Introduction

This document is intended to support Dell Storage with Microsoft Storage Spaces (DSMS) configurations, which have unique solution SKUs called *solution IDs*. These DSMS solution IDs are required when ordering a DSMS configuration, which is the only way to get access to the benefits such as performance and sizing, optimized server and storage components, single-payload updates, and solution-level technical support. If you are in a geographical area outside of the US, the solution IDs are not available at this time; however, you may reference the configuration name instead. Use this document for the most complete list of solution IDs.

This document is divided into two sections:

- Converged configurations and solution IDs
- Scale-Out Filer Server Solution IDs

Figure 1 The correct solution ID or configuration connects you to all the solution has to offer, including Dell Services and Support.

Note: This document may not be representative of all the available configurations. Dell sales may need to custom build the configuration as some configurations are supported but no Solution ID is available as noted in this document.

1 Converged configurations and solution IDs

Use the following information to order the proper systems for your converged DSMS solution. If you are US, use the solution ID, if you are in another geographical area, use the configuration.

Note: Configurations mentioned without a Solution ID are supported but no Solution ID is available. In this case, use the configuration as your reference when you purchase the DSMS solution.

2 Scale-Out File Server configurations and solution IDs

Use the following information to order the proper systems for your SOFS DSMS solution. If you are US, use the Solution ID, if you are in another geographical area, use the configuration.

Note: Configurations mentioned without a Solution ID are supported but no Solution ID is available. In this case, use the configuration as your reference when you purchase the DSMS solution.
