Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.

Version	Description
9.7(0.0)	Introduced on the S6000–ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.5.1.0	Added support for 4-port 40G line cards on the E-Series.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.2.1.1	Introduced on the E-Series.

lacp long-timeout

Configure a long timeout period (30 seconds) for an LACP session.

Syntax `lacp long-timeout`
 To reset the timeout period to a short timeout (1 second), use the `no lacp long-timeout` command.

Defaults **1 second**

Command Modes INTERFACE (conf-if-po-number)

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100–ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100–ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000–ON.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.2.1.1	Introduced on the E-Series.

Usage Information	This command applies to dynamic port-channel interfaces only. When applied on a static port-channel, this command has no effect.
Related Commands	<ul style="list-style-type: none"> • show lacp — display the LACP configuration.

lacp port-priority

To influence which ports will be put in Standby mode when there is a hardware limitation that prevents all compatible ports from aggregating, configure the port priority.

Syntax	<code>lacp port-priority <i>priority-value</i></code>	
	To return to the default setting, use the <code>no lacp port-priority <i>priority-value</i></code> command.	
Parameters	<i>priority-value</i>	Enter the port-priority value. The higher the value number, the lower the priority. The range is from 1 to 65535. The default is 32768 .
Defaults	32768	
Command Modes	INTERFACE	
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> .

	6.2.1.1	Introduced on the E-Series.

port-channel mode

Configure the LACP port channel mode.

Syntax	<code>port-channel <i>number</i> mode [active] [passive] [off]</code>	
Parameters	<i>number</i>	Enter the keywords <code>number</code> then a number. The range is from 1 to 512.
	active	Enter the keyword <code>active</code> to set the mode to the active state.  NOTE: LACP modes are defined in <i>Usage Information</i> .
	passive	Enter the keyword <code>passive</code> to set the mode to the passive state.  NOTE: LACP modes are defined in <i>Usage Information</i> .
	off	Enter the keyword <code>off</code> to set the mode to the off state.  NOTE: LACP modes are defined in <i>Usage Information</i> .
Defaults	off	
Command Modes	INTERFACE	

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.11.1	Introduced on the Z9000.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.2.1.1	Introduced on the E-Series.

Usage Information

LACP Modes

Mode	Function
active	An interface is in an active negotiating state in this mode. LACP runs on any link configured in the active state and also automatically initiates negotiation with other ports by initiating LACP packets.
passive	An interface is not in an active negotiating state in this mode. LACP runs on any link configured in the passive state. Ports in a passive state respond to negotiation requests from other ports that are in active states. Ports in a passive state respond to LACP packets
off	An interface cannot be part of a dynamic port channel in off mode. LACP does not run on a port configured in off mode.

port-channel-protocol lacp

Enable LACP on any LAN port.

Syntax `port-channel-protocol lacp`

To disable LACP on a LAN port, use the `no port-channel-protocol lacp` command.

Command Modes INTERFACE

MAC Addressing Commands

The following commands are related to configuring, managing, and viewing MAC addresses.

clear mac-address-table

Clear the MAC address table of all MAC address learned dynamically.

Syntax `clear mac-address-table {dynamic | sticky }{address mac-address | all | interface interface | vlan vlan-id}`

Parameters	dynamic	Enter the keyword <code>dynamic</code> to specify dynamically-learned MAC addresses.
	sticky	Enter the keyword <code>sticky</code> to specify sticky MAC addresses.
	address <i>mac-address</i>	Enter the keyword <code>address</code> then a MAC address in nn:nn:nn:nn:nn:nn format.
	all	Enter the keyword <code>all</code> to delete all MAC address entries in the MAC address table.
	interface <i>interface</i>	Enter the following keywords and slot/port or number information: <ul style="list-style-type: none"> • For a Port Channel interface, enter the keywords <code>port-channel</code> then a number. • For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. • For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information.
	vlan <i>vlan-id</i>	Enter the keyword <code>vlan</code> then a VLAN ID number from 1 to 4094.

Command Modes EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.12.0	Added support for sticky MAC addresses.

Version	Description
8.3.11.1	Introduced on the Z9000.
8.5.1.0	Added support for 4-port 40G line cards on the E-Series.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

mac-address-table aging-time

Specify an aging time for MAC addresses to remove from the MAC address table.

Syntax `mac-address-table aging-time seconds`

Parameters **seconds** Enter either zero (0) or a number as the number of seconds before MAC addresses are relearned. To disable aging of the MAC address table, enter 0. The range is from 10 to 1000000. The default is **1800 seconds**.

Defaults **1800 seconds**

Command Modes CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
8.3.1.0	On the E-Series, available in INTERFACE VLAN context, reduced the minimum aging time in the INTERFACE VLAN context from 10 seconds to 1 second.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre-6.2.1.1	Introduced on the E-Series.

Related Commands

- [mac learning-limit](#) — set the MAC address learning limits for a selected interface.
- [show mac-address-table aging-time](#) — display the MAC aging time.

mac-address-table aging-time

Specify an aging time for MAC addresses to remove from the MAC address table.

Syntax	<code>mac-address-table aging-time seconds</code>	
Parameters	seconds	Enter either zero (0) or a number as the number of seconds before MAC addresses are released. To disable aging of the MAC address table, enter 0. The range is from 10 to 1000000. The default is 1800 seconds .
Defaults	1800 seconds	
Command Modes	CONFIGURATION

Related Commands	<ul style="list-style-type: none">• mac learning-limit — set the MAC address learning limits for a selected interface.• show mac-address-table aging-time — display the MAC aging time.	

mac-address-table static

Associate specific MAC or hardware addresses to an interface and VLANs.

Z9500

Syntax	<code>mac-address-table static mac-address {multicast vlan vlan-id output-range interface}{output interface vlan vlan-id}</code>
---------------	--

To remove a MAC address, use the `no mac-address-table static mac-address output interface vlan vlan-id` command.

Parameters

mac-address	Enter the 48-bit hexadecimal address in nn:nn:nn:nn:nn:nn format.
multicast	Enter a vlan port to where L2 multicast MAC traffic is forwarded.  NOTE: Use this option if you want multicast functionality in an L2 VLAN without IGMP protocols.
output interface	For a unicast MAC address, enter the keyword <code>output</code> then one of the following interfaces for which traffic is forwarded: <ul style="list-style-type: none">• For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information.• For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information.• For a port channel interface, enter the keywords <code>port-channel</code> then a number.
output-range interface	For a multicast MAC address, enter the keyword <code>output-range</code> then one of the following interfaces to indicate a range of ports for which traffic is forwarded: <ul style="list-style-type: none">• For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information.• For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information.• For a port channel interface, enter the keywords <code>port-channel</code> then a number.
vlan vlan-id	Enter the keyword <code>vlan</code> then a VLAN ID number from 1 to 4094.

Defaults

Not configured.

8.3.11.1	Introduced on the Z9000.
7.6.1.0	Introduced on the C-Series.
7.4.1.0	Introduced on the E-Series.
8.3.7.0	Introduced on the S4810.
7.7.1.0	Introduced on the S-Series.

Usage Information	For more information about using this command, see <i>NIC Teaming</i> in the Layer 2 section of the <i>Dell EMC Networking OS Configuration Guide</i> .
--------------------------	---

mac learning-limit

Limit the maximum number of MAC addresses (static + dynamic) learned on a selected interface.

Syntax `mac learning-limit address_limit [vlan vlan-id] [station-move-violation [dynamic]] [dynamic [no-station-move| station-move]]`

Parameters

- address_limit** Enter the maximum number of MAC addresses that can be learned on the interface. The range is from 1 to 1000000.
- vlan vlan-id** Enter the keyword then the VLAN ID. The range is from 1 to 4094.
- dynamic** (OPTIONAL) Enter the keyword `dynamic` to allow aging of MACs even though a learning limit is configured.
- station-move-violation** (OPTIONAL) Enter the keywords `station-move` to allow a station move on learned MAC addresses.

Defaults

- On S-Series, the default behavior is dynamic.

 **NOTE:** “Static” means manually entered addresses, which do not age.

9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.12.0	Deprecated the <code>no-station-move</code> command (replaced by the <code>mac-learning-limit mac-address-sticky</code> command).
8.3.7.0	Introduced on the S4810.
8.3.1.0	Added the <code>vlan</code> option on the E-Series.
8.2.1.0	Introduced on the S-Series.
7.7.1.0	Introduced on the C-Series. Added the <code>station-move</code> option.
6.5.1.0	Added support for MAC Learning-Limit on the LAG.

Usage Information This command and its options are supported on physical interfaces, static LAGs, LACP LAGs, and VLANs. If you do not specify the `vlan` option, the MAC address counters are not VLAN-based. That is, the sum of the addresses learned on all VLANs (not having any learning limit configuration) is counted against the MAC learning limit.

MAC Learning Limit violation logs and actions are not available on a per-VLAN basis.

With the keyword `no-station-move` option, MAC addresses learned through this feature on the selected interface persist on a per-VLAN basis, even if received on another interface. Enabling or disabling this option has no effect on already learned MAC addresses.

After the MAC address learning limit is reached, the MAC addresses do not age out unless you add the `dynamic` option. To clear statistics on MAC address learning, use the `clear counters` command with the `learning-limit` parameter.

NOTE: If you configure this command on an interface in a routed VLAN, and after the MAC addresses learned reaches the limit set in the `mac learning-limit` command, IP protocols are affected. For example, VRRP sets multiple VRRP Masters and OSPF may not come up.

When a channel member is added to a port-channel and there is not enough ACL CAM space, the MAC limit functionality on that port-channel is undefined. When this occurs, un-configure the existing configuration first and then reapply the limit with a lower value.

Related Commands

- [mac learning-limit mac-address-sticky](#) — replace deprecated `no-station-move` parameter.
- [show mac learning-limit](#) — display MAC learning-limit configuration.

mac learning-limit learn-limit-violation

Configure an action for a MAC address learning-limit violation.

Syntax

```
mac learning-limit learn-limit-violation {log | shutdown}
```

To return to the default, use the `no mac learning-limit learn-limit-violation {log | shutdown}` command.

Parameters

- log** Enter the keyword `log` to generate a syslog message on a learning-limit violation.
- shutdown** Enter the keyword `shutdown` to shut down the port on a learning-limit violation.

Defaults

None

Command Modes

INTERFACE (conf-if-interface-slot/port)

9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.

Version	Description
8.2.1.0	Introduced on the S-Series.
7.8.1.0	Introduced on the C-Series.
7.5.1.0	Introduced on the E-Series.

Usage Information

This command is supported on physical interfaces, static LAGs, and LACP LAGs.

Related Commands

- [show mac learning-limit](#) — display details of the mac learning-limit.

mac learning-limit mac-address-sticky

Maintain the dynamically learned mac addresses as sticky MAC addresses on the selected port.

Syntax

`mac learning-limit mac-address-sticky`

To convert the sticky MAC addresses to dynamic MAC addresses, use the `no mac learning-limit` command.

Parameters

mac-address-sticky Configures the dynamic MAC addresses as sticky on an interface.

Defaults

None

Command Modes

INTERFACE

Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.12.0	Introduced on the S4810.

Usage Information

If you configure `mac-learn-limit` and the sticky MAC feature is enabled, dynamically learned MAC addresses are converted to sticky for that port. Any new MAC address that is learned also becomes sticky for that port.

Related Commands

- [show mac learning-limit](#) — display the details of the mac learning-limit.

mac learning-limit station-move-violation

Specify the actions for a station move violation.

Syntax `mac learning-limit station-move-violation {log | shutdown-both | shutdown-offending | shutdown-original}`

To disable a configuration, use the `no mac learning-limit station-move-violation` command, then the configured keyword.

Parameters	log	Enter the keyword <code>log</code> to generate a syslog message on a station move violation.
	shutdown-both	Enter the keyword <code>shutdown</code> to shut down both the original and offending interface and generate a syslog message.
	shutdown-offending	Enter the keywords <code>shutdown-offending</code> to shut down the offending interface and generate a syslog message.
	shutdown-original	Enter the keywords <code>shutdown-original</code> to shut down the original interface and generate a syslog message.

Defaults None

show cam mac linecard (dynamic or static)

Display the CAM size and the portions allocated for MAC addresses and for MAC ACLs.

Syntax `show cam mac linecard slot port-set port-pipe [address mac_addr | dynamic | interface interface | static | vlan vlan-id]`

Parameters

linecard slot	(REQUIRED) Enter the keyword <code>linecard</code> then a slot number to select the linecard for which to gather information.
port-set port-pipe	(REQUIRED) Enter the keywords <code>port-set</code> then a Port-Pipe number to select the Port-Pipe for which to gather information. The range is from 0 or 1.
address mac-addr	(OPTIONAL) Enter the keyword <code>address</code> then a MAC address in the <code>nn:nn:nn:nn:nn:nn</code> format to display information on that MAC address.
dynamic	(OPTIONAL) Enter the keyword <code>dynamic</code> to display only those MAC addresses the switch dynamically learns.

- interface** (OPTIONAL) Enter the keyword `interface` then the interface type, slot and port information:
- For a port channel interface, enter the keywords `port-channel` then a number.
 - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
 - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- static** (OPTIONAL) Enter the keyword `static` to display only those MAC addresses specifically configured on the switch.
- vlan *vlan-id*** (OPTIONAL) Enter the keyword `vlan` then the VLAN ID to display the MAC address assigned to the VLAN. The range is 1 to 4094.

- Command Modes**
- EXEC
 - EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

show mac-address-table

Display the MAC address table.

Syntax `show mac-address-table [address mac-address | interface interface | vlan vlan-id] [aging-time] [dynamic | static] [count [vlan vlan-id] [interface interface-type [slot [/port]]]]`

Parameters	
address <i>mac-address</i>	(OPTIONAL) Enter the keyword <code>address</code> then a MAC address in the <code>nn:nn:nn:nn:nn:nn</code> format to display information on that MAC address.
dynamic	(OPTIONAL) Enter the keyword <code>dynamic</code> to display only those MAC addresses the switch dynamically learns. Optionally, you can also add one of these combinations: <code>address/mac-address</code> , <code>interface/interface</code> , or <code>vlan vlan-id</code> .
static	(OPTIONAL) Enter the keyword <code>static</code> to display only those MAC addresses specifically configured on the switch. Optionally, you can also add one of these combinations: <code>address/mac-address</code> , <code>interface/interface</code> , or <code>vlan vlan-id</code> .
aging-time	Enter the keyword <code>aging-time</code> to display only aging-time information.
interface <i>interface</i>	(OPTIONAL) Enter the keyword <code>interface</code> and the interface information: <ul style="list-style-type: none">• For a port channel interface, enter the keywords <code>port-channel</code> then a number.• For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information.• For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information.
interface <i>interface-type</i>	(OPTIONAL) Instead of entering the keyword <code>interface</code> then the interface type, slot/port information, as above, you can enter the interface type, then just a slot number.
vlan <i>vlan-id</i>	(OPTIONAL) Enter the keyword <code>vlan</code> then the VLAN ID to display the MAC address assigned to the VLAN. The range is 1 to 4094.
count	(OPTIONAL) Enter the keyword <code>count</code> , then optionally, by an interface or VLAN ID, to display total or interface-specific static addresses, dynamic addresses, and MAC addresses in use.

- EXEC
 - EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.

Version	Description
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.12.0	Updated the output.
8.5.1.0	Added support for 4-port 40G line cards on the E-Series.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre-6.2.1.1	Introduced on the E-Series.

Usage Information

The following describes the `show mac-address-table` command shown in the following example.

Column Heading	Description
VlanId	Displays the VLAN ID number.
Mac Address	Displays the MAC address in nn:nn:nn:nn:nn:nn format.
Type	Lists whether the MAC address was manually configured (Static), learned dynamically (Dynamic), or associated with a specific port (Sticky).
Interface	Displays the interface type and slot/port information. The following abbreviations describe the interface types: <ul style="list-style-type: none"> Po = port channel Te = ten-gigabit Ethernet Fo = forty-gigabit Ethernet
State	Lists if the MAC address is in use (Active) or not in use (Inactive).

Example

```
DellEMC(conf)# do show mac-address-table
Codes: *N - VLT Peer Synced MAC
VlanId   Mac Address           Type           Interface      State
2        00:00:00:00:00:01     Dynamic (N)    Po 128         Active
2        00:00:00:00:00:02     Dynamic (N)    Po 10          Active
2        00:00:00:00:00:03     Dynamic        Po 100         Active
2        00:00:00:00:00:04     Dynamic        Po 10          Active
```

Usage Information

The following describes the `show mac-address-table count` command shown in the following example.

Line Beginning With	Description
MAC Entries...	Displays the number of MAC entries learned per VLAN.
Dynamic Address...	Lists the number of dynamically learned MAC addresses.
Static Address...	Lists the number of user-defined MAC addresses.
Total MAC...	Lists the total number of MAC addresses the switch uses.

Example (Count)

```
DellEMC# show mac-address-table count
MAC Entries for all vlans :
Dynamic Address Count :      110
Static Address (User-defined) Count : 0
Sticky Address Count :      0
```

```
Total Synced Mac from Peer(N):      100
Total MAC Addresses in Use:         110
DellEMC#
```

Related Commands

- [show mac-address-table aging-time](#) — display MAC aging time.

show mac-address-table aging-time

Display the aging times assigned to the MAC addresses on the switch.

Syntax `show mac-address-table aging-time [vlan vlan-id]`

Parameters **vlan *vlan-id*** (OPTIONAL) Enter the keyword `vlan` then the VLAN ID to display the MAC address assigned to the VLAN. The range is from 1 to 4094.

Command Modes

- EXEC
- EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

7.5.1.0	Added support for the <code>violate-action</code> and <code>detail</code> options.
6.5.1.0	Added support for Port Channel.

Example

Virtual LAN (VLAN) Commands

The following commands configure and monitor virtual LANs (VLANs). VLANs are a virtual interface and use many of the same commands as physical interfaces.

You can configure an IP address and Layer 3 protocols on a VLAN called Inter-VLAN routing. FTP, TFTP, ACLs and SNMP are not supported on a VLAN.

Occasionally, while sending broadcast traffic over multiple Layer 3 VLANs, the VRRP state of a VLAN interface may continually switch between Master and Backup.

NOTE: For more information, refer to [VLAN Stacking](#) and VLAN-related commands, such as [portmode hybrid](#) in the [Interfaces](#) chapter.

default vlan-id

Specify a VLAN as the Default VLAN.

Syntax `default vlan-id vlan-id`

To remove the default VLAN status from a VLAN and VLAN 1 does not exist, use the `no default vlan-id vlan-id` syntax.

Parameters ***vlan-id*** Enter the VLAN ID number of the VLAN to become the new Default VLAN. The range is from 1 to 4094. The default is **1**.

Defaults Default VLAN is VLAN **1**.

Command Modes CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre-6.2.1.1	Introduced on the E-Series.

Usage Information To return VLAN 1 as the Default VLAN, use this command syntax (`default-vlan-id 1`).

The Default VLAN contains only untagged interfaces.

**Related
Commands**

- [interface vlan](#) — configure a VLAN.

default-vlan disable

Disable the default VLAN so that all switchports are placed in the Null VLAN until they are explicitly configured as a member of another VLAN.

Defaults Enabled.

Command Modes CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
8.3.1.0	Introduced

Usage Information The `no default vlan disable` command is not listed in the running-configuration, but when the default VLAN is disabled, `default-vlan disable` is listed in the running-configuration.

name

Assign a name to the VLAN.

Syntax `name vlan-name`

To remove the name from the VLAN, use the `no name` command.

Parameters ***vlan-name*** Enter up to 32 characters as the name of the VLAN.

Defaults Not configured.

Command Modes INTERFACE VLAN

Command History

9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre-6.2.1.1	Introduced on the E-Series.

Usage Information

To display information about a named VLAN, enter the `show vlan` command with the name parameter or the `show interfaces description` command.

Related Commands

- [interface vlan](#) — configure a VLAN.
- [show vlan](#) — display the current VLAN configurations on the switch.

show config

Display the current configuration of the selected VLAN.

Syntax

```
show config
```

Command Modes

```
INTERFACE VLAN
```

Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.

7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre-6.2.1.1	Introduced on the E-Series.

Example

```
DellEMC(conf-if-vl-100)# show config
!
interface Vlan 100
  no ip address
  no shutdown
DellEMC(conf-if-vl-100)#
```

show vlan

Display the current VLAN configurations on the switch.

Syntax `show vlan [brief | id vlan-id | name vlan-name]`

Parameters

brief	(OPTIONAL) Enter the keyword <code>brief</code> to display the following information: <ul style="list-style-type: none"> • VLAN ID • VLAN name (left blank if none is configured) • Spanning Tree Group ID • MAC address aging time • IP address
id <i>vlan-id</i>	(OPTIONAL) Enter the keyword <code>id</code> then a number from 1 to 4094. Only information on the VLAN specified is displayed.
name <i>vlan-name</i>	(OPTIONAL) Enter the keyword <code>name</code> then the name configured for the VLAN. Only information on the VLAN named is displayed.

9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.

Version	Description
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
9.1.(0.0)	Updated to support OpenFlow.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Augmented to display PVLAN data for the C-Series and S-Series and revised the output to include the Description field to display a user-entered VLAN description.
7.6.1.0	Introduced on the S-Series and revised the output to display Native VLAN.
7.5.1.0	Introduced on the C-Series.
pre-6.2.1.1	Introduced on the E-Series.

Usage Information

The following describes the `show vlan` command shown in the following example.

Column Heading	Description
(Column 1 — no heading)	<ul style="list-style-type: none"> • asterisk symbol (*) = Default VLAN • G = GVRP VLAN • P = primary VLAN • C = community VLAN • I = isolated VLAN • O = OpenFlow
NUM	Displays existing VLAN IDs.
Status	Displays the word <i>Inactive</i> for inactive VLANs and the word <i>Active</i> for active VLANs.
Q	<ul style="list-style-type: none"> • Displays G for GVRP tagged • M for member of a VLAN-Stack VLAN • T for tagged interface • U for untagged interface • x (not capitalized x) for Dot1x untagged • X (capitalized X) for Dot1x tagged • o (not capitalized o) for OpenFlow untagged • O (capitalized O) for OpenFlow tagged • H for VSN tagged • i (not capitalized i) for Internal untagged • I (capitalized I) for Internal tagged • v (not capitalized v) for VLT untagged • V (capitalized V) for VLT tagged
Ports	Displays the type, slot, and port information. <ul style="list-style-type: none"> • Po = port channel • Te = ten-gigabit Ethernet • Fo = forty-gigabit Ethernet

Example

```
DellEMC# show vlan

Codes: * - Default VLAN, G - GVRP VLANs, P - Primary, C - Community, I -
Isolated
Q: U - Untagged, T - Tagged, O - Openflow
   x - Dot1x untagged, X - Dot1x tagged
```

```

o - OpenFlow untagged, O - OpenFlow tagged
G - GVRP tagged, M - Vlan-stack
i - Internal untagged, I - Internal tagged, v - VLT untagged, V - VLT
tagged
NUM  Status      Description  Q Ports
*   1   Inactive
   2   Active           U Po1(Te 1/1)
                                T Po20(Te 1/6), Te 1/25
                                T Te 1/7
   3   Active T Po20(Te 1/6)
                                T Te 1/7
                                U Te 1/1
   4   Active U Po2(Te 1/2)
                                T Po20(Te 1/6)
                                T Te 1/7
   5   Active T Po20(Te 1/6)
                                T Te 1/7
                                U Te 1/3
   6   Active U Po3(Te 1/4)
                                T Po20(Te 1/6)
                                T Te 1/7
   7   Active T Po20(Te 1/6)
                                T Te 1/7
                                U Te 1/5
P 100  Active T Po1(Te 1/1)
                                T Te 1/2
C 101  Inactive T Te 1/3
I 102  Inactive T Te 1/4
DelleMC#

```

Example (VLAN ID)

```

DelleMC# show vlan id 40

Codes: * - Default VLAN, G - GVRP VLANs
Q: U - Untagged, T - Tagged
   x - Dot1x untagged, X - Dot1x tagged
   G - GVRP tagged, M - Vlan-stack

NUM  Status Description Q Ports
  40  Active           M Te 1/47

DelleMC# show vlan id 41

Codes: * - Default VLAN, G - GVRP VLANs
Q: U - Untagged, T - Tagged
   x - Dot1x untagged, X - Dot1x tagged
   G - GVRP tagged, M - Vlan-stack

NUM  Status Description Q Ports
  41  Active           T Te 1/47

DelleMC# show vlan id 42

Codes: * - Default VLAN, G - GVRP VLANs
Q: U - Untagged, T - Tagged
   x - Dot1x untagged, X - Dot1x tagged
   G - GVRP tagged, M - Vlan-stack

NUM  Status Description Q Ports
  42  Active           U Te 1/47
DelleMC#

```

Example (Brief)

```

DelleMC# show vlan br
VLAN  Name  STG  MAC Aging  IP Address
-----
1      0     1800 unassigned
2      0     1800 2.2.2.2/24
3      0     1800 3.3.3.2/24
DelleMC#

```

Example (Name)

```
Dellconf)# interface vlan 222
DellEMC(conf-if-vl-222)#name test
DellEMC(conf-if-vl-222)#do show vlan name test

Codes: * - Default VLAN, G - GVRP VLANs
Q: U - Untagged, T - Tagged
   x - Dot1x untagged, X - Dot1x tagged
   G - GVRP tagged, M - Vlan-stack

      NUM  Status Description  Q Ports
      222  Inactive                U Te 1/22
DellEMC(conf-if-vl-222)#
```

Example (OpenFlow instance)

	NUM	Status	Description	Q	Ports
*	1	Inactive			
	3	Inactive			
O	6	Inactive			
O	8	Inactive			
O	12	Inactive		O	Te 1/10

Related Commands

- [vlan-stack compatible](#) — enable the Stackable VLAN feature on the selected VLAN.
- [interface vlan](#) — configure a VLAN.

tagged

Add a Layer 2 interface to a VLAN as a tagged interface.

Z9500

Syntax

```
tagged interface
```

To remove a tagged interface from a VLAN, use the `no tagged interface` command.

Parameters

interface

Enter the following keywords and the interface information:

- For a port channel interface, enter the keywords `port-channel` then a number.
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

Defaults

All interfaces in Layer 2 mode are untagged.

Command Modes

INTERFACE VLAN

Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version

Description

9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.

Version	Description
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.5.1.0	Added support for 4-port 40G line cards on the E-Series.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre-6.2.1.1	Introduced on the E-Series.

Usage Information

When you use the `no tagged` command, the interface is automatically placed in the Default VLAN as an untagged interface unless the interface is a member of another VLAN. If the interface belongs to several VLANs, remove it from all VLANs to change it to an untagged interface.

Tagged interfaces can belong to multiple VLANs, while untagged interfaces can only belong to one VLAN at a time.

Related Commands

- [interface vlan](#) — configure a VLAN.
- [untagged](#) — specify which interfaces in a VLAN are untagged.

track ip

Track the Layer 3 operational state of a Layer 3 VLAN, using a subset of the VLAN member interfaces.

Z9500

Syntax

```
track ip interface
```

To remove the tracking feature from the VLAN, use the `no track ip interface` command.

Parameters

<i>interface</i>	Description
	Enter the following keywords and the interface information:
	<ul style="list-style-type: none"> • For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. • For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information. • For a port channel interface, enter the keywords <code>port-channel</code> then a number.

Defaults

Not configured.

Command Modes

INTERFACE VLAN

Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.

Version	Description
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.5.1.0	Added support for 4-port 40G line cards on the E-Series.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre-6.2.1.1	Introduced on the E-Series.

Usage Information

When this command is configured, the VLAN is operationally UP if any of the interfaces specified in the `track ip` command are operationally UP, and the VLAN is operationally DOWN if none of the tracking interfaces are operationally UP.

If the `track ip` command is not configured, the VLAN's Layer 3 operational state depends on all the members of the VLAN.

The Layer 2 state of the VLAN, and the Layer 2 traffic, is not affected by the `track ip` command configuration.

Related Commands

- [interface vlan](#) — configure a VLAN.
- [tagged](#) — specify which interfaces in a VLAN are tagged.

untagged

Add a Layer 2 interface to a VLAN as an untagged interface.

Z9500

Syntax

`untagged interface`

To remove an untagged interface from a VLAN, use the `no untagged interface` command.

Parameters

interface

Enter the following keywords and the interface information:

- For a port channel interface, enter the keywords `port-channel` then a number.
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

Defaults

All interfaces in Layer 2 mode are untagged.

Command Modes

9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.5.1.0	Added support for 4-port 40G line cards on the E-Series.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre-6.2.1.1	Introduced on the E-Series.

Usage Information

Untagged interfaces can only belong to one VLAN.

In the Default VLAN, you cannot use the `no untagged interface` command. To remove an untagged interface from all VLANs, including the Default VLAN, enter INTERFACE mode and use the `no switchport` command.

Related Commands

- [interface vlan](#) — configure a VLAN.
- [tagged](#) — specify which interfaces in a VLAN are tagged.

Far-End Failure Detection (FEFD)

The Dell EMC Networking operating software supports far-end failure detection (FEFD) on the Ethernet interfaces of the platform.

The FEFD feature detects and reports far-end link failures.

- FEFD is not supported on the Management interface.
- During an RPM failover, FEFD is operationally disabled for approximately 8 to 10 seconds.
- By default, FEFD is disabled.

debug fefd

Enable debugging of FEFD.

Syntax

```
debug fefd {events | packets} [interface]
```

To disable debugging of FEFD, use the `no debug fefd {events | packets} [interface]` command.

Parameters

- | | |
|----------------|--|
| events | Enter the keyword <code>events</code> to enable debugging of FEFD state changes. |
| packets | Enter the keyword <code>packets</code> to enable debugging of FEFD to view information on packets sent and received. |

interface

(OPTIONAL) Enter the following keywords and the interface information:

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

Command Modes EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

8.3.12.0	Introduced on the S4810.

Legacy E-Series command.

- Related Commands**
- [fefd](#) — enable far-end failure detection on an interface.
 - [fefd reset](#) — enable FEFD globally on the system.

fefd

Enable Far-End Failure Detection on an interface, set the FEFD interval, or select the FEFD mode.

Syntax `fefd {disable|interval|mode {aggressive|normal}}`

Parameters

disable	Enter the keyword disable to disable FEFD for the specified interface.
interval	Enter the keyword interval , followed by a value to specify the FEFD interval in seconds. Range is from 3 to 300. Default is 15.
mode	Enter the keyword mode followed by the mode type to specify the FEFD mode. <ul style="list-style-type: none"> • normal: Change the link state to “unknown” when a far-end failure is detected by the software on that interface. When the interface is placed in an “unknown” state, the software brings down the line protocol. • aggressive: Change the link state to “error-disabled” when a far-end failure is detected by the software on that interface. When an interface is placed in an “error-disabled” state, you must enter the <code>fefd reset</code> command to reset the interface state. Range is normal or aggressive. Default is normal.

Defaults Disabled.

Command Modes INTERFACE

Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.12.0	Introduced on the S4810.

Usage Information

When you enter `no fefd` for an interface and `fefd-global`, FEFD is enabled on the interface because the `no fefd` command is not retained in the configuration file. To keep the interface FEFD disabled when the global configuration changes, use the `fefd reset` command.

Related Commands

- [fefd disable](#) — disable far-end failure detection on an interface.
- [fefd reset](#) — enable FEFD globally on the system.
- [fefd mode](#) — change FEFD mode on an interface.

fefd disable

Disable FEFD on an interface only. This command overrides the `fefd reset` command for the interface.

Syntax

```
fefd disable
```

To re-enable FEFD on an interface, use the `no fefd disable` command.

Defaults

Not configured.

8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
Legacy E-Series command.	

Usage Information

`FEFD disable` command on the interface prevents the interface from running FEFD when FEFD is enabled globally.

Related Commands

- [fefd reset](#) — clear an interface in Err-disabled state. It doesn't work until the interface is in err-disabled state.
- [fefd mode](#) — change FEFD mode on an interface.

fefd interval

Set an interval between control packets.

Syntax

`fefd interval seconds`

To return to the default value, use the `no fefd interval` command.

Parameters

seconds Enter a number as the time between FEFD control packets. The range is from 3 to 255 seconds. The default is **15 seconds**.

Defaults

15 seconds

Command Modes

INTERFACE

Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
Legacy E-Series command.	

Usage Information

You can set up the interval between control packets using the `fefd interval` command.

Related Commands

- [fefd](#) — enable far-end failure detection.

fefd mode

Change the FEFD mode on an interface.

Syntax `fefd mode {normal | aggressive}`

To return the FEFD mode to the default of normal, use the `no fefd mode` command.

Parameters

normal	(OPTIONAL) Enter the keyword <code>normal</code> to change the link state to “unknown” when a far-end failure the software detects on that interface. When the interface is placed in “unknown” state, the software brings down the line protocol.
aggressive	(OPTIONAL) Enter the keyword <code>aggressive</code> to change the link state to “error-disabled” when a far-end failure the software detects on that interface. When an interface is placed in “error-disabled” state, enter the <code>fefd reset</code> command to reset the interface state.

Defaults Normal

8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.

Legacy E-Series command.

Related Commands

- [fefd](#) — enable far-end failure detection.
- [fefd-global](#) — enable FEFD globally on the system.

fefd-global

Enable FEFD globally on the system.

Syntax

```
fefd-global [interval seconds][mode {normal | aggressive}]
```

To disable FEFD globally, use the `no fefd-global [mode {normal | aggressive}]` command.

Parameters

interval seconds	Enter the keyword <code>interval</code> followed by the number of seconds to wait between FEFD control packets. Range is from 3 to 300 seconds. Default is 15 seconds.
normal	(OPTIONAL) Enter the keywords <code>mode normal</code> to change the link state to “unknown” when a far-end failure the software detects on that interface. When the interface is placed in “unknown” state, the software brings down the line protocol. The default is Normal mode .
aggressive	(OPTIONAL) Enter the keywords <code>mode aggressive</code> to change the link state to “error-disabled” when a far-end failure the software detects on that interface. When an interface is placed in “error-disabled” state, t enter the <code>fefd reset</code> command to reset the interface state.

Defaults

Disabled.

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.

8.3.11.1	Introduced on the Z9000.

Version	Description
8.3.12.0	Introduced on the S4810.

Legacy E-Series command.

Usage Information

If you enter only the `fefd-global` syntax, the mode is normal and the default interval is 15 seconds. If you disable FEFD globally (`no fefd-global`), the system does not remove the FEFD interface configuration.

Related Commands

- [fefd](#) — enable far-end failure detection.
- [fefd-global interval](#) — configure an interval between FEFD control packets.
- [show fefd](#) — display the FEFD command output.

show fefd

View FEFD status globally or on a specific interface.

Syntax `show fefd [interface]`

Parameters *interface* (OPTIONAL) Enter the following keywords and the interface information:

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

Command Modes

8.3.11.1	Introduced on the Z9000.
8.3.12.0	Introduced on the S4810.

Legacy E-Series command.

Usage Information

The following describes the `show fefd` command shown in the following example.

Field	Description
Interface	Displays the interfaces type and number.
Mode	Displays the mode (aggressive or normal) or NA if the interface contains <code>fefd reset</code> in its configuration.
Interval	Displays the interval between FEFD packets.
State	Displays the state of the interface and can be one of the following: <ul style="list-style-type: none"> • bi-directional (interface is up, connected and hearing neighbor's echoes). • err-disabled (only found when FEFD mode is aggressive and when the interface has not hearing its neighbor's echoes for three times the message interval. To reset an interface in this state, use the <code>fefd reset</code> command.) • unknown (only found when FEFD mode is normal). • locally disabled (interface contains the <code>fefd reset</code> command in its configuration). • Admin Shutdown (interface is disabled with the <code>shutdown</code> command).

Example

```
DelleMC# show fefd
FEFD is globally 'ON', interval is 10 seconds, mode is 'Aggressive'.

INTERFACE MODE          INTERVAL  STATE
              (second)
Te 5/1    Aggressive    10       Admin Shutdown
Te 5/2    Aggressive    10       Admin Shutdown
Te 5/3    Aggressive    10       Admin Shutdown
Te 5/4    Aggressive    10       Admin Shutdown
Te 5/5    Aggressive    10       Admin Shutdown
Te 5/6    Aggressive    10       Admin Shutdown
Te 5/7    Aggressive    10       Admin Shutdown
Te 5/8    Aggressive    10       Admin Shutdown
Te 5/9    Aggressive    10       Admin Shutdown
Te 5/10   NA             NA       Locally disabled
Te 5/11   Aggressive    10       Err-disabled
DelleMC#
```

Related Commands

- [fefd](#) — enable far-end failure detection.
- [fefd disable](#) — disable FEFD on an interface only.
- [fefd-global](#) — enable FEFD globally on the system.
- [fefd reset](#) — reset all interfaces or a single interface that was in “error-disabled” mode.

Link Layer Discovery Protocol (LLDP)

The link layer discovery protocol (LLDP) advertises connectivity and management from the local station to the adjacent stations on an IEEE 802 LAN.

LLDP facilitates multi-vendor interoperability by using standard management tools to discover and make available a physical topology for network management. The Dell EMC Networking operating software implementation of LLDP is based on IEEE standard 801.1ab.

The starting point for using LLDP is invoking LLDP with the `protocol lldp` command in either CONFIGURATION or INTERFACE mode.

The information LLDP distributes is stored by its recipients in a standard management information base (MIB). You can access the information by a network management system through a management protocol such as simple network management protocol (SNMP).

Topics:

- [LLPD Commands](#)
- [LLDP-MED Commands](#)

LLPD Commands

The following are LLDP commands.

advertise dot1-tlv

Advertise dot1 TLVs (Type, Length, Value).

Syntax	<code>advertise dot1-tlv {port-protocol-vlan-id port-vlan-id vlan-name}</code>	
	To remove advertised dot1-tlv, use the <code>no advertise dot1-tlv {port-protocol-vlan-id port-vlan-id vlan-name}</code> command.	
Parameters	port-protocol-vlan-id	Enter the keywords <code>port-protocol-vlan-id</code> to advertise the port protocol VLAN identification TLV.
	port-vlan-id	Enter the keywords <code>port-vlan-id</code> to advertise the port VLAN identification TLV.
	vlan-name	Enter the keywords <code>vlan-name</code> to advertise the vlan-name TLV. This keyword is only supported on the C-Series and S-Series.
Defaults	Disabled.	
Command Modes	CONFIGURATION (<code>conf-lldp</code>) and INTERFACE (<code>conf-if-interface-lldp</code>)	
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> .	
	Version	Description
	9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
	9.10(0.0)	Introduced on the S3148.
	9.10(0.0)	Introduced on the S6100-ON.

Version	Description
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.7.1.0	Introduced on the S-Series. Added the <code>vlan-name</code> option.
7.6.1.0	Introduced on the C-Series.
7.4.1.0	Introduced on the E-Series.

Related Commands

- [protocol lldp \(Configuration\)](#) — enable LLDP globally.
- [debug lldp interface](#) — debug LLDP.
- [show lldp neighbors](#) — display the LLDP neighbors.

advertise dot3-tlv

Advertise dot3 TLVs (Type, Length, Value).

Syntax

```
advertise dot3-tlv {max-frame-size}
```

To remove advertised dot3-tlv, use the `no advertise dot3-tlv {max-frame-size}` command.

Parameters

max-frame-size Enter the keywords `max-frame-size` to advertise the dot3 maximum frame size TLV.

Defaults

None

Command Modes

CONFIGURATION (`conf-lldp`) and INTERFACE (`conf-if-interface-lldp`)

Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.

Version	Description
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.7.1.0	Introduced on the S-Series.
7.6.1.0	Introduced on the C-Series.
7.4.1.0	Introduced on the E-Series.

advertise interface-port-desc

Advertise port descriptor.

Syntax	<pre>advertise interface-port-desc {description port-id}</pre> <p>To remove the advertised port descriptor, use the <code>no advertise interface-port-desc {description port-id}</code> command.</p>	
Parameters	description	Enter the keyword <code>description</code> then the interface description.
	port-id	Enter the keyword <code>port-id</code> then the port-id. The range is from 0 to 7.
Defaults	None	
Command Modes	CONFIGURATION (conf-lldp) INTERFACE (conf-if-interface-lldp)	
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> .	
	Version	Description
	9.11(2.0P1)	Introduced the <code>description</code> and <code>port-id</code> options.
Usage Information	If you do not specify the option, by default the <code>port-id</code> takes higher precedence and sends the <code>port-id</code> in the LLDP packets.	

advertise management-tlv

Advertise management TLVs (Type, Length, Value).

Syntax	<pre>advertise management-tlv {management-address system-capabilities system-description system-name}</pre> <p>To remove advertised management TLVs, use the <code>no advertise management-tlv {management-address system-capabilities system-description system-name}</code> command.</p>	
Parameters	management-address	Enter the keyword <code>management-address</code> to advertise the management IP address TLVs to the LLDP peer.
	system-capabilities	Enter the keywords <code>system-capabilities</code> to advertise the system capabilities TLVs to the LLDP peer.

system-description Enter the keywords `system-description` to advertise the system description TLVs to the LLDP peer.

system-name Enter the keywords `system-name` to advertise the system name TLVs to the LLDP peer.

Defaults None

Command Modes CONFIGURATION (`conf-lldp`)

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.2(1.0)	Introduced on the Z9500.
9.1.(0.0)	Modified to support management-address parameter.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.7.1.0	Introduced on the S-Series.
7.6.1.0	Introduced on the C-Series.
7.4.1.0	Introduced on the E-Series.

Usage Information The command options `management-address`, `system-capabilities`, `system-description`, and `system-name` can be invoked individually or together, in any sequence.

advertise management-tlv (Interface)

Advertise management type, length, values (TLVs) to the specified interface.

Syntax `advertise management-tlv {management-address | system-capabilities | system-description | system-name}`

To remove advertised management TLVs, use the `no advertise management-tlv {management-address | system-capabilities | system-description | system-name}` command.

Parameters

management-address Enter the keywords `management-address` to advertise the management IP address TLVs to the specified interface.

system-capabilities Enter the keywords `system-capabilities` to advertise the system capabilities TLVs to the specified interface.

system-description Enter the keywords `system-description` to advertise the system description TLVs to the specified interface.

system-name Enter the keywords `system-name` to advertise the system name TLVs to the specified interface.

Defaults None

Command Modes INTERFACE (`conf-interface-lldp`)

7.7.1.0	Introduced on the S-Series.
7.6.1.0	Introduced on the C-Series.
7.4.1.0	Introduced on the E-Series.

debug lldp interface

To display timer events, neighbor additions or deletions, and other information about incoming and outgoing packets, enable LLDP debugging.

Syntax	<pre>debug lldp interface {<i>interface</i> all}{events packet {brief detail} {tx rx both}}</pre> <p>To disable debugging, use the <code>no debug lldp [interface {<i>interface</i> all}{events} {packet {brief detail} {tx rx both}}]</code> command.</p>
---------------	--

Parameters

interface <i>interface</i>	Enter the following keywords and slot/port or number information: <ul style="list-style-type: none">For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information.For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information.
all	Enter the keyword <code>all</code> to display information on all interfaces.
events	Enter the keyword <code>events</code> to display major events such as timer events.
packet	Enter the keyword <code>packet</code> to display information regarding packets coming in or going out.
brief	Enter the keyword <code>brief</code> to display brief packet information.
detail	Enter the keyword <code>detail</code> to display detailed packet information.
tx	Enter the keyword <code>tx</code> to display transmit-only packet information.
rx	Enter the keyword <code>rx</code> to display receive-only packet information.
both	Enter the keyword <code>both</code> to display both receive and transmit packet information.

Defaults None

Command Modes EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.13.0.0	Enhanced to display organizational specific unrecognized LLDP TLVs.
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.5.1.0	Added support for 4-port 40G line cards on the E-Series.
8.3.7.0	Introduced on the S4810.
7.7.1.0	Introduced on the S-Series.
7.6.1.0	Introduced on the C-Series.
7.4.1.0	Introduced on the E-Series.

Example

```

```

disable

Enable or disable LLDP.

Syntax `disable`

To enable LLDP, use the `no disable` command.

Defaults Enabled — no disable.

Command Modes CONFIGURATION (conf-lldp) and INTERFACE (conf-if-*interface*-lldp)

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.7.1.0	Introduced on the S-Series.
7.6.1.0	Introduced on the C-Series.
7.4.1.0	Introduced on the E-Series.

Related Commands

- [protocol lldp \(Configuration\)](#) — enable LLDP globally.
- [debug lldp interface](#) — debug LLDP.
- [show lldp neighbors](#) — display the LLDP neighbors.

hello

Configure the rate at which the LLDP control packets are sent to its peer.

Syntax	<code>hello seconds</code> To revert to the default, use the <code>no hello seconds</code> command.
Parameters	seconds Enter the rate, in seconds, at which the control packets are sent to its peer. The rate is from 5 to 180 seconds. The default is 30 seconds .
Defaults	30 seconds
Command Modes	CONFIGURATION (conf-lldp) and INTERFACE (conf-if-interface-lldp)
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> .

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.7.1.0	Introduced on the S-Series.
7.6.1.0	Introduced on the C-Series.
7.4.1.0	Introduced on the E-Series.

management-interface

Enable and configure LLDP protocol parameters on the management interface.

Syntax	<code>management-interface</code> To remove LLDP configuration on a management interface, use the <code>no management-interface</code> command.
Command Modes	LLDP (conf-lldp)
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> .

Version	Description
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.2(1.0)	Introduced on the Z9500.
9.2(0.2)	Introduced on the Z9000 and S4810.

Usage Information

To enable LLDP on the management interface, use the `no disable` command in LLDP-MANAGEMENT-INTERFACE mode (`conf-lldp-mgmtIf`).

mode

To receive or transmit, set LLDP.

Syntax

```
mode {tx | rx}
```

To return to the default, use the `no mode` command.

Parameters

tx	Enter the keyword <code>tx</code> to set the mode to transmit.
rx	Enter the keyword <code>rx</code> to set the mode to receive.

Defaults

Both **transmit** and **receive**.

Command Modes

CONFIGURATION (`conf-lldp`) and INTERFACE (`conf-if-interface-lldp`)

Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.

9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.7.1.0	Introduced on the S-Series.
7.6.1.0	Introduced on the C-Series.
7.4.1.0	Introduced on the E-Series.

Related Commands

- [protocol lldp \(Configuration\)](#) — enable LLDP globally.
- [show lldp neighbors](#) — display the LLDP neighbors.

multiplier

Set the multiple of the hello timer before LLDP declares the interface dead.

Syntax	<code>multiplier number</code> To return to the default, use the <code>no multiplier</code> command.
Parameters	<i>integer</i> Enter the number of consecutive misses before the LLDP declares the interface dead. The range is from 2 to 10.
Defaults	4
Command Modes	CONFIGURATION (<code>conf-lldp</code>) and INTERFACE (<code>conf-if-interface-lldp</code>)
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> .

9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.7.1.0	Introduced on the S-Series.
7.6.1.0	Introduced on the C-Series.
7.4.1.0	Introduced on the E-Series.

protocol lldp (Configuration)

Enable the LLDP globally on the switch.

Syntax	<code>protocol lldp</code> To disable LLDP globally on the chassis, use the <code>no protocol lldp</code> command.
Defaults	Enabled.
Command Modes	CONFIGURATION (<code>conf-lldp</code>)
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> .

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.7.1.0	Introduced on the S-Series.
7.6.1.0	Introduced on the C-Series.
7.4.1.0	Introduced on the E-Series.

protocol lldp (Interface)

Enter the LLDP protocol in INTERFACE mode.

Syntax	<code>[no] protocol lldp</code> To return to the global LLDP configuration mode, use the <code>no protocol lldp</code> command from Interface mode.
Defaults	LLDP is not enabled on the interface.
Command Modes	INTERFACE (conf-if-interface-lldp)
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> .

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.

Version	Description
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.7.1.0	Introduced on the S-Series.
7.6.1.0	Introduced on the C-Series.
7.4.1.0	Introduced on the E-Series.

Usage Information

Before LLDP can be configured on an interface, it must be enabled globally from CONFIGURATION mode. This command places you in LLDP mode on the interface; it does not enable the protocol.

When you enter the LLDP protocol in the Interface context, it overrides global configurations. When you execute the `no protocol lldp` from INTERFACE mode, interfaces begin to inherit the configuration from global LLDP CONFIGURATION mode.

show lldp neighbors

Display LLDP neighbor information for all interfaces or a specified interface.

Syntax

```
show lldp neighbors [interface interface] [detail]
```

Parameters

interface <i>interface</i>	(OPTIONAL) Enter the following keywords and the interface information: <ul style="list-style-type: none"> For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information.
detail	(OPTIONAL) Enter the keyword <code>detail</code> to display all the TLV information, remote management IP addresses, timers, and LLDP tx and rx counters.

Defaults

None

Command Modes

EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.13.0.0	Enhanced to display organizational specific unrecognized LLDP TLVs.
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
9.1.(0.0)	Modified output of detail parameter to display remote management IP addresses.

Version	Description
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.5.1.0	Added support for 4-port 40G line cards on the E-Series.
8.3.7.0	Introduced on the S4810.
7.7.1.0	Introduced on the S-Series.
7.6.1.0	Introduced on the C-Series.
7.4.1.0	Introduced on the E-Series.

Usage Information

Omitting the keyword `detail` displays only the remote chassis ID, Port ID, and Dead Interval.

show lldp statistics

Display the LLDP statistical information.

Syntax show lldp statistics

Defaults None

Command Modes EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.

Version	Description
7.7.1.0	Introduced on the S-Series.
7.6.1.0	Introduced on the C-Series.
7.4.1.0	Introduced on the E-Series.

Example

```
DelleMC# show lldp statistics
Total number of neighbors: 300
Last table change time   : Mon Oct 02 16:00:52 2006
Number of Table Inserts  : 1621
Number of Table Deletes  : 200
Number of Table Drops    : 0
Number of Table Age Outs : 400
DelleMC#
```

show management-interface

Display LLDP management interface configuration information.

Syntax `show management-interface`

Command Modes CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.2(1.0)	Introduced on the Z9500.
9.2.(0.0)	Introduced on the Z9000 and S4810.

show running-config lldp

Display the current global LLDP configuration.

Syntax `show running-config lldp`

Defaults None

Command Modes EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.

Version	Description
8.3.19.0	Introduced on the S8420T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.7.1.0	Introduced on the S-Series.
7.6.1.0	Introduced on the C-Series.
7.4.1.0	Introduced on the E-Series.

Example

```
DellEMC# show running-config lldp
!
protocol lldp
  advertise dot1-tlv port-protocol-vlan-id port-vlan-id
  advertise dot3-tlv max-frame-size
  advertise management-tlv system-capabilities system-description
  hello 15
  multiplier 3
  no disable
DellEMC#
```

snmp-notification-interval

Used to configure the value for the lldp notification interval, to throttle lldp notification messages.

Syntax [no] snmp-notification-interval [seconds]
To disable this feature, use the no snmp-notification-interval command.

Parameters **seconds** Enter a value from 5 to 3600 seconds.

Defaults 5 seconds

Command Modes CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.11(2.5)	Introduced on the S3048-ON, S4048-ON, S4048T-ON, S6010-ON and Z9100-ON

Usage Information SNMP notification for the changes in the lldp remote entry table is throttled by 5 seconds (default), or the configured time set using this command. If more than one notification message is generated within the configured time, only the first one will be sent and the remaining messages are suppressed.

LLDP-MED Commands

The following are the LLDP-MED (Media Endpoint Discovery) commands.

Dell EMC Networking OS LLDP-MED commands are an extension of the set of LLDP TLV advertisement commands.

As defined by ANSI/TIA-1057, LLDP-MED provides organizationally specific TLVs (Type Length Value), so that endpoint devices and network connectivity devices can advertise their characteristics and configuration information. The Organizational Unique Identifier (OUI) for the Telecommunications Industry Association (TIA) is 00-12-BB.

- LLDP-MED Endpoint Device — any device that is on an IEEE 802 LAN network edge, can communicate using IP, and uses the LLDP-MED framework.
- LLDP-MED Network Connectivity Device — any device that provides access to an IEEE 802 LAN to an LLDP-MED endpoint device, and supports IEEE 802.1AB (LLDP) and TIA-1057 (LLDP-MED). The Dell EMC Networking system is an LLDP-MED network connectivity device.

Regarding connected endpoint devices, LLDP-MED provides network connectivity devices with the ability to:

- manage inventory
- identify physical location
- identify network policy

advertise med guest-voice

To advertise a separate limited voice service for a guest user with their own IP telephony handset or other appliances that support interactive voice services, configure the system.

Syntax `advertise med guest-voice {vlan-id layer2_priority DSCP_value} | {priority-tagged number}`

To return to the default, use the `no advertise med guest-voice {vlan-id layer2_priority DSCP_value} | {priority-tagged number}` command.

Parameters

vlan-id	Enter the VLAN ID. The range is from 1 to 4094.
layer2_priority	Enter the Layer 2 priority. The range is from 0 to 7.
DSCP_value	Enter the DSCP value. The range is from 0 to 63.
priority-tagged number	Enter the keywords <code>priority-tagged</code> , the Layer 2 priority, and then the DSCP value.

Defaults Unconfigured.

Command Modes CONFIGURATION (conf-lldp)

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.7.1.0	Introduced on the S-Series.
7.6.1.0	Introduced on the C-Series and E-Series.

Related Commands

- [protocol lldp \(Configuration\)](#) — enable LLDP globally.
- [debug lldp interface](#) — debug LLDP.
- [show lldp neighbors](#) — display the LLDP neighbors.

advertise med guest-voice-signaling

To advertise a separate limited voice service for a guest user when the guest voice control packets use a separate network policy than the voice data, configure the system.

Syntax `advertise med guest-voice-signaling {vlan-id layer2_priority DSCP_value} | {priority-tagged number}`

To return to the default, use the `no advertise med guest-voice-signaling {vlan-id layer2_priority DSCP_value} | {priority-tagged number}` command.

Parameters

<i>vlan-id</i>	Enter the VLAN ID. The range is from 1 to 4094.
<i>layer2_priority</i>	Enter the Layer 2 priority. The range is from 0 to 7.
<i>DSCP_value</i>	Enter the DSCP value. The range is from 0 to 63.
<i>priority-tagged number</i>	Enter the keywords <code>priority-tagged</code> , the Layer 2 priority, and then the DSCP value.

Defaults Unconfigured.

Command Modes CONFIGURATION (conf-lldp)

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.7.1.0	Introduced on the S-Series.
7.6.1.0	Introduced on the C-Series and E-Series.

Related Commands

- [debug lldp interface](#) — debug LLDP.
- [show lldp neighbors](#) — display the LLDP neighbors.

advertise med location-identification

To advertise a location identifier, configure the system.

Syntax `advertise med location-identification {coordinate-based value | civic-based value | ecs-elin value}`

To return to the default, use the `no advertise med location-identification {coordinate-based value | civic-based value | ecs-elin value}` command.

Parameters

coordinate-based value	Enter the keywords <code>coordinate-based</code> then the coordinated based location in hexadecimal value of 16 bytes.
civic-based value	Enter the keywords <code>civic-based</code> then the civic based location in hexadecimal format. The range is from 6 to 255 bytes.
ecs-elin value	Enter the keywords <code>ecs-elin</code> then the Emergency Call Service (ecs) Emergency Location Identification Number (elin) numeric location string. The range is from 10 to 25 characters.

Defaults Unconfigured.

Command Modes CONFIGURATION (conf-lldp)

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.7.1.0	Introduced on the S-Series.
7.6.1.0	Introduced on the C-Series and E-Series.

Usage Information

- ECS — Emergency call service such as defined by TIA or the national emergency numbering association (NENA)
- ELIN — Emergency location identification number, a valid North America Numbering Plan format telephone number supplied for ECS purposes.

Related Commands

- [debug lldp interface](#) — debug LLDP.
- [show lldp neighbors](#) — display the LLDP neighbors.

advertise med power-via-mdi

To advertise the Extended Power via MDI TLV, configure the system.

Syntax	<code>advertise med power-via-mdi</code> To return to the default, use the <code>no advertise med power-via-mdi</code> command.
Defaults	unconfigured.
Command Modes	CONFIGURATION (conf-lldp)
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> . The following is a list of the Dell EMC Networking OS version history for this command.

Version	Description
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.7.1.0	Introduced on the S-Series.
7.6.1.0	Introduced on the C-Series.

Usage Information	Advertise the Extended Power via MDI on all ports that are connected to an 802.3af powered, LLDP-MED endpoint device.
Related Commands	debug lldp interface — debugs LLDP. show lldp neighbors — displays the LLDP neighbors.

advertise med softphone-voice

To advertise softphone to enable IP telephony on a computer so that the computer can be used as a phone, configure the system.

Syntax	<code>advertise med softphone-voice {vlan-id layer2_priority DSCP_value} {priority-tagged number}</code> To return to the default, use the <code>no advertise med softphone-voice {vlan-id layer2_priority DSCP_value} {priority-tagged number}</code> command.
Parameters	<i>vlan-id</i> Enter the VLAN ID. The range is from 1 to 4094. <i>layer2_priority</i> Enter the Layer 2 priority. The range is from 0 to 7. <i>DSCP_value</i> Enter the DSCP value. The range is from 0 to 63.

priority-tagged number Enter the keywords `priority-tagged`, the Layer 2 priority, and then the DSCP value.

Defaults Unconfigured.

Command Modes CONFIGURATION (conf-lldp)

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.7.1.0	Introduced on the S-Series.
7.6.1.0	Introduced on the C-Series and E-Series.

Related Commands

- [debug lldp interface](#) — debug LLDP.
- [show lldp neighbors](#) — display the LLDP neighbors.

advertise med streaming-video

To advertise streaming video services for broadcast or multicast-based video, configure the system. This command does not include video applications that rely on TCP buffering.

Syntax `advertise med streaming-video {vlan-id layer2_priority DSCP_value} | {priority-tagged number}`

To return to the default, use the `no advertise med streaming-video {vlan-id layer2_priority DSCP_value} | {priority-tagged number}` command.

Parameters

- vlan-id** Enter the VLAN ID. The range is from 1 to 4094.
- layer2_priority** Enter the Layer 2 priority. The range is from 0 to 7.
- DSCP_value** Enter the DSCP value. The range is from 0 to 63.
- priority-tagged number** Enter the keywords `priority-tagged`, the Layer 2 priority, and then the DSCP value.

Defaults Unconfigured.

Command Modes CONFIGURATION (conf-lldp)

Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.7.1.0	Introduced on the S-Series.
7.6.1.0	Introduced on the C-Series and E-Series.

Related Commands

- [debug lldp interface](#) — debug LLDP.
- [show lldp neighbors](#) — display the LLDP neighbors.

advertise med video-conferencing

To advertise dedicated video conferencing and other similar appliances that support real-time interactive video, configure the system.

Syntax

```
advertise med video-conferencing {vlan-id layer2_priority DSCP_value} | {priority-tagged number}
```

To return to the default, use the `no advertise med video-conferencing {vlan-id layer2_priority DSCP_value} | {priority-tagged number}` command.

Parameters

<i>vlan-id</i>	Enter the VLAN ID. The range is from 1 to 4094.
<i>layer2_priority</i>	Enter the Layer 2 priority. The range is from 0 to 7.
<i>DSCP_value</i>	Enter the DSCP value. The range is from 0 to 63.
<i>priority-tagged number</i>	Enter the keywords <code>priority-tagged</code> , the Layer 2 priority, and then the DSCP value.

Defaults

Unconfigured.

Command Modes CONFIGURATION (conf-lldp)

Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.

- [show lldp neighbors](#) — display the LLDP neighbors.

advertise med voice

To advertise a dedicated IP telephony handset or other appliances supporting interactive voice services, configure the system.

Syntax `advertise med voice {vlan-id layer2_priority DSCP_value} | {priority-tagged number}`

To return to the default, use the `no advertise med voice {vlan-id layer2_priority DSCP_value} | {priority-tagged number}` command.

Parameters		
vlan-id	Enter the VLAN ID. The range is from 1 to 4094.	
layer2_priority	Enter the Layer 2 priority. The range is from 0 to 7.	
DSCP_value	Enter the DSCP value. The range is from 0 to 63.	
priority-tagged number	Enter the keywords <code>priority-tagged</code> , the Layer 2 priority, and then the DSCP value.	

Defaults Unconfigured.

Command Modes CONFIGURATION (conf-lldp)

advertise med voice-signaling

To advertise when voice control packets use a separate network policy than voice data, configure the system.

Syntax `advertise med voice-signaling {vlan-id layer2_priority DSCP_value} | {priority-tagged number}`

To return to the default, use the `no advertise med voice-signaling {vlan-id layer2_priority DSCP_value} | {priority-tagged number}` command.

Parameters	
<i>vlan-id</i>	Enter the VLAN ID. The range is from 1 to 4094.
<i>layer2_priority</i>	Enter the Layer 2 priority. The range is from 0 to 7.
<i>DSCP_value</i>	Enter the DSCP value. The range is from 0 to 63.
<i>priority-tagged number</i>	Enter the keywords <code>priority-tagged</code> , the Layer 2 priority, and then the DSCP value.

Defaults Unconfigured.

Microsoft Network Load Balancing

Network load balancing (NLB) is a clustering functionality that is implemented by Microsoft on Windows 2000 Server and Windows Server 2003 operating systems. Microsoft NLB clustering allows multiple servers running Microsoft Windows to be represented by one MAC and one IP address to provide transparent failover and load-balancing. The Dell EMC Networking OS does not recognize server clusters by default; you must configure NLB functionality on a switch to support server clusters. The maximum NLB entry limit from 8 to 11 is increased and support for more CAM-ACL to increase.

Topics:

- [arp \(for Multicast MAC Address\)](#)
- [ip vlan-flooding](#)
- [mac-address-table static \(for Multicast MAC Address\)](#)

arp (for Multicast MAC Address)

To associate an IP address of a server cluster with a multicast MAC address in the switch for the multicast mode of network load balancing (NLB), use the address resolution protocol (ARP).

Syntax `arp ip-address multicast-mac-address interface`

To remove an ARP address, use the `no arp ip-address` command.

Parameters	<i>ip-address</i>	Enter an IP address in dotted decimal format.
	<i>multicast-mac-address</i>	Enter a 48-bit hexadecimal address in nn:nn:nn:nn:nn:nn format for the static MAC address to be used to switch multicast traffic.
	<i>interface</i>	Enter any of the following keywords and slot/port or number information: <ul style="list-style-type: none"> • For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. • For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information. • For a port channel interface, enter the keywords <code>port-channel</code> then a number. • The specified interface must be configured using the <code>{output-range output} interface</code> option with the <code>mac-address-table static</code> command.

Defaults Not configured.

Command Modes CONFIGURATION

Command History	Version	Description
	9.8(1.0)	Introduced on the Z9100-ON.
	9.7(0.0)	Introduced on the S6000-ON.
	9.5(0.1)	Added support for the association of an IP address with a multicast MAC address on the Z95000.
	9.3(0.0)	Added support for the association of an IP address with a multicast MAC address on the S4810, S4820T, S6000, and Z9000.

Usage Information For the multicast mode of NLB, use ARP to associate the IP address of a server cluster with a multicast MAC address in the switch, by entering the `arp ip-address multicast-mac-address` command.

Related Commands `clear arp-cache` — clears dynamic ARP entries from the ARP table.
`show arp` — displays the ARP table.

ip vlan-flooding

Enable unicast data-traffic flooding on VLAN member ports.

Syntax `ip vlan-flooding`
To disable, use the `no ip vlan-flooding` command.

Command Modes CONFIGURATION

Command History	Version	Description
	9.8(1.0)	Introduced on the Z9100-ON.
	9.7(0.0)	Introduced on the S6000-ON.
	9.5(0.1)	Introduced on the Z9500.
	9.3(0.0)	Introduced on the S4810, S4820T, S6000, Z9000, and MXL.

Default Disabled

Usage Information By default this command is disabled. There might be some ARP table entries which are resolved through ARP packets which had Ethernet MAC SA different from MAC information inside the ARP packet. This unicast data traffic flooding occurs only for those packets which use these ARP entries.

mac-address-table static (for Multicast MAC Address)

To configure the multicast mode of network load balancing (NLB) on the switch, you must associate a multicast MAC address with the VLAN used to switch Layer 2 multicast traffic, and add output ports that will receive multicast streams on the VLAN in the MAC address table.

Syntax `mac-address-table static multicast-mac-address vlan vlan-id output-range {single-interface | interface-list | interface-range}`
To remove a MAC address, use the `no mac-address-table static multicast-mac-address vlan vlan-id output-range interface` command.

Parameters	multicast-mac-address	Enter the 48-bit hexadecimal address in nn:nn:nn:nn:nn:nn format.
	vlan vlan-id	Enter a VLAN ID used to forward L2 multicast MAC traffic to a server cluster. Valid VLAN IDs are from 1 to 4094.  NOTE: Use this option if you want multicast functionality in an L2 VLAN without IGMP protocols.
	output-range interface	For a multicast MAC address, enter the keyword <code>output-range</code> then one of the following interfaces for which traffic is forwarded: <ul style="list-style-type: none">• For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information.• For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information.• For a port channel interface, enter the keywords <code>port-channel</code> then a number.

Defaults Not configured.

Command Modes CONFIGURATION

Command History The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.8(1.0)	Introduced on the Z9100-ON.
9.5(0.1)	Introduced on the Z9500.
9.3(0.0)	Added support for multicast MAC address on the MXL platform.

Usage Information When a multicast source and multicast receivers are in the same VLAN, you can configure a router so that multicast traffic is switched only to the ports assigned to a VLAN that is associated with a static multicast MAC address. However, before you can configure a static MAC address and associate it with a VLAN used to switch Layer 2 multicast traffic, you must first enable the router for Layer 2 multicast switching with the ip multicast-mode l2 command.

Example (Multicast)

```
mac-address-table static 01:00:5E:01:00:01 {multicast vlan 2 output-  
range Te 1/2,Te 1/3
```

Multicast

The multicast commands are supported by Dell EMC Networking OS.

Topics:

- [IPv4 Multicast Commands](#)
- [IPv6 Multicast Commands](#)

IPv4 Multicast Commands

The following section contains the IPv4 multicast commands.

clear ip mroute

Clear learned multicast routes on the multicast forwarding table. To clear the protocol-independent multicast (PIM) tree information base, use the `clear ip pim tib` command.

Syntax `clear ip mroute [vrf vrf-name] {group-address [source-address] | *}`

Parameters **vrf vrf-name** (OPTIONAL) Enter the keyword `vrf` followed by the name of the VRF to configure this setting on that VRF.

 **NOTE:** Applies to specific VRF if input is provided, else applies to Default VRF.

group-address Enter the multicast group address and source address (if desired), in dotted decimal format, to clear information on a specific group.

[source-address]

*

Enter * to clear all multicast routes.

Command Modes EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.11.(3.0)	Removed support for keyword <code>snooping</code> .
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Added support for VRF. Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.2.(0.0)	Added support for keyword <code>snooping</code> on the Z9000, S4810, and S4820T.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.

Version	Description
8.3.7.0	Introduced on the S4810.
7.8.1.0	Introduced on the C-Series.

E-Series legacy command

Related Commands

- [show ip pim tib](#) — show the PIM tree information base.

ip mroute

Assign a static mroute.

Z9500

Syntax

```
ip mroute [vrf vrf-name] destination mask {ip-address | null 0} {{bgp|
ospf} process-id | isis | rip | static} {ip-address | tag | null 0}}
[distance]
```

To delete a specific static mroute, use the `no ip mroute [vrf vrf-name] destination mask {ip-address | null 0} {{bgp| ospf} process-id | isis | rip | static} {ip-address | tag | null 0}} [distance]` command.

To delete all mroutes matching a certain mroute, use the `no ip mroute [vrf vrf-name] destination mask` command.

Parameters

vrf vrf-name	(OPTIONAL) Enter the keyword <code>vrf</code> followed by the name of the VRF to assign a static mroute to that VRF.  NOTE: Applies to specific VRF if input is provided, else applies to Default VRF.
destination	Enter the IP address in dotted decimal format of the destination device.
mask	Enter the mask in slash prefix formation (/x) or in dotted decimal format.
null 0	(OPTIONAL) Enter the keyword <code>null</code> then zero (0).
[protocol [process-id tag] ip-address]	(OPTIONAL) Enter one of the routing protocols: <ul style="list-style-type: none"> • Enter the BGP as-number then the IP address in dotted decimal format of the reverse path forwarding (RPF) neighbor. The range is from 1 to 65535. • Enter the OSPF process identification number then the IP address in dotted decimal format of the RPF neighbor. the range is from 1 to 65535. • Enter the IS-IS alphanumeric tag string then the IP address in dotted decimal format of the RPF neighbor. • Enter the RIP IP address in dotted decimal format of the RPF neighbor.
static ip-address	(OPTIONAL) Enter the Static IP address in dotted decimal format of the RPF neighbor.
ip-address	(OPTIONAL) Enter the IP address in dotted decimal format of the RPF neighbor.
distance	(OPTIONAL) Enter a number as the distance metric assigned to the mroute. The range is from 0 to 255.

Defaults Not configured.

Command Modes CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Added support for VRF. Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.

8.3.7.0	Introduced on the S4810.
E-Series legacy command	

Related Commands

- [show ip mroute](#) — display the routing table.

ip multicast-limit

To limit the number of multicast entries on the system, use this feature.

Z9500

Syntax	<code>ip multicast-limit [vrf vrf-name] limit</code>	
Parameters	vrf vrf-name	(OPTIONAL) Enter the keyword <code>vrf</code> followed by the name of the VRF to limit the number of multicast on the VRF.
	limit	Enter the desired maximum number of multicast entries on the system. The range is from 1 to 16000.
Defaults	The default is 4000.	
Command Modes	CONFIGURATION	
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> .	

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Added support for VRF. Introduced on the S6000-ON.

Version	Description
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Introduced on the C-Series.
7.6.1.0	Introduced on the E-Series.

Usage Information

This feature allows you to limit the number of multicast entries on the system. This number is the total of all the multicast entries on all line cards in the system. On each line card, the multicast module only installs the maximum number of entries, depending on the configured CAM profile.

To store multicast routes, use the IN-L3-McastFib CAM partition. It is a separate hardware limit that exists per port-pipe. This hardware space limitation can supersede any software-configured limit. The opposite is also true, the CAM partition might not be exhausted at the time the system-wide route limit set by the `ip multicast-limit` command is reached.

Related Commands

- [show ip igmp groups](#) — display the IGMP groups.

ip multicast-routing

Enable IP multicast forwarding.

Z9500

Syntax	<code>ip multicast-routing [vrf vrf-name]</code> To disable multicast forwarding, use the <code>no ip multicast-routing [vrf vrf-name]</code> command.
Defaults	Disabled.
Parameters	vrf vrf-name (OPTIONAL) Enter the keyword <code>vrf</code> followed by the name of the VRF to enable IP multicast forwarding on that VRF.
Command Modes	CONFIGURATION
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> .

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.

8.3.19.0	Introduced on the S4820T.

Version	Description
8.3.11.1	Introduced on the Z9000.
8.3.7.1	Introduced on the S4810.

E-Series legacy command

Usage Information

After you enable multicast, you can enable IGMP and PIM on an interface. In INTERFACE mode, enter the `ip pim sparse-mode` command to enable IGMP and PIM on the interface.

Related Commands

- [ip pim sparse-mode](#) — enable IGMP and PIM on an interface.

mtrace

Trace a multicast route from the source to the receiver.

Syntax

```
mtrace [vrf vrf-name] {source-address/hostname} [destination-address/hostname] [group-address/hostname]
```

Parameters

vrf vrf-name	Enter the keyword <code>vrf</code> followed by the name of the VRF. If VRF name is not mentioned, the default VRF will be used. Mtrace is not supported for management VRF.
source-address/hostname	Enter the source IP address in dotted decimal format (A.B.C.D). This is a unicast address of the beginning of the path to be traced.
destination-address/hostname	Enter the destination (receiver) IP address in dotted decimal format (A.B.C.D). If omitted, the mtrace starts from the system at which the command is typed.
group-address/hostnaae	Enter the multicast group address in dotted decimal format (A.B.C.D). If group address is not given then software shall invokes a weak mtrace. A weak mtrace is one that follows the RPF path to the source, regardless of whether any router along the path has multicast routing table state

Command Modes EXEC Privilege

Command History

Version	Description
9.11.0.0	Re-introduced the mtrace command on the Dell EMC Networking OS.
7.5.1.0	Expanded to support originator.
7.4.1.0	Expanded to support the intermediate (transit) router.

Usage Information

Mtrace is an IGMP based protocol that provides a multicast trace route facility and is implemented according to the IETF draft "A *trace route* facility for IP Multicast" (draft-fenner-traceroute-ipm-01.txt). Dell EMC Networking OS supports the Mtrace client and transit functionality.

As an Mtrace client, Dell EMC Networking OS transmits Mtrace queries, receives, parses, and prints out the details in the response packet received.

A transit or intermediate router, forwards mtrace requests to the RPF neighbor after appending its response block to the packet. In case it is the first hop router, it sends a response.

As an Mtrace transit or intermediate router, Dell EMC Networking OS returns the response to Mtrace queries. After receiving the Mtrace request, Dell EMC Networking OS computes the RPF neighbor for the source, fills in the request and the forwards the request to the RPF neighbor.

Example

```
R1>mtrace 103.103.103.3 1.1.1.1 226.0.0.3
Type Ctrl-C to abort.

Querying reverse path for source 103.103.103.3 to destination 1.1.1.1
```

```
via group 226.0.0.3
From source (?) to destination (?)
```

Hop	OIF IP	Proto	Forwarding Code	Source Network/Mask
0	1.1.1.1	-->	Destination	
-1	1.1.1.1	PIM	Reached RP/Core	103.103.103.0/24
-2	101.101.101.102	PIM	-	103.103.103.0/24
-3	2.2.2.1	PIM	-	103.103.103.0/24
-4	103.103.103.3	-->	Source	

The mtrace command traverses the path of the response data block in the reverse direction of the multicast data traffic. The mtrace command traverses the reverse path to the source from the destination. As a result, the tabular output of the mtrace command displays the destination details in the first row, followed by the RPF router details along the path in the consequent rows, and finally the source details in the last row. The tabular output contains the following columns:

- Hop — a hop number(counted negatively to indicate reverse-path)
- OIF IP — outgoing interface address
- Proto — multicast routing protocol
- Forwarding code — error code as present in the response blocks
- Source Network/Mask — source mask

show ip mroute

View the multicast routing table.

Syntax

```
show ip mroute [vrf vrf-name] [static | group-address [source-address] |
count | snooping [vlan vlan-id] [group-address [source-address]] | summary
| vlt [group-address [source-address] | count]
```

Parameters

- vrf vrf-name** (OPTIONAL) Enter the keyword `vrf` followed by the name of the VRF to configure this setting on that VRF.
 **NOTE:** Applies to specific VRF if input is provided, else applies to Default VRF.
- static** (OPTIONAL) Enter the keyword `static` to view static multicast routes.
- group-address [source-address]** (OPTIONAL) Enter the multicast group-address to view only routes associated with that group. Enter the source-address to view routes with that group-address and source-address.
- count** (OPTIONAL) Enter the keyword `count` to view the number of multicast routes and packets.
- snooping [vlan vlan-id] [group-address [source-address]]** Enter the keyword `snooping` to display information on the multicast routes PIM-SM snooping discovers.
 Enter a VLAN ID to limit the information displayed to the multicast routes PIM-SM snooping discovers on a specified VLAN. The VLAN ID range is from 1 to 4094.
 Enter a multicast group address and, optionally, a source multicast address in dotted decimal format (A.B.C.D) to limit the information displayed to the multicast routes PIM-SM snooping discovers for a specified multicast group and source.
- summary** (OPTIONAL) Enter the keyword `summary` to view a summary of all routes.
- vlt** (OPTIONAL) Enter the keyword `vlt` to view multicast routes with a spanned incoming interface. Enter a multicast group address in dotted decimal format (A.B.C.D) to limit the information displayed to the multicast routes for a specified multicast group and optionally a source multicast address in dotted decimal format (A.B.C.D) to limit the information displayed for a specified multicast source. Enter the keyword `count` to display the total number of multicast routes with the spanned IIF.

8.4.1.1	Support for the keyword <code>snooping</code> and the optional <code>vlan vlan-id</code> , <code>group-address</code> , and <code>source-address</code> parameters were added on E-Series.
8.3.19.0	Introduced on the S4820T.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.

E-Series legacy command

Example (Static)

```
DellEMC# show ip mroute static
Mroute: 23.23.23.0/24, interface: Lo 2
Protocol: static, distance: 0, route-map: none, last change: 00:00:23
```

Example (Snooping)

Example (VLT)

```
DellEMC# show ip mroute vlt
IP Multicast Routing Table
Flags: S - Synced
(*, 225.1.1.1), uptime 00:39:33 flags: S
Incoming interface: Vlan 10
Spanned outgoing interface list:
  Vlan 20 (S)
  Vlan 30

(50.1.1.2, 225.1.1.1), uptime 00:39:33 flags: S
Incoming interface: Vlan 10
Spanned outgoing interface list:
  Vlan 20 (S)
```

Usage Information

The following describes the `show ip mroute` command shown in the following example.

Field	Description
(S, G)	Displays the forwarding entry in the multicast route table.

Field	Description
uptime	Displays the amount of time the entry has been in the multicast forwarding table.
Incoming interface	Displays the reverse path forwarding (RPF) information towards the source for (S,G) entries and the RP for (*,G) entries.
Outgoing interface list:	Lists the interfaces that meet one of the following: <ul style="list-style-type: none"> • a directly connected member of the Group • statically configured member of the Group • received a (*,G) or (S,G) Join message

Example

show ip rpf

View reverse path forwarding.

Z9500

Syntax `show ip rpf`

- Command Modes**
- EXEC
 - EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.1	Introduced on the S4810.

E-Series legacy command

Usage Information

Network administrators use static mroutes to control the reach-ability of the multicast sources. If a PIM-registered multicast source is reachable using static mroute as well as unicast route, the distance of each route is examined and the route with shorter distance is the one the PIM selects for reach-ability.

 **NOTE:** The default distance of mroutes is zero (0) and is CLI configurable on a per route basis.

Example

IPv6 Multicast Commands

.This section describes the IPv6 multicast commands.

debug ipv6 mld_host

Enable the collection of debug information for MLD host transactions.

Z9500

Syntax `[no] debug ipv6 mld_host [int-count | interface type] [slot/port-range]`
To discontinue collection of debug information for the MLD host transactions, use the `no debug ipv6 mld_host` command.

Parameters

int-count Enter the keyword `count` to indicate the number of required debug messages.

interface type Enter the following keywords and slot/port information:

- For a 10G Ethernet interface, enter the keyword `tengigabitethernet` then the slot/port information.
- For a 40G interface, enter the keyword `fortyGigE` then the slot/port information.
- For a management interface, enter the keyword `managementinterface` then the slot/port information.
- For a port-channel interface, enter the keywords `port-channel` then the slot/port information.
- For a VLAN interface, enter the keyword `vlan` then the slot/port information.

Default Disabled

Command Modes EXEC

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.1	Introduced on the S4810.

Usage Information To debug the MLD protocol for all ports or for specified ports, use the `debug ipv6 mld_host` command. Displayed information includes when a query is received, when a report is sent, when a mcast joins or leaves a group, and some reasons why an MLD query is rejected.

ip multicast-limit

To limit the number of multicast entries on the system, use this feature.

Z9500

Syntax `ip multicast-limit [vrf vrf-name] limit`

Parameters	vrf <i>vrf-name</i>	(OPTIONAL) Enter the keyword <code>vrf</code> followed by the name of the VRF to limit the number of multicast on the VRF.
	limit	Enter the desired maximum number of multicast entries on the system. The range is from 1 to 16000.

Defaults The default is 4000.

Command Modes CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Added support for VRF. Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Introduced on the C-Series.
7.6.1.0	Introduced on the E-Series.

Usage Information This feature allows you to limit the number of multicast entries on the system. This number is the total of all the multicast entries on all line cards in the system. On each line card, the multicast module only installs the maximum number of entries, depending on the configured CAM profile.

To store multicast routes, use the IN-L3-McastFib CAM partition. It is a separate hardware limit that exists per port-pipe. This hardware space limitation can supersede any software-configured limit. The opposite is also true, the CAM partition might not be exhausted at the time the system-wide route limit set by the `ip multicast-limit` command is reached.

Related Commands

- [show ip igmp groups](#) — display the IGMP groups.

Multicast Source Discovery Protocol (MSDP)

Multicast source discovery protocol (MSDP) connects multiple PIM sparse-mode (PIM-SM) domains together.

MSDP peers connect using TCP port 639. Peers send keepalives every 60 seconds. A peer connection is reset after 75 seconds if no MSDP packets are received. MSDP connections are parallel with MBGP connections.

The Dell EMC Networking OS supports MSDP commands on the Z9500 platform.

Topics:

clear ip msdp peer

Reset the TCP connection to the peer and clear all the peer statistics.

Z9500

Syntax `clear ip msdp peer {peer address}`

Parameters **peer address** Enter the peer address in a dotted decimal format (A.B.C.D.)

Defaults Not configured.

Command Modes EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.

Version	Description
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.5(0.1)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.

8.3.11.1	Introduced on the Z9000.
8.3.7.1	Introduced on the S4810.
6.2.1.1	Introduced

clear ip msdp sa-cache

Clears the entire source-active cache, the source-active entries of a particular multicast group, rejected, or local source-active entries.

Z9500

Syntax `clear ip msdp sa-cache [group-address | rejected-sa | local]`

Parameters

- group-address** Enter the group IP address in dotted decimal format (A.B.C.D.).
- rejected-sa** Enter the keywords `rejected-sa` to clear the cache source-active entries that are rejected because the RPF check failed, an SA filter or limit is configured, the RP or MSDP peer is unreachable, or because of a format error.
- local** Enter the keyword `local` to clear out local PIM advertised entries. It applies the redistribute filter (if present) while adding the local PIM SA entries to the SA cache.

Defaults Without any options, this command clears the entire source-active cache.

Command Modes EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

6.2.1.1	Introduced

clear ip msdp statistic

Clears the entire source-active cache, the source-active entries of a particular multicast group, rejected, or local source-active entries.

Z9500

Syntax	<code>clear ip msdp statistic peer peer-address</code>
Parameters	<p>peer Enter the keyword <code>peer</code> to clear the MSDP peer entries.</p> <p>peer-address Enter the IP address of the MSDP peer.</p>
Defaults	Without any options, this command clears the entire source-active cache.
Command Modes	EXEC Privilege
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> .

Related Commands

- [show ip msdp sa-cache rejected-sa](#) — display the rejected SAs in the SA cache.

ip msdp default-peer

Define a default peer from which to accept all source-active (SA) messages.

Z9500

Syntax

```
ip msdp default-peer peer address [list name]
```

To remove the default peer, use the `no ip msdp default-peer {peer address} list name` command.

Parameters

<i>peer address</i>	Enter the peer address in a dotted decimal format (A.B.C.D.)
<i>list name</i>	Enter the keywords <code>list name</code> and specify a standard access list that contains the RP address that should be treated as the default peer. If no access list is specified, then all SAs from the peer are accepted.

Defaults

Not configured.

ip msdp mesh-group

To be a member of a mesh group, configure a peer.

Z9500

Syntax `ip msdp mesh-group {name} {peer address}`
 To remove the peer from a mesh group, use the `no ip msdp mesh-group {name} {peer address}` command.

Parameters

name	Enter a string of up to 16 characters long for as the mesh group name.
peer address	Enter the peer address in a dotted decimal format (A.B.C.D.).

Defaults Not configured.

Command Modes CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.

8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
6.2.1.1	Introduced

Usage Information An MSDP mesh group is a mechanism for reducing SA flooding, typically in an intra-domain setting. When some subset of a domain's MSDP speakers are fully meshed, they can be configured into a mesh-group. If member X of a mesh-group receives a SA message from an MSDP peer that is also a member of the mesh-group, member X accepts the SA message and forwards it to all of its peers that are not part of the mesh-group. However, member X cannot forward the SA message to other members of the mesh-group.

ip msdp originator-id

Configure the MSDP Originator ID.

Z9500

Syntax `ip msdp originator-id {interface}`

To remove the originator-id, use the `no ip msdp originator-id {interface}` command.

Parameters

<i>interface</i>	Enter the following keywords and slot/port or number information: <ul style="list-style-type: none">• For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information.• For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information.• For a Loopback interface, enter the keyword <code>loopback</code> then a number from 0 to 16383.• For a port channel interface, enter the keywords <code>port-channel</code> then a number.• For a VLAN interface, enter the keyword <code>vlan</code> then a number from 1 to 4094.
-------------------------	---

Defaults Not configured.

Command Modes CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.

8.5.1.0	Added support for 4-port 40G line cards on the E-Series.
6.2.1.1	Introduced

ip msdp peer

Configure an MSDP peer.

Z9500

Syntax `ip msdp peer peer address [connect-source] [description] [sa-limit number]`
To remove the MSDP peer, use the `no ip msdp peer peer address [connect-source interface] [description name] [sa-limit number] command`.

Parameters

peer address	Enter the peer address in a dotted decimal format (A.B.C.D.).
connect-source interface	Enter the keywords <code>connect-source</code> then one of the interfaces and slot/port or number information: <ul style="list-style-type: none">• For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information.• For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information.• For a Loopback interface, enter the keyword <code>loopback</code> then a number from 0 to 16383.• For a port channel interface, enter the keywords <code>port-channel</code> then a number.• For a VLAN interface, enter the keyword <code>vlan</code> then a number from 1 to 4094.
description name	(OPTIONAL) Enter the keyword <code>description</code> then a description name (maximum 80 characters) to designate a description for the MSDP peer.
sa-limit number	(OPTIONAL) Enter the maximum number of SA entries in SA-cache. The range is from 1 to 100000. .

Defaults See *Parameters* .

Command Modes CONFIGURATION

7.5.1.0	Added option for SA upper limit and the <code>description</code> option.

Version	Description
---------	-------------

6.2.1.1	Introduced
---------	------------

Usage Information

The `connect-source` option is used to supply a source IP address for the TCP connection. When an interface is specified using the `connect-source` option, the primary configured address on the interface is used.

If the total number of SA messages received from the peer is already larger than the limit when this command is applied, those SA messages continue to be accepted. To enforce the limit in such situation, use the `clear ip msdp peer` command to reset the peer.

Related Commands

- [ip msdp sa-limit](#) — configure the MSDP SA Limit.
- [clear ip msdp peer](#) — clear the MSDP peer.
- [show ip msdp](#) — display the MSDP information.

ip msdp redistribute

Filter local PIM SA entries in the SA cache. SAs which the ACL denies time out and are not refreshed. Until they time out, they continue to reside in the MSDP SA cache.

Z9500

Syntax `ip msdp redistribute [list acl-name]`

Parameters **list *acl-name*** Enter the name of an extended ACL that contains permitted SAs. If you do not use this option, all local entries are blocked.

Defaults Not configured.

Command Modes CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
---------	-------------

9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
-----------	---

9.10(0.0)	Introduced on the S3148.
-----------	--------------------------

9.10(0.0)	Introduced on the S6100-ON.
-----------	-----------------------------

9.8(2.0)	Introduced on the S3100 series.
----------	---------------------------------

9.8(1.0)	Introduced on the Z9100-ON.
----------	-----------------------------

9.8(0.0P5)	Introduced on the S4048-ON.
------------	-----------------------------

9.8(0.0P2)	Introduced on the S3048-ON.
------------	-----------------------------

9.7(0.0)	Introduced on the S6000-ON.
----------	-----------------------------

9.5(0.1)	Introduced on the Z9500.
----------	--------------------------

9.0.2.0	Introduced on the S6000.
---------	--------------------------

8.3.19.0	Introduced on the S4820T.
----------	---------------------------

8.3.11.1	Introduced on the Z9000.
----------	--------------------------

8.3.7.0	Introduced on the S4810.
---------	--------------------------

7.8.1.0	Introduced
---------	------------

Usage Information

Modifications to the ACL do not have an immediate effect on the sa-cache.

To apply the redistribute filter to entries already present in the SA cache, use the `clear ip msdp sa-cache local` command.

ip msdp sa-filter

Permit or deny MSDP source active (SA) messages based on multicast source and/or group from the specified peer.

Z9500

Syntax `ip msdp sa-filter {in | out} peer-address list [access-list name]`
Remove this configuration using the `no ip msdp sa-filter {in | out} peer address list [access-list name]` command.

Parameters

in	Enter the keyword <code>in</code> to enable incoming SA filtering.
out	Enter the keyword <code>out</code> to enable outgoing SA filtering.
peer-address	Enter the peer address of the MSDP peer in a dotted decimal format (A.B.C.D.).
access-list name	Enter the name of an extended ACL that contains permitted SAs. If you do not use this option, all local entries are blocked.

Defaults Not configured.

Command Modes CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.5(0.1)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.7.1.0	Introduced on the E-Series.

ip msdp sa-limit

Configure the upper limit of source-active (SA) entries in SA-cache.

Z9500

Syntax `ip msdp sa-limit number`

To return to the default, use the `no ip msdp sa-limit number` command.

Parameters *number* Enter the maximum number of SA entries in SA-cache. The range is from 1 to 500000.

Defaults 50000

Command Modes CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.5(0.1)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.5.1.0	Introduced on the E-Series.

Usage Information Dell EMC Networking OS counts the SA messages originated by itself and those messages received from the MSDP peers. When the total SA messages reach this limit, the subsequent SA messages are dropped (even if they pass RPF checking and policy checking).

If the total number of SA messages is already larger than the limit when this command is applied, those SA messages that are already in Dell EMC Networking OS continue to be accepted. To enforce the limit in such situation, use the `clear ip msdp sa-cache` command.

Related Commands

- [ip msdp peer](#) — configure the MSDP peer.
- [clear ip msdp peer](#) — clear the MSDP peer.
- [show ip msdp](#) — display the MSDP information.

ip msdp shutdown

Administratively shut down a configured MSDP peer.

Z9500

Syntax	<code>ip msdp shutdown {peer address}</code>
Parameters	peer address Enter the peer address in a dotted decimal format (A.B.C.D.).
Defaults	Not configured.
Command Modes	CONFIGURATION
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> .

6.2.1.1	Introduced

show ip msdp

Display the MSDP peer status, SA cache, or peer summary.

Z9500

Syntax `show ip msdp {peer peer address | sa-cache | summary}`

Parameters	
peer peer address	Enter the keyword <code>peer</code> then the peer address in a dotted decimal format (A.B.C.D.).
sa-cache	Enter the keywords <code>sa-cache</code> to display the Source-Active cache.
summary	Enter the keyword <code>summary</code> to display an MSDP peer summary.

Defaults Not configured.

Multiple Spanning Tree Protocol (MSTP)

Multiple spanning tree protocol (MSTP), as implemented by the Dell EMC Networking OS, conforms to IEEE 802.1s.

This command supports the Dell EMC Networking OS.

Topics:

- [debug spanning-tree mstp](#)
- [disable](#)
- [forward-delay](#)
- [hello-time](#)
- [max-age](#)
- [max-hops](#)
- [msti](#)
- [name](#)
- [protocol spanning-tree mstp](#)
- [revision](#)
- [show config](#)
- [show spanning-tree mst configuration](#)
- [show spanning-tree msti](#)
- [spanning-tree](#)
- [spanning-tree msti](#)
- [spanning-tree mstp edge-port](#)
- [tc-flush-standard](#)

debug spanning-tree mstp

Enable debugging of the multiple spanning tree protocol and view information on the protocol.

Z9500

Syntax `debug spanning-tree mstp [all | bpdu interface {in | out} | events]`

To disable debugging, enter **no debug spanning-tree mstp**

Parameters	all	(OPTIONAL) Enter the keyword <code>all</code> to debug all spanning tree operations.
	bpdu <i>interface</i> {in out}	(OPTIONAL) Enter the keyword <code>bpdu</code> to debug bridge protocol data units (BPDU). (OPTIONAL) Enter the interface keyword along with the type slot/port of the interface you want displayed. Type slot/port options are the following: <ul style="list-style-type: none"> • For a port channel interface, enter the keywords <code>port-channel</code> then a number. • For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. • For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information. Optionally, enter an <code>in</code> or <code>out</code> parameter with the optional interface: <ul style="list-style-type: none"> • For Receive, enter the keyword <code>in</code>. • For Transmit, enter the keyword <code>out</code>.

events (OPTIONAL) Enter the keyword `events` to debug MSTP events.

Command Modes EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.5.1.0	Added support for 4-port 40G line cards on the E-Series.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre-6.2.1.1	Introduced on the E-Series.

Example

disable

Globally disable the multiple spanning tree protocol on the switch.

Z9500

Syntax `disable`
To enable MSTP, enter the `no disable` command.

Defaults Disabled.

Command Modes MULTIPLE SPANNING TREE

7.5.1.0	Introduced on the C-Series.
6.5.1.0	Introduced.

Related Commands

- [protocol spanning-tree mstp](#) — enter MULTIPLE SPANNING TREE mode.

forward-delay

The amount of time the interface waits in the Blocking State and the Learning State before transitioning to the Forwarding State.

Z9500

Syntax

`forward-delay seconds`

To return to the default setting, use the `no forward-delay` command.

Parameters

seconds

Enter the number of seconds the interface waits in the Blocking State and the Learning State before transiting to the Forwarding State. The range is from 4 to 30. The default is **15 seconds**.

Defaults

15 seconds

Command Modes

MULTIPLE SPANNING TREE

Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.5.1.0	Introduced.

Related Commands

- `max-age` — change the wait time before MSTP refreshes protocol configuration information.
- `hello-time` — change the time interval between bridge protocol data units (BPDUs).

hello-time

Set the time interval between generation of MSTB bridge protocol data units (BPDUs).

Z9500

Syntax

`hello-time seconds`

To return to the default value, use the `no hello-time` command.

Parameters

seconds

Enter a number as the time interval between transmission of BPDUs. The range is from 1 to 10. The default is **2 seconds**.

Defaults

2 seconds

Command Modes

Related Commands

- [forward-delay](#) — amount of time the interface waits in the Blocking State and the Learning State before transitioning to the Forwarding State.
- [max-age](#) — change the wait time before MSTP refreshes protocol configuration information.

max-age

To maintain configuration information before refreshing that information, set the time interval for the MSTB.

Z9500

Syntax

`max-age seconds`

To return to the default values, use the `no max-age` command.

Parameters

max-age Enter a number of seconds the Dell EMC Networking OS waits before refreshing configuration information. The range is from 6 to 40. The default is **20 seconds**.

Defaults

20 seconds

7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.5.1.0	Introduced.

Related Commands

- [forward-delay](#) — amount of time the interface waits in the Blocking State and the Learning State before transitioning to the Forwarding State.
- [hello-time](#) — change the time interval between BPDUs.

max-hops

Configure the maximum hop count.

Z9500

Syntax	<code>max-hops <i>number</i></code> To return to the default values, use the <code>no max-hops</code> command.
Parameters	range Enter a number for the maximum hop count. The range is from 1 to 40. The default is 20 .
Defaults	20 hops
Command Modes	MULTIPLE SPANNING TREE
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> . The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.1	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.5.1.0	Introduced.

Usage Information The `max-hops` command is a configuration command that applies to both the IST and all MST instances in the MSTP region. The BPDUs sent out by the root switch set the remaining-hops parameter to the configured value of `max-hops`. When a switch receives the BPDU, it decrements the received value of the remaining hops and uses the resulting value as remaining-hops in the BPDUs. If the remaining-hops reach zero, the switch discards the BPDU and ages out any information that it holds for the port.

msti

Configure multiple spanning tree instance, bridge priority, and one or multiple VLANs mapped to the MST instance.

Z9500

Syntax	<code>msti <i>instance</i> {vlan <i>range</i> bridge-priority <i>priority</i>}</code> To disable mapping or bridge priority, use the <code>no msti <i>instance</i> {vlan <i>range</i> bridge-priority <i>priority</i>}</code> command.
Parameters	msti <i>instance</i> Enter the MSTP instance. The range is from zero (0) to 63. vlan <i>range</i> Enter the keyword <code>vlan</code> then the identifier range value. The range is from 1 to 4094.

bridge-priority Enter the keywords `bridge-priority` then a value in increments of 4096 as the
priority bridge priority. The range is from zero (0) to 61440.

Valid priority values are: 0, 4096, 8192, 12288, 16384, 20480, 24576, 28672, 32768, 36864, 40960, 45056, 49152, 53248, 57344, and 61440. All other values are rejected.

Defaults default bridge-priority is **32768**.

Command Modes INTERFACE

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.5.1.0	Introduced.

Usage Information By default, all VLANs are mapped to MST instance zero (0) unless you use the `vlan range` command to map it to a non-zero instance.

name

The name you assign to the multiple spanning tree region.

Z9500

Syntax `name region-name`
To remove the region name, use the `no name` command.

Parameters **region-name** Enter the MST region name. The range is 32 character limit.

Defaults No default name.

Command Modes MULTIPLE SPANNING TREE

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.5.1.0	Introduced.

Usage Information

For two MSTP switches to be within the same MSTP region, the switches must share the same region name (including matching case).

Related Commands

- [msti](#) — map the VLAN(s) to an MST instance.
- [revision](#) — assign the revision number to the MST configuration.

protocol spanning-tree mstp

To enable and configure the multiple spanning tree group, enter MULTIPLE SPANNING TREE mode.

Syntax `protocol spanning-tree mstp`

To disable the multiple spanning tree group, use the `no protocol spanning-tree mstp` command.

Defaults Not configured.

Command Modes CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.

Version	Description
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre-6.2.1.1	Introduced on the E-Series.

Usage Information

MSTP is not enabled when you enter MULTIPLE SPANNING TREE mode. To enable MSTP globally on the switch, enter the `no disable` command while in MULTIPLE SPANNING TREE mode.

For more information about the multiple spanning tree protocol, refer to the *Dell EMC Networking OS Configuration Guide*.

Example

```
DellEMC(conf)# protocol spanning-tree mstp
DellEMC(config-mstp)#no disable
```

Related Commands

- [disable](#) — disable multiple spanning tree.

revision

The revision number for the multiple spanning tree configuration.

Syntax

`revision range`

To return to the default values, use the `no revision` command.

Parameters

range Enter the revision number for the MST configuration. The range is from 0 to 65535. The default is **0**.

Defaults

0

Command Modes

7.5.1.0	Introduced on the C-Series.
pre-6.2.1.1	Introduced on the E-Series.

Usage Information Enable the multiple spanning tree protocol prior to using this command.

Example

```
DellEMC# show spanning-tree mst configuration
MST region name: CustomerSvc
Revision: 2
MSTI VID
  10 101-105
DellEMC#
```

show spanning-tree msti

View the multiple spanning tree instance.

Z9500

Syntax `show spanning-tree msti [instance-number [brief]] [guard]`

Parameters

- instance-number*** (Optional) Enter the multiple spanning tree instance number. The range is from 0 to 63.
- brief*** (Optional) Enter the keyword `brief` to view a synopsis of the MST instance.
- guard*** (Optional) Enter the keyword `guard` to display the type of guard enabled on an MSTP interface and the current port state.

Command Modes

- EXEC
- EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.

9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.4.2.1	Support for the optional keyword <code>guard</code> was added on the C-Series, S-Series, and E-Series.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.4.1.0	Expanded to display the port error disable state (EDS) loopback BPDU inconsistency causes.

Usage Information Enable the multiple spanning tree protocol prior to using this command.

Example

Example (EDS and LBK) The bold line shows the loopback BPDU inconsistency (LBK_INC).

Usage Information The following describes the `show spanning-tree msti 5 guard` command shown in the following example.

Field	Description
Interface Name	MSTP interface.

Field	Description
Instance	MSTP instance.
Sts	Port state: root-inconsistent (INCON Root), forwarding (FWD), listening (LIS), blocking (BLK), or shut down (EDS Shut).
Guard Type	Type of STP guard configured (Root, Loop, or BPDU guard).

Example (Guard)

spanning-tree

Enable the multiple spanning tree protocol on the interface.

Z9500

Syntax	<code>spanning-tree</code> To disable the multiple spanning tree protocol on the interface, use the <code>no spanning-tree</code> command.
Parameters	spanning-tree Enter the keywords <code>spanning-tree</code> to enable the MSTP on the interface.
Defaults	Enable.
Command Modes	INTERFACE
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> .

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.

7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre-6.2.1.0	Introduced on the E-Series.

spanning-tree msti

Configure multiple spanning tree instance cost and priority for an interface.

Z9500

Syntax	<code>spanning-tree msti <i>instance</i> {cost <i>cost</i> priority <i>priority</i>}</code>	
Parameters	msti <i>instance</i>	Enter the keyword <code>msti</code> and the MST instance number. The range is from zero (0) to 63.
	cost <i>cost</i>	(OPTIONAL) Enter the keyword <code>cost</code> then the port cost value. The range is from 1 to 200000. The defaults are: <ul style="list-style-type: none">• 100 Mb/s Ethernet interface = 200000• 1-Gigabit Ethernet interface = 20000• 10-Gigabit Ethernet interface = 2000• Port Channel interface with one 100 Mb/s Ethernet = 200000• Port Channel interface with one 1 Gigabit Ethernet = 20000• Port Channel interface with one 10 Gigabit Ethernet = 2000• Port Channel with two 1 Gigabit Ethernet = 18000• Port Channel with two 10 Gigabit Ethernet = 1800• Port Channel with two 100 Mbps Ethernet = 180000
	priority <i>priority</i>	Enter keyword <code>priority</code> then a value in increments of 16 as the priority. The range is from 0 to 240. The default is 128 .
Defaults	<ul style="list-style-type: none">• cost = depends on the interface type• priority = 128	
Command Modes	INTERFACE	
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> .	

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.5.1.0	Introduced on the E-Series.

spanning-tree mstp edge-port

Configures the interface as an MST edge port and optionally a Bridge Protocol Data Unit (BPDU) guard.

Z9500

Syntax	<code>spanning-tree mstp edge-port [bpduguard [shutdown-on-violation]]</code>	
Parameters	mstp edge-port	Enter the keyword <code>mstp</code> then the keywords <code>edge-port</code> to configure the interface as a Multiple Spanning Tree edge port.
	bpduguard	(OPTIONAL) Enter the keyword <code>portfast</code> to enable Portfast to move the interface into forwarding mode immediately after the root fails. Enter the keyword <code>bpduguard</code> to disable the port when it receives a BPDU.
	shutdown-onviolation	(OPTIONAL) Enter the keywords <code>shutdown-on-violation</code> to hardware disable an interface when a BPDU is received and the port is disabled.

Command Modes INTERFACE

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.1	Introduced on the S4810.
8.2.1.0	Introduced the hardware <code>shutdown-on-violation</code> option.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.5.1.0	Introduced on the E-Series.

Usage Information On an MSTP switch, a port configured as an edge port immediately transitions to the Forwarding state. Only configure ports connected to end-hosts as edge ports. Consider an edge port similar to a port with `spanning-tree portfast` enabled.

If you do not enable `shutdown-on-violation`, BPDUs are still sent to the RPM CPU.

tc-flush-standard

Enable the MAC address flushing after receiving every topology change notification.

Z9500

Syntax	<code>tc-flush-standard</code> To disable, use the <code>no tc-flush-standard</code> command.
Defaults	Disabled.

Command Modes CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.5.1.0	Introduced

Usage Information By default, Dell EMC Networking OS implements an optimized flush mechanism for MSTP. This mechanism helps in flushing the MAC addresses only when necessary (and less often) allowing for faster convergence during topology changes. However, if a standards-based flush mechanism is needed, this `knob` command can be turned on to enable flushing MAC addresses after receiving every topology change notification.

Neighbor Discovery Protocol (NDP)

The neighbor discovery protocol for IPv6 is defined in RFC 2461 as part of the Stateless Address Autoconfiguration protocol. It replaces the Address Resolution Protocol used with IPv4. NDP defines mechanisms for solving the following problems:

- Router discovery — hosts can locate routers residing on a link
- Prefix discovery — hosts can discover address prefixes for the link
- Parameter discovery
- Address autoconfiguration — configuration of addresses for an interface
- Address resolution — mapping from IP address to link-layer address
- Next-hop determination
- Neighbor unreachability detection (NUD) — determine that a neighbor is no longer reachable on the link.
- Duplicate address detection (DAD) — allow a node to check whether a proposed address is already in use.
- Redirect — the router can inform a node about a better first-hop.

NDP uses the following five ICMPv6 packet types in its implementation:

- Router Solicitation
- Router Advertisement
- Neighbor Solicitation
- Neighbor Advertisement
- Redirect

Topics:

- [IPv6 Router Advertisement \(RA\) Guard](#)

IPv6 Router Advertisement (RA) Guard

The IPv6 RA guard provides support to perform conditional forwarding or blocking of the router advertisement messages that are received at the network device platform. This functionality analyzes and filters the RAs sent by the devices and compares the configuration information on the layer 2 device with the RA frame. Once the layer 2 device validates the content of the RA frame against the configuration, it forwards the RA to its unicast or multicast destination. On failure to validate the RA frame content, the RA frame is dropped.

The IPv6 RA guard supports two different modes:

- Host mode — When a policy with device role as host is applied on an interface, all the RA packets are dropped without validation. You can also configure the host mode policy with VLAN option to drop the RA packets on that specific VLAN and port.
- Router mode — When a policy with device role as router is applied on an interface, all the RA packets are validated based on the configuration information in the policy. Similarly, you can also apply this mode over any specific VLAN and the validation is performed only for that particular VLAN RA packets.

To configure the IPv6 RA guard, use the following Dell EMC Networking OS commands.

debug ipv6 nd ra-guard

Enable debugging for IPv6 RA guard snooping information.

Syntax `debug ipv6 nd ra-guard [interface_type slot/port | count value]`

Parameters

<i>interface_type</i>	Enter the one of the following interfaces and slot/port information:
<i>slot/port</i>	<ul style="list-style-type: none"> • For a port channel interface, enter the keywords <code>port-channel</code> then a number. • For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information.

- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

count value Enter the keyword `count` then the number of debug outputs. The range is from 1 to 65534. The default is infinity.

Defaults None

Command Modes EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.11(0.0)	Introduced on the C9010.
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.9(0.0)	Introduced on the Z9500.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S4810, S4820T, S5000, S6000, S6000-ON, and Z9000 switches.

device-role

Specify the role of the device attached to the port.

Syntax `device-role {host | router}`
 To reset the device role, use the `no device-role {host | router}` command.

Parameters

host	Enter the keyword <code>host</code> to set the device-role as host.
router	Enter the keyword <code>router</code> to set the device-role as router.

Defaults None

Command Modes POLICY LIST CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.11(0.0)	Introduced on the C9010.
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.9(0.0)	Introduced on the Z9500.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.

Version	Description
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S4810, S4820T, S5000, S6000, S6000-ON, and Z9000 switches.

Related Commands

- [ipv6 nd raguard policy policy-name](#) — define the RA guard policy name and enter the RA guard policy configuration mode.
- [ipv6 nd ra-guard enable](#) — configure the RA guard related commands.

hop-limit

Enable the verification of the advertised hop count limit. If this command is not configured, the verification process is bypassed.

Syntax	<code>hop-limit {maximum minimum <i>limit</i>}</code> To reset the hop count limit, use the <code>no hop-limit {maximum minimum <i>limit</i>}</code> command.
Parameters	<p>maximum <i>limit</i> Enter the keyword <code>maximum</code> then the hop limit value. The range is from 0 to 254.</p> <p>minimum <i>limit</i> Enter the keyword <code>minimum</code> then the hop limit value. The range is from 0 to 254.</p>
Defaults	None

9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S4810, S4820T, S5000, S6000, S6000-ON, and Z9000 switches.

Related Commands

- [ipv6 nd ra-guard enable](#) — configure the RA guard related commands.
- [ipv6 nd raguard policy policy-name](#) — define the RA guard policy name and enter the RA guard policy configuration mode.

ipv6 nd ra-guard attach-policy

Apply the IPv6 RA guard to a specific interface.

Syntax	<code>ipv6 nd ra-guard attach-policy policy-name [vlan [vlan 1, vlan 2, vlan 3.....]]</code>
---------------	--

Parameters	policy <i>policy-name</i>	Enter the keyword <code>policy</code> then the policy name. The policy-name allows a maximum of 140 characters.
	vlan [<i>vlan 1, vlan 2, vlan 3.....</i>]	Enter the keyword <code>vlan</code> then the VLAN range. The VLAN range is from 1 to 4094.

Defaults None

Command Modes INTERFACE

other-config-flag

Enable the verification of the advertised other configuration parameter. If this command is not configured, the verification process is bypassed.

Syntax `other-config-flag {on | off}`

To reset the other configuration parameter, use the `no other-config-flag {on | off}` command.

Parameters

on Enter the keyword `on` to set the other-config-flag value as ON.

off Enter the keyword `off` to set the other-config flag value as OFF.

Defaults None

Open Shortest Path First (OSPFv2 and OSPFv3)

Open Shortest Path First version 2 for IPv4 is supported on platform.

OSPF is an interior gateway protocol (IGP), which means that it distributes routing information between routers in a single autonomous system (AS). OSPF is also a link-state protocol in which all routers contain forwarding tables derived from information about their links to their neighbors.

The fundamental mechanisms of OSPF (flooding, DR election, area support, SPF calculations, and so on) are the same for OSPFv2 and OSPFv3. OSPFv3 runs on a per-link basis instead of on a per-IP-subnet basis.

The Dell EMC Networking OS versions 9.4(0.0) and 9.7(0.0) introduce support for VRF on OSPFv2 and OSPFv3 respectively. The multi-process OSPF feature supported on Dell EMC Networking OS version 7.8.1.0 is modified. In earlier versions, multiple OSPF processes were created without VRF (prior to 9.4(0.0)). In the Dell EMC Networking OS versions 9.4(0.0) and 9.7(0.0) (for OSPFv3), multiple OSPF processes can be created on a router, but with only one OSPF process per VRF. However, there can be one OSPFv2 and one OSPFv3 on the same VRF.

This section is divided into two sections. There is no overlap between the two sets of commands. You cannot use an OSPFv2 command in the IPv6 OSPFv3 mode. OSPFv2 is supported on IPv4 tunnels only and OSPFv3 is supported on IPv6 tunnels only.

- [OSPFv3 Commands](#)

OSPFv2 Commands

The Dell EMC Networking implementation of OSPFv2 is based on IETF RFC 2328. .

area default-cost

Set the metric for the summary default route the area border router (ABR) generates into the stub area. Use this command on the border routers at the edge of a stub area.

Z9500

Syntax	<code>area <i>area-id</i> default-cost <i>cost</i></code>	
	To return default values, use the <code>no area <i>area-id</i> default-cost</code> command.	
Parameters	<i>area-id</i>	Specify the OSPF area in dotted decimal format (A.B.C.D.) or enter a number from zero (0) to 65535.
	<i>cost</i>	Specifies the stub area's advertised external route metric. The range is from zero (0) to 65535.
Defaults	<code>cost = 1</code> ; no areas are configured.	
Command Modes	ROUTER OSPF	
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> .	

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for the Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre- 6.1.1.1	Introduced on the E-Series.

Usage Information

In the Dell EMC Networking operating software (OS), `cost` is defined as reference bandwidth/bandwidth.

Related Commands

- [area stub](#) — create a stub area.

area nssa

Specify an area as a not so stubby area (NSSA).

Syntax

```
area area-id nssa [default-information-originate] [no-redistribution] [no-summary]
```

To delete an NSSA, use the `no area area-id nssa` command.

Parameters

area-id	Specify the OSPF area in dotted decimal format (A.B.C.D.) or enter a number from zero (0) to 65535.
no-redistribution	(OPTIONAL) Specify that the <code>redistribute</code> command does not distribute routes into the NSSA. This command can be used when the router is an autonomous system boundary router (ASBR) or area border router (ABR).
default-information-originate	(OPTIONAL) Allows external routing information to be imported into the NSSA by using Type 7 default.
no-summary	(OPTIONAL) Specify that no summary LSAs should be sent into the NSSA.

Defaults

Not configured.

Command Modes

ROUTER OSPF

Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.13(0.0)	Introduced on the remaining DNOS platforms.
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for the Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre- 6.1.1.1	Introduced on the E-Series.

area range

Summarize routes matching an address/mask at an area border router (ABR).

Z9500

Syntax	<code>area area-id range ip-address mask [not-advertise]</code>	
	To disable route summarization, use the <code>no area area-id range ip-address mask</code> command.	
Parameters	area-id	Specify the OSPF area in dotted decimal format (A.B.C.D.) or enter a number from zero (0) to 65535.
	ip-address	Specify an IP address in dotted decimal format.
	mask	Specify a mask for the destination prefix. Enter the full mask (for example, 255.255.255.0).
	not-advertise	(OPTIONAL) Enter the keywords <code>not-advertise</code> to set the status to DoNotAdvertise (that is, the Type 3 summary-LSA is suppressed and the component networks remain hidden from other areas.)
Defaults	Not configured.	
Command Modes	ROUTER OSPF	
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> .	
	Version	Description
	9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.

Version	Description
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for the Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre- 6.1.1.1	Introduced on the E-Series.

Usage Information

Only the routes within an area are summarized, and that summary is advertised to other areas by the ABR. External routes are not summarized.

Related Commands

- [area stub](#) — create a stub area.
- [router ospf](#) — enter ROUTER OSPF mode to configure an OSPF instance.

area stub

Configure a stub area, which is an area not connected to other areas.

Z9500

Syntax

```
area area-id stub [no-summary]
```

To delete a stub area, use the `no area area-id stub` command.

Parameters

- area-id** Specify the OSPF area in dotted decimal format (A.B.C.D.) or enter a number from zero (0) to 65535.
- no-summary** (OPTIONAL) Enter the keywords `no-summary` to prevent the ABR from sending summary Link State Advertisements (LSAs) into the stub area.

Defaults

Disabled.

9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for the Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre- 6.1.1.1	Introduced on the E-Series.

Usage Information

To configure all routers and access servers within a stub, use this command.

Related Commands

- [router ospf](#) — enter ROUTER OSPF mode to configure an OSPF instance.

auto-cost

Specify how the OSPF interface cost is calculated based on the reference bandwidth method.

Z9500

Syntax

```
auto-cost [reference-bandwidth ref-bw]
```

To return to the default bandwidth or to assign cost based on the interface type, use the `no auto-cost [reference-bandwidth]` command.

Parameters

ref-bw (OPTIONAL) Specify a reference bandwidth in megabits per second. The range is from 1 to 4294967. The default is **100 megabits per second**.

Defaults

100 megabits per second.

Command Modes

ROUTER OSPF

9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for the Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre- 6.1.1.1	Introduced on the E-Series.

clear ip ospf

Clear all OSPF routing tables.

Z9500

Syntax `clear ip ospf process-id [vrf vrf-name] [process]`

Parameters		
process-id	Enter the OSPF Process ID to clear a specific process. If no Process ID is entered, all OSPF processes are cleared.	
vrf vrf-name	Enter the keyword <code>vrf</code> and then the name of the VRF to clear all OSPF routing tables corresponding to that VRF.	
process	(OPTIONAL) Enter the keyword <code>process</code> to reset the OSPF process.	

Command Modes EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.

9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.4.(0.0)	Added support for VRF.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.

Version	Description
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for the Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre- 6.1.1.1	Introduced on the E-Series.

clear ip ospf statistics

Clear the packet statistics in interfaces and neighbors.

Z9500

Syntax `clear ip ospf [process-id] [vrf vrf-name] statistics [interface name {neighbor router-id}]`

Parameters	
process-id	Enter the OSPF Process ID to clear a specific process. If no Process ID is entered, all OSPF processes are cleared.
vrf vrf-name	Enter the keyword <code>vrf</code> followed by the name of the VRF to clear all OSPF routing tables corresponding to that VRF.
statistics	Enter the keyword <code>statistics</code> to clear the packet statistics in interfaces and neighbors.
interface name	(OPTIONAL) Enter the keyword <code>interface</code> then one of the following interface keywords and slot/port or number information: <ul style="list-style-type: none"> For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information. For a VLAN, enter the keyword <code>vlan</code> then a number from 1 to 4094. For Port Channel groups, enter the keywords <code>port-channel</code> then a number.
neighbor router-id	(OPTIONAL) Enter the keyword <code>neighbor</code> then the neighbor's router-id in dotted decimal format (A.B.C.D.).

Defaults None

7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre- 6.1.1.1	Introduced on the E-Series.

Related Commands

- [show ip ospf statistics](#) — display the OSPF statistics.

debug ip ospf

Display debug information on OSPF. Entering the `debug ip ospf` commands enables OSPF debugging for the first OSPF process.

Z9500

Syntax

```
debug ip ospf [process-id] [vrf vrf-name] [bfd | event | packet | spf | database-timer rate-limit]
```

To cancel the debug command, use the `no debug ip ospf` command.

Parameters

<i>process-id</i>	Enter the OSPF Process ID to clear a specific process. If no Process ID is entered, all OSPF processes are cleared.
<i>vrf vrf-name</i>	Enter the keyword <code>vrf</code> to view debugging information on OSPF corresponding to that VRF.
<i>bfd</i>	(OPTIONAL) Enter the keyword <code>bfd</code> to debug only OSPF BFD information.
<i>event</i>	(OPTIONAL) Enter the keyword <code>event</code> to debug only OSPF event information.
<i>packet</i>	(OPTIONAL) Enter the keyword <code>packet</code> to debug only OSPF packet information.
<i>spf</i>	(OPTIONAL) Enter the keyword <code>spf</code> to display the Shortest Path First information.
<i>database-timer rate-limit</i>	(OPTIONAL) Enter the keywords <code>database-timer rate-limit</code> to display the LSA throttling timer information. This applies to the S4810 platform only.

Command Modes EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.

Version	Description
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.4(0.0)	Added support for VRF. Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.8.0	Added the <code>database-timer rate-limit</code> option for the S4810.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for the Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre- 6.1.1.1	Introduced on the E-Series.

Usage Information

The following describes the `debug ip ospf` command shown in the Example below.

Field	Description
8:14	Displays the time stamp.
OSPF	Displays the OSPF process ID: instance ID.
v:	Displays the OSPF version. Dell EMC Networking OS supports version 2 only.
t:	Displays the type of packet sent: <ul style="list-style-type: none"> ● 1 - Hello packet ● 2 - database description ● 3 - link state request ● 4 - link state update ● 5 - link state acknowledgement
l:	Displays the packet length.
rid:	Displays the OSPF router ID.
aid:	Displays the Autonomous System ID.
chk:	Displays the OSPF checksum.
aut:	States if OSPF authentication is configured. One of the following is listed: <ul style="list-style-type: none"> ● 0 - no authentication configured ● 1 - simple authentication configured using the <code>ip ospf authentication-key</code> command ● 2 - MD5 authentication configured using the <code>ip ospf message-digest-key</code> command
auk:	If the <code>ip ospf authentication-key</code> command is configured, this field displays the key used.
keyid:	If the <code>ip ospf message-digest-key</code> command is configured, this field displays the MD5 key
to:	Displays the interface to which the packet is intended.
dst:	Displays the destination IP address.
netmask:	Displays the destination IP address mask.

Field	Description
pri:	Displays the OSPF priority
N, MC, E, T	Displays information available in the Options field of the HELLO packet: <ul style="list-style-type: none"> • N + (N-bit is set) • N - (N-bit is not set) • MC+ (bit used by MOSPF is set and router is able to forward IP multicast packets) • MC- (bit used by MOSPF is not set and router cannot forward IP multicast packets) • E + (router is able to accept AS External LSAs) • E - (router cannot accept AS External LSAs) • T + (router can support TOS) • T - (router cannot support TOS)
hi:	Displays the amount of time configured for the HELLO interval.
di:	Displays the amount of time configured for the DEAD interval.
dr:	Displays the IP address of the designated router.
bdr:	Displays the IP address of the Border Area Router.

Example

default-information originate

To generate a default external route into an OSPF routing domain, configure Dell EMC Networking Operating System (OS).

Syntax `default-information originate [always] [metric metric-value] [metric-type type-value] [route-map map-name]`

To return to the default values, use the `no default-information originate` command.

Parameters	
always	(OPTIONAL) Enter the keyword <code>always</code> to specify that default route information must always be advertised.
metric <i>metric-value</i>	(OPTIONAL) Enter the keyword <code>metric</code> then a number to configure a metric value for the route. The range is from 1 to 16777214.
metric-type <i>type-value</i>	(OPTIONAL) Enter the keywords <code>metric-type</code> then an OSPF link state type of 1 or 2 for default routes. The values are: <ul style="list-style-type: none"> • 1 = Type 1 external route • 2 = Type 2 external route
route-map <i>map-name</i>	(OPTIONAL) Enter the keywords <code>route-map</code> then the name of an established route map.

Defaults Disabled.

Command Modes ROUTER OSPF

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.

Version	Description
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for the Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre- 6.1.1.1	Introduced on the E-Series.

Related Commands

- redistribute — redistributes routes from other routing protocols into OSPF.

default-metric

Change the metrics of redistributed routes to a value useful to OSPF. Use this command with the `redistribute` command.

Z9500

Syntax

`default-metric number`

To return to the default values, use the `no default-metric [number]` command.

Parameters

number Enter a number as the metric. The range is from 1 to 16777214.

Defaults

Disabled.

7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre- 6.1.1.1	Introduced on the E-Series.

description

Add a description about the selected OSPF configuration.

Z9500

Syntax `description description`

To remove the OSPF description, use the `no description` command.

Parameters *description* Enter a text string description to identify the OSPF configuration (80 characters maximum).

Defaults None

Command Modes ROUTER OSPF

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.

7.5.1.0	Introduced on the C-Series.
pre- 6.1.1.1	Introduced on the E-Series.

Related Commands

- `show ip ospf asbr` — display the VLAN configuration.

distance

Define an administrative distance for particular routes to a specific IP address.

Z9500

Syntax

```
distance weight [ip-address mask access-list-name]
```

To delete the settings, use the `no distance weight [ip-address mask access-list-name]` command.

Parameters

<i>weight</i>	Specify an administrative distance. The range is from 1 to 255. The default is 110 .
<i>ip-address</i>	(OPTIONAL) Enter a router ID in the dotted decimal format. If you enter a router ID, include the mask for that router address.
<i>mask</i>	(OPTIONAL) Enter a mask in dotted decimal format or /n format.
<i>access-list-name</i>	(OPTIONAL) Enter the name of an IP standard access list, up to 140 characters.

Defaults

110

Command Modes

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for the Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre- 6.1.1.1	Introduced on the E-Series.

distance ospf

Configure an OSPF distance metric for different types of routes.

Z9500

Syntax `distance ospf [external dist3] [inter-area dist2] [intra-area dist1]`

To delete these settings, use the `no distance ospf` command.

Parameters

- external *dist3*** (OPTIONAL) Enter the keyword `external` then a number to specify a distance for external type 5 and 7 routes. The range is from 1 to 255. The default is **110**.
- inter-area *dist2*** (OPTIONAL) Enter the keywords `inter-area` then a number to specify a distance metric for routes between areas. The range is from 1 to 255. The default is **110**.
- intra-area *dist1*** (OPTIONAL) Enter the keywords `intra-area` then a number to specify a distance metric for all routes within an area. The range is from 1 to 255. The default is **110**.

