Before You Begin

Dell™ Inspiron™ 580 Service Manual

- Technical Specifications
- Recommended Tools
- Turning Off Your Computer
- Safety Instructions

This manual provides procedures for removing and installing the components in your computer. Unless otherwise noted, each procedure assumes that the following conditions exist:

- You have performed the steps in Turning Off Your Computer and Safety Instructions.
- You have read the safety information that ships with your computer.
- A component can be replaced or—if purchased separately—installed by performing the removal procedure in reverse order.

Technical Specifications

For information on technical specifications of your computer, see the Comprehensive Specifications at support.dell.com/manuals.

Recommended Tools

The procedures in this document may require the following tools:

- Small Phillips screwdriver
- Small flat-blade screwdriver
- BIOS executable update program available at support.dell.com

Turning Off Your Computer

⚠️ CAUTION: To avoid losing data, save and close all open files and exit all open programs before you turn off your computer.

1. Save and close all open files and exit all open programs.

2. Turn off your computer:

   Windows Vista®:
   
   Click Start , click the arrow , and then click Shut Down.

   Windows® 7:
   
   Click Start , and click Shut Down.

3. The computer turns off after the operating system shutdown process is complete.

4. Ensure that the computer is turned off. If your computer did not automatically turn off when you shut down the operating system, press and hold the power button until the computer turns off.

Safety Instructions

Use the following safety guidelines to help protect your computer from potential damage and to help to ensure your own personal safety.

⚠️ WARNING: Before working inside your computer, read the safety information that shipped with your computer. For additional safety best practices information, see the Regulatory Compliance Homepage at www.dell.com/regulatory_compliance.

⚠️ CAUTION: Only a certified service technician should perform repairs on your computer. Damage due to servicing that is not authorized by Dell is not covered by your warranty.
1. Ensure that the work surface is flat and clean to prevent the computer cover from being scratched.

2. Turn off your computer (see Turning Off Your Computer).

3. Disconnect all telephone or network cables from the computer.

4. Disconnect your computer and all attached devices from their electrical outlets.

5. Disconnect all attached devices from your computer.

6. Press and eject any installed cards from the optional Media Card Reader.

7. Press and hold the power button while the system is unplugged to ground the system board.

8. **CAUTION:** When you disconnect a cable, pull on its connector or on its pull-tab, not on the cable itself. Some cables have connectors with locking tabs; if you are disconnecting this type of cable, press in on the locking tabs before you disconnect the cable. As you pull connectors apart, keep them evenly aligned to avoid bending any connector pins. Also, before you connect a cable, ensure that both connectors are correctly oriented and aligned.

9. **CAUTION:** To avoid damaging the computer, perform the following steps before you begin working inside the computer.

   1. Ensure that the work surface is flat and clean to prevent the computer cover from being scratched.

   2. Turn off your computer (see Turning Off Your Computer).

   3. Disconnect all telephone or network cables from the computer.

   4. Disconnect your computer and all attached devices from their electrical outlets.

   5. Disconnect all attached devices from your computer.

   6. Press and eject any installed cards from the optional Media Card Reader.

   7. Press and hold the power button while the system is unplugged to ground the system board.

10. **CAUTION:** To disconnect a network cable, first unplug the cable from your computer and then unplug the cable from the network device.

11. **CAUTION:** Before touching anything inside your computer, ground yourself by touching an unpainted metal surface, such as the metal at the back of the computer. While you work, periodically touch an unpainted metal surface to dissipate static electricity, which could harm internal components.
Front Bezel

Removing the Front Bezel

1. Follow the procedures in Before You Begin.
2. Remove the computer cover (see Removing the Computer Cover).
3. Grasp and lift the front-bezel grips one at a time to release it from the front panel.
4. Rotate and pull the front bezel away from the front of the computer to release the front-bezel clamps from the front-bezel inserts.

