Notes, Notices, and Cautions

**NOTE:** A NOTE indicates important information that helps you make better use of your computer.

**NOTICE:** A NOTICE indicates either potential damage to hardware or loss of data and tells you how to avoid the problem.

**CAUTION:** A CAUTION indicates a potential for property damage, personal injury, or death.
CAUTION: Safety Instructions

Use the following safety guidelines to help ensure your own personal safety and to help protect your media base and working environment from potential damage.

General

1. Do not attempt to service the media base yourself unless you are a trained service technician. Always follow installation instructions closely.
2. If you use an extension power cable with your AC adapter, ensure that the total ampere rating of the products plugged in to the extension power cable does not exceed the ampere rating of the extension cable.
3. Do not push objects into air vents or openings of your media base. Doing so can cause fire or electric shock by shorting out interior components.
4. Do not store your media base in a low-airflow environment, such as a carrying case or a closed briefcase, while the media base is turned on. Restricting airflow can damage the media base or cause a fire.
5. Keep your media base away from radiators and heat sources. Also, do not block cooling vents. Avoid placing loose papers underneath your media base; do not place your media base in a closed-in wall unit or on a bed, sofa, or rug.
6. Place the AC adapter in a ventilated area, such as a desk top or on the floor, when you use it to run the media base or to charge the battery. Do not cover the AC adapter with papers or other items that will reduce cooling; also, do not use the AC adapter inside a carrying case.
7. The AC adapter may become hot during normal operation of your media base. Use care when handling the adapter during or immediately after operation.
8. Do not allow your portable media base to operate with the base resting directly on exposed skin for extended periods of time. The surface temperature of the base will rise during normal operation (particularly when AC power is present). Allowing sustained contact with exposed skin can cause discomfort or, eventually, a burn.
9. Do not use your media base in a wet environment, for example, near a bath tub, sink, or swimming pool or in a wet basement.
10. To help avoid the potential hazard of electric shock, do not connect or disconnect any cables or perform maintenance or reconfiguration of this product during an electrical storm. Do not use your computer during an electrical storm unless all cables have been disconnected and the computer is operating on battery power.
11. If your computer includes a modem, the cable used with the modem should be manufactured with a minimum wire size of 26 American wire gauge (AWG) and an FCC-compliant RJ-11 modular plug.
12. Before you clean your media base, disconnect the media base from the electrical outlet. Clean your media base with a soft cloth dampened with water. Do not use liquid or aerosol cleaners, which may contain flammable substances.

Power

1. Use only the Dell-provided AC adapter approved for use with this media base. Use of another AC adapter may cause a fire or explosion.
2. Before you connect the media base to an electrical outlet, check the AC adapter voltage rating to ensure that the required voltage and frequency match the available power source.
3. To remove the media base from all power sources, turn the computer off, disconnect the AC adapter from the electrical outlet, and remove any battery installed in the battery bay.
4. To help prevent electric shock, plug the AC adapter and device power cables into properly grounded power sources. These power cables may be equipped with 3-prong plugs to provide an earth grounding connection. Do not use adapter plugs or remove the grounding prong from the power source.
Observe the following safe-handling guidelines to prevent damage to your media base:

- When setting up the media base for work, place it on a level surface.
- When traveling, do not check the media base as baggage. You can put your media base through an X-ray security machine, but never put your media base through a metal detector.
- When traveling, do not place the media base in overhead storage compartments where it could slide around. Do not drop your media base or subject it to other mechanical shocks.
- Protect your media base, battery, and hard drive from environmental hazards such as dirt, dust, food, liquids, temperature extremes, and overexposure to sunlight.
- When you move your media base between environments with very different temperature and/or humidity ranges, condensation may form on or within the media base. To avoid damaging the media base, allow sufficient time for the moisture to evaporate before using the media base.