Defaults

- external *dist3* = **110**
- inter-area *dist2* = **110**
- intra-area *dist1* = **110**

Command Modes ROUTER OSPF

Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for the Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

Usage Information

To specify a distance for routes learned from other routing domains, use the `redistribute` command.

distribute-list in

Apply a filter to incoming routing updates from OSPF to the routing table.

Z9500

Syntax `distribute-list prefix-list-name in [interface]`
To delete a filter, use the `no distribute-list prefix-list-name in [interface]` command.

Parameters

prefix-list-name Enter the name of a configured prefix list.

interface (OPTIONAL) Enter one of the following keywords and slot/port or number information:

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For Port Channel groups, enter the keywords `port-channel` then a number.
- For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

Defaults Not configured.

Command Modes ROUTER OSPF

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for the Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre- 6.1.1.1	Introduced on the E-Series.

distribute-list out

To restrict certain routes destined for the local routing table after the SPF calculation, apply a filter.

Z9500

Syntax `distribute-list prefix-list-name out [bgp | connected | isis | rip | static]`

To remove a filter, use the `no distribute-list prefix-list-name out [bgp | connected | isis | rip | static]` command.

Parameters

- prefix-list-name*** Enter the name of a configured prefix list.
- bgp** (OPTIONAL) Enter the keyword `bgp` to specify that BGP routes are distributed.
NOTE: BGP and ISIS routes are not available on the C-Series. BGP, ISIS, and RIP routes are not available on the S-Series.
- connected** (OPTIONAL) Enter the keyword `connected` to specify that connected routes are distributed.
- isis** (OPTIONAL) Enter the keyword `isis` to specify that IS-IS routes are distributed.
NOTE: BGP and ISIS routes are not available on the C-Series. BGP, ISIS, and RIP routes are not available on the S-Series.
- rip** (OPTIONAL) Enter the keyword `rip` to specify that RIP routes are distributed.
NOTE: BGP and ISIS routes are not available on the C-Series. BGP, ISIS, and RIP routes are not available on the S-Series.
- static** (OPTIONAL) Enter the keyword `static` to specify that only manually configured routes are distributed.

Defaults Not configured.

Command Modes ROUTER OSPF

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for the Multi-Process OSPF.

Version	Description
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre- 6.1.1.1	Introduced on the E-Series.

Usage Information

The `distribute-list out` command applies to routes autonomous system boundary routers (ASBRs) redistributes into OSPF. It can be applied to external type 2 and external type 1 routes, but not to intra-area and inter-area routes.

enable inverse-mask

By default, Dell Networking Operating System (OS) allows you to input the OSPF `network` command with a `net-mask`. This command provides a choice between `inverse-mask` or `net-mask` (the default).

Z9500

Syntax

`enable inverse mask`

To return to the default `net-mask`, use the `no enable inverse mask` command.

Defaults

net-mask

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.1	Introduced on the S4810.
7.5.1.0	Introduced on the C-Series.
pre- 6.1.1.1	Introduced on the E-Series.

fast-convergence

This command sets the minimum LSA origination and arrival times to zero (0), allowing more rapid route computation so that convergence takes less time.

Z9500

Syntax

`fast-convergence {number}`

To cancel `fast-convergence`, use the `no fast convergence` command.

Parameters

number

Enter the convergence level desired. The higher this parameter is set, the faster OSPF converge takes place. The range is from 1 to 4.

Defaults	None.
Command Modes	ROUTER OSPF
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> .

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Introduced on all platforms.

Usage Information	<p>The higher this parameter is set, the faster OSPF converge takes place.</p> <p> NOTE: The faster the convergence, the more frequent the route calculations and updates. This behavior impacts CPU utilization and may impact adjacency stability in larger topologies.</p> <p>Generally, convergence level 1 meets most convergence requirements. Higher convergence levels should only be selected following consultation with Dell EMC Networking technical support.</p>
--------------------------	---

flood-2328

Enable RFC-2328 flooding behavior.

Z9500

Syntax	<pre>flood-2328</pre> <p>To disable, use the <code>no flood-2328</code> command.</p>
Defaults	Disabled.
Command Modes	ROUTER OSPF
Command History	<p>This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i>.</p> <p>The following is a list of the Dell EMC Networking OS version history for this command.</p>

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S6100-ON.
9.8(1.0)	Introduced on the Z9100-ON.

Version	Description
9.8(0.0)	Introduced on the S3048-ON and S4048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series and E-Series.

Usage Information

In OSPF, flooding is the most resource-consuming task. The flooding algorithm, described in RFC-2328, requires that OSPF flood LSAs (Link State Advertisements) on all interfaces, as governed by LSA's flooding scope (see Section 13 of the RFC). When multiple direct links connect two routers, the RFC-2328 flooding algorithm generates significant redundant information across all links.

By default, Dell EMC Networking OS implements an enhanced flooding procedure that dynamically and intelligently determines when to optimize flooding. Whenever possible, the OSPF task attempts to reduce flooding overhead by selectively flooding on a subset of the interfaces between two routers.

When you enable `flood-2328`, this command configures Dell EMC Networking OS to flood LSAs on all interfaces.

graceful-restart grace-period

Specifies the time duration, in seconds, that the router's neighbors continue to advertise the router as fully adjacent regardless of the synchronization state during a graceful restart.

NOTE: This command enables OSPFv2 graceful restart globally by setting the grace period (in seconds) that an OSPFv2 router's neighbors continues to advertise the router as adjacent during a graceful restart.

Z9500

Syntax `graceful-restart grace-period seconds`
 To disable the grace period, use the `no graceful-restart grace-period` command.

Parameters **seconds** Time duration, in seconds, that specifies the duration of the restart process before OSPF terminates the process. The range is from 40 to 1800 seconds.

Defaults Not Configured

Command Modes ROUTER OSPF

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.

Version	Description
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Introduced on the S-Series. Added support for Multi-Process OSPF.
7.5.1.0	Introduced on the C-Series.
pre- 6.1.1.1	Introduced on the E-Series.

Usage Information

The Helper mode is enabled by default on the device. To enable the restart mode also on the device, you must configure the grace period using this command. After you enable restart mode the router advertises the neighbor as fully adjacent during a restart.

graceful-restart helper-reject

Specify the OSPF router to not act as a helper during graceful restart.

Z9500

Syntax

```
graceful-restart helper-reject ip-address
```

To return to default value, use the `no graceful-restart helper-reject` command.

Parameters

ip-address Enter the OSPF router-id, in IP address format, of the restart router that *will not* act as a helper during graceful restart.

Defaults

Not configured.

Command Modes

ROUTER OSPF

Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.

Version	Description
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.12.0	Introduced on the S4810.
7.8.1.0	<code>Restart role</code> enabled on the S-Series (Both <code>Helper</code> and <code>Restart</code> roles now supported on S-Series). Added support for Multi-Process OSPF.
7.7.1.0	Added <code>Helper-Role</code> support on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre- 6.1.1.1	Introduced on the E-Series.

graceful-restart mode

Enable the graceful restart mode.

Z9500

Syntax

`graceful-restart mode [planned-only | unplanned-only]`

To disable graceful restart mode, use the `no graceful-restart mode` command.

Parameters

- planned-only** (OPTIONAL) Enter the keywords `planned-only` to indicate graceful restart is supported in a planned restart condition only.
- unplanned-only** (OPTIONAL) Enter the keywords `unplanned-only` to indicate graceful restart is supported in an unplanned restart condition only.

Defaults

Support for both planned and unplanned failures.

Command Modes

ROUTER OSPF

Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.

9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.12.0	Introduced on the S4810.
7.8.1.0	Introduced on the S-Series.

Version	Description
7.5.1.0	Introduced on the C-Series.
pre- 6.1.1.1	Introduced on the E-Series.

graceful-restart role

Specify the role for your OSPF router during graceful restart.

Z9500

Syntax	<code>graceful-restart role [helper-only restart-only]</code> To disable graceful restart role, use the <code>no graceful-restart role</code> command.
Parameters	<p>role helper-only (OPTIONAL) Enter the keywords <code>helper-only</code> to specify the OSPF router is a helper only during graceful restart.</p> <p>role restart-only (OPTIONAL) Enter the keywords <code>restart-only</code> to specify the OSPF router is a restart only during graceful-restart.</p>
Defaults	By default, OSPF routers are both helper and restart routers during a graceful restart.
Command Modes	ROUTER OSPF
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> .

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0)	Introduced on the S3048-ON and S4048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.12.0	Introduced on the S4810.
7.8.1.0	Added support for Multi-Process OSPF. Added <code>Restart</code> and <code>Helper</code> roles support on the S-Series.
7.7.1.0	Added <code>Helper-Role</code> support on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre- 6.1.1.1	Introduced on the E-Series.

ip ospf auth-change-wait-time

OSPF provides a grace period while OSPF changes its interface authentication type. During the grace period, OSPF sends out packets with new and old authentication scheme until the grace period expires.

Z9500

Syntax	<code>ip ospf auth-change-wait-time seconds</code> To return to the default, use the <code>no ip ospf auth-change-wait-time</code> command.
Parameters	seconds Enter the seconds. The range is from 0 to 300.
Defaults	zero (0) seconds.
Command Modes	INTERFACE
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> .

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre- 6.1.1.1	Introduced on the E-Series.

ip ospf authentication-key

Enable authentication and set an authentication key on OSPF traffic on an interface.

Z9500

Syntax	<code>ip ospf authentication-key [encryption-type] key</code> To delete an authentication key, use the <code>no ip ospf authentication-key</code> command.
Parameters	encryption-type (OPTIONAL) Enter 7 to encrypt the key. key Enter an eight-character string. Strings longer than eight characters are truncated.

Defaults Not configured.

Command Modes INTERFACE

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre- 6.1.1.1	Introduced on the E-Series.

Usage Information All neighboring routers in the same network must use the same password to exchange OSPF information.

ip ospf cost

Change the cost associated with the OSPF traffic on an interface.

Z9500

Syntax `ip ospf cost cost`

To return to default value, use the `no ip ospf cost` command.

Parameters **cost** Enter a number as the cost. The range is from 1 to 65535.

Defaults The default cost is based on the reference bandwidth.

Command Modes INTERFACE

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.

Version	Description
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre- 6.1.1.1	Introduced on the E-Series.

Usage Information

If this command is not configured, cost is based on the `auto-cost` command.

When you configure OSPF over multiple vendors, to ensure that all routers use the same cost, use the `ip ospf cost` command. Otherwise, OSPF routes improperly.

Related Commands

- [auto-cost](#) — control how the OSPF interface cost is calculated.

ip ospf dead-interval

Set the time interval since the last hello-packet was received from a router. After the interval elapses, the neighboring routers declare the router dead.

Z9500

Syntax

```
ip ospf dead-interval seconds
```

To return to the default values, use the `no ip ospf dead-interval` command.

Parameters

seconds

Enter the number of seconds for the interval. The range is from 1 to 65535. The default is **40 seconds**.

Defaults

40 seconds

Command Modes

INTERFACE

Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.

Version	Description
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre- 6.1.1.1	Introduced on the E-Series.

Usage Information

By default, the dead interval is four times the default hello-interval.

Related Commands

- [ip ospf hello-interval](#) — set the time interval between the hello packets.

ip ospf hello-interval

Specify the time interval between the hello packets sent on the interface.

Z9500

Syntax

```
ip ospf hello-interval seconds
```

To return to the default value, use the `no ip ospf hello-interval` command.

Parameters

seconds

Enter the number of seconds for the interval. The range is from 1 to 65535. The default is **10 seconds**.

Defaults

10 seconds

Command Modes

INTERFACE

Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.

Version	Description
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre- 6.1.1.1	Introduced on the E-Series.

Usage Information

The time interval between the hello packets must be the same for routers in a network.

Related Commands

- [ip ospf dead-interval](#) — set the time interval before a router is declared dead.

ip ospf message-digest-key

Enable OSPF MD5 authentication and send an OSPF message digest key on the interface.

Z9500

Syntax

```
ip ospf message-digest-key keyid md5 key
```

To delete a key, use the `no ip ospf message-digest-key keyid` command.

Parameters

<i>keyid</i>	Enter a number as the key ID. The range is from 1 to 255.
<i>key</i>	Enter a continuous character string as the password.

Defaults

No MD5 authentication is configured.

Command Modes

INTERFACE

Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
9.1(0.0)	Included usage information on maximum number of digest keys per interface.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.

Version	Description
7.5.1.0	Introduced on the C-Series.
pre- 6.1.1.1	Introduced on the E-Series.

Usage Information

You can configure a maximum of six digest keys on an interface. Of the available six digest keys, the switches select the MD5 key that is common. The remaining MD5 keys are unused.

To change to a different key on the interface, enable the new key while the old key is still enabled. Dell EMC Networking OS sends two packets: the first packet authenticated with the old key and the second packet authenticated with the new key. This process ensures that the neighbors learn the new key and communication is not disrupted by keeping the old key enabled.

After the reply is received and the new key is authenticated, delete the old key. Dell EMC recommends keeping only one key per interface.

NOTE: The MD5 secret is stored as plain text in the configuration file with service password encryption. Write down or otherwise record the key. You cannot learn the key once it is configured. Use caution when changing the key.

ip ospf mtu-ignore

Disable OSPF MTU mismatch detection upon receipt of database description (DBD) packets.

Z9500

Syntax `ip ospf mtu-ignore`
To return to the default, use the `no ip ospf mtu-ignore` command.

Defaults Enabled.

Command Modes INTERFACE

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.

9.8(0.0)	Introduced on the S3048-ON and S4048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre- 6.1.1.1	Introduced on the E-Series.

ip ospf network

Set the network type for the interface.

Z9500

Syntax	<code>ip ospf network {broadcast point-to-point}</code> To return to the default, use the <code>no ip ospf network</code> command.				
Parameters	<table><tr><td>broadcast</td><td>Enter the keyword <code>broadcast</code> to designate the interface as part of a broadcast network.</td></tr><tr><td>point-to-point</td><td>Enter the keywords <code>point-to-point</code> to designate the interface as part of a point-to-point network.</td></tr></table>	broadcast	Enter the keyword <code>broadcast</code> to designate the interface as part of a broadcast network.	point-to-point	Enter the keywords <code>point-to-point</code> to designate the interface as part of a point-to-point network.
broadcast	Enter the keyword <code>broadcast</code> to designate the interface as part of a broadcast network.				
point-to-point	Enter the keywords <code>point-to-point</code> to designate the interface as part of a point-to-point network.				
Defaults	Broadcast.				
Command Modes	ROUTER OSPF				
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> .				

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre- 6.1.1.1	Introduced on the E-Series.

ip ospf priority

To determine the designated router for the OSPF network, set the priority of the interface.

Z9500

Syntax	<code>ip ospf priority <i>number</i></code>
---------------	---

To return to the default setting, use the `no ip ospf priority` command.

Parameters	<i>number</i>	Enter a number as the priority. The range is from 0 to 255. The default is 1 .
Defaults	1	
Command Modes	INTERFACE	
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> .	

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre- 6.1.1.1	Introduced on the E-Series.

Usage Information	Setting a priority of 0 makes the router ineligible for election as a designated router or backup designated router. Use this command for interfaces connected to multi-access networks, not point-to-point networks.
--------------------------	--

ip ospf retransmit-interval

Set the retransmission time between lost link state advertisements (LSAs) for adjacencies belonging to the interface.

Z9500

Syntax	<code>ip ospf retransmit-interval seconds</code> To return to the default values, use the <code>no ip ospf retransmit-interval</code> command.
Parameters	<i>seconds</i> Enter the number of seconds as the interval between retransmission. The range is from 1 to 3600. The default is 5 seconds . This interval must be greater than the expected round-trip time for a packet to travel between two routers.
Defaults	5 seconds
Command Modes	INTERFACE

Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre- 6.1.1.1	Introduced on the E-Series.

Usage Information

Set the time interval to a number large enough to prevent unnecessary retransmissions.

ip ospf transmit-delay

To send a link state update packet on the interface, set the estimated time elapsed.

Z9500

Syntax

```
ip ospf transmit-delay seconds
```

To return to the default value, use the `no ip ospf transmit-delay` command.

Parameters

seconds Enter the number of seconds as the interval between retransmission. The range is from 1 to 3600. The default is **1 second**.
This value must be greater than the transmission and propagation delays for the interface.

Defaults

1 second

Command Modes

8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre- 6.1.1.1	Introduced on the E-Series.

log-adjacency-changes

To send a Syslog message about changes in the OSPF adjacency state, set Dell EMC Networking OS.

Z9500

Syntax	log-adjacency-changes To disable the Syslog messages, use the <code>no log-adjacency-changes</code> command.
Defaults	Disabled.
Command Modes	ROUTER OSPF
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> .

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.

Version	Description
7.8.1.0	Added support for Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre- 6.1.1.1	Introduced on the E-Series.

maximum-paths

Enable the software to forward packets over multiple paths.

Z9500

Syntax	<code>maximum-paths number</code>
	To disable packet forwarding over multiple paths, use the <code>no maximum-paths</code> command.
Parameters	<i>number</i> Specify the number of paths. The range for OSPFv2 is from 1 to 64. The default for OSPFv2 is 4 paths . The range for OSPFv3 is from 1 to 64. The default for OSPFv3 is 8 paths .
Defaults	4
Command Modes	ROUTER OSPF for OSPFv2 ROUTER OSPFv3 for OSPFv3
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> .

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
9.1(0.0)	Introduced support for OSPFv3 on the S4810 and Z9000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre- 6.1.1.1	Introduced on the E-Series.

mib-binding

Enable this OSPF process ID to manage the SNMP traps and process SNMP queries.

Z9500

Syntax	<code>mib-binding</code> To mib-binding on this OSPF process, use the <code>no mib-binding</code> command.
Defaults	none.
Command Modes	ROUTER OSPF
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> . The following is a list of the Dell EMC Networking OS version history for this command.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S6100-ON.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0)	Introduced on the S3048-ON and S4048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Introduced to all platforms.

Usage Information	This command is either enabled or disabled. If no OSPF process is identified as the MIB manager, the first OSPF process is used. If an OSPF process has been selected, it must be disabled prior to assigning new process ID the MIB responsibility.
--------------------------	---

network area

Define which interfaces run OSPF and the OSPF area for those interfaces.

Z9500

Syntax	<code>network ip-address mask area area-id</code> To disable an OSPF area, use the <code>no network ip-address mask area area-id</code> command.				
Parameters	<table><tr><td><i>ip-address</i></td><td>Specify a primary or secondary address in dotted decimal format. The primary address is required before adding the secondary address.</td></tr><tr><td><i>mask</i></td><td>Enter a network mask in /prefix format. (/x)</td></tr></table>	<i>ip-address</i>	Specify a primary or secondary address in dotted decimal format. The primary address is required before adding the secondary address.	<i>mask</i>	Enter a network mask in /prefix format. (/x)
<i>ip-address</i>	Specify a primary or secondary address in dotted decimal format. The primary address is required before adding the secondary address.				
<i>mask</i>	Enter a network mask in /prefix format. (/x)				

area-id

Enter the OSPF area ID as either a decimal value or in a valid IP address. Decimal value range is from 0 to 65535. IP address format is dotted decimal format A.B.C.D.

 **NOTE:** If the area ID is smaller than 65535, it is converted to a decimal value. For example, if you use an area ID of 0.0.0.1, it is converted to 1.

Command Modes ROUTER OSPF

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Introduced to all platforms.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre- 6.1.1.1	Introduced on the E-Series.

Usage Information

To enable OSPF on an interface, the `network area` command must include, in its range of addresses, the primary IP address of an interface.

 **NOTE:** An interface can be attached only to a single OSPF area.

If you delete all the `network area` commands for Area 0, the `show ip ospf` command output does not list Area 0.

passive-interface

Suppress both receiving and sending routing updates on an interface.

Z9500

Syntax

```
passive-interface {default | interface}
```

To enable both the receiving and sending routing, use the `no passive-interface interface` command.

To return all OSPF interfaces (current and future) to active, use the `no passive-interface default` command.

Parameters	default	Enter the keyword <code>default</code> to make all OSPF interfaces (current and future) passive.
	interface	Enter the following keywords and slot/port or number information: <ul style="list-style-type: none"> • For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. • For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information. • For a VLAN, enter the keyword <code>vlan</code> then a number from 1 to 4094.

Command Modes ROUTER OSPF

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
7.4.1.0	Modified to include the keyword <code>default</code> .
pre- 6.1.1.1	Introduced on the E-Series.

Usage Information Although the passive interface does not send or receive routing updates, the network on that interface is still included in OSPF updates sent using other interfaces.

The `default` keyword sets all interfaces as passive. You can then configure individual interfaces, where adjacencies are desired, using the `no passive-interface interface` command. The `no` form of this command is inserted into the configuration for individual interfaces when the `no passive-interface interface` command is issued while `passive-interface default` is configured.

This command behavior has changed as follows:

`passive-interface interface`

- The previous `no passive-interface interface` is removed from the running configuration.
- The ABR status for the router is updated.
- Save `passive-interface interface` into the running configuration.

`passive-interface default`

- All present and future OSPF interfaces are marked as *passive*.
- Any adjacency is explicitly terminated from all OSPF interfaces.

- All previous `passive-interface interface` commands are removed from the running configuration.
- All previous `no passive-interface interface` commands are removed from the running configuration.

`no passive-interface interface`

- Remove the interface from the passive list.
- The ABR status for the router is updated.
- If `passive-interface default` is specified, then save `no passive-interface interface` into the running configuration.

`No passive-interface default`

- Clear everything and revert to the default behavior.
- All previously marked passive interfaces are removed.
- May update ABR status.

On configuring suppression using the `passive-interface` command, the state of the OSPF neighbor does not change to INIT; instead, the state of the OSPF neighbor changes to DOWN after the dead-timer expires.

redistribute

Redistribute information from another routing protocol throughout the OSPF process.

Syntax `redistribute {connected | isis | ospf | rip | static} [metric metric-value | metric-type type-value] [route-map map-name] [tag tag-value]`

To disable redistribution, use the `no redistribute {connected | isis | rip | static}` command.

Parameters

connected	Enter the keyword <code>connected</code> to specify that information from active routes on interfaces is redistributed.
isis	Enter the keyword <code>isis</code> to specify that ISO IS-IS information is redistributed.
ospf	Enter the keyword <code>ospf</code> to specify that information corresponding to OSPF is redistributed.
rip	Enter the keyword <code>rip</code> to specify that RIP routing information is redistributed.
static	Enter the keyword <code>static</code> to specify that information from static routes is redistributed.
metric <i>metric-value</i>	(OPTIONAL) Enter the keyword <code>metric</code> then a number. The range is from 0 (zero) to 16777214.
metric-type <i>type-value</i>	(OPTIONAL) Enter the keywords <code>metric-type</code> then one of the following: <ul style="list-style-type: none"> • 1 = OSPF External type 1 • 2 = OSPF External type 2
route-map <i>map-name</i>	(OPTIONAL) Enter the keywords <code>route-map</code> then the name of the route map.
tag <i>tag-value</i>	(OPTIONAL) Enter the keyword <code>tag</code> then a number. The range is from 0 to 4294967295.

Defaults Not configured.

Command Modes ROUTER OSPF

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.

Version	Description
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre- 6.1.1.1	Introduced on the E-Series.

Usage Information

To redistribute the default route (0.0.0.0/0), configure the `default-information originate` command.

Despite removing an OSPF process globally, the OSPF process is not completely removed from the BGP configuration.

Related Commands

- [default-information originate](#) — generate a default route into the OSPF routing domain.

redistribute bgp

Redistribute BGP routing information throughout the OSPF instance.

Syntax

```
redistribute bgp as number [metric metric-value] | [metric-type type-value]
| [tag tag-value]
```

To disable redistribution, use the `no redistribute bgp as number [metric metric-value] | [metric-type type-value] [route-map map-name] [tag tag-value]` command.

Parameters

as <i>number</i>	Enter the autonomous system number. The range is from 1 to 65535.
metric <i>metric-value</i>	(OPTIONAL) Enter the keyword <code>metric</code> then the metric-value number. The range is from 0 to 16777214.
metric-type <i>type-value</i>	(OPTIONAL) Enter the keywords <code>metric-type</code> then one of the following: <ul style="list-style-type: none"> • 1 = for OSPF External type 1 • 2 = for OSPF External type 2
route-map <i>map-name</i>	(OPTIONAL) Enter the keywords <code>route-map</code> then the name of the route map.
tag <i>tag-value</i>	(OPTIONAL) Enter the keyword <code>tag</code> to set the tag for routes redistributed into OSPF. The range is from 0 to 4294967295.

Defaults

None

ROUTER OSPF

Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.3	Added Route Map for BGP Redistribution to OSPF.
7.8.1.0	Added support for Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
7.4.1.0	Added the keyword <code>default</code> .
pre- 6.1.1.1	Introduced on the E-Series.

redistribute isis

Redistribute IS-IS routing information throughout the OSPF instance.

Syntax

```
redistribute isis [tag] [level-1 | level-1-2 | level-2] [metric metric-value | metric-type type-value] [route-map map-name] [tag tag-value]
```

To disable redistribution, use the `no redistribute isis [tag] [level-1 | level-1-2 | level-2] [metric metric-value | metric-type type-value] [route-map map-name] [tag tag-value]` command.

Parameters

tag	(OPTIONAL) Enter the name of the IS-IS routing process.
level-1	(OPTIONAL) Enter the keywords <code>level-1</code> to redistribute only IS-IS Level-1 routes.
level-1-2	(OPTIONAL) Enter the keywords <code>level-1-2</code> to redistribute both IS-IS Level-1 and Level-2 routes.
level-2	(OPTIONAL) Enter the keywords <code>level-2</code> to redistribute only IS-IS Level-2 routes.
metric <i>metric-value</i>	(OPTIONAL) Enter the keyword <code>metric</code> then a number. The range is from 0 (zero) to 4294967295.
metric-type <i>type-value</i>	(OPTIONAL) Enter the keywords <code>metric-type</code> then one of the following: <ul style="list-style-type: none">• 1 = for OSPF External type 1• 2 = for OSPF External type 2

route-map *map-name* (OPTIONAL) Enter the keywords `route-map` then the name of the route map.

tag *tag-value* (OPTIONAL) Enter the keyword `tag` to set the tag for routes redistributed into OSPF. The range is from 0 to 4294967295.

Defaults Not configured.

Command Modes ROUTER OSPF

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.

7.8.1.0	Added support for Multi-Process OSPF.
7.5.1.0	Introduced on the C-Series.
pre- 6.1.1.1	Introduced on the E-Series.

router-id

To configure a fixed router ID, use this command.

Syntax `router-id ip-address`

To remove the fixed router ID, use the `no router-id ip-address` command.

Parameters ***ip-address*** Enter the router ID in the IP address format.

Defaults None.

Command Modes ROUTER OSPF

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.

Version	Description
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre- 6.1.1.1	Introduced on the E-Series.

Usage Information

You can configure an arbitrary value in the IP address format for each router. However, each router ID must be unique. If you use this command on an OSPF router process, which is already active (that is, has neighbors), a prompt reminding you that changing the router-id brings down the existing OSPF adjacency. The new router ID is effective at the next reload.

Example

```
DellEMC(conf)# router ospf 100
DellEMC(conf-router_ospf)#router-id 1.1.1.1
Changing router-id will bring down existing OSPF adjacency [y/n]:

DellEMC(conf-router_ospf)#show config
!
router ospf 100
router-id 1.1.1.1
DellEMC(conf-router_ospf)# no router-id
Changing router-id will bring down existing OSPF adjacency [y/n]:
DellEMC#
```

router ospf

To configure an OSPF instance, enter ROUTER OSPF mode.

Syntax `router ospf process-id [vrf {vrf name}]`

To clear an OSPF instance, use the `no router ospf process-id` command.

Parameters

- process-id*** Enter a number for the OSPF instance. The range is from 1 to 65535.
- vrf name*** (Optional) Enter the VRF process identifier to tie the OSPF instance to the VRF. All network commands under this OSPF instance are then tied to the VRF instance.

Defaults Not configured.

Command Modes CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.

Version	Description
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
9.1(0.0)	Added support for OSPFv3 on the S4810 and Z9000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.9.1.0	Added support for VRF.
7.8.1.0	Added support for Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre- 6.1.1.1	Introduced on the E-Series.

Usage Information

You must have an IP address assigned to an interface to enter ROUTER OSPF mode and configure OSPF. You can create only one OSPFv2 process per VRF.

Example

```
DellEMC(conf)# router ospf 2
DellEMC(conf-router_ospf)#
```

show config

Display the non-default values in the current OSPF configuration.

Z9500

Syntax show config

Command Modes ROUTER OSPF

7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre- 6.1.1.1	Introduced on the E-Series.

Example

show ip ospf

Display information on the OSPF process configured on the switch.

Z9500

Syntax `show ip ospf [process-id | vrf vrf name]`

Parameters

- process-id*** Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.
- vrf vrf name*** Show only the OSPF information tied to the VRF process.

Command Modes

- EXEC
- EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.4.(0.0)	Added support for VRF.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.

Version	Description
8.3.8.0	Added output for LSA throttling timers.
8.3.7.0	Introduced on the S4810.
7.9.1.0	Added support for VRF.
7.8.1.0	Added support of Multi-Process OSPF.
7.8.1.0	Added the <i>process-id</i> option, in support of Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre- 6.1.1.1	Introduced on the E-Series.

Usage Information

If you delete all the network area commands for Area 0, the `show ip ospf` command output does not list Area 0.

The following describes the `show ip ospf` command shown in the following example.

Line Beginning with	Description
“Routing Process...”	Displays the OSPF process ID and the IP address associated with the process ID.
“Supports only...”	Displays the number of Type of Service (TOS) routes supported.
“SPF schedule...”	Displays the delay and hold time configured for this process ID.
“Convergence Level”	
“Min LSA...”	Displays the intervals set for LSA transmission and acceptance.
“Number of...”	Displays the number and type of areas configured for this process ID.

Example

```
DellEMC# show ip ospf 10
Routing Process ospf 10 with ID 1.1.1.1 Virtual router default-vrf
Supports only single TOS (TOS0) routes
SPF schedule delay 5 secs, Hold time between two SPFs 10 secs
Convergence Level 0
Min LSA origination 0 msec, Min LSA arrival 1000 msec
Min LSA hold time 5000 msec, Max LSA wait time 5000 msec
Number of area in this router is 1, normal 1 stub 0 nssa 0
  Area BACKBONE (0)
    Number of interface in this area is 1
    SPF algorithm executed 205 times
    Area ranges are
DellEMC#
```

Related Commands

- [show ip ospf database](#) — display information about the OSPF routes configured.
- [show ip ospf interface](#) — display the OSPF interfaces configured.
- [show ip ospf neighbor](#) — display the OSPF neighbors configured.

show ip ospf asbr

Display all autonomous system boundary router (ASBR) routers visible to OSPF.

Z9500

Syntax	<code>show ip ospf [<i>process-id</i>] asbr</code>	
Parameters	<i>process-id</i>	Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.
Defaults	None	
Command Modes	<ul style="list-style-type: none">EXECEXEC Privilege	
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> .	

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.4.(0.0)	Added support for VRF.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support of Multi-Process OSPF.
7.8.1.0	Added the <i>process-id</i> option, in support of Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series and E-Series.

Usage Information To isolate problems with external routes, use this command. In OSPF, external routes are calculated by adding the LSA cost to the cost of reaching the ASBR router. If an external route does not have the correct cost, use this command to determine if the path to the originating router is correct. The display output is not sorted in any order.

 **NOTE:** ASBRs that are not in directly connected areas are also displayed.

You can determine if an ASBR is in a directly connected area (or not) by the flags. For ASBRs in a directly connected area, E flags are set. In the following example, router 1.1.1.1 is in a directly connected area since the Flag is E/-/-/. For remote ASBRs, the E flag is clear (-/-/-/).

Example

```
DellEMC# show ip ospf 1asbr
RouterID  Flags  Cost  Nexthop  Interface Area
```

```

3.3.3.3   -/-/-/  2   10.0.0.2   Te 1/1   1
1.1.1.1   E/-/-/  0   0.0.0.0   -       0
DellEMC#

```

show ip ospf database

Display all LSA information. If you do not enable OSPF on the switch, no output is generated.

Z9500

Syntax `show ip ospf process-id [vrf vrf-name] database [database-summary]`

Parameters

- process-id*** Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.
- vrf vrf-name*** Enter the keyword `vrf` and then the name of the VRF to view LSA information on OSPF processes corresponding to that VRF.
- database-summary*** (OPTIONAL) Enter the keywords `database-summary` to the display the number of LSA types in each area and the total number of LSAs.

Command Modes

- EXEC
- EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.

7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre- 6.1.1.1	Introduced on the E-Series.

Usage Information The following describes the `show ip ospf process-id database` command shown in the following example.

Field	Description
Link ID	Identifies the router ID.
ADV Router	Identifies the advertising router's ID.
Age	Displays the link state age.
Seq#	Identifies the link state sequence number. This number allows you to identify old or duplicate link state advertisements.
Checksum	Displays the Fletcher checksum of an LSA's complete contents.
Link count	Displays the number of interfaces for that router.

Example

```
DellEMC> show ip ospf 1 database

      OSPF Router with ID (11.1.2.1) (Process ID 1)
          Router (Area 0.0.0.0)

Related Commands

- [show ip ospf database asbr-summary](#) — display only ASBR summary LSA information.

show ip ospf database asbr-summary

Display information about autonomous system (AS) boundary LSAs.

Z9500

Syntax

```
show ip ospf [process-id] database asbr-summary [link-state-id] [adv-router ip-address]
```

Parameters

- process-id*** Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.
- link-state-id*** (OPTIONAL) Specify LSA ID in dotted decimal format. The LSA ID value depends on the LSA type, and it can be one of the following:
- the network's IP address for Type 3 LSAs or Type 5 LSAs
 - the router's OSPF router ID for Type 1 LSAs or Type 4 LSAs

- the default destination (0.0.0.0) for Type 5 LSAs

adv-router ip-address

(OPTIONAL) Enter the keywords `adv-router` and the ip-address to display only the LSA information about that router.

- EXEC
 - EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.4.(0.0)	Added support for VRF.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre- 6.1.1.1	Introduced on the E-Series.

Usage Information

The following describes the `show ip ospf database asbr-summary` command shown in the following example.

Field	Description
LS Age	Displays the LSA's age.
Options	Displays the optional capabilities available on router. The following options can be found in this item: <ul style="list-style-type: none"> • TOS-capability or No TOS-capability is displayed depending on whether the router can support Type of Service. • DC or No DC is displayed depending on whether the originating router can support OSPF over demand circuits. • E or No E is displayed on whether the originating router can accept AS External LSAs.
LS Type	Displays the LSA's type.
Link State ID	Displays the Link State ID.
Advertising Router	Identifies the advertising router's ID.
Checksum	Displays the Fletcher checksum of the LSA's complete contents.

Field	Description
Length	Displays the length in bytes of the LSA.
Network Mask	Displays the network mask implemented on the area.
TOS	Displays the Type of Service (TOS) options. Option 0 is the only option.
Metric	Displays the LSA metric.

Example

```
DellEMC# show ip ospf 100 database asbr-summary

      OSPF Router with ID (1.1.1.10) (Process ID 100)

      Summary Asbr (Area 0.0.0.0)

LS age: 1437
Options: (No TOS-capability, No DC, E)
LS type: Summary Asbr
Link State ID: 103.1.50.1
Advertising Router: 1.1.1.10
LS Seq Number: 0x8000000f
Checksum: 0x8221
Length: 28
Network Mask: /0
      TOS: 0 Metric: 2

LS age: 473
Options: (No TOS-capability, No DC, E)
LS type: Summary Asbr
Link State ID: 104.1.50.1
Advertising Router: 1.1.1.10
LS Seq Number: 0x80000010
Checksum: 0x4198
Length: 28
--More--
```

Related Commands

- [show ip ospf database](#) — display OSPF database information.

show ip ospf database external

Display information on the AS external (type 5) LSAs.

Z9500

Syntax

```
show ip ospf [process-id | vrf vrf-name ] database external [link-state-id]
[adv-router ip-address]
```

Parameters

<i>process-id</i>	Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.
<i>vrf vrf-name</i>	Enter the keyword <code>vrf</code> followed by the name of the VRF to view information on AS external LSAs corresponding to the OSPF processes that are tied to a specific VRF.
<i>link-state-id</i>	(OPTIONAL) Specify LSA ID in dotted decimal format. The LSA ID value depends on the LSA type, and it can be one of the following: <ul style="list-style-type: none"> • the network's IP address for Type 3 LSAs or Type 5 LSAs • the router's OSPF router ID for Type 1 LSAs or Type 4 LSAs • the default destination (0.0.0.0) for Type 5 LSAs
<i>adv-router ip-address</i>	(OPTIONAL) Enter the keywords <code>adv-router</code> and the ip-address to display only the LSA information about that router.

- Command Modes**
- EXEC
 - EXEC Privilege

7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre-6.1.1.1	Introduced on the E-Series.

Usage Information

The following describes the `show ip ospf process-id database external` command shown in the following example.

Field	Description
LS Age	Displays the LSA's age.
Options	Displays the optional capabilities available on router. The following options can be found in this item: <ul style="list-style-type: none"> • TOS-capability or No TOS-capability is displayed depending on whether the router can support Type of Service. • DC or No DC is displayed depending on whether the originating router can support OSPF over demand circuits. • E or No E is displayed on whether the originating router can accept AS External LSAs.
LS Type	Displays the LSA's type.
Link State ID	Displays the Link State ID.
Advertising Router	Identifies the router ID of the LSA's originating router.
LS Seq Number	Identifies the link state sequence number. This number enables you to identify old or duplicate LSAs.
Checksum	Displays the Fletcher checksum of the LSA's complete contents.
Length	Displays the length in bytes of the LSA.
Network Mask	Displays the network mask implemented on the area.

Field	Description
Metrics Type	Displays the external type.
TOS	Displays the Type of Service (TOS) options. Option 0 is the only option.
Metric	Displays the LSA metric.
Forward Address	Identifies the address of the forwarding router. Data traffic is forwarded to this router. If the forwarding address is 0.0.0.0, data traffic is forwarded to the originating router.
External Route Tag	Displays the 32-bit field attached to each external route. The OSPF protocol does not use this field, but you can use the field for external route management.

Example

```
DellEMC# show ip ospf 1 database external

      OSPF Router with ID (20.20.20.5) (Process ID 1)

          Type-5 AS External

LS age: 612
Options: (No TOS-capability, No DC, E)
LS type: Type-5 AS External
Link State ID: 12.12.12.2
Advertising Router: 20.31.3.1
LS Seq Number: 0x80000007
Checksum: 0x4cde
Length: 36
Network Mask: /32
    Metrics Type: 2
    TOS: 0
    Metrics: 25
    Forward Address: 0.0.0.0
    External Route Tag: 43

LS age: 1868
Options: (No TOS-capability, DC)
LS type: Type-5 AS External
Link State ID: 24.216.12.0
Advertising Router: 20.20.20.8
LS Seq Number: 0x80000005
Checksum: 0xa00e
Length: 36
Network Mask: /24
    Metrics Type: 2
    TOS: 0
    Metrics: 1
    Forward Address: 0.0.0.0
    External Route Tag: 701
DellEMC#
```

Related Commands

| <b>pre-6.1.1.1</b> | Introduced on the E-Series.               |

**Usage Information** The following describes the `show ip ospf process-id database opaque-area` command shown in the following example.

| <b>Item</b>    | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                |
|----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>LS Age</b>  | Displays the LSA's age.                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Options</b> | Displays the optional capabilities available on router. The following options can be found in this item: <ul style="list-style-type: none"> <li>• TOS-capability or No TOS-capability is displayed depending on whether the router can support Type of Service.</li> <li>• DC or No DC is displayed depending on whether the originating router can support OSPF over demand circuits.</li> </ul> |

| Item                      | Description                                                                                                                             |
|---------------------------|-----------------------------------------------------------------------------------------------------------------------------------------|
|                           | <ul style="list-style-type: none"> <li>E or No E is displayed on whether the originating router can accept AS External LSAs.</li> </ul> |
| <b>LS Type</b>            | Displays the LSA's type.                                                                                                                |
| <b>Link State ID</b>      | Displays the Link State ID.                                                                                                             |
| <b>Advertising Router</b> | Identifies the advertising router's ID.                                                                                                 |
| <b>Checksum</b>           | Displays the Fletcher checksum of the LSA's complete contents.                                                                          |
| <b>Length</b>             | Displays the length in bytes of the LSA.                                                                                                |
| <b>Opaque Type</b>        | Displays the Opaque type field (the first 8 bits of the Link State ID).                                                                 |
| <b>Opaque ID</b>          | Displays the Opaque type-specific ID (the remaining 24 bits of the Link State ID).                                                      |

### Example

```
DelleMC> show ip ospf 1 database opaque-area

 OSPF Router with ID (3.3.3.3) (Process ID 1)
 Type-10 Opaque Link Area (Area 0)

LS age: 1133
Options: (No TOS-capability, No DC, E)
LS type: Type-10 Opaque Link Area
Link State ID: 1.0.0.1
Advertising Router: 10.16.1.160
LS Seq Number: 0x80000416
Checksum: 0x376
Length: 28
Opaque Type: 1
Opaque ID: 1
Unable to display opaque data

LS age: 833
Options: (No TOS-capability, No DC, E)
LS type: Type-10 Opaque Link Area
Link State ID: 1.0.0.2
Advertising Router: 10.16.1.160
LS Seq Number: 0x80000002
Checksum: 0x19c2
--More--
```

### Related Commands

- [show ip ospf database](#) — display OSPF database information.

## show ip ospf database opaque-as

Display the opaque-as (type 11) LSA information.

**Syntax** `show ip ospf process-id database opaque-as [link-state-id] [adv-router ip-address]`

| Parameters                          | Description                                                                                                                                                                                                                                                                                                                                                                      |
|-------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><i>process-id</i></b>            | Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.                                                                                                                                                                                                                                               |
| <b><i>link-state-id</i></b>         | (OPTIONAL) Specify LSA ID in dotted decimal format. The LSA ID value depends on the LSA type, and it can be one of the following: <ul style="list-style-type: none"> <li>• the network's IP address for Type 3 LSAs or Type 5 LSAs</li> <li>• the router's OSPF router ID for Type 1 LSAs or Type 4 LSAs</li> <li>• the default destination (0.0.0.0) for Type 5 LSAs</li> </ul> |
| <b><i>adv-router ip-address</i></b> | (OPTIONAL) Enter the keywords <code>adv-router</code> and the ip-address to display only the LSA information about that router.                                                                                                                                                                                                                                                  |

- [show ip ospf database](#) — display OSPF database information.

## show ip ospf database router

Display the router (type 1) LSA information.

### Z9500

**Syntax** `show ip ospf [process-id | vrf vrf-name ] database router [link-state-id] [adv-router ip-address]`

- Parameters**
- process-id** Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.
  - vrf vrf-name** Enter the keyword `vrf` followed by the name of the VRF to view the router LSA information corresponding to the OSPF process that is tied to a specific VRF.
  - link-state-id** (OPTIONAL) Specify LSA ID in dotted decimal format. The LSA ID value depends on the LSA type, and it can be one of the following:
    - the network's IP address for Type 3 LSAs or Type 5 LSAs
    - the router's OSPF router ID for Type 1 LSAs or Type 4 LSAs
    - the default destination (0.0.0.0) for Type 5 LSAs

**adv-router ip-address** (OPTIONAL) Enter the keywords `adv-router` followed by the IP address of an Advertising Router to display only the LSA information about that router.

- Command Modes**
- EXEC
  - EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| <b>pre-6.1.1.1</b> | Introduced on the E-Series.               |

**Usage Information** The following describes the `show ip ospf process-id database router` command shown in the following example.

| Item                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|---------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>LS Age</b>             | Displays the LSA age.                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Options</b>            | Displays the optional capabilities available on router. The following options can be found in this item: <ul style="list-style-type: none"> <li>• TOS-capability or No TOS-capability is displayed depending on whether the router can support Type of Service.</li> <li>• DC or No DC is displayed depending on whether the originating router can support OSPF over demand circuits.</li> <li>• E or No E is displayed on whether the originating router can accept AS External LSAs.</li> </ul> |
| <b>LS Type</b>            | Displays the LSA type.                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Link State ID</b>      | Displays the Link State ID.                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Advertising Router</b> | Identifies the router ID of the LSA's originating router.                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>LS Seq Number</b>      | Displays the link state sequence number. This number detects duplicate or old LSAs.                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Checksum</b>           | Displays the Fletcher checksum of an LSA's complete contents.                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| Item                        | Description                                                                                                                       |
|-----------------------------|-----------------------------------------------------------------------------------------------------------------------------------|
| <b>Length</b>               | Displays the length in bytes of the LSA.                                                                                          |
| <b>Number of Links</b>      | Displays the number of active links to the type of router (Area Border Router or AS Boundary Router) listed in the previous line. |
| <b>Link connected to:</b>   | Identifies the type of network to which the router is connected.                                                                  |
| <b>(Link ID)</b>            | Identifies the link type and address.                                                                                             |
| <b>(Link Data)</b>          | Identifies the router interface address.                                                                                          |
| <b>Number of TOS Metric</b> | Lists the number of TOS metrics.                                                                                                  |
| <b>TOS 0 Metric</b>         | Lists the number of TOS 0 metrics.                                                                                                |

### Example

```

DelleMC# show ip ospf 100 database router
 OSPF Router with ID (1.1.1.10) (Process ID 100)
 Router (Area 0)

LS age: 967
Options: (No TOS-capability, No DC, E)
LS type: Router
Link State ID: 1.1.1.10
Advertising Router: 1.1.1.10
LS Seq Number: 0x8000012f
Checksum: 0x3357
Length: 144
AS Boundary Router
Area Border Router
 Number of Links: 10

Link connected to: a Transit Network
 (Link ID) Designated Router address: 192.68.129.1
 (Link Data) Router Interface address: 192.68.129.1
 Number of TOS metric: 0
 TOS 0 Metric: 1

Link connected to: a Transit Network
 (Link ID) Designated Router address: 192.68.130.1
 (Link Data) Router Interface address: 192.68.130.1
 Number of TOS metric: 0
 TOS 0 Metric: 1

Link connected to: a Transit Network
 (Link ID) Designated Router address: 192.68.142.2
 (Link Data) Router Interface address: 192.68.142.2
 Number of TOS metric: 0
 TOS 0 Metric: 1

Link connected to: a Transit Network
 (Link ID) Designated Router address: 192.68.141.2
 (Link Data) Router Interface address: 192.68.141.2
 Number of TOS metric: 0
 TOS 0 Metric: 1

Link connected to: a Transit Network
 (Link ID) Designated Router address: 192.68.140.2
 (Link Data) Router Interface address: 192.68.140.2
 Number of TOS metric: 0
 TOS 0 Metric: 1

Link connected to: a Stub Network
 (Link ID) Network/subnet number: 11.1.5.0
--More--

```

## Related Commands

- [show ip ospf database](#) — display OSPF database information.

# show ip ospf database summary

Display the network summary (type 3) LSA routing information.

## Z9500

**Syntax** `show ip ospf [process-id | vrf vrf-name ] database summary [link-state-id] [adv-router ip-address]`

**Parameters**

- process-id** Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.
- vrf vrf-name** Enter the keyword `vrf` followed by the name of the VRF to view LSA routing information corresponding to the OSPF process that is tied to a specific VRF.
- link-state-id** (OPTIONAL) Specify LSA ID in dotted decimal format. The LSA ID value depends on the LSA type, and it can be one of the following:
  - the network's IP address for Type 3 LSAs or Type 5 LSAs
  - the router's OSPF router ID for Type 1 LSAs or Type 4 LSAs
  - the default destination (0.0.0.0) for Type 5 LSAs
- adv-router ip-address** (OPTIONAL) Enter the keywords `adv-router` then the IP address of an Advertising Router to display only the LSA information about that router.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.4.(0.0)  | Added support for VRF.                    |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |
| 7.8.1.0    | Added support for Multi-Process OSPF.     |
| 7.6.1.0    | Introduced on the S-Series.               |
| 7.5.1.0    | Introduced on the C-Series.               |

|-------------|-----------------------------|
| pre-6.1.1.1 | Introduced on the E-Series. |

### Usage Information

The following describes the `show ip ospf process-id database summary` command shown in the following example.

| Item                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|---------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>LS Age</b>             | Displays the LSA age.                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Options</b>            | Displays the optional capabilities available on router. The following options can be found in this item: <ul style="list-style-type: none"> <li>• TOS-capability or No TOS-capability is displayed depending on whether the router can support Type of Service.</li> <li>• DC or No DC is displayed depending on whether the originating router can support OSPF over demand circuits.</li> <li>• E or No E is displayed on whether the originating router can accept AS External LSAs.</li> </ul> |
| <b>LS Type</b>            | Displays the LSA type.                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Link State ID</b>      | Displays the Link State ID.                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Advertising Router</b> | Identifies the router ID of the LSA's originating router.                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>LS Seq Number</b>      | Displays the link state sequence number. This number allows you to identify old or duplicate LSAs.                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Checksum</b>           | Displays the Fletcher checksum of an LSA's complete contents.                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Length</b>             | Displays the length in bytes of the LSA.                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Network Mask</b>       | Displays the network mask implemented on the area.                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>TOS</b>                | Displays the TOS options. Option 0 is the only option.                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Metric</b>             | Displays the LSA metrics.                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

### Example

```
DelleMC# show ip ospf 100 database summary
 OSPF Router with ID (1.1.1.10) (Process ID 100)
 Summary Network (Area 0.0.0.0)
LS age: 1551
Options: (No TOS-capability, DC, E)
LS type: Summary Network
Link State ID: 192.68.16.0
Advertising Router: 192.168.17.1
LS Seq Number: 0x80000054
Checksum: 0xb5a2
Length: 28
Network Mask: /24
 TOS: 0 Metric: 1

LS age: 9
Options: (No TOS-capability, No DC, E)
LS type: Summary Network
Link State ID: 192.68.32.0
Advertising Router: 1.1.1.10
LS Seq Number: 0x80000016
Checksum: 0x987c
Length: 28
Network Mask: /24
 TOS: 0 Metric: 1

LS age: 7
Options: (No TOS-capability, No DC, E)
LS type: Summary Network
```

```

Link State ID: 192.68.33.0
Advertising Router: 1.1.1.10
LS Seq Number: 0x80000016
Checksum: 0x1241
Length: 28
Network Mask: /26
 TOS: 0 Metric: 1

DellEMC#

```

## Related Commands

- `show ip ospf database` — display OSPF database information.

## show ip ospf interface

Display the OSPF interfaces configured. If OSPF is not enabled on the switch, no output is generated.

### Z9500

#### Syntax

```
show ip ospf [process-id | vrf vrf-name] interface [interface]
```

#### Parameters

- process-id*** Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.
- vrf vrf-name*** Enter the keyword `vrf` followed by the name of the VRF to show the OSPF processes that are tied to a specific VRF.
- interface*** (OPTIONAL) Enter the following keywords and slot/port or number information:
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
  - For a port channel interface, enter the keywords `port-channel` then a number.
  - For a Null interface, enter the keyword `null` then the Null interface number.
  - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

#### Command Modes

- EXEC
- EXEC Privilege

#### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                               |
|-------------------|-------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.               |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.               |
| <b>9.4(0.0)</b>   | Added support for VRF.                    |

| Version     | Description                           |
|-------------|---------------------------------------|
| 9.2(1.0)    | Introduced on the Z9500.              |
| 9.0.2.0     | Introduced on the S6000.              |
| 8.3.19.0    | Introduced on the S4820T.             |
| 8.3.11.1    | Introduced on the Z9000.              |
| 8.3.7.0     | Introduced on the S4810.              |
| 7.8.1.0     | Added support for Multi-Process OSPF. |
| 7.6.1.0     | Introduced on the S-Series.           |
| 7.5.1.0     | Introduced on the C-Series.           |
| pre-6.1.1.1 | Introduced on the E-Series.           |

### Usage Information

The following describes the `show ip ospf process-id interface` command shown in the following example.

| Item                          | Description                                                                                                                                 |
|-------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------|
| <b>GigabitEthernet..</b><br>. | This line identifies the interface type slot/port and the status of the OSPF protocol on that interface.                                    |
| <b>Internet Address...</b>    | This line displays the IP address, network mask and area assigned to this interface.                                                        |
| <b>Process ID...</b>          | This line displays the OSPF Process ID, Router ID, Network type and cost metric for this interface.                                         |
| <b>Transmit Delay...</b>      | This line displays the interface's settings for Transmit Delay, State, and Priority. In the State setting, BDR is Backup Designated Router. |
| <b>Designated Router...</b>   | This line displays the ID of the Designated Router and its interface address.                                                               |
| <b>Backup Designated...</b>   | This line displays the ID of the Backup Designated Router and its interface address.                                                        |
| <b>Timer intervals...</b>     | This line displays the interface's timer settings for Hello interval, Dead interval, Transmit Delay (Wait), and Retransmit Interval.        |
| <b>Hello due...</b>           | This line displays the amount time until the next Hello packet is sent out this interface.                                                  |
| <b>Neighbor Count...</b>      | This line displays the number of neighbors and adjacent neighbors. Listed below this line are the details about each adjacent neighbor.     |

### Example

## show ip ospf neighbor

Display the OSPF neighbors connected to the local router.

### Z9500

**Syntax** `show ip ospf [process-id | vrf vrf-name ] neighbor`

**Parameters**

**process-id** Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.

**vrf vrf-name** Enter the keyword `vrf` followed by the name of the VRF to show information corresponding to the OSPF neighbors that are tied to a specific VRF.

**Command Modes** EXEC Privilege

## Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version     | Description                               |
|-------------|-------------------------------------------|
| 9.10(0.1)   | Introduced on the S6010-ON and S4048T-ON. |

| 8.3.19.0    | Introduced on the S4820T.                 |
| 8.3.11.1    | Introduced on the Z9000.                  |
| 8.3.7.0     | Introduced on the S4810.                  |
| 7.8.1.0     | Added support for Multi-Process OSPF.     |
| 7.6.1.0     | Introduced on the S-Series.               |
| 7.5.1.0     | Introduced on the C-Series.               |
| pre-6.1.1.1 | Introduced on the E-Series.               |

## Usage Information

The following describes the `show ip ospf process-id neighbor` command shown in the following example.

| Item        | Description                                                              |
|-------------|--------------------------------------------------------------------------|
| Neighbor ID | Displays the neighbor router ID.                                         |
| Pri         | Displays the priority assigned neighbor.                                 |
| State       | Displays the OSPF state of the neighbor.                                 |
| Dead Time   | Displays the expected time until the Dell OS declares the neighbor dead. |
| Address     | Displays the IP address of the neighbor.                                 |
| Interface   | Displays the interface type slot/port information.                       |
| Area        | Displays the neighbor's area (process ID).                               |

## Example

```
DellEMC# show ip ospf 34 neighbor

Neighbor ID Pri State Dead Time Address Interface Area

| <b>Syntax</b>     | <code>show ip ospf [process-id   vrf vrf-name ] routes</code> |                                                                                                                                                                          |
| <b>Parameters</b> | <b>process-id</b>                                             | Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.                                       |
|                   | <b>vrf vrf-name</b>                                           | Enter the keyword <code>vrf</code> followed by the name of the VRF to show the OSPF RIB information corresponding to the OSPF processes that are tied to a specific VRF. |

**Defaults** None

- Command Modes**
- EXEC
  - EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                               |
|-------------------|-------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.               |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.               |
| <b>9.4.(0.0)</b>  | Added support for VRF.                    |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                  |
| <b>9.0.2.0</b>    | Introduced on the S6000.                  |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                 |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                  |
| <b>8.3.7.0</b>    | Introduced on the S4810.                  |
| <b>7.8.1.0</b>    | Added support for Multi-Process OSPF.     |
| <b>7.6.1.0</b>    | Introduced on the S-Series.               |
| <b>7.5.1.0</b>    | Introduced on the C-Series and E-Series.  |

**Usage Information** This command is useful in isolating routing problems between the OSPF and the RTM. For example, if a route is missing from the RTM/FIB but is visible from the display output of this command, the problem is with downloading the route to the RTM.

This command has the following limitations:

- The display output is sorted by prefixes; intra-area ECMP routes are not displayed together.
- For Type 2 external routes, Type 1 cost is not displayed.

**i** **NOTE:** Starting with Version 9.4(0.0), the loopback IP address advertised to the neighbor is not displayed in the output because they are not accounted as inactive OSPF routes, whereas the loopback IP address is displayed until Dell EMC Networking OS Version 9.3(0.0). Starting with Version 9.4(0.0), the `show ip ospf routes` command displays the interface and area ID information

of connected networks in addition to the other settings, whereas these details are not displayed until Dell EMC Networking OS Version 9.3(0.0). Starting with Version 9.4(0.0), the metric of E2 routes in the output is displayed as an external metric, whereas until Dell EMC Networking OS Version 9.3(0.0), the number of hops to the ASBR for E2 routes are displayed in the output.

### Example

```
DellEMC# show ip ospf 100 route

Prefix Cost Nexthop Interface Area Type
1.1.1.1 1 0.0.0.0 Lo 0 0 Intra-Area
3.3.3.3 2 13.0.0.3 Te 1/47 1 Intra-Area
13.0.0.0 1 0.0.0.0 Te 1/47 0 Intra-Area
150.150.150.0 2 13.0.0.3 Te 1/47 - External
172.30.1.0 2 13.0.0.3 Te 1/47 1 Intra-Area
DellEMC#
```

## show ip ospf statistics

Display OSPF statistics.

### Z9500

#### Syntax

```
show ip ospf [process-id | vrf vrf-name] statistics global | [interface name {neighbor router-id}]
```

#### Parameters

- process-id*** Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.
- vrf vrf-name*** Enter the keyword `vrf` followed by the name of the VRF to display statistics corresponding to the OSPF process that is tied to a specific VRF.
- global*** Enter the keyword `global` to display the packet counts received on all running OSPF interfaces and packet counts OSPF neighbors receive and transmit.
- interface name*** (OPTIONAL) Enter the keyword `interface` then one of the following interface keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For a port channel interface, enter the keywords `port-channel` then a number.
  - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.
- neighbor router-id*** (OPTIONAL) Enter the keyword `neighbor` then the neighbor's router-id in dotted decimal format (A.B.C.D.).

#### Defaults

None

#### Command Modes

- EXEC
- EXEC Privilege

#### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                               |
|-----------|-------------------------------------------|
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0) | Introduced on the S3148.                  |
| 9.10(0.0) | Introduced on the S6100-ON.               |

| Version    | Description                           |
|------------|---------------------------------------|
| 9.8(2.0)   | Introduced on the S3100 series.       |
| 9.8(1.0)   | Introduced on the Z9100-ON.           |
| 9.8(0.0P5) | Introduced on the S4048-ON.           |
| 9.8(0.0P2) | Introduced on the S3048-ON.           |
| 9.7(0.0)   | Introduced on the S6000-ON.           |
| 9.4.(0.0)  | Added support for VRF.                |
| 9.2(1.0)   | Introduced on the Z9500.              |
| 9.0.2.0    | Introduced on the S6000.              |
| 8.3.19.0   | Introduced on the S4820T.             |
| 8.3.11.1   | Introduced on the Z9000.              |
| 8.3.7.0    | Introduced on the S4810.              |
| 7.8.1.0    | Added support for Multi-Process OSPF. |
| 7.6.1.0    | Introduced on the S-Series.           |
| 7.5.1.0    | Introduced on the C-Series.           |
| 7.4.1.0    | Introduced on the E-Series.           |

#### Usage Information

The following describes the `show ip ospf statistics process-id global` command shown in the following example.

| Row Heading    | Description                                                                                                             |
|----------------|-------------------------------------------------------------------------------------------------------------------------|
| <b>Total</b>   | Displays the total number of packets the OSPF process receives/transmits.                                               |
| <b>Error</b>   | Displays the error count while receiving and transmitting packets by the OSPF process.                                  |
| <b>Hello</b>   | Number of OSPF Hello packets.                                                                                           |
| <b>DDiscr</b>  | Number of database description packets.                                                                                 |
| <b>LSReq</b>   | Number of link state request packets.                                                                                   |
| <b>LSUpd</b>   | Number of link state update packets.                                                                                    |
| <b>LSAck</b>   | Number of link state acknowledgement packets.                                                                           |
| <b>TxQ-Len</b> | The transmission queue length.                                                                                          |
| <b>RxQ-Len</b> | The reception queue length.                                                                                             |
| <b>Tx-Mark</b> | The highest number mark in the transmission queue.                                                                      |
| <b>Rx-Mark</b> | The highest number mark in the reception queue.                                                                         |
| <b>Hello-Q</b> | The queue, for transmission or reception, for the hello packets.                                                        |
| <b>LSR-Q</b>   | The queue, for transmission or reception, for the link state request packets.                                           |
| <b>Other-Q</b> | The queue, for transmission or reception, for the link state acknowledgement, database description, and update packets. |

The following describes the error definitions for the `show ip ospf statistics process-id global` command.

| Error Type       | Description                                                                                         |
|------------------|-----------------------------------------------------------------------------------------------------|
| <b>Intf_Down</b> | Received packets on an interface that is either down or OSPF is not enabled.                        |
| <b>Non-Dr</b>    | Received packets with a destination address of ALL_DRS even though SELF is not a designated router. |

| Error Type          | Description                                                                              |
|---------------------|------------------------------------------------------------------------------------------|
| <b>Self-Org</b>     | Receive the self originated packet.                                                      |
| <b>Wrong_Len</b>    | The received packet length is different to what was indicated in the OSPF header.        |
| <b>Invlld-Nbr</b>   | LSA, LSR, LSU, and DDB are received from a peer which is not a neighbor peer.            |
| <b>Nbr-State</b>    | LSA, LSR, and LSU are received from a neighbor with stats less than the loading state.   |
| <b>Auth-Error</b>   | Simple authentication error.                                                             |
| <b>MD5-Error</b>    | MD5 error                                                                                |
| <b>Cksum-Err</b>    | Checksum Error                                                                           |
| <b>Version</b>      | Version mismatch                                                                         |
| <b>AreaMismatch</b> | Area mismatch                                                                            |
| <b>Conf-Issue</b>   | The received hello packet has a different hello or dead interval than the configuration. |
| <b>No-Buffer</b>    | Buffer allocation failure.                                                               |
| <b>Seq-no</b>       | A sequence no errors occurred during the database exchange process.                      |
| <b>Socket</b>       | Socket Read/Write operation error.                                                       |
| <b>Q-overflow</b>   | Packets dropped due to queue overflow.                                                   |
| <b>Unknown-Pkt</b>  | Received packet is not an OSPF packet.                                                   |

### Example

```

DellEMC# show ip ospf 1 statistics global

OSPF Packet Count
 Total Error Hello DDiscr LSReq LSUpd LSAck
RX 10 0 8 2 0 0 0
TX 10 0 10 0 0 0 0

OSPF Global Queue Length
 TxQ-Len RxQ-Len Tx-Mark Rx-Mark
Hello-Q 0 0 0 2
LSR-Q 0 0 0 0
Other-Q 0 0 0 0

Error packets (Only for RX)

Intf-Down 0 Non-Dr 0 Self-Org 0
Wrong-Len 0 Invlld-Nbr 0 Nbr-State 0
Auth-Err 0 MD5-Err 0 Chksum 0
Version 0 AreaMis 0 Conf-Issues 0
No-Buffer 0 Seq-No 0 Socket 0
Q-OverFlow 0 Unkown-Pkt 0

Error packets (Only for TX)

Socket Errors 0
DellEMC#

```

### Usage Information

The `show ip ospf process-id statistics` command displays the error packet count received on each interface as:

- The hello-timer remaining value for each interface
- The wait-timer remaining value for each interface
- The grace-timer remaining value for each interface
- The packet count received and transmitted for each neighbor
- Dead timer remaining value for each neighbor
- Transmit timer remaining value for each neighbor
- The LSU Q length and its highest mark for each neighbor
- The LSR Q length and its highest mark for each neighbor

## Example (Statistics)

```
DellEMC(conf-if-te-1/6)# do show ip ospf statistics
Interface TenGigabitEthernet 1/6
 Error packets (Receive statistics)
 Intf-Down 0 Non-Dr 0 Self-Org 0
 Wrong-Len 0 Invld-Nbr 0 Nbr-State 0
 Auth-Error 0 MD5-Error 0 Cksum-Err 0
 Version 0 AreaMisMatch 0 Conf-Issue 0
 SeqNo-Err 0 Unknown-Pkt 0 Bad-LsReq 0
 RtidZero 0
 Neighbor ID 4.4.4.4
 Packet Statistics
 Hello DDiscr LSReq LSUpd LSAck
 RX 5 2 1 3 2
 TX 6 5 1 3 3
 Timers
 Hello 0 Wait 0 Grace 0
 Dead 39 Transmit 4
 Queue Statistics
 LSU-Q-Len 0 LSU-Q-Wmark 1
 LSR-Q-Len 0 LSR-Q-Wmark 1

DellEMC(conf-if-te-1/6)#
```

## Related Commands

- [clear ip ospf statistics](#) — clear the packet statistics in all interfaces and neighbors.

## show ip ospf timers rate-limit

Show the LSA currently in the queue waiting for timers to expire.

## Z9500

### Syntax

```
show ip ospf [process-id] timers rate-limit
```

### Parameters

***process-id*** Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.

### Defaults

None

### Command Modes

- EXEC
- EXEC Privilege

### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                               |
|-------------------|-------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.               |

| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.4.(0.0)  | Added support for VRF.                    |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |
| 7.8.1.0    | Added support for Multi-Process OSPF.     |

| Version | Description                              |
|---------|------------------------------------------|
| 7.6.1.0 | Introduced on the S-Series.              |
| 7.5.1.0 | Introduced on the C-Series and E-Series. |

### Usage Information

To isolate problems with inter-area and external routes, use this command. In OSPF inter-area and external routes are calculated by adding LSA cost to the cost of reaching the router. If an inter-area or external route is not of correct cost, the display can determine if the path to the originating router is correct or not.

### Example

```
DellEMC# show ip ospf 1 topology

Router ID Flags Cost Nexthop Interface Area
3.3.3.3 E/B/-/ 1 20.0.0.3 Te 13/1 0
1.1.1.1 E/-/-/ 1 10.0.0.1 Te 7/1 1
DellEMC#
```

## summary-address

To advertise one external route, set the OSPF ASBR.

### Z9500

**Syntax** `summary-address ip-address mask [not-advertise] [tag tag-value]`

To disable summary address, use the `no summary-address ip-address mask` command.

### Parameters

|                      |                                                                                                                                                     |
|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>ip-address</b>    | Specify the IP address in dotted decimal format of the address to summarize.                                                                        |
| <b>mask</b>          | Specify the mask in dotted decimal format of the address to summarize.                                                                              |
| <b>not-advertise</b> | (OPTIONAL) Enter the keywords <code>not-advertise</code> to suppress that match the network prefix/mask pair.                                       |
| <b>tag tag-value</b> | (OPTIONAL) Enter the keyword <code>tag</code> then a value to match on routes redistributed through a route map. The range is from 0 to 4294967295. |

**Defaults** Not configured.

**Command Modes** ROUTER OSPF

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |

| Version     | Description                           |
|-------------|---------------------------------------|
| 8.3.19.0    | Introduced on the S4820T.             |
| 8.3.11.1    | Introduced on the Z9000.              |
| 8.3.7.0     | Introduced on the S4810.              |
| 7.8.1.0     | Added support for Multi-Process OSPF. |
| 7.6.1.0     | Introduced on the S-Series.           |
| 7.5.1.0     | Introduced on the C-Series.           |
| pre-6.1.1.1 | Introduced on the E-Series.           |

#### Usage Information

The `area range` command summarizes routes for the different areas.

With the `not-advertise` parameter configured, you can use this command to filter out some external routes. For example, if you want to redistribute static routes to OSPF, but you don't want OSPF to advertise routes with prefix 1.1.0.0, you can configure the `summary-address 1.1.0.0 255.255.0.0 not-advertise` to filter out all the routes fall in range 1.1.0.0/16.

#### Related Commands

- [area range](#) — summarize routes within an area.

## timers spf

Set the time interval between when the switch receives a topology change and starts a shortest path first (SPF) calculation.

### Z9500

#### Syntax

```
timers spf delay holdtime msec
```

To return to the default, use the `no timers spf` command.

#### Parameters

|                 |                                                                                                                                                                                                                                                                                              |
|-----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>delay</b>    | Enter a number as the delay. The range is from 0 to 2147483647. The default is <b>5 seconds</b> .                                                                                                                                                                                            |
| <b>holdtime</b> | Enter a number as the hold time. The range is from 0 to 2147483647. The default is <b>10 seconds</b> .                                                                                                                                                                                       |
| <b>msec</b>     | Enter the keyword <code>msec</code> to specify the time interval value in milli seconds.<br> <b>NOTE:</b> If you do not specify the <code>msec</code> option, the timer values are considered as seconds. |

#### Defaults

- delay = 5 seconds
- holdtime = 10 seconds

**Command Modes** ROUTER OSPFv2

#### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                                |
|-----------|--------------------------------------------|
| 9.11.0.0  | Introduced the keyword <code>msec</code> . |
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON.  |
| 9.10(0.0) | Introduced on the S3148.                   |
| 9.10(0.0) | Introduced on the S6100-ON.                |
| 9.8(2.0)  | Introduced on the S3100 series.            |
| 9.8(1.0)  | Introduced on the Z9100-ON.                |

| Version            | Description                           |
|--------------------|---------------------------------------|
| <b>9.8(0.0P5)</b>  | Introduced on the S4048-ON.           |
| <b>9.8(0.0P2)</b>  | Introduced on the S3048-ON.           |
| <b>9.7(0.0)</b>    | Introduced on the S6000-ON.           |
| <b>9.2(1.0)</b>    | Introduced on the Z9500.              |
| <b>9.0.2.0</b>     | Introduced on the S6000.              |
| <b>8.3.19.0</b>    | Introduced on the S4820T.             |
| <b>8.3.11.1</b>    | Introduced on the Z9000.              |
| <b>8.3.7.0</b>     | Introduced on the S4810.              |
| <b>7.8.1.0</b>     | Added support for Multi-Process OSPF. |
| <b>7.6.1.0</b>     | Introduced on the S-Series.           |
| <b>7.5.1.0</b>     | Introduced on the C-Series.           |
| <b>pre-6.1.1.1</b> | Introduced on the E-Series.           |

#### Usage Information

Setting the *delay* and *holdtime* parameters to a low number enables the switch to an alternate path quickly but requires more CPU usage.

#### Example

```
DellEMC# conf
DellEMC(conf)# router ospf 1
DellEMC(conf-router_ospf-1)# timer spf 2 5 msec
DellEMC(conf-router_ospf-1)# show config
!
router ospf 1
timers spf 2 5 msec
DellEMC(conf-router_ospf-1)# end
```

## timers throttle lsa all

Configure LSA transmit intervals.

### Z9500

#### Syntax

```
timers throttle lsa all {start-interval | hold-interval | max-interval}
```

To return to the default, use the `no timers throttle lsa` command.

#### Parameters

|                       |                                                                                                                                                                                              |
|-----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>start-interval</b> | Set the minimum interval between initial sending and resending the same LSA. The range is from 0 to 600,000 milliseconds.                                                                    |
| <b>hold-interval</b>  | Set the next interval to send the same LSA. This interval is the time between sending the same LSA after the start-interval has been attempted. The range is from 1 to 600,000 milliseconds. |
| <b>max-interval</b>   | Set the maximum amount of time the system waits before sending the LSA. The range is from 1 to 600,000 milliseconds.                                                                         |

#### Defaults

- start-interval: **0 msec**
- hold-interval: **5000 msec**
- max-interval: **5000 msec**

**Command Modes** ROUTER OSPF

#### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 9.0.2.0    | Introduced on the S6000..                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.8.0    | Introduced on the S4810.                  |

#### Usage Information

LSAs are sent after the start-interval and then after hold-interval until the maximum interval is reached. In throttling, exponential backoff is used when sending same LSA, so that the interval is multiplied until the maximum time is reached. For example, if the *start-interval 5000* and *hold-interval 1000* and *max-interval 100,000*, the LSA is sent at 5000 msec, then 1000 msec, then 2000 msec, then 4000 until 100,000 msec is reached.

## timers throttle lsa arrival

Configure the LSA acceptance intervals.

### Z9500

#### Syntax

```
timers throttle lsa arrival arrival-time
```

To return to the default, use the `no timers throttle lsa` command.

#### Parameters

**arrival-time** Set the interval between receiving the same LSA repeatedly, to allow sufficient time for the system to accept the LSA. The range is from 0 to 600,000 milliseconds.

#### Defaults

1000 msec

#### Command Modes

ROUTER OSPF

#### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

## OSPFv3 Commands

Open shortest path first version 3 (OSPFv3) for IPv6 is supported on the platform.

The fundamental mechanisms of OSPF (flooding, DR election, area support, SPF calculations, and so on) remain unchanged. However, OSPFv3 runs on a per-link basis instead of on a per-IP-subnet basis. Most changes were necessary to handle the increased address size of IPv6.

The Dell EMC Networking OS implementation of OSPFv3 is based on IETF RFC 2740.

### area authentication

Configure an IPsec authentication policy for OSPFv3 packets in an OSPFv3 area.

#### Z9500

|                        |                                                                                                                                                               |                                                                                                                                                                                                                                                     |

| 9.1.(0.0)  | Introduced on the S4810 and Z9000.        |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.4.2.0    | Introduced on the E-Series.               |

### Usage Information

Before you enable IPsec authentication on an OSPFv3 area, you must first enable OSPFv3 globally on the router. Configure the same authentication policy (same SPI and key) on each interface in an OSPFv3 link.

An SPI number must be unique to one IPsec security policy (authentication or encryption) on the router.

If you have enabled IPsec encryption in an OSPFv3 area with the `area encryption` command, you cannot use the `area authentication` command in the area at the same time.

The configuration of IPsec authentication on an interface-level takes precedence over an area-level configuration. If you remove an interface configuration, an area authentication policy that has been configured is applied to the interface.

To remove an IPsec authentication policy from an OSPFv3 area, enter the `no area area-id authentication spi number` command.

### Related Commands

- [ipv6 ospf authentication](#) – configure an IPsec authentication policy on an OSPFv3 interface.
- [show crypto ipsec policy](#) – display the configuration of IPsec authentication policies.

## area encryption

Configure an IPsec encryption policy for OSPFv3 packets in an OSPFv3 area.

### Z9500

#### Syntax

```
area area-id encryption ipsec spi number esp encryption-algorithm [key-encryption-type] key authentication-algorithm [key-encryption-type] key
```

#### Parameters

|                                 |                                                                                                                                                      |
|---------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>area <i>area-id</i></b>      | Area for which OSPFv3 traffic is to be encrypted. For <i>area-id</i> , enter a number. The range is from 0 to 4294967295.                            |
| <b>ipsec spi <i>number</i></b>  | Security Policy index (SPI) value that identifies an IPsec security policy. The range is from 256 to 4294967295.                                     |
| <b>esp encryption-algorithm</b> | Encryption algorithm used with ESP. Valid values are: 3DES, DES, AES-CBC, and NULL. For AES-CBC, only the AES-128 and AES-192 ciphers are supported. |
| <b>key-encryption-algorithm</b> | (OPTIONAL) Specifies if the key is encrypted. Valid values: 0 (key is not encrypted) or 7 (key is encrypted).                                        |

|                                 |                                                                                                                                                                                                                                                     |
|---------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>key</b>                      | Text string used in encryption.<br>The required lengths of a non-encrypted or encrypted key are:<br>3DES - 48 or 96 hex digits; DES - 16 or 32 hex digits; AES-CBC -32 or 64 hex digits for AES-128 and 48 or 96 hex digits for AES-192.            |
| <b>authentication-algorithm</b> | Specifies the authentication algorithm to use for encryption.<br>Valid values are MD5 or SHA1.                                                                                                                                                      |
| <b>key-encryption-type</b>      | (OPTIONAL) Specifies if the authentication key is encrypted.<br>Valid values: 0 (key is not encrypted) or 7 (key is encrypted).                                                                                                                     |
| <b>key</b>                      | Text string used in authentication.<br>For MD5 authentication, the key must be 32 hex digits (non-encrypted) or 64 hex digits (encrypted).<br>For SHA-1 authentication, the key must be 40 hex digits (non-encrypted) or 80 hex digits (encrypted). |
| <b>null</b>                     | Causes an encryption policy configured for the area to not be inherited on the interface.                                                                                                                                                           |

**Defaults** Not configured.

**Command Modes** ROUTER OSPFv3

**Usage Information**

Before you enable IPsec encryption on an OSPFv3 interface, first enable OSPFv3 globally on the router. Configure the same encryption policy (same SPI and keys) on each interface in an OSPFv3 link.

An SPI value must be unique to one IPsec security policy (authentication or encryption) on the router.

When you configure encryption for an OSPFv3 area with the `area encryption` command, you enable both IPsec encryption and authentication. However, when you enable authentication on an area with the `area authentication` command, you do not enable encryption at the same time.

If you have enabled IPsec authentication in an OSPFv3 area with the `area authentication` command, you cannot use the `area encryption` command in the area at the same time.

The configuration of IPsec encryption on an interface-level takes precedence over an area-level configuration. If you remove an interface configuration, an area encryption policy that has been configured is applied to the interface.

To remove an IPsec encryption policy from an interface, enter the `no area area-id encryption spi number` command.

**Related Commands**

- [ipv6 ospf encryption](#) – configure an IPsec encryption policy on an OSPFv3 interface.
- [show crypto ipsec policy](#) – display the configuration of IPsec encryption policies.

## area nssa

Specify an area as a not so stubby area (NSSA).

**Syntax** `area area-id nssa [default-information-originate] [no-redistribution] [no-summary]`

To delete an NSSA, use the `no area area-id nssa` command.

**Parameters**

- area-id*** Specify the OSPF area by entering a number from zero (0) to 65535.
- no-redistribution** (OPTIONAL) Specify that the `redistribute` command does not distribute routes into the NSSA. This command can be used when the router is an autonomous system boundary router (ASBR) or area border router (ABR).
- default-information-originate** (OPTIONAL) Allows external routing information to be imported into the NSSA by using Type 7 default.
- no-summary** (OPTIONAL) Specify that no summary LSAs should be sent into the NSSA.

**Defaults** Not configured.

**Command Modes** ROUTER OSPF

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| <b>9.9(0.0)</b>        | Introduced on the S6000-ON, S6000, S4820T, S4810, S5000, Z9500, S3048-ON, and S4048-ON                                                                                                                                                                                                                         |         |             |                  |                                           |                 |                                                                                        |

#### Usage Information

##### Example

```
DellEMC# show running-config ospf
!
ipv6 router ospf 10
 log-adjacency-changes
 auto-cost reference-bandwidth 2000
DellEMC(conf-ipv6-router_ospf)# auto-cost reference-bandwidth ?
<1-4294967> Reference bandwidth in Mbits/second (default =
100)
DellEMC(conf-ipv6-router_ospf)# no auto-cost ?
reference-bandwidth Use reference bandwidth method to assign OSPF
cost
<cr>
DellEMC(conf-ipv6-router_ospf)#
```

## clear ipv6 ospf process

Reset an OSPFv3 router process without removing or re-configuring the process.

### Z9500

|                        |                                                                                                                                                               |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | <code>clear ipv6 ospf [<i>vrf vrf-name</i>] process</code>                                                                                                    |
| <b>Parameters</b>      | <b><i>vrf vrf-name</i></b> (Optional) Enter the keyword <code>vrf</code> followed by the name of the VRF to clear IPv6 routes corresponding to that VRF.      |
| <b>Command Modes</b>   | <ul style="list-style-type: none"><li>EXEC</li><li>EXEC Privilege</li></ul>                                                                                   |
| <b>Command History</b> | This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> . |

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Added support for VRF.                    |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.1.(0.0)  | Introduced on the S4810 and Z9000.        |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 7.8.1.0    | Added support for C-Series.               |
| 7.4.1.0    | Introduced on the E-Series.               |

## debug ipv6 ospf bfd

Display debug information and interface types for bidirectional forwarding detection (BFD) on OSPF IPv6 packets.

| Version     | Description                               |
|-------------|-------------------------------------------|
| 9.11(2.1P1) | Introduced VRF support.                   |
| 9.10(0.1)   | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)   | Introduced on the S3148.                  |
| 9.10(0.0)   | Introduced on the S6100-ON.               |
| 9.8(2.0)    | Introduced on the S3100 series.           |
| 9.8(1.0)    | Introduced on the Z9100-ON.               |

| Version    | Description                                 |
|------------|---------------------------------------------|
| 9.8(0.0P5) | Introduced on the S4048-ON.                 |
| 9.8(0.0P2) | Introduced on the S3048-ON.                 |
| 9.2(1.0)   | Introduced on the Z9500.                    |
| 9.2.(0.0)  | Introduced on the S4820T, S4810, and Z9000. |

### Usage Information

The following section describes the command fields.

| Lines Beginning With or Including | Description                                                |
|-----------------------------------|------------------------------------------------------------|
| OSPFv3...                         | Debugging is on for all OSPFv3 packets and all interfaces. |
| 05:21:01                          | Displays the time stamp.                                   |
| Sending Ver:3                     | Sending OSPF3 version..                                    |

### Example

```
DellEMC(conf-if-te-1/2)# do debug ipv6 ospf bfd te 1/2
OSPFv3 bfd related debugging is on for TenGigabitEthernet 1/2
00:59:26 : OSPFv3INFO: Received Interface mode bfd config command on
interface Te 1/2 Enable 1, interval 0, min_rx 0, Multiplier 0, role 0,

```

## debug ipv6 ospf events

Display debug information and interface types on OSPF IPv6 events.

**Syntax** debug ipv6 ospf events [*interface*] [*vrf vrf-name*]

**Parameters** *interface* (OPTIONAL) Enter one of the following keywords and slot/port or number information:

- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a port channel interface, enter the keywords `port-channel` then a number.
- For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**vrf vrf-name** Enter the keyword `vrf` to view debugging information on OSPF corresponding to that VRF.

**Command Modes** EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                               |
|-------------------|-------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.               |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                  |
| <b>9.1.(0.0)</b>  | Introduced on the S4810 and Z9000.        |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                 |
| <b>7.8.1.0</b>    | Added support for C-Series.               |
| <b>7.4.1.0</b>    | Introduced on E-Series.                   |

### Example

```
DellEMC# debug ipv6 ospf packet
OSPFv3 packet related debugging is on for all interfaces
05:21:01 : OSPFv3: Sending, Ver:3, Type:1(Hello), Len:40, Router

| <b>Chksum:</b>                    | Displays the OSPFv3 checksum.                                                                                                                                                                                                                           |

# debug ipv6 ospf spf

Display debug information for SPF timers on OSPF IPv6 packets.

**Syntax** [no] debug ipv6 ospf spf [vrf vrf-name]

**Parameters**

**interface** (OPTIONAL) Enter one of the following keywords and slot/port or number information:

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a port channel interface, enter the keywords `port-channel` then a number.
- For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**vrf vrf-name** Enter the keyword `vrf` to view debugging information on OSPF corresponding to that VRF.

**Command Modes** EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version  | Description             |
|----------|-------------------------|
| 9.11.0.0 | Introduced the command. |

**Usage Information** The following section describes the command fields.

| Lines                              | Description                                                |
|------------------------------------|------------------------------------------------------------|
| <b>Beginning With or Including</b> |                                                            |
| <b>OSPFv3...</b>                   | Debugging is on for all OSPFv3 packets and all interfaces. |
| <b>05:21:01</b>                    | Displays the time stamp.                                   |
| <b>Sending Ver:3</b>               | Sending OSPF3 version..                                    |

## default-information originate

Configure the Dell EMC Networking OS to generate a default external route into an OSPFv3 routing domain.

**Syntax** `default-information originate [always] [metric metric-value] [metric-type type-value] [route-map map-name]`

To return to the default values, use the `no default-information originate` command.

**Parameters**

- always** (OPTIONAL) Enter the keyword `always` to specify that default route information must always be advertised.
- metric *metric-value*** (OPTIONAL) Enter the keyword `metric` then a number to configure a metric value for the route. The range is from 1 to 16777214.
- metric-type *type-value*** (OPTIONAL) Enter the keywords `metric-type` then an OSPFv3 link state type of 1 or 2 for default routes. The values are:
  - 1 = Type 1 external route
  - 2 = Type 2 external route
- route-map *map-name*** (OPTIONAL) Enter the keywords `route-map` then the name of an established route map.

**Defaults** Disabled.

**Command Modes** ROUTER OSPFv3

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.1.(0.0)  | Introduced on the S4810 and Z9000.        |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 7.8.1.0    | Added support for C-Series.               |
| 7.4.1.0    | Introduced on the E-Series.               |

**Related Commands**

- [redistribute](#) — redistribute routes from other routing protocols into OSPFv3.

## graceful-restart grace-period

Enable OSPFv3 graceful restart globally by setting the grace period (in seconds) that an OSPFv3 router's neighbors continues to advertise the router as adjacent during a graceful restart.

### Z9500

|                        |                                                                                                                                                                          |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | <code>graceful-restart grace-period seconds</code><br>To disable OSPFv3 graceful restart, enter <code>no graceful-restart grace-period</code> .                          |
| <b>Parameters</b>      | <b>seconds</b> Time duration, in seconds, that specifies the duration of the restart process before OSPFv3 terminates the process. The range is from 40 to 1800 seconds. |
| <b>Defaults</b>        | OSPFv3 graceful restart is disabled and functions in a helper-only role.                                                                                                 |

|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Usage Information</b> | By default, OSPFv3 graceful restart is disabled and functions only in a helper role to help restarting neighbor routers in their graceful restarts when it receives a Grace LSA.<br><br>To enable OSPFv3 graceful restart, enter the <code>ipv6 router ospf</code> command to enter OSPFv3 configuration mode and then configure a grace period using the <code>graceful-restart grace-period</code> command. The grace period is the length of time that OSPFv3 neighbors continue to advertise the restarting router as though it is fully adjacent. When graceful restart is enabled (restarting role), an OSPFv3 restarting expects its OSPFv3 neighbors to help when it restarts by not advertising the broken link.<br><br>When you enable the helper-reject role on an interface with the <code>ipv6 ospf graceful-restart helper-reject</code> command, you reconfigure OSPFv3 graceful restart to function in a "restarting-only" role. In a "restarting-only" role, OSPFv3 does not participate in the graceful restart of a neighbor. |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## graceful-restart mode

Specify the type of events that trigger an OSPFv3 graceful restart.

### Z9500

|               |                                                                    |
|---------------|--------------------------------------------------------------------|
| <b>Syntax</b> | <code>graceful-restart mode {planned-only   unplanned-only}</code> |
|---------------|--------------------------------------------------------------------|

To disable graceful restart mode, enter `no graceful-restart mode`.

#### Parameters

- planned-only** (OPTIONAL) Enter the keywords `planned-only` to indicate graceful restart is supported in a planned restart condition only.
- unplanned-only** (OPTIONAL) Enter the keywords `unplanned-only` to indicate graceful restart is supported in an unplanned restart condition only.

#### Defaults

OSPFv3 graceful restart supports both planned and unplanned failures.

#### Command Modes

ROUTER OSPFv3

#### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                               |
|-------------------|-------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.               |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                  |
| <b>9.1.(0.0)</b>  | Introduced on the S4810 and Z9000.        |
| <b>8.4.2.2</b>    | Introduced on the E-Series.               |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                 |

#### Usage Information

OSPFv3 graceful restart supports planned-only and/or unplanned-only restarts. The default is support for both planned and unplanned restarts.

- A planned restart occurs when you enter the `redundancy force-failover rpm` command to force the primary RPM to switch to the backup RPM. During a planned restart, OSPF sends out a Type-11 Grace LSA before the system switches over to the backup RPM.
- An unplanned restart occurs when an unplanned event causes the active RPM to switch to the backup RPM, such as when an active process crashes, the active RPM is removed, or a power failure happens. During an unplanned restart, OSPF sends out a Grace LSA when the backup RPM comes online.

By default, both planned and unplanned restarts trigger an OSPFv3 graceful restart. Selecting one or the other mode restricts OSPFv3 to the single selected mode.

## ipv6 ospf area

Enable IPv6 OSPF on an interface.

### Z9500

#### Syntax

```
ipv6 ospf process id area area id
```

To disable OSPFv6 routing for an interface, use the `no ipv6 ospf process-id area area-id` command.

#### Parameters

- process-id** Enter the process identification number.
- area area-id** Specify the OSPF area. The range is from 0 to 65535.

|                        |                                                                                                                                                               |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Defaults</b>        | None                                                                                                                                                          |
| <b>Command Modes</b>   | INTERFACE                                                                                                                                                     |
| <b>Command History</b> | This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> . |

| <b>Version</b>    | <b>Description</b>                        |
|-------------------|-------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                  |

| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.               |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                  |
| <b>9.1.(0.0)</b>  | Introduced on the S4810 and Z9000.        |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                 |
| <b>7.4.1.0</b>    | Introduced on the E-Series and C-Series.  |

## ipv6 ospf authentication

Configure an IPsec authentication policy for OSPFv3 packets on an IPv6 interface.

### Z9500

**Syntax** `ipv6 ospf authentication {null | ipsec spi number {MD5 | SHA1} [key-encryption-type] key}}`

|                   |                            |                                                                                                                                                                                                                                                             |
|-------------------|----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Parameters</b> | <b>null</b>                | Causes an authentication policy configured for the area to not be inherited on the interface.                                                                                                                                                               |
|                   | <b>ipsec spi number</b>    | Security Policy index (SPI) value that identifies an IPsec security policy. The range is from 256 to 4294967295.                                                                                                                                            |
|                   | <b>MD5   SHA1</b>          | Authentication type: Message Digest 5 (MD5) or Secure Hash Algorithm 1 (SHA-1).                                                                                                                                                                             |
|                   | <b>key-encryption-type</b> | (OPTIONAL) Specifies if the key is encrypted.<br>Valid values: 0 (key is not encrypted) or 7 (key is encrypted).                                                                                                                                            |
|                   | <b>key</b>                 | Text string used in authentication.<br><br>For MD5 authentication, the key must be 32 hex digits (non-encrypted) or 64 hex digits (encrypted).<br><br>For SHA-1 authentication, the key must be 40 hex digits (non-encrypted) or 80 hex digits (encrypted). |

**Defaults** Not configured.

**Command Modes** INTERFACE

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.1.(0.0)  | Introduced on S4810 and Z9000.            |
| 8.4.2.0    | Introduced on the E-Series.               |
| 8.3.19.0   | Introduced on the S4820T.                 |

### Usage Information

Before you enable IPsec authentication on an OSPFv3 interface, first enable IPv6 unicast routing globally, configure an IPv6 address and enable OSPFv3 on the interface, and assign the interface to an area.

An SPI value must be unique to one IPsec security policy (authentication or encryption) on the router. Configure the same authentication policy (same SPI and key) on each OSPFv3 interface in a link.

To remove an IPsec authentication policy from an interface, enter the `no ipv6 ospf authentication spi number` command. To remove null authentication on an interface to allow the interface to inherit the authentication policy configured for the OSPFv3 area, enter the `no ipv6 ospf authentication null` command.

### Related Commands

- [area authentication](#) – configure an IPsec authentication policy for an OSPFv3 area.
- [show crypto ipsec policy](#) – display the configuration of IPsec authentication policies.
- [show crypto ipsec sa ipv6](#) – display the security associations set up for OSPFv3 interfaces in authentication policies.

## ipv6 ospf bfd all-neighbors

Establish BFD sessions with all OSPFv3 neighbors on a single interface or use non-default BFD session parameters.

### Syntax

```
ipv6 ospf bfd all-neighbors [disable | [interval interval min_rx min_rx multiplier value role {active | passive}]]
```

To disable all BFD sessions on an OSPFv3 interface implicitly, use the `no ipv6 ospf bfd all-neighbors disable` command in interface mode..

### Parameters

|                                |                                                                                                                                                                                                             |
|--------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>disable</b>                 | (OPTIONAL) Enter the keyword <code>disable</code> to disable BFD on this interface.                                                                                                                         |
| <b>interval milliseconds</b>   | (OPTIONAL) Enter the keyword <code>interval</code> to specify non-default BFD session parameters beginning with the transmission interval. The range is from 50 to 1000. The default is <b>200</b> .        |
| <b>min_rx milliseconds</b>     | Enter the keywords <code>min_rx</code> to specify the minimum rate at which the local system receives control packets from the remote system. The range is from 50 to 1000. The default is <b>200</b> .     |
| <b>multiplier value</b>        | Enter the keyword <code>multiplier</code> to specify the number of packets that must be missed in order to declare a session down. The range is from 3 to 50. The default is <b>3</b> .                     |
| <b>role [active   passive]</b> | Enter the role that the local system assumes: <ul style="list-style-type: none"> <li>• <b>Active</b> — active system initiates the BFD session. Both systems can be active for the same session.</li> </ul> |

- **Passive** — passive system does not initiate a session. It only responds to a request for session initialization from the active system.

The default is **Active**.

**Defaults** See *Parameters*.

**Command Modes** INTERFACE

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                                 |
|-------------------|---------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON.   |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                    |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.             |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.                 |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                 |
| <b>9.2.0.0</b>    | Introduced on the Z9000, S4820T, and S4810. |

**Usage Information** This command provides the flexibility to fine-tune the timer values based on individual interface needs when you configure `ipv6 ospf bfd` in CONFIGURATION mode. Any timer values specified with this command overrides timers set using the `bfd all-neighbors` command. Using the `no` form of this command does not disable BFD if you configure BFD in CONFIGURATION mode.

To disable BFD on a specific interface while you configure BFD in CONFIGURATION mode, use the keyword `disable`.

## ipv6 ospf cost

Explicitly specify the cost of sending a packet on an interface.

### Z9500

**Syntax** `ipv6 ospf interface-cost`

**Parameters** **interface-cost** Enter a unsigned integer value expressed as the link-state metric. The range is from 1 to 65535.

**Defaults** Default cost based on the bandwidth.

**Command Modes** INTERFACE

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                               |
|-------------------|-------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.               |

| Version   | Description                        |
|-----------|------------------------------------|
| 9.2(1.0)  | Introduced on the Z9500.           |
| 9.1.(0.0) | Introduced on the S4810 and Z9000. |
| 7.8.1.0   | Added support for C-Series.        |
| 7.4.1.0   | Introduced on the E-Series.        |
| 8.3.19.0  | Introduced on the S4820T.          |

### Usage Information

In general, the path cost is calculated as:

$10^8 / \text{bandwidth}$

Using this formula, the default path cost is calculated as:

- GigabitEthernet — Default cost is 1
- TenGigabitEthernet — Default cost is 1
- FortygigEthernet — Default cost is 1
- Ethernet — Default cost is 10

## ipv6 ospf dead-interval

Set the time interval since the last hello-packet was received from a router. After the time interval elapses, the neighboring routers declare the router down.

### Z9500

#### Syntax

`ipv6 ospf dead-interval seconds`

To return to the default time interval, use the `no ipv6 ospf dead-interval` command.

#### Parameters

**seconds** Enter the time interval in seconds. The range is from 1 to 65535 seconds.

#### Defaults

40 seconds (Ethernet).

**Command Modes** INTERFACE

#### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.1.(0.0)  | Introduced on the S4810 and Z9000.        |
| 7.8.1.0    | Added support for C-Series.               |
| 7.4.1.0    | Introduced on the E-Series.               |
| 8.3.19.0   | Introduced on the S4820T.                 |

## Usage Information

By default, the dead interval is four times longer than the default hello-interval.

## Related Commands

- [ipv6 ospf hello-interval](#) – specify the time interval between hello packets.

# ipv6 ospf encryption

Configure an IPsec encryption policy for OSPFv3 packets on an IPv6 interface.

## Z9500

### Syntax

```
ipv6 ospf encryption {null | ipsec spi number esp encryption-algorithm
[key-encryption-type] key authentication-algorithm [key-encryption-type]
key}}
```

### Parameters

|                                 |                                                                                                                                                                                                                                                     |
|---------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>null</b>                     | Causes an encryption policy configured for the area to not be inherited on the interface.                                                                                                                                                           |
| <b>ipsec spi number</b>         | Security Policy index (SPI) value that identifies an IPsec security policy. The range is from 256 to 4294967295.                                                                                                                                    |
| <b>esp encryption-algorithm</b> | Encryption algorithm used with ESP.<br>Valid values are: 3DES, DES, AES-CBC, and NULL.<br>For AES-CBC, only the AES-128 and AES-192 ciphers are supported.                                                                                          |
| <b>key-encryption-type</b>      | (OPTIONAL) Specifies if the key is encrypted.<br>Valid values: 0 (key is not encrypted) or 7 (key is encrypted).                                                                                                                                    |
| <b>key</b>                      | Text string used in authentication.<br>The required lengths of a non-encrypted or encrypted key are:<br>3DES - 48 or 96 hex digits; DES - 16 or 32 hex digits; AES-CBC -32 or 64 hex digits for AES-128 and 48 or 96 hex digits for AES-192.        |
| <b>authentication-algorithm</b> | Specifies the authentication algorithm to use for encryption. Valid values are MD5 or SHA1.                                                                                                                                                         |
| <b>key-encryption-type</b>      | (OPTIONAL) Specifies if the authentication key is encrypted.<br>Valid values: 0 (key is not encrypted) or 7 (key is encrypted).                                                                                                                     |
| <b>key</b>                      | Text string used in authentication.<br>For MD5 authentication, the key must be 32 hex digits (non-encrypted) or 64 hex digits (encrypted).<br>For SHA-1 authentication, the key must be 40 hex digits (non-encrypted) or 80 hex digits (encrypted). |

### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                               |
|-----------|-------------------------------------------|
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0) | Introduced on the S3148.                  |
| 9.10(0.0) | Introduced on the S6100-ON.               |

| Version           | Description                        |
|-------------------|------------------------------------|
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.    |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.        |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.        |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.        |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.           |
| <b>9.1.(0.0)</b>  | Introduced on the S4810 and Z9000. |
| <b>8.4.2.0</b>    | Introduced on the E-Series.        |
| <b>8.3.19.0</b>   | Introduced on the S4820T.          |

### Usage Information

Before you enable IPsec encryption on an OSPFv3 interface, first enable IPv6 unicast routing globally, configure an IPv6 address and enable OSPFv3 on the interface, and assign the interface to an area.

An SPI value must be unique to one IPsec security policy (authentication or encryption) on the router. Configure the same encryption policy (same SPI and key) on each OSPFv3 interface in a link.

To remove an IPsec encryption policy from an interface, enter the `no ipv6 ospf encryption spi number` command. To remove null authentication on an interface to allow the interface to inherit the authentication policy configured for the OSPFv3 area, enter the `no ipv6 ospf no ipv6 ospf encryption null` command.

### Related Commands

- [area encryption](#) – configure an IPsec encryption policy for an OSPFv3 area.
- [show crypto ipsec policy](#) – display the configuration of IPsec encryption policies.
- [show crypto ipsec sa ipv6](#) – display the security associations set up for OSPFv3 interfaces in encryption policies.

## ipv6 ospf graceful-restart helper-reject

Configure an OSPFv3 interface to not act upon the Grace LSAs that it receives from a restarting OSPFv3 neighbor.

### Z9500

#### Syntax

```
ipv6 ospf graceful-restart helper-reject
```

To disable the helper-reject role, enter `no ipv6 ospf graceful-restart helper-reject`.

#### Defaults

The helper-reject role is not configured.

#### Command Modes

INTERFACE

#### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                               |
|-------------------|-------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.               |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                  |

| Version   | Description                        |
|-----------|------------------------------------|
| 9.1.(0.0) | Introduced on the S4810 and Z9000. |
| 8.4.2.2   | Introduced on E-Series.            |
| 8.3.19.0  | Introduced on the S4820T.          |

### Usage Information

By default, OSPFv3 graceful restart is disabled and functions only in a helper role to help restarting neighbor routers in their graceful restarts when it receives a Grace LSA.

When configured in a helper-reject role, an OSPFv3 router ignores the Grace LSAs that it receives from a restarting OSPFv3 neighbor.

The graceful-restart role command is not supported in OSPFv3. When you enable the helper-reject role on an interface, you reconfigure an OSPFv3 router to function in a “restarting-only” role.

## ipv6 ospf hello-interval

Specify the time interval between the hello packets sent on the interface.

### Z9500

#### Syntax

```
ipv6 ospf hello-interval seconds
```

To return to the default time interval, enter `no ipv6 ospf hello-interval`.

#### Parameters

**seconds** Enter the time interval in seconds as the time between hello packets. The range is from 1 to 65525 seconds.

#### Defaults

10 seconds (Ethernet).

#### Command Modes

INTERFACE

#### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |

| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.1.(0.0)  | Introduced on the S4810 and Z9000.        |
| 7.8.1.0    | Added support for the C-Series.           |
| 7.4.1.0    | Introduced on the E-Series.               |
| 8.3.19.0   | Introduced on the S4820T.                 |

### Usage Information

The time interval between hello packets must be the same for routers in a network.

### Related Commands

- [ipv6 ospf dead-interval](#) – specify the time interval between hello packets was received from a router.

## ipv6 ospf priority

To determine the Designated Router for the OSPFv3 network, set the priority of the interface.

### Z9500

|                        |                                                                                                                                                               |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | <code>ipv6 ospf priority number</code><br>To return to the default time interval, use the <code>no ipv6 ospf priority</code> command.                         |
| <b>Parameters</b>      | <b>number</b> Enter the number as the priority. The range is from 1 to 255.                                                                                   |

| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.               |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                  |

| Version     | Description                           |
|-------------|---------------------------------------|
| 8.3.19.0    | Introduced on the S4820T.             |
| 8.3.11.1    | Introduced on the Z9000.              |
| 8.3.7.0     | Introduced on the S4810.              |
| 7.8.1.0     | Added support for Multi-Process OSPF. |
| 7.6.1.0     | Introduced on the S-Series.           |
| 7.5.1.0     | Introduced on the C-Series.           |
| pre-6.1.1.1 | Introduced on the E-Series.           |

## passive-interface

Disable (suppress) sending routing updates on an interface.

### Z9500

|                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | <code>passive-interface interface</code>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|                        | To enable sending routing updates on an interface, use the <code>no passive-interface interface</code> command.                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Parameters</b>      | <p><b>interface</b> Enter the following keywords and slot/port or number information:</p> <ul style="list-style-type: none"> <li>For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information.</li> <li>For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information.</li> <li>For a port channel interface, enter the keywords <code>port-channel</code> then a number.</li> <li>For a VLAN interface, enter the keyword <code>vlan</code> then a number from 1 to 4094.</li> </ul> |
| <b>Defaults</b>        | Enabled, that is sending of routing updates are enabled by default.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Command Modes</b>   | ROUTER OSPF for OSPFv2<br>ROUTER OSPFv3 for OSPFv3                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Command History</b> | This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| Version    | Description                                           |
|------------|-------------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.             |
| 9.10(0.0)  | Introduced on the S3148.                              |
| 9.10(0.0)  | Introduced on the S6100-ON.                           |
| 9.8(2.0)   | Introduced on the S3100 series.                       |
| 9.8(1.0)   | Introduced on the Z9100-ON.                           |
| 9.8(0.0P5) | Introduced on the S4048-ON.                           |
| 9.8(0.0P2) | Introduced on the S3048-ON.                           |
| 9.2(1.0)   | Introduced on the Z9500.                              |
| 9.1.(0.0)  | Introduced support for OSPFv3 on the S4810 and Z9000. |
| 8.3.19.0   | Introduced on the S4820T.                             |

| Version | Description                     |
|---------|---------------------------------|
| 7.8.1.0 | Added support for the C-Series. |
| 7.4.1.0 | Introduced on the E-Series.     |

### Usage Information

By default, no interfaces are *passive*. Routing updates are sent to all interfaces on which the routing protocol is enabled.

If you disable the sending of routing updates on an interface, the particular address prefix continues to be advertised to other interfaces, and updates from other routers on that interface continue to be received and processed.

OSPFv3 for IPv6 routing information is not sent or received through the specified router interface. The specified interface address appears as a stub network in the OSPFv3 for IPv6 domain.

On configuring suppression using the `passive-interface` command, the state of the OSPF neighbor does not change to INIT; instead, the state of the OSPF neighbor changes to DOWN after the dead-timer expires.

## redistribute

Redistribute into OSPFv3.

**Syntax** `redistribute {bgp as number}{connected | static}[metric metric-value | metric-type type-value] [route-map map-name] [tag tag-value]`

To disable redistribution, use the `no redistribute {connected | static}` command.

### Parameters

|                               |                                                                                                                                                                                                                                                                                           |
|-------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>bgp as number</b>          | Enter the keyword <code>bgp</code> then the autonomous system number.<br>The range is from 1 to 65535.                                                                                                                                                                                    |
| <b>connected</b>              | Enter the keyword <code>connected</code> to redistribute routes from physically connected interfaces.                                                                                                                                                                                     |
| <b>static</b>                 | Enter the keyword <code>static</code> to redistribute manually configured routes.                                                                                                                                                                                                         |
| <b>metric metric-value</b>    | Enter the keyword <code>metric</code> then the metric value.<br>The range is from 0 to 16777214.<br>The default is <b>20</b> .                                                                                                                                                            |
| <b>metric-type type-value</b> | (OPTIONAL) Enter the keywords <code>metric-type</code> then the OSPFv3 link state type of 1 or 2 for default routes. The values are: <ul style="list-style-type: none"> <li>• 1 for a type 1 external route</li> <li>• 2 for a type 2 external route</li> </ul> The default is <b>2</b> . |
| <b>route-map map-name</b>     | (OPTIONAL) Enter the keywords <code>route-map</code> then the name of an established route map. If the route map is not configured, the default is <b>deny</b> (to drop all routes).                                                                                                      |
| <b>tag tag-value</b>          | (OPTIONAL) Enter the keyword <code>tag</code> to set the tag for routes redistributed into OSPFv3.<br>The range is from 0 to 4294967295<br>The default is <b>0</b> .                                                                                                                      |

**Defaults** Not configured.

**Command Modes** ROUTER OSPF for OSPFv2

## ROUTER OSPFv3 for OSPFv3

### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                           |
|------------|-------------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.             |
| 9.10(0.0)  | Introduced on the S3148.                              |
| 9.10(0.0)  | Introduced on the S6100-ON.                           |
| 9.8(2.0)   | Introduced on the S3100 series.                       |
| 9.8(1.0)   | Introduced on the Z9100-ON.                           |
| 9.8(0.0P5) | Introduced on the S4048-ON.                           |
| 9.8(0.0P2) | Introduced on the S3048-ON.                           |
| 9.2(1.0)   | Introduced on the Z9500.                              |
| 9.1(0.0)   | Introduced support for OSPFv3 on the S4810 and Z9000. |
| 8.3.19.0   | Introduced on the S4820T.                             |
| 7.8.1.0    | Added support for the C-Series.                       |
| 7.4.1.0    | Introduced on the E-Series.                           |

### Usage Information

To redistribute the default route (x:x:x:x), use the `default-information originate` command.

### Related Commands

- [default-information originate](#) – configure default external route into OSPFv3.

## router-id

Designate a fixed router ID.

### Syntax

```
router-id ip-address
```

To return to the previous router ID, use the `no router-id ip-address` command.

### Parameters

**ip-address** Enter the router ID in the dotted decimal format.

### Defaults

The router ID is selected automatically from the set of IPv4 addresses configured on a router.

### Command Modes

ROUTER OSPF for OSPFv2

ROUTER OSPFv3 for OSPFv3

| 7.4.1.0   | Introduced on the E-Series.                           |

#### Usage Information

You can configure an arbitrary value in the IP address for each router. However, each router ID must be unique.

If this command is used on an OSPFv3 process that is already active (has neighbors), all the neighbor adjacencies are brought down immediately and new sessions are initiated with the new router ID.

#### Related Commands

- [clear ipv6 ospf process](#) – reset an OSPFv3 router process.

## show crypto ipsec policy

Display the configuration of IPsec authentication and encryption policies.

### Z9500

| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.1.(0.0)  | Introduced on the S4810 and Z9000.        |
| 8.4.2.0    | Introduced on the E-Series.               |
| 8.3.19.0   | Introduced on the S4820T.                 |

#### Usage Information

The `show crypto ipsec policy` command output displays the AH and ESP parameters configured in IPsec security policies, including the SPI number, keys, and algorithms used.

When configured in a helper-reject role, an OSPFv3 router ignores the Grace LSAs that it receives from a restarting OSPFv3 neighbor.

## Related Commands

[show crypto ipsec sa ipv6](#)– displays the IPsec security associations used on OSPFv3 interfaces.

## Example

```
DelleMC# show crypto ipsec policy

Crypto IPsec client security policy data

```

## show crypto ipsec policy Command Fields

| Field                                                     | Description                                                                                          |
|-----------------------------------------------------------|------------------------------------------------------------------------------------------------------|
| <b>Policy name</b>                                        | Displays the name of an IPsec policy.                                                                |
| <b>Policy refcount</b>                                    | Number of interfaces on the router that use the policy.                                              |
| <b>Inbound ESP SPI and Outbound ESP SPI</b>               | The encapsulating security payload (ESP) security policy index (SPI) for inbound and outbound links. |
| <b>Inbound ESP Auth Key and Outbound Auth Key</b>         | The ESP authentication key for inbound and outbound links.                                           |
| <b>Inbound ESP Cipher Key and Outbound ESP Cipher Key</b> | The ESP encryption key for inbound and outbound links.                                               |
| <b>Transform set</b>                                      | The set of security protocols and algorithms used in the policy.                                     |
| <b>Inbound AH SPI and Outbound AH SPI</b>                 | The authentication header (AH) security policy index (SPI) for inbound and outbound links.           |
| <b>Inbound AH Key and Outbound AH Key</b>                 | The AH key for inbound and outbound links.                                                           |

# show crypto ipsec sa ipv6

Display the IPsec security associations (SAs) used on OSPFv3 interfaces.

## Z9500

**Syntax** `show crypto ipsec sa ipv6 [interface interface]`

**Parameters**

|                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|--------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>interface</b><br><i>interface</i> | (OPTIONAL) Displays information about the SAs used on a specified OSPFv3 interface, where <i>interface</i> is one of the following values: <ul style="list-style-type: none"><li>• For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information.</li><li>• For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information.</li><li>• For a port channel interface, enter the keywords <code>port-channel</code> then a number.</li><li>• For a VLAN interface, enter the keyword <code>vlan</code> then a number from 1 to 4094.</li></ul> |
|--------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

**Defaults** No default behavior or values.

**Command Modes** EXEC  
EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.1.(0.0)  | Introduced on the S4810 and Z9000.        |
| 8.4.2.0    | Introduced on the E-Series.               |
| 8.3.19.0   | Introduced on the S4820T.                 |

**Usage Information** The `show crypto ipsec sa ipv6` command output displays security associations set up for OSPFv3 links in IPsec authentication and encryption policies on the router.

**Related Commands** [show crypto ipsec policy](#) – displays the configuration of IPsec authentication and encryption policies.

### Example

```
DellEMC# show crypto ipsec policy
DellEMC# show crypto ipsec sa ipv6

Interface: TenGigabitEthernet 1/1
Link Local address: fe80::201:e8ff:fe40:4d10
IPSecv6 policy name: OSPFv3-1-500

inbound ah sas
```

```

spi : 500 (0x1f4)

 replay detection support : N
 STATUS : ACTIVE

```

## show crypto ipsec sa ipv6 Command Fields

| Field                            | Description                                                                                           |
|----------------------------------|-------------------------------------------------------------------------------------------------------|
| <b>Interface</b>                 | IPv6 interface                                                                                        |
| <b>Link local address</b>        | IPv6 address of interface                                                                             |
| <b>IPSecv6 policy name</b>       | Name of the IPsec security policy applied to the interface.                                           |
| <b>inbound/<br/>outbound ah</b>  | Authentication policy applied to inbound or outbound traffic.                                         |
| <b>inbound/<br/>outbound esp</b> | Encryption policy applied to inbound or outbound traffic.                                             |
| <b>spi</b>                       | Security policy index number used to identify the policy.                                             |
| <b>transform</b>                 | Security algorithm that is used to provide authentication, integrity, and confidentiality.            |
| <b>in use settings</b>           | Transform that the SA uses (only transport mode is supported).                                        |
| <b>replay detection support</b>  | Y: An SA has enabled the replay detection feature.<br>N: The replay detection feature is not enabled. |
| <b>STATUS</b>                    | ACTIVE: The authentication or encryption policy is enabled on the interface.                          |

# show ipv6 ospf interface

View OSPFv3 interface information.

## Z9500

**Syntax** `show ipv6 ospf [process-number] [vrf vrf-name] [interface]`

**Parameters**

- process-number** Enter the OSPF process number.
- vrf vrf-name** (OPTIONAL) Enter the keyword `vrf` followed by the name of the VRF to display neighbors corresponding to that VRF.  
 **NOTE:** If you do not specify this option, neighbors corresponding to the default VRF are displayed.
- interface** (OPTIONAL) Enter one of the following keywords and slot/port or number information:
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For a port channel interface, enter the keywords `port-channel` then a number.
  - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults** None

**Command Modes** EXEC

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                                           |
|------------|-----------------------------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.                             |
| 9.10(0.0)  | Introduced on the S3148.                                              |
| 9.10(0.0)  | Introduced on the S6100-ON.                                           |
| 9.8(2.0)   | Introduced on the S3100 series.                                       |
| 9.8(1.0)   | Introduced on the Z9100-ON.                                           |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                           |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                           |
| 9.7(0.0)   | Added support for VRF.                                                |
| 9.2(1.0)   | Introduced on the Z9500.                                              |
| 9.2.(0.0)  | Added support for showing BFD status on the S4820T, S4810, and Z9000. |
| 9.1.(0.0)  | Added support for OSPFv3 on the S4810 and Z9000.                      |
| 8.3.19.0   | Introduced on the S4820T.                                             |
| 7.8.1.0    | Added support for the C-Series.                                       |
| 7.4.1.0    | Introduced on the E-Series.                                           |

**Usage Information**

If you enable BFD at the global level, `show ipv6 ospf interface` shows the BFD provisioning.  
If you enable BFD at the interface level, `show ipv6 ospf interface` shows the BFD interval timers.

## Example

```
DellEMC# show ipv6 ospf 3 interface tengigabitethernet 1/2

TenGigabitEthernet 1/2 is up, line protocol is up
 Link Local Address fe80::201:e8ff:fe17:5bbd, Interface ID 67420217
 Area 0, Process ID 1, Instance ID 0, Router ID 11.1.1.1
 NetworkType BROADCAST, Cost: 1, Passive: No
 Transmit Delay is 100 sec, State DR, Priority 1
 Interface is using OSPF global mode BFD configuration.
 Designated router on this network is 11.1.1.1 (local)
 No backup designated router on this network
 Timer intervals configured, Hello 10, Dead 40, Wait 1, Retransmit 5

DellEMC#
```

## show ipv6 ospf database

Display information in the OSPFv3 database, including link-state advertisements (LSAs) in detail.

### Syntax

```
show ipv6 ospf [process-number] [vrf vrf-name] database [database-summary |
grace-lsa | external | inter-area-prefix | inter-area-router | intra-area-
prefix | link | network | router | nssa-external]
```

### Parameters

|                                 |                                                                                                                                                                                                                                                                                                                         |
|---------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><i>process-number</i></b>    | Enter the OSPF process number.                                                                                                                                                                                                                                                                                          |
| <b><i>vrf vrf-name</i></b>      | (Optional) Enter the keyword <i>vrf</i> followed by the name of the VRF to display neighbors corresponding to that VRF.<br> <b>NOTE:</b> If you do not specify this option, neighbors corresponding to the default VRF are displayed. |
| <b><i>database-summary</i></b>  | (OPTIONAL) Enter the keyword <i>database-summary</i> to view a summary of database LSA information.                                                                                                                                                                                                                     |
| <b><i>external</i></b>          | (OPTIONAL): Enter the keyword <i>external</i> to display the external link states.                                                                                                                                                                                                                                      |
| <b><i>grace-lsa</i></b>         | (OPTIONAL): Enter the keyword <i>grace-lsa</i> to display the Type-11 Grace LSAs sent and received on an OSPFv3 router.                                                                                                                                                                                                 |
| <b><i>inter-area-prefix</i></b> | (OPTIONAL): Enter the keyword <i>inter-area-prefix</i> to display the inter area prefix link states.                                                                                                                                                                                                                    |
| <b><i>inter-area-router</i></b> | (OPTIONAL): Enter the keyword <i>inter-area-router</i> to display the inter area router link states.                                                                                                                                                                                                                    |
| <b><i>intra-area-prefix</i></b> | (OPTIONAL): Enter the keyword <i>intra-area-prefix</i> to display the intra area prefix link states.                                                                                                                                                                                                                    |
| <b><i>link</i></b>              | (OPTIONAL): Enter the keyword <i>link</i> to display the link states.                                                                                                                                                                                                                                                   |
| <b><i>network</i></b>           | (OPTIONAL): Enter the keyword <i>network</i> to display the network link states.                                                                                                                                                                                                                                        |
| <b><i>nssa-external</i></b>     | (OPTIONAL): Enter the keyword <i>nssa-external</i> to display the nssa link state information.                                                                                                                                                                                                                          |
| <b><i>router</i></b>            | (OPTIONAL): Enter the keyword <i>router</i> to display the router link states.                                                                                                                                                                                                                                          |

### Defaults

None

EXEC Privilege

### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                                                                                              |
|-------------------|----------------------------------------------------------------------------------------------------------|
| <b>9.13(0.0)</b>  | Added support to display all the types of LSAs in detail.                                                |
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON.                                                                |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                                                                                 |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.                                                                              |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.                                                                          |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.                                                                              |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.                                                                              |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                                                                              |
| <b>9.7(0.0)</b>   | Added support for VRF.                                                                                   |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                                                                                 |
| <b>9.1(0.0)</b>   | Added support for OSPFv3 on the S4810 and Z9000.                                                         |
| <b>8.4.2.2</b>    | Added support for the display of graceful restart parameters and Type-11 Grace LSAs on E-Series routers. |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                                                                                |
| <b>7.8.1.0</b>    | Added support for C-Series.                                                                              |

#### Usage Information

The `show ipv6 ospf database` command output displays detailed information on the OSPFv3 database, including link-state advertisements (LSAs).

#### Example (grace-lsa)

```
DelleMC# show ipv6 ospf 3 database grace-lsa
!
Type-11 Grace LSA (Area 0)

LS Age : 10
Link State ID : 6.16.192.66
Advertising Router : 100.1.1.1
LS Seq Number : 0x80000001
Checksum : 0x1DF1
Length : 36
Associated Interface : Te 1/3
Restart Interval : 180
Restart Reason : Switch to Redundant Processor
```

#### Example (database-summary)

```
DelleMC# show ipv6 ospf 3 database database-summary

OSPFv3 Router with ID (1.1.1.1) (Process ID 1)

Process 1 database summary
Type Count/Status
Oper Status 1
Admin Status 1
Area Bdr Rtr Status 1
AS Bdr Rtr Status 1
AS Scope LSA Count 0
AS Scope LSA Cksum sum 0
Originate New LSAS 50

E1200-T2C2#sh ipv6 ospf neighbor

Neighbor ID Pri State Dead Time Interface ID
Interface
63.114.8.36 1 FULL/DR 00:00:37 4 Te 1/4

```

**Example  
(external)**

```

DelleMC# show ipv6 ospf database external

 OSPFv3 Router with ID (10.160.3.37) (Process ID 6)

 AS External Link States (Area 0)

LS Age: 1651
LS Type: OSPFv3 AS external LSA
Link State ID: 0.0.0.1
Advertising Router: 10.130.254.101
LS Seq Number: 0x80000001
Checksum: 0xF038
Length: 36
 Prefix: 9001::/64
 Prefix Options: 0x10 (DN)
 Metric Type: 2 Metric: 20

```

**Example (nssa-  
external)**

```

DelleMC#show ipv6 ospf 10 database nssa-external

 OSPFv3 Router with ID (1.1.1.1) (Process ID 10)

 AS External Link States (Area 1)

LS Age: 35
LS Type: OSPFv3 NSSA LSA
Link State ID: 0.0.0.1
Advertising Router: 1.1.1.1
LS Seq Number: 0x80000001
Checksum: 0xD2DD
Length: 52
 Prefix: 101:101:1::/64
 Prefix Options: 0x8 (P)
 Metric Type: 2 Metric: 20
 Forwarding Address: 101:101:1::1

```

# show ipv6 ospf neighbor

Display the OSPF neighbor information on a per-interface basis.

## Z9500

**Syntax** `show ipv6 ospf [process-number] [vrf vrf-name] neighbor [interface]`

- Parameters**
- process-number** Enter the OSPF process number.
  - vrf vrf-name** (OPTIONAL) Enter the keyword `vrf` followed by the name of the VRF to display OSPF neighbors corresponding to that VRF.  
 **NOTE:** If you do not specify this option, neighbors corresponding to the default VRF are displayed.
  - interface** (OPTIONAL) Enter the following keywords and the interface information:
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
    - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
    - For a port channel interface, enter the keywords `port-channel` then a number.
    - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults** None

**Command Modes** EXEC  
EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                           |
|------------|-------------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.             |
| 9.10(0.0)  | Introduced on the S3148.                              |
| 9.10(0.0)  | Introduced on the S6100-ON.                           |
| 9.8(2.0)   | Introduced on the S3100 series.                       |
| 9.8(1.0)   | Introduced on the Z9100-ON.                           |
| 9.8(0.0P5) | Introduced on the S4048-ON.                           |
| 9.8(0.0P2) | Introduced on the S3048-ON.                           |
| 9.7(0.0)   | Added support for VRF.                                |
| 9.2(1.0)   | Introduced on the Z9500.                              |
| 9.1(0.0)   | Introduced support for OSPFv3 on the S4810 and Z9000. |
| 8.3.19.0   | Introduced on the S4820T.                             |
| 7.8.1.0    | Added support for the C-Series.                       |
| 7.4.1.0    | Introduced on the E-Series.                           |

### Example

```
DelleMC# show ipv6 ospf 3 neighbor gi 1/2
Neighbor ID Pri State Dead Time Interface ID Interface
63.114.8.36 1 FULL/DR 00:00:38 4 Te 1/2
```

```
DellEMC#
```

## timers spf

Set the time interval between when the switch receives a topology change and starts a shortest path first (SPF) calculation.

### Z9500

**Syntax** `timers spf delay holdtime msec`  
To return to the default, use the `no timers spf` command.

**Parameters**

|                 |                                                                                                                                                                                                                                                                                            |
|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>delay</b>    | Enter a number as the delay. The range is from 0 to 2147483647. The default is <b>5 seconds</b> . When configured in milli seconds, 100 is the least value that is allowed to be configured.                                                                                               |
| <b>holdtime</b> | Enter a number as the hold time. The range is from 0 to 2147483647. The default is <b>10 seconds</b> . When configured in milli seconds, 200 is the least value that is allowed to be configured.                                                                                          |
| <b>msec</b>     | Enter the keyword <code>msec</code> to specify the time interval value in milli seconds.<br> <b>NOTE:</b> If you do not specify the <code>msec</code> option, the timer values are considered as seconds. |

**Defaults**

- delay = 5 seconds
- holdtime = 10 seconds

**Command Modes** ROUTER OSPFv3 for OSPFv3 and ROUTER OSPFv2 for OSPFv2

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                              |
|------------|----------------------------------------------------------|
| 9.11.0.0   | Introduced the keyword <code>msec</code> .               |
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.                |
| 9.10(0.0)  | Introduced on the S3148.                                 |
| 9.10(0.0)  | Introduced on the S6100-ON.                              |
| 9.8(2.0)   | Introduced on the S3100 series.                          |
| 9.8(1.0)   | Introduced on the Z9100-ON.                              |
| 9.8(0.0P5) | Introduced on the S4048-ON.                              |
| 9.8(0.0P2) | Introduced on the S3048-ON.                              |
| 9.8(0.0)   | Introduced on the S6000-ON, S6000, S4820T, S4810, S5000. |

**Usage Information** Setting the `delay` and `holdtime` parameters to a low number enables the switch to an alternate path quickly but requires more CPU usage.

### Example

```
DellEMC# conf
DellEMC(conf)# ipv6 router ospf 1
DellEMC(conf-ipv6-router_ospf)# timer spf 2 5 msec
DellEMC(conf-ipv6-router_ospf)# show config
!
ipv6 router ospf 1
timers spf 2 5 msec
DellEMC(conf-ipv6-router_ospf)#
```

```
DellEMC(conf-ipv6-router_ospf)# end
DellEMC#
```

# Pay As You Grow

The Pay As You Grow (PAYG) software feature allows you to purchase a Z9500 switch with 36 40G ports (144 10G ports) and upgrade to a larger number of ports as your networking needs grow.

## Topics:

- [install license](#)
- [show license](#)

## install license

Install the license for a Z9500 port configuration from local flash, a remote server using a file transfer method, or an external flash device.

| <b>Command Modes</b>     | EXEC Privilege                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Command History</b>   | <p>This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>.</p> <p>The following is a list of the Dell Networking OS version history for this command.</p> <p><b>Version 9.5(0.0)</b> Introduced on the Z9500.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Usage Information</b> | <p>If your Z9500 switch has a 36 40G-port license, all 40G ports (144 10G ports) enabled on line card 0. You can purchase a license for additional Z9500 port configurations:</p> <ul style="list-style-type: none"> <li>• 84 40G ports on line cards 0 and 1 (336 10G ports)</li> <li>• 132 40G ports on line cards 0, 1, and 2 (528 10G ports)</li> </ul> <p>You can upgrade from a 36 40G-port to either an 84 40G-port or 132 40G-port configuration.</p>                                                                                                                                                                                                                                                                                                         |

In the `install license` command syntax, `host-ip` is either an IPv4 dotted decimal address or an IPv6 [x:x:x:x] format address.

An error message is displayed if the license is corrupted or invalid.

After you enter the command, the current Z9500 port configuration and license status are displayed (see the following example).

You must reload the switch to enable the licensed port configuration.

### Example

```
??? Dell# install license ftp://122.3.12.34:/dell_license/
z9500_J_Smith.xml
Vendor : Dell
Service Tag : XDF-5YU
Product : Dell Networking Z9500
Feature(s) : 36 Ports 84 Ports 132 Ports
 [enabled] [enabled] [disabled]

Note: You must reload the chassis to activate a license.
Reloading the chassis will affect existing network traffic.
Continue to install license [yes/no] ? yes
Retrieving license..... (ok)
Validating license..... (ok)
Installing license..... (ok)
License installation successful. Restart chassis to activate license.
```

## show license

Check the status of the currently installed Z9500 license and display the number of enabled ports.

## Z9500

### Syntax

```
show license [flash://filepath | ftp://userid:password@host-ip/filepath
| scp://userid:password@hostip/filepath | tftp://host-ip/filepath |
usbflash://filepath]
```

### Parameters

|                                                              |                                                                                                                                 |
|--------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------|
| <b>flash:// filepath</b>                                     | Enter <code>flash://filepath</code> to display a license stored in a local flash directory on the switch.                       |
| <b>ftp://<br/>userid:password<br/>@host-ip/<br/>filepath</b> | Enter <code>ftp://userid:password@host-ip/filepath</code> to display a license stored on a remote file server using FTP.        |
| <b>scp://<br/>userid:password<br/>@hostip/filepath</b>       | Enter <code>scp://userid:password@hostip/filepath</code> to display a license stored on a remote file server using secure copy. |
| <b>tftp:// host-ip/<br/>filepath</b>                         | Enter <code>tftp://host-ip/filepath</code> to display a license stored on a remote file server using TFTP.                      |
| <b>usbflash://<br/>filepath</b>                              | Enter <code>usbflash://filepath</code> to display a license stored on an external flash device.                                 |

### Defaults

None

### Command Modes

EXEC Privilege

### Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

**Version 9.5(0.0)** Introduced on the Z9500.

## Usage Information

Use the `show license` command to verify the location of a Z9500 license before you install it, and whether the licensed port configuration is valid for the switch.

In the `show license` command syntax, `host-ip` is either an IPv4 dotted decimal address or an IPv6 [x:x:x::x] format address.

The following examples show sample output.

## Example

If no license is installed, information about the factory-installed 36 40G-port or 132 40G-port configuration is displayed.