5. Set aside the front bezel in a secure location.

Replacing the Front Bezel

1. Follow the procedures in Before You Begin.
2. Align and insert the front-bezel clamps into the front-bezel inserts.
3. Rotate the front bezel towards the computer until the front-bezel grips snap into place.
4. Replace the computer cover (see Replacing the Computer Cover).
5. Connect your computer and devices to electrical outlets, and then turn them on.
Removing the Card Retention Bracket

1. Follow the procedures in Before You Begin.

2. Remove the computer cover (see Removing the Computer Cover).

3. Remove the screw that secures the card retention bracket to the chassis.

4. Lift the card retention bracket and set it aside in a secure place.

Replacing the Card Retention Bracket

1. Follow the procedures in Before You Begin.

2. Replace the card retention bracket, ensuring that:
   - The guide clamp is aligned with the guide notch.
   - The tops of all cards and filler brackets are flush with the alignment bar.
   - The notch in the top of the card or filler bracket fits around the alignment guide.

**CAUTION:** Only a certified service technician should perform repairs on your computer. Damage due to servicing that is not authorized by Dell™ is not covered by your warranty.
3. Replace the screw that secures the card retention bracket to the chassis.

Removing PCI and PCI Express Cards

1. Follow the procedures in Before You Begin.

2. Remove the computer cover (see Removing the Computer Cover).

3. Remove the card retention bracket (see Removing the Card Retention Bracket).

4. If necessary, disconnect any cables connected to the card and remove the card.
   - For a PCI or PCI Express x1 card, grasp the card by its top corners, and ease it out of its connector.
   - For a PCI Express x16 card, press the retention mechanism, grasp the card by its top corners, and then ease it out of its connector.

5. If you are removing the card permanently, install a filler bracket in the empty card-slot opening.

   **NOTE:** Installing filler brackets over empty card-slot openings is necessary to maintain FCC certification of the computer. The brackets also keep dust and dirt out of your computer.

6. Replace the card retention bracket (see Replacing the Card Retention Bracket).

7. Replace the computer cover (see Replacing the Computer Cover).

8. Connect your computer and devices to electrical outlets, and then turn them on.

9. Remove the card’s driver from the operating system.
Replacing PCI and PCI Express Cards

1. Follow the procedures in Before You Begin.

2. Remove the computer cover (see Removing the Computer Cover).

3. Remove the card retention bracket (see Removing the Card Retention Bracket).

4. If this is a new card installation, remove the filler bracket covering the card-slot opening.

5. Prepare the card for installation.
   
   See the documentation that came with the card for information on configuring the card, making internal connections, or otherwise customizing it for your computer.

6. If you are installing the PCI Express card into the x16 card connector, position the card so the securing slot is aligned with the securing tab.

7. Place the card in the connector and press down firmly. Ensure that the card is fully seated in the slot.

8. Replace the card retention bracket (see Replacing the Card Retention Bracket).

9. Connect any cables that should be connected to the card.
   
   See the documentation for the card for information about the card's cable connections.

⚠️ **CAUTION:** Do not route card cables over or behind the cards. Cables routed over the cards can prevent the computer cover from closing properly or cause damage to the equipment.

10. Replace the computer cover (see Replacing the Computer Cover).
11. Connect your computer and devices to electrical outlets, and then turn them on.

12. To complete the installation, see Configuring Your Computer After Removing or Installing a PCI or PCI Express Card.

## Configuring Your Computer After Removing or Installing a PCI or PCI Express Card

**NOTE:** For information on location of external connectors, see the Setup Guide. For information on installing drivers and software for your card, see the documentation that shipped with the card.

Removing the Battery

1. Record all the screens in System Setup (see System Setup) so that you can restore the correct settings after the new battery has been installed.

2. Follow the procedures in Before You Begin.

3. Remove the computer cover (see Removing the Computer Cover).

4. Locate the battery socket (see System Board Components).

   ▲ CAUTION: If you pry the battery out of its socket with a blunt object, be careful not to touch the system board with the object. Ensure that the object is inserted between the battery and the socket before you attempt to pry out the battery. Otherwise, you may damage the system board by prying off the socket or by breaking circuit traces on the system board.

