System Setup

Dell™ Latitude™ 2100 Service Manual

- [<F12> Menu](#)
 - [Entering System Setup](#)
-

<F12> Menu

Press <F12> when the Dell logo appears to initiate a one-time boot menu with a list of the valid boot devices available to the computer. The devices listed on the boot menu depend on the bootable devices installed in your computer.

This menu is useful when you want to boot to a particular device, or bring up the system diagnostics. Using the boot menu does not make any changes to the boot order stored in the BIOS.

Entering System Setup

Press <F2> to enter System Setup and change the user-definable settings. If you have trouble entering System Setup using this key, press <F2> when the keyboard LEDs first flash.

[Back to Contents Page](#)

Diagnostics

Dell™ Latitude™ 2100 Service Manual

- [Diagnostic Light Codes](#)
- [Battery Light Codes](#)
- [No-POST Light Codes](#)

Diagnostic Light Codes

Diagnostic lights are located in two areas of your computer:

- 1 Bottom left of the palm rest
- 1 Top right side of the keyboard

1	power light	2	hard drive activity light
3	battery light	4	wireless networking activity light
5	numeric key light	6	caps lock light
7	scroll lock light		

Battery Light Codes

If your computer is connected to an electrical outlet, the  light operates as follows:

- 1 **Solid blue** – The battery is charging.
- 1 **Flashing blue** – The battery is almost fully charged.
- 1 **Fast flashing orange and then solid green** – The battery is in temporary failure.
- 1 **Fast flashing orange** – The battery is in a fatal failure.

If your computer is running on a battery, the  light operates as follows:

- 1 **Off** – The battery is adequately charged, or the computer is turned off.
- 1 **Flashing orange** – The battery charge is low.
- 1 **Solid orange** – The battery charge is critically low.
- 1 **Fast flashing orange and then solid green** – The battery is in temporary failure.
- 1 **Fast flashing orange** – The battery is in a fatal failure.

No-POST Codes

The numeric key light, caps lock light, and scroll lock light are also used to diagnose issues that may occur in a no-POST scenario.

Appearance	Description	Next Step
ON-FLASH-FLASH		1. Install supported memory modules.

Passwords

Dell™ Latitude™ 2100 Service Manual

- [Using a System Password](#)
- [Using an Administrator Password](#)
- [Using a Hard-Drive Password](#)

Passwords are not enabled at the factory. You must enable this function in System Setup if you wish to use a password. If you forget a password, search www.support.dell.com for information on how to clear a password from your computer.

A system password, an administrator password, and a hard drive password all prevent unauthorized access to your computer, although each does so in a different way. The following table identifies types and features of passwords available on your computer.

Type of Password	Features
System	Protects your computer from unauthorized access.
Administrator	Gives system administrators or service technicians access to your computer for repair or reconfiguration. Allows you to restrict access to System Setup in the same way a system password restricts access to your computer. Can be used instead of the system password to protect your computer from unauthorized access.
Hard drive	Helps protect the data on your internal hard drive or external hard drive (if one is being used) from unauthorized access.

Passwords provide a high level of security for data in your computer or hard drive. However, passwords are not foolproof. If you require more security use additional forms of protection such as smart cards, data encryption programs, or PC Card devices with encryption features.

Using a System Password

The system password allows you to protect your computer from unauthorized access. After assigning a system password, you must enter it each time you turn on your computer. The following message appears each time you turn on the computer:

```
Please type in the system or administrator password and press <Enter>.
```

To continue, enter your password (must be no more than eight characters in length). If you do not enter a password within 2 minutes, your computer returns to its previous operating state.

 **NOTE:** If you disable the administrator password, the system password is also disabled.

If you have assigned an administrator password, you can use it instead of the system password. The computer does not specifically prompt you for the administrator password.

Using an Administrator Password

The administrator password is designed to give system administrators or service technicians access to computers for repair or reconfiguration. The administrators or technicians can assign identical administrator passwords to groups of computers, allowing you to assign the system password.

When you set an administrator password, the **Configure Setup** option becomes available in System Setup. The **Configure Setup** option allows you to restrict access to System Setup in the same way that a system password restricts access to the computer. The administrator password can be used instead of the system password. Whenever you are prompted to enter the system password, you can enter the administrator password.