```
??? Dell# show license
LICENSE INFORMATION
Feature(s) : 36 Ports 84 Ports 132 Ports
 [enabled] [disabled] [disabled]
State : no license installed
```

If a 132 40G-port license is installed, the following information is displayed.

```
??? Dell# show license
LICENSE INFORMATION
Vendor : Dell
Service Tag : XDF-5YU
Product : Dell Networking Z9500
Feature(s) : 36 Ports 84 Ports 132 Ports
 [enabled] [enabled] [enabled]
State : license active
```

To verify the location of a Z9500 license on a remote server using TFTP and whether the license is valid for the switch:

```
??? Dell# show license tftp://122.3.12.34:/dell_license/z9500_J_Smith.xml
LICENSE INFORMATION
Vendor : Dell
Service Tag : XDF-5YU
Product : Dell Networking Z9500
Feature(s) : 84 Ports
```

If you have installed a new license but have not yet reloaded the switch, the following information is displayed.

```
??? Dell# show license
LICENSE INFORMATION
Vendor : Dell
Service Tag : XDF-5YU
Product : Dell Networking Z9500
Feature(s) : 36 Ports 84 Ports 132 Ports
 [enabled] [enabled] [disabled]
State : license active

CURRENT LICENSE INFORMATION
Feature(s) : 36 Ports 84 Ports 132 Ports
 [enabled] [enabled] [enabled]
State : license installed, not activated
Initiate chassis reload [yes/no] ?
```

# PIM-Sparse Mode (PIM-SM)

The protocol-independent multicast (PIM) commands are supported by the Dell EMC Networking operating software on the platform.

The following describes the IPv4 PIM-SM commands.

## Topics:

- [IPv4 PIM-Sparse Mode Commands](#)

## IPv4 PIM-Sparse Mode Commands

The following describes the IPv4 PIM-sparse mode (PIM-SM) commands.

### clear ip pim rp-mapping

The bootstrap router (BSR) feature uses this command to remove all or particular rendezvous point (RP) advertisement.

#### Z9500

|                        |                                                                                                                                                               |                                                                                                                                                                                                                                                                                                     |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | <code>clear ip pim [<i>vrf vrf-name</i>] rp-mapping [<i>rp-address</i>]</code>                                                                                |                                                                                                                                                                                                                                                                                                     |
| <b>Parameters</b>      | <b><i>vrf vrf-name</i></b>                                                                                                                                    | (OPTIONAL) Enter the keyword <code>vrf</code> followed by the name of the VRF to configure this setting on that VRF.<br> <b>NOTE:</b> Applies to specific VRF if input is provided, else applies to Default VRF. |
|                        | <b><i>rp-address</i></b>                                                                                                                                      | (OPTIONAL) Enter the RP address in dotted decimal format (A.B.C.D).                                                                                                                                                                                                                                 |

| Version           | Description                                        |
|-------------------|----------------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON.          |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                           |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.                        |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.                    |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.                        |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.                        |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                        |
| <b>9.7(0.0)</b>   | Added support for VRF. Introduced on the S6000-ON. |
| <b>9.5(0.1)</b>   | Introduced on the Z9500.                           |
| <b>9.0.2.0</b>    | Introduced on the S6000.                           |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                          |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                           |

| Version | Description                 |
|---------|-----------------------------|
| 8.3.7.0 | Introduced on the S4810.    |
| 8.1.1.0 | Introduced on the E-Series. |
| 7.8.1.0 | Introduced on the S-Series. |

**Usage Information**

This command re-applies the RP mapping logic for all the groups learnt by the node. Any stale information corresponding to the existing mapping configuration is updated. The existing BSR cache and the \*.G's are deleted only if these entries are stale.

## clear ip pim tib

Clear PIM tree information from the PIM database.

### Z9500

**Syntax** `clear ip pim [vrf vrf-name] tib [group]`

**Parameters**

- vrf vrf-name** (OPTIONAL) Enter the keyword `vrf` followed by the name of the VRF to configure this setting on that VRF.  
 **NOTE:** Applies to specific VRF if input is provided, else applies to Default VRF.
- group** (OPTIONAL) Enter the multicast group address in dotted decimal format (A.B.C.D).

**Command Modes** EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                        |

| 8.1.1.0    | Introduced on the E-Series.                        |
| 7.8.1.0    | Introduced on the S-Series.                        |

**Usage Information**

If you use this command on a local VLT node, all multicast routes from the local PIM TIB, the entire multicast route table, and all the entries in the data plane are deleted. The local VLT node sends a request to the peer VLT node to download multicast routes learned by the peer. Both local and synced routes are removed from the local VLT node multicast route table. The peer VLT node clears synced routes from the node.

If you use this command on a peer VLT node, only the synced routes are deleted from the multicast route table.

## debug ip pim

View IP PIM debugging messages.

### Z9500

#### Syntax

```
debug ip pim [vrf vrf-name] [bsr | events | group | packet [in | out] | register | state | timer [assert | hello | joinprune | register]]
```

To disable PIM debugging, use the `no debug ip pim [vrf vrf-name]` command or use the `undebug all` to disable all debugging command.

#### Parameters

|                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>vrf vrf-name</b>                                  | (OPTIONAL) Enter the keyword <code>vrf</code> followed by the name of the VRF to view IP PIM debugging messages corresponding to that VRF.<br> <b>NOTE:</b> Applies to specific VRF if input is provided, else applies to Default VRF.                                                                                                                   |
| <b>bsr</b>                                           | (OPTIONAL) Enter the keyword <code>bsr</code> to view PIM Candidate RP/BSR activities.                                                                                                                                                                                                                                                                                                                                                    |
| <b>events</b>                                        | (OPTIONAL) Enter the keyword <code>group</code> to view PIM messages for a specific group.                                                                                                                                                                                                                                                                                                                                                |
| <b>group</b>                                         | (OPTIONAL) Enter the keyword <code>group</code> to view PIM messages for a specific group.                                                                                                                                                                                                                                                                                                                                                |
| <b>packet [in   out]</b>                             | (OPTIONAL) Enter the keyword <code>packet</code> to view PIM packets. Enter one of the optional parameters: <ul style="list-style-type: none"><li>• <code>in</code>: to view incoming packets</li><li>• <code>out</code>: to view outgoing packets</li></ul>                                                                                                                                                                              |
| <b>register</b>                                      | (OPTIONAL) Enter the keyword <code>register</code> to view PIM register address in dotted decimal format (A.B.C.D).                                                                                                                                                                                                                                                                                                                       |
| <b>state</b>                                         | (OPTIONAL) Enter the keyword <code>state</code> to view PIM state changes.                                                                                                                                                                                                                                                                                                                                                                |
| <b>timer [assert   hello   joinprune   register]</b> | (OPTIONAL) Enter the keyword <code>timer</code> to view PIM timers. Enter one of the optional parameters: <ul style="list-style-type: none"><li>• <code>assert</code>: to view the assertion timer</li><li>• <code>hello</code>: to view the PIM neighbor keepalive timer</li><li>• <code>joinprune</code>: to view the expiry timer (join/prune timer)</li><li>• <code>register</code>: to view the register suppression timer</li></ul> |

| 7.8.1.0  | Introduced on the S-Series.                        |

## ip pim bsr-border

Define the border of PIM domain by filtering inbound and outbound PIM-BSR messages per interface.

**Syntax** `ip pim bsr-border`  
 To return to the default value, use the `no ip pim bsr-border` command.

**Defaults** Disabled.

**Command Modes** INTERFACE

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.5(0.1)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |
| 8.1.1.0    | Introduced on the E-Series.               |
| 7.8.1.0    | Introduced on the S-Series.               |

**Usage Information** This command is applied to the subsequent PIM-BSR. Existing BSR advertisements are cleaned up by time-out. To clean the candidate RP advertisements, use the `clear ip pim rp-mapping` command.

# ip pim bsr-candidate

To join the Bootstrap election process, configure the PIM router.

## Z9500

**Syntax** `ip pim [vrf vrf-name] bsr-candidate interface [hash-mask-length] [priority]`  
To return to the default value, use the `no ip pim bsr-candidate [vrf vrf-name]` command.

**Parameters**

|                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>vrf vrf-name</b>     | (OPTIONAL) Enter the keyword <code>vrf</code> followed by the name of the VRF to configure the PIM router on a VRF.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>interface</b>        | Enter the following keywords and slot/port or number information: <ul style="list-style-type: none"><li>• For a Loopback interface, enter the keyword <code>loopback</code> then a number from 0 to 16383.</li><li>• For a Port Channel interface, enter the keywords <code>port-channel</code> then a number.</li><li>• For a VLAN, enter the keyword <code>vlan</code> then a number from 1 to 4094.</li><li>• For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information.</li><li>• For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information.</li></ul> |
| <b>hash-mask-length</b> | (OPTIONAL) Enter the hash mask length. The range is from zero (0) to 32. The default is <b>30</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>priority</b>         | (OPTIONAL) Enter the priority used in Bootstrap election process. The range is from zero (0) to 255. The default is <b>zero (0)</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

**Defaults** Not configured.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                        |
|------------|----------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.          |
| 9.10(0.0)  | Introduced on the S3148.                           |
| 9.10(0.0)  | Introduced on the S6100-ON.                        |
| 9.8(2.0)   | Introduced on the S3100 series.                    |
| 9.8(1.0)   | Introduced on the Z9100-ON.                        |
| 9.8(0.0P5) | Introduced on the S4048-ON.                        |
| 9.8(0.0P2) | Introduced on the S3048-ON.                        |
| 9.7(0.0)   | Added support for VRF. Introduced on the S6000-ON. |
| 9.5(0.1)   | Introduced on the Z9500.                           |
| 9.0.2.0    | Introduced on the S6000.                           |
| 8.3.19.0   | Introduced on the S4820T.                          |
| 8.3.11.1   | Introduced on the Z9000.                           |
| 8.3.7.0    | Introduced on the S4810.                           |
| 8.1.1.0    | Introduced on the E-Series.                        |
| 6.1.1.0    | Added support for the VLAN interface.              |

## ip pim dr-priority

Change the designated router (DR) priority for the interface.

**Syntax** `ip pim dr-priority priority-value`

To remove the DR priority value assigned, use the `no ip pim dr-priority` command.

**Parameters** ***priority-value*** Enter a number. Preference is given to larger/higher number. The range is from 0 to 4294967294. The default is 1.

**Defaults** 1

**Command Modes** INTERFACE

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                                   |
|------------|---------------------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.                     |
| 9.10(0.0)  | Introduced on the S3148.                                      |
| 9.10(0.0)  | Introduced on the S6100-ON.                                   |
| 9.8(2.0)   | Introduced on the S3100 series.                               |
| 9.8(1.0)   | Introduced on the Z9100-ON.                                   |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                   |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                   |
| 9.7(0.0)   | Introduced on the S6000-ON.                                   |
| 9.5(0.1)   | Introduced on the Z9500.                                      |
| 9.0.2.0    | Introduced on the S6000.                                      |
| 8.3.19.0   | Introduced on the S4820T.                                     |
| 8.3.11.1   | Introduced on the Z9000.                                      |
| 8.3.7.0    | Introduced on the S4810.                                      |
| 8.1.1.0    | Introduced on the E-Series.                                   |
| 7.8.1.0    | Introduced on the C-Series on port-channels and the S-Series. |

**Usage Information** The router with the largest value assigned to an interface becomes the designated router. If two interfaces contain the same designated router priority value, the interface with the largest interface IP address becomes the designated router.

## ip pim join-filter

Permit or deny PIM Join/Prune messages on an interface using an extended IP access list. This command prevents the PIM-SM router from creating state based on multicast source and/or group.

**Syntax** `ip pim [vrf vrf-name] join-filter ext-access-list [in | out]`

To remove the access list, use the `no ip pim [vrf vrf-name] join-filter ext-access-list` command.

**Parameters** ***vrf vrf-name*** (OPTIONAL) Enter the keyword `vrf` followed by the name of the VRF to permit or deny PIM join or prune messages on an interface associated with that VRF.

***ext-access-list*** Enter the name of an extended access list.

**Defaults** none

**Command Modes** INTERFACE

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                                        |
|------------|--------------------------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.                          |
| 9.10(0.0)  | Introduced on the S3148.                                           |
| 9.10(0.0)  | Introduced on the S6100-ON.                                        |
| 9.8(2.0)   | Introduced on the S3100 series.                                    |
| 9.8(1.0)   | Introduced on the Z9100-ON.                                        |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                        |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                        |
| 9.7(0.0)   | Removed the in and out parameters. Introduced on the S6000-ON.     |
| 9.5(0.1)   | Introduced on the Z9500.                                           |
| 9.0.2.0    | Introduced on the S6000.                                           |
| 8.3.19.0   | Introduced on the S4820T.                                          |
| 8.3.11.1   | Introduced on the Z9000.                                           |
| 8.3.7.0    | Introduced on the S4810.                                           |
| 8.1.1.0    | Introduced on the E-Series.                                        |
| 7.8.1.0    | Introduced on the C-Series for the port-channels and the S-Series. |
| 7.7.1.0    | Introduced on the E-Series.                                        |

**Usage Information** When you configure a join filter, it is applicable for both ingress and egress flows. There is no option to specify in or out parameters while configuring a join filter.

#### Example

```
DelleMC(conf)# ip access-list extended iptv-channels
DelleMC(config-ext-nacl)# permit ip 10.1.2.3/24 225.1.1.0/24
DelleMC(config-ext-nacl)# permit ip any 232.1.1.0/24
DelleMC(config-ext-nacl)# permit ip 100.1.1.0/16 any
DelleMC(config-if-te-1/1)# ip pim join-filter iptv-channels
DelleMC(config-if-te-1/1)# ip pim join-filter iptv-channels
```

**Related Commands**

- [ip access-list extended](#) — configure an access list based on IP addresses or protocols.

## ip pim ingress-interface-map

When the Dell EMC Networking system is the RP, statically map potential incoming interfaces to (\*,G) entries to create a lossless multicast forwarding environment.

**Syntax** `ip pim ingress-interface-map std-access-list`

**Parameters** `std-access-list` Enter the name of a standard access list.

**Defaults** none

**Command Modes** INTERFACE

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                 |
|------------|-----------------------------|
| 9.8(0.0P5) | Introduced on the S4048-ON. |
| 9.8(0.0P2) | Introduced on the S3048-ON. |
| 9.7(0.0)   | Introduced on the S6000-ON. |
| 9.5(0.1)   | Introduced on the Z9500.    |
| 8.3.19.0   | Introduced on the S4820T.   |
| 8.3.12.0   | Introduced on the S4810.    |
| 8.4.1.0    | Introduced                  |

### Example

```
DelleMC(conf)# ip access-list standard map1
DelleMC(config-std-nacl)# permit 224.0.0.1/24
DelleMC(config-std-nacl)# exit
DelleMC(conf)# int tengig 1/1
DelleMC(config-if-te-1/1)# ip pim ingress-interface-map map1
DelleMC(config-if-te-1/1)#
```

## ip pim neighbor-filter

To prevent a router from participating in protocol independent multicast (PIM), configure this feature.

### Z9500

#### Syntax

```
ip pim [vrf vrf-name] neighbor-filter {access-list}
```

To remove the restriction, use the `no ip pim [vrf vrf-name] neighbor-filter {access-list}` command.

#### Parameters

|                     |                                                                                                                                                                                                                                                                                                             |
|---------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>vrf vrf-name</b> | (OPTIONAL) Enter the keyword <code>vrf</code> followed by the name of the VRF to prevent that VRF from participating in PIM.<br> <b>NOTE:</b> Applies to specific VRF if input is provided, else applies to default VRF. |
| <b>access-list</b>  | Enter the name of a standard access list. Maximum 16 characters.                                                                                                                                                                                                                                            |

#### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                        |
|------------|----------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.          |
| 9.10(0.0)  | Introduced on the S3148.                           |
| 9.10(0.0)  | Introduced on the S6100-ON.                        |
| 9.8(2.0)   | Introduced on the S3100 series.                    |
| 9.8(1.0)   | Introduced on the Z9100-ON.                        |
| 9.8(0.0P5) | Introduced on the S4048-ON.                        |
| 9.8(0.0P2) | Introduced on the S3048-ON.                        |
| 9.7(0.0)   | Added support for VRF. Introduced on the S6000-ON. |
| 9.5(0.1)   | Introduced on the Z9500.                           |

| Version  | Description                              |
|----------|------------------------------------------|
| 9.0.2.0  | Introduced on the S6000.                 |
| 8.3.19.0 | Introduced on the S4820T.                |
| 8.3.11.1 | Introduced on the Z9000.                 |
| 8.3.7.0  | Introduced on the S4810.                 |
| 8.1.1.0  | Introduced on the E-Series.              |
| 7.8.1.0  | Introduced on the C-Series and S-Series. |
| 7.6.1.0  | Introduced on the E-Series.              |

#### Usage Information

Do not enter this command before creating the access-list.

## ip pim query-interval

Change the frequency of PIM Router-Query messages.

#### Syntax

`ip pim query-interval seconds`

To return to the default value, use the `no ip pim query-interval seconds` command.

#### Parameters

**seconds**

Enter a number as the number of seconds between router query messages. The range is from 0 to 65535. The default is **30 seconds**.

#### Defaults

**30 seconds**

#### Command Modes

INTERFACE

#### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                                        |
|------------|--------------------------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.                          |
| 9.10(0.0)  | Introduced on the S3148.                                           |
| 9.10(0.0)  | Introduced on the S6100-ON.                                        |
| 9.8(2.0)   | Introduced on the S3100 series.                                    |
| 9.8(1.0)   | Introduced on the Z9100-ON.                                        |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                        |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                        |
| 9.7(0.0)   | Introduced on the S6000-ON.                                        |
| 9.5(0.1)   | Introduced on the Z9500.                                           |
| 9.0.2.0    | Introduced on the S6000.                                           |
| 8.3.19.0   | Introduced on the S4820T.                                          |
| 8.3.11.1   | Introduced on the Z9000.                                           |
| 8.3.7.0    | Introduced on the S4810.                                           |
| 8.1.1.0    | Introduced on the E-Series.                                        |
| 7.8.1.0    | Introduced on the C-Series for the port-channels and the S-Series. |

## ip pim register-filter

To prevent a PIM source DR from sending register packets to an RP for the specified multicast source and group, use this feature.

### Z9500

|                        |                                                                                                                                                                                                                                                                                                                                                                                                                                         |                     |                                                                                                                                                                                                                                                             |                    |                                                                   |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|-------------------------------------------------------------------|
| <b>Syntax</b>          | <code>ip pim [vrf vrf-name] register-filter access-list</code><br>To return to the default, use the <code>no ip pim [vrf vrf-name] register-filter access-list</code> command.                                                                                                                                                                                                                                                          |                     |                                                                                                                                                                                                                                                             |                    |                                                                   |
| <b>Parameters</b>      | <table><tr><td><b>vrf vrf-name</b></td><td>(OPTIONAL) Enter the keyword <code>vrf</code> followed by the name of the VRF.<br/> <b>NOTE:</b> Applies to specific VRF if input is provided, else applies to Default VRF.</td></tr><tr><td><b>access-list</b></td><td>Enter the name of an extended access list. | <b>Defaults</b>        | Not configured.                                                                                                                                                                                                                                                                                                                                                                                                                         |                     |                                                                                                                                                                                                                                                             |                    |                                                                   |
| <b>Command Modes</b>   | CONFIGURATION                                                                                                                                                                                                                                                                                                                                                                                                                           |                     |                                                                                                                                                                                                                                                             |                    |                                                                   |
| <b>Command History</b> | This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> .                                                                                                                                                                                                                                                                           |                     |                                                                                                                                                                                                                                                             |                    |                                                                   |

| Version           | Description                                        |
|-------------------|----------------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON.          |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                           |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.                        |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.                    |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.                        |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.                        |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                        |
| <b>9.7(0.0)</b>   | Added support for VRF. Introduced on the S6000-ON. |
| <b>9.5(0.1)</b>   | Introduced on the Z9500.                           |
| <b>9.0.2.0</b>    | Introduced on the S6000.                           |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                          |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                           |
| <b>8.3.7.0</b>    | Introduced on the S4810.                           |
| <b>7.8.1.0</b>    | Introduced on the C-Series and S-Series.           |
| <b>7.6.1.0</b>    | Introduced                                         |

|                          |                                                                                                                                                                                                              |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Usage Information</b> | The access name is an extended IP access list that denies PIM register packets to RP at the source DR based on the multicast and group addresses. Do not enter this command before creating the access-list. |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## ip pim rp-address

Configure a static PIM rendezvous point (RP) address for a group or access-list.

### Z9500

**Syntax** `ip pim [vrf vrf-name] rp-address address {group-address group-address mask} [override]`

To remove an RP address, use the `no ip pim [vrf vrf-name] rp-address address {group-address group-address mask} [override]` command.

|                   |                                         |                                                                                                                                                                                                                                                                                                                     |
|-------------------|-----------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Parameters</b> | <b>vrf vrf-name</b>                     | (OPTIONAL) Enter the keyword <code>vrf</code> followed by the name of the VRF.<br> <b>NOTE:</b> Applies to specific VRF if input is provided, else applies to Default VRF.                                                         |
|                   | <b>address</b>                          | Enter the RP address in dotted decimal format (A.B.C.D).                                                                                                                                                                                                                                                            |
|                   | <b>group-address group-address mask</b> | Enter the keywords <code>group-address</code> then a group-address mask, in dotted decimal format (/xx), to assign that group address to the RP.                                                                                                                                                                    |
|                   | <b>override</b>                         | Enter the keyword <code>override</code> to override the BSR updates with static RP. The <code>override</code> takes effect immediately during enable/disable.<br> <b>NOTE:</b> This option is applicable to multicast group range. |

**Defaults** Not configured.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version      | Description                                        |
|--------------|----------------------------------------------------|
| 9.10(0.1)    | Introduced on the S6010-ON and S4048T-ON.          |
| 9.10(0.0)    | Introduced on the S3148.                           |
| 9.10(0.0)    | Introduced on the S6100-ON.                        |
| 9.8(2.0)     | Introduced on the S3100 series.                    |
| 9.8(1.0)     | Introduced on the Z9100-ON.                        |
| 9.8(0.0P5)   | Introduced on the S4048-ON.                        |
| 9.8(0.0P2)   | Introduced on the S3048-ON.                        |
| 9.7(0.0)     | Added support for VRF. Introduced on the S6000-ON. |
| 9.5(0.1)     | Introduced on the Z9500.                           |
| 9.0.2.0      | Introduced on the S6000.                           |
| 8.3.19.0     | Introduced on the S4820T.                          |
| 8.3.11.1     | Introduced on the Z9000.                           |
| 8.3.7.0      | Introduced on the S4810.                           |
| 8.1.1.0      | Introduced on the E-Series.                        |
| 7.8.1.0      | Introduced on the S-Series.                        |
| pre- 6.1.1.1 | Introduced on the E-Series.                        |

**Usage Information** First-hop routers use this address by to send register packets on behalf of source multicast hosts. The RP addresses are stored in the order in which they are entered. The RP is chosen based on a longer prefix match for a group. The RP selection does not depend on dynamic or static RP assignments.

## ip pim rp-candidate

Configure a PIM router to send out a Candidate-RP-Advertisement message to the bootstrap (BS) router or define group prefixes that are defined with the RP address to PIM BSR.

**Syntax** `ip pim [vrf vrf-name] rp-candidate {interface [priority] [acl-name]}`

To return to the default value, use the `no ip pim [vrf vrf-name] rp-candidate {interface [priority]}` command.

### Parameters

|                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|---------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>vrf vrf-name</b> | (OPTIONAL) Enter the keyword <code>vrf</code> followed by the name of the VRF.<br> <b>NOTE:</b> Applies to specific VRF if input is provided, else applies to Default VRF.                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>interface</b>    | Enter the following keywords and slot/port or number information: <ul style="list-style-type: none"><li>• For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information.</li><li>• For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information.</li><li>• For a Loopback interface, enter the keyword <code>loopback</code> then a number from 0 to 16383.</li><li>• For a port-channel interface, enter the keywords <code>port-channel</code> then the port-channel ID.</li><li>• For a VLAN, enter the keyword <code>vlan</code> then a number from 1 to 4094.</li></ul> |
| <b>priority</b>     | (OPTIONAL) Enter the priority used in Bootstrap election process. The range is zero (0) to 255. The default is <b>192</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>acl-name</b>     | (OPTIONAL) Enter the name of an ACL to configure a PIM router to act as an RP for a specific set of multicast group addresses that are defined in the ACL.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

**Defaults** Not configured.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version             | Description                                        |
|---------------------|----------------------------------------------------|
| <b>9.11(0.0)</b>    | Introduced the <code>acl-name</code> parameter.    |
| <b>9.10(0.1)</b>    | Introduced on the S6010-ON and S4048T-ON.          |
| <b>9.10(0.0)</b>    | Introduced on the S3148.                           |

| <b>pre- 6.1.1.1</b> | Introduced on the E-Series.                        |

### Usage Information

Priority is stored at BSR router when receiving a Candidate-RP-Advertisement.

## ip pim sparse-mode

Enable PIM sparse mode and IGMP on the interface.

|                        |                                                                                                                                                               |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | <code>ip pim sparse-mode</code><br>To disable PIM sparse mode and IGMP, use the <code>no ip pim sparse-mode</code> command.                                   |
| <b>Defaults</b>        | Disabled.                                                                                                                                                     |
| <b>Command Modes</b>   | INTERFACE                                                                                                                                                     |

| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.                                        |
| <b>9.5(0.1)</b>   | Introduced on the Z9500.                                           |
| <b>9.0.2.0</b>    | Introduced on the S6000.                                           |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                                          |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                                           |
| <b>8.3.7.0</b>    | Introduced on the S4810.                                           |
| <b>8.1.1.0</b>    | Introduced on the E-Series.                                        |
| <b>7.8.1.0</b>    | Introduced on the C-Series for the port-channels and the S-Series. |

|                          |                                                                                                                                                                                                                                                                                      |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Usage Information</b> | The interface must be enabled (the <code>no shutdown</code> command) and not have the <code>switchport</code> command configured. Multicast must also be enabled globally (using the <code>ip multicast-lag-hashing</code> command). PIM is supported on the port-channel interface. |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## ip pim sparse-mode sg-expiry-timer

Enable expiry timers globally for all sources.

### Z9500

|                   |                                                                                                                                                                                                                                                                                                                                      |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>     | <code>ip pim [vrf vrf-name] sparse-mode sg-expiry-timer seconds [access-list-name]</code><br>To disable configured timers and return to default mode, use the <code>no ip pim [vrf vrf-name] sparse-mode sg-expiry-timer</code> command.                                                                                             |
| <b>Parameters</b> | <b>vrf vrf-name</b> (OPTIONAL) Enter the keyword <code>vrf</code> followed by the name of the VRF to enable expiry timer for all sources on that VRF.<br> <b>NOTE:</b> Applies to specific VRF if input is provided, else applies to Default VRF. |

**seconds** Enter the number of seconds the S, G entries are retained. The range is from 211 to 65535.

**access-list-name** (OPTIONAL) Enter the name of a previously configured Extended ACL to enable the expiry time to specified S,G entries.

**Defaults** Disabled. The default expiry timer (with no times configured) is 210 sec.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                                                                                                               |
|------------|-------------------------------------------------------------------------------------------------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.                                                                                                 |
| 9.10(0.0)  | Introduced on the S3148.                                                                                                                  |
| 9.10(0.0)  | Introduced on the S6100-ON.                                                                                                               |
| 9.8(2.0)   | Introduced on the S3100 series.                                                                                                           |
| 9.8(1.0)   | Introduced on the Z9100-ON.                                                                                                               |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                                                                                               |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                                                                                               |
| 9.7(0.0)   | Removed the acl-access-list parameter. Modified the max value of S, G entry second range from 86400 to 65535. Introduced on the S6000-ON. |
| 9.5(0.1)   | Introduced on the Z9500.                                                                                                                  |
| 9.0.2.0    | Introduced on the S6000.                                                                                                                  |
| 8.3.19.0   | Introduced on the S4820T.                                                                                                                 |
| 8.3.11.1   | Introduced on the Z9000.                                                                                                                  |
| 8.3.7.0    | Introduced on the S4810.                                                                                                                  |
| 8.1.1.0    | Introduced on the E-Series.                                                                                                               |
| 7.8.1.0    | Introduced on the C-Series for the port-channels and the S-Series.                                                                        |
| 7.7.1.1    | Introduced                                                                                                                                |

**Usage Information** This command configures an expiration timer for all S.G entries, unless they are assigned to an Extended ACL.

Even though the FHR nodes act as RPs, these nodes still send *Register encap* messages to themselves and expect to receive a *Register stop* message (for Anycast RP support). As a result, if the DLT timer expires, SG is not deleted until the register state is deleted in the node. This register state expires 210 seconds after the last Null register is received.

## ip pim spt-threshold

To switch to the shortest path tree when the traffic reaches the specified threshold value, configure the PIM router.

### Z9500

**Syntax** `ip pim [vrf vrf-name] spt-threshold [value | infinity]`

To return to the default value, use the `no ip pim [vrf vrf-name] spt-threshold [infinity]` command.

**Parameters** **value** (OPTIONAL) Enter the traffic value in kilobits per second. The default is 10 packets per second . A value of zero (0) causes a switchover on the first packet.

**vrf *vrf-name*** (OPTIONAL) Enter the keyword `vrf` followed by the name of the VRF to configure the PIM router on that VRF.

 **NOTE:** Applies to specific VRF if input is provided, else applies to Default VRF.

**infinity** (OPTIONAL) Enter the keyword `infinity` to never switch to the source-tree.

**Defaults** Not configured.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                                        |
|-------------------|----------------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON.          |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                           |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.                        |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.                    |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.                        |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.                        |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                        |
| <b>9.7(0.0)</b>   | Added support for VRF. Introduced on the S6000-ON. |
| <b>9.5(0.1)</b>   | Introduced on the Z9500.                           |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                          |
| <b>8.3.12.0</b>   | Introduced on the S4810.                           |
| <b>8.1.1.0</b>    | Introduced on the E-Series.                        |

**Usage Information** This command is applicable to last hop routers on the shared tree towards the rendezvous point (RP).

## no ip pim snooping dr-flood

Disable the flooding of multicast packets to the PIM designated router.

**Syntax** `no ip pim snooping dr-flood`

To re-enable the flooding of multicast packets to the PIM designated router, use the `ip pim snooping dr-flood` command.

**Defaults** Enabled.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                 |
|-------------------|-----------------------------|
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON. |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON. |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON. |
| <b>9.5(0.1)</b>   | Introduced on the Z9500.    |
| <b>8.3.19.0</b>   | Introduced on the S4820T.   |
| <b>8.3.12.0</b>   | Introduced on the S4810.    |

| Version | Description                 |
|---------|-----------------------------|
| 8.4.1.0 | Introduced on the E-Series. |

### Usage Information

By default, when you enable PIM-SM snooping, a switch floods all multicast traffic to the PIM designated router (DR), including unnecessary multicast packets. To minimize the traffic sent over the network to the designated router, you can disable `designated-router flooding`.

When designated-router flooding is disabled, PIM-SM snooping only forwards the multicast traffic, which belongs to a multicast group for which the switch receives a join request, on the port connected towards the designated router.

If the PIM DR flood is not disabled (default setting):

- Multicast traffic is transmitted on the egress port towards the PIM DR if the port is not the incoming interface.
- Multicast traffic for an unknown group is sent on the port towards the PIM DR. When DR flooding is disabled, multicast traffic for an unknown group is dropped.

## show ip pim bsr-router

View information on the Bootstrap router.

### Z9500

**Syntax** `show ip pim [vrf vrf-name] bsr-router`

**Parameters** `vrf vrf-name` (OPTIONAL) Enter the keyword `vrf` followed by the name of the VRF to configure this setting on VRF.  
 **NOTE:** Applies to specific VRF if input is provided, else applies to Default VRF.

- Command Modes**
- EXEC
  - EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                        |
|------------|----------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.          |
| 9.10(0.0)  | Introduced on the S3148.                           |
| 9.10(0.0)  | Introduced on the S6100-ON.                        |
| 9.8(2.0)   | Introduced on the S3100 series.                    |
| 9.8(1.0)   | Introduced on the Z9100-ON.                        |
| 9.8(0.0P5) | Introduced on the S4048-ON.                        |
| 9.8(0.0P2) | Introduced on the S3048-ON.                        |
| 9.7(0.0)   | Added support for VRF. Introduced on the S6000-ON. |
| 9.5(0.1)   | Introduced on the Z9500.                           |
| 9.0.2.0    | Introduced on the S6000.                           |
| 8.3.19.0   | Introduced on the S4820T.                          |
| 8.3.11.1   | Introduced on the Z9000.                           |
| 8.3.7.0    | Introduced on the S4810.                           |
| 8.1.1.0    | Introduced on the E-Series.                        |

| Version | Description                 |
|---------|-----------------------------|
| 7.8.1.0 | Introduced on the S-Series. |

### Example

```
DellEMC# show ip pim bsr-router
PIMv2 Bootstrap information
This system is the Bootstrap Router (v2)
 BSR address: 7.7.7.7 (?)
 BSR Priority: 0, Hash mask length: 30
 Next bootstrap message in 00:00:08

This system is a candidate BSR
 Candidate BSR address: 7.7.7.7, priority: 0, hash mask length: 30
DellEMC#
```

## show ip pim interface

View information on the interfaces with IP PIM enabled.

### Z9500

**Syntax** `show ip pim [vrf vrf-name] interface`

**Parameters** `vrf vrf-name` (OPTIONAL) Enter the keyword `vrf` followed by the name of the VRF to configure this setting on this VRF.

 **NOTE:** Applies to specific VRF if input is provided, else applies to Default VRF.

- Command Modes**
- EXEC
  - EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                        |
|------------|----------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.          |
| 9.10(0.0)  | Introduced on the S3148.                           |
| 9.10(0.0)  | Introduced on the S6100-ON.                        |
| 9.8(2.0)   | Introduced on the S3100 series.                    |
| 9.8(1.0)   | Introduced on the Z9100-ON.                        |

| 8.1.1.0    | Introduced on the E-Series.                        |
| 7.8.1.0    | Introduced on the S-Series.                        |

## Usage Information

The following describes the `show ip pim interface` command shown in the following example.

| Field              | Description                                                                                                                                                                          |
|--------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Address</b>     | Lists the IP addresses of the interfaces participating in PIM.                                                                                                                       |
| <b>Interface</b>   | List the interface type, with either slot/port information or ID (VLAN or Port Channel), of the interfaces participating in PIM.                                                     |
| <b>Ver/Mode</b>    | Displays the PIM version number and mode for each interface participating in PIM: <ul style="list-style-type: none"><li>• v2 = PIM version 2</li><li>• S = PIM Sparse mode</li></ul> |
| <b>Nbr Count</b>   | Displays the number of PIM neighbors discovered over this interface.                                                                                                                 |
| <b>Query Intvl</b> | Displays the query interval for Router Query messages on that interface (configured with <code>ip pim query-interval</code> command).                                                |
| <b>DR Prio</b>     | Displays the Designated Router priority value configured on the interface (use the <code>ip pim dr-priority</code> command).                                                         |
| <b>DR</b>          | Displays the IP address of the Designated Router for that interface.                                                                                                                 |

The `show ip pim interface` command does not display information corresponding to the loop-back interfaces.

## Example

```
DellEMC# show ip pim interface
Address Interface Ver/
 Mode Nbr Query DR DR
 Count Intvl Prio
165.87.34.5 Te 1/10 v2/S 0 30 1 165.87.34.5
10.1.1.2 Vl 10 v2/S 1 30 1 10.1.1.2
20.1.1.5 Vl 20 v2/S 1 30 1 20.1.1.5
165.87.31.200 Vl 30 v2/S 1 30 1 165.87.31.201
DellEMC#
```

## show ip pim neighbor

View PIM neighbors.

### Z9500

**Syntax** `show ip pim [vrf vrf-name] neighbor`

**Parameters** **vrf vrf-name** (OPTIONAL) Enter the keyword `vrf` followed by the name of the VRF to configure this setting on that VRF.

 **NOTE:** Applies to specific VRF if input is provided, else applies to Default VRF.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version          | Description                               |
|------------------|-------------------------------------------|
| <b>9.10(0.1)</b> | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b> | Introduced on the S3148.                  |
| <b>9.10(0.0)</b> | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>  | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>  | Introduced on the Z9100-ON.               |

| Version    | Description                                        |
|------------|----------------------------------------------------|
| 9.8(0.0P5) | Introduced on the S4048-ON.                        |
| 9.8(0.0P2) | Introduced on the S3048-ON.                        |
| 9.7(0.0)   | Added support for VRF. Introduced on the S6000-ON. |
| 9.5(0.1)   | Introduced on the Z9500.                           |
| 9.0.2.0    | Introduced on the S6000.                           |
| 8.3.19.0   | Introduced on the S4820T.                          |
| 8.3.12.0   | Introduced on the S4810.                           |
| 8.3.11.1   | Introduced on the Z9000.                           |
| 8.1.1.0    | Introduced on the E-Series.                        |
| 7.8.1.0    | Introduced on the S-Series.                        |

### Usage Information

The following describes the `show ip pim neighbor` command shown in the following example.

| Field                   | Description                                                                                                                                                                                                                                               |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Neighbor address</b> | Displays the IP address of the PIM neighbor.                                                                                                                                                                                                              |
| <b>Interface</b>        | List the interface type, with either slot/port information or ID (VLAN or Port Channel), on which the PIM neighbor was found.                                                                                                                             |
| <b>Uptime/expires</b>   | Displays the amount of time the neighbor has been up then the amount of time until the neighbor is removed from the multicast routing table (that is, until the neighbor hold time expires).                                                              |
| <b>Ver</b>              | Displays the PIM version number. <ul style="list-style-type: none"> <li>v2 = PIM version 2</li> </ul>                                                                                                                                                     |
| <b>DR prio/Mode</b>     | Displays the Designated Router priority and the mode. <ul style="list-style-type: none"> <li>1 = default Designated Router priority (use the <code>ip pim dr-priority</code> command)</li> <li>DR = Designated Router</li> <li>S = Sparse mode</li> </ul> |

### Example

```
DellEMC# show ip pim neighbor
Neighbor Interface Uptime/Expires Ver DR
Address
127.87.3.4 Te 1/16 09:44:58/00:01:24 v2 1 / S
DellEMC#
```

## show ip pim rp

View all multicast groups-to-RP mappings.

### Z9500

#### Syntax

```
show ip pim [vrf vrf-name] rp [mapping | group-address]
```

#### Parameters

- vrf *vrf-name*** (OPTIONAL) Enter the keyword `vrf` followed by the name of the VRF to configure this setting on that VRF.
- mapping** (OPTIONAL) Enter the keyword `mapping` to display the multicast groups-to-RP mapping and information on how RP is learnt.
- group-address** (OPTIONAL) Enter the multicast group address mask in dotted decimal format to view RP for a specific group.

- Command Modes**
- EXEC
  - EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| <b>Version</b>    | <b>Description</b>                                 |
|-------------------|----------------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON.          |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                           |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.                        |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.                    |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.                        |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.                        |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                        |
| <b>9.7(0.0)</b>   | Added support for VRF. Introduced on the S6000-ON. |
| <b>9.5(0.1)</b>   | Introduced on the Z9500.                           |
| <b>9.0.2.0</b>    | Introduced on the S6000.                           |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                          |
| <b>8.3.12.0</b>   | Introduced on the S4810.                           |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                           |
| <b>8.1.1.0</b>    | Introduced on the E-Series.                        |
| <b>7.8.1.0</b>    | Introduced on the S-Series.                        |

**Example**

```
DellEMC# show ip pim rp
Group RP
224.2.197.115 165.87.20.4
224.2.217.146 165.87.20.4
224.3.3.3 165.87.20.4
225.1.2.1 165.87.20.4
225.1.2.2 165.87.20.4
229.1.2.1 165.87.20.4
229.1.2.2 165.87.20.4
DellEMC#
```

**Example (Mapping)**

```
DellEMC# show ip pim rp mapping
PIM Group-to-RP Mappings
Group(s): 224.0.0.0/4, Static
RP: 50.40.4.4, v2
DellEMC#
```

**Example (Address)**

```
DellEMC# show ip pim rp 229.1.2.1
Group RP
229.1.2.1 165.87.20.4
DellEMC#
```

## show ip pim snooping interface

Display information on VLAN interfaces with PIM-SM snooping enabled.

**Syntax** `show ip pim snooping interface [vlan vlan-id]`

**Parameters**      **vlan *vlan-id***      (OPTIONAL) Enter a VLAN ID to display information about a specified VLAN configured for PIM-SM snooping. The valid VLAN IDs range is from 1 to 4094.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**      This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                 |
|-------------------|-----------------------------|
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON. |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON. |
| <b>9.5(0.1)</b>   | Introduced on the Z9500.    |
| <b>8.3.19.0</b>   | Introduced on the S4820T.   |
| <b>8.3.12.0</b>   | Introduced on the S4810.    |
| <b>8.4.1.1</b>    | Introduced on the E-Series. |

**Usage Information**      The following describes the `show ip pim snooping interface` commands shown in the following example.

| Field            | Description                                                                                                                                                                              |
|------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Interface</b> | Displays the VLAN interfaces with PIM-SM snooping enabled.                                                                                                                               |
| <b>Ver/Mode</b>  | Displays the PIM version number for each VLAN interface with PIM-SM snooping enabled: <ul style="list-style-type: none"><li>• v2 = PIM version 2</li><li>• S = PIM Sparse mode</li></ul> |
| <b>Nbr Count</b> | Displays the number of neighbors learned through PIM-SM snooping on the interface.                                                                                                       |
| <b>DR Prio</b>   | Displays the Designated Router priority value configured on the interface ( <code>ip pim dr-priority</code> command).                                                                    |
| <b>DR</b>        | Displays the IP address of the Designated Router for that interface.                                                                                                                     |

**Example (#2)**

```
DellEMC# show ip pim snooping interface
Interface Ver Nbr DR DR
 Count Prio
Vlan 2 v2 3 1 165.87.32.2
DellEMC#
```

## show ip pim snooping neighbor

Display information on PIM neighbors learned through PIM-SM snooping.

**Syntax**      `show ip pim snooping neighbor [vlan vlan-id]`

**Parameters**      **vlan *vlan-id***      (OPTIONAL) Enter a VLAN ID to display information about PIM neighbors that PIM-SM snooping discovered on a specified VLAN. The valid VLAN IDs range is from 1 to 4094.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**      This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                 |
|------------|-----------------------------|
| 9.8(0.0P5) | Introduced on the S4048-ON. |
| 9.8(0.0P2) | Introduced on the S3048-ON. |
| 9.7(0.0)   | Introduced on the S6000-ON. |
| 9.5(0.1)   | Introduced on the Z9500.    |
| 8.3.19.0   | Introduced on the S4820T.   |
| 8.3.12.0   | Introduced on the S4810.    |
| 8.4.1.1    | Introduced on the E-Series. |

### Usage Information

The following describes the `show ip pim snooping neighbor` commands shown in the following example.

| Field                   | Description                                                                                                                                                                                                                                               |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Neighbor address</b> | Displays the IP address of the neighbor learned through PIM-SM snooping.                                                                                                                                                                                  |
| <b>Interface</b>        | Displays the VLAN ID number and slot/port on which the PIM-SM-enabled neighbor was discovered.                                                                                                                                                            |
| <b>Uptime/expires</b>   | Displays the amount of time the neighbor has been up then the amount of time until the neighbor is removed from the multicast routing table (that is, until the neighbor hold time expires).                                                              |
| <b>Ver</b>              | Displays the PIM version number: <ul style="list-style-type: none"> <li>v2 = PIM version 2</li> </ul>                                                                                                                                                     |
| <b>DR prio/Mode</b>     | Displays the Designated Router priority and the mode: <ul style="list-style-type: none"> <li>1 = default Designated Router priority (use the <code>ip pim dr-priority</code> command)</li> <li>DR = Designated Router</li> <li>S = Sparse mode</li> </ul> |

### Example

```
DelleMC# show ip pim snooping neighbor

Neighbor Interface Uptime/Expires Ver DR Prio
Address
165.87.32.2 V1 2 [Te 1/13] 00:04:03/00:01:42 v2 1
165.87.32.10 V1 2 [Te 1/11] 00:00:46/00:01:29 v2 0
165.87.32.12 V1 2 [Te 2/20] 00:00:51/00:01:24 v2 0
```

## show ip pim snooping tib

Display information from the tree information base (TIB) PIM-SM snooping discovered about multicast group members and states.

**Syntax** `show ip pim snooping tib [vlan vlan-id] [group-address [source-address]]`

| Parameters                   | Description                                                                                                                                                    |
|------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>vlan <i>vlan-id</i></b>   | (OPTIONAL) Enter a VLAN ID to display TIB information PIM-SM snooping discovered on a specified VLAN. The valid VLAN IDs range is from 1 to 4094.              |
| <b><i>group-address</i></b>  | (OPTIONAL) Enter the group address in dotted decimal format (A.B.C.D) to display TIB information PIM-SM snooping discovered for a specified multicast group.   |
| <b><i>source-address</i></b> | (OPTIONAL) Enter the source address in dotted decimal format (A.B.C.D) to display TIB information PIM-SM snooping discovered for a specified multicast source. |

- Command Modes**
- EXEC
  - EXEC Privilege

## Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                 |
|------------|-----------------------------|
| 9.8(0.0P5) | Introduced on the S4048-ON. |
| 9.8(0.0P2) | Introduced on the S3048-ON. |
| 9.5(0.1)   | Introduced on the Z9500.    |
| 8.3.19.0   | Introduced on the S4820T.   |
| 8.3.12.0   | Introduced on the S4810.    |
| 8.4.1.1    | Introduced on the E-Series. |

## Usage Information

The following describes the `show ip pim snooping tib` commands shown in the following example.

| Field                    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|--------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| (S, G)                   | Displays the entry in the PIM multicast snooping database.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| uptime                   | Displays the amount of time the entry has been in the PIM multicast route table.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| expires                  | Displays the amount of time until the entry expires and is removed from the database.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| RP                       | Displays the IP address of the RP/source for this entry.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| flags                    | List the flags to define the entries: <ul style="list-style-type: none"><li>• S = PIM Sparse Mode</li><li>• C = directly connected</li><li>• L = local to the multicast group</li><li>• P = route was pruned</li><li>• R = the forwarding entry is pointing toward the RP</li><li>• F = Dell EMC Networking OS is registering this entry for a multicast source</li><li>• T = packets were received via Shortest Tree Path</li><li>• J = first packet from the last hop router is received and the entry is ready to switch to SPT</li><li>• K=acknowledge pending state</li></ul> |
| Incoming interface       | Displays the reverse path forwarding (RPF) interface towards the RP/ source.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| RPF neighbor             | Displays the next hop from this interface towards the RP/source.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Outgoing interface list: | Lists the interfaces that meet one of the following criteria: <ul style="list-style-type: none"><li>• a directly connect member of the Group</li><li>• statically configured member of the Group</li><li>• received a (*,G) Join message</li></ul>                                                                                                                                                                                                                                                                                                                                 |

## Example

```
DelleMC# show ip pim snooping tib

PIM Multicast Snooping Table
Flags: J/P - (*,G) Join/Prune, j/p - (S,G) Join/Prune
 SGR-P - (S,G,R) Prune
Timers: Uptime/Expires
* : Inherited port

(*, 225.1.2.1), uptime 00:00:01, expires 00:02:59, RP 165.87.70.1,
flags: J
 Incoming interface: Vlan 2, RPF neighbor 0.0.0.0
 Outgoing interface list:
 TenGigabitEthernet 2/11 RPF 165.87.32.2 00:00:01/00:02:59
 TenGigabitEthernet 2/13 Upstream Port -/-

DelleMC# show ip pim snooping tib vlan 2 225.1.2.1 165.87.1.7
```

```

PIM Multicast Snooping Table
Flags: J/P - (*,G) Join/Prune, j/p - (S,G) Join/Prune
 SGR-P - (S,G,R) Prune
Timers: Uptime/Expires
* : Inherited port

(165.87.1.7, 225.1.2.1), uptime 00:00:08, expires 00:02:52, flags: j
Incoming interface: Vlan 2, RPF neighbor 0.0.0.0
Outgoing interface list:
 TenGigabitEthernet 2/11 Upstream Port -/-
 TenGigabitEthernet 2/13 DR Port -/-
 TenGigabitEthernet 2/20 RPF 165.87.32.10 00:00:08/00:02:52

```

## show ip pim summary

View information about PIM-SM operation.

### Z9500

**Syntax** `show ip pim [vrf vrf-name] summary`

**Parameters** `vrf vrf-name` (OPTIONAL) Enter the keyword `vrf` followed by the name of the VRF to configure this setting on that VRF.

 **NOTE:** Applies to specific VRF if input is provided, else applies to Default VRF.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                                              |
|------------|--------------------------------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.                                |
| 9.10(0.0)  | Introduced on the S3148.                                                 |
| 9.10(0.0)  | Introduced on the S6100-ON.                                              |
| 9.8(2.0)   | Introduced on the S3100 series.                                          |
| 9.8(1.0)   | Introduced on the Z9100-ON.                                              |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                              |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                              |
| 9.7(0.0)   | Added support for VRF. Introduced on the S6000-ON.                       |
| 9.5(0.1)   | Introduced on the Z9500.                                                 |
| 8.3.19.0   | Introduced on the S4820T.                                                |
| 8.3.12.0   | Introduced on the S4810.                                                 |
| 8.3.11.1   | Introduced on the Z9000.                                                 |
| 8.4.1.1    | Support for the display of PIM-SM snooping status was added on E-Series. |
| 8.1.1.0    | Introduced on the E-Series.                                              |
| 7.8.1.0    | Introduced on the S-Series.                                              |

### Example

```

DellEMC# show ip pim summary

PIM TIB version 495

```

```

Uptime 22:44:52
Entries in PIM-TIB/MFC : 2/2

Active Modes :
 PIM-SNOOPING

Interface summary:
 1 active PIM interface
 0 passive PIM interfaces
 3 active PIM neighbors

TIB summary:
 1/1 (*,G) entries in PIM-TIB/MFC
 1/1 (S,G) entries in PIM-TIB/MFC
 0/0 (S,G,Rpt) entries in PIM-TIB/MFC

 0 PIM nexthops
 0 RPs
 0 sources
 0 Register states

Message summary:
 2582/2583 Joins sent/received
 5/0 Prunes sent/received
 0/0 Candidate-RP advertisements sent/received
 0/0 BSR messages sent/received
 0/0 State-Refresh messages sent/received
 0/0 MSDP updates sent/received
 0/0 Null Register messages sent/received
 0/0 Register-stop messages sent/received

Data path event summary:
 0 no-cache messages received
 0 last-hop switchover messages received
 0/0 pim-assert messages sent/received
 0/0 register messages sent/received
DellEMC#

## show ip pim tib

View the PIM tree information base (TIB).

### Z9500

**Syntax** `show ip pim [vrf vrf-name] tib [group-address [source-address]]`

**Parameters**

**vrf vrf-name** (OPTIONAL) Enter the keyword `vrf` followed by the name of the VRF to configure this setting on that VRF.

 **NOTE:** Applies to specific VRF if input is provided, else applies to Default VRF.

**group-address** (OPTIONAL) Enter the group address in dotted decimal format (A.B.C.D).

**source-address** (OPTIONAL) Enter the source address in dotted decimal format (A.B.C.D).

**Command Modes**

- EXEC
- EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                               |
|-----------|-------------------------------------------|
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0) | Introduced on the S3148.                  |

| Version    | Description                                        |
|------------|----------------------------------------------------|
| 9.10(0.0)  | Introduced on the S6100-ON.                        |
| 9.8(2.0)   | Introduced on the S3100 series.                    |
| 9.8(1.0)   | Introduced on the Z9100-ON.                        |
| 9.8(0.0P5) | Introduced on the S4048-ON.                        |
| 9.8(0.0P2) | Introduced on the S3048-ON.                        |
| 9.7(0.0)   | Added support for VRF. Introduced on the S6000-ON. |
| 9.5(0.1)   | Introduced on the Z9500.                           |
| 9.0.2.0    | Introduced on the S6000.                           |
| 8.3.19.0   | Introduced on the S4820T.                          |
| 8.3.12.0   | Introduced on the S4810.                           |
| 8.3.11.1   | Introduced on the Z9000.                           |
| 8.1.1.0    | Introduced on the E-Series.                        |
| 7.8.1.0    | Introduced on the S-Series.                        |

### Usage Information

The following describes the `show ip pim tib` command shown in the following example.

| Field                           | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|---------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>(S, G)</b>                   | Displays the entry in the multicast PIM database.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>uptime</b>                   | Displays the amount of time the entry has been in the PIM route table.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>expires</b>                  | Displays the amount of time until the entry expires and is removed from the database.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>RP</b>                       | Displays the IP address of the RP/source for this entry.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>flags</b>                    | List the flags to define the entries: <ul style="list-style-type: none"> <li>● D = PIM Dense Mode</li> <li>● S = PIM Sparse Mode</li> <li>● C = directly connected</li> <li>● L = local to the multicast group</li> <li>● P = route was pruned</li> <li>● R = the forwarding entry is pointing toward the RP</li> <li>● F = Dell EMC Networking OS is registering this entry for a multicast source</li> <li>● T = packets were received via Shortest Tree Path</li> <li>● J = first packet from the last hop router is received and the entry is ready to switch to SPT</li> <li>● K = acknowledge pending state</li> </ul> |
| <b>Incoming interface</b>       | Displays the reverse path forwarding (RPF) interface towards the RP/ source.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>RPF neighbor</b>             | Displays the next hop from this interface towards the RP/source.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Outgoing interface list:</b> | Lists the interfaces that meet one of the following criteria: <ul style="list-style-type: none"> <li>● a directly connect member of the Group</li> <li>● statically configured member of the Group</li> <li>● received a (*,G) Join message</li> </ul>                                                                                                                                                                                                                                                                                                                                                                       |

### Example

```
DelleMC# do show ip pim tib

PIM Multicast Routing Table
Flags: D - Dense, S - Sparse, C - Connected, L - Local, P - Pruned,
 R - RP-bit set, F - Register flag, T - SPT-bit set, J - Join SPT,
 M - MSDP created entry, A - Candidate for MSDP Advertisement
```

```

 K - Ack-Pending State
Timers: Uptime/Expires
Interface state: Interface, next-Hop, State/Mode

(*, 225.1.1.1), uptime 00:40:16, expires 00:00:00, RP 20.40.4.4, flags:
SCJ
 Incoming interface: Vlan 2007, RPF neighbor 20.30.124.4
 Outgoing interface list:
 Vlan 2006 Forward/Sparse 00:06:21/Never

(20.10.4.9, 225.1.1.1), uptime 00:06:21, expires 00:02:06, flags: CT
 Incoming interface: Vlan 2007, RPF neighbor 20.30.124.4
 Outgoing interface list:
 Vlan 2006 Forward/Sparse 00:06:21/Never

(*, 225.1.1.2), uptime 00:40:15, expires 00:00:00, RP 20.40.4.4, flags:
SCJ
 Incoming interface: Vlan 2007, RPF neighbor 20.30.124.4
 Outgoing interface list:
 Vlan 2006 Forward/Sparse 00:06:21/Never

(20.10.4.9, 225.1.1.2), uptime 00:06:21, expires 00:02:06, flags: CT
 Incoming interface: Vlan 2007, RPF neighbor 20.30.124.4
 Outgoing interface list:
 Vlan 2006 Forward/Sparse 00:06:21/Never
DellEMC#

```

## show running-config pim

Display the current configuration of PIM-SM.

**Syntax** show running-config pim

**Command Modes** EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                 |
|-------------------|-----------------------------|
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON. |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON. |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON. |
| <b>9.5(0.1)</b>   | Introduced on the Z9500.    |
| <b>8.3.19.0</b>   | Introduced on the S4820T.   |
| <b>8.3.12.0</b>   | Introduced on the S4810.    |
| <b>8.3.11.1</b>   | Introduced on the Z9000.    |
| <b>8.4.1.0</b>    | Introduced on the E-Series. |

### Example

```

DellEMC# show running-config pim
!
ip pim rp-address 100.0.0.1 group-address 224.0.0.0/4
ip pim vrf VRF2 rp-address 100.0.0.1 group-address 224.0.0.0/4
ip pim bsr-candidate Loopback 1
ip pim vrf VRF2 bsr-candidate Loopback 2
ip pim rp-candidate Loopback 1
ip pim ssm-range PIM-SSM
ip pim vrf VRF2 ssm-range PIM-SSM
ipv6 pim rp-address 2001:100::1 group-address ff00::/8
ipv6 pim vrf VRF2 rp-address 2001:100::1 group-address ff00::/8

```

# PIM-Source Specific Mode (PIM-SSM)

The protocol-independent multicast source-specific mode (PIM-SSM) commands in this section are supported in the Dell Networking operating system.

## Topics:

- IPv4 PIM Commands
- IPv4 PIM-Source Specific Mode Commands
- `ip pim ssm-range`
- `show ip pim ssm-range`
- IPv6 PIM-Source Specific Mode Commands
- `ipv6 pim ssm-range`
- `show ipv6 pim ssm-range`

## IPv4 PIM Commands

The following commands apply to IPv4 PIM-SM, IPv4 PIM-SSM, and PIM-DM.

- `clear ip pim tib`
- `debug ip pim`
- `ip pim dr-priority`
- `ip pim neighbor-filter`
- `ip pim query-interval`
- `show ip pim interface`
- `show ip pim neighbor`
- `show ip pim tib`

## IPv4 PIM-Source Specific Mode Commands

The following IPv4 PIM-source specific mode (PIM-SSM) commands are supported:

- `ip pim ssm-range`
- `show ip pim ssm-range`

## `ip pim ssm-range`

Specify the SSM group range using an access list.

**Syntax** `ip pim [vrf vrf-name] ssm-range {access_list_name}`

**Parameters** `vrf vrf-name` (OPTIONAL) Enter the keyword `vrf` followed by the name of the VRF to specify the SSM group range for that VRF.

 **NOTE:** Applies to specific VRF if input is provided, else applies to Default VRF.

`access_list_name` Enter the name of the access list.

**Defaults** Default SSM range is 232/8 and ff3x/32

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                                                                            |
|------------|--------------------------------------------------------------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.                                                              |
| 9.10(0.0)  | Introduced on the S3148.                                                                               |
| 9.10(0.0)  | Introduced on the S6100-ON.                                                                            |
| 9.8(2.0)   | Introduced on the S3100 series.                                                                        |
| 9.8(1.0)   | Introduced on the Z9100-ON.                                                                            |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                                                            |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                                                            |
| 9.7(0.0)   | Introduced on the S6000-ON. Added support for VRF on S6000, S4810, S4820T, Z9000, Z9500, and S6000-ON. |
| 9.7(0.0)   | Added support for VRF.                                                                                 |
| 9.5(0.1)   | Introduced on the Z9500.                                                                               |
| 9.0.2.0    | Introduced on the S6000.                                                                               |
| 8.3.19.0   | Introduced on the S4820T.                                                                              |
| 8.3.11.1   | Introduced on the Z9000.                                                                               |
| 8.3.7.1    | Introduced on the S4810.                                                                               |
| 8.1.1.0    | Introduced on the E-Series.                                                                            |
| 7.8.1.0    | Introduced on the S-Series.                                                                            |
| 7.7.1.0    | Introduced on the C-Series.                                                                            |
| 7.5.1.0    | Introduced on the E-Series.                                                                            |

### Usage Information

Dell EMC Networking OS supports standard access lists for the SSM range. You cannot use extended ACLs for configuring the SSM range. If you configure an extended ACL and then used in the `ip pim ssm-range {access list name}` configuration, an error is reported.

However, if you configure `ip pim ssm-range {access list name}` first and then you configure the ACL as an Extended ACL, an error is not reported and the ACL is not applied to the SSM range.

Dell EMC Networking OS-recommended best-practices are to configure the standard ACL, and then apply the ACL to the SSM range. After the SSM range is applied, the changes are applied internally without requiring clearing of the tree information base (TIB).

When the ACL rules change, the ACL and protocol-independent multicast (PIM) modules apply the new rules automatically.

When you configure the SSM range, Dell EMC Networking OS supports SSM for configured group range as well as the default SSM range.

When you remove the SSM ACL, PIM SSM is supported for the default SSM range only.

## show ip pim ssm-range

Display the non-default groups added using the SSM range feature.

### Z9500

**Syntax** `show ip pim [vrf vrf-name] ssm-range`

**Parameters** `vrf vrf-name` (OPTIONAL) Enter the keyword `vrf` followed by the name of the VRF to configure this setting on that VRF.

|                        |                                                                                                                                                               |

| Version           | Description                                                                                            |
|-------------------|--------------------------------------------------------------------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON.                                                              |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                                                                               |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.                                                                            |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.                                                                        |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.                                                                            |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.                                                                            |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                                                                            |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON. Added support for VRF on S6000, S4810, S4820T, Z9000, Z9500, and S6000-ON. |
| <b>9.5(0.1)</b>   | Introduced on the Z9500.                                                                               |
| <b>9.0.2.0</b>    | Introduced on the S6000.                                                                               |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                                                                              |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                                                                               |
| <b>8.3.7.1</b>    | Introduced on the S4810.                                                                               |
| <b>8.1.1.0</b>    | Introduced on the E-Series.                                                                            |
| <b>7.8.1.0</b>    | Introduced on the S-Series.                                                                            |
| <b>7.7.1.0</b>    | Introduced on the C-Series.                                                                            |
| <b>7.5.1.0</b>    | Introduced on the E-Series.                                                                            |

#### Example

```
Group Address / MaskLen
```

## IPv6 PIM-Source Specific Mode Commands

This section describes the IPv6 PIM-SSM commands.

### ipv6 pim ssm-range

Specify the SSM group range using an access list.

|                        |                                                                                                                   |
|------------------------|-------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | <code>ipv6 pim ssm-range {access_list_name}</code>                                                                |
| <b>Parameters</b>      | <b>access_list_name</b> Enter the name of the access list. Maximum 16 characters.                                 |
| <b>Defaults</b>        | Default SSM range is 232/8 and ff3x/32                                                                            |
| <b>Command Modes</b>   | CONFIGURATION                                                                                                     |
| <b>Command History</b> | <p><b>Version 9.5(0.1)</b> Introduced on the Z9500.</p> <p><b>Version 7.5.1.0</b> Introduced on the E-Series.</p> |

## Usage Information

After the SSM range is applied, the changes are applied internally without requiring clearing of the TIB. The SSM ACL overrides the default range. To use the default range while the SSM range is active, add the default range to the SSM ACL.

When the ACL rules change, the ACL manager and PIM modules apply the new rules automatically.

When you remove the SSM ACL, the default range is restored. When you configure the SSM range, the system supports SSM for the configured group range as well as the default SSM range.

# show ipv6 pim ssm-range

Display the non-default groups added using the SSM range feature.

**Syntax** `show ipv6 pim ssm-range`

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

**Version 9.5(0.1)** Introduced on the Z9500.

**Version 7.4.1.0** Introduced on the E-Series.

## Example

```
Dell(conf)#ipv6 pim ssm-range SSM_ACL
Dell(conf)#ipv6 access-list SSM_ACL
Dell(conf-ipv6-acl)#permit ipv6 any ff0e::225:1:2:0/112
Dell(conf-ipv6-acl)#
Dell(conf-ipv6-acl)#do show ipv6 pim ssm-range
Group Address / MaskLen
ff0e::225:1:2:0 / 112
Dell(conf-ipv6-acl)#
```

# Policy-based Routing (PBR)

Policy-based routing (PBR) allows you to apply routing policies to specific interfaces. To enable PBR, create a redirect list and apply it to the interface. After the redirect list is applied to the interface, all traffic passing through the interface is subject to the rules defined in the redirect list. PBR is supported by the Dell EMC Networking OS.

You can apply PBR to physical interfaces and logical interfaces (such as a link aggregation group [LAG] or virtual local area network [VLAN]). Trace lists and redirect lists do not function correctly when you configure both in the same configuration.

**NOTE:** Apply PBR to Layer 3 interfaces only.

**NOTE:** For more information, see [Content Addressable Memory \(CAM\)](#).

## Topics:

- [description](#)
- [ip redirect-group](#)
- [ip redirect-list](#)
- [permit](#)
- [redirect](#)
- [seq](#)
- [show cam pbr](#)
- [show ip redirect-list](#)

## description

Add a description to this redirect list.

### Z9500

**Syntax** `description {description}`

To remove the description, use the `no description {description}` command.

**Parameters** **description** Enter a description to identify the IP redirect list (16 characters maximum).

**Defaults** None

**Command Modes** REDIRECT-LIST

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                                        |
|-------------------|----------------------------------------------------|
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.                        |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.                        |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                        |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.                        |
| <b>9.5(0.1)</b>   | Introduced on the Z9500.                           |
| <b>9.4(0.0)</b>   | Introduced on the S4810, S4820T, S6000, and Z9000. |
| <b>8.4.2.1</b>    | Introduced on the C-Series and S-Series.           |

| Version | Description                 |
|---------|-----------------------------|
| 8.4.2.0 | Introduced on the E-Series. |
| 7.7.1.0 | Introduced on the E-Series. |

#### Related Commands

- [ip redirect-list](#) – enable an IP Redirect List.

## ip redirect-group

Apply a redirect list (policy-based routing) on an interface. You can apply multiple redirect lists to an interface by entering this command multiple times.

**Syntax** `ip redirect-group redirect-list-name test [l2-switch]`  
 To remove a redirect list from an interface, use the `no ip redirect-group name` command.

**Parameters**

|                                  |                                                                                      |
|----------------------------------|--------------------------------------------------------------------------------------|
| <b><i>redirect-list-name</i></b> | Enter the name of a configured redirect list.                                        |
| <b><i>l2-switch</i></b>          | Enter the keyword <code>l2-switch</code> to enable PBR on Layer2 (switched) traffic. |

**Defaults** None

**Command Modes** INTERFACE (conf-if-vl-)

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version     | Description                                        |
|-------------|----------------------------------------------------|
| 9.11(2.0P1) | Introduced the <code>l2-switch</code> attribute.   |
| 9.10(0.1)   | Introduced on the S6010-ON and S4048T-ON.          |
| 9.10(0.0)   | Introduced on the S3148.                           |
| 9.10(0.0)   | Introduced on the S6100-ON.                        |
| 9.8(2.0)    | Introduced on the S3100 series.                    |
| 9.8(1.0)    | Introduced on the Z9100-ON.                        |
| 9.8(0.0P5)  | Introduced on the S4048-ON.                        |
| 9.8(0.0P2)  | Introduced on the S3048-ON.                        |
| 9.7(0.0)    | Introduced on the S6000-ON.                        |
| 9.4(0.0)    | Introduced on the S4810, S4820T, S6000, and Z9000. |
| 8.4.2.1     | Introduced on the C-Series and S-Series.           |
| 8.4.2.0     | Introduced on the E-Series.                        |
| 7.7.1.0     | Introduced on the E-Series.                        |

#### Usage Information

You can apply any number of redirect-groups to an interface. A redirect list can contain any number of configured rules. These rules includes the next-hop IP address where the incoming traffic is to be redirected.

If the next hop address is reachable, traffic is forwarded to the specified next hop. Otherwise, the normal routing table is used to forward traffic. When a redirect-group is applied to an interface and the next-hop is reachable, the rules are added into the PBR CAM region. When incoming traffic hits an entry in the CAM, the traffic is redirected to the corresponding next-hop IP address specified in the rule.

**NOTE:** Apply the redirect list to physical, VLAN, or LAG interfaces only.

The Layer2 PBR option matches the layer2 traffic flow. If you un-configure this option, then the Layer2 traffic is not matched. You can apply the `l2-switch` option to redirect Layer2 traffic only on a VLAN interface. This VLAN interface must be configured with an IP address for ARP resolution.

**NOTE:** The `l2-switch` option that redirects Layer2 traffic is applicable only on VLAN interfaces.

The Layer3 routing is not affected on the same interface on which Layer2 PBR is applied. The port from which Layer2 packets egress and the destination MAC are re-written from static ARP. Layer 2 packets with the re-written destination MAC are forwarded through the outgoing port on the same incoming VLAN interface. The `l2-switch` option ensures that the outgoing VLAN and MAC-SA are changed and TTL is not decremented.

#### Related Commands

- `show cam pbr` – display the content of the PBR CAM.
- `show ip redirect-list` – display the redirect-list configuration.

## ip redirect-list

Configure a redirect list and enter REDIRECT-LIST mode.

### Z9500

#### Syntax

```
ip redirect-list redirect-list-name
```

To remove a redirect list, use the `no ip redirect-list` command.

#### Parameters

***redirect-list-name*** Enter the name of a redirect list.

#### Defaults

None

#### Command Modes

CONFIGURATION

#### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                        |

| 9.4(0.0)   | Introduced on the S4810, S4820T, S6000, and Z9000. |
| 8.4.2.1    | Introduced on the C-Series and S-Series.           |
| 8.4.2.0    | Introduced on the E-Series.                        |
| 6.5.3.0    | Introduced on the E-Series.                        |

# permit

Configure a permit rule. A permit rule excludes the matching packets from PBR classification and routes them using conventional routing.

## Z9500

**Syntax** `permit {ip-protocol-number | protocol-type} {source mask | any | host ip-address} {destination mask | any | host ip-address} [bit] [operators]`

To remove the rule, use one of the following:

- If you know the filter sequence number, use the `no seq sequence-number syntax` command.
- You can also use the `no permit {ip-protocol-number | protocol-type} {source mask | any | host ip-address} {destination mask | any | host ip-address} [bit] [operators]` command.

|                   |                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-------------------|----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Parameters</b> | <b><i>ip-protocol-number</i></b> | Enter a number from 0 to 255 for the protocol identified in the IP protocol header.                                                                                                                                                                                                                                                                                                                                                                     |
|                   | <b><i>protocol-type</i></b>      | Enter one of the following keywords as the protocol type: <ul style="list-style-type: none"><li>• <code>icmp</code> for internet control message protocol</li><li>• <code>ip</code> for any internet protocol</li><li>• <code>tcp</code> for transmission control protocol</li><li>• <code>udp</code> for user datagram protocol</li></ul>                                                                                                              |
|                   | <b><i>source</i></b>             | Enter the IP address of the network or host from which the packets were sent.                                                                                                                                                                                                                                                                                                                                                                           |
|                   | <b><i>mask</i></b>               | Enter a network mask in /prefix format (/x).                                                                                                                                                                                                                                                                                                                                                                                                            |
|                   | <b><i>any</i></b>                | Enter the keyword <code>any</code> to specify that all traffic is subject to the filter.                                                                                                                                                                                                                                                                                                                                                                |
|                   | <b><i>host ip-address</i></b>    | Enter the keyword <code>host</code> then the IP address to specify a host IP address.                                                                                                                                                                                                                                                                                                                                                                   |
|                   | <b><i>destination</i></b>        | Enter the IP address of the network or host to which the packets are sent.                                                                                                                                                                                                                                                                                                                                                                              |
|                   | <b><i>bit</i></b>                | (OPTIONAL) For the TCP protocol type only, enter one or a combination of the following TCP flags: <ul style="list-style-type: none"><li>• <code>ack</code> = acknowledgement</li><li>• <code>fin</code> = finish (no more data from the user)</li><li>• <code>psh</code> = push function</li><li>• <code>rst</code> = reset the connection</li><li>• <code>syn</code> = synchronize sequence number</li><li>• <code>urg</code> = urgent field</li></ul> |
|                   | <b><i>operator</i></b>           | (OPTIONAL) For TCP and UDP parameters only. Enter one of the following logical operand: <ul style="list-style-type: none"><li>• <code>eq</code> = equal to</li><li>• <code>neq</code> = not equal to</li><li>• <code>gt</code> = greater than</li><li>• <code>lt</code> = less than</li><li>• <code>range</code> = inclusive range of ports (you must specify two ports for the <code>portcommand</code> parameter.)</li></ul>                          |

**Defaults** None

**Command Modes** REDIRECT-LIST

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                        |
|------------|----------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.          |
| 9.10(0.0)  | Introduced on the S3148.                           |
| 9.10(0.0)  | Introduced on the S6100-ON.                        |
| 9.8(2.0)   | Introduced on the S3100 series.                    |
| 9.8(1.0)   | Introduced on the Z9100-ON.                        |
| 9.8(0.0P5) | Introduced on the S4048-ON.                        |
| 9.8(0.0P2) | Introduced on the S3048-ON.                        |
| 9.7(0.0)   | Introduced on the S6000-ON.                        |
| 9.5(0.1)   | Introduced on the Z9500.                           |
| 9.4(0.0)   | Introduced on the S4810, S4820T, S6000, and Z9000. |
| 8.4.2.1    | Introduced on the C-Series and S-Series.           |
| 8.4.2.0    | Introduced on the E-Series.                        |
| 7.5.1.0    | Introduced on the E-Series.                        |

## redirect

Configure a rule for the redirect list.

### Syntax

```
redirect {ip-address | slot/port} | tunnel tunnel-id [track <obj-id>] {ip-protocol-number | protocol-type [bit]} {source mask | any | host ip-address} {destination mask | any | host ip-address} [operator]
```

To remove this filter, use one of the following:

- Use the `no seq sequence-number` command if you know the filter's sequence number.
- You can also use the `no redirect {ip-address | slot/port} | tunnel tunnel-id [track <obj-id>] {ip-protocol-number [bit] | protocol-type} {source mask | any | host ip-address} {destination mask | any | host ip-address} [operator]` command.

### Parameters

|                             |                                                                                                                                                                                                                                                                                                                                                 |
|-----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>redirect</b>             | Enter the keyword <code>redirect</code> to assign the sequence to the redirect list.                                                                                                                                                                                                                                                            |
| <b>ip-address</b>           | Enter the IP address of the forwarding router.                                                                                                                                                                                                                                                                                                  |
| <b>slot/port</b>            | Enter the keyword <code>slot / port</code> followed by the slot/port information.                                                                                                                                                                                                                                                               |
| <b>tunnel</b>               | Enter the keyword <code>tunnel</code> to configure the tunnel setting.                                                                                                                                                                                                                                                                          |
| <b>tunnel-id</b>            | Enter the keyword <code>tunnel-id</code> to redirect the traffic.                                                                                                                                                                                                                                                                               |
| <b>track</b>                | Enter the keyword <code>track</code> to enable the tracking.                                                                                                                                                                                                                                                                                    |
| <b>track &lt;obj-id&gt;</b> | Enter the keyword <code>track &lt;obj-id&gt;</code> to track object-id.                                                                                                                                                                                                                                                                         |
| <b>ip-protocol-number</b>   | Enter a number from 0 to 255 for the protocol identified in the IP protocol header.                                                                                                                                                                                                                                                             |
| <b>protocol-type</b>        | Enter one of the following keywords as the protocol type: <ul style="list-style-type: none"> <li>• <code>icmp</code> for internet control message protocol</li> <li>• <code>ip</code> for any internet protocol</li> <li>• <code>tcp</code> for transmission control protocol</li> <li>• <code>udp</code> for user datagram protocol</li> </ul> |
| <b>bit</b>                  | (OPTIONAL) For the TCP protocol type only, enter one or a combination of the following TCP flags: <ul style="list-style-type: none"> <li>• <code>ack</code> = acknowledgement</li> </ul>                                                                                                                                                        |

- `fin` = finish (no more data from the user)
- `psh` = push function
- `rst` = reset the connection
- `syn` = synchronize sequence number
- `urg` = urgent field

|                        |                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>source</b>          | Enter the IP address of the network or host from which the packets were sent.                                                                                                                                                                                                                                                                                                                                                         |
| <b>mask</b>            | Enter a network mask in /prefix format (/x).                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>any</b>             | Enter the keyword <code>any</code> to specify that all traffic is subject to the filter.                                                                                                                                                                                                                                                                                                                                              |
| <b>host ip-address</b> | Enter the keyword <code>host</code> then the IP address to specify a host IP address.                                                                                                                                                                                                                                                                                                                                                 |
| <b>destination</b>     | Enter the IP address of the network or host to which the packets are sent.                                                                                                                                                                                                                                                                                                                                                            |
| <b>operator</b>        | (OPTIONAL) For TCP and UDP parameters only. Enter one of the following logical operand: <ul style="list-style-type: none"> <li>• <code>eq</code> = equal to</li> <li>• <code>neq</code> = not equal to</li> <li>• <code>gt</code> = greater than</li> <li>• <code>lt</code> = less than</li> <li>• <code>range</code> = inclusive range of ports (you must specify two ports for the <code>port</code> command parameter.)</li> </ul> |

**Defaults** None

**Command Modes** REDIRECT-LIST

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| <b>Version</b>    | <b>Description</b>                                                     |
|-------------------|------------------------------------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON.                              |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                                               |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.                                            |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.                                        |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.                                            |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.                                            |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                                            |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.                                            |
| <b>9.7(0.0)</b>   | Added support for the track-id on the S4810, S4820T, S6000, and Z9000. |
| <b>9.5(0.1)</b>   | Introduced on the Z9500.                                               |
| <b>9.4(0.0)</b>   | Introduced on the S4810, S4820T, S6000, and Z9000.                     |
| <b>8.4.2.1</b>    | Introduced on the C-Series and S-Series.                               |
| <b>8.4.2.0</b>    | Introduced on the E-Series.                                            |
| <b>7.7.1.0</b>    | Introduced on the E-Series.                                            |

# seq

Configure a filter with an assigned sequence number for the redirect list.

## Z9500

### Syntax

```
seq sequence-number {permit | redirect {ip-address | tunnel tunnel-id}
[track <obj-id>]} {ip-protocol-number | protocol-type} {source mask
| any | host ip-address} {destination mask | any | host ip-address}
[bit] [operator]{source-port source-port| source-port-range start-port -
end-port} {destination-port destination-port| destination-port-range start-
port - end-port}
```

To delete a filter, use the `no seq sequence-number` command.

### Parameters

|                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>sequence-number</b>      | Enter a number from 1 to 65535.                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>permit</b>               | Enter the keyword <code>permit</code> assign the sequence to the permit list.                                                                                                                                                                                                                                                                                                                                                                           |
| <b>redirect</b>             | Enter the keyword <code>redirect</code> to assign the sequence to the redirect list.                                                                                                                                                                                                                                                                                                                                                                    |
| <b>ip-address</b>           | Enter the keyword <code>IP address</code> of the forwarding router.                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>tunnel</b>               | Enter the keyword <code>tunnel</code> to configure the tunnel setting.                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>tunnel-id</b>            | Enter the keyword <code>tunnel-id</code> to redirect the traffic.                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>track</b>                | Enter the keyword <code>track</code> to enable the tracking.                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>track &lt;obj-id&gt;</b> | Enter the keyword <code>track &lt;obj-id&gt;</code> to track object-id.                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>ip-protocol-number</b>   | Enter the keyword <code>ip-protocol-number</code> then the number from 0 to 255 for the protocol identified in the IP protocol header.                                                                                                                                                                                                                                                                                                                  |
| <b>protocol-type</b>        | Enter one of the following keywords as the protocol type: <ul style="list-style-type: none"><li>• <code>icmp</code> for internet control message protocol</li><li>• <code>ip</code> for any internet protocol</li><li>• <code>tcp</code> for transmission control protocol</li><li>• <code>udp</code> for user datagram protocol</li></ul>                                                                                                              |
| <b>source</b>               | Enter the IP address of the network or host from which the packets were sent.                                                                                                                                                                                                                                                                                                                                                                           |
| <b>mask</b>                 | Enter a network mask in <code>/prefix</code> format ( <code>/x</code> ).                                                                                                                                                                                                                                                                                                                                                                                |
| <b>any</b>                  | Enter the keyword <code>any</code> to specify that all traffic is subject to the filter.                                                                                                                                                                                                                                                                                                                                                                |
| <b>host ip-address</b>      | Enter the keyword <code>host</code> then the IP address to specify a host IP address.                                                                                                                                                                                                                                                                                                                                                                   |
| <b>destination</b>          | Enter the IP address of the network or host to which the packets are sent.                                                                                                                                                                                                                                                                                                                                                                              |
| <b>bit</b>                  | (OPTIONAL) For the TCP protocol type only, enter one or a combination of the following TCP flags: <ul style="list-style-type: none"><li>• <code>ack</code> = acknowledgement</li><li>• <code>fin</code> = finish (no more data from the user)</li><li>• <code>psh</code> = push function</li><li>• <code>rst</code> = reset the connection</li><li>• <code>syn</code> = synchronize sequence number</li><li>• <code>urg</code> = urgent field</li></ul> |
| <b>operator</b>             | (OPTIONAL) For the TCP and UDP parameters only. Enter one of the following logical operand: <ul style="list-style-type: none"><li>• <code>eq</code> = equal to</li><li>• <code>neq</code> = not equal to</li><li>• <code>gt</code> = greater than</li></ul>                                                                                                                                                                                             |

- `lt=` less than
- `range` = inclusive range of ports (you must specify two ports for the port command parameter.)

|                               |                                                                                                                                                     |
|-------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>source port</b>            | Enter the keywords <code>source-port</code> then the port number to be matched in the ACL rule in the ICAP rule                                     |
| <b>destination-port</b>       | Enter the keywords <code>destination-port</code> then the port number to be matched in the ACL rule in the ICAP rule.                               |
| <b>source-port-range</b>      | Enter the keywords <code>source-port-range</code> then the range of the start port to end port to be matched in the ACL rule in the ICAP rule.      |
| <b>destination-port-range</b> | Enter the keywords <code>destination-port-range</code> then the range of the start port to end port to be matched in the ACL rule in the ICAP rule. |

**Defaults** none

**Command Modes** REDIRECT-LIST

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                                                                      |
|-------------------|----------------------------------------------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON.                                        |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                                                         |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.                                                      |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.                                                  |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.                                                      |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.                                                      |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                                                      |
| <b>9.7(0.0)</b>   | Added support for the track-id on the S4810, S4820T, S6000, S6000-ON, and Z9000. |
| <b>9.5(0.1)</b>   | Introduced on the Z9500.                                                         |
| <b>9.4(0.0)</b>   | Introduced on the S4810, S4820T, S6000, and Z9000.                               |

## show cam pbr

Display the PBR CAM content.

**Syntax** `show cam pbr {interface interface | stack-unit slot-number port-set number [pipeline number]} [summary]`

|                   |                                   |                                                                                      |
|-------------------|-----------------------------------|--------------------------------------------------------------------------------------|
| <b>Parameters</b> | <b>interface <i>interface</i></b> | Enter the keyword <code>interface</code> then the name of the interface.             |
|                   | <b>stack-unit <i>number</i></b>   | Enter the keyword <code>stack-unit</code> then the slot number.                      |
|                   | <b>port-set <i>number</i></b>     | Enter the keywords <code>port-set</code> then the port-pipe number.                  |
|                   | <b>summary</b>                    | Enter the keyword <code>summary</code> to view only the total number of CAM entries. |

**Defaults** none

**Command Modes** EXEC

## Command History

| Version    | Description                                        |
|------------|----------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.          |
| 9.10(0.0)  | Introduced on the S3148.                           |
| 9.10(0.0)  | Introduced on the S6100-ON.                        |
| 9.8(2.0)   | Introduced on the S3100 series.                    |

| 9.8(0.0P2) | Introduced on the S3048-ON.                        |
| 9.7(0.0)   | Introduced on the S6000-ON.                        |
| 9.4(0.0)   | Introduced on the S4810, S4820T, S6000, and Z9000. |

## Usage Information

The `show cam pbr` command displays the PBR CAM content.

## Example

```
DellEMC# show cam pbr stack-unit 1 port-set 0
TCP Flag: Bit 5 - URG, Bit 4 - ACK, Bit 3 - PSH, Bit 2 - RST,
Bit 1 - SYN, Bit 0 - FIN

Cam Port VlanID Proto Tep Src Dst SrcIp DstIp Next-hop Egress
Index Flag Port Port MAC Port

00000 5 N/A IP 0x0 0 0 22.22.2.22/32 33.33.3.0/24 00:01:e8:8a:fd:76 0/0

```

## Related Commands

- [ip redirect-group](#) – applies a redirect group to an interface.
- [show ip redirect-list](#) – displays the redirect-list configuration.

# show ip redirect-list

View the redirect list configuration and the interfaces it is applied to.

## Syntax

```
show ip redirect-list redirect-list-name
```

## Parameters

***redirect-list-name*** Enter the name of a configured Redirect list.

## Command Modes

- EXEC
- EXEC Privilege

# Port Monitoring

The port monitoring feature allows you to monitor network traffic by forwarding a copy of each incoming or outgoing packet from one port to another port.

## Important Points to Remember

- Port monitoring is supported on physical ports and logical interfaces, such as port channels and virtual local area networks (VLANs).
- The monitoring (destination, “MG”) and monitored (source, “MD”) ports must be on the same switch.
- In general, a monitoring port should have `no ip address` and `no shutdown` as the only configuration; Dell EMC Networking OS permits a limited set of commands for monitoring ports; display them using the `?` command. A monitoring port also may not be a member of a VLAN.
- A total of 4 MG may be configured in a single port-pipe.
- MG and MD ports can be reside anywhere across a port-pipe.
- The Dell EMC Networking OS supports multiple source ports to be monitored by a single destination port in one monitor session.
- One monitor session can have only one MG port.

 **NOTE:** The monitoring port should not be a part of any other configuration.

### Topics:

- [monitor session](#)
- [rate-limit](#)
- [show config](#)
- [show monitor session](#)
- [show running-config monitor session](#)
- [source \(port monitoring\)](#)

## description

Enter a description of this monitoring session.

**Syntax** `description {description}`

To remove the description, use the `no description {description}` command.

**Parameters** **description** Enter a description regarding this session (80 characters maximum).

**Defaults** none

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| 8.1.1.0     | Introduced on the E-Series.     |
| 7.7.1.0     | Introduced on the S-Series.     |
| 7.5.1.0     | Introduced on the C-Series.     |
| pre-7.7.1.0 | Introduced on the E-Series.     |

#### Related Commands

- [monitor session](#) — enables a monitoring session.

## erpm

Configure the source and destination IP address for ERPM traffic.

**Syntax** `erpm source-ip ip-address dest-ip ip-address [gre-protocol value]`  
 To remove the configuration, use the `no erpm source-ip IP-address dest-ip IP-address [gre-protocol value]` command.

**Parameters**

|                                         |                                                                                                                                                   |
|-----------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>source-ip <i>ip-address</i></b>      | Enter the keywords <code>source-ip</code> then the source IP address in dotted decimal format.                                                    |
| <b>destination-ip <i>ip-address</i></b> | Enter the keywords <code>dest-ip</code> then the destination IP address in dotted decimal format.                                                 |
| <b>gre-protocol <i>value</i></b>        | (OPTIONAL) Enter the keywords <code>gre-protocol</code> then the protocol type value for ERPM type monitor session. The range is from 1 to 65535. |

**Command Modes** MONITOR SESSION (`conf-mon- sess-session-ID`)

**Example**

```
DellEMC(conf-mon-sess-10)#erpm source-ip 10.10.10.1 dest-ip 5.1.1.2 gre-protocol 1111
```

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

The following is a list of the Dell EMC Networking OS version history for this command.

| Version   | Description                      |
|-----------|----------------------------------|
| 9.11(0.0) | Introduced GRE protocol support. |

# monitor multicast-queue

Configure monitor QoS multicast queue ID.

**Syntax** `monitor multicast-queue queue-id`  
To remove the configuration, use the `no monitor multicast-queue` command.

**Parameters** `queue-id` Enter the QoS multicast queue ID. The range is from 0 to 9.

**Defaults** `queue-id: 0`  
Enable status: Disabled

**Command Modes** CONFIGURATION

**Example**  

```
DellEMC(conf)#monitor multicast-queue 7
```

**Command History**  
This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell EMC Networking OS Command Line Reference Guide*.

The following is a list of the Dell EMC Networking OS version history for this command.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.8(0.0)   | Introduced on the S6000, Z9500, S6000-ON. |

**Related Commands** [show running-config monitor session](#) — displays information about monitor configurations.

# monitor session

Create a session for monitoring traffic with port monitoring.

**Syntax** `monitor session session-ID [type { rpm | erpm [set ip dscp dscp_value | set ip ttl ttl_value]] [drop]`

To delete a session, use the `no monitor session session-ID` command.

To delete all monitor sessions, use the `no monitor session all` command.

**Parameters** `session-ID` Enter a session identification number. The range is from 0 to 65535.

`type` Specifies one of the following type:

- rpm
- erpm

`rpm` Creates a remote port monitoring (rpm) session.

`erpm` Creates an encapsulated remote port monitoring (erpm) session.

|                    |                                                                                                                                                                                                                    |
|--------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>set ip dscp</b> | Configures the Differentiated Services Code Point (DSCP) value of the packets in the Encapsulated Remote Switched Port Analyzer (ERSPAN) traffic. To revert to the default value, use the no form of this command. |
| <b>dscp_value</b>  | DSCP value of the packets in the ERSPAN traffic. The range is from 0 to 63. The default value is 0.                                                                                                                |
| <b>set ip ttl</b>  | Configures the IP time-to-live (TTL) value of the Encapsulated Remote Switched Port Analyzer (ERSPAN) traffic. To revert to the default configuration, use the no form of this command.                            |
| <b>ttl_value</b>   | IP TTL value of the ERSPAN traffic. The range is from 1 to 255. The default value is 255.                                                                                                                          |
| <b>drop</b>        | Monitors only the dropped packets in the Ingress.                                                                                                                                                                  |

**Defaults** none

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                                                                                                 |
|-------------------|-------------------------------------------------------------------------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON.                                                                   |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                                                                                    |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.                                                                                 |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.                                                                             |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.                                                                                 |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.                                                                                 |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                                                                                 |
| <b>9.8(0.0)</b>   | Added the drop parameter.                                                                                   |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON. Introduced the <code>set ip dscp</code> and <code>set ip ttl</code> parameters. |
| <b>9.5(0.1)</b>   | Introduced on the Z9500.                                                                                    |
| <b>9.4(0.0)</b>   | Introduced on the S4810, S4820T, S6000, and Z9000.                                                          |
| <b>9.0.2.0</b>    | Introduced on the S6000.                                                                                    |
| <b>9.0.2.0</b>    | Introduced on the MXL.                                                                                      |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                                                                                    |
| <b>8.3.7.0</b>    | Introduced on the S4810.                                                                                    |

**Usage Information** The `monitor` command is saved in the running configuration at Monitor Session mode level and can be restored after a chassis reload.

**Example**

```
DelleMC# show monitor session
 SessID Source Destination Dir Mode Source IP Dest IP
 DSCP TTL

 0 Te 1/12 remote-ip rx Flow 1.1.1.1 7.1.1.2 0
 255
 0 Po 1 remote-ip tx Flow 1.1.1.1 7.1.1.2 0
 255
 1 Vl 11 remote-ip rx Flow 5.1.1.1 3.1.1.2 0
 255
```

- Related Command**
- [show monitor session](#) — displays the monitor session.
  - [show running-config monitor session](#) — displays the running configuration of a monitor session.

# rate-limit

Configure the rate-limit to limit the mirrored packets.

|                        |                                                                                                                                                               |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | <code>rate-limit limit</code><br>To remove the limit, use the <code>no rate-limit limit</code> command.                                                       |
| <b>Parameters</b>      | <b>limit</b> Enter the rate-limit value. The range is from 0 to 40000 Megabits per second.                                                                    |
| <b>Defaults</b>        | 60                                                                                                                                                            |

### Example

```
DellEMC(conf-mon-sess-1)# show config
!
monitor session 1
source TenGigabitEthernet 1/1 destination Port-channel 1 direction rx
```

## show monitor session

Display information about monitoring sessions.

### Syntax

```
show monitor session {session-ID} [access-list]
```

To display monitoring information for all sessions, use the `show monitor session` command.

### Parameters

***session-ID*** (OPTIONAL) Enter a session identification number. The range is from 0 to 65535.

**[*access-list*]** (OPTIONAL) Enter the `access-list` keyword to display the ACLs applied to monitor sessions.

### Defaults

none

### Command Modes

- EXEC
- as
- EXEC Privilege

### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                                                                                                                   |
|------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| 9.12(0.0)  | Introduced the <code>access-list</code> optional keyword to display the ACLs applied to monitor sessions on the S6000, S6100-ON and Z9100-ON. |
| 9.11(0.0)  | Introduced the support for GRE Protocol and FC Monitor in the command output.                                                                 |
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.                                                                                                     |
| 9.10(0.0)  | Introduced on the S3148.                                                                                                                      |
| 9.10(0.0)  | Introduced on the S6100-ON.                                                                                                                   |
| 9.8(2.0)   | Introduced on the S3100 series.                                                                                                               |
| 9.8(1.0)   | Introduced on the Z9100-ON.                                                                                                                   |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                                                                                                   |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                                                                                                   |
| 9.7(0.0)   | Introduced on the S6000-ON.                                                                                                                   |
| 9.5(0.1)   | Introduced on the Z9500.                                                                                                                      |

| Version  | Description                       |
|----------|-----------------------------------|
| 9.4.0.0  | Added support for the RPM / ERPM. |
| 9.0.2.0  | Introduced on the S6000.          |
| 8.3.19.0 | Introduced on the S4820T.         |
| 8.3.7.0  | Introduced on the S4810.          |
| 8.3.11.1 | Introduced on the Z9000.          |
| 8.1.1.0  | Introduced on the E-Series.       |
| 7.7.1.0  | Introduced on the S-Series.       |
| 7.5.1.0  | Introduced on the C-Series.       |
| 7.4.1.0  | Introduced on the E-Series.       |

### Example

```
DelleMC# show monitor session 1
SessID Source Destination Dir Mode Source IP
Dest IP DSCP TTL Drop Rate Gre-Protocol FcMonitor
----- -
1 Te 1/2 remote-ip rx Port 0.0.0.0
0.0.0.0 0 0 No N/A N/A yes
DelleMC#

DelleMC# show monitor session
SessID Source Destination Dir Mode Source IP
Dest IP DSCP TTL Drop Rate Gre-Protocol FcMonitor
----- -
1 Te 1/2 remote-ip rx Port 0.0.0.0
0.0.0.0 0 0 No N/A N/A yes
DelleMC#
```

The following is an example output of the `show monitor session access-list` command.

```
DelleMC# show monitor session 13 access-list
Monitor session - 13
Interface Mirror-access-list Direction
----- -
Te 1/1 mtacl in
Te 1/1 mtacl out
Te 1/2 mtacl2 in
```

- Related Commands**
- [monitor session](#) — creates a monitoring session.
  - [rate-limit](#) — configures the rate-limit.

## show running-config monitor session

Display the running configuration of all monitor sessions or a specific session.

**Syntax** `show running-config monitor session {session-ID}`

To display the running configuration for all monitor sessions, use the `show running-config monitor session` command.

**Parameters** *session-ID* (OPTIONAL) Enter a session identification number. The range from 0 to 65535.

**Defaults** none

- Command Modes**
- EXEC
  - EXEC Privilege

## Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.5(0.1)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the S4810.                  |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.1.1.0    | Introduced on the E-Series.               |
| 7.7.1.0    | Introduced on the S-Series.               |
| 7.5.1.0    | Introduced on the C-Series.               |
| 7.4.1.0    | Introduced on the E-Series.               |

## Usage Information

The `monitoring` command is saved in the running configuration at the Monitor Session mode level and can be restored after a chassis reload.

## Example

```
DellEMC# show running-config monitor session
!
monitor session 1
source TenGigabitEthernet 1/1 destination TenGigabitEthernet 1/2
direction rx
!
monitor multicast-queue 7
DellEMC#
```

## Related Commands

- [monitor session](#) — creates a monitoring session.
- [show monitor session](#) — displays a monitoring session.

# source (port monitoring)

Configure a port monitor source.

## Syntax

```
source {interface | range | any} destination interface direction {rx | tx | both}
```

To disable a monitor source, use the `no source interface destination interface direction {rx | tx | both}` command.

## Parameters

- source *interface*** Enter one of the following keywords and slot/port information:
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

- For a VLAN interface enter the keyword `VLAN` followed by a number from 1 to 4094.
- For a port channel interface, enter the keywords `port-channel` then a number.

**range** Enter the keyword `range` to specify the list of interfaces.

**any** Enter the keyword `any` to specify all interfaces.

 **NOTE:** This option is applicable only with drop monitor session.

**destination** Enter the keyword `destination` to specify the destination interface.

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a port channel interface, enter the keywords `port-channel` then a number.

**interface** Enter one of the following keywords and slot/port information:

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.
- For a port channel interface, enter the keywords `port-channel` then a number.

**direction {rx | tx | both}** Enter the keyword `direction` then one of the packet directional indicators.

- `rx`: to monitor receiving packets only.
- `tx`: to monitor transmitting packets only.
- `both`: to monitor both transmitting and receiving packets.

**Defaults** none

**Command Modes** MONITOR SESSION (`conf-mon- sess-session-ID`)

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| <b>7.4.1.0</b> | Introduced on the E-Series.                              |

**Example**

```
DellEMC# monitor session 0
source Port-channel 10 destination TenGigabitEthernet 1/3 direction tx
DellEMC#
```

# Private VLAN (PVLAN)

The private VLAN (PVLAN) feature of the Dell EMC Networking OS is supported on the platforms.

Private VLANs extend the Dell EMC Networking OS security suite by providing Layer 2 isolation between ports within the same private VLAN. A private VLAN partitions a traditional VLAN into subdomains identified by a primary and secondary VLAN pair. The Dell EMC Networking OS private VLAN implementation is based on RFC 3069.

For more information, see the following commands. The command output is augmented in Dell EMC Networking OS version 7.8.1.0 at later to provide PVLAN data:

- [show arp](#)
- [show vlan](#)

## Private VLAN Concepts

### Primary VLAN:

The primary VLAN is the base VLAN and can have multiple secondary VLANs. There are two types of secondary VLAN — community VLAN and isolated VLAN:

- A primary VLAN can have any number of community VLANs and isolated VLANs.
- Private VLANs block all traffic to isolated ports except traffic from promiscuous ports. Traffic received from an isolated port is forwarded only to promiscuous ports or trunk ports.

### Community VLAN:

A community VLAN is a secondary VLAN of the primary VLAN:

- Ports in a community VLAN can talk to each other. Also, all ports in a community VLAN can talk to all promiscuous ports in the primary VLAN and vice versa.
- Devices on a community VLAN can communicate with each other using member ports, while devices in an isolated VLAN cannot.

### Isolated VLAN:

An isolated VLAN is a secondary VLAN of the primary VLAN:

- Ports in an isolated VLAN cannot talk to each other. Servers would be mostly connected to isolated VLAN ports.
- Isolated ports can talk to promiscuous ports in the primary VLAN, and vice versa.

### Port Types:

- *Community port* — a community port is a port that belongs to a community VLAN and is allowed to communicate with other ports in the same community VLAN and with promiscuous ports.
- *Isolated port* — an isolated port is a port that, in Layer 2, can only communicate with promiscuous ports that are in the same PVLAN.
- *Promiscuous port* — a promiscuous port is a port that is allowed to communicate with any other port type.
- *Trunk port* — a trunk port carries VLAN traffic across switches:
  - A trunk port in a PVLAN is always tagged.
  - A trunk port in Tagged mode carries primary or secondary VLAN traffic. The tag on the packet helps identify the VLAN to which the packet belongs.
  - A trunk port can also belong to a regular VLAN (non-private VLAN).

### Topics:

- [ip local-proxy-arp](#)
- [private-vlan mode](#)
- [private-vlan mapping secondary-vlan](#)
- [show interfaces private-vlan](#)
- [show vlan private-vlan](#)
- [switchport mode private-vlan](#)

# ip local-proxy-arp

Enable/disable Layer 3 communication between secondary VLANs in a private VLAN.

## Z9500

### Syntax

```
[no] ip local-proxy-arp
```

To disable Layer 3 communication between secondary VLANs in a private VLAN, use the `no ip local-proxy-arp` command in INTERFACE VLAN mode for the primary VLAN.

To disable Layer 3 communication in a particular secondary VLAN, use the `no ip local-proxy-arp` command in INTERFACE VLAN mode for the selected secondary VLAN.

**NOTE:** Even after you disable `ip-local-proxy-arp` (use `no ip-local-proxy-arp`) in a secondary VLAN, Layer 3 communication may happen between some secondary VLAN hosts, until the address resolution protocol (ARP) timeout happens on those secondary VLAN hosts.

### Defaults

Layer 3 communication is disabled between secondary VLANs in a private VLAN.

### Command Modes

INTERFACE VLAN

### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                               |
|-------------------|-------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.               |

| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.               |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.               |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                  |
| <b>9.0.2.0</b>    | Introduced on the S6000.                  |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                 |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                  |
| <b>8.3.7.0</b>    | Introduced on the S4810.                  |
| <b>7.8.1.0</b>    | Introduced on the C-Series and S-Series.  |

### Related Commands

- [private-vlan mode](#) — sets the mode of the selected VLAN to community, isolated, or primary.
- [private-vlan mapping secondary-vlan](#) — maps secondary VLANs to the selected primary VLAN.
- [show arp](#) — displays the ARP table.
- [switchport mode private-vlan](#) — sets PVLAN mode of the selected port.

# private-vlan mode

Set PVLAN mode of the selected VLAN to community, isolated, or primary.

## Z9500

**Syntax** [no] private-vlan mode {community | isolated | primary}  
To remove the PVLAN configuration, use the no private-vlan mode {community | isolated | primary} command syntax.

**Parameters**

|                  |                                                                                    |
|------------------|------------------------------------------------------------------------------------|
| <b>community</b> | Enter the keyword <code>community</code> to set the VLAN as a community VLAN.      |
| <b>isolated</b>  | Enter the keyword <code>isolated</code> to configure the VLAN as an isolated VLAN. |
| <b>primary</b>   | Enter the keyword <code>primary</code> to configure the VLAN as a primary VLAN.    |

**Defaults** none

**Command Modes** INTERFACE VLAN

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |
| 7.8.1.0    | Introduced on the C-Series and S-Series.  |

**Usage Information** The VLAN:

- can be in only one mode, either `community`, `isolated`, or `primary`.
- mode to `community` or `isolated` even before associating it to a primary VLAN. This secondary VLAN continues to work normally as a normal VLAN even though it is not associated to a primary VLAN. (A syslog message indicates this.)
- must not have a port in it when VLAN mode is being set.

Only ports (and port channels) configured as promiscuous, host, or PVLAN trunk ports (as previously described) can be added to the PVLAN. No other regular ports can be added to the PVLAN.

After using this command to configure a VLAN as a primary VLAN, use the `private-vlan mapping secondary-vlan` command to map secondary VLANs to this VLAN.

**Related Commands**

- [private-vlan mapping secondary-vlan](#) — maps secondary VLANs to the selected primary VLAN.
- [switchport mode private-vlan](#) — sets PVLAN mode of the selected port.

# private-vlan mapping secondary-vlan

Map secondary VLANs to the selected primary VLAN.

|                        |                                                                                                                                                                                                                                   |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | <code>[no] private-vlan mapping secondary-vlan <i>vlan-list</i></code><br>To remove specific secondary VLANs from the configuration, use the <code>no private-vlan mapping secondary-vlan <i>vlan-list</i></code> command syntax. |
| <b>Parameters</b>      | <b><i>vlan-list</i></b> Enter the list of secondary VLANs to associate with the selected primary VLAN. The list can be in comma-delimited or hyphenated-range format, following the convention for the range input.               |
| <b>Defaults</b>        | none                                                                                                                                                                                                                              |
| <b>Command Modes</b>   | INTERFACE VLAN                                                                                                                                                                                                                    |
| <b>Command History</b> | This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> .                                                                     |

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |
| 7.8.1.0    | Introduced on the C-Series and S-Series.  |

|                          |                                                                                                                                                                                                                                                                                                    |
|--------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Usage Information</b> | The list of secondary VLANs can be: <ul style="list-style-type: none"><li>Specified in comma-delimited or hyphenated-range format.</li><li>Specified with this command even before they have been created.</li><li>Amended by specifying the new secondary VLAN to be added to the list.</li></ul> |
| <b>Related Commands</b>  | <ul style="list-style-type: none"><li><a href="#">private-vlan mode</a> — sets the mode of the selected VLAN to community, isolated, or primary.</li><li><a href="#">switchport mode private-vlan</a> — sets PVLAN mode of the selected port.</li></ul>                                            |

## show interfaces private-vlan

Display type and status of PVLAN interfaces.

|                   |                                                                                                                                                                                                                                                                                                         |
|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>     | <code>show interfaces private-vlan [interface <i>interface</i>]</code>                                                                                                                                                                                                                                  |
| <b>Parameters</b> | <b><i>interface</i></b><br><b><i>interface</i></b> (OPTIONAL) Enter the keyword <code>interface</code> followed by the interface type and slot/port numbers or port-channel number to specify the port(s) for which you want to display PVLAN information. The range of Z9500 slot IDs is 0 to 2. Enter |

only a slot ID to display the PVLAN status for all ports on a Z9500 line card. The valid values are:

- **port-channel** *port-channel-number*
- **tengigabitethernet** [*slot-id | slot/port* ]
- **fortygigE** [*slot-id | slot/port*]

**Defaults** none

- Command Modes**
- EXEC
  - EXEC Privilege

**Command History**

| Version         | Description                              |
|-----------------|------------------------------------------|
| <b>9.2(1.0)</b> | Introduced on the Z9500.                 |
| <b>9.0.2.0</b>  | Introduced on the S6000.                 |
| <b>8.3.19.0</b> | Introduced on the S4820T.                |
| <b>8.3.11.1</b> | Introduced on the Z9000.                 |
| <b>8.3.7.1</b>  | Introduced on the S4810.                 |
| <b>7.8.1.0</b>  | Introduced on the C-Series and S-Series. |

**Usage Information** This command has two types of display — a list of all PVLAN interfaces or for a specific interface. Examples of both types of output are shown below.

The following describes the `show interfaces private-vlan` command shown in the Examples below.

| Field                 | Description                                                          |
|-----------------------|----------------------------------------------------------------------|
| <b>Interface</b>      | Displays the type of interface and associated slot and port number.  |
| <b>Vlan</b>           | Displays the VLAN ID of the designated interface.                    |
| <b>PVLAN-Type</b>     | Displays the type of VLAN in which the designated interface resides. |
| <b>Interface Type</b> | Displays the PVLAN port type of the designated interface.            |
| <b>Status</b>         | States whether the interface is operationally up or down.            |

**Example (All)**

```
Dell# show interfaces private-vlan
Interface Vlan PVLAN-Type Interface Type Status

Gi 2/1 10 Primary Promiscuous Up
Gi 2/2 100 Isolated Host Down
Gi 2/3 10 Primary Trunk Up
Gi 2/4 101 Community Host Up
```

**Example (Specific)**

```
Dell# show interfaces private-vlan Gi 2/2
Interface Vlan PVLAN-Type Interface Type Status

Gi 2/2 100 Isolated Host Up
```

**Related Commands**

- [private-vlan mode](#) – sets the mode of the selected VLAN to community, isolated, or primary.
- [show vlan private-vlan](#) – displays the PVLANS and/or interfaces that are part of a PVLAN.
- [switchport mode private-vlan](#) – sets PVLAN mode of the selected port.

# show vlan private-vlan

Display PVLANS and/or interfaces that are part of a PVLAN.

|                   |                                                                                                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>     | <code>show vlan private-vlan [vlan-id   community vlan-id   interface [interface   isolated vlan-id   mapping vlan-id   primary primary_vlan]</code> |                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Parameters</b> | <b>vlan-id</b>                                                                                                                                       | (OPTIONAL) Enter a VLAN ID number to display the PVLAN configuration.                                                                                                                                                                                                                                                                                                                                                                |
|                   | <b>community vlan-id</b>                                                                                                                             | (OPTIONAL) Enter the keyword <code>community</code> and a PVLAN ID number to display the configuration for a community PVLAN.                                                                                                                                                                                                                                                                                                        |
|                   | <b>interface interface</b>                                                                                                                           | (OPTIONAL) Enter the keyword <code>interface</code> followed by the interface type and slot/port numbers or port-channel number to display the PVLAN configuration for a member interface. The range of Z9500 slot IDs is 0 to 2. The valid values are: <ul style="list-style-type: none"><li>• <b>port-channel</b> port-channel-number</li><li>• <b>tengigabitethernet</b> slot/port</li><li>• <b>fortygigE</b> slot/port</li></ul> |
|                   | <b>isolated vlan-id</b>                                                                                                                              | (OPTIONAL) Enter the keyword <code>isolated</code> to display VLANs configured as isolated VLANs, along with their interfaces.                                                                                                                                                                                                                                                                                                       |
|                   | <b>mapping vlan-id</b>                                                                                                                               | (OPTIONAL) Enter the keyword <code>mapping</code> to display the community and isolated PVLAN mapping to primary PVLANS.                                                                                                                                                                                                                                                                                                             |
|                   | <b>primary vlan-id</b>                                                                                                                               | (OPTIONAL) Enter the keyword <code>primary</code> to display VLANs configured as primary VLANs, along with their interfaces.                                                                                                                                                                                                                                                                                                         |

|                        | <b>7.8.1.0</b>  | Introduced on the C-Series and S-Series. |

**Usage Information**

Examples of all types of command output are shown below. The first type of output is the result of not entering an optional keyword. It displays a detailed list of all PVLANS and their member VLANs and interfaces. The other types of output show details about PVLAN subsets.

The following describes the `show private-vlan` command shown in the Examples below.

|                  |                                                                         |
|------------------|-------------------------------------------------------------------------|
| <b>Field</b>     | <b>Description</b>                                                      |
| <b>Primary</b>   | Displays the VLAN ID of the designated or associated primary VLAN(s).   |
| <b>Secondary</b> | Displays the VLAN ID of the designated or associated secondary VLAN(s). |
| <b>Type</b>      | Displays the type of VLAN in which the listed interfaces reside.        |
| <b>Active</b>    | States whether the interface is operationally up or down.               |
| <b>Ports</b>     | Displays the interface IDs in the listed VLAN.                          |

**Example (All)**

```
Dell# show vlan private-vlan
Primary Secondary Type Active Ports

10 primary Yes Gi 2/1,3
```

```

 100 isolated Yes Gi 2/2
 101 community Yes Gi 2/10
20 primary Yes Po 10, 12-13
 Gi 3/1
 200 isolated Yes Gi 3/2,4-6
 201 community No
 202 community Yes Gi 3/11-12

```

**Example  
(Primary)**

```

Dell# show vlan private-vlan primary
Primary Secondary Type Active Ports

10 primary Yes Gi 2/1,3
20 primary Yes Gi 3/1,3

```

**Example  
(Isolated)**

```

Dell# show vlan private-vlan isolated
Primary Secondary Type Active Ports

10 primary Yes Gi 2/1,3
 100 isolated Yes Gi 2/2,4-6
 200 isolated Yes Gi 3/2,4-6

```

**Example  
(Community)**

```

Dell# show vlan private-vlan community
Primary Secondary Type Active Ports

10 primary Yes Gi 2/1,3
 101 community Yes Gi 2/7-10
20 primary Yes Po 10, 12-13
 Gi 3/1
 201 community No
 202 community Yes Gi 3/11-12

```

**Example  
(interface)**

```

Dell# show vlan private-vlan interface te 2/1
Primary Secondary Type Active Ports

10 primary Yes Te 2/1

```

**Example  
(Specific)**

```

Dell# show vlan private-vlan interface Gi 2/1
Primary Secondary Type Active Ports

10 primary Yes Gi 2/1

```

**Example  
(Mapping)**

```

Dell# show vlan private-vlan mapping

Private Vlan:
Primary : 10
Isolated : 30
Community : 20

```

**Usage  
Information**

If the VLAN ID is that of a primary VLAN, the entire private VLAN output is displayed, as shown below. If the VLAN ID is a secondary VLAN, only its primary VLAN and its particular secondary VLAN properties are displayed, as shown in the second Example.

**Example**

```

Dell# show vlan private-vlan 10
Primary Secondary Type Active Ports

10 primary Yes Gi 2/1,3
 102 isolated Yes Gi 0/4
 101 community Yes Gi 2/7-10

```

**Example**

```

Dell#show vlan private-vlan 102
Primary Secondary Type Active Ports

```

```

10 Primary Yes Po 1
 Gi 0/2
102 Isolated Yes Gi 0/4

```

### Related Commands

[private-vlan mode](#) – sets the mode of the selected VLAN to community, isolated, or primary.

[show interfaces private-vlan](#) – displays type and status of PVLAN interfaces.

[switchport mode private-vlan](#) – sets PVLAN mode of the selected port.

## switchport mode private-vlan

Set PVLAN mode of the selected port.

### Z9500

#### Syntax

```
[no] switchport mode private-vlan {host | promiscuous | trunk}
```

To remove PVLAN mode from the selected port, use the `no switchport mode private-vlan` command.

#### Parameters

|                    |                                                                                                                         |
|--------------------|-------------------------------------------------------------------------------------------------------------------------|
| <b>host</b>        | Enter the keyword <code>host</code> to configure the selected port or port channel as an isolated interface in a PVLAN. |
| <b>promiscuous</b> | Enter the keyword <code>promiscuous</code> to configure the selected port or port channel as a promiscuous interface.   |
| <b>trunk</b>       | Enter the keyword <code>trunk</code> to configure the selected port or port channel as a trunk port in a PVLAN.         |

#### Defaults

Disabled.

#### Command Modes

INTERFACE

#### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                               |
|-------------------|-------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.               |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.               |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                  |
| <b>9.0.2.0</b>    | Introduced on the S6000.                  |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                 |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                  |
| <b>8.3.7.0</b>    | Introduced on the S4810.                  |
| <b>7.8.1.0</b>    | Introduced on the C-Series and S-Series.  |

## Usage Information

The assignment of the various PVLAN port types to port and port channel (LAG) interfaces is shown in the following example.

### Example

```
DelleMC#conf
DelleMC(conf)# interface TenGigabitEthernet 2/1
DelleMC(conf-if-te-2/1)# switchport mode private-vlan promiscuous

DelleMC(conf)# interface TenGigabitEthernet 2/2
DelleMC(conf-if-te-2/2)# switchport mode private-vlan host

DelleMC(conf)# interface TenGigabitEthernet 2/3
DelleMC(conf-if-te-2/3)# switchport mode private-vlan trunk

DelleMC(conf)# interface port-channel 10
DelleMC(conf-if-te-2/3)# switchport mode private-vlan promiscuous
DelleMC(conf-if-te-2/3)#
```

### Related Commands

- [private-vlan mode](#) — sets the mode of the selected VLAN to community, isolated, or primary.
- [private-vlan mapping secondary-vlan](#) — sets the mode of the selected VLAN to primary and then associates the secondary VLANs to it.

# Per-VLAN Spanning Tree Plus (PVST+)

The Dell EMC Networking OS implementation of per-VLAN spanning tree plus (PVST+) is based on the IEEE 802.1w standard spanning tree protocol.

Dell EMC Networking OS supports PVST+ on the Z9500 platform.

**NOTE:** For easier command line entry, the plus (+) sign is not used at the command line.

## Topics:

- [description](#)
- [disable](#)
- [extend system-id](#)

## Related Commands

- [protocol spanning-tree pvst](#) — enter PVST+ mode.

# extend system-id

To augment the Bridge ID with a VLAN ID so that PVST+ differentiate between BPDUs for each VLAN, use extend system ID. If the VLAN receives a BPDU meant for another VLAN, PVST+ does not detect a loop, and both ports can remain in Forwarding state.

## Z9500

**Syntax** extend system-id

**Defaults** Disabled

**Command Modes** PROTOCOL PVST

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

## Example

```
DellEMC# conf
DellEMC(conf)# protocol spanning-tree pvst
DellEMC(conf-pvst)# no disable
DellEMC(conf-pvst)# vlan 2 bridge-priority 4096
DellEMC(conf-pvst)# vlan 3 bridge-priority 16384
DellEMC(conf-pvst)#
DellEMC(conf-pvst)# show config
!
protocol spanning-tree pvst
 no disable
 vlan 2 bridge-priority 4096
 vlan 3 bridge-priority 16384
DellEMC#
```

**Usage Information**

After you enable PVST+, the device runs an STP instance for each VLAN it supports.

**Related Commands**

- `disable` — disables PVST+.
- `show spanning-tree pvst` — displays the PVST+ configuration.

## show spanning-tree pvst

View the Per-VLAN spanning tree configuration.

### Z9500

**Syntax**

```
show spanning-tree pvst [vlan vlan-id] [brief] [guard]
```

**Parameters**

- vlan *vlan-id*** (OPTIONAL) Enter the keyword `vlan` then the VLAN ID. The range is 1 to 4094.
- brief** (OPTIONAL) Enter the keyword `brief` to view a synopsis of the PVST+ configuration information.
- interface** (OPTIONAL) Enter one of the interface keywords along with the slot/port information:
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For a Port Channel interface, enter the keyword `port-channel` then a number:
- guard** (OPTIONAL) Enter the keyword `guard` to display the type of guard enabled on a PVST interface and the current port state.