Battery

- Use only Dell™ battery modules that are approved for use with this media base. Use of other types may increase the risk of fire or explosion.
- Do not carry a battery pack in your pocket, purse, or other container where metal objects (such as car keys or paper clips) could short-circuit the battery terminals. The resulting excessive current flow can cause extremely high temperatures and may result in damage to the battery pack or cause fire or burns.
- The battery poses a burn hazard if you handle it improperly. Do not disassemble it. Handle a damaged or leaking battery pack with extreme care. If the battery is damaged, electrolyte may leak from the cells and may cause personal injury.
- Keep the battery away from children.
- Do not store or leave your media base or battery pack near a heat source such as a radiator, fireplace, stove, electric heater, or other heat-generating appliance or otherwise expose it to temperatures in excess of 60°C (140°F). When heated to excessive temperatures, battery cells could explode or vent, posing a risk of fire.
- Do not dispose of your computer's battery in a fire or with normal household waste. Battery cells may explode. Discard a used battery according to the manufacturer's instructions or contact your local waste disposal agency for disposal instructions. Dispose of a spent or damaged battery promptly.

Air Travel

- Certain Federal Aviation Administration regulations and/or airline-specific restrictions may apply to the operation of your Dell computer while you are on board an aircraft. For example, such regulations/ restrictions may prohibit the use of any personal electronic device (PED) that has the capacity for intentional transmission of radio frequency or other electromagnetic signals while on an aircraft.
  - In order to best comply with all such restrictions, if your Dell portable computer is equipped with Dell TrueMobile™ or some other wireless communication device, please disable this device before you board the aircraft and follow all instructions provided by airline personnel with regard to such device.
  - Additionally, the use of any PED, such as a portable computer, may be prohibited in aircraft during certain critical phases of flight, for example, takeoff and landing. Some airlines may further define the critical flight phase as any time the aircraft is below 3050 m (10,000 ft). Please follow the airline's specific instructions as to when the use of a PED is allowed.

EMC Instructions

Use shielded signal cables to ensure that you maintain the appropriate electromagnetic compatibility (EMC) classification for the intended environment. For parallel printers, a cable is available from Dell. If you prefer, you can order a cable from Dell at its worldwide website at **www.dell.com**.

Static electricity can harm electronic components inside your media base. To prevent static damage, discharge static electricity from your body before you touch any of your media base's electronic component. You can do so by touching an unpainted metal surface on the media base's input/output panel.

**WARNING:** Handling the cord on this product, or cords associated with accessories sold with this product, will expose you to a chemical known to the State of California to cause birth defects or other reproductive harm. **Wash your hands after handling the cord.**
When you disconnect a cable, pull on its connector or on its strain-relief loop, not on the cable itself. As you pull out the connector, keep it evenly aligned to avoid bending any connector pins. Also, before you connect a cable make sure both connectors are correctly oriented and aligned.

Handle components with care. Hold a component by its edges, not its pins.

If your media base gets wet or is damaged, follow the procedures described in "Solving Problems" in the documentation that came with your computer. If, after following these procedures, you confirm that your media base is not operating properly, contact Dell (see Contacting Dell in the documentation that came with your computer for the appropriate contact information).

**NOTICE:** When taking the media base from low-temperature conditions into a warmer environment or from high-temperature conditions into a cooler environment, allow the media base to acclimate to room temperature before turning on power.

Documentation for my computer

Dell Support Website — support.dell.com
The Dell Support website provides several online tools, including:
- Solutions — Troubleshooting hints and tips, articles from technicians, and online courses
- Community — Online discussion with other Dell customers
- Upgrades — Upgrade information for components, such as memory, the hard drive, and the operating system
- Customer Care — Contact information, order status, warranty, and repair information
- Downloads — Drivers, patches, and software updates
- Reference — Computer documentation, product specifications, and white papers

Dell Premier Support Website — premiersupport.dell.com
The Dell Premier Support website is customized for corporate, government, and education customers. This website may not be available in all regions.

Windows Help and Support Center
1. Click the Start button and click Help and Support.
2. Type a word or phrase that describes your problem and click the arrow icon.
3. Click the topic that describes your problem.
4. Follow the instructions on the screen.
**Front View**

1. **volume buttons** — Let you increase and decrease the volume.
2. **undock button** — Lets you undock your computer when your computer is operating.
3. **power button** — Lets you turn on and off your computer when it is docked.
4. **mute button** — Lets you mute the volume.

**Left Side View**

1. **subwoofer tuned port vent** — Provides air circulation for the tuned port.
2. **computer release latch** — Releases the computer from the media base if the media base is not secured by an antitheft device.

**Right Side View**

1. **optical bay drive** — Lets you use a variety of drives like a, DVD, CD, CD-RW, a floppy drive, or a second hard drive.

security cable slot — Lets you attach a commercially available antitheft device to the media base. Instructions for installing antitheft devices are usually included with the device. For more information, see Securing the Media Base.