5. Press the battery release lever to remove the battery.

Replacing the Battery

1. Follow the procedures in Before You Begin.

2. Insert the new battery (CR2032) into the socket with the side labeled “+” facing up, and press the battery into place.

3. Replace the computer cover (see Replacing the Computer Cover).
4. Connect your computer and devices to electrical outlets, and then turn them on.

5. Enter System Setup (see Entering System Setup) and restore the settings you recorded in step 1.
Removing the Computer Cover

1. Follow the procedures in Before You Begin.

2. Lay your computer on its side with the computer cover facing up.

3. Using a screwdriver, remove the two screws that secure the computer cover to the chassis.

4. Release the computer cover by pulling it away from the front of the computer and lifting it up.

5. Set the cover aside in a secure location.

Replacing the Computer Cover

1. Follow the procedures in Before You Begin.

2. Ensure that all cables are connected, and fold cables out of the way.

3. Ensure that no tools or extra parts are left inside the computer.

4. Align the tabs at the bottom of the computer cover with the slots located along the edge of the computer.

5. Press the computer cover down and slide it towards the front of the computer until you feel a click or feel the computer cover securely installed.

6. Ensure that the cover is seated correctly.
7. Using a screwdriver, replace the two screws that secure the computer cover to the chassis.

8. Place the computer in an upright position.

⚠️ **CAUTION:** Ensure that none of the system air-vents are blocked. Blocking them would cause serious thermal problems.
Removing the Processor

1. Follow the procedures in Before You Begin.

2. Remove the computer cover (see Removing the Computer Cover).

   □ CAUTION: Despite having a plastic shield, the heat sink assembly may be very hot during normal operation. Be sure that it has had sufficient time to cool before you touch it.

3. Remove the processor fan and heat sink assembly from the computer (see Removing the Processor Fan and Heat Sink Assembly).

   □ NOTE: Unless a new heat sink is required for the new processor, reuse the original heat sink assembly when you replace the processor.

4. Press the release lever down and then pull it outwards to release it from the tab that secures it.

5. Extend the release lever completely to open the processor cover.

   □ CAUTION: When removing the processor, do not touch any of the pins inside the socket or allow any objects to fall on the pins in the socket.

6. Gently lift the processor to remove it from the socket.

   Leave the release lever extended in the release position so that the socket is ready for the new processor.
Replacing the Processor

⚠️ **CAUTION:** Ground yourself by touching an unpainted metal surface on the back of the computer.

⚠️ **CAUTION:** When replacing the processor, do not touch any of the pins inside the socket or allow any objects to fall on the pins in the socket.

1. Follow the procedures in [Before You Begin](#).
2. Unpack the new processor, being careful not to touch the underside of the processor.
3. If the release lever on the socket is not fully extended, move it to that position.
4. Orient the alignment notches on the processor with the alignment tabs on the socket.
5. Align the pin-1 corners of the processor and socket.
6. When the processor is fully seated in the socket, close the processor cover.
7. Pivot the release lever down and place it under the tab on the processor cover.

⚠️ **CAUTION:** You must position the processor correctly in the socket to avoid permanent damage to the processor and the computer when you turn on the computer.

⚠️ **CAUTION:** To avoid damage, ensure that the processor aligns properly with the socket, and do not use excessive force when you install the processor.

⚠️ **CAUTION:** Ensure that the processor cover notch is positioned underneath the alignment post.

<table>
<thead>
<tr>
<th>1. socket</th>
<th>2. processor</th>
<th>3. alignment tabs (2)</th>
</tr>
</thead>
<tbody>
<tr>
<td>4. alignment notches (2)</td>
<td>5. processor pin-1 indicator</td>
<td></td>
</tr>
</tbody>
</table>

Set the processor lightly in the socket and ensure that the processor is positioned correctly.
8. Clean the thermal grease from the bottom of the heat sink.

⚠️ **CAUTION:** Ensure that you apply new thermal grease. New thermal grease is critical for ensuring adequate thermal bonding, which is a requirement for optimal processor operation.