 **NOTE:** If you disable the administrator password, the system password is also disabled.

 **NOTE:** The administrator password provides access to the computer, but it does not provide access to the hard drive when a hard drive password is assigned.

Using a Hard-Drive Password

The hard drive password helps protect the data on your hard drive from unauthorized access. You can also assign a password for an external hard drive (if one is being used) that can be the same as or different from the password for the primary hard drive.

After assigning a hard drive password, you must enter it each time you turn on the computer and each time you restore the computer to normal operation from Standby mode. If the hard drive password is enabled, the following message appears each time you turn on the computer:

```
Hard-disk #*****-****, the system Primary HDD, is
protected by a password authentication system. You cannot
access data on this hard drive without the correct password.
Please type in the hard-disk drive password and press <Enter>.
```

To continue, enter your password (must be no more than eight characters in length). Press <Esc> to return the computer to its previous operating state. If you do not enter a password within 2 minutes, the computer returns to its previous operating state.

If you enter the wrong password, the following message appears:

```
Invalid password
[Press Enter to retry]
```

If you do not enter the correct password in three attempts, the computer tries to start from another bootable device if the **Boot First Device** option in System

Setup is set to allow startup from another device. If the **Boot First Device** option is not set to allow the computer to start from another device, the computer returns to the operating state it was in when you turned it on.

If the hard drive password, the external hard drive password, and the system password are the same, the computer prompts you only for the system password. If the hard drive password is different from the system password, the computer prompts you for both. Two different passwords provide greater security.

 **NOTE:** The administrator password provides access to the computer, but it does not provide access to a hard drive that is protected by a hard drive password.

Processor	
Processor type	Intel® Atom™ N270
CPU speed	1.60 GHz
Bus speed	533 MHz
L1 cache	32 KB
L2 cache	512 KB

System Information	
System chipset	Intel 94GSE chipset
Data bus width	64 bits
DRAM bus width	64 bits
Processor address bus width	36 bits
Flash EPROM	SPI 32 Mbit

Secure Digital (SD) Memory Card Reader	
Cards supported	SD, SDIO, SD HC, Mini SD (w/adapter)

Memory	
Memory module connectors	two SODIMM sockets
Memory module capacities	1 GB, 2 GB
Memory type	DDR2 800 MHz; non-ECC memory only
Minimum memory	1024 MB
Maximum memory	2048 MB

Ports and Connectors	
Audio	microphone and stereo headphone/speakers connector
Network adapter	RJ-45 connector
USB	three 4-pin USB 2.0-compliant connectors
Video	VGA

Communications	
Modem	external (optional)
Network adapter	10/100/1000 Ethernet LAN on system board
Wireless	WLAN half Mini-Card, WPAN Bluetooth® wireless technology

Video	
Video type	integrated
Video controller	Intel Extreme
Data bus	integrated
Video output	video connector
Video memory	up to 128 MB shared memory

Audio	
Audio type	two-channel high definition audio codec
Audio controller	Realtek ALC272
Stereo conversion	24-bit (stereo digital-to-analog) 24-bit (stereo analog-to-digital)
Interfaces:	
Internal	high definition audio
External	microphone-in connector, stereo headphones/speakers mini-connector
Speakers	two 1-Watt, 4-ohm speakers
Internal speaker amplifier	1-Watt channel into 4 ohms
Internal microphone	single digital microphone
Volume controls	volume control buttons

Display	
Type (active-matrix TFT)	WSVGA or WSGA touch screen
Active area X/Y	303.74 x 189.84 mm
Dimensions:	
Height	125.28 mm (4.93 inches)
Width	222.72 mm (8.76 inches)
Maximum Resolution	1024 x 576
Operating angle	0° (closed) to 135°
Refresh rate	60 Hz
Viewing angles:	
Horizontal	40/40°
Vertical	10/30°
Pixel pitch (WSVGA)	0.2175

Keyboard	
Number of keys	84 (U.S. and U.K.); 85 (Brazil); 87 (Japan)
Layout	QWERTY/AZERTY/Kanji

Touch Pad	
X/Y position resolution (graphics table mode)	240 CPI
Size:	
Width	61.8-mm (2.4-inch) sensor-active area
Height	34.9-mm (1.37-inch) rectangle