**Defaults**

none

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| <b>8.3.7.0</b>    | Introduced on the S4810.                                 |
| <b>8.5.1.0</b>    | Added support for 4-port 40G line cards on the E-Series. |

| Version | Description                                                                                                              |
|---------|--------------------------------------------------------------------------------------------------------------------------|
| 8.4.2.1 | Support for the optional guard keyword was added on the C-Series, S-Series, and E-Series.                                |
| 7.6.1.0 | Introduced on the S-Series.                                                                                              |
| 7.5.1.0 | Introduced on the C-Series.                                                                                              |
| 6.4.1.0 | Expanded to display port error disable state (EDS) caused by loopback BPDU inconsistency and Port VLAN ID inconsistency. |
| 6.2.1.1 | Introduced.                                                                                                              |

### Usage Information

The following describes the `show spanning-tree pvst` command shown in the following examples.

| Field                 | Description                                                                                                             |
|-----------------------|-------------------------------------------------------------------------------------------------------------------------|
| <b>Interface Name</b> | PVST interface.                                                                                                         |
| <b>Instance</b>       | PVST instance.                                                                                                          |
| <b>Sts</b>            | Port state: root-inconsistent (INCON Root), forwarding (FWD), listening (LIS), blocking (BLK), or shut down (EDS Shut). |
| <b>Guard Type</b>     | Type of STP guard configured (Root, Loop, or BPDU guard).                                                               |

### Example (Brief)

```
DelleMC# show spanning-tree pvst vlan 3 brief
VLAN 3
Executing IEEE compatible Spanning Tree Protocol
Root ID Priority 4096, Address 0001.e801.6aa8
Root Bridge hello time 2, max age 20, forward delay 15
Bridge ID Priority 16384, Address 0001.e805.e306
Configured hello time 2, max age 20, forward delay 15

Interface Designated
Name PortID Prio Cost Sts Cost Bridge ID PortID

Te 1/0 128.130 128 20000 FWD 20000 4096 0001.e801.6aa8 128.426

```

### Example

```
DelleMC# show spanning-tree pvst vlan 2
VLAN 2
Root Identifier has priority 4096, Address 0001.e805.e306
Root Bridge hello time 2, max age 20, forward delay 15
Bridge Identifier has priority 4096, Address 0001.e805.e306
Configured hello time 2, max age 20, forward delay 15
We are the root of VLAN 2
Current root has priority 4096, Address 0001.e805.e306
Number of topology changes 3, last change occurred 00:57:00

Port 130 (TenGigabitEthernet 1/4) is designated Forwarding
Port path cost 20000, Port priority 128, Port Identifier 128.130
Designated root has priority 4096, address 0001.e805.e3:06
Designated bridge has priority 4096, address 0001.e805.e3:06
Designated port id is 128.130, designated path cost 0
Number of transitions to forwarding state 1
BPDU sent 1567, received 3
The port is not in the Edge port mode
```

```

Port 131 (TenGigabitEthernet 1/1) is designated Forwarding
Port path cost 20000, Port priority 128, Port Identifier 128.131
Designated root has priority 4096, address 0001.e805.e3:06
Designated bridge has priority 4096, address 0001.e805.e3:06
Designated port id is 128.131, designated path cost 0
Number of transitions to forwarding state 1
BPDU sent 1567, received 0
The port is not in the Edge port mode

```

```

Port 146 (TenGigabitEthernet 1/16) is designated Forwarding
Port path cost 20000, Port priority 128, Port Identifier 128.146
Designated root has priority 4096, address 0001.e805.e3:06
Designated bridge has priority 4096, address 0001.e805.e3:06
Designated port id is 128.146, designated path cost 0
Number of transitions to forwarding state 1
BPDU sent 1578, received 0
The port is in the Edge port mode

```

```

Port 147 (TenGigabitEthernet 1/17) is designated Forwarding
Port path cost 20000, Port priority 128, Port Identifier 128.147
Designated root has priority 4096, address 0001.e805.e3:06
Designated bridge has priority 4096, address 0001.e805.e3:06
Designated port id is 128.147, designated path cost 0
Number of transitions to forwarding state 1
BPDU sent 1579, received 0
The port is in the Edge port mode
DelleMC#

```

**Example (EDS/  
LBK)**

```
DelleMC# show spanning-tree pvst vlan 2 interface tengigabitethernet 1/1
```

**TenGigabitEthernet 1/1 of VLAN 2 is LBK\_INC discarding**

```

Edge port:no (default) port guard :none (default)
Link type: point-to-point (auto) bpdu filter:disable (default)
Bpdu guard :disable (default)
Bpdus sent 152, received 27562

```

```

Interface Designated

Name Instance Sts Guard type

Te 1/1 5 INCON(Root) Rootguard
Te 1/2 5 FWD Loopguard
Te 1/3 5 EDS(Shut) Bpduguard

```

## Related Commands

- [spanning-tree pvst](#) — configure PVST+ on an interface.

# spanning-tree pvst

Configure a PVST+ interface with one of these settings: edge port with optional bridge port data unit (BPDU) guard, port disablement if an error condition occurs, port priority or cost for a VLAN range, loop guard, or root guard.

## Z9500

### Syntax

```
spanning-tree pvst {edge-port [bpduguard [shutdown-on-violation]] | err-disable | vlan vlan-range {cost number | priority value} | loopguard | rootguard}
```

### Parameters

|                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>edge-port</b>              | Enter the keywords <code>edge-port</code> to configure the interface as a PVST+ edge port.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>bpduguard</b>              | Enter the keyword <code>portfast</code> to enable Portfast to move the interface into Forwarding mode immediately after the root fails.<br><br>Enter the keyword <code>bpduguard</code> to disable the port when it receives a BPDU.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>shutdown-on-violation</b>  | (OPTIONAL) Enter the keywords <code>shutdown-on-violation</code> to hardware disable an interface when a BPDU is received and the port is disabled.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>err-disable</b>            | Enter the keywords <code>err-disable</code> to enable the port to be put into the error-disable state (EDS) if an error condition occurs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>vlan <i>vlan-range</i></b> | Enter the keyword <code>vlan</code> then the VLAN numbers. The range is from 1 to 4094.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>cost <i>number</i></b>     | Enter the keyword <code>cost</code> then the port cost value. The range is from 1 to 200000.<br><br>Defaults: <ul style="list-style-type: none"><li>• 100 Mb/s Ethernet interface = <b>200000</b>.</li><li>• 1-Gigabit Ethernet interface = <b>20000</b>.</li><li>• 10-Gigabit Ethernet interface = <b>2000</b>.</li><li>• Port Channel interface with one 100 Mb/s Ethernet = <b>200000</b>.</li><li>• Port Channel interface with one 1 Gigabit Ethernet = <b>20000</b>.</li><li>• Port Channel interface with one 10 Gigabit Ethernet = <b>2000</b>.</li><li>• Port Channel with two 1 Gigabit Ethernet = <b>18000</b>.</li><li>• Port Channel with two 10 Gigabit Ethernet = <b>1800</b>.</li><li>• Port Channel with two 100 Mbps Ethernet = <b>180000</b>.</li></ul> |
| <b>priority <i>value</i></b>  | Enter the keyword <code>priority</code> then the Port priority value in increments of 16. The range is from 0 to 240. The default is <b>128</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>loopguard</b>              | (C-, S-, and E-Series only) Enter the keyword <code>loopguard</code> to enable loop guard on a PVST+ port or port-channel interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>rootguard</b>              | (C-, S-, and E-Series only) Enter the keyword <code>rootguard</code> to enable root guard on a PVST+ port or port-channel interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| Version          | Description                               |
|------------------|-------------------------------------------|
| <b>9.10(0.1)</b> | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b> | Introduced on the S3148.                  |

| Version    | Description                                                                                                       |
|------------|-------------------------------------------------------------------------------------------------------------------|
| 9.10(0.0)  | Introduced on the S6100-ON.                                                                                       |
| 9.8(2.0)   | Introduced on the S3100 series.                                                                                   |
| 9.8(1.0)   | Introduced on the Z9100-ON.                                                                                       |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                                                                       |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                                                                       |
| 9.7(0.0)   | Introduced on the S6000-ON.                                                                                       |
| 9.2(1.0)   | Introduced on the Z9500.                                                                                          |
| 9.0.2.0    | Introduced on the S6000.                                                                                          |
| 8.3.19.0   | Introduced on the S4820T.                                                                                         |
| 8.3.11.1   | Introduced on the Z9000.                                                                                          |
| 8.4.2.1    | Introduced the <code>loopguard</code> and <code>rootguard</code> options on the E-Series, C-Series, and S-Series. |
| 8.3.7.0    | Introduced on the S4810.                                                                                          |
| 8.2.1.0    | Introduced the hardware <code>shutdown-on-violation</code> option.                                                |
| 7.6.1.0    | Introduced on the S-Series.                                                                                       |
| 7.5.1.0    | Introduced on the C-Series.                                                                                       |
| 7.4.1.0    | Added the optional Bridge Port Data Unit (BPDU) guard.                                                            |
| 6.2.1.1    | Introduced.                                                                                                       |

### Usage Information

The BPDU guard option prevents the port from participating in an active STP topology in case a BPDU appears on a port unintentionally, or is misconfigured, or is subject to a DOS attack. This option places the port into the Error Disable state if a BPDU appears, and a message is logged so that the administrator can take corrective action.

**NOTE:** A port configured as an edge port, on a PVST switch, immediately transitions to the forwarding state. Only ports connected to end-hosts should be configured as an edge port. Consider an edge port similar to a port with a spanning-tree portfast enabled.

If you do not enable `shutdown-on-violation`, BPDUs are still sent to the route process module (RPM) CPU.

You cannot enable `root guard` and `loop guard` at the same time on a port. For example, if you configure `loop guard` on a port on which `root guard` is already configured, the following error message is displayed: `% Error: RootGuard is configured. Cannot configure LoopGuard.`

When used in a PVST+ network, `loop guard` is performed per-port or per-port channel at a VLAN level. If no BPDUs are received on a VLAN interface, the port or port-channel transitions to a Loop-Inconsistent (blocking) state only for this VLAN.

Enabling Portfast BPDU guard and `loop guard` at the same time on a port results in a port that remains in a Blocking state and prevents traffic from flowing through it. For example, when Portfast BPDU guard and `loop guard` are both configured:

- If a BPDU is received from a remote device, BPDU guard places the port in an Err-Disabled Blocking state and no traffic is forwarded on the port.
- If no BPDU is received from a remote device, `loop guard` places the port in a Loop-Inconsistent Blocking state and no traffic is forwarded on the port.

### Example

```
DellEMC(conf-if-te-1/1)# spanning-tree pvst vlan 3 cost 1800
DellEMC(conf-if-te-1/1)# end
DellEMC(conf-if-te-1/1)# show config
!
interface TenGigabitEthernet 1/1
```

```

no ip address
switchport
spanning-tree pvst vlan 3 cost 1800
no shutdown
DellEMC(conf-if-te-1/1)# end

DellEMC#

```

## spanning-tree pvst err-disable

Place ports in an Err-Disabled state if they receive a PVST+ BPDU when they are members an untagged VLAN.

### Z9500

**Syntax**

`spanning-tree pvst err-disable cause invalid-pvst-bpdu`

**Defaults**

Enabled; ports are placed in the Err-Disabled state if they receive a PVST+ BPDU when they are members of an untagged VLAN.

| <b>9.2(1.0)</b>   | Introduced on the Z9500.                  |
| <b>9.0.2.0</b>    | Introduced on the S6000.                  |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                 |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                  |
| <b>8.3.7.0</b>    | Introduced on the S4810.                  |
| <b>8.2.1.0</b>    | Introduced.                               |

**Usage  
Information**

Some non-Dell EMC Networking systems which have hybrid ports participating in PVST+ transmit two kinds of BPDUs: an 802.1D BPDU and an untagged PVST+ BPDU.

Dell EMC Networking systems do not expect PVST+ BPDU on an untagged port. If this happens, Dell EMC Networking OS places the port in the Error-Disable state. This behavior might result in the network not converging. To prevent Dell EMC Networking OS from executing this action, use the `no spanning-tree pvst err-disable` command `cause invalid-pvst-bpdu`.

|                          |                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|--------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Usage Information</b> | By default, Dell EMC Networking OS implements an optimized flush mechanism for PVST+. This implementation helps in flushing the MAC addresses only when necessary (and less often) allowing for faster convergence during topology changes. However, if a standards-based flush mechanism is needed, you can turn this <i>knob</i> command on to enable flushing MAC addresses after receiving every topology change notification. |
|--------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

# vlan bridge-priority

Set the PVST+ bridge-priority for a VLAN or a set of VLANs.

## Z9500

|                   |                                                                                                                                                           |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>     | <code>vlan <i>vlan-range</i> bridge-priority <i>value</i></code><br>To return to the default value, use the <code>no vlan bridge-priority</code> command. |
| <b>Parameters</b> | <b>vlan <i>vlan-range</i></b> Enter the keyword <code>vlan</code> then the VLAN numbers. The range is from 1 to 4094.                                     |

**bridge-priority** Enter the keywords `bridge-priority` then the bridge priority value in increments of 4096. The range is from 0 to 61440. The default is **32768**.

**value**

**Defaults** 32768

**Command Modes** CONFIGURATION (conf-pvst)

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |
| 7.6.1.0    | Introduced on the S-Series.               |
| 7.5.1.0    | Introduced on the C-Series.               |
| 6.2.1.1    | Introduced.                               |

**Related Commands**

- [vlan forward-delay](#) — changes the time interval before Dell EMC Networking OS transitions to the Forwarding state.
- [vlan hello-time](#) — change the time interval between BPDUs.
- [vlan max-age](#) — changes the time interval before PVST+ refreshes.
- [show spanning-tree pvst](#) — displays the PVST+ configuration.

## vlan forward-delay

Set the amount of time the interface waits in the Listening state and the Learning state before transitioning to the Forwarding state.

### Z9500

**Syntax** `vlan vlan-range forward-delay seconds`

To return to the default setting, use the `no vlan forward-delay` command.

**Parameters** **vlan *vlan-range*** Enter the keyword `vlan` then the VLAN numbers. The range is from 1 to 4094.

**forward-delay *seconds*** Enter the keywords `forward-delay` then the time interval, in seconds, that Dell EMC Networking OS waits before transitioning PVST+ to the forwarding state. The range is from 4 to 30 seconds. The default is **15 seconds**.

**Defaults** 15 seconds

**Command Modes** CONFIGURATION (conf-pvst)

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |
| 7.6.1.0    | Introduced on the S-Series.               |
| 7.5.1.0    | Introduced on the C-Series.               |
| 6.2.1.1    | Introduced.                               |

**Related Commands**

- [vlan bridge-priority](#) — sets the bridge-priority value.
- [vlan hello-time](#) — changes the time interval between BPDUs.
- [vlan max-age](#) — changes the time interval before PVST+ refreshes.
- [show spanning-tree pvst](#) — displays the PVST+ configuration.

## vlan hello-time

Set the time interval between generation of PVST+ 7 BPDUs.

### Z9500

**Syntax** `vlan vlan-range hello-time seconds`

To return to the default value, use the `no vlan hello-time` command.

**Parameters**

|                                  |                                                                                                                                                                                    |
|----------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>vlan <i>vlan-range</i></b>    | Enter the keyword <code>vlan</code> then the VLAN numbers. The range is from 1 to 4094.                                                                                            |
| <b>hello-time <i>seconds</i></b> | Enter the keywords <code>hello-time</code> then the time interval, in seconds, between transmission of BPDUs. The range is from 1 to 10 seconds. The default is <b>2 seconds</b> . |

**Defaults** **2 seconds**

**Command Modes** CONFIGURATION (conf-pvst)

- [vlan max-age](#) — changes the time interval before PVST+ refreshes.
- [show spanning-tree pvst](#) — displays the PVST+ configuration.

## vlan max-age

To maintain configuration information before refreshing that information, set the time interval for the PVST+ bridge.

### Z9500

#### Syntax

```
vlan vlan-range max-age seconds
```

To return to the default, use the `no vlan max-age` command.

#### Parameters

**vlan *vlan-range*** Enter the keyword `vlan` then the VLAN numbers. The range is from 1 to 4094.

**max-age *seconds*** Enter the keywords `max-age` then the time interval, in seconds, that Dell EMC Networking OS waits before refreshing configuration information. The range is from 6 to 40 seconds. The default is **20 seconds**.

#### Defaults

**20 seconds**

- [show spanning-tree pvst](#) — displays the PVST+ configuration.

# Quality of Service (QoS)

The Dell EMC Networking OS commands for quality of service (QoS) include traffic conditioning and congestion control. QoS commands are not universally supported on all Dell EMC Networking products.

## Topics:

- [Global Configuration Commands](#)
- [Per-Port QoS Commands](#)
- [Policy-Based QoS Commands](#)
- [DSCP Color Map Commands](#)

## Global Configuration Commands

There is only one global configuration QoS command.

### qos-rate-adjust

By default, while rate limiting, policing, and shaping, Dell EMC Networking OS does not include the Preamble, SFD, or the IFG fields. These fields are overhead; only the fields from MAC destination address to the CRC are used for forwarding and are included in these rate metering calculations. You can optionally include overhead fields in rate metering calculations by enabling QoS Rate Adjustment.

|                        |                                                                                                                                                                                 |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | <code>qos-rate-adjustment overhead-bytes</code>                                                                                                                                 |
| <b>Parameters</b>      | <b><i>overhead-bytes</i></b> Include a specified number of bytes of packet overhead to include in rate limiting, policing, and shaping calculations. The range is from 1 to 31. |
| <b>Defaults</b>        | QoS rate adjustment is disabled by default.                                                                                                                                     |
| <b>Command Modes</b>   | CONFIGURATION                                                                                                                                                                   |
| <b>Command History</b> | This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> .                   |

| Version           | Description                               |
|-------------------|-------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.               |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.               |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                  |
| <b>9.0.2.0</b>    | Introduced on the S6000.                  |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                 |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                  |

| Version | Description              |
|---------|--------------------------|
| 8.3.7.0 | Introduced on the S4810. |
| 8.3.1.0 | Introduced.              |

**Usage Information**

By default, when rate policing and shaping, the system does not include the Preamble, SFD, or the IFG fields. These fields are overhead; only the fields from MAC destination address to the CRC are used for forwarding and are included in these rate metering calculations.

## service-class bandwidth-percentage

Specify a minimum bandwidth for queues.

### Z9500

**Syntax**

```
service-class bandwidth-percentage queue0 number queue1 number queue2
number queue3 number queue4 number queue5 number queue6 number queue7
number
```

**Parameters**

**number** Enter the bandwidth-weight, as a percentage.

**Defaults**

none

**Command Modes**

CONFIGURATION

**Command History**

| Version   | Description                               |
|-----------|-------------------------------------------|
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0) | Introduced on the S6100-ON.               |
| 9.8(1.0)  | Introduced on the Z9100-ON.               |
| 9.8(0.0)  | Introduced on the S3048-ON and S4048-ON.  |
| 9.7(0.0)  | Introduced on the S6000-ON.               |
| 9.2(1.0)  | Introduced on the Z9500.                  |
| 9.0.2.0   | Introduced on the S6000.                  |
| 8.3.19.0  | Introduced on the S4820T.                 |
| 8.3.11.1  | Introduced on the Z9000.                  |
| 8.3.7.1   | Introduced on the S4810.                  |
| 8.2.1.0   | Introduced on the C-Series and S-Series.  |

**Usage Information**

Guarantee a minimum bandwidth to different queues globally using the `service-class bandwidth-percentage` command from CONFIGURATION mode. The command is applied in the same way as the `bandwidth-percentage` command in an output QoS policy. The `bandwidth-percentage` command in QOS-POLICY-OUT mode supersedes the `service-class bandwidth-percentage` command.

## service-class dot1p-mapping

Configure a service-class criterion based on a dot1p value.

### Z9500

**Syntax** `service-class dot1p-mapping {dot1p0 queue | dot1p1 queue | dot1p2 queue | dot1p3 queue | dot1p4 queue| dot1p5 queue | dot1p6 queue | dot1p7 queue}`

**Parameters** **queue** Enter a value from 0 to 3.

**Defaults** For each dot1p Priority, the default CoS queue value is:

- Dot1p Priority : 0 1 2 3 4 5 6 7
- Queue : 2 0 1 3 4 5 6 7

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |

**Usage Information** To apply dot1p-queue-mapping, use the `service-class dynamic dot1p` command.

**Related Commands**

- [show qos dot1p-queue-mapping](#) — displays the dot1p priority to queue mapping on the switch.

## service-class dynamic dot1p

Honor all 802.1p markings on incoming switched traffic on an interface (from INTERFACE mode) or on all interfaces (from CONFIGURATION mode). A CONFIGURATION mode entry supersedes an INTERFACE mode entry.

### Z9500

**Syntax** `service-class dynamic dot1p`

To return to the default setting, use the `no service-class dynamic dot1p` command.

## Defaults

All dot1p traffic is mapped to Queue 0 unless you enable the `service-class dynamic dot1p` command. The default mapping is as follows:

| dot1p | Queue ID |
|-------|----------|
| 0     | 1        |
| 1     | 0        |
| 2     | 2        |
| 3     | 3        |
| 4     | 4        |
| 5     | 5        |
| 6     | 6        |
| 7     | 7        |

| <b>9.8(2.0)</b>   | Introduced on the S3100 series.                                             |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.                                                 |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.                                                 |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                                                 |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.                                                 |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                                                    |
| <b>9.0.2.0</b>    | Introduced on the S6000.                                                    |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                                                   |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                                                    |
| <b>8.3.7.0</b>    | Introduced on the S4810.                                                    |
| <b>8.2.1.0</b>    | Added the <code>kbps</code> option on the C-Series, E-Series, and S-Series. |
| <b>7.6.1.0</b>    | Introduced on the S-Series.                                                 |
| <b>7.5.1.0</b>    | Introduced on the C-Series.                                                 |
| <b>6.5.1.0</b>    | Expanded the command to permit configuration on port channels.              |
| <b>6.1.1.1</b>    | Introduced on the E-Series.                                                 |

## Usage Information

To honor all incoming 802.1p markings on incoming switched traffic on the interface, enter this command. By default, this facility is not enabled (that is, the 802.1p markings on incoming traffic are not honored).

You can apply this command on both physical interfaces and port channels. When you set the `service-class dynamic` for a port channel, the physical interfaces assigned to the port channel are automatically configured; you cannot assign the `service-class dynamic` command to individual interfaces in a port channel.

- All dot1p traffic is mapped to Queue 0 unless you enable the `service-class dynamic dot1p` command on an interface or globally.
- Layer 2 or Layer 3 service policies supersede dot1p service classes.

## service-class wred

The mechanism to configure a weight factor for WRED and ECN functionality for backplane ports is supported on the Z9000 platform. Also, this mechanism to configure a weight for WRED and ECN functionality for front-end ports is supported on the Z9000 platforms. Create a weighted random early detection (WRED) profile and ECN functionality per queue granularity for backplane ports, and attach the WRED profile with a service class. You can enable or disable these parameters for each queue and specify minimum and maximum buffer thresholds for each color-coding of the packets. Also, you can specify the maximum drop rate percentage for yellow and green profiles. The per-queue profile configured is applicable to all the backplane ports.

**Syntax** `[No] service-class wred {green | weight | yellow}{backplane} {[queue0 number/string] || [queue1 number/string] || [queue2 number/string] || [queue3 number/string] || [queue4 number/string] || [queue5 number/string] || [queue6 number/string] || [queue7 number/string]}`

**Parameters**

|                           |                                                                                                                                                                                                                                                                        |
|---------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>service-class</b>      | Define the mapping between the service class and policy-based QoS or routing                                                                                                                                                                                           |
| <b>wred</b>               | Specify WRED curve parameters for a queue                                                                                                                                                                                                                              |
| <b>green</b>              | Specify green (low) drop precedence to a queue                                                                                                                                                                                                                         |
| <b>weight</b>             | Specify a weight factor to a queue                                                                                                                                                                                                                                     |
| <b>yellow</b>             | Specify yellow (medium) drop precedence to a queue                                                                                                                                                                                                                     |
| <b>backplane</b>          | Specify that the WRED weight and profile configured for each queue apply to backplane ports                                                                                                                                                                            |
| <b>queue 0 to queue 3</b> | Specify the queue number to which the WRED parameters apply                                                                                                                                                                                                            |
| <b>number</b>             | Enter a weight for the queue as a number in the range of 1 to 15. This parameter applies only if you specify the green or yellow drop precedence.                                                                                                                      |
| <b>string</b>             | Enter the WRED profile name. It is a string of up to 32 characters. Or use one of the five pre-defined WRED profile names. Pre-defined Profiles: wred_drop, wred_ge_y, wred_ge_g, wred_teng_y, wred_teng_. This parameter applies only if you specify a weight factor. |

**Default** All queues on backplane ports operate in tail-drop (best-effort traffic) mode by default. There is no default WRED green or yellow profile. The default weight is 0.

**Command Modes** QOS-POLICY-OUT mode

**Command History**

|                        |                                                            |
|------------------------|------------------------------------------------------------|
| <b>Version 9.6.0.0</b> | Added support for backplane changes in the Z9000 platform. |
| <b>Version 9.3.0.0</b> | Introduced on the Z9000 platform.                          |

**Usage Information** You can configure all the data queues. For Z9000, you can configure queues 0-3. WRED profile contains a set of characteristics, such as the minimum and maximum WRED thresholds and the maximum drop rate. You can add and remove WRED parameters for one or more queues by using the command in a single line. All of the configured attributes apply to all the backplane ports and are for each queue. To assign drop precedence to green or yellow traffic, use this command. If there is no honoring enabled on the input, all the traffic defaults to green drop precedence.

### Example

```
Dell(conf-wred) #wred-profile thresh-1
Dell(conf-wred) #threshold min 100 max 200 max-drop-rate 40
Dell(conf-wred) #wred-profile thresh-2
Dell(conf-wred) #threshold min 300 max 400 max-drop-rate 80
Dell(conf) #service-class wred green backplane queue5 thresh-1 queue7
thresh-2
Dell(conf) #service-class wred yellow backplane queue1 thresh-2 queue3
thresh-1
Dell(conf) #service-class wred weight backplane queue0 11 queue6 4
queue7 9
```

## service-class wred ecn

Create a service class and assign ECN marking for different queues on backplane ports to the service class. This functionality can be configured on the Z9000 platforms.

|                        |                                                                  |                                                                                                                                                                                                                                                                                                          |
|------------------------|------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | <code>[No] service-class wred ecn {backplane} queues-list</code> |                                                                                                                                                                                                                                                                                                          |
| <b>Parameters</b>      | <b>service-class</b>                                             | Define the mapping between the service class and policy-based QoS or routing                                                                                                                                                                                                                             |
|                        | <b>wred</b>                                                      | Associate WRED with ECN to mark packets instead of dropping them                                                                                                                                                                                                                                         |
|                        | <b>ecn</b>                                                       | Cause explicit congestion notification (ECN) to be used to indicate network congestion, rather than dropping packets, queues-list Enter the queue numbers, either as individual queue numbers separated by commas or as an inclusive list separating the starting and ending queue numbers with a hyphen |
|                        | <b>backplane</b>                                                 | Specify that the ECN marking configured for each queue applies to backplane ports                                                                                                                                                                                                                        |
| <b>Default</b>         | By default, ECN marking is disabled on all queues.               |                                                                                                                                                                                                                                                                                                          |
| <b>Command Modes</b>   | CONFIGURATION mode                                               |                                                                                                                                                                                                                                                                                                          |
| <b>Command History</b> | <b>Version 9.6.0.0</b>                                           | Added support for backplane changes in the Z9000 platform.                                                                                                                                                                                                                                               |
|                        | <b>Version 9.3.0.0</b>                                           | Introduced on the Z9000 platform.                                                                                                                                                                                                                                                                        |

**Usage Information**

You can add or remove ECN marking configuration on a list of queues on all backplane ports. All of the configured attributes apply to all the backplane ports and are for each queue. You can configure all the data queues. For Z9000, you can configure queues 0-3. For S6000, you can configure queues 0-7. By default, ECN marking is disabled on all queues. When you enable `wred-ecn`, and the number of packets in the queue is below the minimum threshold, packets are transmitted per the usual WRED treatment. When you enable `wred-ecn`, and the number of packets in the queue is between the minimum threshold and the maximum threshold, one of the following two scenarios can occur:

- If the transmission endpoints are ECN-capable and traffic is congested, and the WRED algorithm determines that the packet should have been dropped based on the drop probability, the packet is transmitted and marked so the routers know the system is congested and can slow transmission rates.
- If neither endpoint is ECN-capable, the packet may be dropped based on the WRED drop probability. This behavior is the identical treatment that a packet receives when WRED is enabled without ECN configured on the router.

When you enable `wred-ecn`, and the number of packets in the queue is above the maximum threshold, packets are dropped based on the drop probability. This behavior is the identical treatment a packet receives when WRED is enabled without ECN configured on the router.

### Example

```
Dellconf) #service-class wred ecn backplane 0,3-5,7
```

## service-pool wred

A global buffer pool that is a shared buffer pool accessed by multiple queues when the minimum guaranteed buffers for the queue are consumed can be configured on the S6000 and Z9000 platforms.

Create a global buffer pool that is a shared buffer pool accessed by multiple queues when the minimum guaranteed buffers for the queue are consumed. S4810, S4820T, S6000, and Z9000 platforms support four global service-pools in the egress direction. Two service pools are used—one for lossy queues and the other for lossless (priority-based flow control (PFC)) queues. You can enable WRED and ECN configuration on the global service-pools. You can define WRED profiles and weight on each of the global service-pools for both lossy and lossless (PFC) service-pools.

|                   |                                                                                                          |                                                                               |
|-------------------|----------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------|
| <b>Syntax</b>     | <code>[No] service-pool wred {green   weight   yellow} {pool0 number/string  pool1 number/string}</code> |                                                                               |
| <b>Parameters</b> | <b>service-pool</b>                                                                                      | Define the mapping between the service class and policy-based QoS or routing. |

|               |                                                                                                                                                                                                                                                                        |
|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>wred</b>   | Specify WRED curve parameters for a queue.                                                                                                                                                                                                                             |
| <b>green</b>  | Specify green (low) drop precedence to a queue.                                                                                                                                                                                                                        |
| <b>weight</b> | Specify a weight factor to a queue.                                                                                                                                                                                                                                    |
| <b>yellow</b> | Specify yellow (medium) drop precedence to a queue.                                                                                                                                                                                                                    |
| <b>pool0</b>  | Service-pool buffer 1 (default service-pool for PFC traffic) .                                                                                                                                                                                                         |
| <b>pool1</b>  | Service-pool buffer 0 (default service-pool for both lossy and lossless traffic. traffic).                                                                                                                                                                             |
| <b>number</b> | Enter a weight for the queue as a number in the range of 1 to 15. This parameter applies only if you specify the green or yellow drop precedence.                                                                                                                      |
| <b>string</b> | Enter the WRED profile name. It is a string of up to 32 characters. Or use one of the five pre-defined WRED profile names. Pre-defined Profiles: wred_drop, wred_ge_y, wred_ge_g, wred_teng_y, wred_teng_. This parameter applies only if you specify a weight factor. |

**Default** All queues on backplane ports operate in tail-drop (best-effort traffic) mode by default. There is no default WRED green or yellow profile. The default weight is 0.

**Command Modes** CONFIGURATION mode

| Command History | Version          | Description                                 |
|-----------------|------------------|---------------------------------------------|
|                 | <b>9.10(0.1)</b> | Introduced on the S6010-ON and S4048T-ON.   |
|                 | <b>9.10(0.0)</b> | Introduced on the S6100-ON.                 |
|                 | <b>9.8(1.0)</b>  | Introduced on the Z9100-ON.                 |
|                 | <b>9.7(0.0)</b>  | Introduced on the S6000-ON.                 |
|                 | <b>9.3.0.0</b>   | Introduced on the S6000 and Z9000 platforms |

**Usage Information** You can configure only service pools 0 and 1 because the Dell EMC Networking OS uses only these two service pools. The pool, service0, is used for lossy queues and the pool, service1, is used for lossless (PFC) queues in all the platforms.

You can configure the weight for the WRED average queue size for service1, which is the only the platform in which PFC is supported for this service pool.

A WRED profile contains a set of attributes, such as the minimum and maximum threshold values, and the maximum drop rate for the received packets. You can add or remove WRED parameter configurations for one or more shared service pools using a single command. The `service-pool wred` command is similar in usage and working to the `service-class bandwidth-percentage queue-id` command.

### Example

```
DellEMC(conf-wred) #wred thresh-1
DellEMC(conf-wred) #threshold min 100 max 200 max-drop-rate 40

DellEMC(conf-wred) #wred thresh-2
DellEMC(conf-wred) #threshold min 300 max 400 max-drop-rate 80

DellEMC(conf) #service-pool wred green pool0 thresh-1 pool1 thresh-2
DellEMC(conf) #service-pool wred yellow pool0 thresh-3 pool1 thresh-4
DellEMC(conf) #service-pool wred weight pool0 11 pool1 4
```

## show qos dot1p-queue-mapping

Displays the dot1p priority to queue mapping on the switch.

**Syntax** `show qos dot1p-queue-mapping`

**Defaults**

- dot1p Priority: 0 1 2 3 4 5 6 7

- Queue: 2 0 1 3 4 5 6 7
- Dot1p Priority : 0 1 2 3 4 5 6 7
- Queue : 0 0 0 1 2 3 3 3

**Command Modes** EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                               |
|-------------------|-------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.               |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.               |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                  |
| <b>9.0.2.0</b>    | Introduced on the S6000.                  |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                 |
| <b>8.3.12.0</b>   | Introduced on the S4810.                  |

**Usage Information** trust dot1p, dot1p-priority, service-class dynamic dot1; all these features work over the mapping in this command output.

**Related Commands**

- [service-class dot1p-mapping](#) — Identifies the class map.

## Per-Port QoS Commands

Per-port QoS (port-based QoS) allows you to define the QoS configuration on a per-physical-port basis.

### dot1p-priority

Assign a value to the IEEE 802.1p bits on the traffic this interface receives.

**Syntax** dot1p-priority *priority-value*

To delete the IEEE 802.1p configuration on the interface, use the `no dot1p-priority` command.

**Parameters** *priority-value* Enter a value from 0 to 7.

| dot1p    | Queue Number |
|----------|--------------|
| <b>0</b> | 2            |
| <b>1</b> | 0            |
| <b>2</b> | 1            |
| <b>3</b> | 3            |
| <b>4</b> | 4            |
| <b>5</b> | 5            |
| <b>6</b> | 6            |

|                        |                                                                                                                                                               |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Defaults</b>        | none                                                                                                                                                          |
| <b>Command Modes</b>   | INTERFACE                                                                                                                                                     |
| <b>Command History</b> | This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> . |

Version

| Version             | Description                               |

| <b>9.8(0.0P2)</b>   | Introduced on the S3048-ON.               |
| <b>9.7(0.0)</b>     | Introduced on the S6000-ON.               |
| <b>9.2(1.0)</b>     | Introduced on the Z9500.                  |
| <b>9.0.2.0</b>      | Introduced on the S6000.                  |
| <b>8.3.19.0</b>     | Introduced on the S4820T.                 |
| <b>8.3.11.1</b>     | Introduced on the Z9000.                  |
| <b>8.3.7.0</b>      | Introduced on the S4810.                  |
| <b>7.5.1.0</b>      | Introduced on the C-Series.               |
| <b>pre- 6.1.1.1</b> | Introduced on the E-Series.               |

|                          |                                                                                                                                                                                                                             |
|--------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Usage Information</b> | The <code>dot1p-priority</code> command changes the priority of incoming traffic on the interface. The system places traffic marked with a priority in the correct queue and processes that traffic according to its queue. |
|--------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

When you set the priority for a port channel, the physical interfaces assigned to the port channel are configured with the same value. You cannot assign the `dot1p-priority` command to individual interfaces in a port channel.

## rate police

Police the incoming traffic rate on the selected interface.

|               |                                                                                                             |
|---------------|-------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b> | <code>rate police [kbps] committed-rate [burst-KB] [peak [kbps] peak-rate [burst-KB]] [vlan vlan-id]</code> |
|---------------|-------------------------------------------------------------------------------------------------------------|

|                   |                       |                                                                                                                                                                                      |
|-------------------|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Parameters</b> | <b>kbps</b>           | Enter the keyword <code>kbps</code> to specify the rate limit in Kilobits per second (Kbps). The range is from 0 to 40000000. The default granularity is Megabits per second (Mbps). |
|                   | <b>committed-rate</b> | Enter the bandwidth in Mbps. The range is from 0 to 40000.                                                                                                                           |
|                   | <b>burst-KB</b>       | (OPTIONAL) Enter the burst size in KB. The range is from 16 to 200000. The default is <b>50</b> .                                                                                    |
|                   | <b>peak peak-rate</b> | (OPTIONAL) Enter the keyword <code>peak</code> then a number to specify the peak rate in Mbps. The range is from 0 to 40000.                                                         |

**vlan *vlan-id*** (OPTIONAL) Enter the keyword `vlan` then a VLAN ID to police traffic to those specific VLANs. The range is from 1 to 4094.

**Defaults** Granularity for `committed-rate` and `peak-rate` is Mbps unless you use the `kbps` option.

**Command Modes** INTERFACE

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                                                                 |
|-------------------|-----------------------------------------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON.                                   |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                                                    |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.                                                 |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.                                             |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.                                                 |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.                                                 |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                                                 |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.                                                 |

| <b>9.0.2.0</b>    | Introduced on the S6000.                                                    |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                                                   |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                                                    |
| <b>8.3.7.0</b>    | Introduced on the S4810.                                                    |
| <b>8.2.1.0</b>    | Added the <code>kbps</code> option on the C-Series, E-Series, and S-Series. |
| <b>7.6.1.0</b>    | Introduced on the S-Series.                                                 |
| <b>7.5.1.0</b>    | Introduced on the C-Series.                                                 |
| <b>6.1.1.1</b>    | Introduced on the E-Series.                                                 |

**Usage Information**

 **NOTE:** Per Port rate police is supported for Layer 2 tagged and untagged switched traffic and for Layer 3 traffic. Per VLAN rate police is supported on only tagged ports with Layer 2 switched traffic.

**S-Series**

## rate-shape

Shape the traffic output on the selected interface.

**Syntax** `rate shape [kbps] rate [burst-KB]`

**Parameters**

**kbps** Enter the keyword `kbps` to specify the rate limit in Kilobits per second (Kbps). Enter the value in multiples of 64. The range is from 0 to 40000000. The default granularity is Megabits per second (Mbps).

**rate** The range is from 10 to 40000.

**burst-KB** (OPTIONAL) Enter the burst size in KB. The range is from 0 to 10000. The default is **50**.

**Defaults** Granularity for rate is **Mbps** unless you use the `kbps` option.

**Command Modes** INTERFACE

## Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                                    |
|------------|----------------------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.                      |
| 9.10(0.0)  | Introduced on the S3148.                                       |
| 9.10(0.0)  | Introduced on the S6100-ON.                                    |
| 9.8(2.0)   | Introduced on the S3100 series.                                |
| 9.8(1.0)   | Introduced on the Z9100-ON.                                    |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                    |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                    |
| 9.7(0.0)   | Introduced on the S6000-ON.                                    |
| 9.2(1.0)   | Introduced on the Z9500.                                       |
| 9.0.2.0    | Introduced on the S6000.                                       |
| 8.3.19.0   | Introduced on the S4820T.                                      |
| 8.3.11.1   | Introduced on the Z9000.                                       |
| 8.3.7.0    | Introduced on the S4810.                                       |
| 8.2.1.0    | Added the kbps option on the C-Series, E-Series, and S-Series. |
| 7.6.1.0    | Introduced on the S-Series and C-Series.                       |
| 6.1.1.1    | Introduced on the E-Series.                                    |

## Usage Information

If traffic is shaped between 64 and 1000 Kbs, for some values, the shaped rate is much less than the value configured.

On 40-port 10G linecard if the traffic is shaped between 64 and 1000 Kbs, for some values, the shaped rate is much less than the value configured.

 **NOTE:** When packets of size greater than 7000 bytes are expected to be received from the network, Dell EMC Networking recommends that you configure the burst value to be more than 175 KB if you configured the rate shape. Such a setting ensures proper bandwidth sharing across queues.

## Related Commands

- [rate-shape](#) — shapes traffic output as part of the designated policy.

## strict-priority unicast

Configure a unicast queue as a strict-priority (SP) queue.

### Syntax

```
strict-priority unicast number
```

### Parameters

**unicast *number*** Enter the keyword `unicast` then the queue number. The range is from 1 to 7.

### Defaults

none

### Command Modes

CONFIGURATION

## Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                               |
|-----------|-------------------------------------------|
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0) | Introduced on the S3148.                  |

| Version    | Description                     |
|------------|---------------------------------|
| 9.8(2.0)   | Introduced on the S3100 series. |
| 9.8(0.0P5) | Introduced on the S4048-ON.     |
| 9.8(0.0P2) | Introduced on the S3048-ON.     |
| 9.7(0.0)   | Introduced on the S6000-ON.     |
| 9.2(1.0)   | Introduced on the Z9500.        |
| 9.0.2.0    | Introduced on the S6000.        |
| 8.3.19.0   | Introduced on the S4820T.       |
| 8.3.11.1   | Introduced on the Z9000.        |
| 8.3.7.0    | Introduced on the S4810.        |
| 7.6.1.0    | Introduced on the S-Series.     |
| 7.5.1.0    | Introduced on the C-Series.     |
| 6.1.1.1    | Introduced on the E-Series.     |

#### Usage Information

After you configure a unicast queue as strict-priority, that particular queue, on the entire chassis, is treated as a `strict-priority unicast`. Traffic for a strict priority is scheduled before any other queues are serviced. For example, if you send 100% line rate traffic over the SP queue, it starves all other queues on the ports on which this traffic is flowing.

## Policy-Based QoS Commands

Policy-based traffic classification is handled with class maps. These maps classify unicast traffic into one of four classes. The system allows eight classes in S-Series or eight classes in case of S6000. Dell EMC Networking OS enables you to match multiple class maps and specify multiple match criteria. Policy-based QoS is not supported on logical interfaces, such as port-channels, VLANs, or loopbacks.

### bandwidth-percentage

Assign a percentage of weight to the class/queue.

#### Z9500

|                        |                                                                                                                                                               |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | <code>bandwidth-percentage percentage</code><br>To remove the bandwidth percentage, use the <code>no bandwidth-percentage</code> command.                     |
| <b>Parameters</b>      | <b><i>percentage</i></b> Enter the percentage assignment of bandwidth to the class/queue. The range is from 1 to 100% (granularity 1%).                       |
| <b>Defaults</b>        | none                                                                                                                                                          |
| <b>Command Modes</b>   | CONFIGURATION (conf-qos-policy-out)                                                                                                                           |
| <b>Command History</b> | This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> . |

| Version   | Description                               |
|-----------|-------------------------------------------|
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0) | Introduced on the S3148.                  |
| 9.10(0.0) | Introduced on the S6100-ON.               |

| Version           | Description                     |
|-------------------|---------------------------------|
| <b>9.8(2.0)</b>   | Introduced on the S3100 series. |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.     |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.     |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.     |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.     |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.        |
| <b>9.0.2.0</b>    | Introduced on the S6000.        |
| <b>8.3.1.9.0</b>  | Introduced on the S4820T.       |
| <b>8.3.11.1</b>   | Introduced on the Z9000.        |
| <b>8.3.7.0</b>    | Introduced on the S4810.        |
| <b>6.2.1.1</b>    | Introduced on the E-Series.     |

#### Usage Information

The unit of bandwidth percentage is 1%. If the sum of the bandwidth percentages given to all eight classes exceeds 100%, the bandwidth percentage automatically scales down to 100%.

#### Related Commands

- [qos-policy-output](#) — creates a QoS output policy.

## class-map

Create/access a class map. Class maps differentiate traffic so that you can apply separate quality-of-service policies to each class.

#### Syntax

```
class-map {match-all | match-any} class-map-name [cpu-qos] [layer2]
```

#### Parameters

|                       |                                                                                                                                                                                                                                     |
|-----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>match-all</b>      | Determines how packets are evaluated when multiple match criteria exist. Enter the keywords <code>match-all</code> to determine that the packets must meet all the match criteria in order to be a member of the class.             |
| <b>match-any</b>      | Determines how packets are evaluated when multiple match criteria exist. Enter the keywords <code>match-any</code> to determine that the packets must meet at least one of the match criteria in order to be a member of the class. |
| <b>class-map-name</b> | Enter a name of the class for the class map in a character format (32 character maximum).                                                                                                                                           |
| <b>cpu-qos</b>        | Enter the keyword <code>cpu-qos</code> to assign this Class Map to control plane traffic only (CoPP).                                                                                                                               |
| <b>layer2</b>         | Enter the keyword <code>layer2</code> to specify a Layer 2 Class Map. The default is <b>Layer 3</b> .                                                                                                                               |

| <b>8.3.7.0</b>    | Introduced on the S4810.                                                             |
| <b>8.2.1.0</b>    | Class-map names can be 32 characters. Layer2 available on the C-Series and S-Series. |
| <b>7.6.1.0</b>    | Introduced on the S-Series.                                                          |
| <b>7.5.1.0</b>    | Introduced on the C-Series.                                                          |
| <b>7.4.1.0</b>    | E-Series Only: Expanded to add support for Layer 2.                                  |

### Usage Information

Packets arriving at the input interface are checked against the match criteria and configured using this command to determine if the packet belongs to that class. This command accesses CLASS-MAP mode, where the configuration commands include the `match ip` and `match mac` options.

When you create a class map to filter protocol traffic for CoPP, you must enter the keyword `cpu-qos`.

### Related Commands

- [ip access-list extended](#) — configures an extended IP ACL.
- [ip access-list standard](#) — configures a standard IP ACL.
- [match ip access-group](#) — configures the match criteria based on the access control list (ACL).
- [match ip precedence](#) — identifies the IP precedence values as match criteria.
- [match ip dscp](#) — configures the match criteria based on the DSCP value.
- [match mac access-group](#) — configures a match criterion for a class map based on the contents of the designated MAC ACL.
- [match mac dot1p](#) — configures a match criterion for a class map based on a dot1p value.
- [match mac vlan](#) — configures a match criterion for a class map based on VLAN ID.
- [service-queue](#) — assigns a class map and QoS policy to different queues.
- [show qos class-map](#) — views the current class map information.

## clear qos statistics

Clear qos statistics clears statistics from show qos statistics.

### Z9500

#### Syntax

```
clear qos statistics interface-name
```

#### Parameters

***interface-name***

Enter one of the following keywords:

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

#### Defaults

none

#### Command Modes

- EXEC
- EXEC Privilege

## Command History

**Related Commands**

- [policy-map-input](#) — creates an input policy map.
- [policy-map-output](#) — creates an output policy map.
- [qos-policy-input](#) — creates an input QoS-policy on the router.
- [qos-policy-output](#) — creates an output QoS-policy on the router.
- [wred-profile](#) — creates a WRED profile.

## match ip access-group

Configure match criteria for a class map, based on the access control list (ACL).

**NOTE:** IPv6 class-maps and IP-any class-maps do not match. This condition is true for IPv6 and IP-any class-maps on both ACLs as well as VLANs.

**Syntax** `[seq sequence number] match ip access-group access-group-name [set-ip-dscp value | set-color value]`

To remove ACL match criteria from a class map, use the `no [seq sequence number] match ip access-group access-group-name [set-ip-dscp value | set-color value]` command.

**Parameters**

- seq sequence number** (OPTIONAL) Enter the keyword `seq` then the sequence number. The range is from 1 to 100. By default, the sequence number are assigned in multiples of five.
- access-group-name** Enter the ACL name whose contents are used as the match criteria in determining if packets belong to the class the class-map specifies.
- set-ip-dscp value** (OPTIONAL) Enter the keywords `set-ip-dscp` then the IP DSCP value. The matched traffic is marked with the DSCP value. The range is from 0 to 63.
- set-color value** (Optional) Enter the keyword `set-color` followed by a color value. Traffic that fulfills the match criteria is marked with the color value that you specify. The default value is Yellow.

**Defaults** none

| 8.3.11.1   | Introduced on the Z9000.                                               |
| 8.3.11.1   | Introduced on the Z9000.                                               |
| 8.3.7.0    | Introduced on the S4810.                                               |
| 7.7.1.0    | Added the DSCP Marking option support on the S-Series.                 |
| 7.6.1.0    | Introduced on the S-Series.                                            |
| 7.5.1.0    | Introduced on the C-Series; added support for the DSCP Marking option. |
| 6.1.1.1    | Introduced on the E-Series.                                            |

#### Usage Information

To access this command, enter the `class-map` command. After the class map is identified, you can configure the match criteria. For `class-map match-any`, a maximum of five ACL match criteria are allowed. For `class-map match-all`, only one ACL match criteria is allowed.

#### Related Commands

- `class-map` — identifies the class map.

## match ip dscp

Use a differentiated services code point (DSCP) value as a match criteria.

#### Syntax

```
[seq sequence number] match {ip | ipv6 | ip-any} dscp dscp-list [set-ip-dscp value]
```

To remove a DSCP value as a match criteria, use the `no [seq sequence number] match {ip | ipv6 | ip-any} dscp dscp-list [[multicast] set-ip-dscp value]` command.

#### Parameters

|                                   |                                                                                                                                                                                                 |
|-----------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>seq <i>sequence number</i></b> | (OPTIONAL) Enter the keyword <code>seq</code> then the sequence number. The range is from 1 to 100. By default, the sequence number are assigned in multiples of five.                          |
| <b>ip</b>                         | Enter the keyword <code>ip</code> to support IPv4 traffic.                                                                                                                                      |
| <b>ipv6</b>                       | Enter the keyword <code>ipv6</code> to support IPv6 traffic.                                                                                                                                    |
| <b>ip-any</b>                     | Enter the keyword <code>ip-any</code> to support IPv4 and IPv6 traffic.                                                                                                                         |
| <b><i>dscp-list</i></b>           | Enter the IP DSCP values that is to be the match criteria. Separate values by commas — no spaces ( 1,2,3 ) or indicate a list of values separated by a hyphen (1-3). The range is from 0 to 63. |
| <b>set-ip-dscp <i>value</i></b>   | (OPTIONAL) Enter the keywords <code>set-ip-dscp</code> then the IP DSCP value. The matched traffic is marked with the DSCP value. The range is from 0 to 63.                                    |

#### Defaults

none

| 9.8(2.0)   | Introduced on the S3100 series.                                                                                    |
| 9.8(1.0)   | Introduced on the Z9100-ON.                                                                                        |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                                                                        |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                                                                        |
| 9.7(0.0)   | Introduced on the S6000-ON.                                                                                        |
| 9.5(0.0)   | Added the <b>ipv6</b> and <b>ip-any</b> options on the Z9000, S6000, S4820T, S4810, MXL.                           |
| 9.2(1.0)   | Introduced on the Z9500.                                                                                           |
| 9.0.2.0    | Introduced on the S6000.                                                                                           |
| 8.3.19.0   | Introduced on the S4820T.                                                                                          |
| 8.3.11.1   | Introduced on the Z9000.                                                                                           |
| 8.3.7.0    | Introduced on the S4810.                                                                                           |
| 7.7.1.0    | Added the keyword <code>multicast</code> ; added the DSCP Marking option support on the S-Series.                  |
| 7.6.1.0    | Introduced on the S-Series.                                                                                        |
| 7.5.1.0    | Introduced on the C-Series; added support for the DSCP Marking option.                                             |
| 6.2.1.1    | Introduced on the E-Series.                                                                                        |

## Usage Information

To access this command, enter the `class-map` command. After the class map is identified, you can configure the match criteria.

The `match ip dscp` and `match ip precedence` commands are mutually exclusive.

Up to 64 IP DSCP values can be matched in one match statement. For example, to indicate IP DSCP values 0 1 2 3 4 5 6 7, enter either the `match ip dscp 0,1,2,3,4,5,6,7` or `match ip dscp 0-7` command.

 **NOTE:** Only one of the IP DSCP values must be a successful match criterion, not all of the specified IP DSCP values must match.

## Related Commands

- `class-map` — identifies the class map.

## match ip precedence

Use IP precedence values as a match criteria.

### Syntax

```
[seq sequence number] match {ip | ipv6 | ip-any} precedence ip-precedence-list [set-ip-dscp value]
```

To remove IP precedence as a match criteria, use the `no match {ip | ipv6 | ip-any} precedence ip-precedence-list [[multicast] set-ip-dscp value]` command.

|                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.                                                                                        |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.                                                                                    |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.                                                                                        |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.                                                                                        |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                                                                                        |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.                                                                                        |
| <b>9.5(0.1)</b>   | Introduced on the Z9500.                                                                                           |
| <b>9.5(0.0)</b>   | Added support for the <code>ipv6</code> and <code>ip-any</code> options on the Z9000, S6000, S4820T, S4810, MXL.   |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                                                                                           |
| <b>9.0.2.0</b>    | Introduced on the S6000.                                                                                           |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                                                                                          |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                                                                                           |
| <b>8.3.7.0</b>    | Introduced on the S4810.                                                                                           |
| <b>7.7.1.0</b>    | Added the keyword <code>multicast</code> . Added support for the DSCP Marking option for the S-Series.             |
| <b>7.6.1.0</b>    | Introduced on the S-Series.                                                                                        |
| <b>7.5.1.0</b>    | Introduced on the C-Series. Added support for the DSCP Marking option.                                             |
| <b>6.1.1.1</b>    | Introduced on the E-Series.                                                                                        |

**Usage Information** To access this command, enter the `class-map` command. After the class map is identified, you can configure the match criteria.

The `match ip precedence` command and the `match ip dscp` command are mutually exclusive.

Up to eight precedence values can be matched in one match statement. For example, to indicate the IP precedence values 0 1 2 3, enter either the `match ip precedence 0-3` or `match ip precedence 0,1,2,3` command.

**NOTE:** Only one of the IP precedence values must be a successful match criterion, not all of the specified IP precedence values must match.

#### Related Commands

- `class-map` — identifies the class map.

## match ip vlan

Uses a VLAN as the match criterion for an L3 class map.

**Syntax** `[seq sequence number] match ip vlan vlan-id` To remove VLAN as the match criterion, use the `no [seq sequence number] match ip vlan vlan-id` command.

**Parameters**

|                            |                                                                                                                                                                        |
|----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>seq sequence number</b> | (OPTIONAL) Enter the keyword <code>seq</code> then the sequence number. The range is from 1 to 100. By default, the sequence number are assigned in multiples of five. |
| <b>vlan vlan-id</b>        | Enter the keyword <code>vlan</code> and then the ID of the VLAN. The range is from 1 to 4094.                                                                          |

**Defaults** None.

**Command Modes** CONF-CLASS-MAP

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                                                                                        |
|------------|--------------------------------------------------------------------------------------------------------------------|
| 9.12(0.0)  | Introduced the <code>seq</code> option for the <code>class-map</code> on all the Dell EMC Networking OS platforms. |
| 9.10(0.0)  | Introduced on the S3148.                                                                                           |
| 9.8(2.0)   | Introduced on the S3100 series.                                                                                    |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                                                                        |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                                                                        |
| 9.7(0.0)   | Introduced on the S6000-ON.                                                                                        |
| 9.5(0.1)   | Introduced on the Z9500.                                                                                           |
| 9.4.(0.0)  | Introduced on the S-Series and Z-Series.                                                                           |

**Usage Information** To access this command, enter the `class-map` command. After the class map is identified, you can configure the match criteria.

Use this command to match an IP class-map against a single VLAN ID .

#### Related Commands

- `class-map` — identifies the class map.

## match mac access-group

Configure a match criterion for a class map, based on the contents of the designated MAC ACL.

**Syntax** `[seq sequence number] match mac access-group {mac-acl-name}`

**Parameters** **mac-acl-name** Enter a MAC ACL name. Its contents is used as the match criteria in the class map.

**Defaults** none

**Command Modes** CLASS-MAP

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| 9.10(0.0)  | Introduced on the S3148.                                                                 |
| 9.10(0.0)  | Introduced on the S6100-ON.                                                              |
| 9.8(2.0)   | Introduced on the S3100 series.                                                          |
| 9.8(1.0)   | Introduced on the Z9100-ON.                                                              |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                                              |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                                              |
| 9.7(0.0)   | Introduced on the S6000-ON.                                                              |
| 9.2(1.0)   | Introduced on the Z9500.                                                                 |
| 9.0.2.0    | Introduced on the S6000.                                                                 |
| 8.3.19.0   | Introduced on the S4820T.                                                                |
| 8.3.11.1   | Introduced on the Z9000.                                                                 |
| 8.3.7.0    | Introduced on the S4810.                                                                 |
| 8.2.1.0    | Available on the C-Series and S-Series.                                                  |
| 7.5.1.0    | Added support for the DSCP Marking option.                                               |
| 7.4.1.0    | Introduced on the E-Series.                                                              |

#### Usage Information

To access this command, enter the class-map command. After the class map is identified, you can configure the match criteria.

#### Related Commands

- [class-map](#) — identifies the class map.

## match mac dot1p

Configure a match criterion for a class map based on a dot1p value.

**Syntax** `[seq sequence number] match mac dot1p {dot1p-list}`

**Parameters**

|                            |                                                                                                                                                           |
|----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>seq sequence number</b> | (OPTIONAL) Enter the keyword seq then the sequence number. The range is from 1 to 100. By default, the sequence number are assigned in multiples of five. |
| <b>dot1p-list</b>          | Enter a dot1p value. The range is from 0 to 7.                                                                                                            |

**Defaults** none

## match mac vlan

Configure a match criterion for a class map based on VLAN ID.

**Syntax** `[seq sequence number] match mac vlan number`

**Parameters**

|            |                        |                                                                                                                                                                        |
|------------|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>seq</b> | <b>sequence number</b> | (OPTIONAL) Enter the keyword <code>seq</code> then the sequence number. The range is from 1 to 100. By default, the sequence number are assigned in multiples of five. |
|            | <b>number</b>          | Enter the VLAN ID. The range is from 1 to 4094.                                                                                                                        |

**Defaults** none

| 9.8(1.0)   | Introduced on the Z9100-ON.                                                                                        |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                                                                        |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                                                                        |
| 9.7(0.0)   | Introduced on the S6000-ON.                                                                                        |
| 9.2(1.0)   | Introduced on the Z9500.                                                                                           |

| Version  | Description               |
|----------|---------------------------|
| 9.0.2.0  | Introduced on the S6000.  |
| 8.3.19.0 | Introduced on the S4820T. |
| 8.3.11.1 | Introduced on the Z9000.  |
| 8.3.7.0  | Introduced on the S4810.  |
| 8.2.1.0  | Introduced.               |

#### Usage Information

To access this command, enter the `class-map` command. You can match against only one VLAN ID.

#### Related Commands

- [class-map](#) — identifies the class map.

## policy-aggregate

Allow an aggregate method of configuring per-port QoS via policy maps. An aggregate QoS policy is part of the policy map (output) applied on an interface.

### Z9500

#### Syntax

`policy-aggregate qos-policy-name`

To remove a policy aggregate configuration, use the `no policy-aggregate qos-policy-name` command.

#### Parameters

***qos-policy-name*** Enter the name of the policy map in character format (32 characters maximum).

#### Defaults

none

#### Command Modes

CONFIGURATION (policy-map-input and policy-map-output)

#### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                          |
|------------|------------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.            |
| 9.10(0.0)  | Introduced on the S3148.                             |
| 9.10(0.0)  | Introduced on the S6100-ON.                          |
| 9.8(2.0)   | Introduced on the S3100 series.                      |
| 9.8(1.0)   | Introduced on the Z9100-ON.                          |
| 9.8(0.0P5) | Introduced on the S4048-ON.                          |
| 9.8(0.0P2) | Introduced on the S3048-ON.                          |
| 9.7(0.0)   | Introduced on the S6000-ON.                          |
| 9.2(1.0)   | Introduced on the Z9500.                             |
| 9.0.2.0    | Introduced on the S6000.                             |
| 8.3.19.0   | Introduced on the S4820T.                            |
| 8.3.11.1   | Introduced on the Z9000.                             |
| 8.3.7.0    | Introduced on the S4810.                             |
| 8.2.1.0    | Policy name character limit increased from 16 to 32. |
| 7.6.1.0    | Introduced on the S-Series.                          |

| Version | Description                 |
|---------|-----------------------------|
| 7.5.1.0 | Introduced on the C-Series. |
| 6.1.1.1 | Introduced on the E-Series. |

**Usage Information**

An aggregate output QoS policy applies to all outbound port traffic. An aggregate output QoS policy can coexist with per-queue output QoS policies. If the rate shape exists in both aggregate and per-queue qos-policy, minimum of 2 take effect. Some of all Queue-rate will not exceed aggregate.

**Related Commands**

- [policy-map-input](#) — creates an input policy map.
- [policy-map-output](#) — creates an output policy map.

## policy-map-input

Create an input policy map.

### Z9500

**Syntax**

```
policy-map-input policy-map-name cpu-qos | [layer2] [cpu-qos]
```

To remove an input policy map, use the `no policy-map-input policy-map-name cpu-qos | [layer2] [cpu-qos]` command.

**Parameters**

- policy-map-name*** Enter the name of the `policy map` in character format (32 characters maximum).
- cpu-qos*** Enter the `cpu-qos` keyword to assign this ACL to control plane traffic only.
- layer2** (OPTIONAL) Enter the keyword `layer2` to specify a Layer 2 Class Map. The default is **Layer 3**.
- cpu-qos** (OPTIONAL) Enter the keyword `cpu-qos` to create an input policy to be used to rate-limit control-plane traffic (CoPP).

**Defaults**

**Layer 3**

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |

| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |

| Version | Description                                          |
|---------|------------------------------------------------------|
| 8.2.1.0 | Policy name character limit increased from 16 to 32. |
| 7.6.1.0 | Introduced on the S-Series.                          |
| 7.5.1.0 | Introduced on the C-Series.                          |
| 7.4.1.0 | Expanded to add support for Layer 2.                 |
| 6.1.1.1 | Introduced on the E-Series.                          |

#### Usage Information

The input policy map is used to classify incoming traffic to different flows using class-map, QoS policy, or incoming packets DSCP. This command enables Policy-Map-Input Configuration mode (conf-policy-map-in). When you configure an input policy map for CoPP, you must enter the keyword `cpu-qos`.

#### Related Commands

- [service-queue](#) — assigns a class map and QoS policy to different queues.
- [service-policy input](#) — applies an input policy map to the selected interface.

## policy-map-output

Create an output policy map.

### Z9500

#### Syntax

```
policy-map-output policy-map-name
```

To remove a policy map, use the `no policy-map-output policy-map-name` command.

#### Parameters

***policy-map-name*** Enter the name for the policy map in character format (32 characters maximum).

#### Defaults

none

#### Command Modes

CONFIGURATION

#### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                          |
|------------|------------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.            |
| 9.10(0.0)  | Introduced on the S3148.                             |
| 9.10(0.0)  | Introduced on the S6100-ON.                          |
| 9.8(2.0)   | Introduced on the S3100 series.                      |

| 9.7(0.0)   | Introduced on the S6000-ON.                          |
| 9.2(1.0)   | Introduced on the Z9500.                             |
| 9.0.2.0    | Introduced on the S6000.                             |
| 8.3.19.0   | Introduced on the S4820T.                            |
| 8.3.11.1   | Introduced on the Z9000.                             |
| 8.3.7.0    | Introduced on the S4810.                             |
| 8.2.1.0    | Policy name character limit increased from 16 to 32. |
| 7.6.1.0    | Introduced on the C-Series and S-Series.             |

| Version | Description                 |
|---------|-----------------------------|
| 6.1.1.1 | Introduced on the E-Series. |

**Usage Information**

To assign traffic to different flows using QoS policy, use the Output Policy map. This command enables Policy-Map-Output Configuration mode (conf-policy-map-out).

**Related Commands**

- [service-queue](#) — assigns a class map and QoS policy to different queues.
- [policy-aggregate](#) — allows an aggregate method of configuring per-port QoS using policy maps.
- [service-policy output](#) — applies an output policy map to the selected interface.

## qos-policy-input

Create a QoS input policy on the router.

**Syntax**

```
qos-policy-input qos-policy-name cpu-qos | layer2
```

To remove an existing input QoS policy from the router, use the `no qos-policy-input qos-policy-name cpu-qos | layer2` command.

**Parameters**

- qos-policy-name** Enter the name for the policy map in character format (32 characters maximum).
- cpu-qos** (OPTIONAL) Enter the keyword `cpu-qos` keyword to assign this ACL to control plane traffic only.
- layer2** (OPTIONAL) Enter the keyword `layer2` to specify a Layer 2 Class Map. The default is **Layer 3**.

**Defaults**

**Layer 3**

| 8.3.19.0   | Introduced on the S4820T.                            |
| 8.3.11.1   | Introduced on the Z9000.                             |
| 8.3.7.0    | Introduced on the S4810.                             |
| 8.2.1.0    | Policy name character limit increased from 16 to 32. |
| 7.6.1.0    | Introduced on the C-Series and S-Series.             |
| 7.5.1.0    | Introduced on the C-Series.                          |
| 6.1.1.1    | Introduced on the E-Series.                          |

## Usage Information

Use this command to specify the name of the input QoS policy. Once input policy is specified, rate-police can be defined. This command enables the qos-policy-input configuration mode— (conf-qos-policy-in).

When changing a Service-Queue configuration in a QoS policy map, all QoS rules are deleted and re-added automatically to ensure that the order of the rules is maintained. As a result, the Matched Packets value shown in the `show qos statistics` command is reset.

If you create create a QoS input policy to be used for CoPP, you must enter the keyword `cpu-qos` .

## Related Commands

- [rate police](#) — incoming traffic policing function.

# qos-policy-output

Create a QoS output policy.

## Syntax

```
qos-policy-output qos-policy-name
```

To remove an existing output QoS policy, use the `no qos-policy-output qos-policy-name` command.

## Parameters

***qos-policy-name*** Enter your output QoS policy name in character format (32 characters maximum).

## Defaults

none

## Command Modes

CONFIGURATION

| 8.3.7.0    | Introduced on the S4810.                             |
| 8.2.1.0    | Policy name character limit increased from 16 to 32. |
| 7.6.1.0    | Introduced on the C-Series and S-Series.             |
| 6.1.1.1    | Introduced on the E-Series.                          |

## Usage Information

Use this command to specify the name of the output QoS policy. Once output policy is specified, rate-shape, scheduler strict, bandwidth-percentage, and WRED can be defined. This command enables the qos-policy-output configuration mode—(conf-qos-policy-out).

## Related Commands

- [bandwidth-percentage](#) — assigns percentage of bandwidth to the class/queue.
- [wred](#) — assigns yellow or green drop precedence.

# rate-police

Specify the policing functionality on incoming traffic.

**Syntax** `rate-police [kbps] committed-rate [burst-KB] [peak [kbps] peak-rate [burst-KB]]`

**Parameters**

- kbps** Enter the keyword `kbps` to specify the rate limit in Kilobits per second (Kbps). Make the following value a multiple of 64. The range is from 0 to 40000000. The default granularity is Megabits per second (Mbps).
- committed-rate** Enter the bandwidth in Mbps. The range is from 0 to 40000.
- burst-KB** (OPTIONAL) Enter the burst size in KB. The range is from 16 to 200000. The default is **100**.
- peak peak-rate** (OPTIONAL) Enter the keyword `peak` then a number to specify the peak rate in Mbps. The range is from 0 to 40000. The default is the same as designated for `committed-rate`.

**Defaults** Burst size is 100KB. `peak-rate` is by default the same as `committed-rate`. Granularity for `committed-rate` and `peak-rate` is Mbps unless you use the `kbps` option.

**Command Modes** QOS-POLICY-IN

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| 8.3.7.0    | Introduced on the S4810.                                                    |
| 8.2.1.0    | Added the <code>kbps</code> option on the C-Series, E-Series, and S-Series. |
| 7.6.1.0    | Introduced on the S-Series.                                                 |
| 7.5.1.0    | Introduced on the C-Series.                                                 |
| 6.1.1.1    | Introduced on the E-Series.                                                 |

**Usage Information** The default burst size is 100Kb. If a different value is required, you must configure the burst size to the required value.

**Related Commands**

- [rate police](#) — specifies traffic policing on the selected interface.
- [qos-policy-input](#) — creates a QoS output policy.

# rate-shape

Shape traffic output as part of the designated policy.

**Syntax** `rate-shape [kbps | pps] peak-rate [burst-kbps | burst-packets] committed [kbps | pps] committed-rate [burst-kbps | burst-packets]`

**Parameters**

- pps** Enter the keyword `pps` to specify the rate limit in packets per second (pps).
- kbps** Enter the keyword `kbps` to specify the rate limit in Kilobits per second (Kbps). Make the following value a multiple of 64. The range is from 0 to 40000000. The default granularity is Megabits per second (Mbps).
- burst-kbps** (OPTIONAL) Enter the burst size in KB. The range is from 0 to 40000. The default is **100**.
- burst-packets** Enter the peak rate or committed rate burst size in packets per seconds.

**Defaults** Burst size is 10KB. Granularity for rate is Mbps unless you use the `kbps` option.

**Command Modes** QOS-POLICY-OUT

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                                                 |
|------------|-----------------------------------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.                                   |
| 9.10(0.0)  | Introduced on the S3148.                                                    |
| 9.10(0.0)  | Introduced on the S6100-ON.                                                 |
| 9.8(2.0)   | Introduced on the S3100 series.                                             |
| 9.8(1.0)   | Introduced on the Z9100-ON.                                                 |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                                 |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                                 |
| 9.7(0.0)   | Introduced on the S6000-ON.                                                 |
| 9.2(1.0)   | Introduced on the Z9500.                                                    |
| 9.0.2.0    | Introduced on the S6000.                                                    |
| 8.3.19.0   | Introduced on the S4820T.                                                   |
| 8.3.11.1   | Introduced on the Z9000.                                                    |
| 8.3.7.0    | Introduced on the S4810.                                                    |
| 8.2.1.0    | Added the <code>kbps</code> option on the C-Series, E-Series, and S-Series. |
| 7.6.1.0    | Introduced on the S-Series.                                                 |
| 7.5.1.0    | Introduced on the C-Series.                                                 |
| 6.1.1.1    | Introduced on the E-Series.                                                 |

**Usage Information** On 40-port 10G linecard if the traffic is shaped between 64 and 1000 Kbs, for some values, the shaped rate is much less than the value configured. You must configure the peak rate and peak burst size using the same value: kilobits or packets per second. Similarly, you must configure the committed rate and committed burst size with the same measurement. Peak rate refers to the maximum rate for traffic arriving or exiting an interface under normal traffic conditions. Peak burst size indicates the maximum size of unused peak bandwidth that is aggregated. This aggregated bandwidth enables brief durations of burst traffic that exceeds the peak rate and committed burst. Committed rate refers to the guaranteed bandwidth for traffic entering or leaving the interface under normal network conditions. When traffic propagates at an average rate that is less than or equal to the committed rate, it is considered to be green-colored or coded. When the transmitted traffic falls below the committed rate, the bandwidth, which is not used by any traffic that is traversing the network, is aggregated to form the committed burst

size. Traffic is considered to be green-colored up to the point at which the unused bandwidth does not exceed the committed burst size.

**Related  
Commands**

- [rate shape](#) — shapes traffic output as part of the designated policy.
- [qos-policy-output](#) — creates a QoS output policy.

## service-policy input

Apply an input policy map to the selected interface.

### Z9500

**Syntax**

```
service-policy input policy-map-name [layer2]
```

To remove the input policy map from the interface, use the `no service-policy input policy-map-name [layer2]` command.

**Parameters**

- policy-map-name*** Enter the name for the policy map in character format (32 characters maximum). You can identify an existing policy map or name one that does not yet exist.
- layer2** (OPTIONAL) Enter the keyword `layer2` to specify a Layer 2 Class Map. The default is **Layer 3**.

**Defaults**

**Layer 3**

**Command Modes**

INTERFACE

**Command  
History**

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| 7.5.1.0    | Introduced on the C-Series.                         |
| 7.4.1.0    | E-Series Only: Expanded to add support for Layer 2. |
| 6.1.1.1    | Introduced on the E-Series.                         |

**Usage  
Information**

You can attach a single policy-map to one or more interfaces to specify the service-policy for those interfaces. A policy map attached to an interface can be modified.

**NOTE:** The `service-policy` commands are not allowed on a port channel. The `service-policy input policy-map-name` command and the `service-class dynamic dot1p` command are not allowed simultaneously on an interface. However, the `service-policy input` command (without the `policy-map-name` option) and the `service-class dynamic dot1p` command are allowed on an interface.

#### Related Commands

- [policy-map-input](#) — creates an input policy map.

## service-policy output

Apply an output policy map to the selected interface.

### Z9500

#### Syntax

```
service-policy output policy-map-name
```

To remove the output policy map from the interface, use the `no service-policy output policy-map-name` command.

#### Parameters

***policy-map-name*** Enter the name for the policy map in character format (32 characters maximum). You can identify an existing policy map or name one that does not yet exist.

#### Defaults

none

**Command Modes** INTERFACE

| <b>6.1.1.1</b>    | Introduced on the E-Series.               |

#### Usage Information

A single policy-map can be attached to one or more interfaces to specify the service-policy for those interfaces. A policy map attached to an interface can be modified.

#### Related Commands

- [policy-map-output](#) — creates an output policy map.

# service-queue

Assign a class map and QoS policy to different queues.

## Z9500

**Syntax** `service-queue queue-id [class-map class-map-name] [qos-policy qos-policy-name]`

To remove the queue assignment, use the `no service-queue queue-id [class-map class-map-name] [qos-policy qos-policy-name]` command.

**Parameters**

|                                   |                                                                                                                                                                                                                                                                                                                |
|-----------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>queue-id</b>                   | Enter the value used to identify a queue. The range is from 0 to 7.                                                                                                                                                                                                                                            |
| <b>class-map class-map-name</b>   | (OPTIONAL) Enter the keyword <code>class-map</code> then the class map name assigned to the queue in character format (32 character maximum).<br><b>NOTE:</b> This option is available under <code>policy-map-input</code> only.                                                                               |
| <b>qos-policy qos-policy-name</b> | (OPTIONAL) Enter the keywords <code>qos-policy</code> then the QoS policy name assigned to the queue in text format (32 characters maximum). This specifies the input QoS policy assigned to the queue under <code>policy-map-input</code> and output QoS policy under <code>policy-map-output</code> context. |

**Defaults** none

**Command Modes** CONFIGURATION (conf-policy-map-in and conf-policy-map-out)

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |

| 9.2(1.0)   | Introduced on the Z9500.                      |
| 9.0.2.0    | Introduced on the S6000.                      |
| 8.3.19.0   | Introduced on the S4820T.                     |
| 8.3.11.1   | Introduced on the Z9000.                      |
| 8.3.7.0    | Introduced on the S4810.                      |
| 8.2.1.0    | Added mac-dot1p on the C-Series and S-Series. |
| 7.6.1.0    | Introduced on the S-Series.                   |
| 7.5.1.0    | Introduced on the C-Series.                   |
| 7.4.1.0    | E-Series Only: Added support for mac-dot1p.   |
| 6.1.1.1    | Introduced on the E-Series.                   |

**Usage Information** After the IP DSCP bit is set, other QoS services can then operate on the bit settings.

## show qos class-map

View the current class map information.

|                   |                                                                               |
|-------------------|-------------------------------------------------------------------------------|
| <b>Syntax</b>     | <code>show qos class-map [class-name]</code>                                  |
| <b>Parameters</b> | <p><b>class-name</b> (Optional) Enter the name of a configured class map.</p> |

**Defaults** none

- Command Modes**
- EXEC
  - EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                                                                         |
|-------------------|-------------------------------------------------------------------------------------|
| <b>9.12(0.0)</b>  | Introduced the <code>seq</code> option on all the Dell EMC Networking OS platforms. |
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON.                                           |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                                                            |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.                                                         |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.                                                     |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.                                                         |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.                                                         |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                                                         |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.                                                         |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                                                            |
| <b>9.0.2.0</b>    | Introduced on the S6000.                                                            |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                                                           |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                                                            |
| <b>8.3.7.0</b>    | Introduced on the S4810.                                                            |
| <b>7.6.1.0</b>    | Introduced on the S-Series.                                                         |
| <b>7.5.1.0</b>    | Introduced on the C-Series.                                                         |
| <b>6.1.1.1</b>    | Introduced on the E-Series.                                                         |

#### Example

```
DellEMC# show qos class-map
Class-map match-any CM
 seq 5 Match ip access-group ACL
DellEMC#
```

- Related Commands**
- [class-map](#) — identifies the class map.

## show qos policy-map

View the QoS policy map information.

### Z9500

**Syntax** `show qos policy-map {summary [interface] | detail}`

- Parameters**
- 9.8(0.0P5)** Introduced on the S4048-ON.
  - 9.8(0.0P2)** Introduced on the S3048-ON.
  - summary** To view a policy map interface summary, enter the keyword `summary` and optionally one of the following keywords and slot/port or number information:
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

**detail**

To view a policy map interface in detail, enter the keyword `detail` and optionally one of the following keywords and slot/port or number information:

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

**Defaults** none

- Command Modes**
- EXEC
  - EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                                             |
|-------------------|---------------------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON.               |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                                |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.                             |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.                         |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.                             |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.                             |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                             |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.                             |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                                |
| <b>9.0.2.0</b>    | Introduced on the S6000.                                |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                               |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                                |
| <b>8.3.7.0</b>    | Introduced on the S4810.                                |
| <b>7.6.1.0</b>    | Introduced on the S-Series.                             |
| <b>7.5.1.0</b>    | Introduced on the C-Series.                             |
| <b>7.4.1.0</b>    | E-Series only: Added <code>trust IPv6 diffserv</code> . |
| <b>6.2.1.1</b>    | Introduced on the E-Series.                             |

**Example (IPv4)**

```
DellEMC# show qos policy-map detail tengigabitethernet 1/1/1

Interface TenGigabitEthernet 4/1/1

Policy-map-input policy
Queue# Class-map-name Qos-policy-name
0 - q0
1 CM1 q1
2 CM2 q2
3 CM3 q3
4 CM4 q4
5 CM5 q5
6 CM6 q6
7 CM7 q7
DellEMC#
```

### Example (IPv6)

```
DellEMC# show qos policy-map detail Tengigabitethernet 1/1/1
Interface TeGigabitEthernet 4/1/1
Policy-map-input pmap1
Queue# Class-map-name Qos-policy-name
0 c0 q0
1 c1 q1
2 c2 q2
3 c3 q3
4 c4 q4
5 c5 -
6 c6 q6
7 c7 q7
DellEMC#
```

### Example (Summary IPv4)

```
DellEMC#sho qos policy-map summary
Interface policy-map-input policy-map-output
Te 4/1 PM1 -
Te 4/2 PM2 PMOut
DellEMC#
```

## show qos policy-map-input

View the input QoS policy map details.

### Z9500

#### Syntax

```
show qos policy-map-input [policy-map-name] [class class-map-name] [qos-policy-input qos-policy-name]
```

#### Parameters

- policy-map-name*** Enter the policy map name.
- class class-map-name*** Enter the keyword `class` then the class map name.
- qos-policy-input qos-policy-name*** Enter the keyword `qos-policy-input` then the QoS policy name.

#### Defaults

none

#### Command Modes

- EXEC
- EXEC Privilege

#### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |

| Version  | Description                               |
|----------|-------------------------------------------|
| 9.7(0.0) | Introduced on the S6000-ON.               |
| 9.2(1.0) | Introduced on the Z9500.                  |
| 9.0.2.0  | Introduced on the S6000.                  |
| 8.3.19.0 | Introduced on the S4820T.                 |
| 8.3.11.1 | Introduced on the Z9000.                  |
| 8.3.7.0  | Introduced on the S4810.                  |
| 7.6.1.0  | Introduced on the S-Series.               |
| 7.5.1.0  | Introduced on the C-Series.               |
| 7.4.1.0  | E-Series Only: Added Trust IPv6 diffserv. |
| 6.1.1.1  | Introduced on the E-Series.               |

#### Example

```
DellEMC# show qos policy-map-input

Policy-map-input PolicyMapInput
Aggregate Qos-policy-name AggPolicyIn
Queue# Class-map-name Qos-policy-name
0 ClassMap1 qosPolicyInput
DellEMC#
```

#### Example

```
DellEMC# show qos policy-map-input

Policy-map-input pmap1
Trust ipv6-diffserv
Queue# Class-map-name Qos-policy-name
0 c0 q0
1 c1 q1
2 c2 q2
3 c3 q3
4 c4 q4
5 c5 -
6 c6 q6
7 c7 q7
DellEMC#
```

## show qos policy-map-output

View the output QoS policy map details.

### Z9500

|                      |                                                                                                                                                                        |

## Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |
| 7.6.1.0    | Introduced on the C-Series and S-Series.  |
| 6.1.1.1    | Introduced on the E-Series.               |

## Example

```
DellEMC# show qos policy-map-output

Policy-map-output PolicyMapOutput
Aggregate Qos-policy-name AggPolicyOut
Queue# Qos-policy-name
 0 qosPolicyOutput
DellEMC#
```

## show qos qos-policy-input

View the input QoS policy details.

### Z9500

**Syntax** `show qos qos-policy-input [qos-policy-name]`

**Parameters** **qos-policy-name** Enter the QoS policy name.

**Defaults** none

**Command Modes**

- EXEC
- EXEC Privilege

## Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                               |
|-----------|-------------------------------------------|
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0) | Introduced on the S3148.                  |
| 9.10(0.0) | Introduced on the S6100-ON.               |

| Version    | Description                     |
|------------|---------------------------------|
| 9.8(2.0)   | Introduced on the S3100 series. |
| 9.8(1.0)   | Introduced on the Z9100-ON.     |
| 9.8(0.0P5) | Introduced on the S4048-ON.     |

| 8.3.7.0  | Introduced on the S4810.                 |
| 7.6.1.0  | Introduced on the C-Series and S-Series. |
| 6.1.1.1  | Introduced on the E-Series.              |

### Example

```
DellEMC# show qos qos-policy-output

Qos-policy-output qosOut
 Rate-limit 50 50 peak 50 50
 Wred yellow 1
 Wred green 1
DellEMC#
```

## show qos statistics

View QoS statistics.

### Syntax

```
show qos statistics {egress-queue [interface]} | {wred-profile [interface]} | [interface]
```

### Parameters

#### **egress-queue** ***interface***

Enter the keyword `egress-queue` to display the egress-queue statistics and optionally one of the following keywords and slot/port or number information.

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

#### **wred-profile** ***interface***

Enter the keywords `wred-profile` and optionally one of the following keywords and slot/port or number information:

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

#### ***interface***

Enter one of the following keywords and slot/port or number information:

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

### Defaults

none

### Command Modes

- EXEC
- EXEC Privilege

### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Network OS Command Line Reference Guide*.

| Version   | Description                                |
|-----------|--------------------------------------------|
| 9.12(0.0) | Modified to display the global WRED state. |

| Version    | Description                                                                                                       |
|------------|-------------------------------------------------------------------------------------------------------------------|
| 9.11(0.0)  | Updated the <code>show qos statistics egress-queue</code> output to reflect per queue per port tx and drop rates. |
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.                                                                         |
| 9.10(0.0)  | Introduced on the S3148.                                                                                          |
| 9.10(0.0)  | Introduced on the S6100-ON.                                                                                       |
| 9.8(2.0)   | Introduced on the S3100 series.                                                                                   |
| 9.8(1.0)   | Introduced on the Z9100-ON.                                                                                       |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                                                                       |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                                                                       |
| 9.8(0.0)   | Added the <code>egress-queue</code> keyword.                                                                      |
| 9.7(0.0)   | Introduced on the S6000-ON.                                                                                       |
| 9.2(1.0)   | Introduced on the Z9500.                                                                                          |
| 9.0.2.0    | Introduced on the S6000.                                                                                          |
| 8.3.19.0   | Introduced on the S4820T.                                                                                         |
| 8.3.11.1   | Introduced on the Z9000.                                                                                          |
| 8.3.7.0    | Introduced on the S4810.                                                                                          |
| 7.7.1.1    | Introduced on the S-Series.                                                                                       |
| 7.5.1.0    | Introduced on the C-Series.                                                                                       |
| 6.1.1.1    | Introduced on the E-Series.                                                                                       |

**Example of show qos statistics egress-queue with per queue per port tx and drop rates**

```
DellEMC#show qos statistics egress-queue tengigabitethernet 1/1
Interface Te 1/1
Unicast/Multicast Egress Queue Statistics
Queue# Q# Type TxPkts TxPkts/s TxBytes TxBytes/s DroppedPkts DroppedPkts/s DroppedBytes DroppedBytes/s

0 UCAST 0 0 0 0 0 0 0 0

19 MCAST 0 0 0 0 0 0 0 0
DellEMC#
```

**Example of show qos statistics wred-profile**

```
DellEMC(conf)#do show qos statistics wred-profile
Global Wred State : Enabled
Interface Te 1/11
Drop-statistic Dropped Pkts
Green 0
Yellow 6730113
Out of Profile 0
```

**Usage Information**

In a dual homing setup, you can use this command only from the primary VLT peer.  
The following list describes output of the `show qos statistics` command in the example:

- **Queue #** — Queue Number.
- **Queued Bytes** — Snapshot of the byte count in that queue.

- **Queued Pkts** — Cumulative packet count in that queue.
- **Matched Pkts** — The number of packets that matched the class-map criteria.  
i **NOTE:** When you configure `trust`, matched packet counters are not incremented in this field.
- **Matched Bytes** — The number of bytes that matched the class-map criteria.  
i **NOTE:** When you configure `trust`, matched byte counters are not incremented in this field.
- **Dropped Pkts** — The total of the number of packets dropped for green, yellow and out-of-profile.

## show qos wred-profile

View the WRED profile details.

|                        |                                                                                                                                                               |                                                          |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------|
| <b>Syntax</b>          | <code>show qos wred-profile wred-profile-name</code>                                                                                                          |                                                          |
| <b>Parameters</b>      | <b><i>wred-profile-name</i></b>                                                                                                                               | Enter the WRED profile name to view the profile details. |
| <b>Defaults</b>        | none                                                                                                                                                          |                                                          |

| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.                |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                   |
| <b>9.0.2.0</b>    | Introduced on the S6000.                   |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                  |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                   |
| <b>8.3.7.0</b>    | Introduced on the S4810.                   |
| <b>6.1.1.1</b>    | Introduced on the E-Series.                |

### Example

```
DellEMC# show qos wred-profile

Global Wred State: Disabled

Wred-profile-name min-threshold max-threshold max-drop-rate
wred_drop 0 0 100
wred_teng_y 467 4671 100
wred_teng_g 467 4671 50
wred_fortyg_y 467 4671 50
wred_fortyg_g 467 4671 25
DellEMC#
```

## test cam-usage

Check the Input Policy Map configuration for the CAM usage.

**Syntax** `test cam-usage service-policy input policy-map stack-unit {[number port-set portpipe number] | [all]}`

**Parameters**

|                                                      |                                                                                                          |
|------------------------------------------------------|----------------------------------------------------------------------------------------------------------|
| <b><i>policy-map</i></b>                             | Enter the policy map name.                                                                               |
| <b><i>stack-unit</i> <i>number</i></b>               | (OPTIONAL) Enter the keyword <code>stack-unit</code> then the stack-unit slot number.                    |
| <b><i>port-set</i> <i>portpipe</i> <i>number</i></b> | Enter the keywords <code>port-set</code> then the stack-unit port pipe number. The range is from 0 or 1. |
| <b><i>stack-unit</i> all</b>                         | (OPTIONAL) Enter the keywords <code>stack-unit</code> all to indicate all stack-unit.                    |

**Defaults** none

**Command Modes** EXEC

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |

**Usage Information** This feature allows you to determine if the CAM has enough space available before applying the configuration on an interface.

An input policy map with both Trust and Class-map configuration, the Class-map rules are ignored and only the Trust rule is programmed in the CAM. In such an instance, the Estimated CAM output column contains the size of the CAM space required for the Trust rule and not the Class-map rule.

The following describes the `test cam-usage service-policy input policy-map stack-unit` command shown in the following example.

| Field                | Description                                                                   |
|----------------------|-------------------------------------------------------------------------------|
| <b>stack-unit</b>    | Indicates the stack-unit slot number.                                         |
| <b>Portpipe</b>      | Indicates the portpipe number.                                                |
| <b>CAM Partition</b> | The CAM space where the rules are added.                                      |
| <b>Available CAM</b> | Indicates the free CAM space, in the partition, for the classification rules. |

| Field                         | Description                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                               | <p><b>NOTE:</b> The CAM entries reserved for the default rules are not included in the Available CAM column; free entries, from the default rules space, cannot be used as a policy map for the classification rules.</p>                                                                                                                                                                                                                          |
| <b>Estimated CAM per Port</b> | <p>Indicates the number of free CAM entries required (for the classification rules) to apply the input policy map on a single interface.</p> <p><b>NOTE:</b> The CAM entries for the default rule are not included in this column; a CAM entry for the default rule is always dedicated to a port and is always available for that interface.</p>                                                                                                  |
| <b>Status (Allowed ports)</b> | <p>Indicates if the input policy map configuration on an interface belonging to a stack-unit/port-pipe is successful — Allowed (n) — or not successful — Exception. The allowed number (n) indicates the number of ports in that port-pipe on which the Policy Map can be applied successfully.</p> <p><b>NOTE:</b> In a Layer 2 Policy Map, IPv4/IPv6 rules are not allowed; therefore, the output contains only L2ACL CAM partition entries.</p> |

### Example

```
DellEMC# test cam-usage service-policy input pmap_l2 stack-unit all
For a L2 Input Policy Map pmap_l2, the output must be as follows,
stack-unit|Portpipe|CAM Partition|Available CAM|Estimated CAM per Port |
Status
|
| (Allowed ports)
0 0 L2ACL 500 200
 Allowed (2)
0 1 L2ACL 100 200
Exception
1 0 L2ACL 1000 200
Allowed (5)
1 1 L2ACL 0 200
Exception
...
...
...
13 1 L2ACL 400 200 Allowed
(2)
DellEMC#
```

## threshold

Specify the minimum and maximum threshold values for the configured WRED profiles.

### Z9500

#### Syntax

```
threshold min number max number max-drop-drop
```

To remove the threshold values, use the `no threshold min number max number` command.

#### Parameters

- min *number*** Enter the keyword `min` then the minimum threshold number for the WRED profile. The range is from 0 to 12000KB.
- max *number*** Enter the keyword `max` then the maximum threshold number for the WRED profile. The range is from 0 to 12000 KB.
- max-drop-drop *number*** Enter the keyword **max-drop-drop** followed by the maximum number of packets for the WRED profile. The range is from 0 to 100 KB

**Defaults** none

**Command Modes** CONFIGURATION (config-wred)

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.8.0    | Introduced on the S4810.                  |
| 6.1.1.1    | Introduced on the E-Series.               |

**Usage Information** To configure the minimum and maximum threshold values for user-defined profiles, use this command. Additionally, to modify the minimum and maximum threshold values for the pre-defined WRED profiles, use this command. If you delete the threshold values of the pre-defined WRED profiles, the profiles revert to their original default values.

**Table 8. Threshold Values for the Pre-defined WRED Profiles**

| Pre-Defined WRED Profile Name | Minimum Threshold | Maximum Threshold |
|-------------------------------|-------------------|-------------------|
| wred_drop                     | 0                 | 0                 |
| wred_teng_y                   | 1024              | 2048              |
| wred_teng_g                   | 2048              | 4096              |
| wred_fortyg_y                 | 4096              | 8192              |
| wred_fortyg_g                 | 8192              | 384               |

**Related Commands**

- [wred-profile](#) — creates a WRED profile.

## trust

Specify dynamic classification (DSCP) or dot1p to trust.

## Z9500

**Syntax** `trust {diffserv [fallback]| dot1p [fallback]}`

**Parameters**

- diffserv** Enter the keyword `diffserv` to specify trust of DSCP markings.
- dot1p** Enter the keyword `dot1p` to specify trust dot1p configuration.

**fallback** Enter the keyword `fallback` to classify packets according to their DSCP or dot1p value as a secondary option in case no match occurs against the configured class maps.

**Defaults** none

**Command Modes** CONFIGURATION (conf-policy-map-in)

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                            |
|------------|--------------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.              |
| 9.10(0.0)  | Introduced on the S3148.                               |
| 9.10(0.0)  | Introduced on the S6100-ON.                            |
| 9.8(2.0)   | Introduced on the S3100 series.                        |
| 9.8(1.0)   | Introduced on the Z9100-ON.                            |
| 9.8(0.0P5) | Introduced on the S4048-ON.                            |
| 9.8(0.0P2) | Introduced on the S3048-ON.                            |
| 9.7(0.0)   | Introduced on the S6000-ON.                            |
| 9.2(1.0)   | Introduced on the Z9500.                               |
| 9.0.2.0    | Introduced on the S6000.                               |
| 8.3.19.0   | Introduced on the S4820T.                              |
| 8.3.11.1   | Introduced on the Z9000.                               |
| 8.3.7.0    | Introduced on the S4810.                               |
| 8.3.1.0    | Added <code>fallback</code> to the E-Series.           |
| 8.2.1.0    | Added <code>dot1p</code> to the C-Series and S-Series. |
| 7.6.1.0    | Introduced on the S-Series.                            |
| 7.5.1.0    | Introduced on the C-Series.                            |
| 7.4.1.0    | Added <code>dot1p</code> and <code>IPv6 DSCP</code> .  |
| 6.1.1.1    | Introduced on the E-Series.                            |

**Usage Information** When you configure `trust`, matched bytes/packets counters are not incremented in the `show qos statistics` command.

Dynamic mapping honors packets marked according to the standard definitions of DSCP. The following lists the default mapping.

**Table 9. Default Mapping**

| DSCP/CP hex Range (XXX) | DSCP Definition           | Traditional IP Precedence | S6000 Internal Queue ID | S-Series Internal Queue ID | DSCP/CP Decimal |
|-------------------------|---------------------------|---------------------------|-------------------------|----------------------------|-----------------|
| 111XXX                  |                           | Network Control           | 7                       | 3                          | 48–63           |
| 110XXX                  |                           | Internetwork Control      | 6                       | 3                          | 48–63           |
| 101XXX                  | EF (Expedited Forwarding) | CRITIC/ECP                | 5                       | 2                          | 32–47           |
| 100XXX                  | AF4 (Assured Forwarding)  | Flash Override            | 4                       | 2                          | 32–47           |

**Table 9. Default Mapping (continued)**

| DSCP/CP hex Range (XXX) | DSCP Definition  | Traditional IP Precedence | S6000 Internal Queue ID | S-Series Internal Queue ID | DSCP/CP Decimal |
|-------------------------|------------------|---------------------------|-------------------------|----------------------------|-----------------|
| 011XXX                  | AF3              | Flash                     | 3                       | 1                          | 16–31           |
| 010XXX                  | AF2              | Immediate                 | 2                       | 1                          | 16–31           |
| 001XXX                  | AF1              | Priority                  | 1                       | 0                          | 0–15            |
| 000XXX                  | BE (Best Effort) | Best Effort               | 0                       | 0                          | 0–15            |

## wred

Designate the WRED profile to yellow or green traffic.

## Z9500

### Syntax

```
wred {yellow | green} profile-name
```

To remove the WRED drop precedence, use the `no wred {yellow | green} [profile-name]` command.

### Parameters

#### yellow | green

Enter the keyword `yellow` for yellow traffic. A DSCP value of xxx110 and xxx100, xxx101 maps to yellow.

Enter the keyword `green` for `green` traffic. A DSCP value of xxx0xx are green and DSCP 11111 are red packets.

#### profile-name

Enter your WRED profile name in character format (32 character maximum). Or use one of the five pre-defined WRED profile names.

Pre-defined Profiles: `wred_drop`, `wred-ge_y`, `wred-ge_g`, `wred_teng_y`, `wred_teng_`.

### Defaults

When WRED green is applied, default WRED yellow profiles take effect and vice-versa.

### Command Modes

CONFIGURATION (conf-qos-policy-out)

### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

#### Version

#### Description

##### 9.10(0.1)

Introduced on the S6010-ON and S4048T-ON.

##### 9.10(0.0)

Introduced on the S3148.

##### 9.10(0.0)

Introduced on the S6100-ON.

##### 9.8(2.0)

Introduced on the S3100 series.

##### 9.8(1.0)

Introduced on the Z9100-ON.

##### 9.8(0.0P5)

Introduced on the S4048-ON.

##### 9.8(0.0P2)

Introduced on the S3048-ON.

##### 9.7(0.0)

Introduced on the S6000-ON.

##### 9.2(1.0)

Introduced on the Z9500.

##### 9.0.2.0

Introduced on the S6000.

##### 8.3.19.0

Introduced on the S4820T.

| Version  | Description              |
|----------|--------------------------|
| 8.3.11.1 | Introduced on the Z9000. |
| 8.3.7.0  | Introduced on the S4810. |

**Usage Information**

To assign drop precedence to green or yellow traffic, use this command. If there is no honoring enabled on the input, all the traffic defaults to green drop precedence.

**Related Commands**

- `wred-profile` — creates a WRED profile and name that profile.
- `trust` — defines the dynamic classification to trust DSCP.

## wred weight

Configure the weight factor for computation of average-queue size. This weight value applies to front-end ports. This mechanism to configure a weight for WRED and ECN functionality for front-end ports is supported on the S6000 and Z9000 platforms.

**Syntax** `[no] wred weight number`

**Parameters**

**weight** Define the weight factor to be used for computation of the WRED average-queue size to either enable WRED to discard packets or cause ECN to mark packets that exceed the minimum threshold configured. This setting applies to front-end ports only.

**number** Enter the weight as a number to be used to calculate the average-queue size. The range is 1 to 15. The default is 0.

**Default** The default weight is zero.

**Command Modes** QOS-POLICY-OUT mode

**Command History**

| Version   | Description                                 |
|-----------|---------------------------------------------|
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON.   |
| 9.10(0.0) | Introduced on the S6100-ON.                 |
| 9.8(1.0)  | Introduced on the Z9100-ON.                 |
| 9.7(0.0)  | Introduced on the S6000-ON.                 |
| 9.3.0.0   | Introduced on the S6000 and Z9000 platforms |

**Usage Information**

If the average queue size is more than the maximum threshold of WRED, the packet is dropped. If the average queue size is between the minimum and maximum threshold values, the decision to drop or queue the packet is taken based on the packet drop probability. The probability that a packet is dropped depends on the minimum threshold, maximum threshold, and mark probability denominator.

**Example**

```
DellEMC(conf-qos-policy-out) # wred weight 5
```

## wred ecn

To indicate network congestion, rather than dropping packets, use explicit congestion notification (ECN).

### Z9500

**Syntax** `wred ecn`

To stop marking packets, use the `no wred ecn` command.

**Defaults**

none

**Command Modes**

CONFIGURATION (conf-qos-policy-out)

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                               |
|-------------------|-------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.               |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.               |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                  |
| <b>9.0.2.0</b>    | Introduced on the S6000.                  |
| <b>8.3.19.0</b>   | Introduced on the S4820t.                 |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                  |
| <b>8.3.7.0</b>    | Introduced on the S4810.                  |

**Usage Information**

When you enable `wred ecn`, and the number of packets in the queue is below the minimum threshold, packets are transmitted per the usual WRED treatment.

When you enable `wred ecn`, and the number of packets in the queue is between the minimum threshold and the maximum threshold, one of the following two scenarios can occur:

- If the transmission endpoints are ECN-capable and traffic is congested, and the WRED algorithm determines that the packet should have been dropped based on the drop probability, the packet is transmitted and marked so the routers know the system is congested and can slow transmission rates.
- If neither endpoint is ECN-capable, the packet may be dropped based on the WRED drop probability. This behavior is the identical treatment that a packet receives when WRED is enabled without ECN configured on the router.

When you enable `wred ecn`, and the number of packets in the queue is above the maximum threshold, packets are dropped based on the drop probability. This behavior is the identical treatment a packet receives when WRED is enabled without ECN configured on the router.

**Related Commands**

- [wred-profile](#) — creates a WRED profile and name that profile.

## wred-profile

Create a WRED profile and name the profile.

### Z9500

**Syntax**

```
wred-profile wred-profile-name
```

To remove an existing WRED profile, use the `no wred-profile` command.

**Parameters** *wred-profile-name* Enter your WRED profile name in character format (32 character maximum). Or use one of the pre-defined WRED profile names. You can configure up to 26 WRED profiles plus the five pre-defined profiles, for a total of 31 WRED profiles.

Pre-defined Profiles: wred\_drop, wred\_ge\_y, wred\_ge\_g, wred\_teng\_y, wred\_teng\_g.

**Defaults** The five pre-defined WRED profiles. When you configure a new profile, the minimum and maximum threshold defaults to predefined wred\_ge\_g values.

If green profile is applied, default yellow also take effect and vice-versa.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |
| 6.1.1.1    | Introduced on the E-Series.               |

**Usage Information** Use the default pre-defined profiles or configure your own profile. You cannot delete the pre-defined profiles or their default values. This command enables WRED configuration mode —(conf-wred).

**Related Commands**

- [threshold](#) — specifies the minimum and maximum threshold values of the WRED profile.

## DSCP Color Map Commands

The DSCP color map allows you to set the number of specific DSCP values to yellow or red. Traffic marked as yellow delivers traffic to the egress queue which will either transmit the packet if it has available bandwidth or drop the packet due to no ability to send. Traffic marked as red (high drop precedence) is dropped.

### dscp

Sets the number of specific DSCP values for a color map profile to yellow or red.

**Syntax** `dscp {yellow | red} [list-dscp-values]`

To remove a color policy map profile, use the `no dscp {yellow | red} [dscp-list]` command.

|                   |                         |                                                                                                                                                                                                                                                                                             |
|-------------------|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Parameters</b> | <b>Yellow</b>           | Enter the <code>yellow</code> keyword. Traffic marked as yellow delivers traffic to the egress queue which either transmits the packet if it has available bandwidth or drops the packet due to no ability to send.                                                                         |
|                   | <b>Red</b>              | Enter the <code>red</code> keyword. Traffic marked as red is dropped.                                                                                                                                                                                                                       |
|                   | <b><i>dscp-list</i></b> | Enter a list of IP DSCP values. The <i>dscp-list</i> parameter specifies the full list of IP DSCP value(s) for the specified color. Each DSCP value in a list is separate values by commas – no spaces (1,2,3) or indicates a list of values separated by a hyphen (1-3). Range is 0 to 63. |

**Defaults**      **None**

**Command Modes**    CONFIG-COLOR-MAP

**Command History**    This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| <b>Version</b>    | <b>Description</b>                                      |
|-------------------|---------------------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON.               |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                                |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.                             |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.                         |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.                             |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.                             |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                             |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.                             |
| <b>9.5(0.1)</b>   | Introduced on the Z9500.                                |
| <b>9.5.0.0</b>    | Introduced on the Z9000, S6000, S4820T, S4810, and MXL. |

**Usage Information**    If the specified color-map does not exist, the Diffserv Manager (DSM) creates a color map and sets all the DSCP values to green (low drop precedence).

The default setting for each DSCP value (0-63) is green (low drop precedence). This command allows setting the number of specific DSCP values to yellow or red.

**Important Points to Remember**

- All DSCP values that are not specified as yellow or red are colored green.
- A DSCP value cannot be in both the yellow and red lists. Setting the red or yellow list with any DSCP value that is already in the other list results in an error and no update to that list is made.
- Each color map can only have one list of DSCP values for each color; any DSCP values previously listed for that color that are not in the new DSCP list are colored green.

**Example**

```
DellEMC(conf-dscp-color-map)# dscp yellow 9,10,11,13,15,16
```

**Related Commands**

- [qos dscp-color-map](#) — configures the DSCP color map.
- [qos dscp-color-policy](#) — configures a DSCP color policy.

## qos dscp-color-map

Configure the DSCP color map.

**Syntax**

```
qos dscp-color-map map-name
```

To remove a color map, use the `no qos dscp-color-map map-name` command.

**Parameters**      *map-name*      Enter the name of the DSCP color map. The map name can have a maximum of 32 characters.

**Defaults**      **None**

**Command Modes**      CONFIGURATION

**Command History**      This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| <b>Version</b>    | <b>Description</b>                                      |
|-------------------|---------------------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON.               |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                                |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.                             |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.                         |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.                             |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.                             |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                             |
| <b>9.5(0.1)</b>   | Introduced on the Z9500.                                |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.                             |
| <b>9.5.0.0</b>    | Introduced on the Z9000, S6000, S4820T, S4810, and MXL. |

**Usage Information**      A color map outlines the codepoint mappings to the appropriate color mapping (green, yellow, red) for the traffic. The system uses this information use to handle the traffic on the interface based on the traffic priority and places it into the appropriate shaping queue. You cannot delete a DSCP color map when it is configured on an interface. If you do, all the DSCP values are set to green (low drop precedence). To delete the DSCP color map that is being used by one or more interfaces, remove the DSCP map from each interface.

**Example**      `DellEMC(conf)#qos dscp-color-map mymap`

**Related Commands**

- [qos dscp-color-map](#)— associates the DSCP color map profile with an interface so that all IP packets received on it is given a color based on that color map.
- [dscp](#)— sets the number of specific DSCP values for color map profile to yellow or red.

## qos dscp-color-policy

Associates the DSCP color map profile with an interface so that all IP packets received on it is given a color based on that color map.

**Syntax**      `dscp-color-policy color-map-profile-name`  
To remove a color policy map profile, use the `no dscp-color-policy color-map-profile-name` command.

**Parameters**      *color-map-profile-name*      Enter the color map profile name. The name can have a maximum of 32 characters.

**Defaults**      **None**

**Command Modes**      CONFIG-INTERFACE

**Command History**      This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| <b>Version</b>   | <b>Description</b>                        |
|------------------|-------------------------------------------|
| <b>9.10(0.1)</b> | Introduced on the S6010-ON and S4048T-ON. |

| Version                | Description                                             |
|------------------------|---------------------------------------------------------|
| 9.10(0.0)              | Introduced on the S3148.                                |
| 9.10(0.0)              | Introduced on the S6100-ON.                             |
| 9.8(2.0)               | Introduced on the S3100 series.                         |
| 9.8(1.0)               | Introduced on the Z9100-ON.                             |
| 9.8(0.0P5)             | Introduced on the S4048-ON.                             |
| 9.8(0.0P2)             | Introduced on the S3048-ON.                             |
| 9.7(0.0)               | Introduced on the S6000-ON.                             |
| 9.5(0.1)               | Introduced on the Z9500.                                |
| <b>Version 9.5.0.0</b> | Introduced on the Z9000, S6000, S4820T, S4810, and MXL. |

**Usage Information**

If the specified color-map does not exist, the Diffserv Manager (DSM) creates a color map and sets all the DSCP values to green (low drop precedence).

**Example**

The following example assigns the color map, **bat-enclave-map**, to interface.

**Related Commands**

- `dscp`— sets the number of specific DSCP values for color map profile to yellow or red.
- `qos dscp-color-map`— configures the DSCP color map.

## show qos dscp-color-map

Display the DSCP color map for one or all interfaces.

**Syntax** `show qos dscp-color-map map-name`

**Parameters** `map-name` Enter the name of the color map.

**Defaults** `None`

**Command Modes** EXEC

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                             |
|------------|---------------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.               |
| 9.10(0.0)  | Introduced on the S3148.                                |
| 9.10(0.0)  | Introduced on the S6100-ON.                             |
| 9.8(2.0)   | Introduced on the S3100 series.                         |
| 9.8(1.0)   | Introduced on the Z9100-ON.                             |
| 9.8(0.0P5) | Introduced on the S4048-ON.                             |
| 9.8(0.0P2) | Introduced on the S3048-ON.                             |
| 9.7(0.0)   | Introduced on the S6000-ON.                             |
| 9.5(0.1)   | Introduced on the Z9500.                                |
| 9.5.0.0    | Introduced on the Z9000, S6000, S4820T, S4810, and MXL. |

**Example**

```

Display all DSCP color maps.

DellEMC# show qos dscp-color-map
Dscp-color-map mapONE
 yellow 4,7
 red 20,30

```

```
Dscp-color-map mapTWO
 yellow 16,55
```

Display a specific DSCP color map.

```
DellEMC# show qos dscp-color-map mapTWO
Dscp-color-map mapTWO
 yellow 16,55
DellEMC#
```

# Routing Information Protocol (RIP)

Routing information protocol (RIP) is a distance vector routing protocol. The Dell EMC Networking OS supports both RIP version 1 (RIPv1) and RIP version 2 (RIPv2).

The Dell EMC Networking OS implementation of RIP is based on IETF RFCs 2453 and RFC 1058. For more information about configuring RIP, see the *Dell EMC Networking OS Configuration Guide*.

## auto-summary

Restore the default behavior of automatic summarization of subnet routes into network routes. This command applies only to RIP version 2.

**Syntax**                    `auto-summary`

To send sub-prefix routing information, use the `no auto-summary` command.

**Defaults**                 Enabled.

**Command Modes**        ROUTER RIP

**Command History**        This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version      | Description                               |
|--------------|-------------------------------------------|
| 9.10(0.1)    | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)    | Introduced on the S3148.                  |

| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |

| Version      | Description                 |
|--------------|-----------------------------|
| 8.3.7.0      | Introduced on the S4810.    |
| 7.8.1.0      | Introduced on the S-Series. |
| 7.6.1.0      | Introduced on the C-Series. |
| pre- 6.2.1.1 | Introduced on the E-Series. |

### Usage Information

This command triggers updates of the main RIP routing tables.

## debug ip rip

Examine RIP routing information for troubleshooting.

### Z9500

#### Syntax

```
debug ip rip [interface | database | events [interface] | trigger]
```

To turn off debugging output, use the `no debug ip rip` command.

#### Parameters

|                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>interface</b> | (OPTIONAL) Enter the interface type and ID as one of the following: <ul style="list-style-type: none"> <li>For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information.</li> <li>For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information.</li> <li>For a Port Channel interface, enter the keywords <code>port-channel</code> then a number.</li> <li>For a VLAN, enter the keyword <code>vlan</code> then a number from 1 to 4094.</li> </ul> |
| <b>database</b>  | (OPTIONAL) Enter the keyword <code>database</code> to display messages when there is a change to the RIP database.                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>events</b>    | (OPTIONAL) Enter the keyword <code>events</code> to debug only RIP protocol changes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>trigger</b>   | (OPTIONAL) Enter the keyword <code>trigger</code> to debug only RIP trigger extensions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

**Command Modes** EXEC Privilege

#### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |

| Version      | Description                              |
|--------------|------------------------------------------|
| 8.3.11.1     | Introduced on the Z9000.                 |
| 8.5.1.0      | Added support for 4-port 40G line cards. |
| 8.3.7.0      | Introduced on the S4810.                 |
| 7.8.1.0      | Introduced on the S-Series.              |
| 7.6.1.0      | Introduced on the C-Series.              |
| pre- 6.2.1.1 | Introduced on the E-Series.              |

## default-information originate

Generate a default route for the RIP traffic.

### Z9500

**Syntax** `default-information originate [always] [metric metric-value] [route-map map-name]`

To return to the default values, use the `no default-information originate` command.

| Parameters                        |            |                                                                                                                               |
|-----------------------------------|------------|-------------------------------------------------------------------------------------------------------------------------------|
| <b>always</b>                     | (OPTIONAL) | Enter the keyword <code>always</code> to enable the switch software to always advertise the default route.                    |
| <b>metric <i>metric-value</i></b> | (OPTIONAL) | Enter the keyword <code>metric</code> then a number as the metric value. The range is from 1 to 16. The default is <b>1</b> . |
| <b>route-map <i>map-name</i></b>  | (OPTIONAL) | Enter the keywords <code>route-map</code> then the name of a configured route-map.                                            |

**Defaults** Disabled. Metric: **1**.

**Command Modes** ROUTER RIP

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |

| Version      | Description                 |
|--------------|-----------------------------|
| 7.8.1.0      | Introduced on the S-Series. |
| 7.6.1.0      | Introduced on the C-Series. |
| pre- 6.2.1.1 | Introduced on the E-Series. |

**Usage Information** The default route must be present in the switch routing table for the `default-information originate` command to take effect.

## default-metric

Change the default metric for routes. To ensure that all redistributed routes use the same metric value, use this command with the `redistribute` command.

### Z9500

**Syntax** `default-metric number`  
To return the default metric to the original values, use the `no default-metric` command.

**Parameters** *number* Specify a number. The range is from 1 to 16. The default is **1**.

**Defaults** **1**

**Command Modes** ROUTER RIP

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version      | Description                               |
|--------------|-------------------------------------------|
| 9.10(0.1)    | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)    | Introduced on the S3148.                  |
| 9.10(0.0)    | Introduced on the S6100-ON.               |
| 9.8(2.0)     | Introduced on the S3100 series.           |
| 9.8(1.0)     | Introduced on the Z9100-ON.               |
| 9.8(0.0P5)   | Introduced on the S4048-ON.               |
| 9.8(0.0P2)   | Introduced on the S3048-ON.               |
| 9.7(0.0)     | Introduced on the S6000-ON.               |
| 9.2(1.0)     | Introduced on the Z9500.                  |
| 9.0.2.0      | Introduced on the S6000.                  |
| 8.3.19.0     | Introduced on the S4820T.                 |
| 8.3.11.1     | Introduced on the Z9000.                  |
| 8.3.7.0      | Introduced on the S4810.                  |
| 7.8.1.0      | Introduced on the S-Series.               |
| 7.6.1.0      | Introduced on the C-Series.               |
| pre- 6.2.1.1 | Introduced on the E-Series.               |

**Usage Information** This command ensures that route information being redistributed is converted to the same metric value.

## Related Commands

- [redistribute](#) — allows you to redistribute routes learned by other methods.

# description

Enter a description of the RIP routing protocol.

## Z9500

**Syntax** `description {description}`

To remove the description, use the `no description {description}` command.

**Parameters** **description** Enter a description to identify the RIP protocol (80 characters maximum).

**Defaults** none

**Command Modes** ROUTER RIP

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version             | Description                               |

| <b>9.10(0.0)</b>    | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>    | Introduced on the S6100-ON.               |
| <b>9.8(1.0)</b>     | Introduced on the Z9100-ON.               |
| <b>9.8(0.0)</b>     | Introduced on the S3048-ON and S4048-ON.  |
| <b>9.7(0.0)</b>     | Introduced on the S6000-ON.               |
| <b>9.2(1.0)</b>     | Introduced on the Z9500.                  |
| <b>9.0.2.0</b>      | Introduced on the S6000.                  |
| <b>8.3.19.0</b>     | Introduced on the S4820T.                 |
| <b>8.3.11.1</b>     | Introduced on the Z9000.                  |
| <b>8.3.7.0</b>      | Introduced on the S4810.                  |
| <b>7.8.1.0</b>      | Introduced on the S-Series.               |
| <b>7.6.1.0</b>      | Introduced on the C-Series.               |
| <b>pre- 7.7.1.0</b> | Introduced on the E-Series.               |

## Related Commands

- [router rip](#) — enters ROUTER mode on the switch.

# distance

Assign a weight (for prioritization) to all routes in the RIP routing table or to a specific route. Lower weights (“administrative distance”) are preferred.

## Z9500

**Syntax** `distance weight [ip-address mask [prefix-name]]`

To return to the default values, use the `no distance weight [ip-address mask]` command.

|                   |                           |                                                                                                                                 |
|-------------------|---------------------------|---------------------------------------------------------------------------------------------------------------------------------|
| <b>Parameters</b> | <b><i>weight</i></b>      | Enter a number from 1 to 255 for the weight (for prioritization). The default is <b>120</b> .                                   |
|                   | <b><i>ip-address</i></b>  | (OPTIONAL) Enter the IP address, in dotted decimal format (A.B.C.D), of the host or network to receive the new distance metric. |
|                   | <b><i>mask</i></b>        | If you enter an IP address, also enter a mask for that IP address, in either dotted decimal format or /prefix format (/x).      |
|                   | <b><i>prefix-name</i></b> | (OPTIONAL) Enter a configured prefix list name.                                                                                 |

**Defaults** weight = 120

**Command Modes** ROUTER RIP

| <b>7.6.1.0</b>      | Introduced on the C-Series.               |
| <b>pre- 6.2.1.1</b> | Introduced on the E-Series.               |

**Related Commands**

- [default-metric](#) — assigns one distance metric to all routes learned using the `redistribute` command.

## distribute-list in

Configure a filter for incoming routing updates.

### Z9500

**Syntax** `distribute-list prefix-list-name in [interface]`

To delete the filter, use the `no distribute-list prefix-list-name in` command.

**Parameters**

|                                |                                                                             |
|--------------------------------|-----------------------------------------------------------------------------|
| <b><i>prefix-list-name</i></b> | Enter the name of a configured prefix list.                                 |
| <b><i>interface</i></b>        | (OPTIONAL) Identifies the interface type slot/port as one of the following: |

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a Port Channel interface, enter the keywords `port-channel` then a number.
- For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults** Not configured.

**Command Modes** ROUTER RIP

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version             | Description                               |

| <b>pre- 6.2.1.1</b> | Introduced on the E-Series.               |

**Related Commands**

- [ip prefix-list](#) — enters PREFIX-LIST mode and configures a prefix list.

## distribute-list out

Configure a filter for outgoing routing updates.

### Z9500

**Syntax** `distribute-list prefix-list-name out [interface | bgp | connected | isis | ospf | static]`

To delete the filter, use the `no distribute-list prefix-list-name out` command.

**Parameters**

***prefix-list-name*** Enter the name of a configured prefix list.

***interface*** (OPTIONAL) Identifies the interface type slot/port as one of the following:

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a Port Channel interface, enter the keywords `port-channel` then a number.
- For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

**connected** (OPTIONAL) Enter the keyword `connected` to filter only directly connected routes.

**isis** (OPTIONAL) Enter the keyword `isis` to filter only IS-IS routes.

**ospf** (OPTIONAL) Enter the keyword `ospf` to filter all OSPF routes.

**static** (OPTIONAL) Enter the keyword `static` to filter manually configured routes.

**Defaults** Not configured.

**Command Modes** ROUTER RIP

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version             | Description                                              |
|---------------------|----------------------------------------------------------|
| <b>9.10(0.1)</b>    | Introduced on the S6010-ON and S4048T-ON.                |
| <b>9.10(0.0)</b>    | Introduced on the S3148.                                 |
| <b>9.10(0.0)</b>    | Introduced on the S6100-ON.                              |
| <b>9.8(2.0)</b>     | Introduced on the S3100 series.                          |
| <b>9.8(1.0)</b>     | Introduced on the Z9100-ON.                              |
| <b>9.8(0.0P5)</b>   | Introduced on the S4048-ON.                              |
| <b>9.8(0.0P2)</b>   | Introduced on the S3048-ON.                              |
| <b>9.7(0.0)</b>     | Introduced on the S6000-ON.                              |
| <b>9.2(1.0)</b>     | Introduced on the Z9500.                                 |
| <b>9.0.2.0</b>      | Introduced on the S6000.                                 |
| <b>8.3.19.0</b>     | Introduced on the S4820T.                                |
| <b>8.3.11.1</b>     | Introduced on the Z9000.                                 |
| <b>8.5.1.0</b>      | Added support for 4-port 40G line cards on the E-Series. |
| <b>8.3.7.0</b>      | Introduced on the S4810.                                 |
| <b>7.8.1.0</b>      | Introduced on the S-Series.                              |
| <b>7.6.1.0</b>      | Introduced on the C-Series.                              |
| <b>pre- 6.2.1.1</b> | Introduced on the E-Series.                              |

**Related Commands**

- [ip prefix-list](#) — enters PREFIX-LIST mode and configures a prefix list.

# ip poison-reverse

Set the prefix of the RIP routing updates to the RIP infinity value.

|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------|

# ip rip receive version

To receive specific versions of RIP, set the interface. The RIP version you set on the interface overrides the version command in ROUTER RIP mode.

## Z9500

|                   |                                                                                                                                  |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>     | <code>ip rip receive version [1] [2]</code><br>To return to the default, use the <code>no ip rip receive version</code> command. |
| <b>Parameters</b> | <b>1</b> (OPTIONAL) Enter the number 1 for RIP version 1.                                                                        |

**2** (OPTIONAL) Enter the number 2 for RIP version 2.

**Defaults** **RIPv1** and **RIPv2**

**Command Modes** INTERFACE

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version             | Description                               |
|---------------------|-------------------------------------------|
| <b>9.10(0.1)</b>    | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>    | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>    | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>     | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>     | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b>   | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b>   | Introduced on the S3048-ON.               |
| <b>9.7(0.0)</b>     | Introduced on the S6000-ON.               |
| <b>9.2(1.0)</b>     | Introduced on the Z9500.                  |
| <b>9.0.2.0</b>      | Introduced on the S6000.                  |
| <b>8.3.19.0</b>     | Introduced on the S4820T.                 |
| <b>8.3.11.1</b>     | Introduced on the Z9000.                  |
| <b>8.3.7.0</b>      | Introduced on the S4810.                  |
| <b>7.8.1.0</b>      | Introduced on the S-Series.               |
| <b>7.6.1.0</b>      | Introduced on the C-Series.               |
| <b>pre- 6.2.1.1</b> | Introduced on the E-Series.               |

**Usage Information** If you want the interface to receive both versions of RIP, use the `ip rip receive version 1 2` command.

**Related Commands**

- [ip rip send version](#) — sets the RIP version for sending RIP traffic on an interface.
- [version](#) — sets the RIP version the switch software uses.

## ip rip send version

To send a specific version of RIP, set the interface. The version you set on the interface overrides the version command in ROUTER RIP mode.

### Z9500

**Syntax** `ip rip send version [1] [2]`

To return to the default value, use the `no ip rip send version` command.

**Parameters**

**1** (OPTIONAL) Enter the number 1 for RIP version 1. The default is RIP version 1.

**2** (OPTIONAL) Enter the number 2 for RIP version 2.

**Defaults** **RIPv1**

**Command Modes** INTERFACE

## Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version      | Description                               |
|--------------|-------------------------------------------|
| 9.10(0.1)    | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)    | Introduced on the S3148.                  |
| 9.10(0.0)    | Introduced on the S6100-ON.               |
| 9.8(2.0)     | Introduced on the S3100 series.           |
| 9.8(1.0)     | Introduced on the Z9100-ON.               |
| 9.8(0.0P5)   | Introduced on the S4048-ON.               |
| 9.8(0.0P2)   | Introduced on the S3048-ON.               |
| 9.7(0.0)     | Introduced on the S6000-ON.               |
| 9.2(1.0)     | Introduced on the Z9500.                  |
| 9.0.2.0      | Introduced on the S6000.                  |
| 8.3.19.0     | Introduced on the S4820T.                 |
| 8.3.11.1     | Introduced on the Z9000.                  |
| 8.3.7.0      | Introduced on the S4810.                  |
| 7.8.1.0      | Introduced on the S-Series.               |
| 7.6.1.0      | Introduced on the C-Series.               |
| pre- 6.2.1.1 | Introduced on the E-Series.               |

## Usage Information

To enable the interface to send both version of RIP packets, use the `ip rip send version 1 2` command.

## Related Commands

- [ip rip receive version](#) — sets the RIP version for the interface to receive traffic.
- [version](#) — sets the RIP version for the switch software.