9. Apply the new thermal grease to the top of the processor.

10. Replace the processor fan and heat sink assembly (see [Replacing the Processor Fan and Heat Sink Assembly](#)).

⚠️ **CAUTION:** Ensure that the processor fan and heat sink assembly is correctly seated and secure.

11. Replace the computer cover (see [Replacing the Computer Cover](#)).

12. Connect your computer and devices to electrical outlets, and turn them on.
### Hard Drive

#### Removing the Hard Drive

⚠️ **CAUTION:** If you are replacing a hard drive that contains data that you want to keep, back up your files before you begin this procedure.

1. Follow the procedures in [Before You Begin](#).
2. Remove the computer cover (see [Removing the Computer Cover](#)).
3. Disconnect the power cable and the data cable from the hard drive.
4. Remove the four screws that secure the hard drive to the drive panel.

⚠️ **CAUTION:** Ensure that you do not scratch the hard drive’s circuit board, while removing or replacing the hard drive.

5. Slide the hard drive out towards the back of the computer.

6. If removing the hard drive changes the drive configuration, ensure that you reflect these changes in System Setup (see [System Setup](#)).

#### Replacing the Hard Drive

1. Follow the procedures in [Before You Begin](#).
2. Check the documentation for the drive to verify that it is configured for your computer.

3. Slide the hard drive into the hard-drive bay.

4. Align and replace the four screws that secure the hard drive to the drive panel.

5. Connect the power cable and the data cable to the hard drive.

6. Check all cables to be certain that they are properly connected and firmly seated.

7. Replace the computer cover (see Replacing the Computer Cover).

8. Connect your computer and devices to electrical outlets, and then turn them on.

9. See the documentation that came with the hard drive for instructions on installing any software required for hard drive operation.

10. Check the System Setup for hard drive configuration changes (see Entering System Setup).

---

**Media Card Reader**

**Removing the Media Card Reader**

1. Follow the procedures in Before You Begin.

2. Remove the computer cover (see Removing the Computer Cover).

3. Remove the front bezel (see Removing the Front Bezel).

4. Disconnect the FlexBay USB cable from the FlexBay USB connector on the system board (see System Board Components).

5. Remove the two screws that secure the Media Card Reader to the drive panel.

6. Slide the Media Card Reader out through the front of the computer.

---

**Replacing the Media Card Reader**

1. Follow the procedures in Before You Begin.
2. If this is a new Media Card Reader installation, remove the break-away metal plate. Align the tip of a Phillips screwdriver with the slot on the break-away metal plate and rotate the screwdriver outwards to break and remove the metal plate.

3. Gently slide the Media Card Reader into place in the FlexBay slot.

4. Align the screw holes in the Media Card Reader with the screw holes in the drive panel.

5. Replace the two screws that secure the Media Card Reader to the drive panel.

   **NOTE:** Ensure that the Media Card Reader is installed before the FlexBay USB cable is connected.

6. Connect the FlexBay USB cable to the FlexBay USB connector on the system board (see System Board Components).

7. Replace the front bezel (see Replacing the Front Bezel).

8. Replace the computer cover (see Replacing the Computer Cover).

9. Connect your computer and devices to electrical outlets, and then turn them on.

---

**Optical Drive**

**Removing the Optical Drive**

1. Follow the procedures in Before You Begin.

2. Remove the computer cover (see Removing the Computer Cover).

3. Remove the front bezel (see Removing the Front Bezel).

4. Disconnect the power cable and the data cable from the back of the optical drive.

   **NOTE:** If you are not replacing the optical drive at this time, disconnect the other end of the data cable from the system board and set it aside. You can use the data cable to install an optical drive at a later time.

5. Remove the two screws that secure the optical drive to the drive panel.

6. Slide the optical drive out through the front of the computer.
7. Replace the front bezel (see Replacing the Front Bezel).

