

Touchscreen Gestures

The touchscreen of your computer allows you to perform actions like zoom and scroll using gestures. These gestures are defined in the operating system and used in touchscreen enabled applications.

NOTE: Some of the gestures are application-specific and may not work outside the application.

Zoom

Allows you to increase or decrease the magnification of the screen content by moving two fingers apart or bringing them closer together on the screen.

To zoom in: Move two fingers apart to enlarge the view of the active window.

To zoom out: Move two fingers close together to reduce the view of the active window.

Dwell

Allows you to access additional information by simulating a right-click.

Press and hold a finger on the touchscreen to open the context-sensitive (right-click) menu.

Flick

Allows you to flip content forward or backward, based on the direction of the flick.

Move a finger quickly in the desired direction to flip through content in the active window like pages in a book. Flick also works vertically when navigating content such as images or songs in a playlist.

Rotate

Allows you to rotate the active content using two fingers.

Keeping a finger or thumb in place, move the other finger in an arced direction right or left. You can also rotate the active content by moving both the fingers in a circular motion.

Scroll

Allows you to scroll through content. The scroll features include:

- 1 Pan** — Allows you to move the focus on the selected object when the entire object is not visible.

Move two fingers in the desired direction to pan-scroll the selected object.

- 2 Scroll Vertical** — Allows you to scroll up or scroll down on the active window.

Move a finger up or down to activate vertical scrolling.

- 3 Scroll Horizontal** — Allows you to scroll left or right on the active window.

Move a finger to the left or right to activate horizontal scrolling.