Top View

PS/2 connector — Connects PS/2-compatible devices such as a mouse, keyboard, or external numeric keypad.

Shut down the computer before attaching a PS/2-compatible device. If the device does not work, install the device drivers from the floppy disk or CD that came with the device, and restart the computer.

You can use the integrated keyboard and an external keypad at the same time. When you attach a PS/2 numeric keypad, the integrated keypad is disabled.

headphone connector — Connects headphones or speakers. The connector is a stereo output connector.

1 battery bay
2 docking connector

battery bay — Lets you charge a 28-Whr battery.

Bottom View
Setting Up Your Media Base

**NOTICE:** Always use the Dell AC adapter that came with the media base. If you use any other commercially available AC adapter—or the AC adapter from older models of Dell computers—you may damage the media base or the computer.

1. Connect the AC adapter to the AC adapter connector and to an electrical outlet.

2. Before you initially dock your computer, the operating system must complete its setup process. To verify that the operating system has completed the setup process:
   
   a. Ensure that the computer is not connected to the media base (docked).
   
   b. Turn on the computer.
   
   c. Verify that the Microsoft® Windows® desktop appears.
   
   d. Shut down the computer through the Windows Start menu.

Securing the Media Base

**NOTE:** If the computer is docked to the media base and an antitheft device is attached to the security cable slot on the media base, you cannot undock the computer.
3. Attach a commercially available antitheft device to the security cable slot on the media base.

Antitheft devices usually include a segment of metal-stranded cable with an attached locking device and associated key. For instructions on installing this kind of antitheft device, see the documentation that accompanied the device.

## Installing a Battery

To insert a battery into the battery bay:

1. Pull back the battery bay latch and lift up the **battery bay cover**.

   **NOTE:** See the label inside the battery bay for instructions on inserting and removing a battery from the bay.

2. Insert and press the battery into the battery bay until it clicks. Ensure that both the **battery latches** are engaged.

3. Replace the **battery bay cover**.
To remove the battery from the battery bay:

1. Remove the **battery bay cover**.
2. Slide both battery latches in the direction of the arrows, and remove the battery from the bay.

---

**Docking Your Computer**

- **NOTE**: If you are docking your computer for the first time and have not completed the steps in *Setting Up Your Media Base*, complete them before proceeding to the next step.

- **NOTE**: After docking the computer for the first time, the computer battery or the computer AC adapter connection can power the media base if the media base is not connected to an AC adapter.

1. Align the front of the computer with the front of the media base and lower the computer onto the media base.
2. Gently press the computer into the media base until it clicks and the computer is seated.
3. Turn on the computer.

The operating system recognizes the media base.

**NOTE:** Your computer should be turned off only when you dock your computer for the first time.

## Undocking Your Computer

1. Before you undock your computer, save and close any open files and exit any open programs.
2. To set your computer's power management settings so that the computer does not enter standby or hibernate mode when you close (lower) the display:

   **Windows® XP**
   a. Click the **Start** button and click **Control Panel**.
   b. Under **Pick a category**, click **Performance and Maintenance**.
   c. Under or pick a Control Panel icon, click **Power Options** and click the **Advanced** tab.
   d. Under the **When I close the lid of my portable computer** drop-down menu, select **Do nothing**.

   **Windows 2000**
   a. Click the **Start** button, click **Settings** and then click **Control Panel**.
   b. Double-click the **Power Options** icon and click the **Advanced** tab.
   c. Under the **When I close the lid of my portable computer** drop-down menu, click **None**.

   **NOTICE:** Never undock the computer without first preparing the computer to undock. If you undock before preparing the computer, you will lose data and the computer may not recover normal operation for several minutes, if at all.

3. To prepare the computer for undocking, do one of the following:
   - **In Windows XP**, click the **Start** button and click **Undock Computer**.
   - **In Windows 2000**, click the **Start** button and click **Eject PC**.

   An **Undock Complete** message appears, stating that you can now undock your computer, click **OK**.

OR
Press the undock button on the front of the media base for 1 second. (See "Front View").

An Undock Complete message appears stating that you can now undock your computer. Click OK.