8. Replace the computer cover (see Replacing the Computer Cover).

9. Connect your computer and devices to electrical outlets, and then turn them on.

10. Configure the drives in system setup (see System Setup Options).

## Replacing the Optical Drive

1. Follow the procedures in Before You Begin.

2. Gently slide the optical drive into the optical-drive bay through the front of the computer.

3. Align the screw holes in the optical drive with the screw holes in the drive panel.

4. Replace the two screws that secure the optical drive to the drive panel.

5. Connect the power cable and the data cable to the optical drive.

6. If disconnected, connect the data cable to the system board connector (see System Board Components).

7. Replace the front bezel (see Replacing the Front Bezel).

8. Replace the computer cover (see Replacing the Computer Cover).

9. Connect your computer and devices to electrical outlets, and then turn them on.

   See the documentation that came with the optical drive for instructions on installing any software required for optical drive operation.

10. Check the System Setup for drive configuration changes (see Entering System Setup).
**Removing the Processor Fan and Heat Sink Assembly**

**CAUTION:** The processor fan with the heat sink is one single unit. Do not try to remove the fan separately.

**CAUTION:** Do not touch the fan blades when you are removing the processor fan and heat sink assembly. This could damage the fan.

1. Follow the procedures in *Before You Begin.*
2. Remove the computer cover (see *Removing the Computer Cover*).
3. Disconnect the processor fan cable from the system board connector (see *System Board Components*).
4. Carefully move away any cables that are routed over the processor fan and heat sink assembly.

**CAUTION:** Despite having a plastic shield, the processor fan and heat sink assembly may be very hot during normal operation. Be sure that it has had sufficient time to cool before you touch it.

5. Depending on the processor fan and heat sink assembly installed in your computer, perform the following steps:

**Type 1**

a. Align the tip of a flat-blade screwdriver with the fastener grooves and rotate the four fasteners in anticlockwise direction to unlock them.

b. Lift the processor fan and heat sink assembly out of the computer.
Replacing the Processor Fan and Heat Sink Assembly

⚠️ **CAUTION:** When reinstalling the fan, ensure that you do not pinch the wires that run between the system board and the fan.

1. Follow the procedures in *Before You Begin*.
2. Clean the thermal grease from the bottom of the processor fan and heat sink assembly.
3. Apply the new thermal grease to the top of the processor.

⚠️ **CAUTION:** Ensure that you apply new thermal grease. New thermal grease is critical for ensuring adequate thermal bonding, which is a requirement for optimal processor operation.

4. Replace the processor fan and heat sink assembly:

   **Type 1**
   a. If required, rotate the fasteners on the processor fan and heat sink assembly clockwise to ensure that they are in the lock position.
   b. Align and press the four fasteners on the processor fan and heat sink assembly into the screw holes on the system board.

   **Type 2**
   a. Align the four captive screws on the processor fan and heat sink assembly with the screw holes on the system board.
   b. Tighten the four captive screws that secure the processor fan and heat sink assembly to the system board.

   **NOTE:** Ensure that the processor fan and heat sink assembly is correctly seated and secure.

5. Connect the processor fan cable to the system board connector (see *System Board Components*).
6. Replace the computer cover (see *Replacing the Computer Cover*).
7. Connect your computer and devices to electrical outlets, and turn them on.
Removing the Chassis Fan

⚠️ **CAUTION**: Do not touch the fan blades when you are removing the chassis fan. This could damage the fan.

1. Follow the procedures in **Before You Begin**.
2. Remove the computer cover (see **Removing the Computer Cover**).
3. Disconnect the chassis fan cable from the system board connector (see **System Board Components**).
4. Remove the four screws that secure the chassis fan to the chassis.
5. Slide the chassis fan towards the front of the computer and lift it out.

![Diagram of chassis fan](image_url)

1 screws (4)  2 chassis fan

Replacing the Chassis Fan

1. Follow the procedures in **Before You Begin**.
2. Slide the chassis fan in place towards the back of the computer.
3. Replace the four screws that secure the chassis fan to the chassis.
4. Connect the chassis fan cable to the system board connector (see **System Board Components**).
5. Replace the computer cover (see **Replacing the Computer Cover**).
6. Connect your computer and devices to electrical outlets, and turn them on.