Camera (optional)	
Resolution	640 x 480 pixels (VGA)

Battery	
Type	3-cell: 35 Whr 6-cell: 56 Whr
Dimensions:	
Depth	
3-cell lithium-ion battery	204 mm (8.03 inches)
6-cell lithium-ion battery	204 mm (8.03 inches)
Height	
3-cell lithium-ion battery	23.2 mm (0.91 inches)
6-cell lithium-ion battery	42.5 mm (1.67 inches)
Width	
3-cell lithium-ion battery	40.5 mm (1.57 inches)
6-cell lithium-ion battery	48.1 mm (1.89 inches)
Weight	
3-cell lithium-ion battery	0.21 kg (0.41 lbs)
6-cell lithium-ion battery	0.35 kg (0.77 lbs)
Voltage	
3-cell lithium-ion battery	14.8 VDC
6-cell lithium-ion battery	11.1 VDC
Charge time (approximate) for 6-cell lithium-ion battery	
Computer off	approximately 1 hour to 80% capacity approximately 2 hours to 100% capacity
Life span (approximate)	1 year
Temperature range	
Operating	0° to 40°C (32° to 104°F)
Storage	-10° to 65°C (14° to 149°F)
Coin-cell battery	CR-2032

AC Adapter	
Type	65 Watt
Input voltage	100-240 VAC
Input current (maximum)	1.5 A
Input frequency	50-60 Hz
Output current	4.34 A (maximum at 4-sec pulse) 3.34 A (continuous)
Output power	65 Watts
Rated output voltage	19.5 ±1.0 VDC
Temperature range:	
Operating	0° to 35°C (32° to 95°F)
Storage	-30° to 65°C (-22° to 149°F)

Physical	
Height:	
3-cell	39.9-41.5 mm (1.57-1.63 inches)
6-cell	59.15-60.75 mm (2.32-2.39 inches)
Width (3- and 6-cell)	265 mm (10.4 inches)
Depth:	
3-cell	187 mm (7.36 inches)
6-cell	194.63 mm (7.66 inches)
Weight (approximate):	
3-cell	1.42 kg (3.13 lbs)
6-cell	1.57 kg (3.47 lbs)

Environmental	
Temperature range:	
Operating	0° to 35°C (32° to 95°F)

Storage	-40° to 65°C (-40° to 149°F)
Relative humidity (maximum):	
Operating	10% to 90% (non-condensing)
Storage	5% to 95% (non-condensing)
Maximum vibration (using a random-vibration spectrum that simulates user environment):	
Operating	0.66 GRMS
Storage	1.3 GRMS
Maximum shock (measured with hard drive in head-parked position and a 2-ms half-sine pulse):	
Operating	140 G
Storage	163 G
Airborne contaminant level	G2 or lower as defined by ANSI/ISA-S71.04-1985

Keyboard

Dell™ Latitude™ 2100 Service Manual

WARNING: Before working inside your computer, read the safety information that shipped with your computer. For additional safety best practices information, see the Regulatory Compliance Homepage at www.dell.com/regulatory_compliance.

NOTE: You may need to install Adobe Flash Player from Adobe.com in order to view the illustrations below.

Removing the Keyboard

1. Follow the procedures in [Before Working Inside Your Computer](#).
2. Remove the [battery](#) from the computer.
3. Remove the two keyboard screws.

4. Open the display to a 145-degree angle and set your computer on its edge atop the work surface.

5. Push a plastic scribe through the screw socket.

6. Lay the computer flat upon the work surface.

7. Starting at the top left corner of the keyboard, separate the keyboard from the computer.

8. Turn over the keyboard.

9. Open the keyboard data cable clip.

10. Disconnect the keyboard data cable.

11. Remove the keyboard from the computer.

Working on Your Computer

Dell™ Latitude™ 2100 Service Manual

- [Before Working Inside Your Computer](#)
- [Recommended Tools](#)
- [Turning Off Your Computer](#)
- [After Working Inside Your Computer](#)

Before Working Inside Your Computer

Use the following safety guidelines to help protect your computer from potential damage and to help to ensure your personal safety. Unless otherwise noted, each procedure included in this document assumes that the following conditions exist:

- 1 You have performed the steps in [Working on Your Computer](#).
- 1 You have read the safety information that shipped with your computer.
- 1 A component can be replaced or--if purchased separately--installed by performing the removal procedure in reverse order.