4. If your media base is secured, remove the lock.

5. Pull the computer release lever (see "Left Side View") to release the computer.

6. Lift the computer out of the media base.

---

### Installing Drives

1. Save and close any open files, and exit any open programs.
2. Insert the drive into the optical bay drive on the media base. (See "Right Side View").
3. The operating system recognizes the new drive.

---

### Removing Drives

1. Save and close any open files, and exit any open programs.
2. Push the drive latch release and pull the drive out of the bay. (See "Right Side View").

---

### Connecting and Disconnecting External Drives

1. To connect an external drive such as a floppy, CD, CD-RW, or DVD/CD-RW drive while the computer is off, connect the drive cable to the USB connector on the media base. (See "Back View").
2. To disconnect an external drive while the computer is off, remove the drive cable from the USB connector.
3. To connect and disconnect drives while the computer is running, see the following section, "Swapping External Drives While the Computer Is Running."

**NOTICE:** To prevent damage to external drives, place them in a safe, dry place when they are not connected to the computer. Avoid pressing down on them or placing heavy objects on top of them.

---

### Swapping External Drives While the Computer Is Running

**In Windows XP**

1. Double-click the Unplug or Eject Hardware icon on the Windows taskbar.
2. Click the drive you want to eject.
3. Remove the drive cable from the USB connector.
4. Connect the new drive by connecting the drive cable to the USB connector.

The operating system recognizes the new drive.

If necessary, enter your password to unlock your computer.

In Windows 2000

1. Double-click the Unplug or Eject Hardware icon on the Windows taskbar.
2. Click the drive you want to eject and then click Stop.
3. Click OK, and wait until the drive you want to eject is cleared from the list of devices in the Unplug or Eject Hardware window.
4. Click OK.
5. Remove the drive cable from the USB connector.
6. Connect the new drive by connecting the drive cable to the USB connector.

The operating system recognizes the new drive.

</table>
Electromagnetic Interference (EMI) is any signal or emission, radiated in free space or conducted along power or signal leads, that endangers the functioning of a radio navigation or other safety service or seriously degrades, obstructs, or repeatedly interrupts a licensed radio communications service. Radio communications services include but are not limited to AM/FM commercial broadcast, television, cellular services, radar, air-traffic control, pager, and Personal Communication Services (PCS). These licensed services, along with unintentional radiators such as digital devices, including media bases, contribute to the electromagnetic environment.

Electromagnetic Compatibility (EMC) is the ability of items of electronic equipment to function properly together in the electronic environment. While this media base has been designed and determined to be compliant with regulatory agency limits for EMI, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause interference with radio communications services, which can be determined by turning the equipment off and on, you are encouraged to try to correct the interference by one or more of the following measures:

1. Reorient the receiving antenna.
2. Relocate the media base with respect to the receiver.
3. Move the media base away from the receiver.
4. Plug the media base into a different outlet so that the computer and the receiver are on different branch circuits.

If necessary, consult a Dell Technical Support representative or an experienced radio/television technician for additional suggestions.

Dell™ media bases are designed, tested, and classified for their intended electromagnetic environment. These electromagnetic environment classifications generally refer to the following harmonized definitions:

1. Class A is typically for business or industrial environments.
2. Class B is typically for residential environments.

Information Technology Equipment (ITE), including devices, expansion cards, printers, input/output (I/O) devices, monitors, and so on, that are integrated into or connected to the media base should match the electromagnetic environment classification of the media base.

A Notice About Shielded Signal Cables: Use only shielded cables for connecting devices to any Dell device to reduce the possibility of interference with radio communications services. Using shielded cables ensures that you maintain the appropriate EMC classification for the intended environment. For parallel printers, a cable is available from Dell. If you prefer, you can order a cable from Dell on the World Wide Web at accessories.us.dell.com/sna/category.asp?category_id=4117.

Most Dell computers are classified for Class B environments. However, the inclusion of certain options can change the rating of some configurations to Class A. To determine the electromagnetic classification for your computer or device, see the following sections specific for each regulatory agency. Each section provides country-specific EMC/EMI or product safety information.

**FCC Notices (U.S. Only)**

Most Dell computers are classified by the Federal Communications Commission (FCC) as Class B digital devices. To determine which classification applies to your computer, examine all FCC registration labels located on the bottom, side, or back panel of your computer, on card-mounting brackets, and on the cards themselves. If any one of the labels carry a Class A rating, your entire computer is considered to be a Class A digital device. If all labels carry an FCC Class B rating as distinguished by either an FCC ID number or the FCC logo ( ), your computer is considered to be a Class B digital device.