[Back to Contents Page]
Removing the Front I/O Panel

1. Follow the procedures in Before You Begin.

2. Remove the computer cover (see Removing the Computer Cover).

3. Remove the front bezel (see Removing the Front Bezel).

CAUTION: When sliding the front I/O panel out of the computer, be extremely careful. Carelessness may result in damage to the cable connectors and the cable routing clips.

4. Disconnect all the cables that are connected to the front I/O panel from the system board connectors. Note the routing of all cables as you remove them so that you can re-route them correctly after installing the new front I/O panel.

5. Remove the screw that secures the front I/O panel to the chassis.

6. Carefully slide the front I/O panel down and out of the front I/O panel clamp slot.

Replacing the Front I/O Panel

CAUTION: Take care not to damage the cable connectors and the cable routing clips when sliding the front I/O panel into the front I/O panel clamp slot.

1. Follow the procedures in Before You Begin.
2. Route and connect the cables that you disconnected from the system board connectors.

3. Align and slide the front I/O panel clamp into the front I/O panel clamp slot.

4. Replace the screw that secures the front I/O panel to the chassis.

5. Replace the front bezel (see Replacing the Front Bezel).

6. Replace the computer cover (see Replacing the Computer Cover).

7. Connect your computer and devices to electrical outlets, and turn them on.
Removing the Memory Module(s)

1. Follow the procedures in Before You Begin.

2. Remove the computer cover (see Removing the Computer Cover).

3. Locate the memory module(s) on the system board (see System Board Components).

4. Press out the securing clip at each end of the memory-module connector.

5. Grasp the memory module and pull it upwards.

   If the memory module is difficult to remove, gently ease the memory module back and forth to remove it from the memory-module connector.

Replacing the Memory Module(s)

1. Follow the procedures in Before You Begin.

2. Press out the securing clip at each end of the memory-module connector.

3. Follow the memory installation guidelines (see Recommended Memory Configuration).

   **CAUTION:** Do not install ECC memory modules.

4. Align the notch on the bottom of the memory module with the tab in the memory-module connector.
5. Insert the memory module into the memory-module connector until the memory module snaps into position. If you insert the memory module correctly, the securing clips snap into the cutouts at each end of the memory module.

6. Replace the computer cover (see Replacing the Computer Cover).

7. Connect your computer and devices to electrical outlets, and then turn them on. If the message appears stating that memory size has changed, press <F1> to continue.

8. Log on to your computer.

9. Right-click the My Computer icon on your Microsoft® Windows® desktop and click Properties.

10. Click the General tab.

11. To verify that the memory is installed correctly, check the amount of memory (RAM) listed.

**Recommended Memory Configuration**

While installing or replacing memory, refer to the table below. For the location of the memory-module connectors, see System Board Components.

<table>

Removing the Power Supply

1. Follow the procedures in Before You Begin.
2. Remove the computer cover (see Removing the Computer Cover).
3. Disconnect the DC power cables from the system board and the drives.
   Note the routing of the DC power cables underneath the tabs in the computer chassis as you remove them from the system board and drives. You must route these cables properly when you replace them to prevent them from being pinched or crimped.
4. Remove all the cables from the securing clip on the side of the power supply.
5. Remove the four screws that secure the power supply to the back of the chassis.
6. While pressing down on the power supply retention snaps, slide out the power supply and lift it out.

Replacing the Power Supply

1. Follow the procedures in Before You Begin.
2. Press down on the power supply retention snaps and slide the replacement power supply into the chassis.

WARNING: Failure to replace and tighten all screws may cause electrical shock as these screws are a key part of the system grounding.
3. Replace the four screws that secure the power supply to the back of the chassis.

   **NOTE:** Route the DC power cables under the chassis tabs. The cables must be properly routed to prevent the cables from being damaged.

4. Connect the DC power cables to the system board and drives.

5. Secure all the cables to the securing clip on the side of the power supply.

   **NOTE:** Double-check all cable connections to make sure they are secure.

6. Replace the computer cover (see *Replacing the Computer Cover*).

   **CAUTION:** To help avoid damaging your computer, ensure that the voltage selector switch is set for the voltage that most closely matches the AC power available in your location.

