NOTE: When you upgrade from version 4.0 to version 4.1, the devices that displayed a critical or warning state before upgrading, display a normal state after upgrading, even though they are still in critical or warning state. The devices display the correct health status only in the subsequent monitoring cycle.

NOTE: After you upgrade the management pack to version 4.1, you may see some of the components in **Diagram** view still displaying default icons. You need to restart the **Operations Console** with the `/clearcache` option to see the new icons.

Microsoft Guidelines for Performance and Scalability for Operations Manager 2007 SP1/R2 SCE 2007 SP1/ SCE 2010

For optimal performance, deploy device-specific Dell Management Packs on different management stations.

For information on Microsoft's recommendations for scalability, see [technet.microsoft.com/hi-in/library/bb735402\(en-us\).aspx](http://technet.microsoft.com/hi-in/library/bb735402(en-us).aspx)

NOTE: Make sure that the **Autogrow** Option is enabled in Operations Manager Database.

Security Considerations

Operations Console access privileges are handled internally by SCOM/ SCE.

This can be setup using the **User Roles** option under **Administration** → **Security** feature on the SCOM/ SCE console. The profile your role determines what actions you can perform. For more information on security considerations see the *Microsoft Operations Manager 2007 SP1*, *Microsoft Operations Manager 2007 R2*, or the *Microsoft Systems Centre Essentials SP1/SCE 2010 online help*.