# ip split-horizon

Enable split-horizon for RIP data on the interface. As described in RFC 2453, the split-horizon scheme prevents any routes learned over a specific interface to be sent back out that interface.

## Z9500

### Syntax

```
ip split-horizon
```

To disable split-horizon, use the `no ip split-horizon` command.

### Defaults

Enabled

### Command Modes

INTERFACE

## Command History

| 7.8.1.0      | Introduced on the S-Series. |
| 7.6.1.0      | Introduced on the C-Series. |
| pre- 6.2.1.1 | Introduced on the E-Series. |

#### Related Commands

- [ip poison-reverse](#) — sets the prefix for RIP routing updates.

## maximum-paths

Set RIP to forward packets over multiple paths.

### Z9500

#### Syntax

`maximum-paths number`

To return to the default values, use the `no maximum-paths` commands.

#### Parameters

**number**

Enter the number of paths. The range is from 1 to 16. The default is **4** paths.

#### Defaults

**4**

#### Command Modes

ROUTER RIP

#### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |

| Version      | Description                 |
|--------------|-----------------------------|
| 8.3.19.0     | Introduced on the S4820T.   |
| 8.3.11.1     | Introduced on the Z9000.    |
| 8.3.7.0      | Introduced on the S4810.    |
| 7.8.1.0      | Introduced on the S-Series. |
| 7.6.1.0      | Introduced on the C-Series. |
| pre- 6.2.1.1 | Introduced on the E-Series. |

**Usage Information**

RIP supports a maximum of 16 ECMP paths.

## neighbor

Define a neighbor router with which to exchange RIP information.

### Z9500

**Syntax**

`neighbor ip-address`

To delete a neighbor setting, use the `no neighbor ip-address` command.

**Parameters**

***ip-address*** Enter the IP address, in dotted decimal format, of a router with which to exchange information.

**Defaults**

Not configured.

**Command Modes**

ROUTER RIP

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version      | Description                               |
|--------------|-------------------------------------------|
| 9.10(0.1)    | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)    | Introduced on the S3148.                  |
| 9.10(0.0)    | Introduced on the S6100-ON.               |
| 9.8(2.0)     | Introduced on the S3100 series.           |
| 9.8(1.0)     | Introduced on the Z9100-ON.               |
| 9.8(0.0P5)   | Introduced on the S4048-ON.               |
| 9.8(0.0P2)   | Introduced on the S3048-ON.               |
| 9.7(0.0)     | Introduced on the S6000-ON.               |
| 9.2(1.0)     | Introduced on the Z9500.                  |
| 9.0.2.0      | Introduced on the S6000.                  |
| 8.3.19.0     | Introduced on the S4820T.                 |
| 8.3.11.1     | Introduced on the Z9000.                  |
| 8.3.7.0      | Introduced on the S4810.                  |
| 7.8.1.0      | Introduced on the S-Series.               |
| 7.6.1.0      | Introduced on the C-Series.               |
| pre- 6.2.1.1 | Introduced on the E-Series.               |

**Usage Information**

When a neighbor router is identified, unicast data exchanges occur. Multiple neighbor routers are possible. To ensure that only specific interfaces are receiving and sending data, use the `passive-interface` command with the `neighbor` command.

**Related Commands**

- `passive-interface` — sets the interface to only listen to RIP broadcasts.

## network

Enable RIP for a specified network. To enable RIP on all networks connected to the switch, use this command.

### Z9500

**Syntax**

```
network ip-address
```

To disable RIP for a network, use the `no network ip-address` command.

**Parameters**

**`ip-address`** Specify an IP network address in dotted decimal format. You cannot specify a subnet.

**Defaults**

No RIP network is configured.

**Command Modes** ROUTER RIP**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version             | Description                               |
|---------------------|-------------------------------------------|
| <b>9.10(0.1)</b>    | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>    | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>    | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>     | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>     | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b>   | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b>   | Introduced on the S3048-ON.               |
| <b>9.7(0.0)</b>     | Introduced on the S6000-ON.               |
| <b>9.2(1.0)</b>     | Introduced on the Z9500.                  |
| <b>9.0.2.0</b>      | Introduced on the S6000.                  |
| <b>8.3.19.0</b>     | Introduced on the S4820T.                 |
| <b>8.3.11.1</b>     | Introduced on the Z9000.                  |
| <b>8.3.7.0</b>      | Introduced on the S4810.                  |
| <b>7.8.1.0</b>      | Introduced on the S-Series.               |
| <b>7.6.1.0</b>      | Introduced on the C-Series.               |
| <b>pre- 6.2.1.1</b> | Introduced on the E-Series.               |

**Usage Information**

You can enable an unlimited number of RIP networks.

RIP operates over interfaces configured with any address the `network` command specifies.

# offset-list

Specify a number to add to the incoming or outgoing route metrics learned using RIP.

## Z9500

|                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | <code>offset-list prefix-list-name {in   out} offset [interface]</code><br>To delete an offset list, use the <code>no offset-list prefix-list-name {in   out} offset [interface]</code> command.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Parameters</b>      | <p><b>prefix-list-name</b> Enter the name of an established Prefix list to determine which incoming routes are modified.</p> <p><b>offset</b> Enter a number from zero (0) to 16 to be applied to the incoming route metric matching the access list specified. If you set an offset value to zero (0), no action is taken.</p> <p><b>interface</b> (OPTIONAL) Enter the following keywords and slot/port or number information:</p> <ul style="list-style-type: none"><li>• For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information.</li><li>• For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information.</li><li>• For a VLAN, enter the keyword <code>vlan</code> then a number from 1 to 4094.</li></ul> |
| <b>Defaults</b>        | Not configured.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Command Modes</b>   | ROUTER RIP                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Command History</b> | This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| Version      | Description                               |
|--------------|-------------------------------------------|
| 9.10(0.1)    | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)    | Introduced on the S3148.                  |
| 9.10(0.0)    | Introduced on the S6100-ON.               |
| 9.8(2.0)     | Introduced on the S3100 series.           |
| 9.8(1.0)     | Introduced on the Z9100-ON.               |
| 9.8(0.0P5)   | Introduced on the S4048-ON.               |
| 9.8(0.0P2)   | Introduced on the S3048-ON.               |
| 9.7(0.0)     | Introduced on the S6000-ON.               |
| 9.2(1.0)     | Introduced on the Z9500.                  |
| 9.0.2.0      | Introduced on the S6000.                  |
| 8.3.19.0     | Introduced on the S4820T.                 |
| 8.3.11.1     | Introduced on the Z9000.                  |
| 8.5.1.0      | Added support for 4-port 40G line cards.  |
| 8.3.7.0      | Introduced on the S4810.                  |
| 7.8.1.0      | Introduced on the S-Series.               |
| 7.6.1.0      | Introduced on the C-Series.               |
| pre- 6.2.1.1 | Introduced on the E-Series.               |

|                          |                                                                                                                                           |
|--------------------------|-------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Usage Information</b> | When the offset metric is applied to an interface, that value takes precedence over an offset value that is not extended to an interface. |
|--------------------------|-------------------------------------------------------------------------------------------------------------------------------------------|

## Related Commands

- [ip prefix-list](#) — enters PREFIX-LIST mode and configure a prefix list.

# output-delay

Set the interpacket delay of successive packets to the same neighbor.

## Z9500

|                        |                                                                                                                                                               |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | <code>output-delay delay</code><br>To return to the switch software defaults for interpacket delay, use the <code>no output-delay</code> command.             |
| <b>Parameters</b>      | <b>delay</b> Specify a number of milliseconds as the delay interval. The range is from 8 to 50.                                                               |
| <b>Defaults</b>        | Not configured.                                                                                                                                               |
| <b>Command Modes</b>   | ROUTER RIP                                                                                                                                                    |

|--------------------------|----------------------------------------------------|
| <b>Usage Information</b> | This command is intended for low-speed interfaces. |
|--------------------------|----------------------------------------------------|

# passive-interface

Suppress routing updates on a specified interface.

## Z9500

**Syntax** `passive-interface interface`

To delete a passive interface, use the `no passive-interface interface` command.

**Parameters** *interface* Enter the following information:

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a Port Channel interface, enter the keywords `port-channel` then a number.
- For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults** Not configured.

**Command Modes** ROUTER RIP

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| 9.8(2.0)     | Introduced on the S3100 series.                          |
| 9.8(1.0)     | Introduced on the Z9100-ON.                              |
| 9.8(0.0P5)   | Introduced on the S4048-ON.                              |
| 9.8(0.0P2)   | Introduced on the S3048-ON.                              |
| 9.7(0.0)     | Introduced on the S6000-ON.                              |
| 9.2(1.0)     | Introduced on the Z9500.                                 |
| 9.0.2.0      | Introduced on the S6000.                                 |
| 8.3.19.0     | Introduced on the S4820T.                                |
| 8.3.11.1     | Introduced on the Z9000.                                 |
| 8.5.1.0      | Added support for 4-port 40G line cards on the E-Series. |
| 8.3.7.0      | Introduced on the S4810.                                 |
| 7.8.1.0      | Introduced on the S-Series.                              |
| 7.6.1.0      | Introduced on the C-Series.                              |
| pre- 6.2.1.1 | Introduced on the E-Series.                              |

**Usage Information** Although the passive interface does not send or receive routing updates, the network on that interface still includes in RIP updates sent using other interfaces.

**Related Commands**

- [neighbor](#) — enables RIP for a specified network.
- [network](#) — defines a neighbor.

# redistribute

Redistribute information from other routing instances.

| <b>pre- 6.2.1.1</b> | Introduced on the E-Series.               |

|                          |                                                                                                                                            |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Usage Information</b> | To redistribute the default route (0.0.0.0/0), configure the <code>default-information originate</code> command.                           |
| <b>Related Commands</b>  | <ul style="list-style-type: none"><li><a href="#">default-information originate</a> — generates a default route for RIP traffic.</li></ul> |

# redistribute isis

Redistribute routing information from an IS-IS instance.

|               |                                                                                                                                                                                                                                                                                   |
|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b> | <code>redistribute isis [tag] [level-1   level-1-2   level-2] [metric metric-value] [route-map map-name]</code><br>To disable redistribution, use the <code>no redistribute isis [tag] [level-1   level-1-2   level-2] [metric metric-value] [route-map map-name]</code> command. |
|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

|                   |                                   |                                                                                                                |
|-------------------|-----------------------------------|----------------------------------------------------------------------------------------------------------------|
| <b>Parameters</b> | <b>tag</b>                        | (OPTIONAL) Enter the name of the IS-IS routing process.                                                        |
|                   | <b>level-1</b>                    | (OPTIONAL) Enter the keywords <code>level-1</code> to redistribute only IS-IS Level-1 routes.                  |
|                   | <b>level-1-2</b>                  | (OPTIONAL) Enter the keywords <code>level-1-2</code> to redistribute both IS-IS Level-1 and Level-2 routes.    |
|                   | <b>level-2</b>                    | (OPTIONAL) Enter the keywords <code>level-2</code> to redistribute only IS-IS Level-2 routes.                  |
|                   | <b>metric <i>metric-value</i></b> | (OPTIONAL) Enter the keyword <code>metric</code> then a number as the metric value. The range is from 0 to 16. |
|                   | <b>route-map <i>map-name</i></b>  | (OPTIONAL) Enter the keywords <code>route-map</code> then the name of a configured route map.                  |

**Defaults** Not configured.

**Command Modes** ROUTER RIP

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| <b>pre- 6.2.1.1</b> | Introduced on the E-Series.               |

## redistribute ospf

Redistribute routing information from an OSPF process.

**Syntax** `redistribute ospf process-id [match external {1 | 2} | match internal | metric metric-value] [route-map map-name]`

To disable redistribution, use the `no redistribute ospf process-id [match external {1 | 2} | match internal | metric metric-value] [route-map map-name]` command.

|                   |                               |                                                                                                                                                                    |
|-------------------|-------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Parameters</b> | <b><i>process-id</i></b>      | Enter a number that corresponds to the OSPF process ID to redistribute. The range is from 1 to 65355.                                                              |
|                   | <b>match external {1   2}</b> | (OPTIONAL) Enter the keywords <code>match external</code> then the numbers 1 or 2 to indicate that external 1 routes or external 2 routes should be redistributed. |
|                   | <b>match internal</b>         | (OPTIONAL) Enter the keywords <code>match internal</code> to indicate that internal routes should be redistributed.                                                |

|                                   |                                                                                                                |
|-----------------------------------|----------------------------------------------------------------------------------------------------------------|
| <b>metric <i>metric-value</i></b> | (OPTIONAL) Enter the keyword <code>metric</code> then a number as the metric value. The range is from 0 to 16. |
| <b>route-map <i>map-name</i></b>  | (OPTIONAL) Enter the keywords <code>route-map</code> then the name of a configured route map.                  |

**Defaults** Not configured.

**Command Modes** ROUTER RIP

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| <b>Version</b>      | <b>Description</b>                        |
|---------------------|-------------------------------------------|
| <b>9.10(0.1)</b>    | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>    | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>    | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>     | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>     | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b>   | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b>   | Introduced on the S3048-ON.               |
| <b>9.7(0.0)</b>     | Introduced on the S6000-ON.               |
| <b>9.2(1.0)</b>     | Introduced on the Z9500.                  |
| <b>9.0.2.0</b>      | Introduced on the S6000.                  |
| <b>8.3.19.0</b>     | Introduced on the S4820T.                 |
| <b>8.3.11.1</b>     | Introduced on the Z9000.                  |
| <b>8.3.7.0</b>      | Introduced on the S4810.                  |
| <b>7.8.1.0</b>      | Introduced on the S-Series.               |
| <b>7.6.1.0</b>      | Introduced on the C-Series.               |
| <b>pre- 6.2.1.1</b> | Introduced on the E-Series.               |

## router rip

To configure and enable RIP, enter ROUTER RIP mode.

**Syntax** `router rip`  
To disable RIP, use the `no router rip` command.

**Defaults** Disabled.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| <b>Version</b>   | <b>Description</b>                        |
|------------------|-------------------------------------------|
| <b>9.10(0.1)</b> | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b> | Introduced on the S3148.                  |
| <b>9.10(0.0)</b> | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>  | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>  | Introduced on the Z9100-ON.               |

| Version             | Description                 |
|---------------------|-----------------------------|
| <b>9.8(0.0P5)</b>   | Introduced on the S4048-ON. |
| <b>9.8(0.0P2)</b>   | Introduced on the S3048-ON. |
| <b>9.7(0.0)</b>     | Introduced on the S6000-ON. |
| <b>9.2(1.0)</b>     | Introduced on the Z9500.    |
| <b>9.0.2.0</b>      | Introduced on the S6000.    |
| <b>8.3.19.0</b>     | Introduced on the S4820T.   |
| <b>8.3.11.1</b>     | Introduced on the Z9000.    |
| <b>8.3.7.0</b>      | Introduced on the S4810.    |
| <b>7.8.1.0</b>      | Introduced on the S-Series. |
| <b>7.6.1.0</b>      | Introduced on the C-Series. |
| <b>pre- 6.2.1.1</b> | Introduced on the E-Series. |

**Usage Information**

To enable RIP, assign a network address using the `network` command.

**Example**

```
DellEMC(conf)# router rip
DellEMC(conf-router_rip)#
```

**Related Commands**

- [network](#) — enables RIP.
- [exit](#) — returns to CONFIGURATION mode.

## show config

Display the changes you made to the RIP configuration. The default values are not shown.

### Z9500

**Syntax** `show config`

**Command Modes** ROUTER RIP

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                               |
|-------------------|-------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.               |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.               |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                  |
| <b>9.0.2.0</b>    | Introduced on the S6000.                  |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                 |

| Version      | Description                 |
|--------------|-----------------------------|
| 8.3.11.1     | Introduced on the Z9000.    |
| 8.3.7.0      | Introduced on the S4810.    |
| 7.8.1.0      | Introduced on the S-Series. |
| 7.6.1.0      | Introduced on the C-Series. |
| pre- 6.2.1.1 | Introduced on the E-Series. |

### Example

```
DellEMC(conf-router_rip)# show config
!
router rip
 network 172.31.0.0
 passive-interface TenGigabitEthernet 1/1
DellEMC(conf-router_rip)#
```

## show ip rip database

Display the routes that RIP learns. If the switch learned no RIP routes, no output is generated.

### Z9500

**Syntax** `show ip rip database [ip-address mask]`

**Parameters**

***ip-address*** (OPTIONAL) Specify an IP address in dotted decimal format to view RIP information on that network only. If you enter an IP address, also enter a mask for that IP address.

***mask*** (OPTIONAL) Specify a mask, in /network format, for the IP address.

**Command Modes** EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |
| 7.8.1.0    | Introduced on the S-Series.               |

| Version      | Description                 |
|--------------|-----------------------------|
| 7.6.1.0      | Introduced on the C-Series. |
| pre- 6.2.1.1 | Introduced on the E-Series. |

### Usage Information

The following describes the `show ip rip database` command shown in the following example.

| Field                                         | Description                                                   |
|-----------------------------------------------|---------------------------------------------------------------|
| <b>Total number of routes in RIP database</b> | Displays the number of RIP routes stored in the RIP database. |
| <b>100.10.10.0/24 directly connected</b>      | Lists the routes directly connected.                          |
| <b>150.100.0.0 redistributed</b>              | Lists the routes learned through redistribution.              |
| <b>209.9.16.0/24...</b>                       | Lists the routes and the sources advertising those routes.    |

### Example

```
DellEMC# show ip rip database
Total number of routes in RIP database: 1624
204.250.54.0/24
 [50/1] via 192.14.1.3, 00:00:12, TenGigabitEthernet 1/15
204.250.54.0/24
 auto-summary
203.250.49.0/24
 [50/1] via 192.13.1.3, 00:00:12, TenGigabitEthernet 1/14
203.250.49.0/24
 auto-summary
210.250.40.0/24
 [50/2] via 1.1.18.2, 00:00:14, Vlan 18
 [50/2] via 1.1.130.2, 00:00:12, Port-channel 30
210.250.40.0/24
 auto-summary
207.250.53.0/24
 [50/2] via 1.1.120.2, 00:00:55, Port-channel 20
 [50/2] via 1.1.130.2, 00:00:12, Port-channel 30
 [50/2] via 1.1.10.2, 00:00:18, Vlan 10
207.250.53.0/24
 auto-summary
208.250.42.0/24
 [50/2] via 1.1.120.2, 00:00:55, Port-channel 20
 [50/2] via 1.1.130.2, 00:00:12, Port-channel 30
 [50/2] via 1.1.10.2, 00:00:18, Vlan 10
208.250.42.0/24
 auto-summary
DellEMC#
```

## show running-config rip

Display the current RIP configuration.

### Z9500

**Syntax** `show running-config rip`

**Defaults** none

**Command Modes** EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                               |
|-----------|-------------------------------------------|
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON. |

| Version    | Description                     |
|------------|---------------------------------|
| 9.10(0.0)  | Introduced on the S3148.        |
| 9.10(0.0)  | Introduced on the S6100-ON.     |
| 9.8(2.0)   | Introduced on the S3100 series. |
| 9.8(1.0)   | Introduced on the Z9100-ON.     |
| 9.8(0.0P5) | Introduced on the S4048-ON.     |
| 9.8(0.0P2) | Introduced on the S3048-ON.     |
| 9.7(0.0)   | Introduced on the S6000-ON.     |
| 9.2(1.0)   | Introduced on the Z9500.        |
| 9.0.2.0    | Introduced on the S6000.        |
| 8.3.19.0   | Introduced on the S4820T.       |
| 8.3.11.1   | Introduced on the Z9000.        |
| 8.3.7.0    | Introduced on the S4810.        |
| 7.8.1.0    | Introduced on the S-Series.     |
| 7.7.1.0    | Introduced on the C-Series.     |
| 7.6.1.0    | Introduced on the E-Series.     |

#### Example

```
DelleMC# show running-config rip
!
router rip
 distribute-list Test1 in
 distribute-list Test21 out
 network 10.0.0.0
 passive-interface GigabitEthernet 2/1
 neighbor 20.20.20.20
 redistribute ospf 999
 version 2
DelleMC#
```

## timers basic

Manipulate the RIP timers for routing updates, invalid, holddown times, and flush time.

### Z9500

#### Syntax

```
timers basic update invalid holddown flush
```

To return to the default settings, use the `no timers basic` command.

#### Parameters

- update*** Enter the number of seconds to specify the rate at which RIP routing updates are sent. The range is from zero (0) to 4294967295. The default is **30 seconds**.
- invalid*** Enter the number of seconds to specify the time interval before routing updates are declared invalid or expired. The invalid value should be at least three times the update timer value. The range is from zero (0) to 4294967295. The default is **180 seconds**.
- holddown*** Enter the number of seconds to specify a time interval during which the route is marked as unreachable but still sending RIP packets. The holddown value should be at least three times the update timer value. The range is from zero (0) to 4294967295. The default is **180 seconds**.

**flush** Enter the number of seconds to specify the time interval during which the route is advertised as unreachable. When this interval expires, the route is flushed from the routing table. The flush value should be greater than the update value. The range is from zero (0) to 4294967295. The default is **240 seconds**.

- Defaults**
- update = **30 seconds**
  - invalid = **180 seconds**
  - holddown = **180 seconds**
  - flush = **240 seconds**

**Command Modes** ROUTER RIP

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version             | Description                               |
|---------------------|-------------------------------------------|
| <b>9.10(0.1)</b>    | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>    | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>    | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>     | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>     | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b>   | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b>   | Introduced on the S3048-ON.               |
| <b>9.7(0.0)</b>     | Introduced on the S6000-ON.               |
| <b>9.2(1.0)</b>     | Introduced on the Z9500.                  |
| <b>9.0.2.0</b>      | Introduced on the S6000.                  |
| <b>8.3.19.0</b>     | Introduced on the S4820T.                 |
| <b>8.3.11.1</b>     | Introduced on the Z9000.                  |
| <b>8.3.7.0</b>      | Introduced on the S4810.                  |
| <b>7.8.1.0</b>      | Introduced on the S-Series.               |
| <b>7.6.1.0</b>      | Introduced on the C-Series.               |
| <b>pre- 6.2.1.1</b> | Introduced on the E-Series.               |

**Usage Information** If you change the timers on one router, also synchronize the timers on all routers in the RIP domain.

## version

Specify either RIP version 1 or RIP version 2.

## Z9500

**Syntax** `version {1 | 2}`  
To return to the default version setting, use the `no version` command.

**Parameters**

- 1** Enter the keyword 1 to specify RIP version 1.
- 2** Enter the keyword 2 to specify RIP version 2.

**Defaults** The Dell EMC Networking OS sends RIPv1 and receives RIPv1 and RIPv2.

**Command Modes** ROUTER RIP

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| <b>Version</b>      | <b>Description</b>                        |
|---------------------|-------------------------------------------|
| <b>9.10(0.1)</b>    | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>    | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>    | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>     | Introduced on the S3100 series.           |

| <b>pre- 6.2.1.1</b> | Introduced on the E-Series.               |

**Related Commands**

- [ip rip receive version](#) — sets the RIP version the interface receives.
- [ip rip send version](#) — sets the RIP version the interface sends.

# Remote Monitoring (RMON)

Dell EMC Networking OS RMON is based on IEEE standards, providing both 32-bit and 64-bit monitoring and long-term statistics collection. Dell EMC Networking OS RMON supports the following RMON groups, as defined in RFC-2819, RFC-3273, RFC-3434, and RFC-4502:

- Ethernet Statistics Table; RFC-2819
- Ethernet Statistics High-Capacity Table; RFC-3273, 64bits
- Ethernet History Control Table; RFC-2819
- Ethernet History Table; RFC-2819
- Ethernet History High-Capacity Table; RFC-3273, 64bits
- Alarm Table; RFC-2819
- High-Capacity Alarm Table (64bits); RFC-3434, 64bits
- Event Table; RFC-2819
- Log Table; RFC-2819
- User History; RFC-4502
- Probe Configuration (Capabilities, SoftwareRev, HardwareRev, DateTime and ResetControl); RFC-4502

Dell EMC Networking OS RMON does not support the following statistics:

- etherStatsCollisions
- etherHistoryCollisions
- etherHistoryUtilization

**NOTE:** Only SNMP GET/GETNEXT access is supported. Configure RMON using the RMON commands. Collected data is lost during a chassis reboot.

## rmon alarm

Set an alarm on any MIB object.

**Syntax** `rmon alarm number variable interval {delta | absolute} rising-threshold value event-number falling-threshold value event-number [owner string]`

To disable the alarm, use the `no rmon alarm number` command.

**Parameters**

|                        |                                                                                                                                                       |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><i>number</i></b>   | Enter the alarm integer number from 1 to 65535. The value must be unique in the RMON alarm table.                                                     |
| <b><i>variable</i></b> | Enter the MIB object to monitor. The variable must be in the SNMP OID format; for example, 1.3.6.1.2.1.1.3. The object type must be a 32-bit integer. |

|                                                      |                                                                                                                                                                                                                                                                                                                                                                                           |
|------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><i>interval</i></b>                               | Time, in seconds, the alarm monitors the MIB variables; this is the alarmSampleType in the RMON alarm table. The range is from 5 to 3600 seconds.                                                                                                                                                                                                                                         |
| <b>delta</b>                                         | Enter the keyword <code>delta</code> to test the change between MIB variables. This is the alarmSampleType in the RMON alarm table.                                                                                                                                                                                                                                                       |
| <b>absolute</b>                                      | Enter the keyword <code>absolute</code> to test each MIB variable directly. This is the alarmSampleType in the RMON alarm table.                                                                                                                                                                                                                                                          |
| <b>rising-threshold<br/>value event-<br/>number</b>  | Enter the keywords <code>rising-threshold</code> then the value (32 bit) the rising-threshold alarm is either triggered or reset. Then enter the event-number to trigger when the rising threshold exceeds its limit. This value is the same as the alarmRisingEventIndex or alarmTable of the RMON MIB. If there is no corresponding rising-threshold event, the value is zero.          |
| <b>falling-threshold<br/>value event-<br/>number</b> | Enter the keywords <code>falling-threshold</code> then the value (32 bit) the falling-threshold alarm is either triggered or reset. Then enter the event-number to trigger when the falling threshold exceeds its limit. This value is the same as the alarmFallingEventIndex or the alarmTable of the RMON MIB. If there is no corresponding falling-threshold event, the value is zero. |
| <b>owner string</b>                                  | (OPTIONAL) Enter the keyword <code>owner</code> then the owner name to specify an owner for the alarm. This is the alarmOwner object in the alarmTable of the RMON MIB.                                                                                                                                                                                                                   |

| <b>Version</b>    | <b>Description</b>                        |
|-------------------|-------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.               |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.               |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                  |
| <b>9.0.2.0</b>    | Introduced on the S6000.                  |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                 |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                  |
| <b>8.3.7.0</b>    | Introduced on the S4810.                  |
| <b>7.6.1.0</b>    | Introduced on the S-Series.               |
| <b>7.5.1.0</b>    | Introduced on the C-Series.               |
| <b>6.1.1.0</b>    | Introduced on the E-Series.               |

# rmon collection history

Enable the RMON MIB history group of statistics collection on an interface.

**Syntax** `rmon collection history {controlEntry integer} [owner name] [buckets number] [interval seconds]`

To remove a specified RMON history group of statistics collection, use the `no rmon collection history {controlEntry integer}` command.

|                   |                                    |                                                                                                                                                                                                                                                                  |
|-------------------|------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Parameters</b> | <b>controlEntry <i>integer</i></b> | Enter the keyword <code>controlEntry</code> to specify the RMON group of statistics using a value. Then enter an integer value from 1 to 65535 that identifies the RMON group of statistics. The integer value must be a unique index in the RMON history table. |
|                   | <b>owner <i>name</i></b>           | (OPTIONAL) Enter the keyword <code>owner</code> then the owner name to record the owner of the RMON group of statistics.                                                                                                                                         |
|                   | <b>buckets <i>number</i></b>       | (OPTIONAL) Enter the keyword <code>buckets</code> then the number of buckets for the RMON collection history group of statistics. The bucket range is from 1 to 1000. The default is <b>50</b> .                                                                 |
|                   | <b>interval <i>seconds</i></b>     | (OPTIONAL) Enter the keyword <code>interval</code> then the number of seconds in each polling cycle. The range is from 5 to 3600 seconds. The default is <b>1800 seconds</b> .                                                                                   |

**Defaults** none

# rmon collection statistics

Enable RMON MIB statistics collection on an interface.

**Syntax** `rmon collection statistics {controlEntry integer} [owner name]`  
To remove RMON MIB statistics collection on an interface, use the `no rmon collection statistics {controlEntry integer}` command.

**Parameters**

|                             |                                                                                                                                                                                                                                                          |
|-----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>controlEntry integer</b> | Enter the keyword <code>controlEntry</code> to specify the RMON group of statistics using a value. Then enter an integer value from 1 to 65535 that identifies the RMON Statistic Table. The integer value must be a unique in the RMON statistic table. |
| <b>owner name</b>           | (OPTIONAL) Enter the keyword <code>owner</code> then the owner name to record the owner of the RMON group of statistics.                                                                                                                                 |

**Defaults** none

**Command Modes** CONFIGURATION INTERFACE (config-if)

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |

| 7.5.1.0    | Introduced on the C-Series.               |
| 6.1.1.0    | Introduced on the E-Series.               |

# rmon event

Add an event in the RMON event table.

**Syntax** `rmon event number [log] [trap community] [description string]`  
To disable RMON on an interface, use the `no rmon event number` command.

**Parameters**

|               |                                                                                                                                                     |
|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>number</b> | Assign an event number in integer format. The range is from 1 to 65535. You must ensure that the value you enter is unique in the RMON event table. |
|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|

|                                  |                                                                                                                                                                                                                                                                                                                                                              |
|----------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>log</b>                       | (OPTIONAL) Enter the keyword <code>log</code> to generate an RMON event log. This option sets the <code>eventType</code> to either <code>log</code> or <code>log-and-snmptrap</code> in the RMON event table. The default is <code>None</code> .                                                                                                             |
| <b>trap <i>community</i></b>     | (OPTIONAL) Enter the keyword <code>trap</code> followed by the SNMP community string to generate SNMP traps for an RMON event entry. This option sets the <code>eventType</code> to either <code>snmptrap</code> or <code>log-and-snmptrap</code> in the RMON event table. In addition to the SNMP traps, this option also generates a <code>syslog</code> . |
| <b>description <i>string</i></b> | (OPTIONAL) Enter the keyword <code>description</code> then a string describing the event.                                                                                                                                                                                                                                                                    |
| <b>owner <i>name</i></b>         | (OPTIONAL) Enter the keyword <code>owner</code> then the name of the owner of this event.                                                                                                                                                                                                                                                                    |

**Defaults** As noted in the *Parameters* section.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| <b>7.5.1.0</b>    | Introduced on the C-Series.               |
| <b>6.1.1.0</b>    | Introduced on the E-Series.               |

## rmon hc-alarm

Set an alarm on any MIB object.

**Syntax** `rmon hc-alarm number variable interval {delta | absolute} rising-threshold value event-number falling-threshold value event-number [owner string]`

To disable the alarm, use the `no rmon hc-alarm number` command.

**Parameters**

***number*** Enter the alarm integer number from 1 to 65535. The value must be unique in the RMON alarm table.

***variable*** The MIB object to monitor. The variable must be in the SNMP OID format; for example, 1.3.6.1.2.1.1.3 The object type must be a 64-bit integer.

|                                                      |                                                                                                                                                                                                                                                                                                                                                                                           |
|------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><i>interval</i></b>                               | Time, in seconds, the alarm monitors the MIB variables; this is the alarmSampleType in the RMON alarm table. The range is from 5 to 3600 seconds.                                                                                                                                                                                                                                         |
| <b>delta</b>                                         | Enter the keyword <code>delta</code> to test the change between MIB variables. This is the alarmSampleType in the RMON alarm table.                                                                                                                                                                                                                                                       |
| <b>absolute</b>                                      | Enter the keyword <code>absolute</code> to test each MIB variable directly. This is the alarmSampleType in the RMON alarm table.                                                                                                                                                                                                                                                          |
| <b>rising-threshold<br/>value event-<br/>number</b>  | Enter the keywords <code>rising-threshold</code> then the value (64 bit) the rising-threshold alarm is either triggered or reset. Then enter the event-number to trigger when the rising threshold exceeds its limit. This value is the same as the alarmRisingEventIndex or alarmTable of the RMON MIB. If there is no corresponding rising-threshold event, the value is zero.          |
| <b>falling-threshold<br/>value event-<br/>number</b> | Enter the keywords <code>falling-threshold</code> then the value (64 bit) the falling-threshold alarm is either triggered or reset. Then enter the event-number to trigger when the falling threshold exceeds its limit. This value is the same as the alarmFallingEventIndex or the alarmTable of the RMON MIB. If there is no corresponding falling-threshold event, the value is zero. |
| <b>owner string</b>                                  | (OPTIONAL) Enter the keyword <code>owner</code> then the owner name to specify an owner for the alarm. This is the alarmOwner object in the alarmTable of the RMON MIB.                                                                                                                                                                                                                   |

| 6.1.1.0    | Introduced on the E-Series.               |

### Example

```
DellEMC# show rmon
RMON status
 total memory used 218840 bytes.
 ether statistics table: 8 entries, 4608 bytes
 ether history table: 8 entries, 6000 bytes
 alarm table: 390 entries, 102960 bytes
 high-capacity alarm table: 5 entries, 1680 bytes
 event table: 500 entries, 206000 bytes
 log table: 2 entries, 552 bytes
DellEMC#
```

# show rmon alarms

Display the contents of the RMON alarm table.

## Z9500

**Syntax** `show rmon alarms [index] [brief]`

**Parameters**

- index** (OPTIONAL) Enter the table index number to display just that entry.
- brief** (OPTIONAL) Enter the keyword `brief` to display the RMON alarm table in an easy-to-read format.

**Defaults** none

**Command Modes** EXEC

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                               |

|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | <code>show rmon hc-alarm [<i>index</i>] [<i>brief</i>]</code>                                                                                                 |                                                                                                                          |
| <b>Parameters</b>      | <b><i>index</i></b>                                                                                                                                           | (OPTIONAL) Enter the table index number to display just that entry.                                                      |
|                        | <b><i>brief</i></b>                                                                                                                                           | (OPTIONAL) Enter the keyword <code>brief</code> to display the RMON High-Capacity alarm table in an easy-to-read format. |
| <b>Defaults</b>        | none                                                                                                                                                          |                                                                                                                          |
| <b>Command Modes</b>   | EXEC                                                                                                                                                          |                                                                                                                          |
| <b>Command History</b> | This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> . |                                                                                                                          |

| <b>Version</b>    | <b>Description</b>                        |
|-------------------|-------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.               |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.               |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                  |
| <b>9.0.2.0</b>    | Introduced on the S6000.                  |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                 |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                  |
| <b>8.3.7.0</b>    | Introduced on the S4810.                  |
| <b>7.6.1.0</b>    | Introduced on the S-Series.               |
| <b>7.5.1.0</b>    | Introduced on the C-Series.               |
| <b>6.1.1.0</b>    | Introduced on the E-Series.               |

#### Example (Index)

```
DellEMC# show rmon hc-alarm 1
RMON high-capacity alarm entry 2
 object: 1.3.6.1.2.1.2.2.1.4.2099844
 sample interval: 10
 sample type: delta value.
 value: 0, value status: positive
 alarm type: rising or falling alarm.
 alarm rising threshold value: positive.
 rising threshold: 500, RMON event index: 3
 alarm falling threshold value: positive.
```

```

 falling threshold: 300, RMON event index: 4
 alarm sampling failed 0 times.
 alarm owner:
 alarm storage type: non-volatile.
 alarm status: OK
DellEMC#

```

### Example (Brief)

```

DellEMC# show rmon hc-alarm brief
index SNMP OID

1 1.3.6.1.2.1.1.3
2 1.3.6.1.2.1.1.3
3 1.3.6.1.2.1.1.3
4 1.3.6.1.2.1.1.3
5 1.3.6.1.2.1.1.3
DellEMC#

```

## show rmon history

Display the contents of the RMON Ethernet history table.

### Z9500

**Syntax** `show rmon history [index] [brief]`

**Parameters**

- index*** (OPTIONAL) Enter the table index number to display just that entry.
- brief*** (OPTIONAL) Enter the keyword `brief` to display the RMON Ethernet history table in an easy-to-read format

**Defaults** none

**Command Modes** EXEC

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                               |
|-------------------|-------------------------------------------|

| <b>7.6.1.0</b>    | Introduced on the S-Series.               |

| Version | Description                 |
|---------|-----------------------------|
| 7.5.1.0 | Introduced on the C-Series. |
| 6.1.1.0 | Introduced on the E-Series. |

#### Example (Index)

```
DellEMC# show rmon history 6001
RMON history control entry 6001
interface: ifIndex.100974631 TenGigabitEthernet 2/1
bucket requested: 1
bucket granted: 1
sampling interval: 5 sec
owner: 1
status: OK
DellEMC#
```

#### Example (Brief)

## show rmon log

Display the contents of the RMON log table.

### Z9500

**Syntax** `show rmon log [index] [brief]`

**Parameters**

- index** (OPTIONAL) Enter the table index number to display just that entry.
- brief** (OPTIONAL) Enter the keyword `brief` to display the RMON log table in an easy-to-read format.

**Defaults** none

**Command Modes** EXEC

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |
| 7.6.1.0    | Introduced on the S-Series.               |

| Version | Description                 |
|---------|-----------------------------|
| 7.5.1.0 | Introduced on the C-Series. |
| 6.1.1.0 | Introduced on the E-Series. |

**Usage Information**

The log table has a maximum of 500 entries. If the log exceeds that maximum, the oldest log entry is purged to allow room for the new entry.

**Example (Index)**

```
DelleMC# show rmon log 2
RMON log entry, alarm table index 2, log index 1
 log time: 14638 (THU AUG 12 22:10:40 2004)
 description: 2
DelleMC#
```

**Example (Brief)**

```
DelleMC# show rmon log br
eventIndex description

2 2
4 4
DelleMC#
```

## show rmon statistics

Display the contents of RMON Ethernet statistics table.

### Z9500

**Syntax** `show rmon statistics [index] [brief]`

**Parameters**

- index** (OPTIONAL) Enter the table index number to display just that entry.
- brief** (OPTIONAL) Enter the keyword `brief` to display the RMON Ethernet statistics table in an easy-to-read format.

**Defaults** none

**Command Modes** EXEC

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |

# Rapid Spanning Tree Protocol (RSTP)

The Dell EMC Networking OS implementation of rapid spanning tree protocol (RSTP) is based on the IEEE 802.1w standard spanning-tree protocol. The RSTP algorithm configures connectivity throughout a bridged local area network (LAN) that is comprised of LANs interconnected by bridges.

Dell EMC Networking OS supports RSTP.

## Topics:

- [bridge-priority](#)
- [debug spanning-tree rstp](#)
- [description](#)
- [disable](#)
- [forward-delay](#)
- [hello-time](#)
- [max-age](#)
- [protocol spanning-tree rstp](#)
- [show config](#)
- [show spanning-tree rstp](#)
- [spanning-tree rstp](#)
- [tc-flush-standard](#)

## bridge-priority

Set the bridge priority for RSTP.

|                        |                                                                                                                                                               |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | <code>bridge-priority <i>priority-value</i></code><br>To return to the default value, use the <code>no bridge-priority</code> command.                        |
| <b>Parameters</b>      | <b><i>priority-value</i></b> Enter a number as the bridge priority value in increments of 4096. The range is from 0 to 61440. The default is <b>32768</b> .   |
| <b>Defaults</b>        | <b>32768</b>                                                                                                                                                  |
| <b>Command Modes</b>   | CONFIGURATION RSTP (conf-rstp)                                                                                                                                |
| <b>Command History</b> | This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> . |

| Version           | Description                               |
|-------------------|-------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.               |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.               |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                  |

| Version  | Description                 |
|----------|-----------------------------|
| 9.0.2.0  | Introduced on the S6000.    |
| 8.3.19.0 | Introduced on the S4820T.   |
| 8.3.11.1 | Introduced on the Z9000.    |
| 8.3.7.0  | Introduced on the S4810.    |
| 7.6.1.0  | Introduced on the S-Series. |
| 7.5.1.0  | Introduced on the C-Series. |
| 6.2.1.1  | Introduced on the E-Series. |

#### Related Commands

- [protocol spanning-tree rstp](#) — enters rapid spanning tree mode.

## debug spanning-tree rstp

Enable debugging of RSTP and view information on the protocol.

**Syntax** `debug spanning-tree rstp [all | bpdu interface {in | out} | events]`

To disable debugging, use the `no debug spanning-tree rstp` command.

#### Parameters

|                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-----------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>all</b>                              | (OPTIONAL) Enter the keyword <code>all</code> to debug all spanning tree operations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>bpdu <i>interface</i> {in   out}</b> | (OPTIONAL) Enter the keyword <code>bpdu</code> to debug the bridge protocol data units.<br>(OPTIONAL) Enter the keyword <code>interface</code> along with the interface information: <ul style="list-style-type: none"> <li>• For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information.</li> <li>• For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information.</li> <li>• For a port-channel interface, enter the keywords <code>port-channel</code> then the port-channel ID.</li> </ul> Optionally, enter an <code>in</code> or <code>out</code> parameter with the optional interface: <ul style="list-style-type: none"> <li>• For Receive, enter <code>in</code>.</li> <li>• For Transmit, enter <code>out</code>.</li> </ul> |
| <b>events</b>                           | (OPTIONAL) Enter the keyword <code>events</code> to debug RSTP events.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

**Command Modes** EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |

| Version  | Description                              |
|----------|------------------------------------------|
| 9.0.2.0  | Introduced on the S6000.                 |
| 8.3.19.0 | Introduced on the S4820T.                |
| 8.3.11.1 | Introduced on the Z9000.                 |
| 8.5.1.0  | Added support for 4-port 40G line cards. |
| 8.3.7.0  | Introduced on the S4810.                 |
| 7.6.1.0  | Introduced on the S-Series.              |
| 7.5.1.0  | Introduced on the C-Series.              |
| 6.2.1.1  | Introduced on the E-Series.              |

### Example

```
DellEMC# debug spanning-tree rstp bpdu tengigabitethernet 2/1 ?
in Receive (in)
out Transmit (out)
```

## description

Enter a description of the rapid spanning tree.

**Syntax** `description {description}`

To remove the description, use the `no description {description}` command.

**Parameters** *description* Enter a description to identify the rapid spanning tree (80 characters maximum).

**Defaults** none

**Command Modes** SPANNING TREE (The prompt is "config-rstp".)

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

**Related Commands**

- [hello-time](#) — changes the time interval between BPDUs.
- [max-age](#) — changes the wait time before RSTP refreshes the protocol configuration information.

## hello-time

Set the time interval between the generation of the RSTP bridge protocol data units (BPDUs).

**Syntax** `hello-time [milli-second] seconds`

To return to the default value, use the `no hello-time` command.

**Parameters**

|                     |                                                                                                                                               |
|---------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| <b>seconds</b>      | Enter a number as the time interval between transmission of BPDUs. The range is from 1 to 10 seconds. The default is <b>2 seconds</b> .       |
| <b>milli-second</b> | Enter the keywords <code>milli-second</code> to configure a hello time on the order of milliseconds. The range is from 50 to 950 milliseconds |

**Defaults** **2 seconds**

**Command Modes** CONFIGURATION RSTP (conf-rstp)

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |

| Version           | Description                                                 |
|-------------------|-------------------------------------------------------------|
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                                 |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.                                 |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                                    |
| <b>9.0.2.0</b>    | Introduced on the S6000.                                    |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                                   |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                                    |
| <b>8.3.7.0</b>    | Introduced on the S4810.                                    |
| <b>8.3.1.0</b>    | Added the <code>milli-second</code> option to the S-Series. |
| <b>7.6.1.0</b>    | Introduced on the S-Series.                                 |
| <b>7.5.1.0</b>    | Introduced on the C-Series.                                 |
| <b>6.2.1.1</b>    | Introduced on the E-Series.                                 |

#### Usage Information

The hello time is encoded in BPDUs in increments of 1/256ths of a second. The standard minimum hello time in seconds is 1 second, which is encoded as 256. Millisecond hello times are encoded using values less than 256; the millisecond hello time equals  $(x/1000)*256$ .

When you configure millisecond hellos, the default hello interval of 2 seconds is still used for edge ports; the millisecond hello interval is not used.

#### Related Commands

- `forward-delay` — changes the wait time before RSTP transitions to the Forwarding state.
- `max-age` — changes the wait time before RSTP refreshes the protocol configuration information.

## max-age

To maintain configuration information before refreshing that information, set the time interval for the RSTP bridge.

#### Syntax

`max-age seconds`

To return to the default values, use the `no max-age` command.

#### Parameters

***max-age*** Enter a number of seconds the Dell EMC Networking OS waits before refreshing configuration information. The range is from 6 to 40 seconds. The default is **20 seconds**.

#### Defaults

**20 seconds**

#### Command Modes

CONFIGURATION RSTP (conf-rstp)

#### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                               |
|-------------------|-------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.               |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.               |

| Version  | Description                 |
|----------|-----------------------------|
| 9.2(1.0) | Introduced on the Z9500.    |
| 9.0.2.0  | Introduced on the S6000.    |
| 8.3.19.0 | Introduced on the S4820T.   |
| 8.3.11.1 | Introduced on the Z9000.    |
| 8.3.7.0  | Introduced on the S4810.    |
| 7.6.1.0  | Introduced on the S-Series. |
| 7.5.1.0  | Introduced on the C-Series. |
| 6.2.1.1  | Introduced on the E-Series. |

**Related Commands**

- [forward-delay](#) — changes the wait time before RSTP transitions to the Forwarding state.
- [hello-time](#) — changes the time interval between BPDUs.

## protocol spanning-tree rstp

To configure RSTP, enter RSTP mode.

**Syntax** `protocol spanning-tree rstp`  
 To exit RSTP mode, use the `exit` command.

**Defaults** Not configured

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |

| 8.3.7.0    | Introduced on the S4810.                  |
| 7.6.1.0    | Introduced on the S-Series.               |
| 7.5.1.0    | Introduced on the C-Series.               |
| 6.2.1.1    | Introduced on the E-Series.               |

**Usage Information**

RSTP is not enabled when you enter RSTP mode. To enable RSTP globally on the system, use the `no disable` command from RSTP mode.

## Example

```
DellEMC(conf)# protocol spanning-tree rstp
DellEMC(config-rstp)# no disable
```

## Related Commands

- [disable](#) — disables RSTP globally on the system.

# show config

View the current configuration for the mode. Only non-default values are displayed.

**Syntax** `show config`

**Command Modes** CONFIGURATION RSTP (conf-rstp)

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| <b>6.2.1.1</b>    | Introduced on the E-Series.               |

## Example

```
DellEMC(conf-rstp)# show config
!
protocol spanning-tree rstp
 no disable
 bridge-priority 16384
```

# show spanning-tree rstp

Display the RSTP configuration.

**Syntax** `show spanning-tree rstp [brief] [guard]`

**Parameters** **brief** (OPTIONAL) Enter the keyword `brief` to view a synopsis of the RSTP configuration information.

**guard** (OPTIONAL) Enter the keyword `guard` to display the type of guard enabled on an RSTP interface and the current port state.

- Command Modes**
- EXEC
  - EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| 9.8(2.0)   | Introduced on the S3100 series.                                                                    |
| 9.8(1.0)   | Introduced on the Z9100-ON.                                                                        |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                                                        |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                                                        |
| 9.7(0.0)   | Introduced on the S6000-ON.                                                                        |
| 9.2(1.0)   | Introduced on the Z9500.                                                                           |
| 9.0.2.0    | Introduced on the S6000.                                                                           |
| 8.3.19.0   | Introduced on the S4820T.                                                                          |
| 8.3.11.1   | Introduced on the Z9000.                                                                           |
| 8.4.2.1    | Added support for the optional <code>guard</code> keyword on the C-Series, S-Series, and E-Series. |
| 8.3.7.0    | Introduced on the S4810.                                                                           |
| 7.6.1.0    | Introduced on the S-Series.                                                                        |
| 7.5.1.0    | Introduced on the C-Series.                                                                        |
| 6.4.1.0    | Expanded to display the port error disable state (EDS) caused by loopback BPDU inconsistency.      |
| 6.2.1.1    | Introduced on the E-Series.                                                                        |

**Usage Information** The following describes the `show spanning-tree rstp guard` command shown in the following example.

| Field                 | Description                                                                                                                             |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------|
| <b>Interface Name</b> | RSTP interface.                                                                                                                         |
| <b>Instance</b>       | RSTP instance.                                                                                                                          |
| <b>Sts</b>            | Port state: root-inconsistent (INCON Root), forwarding (FWD), listening (LIS), blocking (BLK), disabled (DIS), or shut down (EDS Shut). |
| <b>Guard Type</b>     | Types of STP guard configured (Root, Loop, or BPDU guard)                                                                               |

**Example (Brief)**

```
DelleMC# show spanning-tree rstp brief
Executing IEEE compatible Spanning Tree Protocol
Root ID Priority 8192, Address 0001.e805.e306
Root Bridge hello time 4, max age 20, forward delay 15

Number of transitions to forwarding state 1
BPDU : sent 27, received 9
The port is not in the Edge port mode

```

### Example (Guard)

```

DelleMC# show spanning-tree rstp guard
Interface
Name Instance Sts Guard type

Te 1/1 0 INCON(Root) Rootguard
Te 1/2 0 FWD Loopguard
Te 1/3 0 BLK Bpduguard

```

## spanning-tree rstp

Configure an RSTP interface with one of these settings: port cost, edge port with optional bridge port data unit (BPDU) guard, port priority, loop guard, or root guard.

**Syntax** `spanning-tree rstp {cost port-cost | edge-port [bpduguard [shutdown-on-violation]] | priority priority | {loopguard | rootguard}}`

## Parameters

|                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|---------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>cost</b> <i>port-cost</i>    | Enter the keyword <code>cost</code> then the port cost value. The range is from 1 to 200000. The defaults are: <ul style="list-style-type: none"><li>• 100 Mb/s Ethernet interface = <b>200000</b></li><li>• 1-Gigabit Ethernet interface = <b>20000</b></li><li>• 10-Gigabit Ethernet interface = <b>2000</b></li><li>• Port Channel interface with one 100 Mb/s Ethernet = <b>200000</b></li><li>• Port Channel interface with one 1 Gigabit Ethernet = <b>20000</b></li><li>• Port Channel interface with one 10 Gigabit Ethernet = <b>2000</b></li><li>• Port Channel with two 1 Gigabit Ethernet = <b>18000</b></li><li>• Port Channel with two 10 Gigabit Ethernet = <b>1800</b></li><li>• Port Channel with two 100 Mbps Ethernet = <b>180000</b></li></ul> |
| <b>edge-port</b>                | Enter the keywords <code>edge-port</code> to configure the interface as a rapid spanning tree edge port.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>bpduguard</b>                | (OPTIONAL) Enter the keyword <code>portfast</code> to enable Portfast to move the interface into Forwarding mode immediately after the root fails.<br>Enter the keyword <code>bpduguard</code> to disable the port when it receives a BPDU.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>shutdown-on-violation</b>    | (OPTIONAL) Enter the keywords <code>shutdown-on-violation</code> to hardware disable an interface when a BPDU is received and the port is disabled.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>priority</b> <i>priority</i> | Enter keyword <code>priority</code> then a value in increments of 16 as the priority. The range is from 0 to 240. The default is <b>128</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>loopguard</b>                | Enter the keyword <code>loopguard</code> to enable loop guard on an RSTP port or port-channel interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>rootguard</b>                | Enter the keyword <code>rootguard</code> to enable root guard on an RSTP port or port-channel interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

## Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                                                                                        |
|-------------------|----------------------------------------------------------------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON.                                                          |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                                                                           |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.                                                                        |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.                                                                    |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.                                                                        |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.                                                                        |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                                                                        |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.                                                                        |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                                                                           |
| <b>9.0.2.0</b>    | Introduced on the S6000.                                                                           |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                                                                          |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                                                                           |
| <b>8.4.2.1</b>    | Added support for the optional <code>guard</code> keyword on the C-Series, S-Series, and E-Series. |
| <b>8.3.7.0</b>    | Introduced on the S4810.                                                                           |
| <b>8.2.1.0</b>    | Introduced the hardware <code>shutdown-on-violation</code> options.                                |

| Version | Description                                            |
|---------|--------------------------------------------------------|
| 7.6.1.0 | Introduced on the S-Series.                            |
| 7.5.1.0 | Introduced on the C-Series.                            |
| 7.4.1.0 | Added the optional bridge port data unit (BPDU) guard. |
| 6.2.1.1 | Introduced on the E-Series.                            |

### Usage Information

The `BPDU guard` option prevents the port from participating in an active STP topology in case a BPDU appears on a port unintentionally, or is misconfigured, or is subject to a DOS attack. This option places the port into an Error Disable state if a BPDU appears and a message is logged so that the administrator can take corrective action.

**NOTE:** A port configured as an edge port, on an RSTP switch, immediately transitions to the Forwarding state. Only configure ports connected to end-hosts as edge ports. Consider an edge port similar to a port with a `spanning-tree portfast` enabled.

If you do not enable `shutdown-on-violation`, BPDUs are still sent to the RPM CPU.

You cannot enable STP root guard and loop guard at the same time on a port. For example, if you configure loop guard on a port on which root guard is already configured, the following error message displays: `% Error: RootGuard is configured. Cannot configure LoopGuard.`

Enabling Portfast BPDU guard and loop guard at the same time on a port results in a port that remains in a Blocking state and prevents traffic from flowing through it. For example, when Portfast BPDU guard and loop guard are both configured:

- If a BPDU is received from a remote device, BPDU guard places the port in an Err-Disabled Blocking state and no traffic is forwarded on the port.
- If no BPDU is received from a remote device, loop guard places the port in a Loop-Inconsistent Blocking state and no traffic is forwarded on the port.

### Example

```
DellEMC(conf)# interface tengigabitethernet 4/1
DellEMC(conf-if-gi-4/0)# spanning-tree rstp edge-port
DellEMC(conf-if-gi-4/0)# show config
!
interface TenGigabitEthernet 4/1
 no ip address
 switchport
 spanning-tree rstp edge-port
 no shutdown
DellEMC#
```

## tc-flush-standard

Enable the MAC address flushing after receiving every topology change notification.

**Syntax** `tc-flush-standard`  
To disable, use the `no tc-flush-standard` command.

**Defaults** Disabled

**Command Modes** CONFIGURATION (conf-rstp)

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                               |
|-----------|-------------------------------------------|
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0) | Introduced on the S3148.                  |
| 9.10(0.0) | Introduced on the S6100-ON.               |

| <b>Version</b>    | <b>Description</b>              |
|-------------------|---------------------------------|
| <b>9.8(2.0)</b>   | Introduced on the S3100 series. |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.     |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.     |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.     |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.     |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.        |
| <b>9.0.2.0</b>    | Introduced on the S6000.        |
| <b>8.3.19.0</b>   | Introduced on the S4820T.       |
| <b>8.3.11.1</b>   | Introduced on the Z9000.        |
| <b>8.3.7.0</b>    | Introduced on the S4810.        |
| <b>7.6.1.0</b>    | Introduced on the S-Series.     |
| <b>7.5.1.0</b>    | Introduced on the C-Series.     |
| <b>6.5.1.0</b>    | Introduced on the E-Series.     |

**Usage  
Information**

By default, Dell EMC Networking OS implements an optimized flush mechanism for RSTP. This implementation helps in flushing MAC addresses only when necessary (and less often), allowing for faster convergence during topology changes. However, if a standards-based flush mechanism is needed, you can turn on this *knob* command to enable flushing MAC addresses after receiving every topology change notification.

The commands in this chapter are available on Dell EMC Networking OS.

For configuration details, see the *Security* section in the *Dell EMC Networking OS Configuration Guide*.

**i** **NOTE:** Dell EMC Networking OS implements LEAP with MSCHAP v2 supplicant.

## Role-Based Access Control Commands

With Role-Based Access Control (RBAC), access and authorization is controlled based on a user's role. Users are granted permissions based on their user roles, not on their individual user ID. User roles are created for job functions and through those roles they acquire the permissions to perform their associated job function.

This section describes the syntax and usage of RBAC-specific commands. You can find information on other related security commands in this chapter:

- [aaa accounting](#)
- [aaa authentication login](#)
- [aaa authorization commands](#)
- [authorization](#)
- [show accounting](#)
- [show users](#)
- [username](#)

### aaa authorization role-only

Configure authentication to use the user's role only when determining if access to commands is permitted.

**Syntax** `aaa authorization role-only`

To return to the default setting, use the `no aaa authentication role-only` command.

**Parameters**

|                                          |                                                                                                                                                             |
|------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><i>name</i></b>                       | Enter a text string for the name of the user up to 63 characters. It cannot be one of the system defined roles (sysadmin, secadmin, netadmin, netoperator). |
| <b><i>inherit existing-role-name</i></b> | Enter the <code>inherit</code> keyword then specify the system defined role to inherit permissions from (sysadmin, secadmin, netadmin, netoperator).        |

**Defaults** none

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                             |
|------------|---------------------------------------------------------|
| 9.8(1.0)   | Introduced on the Z9100-ON.                             |
| 9.8(0.0P5) | Introduced on the S4048-ON.                             |
| 9.8(0.0P2) | Introduced on the S3048-ON.                             |
| 9.7(0.0)   | Introduced on the S6000-ON.                             |
| 9.5(0.0)   | Introduced on the Z9000, S6000, S4820T, S4810, and MXL. |

**Usage Information**

By default, access to commands are determined by the user's role (if defined) or by the user's privilege level. If the `aaa authorization role-only` command is enabled, then only the user's role is used.

Before you enable role-based only AAA authorization:

1. Locally define a system administrator user role. This will give you access to login with full permissions even if network connectivity to remote authentication servers is not available.
2. Configure login authentication on the console. This ensures that all users are properly identified through authentication no matter the access point
3. Specify an authentication method (RADIUS, TACACS+, or Local).
4. Specify authorization method (RADIUS, TACACS+ or Local).
5. Verify the configuration has been applied to the console or VTY line.

**Related Commands**

login authentication, password, radius-server host, tacacs-server host

## role

Changes command permissions for roles.

**Syntax** `role mode { { { addrole | deleterole } role-name } | reset } command`

To delete access to a command, use the `no role mode role-name`

**Parameters**

|                   |                                                                                                                                                                                                                                                                      |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>mode</b>       | Enter one of the following keywords as the mode for which you are controlling access:<br><br>configure for CONFIGURATION mode<br>exec for EXEC mode<br>interface for INTERFACE modes<br>line for LINE mode<br>route-map for Route-map mode<br>router for Router mode |
| <b>addrole</b>    | Enter the keyword <code>addrole</code> to add permission to the command. You cannot add or delete rights for the <code>sysadmin</code> role.                                                                                                                         |
| <b>deleterole</b> | Enter the keyword <code>deleterole</code> to remove access to the command. You cannot add or delete rights for the <code>sysadmin</code> role.                                                                                                                       |
| <b>role-name</b>  | Enter a text string for the name of the user role up to 63 characters. These are 3 system defined roles you can modify: <code>secadmin</code> , <code>netadmin</code> , and <code>netoperator</code> .                                                               |
| <b>reset</b>      | Enter the keyword <code>reset</code> to reset all roles back to default for that command.                                                                                                                                                                            |

**command** Enter the command's keywords to assign the command to a certain access level. You can enter one or more keywords.

**Defaults** none

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                             |
|------------|---------------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.               |
| 9.10(0.0)  | Introduced on the S3148.                                |
| 9.10(0.0)  | Introduced on the S6100-ON.                             |
| 9.8(2.0)   | Introduced on the S3100 series.                         |
| 9.8(1.0)   | Introduced on the Z9100-ON.                             |
| 9.8(0.0P5) | Introduced on the S4048-ON.                             |
| 9.8(0.0P2) | Introduced on the S3048-ON.                             |
| 9.7(0.0)   | Introduced on the S6000-ON.                             |
| 9.5(0.0)   | Introduced on the Z9000, S6000, S4820T, S4810, and MXL. |

**Related Commands**

- [userrole](#) — creates user roles.

## show role

Display information on permissions assigned to a command, including user role and/or permission level.

**Syntax** `show role mode {mode} {command}`

**Parameters**

**command** Enter the command's keywords to assign the command to a certain access level. You can enter one or all of the keywords.

**mode mode** Enter keyword then one of the following modes.

- configure
- exec
- interface
- line
- route-map
- router

**Defaults** none

**Command Modes** EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                               |
|-----------|-------------------------------------------|
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0) | Introduced on the S3148.                  |
| 9.10(0.0) | Introduced on the S6100-ON.               |

| Version    | Description                                        |
|------------|----------------------------------------------------|
| 9.8(2.0)   | Introduced on the S3100 series.                    |
| 9.8(1.0)   | Introduced on the Z9100-ON.                        |
| 9.8(0.0P5) | Introduced on the S4048-ON.                        |
| 9.8(0.0P2) | Introduced on the S3048-ON.                        |
| 9.7(0.0)   | Introduced on the S6000-ON.                        |
| 9.5(0.1)   | Introduced on the Z9500.                           |
| 9.5(0.0)   | Introduced on the Z9000, S6000, S4820T, S4810, MXL |

### Examples

```
DellEMC# show role mode configure username
Role access: sysadmin

DellEMC# show role mode configure management route
Role access: netadmin, sysadmin

DellEMC# show role mode configure management crypto-policy
Role access: secadmin, sysadmin
```

### Related Commands

- [userrole](#) — create user roles.

## show userroles

Display information on all defined user roles.

### Syntax

```
show userroles
```

### Example

```
DellEMC# show userroles
Role Inheritance Modes
netoperator
netadmin Exec
 Exec Config Interface Line Router IP
 Route-map Protocol MAC
secadmin
sysadmin Exec Config
 Exec Config Interface Line Router IP
 Route-map Protocol MAC
netoperator
testadmin netadmin Exec Config Interface Line Router IP
 Route-map Protocol MAC
```

**Command Modes** EXEC Privilege

### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |

| Version  | Description                                         |
|----------|-----------------------------------------------------|
| 9.5(0.1) | Introduced on the Z9500.                            |
| 9.5(0.0) | Introduced on the Z9000, S6000, S4820T, S4810, MXL. |

### Example

```
DellEMC# show userroles
Role Inheritance Modes
netoperator
netadmin Exec Config Interface Line Router IP
Route-map Protocol MAC
secadmin Exec Config
sysadmin Exec Config Interface Line Router IP
Route-map Protocol MAC
netoperator
testadmin netadmin Exec Config Interface Line Router IP
Route-map Protocol MAC
```

### Related Commands

- [userrole](#) — create user roles.

## userrole

Create user roles for the role-based security model.

**Syntax** `userrole name inherit existing-role-name`

To delete a role name, use the `no userrole name` command. Note that the reserved role names may not be deleted.

**Parameters**

***name*** Enter a text string for the name of the user up to 63 characters. It cannot be one of the system defined roles (sysadmin, secadmin, netadmin, netoperator).

***inherit existing-role-name*** Enter the `inherit` keyword then specify the system defined role to inherit permissions from (sysadmin, secadmin, netadmin, netoperator).

**Defaults** none

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                         |
|------------|-----------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.           |
| 9.10(0.0)  | Introduced on the S3148.                            |
| 9.10(0.0)  | Introduced on the S6100-ON.                         |
| 9.8(2.0)   | Introduced on the S3100 series.                     |
| 9.8(1.0)   | Introduced on the Z9100-ON.                         |
| 9.8(0.0P5) | Introduced on the S4048-ON.                         |
| 9.8(0.0P2) | Introduced on the S3048-ON.                         |
| 9.7(0.0)   | Introduced on the S6000-ON.                         |
| 9.5(0.1)   | Introduced on the Z9500.                            |
| 9.5(0.0)   | Introduced on the Z9000, S6000, S4820T, S4810, MXL. |

### Usage Information

Instead of using the system defined user roles, you can create a new user role that best matches your organization. When you create a new user role, you first inherit permissions from one of the system

defined roles. Otherwise you would have to create a user role from scratch. You then restrict commands or add commands to that role. For information about this topic, See *Modifying Command Permissions for Roles*.

**NOTE:** You can change user role permissions on system pre-defined user roles or user-defined user roles.

### Important Points to Remember

Consider the following when creating a user role:

- Only the system administrator and user-defined roles inherited from the system administrator can create roles and usernames. Only the system administrator, security administrator, and roles inherited from these can use the `role` command to modify command permissions. The security administrator and roles inherited by security administrator can only modify permissions for commands they already have access to.
- Make sure you select the correct role you want to inherit.

**NOTE:** If you inherit a user role, you cannot modify or delete the inheritance. If you want to change or remove the inheritance, delete the user role and create it again. If the user role is in use, you cannot delete the user role.

`role mode { { { addrole | deleterole } role-name } | reset } command` – Modifies (adds or deletes) command permissions for newly created user roles and system defined roles.

### Related Commands

- `role mode { { { addrole | deleterole } role-name } | reset } command` — modifies (adds or deletes) command permissions for newly created user roles and system defined roles.

## AAA Accounting Commands

AAA Accounting enables tracking of services that users are accessing and the amount of network resources being consumed by those services. When you enable AAA Accounting, the network server reports user activity to the TACACS+ security server in the form of accounting records. Each accounting record is comprised of accounting AV pairs and is stored on the access control server.

As with authentication and authorization, you must configure AAA Accounting by defining a named list of accounting methods, and then applying that list to various interfaces.

### aaa accounting

Enable AAA Accounting and create a record for monitoring the accounting function.

#### Syntax

```
aaa accounting {system | exec | commands level | role role-name} {name | default}{start-stop | wait-start | stop-only} {tacacs+}
```

To disable AAA Accounting, use the `no aaa accounting {system | exec | command level} {name | default}{start-stop | wait-start | stop-only} {tacacs+} command`.

#### Parameters

- |                                          |                                                                                                                                                                                                                                                        |
|------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>system</b>                            | Enter the keyword <code>system</code> to send accounting information of any other AAA configuration.                                                                                                                                                   |
| <b>exec</b>                              | Enter the keyword <code>exec</code> to send accounting information when a user has logged in to EXEC mode.                                                                                                                                             |
| <b>commands {level   role role-name}</b> | Enter the keyword <code>command</code> then a privilege level for accounting of commands executed at that privilege level or enter the keyword <code>role</code> then the role name for accounting of commands executed by a user with that user role. |
| <b>name   default</b>                    | Enter one of the following: <ul style="list-style-type: none"><li>• For <code>name</code>, enter a user-defined name of a list of accounting methods.</li><li>• For <code>default</code>, the default accounting methods used.</li></ul>               |

|                   |                                                                                                                                                                                |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>start-stop</b> | Enter the keywords <code>start-stop</code> to send a “start accounting” notice at the beginning of the requested event and a “stop accounting” notice at the end of the event. |
| <b>wait-start</b> | Enter the keywords <code>wait-start</code> to ensure that the TACACS+ security server acknowledges the start notice before granting the user’s process request.                |
| <b>stop-only</b>  | Enter the keywords <code>stop-only</code> to instruct the TACACS+ security server to send a “stop record accounting” notice at the end of the requested user process.          |
| <b>tacacs+</b>    | Enter the keyword <code>tacacs+</code> to use TACACS+ data for accounting. The Dell EMC Networking OS currently only supports TACACS+ accounting.                              |

**Defaults** none

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| <b>Version</b>    | <b>Description</b>                                                  |
|-------------------|---------------------------------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON.                           |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                                            |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.                                         |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.                                     |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.                                         |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.                                         |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                                         |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.                                         |
| <b>9.5(0.0)</b>   | Added support for roles on the Z9000, S6000, S4820T, S4810, and MXL |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                                            |
| <b>9.0.2.0</b>    | Introduced on the S6000.                                            |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                                           |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                                            |
| <b>8.3.7.0</b>    | Introduced on the S4810.                                            |
| <b>7.6.1.0</b>    | Introduced on the S-Series.                                         |
| <b>7.5.1.0</b>    | Introduced on the C-Series.                                         |
| <b>6.3.1.0</b>    | Introduced on the E-Series.                                         |

**Usage Information** In the example above, TACACS+ accounting is used to track all usage of EXEC command and commands on privilege level 15.

Privilege level 15 is the default. If you want to track usage at privilege level 1 for example, use the `aaa accounting command 1` command.

**Example**

```
DelleMC(conf)# aaa accounting exec default start-stop tacacs+
DelleMC(conf)# aaa accounting command 15 default start-stop tacacs+
DelleMC(conf)# aaa accounting command role secaadmin default start-stop tacacs+
```

**Related Commands**

- [enable password](#) — changes the password for the `enable` command.
- [login authentication](#) — enables AAA login authentication on the terminal lines.
- [password](#) — creates a password.
- [tacacs-server host](#) — specifies a TACACS+ server host.

## aaa accounting suppress

Prevent the generation of accounting records of users with the user name value of NULL.

**Syntax** `aaa accounting suppress null-username`  
To permit accounting records to users with user name value of NULL, use the `no aaa accounting suppress null-username` command.

**Defaults** Accounting records are recorded for all users.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4280T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |
| 7.6.1.0    | Introduced on the S-Series.               |
| 7.5.1.0    | Introduced on the C-Series.               |
| 6.3.1.0    | Introduced on the E-Series.               |

**Usage Information** Dell EMC Networking OS issues accounting records for all users on the system, including users whose username string, due to protocol translation, is NULL. For example, a user who comes on line with the `aaa authentication login method-list none` command is applied. To prevent the accounting records from being generated for sessions that do not have user names associated to them, use the `aaa accounting suppress` command.

## accounting

Apply an accounting method list to terminal lines.

### Z9500

**Syntax** `accounting {exec | commands {level | role role-name} method-list`

**Parameters** `exec` Enter the keyword `exec` to apply an EXEC level accounting method list.

**commands {level | role role-name}** Enter the keywords `commands level` to apply an EXEC and CONFIGURATION level accounting method list or enter the keyword `role` and then the role name for accounting of commands executed by a user with that user role.

**method-list** Enter a method list that you defined using the `aaa accounting exec` or `aaa accounting` commands.

**Defaults** none

**Command Modes** LINE

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                                      |
|------------|------------------------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.                        |
| 9.10(0.0)  | Introduced on the S3148.                                         |
| 9.10(0.0)  | Introduced on the S6100-ON.                                      |

| 9.8(1.0)   | Introduced on the Z9100-ON.                                      |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                      |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                      |
| 9.7(0.0)   | Introduced on the S6000-ON.                                      |
| 9.5(0.0)   | Added support for roles on the Z9000, S6000, S4820T, S4810, MXL. |
| 9.2(1.0)   | Introduced on the Z9500.                                         |
| 9.0.2.0    | Introduced on the S6000.                                         |
| 8.3.19.0   | Introduced on the S4820T.                                        |
| 8.3.11.1   | Introduced on the Z9000.                                         |
| 8.3.7.0    | Introduced on the S4810.                                         |
| 7.6.1.0    | Introduced on the S-Series.                                      |
| 7.5.1.0    | Introduced on the C-Series.                                      |
| 6.3.1.0    | Introduced on the E-Series.                                      |

**Related Commands** • [aaa accounting](#) — enables AAA Accounting and creates a record for monitoring the accounting function.

## show accounting

Display the active accounting sessions for each online user.

**Syntax** `show accounting`

**Defaults** none

**Command Modes** EXEC

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                               |

| 8.3.7.0    | Introduced on the S4810.                                         |
| 7.6.1.0    | Introduced on the S-Series.                                      |
| 7.5.1.0    | Introduced on the C-Series.                                      |
| 6.3.1.0    | Introduced on the E-Series.                                      |

#### Usage Information

This command steps through all active sessions and then displays the accounting records for the active account functions.

#### Example

```
DelleMC# show accounting
Active accounted actions on tty2, User admin Priv 1 Role
 Task ID 2, EXEC Accounting record, 00:02:03 Elapsed, service=shell
Active accounted actions on tty3, User ad Priv 15 Role
 Task ID 7, EXEC Accounting record, 00:01:22 Elapsed, service=shell
Active accounted actions on tty4, User ad Priv 15 Role
 Task ID 11, EXEC Accounting record, 00:00:35 Elapsed, service=shell
Active accounted actions on tty5, User ad1 Priv 1 Role sysadmin
 Task ID 16, EXEC Accounting record, 00:00:04 Elapsed, service=shell
DelleMC#
```

#### Related Commands

- [aaa accounting](#) — enables AAA Accounting and creates a record for monitoring the accounting function.

## Authorization and Privilege Commands

To set command line authorization and privilege levels, use the following commands.

### authorization

Apply an authorization method list to terminal lines.

#### Z9500

#### Syntax

```
authorization {exec | commands {level | role role-name}} method-list
```

#### Parameters

- exec** Enter the keyword `exec` to apply an EXEC level authorization method list.
- commands {level | role role-name}** Enter the keyword `commands` followed by either a privilege level for accounting of commands executed at that privilege level, or enter the keyword `role` then the role name for authorization of commands executed by a user with that user role.

**method-list** Enter a method list that you defined using the `aaa accounting exec` or `aaa accounting` commands.

**Defaults** none

**Command Modes** LINE

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                                          |
|------------|----------------------------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.                            |

| 9.8(1.0)   | Introduced on the Z9100-ON.                                          |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                          |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                          |
| 9.7(0.0)   | Introduced on the S6000-ON.                                          |
| 9.5(0.0)   | Added support for roles on the Z9000, S6000, S4820T, S4810, and MXL. |
| 9.2(1.0)   | Introduced on the Z9500.                                             |
| 9.0.2.0    | Introduced on the S6000.                                             |
| 8.3.19.0   | Introduced on the S4820T.                                            |
| 8.3.11.1   | Introduced on the Z9000.                                             |
| 8.3.7.0    | Introduced on the S4810.                                             |
| 7.6.1.0    | Introduced on the S-Series.                                          |
| 7.5.1.0    | Introduced on the C-Series.                                          |
| 6.3.1.0    | Introduced on the E-Series.                                          |

**Related Commands**

- [aaa authorization commands](#) — sets the parameters that restrict (or permit) a user's access to EXEC and CONFIGURATION level commands.
- [aaa authorization exec](#) — sets the parameters that restrict (or permit) a user's access to EXEC level commands.

## aaa authorization commands

Set parameters that restrict (or permit) a user's access to EXEC and CONFIGURATION level commands.

**Syntax** `aaa authorization commands {level | role role-name}{name|default} {local | tacacs+ | none}`

Undo a configuration with the `no aaa authorization commands {level | role role-name} {name|default} {local | tacacs+ | none} command`.

**Parameters**

|                       |                                                                                                           |
|-----------------------|-----------------------------------------------------------------------------------------------------------|
| <b>commands level</b> | Enter the keyword <code>commands</code> then the command privilege level for command level authorization. |
| <b>role role-name</b> | Enter the keyword <code>role</code> then the role name.                                                   |
| <b>name</b>           | Define a name for the list of authorization methods.                                                      |
| <b>default</b>        | Define the default list of authorization methods.                                                         |
| <b>local</b>          | Use the authorization parameters on the system to perform authorization.                                  |

|                |                                                                |
|----------------|----------------------------------------------------------------|
| <b>tacacs+</b> | Use the TACACS+ protocol to perform authorization.             |
| <b>none</b>    | Enter the keyword <code>none</code> to apply no authorization. |

**Defaults** none

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                                                     |
|-------------------|-----------------------------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON.                       |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                                        |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.                                     |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.                                 |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.                                     |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.                                     |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                                     |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.                                     |
| <b>9.5(0.0)</b>   | Added support for roles on the Z9000, S6000, S4820T, S4810, MXL |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                                        |
| <b>9.0.2.0</b>    | Introduced on the S6000.                                        |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                                       |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                                        |
| <b>8.3.7.0</b>    | Introduced on the S4810.                                        |
| <b>7.6.1.0</b>    | Introduced on the S-Series.                                     |
| <b>7.5.1.0</b>    | Introduced on the C-Series.                                     |
| <b>6.1.1.0</b>    | Added support for RADIUS.                                       |

**Usage Information** Certain TACACS+ servers do not authenticate the device if you use the `aaa authorization commands level default local tacacs+ command`. To resolve the issue, use the `aaa authorization commands level default tacacs+ local command`.

## aaa authorization config-commands

Set parameters that restrict (or permit) a user's access to EXEC level commands.

**Syntax** `aaa authorization config-commands`  
 Disable authorization checking for CONFIGURATION level commands using the `no aaa authorization config-commands` command.

**Defaults** Enabled when you configure `aaa authorization commands` command.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version          | Description                               |
|------------------|-------------------------------------------|
| <b>9.10(0.1)</b> | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b> | Introduced on the S3148.                  |

| Version    | Description                     |
|------------|---------------------------------|
| 9.10(0.0)  | Introduced on the S6100-ON.     |
| 9.8(2.0)   | Introduced on the S3100 series. |
| 9.8(1.0)   | Introduced on the Z9100-ON.     |
| 9.8(0.0P5) | Introduced on the S4048-ON.     |
| 9.8(0.0P2) | Introduced on the S3048-ON.     |
| 9.7(0.0)   | Introduced on the S6000-ON.     |
| 9.2(1.0)   | Introduced on the Z9500.        |
| 9.0.2.0    | Introduced on the S6000.        |
| 8.3.19.0   | Introduced on the S4820T.       |
| 8.3.11.1   | Introduced on the Z9000.        |
| 8.3.7.0    | Introduced on the S4810.        |
| 7.6.1.0    | Introduced on the S-Series.     |
| 7.5.1.0    | Introduced on the E-Series.     |

**Usage Information**

By default, the `aaa authorization commands` command configures the system to check both EXEC level and CONFIGURATION level commands. Use the command `no aaa authorization config-commands` to enable only EXEC-level command checking.

## aaa authorization exec

Set parameters that restrict (or permit) a user's access to EXEC-level commands.

**Syntax**

```
aaa authorization exec {name | default} {local || tacacs+ || if-
authenticated || none}
```

To disable authorization checking for EXEC level commands, use the `no aaa authorization exec` command.

**Parameters**

|                |                                                                          |
|----------------|--------------------------------------------------------------------------|
| <b>name</b>    | Define a name for the list of authorization methods.                     |
| <b>default</b> | Define the default list of authorization methods.                        |
| <b>local</b>   | Use the authorization parameters on the system to perform authorization. |
| <b>tacacs+</b> | Use the TACACS+ protocol to perform authorization.                       |
| <b>none</b>    | Enter the keyword <code>none</code> to apply no authorization.           |

**Defaults**

none

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |

| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |

| Version    | Description                 |
|------------|-----------------------------|
| 9.8(0.0P2) | Introduced on the S3048-ON. |
| 9.7(0.0)   | Introduced on the S6000-ON. |
| 9.2(1.0)   | Introduced on the Z9500.    |
| 9.0.2.0    | Introduced on the S6000.    |
| 8.3.19.0   | Introduced on the S4820T.   |
| 8.3.11.1   | Introduced on the Z9000.    |
| 8.3.7.0    | Introduced on the S4810.    |
| 7.6.1.0    | Introduced on the S-Series. |
| 7.5.1.0    | Introduced on the C-Series. |
| 6.1.1.0    | Added support for RADIUS.   |

## privilege level (CONFIGURATION mode)

Change the access or privilege level of one or more commands.

**Syntax** `privilege mode {level level command | reset command}`  
 To delete access to a level and command, use the `no privilege mode level level command command`.

**Parameters**

|                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>mode</b>        | Enter one of the following keywords as the mode for which you are controlling access: <ul style="list-style-type: none"> <li>• <code>configure</code> for CONFIGURATION mode</li> <li>• <code>exec</code> for EXEC mode</li> <li>• <code>interface</code> for INTERFACE modes</li> <li>• <code>line</code> for LINE mode</li> <li>• <code>route-map</code> for ROUTE-MAP mode</li> <li>• <code>router</code> for ROUTER OSPF, ROUTER RIP, ROUTER ISIS and ROUTER BGP modes</li> </ul> |
| <b>level level</b> | Enter the keyword <code>level</code> then a number for the access level. The range is from 0 to 15.<br><br>Level 1 is EXEC mode and Level 15 allows access to all CLI modes and commands.                                                                                                                                                                                                                                                                                             |
| <b>reset</b>       | Enter the keyword <code>reset</code> to return the security level to the default setting.                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>command</b>     | Enter the command's keywords to assign the command to a certain access level. You can enter one or all of the keywords.                                                                                                                                                                                                                                                                                                                                                               |

**Defaults** Not configured.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                               |

| <b>7.5.1.0</b>     | Introduced on the C-Series. |
| <b>pre-6.1.1.0</b> | Introduced on the E-Series. |

**Usage Information** To define a password for the level to which you are assigning privilege or access, use the `enable password` command.

## privilege level (LINE mode)

Change the access level for users on the terminal lines.

**Syntax** `privilege level level`  
 To delete access to a terminal line, use the `no privilege level level` command.

**Parameters** `level level` Enter the keyword `level` then a number for the access level. The range is from 0 to 15.  
 Level 1 is EXEC mode and Level 15 allows access to all CLI modes.

**Defaults** `level = 15`

## Obscure Password Commands

To enable the obscure password, use the following commands.

### service obscure-passwords

Enable the obscuring of passwords and keys.

|                        |                                                                                                                                                                                                                                   |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | <code>service obscure-passwords</code><br>Enable the obscuring of passwords and keys, including RADIUS, TACACS+ keys, router authentication strings, VRRP authentication, use the <code>service obscure-passwords</code> command. |
| <b>Defaults</b>        | Disabled.                                                                                                                                                                                                                         |
| <b>Command Modes</b>   | CONFIGURATION                                                                                                                                                                                                                     |

|                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Usage Information</b> | <p>By default, the <code>service password-encryption</code> command stores encrypted passwords. For greater security, you can also use the <code>service obscure-passwords</code> command to prevent a user from reading the passwords and keys, including RADIUS, TACACS+ keys, router authentication strings, VRRP authentication by obscuring this information. Passwords and keys are stored encrypted in the configuration file and by default are displayed in the encrypted form when the configuration is displayed. Enabling the <code>service obscure-passwords</code> command displays asterisks instead of the encrypted passwords and keys. This command prevents a user from reading these passwords and keys by obscuring this information with asterisks.</p> <p>Password obscuring masks the password and keys for display only but does not change the contents of the file. The string of asterisks is the same length as the encrypted string for that line of configuration. To verify that you have successfully obscured passwords and keys, use the <code>show running-config</code> command or <code>show startup-config</code> command.</p> <p>If you are using role-based access control (RBAC), only the system administrator and security administrator roles can enable the <code>service obscure-password</code> command.</p> |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

**Related  
Commands**

- [show running-config](#)— Display the current configuration and display changes from the default values.
- [service password-encryption](#)— Encrypts all passwords configured in the system.

## Authentication and Password Commands

To manage access to the system, use the following the commands.

### aaa authentication enable

Configure AAA Authentication method lists for user access to EXEC privilege mode (the “Enable” access).

**Syntax** `aaa authentication enable {default | method-list-name} method [... method2]`

To return to the default setting, use the `no aaa authentication enable {default | method-list-name} method [... method2]` command.

**Parameters**

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>default</b>                 | Enter the keyword <code>default</code> then the authentication methods to use as the default sequence of methods for the Enable login. The default is <code>default enable</code> .                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b><i>method-list-name</i></b> | Enter a text string (up to 16 characters long) to name the list of enabled authentication methods activated at login.                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b><i>method</i></b>           | Enter one of the following methods: <ul style="list-style-type: none"><li>• <code>enable</code>: use the password the <code>enable password</code> command defines in CONFIGURATION mode.</li><li>• <code>line</code>: use the password the <code>password</code> command defines in LINE mode.</li><li>• <code>none</code>: no authentication.</li><li>• <code>radius</code>: use the RADIUS servers configured with the <code>radius-server host</code> command.</li><li>• <code>tacacs+</code>: use the TACACS+ server(s) configured with the <code>tacacs-server host</code> command.</li></ul> |
| <b><i>... method2</i></b>      | (OPTIONAL) In the event of a “no response” from the first method, Dell EMC Networking OS applies the next configured method.                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

**Defaults** Use the `enable` password.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| <b>Version</b>    | <b>Description</b>                        |
|-------------------|-------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.               |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.               |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                  |
| <b>9.0.2.0</b>    | Introduced on the S6000.                  |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                 |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                  |

| Version | Description                 |
|---------|-----------------------------|
| 8.3.7.0 | Introduced on the S4810.    |
| 7.6.1.0 | Introduced on the S-Series. |
| 7.5.1.0 | Introduced on the C-Series. |
| 6.2.1.0 | Introduced on the E-Series. |

### Usage Information

By default, the `Enable` password is used. If you configure `aaa authentication enable default`, Dell EMC Networking OS uses the methods defined for `Enable` access instead.

Methods configured with the `aaa authentication enable` command are evaluated in the order they are configured. If authentication fails using the primary method, Dell EMC Networking OS employs the second method (or third method, if necessary) automatically. The fallback to the second method would happen only if the authentication failure is due to a non-reachable server or invalid TACACS server key. The fallback would not occur if the authentication failure is due to invalid credentials. For example, if the TACACS+ server is reachable, but the server key is invalid, Dell EMC Networking OS proceeds to the next authentication method.

### Related Commands

- [enable password](#) — changes the password for the `enable` command.
- [login authentication](#) — enables AAA login authentication on the terminal lines.
- [password](#) — creates a password.
- [radius-server host](#) — specifies a RADIUS server host.
- [tacacs-server host](#) — specifies a TACACS+ server host.

## aaa authentication login

Configure AAA Authentication method lists for user access to EXEC mode (`Enable log-in`).

### Z9500

#### Syntax

```
aaa authentication login {method-list-name | default} method [... method4]
```

To return to the default setting, use the `no aaa authentication login {method-list-name | default}` command.

#### Parameters

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|--------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><i>method-list-name</i></b> | Enter a text string (up to 16 characters long) as the name of a user-configured method list that can be applied to different lines.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b><i>default</i></b>          | Enter the keyword <code>default</code> to specify that the method list specified is the default method for all terminal lines.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b><i>method</i></b>           | Enter one of the following methods: <ul style="list-style-type: none"> <li>• <code>enable</code>: use the password the <code>enable password</code> command defines in CONFIGURATION mode. Not available if <code>role-only</code> is in use.</li> <li>• <code>line</code>: use the password the <code>password</code> command defines in LINE mode. Not available if <code>role-only</code> is in use.</li> <li>• <code>local</code>: use the password for the <code>userid</code> contained in the local password database.</li> <li>• <code>none</code>: no authentication. Not available if <code>role-only</code> is in use.</li> <li>• <code>radius</code>: use the RADIUS servers configured with the <code>radius-server host</code> command.</li> <li>• <code>tacacs+</code>: use the TACACS+ servers configured with the <code>tacacs-server host</code> command.</li> </ul> |
| <b><i>... method4</i></b>      | (OPTIONAL) Enter up to four additional methods. In the event of a “no response” from the first method, the system applies the next configured method (up to four configured methods).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

**Defaults** Not configured (that is, no authentication is performed).

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version     | Description                                                                                 |
|-------------|---------------------------------------------------------------------------------------------|
| 9.11(0.0)   | Included a prompt to force the users to re-authenticate, when re-authentication is enabled. |
| 9.10(0.1)   | Introduced on the S6010-ON and S4048T-ON.                                                   |
| 9.10(0.0)   | Introduced on the S3148.                                                                    |
| 9.10(0.0)   | Introduced on the S6100-ON.                                                                 |
| 9.8(2.0)    | Introduced on the S3100 series.                                                             |
| 9.8(1.0)    | Introduced on the Z9100-ON.                                                                 |
| 9.8(0.0P5)  | Introduced on the S4048-ON.                                                                 |
| 9.8(0.0P2)  | Introduced on the S3048-ON.                                                                 |
| 9.7(0.0)    | Introduced on the S6000-ON.                                                                 |
| 9.5(0.1)    | Added support for roles Z9500.                                                              |
| 9.5(0.0)    | Added support for roles on the Z9000, S6000, S4820T, S4810, MXL                             |
| 9.2(1.0)    | Introduced on the Z9500.                                                                    |
| 9.0.2.0     | Introduced on the S6000.                                                                    |
| 8.3.19.0    | Introduced on the S4820T.                                                                   |
| 8.3.11.1    | Introduced on the Z9000.                                                                    |
| 8.3.7.0     | Introduced on the S4810.                                                                    |
| 7.6.1.0     | Introduced on the S-Series.                                                                 |
| 7.5.1.0     | Introduced on the C-Series.                                                                 |
| pre-6.2.1.0 | Introduced on the E-Series.                                                                 |

### Usage Information

By default, the locally configured username password is used. If you configure `aaa authentication login default`, Dell EMC Networking OS uses the methods this command defines for login instead.

Methods configured with the `aaa authentication login` command are evaluated in the order they are configured. If users encounter an error with the first method listed, Dell EMC Networking OS applies the next method configured. If users fail the first method listed, no other methods are applied. The only exception is the local method. If the user's name is not listed in the local database, the next method is applied. If the correct user name/password combination is not entered, the user is not allowed access to the switch.

**NOTE:** If authentication fails using the primary method, Dell EMC Networking OS employs the second method (or third method, if necessary) automatically. For example, if the TACACS+ server is reachable, but the server key is invalid, Dell EMC Networking OS proceeds to the next authentication method. The TACACS+ is incorrect, but the user is still authenticated by the secondary method.

After configuring the `aaa authentication login` command, configure the `login authentication` command to enable the authentication scheme on terminal lines.

Connections to the SSH server work with the following login mechanisms: local, radius, and tacacs.

### Related Commands

- [login authentication](#) — enables AAA login authentication on the terminal lines.
- [password](#) — creates a password.
- [radius-server host](#) — specifies a RADIUS server host.
- [tacacs-server host](#) — specifies a TACACS+ server host.

## aaa reauthenticate enable

Enable re-authentication of user whenever there is a change in the authenticators.

**Syntax** `aaa reauthenticate enable`

To disable the re-authentication option, use the `no aaa reauthenticate enable` command.

**Defaults** Disabled

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description              |
|-----------|--------------------------|
| 9.11(0.0) | Introduced this command. |

### Usage Information

When an operating system enables to change the user authenticators, the users might access resources and perform tasks that they do not have authorization.

Once re-authentication is enabled, Dell EMC Networking OS prompts the users to re-authenticate whenever there is a change in authenticators.

The change in authentication happens when:

- Add or remove an authentication server (RADIUS/TACACS+)
- Modify an AAA authentication/authorization list
- Change to role-only (RBAC) mode

The re-authentication is also applicable for authenticated 802.1x devices. When there is a change in the authentication servers, the supplicants connected to all the ports are forced to re-authenticate.

### Example

```
DellEMC(config)#aaa reauthenticate enable
```

```
DellEMC(config)#aaa authentication login vty_auth_list radius
Force all logged-in users to re-authenticate (y/n)?
```

```
DellEMC(config)#radius-server host 192.100.0.12
Force all logged-in users to re-authenticate (y/n)?
```

## access-class

Restrict incoming connections to a particular IP address in a defined IP access control list (ACL).

**Syntax** `access-class access-list-name`

To delete a setting, use the `no access-class` command.

**Parameters** ***access-list-name*** Enter the name of an established IP Standard ACL.

**Defaults** Not configured.

**Command Modes** LINE

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                               |
|-----------|-------------------------------------------|
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0) | Introduced on the S3148.                  |

| Version     | Description                     |
|-------------|---------------------------------|
| 9.10(0.0)   | Introduced on the S6100-ON.     |
| 9.8(2.0)    | Introduced on the S3100 series. |
| 9.8(1.0)    | Introduced on the Z9100-ON.     |
| 9.8(0.0P5)  | Introduced on the S4048-ON.     |
| 9.8(0.0P2)  | Introduced on the S3048-ON.     |
| 9.7(0.0)    | Introduced on the S6000-ON.     |
| 9.2(1.0)    | Introduced on the Z9500.        |
| 9.0.2.0     | Introduced on the S6000.        |
| 8.3.19.0    | Introduced on the S4820T.       |
| 8.3.11.1    | Introduced on the Z9000.        |
| 8.3.7.0     | Introduced on the S4810.        |
| 7.6.1.0     | Introduced on the S-Series.     |
| 7.5.1.0     | Introduced on the C-Series.     |
| pre-6.2.1.1 | Introduced on the E-Series.     |

**Related Commands**

- [line](#) — applies an authentication method list to the designated terminal lines.
- [ip access-list standard](#) — names (or selects) a standard access list to filter based on the IP address.
- [ip access-list extended](#) — names (or selects) an extended access list based on the IP addresses or protocols.

## enable password

Change the password for the `enable` command.

**Syntax**

`enable password [level level] [encryption-type] password`

To delete a password, use the `no enable password [encryption-type] password [level level]` command.

**Parameters**

- level level** (OPTIONAL) Enter the keyword `level` then a number as the level of access. The range is from 1 to 15.
- encryption-type** (OPTIONAL) Enter the number 7 or 0 as the encryption type.  
Enter a 7 then a text string as the hidden password. The text string must be a password that was already encrypted by a Dell EMC Networking router.  
Use this parameter only with a password that you copied from the `show running-config` file of another Dell EMC Networking router.
- password** Enter a text string, up to 96 characters long, as the clear text password.

**Defaults**

No password is configured. `level = 15`.

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                                               |
|-----------|-----------------------------------------------------------|
| 9.13(0.0) | Changed the maximum length of the password from 32 to 96. |
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON.                 |
| 9.10(0.0) | Introduced on the S3148.                                  |

| Version     | Description                     |
|-------------|---------------------------------|
| 9.10(0.0)   | Introduced on the S6100-ON.     |
| 9.8(2.0)    | Introduced on the S3100 series. |
| 9.8(1.0)    | Introduced on the Z9100-ON.     |
| 9.8(0.0P5)  | Introduced on the S4048-ON.     |
| 9.8(0.0P2)  | Introduced on the S3048-ON.     |
| 9.7(0.0)    | Introduced on the S6000-ON.     |
| 9.2(1.0)    | Introduced on the Z9500.        |
| 9.0.2.0     | Introduced on the S6000.        |
| 8.3.19.0    | Introduced on the S4820T.       |
| 8.3.11.1    | Introduced on the Z9000.        |
| 8.3.7.0     | Introduced on the S4810.        |
| 7.6.1.0     | Introduced on the S-Series.     |
| 7.5.1.0     | Introduced on the C-Series.     |
| pre-6.1.1.0 | Introduced on the E-Series.     |

### Usage Information

To control access to command modes, use this command to define a password for a level and use the `privilege level (CONFIGURATION mode)` command.

Passwords must meet the following criteria:

- Start with a letter, not a number.
- Passwords can have a regular expression as the password. To create a password with a regular expression in it, use `CNTL + v` prior to entering regular expression. For example, to create the password `abcd]e`, you type "`abcd CNTL v ]e`". When the password is created, you do not use the `CNTL + v` key combination and enter "`abcd]e`".

 **NOTE:** The question mark (?) is not a supported character.

### Related Commands

- [show running-config](#) — views the current configuration.
- [privilege level \(CONFIGURATION mode\)](#) — controls access to the command modes within the switch.

## enable sha256-password

Configure SHA-256 based password for the `enable` command.

### Syntax

```
enable sha256-password [level level] [encryption-type] password
```

To delete a password, use the `no enable sha256-password [encryption-type] password [level level]` command.

### Parameters

- sha256-password** Enter the keyword `sha256-password` then the `encryption-type` or the password.
- level level** (OPTIONAL) Enter the keyword `level` then a number as the level of access. The range is from 1 to 15.
- encryption-type** (OPTIONAL) Enter the number 8 or 0 as the encryption type.  
Enter 8 to enter the sha256-based hashed password.
- password** Enter a text string, up to 96 characters long, as the clear text password.

### Defaults

No password is configured. `level` = **15**.

**Command Modes** CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                                                                                                                     |
|-----------|---------------------------------------------------------------------------------------------------------------------------------|
| 9.13(0.0) | Changed the maximum length of the password from 32 to 96.                                                                       |
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON.                                                                                       |
| 9.10(0.0) | Introduced on the S3148.                                                                                                        |
| 9.10(0.0) | Introduced on the S6100-ON, S6000, S6000-ON, S5000, S4810, S4820T, S3048-ON, S4048-ON, MXL, FN IOM, C9010, S3100, and Z9100-ON. |

**Related Commands**

- [show running-config](#) — views the current configuration.
- [privilege level \(CONFIGURATION mode\)](#) — controls access to the command modes within the switch.

## enable restricted

Allows Dell EMC Networking technical support to access restricted commands.

**Syntax**

```
enable restricted [encryption-type] password
```

To disallow access to restricted commands, use the `no enable restricted` command.

**Parameters**

|                               |                                                                                                                                                                                                                                                                                                                                                                         |
|-------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><i>encryption-type</i></b> | (OPTIONAL) Enter the number 7 as the encryption type.<br><br>Enter 7 followed a text string as the hidden password. The text string must be a password that was already encrypted by a Dell EMC Networking router.<br><br>Use this parameter only with a password that you copied from the <code>show running-config</code> file of another Dell EMC Networking router. |
| <b><i>password</i></b>        | Enter a text string, up to 32 characters long, as the clear text password.                                                                                                                                                                                                                                                                                              |

**Defaults**

Not configured.

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |

| 7.6.1.0    | Introduced on the S-Series.               |
| 7.5.1.0    | Introduced on the C-Series.               |

| Version     | Description                 |
|-------------|-----------------------------|
| pre-6.1.1.0 | Introduced on the E-Series. |

**Usage Information**

Only Dell EMC Networking Technical Support staff use this command.

## enable secret

Change the password for the `enable` command.

**Syntax**

`enable secret [level level] [encryption-type] password`

To delete a password, use the `no enable secret [encryption-type] password [level level]` command.

**Parameters**

|                           |                                                                                                                                                                                                                                                                                                                                                                            |
|---------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>level <i>level</i></b> | (OPTIONAL) Enter the keyword <code>level</code> then a number as the level of access. The range is from 1 to 15.                                                                                                                                                                                                                                                           |
| <b>encryption-type</b>    | (OPTIONAL) Enter the number 5 or 0 as the encryption type.<br><br>Enter a 5 then a text string as the hidden password. The text string must be a password that was already encrypted by a Dell EMC Networking router.<br><br>Use this parameter only with a password that you copied from the <code>show running-config</code> file of another Dell EMC Networking router. |
| <b>password</b>           | Enter a text string, up to 32 characters long, as the clear text password.                                                                                                                                                                                                                                                                                                 |

**Defaults**

No password is configured. *level* = **15**.

**Command Modes**

CONFIGURATION

**Command History**

| Version     | Description                               |
|-------------|-------------------------------------------|
| 9.10(0.1)   | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)   | Introduced on the S3148.                  |
| 9.10(0.0)   | Introduced on the S6100-ON.               |
| 9.8(2.0)    | Introduced on the S3100 series.           |
| 9.8(1.0)    | Introduced on the Z9100-ON.               |
| 9.8(0.0P5)  | Introduced on the S4048-ON.               |
| 9.8(0.0P2)  | Introduced on the S3048-ON.               |
| 9.7(0.0)    | Introduced on the S6000-ON.               |
| 9.2(1.0)    | Introduced on the Z9500.                  |
| 9.0.2.0     | Introduced on the S6000.                  |
| 8.3.19.0    | Introduced on the S4820T.                 |
| 8.3.11.1    | Introduced on the Z9000.                  |
| 8.3.7.0     | Introduced on the S4810.                  |
| 7.6.1.0     | Introduced on the S-Series.               |
| 7.5.1.0     | Introduced on the C-Series.               |
| pre-6.1.1.0 | Introduced on the E-Series.               |

## Usage Information

To control access to command modes, use this command to define a password for a level and use the `privilege level (CONFIGURATION mode)` command.

Passwords must meet the following criteria:

- Start with a letter, not a number.
- Passwords can have a regular expression as the password. To create a password with a regular expression in it, use `CNTL + v` prior to entering regular expression. For example, to create the password `abcd]e`, you type "`abcd CNTL v ]e`". When the password is created, you do not use the `CNTL + v` key combination and enter "`abcd]e`".

 **NOTE:** The question mark (?) is not a supported character.

## Related Commands

- [show running-config](#) — views the current configuration.
- [privilege level \(CONFIGURATION mode\)](#) — controls access to the command modes within the switch.

# login authentication

To configure authentication for console or remote access, apply an authentication method list.

## Syntax

```
login authentication {method-list-name | default}
```

To use the local user/password database for login authentication, use the `no login authentication` command.

## Parameters

**method-list-name**

Enter the keywords `method-list-name` to specify that method list, created in the `aaa authentication login` command, to be applied to the designated terminal line.

**default**

Enter the keyword `default` to specify that the default method list, created in the `aaa authentication login` command, is applied to the terminal line.

## Defaults

No authentication is performed on the console lines. Local authentication is performed on the virtual terminal and auxiliary lines.

## Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                                            |
|-------------------|--------------------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON.              |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                               |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.                            |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.                        |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.                            |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.                            |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                            |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.                            |
| <b>9.6.0.0</b>    | Revised introductory and usage guidelines description. |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                               |
| <b>9.0.2.0</b>    | Introduced on the S6000.                               |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                              |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                               |
| <b>8.3.7.0</b>    | Introduced on the S4810.                               |
| <b>7.6.1.0</b>    | Introduced on the S-Series.                            |

| Version     | Description                 |
|-------------|-----------------------------|
| 7.5.1.0     | Introduced on the C-Series. |
| pre-6.2.1.0 | Introduced on the E-Series. |

### Usage Information

If you configure the `aaa authentication login default` command, the `login authentication default` command automatically is applied to all terminal lines.

When configuring authentication, consider the following:

- If you configure the default authentication list using the `default` keyword, the list applies it to all the local and remote connections globally, unless you have specified some another authentication list for a specific connection.
- If you configure an authentication lists other than default, you must apply those authentication lists to each connection.
- If you configure the `aaa authentication login default` command, the `login authentication default` command automatically is applied to all terminal lines.

### Related Commands

- [aaa authentication login](#) — selects the login authentication methods.

## password

Specify a password for users on terminal lines.

### Syntax

```
password [encryption-type] password
```

To delete a password, use the `no password password` command.

### Parameters

|                        |                                                                                                                                                                                                                                                                                                             |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>encryption-type</b> | (OPTIONAL) Enter either zero (0) or 7 as the encryption type for the password entered. The options are <ul style="list-style-type: none"> <li>• 0 is the default and means the password is not encrypted and stored as clear text.</li> <li>• 7 means that the password is encrypted and hidden.</li> </ul> |
| <b>password</b>        | Enter a text string up to 96 characters long. The first character of the password must be a letter. You cannot use spaces in the password.                                                                                                                                                                  |

### Defaults

No password is configured.

### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                               |
|------------|-----------------------------------------------------------|
| 9.13(0.0)  | Changed the maximum length of the password from 32 to 96. |
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.                 |
| 9.10(0.0)  | Introduced on the S3148.                                  |
| 9.10(0.0)  | Introduced on the S6100-ON.                               |
| 9.8(2.0)   | Introduced on the S3100 series.                           |
| 9.8(1.0)   | Introduced on the Z9100-ON.                               |
| 9.8(0.0P5) | Introduced on the S4048-ON.                               |
| 9.8(0.0P2) | Introduced on the S3048-ON.                               |
| 9.7(0.0)   | Introduced on the S6000-ON.                               |
| 9.2(1.0)   | Introduced on the Z9500.                                  |

| Version     | Description                 |
|-------------|-----------------------------|
| 9.0.2.0     | Introduced on the S6000.    |
| 8.3.19.0    | Introduced on the S4820T.   |
| 8.3.11.1    | Introduced on the Z9000.    |
| 8.3.7.0     | Introduced on the S4810.    |
| 7.6.1.0     | Introduced on the S-Series. |
| 7.5.1.0     | Introduced on the C-Series. |
| pre-6.1.1.0 | Introduced on the E-Series. |

#### Usage Information

Dell EMC Networking OS prompts users for these passwords when the method for authentication or authorization used is "line".

#### Related Commands

- [enable password](#) — sets the password for the `enable` command.
- [login authentication](#) — configures an authentication method to log in to the switch.
- [service password-encryption](#) — encrypts all passwords configured in Dell EMC Networking OS.
- [radius-server key](#) — configures a key for all RADIUS communications between the switch and the RADIUS host server.
- [tacacs-server key](#) — configures a key for communication between a TACACS+ server and client.
- [username](#) — establishes an authentication system based on user names.

## password-attributes

Configure the password attributes (strong password).

#### Syntax

```
password-attributes [min-length number] [max-retry number] [lockout-period minutes] [user-lockout-period minutes] [character-restriction [upper number] [lower number] [numeric number] [special-char number]]
```

To return to the default, use the `no password-attributes [min-length number] [max-retry number] [lockout-period minutes] [character-restriction [upper number] [lower number] [numeric number] [special-char number]]` command.

#### Parameters

|                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>min-length <i>number</i></b>           | (OPTIONAL) Enter the keywords <code>min-length</code> then the number of characters. The range is from 0 to 32 characters.                                                                                                                                                                                                                                                                                                                        |
| <b>max-retry <i>number</i></b>            | (OPTIONAL) Enter the keywords <code>max-retry</code> then the number of maximum password retries. The range is from 0 to 16.                                                                                                                                                                                                                                                                                                                      |
| <b>lockout-period <i>minutes</i></b>      | (OPTIONAL) Enter the keyword <code>lockout-period</code> then the number of minutes. The range is from 1 to 1440 minutes. The default is 0 minutes and the lockout-period is not enabled. This parameter enhances the security of the switch by locking out sessions on the Telnet or SSH sessions for which there has been a consecutive failed login attempts. The console is not locked out.                                                   |
| <b>user-lockout-period <i>minutes</i></b> | (OPTIONAL) Enter the keyword <code>user-lockout-period</code> then the number of minutes. The range is from 1 to 1440 minutes. The default is 0 minutes and the lockout-period is not enabled. This parameter enhances the security of the switch by locking out the local user account if there are more number of unsuccessful login attempts than what is configured using the <code>max-retry</code> parameter. The default value is 3 times. |
| <b>character-restriction</b>              | (OPTIONAL) Enter the keywords <code>character-restriction</code> to indicate a character restriction for the password.                                                                                                                                                                                                                                                                                                                            |
| <b>upper <i>number</i></b>                | (OPTIONAL) Enter the keyword <code>upper</code> then the upper number. The range is from 0 to 31.                                                                                                                                                                                                                                                                                                                                                 |
| <b>lower <i>number</i></b>                | (OPTIONAL) Enter the keyword <code>lower</code> then the lower number. The range is from 0 to 31.                                                                                                                                                                                                                                                                                                                                                 |

**numeric *number*** (OPTIONAL) Enter the keyword `numeric` then the numeric number. The range is from 0 to 31.

**special-char *number*** (OPTIONAL) Enter the keywords `special-char` then the number of special characters permitted. The range is from 0 to 31.

The following special characters are supported:

`! " # % & ' ( ) ; < = > ? [ \ ] * + , - . / : ^ _ { | } ~ @ $`

**Defaults** none

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                                                                                |
|-------------------|--------------------------------------------------------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON.                                                  |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                                                                   |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.                                                                |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.                                                            |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.                                                                |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.                                                                |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                                                                |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.                                                                |
| <b>9.5(0.1)</b>   | Introduced lockout-period option on the Z9500.                                             |
| <b>9.5(0.0)</b>   | Introduced <code>lockout-period</code> option on the Z9000, S6000, S4820T, S4810, and MXL. |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                                                                   |
| <b>9.0.2.0</b>    | Introduced on the S6000.                                                                   |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                                                                  |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                                                                   |
| <b>8.3.7.0</b>    | Introduced on the S4810.                                                                   |
| <b>7.6.1.0</b>    | Introduced on the S-Series.                                                                |
| <b>7.5.1.0</b>    | Introduced on the C-Series.                                                                |
| <b>6.3.1.0</b>    | Introduced on the E-Series.                                                                |

**Example** In the following example, after 5 un-successful login attempts, the session (SSH/TELNET) goes into a locked state for 5 minutes. If all the 10 sessions are locked out with 5 un-successful attempts in each session, no users can login during the lockout-period.

```
DellEMC(conf)# password-attributes max-retry 5 lockout-period 5
```

**Related Commands**

- `password` — specifies a password for users on terminal lines.

## secure-cli enable

Enable the secured CLI mode.

**Syntax** `secure-cli enable`

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description              |
|-----------|--------------------------|
| 9.11(0.0) | Introduced this command. |

**Usage Information**

The secured CLI mode prevents the users from enhancing the permissions or promoting the privilege levels. After entering the command, save the running-configuration.

Once you save the running-configuration, the secured CLI mode is enabled. If you do not want to enter the secured mode, do not save the running-configuration.

Once saved, to disable the secured CLI mode, you need to manually edit the startup-configuration file and reboot the system.

## service password-encryption

Encrypt all passwords configured in Dell EMC Networking OS.

**Syntax** `service password-encryption`  
To store new passwords as clear text, use the `no service password-encryption` command.

**Defaults** Enabled.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version     | Description                               |
|-------------|-------------------------------------------|
| 9.10(0.1)   | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)   | Introduced on the S3148.                  |
| 9.10(0.0)   | Introduced on the S6100-ON.               |
| 9.8(2.0)    | Introduced on the S3100 series.           |
| 9.8(1.0)    | Introduced on the Z9100-ON.               |
| 9.8(0.0P5)  | Introduced on the S4048-ON.               |
| 9.8(0.0P2)  | Introduced on the S3048-ON.               |
| 9.7(0.0)    | Introduced on the S6000-ON.               |
| 9.2(1.0)    | Introduced on the Z9500.                  |
| 9.0.2.0     | Introduced on the S6000.                  |
| 8.3.19.0    | Introduced on the S4820T.                 |
| 8.3.11.1    | Introduced on the Z9000.                  |
| 8.3.7.0     | Introduced on the S4810.                  |
| 7.6.1.0     | Introduced on the S-Series.               |
| 7.5.1.0     | Introduced on the C-Series.               |
| pre-6.1.1.0 | Introduced on the E-Series.               |

**Usage Information**

 **CAUTION:** Encrypting passwords with this command does not provide a high level of security. When the passwords are encrypted, you cannot return them to plain text unless you re-configure them. To remove an encrypted password, use the `no password password` command.

To keep unauthorized people from viewing passwords in the switch configuration file, use the `service password-encryption` command. This command encrypts the clear-text passwords created for user name passwords, authentication key passwords, the privileged command password, and console and virtual terminal line access passwords.

To view passwords, use the `show running-config` command.

## show privilege

View your access level.

**Syntax** `show privilege`

- Command Modes**
- EXEC
  - EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| <b>7.5.1.0</b>     | Introduced on the C-Series.               |
| <b>pre-6.1.1.0</b> | Introduced on the E-Series.               |

### Example

```
DellEMC# show privilege
Current privilege level is 15.
DellEMC#

DellEMC# show privilege
Current privilege level is 14.
DellEMC#

DellEMC# show privilege
Current privilege level is 10.
DellEMC#
```

### Related Commands

- [privilege level \(CONFIGURATION mode\)](#) — assign access control to different command modes.

# show users

Allows you to view information on all users logged in to the switch.

**Syntax** `show users [all]`

**Parameters** **all** (OPTIONAL) Enter the keyword `all` to view all terminal lines in the switch.

**Command Modes** EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| 9.7(0.0)    | Introduced on the S6000-ON.                                      |
| 9.5(0.1)    | Added support for roles on the Z9500.                            |
| 9.5(0.0)    | Added support for roles on the Z9000, S6000, S4820T, S4810, MXL. |
| 9.2(1.0)    | Introduced on the Z9500.                                         |
| 9.0.2.0     | Introduced on the S6000.                                         |
| 8.3.19.0    | Introduced on the S4820T.                                        |
| 8.3.11.1    | Introduced on the Z9000.                                         |
| 8.3.7.0     | Introduced on the S4810.                                         |
| 7.6.1.0     | Introduced on the S-Series.                                      |
| 7.5.1.0     | Introduced on the C-Series.                                      |
| pre-6.1.1.0 | Introduced on the E-Series.                                      |

**Usage Information** The following describes the `show user` command shown in the following example.

| Field      | Description                                                       |
|------------|-------------------------------------------------------------------|
| (untitled) | Indicates with an asterisk (*) which terminal line you are using. |
| Line       | Displays the terminal lines currently in use.                     |
| User       | Displays the user name of all users logged in.                    |
| Host(s)    | Displays the terminal line status.                                |
| Location   | Displays the IP address of the user.                              |

## Example

```
DelleMC# show users
Authorization Mode: role or privilege
 Line Location User Role Priv
Host(s)
* 0 console 0 unassigned 1
idle
 2 vty 0 admin unassigned 1
idle 10.16.127.35
 3 vty 1 ad unassigned 15
```

```

idle 10.16.127.145
 4 vty 2 ad1 sysadmin 1
idle 10.16.127.141
 5 vty 3 ad1 sysadmin 1
idle 10.16.127.145
 6 vty 4 admin unassigned 1
idle 10.16.127.141
 7 vty 5 ad unassigned 15
idle 10.16.127.141
DellEMC#

```

## Related Commands

- [username](#) — enables a user.

## timeout login response

Specify how long the software waits for the login input (for example, the user name and password) before timing out.

**Syntax** `timeout login response seconds`

To return to the default values, use the `no timeout login response` command.

### Parameters

#### **seconds**

Enter a number of seconds the software waits before logging you out. The range is:

- VTY — range is from 1 to 30 seconds, the default is **30 seconds**.
- Console — range is from 1 to 300 seconds, the default is **0 seconds** (no timeout).
- AUX — range is from 1 to 300 seconds, the default is **0 seconds** (no timeout).

**Defaults** See *Parameters*.

**Command Modes** LINE

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version            | Description                               |
|--------------------|-------------------------------------------|
| <b>9.10(0.1)</b>   | Introduced on the S6010-ON and S4048T-ON. |

| <b>8.3.11.1</b>    | Introduced on the Z9000.                  |
| <b>8.3.7.0</b>     | Introduced on the S4810.                  |
| <b>7.6.1.0</b>     | Introduced on the S-Series.               |
| <b>7.5.1.0</b>     | Introduced on the C-Series.               |
| <b>pre-6.1.1.0</b> | Introduced on the E-Series.               |

## Usage Information

The software measures the period of inactivity defined in this command as the period between consecutive keystrokes. For example, if your password is “password” you can enter “p” and wait 29 seconds to enter the next letter.

## username

Establish an authentication system based on user names.

### Syntax

```
username name [access-class access-list-name] [nopassword | {password | secret | sha256-password} [encryption-type] password [dynamic-salt]] [privilege level] [role role-name]
```

If you do not want a specific user to enter a password, use the `nopassword` option.

To delete authentication for a user, use the `no username name` command.

### Parameters

|                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| <b><i>name</i></b>                                           | Enter a text string for the name of the user up to 63 characters.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b><i>access-class</i></b><br><b><i>access-list-name</i></b> | Enter the keywords <code>access-class</code> then the name of a configured access control list (either an IP access control list or MAC access control list).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b><i>nopassword</i></b>                                     | Enter the keyword <code>nopassword</code> to specify that the user should not enter a password.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b><i>password</i></b><br><b><i>encryption-type</i></b>      | Enter the keyword <code>password</code> then the <code>encryption-type</code> or the password. <ul style="list-style-type: none"><li>• 0 directs the system to store the password as clear text. It is the default encryption type when using the <code>password</code> option.</li><li>• 8 to indicate that a password encrypted using a sha256 hashing algorithm follows. This encryption type is available with the <code>sha256-password</code> option only, and is the default encryption type for this option.</li><li>• 7 to indicate that a password encrypted using a DES hashing algorithm follows. This encryption type is available with the <code>password</code> option only.</li><li>• 5 to indicate that a password encrypted using an MD5 hashing algorithm follows. This encryption type is available with the <code>secret</code> option only, and is the default encryption type for this option.</li></ul> |
| <b><i>password</i></b>                                       | Enter a string up to 32 characters long.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b><i>dynamic-salt</i></b>                                   | Enter the keyword <code>dynamic-salt</code> to have an additional random input in the password encryption process.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b><i>privilege level</i></b>                                | Enter the keyword <code>privilege</code> then a number from zero (0) to 15.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b><i>role</i> <i>role-name</i></b>                          | Enter the keyword <code>role</code> followed by the role name to associate with that user ID.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b><i>secret</i></b>                                         | Enter the keyword <code>secret</code> then the encryption type.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b><i>sha256-password</i></b>                                | Enter the keyword <code>sha256-password</code> then the <code>encryption-type</code> or the password.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

### Defaults

The default encryption type for `password` option is **0**. The default encryption type for `secret` option is **5**. The default encryption type for `sha256-password` option is **8**. The default value of `privilege level` is **1**.

### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

### Version

### Description

#### 9.13.0.0

Enhanced to display a warning message when a weak password is used. Introduced the `dynamic-salt` option on the MXL, S5000, S4048-ON, S6000, S6000-ON, S3048-ON, S3100 Series, C9010, S4048T-ON, Z9500, Z9100-ON, S6100-ON, S6010-ON.

| Version     | Description                                                                                                                                               |
|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| 9.12(1.0)   | Introduced on the S5048F-ON.                                                                                                                              |
| 9.10(0.1)   | Introduced on the S6010-ON and S4048T-ON.                                                                                                                 |
| 9.10(0.0)   | Introduced on the S3148.                                                                                                                                  |
| 9.10(0.0)   | Added support for the <code>sha256-password</code> option for S3100, S3048-ON, S4048-ON, S4810, S4820T, S5000, S6000, S6000-ON, Z9100-ON, MXL, and Z9500. |
| 9.8(2.0)    | Introduced on the S3100 series.                                                                                                                           |
| 9.8(1.0)    | Introduced on the Z9100-ON.                                                                                                                               |
| 9.8(0.0P5)  | Introduced on the S4048-ON.                                                                                                                               |
| 9.8(0.0P2)  | Introduced on the S3048-ON.                                                                                                                               |
| 9.7(0.0)    | Introduced on the S6000-ON.                                                                                                                               |
| 9.5(0.0)    | Added support for roles on the Z9000, S6000, S4820T, S4810, MXL.                                                                                          |
| 9.2(1.0)    | Introduced on the Z9500.                                                                                                                                  |
| 9.0.2.0     | Introduced on the S6000.                                                                                                                                  |
| 8.3.19.0    | Introduced on the S4820T.                                                                                                                                 |
| 8.3.11.1    | Introduced on the Z9000.                                                                                                                                  |
| 8.3.7.0     | Introduced on the S4810.                                                                                                                                  |
| 7.7.1.0     | Added support for the <code>secret</code> option and the MD5 password encryption. Extended the name from 25 to 63 characters.                             |
| 7.6.1.0     | Introduced on the S-Series.                                                                                                                               |
| 7.5.1.0     | Introduced on the C-Series.                                                                                                                               |
| pre-6.1.1.0 | Introduced on the E-Series.                                                                                                                               |

#### Usage Information

To view the defined user names, use the `show running-config user` command. You can use the `dynamic-salt` option only under the `secret` and the `password` options.

When you configure the password, the system alerts if your password does not match the following criteria. The system accepts your password even if these conditions are not met. Dell EMC Networking recommends selecting a strong password for enhanced security.

- A minimum of eight characters in length
- A minimum of one lower case letter (a to z)
- A minimum of one upper case letter (A to Z)
- A minimum of one numeric character (0 to 9)
- A minimum of one special character including a space (" !"#%&'()\*+,-./:;<=>?@[\\]^\_`{|}~")

#### Related Commands

- `password` — specifies a password for users on terminal lines.
- `show running-config` — views the current configuration.

## RADIUS Commands

The following RADIUS commands are supported by Dell EMC Networking OS.

### aaa radius auth-method

Configure the authentication method to use with RADIUS for user access.

**Syntax**            `aaa radius auth-method {pap | mschapv2}`

To undo the RADIUS authentication method configuration, use the `no aaa radius auth-method` command.

|                          |                                                                                                                                                               |                                                                                                                                                                                                                                                                                           |
|--------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Parameters</b>        | <b>pap</b>                                                                                                                                                    | Enter the keyword <code>pap</code> to use the Password Authentication Protocol (PAP) for RADIUS authentication. This protocol uses the username and password attributes in the access-request message sent to the RADIUS server.                                                          |
|                          | <b>mschapv2</b>                                                                                                                                               | Enter the keyword <code>mschapv2</code> to use the Microsoft Challenge-Handshake Authentication Protocol (MS-CHAPv2) for RADIUS authentication. This protocol is considered to be more secure than PAP and uses mutual authentication based on a random challenge and challenge response. |
| <b>Defaults</b>          | PAP                                                                                                                                                           |                                                                                                                                                                                                                                                                                           |
| <b>Command Modes</b>     | CONFIGURATION                                                                                                                                                 |                                                                                                                                                                                                                                                                                           |

|-------------|-----------------------------|
| 8.3.7.0     | Introduced on the S4810.    |
| 7.6.1.0     | Introduced on the S-Series. |
| 7.5.1.0     | Introduced on the C-Series. |
| pre-6.2.1.0 | Introduced on the E-Series. |

## ip radius source-interface

Specify an interface's IP address as the source IP address for RADIUS connections.

**Syntax** `ip radius source-interface interface`

To delete a source interface, use the `no ip radius source-interface` command.