7. Connect your computer and devices to electrical outlets, and turn them on.
Overview

Use System Setup to:

- Change the system configuration information after you add, change, or remove any hardware in your computer.
- Set or change a user-selectable option such as the user password.
- View the installed amount of memory or set the type of hard drive installed.

⚠️ **CAUTION:** Only a certified service technician should perform repairs on your computer. Damage due to servicing that is not authorized by Dell™ is not covered by your warranty.

⚠️ **CAUTION:** Do not change the settings in system setup unless you are an expert computer user. Certain changes can cause your computer to work incorrectly.

**NOTE:** Before you use System Setup, it is recommended that you write down the System Setup screen information for future reference.

Entering System Setup

1. Turn on (or restart) your computer.

2. When the DELL logo appears, press <F2> immediately.

**NOTE:** Keyboard failure may result when a key on the keyboard is held down for extended periods of time. To avoid possible keyboard failure, press and release <F2> in even intervals until the system setup screen appears.

If you wait too long and the operating system logo appears, continue to wait until you see the Microsoft® Windows® desktop, then shut down your computer and try again.

System Setup Screens

- **Options List** — This field appears on the top of the system setup window. The tabbed options contain features that define the configuration of your computer, including installed hardware, power conservation, and security features.

- **Option Field** — This field contains information about each option. In this field you can view your current settings and make changes to your settings. Use the right- and left-arrow keys to highlight an option. Press <Enter> to make that selection active.

- **Help Field** — This field provides context sensitive help based on the options selected.

- **Key Functions** — This field appears below the Option Field and lists keys and their functions within the active system setup field.

System Setup Options

**NOTE:** Depending on your computer and installed devices, the items listed in this section may not appear, or may not appear exactly as listed.

Changing Boot Sequence for the Current Boot

You can use this feature, for example, to tell the computer to boot from the CD drive so that you can run the Dell Diagnostics on the Drivers and Utilities media, but you want the computer to boot from the hard drive when the diagnostic tests are complete. You can also use this feature to restart your computer to a USB device such as a floppy drive, memory key, or CD-RW drive.

1. If you are booting to a USB device, connect the USB device to a USB connector.
2. Turn on (or restart) your computer.
   
   If you wait too long and the operating system logo appears, continue to wait until you see the Microsoft Windows desktop. Then shut down your computer and try again.
   
   The Boot Device Menu appears, listing all available boot devices.
4. Use the up- or down-arrow keys to select the current boot device and press <Enter>.
   
   For example, if you are booting to a USB memory key, highlight USB Flash Device and press <Enter>.

   **NOTE:** To boot to a USB device, the device must be bootable. To make sure your device is bootable, check the device documentation.

Changing Boot Sequence for Future Boots

1. Enter system setup (see Entering System Setup).
2. Use the arrow keys to highlight the Boot Device Configuration menu option and press <Enter> to access the menu.

   **NOTE:** Write down your current boot sequence in case you want to restore it.
3. Press the up- and down-arrow keys to move through the list of devices.
4. Press plus (+) or minus (–) to change the boot priority of device.

Clearing Forgotten Passwords

**WARNING:** Before working inside your computer, read the safety information that shipped with your computer. For additional safety best practices information, see the Regulatory Compliance Homepage at www.dell.com/regulatory_compliance.

1. Follow the procedures in Before You Begin.
2. Remove the computer cover (see Removing the Computer Cover).
3. Locate the 3-pin password reset jumper on the system board (see System Board Components).

   **NOTE:** The location of the password connector may vary depending on the system.
4. Remove the 2-pin jumper plug from pins 2 and 3 and fix it on pins 1 and 2.

5. Turn on the computer, wait for approximately five seconds, and then turn off the computer. If required, press and hold the power button to turn off the computer.