Once you have determined your computer’s FCC classification, read the appropriate FCC notice. Note that FCC regulations provide that changes or modifications not expressly approved by Dell could void your authority to operate this equipment.
This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

1. This device may not cause harmful interference.
2. This device must accept any interference received, including interference that may cause undesired operation.

Class A

This equipment has been tested and found to comply with the limits for a Class A digital device pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the manufacturer's instruction manual, may cause harmful interference with radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case you will be required to correct the interference at your own expense.

Class B

This equipment has been tested and found to comply with the limits for a Class B digital device pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the manufacturer's instruction manual, may cause interference with radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, you are encouraged to try to correct the interference by one or more of the following measures:

1. Reorient or relocate the receiving antenna.
2. Increase the separation between the equipment and the receiver.
3. Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
4. Consult the dealer or an experienced radio/television technician for help.

FCC Identification Information

The following information is provided on the device or devices covered in this document in compliance with FCC regulations:

- Model number: PR04S
- Company name:
  Dell Computer Corporation
  One Dell Way
  Round Rock, Texas 78682 USA
  512-338-4400

IC Notice (Canada Only)

Most Dell computers (and other Dell digital apparatus) are classified by the Industry Canada (IC) Interference-Causing Equipment Standard #3 (ICES-003) as Class B digital devices. To determine which classification (Class A or B) applies to your computer (or other Dell digital apparatus), examine all registration labels located on the bottom, side, or the back panel of your computer (or other digital apparatus). A statement in the form of "IC Class A ICES-003" or "IC Class B ICES-003" will be located on one of these labels. Note that Industry Canada regulations provide that changes or modifications not expressly approved by Dell could void your authority to operate this equipment.

This Class B (or Class A, if so indicated on the registration label) digital apparatus meets the requirements of the Canadian Interference-Causing Equipment Regulations.

Ce présent appareil numérique de la Classe B (ou Classe A, si ainsi indiqué sur l'étiquette d'enregistrement) respecte toutes les exigences du Reglement sur le Materiel Brouilleur du Canada.
CE Notice (European Union)

Marking by the symbol CE indicates compliance of this Dell computer to the EMC Directive and the Low Voltage Directive of the European Union. Such marking is indicative that this Dell system meets the following technical standards:

- EN 55022 — "Information Technology Equipment — Radio Disturbance Characteristics — Limits and Methods of Measurement."
- EN 55024 — "Information Technology Equipment — Immunity Characteristics — Limits and Methods of Measurement."
- EN 61000-3-2 — "Electromagnetic Compatibility (EMC) - Part 3: Limits - Section 2: Limits for Harmonic Current Emissions (Equipment Input Current Up to and Including 16 A Per Phase)."
- EN 61000-3-3 — "Electromagnetic Compatibility (EMC) - Part 3: Limits - Section 3: Limitation of Voltage Fluctuations and Flicker in Low-Voltage Supply Systems for Equipment With Rated Current Up to and Including 16 A."
- EN 60950 — "Safety of Information Technology Equipment."

**NOTE:** EN 55022 emissions requirements provide for two classifications:

- Class A is for typical commercial areas.
- Class B is for typical domestic areas.

**RF INTERFERENCE WARNING:** This is a Class A product. In a domestic environment this product may cause radio frequency (RF) interference, in which case the user may be required to take adequate measures.

This Dell device is classified for use in a typical Class B domestic environment.

A "Declaration of Conformity" in accordance with the preceding directives and standards has been made and is on file at Dell Computer Corporation Products Europe BV, Limerick, Ireland.

---

CE Mark Notice

This equipment complies with the essential requirements of the European Union Directive 1999/5/EC.

---

ENERGY STAR® Compliance

Certain configurations of Dell computers comply with the requirements set forth by the Environmental Protection Agency (EPA) for energy-efficient computers. If the front panel of your computer bears the ENERGY STAR® Emblem, your original configuration complies with these requirements and all ENERGY STAR® power management features of the computer are enabled.

**NOTE:** Any Dell computer bearing the ENERGY STAR® Emblem is certified to comply with EPA ENERGY STAR® requirements as configured when shipped by Dell.
Any changes you make to this configuration (such as installing additional expansion cards or drives) may increase the computer's power consumption beyond the limits set by the EPA’s ENERGY STAR® Computers program.