**Parameters** *interface*

Enter the following keywords and the interface information:

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
- For a port channel interface, enter the keywords `port-channel` then a number.
- For a Null interface, enter the keyword `null` then the Null interface number.
- For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults** Not configured.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.5.1.0    | Added support for 4-port 40G line cards.  |
| 8.3.7.0    | Introduced on the S4810.                  |
| 7.6.1.0    | Introduced on the S-Series.               |
| 7.5.1.0    | Introduced on the C-Series.               |

| Version     | Description                 |
|-------------|-----------------------------|
| pre-6.2.1.0 | Introduced on the E-Series. |

## radius-server deadtime

Configure a time interval during which non-responsive RADIUS servers to authentication requests are skipped.

|                        |                                                                                                                                                                               |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | <code>radius-server deadtime seconds</code>                                                                                                                                   |
|                        | To disable this function or return to the default value, use the <code>no radius-server deadtime</code> command.                                                              |
| <b>Parameters</b>      | <b>seconds</b> Enter a number of seconds during which non-responsive RADIUS servers are skipped. The range is from 0 to 2147483647 seconds. The default is <b>0 seconds</b> . |
| <b>Defaults</b>        | <b>0 seconds</b>                                                                                                                                                              |
| <b>Command Modes</b>   | CONFIGURATION                                                                                                                                                                 |
| <b>Command History</b> | This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> .                 |

| Version     | Description                               |
|-------------|-------------------------------------------|
| 9.10(0.1)   | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)   | Introduced on the S3148.                  |
| 9.10(0.0)   | Introduced on the S6100-ON.               |
| 9.8(2.0)    | Introduced on the S3100 series.           |
| 9.8(1.0)    | Introduced on the Z9100-ON.               |
| 9.8(0.0P5)  | Introduced on the S4048-ON.               |
| 9.8(0.0P2)  | Introduced on the S3048-ON.               |
| 9.7(0.0)    | Introduced on the S6000-ON.               |
| 9.2(1.0)    | Introduced on the Z9500.                  |
| 9.0.2.0     | Introduced on the S6000.                  |
| 8.3.19.0    | Introduced on the S4820T.                 |
| 8.3.11.1    | Introduced on the Z9000.                  |
| 8.3.7.0     | Introduced on the S4810.                  |
| 7.6.1.0     | Introduced on the S-Series.               |
| 7.5.1.0     | Introduced on the C-Series.               |
| pre-6.1.1.0 | Introduced on the E-Series.               |

## radius-server host

Configure a RADIUS server host.

|                   |                                                                                                                                                                     |
|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>     | <code>radius-server host {hostname   ipv4-address   ipv6-address} [auth-port port-number] [retransmit retries] [timeout seconds] [key [encryption-type] key]</code> |
| <b>Parameters</b> | <b>hostname</b> Enter the name of the RADIUS server host.                                                                                                           |

|                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><i>ipv4-address   ipv6-address</i></b> | Enter the IPv4 address (A.B.C.D) or IPv6 address (X:X:X:X) of the RADIUS server host.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b><i>auth-port port-number</i></b>       | (OPTIONAL) Enter the keywords <code>auth-port</code> then a number as the port number. The range is from zero (0) to 65535. The default port-number is <b>1812</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b><i>retransmit retries</i></b>          | (OPTIONAL) Enter the keyword <code>retransmit</code> then a number as the number of attempts. This parameter overwrites the <code>radius-server retransmit</code> command. The range is from zero (0) to 100. The default is <b>3 attempts</b> .                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b><i>timeout seconds</i></b>             | (OPTIONAL) Enter the keyword <code>timeout</code> then the seconds the time interval the switch waits for a reply from the RADIUS server. This parameter overwrites the <code>radius-server timeout</code> command. The range is from 0 to 1000. The default is <b>5 seconds</b> .                                                                                                                                                                                                                                                                                                                                                                               |
| <b><i>key [encryption-type] key</i></b>   | <p>(OPTIONAL) Enter the keyword <code>key</code> then an optional encryption-type and a string up to 42 characters long as the authentication key. The RADIUS host server uses this authentication key and the RADIUS daemon operating on this switch.</p> <p>For the encryption-type, enter either zero (0) or 7 as the encryption type for the key entered. The options are:</p> <ul style="list-style-type: none"> <li>• 0 is the default and means the password is not encrypted and stored as clear text.</li> <li>• 7 means that the password is encrypted and hidden.</li> </ul> <p>Configure this parameter last because leading spaces are ignored.</p> |

| <b>Version</b>    | <b>Description</b>                                                                                        |
|-------------------|-----------------------------------------------------------------------------------------------------------|
| <b>9.11(0.0)</b>  | Included a prompt to force the users to re-authenticate when there is a change in the RADIUS server list. |
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON.                                                                 |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                                                                                  |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.                                                                               |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.                                                                           |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.                                                                               |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.                                                                               |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                                                                               |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.                                                                               |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                                                                                  |
| <b>9.0.2.0</b>    | Introduced on the S6000.                                                                                  |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                                                                                 |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                                                                                  |
| <b>8.4.1.0</b>    | Added support for IPv6.                                                                                   |
| <b>8.3.7.0</b>    | Introduced on the S4810.                                                                                  |
| <b>7.7.1.0</b>    | Authentication key length increased to 42 characters.                                                     |
| <b>7.6.1.0</b>    | Introduced on the S-Series.                                                                               |
| <b>7.5.1.0</b>    | Introduced on the C-Series.                                                                               |

| Version     | Description                 |
|-------------|-----------------------------|
| pre-6.2.1.0 | Introduced on the E-Series. |

### Usage Information

To configure any number of RADIUS server hosts for each server host that is configured, use this command. Dell EMC Networking OS searches for the RADIUS hosts in the order they are configured in the software.

The global default values for the `timeout`, `retransmit`, and `key` optional parameters are applied, unless those values are specified in the `radius-server host` or other commands. To return to the global default values, if you configure the `timeout`, `retransmit`, or `key` values, include those keywords when using the `no radius-server host` command syntax.

You can use duplicate host names or IP addresses among RADIUS groups. However, you cannot use duplicate host names or IP addresses within the same RADIUS group. If a VRF is not configured on the RADIUS group, then servers configured in the group are considered to be on the default VRF. RADIUS servers that are configured in the CONFIGURATION mode are also considered to be on the default VRF.

You must configure the RADIUS group explicitly with the `aaa radius group` command in order for the AAA servers to use the group of RADIUS servers. The 802.1x servers use the group of RADIUS servers based on the VRF where the 802.1x request is received. As a result, it is possible that both globally configured RADIUS servers as well as the group-configured RADIUS servers (without VRF or default VRF) are used for processing the 802.1x requests that are received at the default VRF. The order in which the RADIUS servers are tried depends on the order in which the RADIUS servers are configured.

### Example

```
DellEMC(config)#radius-server host 192.100.0.12
Force all logged-in users to re-authenticate (y/n)?
```

```
DellEMC(config)#no radius-server host 192.100.0.12
Force all logged-in users to re-authenticate (y/n)?
```

### Related Commands

- [login authentication](#) — sets the database to be checked when a user logs in.
- [radius-server key](#) — sets an authentication key for RADIUS communications.
- [radius-server retransmit](#) — sets the number of times the RADIUS server attempts to send information.
- [radius-server timeout](#) — sets the time interval before the RADIUS server times out.

## radius-server key

Configure a key for all RADIUS communications between the switch and the RADIUS host server.

**Syntax** `radius-server key [encryption-type] key`

To delete a password, use the `no radius-server key` command.

### Parameters

**encryption-type** (OPTIONAL) Enter either zero (0) or 7 as the encryption type for the key entered. The options are:

- 0 is the default and means the key is not encrypted and stored as clear text.
- 7 means that the key is encrypted and hidden.

**key** Enter a string that is the key to be exchanged between the switch and RADIUS servers. It can be up to 96 characters long.

**Defaults** Not configured.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                                               |
|-----------|-----------------------------------------------------------|
| 9.13(0.0) | Changed the maximum length of the password from 32 to 96. |

| Version     | Description                                           |
|-------------|-------------------------------------------------------|
| 9.10(0.1)   | Introduced on the S6010-ON and S4048T-ON.             |
| 9.10(0.0)   | Introduced on the S3148.                              |
| 9.10(0.0)   | Introduced on the S6100-ON.                           |
| 9.8(2.0)    | Introduced on the S3100 series.                       |
| 9.8(1.0)    | Introduced on the Z9100-ON.                           |
| 9.8(0.0P5)  | Introduced on the S4048-ON.                           |
| 9.8(0.0P2)  | Introduced on the S3048-ON.                           |
| 9.7(0.0)    | Introduced on the S6000-ON.                           |
| 9.2(1.0)    | Introduced on the Z9500.                              |
| 9.0.2.0     | Introduced on the S6000.                              |
| 8.3.19.0    | Introduced on the S4820T.                             |
| 8.3.11.1    | Introduced on the Z9000.                              |
| 8.3.7.0     | Introduced on the S4810.                              |
| 7.7.1.0     | Authentication key length increased to 42 characters. |
| 7.6.1.0     | Introduced on the S-Series.                           |
| 7.5.1.0     | Introduced on the C-Series.                           |
| pre-6.2.1.0 | Introduced on the E-Series.                           |

#### Usage Information

The key configured on the switch must match the key configured on the RADIUS server daemon.

If you configure the `key` parameter in the `radius-server host` command, the key configured with the `radius-server key` command is the default key for all RADIUS communications.

#### Related Commands

- [radius-server host](#) — configures a RADIUS host.

## radius-server retransmit

Configure the number of times the switch attempts to connect with the configured RADIUS host server before declaring the RADIUS host server unreachable.

#### Syntax

```
radius-server retransmit retries
```

To configure zero retransmit attempts, use the `no radius-server retransmit` command.

To return to the default setting, use the `radius-server retransmit 3` command.

#### Parameters

***retries*** Enter a number of attempts that the Dell OS tries to locate a RADIUS server. The range is from zero (0) to 100. The default is **3 retries**.

#### Defaults

**3 retries**

#### Command Modes

CONFIGURATION

#### Command History

| <b>pre-6.2.1.0</b> | Introduced on the E-Series.     |

#### Related Commands

- [radius-server host](#) — configures a RADIUS host.

## radius-server timeout

To reply to a request, configure the amount of time the RADIUS client (the switch) waits for a RADIUS host server .

**Syntax** `radius-server timeout seconds`

To return to the default value, use the `no radius-server timeout` command.

**Parameters** `seconds` Enter the number of seconds between an unsuccessful attempt and the Dell EMC Networking OS times out. The range is from zero (0) to 1000 seconds. The default is **5 seconds**.

**Defaults** **5 seconds**

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

- [radius-server host](#) — configure a RADIUS host.

## TACACS+ Commands

Dell EMC Networking OS supports TACACS+ as an alternate method for login authentication.

### debug tacacs+

To assist with troubleshooting, view TACACS+ transactions.

**Syntax** `debug tacacs+`  
 To disable debugging of TACACS+, use the `no debug tacacs+` command.

**Defaults** Disabled.

**Command Modes** EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version     | Description                               |

| pre-6.2.1.0 | Introduced on the E-Series.               |

## ip tacacs source-interface

Specify an interface's IP address as the source IP address for TACACS+ connections.

**Syntax** `ip tacacs source-interface interface`

To delete a source interface, use the `no ip tacacs source-interface` command.

**Parameters** ***interface*** Enter the following keywords and the interface information:

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
- For a port channel interface, enter the keywords `port-channel` then a number.
- For a Null interface, enter the keyword `null` then the Null interface number.
- For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults** Not configured.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| 8.3.11.1    | Introduced on the Z9000.                  |
| 8.5.1.0     | Added support for 4-port 40G line cards.  |
| 8.3.7.0     | Introduced on the S4810.                  |
| 7.6.1.0     | Introduced on the S-Series.               |
| 7.5.1.0     | Introduced on the C-Series.               |
| pre-6.2.1.1 | Introduced on the E-Series.               |

## tacacs-server host

Specify a TACACS+ host.

**Syntax** `tacacs-server host {hostname | ipv4-address | ipv6-address} [port number] [timeout seconds] [key key]`

|                   |                                    |                                                                                                                                                                                                                                    |
|-------------------|------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Parameters</b> | <b>hostname</b>                    | Enter the name of the TACACS+ server host.                                                                                                                                                                                         |
|                   | <b>ipv4-address   ipv6-address</b> | Enter the IPv4 address (A.B.C.D) or IPv6 address (X:X:X:X) of the TACACS+ server host.                                                                                                                                             |
|                   | <b>port number</b>                 | (OPTIONAL) Enter the keyword <code>port</code> then a number as the port to be used by the TACACS+ server. The range is from zero (0) to 65535. The default is <b>49</b> .                                                         |
|                   | <b>timeout seconds</b>             | (OPTIONAL) Enter the keyword <code>timeout</code> then the number of seconds the switch waits for a reply from the TACACS+ server. The range is from 0 to 1000. The default is <b>10 seconds</b> .                                 |
|                   | <b>key key</b>                     | (OPTIONAL) Enter the keyword <code>key</code> then a string up to 42 characters long as the authentication key. This authentication key must match the key specified in the <code>tacacs-server key</code> for the TACACS+ daemon. |

**Defaults** Not configured.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| <b>Version</b>     | <b>Description</b>                                    |

| <b>pre-6.2.1.1</b> | Introduced on the E-Series.                           |

**Usage Information** To list multiple TACACS+ servers to be used by the `aaa authentication login` command, configure this command multiple times.

If you are not configuring the switch as a TACACS+ server, you do not need to configure the `port`, `timeout` and `key` optional parameters. If you do not configure a key, the key assigned in the `tacacs-server key` command is used.

You can use duplicate host names or IP addresses among TACACS groups. However, you cannot use duplicate host names or IP addresses within the same TACACS group.

If a VRF is not configured on the TACACS group, then servers configured in the group are considered to be on the default VRF. TACACS servers that are configured in the CONFIGURATION mode are also considered to be on the default VRF.

For AAA servers to use a group of TACACS servers, you must explicitly configure the group using the `aaa tacacs group group-name` command. The order in which the TACACS servers are tried depends on the order in which they are configured.

### Example

```
DellEMC(conf)# tacacs-server group group1
DellEMC(conf-tacacs-group)# tacacs-server host 1.1.1.1 key secr-et
DellEMC(conf-tacacs-group)# no tacacs-server host 1.1.1.1
DellEMC(conf-tacacs-group)#
```

### Related Commands

- [aaa authentication login](#) — specifies the login authentication method.
- [tacacs-server key](#) — configures a TACACS+ key for the TACACS server.

## tacacs-server key

Configure a key for communication between a TACACS+ server and a client.

### Syntax

```
tacacs-server key [encryption-type] key
```

To delete a key, use the `no tacacs-server key key` command.

### Parameters

- encryption-type*** (OPTIONAL) Enter either zero (0) or 7 as the encryption type for the key entered. The options are:
- 0 is the default and means the key is not encrypted and stored as clear text.
  - 7 means that the key is encrypted and hidden.
- key*** Enter a text string, up to 42 characters long, as the clear text password. Leading spaces are ignored.

### Defaults

Not configured.

### Command Modes

CONFIGURATION

### Command History

| 8.3.11.1    | Introduced on the Z9000.                              |
| 8.3.7.0     | Introduced on the S4810.                              |
| 7.7.1.0     | Authentication key length increased to 42 characters. |
| 7.6.1.0     | Introduced on the S-Series.                           |
| 7.5.1.0     | Introduced on the C-Series.                           |
| pre-6.2.1.1 | Introduced on the E-Series.                           |

**Usage Information**

The key configured with this command must match the key configured on the TACACS+ daemon.

## Port Authentication (802.1X) Commands

An authentication server must authenticate a client connected to an 802.1X switch port. Until the authentication, only Extensible Authentication Protocol over LAN (EAPOL) traffic is allowed through the port to which a client is connected. After authentication is successful, normal traffic passes through the port.

Dell EMC Networking OS supports RADIUS and Active Directory environments using 802.1X Port Authentication.

### Important Points to Remember

Dell EMC Networking OS limits network access for certain users by using VLAN assignments. 802.1X with VLAN assignment has these characteristics when configured on the switch and the RADIUS server.

- 802.1X is supported on Dell EMC Networking OS.
- 802.1X is not supported on the LAG or the channel members of a LAG.
- If no VLAN is supplied by the RADIUS server or if 802.1X authorization is disabled, the port is configured in its access VLAN after successful authentication.
- If 802.1X authorization is enabled but the VLAN information from the RADIUS server is not valid, the port returns to the Unauthorized state and remains in the configured access VLAN. This prevents ports from appearing unexpectedly in an inappropriate VLAN due to a configuration error. Configuration errors create an entry in Syslog.
- If 802.1X authorization is enabled and all information from the RADIUS server is valid, the port is placed in the specified VLAN after authentication.
- If port security is enabled on an 802.1X port with VLAN assignment, the port is placed in the RADIUS server assigned VLAN.
- If 802.1X is disabled on the port, it is returned to the configured access VLAN.
- When the port is in the Force Authorized, Force Unauthorized, or Shutdown state, it is placed in the configured access VLAN.
- If an 802.1X port is authenticated and put in the RADIUS server assigned VLAN, any change to the port access VLAN configuration does not take effect.
- The 802.1X with VLAN assignment feature is not supported on trunk ports, dynamic ports, or with dynamic-access port assignment through a VLAN membership.

## dot1x authentication (Configuration)

Enable dot1x globally; dot1x must be enabled both globally and at the interface level.

**Syntax** `dot1x authentication`

To disable dot1x on globally, use the `no dot1x authentication` command.

**Defaults** Disabled.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |

| Version           | Description                              |
|-------------------|------------------------------------------|
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.              |

**Related Commands**

- [dot1x authentication \(Configuration\)](#) — enable dot1x globally.

## dot1x auth-fail-vlan

Configure an authentication failure VLAN for users and devices that fail 802.1X authentication.

**Syntax** `dot1x auth-fail-vlan vlan-id [max-attempts number]`  
To delete the authentication failure VLAN, use the `no dot1x auth-fail-vlan vlan-id [max-attempts number]` command.

**Parameters**

|                                   |                                                                                                                                                                          |
|-----------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><i>vlan-id</i></b>             | Enter the VLAN Identifier. The range is from 1 to 4094.                                                                                                                  |
| <b><i>max-attempts number</i></b> | (OPTIONAL) Enter the keywords <code>max-attempts</code> then number of attempts desired before authentication fails. The range is from 1 to 5. The default is <b>3</b> . |

**Defaults** **3 attempts**

**Command Modes** CONFIGURATION (conf-if-interface-slot/port)

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                                         |
|-------------------|-----------------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON.           |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                            |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.                         |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.                     |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.                         |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.                         |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                         |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.                         |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                            |
| <b>9.0.2.0</b>    | Introduced on the S6000.                            |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                           |
| <b>8.3.7.0</b>    | Introduced on the S4810.                            |
| <b>7.6.1.0</b>    | Introduced on the C-Series, S-Series, and E-Series. |

**Usage Information** If the host responds to 802.1X with an incorrect login/password, the login fails. The switch attempts to authenticate again until the maximum attempts configured is reached. If the authentication fails after all allowed attempts, the interface is moved to the authentication failed VLAN.

After the authentication VLAN is assigned, the port-state must be toggled to restart authentication. Authentication occurs at the next re-authentication interval (`dot1x reauthentication`).

**Related Commands**

- [dot1x port-control](#) — enables port-control on an interface.
- [dot1x guest-vlan](#) — configures a guest VLAN for non-dot1x devices.
- [show dot1x interface](#) — displays the 802.1X information on an interface.

## dot1x auth-server

Configure the authentication server to RADIUS.

**Syntax** `dot1x auth-server radius`

**Defaults** none

**Command Modes** CONFIGURATION

## Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |
| 7.6.1.0    | Introduced on the C-Series and S-Series.  |
| 7.4.1.0    | Introduced on the E-Series.               |

## dot1x guest-vlan

Configure a guest VLAN for limited access users or for devices that are not 802.1X capable.

**Syntax** `dot1x guest-vlan vlan-id`  
To disable the guest VLAN, use the `no dot1x guest-vlan vlan-id` command.

**Parameters** `vlan-id` Enter the VLAN Identifier. The range is from 1 to 4094.

**Defaults** Not configured.

**Command Modes** CONFIGURATION (conf-if-interface-slot/port)

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |

| Version  | Description                                         |
|----------|-----------------------------------------------------|
| 8.3.19.0 | Introduced on the S4820T.                           |
| 8.3.11.1 | Introduced on the Z9000.                            |
| 8.3.7.0  | Introduced on the S4810.                            |
| 7.6.1.0  | Introduced on the C-Series, S-Series, and E-Series. |

### Usage Information

802.1X authentication is enabled when an interface is connected to the switch. If the host fails to respond within a designated amount of time, the authenticator places the port in the guest VLAN.

If a device does not respond within 30 seconds, it is assumed that the device is not 802.1X capable. Therefore, a guest VLAN is allocated to the interface and authentication for the device occurs at the next re-authentication interval (`dot1x reauthentication`).

If the host fails authentication for the designated number of times, the authenticator places the port in authentication failed VLAN (`dot1x auth-fail-vlan`).

**NOTE:** The layer 3 portion of guest VLAN and authentication fail VLANs can be created regardless if the VLAN is assigned to an interface or not. After an interface is assigned a guest VLAN (which has an IP address), routing through the guest VLAN is the same as any other traffic. However, the interface may join/leave a VLAN dynamically.

### Related Commands

- `dot1x auth-fail-vlan` — configures a VLAN for authentication failures.
- `dot1x reauthentication` — enables periodic re-authentication.
- `show dot1x interface` — displays the 802.1X information on an interface.

## dot1x mac-auth-bypass

Enable MAC authentication bypass. If 802.1X times out because the host did not respond to the Identity Request frame, Dell EMC Networking OS attempts to authenticate the host based on its MAC address.

**Syntax** `[no] dot1x mac-auth-bypass`

**Defaults** Disabled

**Command Modes** INTERFACE

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |

| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.4   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |

| Version | Description                              |
|---------|------------------------------------------|
| 8.4.1.0 | Introduced on the C-Series and S-Series. |

**Usage Information**

To disable MAC authentication bypass on a port, enter the `no dot1x mac-auth-bypass` command.

## dot1x max-eap-req

Configure the maximum number of times an extensive authentication protocol (EAP) request is transmitted before the session times out.

**Syntax** `dot1x max-eap-req number`

To return to the default, use the `no dot1x max-eap-req` command.

**Parameters** *number* Enter the number of times an EAP request is transmitted before a session time-out. The range is from 1 to 10. The default is **2**.

**Defaults** **2**

**Command Modes** INTERFACE

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|

| 7.4.1.0    | Introduced on the E-Series.               |

**Related Commands**

- [interface range](#) — configure a range of interfaces.

## dot1x port-control

Enable port control on an interface.

**Syntax** `dot1x port-control {force-authorized | auto | force-unauthorized}`

**Parameters** **force-authorized** Enter the keywords `force-authorized` to forcibly authorize a port.

**auto** Enter the keyword `auto` to authorize a port based on the 802.1X operation result.

**force-unauthorized** Enter the keywords `force-unauthorized` to forcibly de-authorize a port.

**Defaults** none

**Command Modes** INTERFACE

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |
| 7.6.1.0    | Introduced on the C-Series and S-Series.  |
| 7.4.1.0    | Introduced on the E-Series.               |

**Usage Information** The authenticator performs authentication only when `port-control` is set to `auto`.

## dot1x quiet-period

Set the number of seconds that the authenticator remains quiet after a failed authentication with a client.

**Syntax** `dot1x quiet-period seconds`  
 To disable quiet time, use the `no dot1x quiet-time` command.

**Parameters** **seconds** Enter the number of seconds. The range is from 1 to 65535. The default is **30**.

**Defaults** **30 seconds**

**Command Modes** INTERFACE

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                               |
|-----------|-------------------------------------------|
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0) | Introduced on the S3148.                  |
| 9.10(0.0) | Introduced on the S6100-ON.               |

| Version    | Description                              |
|------------|------------------------------------------|
| 9.8(2.0)   | Introduced on the S3100 series.          |
| 9.8(1.0)   | Introduced on the Z9100-ON.              |
| 9.8(0.0P5) | Introduced on the S4048-ON.              |
| 9.8(0.0P2) | Introduced on the S3048-ON.              |
| 9.7(0.0)   | Introduced on the S6000-ON.              |
| 9.2(1.0)   | Introduced on the Z9500.                 |
| 9.0.2.0    | Introduced on the S6000.                 |
| 8.3.19.0   | Introduced on the S4820T.                |
| 8.3.11.1   | Introduced on the Z9000.                 |
| 8.3.7.0    | Introduced on the S4810.                 |
| 7.6.1.0    | Introduced on the C-Series and S-Series. |
| 7.4.1.0    | Introduced on the E-Series.              |

## dot1x reauthentication

Enable periodic re-authentication of the client.

**Syntax** `dot1x reauthentication [interval seconds]`  
 To disable periodic re-authentication, use the `no dot1x reauthentication` command.

**Parameters** **interval seconds** (Optional) Enter the keyword `interval` then the interval time, in seconds, after which re-authentication is initiated. The range is from 1 to 31536000 (1 year). The default is **3600 (1 hour)**.

**Defaults** **3600 seconds (1 hour)**

**Command Modes** INTERFACE

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |
| 7.6.1.0    | Introduced on the C-Series and S-Series.  |

| Version | Description                 |
|---------|-----------------------------|
| 7.4.1.0 | Introduced on the E-Series. |

**Related Commands**

- [interface range](#) — configures a range of interfaces.

## dot1x reauth-max

Configure the maximum number of times a port can re-authenticate before the port becomes unauthorized.

**Syntax** `dot1x reauth-max number`

To return to the default, use the `no dot1x reauth-max` command.

**Parameters** *number* Enter the permitted number of re-authentications. The range is from 1 to 10. The default is **2**.

**Defaults** **2**

**Command Modes** INTERFACE

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |
| 7.6.1.0    | Introduced on the C-Series and S-Series.  |
| 7.4.1.0    | Introduced on the E-Series.               |

## dot1x server-timeout

Configure the amount of time after which exchanges with the server time-out.

**Syntax** `dot1x server-timeout seconds`

To return to the default, use the `no dot1x server-timeout` command.

**Parameters** *seconds* Enter a time-out value in seconds. The range is from 1 to 300, where 300 is implementation dependant. The default is **30**.

**Defaults** 30 seconds

**Command Modes** INTERFACE

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |
| 7.6.1.0    | Introduced on the C-Series and S-Series.  |
| 7.4.1.0    | Introduced on the E-Series.               |

## dot1x supplicant-timeout

Configure the amount of time after which exchanges with the supplicant time-out.

**Syntax** dot1x supplicant-timeout seconds

To return to the default, use the no dot1x supplicant-timeout command.

**Parameters** seconds Enter a time-out value in seconds. The range is from 1 to 300, where 300 is implementation dependant. The default is **30**.

**Defaults** 30 seconds

**Command Modes** INTERFACE

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |

| Version  | Description                              |
|----------|------------------------------------------|
| 9.2(1.0) | Introduced on the Z9500.                 |
| 9.0.2.0  | Introduced on the S6000.                 |
| 8.3.19.0 | Introduced on the S4820T.                |
| 8.3.11.1 | Introduced on the Z9000.                 |
| 8.3.7.0  | Introduced on the S4810.                 |
| 7.6.1.0  | Introduced on the C-Series and S-Series. |
| 7.4.1.0  | Introduced on the E-Series.              |

## dot1x tx-period

Configure the intervals at which EAPOL PDUs are transmitted by the Authenticator PAE.

**Syntax** `dot1x tx-period seconds`  
 To return to the default, use the `no dot1x tx-period` command.

**Parameters** **seconds** Enter the interval time, in seconds, that EAPOL PDUs are transmitted. The range is from 1 to 65535 (1 year). The default is **30**.

**Defaults** **30 seconds**

**Command Modes** INTERFACE

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |
| 7.6.1.0    | Introduced on the C-Series and S-Series.  |
| 7.4.1.0    | Introduced on the E-Series.               |

## show dot1x interface

Display the 802.1X information on an interface.

**Syntax** `show dot1x interface interface`

**Parameters** *interface* Enter one of the following keywords and slot/port or number information:

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.

**Defaults** none

**Command Modes**

- EXEC
- EXEC privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                                         |

## SSH and SCP Commands

Dell EMC Networking OS supports secure shell (SSH) protocol version 2.0. SSH is a protocol for secure remote login over an insecure network. SSH sessions are encrypted and use authentication.

### crypto key generate

Generate keys for the SSH server.

#### Syntax

 **NOTE:** Some of the parameters in this command require licensing to access. For more information, contact your Dell EMC Networking representative.

```
crypto key generate {rsa}
```

#### Parameters

**rsa** Enter the keyword `rsa` then the key size to generate a SSHv2 RSA host keys. The range is from 1024 to 2048 if you did not enable FIPS mode; if you enabled FIPS mode, you can only generate a 2048-bit key. The default is **1024**.

 **NOTE:** You must have a license to access the FIPS mode. For more information, contact your Dell EMC Networking representative.

#### Defaults

Key size **1024**; if you enable FIPS mode, the key size is **2048**.

**Command Modes** CONFIGURATION

## Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version     | Description                                       |
|-------------|---------------------------------------------------|
| 9.12(0.0)   | Removed support for rsa1 keys from all platforms. |
| 9.10(0.1)   | Introduced on the S6010-ON and S4048T-ON.         |
| 9.10(0.0)   | Introduced on the S3148.                          |
| 9.10(0.0)   | Introduced on the S6100-ON.                       |
| 9.8(2.0)    | Introduced on the S3100 series.                   |
| 9.8(1.0)    | Introduced on the Z9100-ON.                       |
| 9.8(0.0P5)  | Introduced on the S4048-ON.                       |
| 9.8(0.0P2)  | Introduced on the S3048-ON.                       |
| 9.7(0.0)    | Introduced on the S6000-ON.                       |
| 9.2(1.0)    | Introduced on the Z9500.                          |
| 9.0.2.0     | Introduced on the S6000.                          |
| 8.3.19.0    | Introduced on the S4820T.                         |
| 8.3.11.1    | Introduced on the Z9000.                          |
| 8.3.12.0    | Added support for FIPS mode on the S4810.         |
| 8.3.7.0     | Introduced on the S4810.                          |
| 7.6.1.0     | Introduced on the S-Series.                       |
| 7.5.1.0     | Introduced on the C-Series.                       |
| pre-6.1.1.0 | Introduced on the E-Series.                       |

## Usage Information

The host keys are required for key-exchange by the SSH server. If the keys are not found when you enable the server (`ip ssh server enable`), the keys are automatically generated.

This command requires user interaction and generates a prompt prior to overwriting any existing host keys.

 **NOTE:** Only a user with superuser permissions should generate host-keys.

## Example

```
DellEMC(conf)# crypto key generate rsa
Enter key size <1024-2048>. Default<1024> :
Host key already exists. Overwrite (y/n)?y
Generating 1024-bit SSHv2 RSA key.
!!
DellEMC(conf)#
```

## Related Commands

- [ip ssh server](#) — enables the SSH server.
- [show crypto](#) — displays the SSH host public keys.

## crypto key zeroize rsa

Removes the generated RSA host keys and zeroize the key storage location.

**Syntax** `crypto key zeroize rsa`

**Defaults** none

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                        |
|------------|----------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.          |
| 9.10(0.0)  | Introduced on the S3148.                           |
| 9.10(0.0)  | Introduced on the S6100-ON.                        |
| 9.8(2.0)   | Introduced on the S3100 series.                    |
| 9.8(1.0)   | Introduced on the Z9100-ON.                        |
| 9.8(0.0P5) | Introduced on the S4048-ON.                        |
| 9.8(0.0P2) | Introduced on the S3048-ON.                        |
| 9.7(0.0)   | Introduced on the S6000-ON.                        |
| 9.5(0.1)   | Introduced on the Z9500.                           |
| 9.5(0.0)   | Introduced on the Z9000, S6000, S4820T, S4810, MXL |

## debug ip ssh

Enables collecting SSH debug information.

**Syntax** `debug ip ssh {client | server}`  
 To disable debugging, use the `no debug ip ssh {client | server}` command.

**Parameters**

- client** Enter the keyword `client` to enable collecting debug information on the client.
- server** Enter the keyword `server` to enable collecting debug information on the server.

**Defaults** Disabled on both client and server.

**Command Modes** EXEC

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version     | Description                               |
|-------------|-------------------------------------------|
| 9.10(0.1)   | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)   | Introduced on the S3148.                  |
| 9.10(0.0)   | Introduced on the S6100-ON.               |
| 9.8(2.0)    | Introduced on the S3100 series.           |
| 9.8(1.0)    | Introduced on the Z9100-ON.               |
| 9.8(0.0P5)  | Introduced on the S4048-ON.               |
| 9.8(0.0P2)  | Introduced on the S3048-ON.               |
| 9.7(0.0)    | Introduced on the S6000-ON.               |
| 9.2(1.0)    | Introduced on the Z9500.                  |
| 9.0.2.0     | Introduced on the S6000.                  |
| 8.3.19.0    | Introduced on the S4820T.                 |
| 8.3.11.1    | Introduced on the Z9000.                  |
| 8.3.7.0     | Introduced on the S4810.                  |
| 7.6.1.0     | Introduced on the S-Series.               |
| 7.5.1.0     | Introduced on the C-Series.               |
| pre-6.1.1.0 | Introduced on the E-Series.               |

**Usage Information** Debug information includes details for key-exchange, authentication, and established session for each connection.

## ip scp topdir

Identify a location for files used in secure copy transfer.

**Syntax** `ip scp topdir directory`  
To return to the default setting, use the `no ip scp topdir` command.

**Parameters** ***directory*** Enter a directory name.

**Defaults** The internal flash (`flash:`) is the default directory.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version     | Description                               |
|-------------|-------------------------------------------|
| 9.10(0.1)   | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)   | Introduced on the S3148.                  |
| 9.10(0.0)   | Introduced on the S6100-ON.               |
| 9.8(2.0)    | Introduced on the S3100 series.           |
| 9.8(1.0)    | Introduced on the Z9100-ON.               |
| 9.8(0.0P5)  | Introduced on the S4048-ON.               |
| 9.8(0.0P2)  | Introduced on the S3048-ON.               |
| 9.7(0.0)    | Introduced on the S6000-ON.               |
| 9.2(1.0)    | Introduced on the Z9500.                  |
| 9.0.2.0     | Introduced on the S6000.                  |
| 8.3.19.0    | Introduced on the S4820T.                 |
| 8.3.11.1    | Introduced on the Z9000.                  |
| 8.3.7.0     | Introduced on the S4810.                  |
| 7.6.1.0     | Introduced on the S-Series.               |
| 7.5.1.0     | Introduced on the C-Series.               |
| pre-6.1.1.0 | Introduced on the E-Series.               |

**Usage Information** To configure the switch as an SCP server, use the `ip ssh server` command.

**Related Commands**

- `ip ssh server` — enables the SSH and SCP server on the switch.

## ip ssh authentication-retries

Configure the maximum number of attempts that should be used to authenticate a user.

**Syntax** `ip ssh authentication-retries 1-10`

**Parameters** ***1-10*** Enter the number of maximum retries to authenticate a user. The range is from 1 to 10. The default is **3**.

**Defaults** 3

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| <b>Version</b>     | <b>Description</b>                        |
|--------------------|-------------------------------------------|
| <b>9.10(0.1)</b>   | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>   | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>   | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>    | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>    | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b>  | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b>  | Introduced on the S3048-ON.               |
| <b>9.7(0.0)</b>    | Introduced on the S6000-ON.               |
| <b>9.2(1.0)</b>    | Introduced on the Z9500.                  |
| <b>9.0.2.0</b>     | Introduced on the S6000.                  |
| <b>8.3.19.0</b>    | Introduced on the S4820T.                 |
| <b>8.3.11.1</b>    | Introduced on the Z9000.                  |
| <b>8.3.7.0</b>     | Introduced on the S4810.                  |
| <b>7.6.1.0</b>     | Introduced on the S-Series.               |
| <b>7.5.1.0</b>     | Introduced on the C-Series.               |
| <b>pre-6.1.1.0</b> | Introduced on the E-Series.               |

**Usage Information** This command specifies the maximum number of attempts to authenticate a user on an SSH connection with the remote host for password authentication. SSH disconnects when the number of password failures exceeds authentication-retries.

## ip ssh challenge-response-authentication

Enable challenge response authentication for SSHv2.

**Syntax** `ip ssh challenge-response-authentication enable`

To disable the challenge response authentication, use the `no ip ssh challenge-response-authentication enable` command.

**Parameters** **enable** Enter the keyword `enable` to enable the challenge response authentication for SSHv2.

**Defaults** Disabled.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| <b>Version</b>   | <b>Description</b>                                                                                                                                         |
|------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>9.11(0.0)</b> | Introduced on the S4810, S4820T, S3048-ON, S3100 Series, S4048-ON, S5000, S6000, S6000-ON, Z9500, Z9100-ON, S6100-ON, S6010-ON, S4048T-ON, C9000, and MXL. |

**Usage Information** If both the challenge response authentication and password authentication methods are configured, the challenge response authentication takes priority.

## ip ssh cipher

Configure the list of ciphers supported on both SSH client and SCP.

**Syntax** `ip ssh cipher cipher-list`

**Parameters** **cipher cipher-list** Enter the keyword `cipher` and then a space-delimited list of ciphers that the SSH client supports. The following ciphers are available.

- `aes256-ctr`
- `aes256-cbc`
- `aes192-ctr`
- `aes192-cbc`
- `aes128-ctr`
- `aes128-cbc`
- `3des-cbc`

**Defaults** The default list of ciphers is in the order as shown below:

- `aes256-ctr`
- `aes256-cbc`
- `aes192-ctr`
- `aes192-cbc`
- `aes128-ctr`
- `aes128-cbc`
- `3des-cbc`

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                                                                                                                    |
|-----------|--------------------------------------------------------------------------------------------------------------------------------|
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON.                                                                                      |
| 9.10(0.0) | Introduced on the S3148.                                                                                                       |
| 9.10(0.0) | Introduced on the S6100-ON, S6000, S6000-ON, S5000, S4810, S4820T, S3048-ON, S4048-ON, MXL, C9010, S3100 series, and Z9100-ON. |

**Usage Information**

- You can select one or more ciphers from the list.
- The default list of supported ciphers is same irrespective of whether FIPS mode is enabled or disabled.
- Client-supported cipher list gets preference over the server-supported cipher list in selecting the cipher for the SSH session.
- When the `cipher (-c)` option is used with the SSH CLI, it overrides the configured or default cipher list.
- When FIPS is enabled or disabled, the client ciphers get default configuration.

## ip ssh connection-rate-limit

Configure the maximum number of incoming SSH connections per minute.

**Syntax** `ip ssh connection-rate-limit 1-60`

**Parameters** **1-60** Enter the number of maximum numbers of incoming SSH connections allowed per minute. The range is from 1 to 60 per minute. The default is **10 per minute**.

**Defaults** 10 per minute  
**Command Modes** CONFIGURATION  
**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version     | Description                               |
|-------------|-------------------------------------------|
| 9.11(0.0)   | Increased the SSH rate-limit range.       |
| 9.10(0.1)   | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)   | Introduced on the S3148.                  |
| 9.10(0.0)   | Introduced on the S6100-ON.               |
| 9.8(2.0)    | Introduced on the S3100 series.           |
| 9.8(1.0)    | Introduced on the Z9100-ON.               |
| 9.8(0.0P5)  | Introduced on the S4048-ON.               |
| 9.8(0.0P2)  | Introduced on the S3048-ON.               |
| 9.7(0.0)    | Introduced on the S6000-ON.               |
| 9.2(1.0)    | Introduced on the Z9500.                  |
| 9.0.2.0     | Introduced on the S6000.                  |
| 8.3.19.0    | Introduced on the S4820T.                 |
| 8.3.11.1    | Introduced on the Z9000.                  |
| 8.3.7.0     | Introduced on the S4810.                  |
| 7.6.1.0     | Introduced on the S-Series.               |
| 7.5.1.0     | Introduced on the C-Series.               |
| pre-6.1.1.0 | Introduced on the E-Series.               |

## ip ssh hostbased-authentication

Enable hostbased-authentication for the SSHv2 server.

**Syntax** `ip ssh hostbased-authentication enable`

To disable hostbased-authentication for SSHv2 server, use the `no ip ssh hostbased-authentication enable` command.

**Parameters** **enable** Enter the keyword `enable` to enable hostbased-authentication for SSHv2 server.

**Defaults** Disabled.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                               |
|-----------|-------------------------------------------|
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0) | Introduced on the S3148.                  |
| 9.10(0.0) | Introduced on the S6100-ON.               |
| 9.8(2.0)  | Introduced on the S3100 series.           |
| 9.8(1.0)  | Introduced on the Z9100-ON.               |

| Version            | Description                 |
|--------------------|-----------------------------|
| <b>9.8(0.0P5)</b>  | Introduced on the S4048-ON. |
| <b>9.8(0.0P2)</b>  | Introduced on the S3048-ON. |
| <b>9.7(0.0)</b>    | Introduced on the S6000-ON. |
| <b>9.2(1.0)</b>    | Introduced on the Z9500.    |
| <b>9.0.2.0</b>     | Introduced on the S6000.    |

| <b>8.3.11.1</b>    | Introduced on the Z9000.    |
| <b>8.3.7.0</b>     | Introduced on the S4810.    |
| <b>7.6.1.0</b>     | Introduced on the S-Series. |
| <b>7.5.1.0</b>     | Introduced on the C-Series. |
| <b>pre-6.1.1.0</b> | Introduced on the E-Series. |

### Usage Information

If you enable this command, clients can log in without a password prompt. This command provides two levels of authentication:

- rhost-authentication is done with the file specified in the `ip ssh rhostfile` command.
- checking client host-keys is done with the file specified in the `ip ssh pub-key-file` command.

**NOTE:** Administrators must specify the two files (`rhosts` and `pub-key-file`) to configure host-based authentication.

### Related Commands

- [ip ssh pub-key-file](#) — public keys of trusted hosts from a file.
- [ip ssh rhostsfile](#) — trusted hosts and users for rhost authentication.

## ip ssh key-size

Configure the size of the server-generated RSA SSHv1 key.

|                        |                                                                                                                                                               |                                                                                                                             |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | <code>ip ssh key-size 512-869</code>                                                                                                                          |                                                                                                                             |
| <b>Parameters</b>      | <b>512-869</b>                                                                                                                                                | Enter the key-size number for the server-generated RSA SSHv1 key. The range is from 512 to 869. The default is <b>768</b> . |
| <b>Defaults</b>        | Key size <b>768</b>                                                                                                                                           |                                                                                                                             |

| <b>9.2(1.0)</b>   | Introduced on the Z9500.    |
| <b>9.0.2.0</b>    | Introduced on the S6000.    |
| <b>8.3.19.0</b>   | Introduced on the S4820T.   |
| <b>8.3.11.1</b>   | Introduced on the Z9000.    |
| <b>8.3.7.0</b>    | Introduced on the S4810.    |

| Version     | Description                 |
|-------------|-----------------------------|
| 7.6.1.0     | Introduced on the S-Series. |
| 7.5.1.0     | Introduced on the C-Series. |
| pre-6.1.1.0 | Introduced on the E-Series. |

**Usage Information**

The server-generated key is used for SSHv1 key-exchange.

## ip ssh mac

Configure the list of MAC algorithms supported on both SSH client and SCP.

**Syntax** `ip ssh mac mac-list`

**Parameters** **mac mac-list** Enter the keyword `mac` then a space-delimited list of message authentication code (MAC) algorithms supported by the SSH client. The following MAC algorithms are available.

When FIPS mode is enabled:

- `hmac-sha2-256`
- `hmac-sha1`
- `hmac-sha1-96`

When FIPS mode is disabled:

- `hmac-sha2-256`
- `hmac-sha1`
- `hmac-sha1-96`
- `hmac-md5`
- `hmac-md5-96`

**Defaults** The default list of MAC algorithm is in the order as shown below:

When FIPS mode is enabled:

- `hmac-sha2-256`
- `hmac-sha1`
- `hmac-sha1-96`

When FIPS mode is disabled:

- `hmac-sha2-256`
- `hmac-sha1`
- `hmac-sha1-96`
- `hmac-md5`
- `hmac-md5-96`

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                                                                                                                    |
|-----------|--------------------------------------------------------------------------------------------------------------------------------|
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON.                                                                                      |
| 9.10(0.0) | Introduced on the S3148.                                                                                                       |
| 9.10(0.0) | Introduced on the S6100-ON, S6000, S6000-ON, S5000, S4810, S4820T, S3048-ON, S4048-ON, MXL, C9010, S3100 series, and Z9100-ON. |

- Usage Information**
- You can select one or more MAC algorithms from the list.
  - Client-supported MAC list gets preference over the server-supported MAC list in selecting the MAC algorithm for the SSH session.
  - When the `MAC (-m)` option is used with the SSH CLI, it overrides the configured or default MAC list.
  - When FIPS is enabled or disabled, the client MACs get default configuration.

## ip ssh password-authentication

Enable password authentication for the SSH server.

|                        |                                                                                                                                                               |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | <code>ip ssh password-authentication enable</code>                                                                                                            |
|                        | To disable password-authentication, use the <code>no ip ssh password-authentication enable</code> command.                                                    |
| <b>Parameters</b>      | <b>enable</b> Enter the keyword <code>enable</code> to enable password-authentication for the SSH server.                                                     |
| <b>Defaults</b>        | Enabled                                                                                                                                                       |
| <b>Command Modes</b>   | CONFIGURATION                                                                                                                                                 |
| <b>Command History</b> | This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> . |

| Version            | Description                               |
|--------------------|-------------------------------------------|
| <b>9.10(0.1)</b>   | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>   | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>   | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>    | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>    | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b>  | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b>  | Introduced on the S3048-ON.               |
| <b>9.7(0.0)</b>    | Introduced on the S6000-ON.               |
| <b>9.2(1.0)</b>    | Introduced on the Z9500.                  |
| <b>9.0.2.0</b>     | Introduced on the S6000.                  |
| <b>8.3.19.0</b>    | Introduced on the S4820T.                 |
| <b>8.3.11.1</b>    | Introduced on the Z9000.                  |
| <b>8.3.7.0</b>     | Introduced on the S4810.                  |
| <b>7.6.1.0</b>     | Introduced on the S-Series.               |
| <b>7.5.1.0</b>     | Introduced on the C-Series.               |
| <b>pre-6.1.1.0</b> | Introduced on the E-Series.               |

**Usage Information** With password authentication enabled, you can authenticate using the local, RADIUS, or TACACS+ password fallback order as configured.

## ip ssh pub-key-file

Specify the file used for host-based authentication.

|                   |                                                                    |
|-------------------|--------------------------------------------------------------------|
| <b>Syntax</b>     | <code>ip ssh pub-key-file {WORD}</code>                            |
| <b>Parameters</b> | <b>WORD</b> Enter the file name for the host-based authentication. |

|                        |                                                                                                                                                               |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Defaults</b>        | none                                                                                                                                                          |
| <b>Command Modes</b>   | CONFIGURATION                                                                                                                                                 |
| <b>Command History</b> | This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> . |

| <b>Version</b>     | <b>Description</b>                        |
|--------------------|-------------------------------------------|
| <b>9.10(0.1)</b>   | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>   | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>   | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>    | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>    | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b>  | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b>  | Introduced on the S3048-ON.               |
| <b>9.7(0.0)</b>    | Introduced on the S6000-ON.               |
| <b>9.2(1.0)</b>    | Introduced on the Z9500.                  |
| <b>9.0.2.0</b>     | Introduced on the S6000.                  |
| <b>8.3.19.0</b>    | Introduced on the S4820T.                 |
| <b>8.3.11.1</b>    | Introduced on the Z9000.                  |
| <b>8.3.7.0</b>     | Introduced on the S4810.                  |
| <b>7.6.1.0</b>     | Introduced on the S-Series.               |
| <b>7.5.1.0</b>     | Introduced on the C-Series.               |
| <b>pre-6.1.1.0</b> | Introduced on the E-Series.               |

**Usage Information** This command specifies the file used for the host-based authentication. The `creates/` file overwrites the `flash://ADMIN_DIR/ssh/knownhosts` file and deletes the user-specified file. Even though this command is a global configuration command, it does not appear in the running configuration because you only need to run this command once.

The file contains the OpenSSH-compatible public keys of the host for which host-based authentication is allowed. An example known host file format:

```
poclab4,123.12.1.123 ssh-rsa AAAAB3NzaC1yc2EAAAABIwAAAIEAox/
QQp8xYhzOxn07yh4VGPAoUfgKoiETHO9G4sNV+ui+DWEc3cgYAcU5LailMU2ODrzhCwyDNp05tK
BU3t
ReG1o8AxLi6+S4hyEMqHzkzBFNVqHzpQc+Rs4p2urzV0F4pRKnaXdHf3Lk4D460HZRhhVrxqeNx
PDpEn WIMPJi0ds= ashwani@poclab4
```

 **NOTE:** For `rhostfile` and `pub-key-file`, the administrator must FTP the file to the chassis.

### Example

```
DellEMC# conf
DellEMC(conf)# ip ssh pub-key-file flash://knownhosts
DellEMC(conf)#
```

**Related Commands**

- [show ip ssh client-pub-keys](#) — displays the client-public keys used for the host-based authentication.

## ip ssh mac

Configure the list of MAC algorithms supported on both SSH client and SCP.

**Syntax** `ip ssh mac mac-list`

## Parameters

### **mac** *mac-list*

Enter the keyword `mac` then a space-delimited list of message authentication code (MAC) algorithms supported by the SSH client. The following MAC algorithms are available.

When FIPS mode is enabled:

- `hmac-sha2-256`
- `hmac-sha1`
- `hmac-sha1-96`

When FIPS mode is disabled:

- `hmac-sha2-256`
- `hmac-sha1`
- `hmac-sha1-96`
- `hmac-md5`
- `hmac-md5-96`

## Defaults

The default list of MAC algorithm is in the order as shown below:

When FIPS mode is enabled:

- `hmac-sha2-256`
- `hmac-sha1`
- `hmac-sha1-96`

When FIPS mode is disabled:

- `hmac-sha2-256`
- `hmac-sha1`
- `hmac-sha1-96`
- `hmac-md5`
- `hmac-md5-96`

**Command Modes** CONFIGURATION

## Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

### **Version**

### **Description**

#### **9.10(0.1)**

Introduced on the S6010-ON and S4048T-ON.

#### **9.10(0.0)**

Introduced on the S3148.

#### **9.10(0.0)**

Introduced on the S6100-ON, S6000, S6000-ON, S5000, S4810, S4820T, S3048-ON, S4048-ON, MXL, C9010, S3100 series, and Z9100-ON.

## Usage Information

- You can select one or more MAC algorithms from the list.
- Client-supported MAC list gets preference over the server-supported MAC list in selecting the MAC algorithm for the SSH session.
- When the `MAC (-m)` option is used with the SSH CLI, it overrides the configured or default MAC list.
- When FIPS is enabled or disabled, the client MACs get default configuration.

## ip ssh rekey

Configures the time `rekey-interval` or volume `rekey-limit` threshold at which to re-generate the SSH key during an SSH session.

### **Syntax**

```
ip ssh rekey [time rekey-interval] [volume rekey-limit]
```

To reset to the default, use `no ip ssh rekey [time rekey-interval] [volume rekey-limit]` command.

|                   |                                  |                                                                                                                                                         |
|-------------------|----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Parameters</b> | <b>time <i>minutes</i></b>       | Enter the keywords <code>time</code> then the amount of time in minutes. The range is from 10 to 1440 minutes. The default is <b>60</b> minutes         |
|                   | <b>volume <i>rekey-limit</i></b> | Enter the keywords <b>volume</b> then the amount of volume in megabytes. The range is from 1 to 4096 to megabytes. The default is <b>1024 megabytes</b> |

**Defaults** The default time is **60** minutes. The default volume is **1024** megabytes.

**Command Modes** CONFIGURATION mode

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                        |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.                        |
| <b>9.5(0.1)</b>   | Introduced on the Z9500.                           |
| <b>9.5(0.0)</b>   | Introduced on the Z9000, S6000, S4820T, S4810, MXL |

## ip ssh rhostsfile

Specify the rhost file used for host-based authorization.

**Syntax** `ip ssh rhostsfile {WORD}`

**Parameters** **WORD** Enter the rhost file name for the host-based authentication.

**Defaults** none

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| 8.3.7.0     | Introduced on the S4810.    |
| 7.6.1.0     | Introduced on the S-Series. |
| 7.5.1.0     | Introduced on the C-Series. |
| pre-6.1.1.0 | Introduced on the E-Series. |

### Example

```
DellEMC#conf
DellEMC(conf)# ip ssh rhostsfile flash://shosts
DellEMC(conf)#
```

### Usage Information

This command specifies the rhost file used for host-based authentication. This `creates/` file overwrites the `flash:/ADMIN_DIR/ssh/shosts` file and deletes the user-specified file. Even though this command is a global configuration command, it does not appear in the running configuration because you only need to run this command once.

This file contains hostnames and usernames, for which hosts and users, rhost-authentication can be allowed.

 **NOTE:** For `rhostsfile` and `pub-key-file`, the administrator must FTP the file to the switch.

## ip ssh rsa-authentication (Config)

Enable RSA authentication for the SSHv2 server.

**Syntax** `ip ssh rsa-authentication enable`

To disable RSA authentication, use the `no ip ssh rsa-authentication enable` command.

**Parameters** **enable** Enter the keyword `enable` to enable RSA authentication for the SSHv2 server.

**Defaults** Disabled.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |

| 8.3.19.0   | Introduced on the S4820T.                 |

| Version     | Description                 |
|-------------|-----------------------------|
| 8.3.11.1    | Introduced on the Z9000.    |
| 8.3.7.0     | Introduced on the S4810.    |
| 7.6.1.0     | Introduced on the S-Series. |
| 7.5.1.0     | Introduced on the C-Series. |
| pre-6.1.1.0 | Introduced on the E-Series. |

### Usage Information

Enabling RSA authentication allows the user to log in without being prompted for a password. In addition, the OpenSSH compatible SSHv2 RSA public key must be added to the list of authorized keys (`ip ssh rsa-authentication my-authorized-keys device://filename` command).

## ip ssh rsa-authentication (EXEC)

Add keys for the RSA authentication.

### Syntax

```
ip ssh rsa-authentication {my-authorized-keys WORD}
```

To delete the authorized keys, use the `no ip ssh rsa-authentication {my-authorized-keys}` command.

### Parameters

**my-authorized-keys WORD** Enter the keywords `my-authorized-keys` then the filename of the RSA authorized-keys.

### Defaults

none

### Command Modes

EXEC

### Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

| Version             | Description                 |
|---------------------|-----------------------------|
| 9.7(0.0)            | Introduced on the S6000-ON. |
| 9.2(1.0)            | Introduced on the Z9500.    |
| 9.0.2.0             | Introduced on the S6000.    |
| 8.3.19.0            | Introduced on the S4820T.   |
| 8.3.11.1            | Introduced on the Z9000.    |
| 8.3.7.0             | Introduced on the S4810.    |
| 7.6.1.0             | Introduced on the S-Series. |
| 7.5.1.0             | Introduced on the C-Series. |
| pre-Version 6.1.1.0 | Introduced on the E-Series. |

### Usage Information

If you want to log in without being prompted for a password, log in through RSA authentication. To do that, first add the SSHv2 RSA public keys to the list of authorized keys. This command adds the specified RSA keys to the following file: `flash://ADMIN_DIR/ssh/authorized-keys-username` (where `username` is the user associated with this terminal).

 **NOTE:** The `no` form of this command deletes the file `flash://ADMIN_DIR/ssh/authorized-keys-username` file.

### Related Commands

[show ip ssh rsa-authentication](#) — displays the RSA authorized keys.

[ip ssh rsa-authentication \(Config\)](#) — enables RSA authentication.

## ip ssh server

### Syntax

**NOTE:** Some of the parameters in this command require licensing to access. For more information, contact your Dell EMC Networking representative.

```
ip ssh server {ciphers cipher-list} {enable | port port-number} [kex key-exchange-algorithm] [mac hmac-algorithm] [version 2]
```

To disable SSH server functions, use the `no ip ssh server {ciphers cipher-list} {enable | port port-number} [kex key-exchange-algorithm] [mac hmac-algorithm]` command.

### Parameters

|                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>enable</b>                     | Enter the key word <code>enable</code> to start the SSH server.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>ciphers <i>cipher-list</i></b> | <p>Enter the keyword <code>ciphers</code> and then a space-delimited list of ciphers that the SSH server supports. The following ciphers are available.</p> <ul style="list-style-type: none"><li>• <code>3des-cbc</code></li><li>• <code>aes128-cbc</code></li><li>• <code>aes192-cbc</code></li><li>• <code>aes256-cbc</code></li><li>• <code>aes128-ctr</code></li><li>• <code>aes192-ctr</code></li><li>• <code>aes256-ctr</code></li></ul> <p>The default cipher list is used.</p> <ul style="list-style-type: none"><li>• <code>3des-cbc</code></li><li>• <code>aes128-cbc</code></li><li>• <code>aes192-cbc</code></li><li>• <code>aes256-cbc</code></li><li>• <code>aes128-ctr</code></li><li>• <code>aes192-ctr</code></li><li>• <code>aes256-ctr</code></li></ul>                                 |
| <b>mac <i>hmac-algorithm</i></b>  | <p>Enter the keyword <code>mac</code> then a space-delimited list of hash message authentication code (HMAC) algorithms supported by the SSH server for keying hashing for the message authentication.</p> <p>The following HMAC algorithms are available:</p> <ul style="list-style-type: none"><li>• <code>hmac-sha1</code></li><li>• <code>hmac-sha1-96</code></li><li>• <code>hmac-sha2-256</code></li></ul> <p>When FIPS is enabled, the default HMAC algorithm is <code>hmac-sha1-96</code>.</p> <p>When FIPS is not enabled, the default HMAC algorithms are the following:</p> <ul style="list-style-type: none"><li>• <code>hmac-md5</code></li><li>• <code>hmac-md5-96</code></li><li>• <code>hmac-sha1</code></li><li>• <code>hmac-sha1-96</code></li><li>• <code>hmac-sha2-256</code></li></ul> |

**kex**  
**key-exchange-algorithm** Enter the keyword `kex` and then a space-delimited list of key exchange algorithms supported by the SSH server.

The following key exchange algorithms are available:

- `diffie-hellman-group-exchange-sha1`
- `diffie-hellman-group1-sha1`
- `diffie-hellman-group14-sha1`

When FIPS is enabled, the default key-exchange-algorithm is `diffie-hellman-group14-sha1`.

When FIPS is not enabled, the default key-exchange-algorithms are the following:

- `diffie-hellman-group-exchange-sha1`
- `diffie-hellman-group1-sha1`,
- `diffie-hellman-group14-sha1`

**port port-number** (OPTIONAL) Enter the keyword `port` then the port number of the listening port of the SSH server. The range is from 1 to 65535. The default is **22**.

**[version 2]** (OPTIONAL) Enter the keyword `version` then the SSH version 2, to specify SSHv2.

## Defaults

- Default listening port is **22**.
- Default cipher list is `3des-cbc,aes128-cbc,aes192-cbc,aes256-cbc,aes128-ctr,aes192-ctr,aes256-ctr`.
- When FIPS is enabled, the default is `hmac-sha1-96`.
- When FIPS is not enabled, the default is `hmac-md5,hmac-md5-96,hmac-sha1,hmac-sha1-96,hmac-sha2-256`.
- *When FIPS is enabled, the default is `diffie-hellman-group14-sha1`.*
- When FIPS is not enabled, the default is `diffie-hellman-group-exchange-sha1,diffie-hellman-group1-sha1,diffie-hellman-group14-sha1`.

**Command Modes** CONFIGURATION

## Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                                                                                                                     |
|-------------------|---------------------------------------------------------------------------------------------------------------------------------|
| <b>9.12(0.0)</b>  | Removed support for SSHv1 from all platforms.                                                                                   |
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON.                                                                                       |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                                                                                                        |
| <b>9.10(0.0)</b>  | Removed the support for <code>hmac-sha2-256-96</code> algorithm.                                                                |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.                                                                                                 |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.                                                                                                     |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.                                                                                                     |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                                                                                                     |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.                                                                                                     |
| <b>9.5(0.1)</b>   | Introduced the <code>cipher</code> , <code>kex</code> and <code>mac</code> options on the Z9500.                                |
| <b>9.5(0.0)</b>   | Introduced the <code>cipher</code> , <code>kex</code> and <code>mac</code> options on the Z9000, S6000, S4820T, S4810, and MXL. |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                                                                                                        |

| Version     | Description                 |
|-------------|-----------------------------|
| 9.0.2.0     | Introduced on the S6000.    |
| 8.3.19.0    | Introduced on the S4820T.   |
| 8.3.11.1    | Introduced on the Z9000.    |
| 8.3.7.0     | Introduced on the S4810.    |
| 7.6.1.0     | Introduced on the S-Series. |
| 7.5.1.0     | Introduced on the C-Series. |
| pre-6.1.1.0 | Introduced on the E-Series. |

### Usage Information

This command enables the SSH server and begins listening on a port. If a port is not specified, listening is on SSH default port 22.

 **NOTE:** Starting with Dell EMC Networking OS Release 9.2(0.0), SSH server is enabled by default.

### Example

```
DellEMC# conf
DellEMC(conf)# ip ssh server port 45
DellEMC(conf)# ip ssh server enable
DellEMC#
```

## ip ssh source-interface

Specifies an interface's IP address as the source IP address for an outgoing SSH connections.

### Syntax

```
ip ssh source-interface interface
```

To delete a source interface, use the `no ip ssh source-interface` command.

### Parameters

#### *interface*

Enter the following keywords and slot/port or number information:

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
- For a port channel interface, enter the keywords `port-channel` then a number.
- For a Null interface, enter the keyword `null` then the Null interface number.
- For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

### Defaults

Not configured.

### Command Modes

CONFIGURATION

### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |

| Version    | Description                           |
|------------|---------------------------------------|
| 9.8(0.0P2) | Introduced on the S3048-ON.           |
| 9.7(0.0)   | Introduced on the S6000-ON.           |
| 9.5(0.1)   | Introduced on the Z9500.              |
| 9.5(0.0)   | Introduced on the Z9500.              |
| 9.4(0.0)   | Introduced on the S-Series and Z9000. |

### Usage Information

The `source-interface interface` attribute is applicable for both the `SSH client` as well as the `COPY (SCP)` commands. Using these attributes the client session tags an error to the user during run time, in case there is a mismatch between this command and the `ip ssh vrf` command.

### Example

```
DellEMC(conf)#ip ssh source-interface tengigabitethernet 1/42
DellEMC(conf)#do ssh 10.10.10.2 -l admin
DellEMC(conf)#no ip ssh source-interface
```

## show crypto

Display the public part of the SSH host-keys.

### Syntax

 **NOTE:** Some of the parameters in this command require licensing to access. For more information, contact your Dell EMC Networking representative.

```
show crypto key mypubkey {rsa}
```

### Parameters

|                 |                                                                              |
|-----------------|------------------------------------------------------------------------------|
| <b>Key</b>      | Enter the keyword <code>key</code> to display the host public key.           |
| <b>mypubkey</b> | Enter the keyword <code>mypubkey</code> to display the host public key.      |
| <b>rsa</b>      | Enter the keyword <code>rsa</code> to display the host SSHv2 RSA public key. |

### Defaults

none

### Command Modes

EXEC

### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                                    |
|------------|----------------------------------------------------------------|
| 9.12(0.0)  | Removed support for <code>rsa1</code> keys from all platforms. |
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.                      |
| 9.10(0.0)  | Introduced on the S3148.                                       |
| 9.10(0.0)  | Introduced on the S6100-ON.                                    |
| 9.8(2.0)   | Introduced on the S3100 series.                                |
| 9.8(1.0)   | Introduced on the Z9100-ON.                                    |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                    |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                    |
| 9.7(0.0)   | Introduced on the S6000-ON.                                    |
| 9.2(1.0)   | Introduced on the Z9500.                                       |
| 9.0.2.0    | Introduced on the S6000.                                       |
| 8.3.11.1   | Introduced on the Z9000.                                       |
| 8.3.7.0    | Introduced on the S4810.                                       |

| Version     | Description                 |
|-------------|-----------------------------|
| 7.6.1.0     | Introduced on the S-Series. |
| 7.5.1.0     | Introduced on the C-Series. |
| pre-6.1.1.0 | Introduced on the E-Series. |

### Usage Information

This command is useful if the remote SSH client implements Strict Host Key Checking. You can copy the host key to your list of known hosts.

### Example

```
DellEMC# show crypto key mypubkey rsa
ssh-rsa AAAAB3NzaC1yc2EAAAADAQABAAQgQC9IYgcUcc8wQm+5KUQgW/
zAs8V5STalGq4/+S+6H9axpQnA+A0xweeo5iR5hvPP6Vc+HS+uWoQH+
VOJ8H5Jxsm347XnYv/gpSqhGjZ/C5UwFiucVkvfYu8RDcJVIuQhLv
PEebIF5Q+sD8K89MXU90MAS/UdoiJZSOI1baCuSTW1Q==

DellEMC#
```

### Related Commands

- [crypto key generate](#) — generates the SSH keys.

## show ip ssh

Display information about established SSH sessions

**Syntax** show ip ssh

**Defaults** None

**Command Modes** EXEC  
EXEC Privilege

### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                         |
|------------|-----------------------------------------------------|
| 9.10(0.0)  | Removed the support for hmac-sha2-256-96 algorithm. |
| 9.8(0.0P5) | Introduced on the S4048-ON.                         |
| 9.8(0.0P2) | Introduced on the S3048-ON.                         |
| 9.5(0.1)   | Introduced on the Z9500.                            |
| 9.1(0.0)   | Introduced on the Z9000.                            |
| 8.3.19.0   | Introduced on the S4820T.                           |
| 8.3.12.0   | Introduced on S4810.                                |

### Example

```
DellEMC# show ip ssh
SSH server : enabled.
SSH server version : v2.
SSH server vrf : default.
SSH server ciphers : aes256-ctr, aes256-cbc, aes192-ctr, aes192-
cbc, aes128-ctr, aes128-cbc, 3des-cbc.
SSH server macs : hmac-sha2-256, hmac-sha1, hmac-sha1-96,
hmac-md5, hmac-md5-96.
SSH server kex algorithms : diffie-hellman-group14-sha1.
Password Authentication : enabled.
Hostbased Authentication : disabled.
RSA Authentication : disabled.
Vty Encryption HMAC Remote IP
```

### With FIPS Mode enabled:

```
DelleMC# show ip ssh
SSH server : enabled.
SSH server version : v2.
SSH server vrf : default.
SSH server ciphers : 3des-cbc,aes128-cbc,aes192-cbc,aes256-
cbc,aes128-ctr,aes192-ctr,aes256-ctr.
SSH server macs : hmac-sha1-96.
SSH server kex algorithms : diffie-hellman-group14-sha1.
Password Authentication : enabled.
Hostbased Authentication : disabled.
RSA Authentication : disabled.
 Vty Encryption HMAC Remote IP
0 3des-cbc hmac-sha1-96 10.1.20.48
1 3des-cbc hmac-sha1-96 10.1.20.48
```

### With FIPS Mode disabled:

```
DelleMC# show ip ssh
SSH server : enabled.
SSH server version : v1 and v2.
SSH server vrf : default.
SSH server ciphers : 3des-cbc,aes128-cbc,aes192-cbc,aes256-
cbc,aes128-ctr,aes192-ctr,aes256-ctr.
SSH server macs : hmac-md5,hmac-md5-96,hmac-sha1,hmac-
sha1-96,hmac-sha2-256.
SSH server kex algorithms : diffie-hellman-group-exchange-sha1,diffie-
hellman-group1-sha1,diffie-hellman-group14-sha1.
Password Authentication : enabled.
Hostbased Authentication : disabled.
RSA Authentication : disabled.
 Vty Encryption HMAC Remote IP
0 3des-cbc hmac-sha1-96 10.1.20.48
1 3des-cbc hmac-sha1-96 10.1.20.48
```

## show ip ssh client-pub-keys

Display the client public keys used in host-based authentication.

**Syntax** show ip ssh client-pub-keys

**Defaults** none

**Command Modes** EXEC

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Network OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |

| Version            | Description                 |
|--------------------|-----------------------------|
| <b>8.3.19.0</b>    | Introduced on the S4820T.   |
| <b>8.3.11.1</b>    | Introduced on the Z9000.    |
| <b>8.3.7.0</b>     | Introduced on the S4810.    |
| <b>7.6.1.0</b>     | Introduced on the S-Series. |
| <b>7.5.1.0</b>     | Introduced on the C-Series. |
| <b>pre-6.1.1.0</b> | Introduced on the E-Series. |

### Usage Information

This command displays the contents of the `flash://ADMIN_DIRssh/knownhosts` file.

### Example

```
DellEMC# show ip ssh client-pub-keys
4.8.1.2 ssh-rsa AAAAB3NzaC1yc2EAAAABIwAAAIEAu5NoTbmnLxBknaeXZmUJMupNwNUoGlo1/
yLPI5eehQTyaldRPhtGyPlcmMbCH+QJkqtiwDPmH4njyDMYDCXY85vc55ibWsn9qalagklnh2cj2q4nYj5x8+80OhYeFPaHiygd

DellEMC#
```

### Related Commands

- [ip ssh pub-key-file](#) — configures the filename for the host-based authentication.

## show ip ssh rsa-authentication

Display the authorized-keys for the RSA authentication.

**Syntax** `show ip ssh rsa-authentication {my-authorized-keys}`

**Parameters** **my-authorized-keys** Display the RSA authorized keys.

**Defaults** none

**Command Modes** EXEC

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

U9tMwhS8vy8AVxdH4x4km3c3t5Jvc=
freedom@poclabb4

DellEMC#
```

### Related Commands

- [ip ssh rsa-authentication \(Config\)](#) — configures the RSA authorized keys.

## ssh

Open an SSH connection specifying the hostname, username, encryption cipher, HMAC algorithm, port number, and version of the SSH client.

### Syntax

**i** **NOTE:** Some of the parameters in this command require licensing to access. For more information, contact your Dell EMC Networking representative.

```
ssh [vrf vrf-name] {hostname | ipv4 address | ipv6 address} [-c encryption cipher | -l username | -m HMAC algorithm | -p port-number | -v {1 | 2}]
```

### Parameters

|                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-----------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>vrf vrf-name</b>               | (OPTIONAL) Enter the keyword <code>vrf</code> and then the name of the VRF to specify the VRF used with the SSH session.<br><b>i</b> <b>NOTE:</b> The VRF configured using this command has a higher precedence than the VRF configured using the <code>ip ssh vrf vrf-name</code> command. If you do not configure a VRF using this command, then the SSH client uses the configured VRF (if any). If there is a mismatch between VRFs that are configured using the <code>ip ssh source-interface</code> command and the <code>ssh vrf vrf-name</code> command, then an error is reported. |
| <b>hostname</b>                   | (OPTIONAL) Enter the IP address or the host name of the remote device.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>vrf instance</b>               | (OPTIONAL) E-Series Only: Enter the keyword <code>vrf</code> then the VRF Instance name to open an SSH connection to that instance.                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>ipv4 address</b>               | (OPTIONAL) Enter the IP address in dotted decimal format A.B.C.D.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>ipv6-address prefix-length</b> | (OPTIONAL) Enter the IPv6 address in the <code>x:x:x::x</code> format then the prefix length in the <code>/x</code> format. The range is from <code>/0</code> to <code>/128</code> .<br><b>i</b> <b>NOTE:</b> The <code>::</code> notation specifies successive hexadecimal fields of zeros.                                                                                                                                                                                                                                                                                                 |
| <b>-c encryption cipher</b>       | Enable the "FIPS mode enable", this mode will support the v2 client.<br>"no fips mode enable"(disable) will support v1 & v2 client. This comment is applicable for both ciphers & HMAC algorithms:                                                                                                                                                                                                                                                                                                                                                                                           |

- `3des-cbc`: Force ssh to use 3des-cbc encryption cipher.
- `aes128-cbc` : Force ssh to use aes128-cbc encryption cipher
- `aes192-cbc` : Force ssh to use aes192-cbc encryption cipher
- `aes256-cbc` : Force ssh to use aes256-cbc encryption cipher
- `aes128-ctr` : Force ssh to use aes128-ctr encryption cipher
- `aes192-ctr` : Force ssh to use aes192-ctr encryption cipher
- `aes256-ctr` : Force ssh to use aes256-ctr encryption cipher

**-l *username*** (OPTIONAL) Enter the keyword `-l` then the user name used in this SSH session. The default is the user name of the user associated with the terminal.

**-m *HMAC algorithm*** Enter one of the following HMAC algorithms to use:

"no fips mode enable"(disable) will support v1 & v2 client.

- `hmac-md5`: Force ssh to use hmac-md5 HMAC algorithm.
- `hmac-md5-96`: Force ssh to use hmac-md5-96 HMAC algorithm.
- `hmac-sha1`: Force ssh to use hmac-sha1 HMAC algorithm.
- `hmac-sha1-96` : Force ssh to use hmac-sha1-96 HMAC algorithm.
- `hmac-sha2-256` : Force ssh to use hmac-sha2-256 HMAC algorithm.

**-p *port-number*** (OPTIONAL) Enter the keyword `-p` then the port number. The range is from 1 to 65535. The default is **22**.

**-v {1 | 2}** (OPTIONAL) Enter the keyword `-v` then the SSH version 1 or 2. The default is the version from the protocol negotiation.

**Defaults** As shown in the *Parameters* section.

**Command Modes** EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON.                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>9.10(0.0)</b>  | Removed the support for hmac-sha2-256-96 algorithm.                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>9.5(0.1)</b>   | Added support for the following ciphers and HMAC algorithms on the Z9000, S6000, S4820T, S4820T. S6000-ON. <ul style="list-style-type: none"> <li>• <code>aes128-cbc</code></li> <li>• <code>aes192-cbc</code></li> <li>• <code>aes256-cbc</code></li> <li>• <code>aes128-ctr</code></li> <li>• <code>aes192-ctr</code></li> <li>• <code>aes256-ctr</code></li> <li>• <code>hmac-sha2-256</code></li> <li>• <code>hmac-sha2-256-96</code></li> </ul> |
| <b>9.4.(0.0)</b>  | Added support for VRF.                                                                                                                                                                                                                                                                                                                                                                                                                               |

| Version     | Description                                                                        |
|-------------|------------------------------------------------------------------------------------|
| 9.2(1.0)    | Introduced on the Z9500.                                                           |
| 9.0.2.0     | Introduced on the S6000.                                                           |
| 8.3.19.0    | Introduced on the S4820T.                                                          |
| 8.3.11.1    | Introduced on the Z9000.                                                           |
| 8.3.12.0    | Added support for the <code>-c</code> and <code>-m</code> parameters on the S4810. |
| 8.3.7.0     | Introduced on the S4810.                                                           |
| 7.6.1.0     | Introduced on the S-Series.                                                        |
| 7.5.1.0     | Added IPv6 support. Introduced on the C-Series.                                    |
| pre-6.1.1.0 | Introduced on the E-Series.                                                        |

**Usage Information**

Dell EMC Networking OS supports both inbound and outbound SSH sessions using IPv4 or IPv6 addressing. Inbound SSH supports accessing the system through the management interface as well as through a physical Layer 3 interface.

**Example**

```
DellEMC#ssh 10.16.151.48 -l anvltest

Trying 10.16.151.48...
01:18:16: %STKUNIT0-M:CP %SEC-5-SSH_USAGE: Initiated SSH Client v2 (FIPS
Disabled) to anvltest@10.16.151.48 by default from console
anvltest@10.16.151.48's password:
Last login: Thu Jan 5 00:17:47 2012 from login-maa-101
[anvltest@dt-maa-linux-1 ~]# exit
logout
DellEMC#
```

## Secure DHCP Commands

DHCP as defined by RFC 2131 provides no authentication or security mechanisms. Secure DHCP is a suite of features that protects networks that use dynamic address allocation from spoofing and attacks.

### clear ip dhcp snooping

Clear the DHCP binding table.

**Syntax** clear ip dhcp snooping binding

**Defaults** none

**Command Modes** EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |

| Version  | Description                              |
|----------|------------------------------------------|
| 9.7(0.0) | Introduced on the S6000-ON.              |
| 9.2(1.0) | Introduced on the Z9500.                 |
| 9.0.2.0  | Introduced on the S6000.                 |
| 8.3.19.0 | Introduced on the S4820T.                |
| 8.3.11.1 | Introduced on the Z9000.                 |
| 8.3.7.0  | Introduced on the S4810.                 |
| 7.8.1.0  | Introduced on the C-Series and S-Series. |

**Related Commands**

- [show ip dhcp snooping](#) — display the contents of the DHCP binding table.

## ip dhcp relay

Enable Option 82.

**Syntax** `ip dhcp relay information-option [trust-downstream | vrf]`

| Parameters              |  |                                                                                                                                                                                                                                   |
|-------------------------|--|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>trust-downstream</b> |  | Configure the system to trust Option 82 when it is received from the previous-hop router.                                                                                                                                         |
| <b>vrf</b>              |  | Enter the keyword <code>vrf</code> to include VRF related information in the Option 82. This configuration enables the relay agent to include VRF related information when it forwards the broadcasts from client to DHCP server. |

**Defaults** Disabled.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.4.(0.0)  | Added support for VRF.                    |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |
| 7.8.1.0    | Introduced on the C-Series and S-Series.  |

## ip dhcp snooping

Enable DHCP Snooping globally.

**Syntax** `[no] ip dhcp snooping`

**Defaults** Disabled.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |
| 7.8.1.0    | Introduced on the C-Series and S-Series.  |

**Usage Information** When enabled, no learning takes place until you enable snooping on a VLAN. After disabling DHCP Snooping, the binding table is deleted and Option 82, IP Source Guard, and Dynamic ARP Inspection are disabled.

**Related Commands**

- [ip dhcp snooping vlan](#) — enable DHCP Snooping on one or more VLANs.

## ip dhcp snooping binding

Create a static entry in the DHCP binding table.

**Syntax** `[no] ip dhcp snooping binding mac address vlan-id vlan-id ip ip-address interface type slot/port lease number`

**Parameters**

|                        |                                                                                                                                                                                                                                                                              |
|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>mac address</b>     | Enter the keyword <code>mac</code> then the MAC address of the host to which the server is leasing the IP address.                                                                                                                                                           |
| <b>vlan-id vlan-id</b> | Enter the keywords <code>vlan-id</code> then the VLAN to which the host belongs. The range is from 2 to 4094.                                                                                                                                                                |
| <b>ip ip-address</b>   | Enter the keyword <code>ip</code> then the IP address that the server is leasing.                                                                                                                                                                                            |
| <b>interface type</b>  | Enter the keyword <code>interface</code> then the type of interface to which the host is connected. <ul style="list-style-type: none"><li>• For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information.</li></ul> |

- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.

***slot/port*** Enter the slot and port number of the interface.

***lease time*** Enter the keyword `lease` then the amount of time the IP address is leased. The range is from 1 to 4294967295.

**Defaults** none

- Command Modes**
- EXEC
  - EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                               |
|-------------------|-------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.               |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.               |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                  |
| <b>9.0.2.0</b>    | Introduced on the S6000.                  |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                 |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                  |
| <b>8.5.1.0</b>    | Added support for 4-port 40G line cards.  |
| <b>8.3.7.0</b>    | Introduced on the S4810.                  |
| <b>7.8.1.0</b>    | Introduced on the C-Series and S-Series.  |

- Related Commands**
- [show ip dhcp snooping](#) — displays the contents of the DHCP binding table.

## ip dhcp snooping database

Delay writing the binding table for a specified time.

**Syntax** `ip dhcp snooping database write-delay minutes`

**Parameters** ***minutes*** The range is from 5 to 21600.

**Defaults** none

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                              |
|------------|------------------------------------------|
| 9.8(0.0P5) | Introduced on the S4048-ON.              |
| 9.8(0.0P2) | Introduced on the S3048-ON.              |
| 9.7(0.0)   | Introduced on the S6000-ON.              |
| 9.5(0.0)   | Introduced on the Z9500.                 |
| 9.2(1.0)   | Introduced on the Z9500.                 |
| 8.3.19.0   | Introduced on the S4820T.                |
| 8.3.11.1   | Introduced on the Z9000.                 |
| 8.3.7.0    | Introduced on the S4810.                 |
| 7.8.1.0    | Introduced on the C-Series and S-Series. |

## ip dhcp snooping database renew

Renew the binding table.

**Syntax** `ip dhcp snooping database renew`

**Defaults** none

**Command Modes**

- EXEC
- EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |
| 7.8.1.0    | Introduced on the C-Series and S-Series.  |

## ip dhcp snooping trust

Configure an interface as trusted.

**Syntax** `[no] ip dhcp snooping trust`

**Defaults** Untrusted

**Command Modes** INTERFACE

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| <b>Version</b>    | <b>Description</b>                        |
|-------------------|-------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.               |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.               |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                  |
| <b>9.0.2.0</b>    | Introduced on the S6000.                  |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                 |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                  |
| <b>8.3.7.0</b>    | Introduced on the S4810.                  |
| <b>7.8.1.0</b>    | Introduced on the C-Series and S-Series.  |

## ip dhcp source-address-validation

Enable IP source guard.

**Syntax** [no] ip dhcp source-address-validation

**Defaults** Disabled.

**Command Modes** INTERFACE

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| <b>Version</b>    | <b>Description</b>                        |

| <b>8.3.19.0</b>   | Introduced on the S4820T.                 |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                  |
| <b>8.3.7.0</b>    | Introduced on the S4810.                  |

| Version | Description                              |
|---------|------------------------------------------|
| 7.8.1.0 | Introduced on the C-Series and S-Series. |

## ip dhcp snooping vlan

Enable DHCP Snooping on one or more VLANs.

|                        |                                                                                                                                                               |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | [no] ip dhcp snooping vlan <i>name</i>                                                                                                                        |
| <b>Parameters</b>      | <b><i>name</i></b> Enter the name of a VLAN on which to enable DHCP Snooping.                                                                                 |
| <b>Defaults</b>        | Disabled.                                                                                                                                                     |
| <b>Command Modes</b>   | CONFIGURATION                                                                                                                                                 |
| <b>Command History</b> | This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> . |

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |
| 7.8.1.0    | Introduced on the C-Series and S-Series.  |

**Usage Information** When enabled, the system begins creating entries in the binding table for the specified VLANs.

 **NOTE:** Learning only happens if there is a trusted port in the VLAN.

**Related Commands**

- [ip dhcp snooping trust](#) — configure an interface as trusted.

## show ip dhcp snooping

Display the contents of the DHCP binding table.

|                        |                                                                                                                                                               |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | show ip dhcp snooping binding                                                                                                                                 |
| <b>Defaults</b>        | none                                                                                                                                                          |
| <b>Command Modes</b>   | <ul style="list-style-type: none"> <li>• EXEC</li> <li>• EXEC Privilege</li> </ul>                                                                            |
| <b>Command History</b> | This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> . |

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |

| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |
| 7.8.1.0    | Introduced on the C-Series and S-Series.  |

#### Related Commands

- [clear ip dhcp snooping](#) — clear the contents of the DHCP binding table.

## ICMP Vulnerabilities

The internet control message protocol (ICMP) is a network-layer internet protocol that provides message packets to report errors and other information regarding IP packet processing back to the source. Dell EMC Networking OS mainly addresses the following ICMP vulnerabilities:

- ICMP Mask Reply
- ICMP Timestamp Request
- ICMP Replies
- IP ID Values Randomness

You can configure the Dell EMC Networking OS to drop ICMP reply messages. When you configure the `drop icmp` command, the system drops the ICMP reply messages from the front end and management interfaces. By default, the Dell EMC Networking OS responds to all the ICMP messages. You can configure the Dell EMC Networking OS to suppress the following ICMPv4 and ICMPv6 message types:

**Table 10. Suppressed ICMPv4 message types**

| ICMPv4 Message Types                         |
|----------------------------------------------|
| Echo reply (0)                               |
| All sub types of destination unreachable (3) |
| Source quench (4)                            |
| Redirect (5)                                 |
| Router advertisement (9)                     |
| Router solicitation (10)                     |
| Time exceeded (11)                           |
| IP header bad (12)                           |
| Timestamp request (13)                       |
| Timestamp reply (14)                         |

**Table 10. Suppressed ICMPv4 message types (continued)**

| ICMPv4 Message Types      |
|---------------------------|
| Information request (15)  |
| Information reply (16)    |
| Address mask request (17) |
| Address mask reply (18)   |

**NOTE:** The Dell EMC Networking OS does not suppress the ICMPv4 message type Echo request (8).

**Table 11. Suppressed ICMPv6 message types**

| ICMPv6 Message Types        |
|-----------------------------|
| Destination unreachable (1) |
| Time exceeded (3)           |
| IPv6 header bad (4)         |
| Echo reply (129)            |
| Who are you request (139)   |
| Who are you reply (140)     |
| Mtrace response (200)       |
| Mtrace messages (201)       |

**NOTE:** The Dell EMC Networking OS does not suppress the following ICMPv6 message types:

- Packet too big (2)
- Echo request (128)
- Multicast listener query (130)
- Multicast listener report (131)
- Multicast listener done (132)
- Router solicitation (133)
- Router advertisement (134)
- Neighbor solicitation (135)
- Neighbor advertisement (136)
- Redirect (137)
- Router renumbering (138)
- MLD v2 listener report (143)
- Duplicate Address Request (157)
- Duplicate Address Confirmation (158)

## drop icmp

Drops the ICMPv4 and ICMPv6 packets.

**Syntax** `drop {icmp | icmp6}`

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other Platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version  | Description                                                                                                                                                |
|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 9.11.0.0 | Introduced on the S4810, S4820T, S3048-ON, S3100 Series, S4048-ON, S5000, S6000, S6000-ON, Z9500, Z9100-ON, S6100-ON, S6010-ON, S4048T-ON, C9000, and MXL. |

### Usage Information

When the `drop icmp` feature is configured, the system drops the ICMP reply messages on the front end and management interfaces. By default, the Dell EMC Networking OS responds to all the ICMP messages.

**NOTE:** There is no separate CLI to enable IP ID randomness. By default, the IP ID in the kernel is randomized.

For more information on the ICMP message types, see the [ICMP Commands](#) section.

## System Security Commands

The following section lists the system security commands.

### generate hash

Generate a hash checksum for the given file or the startup configuration using the MD5, SHA1, or SHA256 algorithm.

**Syntax** `generate hash {md5 | sha1 | sha256} {flash://filename | startup-config}`

| Parameters                 |                                                                                                                                                                      |  |
|----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| <b>md5   sha1   sha256</b> | Enter the keyword <code>md5</code> , <code>sha1</code> , or <code>sha256</code> to generate .                                                                        |  |
| <b>flash:// filename</b>   | Enter the keyword <code>flash:</code> and enter the filename to generate the hash checksum for any file in the flash drive using the MD5, SHA1, or SHA256 algorithm. |  |
| <b>startup-config</b>      | Enter the keyword <code>startup-config</code> to generate the hash checksum for the startup configuration using the MD5, SHA1, or SHA256 algorithm.                  |  |

**Defaults** None

**Command Modes** EXEC Privilege

### Command History

| Version   | Description                                                                                                                                         |
|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| 9.13(0.0) | Introduced on the S3100 series, S3048-ON, S4048-ON, S4048T-ON, S5000, S6000, S6000-ON, S6010-ON, S6100-ON, Z9100-ON, Z9500, C9010, MXL, and FN-IOM. |

### Usage Information

Use the `generate hash` command to generate a hash checksum for your startup configuration, and use the hash to verify using the `verified boot hash` command.

### Example

```
DellEMC#generate hash md5 startup-config
MD5SUM(/f10/flash/startup-config) : f81812a64eea202c5b2ef782639bafc3
```

### root-access password

Configure the root access password.

**Syntax** `root-access password [encryption-type] root-password`

To reset to the default password, use the `no root-access password` command.

**Parameters** **encryption-type** (OPTIONAL) Enter an encryption type for the root password that you enter.

- 0 directs the system to store the password as clear text.
- 7 directs the system to store the password with a dynamic salt.
- 9 directs the system to encrypt the clear text password and store the encrypted password in an inaccessible location.

**root-password** Enter the root password.

**Defaults** Not configured

**Command Modes** CONFIGURATION

**Command History**

| Version   | Description                                                                                                                                         |
|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| 9.13(0.0) | Introduced on the S3100 series, S3048-ON, S4048-ON, S4048T-ON, S5000, S6000, S6000-ON, S6010-ON, S6100-ON, Z9100-ON, Z9500, C9010, MXL, and FN-IOM. |

**Usage Information**

If you configure the `secure-cli` command on the system, the Dell EMC Networking OS resets any previously-configured root access password to the default root password without displaying any warning message. With the `secure-cli` command enabled on the system, the CONFIGURATION mode does not display the `root access password` option.

When you configure the root access password, ensure that your password meets the following criteria:

- A minimum of eight characters in length
- A minimum of one lower case letter (a to z)
- A minimum of one upper case letter (A to Z)
- A minimum of one numeric character (0 to 9)
- A minimum of one special character including a space (" !"#\$\$%&'()\*+,-./:;<=>?@[\\]^\_`{|}~")

If your password does not meet the criteria, the system does not accept your password.

If you use encryption type 9, the system stores the clear text password in an inaccessible location on the system. The `show running-configuration` command does not display the password. This configuration is not portable between different systems.

**Example**

```
DellEMC)# show running-config | g root
root-access password 7
f4dc0cb9787722dd1084d17f417f164cc7f730d4f03d4f0215294cbd899614e3
```

## verified boot

Enable OS image hash validation during system startup.

**Syntax** `verified boot`

To disable OS image hash validation, use the `no verified boot` command.

**Defaults** Not configured

**Command Modes** CONFIGURATION

**Command History**

| Version   | Description                                                                                                                           |
|-----------|---------------------------------------------------------------------------------------------------------------------------------------|
| 9.13(0.0) | Introduced on the S3100 series, S3048-ON, S4048-ON, S4048T-ON, S5000, S6000, S6000-ON, S6010-ON, S6100-ON, Z9100-ON, MXL, and FN-IOM. |

**Usage Information**

When you reboot the system using the `reload` command, the system performs OS image verification on the primary boot image. You can enable boot image hash validation only for images on local flash partitions such as A: or B:.

**Example**

```
DellEMC(config)# verified boot
```

## verified boot hash

Verify and store the hash value of the boot image (OS) or the startup configuration.

|                          |                                                                                         |                                                                                                                                                                                                             |
|--------------------------|-----------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>            | <code>verified boot hash startup-config hash value</code>                               |                                                                                                                                                                                                             |
| <b>Parameters</b>        | <b>startup-config</b>                                                                   | Enter the keyword <code>startup-config</code> and then the hash value for the startup configuration. You can get the hash value for the startup configuration using the <code>generate hash</code> command. |
|                          | <b>hash value</b>                                                                       | Enter the MD5, SHA1, or SHA256 hash.                                                                                                                                                                        |
| <b>Defaults</b>          | None                                                                                    |                                                                                                                                                                                                             |
| <b>Command Modes</b>     | EXEC Privilege                                                                          |                                                                                                                                                                                                             |
| <b>Command History</b>   | <b>Version</b>                                                                          | <b>Description</b>                                                                                                                                                                                          |
|                          | <b>9.13(0.0)</b>                                                                        | Introduced on the S3100 series, S3048-ON, S4048-ON, S4048T-ON, S5000, S6000, S6000-ON, S6010-ON, S6100-ON, Z9100-ON, Z9500, C9010, MXL, and FN-IOM.                                                         |
| <b>Usage Information</b> | Dell EMC Networking OS supports MD5, SHA1, and SHA256.                                  |                                                                                                                                                                                                             |
| <b>Example</b>           | <pre>DelleMC# verified boot hash system-image A: 619A8C1B7A2BC9692A221E2151B9DA9E</pre> |                                                                                                                                                                                                             |

## verified startup-config

Enable hash validation for the startup configuration during system startup.

|                        |                                                                                                                    |                                                                                                                                                     |
|------------------------|--------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | <code>verified startup-config</code>                                                                               |                                                                                                                                                     |
|                        | To disable hash validation for the startup configuration, use the <code>no verified startup-config</code> command. |                                                                                                                                                     |
| <b>Defaults</b>        | Not configured                                                                                                     |                                                                                                                                                     |
| <b>Command Modes</b>   | CONFIGURATION                                                                                                      |                                                                                                                                                     |
| <b>Command History</b> | <b>Version</b>                                                                                                     | <b>Description</b>                                                                                                                                  |
|                        | <b>9.13(0.0)</b>                                                                                                   | Introduced on the S3100 series, S3048-ON, S4048-ON, S4048T-ON, S5000, S6000, S6000-ON, S6010-ON, S6100-ON, Z9100-ON, Z9500, C9010, MXL, and FN-IOM. |
| <b>Example</b>         | <pre>DelleMC(config)# verified startup-config</pre>                                                                |                                                                                                                                                     |

# Service Provider Bridging

Service provider bridging is composed of virtual local area network (VLAN) Stacking, Layer 2 Protocol Tunneling, and Provider Backbone Bridging as described in the *Dell EMC Networking OS Configuration Guide Service Provider Bridging* section.

This section includes command line information (CLI) for the Dell EMC Networking OS Layer 2 Protocol Tunneling (L2PT). L2PT enables protocols to tunnel through an 802.1q tunnel.

Dell EMC Networking OS supports L2PT on Dell EMC Networking OS.

For more information, see [VLAN Stacking](#), [Spanning Tree Protocol \(STP\)](#), and [GARP VLAN Registration \(GVRP\)](#).

## Important Points to Remember

- L2PT is enabled at the interface VLAN-Stack VLAN level. For more information about Stackable VLAN (VLAN-Stacking) commands, see [VLAN Stacking](#).
- The default behavior is to disable protocol packet tunneling through the 802.1q tunnel.
- Rate-limiting is required to protect against bridge protocol data units (BPDU) attacks.
- A port channel (including through link aggregation control protocol [LACP]) can be configured as a VLAN-Stack access or trunk port.
- Address resolution protocol (ARP) packets work as expected across the tunnel.
- Far-end failure detection (FEFD) works the same as with Layer 2 links.
- Protocols that use Multicast MAC addresses (for example, open shortest path first [OSPF]) work as expected and carry over to the other end of the VLAN-Stack VLAN.

### Topics:

- [debug protocol-tunnel](#)
- [protocol-tunnel](#)
- [protocol-tunnel destination-mac](#)
- [protocol-tunnel enable](#)
- [protocol-tunnel rate-limit](#)
- [show protocol-tunnel](#)

## debug protocol-tunnel

Enable debugging to ensure incoming packets are received and rewritten to a new MAC address.

**Syntax**            `debug protocol-tunnel interface {in | out | both} [vlan vlan-id] [count value]`

To disable debugging, use the `no debug protocol-tunnel interface {in | out | both} [vlan vlan-id] [count value]` command.

**Parameters**            **interface**            Enter one of the following interfaces and the interface information:

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
- For a port-channel interface, enter the keywords `port-channel` then the port-channel ID.

|                            |                                                                                                                                                                          |
|----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>in   out   both</b>     | Enter the keyword <code>in</code> , <code>out</code> , or <code>both</code> to debug incoming interfaces, outgoing interfaces, or both incoming and outgoing interfaces. |
| <b>vlan <i>vlan-id</i></b> | Enter the keyword <code>vlan</code> then the VLAN ID. The range is from 1 to 4094.                                                                                       |
| <b>count <i>value</i></b>  | Enter the keyword <code>count</code> then the number of debug outputs. The range is from 1 to 100.                                                                       |

**Defaults** Debug disabled.

**Command Modes** EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| <b>Version</b>    | <b>Description</b>                        |
|-------------------|-------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.               |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.               |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                  |
| <b>9.0.2.0</b>    | Introduced on the S6000.                  |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                 |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                  |
| <b>8.5.1.0</b>    | Added support for 4-port 40G line cards.  |
| <b>8.3.7.0</b>    | Introduced on the S4810.                  |
| <b>8.2.1.0</b>    | Introduced on the C-Series, and E-Series. |
| <b>7.4.1.0</b>    | Introduced                                |

## protocol-tunnel

Enable protocol tunneling on a stacked (Q-in-Q) VLAN for specified protocol packets.

**Syntax** `protocol-tunnel {rate-limit rate | stp}`

To disable protocol tunneling for a Layer 2 protocol, use the `no protocol-tunnel` command.

|                   |                               |                                                                                                                                                  |
|-------------------|-------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Parameters</b> | <b>rate-limit <i>rate</i></b> | Enter the keyword <code>rate-limit</code> followed by a number for the rate-limit for tunneled packets on the VMAN. The range is from 64 to 320. |
|                   | <b>stp</b>                    | Enter the keyword <code>stp</code> to enable protocol tunneling on a spanning tree, including STP, MSTP, RSTP, and PVST.                         |

**Defaults** none

**Command Modes** CONF-IF-VLAN

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                                                                                            |
|------------|------------------------------------------------------------------------------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.                                                                              |
| 9.10(0.0)  | Introduced on the S3148.                                                                                               |
| 9.10(0.0)  | Introduced on the S6100-ON.                                                                                            |
| 9.8(2.0)   | Introduced on the S3100 series.                                                                                        |
| 9.8(1.0)   | Introduced on the Z9100-ON.                                                                                            |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                                                                            |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                                                                            |
| 9.7(0.0)   | Introduced on the S6000-ON.                                                                                            |
| 9.2(1.0)   | Introduced on the Z9500.                                                                                               |
| 9.0.2.0    | Introduced on the S6000.                                                                                               |
| 8.3.11.1   | Introduced on the Z9000.                                                                                               |
| 8.5.1.1    | Added support for 802.1X, E-LMI, GMRP, GVRP, LLDP, LACP, MMRP, MVRP, and OAM 802.3ah protocol traffic to the E-Series. |
| 8.2.1.0    | Introduced on the C-Series, E-Series, and E-Series.                                                                    |
| 7.4.1.0    | Introduced                                                                                                             |

### Example

```
DelleMC# conf
DelleMC(conf)#interface vlan 2
DelleMC(conf-if-vl-2)#vlan-stack compatible
DelleMC(conf-if-vl-2)#member Te 1/2-3
DelleMC(conf-if-vl-2)#protocol-tunnel stp
DelleMC(conf-if-vl-2)#protocol-tunnel enable
```

### Related Command

- [show protocol-tunnel](#) — displays tunneling information for all VLANs.

## protocol-tunnel destination-mac

Overwrite the BPDU destination MAC address with a specific value.

**Syntax** `protocol-tunnel destination-mac xstp address`

**Parameters** **stp** Change the default destination MAC address used for L2PT to another value.

**Defaults** The default destination MAC is 01:01:e8:00:00:00.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |

| Version  | Description                               |
|----------|-------------------------------------------|
| 9.7(0.0) | Introduced on the S6000-ON.               |
| 9.2(1.0) | Introduced on the Z9500.                  |
| 9.0.2.0  | Introduced on the S6000.                  |
| 8.3.19.0 | Introduced on the S4820T.                 |
| 8.3.11.1 | Introduced on the Z9000.                  |
| 8.3.7.0  | Introduced on the S4810.                  |
| 8.2.1.0  | Introduced on the C-Series, and S-Series. |
| 7.4.1.0  | Introduced                                |

**Usage Information**

When you enable VLAN-Stacking, no protocol packets are tunneled.

**Related Command**

- [show protocol-tunnel](#) — displays tunneling information for all VLANs.

## protocol-tunnel enable

Enable protocol tunneling globally on the system.

**Syntax**

`protocol-tunnel enable`

To disable protocol tunneling, use the `no protocol-tunnel enable` command.

**Defaults**

Disabled.

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |
| 7.4.1.0    | Introduced                                |

**Usage Information**

Dell EMC Networking OS must have the default CAM profile with the default microcode before you enable L2PT.

# protocol-tunnel rate-limit

Enable traffic rate limiting per box.

**Syntax** `protocol-tunnel rate-limit rate`  
To reset the rate limit to the default, use the `no protocol-tunnel rate-limit rate` command.

**Parameters** *rate* Enter the rate in frames per second. The range is from 75 to 3000. The default is **75**.

**Defaults** 75 frames per second.

**Command Modes** CONF-IF-VLAN-STACK

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                                                                        |
|------------|----------------------------------------------------------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.                                                          |
| 9.10(0.0)  | Introduced on the S3148.                                                                           |
| 9.10(0.0)  | Introduced on the S6100-ON.                                                                        |
| 9.8(2.0)   | Introduced on the S3100 series.                                                                    |
| 9.8(1.0)   | Introduced on the Z9100-ON.                                                                        |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                                                        |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                                                        |
| 9.7(0.0)   | Introduced on the S6000-ON.                                                                        |
| 9.2(1.0)   | Introduced on the Z9500.                                                                           |
| 9.0.2.0    | Introduced on the S6000.                                                                           |
| 8.3.19.0   | Introduced on the S4820T.                                                                          |
| 8.3.11.1   | Introduced on the Z9000.                                                                           |
| 8.3.7.0    | Introduced on the S4810.                                                                           |
| 8.2.1.0    | Introduced on the C-Series and E-Series. Maximum rate limit on E-Series reduced from 4000 to 3000. |
| 7.4.1.0    | Introduced                                                                                         |

## Example

```
DellEMC(conf-if-vl-2)# vlan-stack compatible
DellEMC(conf-if-vl-2-stack)#protocol-tunnle rate-limit 100 <<<<<<<< VLAN
stack mode
DellEMC(conf-if-vl-2-stack)#show config
!
interface Vlan 2
 no ip address
 mtu 1000
 vlan-stack compatible
 protocol-tunnel rate-limit 100
 shutdown
```

- Related Commands**
- [show protocol-tunnel](#) — displays tunneling information for all VLANs.
  - [show running-config](#) — displays the current configuration.

# show protocol-tunnel

Display protocol tunnel information for all or a specified VLAN-Stack VLAN.

|                        |                                                                                                                                                               |                                                                                                                                       |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | <code>show protocol-tunnel [vlan <i>vlan-id</i>]</code>                                                                                                       |                                                                                                                                       |
| <b>Parameters</b>      | <b>vlan <i>vlan-id</i></b>                                                                                                                                    | (OPTIONAL) Enter the keyword <code>vlan</code> then the VLAN ID to display information for the one VLAN. The range is from 1 to 4094. |
| <b>Defaults</b>        | none                                                                                                                                                          |                                                                                                                                       |
| <b>Command Modes</b>   | EXEC                                                                                                                                                          |                                                                                                                                       |
| <b>Command History</b> | This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> . |                                                                                                                                       |

| Version           | Description                               |
|-------------------|-------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.               |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.               |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                  |
| <b>9.0.2.0</b>    | Introduced on the S6000.                  |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                 |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                  |
| <b>8.3.7.0</b>    | Introduced on the S4810.                  |
| <b>8.2.1.0</b>    | Introduced on the C-Series, and E-Series. |
| <b>7.4.1.0</b>    | Introduced                                |

## Example

```
DellEMC# show protocol-tunnel
System Rate-Limit: 75 frames/second
VLAN Protocols Interface
1000 STP,PVST Te 5/7,Te 5/6
1001 LLDP,GVRP Te 5/7,Te 5/6
1002 MMRP,MVRP Te 5/7,Te 5/6
1003 LACP,DOT1X Te 5/7,Te 5/6
1004 OAM,PAUSE Te 5/7,Te 5/6
1005 E-LMI Te 5/7,Te 5/6
```

## Example (Specific VLAN)

```
DellEMC# show protocol-tunnel vlan 2
System Rate-Limit: 1000 Frames/second
Interface Vlan Protocol(s)
Te1/2 2 STP, PVST
DellEMC#
```

## Related Commands

- [show running-config](#) — displays the current configuration.

The Dell EMC Networking OS supports sFlow commands.

The Dell EMC Networking OS sFlow monitoring system includes an sFlow Agent and an sFlow Collector.

- The sFlow Agent combines the flow samples and interface counters into sFlow datagrams and forwards them to the sFlow Collector.
- The sFlow Collector analyses the sFlow Datagrams received from the different devices and produces a network-wide view of traffic flows.

## Important Points to Remember

- Dell EMC Networking recommends that the sFlow Collector be connected to the Dell EMC Networking chassis through a line card port rather than the route processor module (RPM) Management Ethernet port.
- Dell EMC Networking OS exports all sFlow packets to the sFlow Collector. A small sampling rate can equate to many exported packets. A backoff mechanism is automatically applied to reduce this amount. Some sampled packets may be dropped when the exported packet rate is high and the backoff mechanism is about to or is starting to take effect. The dropEvent counter, in the sFlow packet, is always zero.
- sFlow sampling is done on a per-port basis.
- Community list and local preference fields are not filled up in the extended gateway element in the sFlow datagram.
- The 802.1P source priority field is not filled up in the extended switch element in the sFlow datagram.
- Only Destination and Destination Peer AS numbers are packed in the dst-as-path field in the extended gateway element.
- If the packet being sampled is redirected using policy-based routing (PBR), the sFlow datagram may contain incorrect extended gateway/router information.
- sFlow does not support packing extended information for IPv6 packets. Only the first 128 bytes of the IPv6 packet is shipped in the datagram.
- The source virtual local area network (VLAN) field in the extended switch element is not packed if there is a routed packet.
- The destination VLAN field in the extended switch element is not packed if there is a multicast packet.
- The sFlow sampling functionality is supported only for egress traffic and not for ingress traffic.
- The maximum number of packets that can be sampled and processed per second is:
  - 7500 packets when no extended information packing is enabled.
  - 7500 packets when only extended-switch information packing is enabled (see [sflow extended-switch enable](#)).

# sflow collector

Configure a collector device to which sFlow datagrams are forwarded.

**Syntax** `sflow collector {ip-address | ipv6-address} agent-addr {ip-address | ipv6-address} [number [max-datagram-size number]] | [max-datagram-size number] [vrf management]`

To delete a configured collector, use the `no sflow collector {ip-address | ipv6-address} agent-addr {ipv4-address | ipv6-address} [number [max-datagram-size number]] | [max-datagram-size number] [vrf management]` command.

## Parameters

|                                                                      |                                                                                                                                                                                                                                                                                                                      |
|----------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>sflow collector</b><br><b>ip-address  </b><br><b>ipv6-address</b> | Enter the IP address of the collector in dotted decimal format for IPv4 or x:x:x:x:x format for IPv6.<br> <b>NOTE:</b> The :: notation specifies successive hexadecimal fields of zeros.                                            |
| <b>agent-addr</b> <b>ip-address  </b><br><b>ipv6-address</b>         | Enter the keyword <code>agent-addr</code> followed by the sFlow agent IP address in dotted decimal format for IPv4 or x:x:x:x:x format for IPv6.<br> <b>NOTE:</b> The :: notation specifies successive hexadecimal fields of zeros. |
| <b>number</b>                                                        | (OPTIONAL) Enter the user datagram protocol (UDP) port number. The range is from 0 to 65535. The default is 6343.                                                                                                                                                                                                    |
| <b>max-datagram-size</b> <b>number</b>                               | (OPTIONAL) Enter the keyword <code>max-datagram-size</code> then the size number in bytes. The range is from 400 to 1500. The default is <b>1400</b> .                                                                                                                                                               |
| <b>vrf management</b>                                                | (OPTIONAL) Enter the keyword <code>vrf</code> followed by the keyword <code>management</code> to configure the collector device corresponding to the default VRF and the management VRF respectively.                                                                                                                |

**Defaults** Not configured.

| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON.                                                   |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                                                                    |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.                                                                 |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.                                                             |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.                                                                 |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.                                                                 |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                                                                 |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.                                                                 |
| <b>9.4.(0.0)</b>  | Added support for VRF.                                                                      |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                                                                    |
| <b>9.0.2.0</b>    | Introduced on the S6000.                                                                    |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                                                                   |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                                                                    |
| <b>8.4.2.3</b>    | Added support for IPv6 sFlow collectors and agents on the E-series, C-Series, and S-Series. |
| <b>8.4.1.1</b>    | Added support for IPv6 sFlow collectors and agents on the E-series.                         |
| <b>8.3.7.0</b>    | Introduced on the S4810.                                                                    |

| Version | Description                                                                              |
|---------|------------------------------------------------------------------------------------------|
| 8.2.1.0 | Introduced S-Series Stacking.                                                            |
| 8.1.1.0 | Introduced on the E-Series.                                                              |
| 7.7.1.0 | Introduced on the S-Series.                                                              |
| 7.6.1.0 | Introduced on the C-Series.                                                              |
| 6.5.1.0 | Expanded the <code>no</code> form of the command to mirror the syntax used to configure. |
| 6.2.1.1 | Introduced on the E-Series.                                                              |

### Usage Information

You can configure up to two sFlow collectors (IPv4 or IPv6). If two collectors are configured, traffic samples are sent to both.

The sFlow agent address is carried in a field in SFlow packets and is used by the collector to identify the sFlow agent.

In sFlow, the agent address is a single invariant IPv4 or IPv6 address used to identify the agent to the collector. It is usually assigned the address of a loopback interface on the agent, which provides invariance. The agent address is carried as a field in the payload of the sFlow packets.

As part of the sFlow-MIB, if the SNMP request originates from a configured collector, Dell EMC Networking OS returns the corresponding configured agent IP in the MIB requests. Dell EMC Networking OS checks to ensure that two entries are not configured for the same collector IP with a different agent IP. Should that happen, Dell EMC Networking OS generates the following error: `%Error: Different agent-addr attempted for an existing collector.`

### Example

```
DellEMC(conf)# sflow collector 10.1.1.25 agent-addr 10.1.1.10 vrf
management
```

## sflow enable (Global)

Enable sFlow globally.

**Syntax** `sflow enable`  
To disable sFlow, use the `no sflow enable` command.

**Defaults** Disabled.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |

| Version  | Description                   |
|----------|-------------------------------|
| 8.3.19.0 | Introduced on the S4820T.     |
| 8.3.11.1 | Introduced on the Z9000.      |
| 8.3.7.0  | Introduced on the S4810.      |
| 8.2.1.0  | Introduced S-Series Stacking. |
| 8.1.1.0  | Introduced on the E-Series.   |
| 7.7.1.0  | Introduced on the S-Series.   |
| 7.6.1.0  | Introduced on the C-Series.   |
| 6.2.1.1  | Introduced on the E-Series.   |

**Usage Information**

sFlow is disabled by default. In addition to this command, sFlow needs to be enable on individual interfaces where sFlow sampling is desired.

**Related Commands**

- [sflow enable \(Interface\)](#) — enable sFlow on interfaces.

## sflow ingress-enable

Enable sFlow ingress on interfaces.

**Syntax**

`sflow ingress-enable`

To disable sFlow, use the `no sflow ingress enable` command.

**Defaults**

Disabled.

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                           |
|------------|-------------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.             |
| 9.10(0.0)  | Introduced on the S3148.                              |
| 9.10(0.0)  | Introduced on the S6100-ON.                           |
| 9.8(2.0)   | Introduced on the S3100 series.                       |
| 9.8(1.0)   | Introduced on the Z9100-ON.                           |
| 9.8(0.0P5) | Introduced on the S4048-ON.                           |
| 9.8(0.0P2) | Introduced on the S3048-ON.                           |
| 9.7(0.0)   | Introduced on the S6000-ON.                           |
| 9.7(0.0)   | Introduced on the S-Series, Z-Series, and MXL switch. |
| 9.2(1.0)   | Introduced on the Z9500.                              |

**Usage Information**

When you enable ingress sFlow on an interface, flow sampling is done on any incoming traffic.

 **NOTE:** After a physical port is a member of a LAG, it inherits the sFlow configuration from the LAG port.

**Related Commands**

- [sflow enable \(Global\)](#) — turn sFlow globally.

# sflow extended-switch enable

Enable packing information on a switch only.

**Syntax** `sflow extended-switch enable`

To disable packing information, use the `no sflow extended-switch [enable]` command.

**Parameters** **enable** Enter the keyword `enable` to enable global extended information.

**Defaults** Disabled.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |
| 8.2.1.0    | Introduced on S-Series Stacking.          |
| 8.1.1.0    | Introduced on the E-Series.               |
| 7.7.1.0    | Introduced on the S-Series.               |
| 7.6.1.0    | Introduced on the C-Series.               |
| 7.4.1.0    | Introduced on the E-Series.               |

**Usage Information** Dell EMC Networking OS enhances the sflow implementation for real time traffic analysis on the E-Series to provide extended gateway information in cases where the destination IP addresses are learned by different routing protocols and for cases where the destination is reachable over ECMP.

**Related Commands**

- [show sflow](#) — displays the sFlow configuration.

# sflow max-header-size extended

Set the maximum header size of a packet to 256 bytes.

**Syntax** `sflow max-header-size extended`

To reset the maximum header size of a packet, use the `[no] sflow max-header-size extended` command.

|                        |                                                                                                                                                               |                                                                                                      |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------|
| <b>Parameters</b>      | <b>extended</b>                                                                                                                                               | Enter the keyword <code>extended</code> to copy 256 bytes from the sample packets to sFlow datagram. |
| <b>Defaults</b>        | <b>128 bytes</b>                                                                                                                                              |                                                                                                      |

| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.                       |
| <b>9.7(0.0)</b>   | Introduced on the S Series and Z Series switches. |

#### Example

```
DellEMC(conf)# sflow max-header-size extended
```

## sflow polling-interval (Global)

Set the sFlow polling interval at a global level.

**Syntax** `sflow polling-interval interval value`  
To return to the default, use the `no sflow polling-interval interval` command.

**Parameters** ***interval value*** Enter the interval value in seconds. The range is from 15 to 86400 seconds. The default is **20 seconds**.

**Defaults** **20 seconds**

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| <b>Version</b>    | <b>Description</b>                        |
|-------------------|-------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.               |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.               |

| Version  | Description                      |
|----------|----------------------------------|
| 9.2(1.0) | Introduced on the Z9500.         |
| 9.0.2.0  | Introduced on the S6000.         |
| 8.3.19.0 | Introduced on the S4820T.        |
| 8.3.11.1 | Introduced on the Z9000.         |
| 8.3.7.0  | Introduced on the S4810.         |
| 8.2.1.0  | Introduced on S-Series Stacking. |
| 8.1.1.0  | Introduced on the E-Series.      |
| 7.7.1.0  | Introduced on the S-Series.      |
| 7.6.1.0  | Introduced on the C-Series.      |
| 7.4.1.0  | Introduced on the E-Series.      |

**Usage Information**

The polling interval for an interface is the maximum number of seconds between successive samples of counters sent to the collector. This command changes the global default counter polling (20 seconds) interval. You can configure an interface to use a different polling interval.

**Related Commands**

- [sflow polling-interval \(Interface\)](#) — sets the polling interval for an interface.

## sflow polling-interval (Interface)

Set the sFlow polling interval at an interface (overrides the global-level setting.)

**Syntax**

`sflow polling-interval interval value`

To return to the default, use the `no sflow polling-interval interval` command.

**Parameters**

**interval value** Enter the interval value in seconds. The range is from 15 to 86400 seconds. The default is **the global counter polling interval**.

**Defaults**

The same value as the current global default counter polling interval.

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |

| 7.6.1.0 | Introduced on the C-Series.      |
| 7.4.1.0 | Introduced on the E-Series.      |

**Usage Information**

This command sets the counter polling interval for an interface.

**Related Commands**

- [sflow polling-interval \(Global\)](#) — globally sets the polling interval.

## sflow sample-rate (Global)

Change the global default sampling rate.

**Syntax** `sflow sample-rate value`

To return to the default sampling rate, use the `no sflow sample-rate` command.

**Parameters** *value* Enter the sampling rate value. For the C-Series and S-Series, the range is from 256 to 8388608 packets. Enter values in powers of 2 only; for example, 4096, 8192, 16384, and so on. The default is **32768 packets**.

**Defaults** **32768 packets**

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |
| 8.2.1.0    | Introduced on S-Series Stacking.          |
| 8.1.1.0    | Introduced on the E-Series.               |
| 7.7.1.0    | Introduced on the S-Series.               |

| Version | Description                 |
|---------|-----------------------------|
| 7.6.1.0 | Introduced on the C-Series. |
| 7.4.1.0 | Introduced on the E-Series. |

#### Usage Information

Sample-rate is the average number of packets skipped before the sample is taken. This command changes the global default sampling rate. You can configure an interface to use a different sampling rate than the global sampling rate. If the value entered is not a correct power of 2, the command generates an error message with the previous and next power of 2 value. Select one of these two packet numbers and re-enter the command.

#### Related Commands

- [sflow sample-rate \(Interface\)](#) — changes the interface sampling rate.

## sflow sample-rate (Interface)

Change the interface default sampling rate.

**Syntax** `sflow sample-rate value`

To return to the default sampling rate, use the `no sflow sample-rate` command.

**Parameters** *value* Enter the sampling rate value. For the C-Series and S-Series, the range is from 256 to 8388608 packets. Enter values in powers of 2 only; for example, 4096, 8192, 16384, etc. The default is **32768** packets.

**Defaults** The Global default sampling.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |

| 6.2.1.1    | Introduced on the E-Series.               |

## Usage Information

This command changes the sampling rate for an interface. By default, the sampling rate of an interface is set to the same value as the current global default sampling rate. If the value entered is not a correct power of 2, the command generates an error message with the previous and next power-of-2 value. Select one of these two number and re-enter the command.

## Related Commands

- [sflow sample-rate \(Global\)](#) — changes the sampling rate globally.

# show sflow

Display the current sFlow configuration.

## Syntax

```
show sflow [interface]
```

## Parameters

### *interface*

(OPTIONAL) Enter the following keywords and slot/port or number information:

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
- For the Management interface on the, enter the keyword `ManagementEthernet` then the slot/port information.
- For a port-channel interface, enter the keywords `port-channel` then the port-channel ID.

## Command Modes

- EXEC
- EXEC Privilege

## Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |

| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |
| 8.2.1.0    | Introduced on S-Series Stacking.          |
| 8.1.1.0    | Introduced on the E-Series.               |
| 7.7.1.0    | Introduced on the S-Series.               |
| 7.6.1.0    | Introduced on the C-Series.               |
| 6.2.1.1    | Introduced on the E-Series.               |

## Usage Information

The dropEvent counter (sFlow samples dropped due to sub-sampling) shown in the following example always displays a value of zero.

## Example

```
DellEMC#show sflow
sFlow services are enabled
Egress Management Interface sFlow services are disabled
Global default sampling rate: 32768
Global default counter polling interval: 20
Global default extended maximum header size: 128 bytes
Global extended information enabled: none
1 collectors configured
Collector IP addr: 100.1.1.1, Agent IP addr: 1.1.1.2, UDP port: 6343
VRF: Default
0 UDP packets exported
0 UDP packets dropped
0 sFlow samples collected

stack-unit 1 Port set 1
 Te 1/1: configured rate 16384, actual rate 16384 <<< sampling rate
based on line speed if global sampling rate is default
DellEMC#
```

# show sflow linecard

Display the sFlow information on a line card.

**Syntax** `show sflow linecard {slot number}`

**Parameters** *slot number* (OPTIONAL) Enter a slot number to view information on the line card in that slot.

- Command Modes**
- EXEC
  - EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

Version

The following is a list of the Dell Networking OS version history for this command.

| Version         | Description                          |
|-----------------|--------------------------------------|
| <b>9.7(0.0)</b> | Introduced on the S6000-ON.          |
| <b>9.2(1.0)</b> | Introduced on the Z9500.             |
| <b>9.0.2.0</b>  | Introduced on the S6000.             |
| <b>8.3.11.1</b> | Introduced on the Z9000.             |
| <b>8.2.1.0</b>  | Introduced on S-Series Stacking.     |
| <b>8.1.1.0</b>  | Introduced on the E-Series ExaScale. |
| <b>7.7.1.0</b>  | Introduced on the S-Series.          |
| <b>7.6.1.0</b>  | Introduced on the C-Series.          |
| <b>6.2.1.1</b>  | Introduced on the E-Series.          |

## Usage Information

The dropEvent counter (sFlow samples dropped due to sub-sampling) shown in the following example below always displays a value of zero.

## Example

```
Dell#show sflow linecard 1
Linecard 1
 Samples rcvd from h/w :165
 Samples dropped for sub-sampling :0
```

```
Total UDP packets exported :0
UDP packets exported via RPM :77
UDP packets dropped :
Dell#
```

# Simple Network Management Protocol (SNMP) and Syslog

This section contains commands to configure and monitor the simple network management protocol (SNMP) v1/v2/v3 and Syslog. Both features are supported on Dell EMC Networking OS.

## Topics:

- [SNMP Commands](#)
- [Syslog Commands](#)

## SNMP Commands

The following SNMP commands are available in the Dell EMC Networking OS.

The simple network management protocol (SNMP) is used to communicate management information between the network management stations and the agents in the network elements. Dell EMC Networking OS supports SNMP versions 1, 2c, and 3, supporting both read-only and read-write modes. Dell EMC Networking OS sends SNMP traps, which are messages informing an SNMP management system about the network. Dell EMC Networking OS supports up to 16 SNMP trap receivers.

## Important Points to Remember

- Typically, 5-second timeout and 3-second retry values on an SNMP server are sufficient for both LAN and WAN applications. If you experience a timeout with these values, the recommended best practice on Dell EMC Networking switches (to accommodate their high port density) is to increase the timeout and retry values on your SNMP server to the following:
  - SNMP Timeout — greater than 3 seconds.
  - SNMP Retry count — greater than 2 seconds.
- If you want to query an E-Series switch using SNMP v1/v2/v3 with an IPv6 address, configure the IPv6 address on a non-management port on the switch.
- If you want to send SNMP v1/v2/v3 traps from an E-Series using an IPv6 address, use a non-management port.
- SNMP v3 informs are not currently supported with IPv6 addresses.
- If you are using access control lists (ACLs) in an SNMP v3 configuration, group ACL overrides user ACL if the user is part of that group.
- SNMP operations are not supported on a virtual local area network (VLAN).

## show snmp

Display the status of SNMP network elements.

**Syntax**                    `show snmp`

**Command Modes**    • EXEC  
                               • EXEC Privilege

**Command History**        This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                               |
|-----------|-------------------------------------------|
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0) | Introduced on the S3148.                  |

| Version           | Description                     |
|-------------------|---------------------------------|
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.     |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series. |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.     |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.     |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.     |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.     |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.        |
| <b>9.0.2.0</b>    | Introduced on the S6000.        |
| <b>8.3.19.0</b>   | Introduced on the S4820T.       |
| <b>8.3.11.1</b>   | Introduced on the Z9000.        |
| <b>8.3.7.0</b>    | Introduced on the S4810.        |
| <b>7.6.1.0</b>    | Introduced on the S-Series.     |
| <b>7.5.1.0</b>    | Introduced on the C-Series.     |

**E-Series legacy command**

**Example**

```
DellEMC# show snmp
 32685 SNMP packets input
 0 Bad SNMP version errors
 0 Unknown community name
 0 Illegal operation for community name supplied
 0 Encoding errors
 96988 Number of requested variables
 0 Number of altered variables
 31681 Get-request PDUs
 968 Get-next PDUs
 0 Set-request PDUs
 61727 SNMP packets output
 0 Too big errors (Maximum packet size 1500)
 9 No such name errors
 0 Bad values errors
 0 General errors
 32649 Response PDUs
 29078 Trap PDUs
DellEMC#
```

**Related Commands**

- [snmp-server community](#) — enables the SNMP and set community string.

## show snmp engineID

Display the identification of the local SNMP engine and all remote engines that are configured on the router.

**Syntax**                    show snmp engineID

- Command Modes**
- EXEC
  - EXEC Privilege

**Command History**            This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version          | Description                               |
|------------------|-------------------------------------------|
| <b>9.10(0.1)</b> | Introduced on the S6010-ON and S4048T-ON. |

| Version    | Description                     |
|------------|---------------------------------|
| 9.10(0.0)  | Introduced on the S3148.        |
| 9.10(0.0)  | Introduced on the S6100-ON.     |
| 9.8(2.0)   | Introduced on the S3100 series. |
| 9.8(1.0)   | Introduced on the Z9100-ON.     |
| 9.8(0.0P5) | Introduced on the S4048-ON.     |
| 9.8(0.0P2) | Introduced on the S3048-ON.     |
| 9.7(0.0)   | Introduced on the S6000-ON.     |
| 9.2(1.0)   | Introduced on the Z9500.        |
| 9.0.2.0    | Introduced on the S6000.        |
| 8.3.19.0   | Introduced on the S4820T.       |
| 8.3.11.1   | Introduced on the Z9000.        |
| 8.3.7.0    | Introduced on the S4810.        |
| 7.6.1.0    | Introduced on the S-Series.     |
| 7.5.1.0    | Introduced on the C-Series.     |

### Example