6. Remove the 2-pin jumper plug from pins 1 and 2 and replace it on pins 2 and 3 to enable the password feature.

7. Replace the computer cover (see Replacing the Computer Cover).

8. Connect your computer and devices to electrical outlets, and turn them on.

---

**Clearing CMOS Settings**

1. Follow the procedures in Before You Begin.

   **NOTE:** The computer must be disconnected from the electrical outlet to clear the CMOS setting.

2. Remove the computer cover (see Removing the Computer Cover).

3. Reset the current CMOS settings:
   a. Locate the 3-pin CMOS reset jumper on the system board (see System Board Components).
   b. Remove the jumper plug from the CMOS reset jumper pins 2 and 3.
   c. Place the jumper plug on the CMOS reset jumper pins 1 and 2 and wait for approximately five seconds.
   d. Remove the jumper plug and replace it on the CMOS reset jumper pins 2 and 3.
4. Replace the computer cover (see Replacing the Computer Cover).

5. Connect your computer and devices to electrical outlets, and turn them on.

---

**Flashing the BIOS**

The BIOS may require flashing when an update is available or when replacing the system board. To flash the BIOS:

1. Turn on the computer.

2. Go to support.dell.com/support/downloads.

3. Locate the BIOS update file for your computer:
   - If you have your computer's Service Tag:
     a. Click Enter a Tag.
     b. Enter your computer's Service Tag in the Enter a service tag: field, click Go, and proceed to step 4.
   - If you do not have your computer's Service Tag:
     a. Click Select Model.
     b. Select the type of product in the Select Your Product Family list.
     c. Select the product brand in the Select Your Product Line list.
     d. Select the product model number in the Select Your Product Model list.

   ![NOTE:](image) If you have selected a different model and want to start over again, click Start Over on the top right of the menu.

     e. Click Confirm.

4. A list of results appear on the screen. Click BIOS.

5. Click Download Now to download the latest BIOS file.

   The File Download window appears.

6. Click Save to save the file on your desktop. The file downloads to your desktop.

7. Click Close if the Download Complete window appears.

   The file icon appears on your desktop and is titled the same as the downloaded BIOS update file.

8. Double-click the file icon on the desktop and follow the procedures that appear on the screen.
Removing the System Board

1. Follow the procedures in Before You Begin.
2. Remove the computer cover (see Removing the Computer Cover).
3. Remove any PCI and PCI Express cards on the system board (see Removing PCI and PCI Express Cards).
4. Remove the processor fan and heat sink assembly (see Removing the Processor Fan and Heat Sink Assembly).
5. Remove the processor (see Removing the Processor).
6. Remove the memory modules (see Removing the Memory Module(s)) and document which memory module is removed from each memory-module connector so that the memory modules can be installed in the same location after the board is replaced.
7. Disconnect all cables from the system board. Note the routing of all cables as you remove them so that you can re-route them correctly after installing the new system board.
8. Remove the eight screws that secure the system board to the chassis.
9. Lift the system board up and out of the chassis.

Replacing the System Board

1. Follow the procedures in Before You Begin.
2. Gently align the system board into the chassis and slide it towards the back of the computer.

⚠️ CAUTION: Ensure that the port retention springs are not damaged while replacing the system board.

NOTE: Compare the system board that you removed with the replacement system board to ensure that they are identical.
3. Replace the eight screws that secure the system board to the chassis.

4. Route and connect the cables that you disconnected from the system board.

⚠️ **CAUTION:** Ensure that the processor fan and heat sink assembly is correctly seated and secure.

5. Replace the processor (see *Replacing the Processor*).

6. Replace the processor fan and heat sink assembly (see *Replacing the Processor Fan and Heat Sink Assembly*).

7. Replace the memory modules (see *Replacing the Memory Module(s)*).

8. Replace any PCI and PCI Express cards on the system board (see *Replacing PCI and PCI Express Cards*).

9. Replace the computer cover (see *Replacing the Computer Cover*).

10. Connect your computer and devices to electrical outlets, and turn them on.

11. Flash the system BIOS, as needed (see *Flashing the BIOS*).
WARNING: Before working inside your computer, read the safety information that shipped with your computer. For additional safety best practices information, see the Regulatory Compliance Homepage at www.dell.com/regulatory_compliance.