**ENERGY STAR® Emblem**

The EPA’s ENERGY STAR® Computers program is a joint effort between the EPA and computer manufacturers to reduce air pollution by promoting energy-efficient computer products. The EPA estimates that use of ENERGY STAR® computer products can save computer users up to two billion dollars annually in electricity costs. In turn, this reduction in electricity usage can reduce emissions of carbon dioxide, the gas primarily responsible for the greenhouse effect, and sulfur dioxide and nitrogen oxides, the primary causes of acid rain.

You can also help reduce electricity usage and its side effects by turning off your computer when it is not in use for extended periods of time, particularly at night and on weekends.

---

**Simplified Chinese Class A Warning Notice (China Only)**

On Class A systems, the following warning will appear near the regulatory label:

**Warning:** This is a Class A product. In a domestic environment this product may cause radio interference, in which case the user may be required to take adequate measures.

声明
此为A级产品，在生活环境内，该产品可能会造成无线电干扰。
在这种情况下，可能需要用户对其干扰采取切实可行的措施。

---

**EN 55022 Compliance (Czech Republic Only)**

This device belongs to Class B devices as described in EN 55022, unless it is specifically stated that it is a Class A device on the specification label. The following applies to devices in Class A of EN 55022 (radius of protection up to 30 meters). The user of the device is obliged to take all steps necessary to remove sources of interference to telecommunications or other devices.

Pokus není na typovém štítku počítače uvedeno, že spadá do třídy A, podle EN 55022: spodá automatičky do třídy B podle EN 55022. Pro zařízení zařazené do třídy A (ochranné pasto 30m) podle EN 56022 platí následující. Dokde-li k rušení telekomunikačních nebo jiných zařízení, je uživatel povinen provést takové opatření, aby rušení odešlo.

---

**VCCI Notice (Japan Only)**

Most Dell computers are classified by the Voluntary Control Council for Interference (VCCI) as Class B information technology equipment (ITE). However, the inclusion of certain options can change the rating of some configurations to Class A. ITE, including devices, expansion cards, printers, input/output (I/O) devices, monitors, and so on, integrated into or connected to the computer should match the electromagnetic environment classification (Class A or B) of the computer.

To determine which classification applies to your computer, examine the regulatory labels/markings (see "VCCI Class A ITE Regulatory Mark" and "VCCI Class B ITE Regulatory Mark").
ITE Regulatory Mark located on the bottom, side, or back panel of your computer. Once you have determined your computer’s VCCI classification, read the appropriate VCCI notice.

Class A ITE

This is a Class A product based on the standard of the Voluntary Control Council for Interference (VCCI) for information technology equipment. If this equipment is used in a domestic environment, radio disturbance may arise. When such trouble occurs, the user may be required to take corrective actions.

VCCI Class A ITE Regulatory Mark

If the regulatory label includes the following marking, your computer is a Class A product:

Class B ITE

This is a Class B product based on the standard of the Voluntary Control Council for Interference (VCCI) for information technology equipment. If this equipment is used near a radio or television receiver in a domestic environment, it may cause radio interference. Install and use the equipment according to the instruction manual.

VCCI Class B ITE Regulatory Mark

If the regulatory label includes the following marking, your computer is a Class B product:

MIC Notice (Republic of Korea Only)

To determine which classification (Class A or B) applies to your computer (or other Dell digital device), examine the Republic of Korean Ministry of Information and Communications (MIC) registration labels located on your computer (or other Dell digital device). The MIC label may be located separately from the other regulatory marking applied to your product. Line two of the label identifies the emissions class for the product—“(A)” for Class A products or “(B)” for Class B...
products.

**NOTE:** MIC emissions requirements provide for two classifications:

- Class A devices are for business purposes.
- Class B devices are for nonbusiness purposes.

### Class A Device

<table>
<thead>
<tr>
<th>기종별</th>
<th>사용자 안내문</th>
</tr>
</thead>
<tbody>
<tr>
<td>A급 기기 (업무용 정보통신기기)</td>
<td>이 기기는 업무용으로 전자파저항등록을 한 기기로써, 만약 잘못 판매 또는 구입하였을 때에는 가정용으로 교환하시기 바랍니다.</td>
</tr>
</tbody>
</table>

Please note that this device has been approved for business purposes with regard to electromagnetic interference. If you find that this device is not suitable for your use, you may exchange it for a nonbusiness-purpose device.