```
DellEMC# show snmp engineID
Local SNMP engineID: 0000178B02000001E80214A8
Remote Engine ID IP-addr Port
80001F88043132333435 172.31.1.3 5009
80001F88043938373635 172.31.1.3 5008
DellEMC#
```

### Related Commands

- [snmp-server engineID](#) — configures local and remote SNMP engines on the router.

## show snmp group

Display the group name, security model, status, and storage type of each group.

**Syntax** `show snmp group`

- Command Modes**
- EXEC
  - EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |

| Version  | Description                 |
|----------|-----------------------------|
| 9.0.2.0  | Introduced on the S6000.    |
| 8.3.19.0 | Introduced on the S4820T.   |
| 8.3.11.1 | Introduced on the Z9000.    |
| 8.3.7.0  | Introduced on the S4810.    |
| 7.6.1.0  | Introduced on the S-Series. |
| 7.5.1.0  | Introduced on the C-Series. |

#### E-Series legacy command

#### Usage Information

The following Example displays a group named *ngroup*. The *ngroup* has a security model of version 3 (v3) with authentication (*auth*), the read and notify name is *nview* with no write view name specified, and finally the row status is active.

#### Example

```
DellEMC# show snmp group
groupname: vlv2creadg security model: v1
readview : vlv2cdefault writeview: no write view specified
notifyview: vlv2cdefault context: no context specified
row status: active
DellEMC#
```

#### Related Commands

- [snmp-server group](#) — configures an SNMP server group.

## show snmp user

Display the information configured on each SNMP user name.

**Syntax** `show snmp user`

- Command Modes**
- EXEC
  - EXEC Privilege

#### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |

| Version | Description                 |
|---------|-----------------------------|
| 7.6.1.0 | Introduced on the S-Series. |
| 7.5.1.0 | Introduced on the C-Series. |

**E-Series legacy command**

**Example**

```
DellEMC#show snmp user
 User name: vlv2creadu
 Engine ID: 0000178B02000001E80214A8
 storage-type: nonvolatile active
 Authentication Protocol: None
 Privacy Protocol: None

DellEMC#
```

## snmp context

Enables you to map a bgp vrf instance within a SNMP context through community mapping, in SNMPv2c and SNMPv3.

**Syntax** [no] snmp context [*context name*]

**Parameters** *context name* Enter a unique name for the context.

**Defaults** None

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                       |
|-----------|-----------------------------------|
| 9.13(0.0) | Introduced on all DNOS platforms. |

**Usage Information** This command is used for mapping SNMP context to a VRF instance within a community, in SNMPv2c and SNMPv3. The no version of this command turns off this feature.

## snmp ifmib ifalias long

Display the entire description string through the Interface MIB, which would be truncated otherwise to 63 characters.

**Syntax** snmp ifmib ifalias long

**Defaults** Interface description truncated beyond 63 characters.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                               |
|-----------|-------------------------------------------|
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0) | Introduced on the S3148.                  |
| 9.10(0.0) | Introduced on the S6100-ON.               |
| 9.8(2.0)  | Introduced on the S3100 series.           |
| 9.8(1.0)  | Introduced on the Z9100-ON.               |

| Version    | Description                 |
|------------|-----------------------------|
| 9.8(0.0P5) | Introduced on the S4048-ON. |
| 9.8(0.0P2) | Introduced on the S3048-ON. |
| 9.7(0.0)   | Introduced on the S6000-ON. |
| 9.2(1.0)   | Introduced on the Z9500.    |
| 9.0.2.0    | Introduced on the S6000.    |
| 8.3.19.0   | Introduced on the S4820T.   |
| 8.3.11.1   | Introduced on the Z9000.    |
| 8.3.7.0    | Introduced on the S4810.    |
| 7.6.1.0    | Introduced on the S-Series. |
| 7.5.1.0    | Introduced on the C-Series. |
| unknown    | Introduced on the E-Series. |

### Example

```
DelleMC#config!-----command run on host connected to switch:
-----!
> snmpwalk -c public 10.10.10.130 .1.3.6.1.2.1.31 | grep -i alias | more
IF-MIB::ifAlias.134530304 = STRING: This is a port connected to Router2.
This
is a port connected to
IF-MIB::ifAlias.134792448 = STRING:

!-----command run on Dell EMC Networkingswitch: -----!
DelleMC#snmp ifmib ifalias long

!-----command run on server connected to switch: -----!
> snmpwalk -c public 10.10.10.130 .1.3.6.1.2.1.31 | grep -i alias | more
IF-MIB::ifAlias.134530304 = STRING: This is a port connected to Router2.
This
is a port connected to Router2. This is a port connected to Router2.
This is a
port connected to Router2. This is a port connected to Router2.
IF-MIB::ifAlias.134792448 = STRING:
DelleMC#config
```

## snmp-server community

Configure a new community string access for SNMPv1 v2 and v3.

### Syntax

```
snmp-server community community-name {ro | rw} [ipv6 ipv6-access-list-name
[ipv6 ipv6-access-list-name | access-list-name | security-name name]
| security-name name [ipv6 ipv6-access-list-name | access-list-name |
security-name name] | access-list-name [ipv6 ipv6-access-list-name |
access-list-name | security-name name]]]
```

To remove access to a community, use the `no snmp-server community community-string {ro | rw} [security-name name [access-list-name | ipv6 access-list-name | access-list-name ipv6 access-list-name]]` command.

### Parameters

- community-name*** Enter a text string (up to 20 characters long) to act as a password for SNMP.
- ro** Enter the keyword `ro` to specify read-only permission.
- rw** Enter the keyword `rw` to specify read-write permission.
- ipv6 access-list-name*** (Optional) Enter the keyword `ipv6` then an IPv6 ACL name (a string up to 16 characters long).

**security-name name** (Optional) Enter the keywords `security-name` then the security name as defined by the community MIB.

**access-list-name** (Optional) Enter a standard IPv4 access list name (a string up to 16 characters long).

**Defaults** none

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |
| 7.6.1.0    | Introduced on the S-Series.               |
| 7.5.1.0    | Introduced on the C-Series.               |
| 6.2.1.1    | Introduced on the E-Series.               |

**Usage Information** The following example configures a community named `public` that is mapped to the security named `guestuser` with Read Only (`ro`) permissions.

The `security-name` parameter maps the community string to an SNMPv3 user/security name as defined by the community MIB.

If a community string is configured without a `security-name` (for example, `snmp-server community public ro`), the community is mapped to a default security-name/group:

- `v1v2creadu / v1v2creadg` — maps to a community with `ro` (read-only) permissions.
- `v1v2cwriteu/ v1v2cwriteg` — maps to a community with `rw` (read-write) permissions.

The `community-name` parameter indexes this command.

If you do not configure the `snmp-server community` command, you cannot query SNMP data. Only Standard IPv4 ACL and IPv6 ACL is supported in the optional `access-list-name`.

The command options `ipv6`, `security-name`, and `access-list-name` are recursive. In other words, each option can, in turn, accept any of the three options as a sub-option, and each of those sub-options can accept any of the three sub-options as a sub-option, and so forth. The second Example shows the creation of a standard IPv4 ACL called `snmp-ro-acl` and then assigning it to the SNMP community `guest`.

**NOTE:** For IPv6 ACLs, only IPv6 and UDP types are valid for SNMP; TCP and ICMP rules are not valid for SNMP. In IPv6 ACLs, port rules are not valid for SNMP.

**Example**

```
DellEMC# config
DellEMC(conf)# snmp-server community public ro
```

```
DelleEMC(conf)# snmp-server community guest ro security-name guestuser
DelleEMC(conf)#
```

### Example

```
DelleEMC(conf)# ip access-list standard snmp-ro-acl
DelleEMC(config-std-nacl)#seq 5 permit host 10.10.10.224
DelleEMC(config-std-nacl)#seq 10 deny any count
!
DelleEMC(conf)# snmp-server community guest ro snmp-ro-acl
DelleEMC(conf)#
```

### Related Commands

- [ip access-list standard](#) — names (or selects) a standard access list to filter based on IP address.
- [ipv6 access-list](#) — configures an access list based on IPv6 addresses or protocols.
- [show running-config](#) — displays the current SNMP configuration and defaults.

## snmp-server contact

Configure contact information for troubleshooting this SNMP node.

**Syntax** `snmp-server contact text`

To delete the SNMP server contact information, use the `no snmp-server contact` command.

**Parameters** `text` Enter an alphanumeric text string, up to 55 characters long.

**Defaults** none

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                               |
|-------------------|-------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.               |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.               |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                  |
| <b>9.0.2.0</b>    | Introduced on the S6000.                  |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                 |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                  |
| <b>8.3.7.0</b>    | Introduced on the S4810.                  |
| <b>7.6.1.0</b>    | Introduced on the S-Series.               |
| <b>7.5.1.0</b>    | Introduced on the C-Series.               |

**E-Series legacy command**

## snmp-server enable traps

Enable SNMP traps.

**Syntax** `snmp-server enable traps [notification-type] [notification-option]`

To disable traps, use the `no snmp-server enable traps [notification-type] [notification-option]` command.

### Parameters

**notification-type** Enter the type of notification from the following list:

**notification-option**

For the `envmon` notification-type, enter one of the following optional parameters:

- `cam-utilization`
- `fan`
- `supply`
- `temperature`

For the `snmp` notification-type, enter one of the following optional parameters:

- `authentication`
- `coldstart`
- `linkdown`
- `linkup`
- `syslog-reachable`
- `syslog-unreachable`

**Defaults** Not enabled.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                                                                                            |
|------------|------------------------------------------------------------------------------------------------------------------------|
| 9.12(0.0)  | Introduced MAC address notification traps on all the Dell EMC Networking OS platforms.                                 |
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.                                                                              |
| 9.10(0.0)  | Introduced on the S3148.                                                                                               |
| 9.10(0.0)  | Introduced on the S6100-ON.                                                                                            |
| 9.8(2.0)   | Introduced on the S3100 series.                                                                                        |
| 9.8(1.0)   | Introduced on the Z9100-ON.                                                                                            |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                                                                            |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                                                                            |
| 9.8(0.0)   | Added the following two SNMP notification options: <code>syslog-reachable</code> and <code>syslog-unreachable</code> . |
| 9.7(0.0)   | Introduced on the S6000-ON.                                                                                            |
| 9.2(1.0)   | Introduced on the Z9500.                                                                                               |
| 9.2(0.0)   | Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.                    |
| 9.0.2.0    | Introduced on the S6000.                                                                                               |
| 9.1(0.0)   | Added support for copy-config and ECMP traps.                                                                          |
| 8.3.19.0   | Introduced on the S4820T.                                                                                              |
| 8.3.11.1   | Introduced on the Z9000.                                                                                               |
| 8.3.7.0    | Introduced on the S4810.                                                                                               |

| Version | Description                                                       |
|---------|-------------------------------------------------------------------|
| 8.4.1.0 | Added support for VRRP traps.                                     |
| 7.6.1.0 | Added support for STP and xSTP traps. Introduced on the S-Series. |
| 7.5.1.0 | Introduced on the C-Series.                                       |

### E-Series legacy command

#### Usage Information

Dell EMC Networking OS supports up to 16 SNMP trap receivers.

If you do not configure this command, traps that controlled by this command are not sent. If you do not specify a `notification-type` and `notification-option`, all traps are enabled.

#### Related Commands

- [snmp-server community](#) — enables SNMP and sets the community string.

## snmp-server engineID

Configure the name for both the local and remote SNMP engines on the router.

#### Syntax

```
snmp-server engineID [local engineID] [remote ip-address vrf vrf-name udp-port port-number engineID]
```

To return to the default, use the `no snmp-server engineID [local engineID] [remote ip-address vrf vrf-name udp-port port-number engineID]` command.

#### Parameters

##### local engineID

Enter the keyword `local` followed by the engine ID number that identifies the copy of the SNMP on the local device.

Format (as specified in RFC 3411): 12 octets.

- The first four octets are set to the private enterprise number.
- The remaining eight octets are the MAC address of the chassis.

##### remote ip-address

Enter the keyword `remote` followed by the IP address that identifies the copy of the SNMP on the remote device.

##### vrf vrf-name

Enter the keyword `vrf` followed by the name of the VRF that is used to reach the device.

 **NOTE:** Use this attribute to specify the VRF that is used by the SNMP engine to reach the device. If no VRF is specified, then the default VRF is used.

##### udp-port port-number engineID

Enter the keywords `udp-port` followed by the user datagram protocol (UDP) port number on the remote device. The range is from 0 to 65535. The default is **162**.

#### Defaults

As above.

#### Command Modes

CONFIGURATION

#### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |

| Version    | Description                 |
|------------|-----------------------------|
| 9.8(0.0P2) | Introduced on the S3048-ON. |
| 9.7(0.0)   | Introduced on the S6000-ON. |
| 9.4.(0.0)  | Added support for VRF.      |
| 9.2(1.0)   | Introduced on the Z9500.    |
| 9.0.2.0    | Introduced on the S6000.    |
| 8.3.19.0   | Introduced on the S4820T.   |
| 8.3.11.1   | Introduced on the Z9000.    |
| 8.3.7.0    | Introduced on the S4810.    |
| 7.6.1.0    | Introduced on the S-Series. |
| 7.5.1.0    | Introduced on the C-Series. |

#### E-Series legacy command

#### Usage Information

Changing the value of the SNMP Engine ID has important side effects. A user's password (entered on the command line) is converted to a message digest algorithm (MD5) or secure hash algorithm (SHA) security digest. This digest is based on both the password and the local Engine ID. The command line password is then destroyed, as required by RFC 2274. Because of this deletion, if the local value of the Engine ID changes, the security digests of SNMPv3 users is invalid and the users will have to be reconfigured.

For the remote Engine ID, the host IP and UDP port are the indexes to the command that are matched to either overwrite or remove the configuration.

#### Related Commands

- [show snmp engineID](#) — displays the SNMP engine and all the remote engines that are configured on the router.
- [show running-config snmp](#) — displays the SNMP running configuration.

## snmp-server group

Configure a new SNMP group or a table that maps SNMP users to SNMP views.

#### Syntax

```
snmp-server group [group_name {1 | 2c | 3 {auth | noauth | priv}}] [read name] [write name] [notify name] [access access-list-name | ipv6 access-list-name | access-list-name ipv6 access-list-name]
```

To remove a specified group, use the `no snmp-server group [group_name {v1 | v2c | v3 {auth | noauth | priv}}] [read name] [write name] [notify name] [access access-list-name | ipv6 access-list-name | access-list-name ipv6 access-list-name]` command.

#### Parameters

- group\_name** Enter a text string (up to 20 characters long) as the name of the group. The following groups are created for mapping to read/write community/security-names (defaults):
- `v1v2creadg` — maps to a community/security-name with `ro` permissions.
  - `1v2cwriteg` — maps to a community/security-name `rw` permissions.
- 1 | 2c | 3** (OPTIONAL) Enter the security model version number (1, 2c, or 3):
- 1 is the least secure version.
  - 3 is the most secure of the security modes.
  - 2c allows transmission of informs and counter 64, which allows for integers twice the width of what is normally allowed.

The default is **1**.

|                                                                 |                                                                                                                                                                                                                                            |
|-----------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>auth</b>                                                     | (OPTIONAL) Enter the keyword <code>auth</code> to specify authentication of a packet without encryption.                                                                                                                                   |
| <b>noauth</b>                                                   | (OPTIONAL) Enter the keyword <code>noauth</code> to specify no authentication of a packet.                                                                                                                                                 |
| <b>priv</b>                                                     | (OPTIONAL) Enter the keyword <code>priv</code> to specify both authentication and then scrambling of the packet.                                                                                                                           |
| <b>read <i>name</i></b>                                         | (OPTIONAL) Enter the keyword <code>read</code> then a name (a string of up to 20 characters long) as the read view name. The default is <b>GlobalView</b> and is assumed to be every object belonging to the internet (1.3.6.1) OID space. |
| <b>write <i>name</i></b>                                        | (OPTIONAL) Enter the keyword <code>write</code> then a name (a string of up to 20 characters long) as the write view name.                                                                                                                 |
| <b>notify <i>name</i></b>                                       | (OPTIONAL) Enter the keyword <code>notify</code> then a name (a string of up to 20 characters long) as the notify view name.                                                                                                               |
| <b>access <i>access-list-name</i></b>                           | (Optional) Enter the standard IPv4 access list name (a string up to 16 characters long).                                                                                                                                                   |
| <b>ipv6 <i>access-list-name</i></b>                             | (Optional) Enter the keyword <code>ipv6</code> then the IPv6 access list name (a string up to 16 characters long).                                                                                                                         |
| <b><i>access-list-name</i><br/>ipv6 <i>access-list-name</i></b> | (Optional) Enter both an IPv4 and IPv6 access list name.                                                                                                                                                                                   |

**Defaults** As above.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| <b>Version</b>    | <b>Description</b>                                   |
|-------------------|------------------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON.            |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                             |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.                          |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.                      |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.                          |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.                          |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                          |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.                          |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                             |
| <b>9.0.2.0</b>    | Introduced on the S6000.                             |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                            |

| <b>7.5.1.0</b>    | Introduced on the C-Series.                          |

**E-Series legacy command**

**Usage Information** The following example specifies the group named *harig* as a version 3 user requiring both authentication and encryption and read access limited to the read named *rview*.

**i** **NOTE:** The number of configurable groups is limited to 16 groups.

### Example

```
DellEMC# conf
DellEMC(conf)# snmp-server group harig 3 priv read rview
DellEMC#
```

### Related Commands

- `show snmp group` — displays the group name, security model, view status, and storage type of each group.
- `show running-config` — displays the SNMP running configuration.

## snmp-server host

Configure the recipient of an SNMP trap operation.

### Syntax

```
snmp-server host ip-address | ipv6-address [vrf vrf-name] traps | informs
[version 1 | 2c | 3] [auth | no auth | priv] [community-string] [udp-port
port-number] [notification-type]
```

To remove the SNMP host, use the `no snmp-server host ip-address [vrf vrf-name] traps | informs [version 1 | 2c | 3] [auth | noauth | priv] [community-string] [udp-port number] [notification-type]` command.

### Parameters

|                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><i>ip-address</i></b>                       | Enter the keyword <code>host</code> then the IP address of the host (configurable hosts is limited to 16).                                                                                                                                                                                                                                                                                                                                                      |
| <b><i>ipv6-address</i></b>                     | Enter the keyword <code>host</code> then the IPv6 address of the host in the <code>x:x:x:x</code> format.<br><b>i</b> <b>NOTE:</b> The <code>::</code> notation specifies successive hexadecimal fields of zero.                                                                                                                                                                                                                                                |
| <b><i>vrf vrf-name</i></b>                     | Enter the keyword <code>vrf</code> and then the name of the VRF that the SNMP server uses to connect to the host.<br><b>i</b> <b>NOTE:</b> You can use this attribute to inform the SNMP engine about the vrf instance to be used to reach the corresponding remote host to send Trap or Inform message. If no VRF is specified, then the default VRF is used.                                                                                                  |
| <b><i>traps</i></b>                            | (OPTIONAL) Enter the keyword <code>traps</code> to send trap notifications to the specified host. The default is <b>traps</b> .                                                                                                                                                                                                                                                                                                                                 |
| <b><i>informs</i></b>                          | (OPTIONAL) Enter the keyword <code>informs</code> to send inform notifications to the specified host. The default is <b>traps</b> .                                                                                                                                                                                                                                                                                                                             |
| <b><i>version 1</i>   <i>2c</i>   <i>3</i></b> | (OPTIONAL) Enter the keyword <code>version</code> to specify the security model then the security model version number 1, 2c, or 3: <ul style="list-style-type: none"><li>• Version 1 is the least secure version.</li><li>• Version 3 is the most secure of the security modes.</li><li>• Version 2c allows transmission of informs and counter 64, which allows for integers twice the width of what is normally allowed.</li></ul> The default is version 1. |
| <b><i>auth</i></b>                             | (OPTIONAL) Enter the keyword <code>auth</code> to specify authentication of a packet without encryption.                                                                                                                                                                                                                                                                                                                                                        |
| <b><i>noauth</i></b>                           | (OPTIONAL) Enter the keyword <code>noauth</code> to specify no authentication of a packet.                                                                                                                                                                                                                                                                                                                                                                      |
| <b><i>priv</i></b>                             | (OPTIONAL) Enter the keyword <code>priv</code> to specify both authentication and then scrambling of the packet.                                                                                                                                                                                                                                                                                                                                                |
| <b><i>community-string</i></b>                 | Enter a text string (up to 20 characters long) as the name of the SNMP community.<br><b>i</b> <b>NOTE:</b> For version 1 and version 2c security models, this string represents the name of the SNMP community. The string can be set using this command; however, Dell EMC Networking OS recommends setting the community                                                                                                                                      |

string using the `snmp-server community` command before executing this command. For version 3 security model, this string is the USM user security name.

**udp-port *port-number*** (OPTIONAL) Enter the keywords `udp-port` followed by the port number of the remote host to use. The range is from 0 to 65535. The default is **162**.

**notification-type** (OPTIONAL) Enter one of the following keywords for the type of trap to be sent to the host:

- `bgp` — Enable BGP state change traps.
- `ecfm` — Enable ECFM state change traps.
- `entity` — Enable entity change traps.
- `envmon` — Enable SNMP environmental monitor traps.
- `eoam` — Enable EOAM state change traps
- `ets` — Enable ets traps
- `fips` — Enable FIP Snooping state change traps
- `lACP` — Enable LACP state change traps.
- `mac` — Enable MAC address notification traps.
- `isis` — Enable ISIS adjacency change traps.
- `pfc` — Enable pfc traps.
- `snmp` — Enable SNMP trap.
- `stp` — Enable 802.1d state change traps.
- `vlt` — Enable VLT traps.
- `vrrp` — Enable VRRP state change traps.
- `xstp` — Enable 802.1s, 802.1w, and PVST+ state change traps.

The default is all trap types are sent to host.

**Defaults** As above.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| <b>Version</b>    | <b>Description</b>                                                                     |
|-------------------|----------------------------------------------------------------------------------------|
| <b>9.12(0.0)</b>  | Introduced MAC address notification traps on all the Dell EMC Networking OS platforms. |
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON.                                              |
| <b>9.10(0.0)</b>  | Introduced on the S3148 and S6100-ON.                                                  |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.                                                        |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.                                                            |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.                                                            |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                                                            |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.                                                            |
| <b>9.4.(0.0)</b>  | Added support for VRF.                                                                 |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                                                               |
| <b>9.0.2.0</b>    | Introduced on the S6000.                                                               |
| <b>9.1(0.0)</b>   | Added support for config and ecmp traps.                                               |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                                                              |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                                                               |
| <b>8.3.7.0</b>    | Introduced on the S4810.                                                               |

| Version | Description                                                                    |
|---------|--------------------------------------------------------------------------------|
| 8.4.1.0 | Added support for VRRP traps.                                                  |
| 7.6.1.0 | Added support for STP and xSTP notification types. Introduced on the S-Series. |
| 7.5.1.0 | Introduced on the C-Series.                                                    |

### E-Series legacy command

#### Usage Information

To configure the router to send SNMP notifications, enter at least one `snmp-server host` command. If you enter the command with no keywords, all trap types are enabled for the host. If you do not enter an `snmp-server host` command, no notifications are sent.

In order to enable multiple hosts, issue a separate `snmp-server host` command for each host. You can specify multiple notification types in the command for each host.

When multiple `snmp-server host` commands are given for the same host and type of notification (trap or inform), each succeeding command overwrites the previous command. Only the last `snmp-server host` command will be in effect. For example, if you enter an `snmp-server host inform` command for a host and then enter another `snmp-server host inform` command for the same host, the second command replaces the first command.

The `snmp-server host` command is used with the `snmp-server enable` command. Use the `snmp-server enable` command to specify which SNMP notifications are sent globally. For a host to receive most notifications, at least one `snmp-server enable` command and the `snmp-server host` command for that host must be enabled.

**NOTE:** For v1 / v2c trap configuration, if the community-string is not defined using the `snmp-server community` command prior to using this command, the default form of the `snmp-server community` command automatically is configured with the community-name the same as specified in the `snmp-server host` command.

#### Configuring Informs

To send an inform, use the following steps:

1. Configure a remote engine ID.
2. Configure a remote user.
3. Configure a group for this user with access rights.
4. Enable traps.
5. Configure a host to receive informs.

#### Related Commands

- [snmp-server enable traps](#) — enables SNMP traps.
- [snmp-server community](#) — configures a new community SNMPv1 or SNMPv2c.

## snmp-server location

Configure the location of the SNMP server.

#### Syntax

```
snmp-server location text
```

To delete the SNMP location, use the `no snmp-server location` command.

#### Parameters

**text** Enter an alpha-numeric text string, up to 55 characters long.

#### Defaults

Not configured.

#### Command Modes

CONFIGURATION

#### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |
| 7.6.1.0    | Introduced on the S-Series.               |
| 7.5.1.0    | Introduced on the C-Series.               |

**E-Series legacy command**

#### Example

```
DellEMC(conf)#snmp-server location MAA_LAB
DellEMC(conf)#do show running-config snmp
!
snmp-server community public ro
snmp-server location MAA_LAB
```

## snmp-server packetsize

Set the largest SNMP packet size permitted. When the SNMP server is receiving a request or generating a reply, use the `snmp-server packetsize global` configuration command.

|                        |                                                                                                                                                               |                                                                                                                            |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | <code>snmp-server packetsize <i>byte-count</i></code>                                                                                                         |                                                                                                                            |
| <b>Parameters</b>      | <b><i>byte-count</i></b>                                                                                                                                      | Enter one of the following values 8, 16, 24 or 32. Packet sizes are 8000 bytes, 16000 bytes, 32000 bytes, and 64000 bytes. |
| <b>Defaults</b>        | <b>8</b>                                                                                                                                                      |                                                                                                                            |
| <b>Command Modes</b>   | CONFIGURATION                                                                                                                                                 |                                                                                                                            |

| 8.3.11.1   | Introduced on the Z9000.    |
| 8.3.7.0    | Introduced on the S4810.    |
| 7.6.1.0    | Introduced on the S-Series. |
| 7.5.1.0    | Introduced on the C-Series. |

**E-Series legacy command**

## snmp-server trap-source

Configure a specific interface as the source for SNMP traffic.

**Syntax** `snmp-server trap-source interface`  
 To disable sending traps out a specific interface, use the `no snmp trap-source` command.

**Parameters** *interface* Enter the following keywords and slot/port or number information:

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
- For a port channel interface, enter the keywords `port-channel` then a number.
- For a Null interface, enter the keyword `null` then the Null interface number.
- For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults** The IP address assigned to the management interface is the default.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| 8.3.7.0  | Introduced on the S4810.                 |
| 8.5.1.0  | Added support for 4-port 40G line cards. |
| 7.6.1.0  | Introduced on the S-Series.              |
| 7.5.1.0  | Introduced on the C-Series.              |

#### E-Series legacy command

#### Usage Information

To enable this `snmp-server trap-source` command, configure an IP address on the interface and enable the interface configured as an SNMP trap source.

#### Related Commands

- [snmp-server community](#) — sets the community string.

## snmp-server user

Configure a new user to an SNMP group.

#### Syntax

```
snmp-server user name {group_name remote ip-address vrf vrf-name udp-port
port-number} [1 | 2c | 3] [encrypted] [auth {md5 | sha} auth-password]
[priv {des56 | aes128} priv password] [access access-list-name | ipv6
access-list-name | access-list-name ipv6 access-list-name]
```

To remove a user from the SNMP group, use the `no snmp-server user name {group_name remote ip-address udp-port port-number} [1 | 2c | 3] [encrypted] [auth {md5 | sha} auth-password] [priv {des56 | aes128} priv password] [access access-list-name | ipv6 access-list-name | access-list-name ipv6 access-list-name]` command.

#### Parameters

|                                    |                                                                                                                                                                                                                                                                                                                                                                                                    |
|------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><i>name</i></b>                 | Enter the name of the user (not to exceed 20 characters), on the host that connects to the agent.                                                                                                                                                                                                                                                                                                  |
| <b><i>group_name</i></b>           | Enter a text string (up to 20 characters long) as the name of the group. The following groups are created for mapping to read/write community/security-names (defaults): <ul style="list-style-type: none"> <li>• <code>v1v2creadu</code> — maps to a community with <code>ro</code> permissions.</li> <li>• <code>1v2cwriteu</code> — maps to a community <code>rw</code> permissions.</li> </ul> |
| <b><i>remote ip-address</i></b>    | Enter the keywords <code>udp-port</code> then the user datagram protocol (UDP) port number on the remote device. The range is from 0 to 65535. The default is <b>162</b> .                                                                                                                                                                                                                         |
| <b><i>vrf vrf-name</i></b>         | Enter the keywords <code>vrf</code> and then the name of the VRF this is used to connect to the SNMP server. <p> <b>NOTE:</b> Use this attribute to specify a VRF name that is used to connect to the remote host. If no VRF is specified, then the default VRF is used.</p>                                    |
| <b><i>udp-port port-number</i></b> | Enter the keywords <code>udp-port</code> then the UDP (User Datagram Protocol) port number on the remote device. The range is from 0 to 65535. The default is <b>162</b> .                                                                                                                                                                                                                         |
| <b>1   2c   3</b>                  | (OPTIONAL) Enter the security model version number (1, 2c, or 3): <ul style="list-style-type: none"> <li>• 1 is the least secure version.</li> <li>• 3 is the most secure of the security modes.</li> </ul>                                                                                                                                                                                        |

- `2c` allows transmission of informs and counter 64, which allows for integers twice the width of what is normally allowed.

The default is **1**.

|                                                   |                                                                                                                                                                                                                                                                                                                             |
|---------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>encrypted</b>                                  | (OPTIONAL) Enter the keyword <code>encrypted</code> to specify the password appear in encrypted format (a series of digits, masking the true characters of the string).                                                                                                                                                     |
| <b>auth</b>                                       | (OPTIONAL) Enter the keyword <code>auth</code> to specify authentication of a packet without encryption.                                                                                                                                                                                                                    |
| <b>md5   sha</b>                                  | (OPTIONAL) Enter the keyword <code>md5</code> or <code>sha</code> to designate the authentication level. <ul style="list-style-type: none"> <li>• <code>md5</code> — Message Digest Algorithm</li> <li>• <code>sha</code> — Secure Hash Algorithm</li> </ul>                                                                |
| <b>auth-password</b>                              | (OPTIONAL) Enter a text string (up to 20 characters long) password that enables the agent to receive packets from the host. Minimum: eight characters long.                                                                                                                                                                 |
| <b>priv</b>                                       | (OPTIONAL) Enter the keywords <code>priv</code> to initiate a privacy authentication level setting.                                                                                                                                                                                                                         |
| <b>des56   aes128</b>                             | (OPTIONAL) Enter the keyword <code>des56</code> or <code>aes128</code> to specify the encryption mode. <ul style="list-style-type: none"> <li>• <code>aes128</code> — Use 128 bit AES algorithm in CFB mode for encryption.</li> <li>• <code>des56</code> — Use 56 bit DES algorithm in CBC mode for encryption.</li> </ul> |
| <b>priv password</b>                              | (OPTIONAL) Enter a text string (up to 20 characters long) password that enables the host to encrypt the contents of the message it sends to the agent. Minimum: eight characters long.                                                                                                                                      |
| <b>access access-list-name</b>                    | (Optional) Enter the standard IPv4 access list name (a string up to 16 characters long).                                                                                                                                                                                                                                    |
| <b>ipv6 access-list-name</b>                      | (Optional) Enter the keyword <code>ipv6</code> then the IPv6 access list name (a string up to 16 characters long).                                                                                                                                                                                                          |
| <b>access-list-name<br/>ipv6 access-list-name</b> | (Optional) Enter both an IPv4 and IPv6 access list name.                                                                                                                                                                                                                                                                    |

**Defaults** As above.

**Command Modes** CONFIGURATION

| <b>9.4.(0.0)</b>  | Added support for VRF.                        |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                      |
| <b>9.0.2.0</b>    | Introduced on the S6000.                      |

| Version  | Description                 |
|----------|-----------------------------|
| 8.3.19.0 | Introduced on the S4820T.   |
| 8.3.11.1 | Introduced on the Z9000.    |
| 8.3.7.0  | Introduced on the S4810.    |
| 7.6.1.0  | Introduced on the S-Series. |

### Usage Information

**NOTE:** For IPv6 ACLs, only IPv6 and UDP types are valid for SNMP. TCP and ICMP rules are not valid for SNMP. In IPv6 ACLs port rules are not valid for SNMP.

No default values exist for authentication or privacy algorithms and no default password exists. If you forget a password, you cannot recover it; the user must be reconfigured. You can specify either a plain-text password or an encrypted cypher-text password. In either case, the password is stored in the configuration in an encrypted form and displayed as encrypted in the `show running-config` command.

If you have an encrypted password, you can specify the encrypted string instead of the plain-text password. The following command is an Example of how to specify the command with an encrypted string.

**NOTE:** The number of configurable users is limited to 16.

### Example

```
DellEMC# snmp-server user privuser v3group v3 encrypted auth md5
9fc53d9d908118b2804fe80e3ba8763d priv des56
d0452401a8c3ce42804fe80e3ba8763d
```

### Usage Information

The following command is an example of how to enter a plain-text password as the string `authpasswd` for user `authuser` of group `v3group`.

### Example

```
DellEMC#conf
DellEMC(conf)# snmp-server user authuser v3group v3 auth md5 authpasswd
```

### Usage Information

The following command configures a remote user named `n3user` with a `v3` security model and a security level of `authNOPriv`.

### Example

```
DellEMC#conf
DellEMC(conf)# snmp-server user n3user ngroup remote 172.31.1.3 udp-port
5009 3
auth md5 authpasswd
```

### Related Commands

- `show snmp user` — displays the information configured on each SNMP user name.

## snmp-server view

Configure an SNMPv3 view.

### Syntax

```
snmp-server view view-name oid-tree {included | excluded}
```

To remove an SNMPv3 view, use the `no snmp-server view view-name oid-tree {included | excluded}` command.

### Parameters

|                  |                                                                                           |
|------------------|-------------------------------------------------------------------------------------------|
| <b>view-name</b> | Enter the name of the view (not to exceed 20 characters).                                 |
| <b>oid-tree</b>  | Enter the OID sub tree for the view (not to exceed 20 characters).                        |
| <b>included</b>  | (OPTIONAL) Enter the keyword <code>included</code> to include the MIB family in the view. |
| <b>excluded</b>  | (OPTIONAL) Enter the keyword <code>excluded</code> to exclude the MIB family in the view. |

### Defaults

none

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |
| 7.6.1.0    | Introduced on the S-Series.               |
| 7.5.1.0    | Introduced on the C-Series.               |

**E-Series legacy command**

**Usage Information** The `oid-tree` variable is a full sub-tree starting from 1.3.6 and cannot specify the name of a sub-tree or a MIB. The following Example configures a view named `rview` that allows access to all objects under 1.3.6.1.

**Example**

```
DellEMC# conf
DellEMC#(conf) snmp-server view rview 1.3.6.1 included
```

**Related Commands**

- [show running-config snmp](#) — displays the SNMP running configuration.

## snmp trap link-status

Enable the interface to send SNMP link traps, which indicate whether the interface is up or down.

**Syntax** `snmp trap link-status`  
To disable sending link trap messages, use the `no snmp trap link-status` command.

**Defaults** Enabled.

**Command Modes** INTERFACE

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                               |

| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0) | Introduced on the S6100-ON.               |
| 9.8(2.0)  | Introduced on the S3100 series.           |

| Version                        | Description                                                                                         |
|--------------------------------|-----------------------------------------------------------------------------------------------------|
| 9.8(1.0)                       | Introduced on the Z9100-ON.                                                                         |
| 9.8(0.0P5)                     | Introduced on the S4048-ON.                                                                         |
| 9.8(0.0P2)                     | Introduced on the S3048-ON.                                                                         |
| 9.7(0.0)                       | Introduced on the S6000-ON.                                                                         |
| 9.2(1.0)                       | Introduced on the Z9500.                                                                            |
| 9.0.2.0                        | Introduced on the S6000.                                                                            |
| 9.2(0.0)                       | Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only. |
| 8.3.19.0                       | Introduced on the S4820T.                                                                           |
| 8.3.11.1                       | Introduced on the Z9000.                                                                            |
| 8.3.7.0                        | Introduced on the S4810.                                                                            |
| 7.6.1.0                        | Introduced on the S-Series.                                                                         |
| 7.5.1.0                        | Introduced on the C-Series.                                                                         |
| <b>E-Series legacy command</b> |                                                                                                     |

**Usage Information**

If the interface is expected to flap during normal usage, you could disable this command.

## Syslog Commands

The following commands allow you to configure logging functions on all Dell EMC Networking switches.

### clear logging

Clear the messages in the logging buffer.

**Syntax** `clear logging`

**Defaults** none

**Command Modes** EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |

| Version                        | Description                                                                                         |
|--------------------------------|-----------------------------------------------------------------------------------------------------|
| <b>9.2(0.0)</b>                | Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only. |
| <b>8.3.19.0</b>                | Introduced on the S4820T.                                                                           |
| <b>8.3.11.1</b>                | Introduced on the Z9000.                                                                            |
| <b>8.3.7.0</b>                 | Introduced on the S4810.                                                                            |
| <b>7.6.1.0</b>                 | Introduced on the S-Series.                                                                         |
| <b>7.5.1.0</b>                 | Introduced on the C-Series.                                                                         |
| <b>E-Series legacy command</b> |                                                                                                     |

**Related Commands**

- [show logging](#) — display logging settings and system messages in the internal buffer.

## clear logging auditlog

Clears audit log.

**Syntax** `clear logging auditlog`

**Defaults** None

**Command Modes** EXEC

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                               |
|-------------------|-------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.               |
| <b>9.9(0.0)</b>   | Introduced on the FN IOM.                 |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.               |
| <b>9.5(0.1)</b>   | Introduced on the Z9500.                  |
| <b>9.5(0.0)</b>   | Introduced on the MXL.                    |

**Example**

```
DellEMC(conf)# clear logging auditlog
```

**Related Commands**

- [show logging auditlog](#) — display the audit log.

## default logging buffered

Return to the default setting for messages logged to the internal buffer.

**Syntax** `default logging buffered`

**Defaults** **size = 40960; level = 7 or debugging**

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version                        | Description                               |
|--------------------------------|-------------------------------------------|
| 9.10(0.1)                      | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)                      | Introduced on the S3148.                  |
| 9.10(0.0)                      | Introduced on the S6100-ON.               |
| 9.8(2.0)                       | Introduced on the S3100 series.           |
| 9.8(1.0)                       | Introduced on the Z9100-ON.               |
| 9.8(0.0P5)                     | Introduced on the S4048-ON.               |
| 9.8(0.0P2)                     | Introduced on the S3048-ON.               |
| 9.7(0.0)                       | Introduced on the S6000-ON.               |
| 9.2(1.0)                       | Introduced on the Z9500.                  |
| 9.0.2.0                        | Introduced on the S6000.                  |
| 8.3.19.0                       | Introduced on the S4820T.                 |
| 8.3.11.1                       | Introduced on the Z9000.                  |
| 7.6.1.0                        | Introduced on the S-Series.               |
| 7.5.1.0                        | Introduced on the C-Series.               |
| <b>E-Series legacy command</b> |                                           |

**Related Commands**

- [logging buffered](#) — set the logging buffered parameters.

## default logging console

Return the default settings for messages logged to the console.

**Syntax** `default logging console`

**Defaults** `level = 7 or debugging`

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |

| 7.5.1.0    | Introduced on the C-Series.               |

**E-Series legacy command**

**Related Commands**

- [logging trap](#) — limit messages logged to the Syslog servers based on severity.

## logging

Configure an IP address or host name of a Syslog server where logging messages are sent. Multiple logging servers of both IPv4 and/or IPv6 can be configured.

**Syntax** `logging {ip-address | ipv6-address | hostname} [{udp {port}} | {tcp {port}}] [vrf vrf-name]`

To disable logging, use the `no logging` command.

**Parameters**

**ip-address** Enter the IPv4 address in dotted decimal format.

**ipv6-address** Enter the IPv6 address in the x:x:x::X format.

 **NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

**hostname** Enter the name of a host already configured and recognized by the switch.

**udp** Enter the keyword `udp` to enable transmission of log message over UDP followed by port number. The default port is 514

**tcp** Enter the keyword `tcp` to enable transmission of log message over TCP followed by port number.

**vrf *vrf-name*** (Optional) Enter the keyword `vrf` and then the name of the VRF to enable the logging process in VRF mode.

 **NOTE:** Use this attribute to specify the VRF that is used to contact the host. By default, the default VRF is used.

**Defaults** Disabled.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| <b>9.2(0.0)</b>   | Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only. |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                                                                           |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                                                                            |
| <b>8.3.7.0</b>    | Introduced on the S4810.                                                                            |
| <b>8.4.1.0</b>    | Added support for IPv6.                                                                             |
| <b>7.6.1.0</b>    | Introduced on the S-Series.                                                                         |
| <b>7.5.1.0</b>    | Introduced on the C-Series.                                                                         |

**E-Series legacy command**

**Usage Information** Multiple logging servers of both IPv4 and/or IPv6 can be configured.

**Related Commands**

- [logging on](#) — enables the logging asynchronously to logging buffer, console, Syslog server, and terminal lines.
- [logging trap](#) — enables logging to the Syslog server based on severity.

# logging buffered

Enable logging and specify which messages are logged to an internal buffer. By default, all messages are logged to the internal buffer.

**Syntax** `logging buffered [level] [size]`  
To return to the default values, use the `default logging buffered` command.  
To disable logging stored to an internal buffer, use the `no logging buffered` command.

**Parameters**

**level** (OPTIONAL) Indicate a value from 0 to 7 or enter one of the following equivalent words: `emergencies`, `alerts`, `critical`, `errors`, `warnings`, `notifications`, `informational`, or `debugging`. The default is **7** or **debugging**.

**size** (OPTIONAL) Indicate the size, in bytes, of the logging buffer. The number of messages buffered depends on the size of each message. The range is from 40960 to 524288. The default is **40960 bytes**.

**Defaults** level = 7; size = **40960 bytes**

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| 9.8(1.0)   | Introduced on the Z9100-ON.                                                                         |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                                                         |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                                                         |
| 9.7(0.0)   | Introduced on the S6000-ON.                                                                         |
| 9.2(1.0)   | Introduced on the Z9500.                                                                            |
| 9.2(0.0)   | Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only. |
| 9.0.2.0    | Introduced on the S6000.                                                                            |
| 8.3.19.0   | Introduced on the S4820T.                                                                           |
| 8.3.11.1   | Introduced on the Z9000.                                                                            |
| 8.3.7.0    | Introduced on the S4810.                                                                            |
| 7.6.1.0    | Introduced on the S-Series.                                                                         |
| 7.5.1.0    | Introduced on the C-Series.                                                                         |

### E-Series legacy command

**Usage Information** When you decrease the buffer size, all messages stored in the buffer are lost. Increasing the buffer size does not affect messages stored in the buffer.

- Related Commands**
- [clear logging](#) — clears the logging buffer.
  - [default logging buffered](#) — returns the logging buffered parameters to the default setting.
  - [show logging](#) — displays the logging setting and system messages in the internal buffer.

## logging console

Specify which messages are logged to the console.

|                        |                                                                                                                                                                                                                                                                                                                                                           |

## logging extended

Logs security and audit events to a system log server.

|                      |                               |
|----------------------|-------------------------------|
| <b>Syntax</b>        | <code>logging extended</code> |
| <b>Defaults</b>      | none                          |
| <b>Command Modes</b> | CONFIGURATION                 |

## Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                             |
|------------|---------------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.               |
| 9.10(0.0)  | Introduced on the S3148.                                |
| 9.10(0.0)  | Introduced on the S6100-ON.                             |
| 9.8(2.0)   | Introduced on the S3100 series.                         |
| 9.8(1.0)   | Introduced on the Z9100-ON.                             |
| 9.8(0.0P5) | Introduced on the S4048-ON.                             |
| 9.8(0.0P2) | Introduced on the S3048-ON.                             |
| 9.7(0.0)   | Introduced on the S6000-ON.                             |
| 9.5(0.1)   | Introduced on the Z9500.                                |
| 9.5(0.0)   | Introduced on the S4810, S4820T, S6000, Z9000, and MXL. |

## Usage Information

This command is available with or without RBAC enabled. When RBAC is enabled you can restrict access to audit and security logs based on the CLI sessions' user roles. If extended logging is disabled, you can only view system events, regardless of RBAC user role.

When you enabled RBAC and extended logging:

- Only the system administrator role can execute this command.
- The system administrator and system security administrator roles can view security events and system events.
- The system administrator role can view audit, security, and system events.
- The network administrator and network operator roles can view system events.

## Examples

```
DellEMC(conf)#logging extended
```

## Related Commands

- [show logging auditlog](#) — display the audit log.
- [clear logging auditlog](#) — clear the audit log.

# logging facility

Configure the Syslog facility used for error messages sent to Syslog servers.

## Syntax

```
logging facility [facility-type]
```

To return to the default values, use the `no logging facility` command.

## Parameters

|                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><i>facility-type</i></b> | (OPTIONAL) Enter one of the following parameters:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|                             | <ul style="list-style-type: none"><li>• <code>auth</code> (authorization system)</li><li>• <code>cron</code> (Cron/at facility)</li><li>• <code>daemon</code> (system daemons)</li><li>• <code>kern</code> (kernel)</li><li>• <code>local0</code> (local use)</li><li>• <code>local1</code> (local use)</li><li>• <code>local2</code> (local use)</li><li>• <code>local3</code> (local use)</li><li>• <code>local4</code> (local use)</li><li>• <code>local5</code> (local use)</li><li>• <code>local6</code> (local use)</li></ul> |

- `local17` (local use)
- `lpr` (line printer system)
- `mail` (mail system)
- `news` (USENET news)
- `sys9` (system use)
- `sys10` (system use)
- `sys11` (system use)
- `sys12` (system use)
- `sys13` (system use)
- `sys14` (system use)
- `syslog` (Syslog process)
- `user` (user process)
- `uucp` (Unix to Unix copy process)

The default is **local7**.

**Defaults** `local7`

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                               |

| <b>7.6.1.0</b>    | Introduced on the S-Series.               |
| <b>7.5.1.0</b>    | Introduced on the C-Series.               |

**E-Series legacy command**

- Related Commands**
- [logging](#) — enables logging to a Syslog server
  - [logging on](#) — enables logging.

## logging history

Specify which messages are logged to the history table of the switch and the SNMP network management station (if configured).

**Syntax** `logging history level`

To return to the default values, use the `no logging history` command.

**Parameters**      *level*      Indicate a value from 0 to 7 or enter one of the following equivalent words: emergencies, alerts, critical, errors, warnings, notifications, informational, or debugging. The default is **4** or **warnings**.

**Defaults**      **warnings or 4**

**Command Modes**      CONFIGURATION

**Command History**      This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| <b>Version</b>    | <b>Description</b>                        |
|-------------------|-------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.               |

| <b>8.3.7.0</b>    | Introduced on the S4810.                  |
| <b>7.6.1.0</b>    | Introduced on the S-Series.               |
| <b>7.5.1.0</b>    | Introduced on the C-Series.               |

**E-Series legacy command**

**Usage Information**      When you configure the `snmp-server trap-source` command, the system messages logged to the history table are also sent to the SNMP network management station.

**Related Commands**

- [show logging](#) — displays information logged to the history buffer.

## logging history size

Specify the number of messages stored in the Dell EMC Networking logging history table.

**Syntax**      `logging history size size`  
To return to the default values, use the `no logging history size` command.

**Parameters**      *size*      Indicate a value as the number of messages to be stored. The range is from 0 to 500. The default is **1 message**.

**Defaults**      **1 message**

**Command Modes**      CONFIGURATION

**Command History**      This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version                        | Description                               |
|--------------------------------|-------------------------------------------|
| 9.10(0.1)                      | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)                      | Introduced on the S3148.                  |
| 9.10(0.0)                      | Introduced on the S6100-ON.               |
| 9.8(2.0)                       | Introduced on the S3100 series.           |
| 9.8(1.0)                       | Introduced on the Z9100-ON.               |
| 9.8(0.0P5)                     | Introduced on the S4048-ON.               |
| 9.8(0.0P2)                     | Introduced on the S3048-ON.               |
| 9.7(0.0)                       | Introduced on the S6000-ON.               |
| 9.2(1.0)                       | Introduced on the Z9500.                  |
| 9.0.2.0                        | Introduced on the S6000.                  |
| 8.3.19.0                       | Introduced on the S4820T.                 |
| 8.3.11.1                       | Introduced on the Z9000.                  |
| 8.3.7.0                        | Introduced on the S4810.                  |
| 7.6.1.0                        | Introduced on the S-Series.               |
| 7.5.1.0                        | Introduced on the C-Series.               |
| <b>E-Series legacy command</b> |                                           |

**Usage Information**

When the number of messages reach the limit you set with the `logging history size` command, older messages are deleted as newer ones are added to the table.

**Related Commands**

- [show logging](#) — displays information logged to the history buffer.

## logging monitor

Specify which messages are logged to Telnet applications.

**Syntax**

`logging monitor [level]`

To disable logging to terminal connections, use the `no logging monitor` command.

**Parameters**

*level*

Indicate a value from 0 to 7 or enter one of the following parameters: `emergencies`, `alerts`, `critical`, `errors`, `warnings`, `notifications`, `informational`, or `debugging`. The default is **7** or **debugging**.

**Defaults**

**7** or **debugging**

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

|--------------------------------|-----------------------------------------------------------------------------------------------------|
| <b>9.8(0.0P2)</b>              | Introduced on the S3048-ON.                                                                         |
| <b>9.7(0.0)</b>                | Introduced on the S6000-ON.                                                                         |
| <b>9.2(1.0)</b>                | Introduced on the Z9500.                                                                            |
| <b>9.2(0.0)</b>                | Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only. |
| <b>9.0.2.0</b>                 | Introduced on the S6000.                                                                            |
| <b>8.3.19.0</b>                | Introduced on the S4820T.                                                                           |
| <b>8.3.11.1</b>                | Introduced on the Z9000.                                                                            |
| <b>8.3.7.0</b>                 | Introduced on the S4810.                                                                            |
| <b>7.6.1.0</b>                 | Introduced on the S-Series.                                                                         |
| <b>7.5.1.0</b>                 | Introduced on the C-Series.                                                                         |
| <b>E-Series legacy command</b> |                                                                                                     |

**Related Commands**

- [default logging monitor](#) — returns the logging monitor parameters to the default setting.

## logging on

Specify that debug or error messages are asynchronously logged to multiple destinations, such as the logging buffer, Syslog server, or terminal lines.

**Syntax** `logging on`  
 To disable logging to logging buffer, Syslog server and terminal lines, use the `no logging on` command.

**Defaults** Enabled.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                               |
|-------------------|-------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.               |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.               |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                  |
| <b>9.0.2.0</b>    | Introduced on the S6000.                  |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                 |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                  |
| <b>8.3.7.0</b>    | Introduced on the S4810.                  |

| Version | Description                 |
|---------|-----------------------------|
| 7.6.1.0 | Introduced on the S-Series. |
| 7.5.1.0 | Introduced on the C-Series. |

**E-Series legacy command**

**Usage Information**

When you use the `no logging on` command, messages are logged only to the console.

**Related Commands**

- [logging](#) — enable logging to the Syslog server.
- [logging buffered](#) — set the logging buffered parameters.
- [logging console](#) — set the logging console parameters.
- [logging monitor](#) — set the logging parameters for the terminal connections.

## logging source-interface

Specify that the IP address of an interface is the source IP address of Syslog packets sent to the Syslog server.

**Syntax**

`logging source-interface interface`

To disable this command and return to the default setting, use the `no logging source-interface` command.

**Parameters**

**interface**

Enter the following keywords and slot/port or number information:

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
- For the Management interface, enter the keyword `ManagementEthernet` then the slot/port information.
- For a port-channel interface, enter the keywords `port-channel` then the port-channel ID.
- For a Null interface, enter the keyword `null` then the Null interface number.
- For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults**

Not configured.

**Command Modes**

| Version  | Description                                                                                         |
|----------|-----------------------------------------------------------------------------------------------------|
| 9.2(0.0) | Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only. |
| 9.0.2.0  | Introduced on the S6000.                                                                            |
| 8.3.19.0 | Introduced on the S4820T.                                                                           |
| 8.3.11.1 | Introduced on the Z9000.                                                                            |
| 8.3.7.0  | Introduced on the S4810.                                                                            |
| 8.5.1.0  | Added support for 4-port 40G line cards on the E-Series.                                            |
| 7.6.1.0  | Introduced on the S-Series.                                                                         |
| 7.5.1.0  | Introduced on the C-Series.                                                                         |

#### E-Series legacy command

#### Usage Information

Syslog messages contain the IP address of the interface used to egress the router. By configuring the `logging source-interface` command, the Syslog packets contain the IP address of the interface configured.

#### Related Commands

- [logging](#) — enables logging to the Syslog server.

## logging synchronous

Synchronize unsolicited messages and Dell EMC Networking OS output.

#### Syntax

```
logging synchronous [level level | all] [limit number-of-buffers]
```

To disable message synchronization, use the `no logging synchronous [level level | all] [limit number-of-buffers]` command.

#### Parameters

|                                       |                                                                                                                                                                                             |
|---------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>all</b>                            | Enter the keyword <code>all</code> to ensure that all levels are printed asynchronously.                                                                                                    |
| <b>level <i>level</i></b>             | Enter the keyword <code>level</code> then a number as the severity level. A high number indicates a low severity level and vice versa. The range is from 0 to 7. The default is <b>2</b> .  |
| <b>all</b>                            | Enter the keyword <code>all</code> to turn off all.                                                                                                                                         |
| <b>limit <i>number-of-buffers</i></b> | Enter the keyword <code>limit</code> then the number of buffers to be queued for the terminal after which new messages are dropped. The range is from 20 to 300. The default is <b>20</b> . |

#### Defaults

Disabled. If enabled without the `level` or `number-of-buffers` options specified, `level = 2` and `number-of-buffers = 20` are the defaults.

#### Command Modes

LINE

#### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                               |
|-----------|-------------------------------------------|
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0) | Introduced on the S3148.                  |
| 9.10(0.0) | Introduced on the S6100-ON.               |
| 9.8(2.0)  | Introduced on the S3100 series.           |
| 9.8(1.0)  | Introduced on the Z9100-ON.               |

| Version                        | Description                 |
|--------------------------------|-----------------------------|
| <b>9.8(0.0P5)</b>              | Introduced on the S4048-ON. |
| <b>9.8(0.0P2)</b>              | Introduced on the S3048-ON. |
| <b>9.7(0.0)</b>                | Introduced on the S6000-ON. |
| <b>9.2(1.0)</b>                | Introduced on the Z9500.    |
| <b>9.0.2.0</b>                 | Introduced on the S6000.    |
| <b>8.3.19.0</b>                | Introduced on the S4820T.   |
| <b>8.3.11.1</b>                | Introduced on the Z9000.    |
| <b>8.3.7.0</b>                 | Introduced on the S4810.    |

| <b>7.5.1.0</b>                 | Introduced on the C-Series. |
| <b>E-Series legacy command</b> |                             |

### Usage Information

When you enable `logging synchronous`, unsolicited messages appear between software prompts and outputs. Only the messages with a severity at or below the set level are sent to the console.

If the message queue limit is reached on a terminal line and messages are discarded, a system message appears on that terminal line. Messages may continue to appear on other terminal lines.

### Related Commands

- [logging on](#) — enables logging.

## logging trap

Specify which messages are logged to the Syslog server based the message severity.

### Syntax

```
logging trap [level]
```

To return to the default values, use the default `logging trap` command.

To disable logging, use the `no logging trap` command.

### Parameters

**level** Indicate a value from 0 to 7 or enter one of the following parameters: `emergencies`, `alerts`, `critical`, `errors`, `warnings`, `notifications`, `informational`, or `debugging`. The default is **6** or **informational**.

### Defaults

**6** or **informational**

| <b>9.8(2.0)</b>   | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.               |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.               |

| Version  | Description                      |
|----------|----------------------------------|
| 9.2(1.0) | Introduced on the Z9500.         |
| 9.0.2.0  | Introduced on the S6000.         |
| 8.3.19.0 | Introduced on the S4820T.        |
| 8.3.11.1 | Introduced on the Z9000.         |
| 8.3.7.0  | Introduced on the S4810.         |
| 7.6.1.0  | Introduced on the S-Series, S55. |
| 7.5.1.0  | Introduced on the C-Series.      |

#### E-Series legacy command

#### Usage Information

To block a type of message parameter, set the logging trap level to a lower number. For example, to block severity messages at level 6, set the level to 5.

#### Related Commands

- [logging](#) — enables the logging to another device.
- [logging on](#) — enables logging.

## logging version

Displays syslog messages in a RFC 3164 or RFC 5424 format.

**Syntax** `logging version {0|1}`

**Defaults** 0

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                             |
|------------|---------------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.               |
| 9.10(0.0)  | Introduced on the S3148.                                |
| 9.10(0.0)  | Introduced on the S6100-ON.                             |
| 9.8(2.0)   | Introduced on the S3100 series.                         |
| 9.8(1.0)   | Introduced on the Z9100-ON.                             |
| 9.8(0.0P5) | Introduced on the S4048-ON.                             |
| 9.8(0.0P2) | Introduced on the S3048-ON.                             |
| 9.7(0.0)   | Introduced on the S6000-ON.                             |
| 9.5(0.1)   | Introduced on the Z9500.                                |
| 9.5(0.0)   | Introduced on the S4810, S4820T, S6000, Z9000, and MXL. |

#### Usage Information

To display syslog messages in a RFC 3164 or RFC 5424 format, use the **log version** command in configuration mode. By default, the system log version is set to **0**.

The following describes the two supported log messages formats:

- 0 – Displays syslog messages format as described in RFC 3164, The BSD syslog Protocol
- 1 – Displays SYSLOG message format as described in RFC 5424, The Syslog Protocol

## Example

```
DellEMC(conf) #logging version ?
<0-1> Select syslog version (default = 0)
DellEMC(conf) #logging version 1
```

## show logging

Display the logging settings and system messages logged to the internal buffer of the switch.

**Syntax** `show logging [number | history [reverse][number] | reverse [number] | summary]`

|                   |                |                                                                                                                                                           |
|-------------------|----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Parameters</b> | <b>number</b>  | (OPTIONAL) Enter the number of messages displayed in the output. The range is from 1 to 65535.                                                            |
|                   | <b>history</b> | (OPTIONAL) Enter the keyword <code>history</code> to view only information in the Syslog history table.                                                   |
|                   | <b>reverse</b> | (OPTIONAL) Enter the keyword <code>reverse</code> to view the Syslog messages in FIFO (first in, first out) order.                                        |
|                   | <b>summary</b> | (OPTIONAL) Enter the keyword <code>summary</code> to view a table showing the number of messages per type and per slot. Slots *7* and *8* represent RPMs. |

  - EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                                                                                         |
|-------------------|-----------------------------------------------------------------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON.                                                           |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                                                                            |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.                                                                         |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.                                                                     |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.                                                                         |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.                                                                         |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                                                                         |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.                                                                         |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                                                                            |
| <b>9.2(0.0)</b>   | Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only. |
| <b>9.0.2.0</b>    | Introduced on the S6000.                                                                            |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                                                                           |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                                                                            |
| <b>8.3.7.0</b>    | Introduced on the S4810.                                                                            |
| <b>7.6.1.0</b>    | Introduced on the S-Series.                                                                         |
| <b>7.5.1.0</b>    | Introduced on the C-Series.                                                                         |

**E-Series legacy command**

## Example (Partial)

```
DellEMC#show logging
Syslog logging: enabled
```

```

Console logging: level debugging
Monitor logging: level debugging
Buffer logging: level debugging, 97 Messages Logged, Size (40960
bytes)
Trap logging: level informational
Logging to 172.16.1.162
Logging to 10.10.10.4
Logging to 10.1.2.4
Logging to 172.31.1.4
Logging to 133.33.33.4
Feb 18 01:17:32: %SYSTEM:CP %SEC-5-LOGOUT: Exec session is terminated
for user admin on line vty0 (10.16.127.145)
Feb 18 01:17:31: %SYSTEM:CP %IFMGR-5-ASTATE_DN: Changed interface Admin

Feb 18 00:39:38: %SYSTEM:CP %SYS-5-CONFIG_I: Configured from console

```

### Example (History)

```

DellEMC#show logging history
Syslog History Table: 1 maximum table entries,
saving level Warnings or higher
SNMP notifications not Enabled
Feb 18 01:16:57: %SYSTEM:CP %SEC-3-AUTHENTICATION_ENABLE_SUCCESS: Enable
password authentication success on vty0 (10.16.127.145)
DellEMC#

```

## show logging auditlog

Displays an audit log.

**Syntax** `show logging auditlog`

**Defaults** None

**Command Modes** EXEC

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                             |
|------------|---------------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.               |
| 9.10(0.0)  | Introduced on the S3148.                                |
| 9.10(0.0)  | Introduced on the S6100-ON.                             |
| 9.8(2.0)   | Introduced on the S3100 series.                         |
| 9.8(1.0)   | Introduced on the Z9100-ON.                             |
| 9.8(0.0P5) | Introduced on the S4048-ON.                             |
| 9.8(0.0P2) | Introduced on the S3048-ON.                             |
| 9.7(0.0)   | Introduced on the S6000-ON.                             |
| 9.5(0.1)   | Introduced on the Z9500.                                |
| 9.5(0.0)   | Introduced on the S4810, S4820T, S6000, Z9000, and MXL. |

### Example

```
DellEMC(conf)# show logging auditlog
```

### Related Commands

- [clear logging auditlog](#) — clear the audit log.

## show logging driverlog stack-unit

Display the driver log for the specified hardware component.

**Syntax** `show logging driverlog {cp | rp | linecard slot-id}`

**Parameters**

|                         |                                                                                                                                                                                 |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>cp</b>               | Enter the keyword <code>cp</code> to display the driver log for the Control Processor on the switch.                                                                            |
| <b>rp</b>               | Enter the keyword <code>rp</code> to display the driver log for the Route Processor on the switch.                                                                              |
| <b>linecard slot-id</b> | Enter the <code>linecard slot-id</code> parameters to specify the line-card ports for which you want to display the driver log. The range of line-card slot IDs is from 0 to 2. |

**defaults** none

**Command Modes**

- EXEC
- EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                               |
|-----------|-------------------------------------------|
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0) | Introduced on the S3148.                  |

10:Task(tUsrRoot): [35]SS DRV DEBUG: port:32 isfanout:0
```

### Usage Information

This command displays internal software driver information, which may be useful during troubleshooting switch initialization errors, such as a downed Port-Pipe.

## show logging kernellog

Display the kernel log for the specified hardware component.

|                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |           |                                                                                                      |           |                                                                                                    |                         |                                                                                                                                                                                 |

| <b>Command History</b>  | This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> .                                                                                                                                                                                                                                                                                                                                                                 |           |                                                                                                      |           |                                                                                                    |                         |                                                                                                                                                                                 |

The following is a list of the Dell Networking OS version history for this command.

| Version         | Description                 |
|-----------------|-----------------------------|
| <b>9.7(0.0)</b> | Introduced on the S6000-ON. |
| <b>9.2(1.0)</b> | Introduced on the Z9500.    |
| <b>8.3.19.0</b> | Introduced on the S4820T.   |
| <b>8.3.11.1</b> | Introduced on the Z9000.    |
| <b>8.3.7.0</b>  | Introduced on the S4810.    |
| <b>7.6.1.0</b>  | Introduced on the S-Series. |

```

**Usage Information**

This command displays internal software driver information, which may be useful during troubleshooting switch initialization errors, such as a downed port pipe.

## terminal monitor

Configure the Dell EMC Networking OS to display messages on the monitor/terminal.

**Syntax** terminal monitor

To return to default settings, use the `terminal no monitor` command.

**defaults** Disabled.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                               |
|-----------|-------------------------------------------|
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON. |

| <b>Version</b>                 | <b>Description</b>                                                                                  |
|--------------------------------|-----------------------------------------------------------------------------------------------------|
| <b>9.10(0.0)</b>               | Introduced on the S3148.                                                                            |
| <b>9.10(0.0)</b>               | Introduced on the S6100-ON.                                                                         |
| <b>9.8(2.0)</b>                | Introduced on the S3100 series.                                                                     |
| <b>9.8(1.0)</b>                | Introduced on the Z9100-ON.                                                                         |
| <b>9.8(0.0P5)</b>              | Introduced on the S4048-ON.                                                                         |
| <b>9.8(0.0P2)</b>              | Introduced on the S3048-ON.                                                                         |
| <b>9.7(0.0)</b>                | Introduced on the S6000-ON.                                                                         |
| <b>9.2(1.0)</b>                | Introduced on the Z9500.                                                                            |
| <b>9.2(0.0)</b>                | Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only. |
| <b>9.0.2.0</b>                 | Introduced on the S6000.                                                                            |
| <b>8.3.19.0</b>                | Introduced on the S4820T.                                                                           |
| <b>8.3.11.1</b>                | Introduced on the Z9000.                                                                            |
| <b>8.3.7.0</b>                 | Introduced on the S4810.                                                                            |
| <b>7.6.1.0</b>                 | Introduced on the S-Series.                                                                         |
| <b>7.5.1.0</b>                 | Introduced on the C-Series.                                                                         |
| <b>E-Series legacy command</b> |                                                                                                     |

|     |                           |                                        |                                     |                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----|---------------------------|----------------------------------------|-------------------------------------|---------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|     |                           |                                        |                                     |                                 | suppressed by the agent until the current throttling period expires. At the end of a throttling period, one notification-event should be generated if any configuration changes occurred since the start of the throttling period. In such a case, another throttling period is started right away. An NMS should periodically check the value of entLastChangeTime to detect any missed entConfigChange notification-events, e.g., due to throttling or transmission loss. |

# Storm Control

The Dell EMC Networking OS storm control feature allows you to limit or suppress traffic during a traffic storm (Broadcast/Unknown Unicast Rate Limiting or Multicast on the C-Series and S-Series).

Storm control is supported on Dell EMC Networking OS.

## Important Points to Remember

- Interface commands can only be applied on physical interfaces (virtual local area networks [VLANs] and link aggregation group [LAG] interfaces are not supported).
  - An INTERFACE-level command only supports storm control configuration on ingress.
  - An INTERFACE-level command overrides any CONFIGURATION-level ingress command for that physical interface, if both are configured.
  - You can apply the CONFIGURATION-level storm control commands at ingress or egress and are supported on all physical interfaces.
  - When storm control is applied on an interface, the percentage of storm control applied is calculated based on the advertised rate of the line card. It is not based on the speed setting for the line card.
  - Do not apply per-VLAN quality of service (QoS) on an interface that has storm control enabled (either on an interface or globally).
  - When you enable broadcast storm control on an interface or globally on ingress, and DSCP marking for a DSCP value 1 is configured for the data traffic, the traffic goes to queue 1 instead of queue 0.
  - Similarly, if you enable unicast storm control on an interface or globally on ingress, and DSCP marking for a DSCP value 2 is configured for the data traffic, the traffic goes to queue 2 instead of queue 0.
- i** **NOTE:** Bi-directional traffic (unknown unicast and broadcast) along with egress storm control causes the configured traffic rates split between the involved ports. The percentage of traffic that each port receives after the split is not predictable. These ports can be in the same/different port pipes or the same/different line cards.
- i** **NOTE:** The policy discard drop counters are common across storm-control drops, ACL drops and QoS drops. If your configuration includes ACL and QoS, those drops are also computed and displayed in the policy discard drops counter field along with storm-control drops. The packets dropped by the storm control feature can be monitored by viewing the value of the Policy Discard Drops field of the output of the `show hardware linecard linecard-number drops` command.

### Topics:

- [show storm-control broadcast](#)
- [show storm-control multicast](#)
- [show storm-control unknown-unicast](#)
- [storm-control broadcast \(Configuration\)](#)
- [storm-control broadcast \(Interface\)](#)
- [storm-control PFC/LLFC](#)
- [storm-control multicast \(Configuration\)](#)
- [storm-control multicast \(Interface\)](#)
- [storm-control unknown-unicast \(Configuration\)](#)
- [storm-control unknown-unicast \(Interface\)](#)

## show storm-control broadcast

Display the storm control broadcast configuration.

**Syntax**                    `show storm-control broadcast [interface]`

|                        |                                                                                                                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                     |

| <b>Command History</b> | This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> . |                                                                                                                                                                                                                                                                                                                                                                                                                     |

| <b>Version</b>    | <b>Description</b>                                       |
|-------------------|----------------------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON.                |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                                 |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.                              |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.                          |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.                              |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.                              |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                              |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.                              |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                                 |
| <b>9.0.2.0</b>    | Introduced on the S6000.                                 |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                                |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                                 |
| <b>8.5.1.0</b>    | Added support for 4-port 40G line cards on the E-Series. |
| <b>8.3.7.0</b>    | Introduced on the S4810.                                 |
| <b>7.6.1.0</b>    | Introduced on the S-Series.                              |
| <b>7.5.1.0</b>    | Introduced on the C-Series.                              |
| <b>6.5.1.0</b>    | Introduced on the E-Series.                              |

## show storm-control multicast

Display the storm control multicast configuration.

|                   |                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-------------------|--------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>     | <code>show storm-control multicast [<i>interface</i>]</code> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Parameters</b> | <b><i>interface</i></b>                                      | (OPTIONAL) Enter one of the following interfaces to display the interface specific storm control configuration: <ul style="list-style-type: none"> <li>• For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information.</li> <li>• For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information.</li> <li>• For a port channel interface, enter the keywords <code>port-channel</code> then a number.</li> </ul> |
| <b>Defaults</b>   | None                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

- Command Modes**
- EXEC
  - EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                              |
|------------|----------------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.                |
| 9.10(0.0)  | Introduced on the S3148.                                 |
| 9.10(0.0)  | Introduced on the S6100-ON.                              |
| 9.8(2.0)   | Introduced on the S3100 series.                          |
| 9.8(1.0)   | Introduced on the Z9100-ON.                              |
| 9.8(0.0P5) | Introduced on the S4048-ON.                              |
| 9.8(0.0P2) | Introduced on the S3048-ON.                              |
| 9.7(0.0)   | Introduced on the S6000-ON.                              |
| 9.2(1.0)   | Introduced on the Z9500.                                 |
| 9.0.2.0    | Introduced on the S6000.                                 |
| 8.3.19.0   | Introduced on the S4820T.                                |
| 8.3.11.1   | Introduced on the Z9000.                                 |
| 8.5.1.0    | Added support for 4-port 40G line cards on the E-Series. |
| 8.3.7.0    | Introduced on the S4810.                                 |
| 7.6.1.0    | Introduced on the C-Series and S-Series.                 |

**Example**

```
DellEMC# show storm-control multicast Tengigabitethernet 1/1
Multicast storm control configuration
Interface Direction Packets/Second

Te 1/1 Ingress 5
DellEMC#
```

## show storm-control unknown-unicast

Display the storm control unknown-unicast configuration.

**Syntax** `show storm-control unknown-unicast [interface]`

**Parameters** *interface* (OPTIONAL) Enter one of the following interfaces to display the interface specific storm control configuration:

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a port channel interface, enter the keywords `port-channel` then a number.

**Defaults** None

**Command Modes** • EXEC

- EXEC Privilege

## Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                                                                         |
|------------|-----------------------------------------------------------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.                                                           |
| 9.10(0.0)  | Introduced on the S3148.                                                                            |
| 9.10(0.0)  | Introduced on the S6100-ON.                                                                         |
| 9.8(2.0)   | Introduced on the S3100 series.                                                                     |
| 9.8(1.0)   | Introduced on the Z9100-ON.                                                                         |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                                                         |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                                                         |
| 9.7(0.0)   | Introduced on the S6000-ON.                                                                         |
| 9.2(1.0)   | Introduced on the Z9500.                                                                            |
| 9.0.2.0    | Introduced on the S6000.                                                                            |
| 9.2(0.0)   | Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only. |
| 8.3.19.0   | Introduced on the S4820T.                                                                           |
| 8.3.11.1   | Introduced on the Z9000.                                                                            |
| 8.5.1.0    | Added support for 4-port 40G line cards on the E-Series.                                            |
| 8.3.7.0    | Introduced on the S4810.                                                                            |
| 7.6.1.0    | Introduced on the S-Series.                                                                         |
| 7.5.1.0    | Introduced on the C-Series.                                                                         |
| 6.5.1.0    | Introduced on the E-Series.                                                                         |

## storm-control broadcast (Configuration)

Configure the percentage of broadcast traffic allowed in the network.

|                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>        | <code>storm-control broadcast [packets_per_second in]</code><br>To disable broadcast rate-limiting, use the <code>no storm-control broadcast [packets_per_second in]</code> command.<br><b>storm-control broadcast</b> [percentage decimal_value in   out] [wred-profile name] [packets_per_second in]<br>To disable broadcast rate-limiting, use the <b>storm-control broadcast</b> [percentage decimal_value in   out] [wred-profile name] [packets_per_second in] command.                                                  |
| <b>Parameters</b>    | <p><b>percentage decimal_value in   out</b> Enter the percentage of broadcast traffic allowed in or out of the network. Optionally, you can designate a decimal value percentage, for example, 55.5%. The decimal range is from .1 to .9.</p> <p><b>wred-profile name</b> Enter the keyword <b>wred-profile</b> followed by the profile name to designate a wred-profile.</p> <p><b>packets_per_second in</b> Enter the packets per second of broadcast traffic allowed into the network. The range is from 0 to 33554368.</p> |

## Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                                                                         |
|------------|-----------------------------------------------------------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.                                                           |
| 9.10(0.0)  | Introduced on the S3148.                                                                            |
| 9.10(0.0)  | Introduced on the S6100-ON.                                                                         |
| 9.8(2.0)   | Introduced on the S3100 series.                                                                     |
| 9.8(1.0)   | Introduced on the Z9100-ON.                                                                         |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                                                         |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                                                         |
| 9.7(0.0)   | Introduced on the S6000-ON.                                                                         |
| 9.2(1.0)   | Introduced on the Z9500.                                                                            |
| 9.2(0.0)   | Introduced on the M I/O Aggregator. This command is supported in Programmable-MUX (PMUX) mode only. |
| 8.3.19.0   | Introduced on the S4820T.                                                                           |
| 8.3.11.1   | Introduced on the Z9000.                                                                            |
| 8.3.7.0    | Introduced on the S4810.                                                                            |
| 7.6.1.0    | Introduced on the S-Series.                                                                         |
| 7.5.1.0    | Introduced on the C-Series.                                                                         |
| 7.4.1.0    | E-Series Only: Added the <code>percentage decimal value</code> option.                              |
| 6.5.1.0    | Introduced on the E-Series.                                                                         |

## Usage Information

Broadcast storm control is valid on Layer 2/Layer 3 interfaces only. Layer 2 broadcast traffic is treated as unknown-unicast traffic.

# storm-control broadcast (Interface)

Configure the percentage of broadcast traffic allowed on an interface (ingress only).

## Syntax

```
storm-control broadcast [packets_per_second in]
```

To disable broadcast storm control on the interface, use the `no storm-control broadcast [packets_per_second in]` command.

## Parameters

***packets\_per\_second in*** Enter the packets per second of broadcast traffic allowed into the network. The range is from 0 to 33554368.

## Defaults

none

## Command Modes

INTERFACE (*conf-if-interface-slot/port*)

## Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                               |
|-----------|-------------------------------------------|
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0) | Introduced on the S3148.                  |
| 9.10(0.0) | Introduced on the S6100-ON.               |
| 9.8(2.0)  | Introduced on the S3100 series.           |

| Version    | Description                                                            |
|------------|------------------------------------------------------------------------|
| 9.8(1.0)   | Introduced on the Z9100-ON.                                            |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                            |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                            |
| 9.7(0.0)   | Introduced on the S6000-ON.                                            |
| 9.2(1.0)   | Introduced on the Z9500.                                               |
| 9.0.2.0    | Introduced on the S6000.                                               |
| 8.3.19.0   | Introduced on the S4820T.                                              |
| 8.3.11.1   | Introduced on the Z9000.                                               |
| 8.3.7.0    | Introduced on the S4810.                                               |
| 7.6.1.0    | Introduced on the S-Series.                                            |
| 7.5.1.0    | Introduced on the C-Series.                                            |
| 7.4.1.0    | E-Series Only: Added the <code>percentage decimal value</code> option. |
| 6.5.1.0    | Introduced on the E-Series.                                            |

## storm-control PFC/LLFC

Shut down the port if it receives the PFC/LLFC frames more than the configured rate.

|                        |                                                                                                                                                           |                                                                                                                        |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | <code>storm-control pfc-llfc [pps]in shutdown</code>                                                                                                      |                                                                                                                        |
| <b>Parameters</b>      | <b><i>pfc-llfc in</i></b>                                                                                                                                 | Enter the keyword <i>pfc-llfc</i> to get the flow control traffic. The range is from 0 to 33554368 packets per second. |
|                        | <b>shutdown</b>                                                                                                                                           | Enter the keyword <i>shutdown</i> to shut down the port when the rate exceeds.                                         |
| <b>Defaults</b>        | none                                                                                                                                                      |                                                                                                                        |
| <b>Command Modes</b>   | INTERFACE ( <i>conf-if-interface-slot/port</i> )                                                                                                          |                                                                                                                        |
| <b>Command History</b> | This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell Networking OS Command Line Reference Guide</i> . |                                                                                                                        |
|                        | <b>Version</b>                                                                                                                                            | <b>Description</b>                                                                                                     |
|                        | 9.9(0.0)                                                                                                                                                  | Introduced on the C9010, S4810, S4820T, S5000, S6000, Z9500, S3048-ON, S4048-ON, and S6000-ON.                         |

**Usage Information**  **NOTE:** PFC/LLFC storm control enabled interfaces disable the interfaces if it receives continuous PFC/LLFC packets. It can be a result of a faulty NIC/Switch that sends spurious PFC/LLFC packets.

## storm-control multicast (Configuration)

Configure the packets per second (pps) of multicast traffic allowed into the C-Series and S-Series networks only.

|                   |                                                                                                                                                 |                                                                                                              |
|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>     | <code>storm-control multicast packets_per_second in</code>                                                                                      |                                                                                                              |
|                   | To disable storm-control for multicast traffic into the network, use the <code>no storm-control multicast packets_per_second in</code> command. |                                                                                                              |
| <b>Parameters</b> | <b><i>packets_per_second in</i></b>                                                                                                             | Enter the packets per second of multicast traffic allowed into the network. The range is from 0 to 33554368. |

| <b>Defaults</b>          | none                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                |                    |                  |                                           |                  |                          |                  |                             |                 |                                 |                 |                             |                   |                             |                   |                             |                 |                             |                 |                          |                |                          |                 |                                                                                                     |                 |                           |                 |                          |                |                          |                |                                          |

| <b>7.6.1.0</b>           | Introduced on the C-series and S-Series.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                |                    |                  |                                           |                  |                          |                  |                             |                 |                                 |                 |                             |                   |                             |                   |                             |                 |                             |                 |                          |                |                          |                 |                                                                                                     |                 |                           |                 |                          |                |                          |                |                                          |
| <b>Usage Information</b> | Broadcast traffic (all 0xFs) should be counted against the broadcast storm control meter, not against the multicast storm control meter. It is possible, however, that some multicast control traffic may get dropped when storm control thresholds are exceeded.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                |                    |                  |                                           |                  |                          |                  |                             |                 |                                 |                 |                             |                   |                             |                   |                             |                 |                             |                 |                          |                |                          |                 |                                                                                                     |                 |                           |                 |                          |                |                          |                |                                          |

## storm-control multicast (Interface)

Configure the percentage of multicast traffic allowed on an C-Series or S-Series interface (ingress only) network only.

| <b>Syntax</b>          | <code>storm-control multicast packets_per_second in</code>                                                                                                                                                                                                                                                                                                                                                                                         |                |                    |                  |                                           |                  |                          |                  |                             |                 |                                 |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------|--------------------|------------------|-------------------------------------------|------------------|--------------------------|------------------|-----------------------------|-----------------|---------------------------------|
|                        | To disable multicast storm control on the interface, use the <code>no storm-control multicast packets_per_second in</code> command.                                                                                                                                                                                                                                                                                                                |                |                    |                  |                                           |                  |                          |                  |                             |                 |                                 |
| <b>Parameters</b>      | <b><i>packets_per_second in</i></b> Enter the packets per second of broadcast traffic allowed into the network. The range is from 0 to 33554368.                                                                                                                                                                                                                                                                                                   |                |                    |                  |                                           |                  |                          |                  |                             |                 |                                 |
| <b>Defaults</b>        | none                                                                                                                                                                                                                                                                                                                                                                                                                                               |                |                    |                  |                                           |                  |                          |                  |                             |                 |                                 |

| 9.2(1.0)   | Introduced on the Z9500.                 |
| 9.0.2.0    | Introduced on the S6000.                 |
| 8.3.19.0   | Introduced on the S4820T.                |
| 8.3.11.1   | Introduced on the Z9000.                 |
| 8.3.7.0    | Introduced on the S4810.                 |
| 7.6.1.0    | Introduced on the C-series and S-Series. |

## storm-control unknown-unicast (Configuration)

Configure the percentage of unknown-unicast traffic allowed in or out of the network.

**Syntax** `storm-control unknown-unicast [packets_per_second in]`  
 To disable storm control for unknown-unicast traffic, use the `no storm-control unknown-unicast [packets_per_second in]` command.

**Parameters** `packets_per_second in` Enter the packets per second of broadcast traffic allowed into the network. The range is from 0 to 33554368.

**Defaults** none

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |
| 7.6.1.0    | Introduced on the S-Series.               |
| 7.5.1.0    | Introduced on the C-Series.               |

| Version | Description                                                            |
|---------|------------------------------------------------------------------------|
| 7.4.1.0 | E-Series Only: Added the <code>percentage decimal value</code> option. |
| 6.5.1.0 | Introduced on the E-Series.                                            |

**Usage Information** Unknown Unicast Storm-Control is valid for Layer 2 and Layer 2/Layer 3 interfaces.

## storm-control unknown-unicast (Interface)

Configure percentage of unknown-unicast traffic allowed on an interface (ingress only).

**Syntax** `storm-control unknown-unicast [percentage decimal_value in] | [wred-profile name]] [packets_per_second in]`

To disable unknown-unicast storm control on the interface, use the `no storm-control unknown-unicast [percentage decimal_value in] | [wred-profile name]] [packets_per_second in]` command.

### Parameters

|                                            |                                                                                                                                                                                                                                                                                                                                                                                              |
|--------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>percentage decimal_value [in   out]</b> | E-Series Only: Enter the percentage of broadcast traffic allowed in or out of the network. Optionally, you can designate a decimal value percentage, for example, 55.5%.<br><br>The percentage is from 0 to 100: <ul style="list-style-type: none"> <li>0% blocks all related traffic.</li> <li>100% allows all traffic into the interface.</li> </ul> The decimal range is from 0.1 to 0.9. |
| <b>wred-profile name</b>                   | E-Series Only: (Optionally) Enter the keywords <code>wred-profile</code> followed by the profile name to designate a wred-profile.                                                                                                                                                                                                                                                           |
| <b>packets_per_second in</b>               | C-Series and S-Series Only: Enter the packets per second of broadcast traffic allowed into the network. The range is from 0 to 33554431.                                                                                                                                                                                                                                                     |

**Defaults** none

**Command Modes** INTERFACE (*conf-if-interface-slot/port*)

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

# Spanning Tree Protocol (STP)

The commands in this section configure and monitor the IEEE 802.1d spanning tree protocol (STP) and are supported on the Dell EMC Networking switch/routing platform.

## bpdu-destination-mac-address

Use the Provider Bridge Group address in Spanning Tree or GVRP PDUs.

|                        |                                                                                                                                                               |                                                                                                                 |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | <code>bpdu-destination-mac-address [stp   gvrp] provider-bridge-group</code>                                                                                  |                                                                                                                 |
| <b>Parameters</b>      | <b>xstp</b>                                                                                                                                                   | Force STP, RSTP, and MSTP to use the Provider Bridge Group address as the destination MAC address in its BPDUs. |
|                        | <b>gvrp</b>                                                                                                                                                   | Forces GVRP to use the Provider Bridge GVRP Address as the destination MAC address in its PDUs.                 |
| <b>Defaults</b>        | The destination MAC address for BPDUs is the Bridge Group Address.                                                                                            |                                                                                                                 |
| <b>Command Modes</b>   | CONFIGURATION                                                                                                                                                 |                                                                                                                 |
| <b>Command History</b> | This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> . |                                                                                                                 |

| Version           | Description                               |
|-------------------|-------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.               |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.               |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                  |
| <b>9.0.2.0</b>    | Introduced on the S6000.                  |

| Version         | Description                              |
|-----------------|------------------------------------------|
| <b>8.3.19.0</b> | Introduced on the S4820T.                |
| <b>8.3.11.1</b> | Introduced on the S4810.                 |
| <b>8.2.1.0</b>  | Introduced on the C-Series and S-Series. |

## bridge-priority

Set the bridge priority of the switch in an IEEE 802.1D spanning tree.

**Syntax** `bridge-priority {priority-value | primary | secondary}`  
 To return to the default value, use the `no bridge-priority` command.

**Parameters**

- priority-value** Enter a number as the bridge priority value. The range is from 0 to 65535. The default is **32768**.
- primary** Enter the keyword `primary` to designate the bridge as the root bridge.
- secondary** Enter the keyword `secondary` to designate the bridge as a secondary root bridge.

**Defaults** `priority-value = 32768`

**Command Modes** SPANNING TREE (The prompt is "config-stp".)

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                               |
|-------------------|-------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.               |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.               |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                  |
| <b>9.0.2.0</b>    | Introduced on the S6000.                  |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                 |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                  |
| <b>8.3.7.0</b>    | Introduced on the S4810.                  |
| <b>7.7.1.0</b>    | Introduced on the S-Series.               |
| <b>7.5.1.0</b>    | Introduced on the C-Series.               |
| <b>6.2.1.1</b>    | Introduced on the E-Series.               |

# debug spanning-tree

Enable debugging of the spanning tree protocol and view information on the protocol.

**Syntax** `debug spanning-tree {stp-id [all | bpdu | config | events | exceptions | general | root] | protocol}`

To disable debugging, use the `no debug spanning-tree` command.

|                   |                 |                                                                                                                       |
|-------------------|-----------------|-----------------------------------------------------------------------------------------------------------------------|
| <b>Parameters</b> | <b>stp-id</b>   | Enter zero (0). The switch supports one spanning tree group with a group ID of 0.                                     |
|                   | <b>protocol</b> | Enter the keyword for the type of STP to debug, either <code>mstp</code> , <code>pvst</code> , or <code>rstp</code> . |
|                   | <b>all</b>      | (OPTIONAL) Enter the keyword <code>all</code> to debug all spanning tree operations.                                  |
|                   | <b>bpdu</b>     | (OPTIONAL) Enter the keyword <code>bpdu</code> to debug bridge protocol data units.                                   |
|                   | <b>config</b>   | (OPTIONAL) Enter the keyword <code>config</code> to debug configuration information.                                  |
|                   | <b>events</b>   | (OPTIONAL) Enter the keyword <code>events</code> to debug STP events.                                                 |
|                   | <b>general</b>  | (OPTIONAL) Enter the keyword <code>general</code> to debug general STP operations.                                    |
|                   | <b>root</b>     | (OPTIONAL) Enter the keyword <code>root</code> to debug STP root transactions.                                        |

**Command Modes** EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |
| 7.7.1.0    | Introduced on the S-Series.               |
| 7.5.1.0    | Introduced on the C-Series.               |
| 6.2.1.1    | Introduced on the E-Series.               |

**Usage Information** When you enable `debug spanning-tree bpdu` for multiple interfaces, the software only sends information on BPDUs for the last interface specified.

**Related Commands**

- [protocol spanning-tree](#) — enters SPANNING TREE mode on the switch.

# description

Enter a description of the spanning tree.

**Syntax** `description {description}`  
To remove the description from the spanning tree, use the `no description {description}` command.

**Parameters** **description** Enter a description to identify the spanning tree (80 characters maximum).

**Defaults** none

**Command Modes** SPANNING TREE (The prompt is “config-stp”.)

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

**Related Commands**

- [protocol spanning-tree](#) — enter SPANNING TREE mode on the switch.

# disable

Disable the spanning tree protocol globally on the switch.

**Syntax** `disable`  
To enable Spanning Tree Protocol, use the `no disable` command.

**Defaults** Enabled (that is, the spanning tree protocol is disabled.)

**Command Modes** SPANNING TREE

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

#### Related Commands

- [protocol spanning-tree](#) — enter SPANNING TREE mode on the switch.

## forward-delay

The amount of time the interface waits in the Listening state and the Learning state before transitioning to the Forwarding state.

**Syntax** `forward-delay seconds`

To return to the default setting, use the `no forward-delay` command.

**Parameters** `seconds` Enter the number of seconds the Dell EMC Networking OS waits before transitioning STP to the Forwarding state. The range is from 4 to 30. The default is **15 seconds**.

**Defaults** **15 seconds**

**Command Modes** SPANNING TREE

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

#### Related Commands

- [max-age](#) — changes the wait time before STP refreshes protocol configuration information.
- [hello-time](#) — changes the time interval between BPDUs.

## hello-time

Set the time interval between generation of the spanning tree bridge protocol data units (BPDUs).

**Syntax** `hello-time seconds`

To return to the default value, use the `no hello-time` command.

**Parameters** `seconds` Enter a number as the time interval between transmission of BPDUs. The range is from 1 to 10. The default is **2 seconds**.

**Defaults** `2 seconds`

**Command Modes** SPANNING TREE

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

- Related Commands**
- [forward-delay](#) — changes the wait time before STP transitions to the Forwarding state.
  - [max-age](#) — changes the wait time before STP refreshes protocol configuration information.

## max-age

To maintain configuration information before refreshing that information, set the time interval for the spanning tree bridge.

**Syntax** `max-age seconds`

To return to the default values, use the `no max-age` command.

**Parameters** **seconds** Enter a number of seconds the Dell EMC Networking OS waits before refreshing configuration information. The range is from 6 to 40. The default is **20 seconds**.

**Defaults** **20 seconds**

**Command Modes** SPANNING TREE

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |
| 7.7.1.0    | Introduced on the S-Series.               |
| 7.5.1.0    | Introduced on the C-Series.               |
| 6.2.1.1    | Introduced on the E-Series.               |

- Related Commands**
- [forward-delay](#) — changes the wait time before STP transitions to the Forwarding state.
  - [hello-time](#) — changes the time interval between BPDUs.

## protocol spanning-tree

To enable and configure the spanning tree group, enter SPANNING TREE mode.

**Syntax** `protocol spanning-tree stp-id`

To disable the Spanning Tree group, use the `no protocol spanning-tree stp-id` command.

**Parameters** **stp-id** Enter zero (0). Dell EMC Networking OS supports one spanning tree group, group 0.

**Defaults** Not configured.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |
| 7.7.1.0    | Introduced on the S-Series.               |
| 7.5.1.0    | Introduced on the C-Series.               |
| 6.2.1.1    | Introduced on the E-Series.               |

**Usage Information** STP is not enabled when you enter SPANNING TREE mode. To enable STP globally on the switch, use the `no disable` command from SPANNING TREE mode.

**Example**

```
DellEMC(conf)# protocol spanning-tree 0
DellEMC(config-stp)#
```

**Related Commands**

- `disable` — disables spanning tree group 0. To enable spanning tree group 0, use the `no disable` command.

## show config

Display the current configuration for the mode. Only non-default values display.

**Syntax** `show config`

**Command Modes** SPANNING TREE

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| 6.2.1.1    | Introduced on the E-Series. |

### Example

```
DellEMC(config-stp)# show config
protocol spanning-tree 0
 no disable
DellEMC(config-stp)#
```

## show spanning-tree 0

Display the spanning tree group configuration and status of interfaces in the spanning tree group.

**Syntax** `show spanning-tree 0 [active | brief | guard | interface interface | root | summary]`

| Parameters                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-----------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>0</b>                          | Enter 0 (zero) to display information about that specific spanning tree group.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>active</b>                     | (OPTIONAL) Enter the keyword <code>active</code> to display only active interfaces in spanning tree group 0.                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>brief</b>                      | (OPTIONAL) Enter the keyword <code>brief</code> to display a synopsis of the spanning tree group configuration information.                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>guard</b>                      | (OPTIONAL) Enter the keyword <code>guard</code> to display the type of guard enabled on an STP interface and the current port state.                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>interface <i>interface</i></b> | (OPTIONAL) Enter the keyword <code>interface</code> and the type slot/port of the interface you want displayed. Type slot/port options are the following: <ul style="list-style-type: none"> <li>For a port-channel interface, enter the keywords <code>port-channel</code> then the port-channel ID.</li> <li>For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information.</li> <li>For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information.</li> </ul> |
| <b>root</b>                       | (OPTIONAL) Enter the keyword <code>root</code> to display configuration information on the spanning tree group root.                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>summary</b>                    | (OPTIONAL) Enter the keyword <code>summary</code> to only the number of ports in the spanning tree group and their state.                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| 9.8(2.0)   | Introduced on the S3100 series.                                                                    |
| 9.8(1.0)   | Introduced on the Z9100-ON.                                                                        |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                                                        |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                                                        |
| 9.7(0.0)   | Introduced on the S6000-ON.                                                                        |
| 9.2(1.0)   | Introduced on the Z9500.                                                                           |
| 9.0.2.0    | Introduced on the S6000.                                                                           |
| 8.3.19.0   | Introduced on the S4820T.                                                                          |
| 8.3.11.1   | Introduced on the Z9000.                                                                           |
| 8.5.1.0    | Added support for 4-port 40G line cards on the E-Series.                                           |
| 8.4.2.1    | Added support for the optional <code>guard</code> keyword on the C-Series, S-Series, and E-Series. |
| 8.3.7.0    | Introduced on the S4810.                                                                           |
| 7.7.1.0    | Introduced on the S-Series.                                                                        |
| 7.5.1.0    | Introduced on the C-Series.                                                                        |
| 6.2.1.1    | Introduced on the E-Series.                                                                        |

### Usage Information

Enable spanning tree group 0 prior to using this command.

The following describes the `show spanning-tree 0` command shown in the example.

| Field                         | Description                                                                                                                                                                   |
|-------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>“Bridge Identifier...”</b> | Lists the bridge priority and the MAC address for this STP bridge.                                                                                                            |
| <b>“Configured hello...”</b>  | Displays the settings for hello time, max age, and forward delay.                                                                                                             |
| <b>“We are...”</b>            | States whether this bridge is the root bridge for the STG.                                                                                                                    |
| <b>“Current root...”</b>      | Lists the bridge priority and MAC address for the root bridge.                                                                                                                |
| <b>“Topology flag...”</b>     | States whether the topology flag and the detected flag were set.                                                                                                              |
| <b>“Number of...”</b>         | Displays the number of topology changes, the time of the last topology change, and on what interface the topology change occurred.                                            |
| <b>“Timers”</b>               | Lists the values for the following bridge timers: hold time, topology change, hello time, max age, and forward delay.                                                         |
| <b>“Times”</b>                | List the number of seconds since the last: <ul style="list-style-type: none"> <li>• hello time</li> <li>• topology change</li> <li>• notification</li> <li>• aging</li> </ul> |
| <b>“Port 1...”</b>            | Displays the Interface type slot/port information and the status of the interface (Disabled or Enabled).                                                                      |
| <b>“Port path...”</b>         | Displays the path cost, priority, and identifier for the interface.                                                                                                           |

| Field                | Description                                                                                     |
|----------------------|-------------------------------------------------------------------------------------------------|
| “Designated root...” | Displays the priority and MAC address of the root bridge of the STG that the interface belongs. |
| “Designated port...” | Displays the designated port ID.                                                                |

### Example

```
DelleEMC# show spann 0

Executing IEEE compatible Spanning Tree Protocol
Bridge Identifier has priority 32768, Address 0001.e800.0a56
Configured hello time 2, max age 20, forward delay 15
We are the root of the spanning tree
Current root has priority 32768 address 0001.e800.0a56
Topology change flag set, detected flag set
Number of topology changes 1 last change occurred 0:00:05 ago
 from TenGigabitEthernet 1/3
Timers:hold 1, topology change 35
 hello 2, max age 20, forward_delay 15
Times:hello 1, topology change 1, notification 0, aging 2

Port 26 (TenGigabitEthernet 1/1) is Forwarding
Port path cost 4, Port priority 8, Port Identifier 8.26
Designated root has priority 32768, address 0001.e800.0a56
Designated bridge has priority 32768, address 0001.e800.0a56
Designated port id is 8.26, designated path cost 0
Timers: message age 0, forward_delay 0, hold 0
Number of transitions to forwarding state 1
BPDU: sent:18, received 0
The port is not in the portfast mode

Port 27 (TenGigabitEthernet 1/2) is Forwarding
Port path cost 4, Port priority 8, Port Identifier 8.27
Designated root has priority 32768, address 0001.e800.0a56
Designated bridge has priority 32768, address 0001.e800.0a56
Designated port id is 8.27, designated path cost 0
Timers: message age 0, forward_delay 0, hold 0
Number of transitions to forwarding state 1
BPDU: sent:18, received 0
The port is not in the portfast mode

Port 28 (TenGigabitEthernet 1/3) is Forwarding
Port path cost 4, Port priority 8, Port Identifier 8.28
Designated root has priority 32768, address 0001.e800.0a56
Designated bridge has priority 32768, address 0001.e800.0a56
Designated port id is 8.28, designated path cost 0
Timers: message age 0, forward_delay 0, hold 0
Number of transitions to forwarding state 1
BPDU: sent:31, received 0
The port is not in the portfast mode

DelleEMC#
```

### Example (Brief)

```
DelleEMC# show span 0 brief
Executing IEEE compatible Spanning Tree Protocol
Root ID Priority 32768
 Address 0001.e800.0a56
Root Bridge hello time 2, max age 20, forward delay 15
Bridge ID Priority 32768,
 Address 0001.e800.0a56
Configured hello time 2, max age 20, forward delay 15
Interface Designated
Name PortID Prio Cost Sts Cost Bridge ID PortID

Te 1/1 8.26 8 4 FWD 0 32768 0001.e800.0a56 8.26
Te 1/2 8.27 8 4 FWD 0 32768 0001.e800.0a56 8.27
Te 1/3 8.28 8 4 FWD 0 32768 0001.e800.0a56 8.28
DelleEMC#
```

## Usage Information

The following describes the `show spanning-tree 0 guard` command shown in the example.

| Field                 | Description                                                                                                             |
|-----------------------|-------------------------------------------------------------------------------------------------------------------------|
| <b>Interface Name</b> | STP interface.                                                                                                          |
| <b>Instance</b>       | STP 0 instance.                                                                                                         |
| <b>Sts</b>            | Port state: root-inconsistent (INCON Root), forwarding (FWD), listening (LIS), blocking (BLK), or shut down (EDS Shut). |
| <b>Guard Type</b>     | Type of STP guard configured (Root, Loop, or BPDU guard).                                                               |

## Example (Guard)

```
DelleMC#show spanning-tree 0 guard
Interface
Name Instance Sts Guard type

Te 1/1 0 INCON (Root) Rootguard
Te 1/2 0 LIS Loopguard
Te 1/3 0 EDS (Shut) Bpduguard
```

# spanning-tree

Assigns a Layer 2 interface to STP instance 0 and configures a port cost or port priority, or enables loop guard, root guard, or the Portfast feature on the interface.

## Syntax

```
spanning-tree stp-id {cost cost | {loopguard | rootguard} | portfast
[bpduguard [shutdown-on-violation]] | priority priority}
```

To disable Spanning Tree group on an interface, use the `no spanning-tree stp-id {cost cost | {loopguard | rootguard} | portfast [bpduguard [shutdown-on-violation]] | priority priority}` command.

## Parameters

|                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|----------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><i>stp-id</i></b>                                                             | Enter the STP instance ID. The range is 0.                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b><i>cost cost</i></b>                                                          | Enter the keyword <i>cost</i> then a number as the cost. The range is from 1 to 65535. The defaults are: <ul style="list-style-type: none"><li>• 1-Gigabit Ethernet interface = <b>4</b>.</li><li>• 10-Gigabit Ethernet interface = <b>2</b>.</li><li>• Port Channel interface with 100 Mb/s Ethernet = <b>18</b>.</li><li>• Port Channel interface with 1 Gigabit Ethernet = <b>3</b>.</li><li>• Port Channel interface with 10 Gigabit Ethernet = <b>1</b>.</li></ul> |
| <b><i>loopguard</i></b>                                                          | Enter the keyword <i>loopguard</i> to enable STP loop guard on a port or port-channel interface.                                                                                                                                                                                                                                                                                                                                                                        |
| <b><i>rootguard</i></b>                                                          | Enter the keyword <i>rootguard</i> to enable STP root guard on a port or port-channel interface.                                                                                                                                                                                                                                                                                                                                                                        |
| <b><i>portfast</i><br/>[<i>bpduguard</i><br/>[<i>shutdown-on-violation</i>]]</b> | Enter the keyword <i>portfast</i> to enable Portfast to move the interface into Forwarding mode immediately after the root fails.<br><br>Enter the optional keyword <i>bpduguard</i> to disable the port when it receives a BPDU.<br><br>Enter the optional keyword <i>shutdown-on-violation</i> to hardware disable an interface when a BPDU is received and the port is disabled.                                                                                     |
| <b><i>priority priority</i></b>                                                  | Enter keyword <i>priority</i> then a number as the priority. The range is from zero (0) to 15. The default is <b>8</b> .                                                                                                                                                                                                                                                                                                                                                |

## Defaults

*cost* = depends on the interface type; *priority* = **8**

**Command Modes** INTERFACE

## Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                                                                                       |
|------------|-------------------------------------------------------------------------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.                                                                         |
| 9.10(0.0)  | Introduced on the S3148.                                                                                          |
| 9.10(0.0)  | Introduced on the S6100-ON.                                                                                       |
| 9.8(2.0)   | Introduced on the S3100 series.                                                                                   |
| 9.8(1.0)   | Introduced on the Z9100-ON.                                                                                       |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                                                                       |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                                                                       |
| 9.7(0.0)   | Introduced on the S6000-ON.                                                                                       |
| 9.2(1.0)   | Introduced on the Z9500.                                                                                          |
| 9.0.2.0    | Introduced on the S6000.                                                                                          |
| 8.3.19.0   | Introduced on the S4820T.                                                                                         |
| 8.3.11.1   | Introduced on the Z9000.                                                                                          |
| 8.3.10.1   | Introduced the <code>loopguard</code> and <code>rootguard</code> options on the S4810.                            |
| 8.4.2.1    | Introduced the <code>loopguard</code> and <code>rootguard</code> options on the E-Series, C-Series, and S-Series. |
| 8.3.7.0    | Introduced on the S4810.                                                                                          |
| 8.2.1.0    | Introduced the <code>shutdown-on-violation</code> option.                                                         |
| 7.7.1.0    | Introduced on the S-Series.                                                                                       |
| 7.5.1.0    | Introduced on the C-Series.                                                                                       |
| 6.2.1.1    | Introduced on the E-Series.                                                                                       |

## Usage Information

If you enable `portfast bpduguard` on an interface and the interface receives a BPDU, the software disables the interface and sends a message stating that fact. The port is in `ERR_DISABLE` mode, yet appears in the `show interface` commands as enabled. If you do not enable `shutdown-on-violation`, BPDUs are still sent to the RPM CPU.

STP loop guard and root guard are supported on a port or port-channel enabled in any Spanning Tree mode: Spanning Tree Protocol (STP), Rapid Spanning Tree Protocol (RSTP), Multiple Spanning Tree Protocol (MSTP), and Per-VLAN Spanning Tree Plus (PVST+).

Root guard is supported on any STP-enabled port or port-channel except when used as a stacking port. When enabled on a port, root guard applies to all VLANs configured on the port.

STP root guard and loop guard cannot be enabled at the same time on a port. For example, if you configure loop guard on a port on which root guard is already configured, the following error message is displayed: `% Error: RootGuard is configured. Cannot configure LoopGuard.`

Do not enable Portfast BPDU guard and loop guard at the same time on a port. Enabling both features may result in a port that remains in a blocking state and prevents traffic from flowing through it. For example, when Portfast BPDU guard and loop guard are both configured:

- If a BPDU is received from a remote device, BPDU guard places the port in an Err-Disabled Blocking state and no traffic is forwarded on the port.
- If no BPDU is received from a remote device, loop guard places the port in a Loop-Inconsistent Blocking state and no traffic is forwarded on the port.

To display the type of STP guard (Portfast BPDU, root, or loop guard) enabled on a port, enter the `show spanning-tree 0` command.

# SupportAssist

SupportAssist sends troubleshooting data securely to Dell. SupportAssist in this Dell EMC Networking OS release does not support automated email notification at the time of hardware fault alert, automatic case creation, automatic part dispatch, or reports. SupportAssist requires Dell EMC Networking OS 9.9(0.0) and SmartScripts 9.7 or later to be installed on the Dell EMC Networking device. For more information on SmartScripts, see *Dell EMC Networking Open Automation guide*.

**NOTE:** SupportAssist is enabled by default on the system. To disable SupportAssist, enter the `eula-consent support-assist reject` command in Global Configuration mode and save the configuration.

| Version          | Description                                                                              |
|------------------|------------------------------------------------------------------------------------------|
| <b>9.11(0.0)</b> | Introduced on the M I/O Aggregator and FN IOM.                                           |
| <b>9.10(0.1)</b> | Introduced on the S6010-ON and S4048T-ON.                                                |
| <b>9.10(0.0)</b> | Introduced on the S3148.                                                                 |
| <b>9.10(0.0)</b> | Introduced on the C9010, Z9100-ON, S6100-ON, and S3100 series.                           |
| <b>9.9(0.0)</b>  | Introduced on the S4810, S4820T, S3048-ON, S4048-ON, S5000, S6000, S6000-ON, Z9500, MXL. |

## Usage Information

- When you run the command, the system displays a message with the information directing to the URL for further information.
- Even before you accept or reject the EULA, the configuration data is sent to the default centrally deployed SupportAssist Server. If you reject the EULA, the configuration data is not transmitted to the SupportAssist server.
- If there is an existing SupportAssist configuration, the configuration is not removed and the feature is disabled.

## Example

Accept the EULA:

```
DelleMC(conf)# eula-consent support-assist accept
I accept the terms of the license agreement. You can reject
the license agreement by configuring this command
'eula-consent support-assist reject'.
```

By installing SupportAssist, you allow Dell to save your contact information (e.g. name, phone number and/or email address) which would be used to provide technical support for your Dell products and services. Dell may use the information for providing recommendations to improve your IT infrastructure.

Dell SupportAssist also collects and stores machine diagnostic information, which may include but is not limited to configuration information, user supplied contact information, names of data volumes, IP addresses, access control lists, diagnostics & performance information, network configuration information, host/server configuration & performance information and related data ("Collected Data") and transmits this information to Dell. By downloading SupportAssist and agreeing to be bound by these terms and the Dell end user license agreement, available at: [www.dell.com/aeula](http://www.dell.com/aeula), you agree to allow Dell to provide remote monitoring services of your IT environment and you give Dell the right to collect the Collected Data in accordance with Dells Privacy Policy, available at: [www.dell.com/privacypolicycountryspecific](http://www.dell.com/privacypolicycountryspecific), in order to enable the performance of all of the various functions of SupportAssist during your entitlement to receive related repair services from Dell,. You further agree to allow Dell to transmit and store the Collected Data from SupportAssist in accordance with these terms. You agree that the provision of SupportAssist may involve international transfers of data from you to Dell and/or to Dells affiliates, subcontractors or business partners. When making such transfers, Dell shall ensure appropriate protection is in place to safeguard the Collected Data being transferred in connection with SupportAssist. If you are downloading SupportAssist on behalf of a company or other legal entity, you are further certifying to Dell that you have appropriate authority to provide this consent on behalf of that entity. If you do not consent to the collection, transmission and/or use of the Collected Data, you may not download, install or otherwise use SupportAssist.

Reject the EULA:

```
DelleMC(conf)#eula-consent support-assist reject
Aug 24 22:35:38: %STKUNIT1-M:CP %SUPPORT_ASSIST-6-SUPASSIST_EVT: Event
monitor service stopped
I do not accept the terms of the license agreement. The SupportAssist
feature has
been deactivated and can no longer be used.
To enable SupportAssist configurations, accept the terms of the license
agreement
by configuring this command 'eula-consent support-assist accept'.
DelleMC(conf)#
DelleMC(conf)#
Aug 24 22:35:49: %STKUNIT1-M:CP %SUPPORT_ASSIST-6-
SUPASSIST_PKG_UNINSTALLED: SupportAssist package uninstalled
DelleMC(conf)#
```

## Related Commands

- [support-assist](#) — moves to the SupportAssist Configuration mode.

# support-assist

Move to the SupportAssist configuration mode.

**Syntax** `support-assist`  
To remove all the configuration of the SupportAssist service, use the `no support-assist` command.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                                                                              |
|-----------|------------------------------------------------------------------------------------------|
| 9.11(0.0) | Introduced on the M I/O Aggregator and FN IOM.                                           |
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON.                                                |
| 9.10(0.0) | Introduced on the S3148.                                                                 |
| 9.10(0.0) | Introduced on the C9010, Z9100-ON, S6100-ON, and S3100 series.                           |
| 9.9(0.0)  | Introduced on the S4810, S4820T, S3048-ON, S4048-ON, S5000, S6000, S6000-ON, Z9500, MXL. |

**Usage Information** If you reject the EULA, the data is not transmitted to the SupportAssist server.

**Related Commands** • [eula-consent](#) — accept or reject the EULA.

# support-assist activate

Launch the configuration wizard that enables SupportAssist service and guides through a series of commands to configure SupportAssist.

**Syntax** `support-assist activate`

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                                                                              |
|-----------|------------------------------------------------------------------------------------------|
| 9.11(0.0) | Introduced on the M I/O Aggregator and FN IOM.                                           |
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON.                                                |
| 9.10(0.0) | Introduced on the S3148.                                                                 |
| 9.10(0.0) | Introduced on the C9010, Z9100-ON, S6100-ON, and S3100 series.                           |
| 9.9(0.0)  | Introduced on the S4810, S4820T, S3048-ON, S4048-ON, S5000, S6000, S6000-ON, Z9500, MXL. |

**Usage Information** You are guided through a series of queries to configure SupportAssist. The generated commands are added to the running configuration, including the DNS resolve commands, if configured.

This command starts the configuration wizard for the SupportAssist. At any time, you can exit by entering Ctrl-C. If necessary, you can skip some data entry.

Once you exit the wizard, the Dell EMC Networking OS starts a full transfer.

# support-assist activity

Trigger an activity event immediately.

**Syntax** `support-assist activity {full-transfer | core-transfer} start now`

**Parameters**

|                      |                                                                                                                            |
|----------------------|----------------------------------------------------------------------------------------------------------------------------|
| <b>full-transfer</b> | Enter the keyword <code>full-transfer</code> to specify transfer of configuration, inventory, logs, and other information. |
| <b>core-transfer</b> | Enter the keyword <code>core-transfer</code> to specify transfer of core files.                                            |

**Command Modes** EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                                                                              |
|-----------|------------------------------------------------------------------------------------------|
| 9.11(0.0) | Introduced on the M I/O Aggregator and FN IOM.                                           |
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON.                                                |
| 9.10(0.0) | Introduced on the S3148.                                                                 |
| 9.10(0.0) | Introduced on the C9010, Z9100-ON, S6100-ON, and S3100 series.                           |
| 9.9(0.0)  | Introduced on the S4810, S4820T, S3048-ON, S4048-ON, S5000, S6000, S6000-ON, Z9500, MXL. |

**Usage Information** Use the command to trigger the activity that enables transfer of information. You can choose a full transfer that includes all the details or core transfer that includes only the core files.

 **NOTE:** The full transfer includes the core files as well in the information sent. The core transfer does not send core files that are older than 30 days.

## SupportAssist Commands

Dell EMC Networking OS supports the following SupportAssist mode commands.

### activity

Move to the SupportAssist Activity mode for an activity. Allow the user to configure customized details for a specific activity.

**Syntax** `activity {activity-name}`

To remove all customized detail for a specific activity, use the `no activity {activity-name}` command.

**Parameters**

|                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>activity-name</b> | Enter one of the following keywords: <ul style="list-style-type: none"><li>• Enter the keyword <code>full-transfer</code> to enable or disable full transfer. You can create a custom file to transfer the outputs from a set of show commands. By default, the full transfer runs once in every 30 days.</li><li>• Enter the keyword <code>core-transfer</code> to enable or disable core transfer.</li><li>• Enter the keyword <code>event-transfer</code> to enable or disable event transfer. You can create a custom file to monitor a set of events.</li></ul> |
|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| 9.10(0.0) | Introduced on the S3148.                                                                                                                |
| 9.10(0.0) | Introduced on the C9010, Z9100-ON, S6100-ON, and S3100 series.                                                                          |
| 9.9(0.0)  | Introduced on the S4810, S4820T, S3048-ON, S4048-ON, S5000, S6000, S6000-ON, Z9500, MXL.                                                |

#### Usage Information

By default, each activity follows a set of default actions using a default schedule. Using this command, you can customize the set of actions and disable a certain activity.

## contact-company

Configure the contact information for the company.

**Syntax** `contact-company name {company-name} [company-next-name] ... [company-next-name]`

To remove the contact company information, use the `no contact-company` command.

#### Parameters

|                                 |                                                                                                          |
|---------------------------------|----------------------------------------------------------------------------------------------------------|
| <b><i>company-name</i></b>      | Enter the name for the company. If there are multiple words in the name, use optional additional fields. |
| <b><i>company-next-name</i></b> | (OPTIONAL) Enter the next components of the company name, up to 5 components are allowed.                |

**Command Modes** SUPPORTASSIST

#### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                                                                              |
|-----------|------------------------------------------------------------------------------------------|
| 9.11(0.0) | Introduced on the M I/O Aggregator and FN IOM.                                           |
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON.                                                |
| 9.10(0.0) | Introduced on the S3148.                                                                 |
| 9.10(0.0) | Introduced on the C9010, Z9100-ON, S6100-ON, and S3100 series.                           |
| 9.9(0.0)  | Introduced on the S4810, S4820T, S3048-ON, S4048-ON, S5000, S6000, S6000-ON, Z9500, MXL. |

#### Usage Information

You can configure only one contact-company.

It is not possible to remove the components of the company name. The `no` form of the command removes the entire contact-company entry.

This command is optional for SupportAssist service configuration.

## contact-person

Configure the contact name for an individual.

**Syntax** `contact-person [first <first-name>] last <last-name>`

To remove the contact person and all their details, use the `no contact-person [first <first-name>] last <last-name>` command.

|                   |                          |                                                                                                                                                                               |
|-------------------|--------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Parameters</b> | <b><i>first-name</i></b> | (Optional) Enter the first name for the contact person. This is optional provided each contact person name is unique. To include a space, enter a space within double quotes. |
|                   | <b><i>last-name</i></b>  | Enter the last name for the contact person. To include a space, enter a space within double quotes.                                                                           |

**Command Modes** SUPPORTASSIST

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| <b>Version</b>   | <b>Description</b>                                                                       |
|------------------|------------------------------------------------------------------------------------------|
| <b>9.11(0.0)</b> | Introduced on the M I/O Aggregator and FN IOM.                                           |
| <b>9.10(0.1)</b> | Introduced on the S6010-ON and S4048T-ON.                                                |
| <b>9.10(0.0)</b> | Introduced on the S3148.                                                                 |
| <b>9.10(0.0)</b> | Introduced on the C9010, Z9100-ON, S6100-ON, and S3100 series.                           |
| <b>9.9(0.0)</b>  | Introduced on the S4810, S4820T, S3048-ON, S4048-ON, S5000, S6000, S6000-ON, Z9500, MXL. |

**Usage Information**

Each contact person must be unique by their name.

You can configure only one contact person.

It is not possible to remove the first name or last name. The no form of the command removes the entire contact-person entry.

This command is optional for SupportAssist service configuration.

## enable

Enable all activities and severs for the SupportAssist service.

**Syntax** `enable all`

To disable the SupportAssist activities temporarily, use the `no enable all` command.

**Parameters** **all** Enter the keyword `all` to enable all SupportAssist service activities.

**Defaults** Enabled or All Enabled

**Command Modes** SUPPORTASSIST

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| <b>Version</b>   | <b>Description</b>                                                                       |
|------------------|------------------------------------------------------------------------------------------|
| <b>9.11(0.0)</b> | Introduced on the M I/O Aggregator and FN IOM.                                           |
| <b>9.10(0.1)</b> | Introduced on the S6010-ON and S4048T-ON.                                                |
| <b>9.10(0.0)</b> | Introduced on the S3148.                                                                 |
| <b>9.10(0.0)</b> | Introduced on the C9010, Z9100-ON, S6100-ON, and S3100 series.                           |
| <b>9.9(0.0)</b>  | Introduced on the S4810, S4820T, S3048-ON, S4048-ON, S5000, S6000, S6000-ON, Z9500, MXL. |

## server

Configure the name of the remote SupportAssist Server and move to SupportAssist Server mode.

**Syntax** `server {default | server-name}`

To delete a server, use the `no server server-name` command.

**Parameters**

|                    |                                                                                                                                     |
|--------------------|-------------------------------------------------------------------------------------------------------------------------------------|
| <b>default</b>     | Enter the keyword <code>default</code> for the default server.                                                                      |
| <b>server-name</b> | Enter the name of the custom server to which the logs would be transferred. To include a space, enter a space within double quotes. |

**Defaults** Default server has URL `stor.g3.ph.dell.com`

**Command Modes** SUPPORTASSIST

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                                                                              |
|-----------|------------------------------------------------------------------------------------------|
| 9.11(0.0) | Introduced on the M I/O Aggregator and FN IOM.                                           |
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON.                                                |
| 9.10(0.0) | Introduced on the S3148.                                                                 |
| 9.10(0.0) | Introduced on the C9010, Z9100-ON, S6100-ON, and S3100 series.                           |
| 9.9(0.0)  | Introduced on the S4810, S4820T, S3048-ON, S4048-ON, S5000, S6000, S6000-ON, Z9500, MXL. |

**Usage Information** The `server-name` is used as a reference only and is not required to be used as part of a URL definition. There is a reserved name of `default` for the default server at `stor.g3.ph.dell.com`. You can customize the defaults for this server by entering the `server default` command and use the custom commands. You can configure one additional server.

## SupportAssist Activity Commands

Dell EMC Networking OS supports the following SupportAssist Activity mode commands.

### action-manifest get

Copy an action-manifest file for an activity to the system.

**Syntax** `action-manifest get tftp | ftp | flash <file-specification> <local-file-name>`

**Parameters**

|                           |                                                                                                                                                                                                                                                                                              |
|---------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>file-specification</b> | Enter the full file specification for the action-manifest file. For example: <ul style="list-style-type: none"><li>• <code>tftp://hostip/filepath</code></li><li>• <code>ftp://userid:password@hostip/filepath</code></li><li>• <code>scp://userid:password@hostip/filepath</code></li></ul> |
| <b>local-file-name</b>    | Enter the name of the local action-manifest file, up to 32 characters long. Allowable characters are: a to z, A to Z, 0 to 9, -, _, and space.                                                                                                                                               |

**Command Modes** SUPPORTASSIST ACTIVITY FULL-TRANSFER  
SUPPORTASSIST ACTIVITY EVENT-TRANSFER

## Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                                                                              |
|-----------|------------------------------------------------------------------------------------------|
| 9.11(0.0) | Introduced on the M I/O Aggregator and FN IOM.                                           |
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON.                                                |
| 9.10(0.0) | Introduced on the S3148.                                                                 |
| 9.10(0.0) | Introduced on the C9010, Z9100-ON, S6100-ON, and S3100 series.                           |
| 9.9(0.0)  | Introduced on the S4810, S4820T, S3048-ON, S4048-ON, S5000, S6000, S6000-ON, Z9500, MXL. |

## Usage Information

The remote file specification for full transfer includes the protocol that is used to copy the file from the remote system.

The default Manifest-file for full transfer includes records like alarms, logs, operational, and configuration data.

## Related Commands

- [action-manifest install](#) — configure the action-manifest to use for a specific activity.
- [action-manifest show](#) — view the list of action-manifest for a specific activity.
- [action-manifest remove](#) — remove the action-manifest file for an activity.

# action-manifest install

Configure action-manifest to transfer a set of customized records for full transfer and to monitor a set of specified events for event transfer.

## Syntax

```
action-manifest install {default | <local-file-name>}
```

To revert to the default action-manifest file, use the `action-manifest install default` command.

## Parameters

|                        |                                                                                                                      |
|------------------------|----------------------------------------------------------------------------------------------------------------------|
| <b>default</b>         | Enter the keyword <code>default</code> to revert back to the default set of actions for an activity.                 |
| <b>local-file-name</b> | Enter the name of the local action-manifest file. Allowable characters are: a to z, A to Z, 0 to 9, -, _, and space. |

## Defaults

Default

## Command Modes

SUPPORTASSIST ACTIVITY FULL-TRANSFER  
SUPPORTASSIST ACTIVITY EVENT-TRANSFER

## Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                                                                              |
|-----------|------------------------------------------------------------------------------------------|
| 9.11(0.0) | Introduced on the M I/O Aggregator and FN IOM.                                           |
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON.                                                |
| 9.10(0.0) | Introduced on the S3148.                                                                 |
| 9.10(0.0) | Introduced on the C9010, Z9100-ON, S6100-ON, and S3100 series.                           |
| 9.9(0.0)  | Introduced on the S4810, S4820T, S3048-ON, S4048-ON, S5000, S6000, S6000-ON, Z9500, MXL. |

## Usage Information

To replace the default action-manifest with a customized one, copy the action-manifest file to the system using the `action-manifest get` command and then use the `action-manifest install` command. To revert to the default action-manifest file, use the `action-manifest install default` command.

- Related Commands**
- [action-manifest get](#) — copy an action-manifest file for an activity to the system.
  - [action-manifest show](#) — view the list of action-manifest for a specific activity.
  - [action-manifest remove](#) — remove the action-manifest file for an activity.

## action-manifest remove

Remove the action-manifest file from Dell EMC Networking OS.

**Syntax** `action-manifest remove <local-file-name>`

**Parameters** **local-file-name** Enter the name of the local action-manifest file. Allowable characters are: a to z, A to Z, 0 to 9, -, \_, and space.

**Command Modes** SUPPORTASSIST ACTIVITY FULL-TRANSFER  
SUPPORTASSIST ACTIVITY EVENT-TRANSFER

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                                                                              |
|-----------|------------------------------------------------------------------------------------------|
| 9.11(0.0) | Introduced on the M I/O Aggregator and FN IOM.                                           |
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON.                                                |
| 9.10(0.0) | Introduced on the S3148.                                                                 |
| 9.10(0.0) | Introduced on the C9010, Z9100-ON, S6100-ON, and S3100 series.                           |
| 9.9(0.0)  | Introduced on the S4810, S4820T, S3048-ON, S4048-ON, S5000, S6000, S6000-ON, Z9500, MXL. |

**Usage Information** To revert to the default action-manifest file, use the `action-manifest install` command. If necessary, you can then remove the custom action-manifest file.

- Related Commands**
- [action-manifest get](#) — copy an action-manifest file for an activity to the system.
  - [action-manifest install](#) — configure the action-manifest to use for a specific activity.
  - [action-manifest show](#) — view the list of action-manifest for a specific activity.

## action-manifest show

View the list of action-manifest for a specific activity.

**Syntax** `action-manifest show {all}`

**Parameters** **all** Enter the keyword `all` to view the entire list of action-manifests that are available for an activity.

**Command Modes** SUPPORTASSIST ACTIVITY FULL-TRANSFER  
SUPPORTASSIST ACTIVITY EVENT-TRANSFER

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

|-----------|------------------------------------------------------------------------------------------|
| 9.11(0.0) | Introduced on the M I/O Aggregator and FN IOM.                                           |
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON.                                                |
| 9.10(0.0) | Introduced on the S3148.                                                                 |
| 9.10(0.0) | Introduced on the C9010, Z9100-ON, S6100-ON, and S3100 series.                           |
| 9.9(0.0)  | Introduced on the S4810, S4820T, S3048-ON, S4048-ON, S5000, S6000, S6000-ON, Z9500, MXL. |

#### Usage Information

Enter the specific SupportAssist activity mode and then enable it.

 **NOTE:** By default, the full transfer includes the core files. When you disable the core transfer activity, the full transfer excludes the core files.

#### Related Commands

- [activity](#) — move user to the SupportAssist Activity mode for that activity.

## SupportAssist Company Commands

Dell EMC Networking OS supports the following SupportAssist Company mode commands.

### address

Configure the address information for the company.

#### Syntax

`address [city company-city] [{province | region | state} name] [country company-country] [{postalcode | zipcode} company-code]`

To remove a portion of the company address information, use the `no address [city | province | region | state | country | postalcode | zipcode]` command. For example, to remove the city alone, use the `no address city` command.

To remove the complete company contact information, use the `no address` command.

## Parameters

|                                                 |                                                                                                                                                                                                                         |
|-------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>city</b> <i>company-city</i>                 | (OPTIONAL) Enter the keyword <code>city</code> then the city or town for the company site. To include a space, enter a space within double quotes.                                                                      |
| <b>province   region   state</b> <i>name</i>    | (OPTIONAL) Enter the keyword <code>province</code> , <code>region</code> or <code>state</code> then the name of province, region or state for the company site. To include a space, enter a space within double quotes. |
| <b>country</b> <i>company-country</i>           | (OPTIONAL) Enter the keyword <code>country</code> then the country for the company site. To include a space, enter a space within double quotes.                                                                        |
| <b>postalcode   zipcode</b> <i>company-code</i> | (OPTIONAL) Enter the keyword <code>postalcode</code> or <code>zipcode</code> then the postal code or zip code for the company site, as one string with no spaces.                                                       |

**Command Modes** SUPPORTASSIST COMPANY

## Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                                                                              |
|-----------|------------------------------------------------------------------------------------------|
| 9.11(0.0) | Introduced on the M I/O Aggregator and FN IOM.                                           |
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON.                                                |
| 9.10(0.0) | Introduced on the S3148.                                                                 |
| 9.10(0.0) | Introduced on the C9010, Z9100-ON, S6100-ON, and S3100 series.                           |
| 9.9(0.0)  | Introduced on the S4810, S4820T, S3048-ON, S4048-ON, S5000, S6000, S6000-ON, Z9500, MXL. |

## Usage Information

The optional parameters must be provided in the following order: `city state country postalcode`. If specified in a different order, the command returns an error as follows:

```
DellEMC(conf-supportassist-cmpy-test)# address city Minneapolis
postalcode 55344 country USA state Minnesota
 ^
% Error: Invalid input at "^" marker.
```

This command is optional for SupportAssist service configuration.

## Example

```
DellEMC(conf-supportassist-cmpy-test)# address city Minneapolis state
Minnesota country USA postalcode 55344
```

## street-address

Configure the street address information for the company.

## Syntax

```
street-address {address1} [address2]...[address8]
```

To remove the street address, use the `no street-address` command.

## Parameters

|                           |                                                                                      |
|---------------------------|--------------------------------------------------------------------------------------|
| <b>address1</b>           | Enter the street address for the company.                                            |
| <b>address2..address8</b> | (OPTIONAL) Enter the street address of the company site. Up to 8 fields are allowed. |

**Command Modes** SUPPORTASSIST COMPANY

## Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                                                                              |
|-----------|------------------------------------------------------------------------------------------|
| 9.11(0.0) | Introduced on the M I/O Aggregator and FN IOM.                                           |
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON.                                                |
| 9.10(0.0) | Introduced on the S3148.                                                                 |
| 9.10(0.0) | Introduced on the C9010, Z9100-ON, S6100-ON, and S3100 series.                           |
| 9.9(0.0)  | Introduced on the S4810, S4820T, S3048-ON, S4048-ON, S5000, S6000, S6000-ON, Z9500, MXL. |

**Usage Information** This command is optional for SupportAssist service configuration.

## territory

Configure the territory and set the coverage for the company site.

**Syntax** `territory company-territory`  
 To remove the company territory information, use the `no territory` command.

**Parameters** **company-territory** Enter the territory name for the company. To include a space, enter a space within double quotes. Use three-letter country codes like USA, IND, FRA, GER and so on.

**Command Modes** SUPPORTASSIST COMPANY

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                                                                              |
|-----------|------------------------------------------------------------------------------------------|
| 9.11(0.0) | Introduced on the M I/O Aggregator and FN IOM.                                           |
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON.                                                |
| 9.10(0.0) | Introduced on the S3148.                                                                 |
| 9.10(0.0) | Introduced on the C9010, Z9100-ON, S6100-ON, and S3100 series.                           |
| 9.9(0.0)  | Introduced on the S4810, S4820T, S3048-ON, S4048-ON, S5000, S6000, S6000-ON, Z9500, MXL. |

**Usage Information** This command is optional for SupportAssist service configuration.

## SupportAssist Person Commands

Dell EMC Networking OS supports the following SupportAssist Person mode commands.

### email-address

Configure the email addresses to reach the contact person.

**Syntax** `email-address primary email-address [alternate email-address]`  
 To remove an email address, use the `no email-address` command. To remove the primary and the alternate email addresses, use the `no email-address primary` and `no email-address alternate` commands respectively.

|                   |                                       |                                                                                           |
|-------------------|---------------------------------------|-------------------------------------------------------------------------------------------|
| <b>Parameters</b> | <b>primary <i>email-address</i></b>   | Enter the keyword <code>primary</code> then the primary email address for the person.     |
|                   | <b>alternate <i>email-address</i></b> | Enter the keyword <code>alternate</code> then the alternate email address for the person. |

**Command Modes** SUPPORTASSIST PERSON

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| <b>Version</b>   | <b>Description</b>                                                                       |
|------------------|------------------------------------------------------------------------------------------|
| <b>9.11(0.0)</b> | Introduced on the M I/O Aggregator and FN IOM.                                           |
| <b>9.10(0.1)</b> | Introduced on the S6010-ON and S4048T-ON.                                                |
| <b>9.10(0.0)</b> | Introduced on the S3148.                                                                 |
| <b>9.10(0.0)</b> | Introduced on the C9010, Z9100-ON, S6100-ON, and S3100 series.                           |
| <b>9.9(0.0)</b>  | Introduced on the S4810, S4820T, S3048-ON, S4048-ON, S5000, S6000, S6000-ON, Z9500, MXL. |

**Usage Information** The email addresses must have the standard form of `<username>@<email system>` to be considered valid.

This command is optional for SupportAssist service configuration.

**Related Commands**

- [preferred-method](#) — configure the preferred method for contacting the person.

## phone

Configure phone numbers to reach the contact person.

**Syntax** `phone primary phone [alternate phone]`

To remove a phone number, use the `no phone` command. To remove the primary and alternate phone numbers, use the `no phone primary` and `no phone alternate` commands respectively.

|                   |                               |                                                                                          |
|-------------------|-------------------------------|------------------------------------------------------------------------------------------|
| <b>Parameters</b> | <b>primary <i>phone</i></b>   | Enter the keyword <code>primary</code> then the primary phone number for the person.     |
|                   | <b>alternate <i>phone</i></b> | Enter the keyword <code>alternate</code> then the alternate phone number for the person. |

**Command Modes** SUPPORTASSIST PERSON

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| <b>Version</b>   | <b>Description</b>                                                                       |
|------------------|------------------------------------------------------------------------------------------|
| <b>9.11(0.0)</b> | Introduced on the M I/O Aggregator and FN IOM.                                           |
| <b>9.10(0.1)</b> | Introduced on the S6010-ON and S4048T-ON.                                                |
| <b>9.10(0.0)</b> | Introduced on the S3148.                                                                 |
| <b>9.10(0.0)</b> | Introduced on the C9010, Z9100-ON, S6100-ON, and S3100 series.                           |
| <b>9.9(0.0)</b>  | Introduced on the S4810, S4820T, S3048-ON, S4048-ON, S5000, S6000, S6000-ON, Z9500, MXL. |

**Usage Information** The phone numbers may contain country codes, area codes and extensions, if necessary. Allowable characters are 0 to 9, x, (, ), - and +.

This command is optional for SupportAssist service configuration.

## Related Commands

- [preferred-method](#) — configure the preferred method for contacting the person.

# preferred-method

Configure the preferred method for contacting the person.

**Syntax** `preferred-method {email | no-contact | phone}`

**Parameters**

|                   |                                                                                          |
|-------------------|------------------------------------------------------------------------------------------|
| <b>email</b>      | Enter the keyword <code>email</code> to specify email as preferred method.               |
| <b>no-contact</b> | Enter the keywords <code>no-contact</code> to specify that there is no preferred method. |
| <b>phone</b>      | Enter the keyword <code>phone</code> to specify phone as preferred method.               |

**Defaults** `no-contact`

**Command Modes** `SUPPORTASSIST PERSON`

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version          | Description                                                                              |
|------------------|------------------------------------------------------------------------------------------|
| <b>9.11(0.0)</b> | Introduced on the M I/O Aggregator and FN IOM.                                           |
| <b>9.10(0.1)</b> | Introduced on the S6010-ON and S4048T-ON.                                                |
| <b>9.10(0.0)</b> | Introduced on the S3148.                                                                 |

## Related Commands

- [email-address](#) — configure email addresses to reach the contact person.
- [phone](#) — configure phone numbers to reach the contact person.

# time-zone

Configure the time zone for contacting the person.

**Syntax** `time-zone zone +-HH:MM[start-time HH:MM] [end-time HH:MM]`

To remove the time zone, use the `no time-zone [zone | start-time | end-time]` command.

**Parameters**

|                         |                                                                                                                                              |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| <b>zone +-HH:MM</b>     | Enter the keyword <code>zone</code> then a time difference from GMT expressed as HH:MM. This number may be preceded by either a + or – sign. |
| <b>start-time HH:MM</b> | Enter the keywords <code>start-time</code> then a starting time expressed as HH:MM. Use the 24-hour clock format.                            |
| <b>stop-time HH:MM</b>  | Enter the keywords <code>stop-time</code> then a stopping time expressed as HH:MM. Use the 24-hour clock format.                             |

**Command Modes** `SUPPORTASSIST PERSON`

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

|-----------|------------------------------------------------------------------------------------------|
| 9.10(0.0) | Introduced on the C9010, Z9100-ON, S6100-ON, and S3100 series.                           |
| 9.9(0.0)  | Introduced on the S4810, S4820T, S3048-ON, S4048-ON, S5000, S6000, S6000-ON, Z9500, MXL. |

### Usage Information

This command is optional for SupportAssist service configuration.

## SupportAssist Server Commands

Dell EMC Networking OS supports the following SupportAssist Server mode commands.

### proxy-ip-address

Configure a proxy for reaching the SupportAssist remote server.

**Syntax** `proxy-ip-address {ipv4-address | ipv6-address} port port-number [ username userid password [ encryption-type] password ]`

To remove the proxy, use the `no proxy-ip-address` command.

#### Parameters

|                         |                                                                                                                                                                                                                                                                                 |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>ipv4-address</b>     | Enter the IP address of the proxy server in a dotted decimal format (A.B.C.D).                                                                                                                                                                                                  |
| <b>ipv6-address</b>     | Enter the IPv6 address of the proxy server in the x:x:x:x format.<br><i>i</i> <b>NOTE:</b> The :: notation specifies successive hexadecimal fields of zeros.                                                                                                                    |
|                         | <i>i</i> <b>NOTE:</b> To use the IPv6 address, the Open Automation package should also support IPv6 communications. For this purpose, SupportAssist requires Dell EMC Networking Open Automation 9.10(0.0) package or later.                                                    |
| <b>port port-number</b> | Enter the keyword <code>port</code> then the TCP/IP port number. The port number range is from 1024 to 65534.                                                                                                                                                                   |
| <b>username userid</b>  | (OPTIONAL) Enter the keyword <code>username</code> then the user ID used for the proxy server.                                                                                                                                                                                  |
| <b>password</b>         | Enter the keyword <code>password</code> then the encryption-type or the user password.                                                                                                                                                                                          |
| <b>encryption-type</b>  | (OPTIONAL) Enter an encryption type for the <code>password</code> you enter. <ul style="list-style-type: none"> <li>0 directs the system to interpret the password as clear text.</li> <li>7 indicates that the password is encrypted using a DES hashing algorithm.</li> </ul> |
| <b>password</b>         | Enter a string up to 32 characters long.                                                                                                                                                                                                                                        |

**Defaults** encryption-type for the password is 0.

**Command Modes** SUPPORTASSIST SERVER

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                                                                              |
|-----------|------------------------------------------------------------------------------------------|
| 9.11(0.0) | Introduced on the M I/O Aggregator and FN IOM.                                           |
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON.                                                |
| 9.10(0.0) | Introduced on the S3148.                                                                 |
| 9.10(0.0) | Introduced on the C9010, Z9100-ON, S6100-ON, and S3100 series.                           |
| 9.9(0.0)  | Introduced on the S4810, S4820T, S3048-ON, S4048-ON, S5000, S6000, S6000-ON, Z9500, MXL. |

## Usage Information

The passwords are stored encrypted in the running configuration.

## enable

Enable communication with the SupportAssist server.

**Syntax** `enable`

To disable communication to a specific SupportAssist server, use the `no enable` command.

**Defaults** Enabled

**Command Modes** SUPPORTASSIST SERVER

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                                                                              |
|-----------|------------------------------------------------------------------------------------------|
| 9.11(0.0) | Introduced on the M I/O Aggregator and FN IOM.                                           |
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON.                                                |
| 9.10(0.0) | Introduced on the S3148.                                                                 |
| 9.10(0.0) | Introduced on the C9010, Z9100-ON, S6100-ON, and S3100 series.                           |
| 9.9(0.0)  | Introduced on the S4810, S4820T, S3048-ON, S4048-ON, S5000, S6000, S6000-ON, Z9500, MXL. |

## Related Commands

- [server](#) — configure the name of the remote SupportAssist server.

## url

Configure the URL to reach the SupportAssist remote server.

**Syntax** `url uniform-resource-locator`

To delete the URL for the server, use the `no url` command.

## Parameters

***uniform-resource-locator*** Enter a text string for the URL using one of the following formats:

- `http://[username:password@]<hostip>:<portNum>/<filepath>`
- `https://[username:password@]<hostip>:<portNum>/<filepath>`

 **NOTE:** The host IP for the server may be specified as an IPv4 address, an IPv6 address or as a DNS hostname. If using the DNS hostname, the DNS resolver will need to be configured and enabled.

**Command Modes** SUPPORTASSIST SERVER

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

## Usage Information

The URL should be formatted to follow the ISO format.

# show eula-consent

Display the EULA for the feature.

**Syntax** `show eula-consent {support-assist | other feature}`

**Parameters** **support-assist | other feature** Enter the keywords `support-assist` or the text corresponding to other feature.

**Command Modes** EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                                                                              |
|-----------|------------------------------------------------------------------------------------------|
| 9.11(0.0) | Introduced on the M I/O Aggregator and FN IOM.                                           |
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON.                                                |
| 9.10(0.0) | Introduced on the S3148.                                                                 |
| 9.10(0.0) | Introduced on the C9010, Z9100-ON, S6100-ON, and S3100 series.                           |
| 9.9(0.0)  | Introduced on the S4810, S4820T, S3048-ON, S4048-ON, S5000, S6000, S6000-ON, Z9500, MXL. |

## Example

```
DellEMC# show eula-consent support-assist

SupportAssist EULA has been: Accepted

Additional information about the SupportAssist EULA is as follows:

By installing SupportAssist, you allow Dell to save your contact
information
(e.g. name, phone number and/or email address) which would be used to
provide
technical support for your Dell products and services. Dell may use the
information
for providing recommendations to improve your IT infrastructure.