WARNING: Before working inside your computer, read the safety information that shipped with your computer. For additional safety best practices information, see the Regulatory Compliance Homepage at www.dell.com/regulatory_compliance.

CAUTION: Only a certified service technician should perform repairs on your computer. Damage due to servicing that is not authorized by Dell is not covered by your warranty.

CAUTION: To avoid electrostatic discharge, ground yourself by using a wrist grounding strap or by periodically touching an unpainted metal surface, such as a connector on the back of the computer.

CAUTION: Handle components and cards with care. Do not touch the components or contacts on a card. Hold a card by its edges or by its metal mounting bracket. Hold a component such as a processor by its edges, not by its pins.

CAUTION: When you disconnect a cable, pull on its connector or on its pull-tab, not on the cable itself. Some cables have connectors with locking tabs; if you are disconnecting this type of cable, press in on the locking tabs before you disconnect the cable. As you pull connectors apart, keep them evenly aligned to avoid bending any connector pins. Also, before you connect a cable, ensure that both connectors are correctly oriented and aligned.

NOTE: The color of your computer and certain components may appear differently than shown in this document.

To avoid damaging your computer, perform the following steps before you begin working inside the computer.

1. Ensure that your work surface is flat and clean to prevent the computer cover from being scratched.
2. Turn off your computer (see [Turning Off Your Computer](#)).
3. If the computer is connected to a docking device (docked) such as the optional Media Base or Battery Slice, undock it.

CAUTION: To disconnect a network cable, first unplug the cable from your computer and then unplug the cable from the network device.

4. Disconnect all network cables from the computer.
5. Disconnect your computer and all attached devices from their electrical outlets.
6. Close the display and turn the computer upside-down on a flat work surface.

CAUTION: To avoid damaging the system board, you must remove the main battery before you service the computer.

7. Remove the main battery (see [Removing the Battery](#)).
8. Turn the computer top-side up.
9. Open the display.
10. Press the power button to ground the system board.

CAUTION: To guard against electrical shock, always unplug your computer from the electrical outlet before opening the display.

CAUTION: Before touching anything inside your computer, ground yourself by touching an unpainted metal surface, such as the metal at the back of the computer. While you work, periodically touch an unpainted metal surface to dissipate static electricity, which could harm internal components.

11. Remove any installed ExpressCards or Smart Cards from the appropriate slots.
12. Remove the hard drive (see [Removing the Hard Drive](#)).

Recommended Tools

The procedures in this document may require the following tools:

- 1 Small flat-blade screwdriver
- 1 #0 Phillips screwdriver
- 1 #1 Phillips screwdriver
- 1 Small plastic scribe
- 1 Flash BIOS update program CD

Turning Off Your Computer

CAUTION: To avoid losing data, save and close all open files and exit all open programs before you turn off your computer.

1. Shut down the operating system:

1 In Windows Vista®:

Click **Start** , then click the arrow in the lower-right corner of the **Start** menu as shown below, and then click **Shut Down**.

1 In Windows® XP:

Click **Start**→ **Turn Off Computer**→ **Turn Off**.

The computer turns off after the operating system shutdown process is complete.

2. Ensure that the computer and all attached devices are turned off. If your computer and attached devices did not automatically turn off when you shut down your operating system, press and hold the power button for about 4 seconds to turn them off.

After Working Inside Your Computer

After you complete any replacement procedure, ensure you connect any external devices, cards, and cables before turning on your computer.

 **CAUTION:** To avoid damage to the computer, use only the battery designed for this particular Dell computer. Do not use batteries designed for other Dell computers.

1. Connect any external devices, such as a port replicator, battery slice, or media base, and replace any cards, such as an ExpressCard.
2. Connect any telephone or network cables to your computer.

 **CAUTION:** To connect a network cable, first plug the cable into the network device and then plug it into the computer.

3. Replace the [battery](#).
4. Connect your computer and all attached devices to their electrical outlets.
5. Turn on your computer.