### MIC Class A Regulatory Label

If the regulatory label includes the following marking, your computer is a Class A product:

1. 기기의 명칭(모델명):
2. 인증번호(A):
3. 인증받은 자의 상호:
4. 제조년월일:
5. 제조자/제조국가:

### Class B Device

<tbody>
<tr>
<td>B급 기기 (가정용 정보통신기기)</td>
<td>이 기기는 가정용으로 전자파저항등록을 한 기기로서 주거지역에서는 물론 모든 지역에서 사용할 수 있습니다.</td>
</tr>
</tbody>
</table>

Please note that this device has been approved for nonbusiness purposes and may be used in any environment, including residential areas.

### MIC Class B Regulatory Label

If the regulatory label includes the following marking, your computer is a Class B product:

1. 기기의 명칭(모델명):
2. 인증번호(B):
3. 인증받은 자의 상호:
4. 제조년월일:
5. 제조자/제조국가:
Polish Center for Testing and Certification Notice

The equipment should draw power from a socket with an attached protection circuit (a 3-prong socket). All equipment that works together (computer, monitor, printer, and so on) should have the same power supply source.

The phasing conductor of the room’s electrical installation should have a reserve short-circuit protection device in the form of a fuse with a nominal value no larger than 16 amperes (A).

To completely switch off the equipment, the power supply cable must be removed from the power supply socket, which should be located near the equipment and easily accessible.

A protection mark “B” confirms that the equipment is in compliance with the protection usage requirements of standards PN-93/T-42107 and PN-EN 55022.

Wymagania Polskiego Centrum Badan i Certyfikacji

Urządzenie powinno być zasilane z gniazda z przyłączonym obwodem ochronnym (gniazdo z kołkiem). Współpracujące ze sobą urządzenia (komputer, monitor, drukarka) powinny być zasilane z tego samego źródła.

Instalacja elektryczna pomieszczenia powinna zawierać w przewodzie fazowym rezerwową ochronę przed zwarciami, w postaci bezpiecznika o wartości znamionowej nie większej niż 16A (amperów).

W celu całkowitego wyłączenia urządzenia z sieci zasilania, należy wyjąć wtyczkę kabla zasilającego z gniazda, które powinno znajdować się w pobliżu urządzenia i być łatwo dostępne.

Jeżeli na tabliczce znamionowej umieszczono informację, że urządzenie jest klasy A, to oznacza to, że urządzenie w środowisku mieszkalnym może powodować zakłócenia radiowe. W takich przypadkach można zgłosić od jego użytkownika zastrzeżenia odpowiednich urzędów nadzorczych.

Pozostałe instrukcje bezpieczeństwa

- Nie należy używać wtyczek adapterowych lub usuwać końca obwodu ochronnego z wtyczki. Jeżeli konieczne jest użycie przedłużacza to należy użyć przedłużacza 3-chanalowego z prawidłowo połączonej przewodami ochronnymi.
- System komputerowy należy zabezpieczyć przed nagłymi, chwilowymi wzrostami lub spadkami napięcia, używając eliminatora przepięć, urządzenia dopasowującego lub bezzakłóceniowego źródła zasilania.
- Należy upewnić się, aby nic nie leżało na kablach systemu komputerowego, oraz aby kable nie były umieszczone w miejscu, gdzie można byłoby na nie nastąpić lub potykać się o nie.
- Nie należy rozwijać napojów ani innych płynów na system komputerowy.
- Nie należy wypychać żadnych przedmiotów do obwodów systemu komputerowego, gdyż może to spowodować pozór lub porażenie prądem, poprzez zwarcie elementów wewnętrznych.
- System komputerowy powinien znajdować się z dala od grzejników i źródeł ciepła. Ponadto, nie należy blokować obwodów wentylacyjnych. Należy unikać kładzenia luźnych papierów pod komputer oraz umieszczania komputera w ciasnym miejscu bez możliwości cyrkulacji powietrza wokół niego.
BSMI Notice (Taiwan Only)

If you find a ☀️ or ⚠️ mark on the regulatory label on the bottom, side, or back panel of your computer, the following section is applicable:

NOM Information (Mexico Only)