Dell SupportAssist also collects and stores machine diagnostic
information, which
may include but is not limited to configuration information, user
supplied contact
information, names of data volumes, IP addresses, access control lists,
diagnostics &
performance information, network configuration information, host/server
configuration
& performance information and related data (Collected Data) and
transmits this
information to Dell. By downloading SupportAssist and agreeing to be
bound by these
terms and the Dell end user license agreement, available at:
www.dell.com/aeula,
you agree to allow Dell to provide remote monitoring services of your IT
environment
and you give Dell the right to collect the Collected Data in accordance
with Dells
Privacy Policy, available at: www.dell.com/privacypolicycountryspecific,
in order to
enable the performance of all of the various functions of SupportAssist
during your
entitlement to receive related repair services from Dell,. You further
agree to
```

```

allow Dell to transmit and store the Collected Data from SupportAssist
in accordance
with these terms. You agree that the provision of SupportAssist may
involve
international transfers of data from you to Dell and/or to Dells
affiliates,
subcontractors or business partners. When making such transfers, Dell
shall ensure
appropriate protection is in place to safeguard the Collected Data being
transferred
in connection with SupportAssist. If you are downloading SupportAssist
on behalf
of a company or other legal entity, you are further certifying to Dell
that you
have appropriate authority to provide this consent on behalf of that
entity. If you
do not consent to the collection, transmission and/or use of the
Collected Data,
you may not download, install or otherwise use SupportAssist.
DellEMC#

```

## show running-config

Display the current configuration and changes from the default values.

**Syntax** `show running-config support-assist`

**Parameters** **support-assist** Enter the keyword `support-assist` to view the detailed configuration for the feature.

**Command Modes** EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                                                                              |
|-----------|------------------------------------------------------------------------------------------|
| 9.11(0.0) | Introduced on the M I/O Aggregator and FN IOM.                                           |
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON.                                                |
| 9.10(0.0) | Introduced on the S3148.                                                                 |
| 9.10(0.0) | Introduced on the C9010, Z9100-ON, S6100-ON, and S3100 series.                           |
| 9.9(0.0)  | Introduced on the S4810, S4820T, S3048-ON, S4048-ON, S5000, S6000, S6000-ON, Z9500, MXL. |

```

# System Time and Date

The commands in this section configure time values on the system, either using the Dell EMC Networking OS, or the hardware, or using the network time protocol (NTP). With NTP, the switch can act only as a client to an NTP clock host.

For more information, see “Network Time Protocol” of the *Management* section in the *Dell EMC Networking OS Configuration Guide*.

The commands in this chapter are generally supported on Dell EMC Networking OS with some exceptions, as notes in the Command History fields.

## Topics:

- [clock set](#)
- [clock summer-time date](#)
- [clock summer-time recurring](#)
- [clock timezone](#)
- [debug ntp](#)
- [ntp authenticate](#)
- [ntp authentication-key](#)
- [ntp broadcast client](#)
- [ntp disable](#)
- [ntp multicast client](#)
- [ntp master <stratum>](#)
- [ntp offset-threshold](#)
- [ntp server](#)
- [ntp source](#)
- [ntp trusted-key](#)
- [show clock](#)
- [show ntp associations](#)
- [show ntp vrf associations](#)
- [show ntp status](#)

## clock set

Set the software clock in the switch.

**Syntax** `clock set time month day year`

|                   |                     |                                                                                                                                                      |
|-------------------|---------------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Parameters</b> | <b><i>time</i></b>  | Enter the time in hours:minutes:seconds. For the hour variable, use the 24-hour format; example, 17:15:00 is 5:15 pm.                                |
|                   | <b><i>month</i></b> | Enter the name of one of the 12 months, in English. You can enter the number of a day and change the order of the display to time day month year.    |
|                   | <b><i>day</i></b>   | Enter the number of the day. The range is from 1 to 31. You can enter the name of a month to change the order of the display to time month day year. |
|                   | <b><i>year</i></b>  | Enter a four-digit number as the year. The range is from 1993 to 2035.                                                                               |

**Defaults** Not configured.

**Command Modes** EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

| Version                | Description                 |
|------------------------|-----------------------------|
| 9.2(1.0)               | Introduced on the Z9500.    |
| 9.0.2.0                | Introduced on the S6000.    |
| 8.3.11.1               | Introduced on the Z9000.    |
| 7.6.1.0                | Introduced on the S-Series. |
| 7.5.1.0                | Introduced on the C-Series. |
| pre-Version<br>6.1.1.0 | Introduced on the E-Series. |

### Usage Information

You can change the order of the `month` and `day` parameters to enter the time and date as time day month year. You cannot delete the software clock.

The software clock runs only when the software is up. The clock restarts, based on the hardware clock, when the switch reboots.

Dell Networking recommends using an outside time source, such as NTP, to ensure accurate time on the switch.

### Example

```
Dell#clock set 16:20:00 19 may 2001
Dell#
```

## clock summer-time date

Set a date (and time zone) on which to convert the switch to daylight saving time on a one-time basis.

### Syntax

```
clock summer-time time-zone date start-month start-day start-year start-time end-month end-day end-year end-time [offset]
```

To delete a daylight saving time zone configuration, use the `no clock summer-time` command.

### Parameters

|                           |                                                                                                                                                      |
|---------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><i>time-zone</i></b>   | Enter the three-letter name for the time zone. This name is displayed in the show clock output.                                                      |
| <b><i>start-month</i></b> | Enter the name of one of the 12 months in English. You can enter the name of a day to change the order of the display to time day month year.        |
| <b><i>start-day</i></b>   | Enter the number of the day. The range is from 1 to 31. You can enter the name of a month to change the order of the display to time day month year. |
| <b><i>start-year</i></b>  | Enter a four-digit number as the year. The range is from 1993 to 2035.                                                                               |
| <b><i>start-time</i></b>  | Enter the time in hours:minutes. For the hour variable, use the 24-hour format; example, 17:15 is 5:15 pm.                                           |
| <b><i>end-day</i></b>     | Enter the number of the day. The range is from 1 to 31. You can enter the name of a month to change the order of the display to time day month year. |
| <b><i>end-month</i></b>   | Enter the name of one of the 12 months in English. You can enter the name of a day to change the order of the display to time day month year.        |
| <b><i>end-time</i></b>    | Enter the time in hours:minutes. For the hour variable, use the 24-hour format; example, 17:15 is 5:15 pm.                                           |
| <b><i>end-year</i></b>    | Enter a four-digit number as the year. The range is from 1993 to 2035.                                                                               |
| <b><i>offset</i></b>      | (OPTIONAL) Enter the number of minutes to add during the summer-time period. The range is from 1 to 1440. The default is <b>60 minutes</b> .         |

## Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |
| 7.6.1.0    | Introduced on the S-Series.               |
| 7.5.1.0    | Introduced on the C-Series.               |
| 6.1.1.0    | Introduced on the E-Series.               |

## Related Commands

- [clock summer-time recurring](#) — sets a date (and time zone) on which to convert the switch to daylight saving time each year.
- [show clock](#) — displays the current clock settings.

# clock summer-time recurring

Set the software clock to convert to daylight saving time on a specific day each year.

## Syntax

```
clock summer-time time-zone recurring [start-week start-day start-month
start-time end-week end-day end-month end-time [offset]]
```

To delete a daylight saving time zone configuration, use the `no clock summer-time` command.

## Parameters

|                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|---------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><i>time-zone</i></b>   | Enter the three-letter name for the time zone. This name is displayed in the show clock output. You can enter up to eight characters.                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b><i>start-week</i></b>  | (OPTIONAL) Enter one of the following as the week that daylight saving begins and then enter values for start-day through end-time: <ul style="list-style-type: none"><li>• <code>week-number</code>: Enter a number from 1 to 4 as the number of the week in the month to start daylight saving time.</li><li>• <code>first</code>: Enter this keyword to start daylight saving time in the first week of the month.</li><li>• <code>last</code>: Enter this keyword to start daylight saving time in the last week of the month.</li></ul> |
| <b><i>start-day</i></b>   | Enter the name of the day that you want daylight saving time to begin. Use English three letter abbreviations; for example, Sun, Sat, Mon, and so on. The range is from Sun to Sat.                                                                                                                                                                                                                                                                                                                                                          |
| <b><i>start-month</i></b> | Enter the name of one of the 12 months in English.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b><i>start-time</i></b>  | Enter the time in hours:minutes. For the hour variable, use the 24-hour format; example, 17:15 is 5:15 pm.                                                                                                                                                                                                                                                                                                                                                                                                                                   |

- end-week*** Enter the one of the following as the week that daylight saving ends:
  - `week-number`: enter a number from 1 to 4 as the number of the week to end daylight saving time.
  - `first`: enter the keyword `first` to end daylight saving time in the first week of the month.
  - `last`: enter the keyword `last` to end daylight saving time in the last week of the month.
- end-day*** Enter the weekday name that you want daylight saving time to end. Enter the weekdays using the three letter abbreviations; for example Sun, Sat, Mon, and so on. The range is from Sun to Sat.
- end-month*** Enter the name of one of the 12 months in English.
- end-time*** Enter the time in hours:minutes:seconds. For the hour variable, use the 24-hour format; example, 17:15:00 is 5:15 pm.
- offset*** (OPTIONAL) Enter the number of minutes to add during the summer-time period. The range is from 1 to 1440. The default is **60 minutes**.

**Defaults** Not configured.

| <b>8.3.19.0</b>   | Introduced on the S4820T.                                                                                                                 |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                                                                                                                  |
| <b>8.3.7.0</b>    | Introduced on the S4810.                                                                                                                  |
| <b>7.6.1.0</b>    | Introduced on the S-Series.                                                                                                               |
| <b>7.5.1.0</b>    | Introduced on the C-Series.                                                                                                               |
| <b>7.4.1.0</b>    | Updated the <code>start-day</code> and <code>end-day</code> options to allow for using the three-letter abbreviation of the weekday name. |
| <b>6.1.1.0</b>    | Introduced on the E-Series.                                                                                                               |

- Related Commands**
- [ntp trusted-key](#) — configures a trusted key.
  - [clock summer-time date](#) — sets a date (and time zone) on which to convert the switch to daylight saving time on a one-time basis.
  - [show clock](#) — displays the current clock settings.

# clock timezone

Configure a timezone for the switch.

**Syntax** `clock timezone timezone-name offset`

To delete a timezone configuration, use the `no clock timezone` command.

**Parameters**

***timezone-name*** Enter the name of the timezone. You cannot use spaces.

***offset*** Enter one of the following:

- a number from 1 to 23 as the number of hours in addition to universal time coordinated (UTC) for the timezone.
- a minus sign (-) then a number from 1 to 23 as the number of hours.

**Defaults** Not configured.

**Command Modes** CONFIGURATION

| 6.1.1.0    | Introduced on the E-Series.               |

**Usage Information**

Coordinated universal time (UTC) is the time standard based on the International Atomic Time standard, commonly known as Greenwich Mean time. When determining system time, include the differentiator between UTC and your local timezone. For example, San Jose, CA is the Pacific Timezone with a UTC offset of -8.

# debug ntp

Display network time protocol (NTP) transactions and protocol messages for troubleshooting.

**Syntax** `debug ntp {adjust | all | authentication | events | loopfilter | packets | select | sync}`

To disable debugging of NTP transactions, use the `no debug ntp {adjust | all | authentication | events | loopfilter | packets | select | sync}` command.

|                   |                       |                                                                                                          |
|-------------------|-----------------------|----------------------------------------------------------------------------------------------------------|
| <b>Parameters</b> | <b>adjust</b>         | Enter the keyword <code>adjust</code> to display information on NTP clock adjustments.                   |
|                   | <b>all</b>            | Enter the keyword <code>all</code> to display information on all NTP transactions.                       |
|                   | <b>authentication</b> | Enter the keyword <code>authentication</code> to display information on NTP authentication transactions. |
|                   | <b>events</b>         | Enter the keyword <code>events</code> to display information on NTP events.                              |
|                   | <b>loopfilter</b>     | Enter the keyword <code>loopfilter</code> to display information on NTP local clock frequency.           |
|                   | <b>packets</b>        | Enter the keyword <code>packets</code> to display information on NTP packets.                            |
|                   | <b>select</b>         | Enter the keyword <code>select</code> to display information on the NTP clock selection.                 |
|                   | <b>sync</b>           | Enter the keyword <code>sync</code> to display information on the NTP clock synchronization.             |

**Command Modes** EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| <b>Version</b>    | <b>Description</b>                        |
|-------------------|-------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.               |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.               |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                  |
| <b>9.0.2.0</b>    | Introduced on the S6000.                  |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                 |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                  |
| <b>8.3.7.0</b>    | Introduced on the S4810.                  |
| <b>7.6.1.0</b>    | Introduced on the S-Series.               |
| <b>7.5.1.0</b>    | Introduced on the C-Series.               |
| <b>6.1.1.0</b>    | Introduced on the E-Series.               |

## ntp authenticate

Enable authentication of NTP traffic between the switch and the NTP time serving hosts.

**Syntax** `ntp authenticate`  
To disable NTP authentication, use the `no ntp authentication` command.

**Defaults** Not enabled.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |
| 7.6.1.0    | Introduced on the S-Series.               |
| 7.5.1.0    | Introduced on the C-Series.               |
| 6.1.1.0    | Introduced on the E-Series.               |

**Usage Information**

You also must configure an authentication key for NTP traffic using the `ntp authentication-key` command.

## ntp authentication-key

Specify a key for authenticating the NTP server.

**Syntax** `ntp authentication-key number md5 [0 | 7] key`

| Parameters    |                                                                                                                                                                                                           |  |
|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| <b>number</b> | Specify a number for the authentication key. The range is from 1 to 4294967295. This number must be the same as the <code>number</code> parameter configured in the <code>ntp trusted-key</code> command. |  |
| <b>md5</b>    | Specify that the authentication key is encrypted using MD5 encryption algorithm.                                                                                                                          |  |
| <b>0</b>      | Specify that authentication key is entered in an unencrypted format (default).                                                                                                                            |  |
| <b>7</b>      | Specify that the authentication key is entered in DES encrypted format.                                                                                                                                   |  |
| <b>key</b>    | Enter the authentication key in the previously specified format.                                                                                                                                          |  |

**Defaults** NTP authentication is not configured by default. If you do not specify the option [0 | 7], **0** is selected by default.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                               |
|-----------|-------------------------------------------|
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0) | Introduced on the S3148.                  |
| 9.10(0.0) | Introduced on the S6100-ON.               |
| 9.8(2.0)  | Introduced on the S3100 series.           |

| Version           | Description                                                |
|-------------------|------------------------------------------------------------|
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.                                |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.                                |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                                |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.                                |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                                   |
| <b>9.0.2.0</b>    | Introduced on the S6000.                                   |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                                   |
| <b>8.2.1.0</b>    | Added options [0   7] for entering the authentication key. |
| <b>7.6.1.0</b>    | Introduced on the S-Series.                                |
| <b>7.5.1.0</b>    | Introduced on the C-Series.                                |
| <b>6.1.1.0</b>    | Introduced on the E-Series.                                |

### Usage Information

After configuring the `ntp authentication-key` command, configure the `ntp trusted-key` command to complete NTP authentication.

Dell EMC Networking OS versions 8.2.1.0 and later use an encryption algorithm to store the authentication key that is different from previous Dell EMC Networking OS versions; beginning in version 8.2.1.0, Dell EMC Networking OS uses DES encryption to store the key in the startup-config when you enter the `ntp authentication-key` command. Therefore, if your system boots with a startup-configuration from an Dell EMC Networking OS versions prior to 8.2.1.0 in which you have configured `ntp authentication-key`, the system cannot correctly decrypt the key, and cannot authenticate NTP packets. In this case you must re-enter this command and save the running-config to the startup-config.

### Related Commands

- [ntp authenticate](#) — enables NTP authentication.
- [ntp trusted-key](#) — configures a trusted key.

## ntp broadcast client

Set up the interface to receive NTP broadcasts from an NTP server.

**Syntax** `ntp broadcast client`  
 To disable broadcast, use the `no ntp broadcast client` command.

**Defaults** Disabled.

**Command Modes** INTERFACE

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                               |
|-------------------|-------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                  |

| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.               |

| Version  | Description                 |
|----------|-----------------------------|
| 9.2(1.0) | Introduced on the Z9500.    |
| 9.0.2.0  | Introduced on the S6000.    |
| 8.3.19.0 | Introduced on the S4820T.   |
| 8.3.11.1 | Introduced on the Z9000.    |
| 8.3.7.0  | Introduced on the S4810.    |
| 7.6.1.0  | Introduced on the S-Series. |
| 7.5.1.0  | Introduced on the C-Series. |
| 6.1.1.0  | Introduced on the E-Series. |

## ntp disable

Prevent an interface from receiving NTP packets.

**Syntax** `ntp disable`

To re-enable NTP on an interface, use the `no ntp disable` command.

**Defaults** Disabled (that is, if you configure an NTP host, all interfaces receive NTP packets)

**Command Modes** INTERFACE

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |

| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |
| 7.6.1.0    | Introduced on the S-Series.               |
| 7.5.1.0    | Introduced on the C-Series.               |
| 6.1.1.0    | Introduced on the E-Series.               |

# ntp multicast client

To receive NTP information from the network via multicast, configure the switch.

**Syntax** `ntp multicast client [multicast-address]`  
To disable multicast reception, use the `no ntp multicast client [multicast-address]` command.

**Parameters** **multicast-address** (OPTIONAL) Enter a multicast address. Enter either an IPv4 address in dotted decimal format or an IPv6 address in X:X:X::X format. If you do not enter a multicast address, the address:

- 224.0.1.1 is configured if the interface address is IPv4
- ff05::101 is configured if the interface address is IPv6

**Defaults** Not configured.

**Command Modes** INTERFACE

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                 |
|------------|---------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.   |
| 9.10(0.0)  | Introduced on the S3148.                    |
| 9.8(2.0)   | Introduced on the S3100 series.             |
| 9.8(0.0P5) | Introduced on the S4048-ON.                 |
| 9.8(0.0P2) | Introduced on the S3048-ON.                 |
| 9.7(0.0)   | Introduced on the S6000-ON.                 |
| 9.2(1.0)   | Introduced on the Z9500.                    |
| 9.0.2.0    | Introduced on the S6000.                    |
| 8.3.19.0   | Introduced on the S4820T.                   |
| 8.3.11.1   | Introduced on the Z9000.                    |
| 8.4.1.0    | Added support for IPv6 multicast addresses. |
| 8.3.7.0    | Introduced on the S4810.                    |
| 6.1.1.0    | Introduced on the E-Series.                 |

# ntp master <stratum>

Configure the switch as NTP Server.

**Syntax** `ntp master <stratum>`

**Parameters** **ntp master <stratum>** Enter the `stratum` number to identify the NTP Server's hierarchy.

**Defaults** Not configured.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                                      |
|------------|------------------------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.                        |
| 9.10(0.0)  | Introduced on the S3148.                                         |
| 9.10(0.0)  | Introduced on the S6100-ON.                                      |
| 9.8(2.0)   | Introduced on the S3100 series.                                  |
| 9.8(1.0)   | Introduced on the Z9100-ON.                                      |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                      |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                      |
| 9.7(0.0)   | Introduced on the S6000-ON.                                      |
| 9.6(0.0)   | Introduced on the S4810, S4820T, S5000, S6000, Z9000, and Z9500. |
| 9.2(1.0)   | Introduced on the Z9500.                                         |

## ntp offset-threshold

Configure the threshold time interval before which the system generates an NTP audit log message if the time difference from the NTP server is greater than a threshold value (offset-threshold).

**Syntax** `ntp offset-threshold threshold-value`  
 To disable the threshold value, use the `no ntp offset-threshold` command.

**Parameters** **offset-threshold** (Optional) Enter the keyword `offset-threshold` and then the threshold value.  
**threshold-value** The range is from 0 to 999.

**Defaults** Not enabled.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                                                                                                                |
|-----------|----------------------------------------------------------------------------------------------------------------------------|
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON.                                                                                  |
| 9.10(0.0) | Introduced on the S3148.                                                                                                   |
| 9.10(0.0) | Introduced on the S3038-ON, S4048-ON, S3100 Series, S4810P, S4820T, S5000, S6000, S6000-ON, S6100-ON, Z9500, and Z9100-ON. |

**Usage Information** The `ntp offset-threshold` command does not time synchronization.

**Example**

```
DellEMC(config)# ntp offset-threshold 4
```

## ntp server

Configure an NTP time-serving host.

**Syntax** `ntp server[vrf vrf-name] {hostname | ipv4-address | ipv6-address} [key keyid] [prefer] [version number]`

**Parameters** **vrf vrf-name** (Optional) Enter the keyword `vrf` and then the name of the VRF to configure an NTP time-serving host corresponding to that VRF.

|                                                  |                                                                                                                                               |
|--------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| <b><i>ipv4-address</i>   <i>ipv6-address</i></b> | Enter an IPv4 address (A.B.C.D) or IPv6 address (X:X:X::X) of NTP server.                                                                     |
| <b><i>hostname</i></b>                           | Enter the host name of the server.                                                                                                            |
| <b><i>key keyid</i></b>                          | (OPTIONAL) Enter the keyword <code>key</code> and a number as the NTP peer key. The range is from 1 to 4294967295.                            |
| <b><i>prefer</i></b>                             | (OPTIONAL) Enter the keyword <code>prefer</code> to indicate that this peer has priority over other servers.                                  |
| <b><i>version number</i></b>                     | (OPTIONAL) Enter the keyword <code>version</code> and a number to correspond to the NTP version used on the server. The range is from 1 to 4. |

**Defaults** Not configured.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| <b>Version</b>    | <b>Description</b>                        |
|-------------------|-------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.               |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.               |
| <b>9.6(0.0)</b>   | Added support for VRF.                    |
| <b>9.4.(0.0)</b>  | Added support for VRF.                    |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                  |
| <b>9.0.2.0</b>    | Introduced on the S6000.                  |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                  |
| <b>8.4.1.0</b>    | Added IPv6 support.                       |
| <b>7.6.1.0</b>    | Introduced on the S-Series.               |
| <b>7.5.1.0</b>    | Introduced on the C-Series.               |
| <b>6.1.1.0</b>    | Introduced on the E-Series.               |

**Usage Information** You can configure multiple time-serving hosts. From these time-serving hosts, the Dell EMC Networking OS chooses one NTP host with which to synchronize. To determine which server is selected, use the `show ntp associations` command.

Because many polls to NTP hosts can affect network performance, Dell EMC Networking recommends limiting the number of hosts configured.

By default, the system performs a time synchronization if the time difference from the time source is greater than one second.

**Related Commands**

- [show ntp associations](#) — displays the NTP servers configured and their status.

# ntp source

Specify an interface's IP address to be included in the NTP packets.

**Syntax** `ntp source interface`

To delete the configuration, use the `no ntp source` command.

**Parameters** *interface* Enter the following keywords and slot/port or number information:

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
- For the Management interface, enter the keyword `ManagementEthernet` then slot/port information.
- For a port-channel interface, enter the keywords `port-channel` then the port-channel ID.
- For VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults** Not configured.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                         |
|------------|-----------------------------------------------------|
| 9.13.0.0   | Added support for configuring Management interface. |
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.           |
| 9.10(0.0)  | Introduced on the S3148.                            |
| 9.10(0.0)  | Introduced on the S6100-ON.                         |
| 9.8(2.0)   | Introduced on the S3100 series.                     |
| 9.8(1.0)   | Introduced on the Z9100-ON.                         |
| 9.8(0.0P5) | Introduced on the S4048-ON.                         |
| 9.8(0.0P2) | Introduced on the S3048-ON.                         |
| 9.7(0.0)   | Introduced on the S6000-ON.                         |
| 9.2(1.0)   | Introduced on the Z9500.                            |
| 9.0.2.0    | Introduced on the S6000.                            |
| 8.3.11.1   | Introduced on the Z9000.                            |
| 8.5.1.0    | Added support for 4-port 40G line cards.            |
| 7.6.1.0    | Introduced on the S-Series.                         |
| 7.5.1.0    | Introduced on the C-Series.                         |
| 6.1.1.0    | Introduced on the E-Series.                         |

# ntp trusted-key

Set a key to authenticate the system to which NTP synchronizes.

**Syntax** `ntp trusted-key number`

To delete the key, use the `no ntp trusted-key number` command.

|                        |                                                                                                                                                               |                                                                          |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------|
| <b>Parameters</b>      | <b>number</b>                                                                                                                                                 | Enter a number as the trusted key ID. The range is from 1 to 4294967295. |
| <b>Defaults</b>        | Not configured.                                                                                                                                               |                                                                          |
| <b>Command Modes</b>   | CONFIGURATION                                                                                                                                                 |                                                                          |
| <b>Command History</b> | This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> . |                                                                          |

| <b>Version</b>    | <b>Description</b>                        |
|-------------------|-------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.               |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.               |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                  |
| <b>9.0.2.0</b>    | Introduced on the S6000.                  |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                  |
| <b>7.6.1.0</b>    | Introduced on the S-Series.               |
| <b>7.5.1.0</b>    | Introduced on the C-Series.               |
| <b>6.1.1.0</b>    | Introduced on the E-Series.               |

**Usage Information** The number parameter in the `ntp trusted-key` command must be the same number as the number parameter in the `ntp authentication-key` command. If you change the `ntp authentication-key` command, you must also change the `ntp trusted-key` command.

**Related Commands**

- [ntp authentication-key](#) — sets an authentication key for NTP.
- [ntp authenticate](#) — enables the NTP authentication parameters you set.

## show clock

Display the current clock settings.

|                        |                                                                                                                                                               |                                                                                               |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | <code>show clock [detail]</code>                                                                                                                              |                                                                                               |
| <b>Parameters</b>      | <b>detail</b>                                                                                                                                                 | (OPTIONAL) Enter the keyword <code>detail</code> to view the source information of the clock. |
| <b>Command Modes</b>   | <ul style="list-style-type: none"><li>• EXEC</li><li>• EXEC Privilege</li></ul>                                                                               |                                                                                               |
| <b>Command History</b> | This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> . |                                                                                               |

| <b>Version</b>   | <b>Description</b>                        |

| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.     |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.     |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.     |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.        |
| <b>9.0.2.0</b>    | Introduced on the S6000.        |
| <b>8.3.19.0</b>   | Introduced on the S4820T.       |
| <b>8.3.11.1</b>   | Introduced on the Z9000.        |
| <b>8.3.7.0</b>    | Introduced on the S4810.        |
| <b>7.6.1.0</b>    | Introduced on the S-Series.     |
| <b>7.5.1.0</b>    | Introduced on the C-Series.     |
| <b>6.1.1.0</b>    | Introduced on the E-Series.     |

### Example

```
DellEMC#show clock
11:05:56.949 UTC Thu Oct 25 2001
DellEMC#
```

### Example (Detail)

```
DellEMC# show clock detail
12:18:10.691 UTC Wed Jan 7 2009
Time source is RTC hardware
Summer time starts 02:00:00 UTC Sun Mar 8 2009
Summer time ends 02:00:00 ABC Sun Nov 1 2009
DellEMC#
```

### Related Commands

- [clock summer-time recurring](#) — displays the time and date from the switch hardware clock.

## show ntp associations

Display the NTP master and peers.

**Syntax** `show ntp associations`

- Command Modes**
- EXEC
  - EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                               |

| 7.6.1.0  | Introduced on the S-Series. |
| 7.5.1.0  | Introduced on the C-Series. |
| 6.1.1.0  | Introduced on the E-Series. |

### Usage Information

The following describes the `show ntp associations` command shown in the Example below.

| Field            | Description                                                                                                                                                                                                                                                                                                                                                                                 |
|------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>(none)</b>    | One or more of the following symbols could be displayed: <ul style="list-style-type: none"> <li>• * means synchronized to this peer.</li> <li>• # means almost synchronized to this peer.</li> <li>• + means the peer was selected for possible synchronization.</li> <li>• - means the peer is a candidate for selection.</li> <li>• ~ means the peer is statically configured.</li> </ul> |
| <b>remote</b>    | Displays the remote IP address of the NTP peer.                                                                                                                                                                                                                                                                                                                                             |
| <b>ref clock</b> | Displays the IP address of the remote peer's reference clock.                                                                                                                                                                                                                                                                                                                               |
| <b>st</b>        | Displays the peer's stratum, that is, the number of hops away from the external time source. A 16 in this column means the NTP peer cannot reach the time source.                                                                                                                                                                                                                           |
| <b>when</b>      | Displays the last time the switch received an NTP packet.                                                                                                                                                                                                                                                                                                                                   |
| <b>poll</b>      | Displays the polling interval (in seconds).                                                                                                                                                                                                                                                                                                                                                 |
| <b>reach</b>     | Displays the reachability to the peer (in octal bitstream).                                                                                                                                                                                                                                                                                                                                 |
| <b>delay</b>     | Displays the time interval or delay for a packet to complete a round-trip to the NTP time source (in milliseconds).                                                                                                                                                                                                                                                                         |
| <b>offset</b>    | Displays the relative time of the NTP peer's clock to the switch clock (in milliseconds).                                                                                                                                                                                                                                                                                                   |
| <b>disp</b>      | Displays the dispersion.                                                                                                                                                                                                                                                                                                                                                                    |

### Example

```
DelleMC# show ntp associations
remote ref clock st when poll reach delay offset disp
=====
 10.10.120.5 0.0.0.0 16 - 256 0 0.00 0.000 16000.0
*172.16.1.33 127.127.1.0 11 6 16 377 -0.08 -1499.9 104.16
 172.31.1.33 0.0.0.0 16 - 256 0 0.00 0.000 16000.0
 192.200.0.2 0.0.0.0 16 - 256 0 0.00 0.000 16000.0

### Usage Information

The following describes the `show ntp status` command shown in the Example below.

| Field                          | Description                                                                                                                          |
|--------------------------------|--------------------------------------------------------------------------------------------------------------------------------------|
| <b>“Clock is...”</b>           | States whether or not the switch clock is synchronized, which NTP stratum the system is assigned and the IP address of the NTP peer. |
| <b>“frequency is...”</b>       | Displays the frequency (in ppm), stability (in ppm) and precision (in Hertz) of the clock in this system.                            |
| <b>“reference time is...”</b>  | Displays the reference time stamp.                                                                                                   |
| <b>“clock offset is...”</b>    | Displays the system offset to the synchronized peer and the time delay on the path to the NTP root clock.                            |
| <b>“root dispersion is...”</b> | Displays the root and path dispersion.                                                                                               |
| <b>“peer mode is...”</b>       | State what NTP mode the switch is. This should be Client mode.                                                                       |

### Example

```
DellEMC# show ntp status
Clock is synchronized, stratum 2, reference is 100.10.10.10
frequency is -32.000 ppm, stability is 15.156 ppm, precision is
4294967290
reference time is BC242FD5.C7C5C000 (10:15:49.780 UTC Mon Jan 10 2000)
clock offset is clock offset msec, root delay is 0.01656 sec
root dispersion is 0.39694 sec, peer dispersion is peer dispersion msec
peer mode is client
DellEMC#
```

### Related Commands

- [show ntp associations](#) — displays information on the NTP master and peer configurations.

# Tunneling

Tunneling is supported on Dell EMC Networking OS.

## Topics:

- [ip unnumbered](#)
- [ipv6 unnumbered](#)
- [tunnel allow-remote](#)
- [tunnel destination](#)
- [tunnel dscp](#)
- [tunnel flow-label](#)
- [tunnel hop-limit](#)
- [tunnel keepalive](#)
- [tunnel-mode](#)
- [tunnel source](#)

## ip unnumbered

Configure a tunnel interface to operate without a unique IPv4 address and select the interface from which the tunnel borrows its address.

|                        |                                                                                                                                                                                                                                          |
|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | <code>ip unnumbered <i>interface-type</i></code>                                                                                                                                                                                         |
|                        | To set the tunnel back to default logical address use the <code>no ip unnumbered</code> command. If the tunnel was previously operational, the tunnel interface is operationally down unless you also configure the tunnel IPv6 address. |
| <b>Parameters</b>      | <b><i>interface-type</i></b> Enter the interface type, followed by a slot/port/subport number.                                                                                                                                           |
| <b>Defaults</b>        | None                                                                                                                                                                                                                                     |
| <b>Command Modes</b>   | INTERFACE TUNNEL                                                                                                                                                                                                                         |

| <b>9.3(0.1)</b>   | Introduced on the S5000 and Z9000.                |

## Usage Information

The `ip unnumbered` command fails in two conditions:

- If the logical ip address is configured.
- If Tunnel mode is `ipv6ip` (where ip address over tunnel interface is not possible).

To ping the unnumbered tunnels, the logical address route information must be present at both the ends.

**NOTE:** The `ip unnumbered` command can specify an interface name that does not exist or does not have a configured IPv6 address. The tunnel interface is not changed to operationally up until the logical IP address is identified from one of the address family.

## ipv6 unnumbered

Configure a tunnel interface to operate without a unique IPv6 address and select the interface from which the tunnel borrows its address.

**Syntax** `ipv6 unnumbered {interface-type interface-number}`

To set the tunnel back to default logical address use the `no ipv6 unnumbered` command. If the tunnel was previously operational, the tunnel interface is operationally down unless you also configure the tunnel IPv4 address.

**Parameters** **interface-type** Enter the interface type, followed by the type, and then the slot/port/subport  
**interface-number** information.

**Defaults** None.

**Command Modes** INTERFACE TUNNEL

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.5(0.1)   | Introduced on the Z9500.                  |
| 9.4(0.0)   | Introduced on the S4810, S4820T.          |
| 9.3(0.1)   | Introduced on the S6000 and Z9000.        |

## Usage Information

The `ipv6 unnumbered` command fails in two conditions:

- If the logical IP address is configured.
- If Tunnel mode is `ipv6ip` (where ip address over tunnel interface is not possible).

To ping the unnumbered tunnels, the logical address route information must be present at both the ends.

**NOTE:** The `ipv6 unnumbered` command can specify an interface name that does not exist or does not have a configured IPv6 address. The tunnel interface is not changed to operationally up until the logical IP address is identified from one of the address family.

# tunnel allow-remote

Configure an IPv4 or IPv6 address or prefix whose tunneled packets are accepted for decapsulation. If you do not configure allow-remote entries, tunneled packets from any remote peer address is accepted.

This feature is supported on Dell EMC Networking OS.

- Syntax** `tunnel allow-remote {ip-address | ipv6-address} [mask]`
- To delete a configured allow-remote entry use the `no tunnel allow-remote` command. Any specified address/mask values must match an existing entry for the delete to succeed. If the address and mask are not specified, this command deletes all allow-remote entries.
- Parameters**
- ip-address** Enter the source IPv4 address in A.B.C.D format.
  - ipv6-address** Enter the source IPv6 address in X:X:X::X format.
  - mask** (OPTIONAL) Enter a network mask in /prefix format (/x) or A.B.C.D to match a range of remote addresses. The default mask is /32 for IPv4 addresses and /128 for IPv6 addresses, which match only the specified address.
- Defaults** If you do not configure tunnel allow remote , all traffic which is destined to tunnel source address is decapsulated.
- Command Modes** INTERFACE TUNNEL
- Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                       |
|------------|---------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.         |
| 9.10(0.0)  | Introduced on the S3148.                          |
| 9.10(0.0)  | Introduced on the S6100-ON.                       |
| 9.8(2.0)   | Introduced on the S3100 series.                   |
| 9.8(1.0)   | Introduced on the Z9100-ON.                       |
| 9.8(0.0P5) | Introduced on the S4048-ON.                       |
| 9.8(0.0P2) | Introduced on the S3048-ON.                       |
| 9.7(0.0)   | Introduced on the S6000-ON.                       |
| 9.5(0.1)   | Introduced on the Z9500.                          |
| 9.4(0.0)   | Introduced on the S4810, S4820T, S6000 and Z9000. |
| 9.3(0.1)   | Introduced on the S6000 and Z9000.                |

- Usage Information** You can configure up to eight allow-remote entries on any multipoint receive-only tunnel.
- This command fails if the address family entered does not match the outer header address family of the tunnel mode, tunnel source, or any other tunnel allow-remote.
- If you configure any allow-remote , the tunnel source or tunnel mode commands fail if the outer header address family does not match that of the configured allow-remote.

# tunnel destination

Set a destination endpoint for the tunnel.

- Syntax** `tunnel destination {ip-address | ipv6-address}`
- To delete a tunnel destination address, use the `no tunnel destination {ip-address | ipv6-address}` command.

|                        |                                                                                                                                                               |                                                    |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------|
| <b>Parameters</b>      | <b><i>ip-address</i></b>                                                                                                                                      | Enter the destination IPv4 address for the tunnel. |
|                        | <b><i>ipv6-address</i></b>                                                                                                                                    | Enter the destination IPv6 address for the tunnel. |
| <b>Defaults</b>        | none                                                                                                                                                          |                                                    |

| <b>9.3(0.0)</b>   | Introduced on the S4810, S4820T, S6000 and Z9000. |

|                          |                                                                                                                                                                                                                                                                                                                                                            |
|--------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Usage Information</b> | <p>The tunnel interface is inoperable without a valid tunnel destination address for the configured Tunnel mode.</p> <p>To establish a logical tunnel to the particular destination address, use the destination address of the outer tunnel header. If you configure a tunnel interface or source address, the tunnel destination must be compatible.</p> |
|--------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## tunnel dscp

Configure the method to set the DSCP in the outer tunnel header.

### C9000 Series

|                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | <code>tunnel dscp {mapped   value}</code>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|                        | To use the default tunnel mapping behavior, use the <code>no tunnel dscp value</code> command.                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Parameters</b>      | <p><b><i>mapped</i></b> Enter the keyword <code>mapped</code> to map the original packet DSCP (IPv4)/Traffic Class (IPv6) to the tunnel header DSCP (IPv4)/Traffic Class (IPv6) depending on the mode of tunnel.</p> <p><b><i>value</i></b> Enter a value to set the DSCP value in the tunnel header. The range is from 0 to 63. The default value of <b>0</b> denotes mapping of original packet DSCP (IPv4)/Traffic Class (IPv6) to the tunnel header DSCP (IPv4)/Traffic Class (IPv6) depending on the mode of tunnel.</p> |
|                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Defaults</b>        | 0 (Mapped)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Command Modes</b>   | INTERFACE TUNNEL (conf-if-tu)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| 9.3(0.0)   | Introduced on the S6000, S4810, S4820T, Z9000. |

#### Usage Information

This command configures the method used to set the high 6 bits (the differentiated services codepoint) of the IPv4 TOS or the IPv6 traffic class in the outer IP header.

A value of 0 copies original packet DSCP (IPv4)/Traffic Class (IPv6) to the tunnel header DSCP (IPv4)/Traffic Class (IPv6) depending on the mode of tunnel.

## tunnel flow-label

Configure the method to set the IPv6 flow label value in the outer tunnel header.

#### Syntax

```
tunnel flow-label value
```

To return to the default value of 0, use the `no tunnel flow-label value` command.

#### Parameters

**value** Enter a value to set the IPv6 flow label value in the tunnel header. The range is from 0 to 1048575. The default value is **0**.

#### Defaults

**0** (Mapped original packet flow-label value to tunnel header flow-label value)

#### Command Modes

INTERFACE TUNNEL (conf-if-tu)

#### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                    |
|------------|------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.      |
| 9.10(0.0)  | Introduced on the S3148.                       |
| 9.10(0.0)  | Introduced on the S6100-ON.                    |
| 9.8(2.0)   | Introduced on the S3100 series.                |
| 9.8(1.0)   | Introduced on the Z9100-ON.                    |
| 9.8(0.0P5) | Introduced on the S4048-ON.                    |
| 9.8(0.0P2) | Introduced on the S3048-ON.                    |
| 9.7(0.0)   | Introduced on the S6000-ON.                    |
| 9.5(0.1)   | Introduced on the Z9500.                       |
| 9.3(0.0)   | Introduced on the S6000, S4810, S4820T, Z9000. |

#### Usage Information

This command is only valid for tunnel interfaces with an IPv6 outer header.

# tunnel hop-limit

Configure the method to set the IPv4 time-to-live or the IPv6 hop limit value in the outer tunnel header.

|                        |                                                                                                                                                               |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | <code>tunnel hop-limit value</code><br>To restore the default tunnel hop-limit, use the <code>no tunnel hop-limit</code> command.                             |
| <b>Parameters</b>      | <b>value</b> Enter the hop limit (ipv6) or time-to-live (ipv4) value to include in the tunnel header. The range is from 0 to 255. The default is <b>64</b> .  |
| <b>Defaults</b>        | <b>64</b> (Time-to-live for IPv4 outer tunnel header or hop limit for IPv6 outer tunnel header)                                                               |
| <b>Command Modes</b>   | INTERFACE TUNNEL (conf-if-tu)                                                                                                                                 |

|                          |                                                                                                                                                                             |
|--------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Usage Information</b> | A value of 0 copies the inner packet hop limit (ipv6) or time-to-live (ipv4) in the encapsulated packet to the tunnel header hop limit (ipv6) or time-to-live (ipv4) value. |
|--------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

# tunnel keepalive

Configure the tunnel keepalive target, interval and attempts.

|                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>     | <code>tunnel keepalive {ip-address   ipv6-address}[interval {seconds}] [attempts {count   unlimited}]</code><br>To disable the tunnel keepalive probes use the <b>no tunnel keepalive</b> command.                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Parameters</b> | <b>ip-address ipv6 address</b> Enter the IPv4 or IPv6 address of the peer to which the keepalive probes will be sent.<br><b>interval seconds</b> Enter the keyword <code>interval</code> then the interval time, in seconds, after which the restart process to keepalive probe packets.<br>The range is from 5 to 255. The default is 5.<br><b>count</b> (OPTIONAL) Enter the keyword <b>count</b> to count packets processed by the filter.<br>The range is from 3 to 10. The default is 3.<br><b>unlimited</b> Enter the keyword <b>unlimited</b> to specify the unlimited number of keepalive probe packets. |

**Defaults** Tunnel keepalive is disabled.

**Command Modes** INTERFACE TUNNEL

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                       |
|------------|---------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.         |
| 9.10(0.0)  | Introduced on the S3148.                          |
| 9.10(0.0)  | Introduced on the S6100-ON.                       |
| 9.8(2.0)   | Introduced on the S3100 series.                   |

| 9.8(0.0P2) | Introduced on the S3048-ON.                       |
| 9.7(0.0)   | Introduced on the S6000-ON.                       |
| 9.5(0.1)   | Introduced on the Z9500.                          |
| 9.4(0.0)   | Introduced on the S4810, S4820T, S6000 and Z9000. |

**Usage Information** Enabling tunnel keepalive causes ICMP echo packets to be sent to the keepalive target. The ICMP echo will be sourced from the tunnel interface logical IPv4 or IPv6 address and will be tunnel encapsulated. The response will be accepted whether it returns tunnel encapsulated or not.

When configuring tunnel keepalive at both end points of a tunnel interface it is recommended to set the tunnel keepalive target to the logical IPv4 or IPv6 address of the far end tunnel peer, rather than to the tunnel destination. This reduces the chance of both ends of the tunnel staying in keepalive down state. If both ends get into a keepalive down state that does not clear in a few seconds, then performing shutdown - no shutdown sequence on one end should bring both ends back to up.

## tunnel-mode

Enable a tunnel interface.

**Syntax** `tunnel mode {ipip | ipv6 | ipv6ip} [decapsulate-any]`

To disable an active tunnel interface, use the **no tunnel** mode command.

**Parameters**

|                        |                                                                                                  |
|------------------------|--------------------------------------------------------------------------------------------------|
| <i>ipip</i>            | Enable tunnel in RFC 2003 mode and encapsulate IPv4 and/or IPv6 datagrams inside an IPv4 tunnel. |
| <i>ipv6</i>            | Enable tunnel in RFC 2473 mode and encapsulate IPv4 and/or IPv6 datagrams inside an IPv6 tunnel. |
| <i>ipv6ip</i>          | Enable tunnel in RFC 4213 mode and encapsulate IPv6 datagrams inside an IPv4 tunnel.             |
| <i>decapsulate-any</i> | (Optional) Enable tunnel in multipoint receive-only mode.                                        |

**Defaults** There is no default tunnel mode.

**Command Modes** INTERFACE TUNNEL

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                               |
|-----------|-------------------------------------------|
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON. |

| Version    | Description                        |
|------------|------------------------------------|
| 9.10(0.0)  | Introduced on the S3148.           |
| 9.10(0.0)  | Introduced on the S6100-ON.        |
| 9.8(2.0)   | Introduced on the S3100 series.    |
| 9.8(1.0)   | Introduced on the Z9100-ON.        |
| 9.8(0.0P5) | Introduced on the S4048-ON.        |
| 9.8(0.0P2) | Introduced on the S3048-ON.        |
| 9.7(0.0)   | Introduced on the S6000-ON.        |
| 9.5(0.1)   | Introduced on the Z9500.           |
| 9.4(0.0)   | Added the decapsulate-any command. |
| 9.3(0.1)   | Introduced on the S6000 and Z9000. |

### Usage Information

To enable a tunnel interface, use this command. You must define a tunnel mode for the tunnel to function. If you previously defined the tunnel destination or source address, the tunnel mode must be compatible.

Including the decapsulate-any option causes the command to fail if any of the following tunnel transmit options are configured: tunnel destination, tunnel dscp, tunnel flow-label, tunnel hop-limit, or tunnel keepalive. Conversely, if you configure any tunnel allow-remote entries, the `tunnel-mode` command fails unless the decapsulate-any option is included.

Configuration of IPv6 commands over decapsulate-any tunnel causes an error.

## tunnel source

Set a source address for the tunnel.

**Syntax** `tunnel source {ip-address | ipv6-address | interface-type-number | anylocal}`

To delete the current tunnel source address, use the `no tunnel source` command.

### Parameters

|                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><i>ip-address</i></b>            | Enter the source IPv4 address in A.B.C.D format.                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b><i>ipv6-address</i></b>          | Enter the source IPv6 address in X:X:X::X format.                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b><i>interface-type-number</i></b> | <ul style="list-style-type: none"> <li>For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information.</li> <li>For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information.</li> <li>For a VLAN interface, enter the keyword <code>vlan</code> then a number from 1 to 4094.</li> <li>For a port-channel interface, enter the keywords <code>port-channel</code> then the port-channel ID.</li> </ul> |
| <b><i>anylocal</i></b>              | Enter the <code>anylocal</code> command to allow the multipoint receive-only tunnel to decapsulate tunnel packets destined to any local ip address.                                                                                                                                                                                                                                                                                                                                                            |

**Defaults** none

| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.                       |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                       |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.                       |
| <b>9.5(0.1)</b>   | Introduced on the Z9500.                          |
| <b>9.4(0.0)</b>   | Added the tunnel source anylocal command.         |
| <b>9.3(0.0)</b>   | Introduced on the S4810, S4820T, S6000 and Z9000. |

**Usage  
Information**

Added an optional keyword **“anylocal”** to the tunnel source command. The anylocal argument can be used in place of the ip address or interface, but only with the multipoint receive-only mode tunnels. The tunnel source `anylocal` command allows the multipoint receive-only tunnel to decapsulate tunnel packets addressed to any IPv4 or IPv6 (depending on the tunnel mode) address configured on the switch that is operationally **Up**.

# Uplink Failure Detection (UFD)

Uplink failure detection (UFD) provides detection of the loss of upstream connectivity and, if you use this with NIC teaming, automatic recovery from a failed link.

## clear ufd-disable

Re-enable one or more downstream interfaces on the switch/router that are in a UFD-Disabled Error state so that an interface can send and receive traffic.

**Syntax** `clear ufd-disable {interface interface | uplink-state-group group-id}`

### Parameters

|                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|----------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>interface</b><br><i>interface</i>         | Specify one or more downstream interfaces. For <i>interface</i> , enter one of the following interface types: <ul style="list-style-type: none"> <li>• For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the <i>slot/port</i>   <i>slot/port-range</i></li> <li>• Port channel: <code>port-channel</code> {<i>1-512</i>   <i>port-channel-range</i>}</li> </ul> <p>Where <i>port-range</i> and <i>port-channel-range</i> specify a range of ports separated by a dash (-) and/or individual ports/port channels in any order; for example: <code>gigabitethernet 1/1-2,5,9,11-12 port-channel 1-3,5</code>. A comma is required to separate each port and port-range entry.</p> |
| <b>uplink-state-group</b><br><i>group-id</i> | Re-enables all UFD-disabled downstream interfaces in the group. The valid <i>group-id</i> values are from 1 to 16.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

**Defaults** A downstream interface in a UFD-disabled uplink-state group is also disabled and is in a UFD-Disabled Error state.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                     |
|------------|---------------------------------|
| 9.10.0.2   | Introduced on the Z9100-ON.     |
| 9.8(2.0)   | Introduced on the S3100 series. |
| 9.10(0.0)  | Introduced on the S3148.        |
| 9.8(0.0P5) | Introduced on the S4048-ON.     |

| Version    | Description                                                                                         |
|------------|-----------------------------------------------------------------------------------------------------|
| 9.8(0.0P2) | Introduced on the S3048-ON.                                                                         |
| 9.2(1.0)   | Introduced on the Z9500.                                                                            |
| 9.2(0.0)   | Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only. |
| 8.3.19.0   | Introduced on the S4820T.                                                                           |
| 8.3.12.0   | Introduced on the S4810.                                                                            |
| 8.4.2.3    | Introduced on the S-Series S50.                                                                     |

**Related Commands**

- [downstream](#) — assigns a port or port-channel to the uplink-state group as a downstream interface.
- [uplink-state-group](#) — creates an uplink-state group and enables the tracking of upstream links.

## debug uplink-state-group

Enable debug messages for events related to a specified uplink-state group or all groups.

### Z9500

**Syntax**

```
debug uplink-state-group [group-id]
```

To turn off debugging event messages, enter the `no debug uplink-state-group [group-id]` command.

**Parameters**

**group-id** Enables debugging on the specified uplink-state group. The valid group-id values are from 1 to 16.

**Defaults**

none

**Command Modes**

EXEC Privilege

**Command History**

| <b>Syntax</b>        | <code>downstream interface</code>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|                      | To delete an uplink-state group, enter the <code>no downstream interface</code> command.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Parameters</b>    | <b>interface</b> Enter one of the following interface types: <ul style="list-style-type: none"><li>• For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the <code>slot/port   slot/port-range</code></li><li>• Port channel: <code>port-channel {1-512   port-channel-range}</code></li></ul> Where <code>port-range</code> and <code>port-channel-range</code> specify a range of ports separated by a dash (-) and/or individual ports/port channels in any order; for example: <code>gigabitethernet 1/1-2,5,9,11-12 port-channel 1-3,5</code> . A comma is required to separate each port and port-range entry. |
| <b>Defaults</b>      | none                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Command Modes</b> | UPLINK-STATE-GROUP                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

## Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                                                                         |
|------------|-----------------------------------------------------------------------------------------------------|
| 9.10.0.2   | Introduced on the Z9100–ON.                                                                         |
| 9.8(2.0)   | Introduced on the S3100 series.                                                                     |
| 9.10(0.0)  | Introduced on the S3148.                                                                            |
| 9.8(0.0P5) | Introduced on the S4048–ON.                                                                         |
| 9.8(0.0P2) | Introduced on the S3048–ON.                                                                         |
| 9.2(1.0)   | Introduced on the Z9500.                                                                            |
| 9.2(0.0)   | Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only. |
| 8.3.19.0   | Introduced on the S4820T.                                                                           |
| 8.3.12.0   | Introduced on the S4810.                                                                            |
| 8.4.2.3    | Introduced on the S-Series S50.                                                                     |

## Usage Information

You can assign physical port or port-channel interfaces to an uplink-state group.

You can assign an interface to only one uplink-state group. Configure each interface assigned to an uplink-state group as either an upstream or downstream interface, but not both.

You can assign individual member ports of a port channel to the group. An uplink-state group can contain either the member ports of a port channel or the port channel itself, but not both.

## Related Commands

- [upstream](#) — assigns a port or port-channel to the uplink-state group as an upstream interface.
- [uplink-state-group](#) — creates an uplink-state group and enables the tracking of upstream links.

# downstream auto-recover

Enable auto-recovery so that UFD-disabled downstream ports in an uplink-state group automatically come up when a disabled upstream port in the group comes back up.

## Syntax

```
downstream auto-recover
```

To disable auto-recovery on downstream links, use the `no downstream auto-recover` command.

## Defaults

The auto-recovery of UFD-disabled downstream ports is enabled.

## Command Modes

UPLINK-STATE-GROUP

## Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| 9.8(0.0P2) | Introduced on the S3048–ON.                                                                         |
| 9.2(1.0)   | Introduced on the Z9500.                                                                            |
| 9.2(0.0)   | Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only. |
| 8.3.19.0   | Introduced on the S4820T.                                                                           |

| Version  | Description                     |
|----------|---------------------------------|
| 8.3.12.0 | Introduced on the S4810.        |
| 8.4.2.3  | Introduced on the S-Series S50. |

**Related Commands**

- [downstream](#) — assign a port or port-channel to the uplink-state group as a downstream interface.
- [uplink-state-group](#) — create an uplink-state group and enables the tracking of upstream links.

## downstream disable links

Configure the number of downstream links in the uplink-state group that are disabled if one upstream link in an uplink-state group goes down.

**Syntax** `downstream disable links {number | all}`  
 To revert to the default setting, use the `no downstream disable links` command.

**Parameters**

|                      |                                                                                        |
|----------------------|----------------------------------------------------------------------------------------|
| <b><i>number</i></b> | Enter the number of downstream links the UFD brings down. The range is from 1 to 1024. |
| <b>all</b>           | Brings down all downstream links in the group.                                         |

**Defaults** No downstream links are disabled when an upstream link in an uplink-state group goes down.

**Command Modes** UPLINK-STATE-GROUP

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| 9.10.0.2   | Introduced on the Z9100-ON.                                                                         |
| 9.8(2.0)   | Introduced on the S3100 series.                                                                     |
| 9.10(0.0)  | Introduced on the S3148.                                                                            |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                                                         |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                                                         |
| 9.2(1.0)   | Introduced on the Z9500.                                                                            |
| 9.2(0.0)   | Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only. |
| 8.3.19.0   | Introduced on the S4820T.                                                                           |
| 8.3.12.0   | Introduced on the S4810.                                                                            |
| 8.4.2.3    | Introduced on the S-Series S50.                                                                     |

**Usage Information**

When one upstream interface in an uplink-state group goes down, you can configure the number of downstream interfaces in an uplink-state group are put into a link-down state with an UFD-Disabled error message.

If all upstream interfaces in an uplink-state group go down, all downstream interfaces in the same uplink-state group are put into a link-down state.

**Related Commands**

- [downstream](#) — assigns a port or port-channel to the uplink-state group as a downstream interface.
- [uplink-state-group](#) — creates an uplink-state group and enables the tracking of upstream links.

# enable

Enable uplink state group tracking for a specific UFD group.

|                        |                                                                                                                                                               |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | <code>enable</code><br>To disable upstream-link tracking without deleting the uplink-state group, use the <code>no enable</code> command.                     |
| <b>Defaults</b>        | Upstream-link tracking is automatically enabled in an uplink-state group.                                                                                     |

|------------|---------------------------------|
| 9.10.0.2   | Introduced on the Z9100-ON.     |
| 9.8(2.0)   | Introduced on the S3100 series. |
| 9.10(0.0)  | Introduced on the S3148.        |
| 9.8(0.0P5) | Introduced on the S4048-ON.     |
| 9.8(0.0P2) | Introduced on the S3048-ON.     |

| Version  | Description                                                                                         |
|----------|-----------------------------------------------------------------------------------------------------|
| 9.2(1.0) | Introduced on the Z9500.                                                                            |
| 9.2(0.0) | Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only. |
| 8.3.19.0 | Introduced on the S4820T.                                                                           |
| 8.3.12.0 | Introduced on the S4810.                                                                            |
| 8.4.2.3  | Introduced on the S-Series S50.                                                                     |

### Example

```
DellEMC# show running-config uplink-state-group
!
no enable
uplink state track 1
downstream TengigabitEthernet 0/2,4,6,11-19
upstream TengigabitEthernet 0/48, 52
upstream PortChannel 1
!
uplink state track 2
downstream TengigabitEthernet 0/1,3,5,7-10
upstream TengigabitEthernet 0/56,60
DellEMC#
```

### Related Commands

- [show uplink-state-group](#) — displays the status information on a specified uplink-state group or all groups.
- [uplink-state-group](#) — creates an uplink-state group and enables the tracking of upstream links.

## show uplink-state-group

Display status information on a specified uplink-state group or all groups.

### Syntax

```
show uplink-state-group [group-id] [detail]
```

### Parameters

|                 |                                                                                                                          |
|-----------------|--------------------------------------------------------------------------------------------------------------------------|
| <b>group-id</b> | Displays status information on a specified uplink-state group or all groups. The valid group-id values are from 1 to 16. |
| <b>detail</b>   | Displays additional status information on the upstream and downstream interfaces in each group                           |

### Defaults

none

### Command Modes

- EXEC
- EXEC Privilege

- [uplink-state-group](#) — creates an uplink-state group and enables the tracking of upstream links.

## uplink-state-group

Create an uplink-state group and enable the tracking of upstream links on a switch or router.

**Syntax** `uplink-state-group group-id`  
 To delete an uplink-state group, enter the `no uplink-state-group group-id` command.

**Parameters** `group-id` Enter the ID number of an uplink-state group. The range is from 1 to 16.

**Defaults** none

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                                                                         |

| 9.10.0.2   | Introduced on the Z9100-ON.                                                                         |
| 9.8(2.0)   | Introduced on the S3100 series.                                                                     |
| 9.10(0.0)  | Introduced on the S3148.                                                                            |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                                                         |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                                                         |
| 9.2(1.0)   | Introduced on the Z9500.                                                                            |
| 9.2(0.0)   | Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only. |
| 8.3.19.0   | Introduced on the S4820T.                                                                           |
| 8.3.12.0   | Introduced on the S4810.                                                                            |
| 8.4.2.3    | Introduced on the S-Series S50.                                                                     |

### Usage Information

After you enter the command, to assign upstream and downstream interfaces to the group, enter Uplink-State-Group Configuration mode.

An uplink-state group is considered operationally up if at least one upstream interface in the group is in the Link-Up state.

An uplink-state group is considered operationally down if no upstream interfaces in the group are in the Link-Up state. No uplink-state tracking is performed when a group is disabled or in an operationally down state.

To disable upstream-link tracking without deleting the uplink-state group, use the `no enable` command in uplink-state-group configuration mode.

### Example

```
DellEMC(conf)# uplink-state-group 16
DellEMC(conf)#
02:23:17: %RPM0-P:CP %IFMGR-5-ASTATE_UP: Changed uplink state group
```

```
Admin state to up: Group 16
DellEMC(conf) #
```

### Related Commands

- [show running-config uplink-state-group](#) — displays the current configuration of one or more uplink-state groups.
- [show uplink-state-group](#) — displays the status information on a specified uplink-state group or all groups.

## upstream

Assign a port or port-channel to the uplink-state group as an upstream interface.

### Syntax

```
upstream interface
```

To delete an uplink-state group, use the `no upstream interface` command.

### Parameters

#### ***interface***

Enter one of the following interface types:

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the `slot/port | slot/port-range`
- Port channel: `port-channel {1-512 | port-channel-range}`

Where `port-range` and `port-channel-range` specify a range of ports separated by a dash (-) and/or individual ports/port channels in any order; for example: `gigabitethernet 1/1-2,5,9,11-12 port-channel 1-3,5`. A comma is required to separate each port and port-range entry.

### Defaults

none

### Command Modes

UPLINK-STATE-GROUP

### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                                                                         |

| 9.8(0.0P5) | Introduced on the S4048-ON.                                                                         |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                                                         |
| 9.2(1.0)   | Introduced on the Z9500.                                                                            |
| 9.2(0.0)   | Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only. |
| 8.3.19.0   | Introduced on the S4820T.                                                                           |
| 8.3.12.0   | Introduced on the S4810.                                                                            |
| 8.4.2.3    | Introduced on the S-Series S50.                                                                     |

### Usage Information

You can assign physical port or port-channel interfaces to an uplink-state group.

You can assign an interface to only one uplink-state group. Configure each interface assigned to an uplink-state group as either an upstream or downstream interface, but not both.

You can assign individual member ports of a port channel to the group. An uplink-state group can contain either the member ports of a port channel or the port channel itself, but not both.

### Example

```
DellEMC(conf-uplink-state-group-16) # upstream tengigabitethernet 1/10-15
DellEMC(conf-uplink-state-group-16) #
```

**Related  
Commands**

- [downstream](#) — assigns a port or port-channel to the uplink-state group as a downstream interface.
- [uplink-state-group](#) — creates an uplink-state group and enables the tracking of upstream links.

# VLAN Stacking

With the virtual local area network (VLAN)-stacking feature (also called stackable VLANs and QinQ), you can “stack” VLANs into one tunnel and switch them through the network transparently.

The Dell EMC Networking OS supports this feature.

For more information about basic VLAN commands, see the *Virtual LAN (VLAN) Commands* section in [Layer 2](#).

## Important Points to Remember

- If you do not enable the spanning tree protocol (STP) across the stackable VLAN network, STP bridge protocol data units (BPDUs) from the customer’s networks are tunneled across the stackable VLAN network.
- If you do enable STP across the stackable VLAN network, STP BPDUs from the customer’s networks are consumed and not tunneled across the stackable VLAN network unless you enable protocol tunneling.
  - **NOTE:** For more information about protocol tunneling on the E-Series, see [Service Provider Bridging](#).
- Layer 3 protocols are not supported on a stackable VLAN network.
- Assigning an IP address to a stackable VLAN is supported when all the members are only stackable VLAN trunk ports. IP addresses on a stackable VLAN-enabled VLAN are not supported if the VLAN contains stackable VLAN access ports. This facility is provided for the simple network management protocol (SNMP) management over a stackable VLAN-enabled VLAN containing only stackable VLAN trunk interfaces. Layer 3 routing protocols on such a VLAN are not supported.
- Dell EMC Networking recommends that you do not use the same MAC address, on different customer VLANs, on the same stackable VLAN.
- Interfaces configured using stackable VLAN access or stackable VLAN trunk commands do not switch traffic for the default VLAN. These interfaces are switch traffic only when they are added to a non-default VLAN.
- Starting with Dell EMC Networking OS version 7.8.1 for C-Series and S-Series (Dell EMC Networking OS version 7.7.1 for E-Series, 8.2.1.0 for E-Series ExaScale), a vlan-stack trunk port is also allowed to be configured as a tagged port and as an untagged port for single-tagged VLANs. When the vlan-stack trunk port is also a member of an untagged vlan, the port must be in Hybrid mode. For more information, see [portmode hybrid](#).

### Topics:

- [member](#)
- [peer-domain-link port-channel exclude-vlan](#)

- [vlan-stack compatible](#)
- [vlan-stack dot1p-mapping](#)
- [vlan-stack protocol-type](#)
- [vlan-stack trunk](#)
- [tagged port-channel](#)
- [untagged port-channel](#)

## member

Assign a stackable VLAN access or trunk port to a VLAN. The VLAN must contain the `vlan-stack compatible` command in its configuration.

**Syntax** `member interface`

To remove an interface from a Stackable VLAN, use the `no member interface` command.

**Parameters** `interface` Enter the following keywords and the interface information:

- For a Port Channel interface, enter the keywords `port-channel`, and then a number.
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

**Defaults** Not configured.

**Command Modes** CONF-IF-VLAN

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.2.1.0    | Introduced on the E-Series.               |
| 7.6.1.0    | Introduced on the C-Series and S-Series.  |

**Usage Information** Enable the stackable VLAN (using the `vlan-stack compatible` command) on the VLAN prior to adding a member to the VLAN.

**Related Commands**

- [vlan-stack compatible](#) — enables stackable VLAN on a VLAN.

## peer-domain-link port-channel exclude-vlan

Configure the VLT port channel, which is connected to the remote VLT domain, for the proxy gateway or configure the VLANs you want to exclude from VLT proxy gateway.

### Z9500

**Syntax** `[no] peer-domain-link port-channel interface-identifier exclude-vlan vlan-range`

**Parameters**

- port-channel** Configure the proxy-gateway interface port-channel.
- interface-identifier** Enter the interface type.
- vlan-range** Enter the VLAN IDs that you want to exclude from the proxy gateway. The value can be a single VLAN ID, comma-separated VLAN IDs, a range of VLAN IDs, or a combination. For example:

Comma-separated: 3, 4, 6

Range: 5-10

Combination: 3, 4, 5-10, 8

**Command Modes** VLT DOMAIN PROXY GW LLDP

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                        |
|------------|----------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.          |
| 9.10(0.0)  | Introduced on the S3148.                           |
| 9.10(0.0)  | Introduced on the S6100-ON.                        |
| 9.8(2.0)   | Introduced on the S3100 series.                    |
| 9.8(1.0)   | Introduced on the Z9100-ON.                        |
| 9.8(0.0P5) | Introduced on the S4048-ON.                        |
| 9.8(0.0P2) | Introduced on the S3048-ON.                        |
| 9.7(0.0)   | Introduced on the S6000-ON.                        |
| 9.5(0.1)   | Introduced on the Z9500.                           |
| 9.4(0.0)   | Introduced on the S4810, S4820T, S6000, and Z9000. |

**Usage Information** You must configure the VLT port channel interface which is connecting to the remote VLT domain as peer-domain-link. You can also configure the VLANs you want to exclude from the VLT proxy gateway.

**Example**

```
DellEMC (conf) #vlt-domain 1
DellEMC (conf-vlt-domain) #proxy-gateway lldp
DellEMC (conf-vlt-domain-proxy-gw-lldp) #peer-domain-link port-channel 20
exclude-vlan 3
```

## vlan-stack access

Specify a Layer 2 port or port channel as an access port to the stackable VLAN network.

**Syntax** `vlan-stack access`

To remove access port designation, use the `no vlan-stack access` command.

**Defaults** Not configured.

**Command Modes** INTERFACE

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |

| Version           | Description                              |
|-------------------|------------------------------------------|
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.              |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.              |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                 |
| <b>9.0.2.0</b>    | Introduced on the S6000.                 |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                 |
| <b>8.3.7.0</b>    | Introduced on the S4810.                 |
| <b>8.2.1.0</b>    | Introduced on the E-Series.              |
| <b>7.6.1.0</b>    | Introduced on the C-Series and S-Series. |

**E-Series original Command**

**Usage Information**

Prior to enabling this command, to place the interface in Layer 2 mode, enter the `switchport` command.

To remove the access port designation, remove the port (using the `no member interface` command) from all stackable VLAN-enabled VLANs.

## vlan-stack compatible

Enable the stackable VLAN feature on a VLAN.

**Syntax** `vlan-stack compatible`

To disable the Stackable VLAN feature on a VLAN, use the `no vlan-stack compatible` command.

**Defaults** Not configured.

**Command Modes** CONF-IF-VLAN

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                               |
|-------------------|-------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.               |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.               |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                  |
| <b>9.0.2.0</b>    | Introduced on the S6000.                  |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                 |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                  |
| <b>8.3.7.0</b>    | Introduced on the S4810.                  |
| <b>8.2.1.0</b>    | Introduced on the E-Series.               |

| Version | Description                              |
|---------|------------------------------------------|
| 7.6.1.0 | Introduced on the C-Series and S-Series. |

### E-Series original Command

### Usage Information

Prior to disabling the stackable VLAN feature, remove the members.

To view the stackable VLANs, use the `show vlan` command in EXEC Privilege mode. Stackable VLANs contain members, designated by the M in the Q column of the command output.

If you enabled VRF, you cannot enable the stacked VLAN feature using this command.

If you enabled IGMP snooping, you cannot enable the stacked VLAN feature using this command.

### Example

```
DellEMC# show vlan

Codes: * - Default VLAN, G - GVRP VLANs

 NUM Status Q Ports
* 1 Inactive
 2 Active M Te 1/13
 M Te 1/1-3
 3 Active M Po1(Te 1/14-15)
 M Te 1/18
 M Te 1/4
 4 Active M Po1(Te 1/14-15)
 M Te 1/18
 M Te 1/5
 5 Active M Po1(Te 1/14-15)
 M Te 1/18
 M Te 1/6

DellEMC#
```

## vlan-stack dot1p-mapping

Map C-Tag dot1p values to an S-Tag dot1p value.

**Syntax** `vlan-stack dot1p-mapping c-tag-dot1p values sp-tag-dot1p value`

**Parameters**

- c-tag-dot1p value** Enter the keyword `c-tag-dot1p` then the customer dot1p value that is mapped to a service provider dot1p value. The range is from 0 to 7.
- sp-tag-dot1p value** Enter the keyword `sp-tag-dot1p` then the service provider dot1p value. The range is from 0 to 7.

**Defaults** none

**Command Modes** INTERFACE

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |

| Version           | Description                              |
|-------------------|------------------------------------------|
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.              |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.              |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                 |
| <b>9.0.2.0</b>    | Introduced on the S6000.                 |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                |
| <b>8.3.7.0</b>    | Introduced on the S4810.                 |
| <b>8.3.1.0</b>    | Introduced on the C-Series and S-Series. |

**Usage Information**

You can separate the C-Tag values by commas or dashed ranges. In the case of conflicts, dynamic mode CoS overrides any Layer 2 QoS configuration.

## vlan-stack protocol-type

Define the stackable VLAN tag protocol identifier (TPID) for the outer VLAN tag (also called the VMAN tag). If you do not configure this command, the Dell EMC Networking OS assigns the value 0x9100.

**Syntax** `vlan-stack protocol-type number`

**Parameters** *number* Enter the hexadecimal number as the stackable VLAN tag.  
You may specify both bytes of the 2-byte S-Tag TPID. The range is from 0 to FFFF. The default is **9100**.

**Defaults** 0x9100

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                                                                                   |
|-------------------|-----------------------------------------------------------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON.                                                     |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                                                                      |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.                                                                   |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.                                                               |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.                                                                   |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.                                                                   |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                                                                   |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.                                                                   |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                                                                      |
| <b>9.0.2.0</b>    | Introduced on the S6000.                                                                      |
| <b>8.3.19.0</b>   | Introduced on the S4820.                                                                      |
| <b>8.3.7.0</b>    | Introduced on the S4810.                                                                      |
| <b>8.2.1.0</b>    | Introduced on the E-Series. C-Series and S-Series accept both bytes of the 2-byte S-Tag TPID. |
| <b>8.2.1.0</b>    | Introduced on the E-Series.                                                                   |
| <b>7.6.1.0</b>    | Introduced on the C-Series and S-Series.                                                      |

| Version | Description |
|---------|-------------|
|---------|-------------|

| E-Series original Command |
|---------------------------|
|---------------------------|

**Usage Information**

For specific interoperability limitations regarding the S-Tag TPID, see the *Dell EMC Networking OS Configuration Guide*.

The four characters you may enter are shown in the following table.

| Number | Resulting TPID |
|--------|----------------|
|--------|----------------|

|   |        |
|---|--------|
| 1 | 0x0001 |
|---|--------|

|    |        |
|----|--------|
| 10 | 0x0010 |
|----|--------|

|    |        |
|----|--------|
| 81 | 0x0081 |
|----|--------|

|      |        |
|------|--------|
| 8100 | 0x8100 |
|------|--------|

**Related Commands**

- [portmode hybrid](#) — sets a port (physical ports only) to accept both tagged and untagged frames. A port configured this way is identified as a hybrid port in report displays.
- [vlan-stack trunk](#) — specifies a Layer 2 port or port channel as a trunk port to the Stackable VLAN network.

## vlan-stack trunk

Specify a Layer 2 port or port channel as a trunk port to the stackable VLAN network.

**Syntax**

```
vlan-stack trunk
```

To remove a trunk port designation from the selected interface, use the `no vlan-stack trunk` command.

**Defaults**

Not configured.

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| 7.6.1.0 | Introduced on the C-Series and S-Series.                                                   |

### E-Series original Command

### Usage Information

Prior to using this command, to place the interface in Layer 2 mode, use the `switchport` command.

To remove the trunk port designation, first remove the port (using the `no member interface` command) from all stackable VLAN-enabled VLANs.

In Example 1, a VLAN-Stack trunk port is configured and then made part of a single-tagged VLAN.

In Example 2, the tag protocol identifier (TPID) is set to 88A8. The Te 3/10 port is configured to act as a VLAN-Stack access port; the Te 5/1 port acts as a VLAN-Stack trunk port, switching stackable VLAN traffic for VLAN 10, while also switching untagged traffic for VLAN 30 and tagged traffic for VLAN 40. (To allow VLAN 30 traffic, you need the native VLAN feature. Use the `portmode hybrid` command. For more information, see the [portmode hybrid](#) command.

### Example 1

```
DelleMC(conf-if-te-1/42)# switchport
DelleMC(conf-if-te-1/42)# vlan-stack trunk
DelleMC(conf-if-te-1/42)# show config
!
interface TenGigabitEthernet 1/42
 no ip address
 switchport
 vlan-stack trunk
 no shutdown
DelleMC(conf-if-te-1/42)# interface vlan 100
DelleMC(conf-if-vl-100)# vlan-stack compatible
DelleMC(conf-if-vl-100-stack)# member tengigabitethernet 1/42
DelleMC(conf-if-vl-100-stack)# show config
!

DelleEMC(config)# interface vlan 30
DelleEMC(conf-if-vlan)# untagged TenGi 5/1
DelleEMC(conf-if-vlan)# exit
DelleEMC(config)#

DelleEMC(config)# interface vlan 40
DelleEMC(conf-if-vlan)# tagged TenGi 5/1
DelleEMC(conf-if-vlan)# exit
DelleEMC(config)#

```

## tagged port-channel

Specify tagged VLAN ports.

### Z9500

|                        |                                                                                                                                                                                                                                                       |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | <code>tagged port-channel <i>port-channel-number</i></code>                                                                                                                                                                                           |
|                        | To remove tagged VLAN ports, use the <code>no tagged port-channel <i>port-channel-number</i></code> command.                                                                                                                                          |
| <b>Parameters</b>      | <b><i>port-channel-number</i></b> Enter the port-channel number. The range is from 1 to 512.                                                                                                                                                          |
| <b>Defaults</b>        | Not configured.                                                                                                                                                                                                                                       |
| <b>Command Modes</b>   | INTERFACE                                                                                                                                                                                                                                             |
| <b>Command History</b> | This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> .<br>The following is a list of the Dell Networking OS version history for this command. |
| <b>Version</b>         | <b>Description</b>                                                                                                                                                                                                                                    |
| <b>9.7(0.0)</b>        | Introduced on the S-Series and Z-Series.                                                                                                                                                                                                              |

## untagged port-channel

Specify un-tagged VLAN ports.

### Z9500

|               |                                                               |
|---------------|---------------------------------------------------------------|
| <b>Syntax</b> | <code>untagged port-channel <i>port-channel-number</i></code> |
|---------------|---------------------------------------------------------------|

To remove un-tagged VLAN ports, use the `no untagged port-channel port-channel-number` command.

**Parameters**      ***port-channel-number***      Enter the port-channel number. The range is from 1 to 512.

**Defaults**      Not configured.

**Command Modes**      INTERFACE

**Command History**      This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

| <b>Version</b>  | <b>Description</b>                    |
|-----------------|---------------------------------------|
| <b>9.7(0.0)</b> | Introduced the S-Series and Z-Series. |

# Virtual Routing and Forwarding (VRF)

Virtual routing and forwarding (VRF) allows multiple instances of a routing table to coexist on the same router at the same time.

## ip vrf

Create or delete a customer VRF.

|                        |                                                                                                                                                                                                                                             |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | <code>ip vrf {vrf-name   management} [vrf_id]</code><br>To delete a customer VRF, use the <code>no ip vrf {vrf-name   management} [vrf_id]</code> command.                                                                                  |
| <b>Parameters</b>      | <p><b>vrf-name</b> Enter the name of the VRF that you create.</p> <p><b>management</b> Enter the keyword <code>management</code> to create the management VRF.</p> <p><b>vrf_id</b> (Optional) Enter the ID of the VRF that you create.</p> |
| <b>Defaults</b>        | Available by default for management VRF. For creating other customer VRFs, enable the <code>feature vrf</code> option in Configuration mode.                                                                                                |
| <b>Command Modes</b>   | CONFIGURATION                                                                                                                                                                                                                               |
| <b>Command History</b> | This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> .                                                                               |

| Version           | Description                           |
|-------------------|---------------------------------------|
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.           |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.           |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON and Z9500. |
| <b>9.4(0.0)</b>   | Introduced on the S4810 and S4820T.   |

|                          |                                                                                                                                                                                                                       |
|--------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Usage Information</b> | <p>You cannot use the keyword <code>default</code> as a VRF name as this name indicates a special VRF.</p> <p>To create a management VRF, use the keyword <code>management</code>.</p> <p>The VRF ID is optional.</p> |
|--------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

# ip http vrf

Configure an HTTP client with a VRF used to connect to the HTTP server.

## Z9500

| <b>Syntax</b>            | <code>ip http vrf {management   vrf-name}</code><br>To undo the HTTP client configuration, use the <code>ip http vrf</code> command.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                   |                                                                                                        |                  |                                                                                                                     |                  |                          |                  |                             |                 |                                 |                 |                             |                   |                             |                   |                             |                 |                                                                     |

| <b>9.8(0.0)</b>          | Introduced on the S4810, S4820T, S5000, S6000, S6000-ON, and Z9500.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                   |                                                                                                        |                  |                                                                                                                     |                  |                          |                  |                             |                 |                                 |                 |                             |                   |                             |                   |                             |                 |                                                                     |
| <b>Usage Information</b> | To make the HTTP clients VRF-aware, use the <code>ip http vrf</code> command. The HTTP client uses the VRF name that you specify to reach the HTTP server. If you do not specify a VRF name, the HTTP client uses the default VRF.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                   |                                                                                                        |                  |                                                                                                                     |                  |                          |                  |                             |                 |                                 |                 |                             |                   |                             |                   |                             |                 |                                                                     |

## description

Specify a name for a customer VRF.

| <b>Syntax</b>          | <code>description string</code><br>To delete the descriptive name for a customer VRF, use the <code>no description string</code> command.                                      |               |                                       |                  |                                           |

## ip vrf forwarding

Attach an interface to a VRF.

**Syntax** `ip vrf forwarding {vrf-name | management}`  
 To delete an interface associated with a configured VRF, use the `no ip vrf forwarding {vrf-name | management}` command.

**Parameters**

|                   |                                                                                            |
|-------------------|--------------------------------------------------------------------------------------------|
| <b>vrf-name</b>   | Enter name of the VRF that you want to associate the interface to.                         |
| <b>management</b> | Enter the keyword <code>management</code> to associate an interface to the management VRF. |

**Defaults** none

**Command Modes** INTERFACE-CONFIG

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| 9.10(0.1)  | Introduced on the S6010–ON and S4048T–ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100–ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100–ON.               |
| 9.8(0.0P5) | Introduced on the S4048–ON.               |
| 9.8(0.0P2) | Introduced on the S3048–ON.               |
| 9.7(0.0)   | Introduced on the S6000–ON and Z9500.     |
| 9.4.(0.0)  | Introduced on the S-Series and Z9000.     |

**Usage Information** You can attach an interface to either a nondefault VRF or a management VRF.

To assign a port-back to a default VRF, remove the VRF association from the interface. You can use this only if there is no IP address configured on the interface.

There must be no prior Layer 3 configuration on the interface when configuring VRF.

You must enable VRF before using this command.

You can configure an IP subnet or address on a physical or VLAN interface that overlaps the same IP subnet or address configured on another interface only if the interfaces are assigned to different VRFs. If you assign two interfaces to the same VRF, you cannot configure overlapping IP subnets or the same IP address to them.

### Example

```
DelleMC# configure terminal
DelleMC(conf)# ip vrf red
DelleMC(conf-vrf)# description "Red Network"
DelleMC(conf-vrf)# show config
!
ip vrf red 4
 description "Red Network"
DelleMC(conf-vrf)#

DelleMC(conf-if-te-1/45)# int te 7/46
DelleMC(conf-if-te-1/46)# no shut
DelleMC(conf-if-te-1/46)# ip vrf forwarding red
DelleMC(conf-if-te-1/46)# ip add 100.1.1.1/24
DelleMC(conf-if-te-1/46)#
DelleMC(conf-if-te-1/46)#
DelleMC(conf-if-te-1/46)#
DelleMC(conf-if-te-1/46)# show config
!
interface TenGigabitEthernet 1/46
 ip vrf forwarding red
 ip address 100.1.1.1/24
 no shutdown
DelleMC(conf-if-te-1/46)#
```

## ip route-export

Enables route leaking between VRFs. This command exports or shares IPv4 routes corresponding to one VRF with other nondefault VRFs.

**Syntax** `ip route-export tag [route-map-name]`

|                   |                       |                                                                                                                                                                                                                                                                                                                                                                                      |
|-------------------|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Parameters</b> | <b>route-export</b>   | Enter the keywords <code>route-export</code> to leak or share routes between VRFs.                                                                                                                                                                                                                                                                                                   |
|                   | <b>tag</b>            | Enter a tag (export route target) to expose routes to other VRFs. This tag acts as an identifier for exported routes. Use this identifier while importing these routes into another nondefault VRF.                                                                                                                                                                                  |
|                   | <b>route-map-name</b> | (Optional) Enter the name of the route-map to filter the exported routes.<br><br>You can leak global routes to VRFs. As the global RTM usually contains a large pool of routes, when the destination VRF imports global routes, these routes are duplicated into the VRF's RTM. It is mandatory to use route-maps to filter out leaked routes while sharing global routes with VRFs. |

|------------|---------------------------------------------------------------------|
| 9.8(0.0P5) | Introduced on the S4048-ON.                                         |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                         |
| 9.7(0.0)   | Introduced on the S4810, S4820T, S5000, S6000, S6000-ON, and Z9500. |

### Usage Information

To export all the routes corresponding to a source VRF, you can use the `ip route-export tag` command without specifying the `route-map` attribute. This action exposes source VRF routes to various other VRFs, which then import these routes using the `ip route-import tag` command.

In Dell EMC Networking OS, you can configure one `route-export` per VRF as you can only expose one set of routes for leaking. However, you can configure multiple `route-import` targets because a VRF can accept routes from multiple VRFs.

You can expose a unique set of routes from the source VRF for leaking to other VRFs. When two VRFs leak or export routes, there is no option to discretely filter leaked routes from each source VRF. For example, you cannot import one set of routes from one VRF and another set of routes from another VRF.

Only active routes are eligible for leaking. For example, if one VRF has two routes corresponding to BGP and OSPF, in which the BGP route is not active, the OSPF route takes precedence over BGP. Even though the target VRF has specified filtering options to match BGP, the BGP route is not leaked as that route is not active in the Source VRF.

### Related Commands

- [ip route-import](#) — imports routes from another VRF.

## ip route-import

Imports IPv4 routes that another VRF leaks using the VRF tag during the export of these routes.

**Syntax** `ip route-import tag [route-map-name]`

### Parameters

|                       |                                                                                                                                                                                                                                            |
|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>route-import</b>   | Enter the keywords <code>route-import</code> to import routes into the VRF.                                                                                                                                                                |
| <b>tag</b>            | Enter a tag (ASN number) to specify an import route target for importing routes from another VRF.<br><br>To import leaked routes from another VRF, use the same ASN number that is specified as the export route target at the source VRF. |
| <b>route-map-name</b> | Enter the name of the route-map to filter the imported routes.                                                                                                                                                                             |

**NOTE:** Use the `route-map` attribute while importing routes from the global RTM. Route-maps allow you to filter routes at the import end based on the matching criteria that you define in the route-map.

**Usage Information**

To export all the routes corresponding to a source VRF, use the `ip route-export tag` command without specifying the route-map attribute. This action exposes source VRF routes to other VRFs, which then import these routes using the `ip route-import tag` command.

In Dell EMC Networking OS, you can configure one route-export per VRF as you can only expose one set of routes for leaking. However, you can configure multiple route-import targets because a VRF can accept routes from multiple VRFs.

You can expose a unique set of routes from the source VRF for leaking to other VRFs. When two VRFs leak or export routes, there is no option to discretely filter leaked routes from each source VRF. For example, you cannot import one set of routes from one VRF and another set of routes from another VRF.

Only active routes are eligible for leaking. For example, if one VRF has two routes corresponding to BGP and OSPF, in which the BGP route is not active, the OSPF route takes precedence over BGP. Even though the target VRF has specified filtering options to match BGP, the BGP route is not leaked as that route is not active in the source VRF.

#### Related Commands

- [ipv6 route-import](#) – imports IPv6 routes from another VRF.

## ipv6 route-import

Imports IPv6 routes that another VRF leaks using the tag that VRF specifies during export of these routes.

**Syntax** `ipv6 route-import tag [route-map-name]`

#### Parameters

**route-import** Enter the keywords `route-import` to import IPv6 routes into the VRF.

**tag** Enter a tag (ASN number) to specify an import route target for importing routes from another VRF. To import leaked routes from another VRF, use the same ASN number that is specified as the export route target at the source VRF.

**route-map-name** Enter the name of the route-map to filter the imported routes.

 **NOTE:** Use the route-map attribute while importing routes from the global RTM. Route-maps allow you to filter routes at the import end based on the matching criteria that you define in the route-map.

**Defaults** N/A

- Command Modes**
- VRF mode
  - CONFIGURATION mode

| Version           | Description                                                         |
|-------------------|---------------------------------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON.                           |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                                            |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.                                         |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.                                     |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.                                         |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.                                         |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                                         |
| <b>9.7(0.0)</b>   | Introduced on the S4810, S4820T, S5000, S6000, S6000-ON, and Z9500. |

**Usage Information** Specify the matching criteria only after defining a route-map. Before using this command, you must enter Route Map mode using the `route-map route-map-name` command. The match criteria that you specify is associated with the route-map that you define.

The export-target and import-target options support only the match protocol and match prefix-list options. Other options that you configure in the route-maps are ignored.

**Related Commands**

- [ipv6 route-import](#) – imports IPv6 routes from another VRF.

# redistribute

Redistributes leaked or exported routes corresponding to specific protocols.

**Syntax** `redistribute {imported-bgp | import-ospf | import-isis}`

|                   |                      |                                                                                                                       |
|-------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------|
| <b>Parameters</b> | <b>imported-bgp</b>  | Enter the keywords <code>imported-bgp</code> to redistribute leaked routes that are learned using the BGP protocol.   |
|                   | <b>imported-ospf</b> | Enter the keywords <code>imported-ospf</code> to redistribute leaked routes that are learned using the OSPF protocol. |
|                   | <b>imported-isis</b> | Enter the keywords <code>imported-isis</code> to redistribute leaked routes that are learned using the ISIS protocol. |

**route-map** Enter the name of the route-map to specify the filtering criteria for imported routes.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                                         |
|------------|---------------------------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.                           |
| 9.10(0.0)  | Introduced on the S3148.                                            |
| 9.10(0.0)  | Introduced on the S6100-ON.                                         |
| 9.8(2.0)   | Introduced on the S3100 series.                                     |
| 9.8(1.0)   | Introduced on the Z9100-ON.                                         |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                         |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                         |
| 9.7(0.0)   | Introduced on the S4810, S4820T, S5000, S6000, S6000-ON, and Z9500. |

**Related Commands**

- [ip route-import](#) — import routes from another VRF.

## interface management

Associates a management port with a management VRF.

**Syntax** `interface management`

To delete the association between a management port and a management VRF, use the `no interface management` command.

**Command Modes** VRF MODE

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.5(0.0)   | Introduced on the Z9500.                  |
| 9.4.(0.0)  | Introduced on the S-Series and Z9000.     |

**Usage Information** When you use this command, the management ports corresponding to both the active unit and the standby unit are associated with the management VRF.

# maximum dynamic-routes

Specify the maximum number of dynamic (protocol) routes a VRF can have.

|                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |              |                                                                                                                                             |                          |                                                                                                                                                                                                                                                                                     |                     |                                                                                                                                                                                                                            |

| <b>Syntax</b>            | <code>maximum dynamic-routes limit {warn-threshold threshold-value   warning-only}</code><br><br>To remove the limit on the maximum number of routes used, use the <code>no maximum dynamic-routes</code> command.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |              |                                                                                                                                             |                          |                                                                                                                                                                                                                                                                                     |                     |                                                                                                                                                                                                                            |
| <b>Parameters</b>        | <table><tr><td><b>limit</b></td><td>Maximum number of routes allowed in a VRF. The valid range is from 1 to 16,000 (or maximum allowable for that platform if a smaller value).</td></tr><tr><td><b>warning-threshold</b></td><td>The warning threshold value is a percentage of the limit value. When the number of routes reaches the specified percentage of the limit, a warning message appears. The valid range is from 1 to 100.<br/><br/>After the limit is reached, additional dynamic routes are not allowed.</td></tr><tr><td><b>warning-only</b></td><td>When you use the <code>warning-only</code> option, when the maximum number of dynamic routes reaches the limit, a warning message appears.<br/><br/>After the limit is reached, additional dynamic routes are still allowed.</td></tr></table> | <b>limit</b> | Maximum number of routes allowed in a VRF. The valid range is from 1 to 16,000 (or maximum allowable for that platform if a smaller value). | <b>warning-threshold</b> | The warning threshold value is a percentage of the limit value. When the number of routes reaches the specified percentage of the limit, a warning message appears. The valid range is from 1 to 100.<br><br>After the limit is reached, additional dynamic routes are not allowed. | <b>warning-only</b> | When you use the <code>warning-only</code> option, when the maximum number of dynamic routes reaches the limit, a warning message appears.<br><br>After the limit is reached, additional dynamic routes are still allowed. |
| <b>limit</b>             | Maximum number of routes allowed in a VRF. The valid range is from 1 to 16,000 (or maximum allowable for that platform if a smaller value).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |              |                                                                                                                                             |                          |                                                                                                                                                                                                                                                                                     |                     |                                                                                                                                                                                                                            |
| <b>warning-threshold</b> | The warning threshold value is a percentage of the limit value. When the number of routes reaches the specified percentage of the limit, a warning message appears. The valid range is from 1 to 100.<br><br>After the limit is reached, additional dynamic routes are not allowed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |              |                                                                                                                                             |                          |                                                                                                                                                                                                                                                                                     |                     |                                                                                                                                                                                                                            |
| <b>warning-only</b>      | When you use the <code>warning-only</code> option, when the maximum number of dynamic routes reaches the limit, a warning message appears.<br><br>After the limit is reached, additional dynamic routes are still allowed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |              |                                                                                                                                             |                          |                                                                                                                                                                                                                                                                                     |                     |                                                                                                                                                                                                                            |

**Defaults** No limit is set on the maximum number of dynamic routes for a VRF.

**Command Modes** CONFIGURATION-VRF

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking Command Line Reference Guide*.

| Version           | Description                               |
|-------------------|-------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.               |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON and Z9500.     |
| <b>9.4(0.0)</b>   | Introduced on the S-Series.               |

**Usage Information** If you do not specify the maximum route limit for a VRF, the VRF has unlimited space that extends to the maximum number of entries allowed for the system.

# show ip vrf

Displays information corresponding to the VRFs that you configure in the system.

|                      |                                                                                                                                                                            |                     |                                                                                                               |

## Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.5(0.0)   | Introduced on the Z9500.                  |
| 9.4.(0.0)  | Introduced on the S-Series and Z9000.     |

## Example

```
DelleMC# show ip vrf
VRF-Name VRF-ID Interfaces

fault 0 Te 0/0-13,18-47,
 Fo 0/48,52,56,60,
 Ma 0/0,
 Ma 1/0,
 Ma 2/0,
 Ma 3/0,
 Ma 4/0,
 Ma 5/0,
 Ma 6/0,
 Ma 7/0,
 Ma 8/0,
 Ma 9/0,
 Ma 10/0,
 Ma 11/0,
 Nu 0,
 Vl 1
test1 1 Te 0/14,16-17
test2 2 Te 0/15
management 64

DelleMC# show ip vrf test1
VRF-Name VRF-ID Interfaces

test1 1 Te 0/14,16-17
```

## show run vrf

Displays configuration information corresponding to all the VRFs in the system.

**Syntax** `show run vrf vrf-name`

**Parameters** `vrf vrf-name` Enter the keyword `vrf` and then the name of the VRF.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| <b>Version</b>    | <b>Description</b>                        |
|-------------------|-------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.               |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON and Z9500.     |
| <b>9.4(0.0)</b>   | Introduced on the S-Series and Z9000.     |

**Usage Information**

This command displays information from the running-config corresponding to either a specific VRF or all the VRFs in the system.

**Example**

```
DellEMC# show run vrf test3
!
ip vrf test3
 description "Banking Customer Chennai"
DellEMC#
```

# Virtual Link Trunking (VLT)

Virtual link trunking (VLT) allows physical links between two chassis to appear as a single virtual link to the network core. VLT eliminates the requirement for Spanning Tree protocols by allowing link aggregation group (LAG) terminations on two separate distribution or core switches, and by supporting a loop-free topology.

VLT provides Layer 2 multipathing, creating redundancy through increased bandwidth and enabling multiple parallel paths between nodes and load-balancing traffic where alternative paths exist.

**i** **NOTE:** When you launch the VLT link, the VLT peer-ship is not established if any of the following is **TRUE**:

- The VLT System-MAC configured on both the VLT peers do not match.
- The VLT Unit-Id configured on both the VLT peers are identical.
- The VLT System-MAC or Unit-Id is configured only on one of the VLT peers.
- The VLT domain ID is not the same on both peers.

If the VLT peer-ship is already established, changing the System-MAC or Unit-Id does not cause VLT peer-ship to go down.

Also, if the VLT peer-ship is already established and the VLT Unit-Id or System-MAC are configured on both peers, then changing the CLI configurations on the VLT Unit-Id or System-MAC is rejected if any of the following become **TRUE**:

- After making the CLI configuration change, the VLT Unit-Id becomes identical on both peers.
- After making the CLI configuration change, the VLT System-MAC do not match on both peers.

When the VLT peer-ship is already established, you can remove the VLT Unit-Id or System-MAC configuration from either or both peers. However, removing configuration settings can cause the VLT ports to go down if you configure the Unit-Id or System-MAC on only one of the VLT peers.

# back-up destination

Configure the IPv4 or IPv6 address of the management interface on the remote VLT peer used as the VLT backup link endpoint for sending out-of-band (OOB) hello messages.

|                        |                                                                                                                                                               |                                                                                                                                                         |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | <code>back-up destination {[ipv4-address]   [ipv6 ipv6-address] [interval seconds]}</code>                                                                    |                                                                                                                                                         |
| <b>Parameters</b>      | <b>ipv4-address</b>                                                                                                                                           | Enter the IPv4 address of the backup destination.                                                                                                       |
|                        | <b>ipv6</b>                                                                                                                                                   | Enter the keyword <code>ipv6</code> then an IPv6 address in the X:X:X::X format.                                                                        |
|                        | <b>interval seconds</b>                                                                                                                                       | Enter the keyword <code>interval</code> to specify the time interval to send hello messages. The range is from 1 to 5 seconds. The default is 1 second. |
| <b>Defaults</b>        | <b>1 second</b>                                                                                                                                               |                                                                                                                                                         |
| <b>Command Modes</b>   | VLT DOMAIN                                                                                                                                                    |                                                                                                                                                         |
| <b>Command History</b> | This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> . |                                                                                                                                                         |

| Version    | Description                                                                                         |
|------------|-----------------------------------------------------------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.                                                           |
| 9.10(0.0)  | Introduced on the S3148.                                                                            |
| 9.10(0.0)  | Introduced on the S6100-ON.                                                                         |
| 9.8(2.0)   | Introduced on the S3100 series.                                                                     |
| 9.8(1.0)   | Introduced on the Z9100-ON.                                                                         |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                                                         |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                                                         |
| 9.7(0.0)   | Introduced on the S6000-ON.                                                                         |
| 9.5(0.1)   | Introduced on the Z9500.                                                                            |
| 9.2(0.0)   | Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only. |
| 9.2(0.2)   | Added support for IPv6.                                                                             |
| 9.0.2.0    | Introduced on the S6000.                                                                            |
| 9.0.0.0    | Introduced on the Z9000.                                                                            |
| 8.3.19.0   | Introduced on the S4820T.                                                                           |
| 8.3.8.0    | Introduced on the S4810.                                                                            |

# clear vlt statistics

Clear the VLT operation statistics.

|                   |                                                                                       |                                               |
|-------------------|---------------------------------------------------------------------------------------|-----------------------------------------------|
| <b>Syntax</b>     | <code>clear vlt statistics [arp   domain   igmp-snoop   mac   multicast   ndp]</code> |                                               |
| <b>Parameters</b> | <b>domain</b>                                                                         | Clear the VLT statistics for the domain.      |
|                   | <b>multicast</b>                                                                      | Clear the VLT statistics for multicast.       |
|                   | <b>mac</b>                                                                            | Clear the VLT statistics for the MAC address. |
|                   | <b>arp</b>                                                                            | Clear the VLT statistics for ARP.             |
|                   | <b>igmp-snoop</b>                                                                     | Clear the VLT statistics for IGMP snooping.   |

**ndp** Clear the VLT statistics for NDP.

**Command Modes** EXEC

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                                                                         |
|------------|-----------------------------------------------------------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.                                                           |
| 9.10(0.0)  | Introduced on the S3148.                                                                            |
| 9.10(0.0)  | Introduced on the S6100-ON.                                                                         |
| 9.8(2.0)   | Introduced on the S3100 series.                                                                     |
| 9.8(1.0)   | Introduced on the Z9100-ON.                                                                         |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                                                         |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                                                         |
| 9.7(0.0)   | Introduced on the S6000-ON.                                                                         |
| 9.5(0.1)   | Introduced on the Z9500.                                                                            |
| 9.2(0.0)   | Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only. |
| 9.2(0.2)   | Added <code>multicast</code> and <code>ndp</code> parameters.                                       |
| 9.0.2.0    | Introduced on the S6000.                                                                            |
| 9.0.0.0    | Introduced on the Z9000.                                                                            |
| 8.3.19.0   | Introduced on the S4820T.                                                                           |
| 8.3.12.0   | Introduced on the S4810.                                                                            |

### Example

```
VLT ARP Statistics

ARP Tunnel Pkts sent:0
ARP Tunnel Pkts Rcvd:0
ARP-sync Pkts Sent:0
ARP-sync Pkts Rcvd:0
ARP Reg Request sent:19
ARP Reg Request rcvd:10
```

**Related Commands**

- [show vlt statistics](#) — displays statistics on VLT operations.

## delay-restore

Configure the delay in bringing up VLT ports after reload or peer-link restoration between the VLT peer switches.

**Syntax** `delay-restore`

**Parameters** **delay-restore** Enter the amount of time, in seconds, to delay bringing up the VLT ports after the VLTi device reloads or after the peer-link restores between VLT peer switches. The range from 1 to 1200. The default is **90 seconds**.

**Defaults** Not configured.

**Command Modes** VLT DOMAIN

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| 9.8(2.0)   | Introduced on the S3100 series.                                                                     |
| 9.8(1.0)   | Introduced on the Z9100-ON.                                                                         |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                                                         |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                                                         |
| 9.7(0.0)   | Introduced on the S6000-ON.                                                                         |
| 9.5(0.1)   | Introduced on the Z9500.                                                                            |
| 9.2(0.0)   | Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only. |
| 9.0.2.0    | Introduced on the S6000.                                                                            |
| 9.0.0.0    | Introduced on the Z9000.                                                                            |
| 8.3.19.0   | Introduced on the S8420T.                                                                           |
| 8.3.12.0   | Introduced on the S4810.                                                                            |

#### Usage Information

To delay the system from bringing up the VLT port for a brief period to allow IGMP snooping and Layer 3 routing protocols to converge, use the `delay-restore` command. Use this command:

- after a VLT device reloads.
- if the peer VLT device was up at the time the VLTi link failed.
- [show vlt statistics](#) — displays statistics on VLT operations.

#### Related Commands

## delay-restore abort-threshold

Increase the boot up timer to a value greater than 60 seconds.

**Syntax** `delay-restore abort-threshold <interval>`

To remove the boot up timer value, use the `no delay-restore abort-threshold` command.

**Parameters** *interval* Enter the interval value (in seconds) for the delay restore timer to abort. The range is from 1 to 1800 seconds. The default is **60 seconds**.

This delay restore timer applies only during reload/boot-up and not in other scenarios (for example, during ICL flap).

**Defaults** 60 seconds

**Command Modes** VLT DOMAIN

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                               |
|-----------|-------------------------------------------|
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0) | Introduced on the S3148.                  |
| 9.10(0.0) | Introduced on the S6100-ON.               |
| 9.8(2.0)  | Introduced on the S3100 series.           |
| 9.8(1.0)  | Introduced on the Z9100-ON.               |

| Version           | Description                                                               |
|-------------------|---------------------------------------------------------------------------|
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.                                               |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                                               |
| <b>9.7(0.0)</b>   | Introduced on the S4820T, S4810, S6000, S5000, Z9000, S6000-ON and Z9500. |

**Usage Information**

To abort the VLT delay restore timer value as the maximum threshold, during reload, apply the maximum time interval to the hold-down ICL peer-up in the start-up configurations.

## lacp ungroup member-independent

Prevent possible loop during the VLT peer switch bootup or on a device that accesses the VLT domain.

**Syntax** `lacp ungroup member-independent {vlt | port-channel}`

**Parameters**

|                     |                                                            |
|---------------------|------------------------------------------------------------|
| <b>vlt</b>          | Force all VLT LACP members to become switchports.          |
| <b>port-channel</b> | Force all LACP port-channel members to become switchports. |

**Defaults** Not configured.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                                                                                         |
|-------------------|-----------------------------------------------------------------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON.                                                           |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                                                                            |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.                                                                         |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.                                                                     |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.                                                                         |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.                                                                         |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                                                                         |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.                                                                         |
| <b>9.5(0.1)</b>   | Introduced on the Z9500.                                                                            |
| <b>9.2(0.0)</b>   | Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only. |
| <b>9.0.2.0</b>    | Introduced on the S6000.                                                                            |
| <b>9.0.0.0</b>    | Introduced on the Z9000.                                                                            |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                                                                           |
| <b>8.3.12.0</b>   | Added port-channel parameter on the S4810.                                                          |
| <b>8.3.8.0</b>    | Introduced on the S4810.                                                                            |

**Usage Information**

LACP on the VLT ports (on a VLT switch or access device), which are members of the VLT, are not brought up until the VLT domain is recognized on the access device.

During boot-up in a stacking configuration, the system must be able to reach the DHCP server with the boot image and configuration image. To receive an offer on static LAGs between switches, only untagged DHCP requests are sent to the DHCP server. Configure the DHCP server to start in BMP mode.

If the switches are connected using LACP port-channels (for example, the VLT peer and top of rack [ToR]), use the `port-channel` option on the ToR-side configuration to allow member ports of an

ungrouped LACP port-channel to inherit VLAN membership of that port channel. This ensures untagged VLT peer device packets reach the DHCP server on the ToR.

To ungroup the VLT and port-channel configurations, use the `no lacp ungroup member independent` command on a VLT port channel.

If you reboot both VLT peers in BMP mode with static VLT LAGs, the DHCP server reply to the DHCP discover offer may not be forwarded by the ToR to the correct node. To avoid this issue, configure the VLT LAGs to the ToR and the ToR port channel to the VLT peers with LACP.

If supported by the ToR, enable the `lacp-ungroup` feature on the ToR using the `lacp ungroup member-independent port-channel` command.

If the `lacp-ungroup` feature is not supported on the ToR, reboot the VLT peers one at a time. After rebooting, verify that VLTi (ICL) is active before attempting DHCP connectivity.

Use the `lacp ungroup member-independent` command only if the system connects to nodes using bare metal provisioning (BMP) to upgrade or boot from the network. Otherwise, when the member links flap, the links become independent switch ports and forward the traffic even before LACP is formed on that port.

Ensure that you configure all port channels as hybrid ports and as untagged members of a VLAN where the LACP ungroup option is applicable.

BMP uses untagged dynamic host configuration protocol (DHCP) packets to communicate with the DHCP server.

To disable this feature on VLT and port channels, use `no lacp ungroup member-independent {vlt | port-channel}` command under the configuration mode.

### Example

```
DellEMC(conf)#lacp ungroup member-independent ?
port-channel LACP port-channel members become switchports
vlt All VLT LACP members become
switchports
```

## multicast peer-routing timeout

To retain synced multicast routes or synced multicast outgoing interface (OIF) after a VLT peer node failure, configure the timeout value for a VLT node.

**Syntax** `multicast peer-routing timeout value`

To restore the default value, use the `no multicast peer-routing timeout` command.

**Parameters** **value** Enter the timeout value (in seconds). The range is from 1 to 1200. The default is 150.

**Command Modes** VLT DOMAIN (conf-vlt-domain)

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |

| Version  | Description                                                                                         |
|----------|-----------------------------------------------------------------------------------------------------|
| 9.7(0.0) | Introduced on the S6000-ON.                                                                         |
| 9.5(0.1) | Introduced on the Z9500.                                                                            |
| 9.2(0.0) | Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only. |
| 9.2(0.2) | Introduced on the Z9000, S4810, and S4820T.                                                         |
| 9.0.2.0  | Introduced on the S6000.                                                                            |

## peer-link port-channel

Configure the specified port channel as the chassis interconnect trunk between VLT peers in the domain.

|                        |                                                                                                                                                               |                                                                                                                                            |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | <code>peer-link port-channel port-channel-number {peer-down-vlan vlan id}</code>                                                                              |                                                                                                                                            |
| <b>Parameters</b>      | <b>port-channel-number</b>                                                                                                                                    | Enter the port-channel number that acts as the interconnect trunk. The range is from 1 to 512.                                             |
|                        | <b>peer-down-vlan vlan id</b>                                                                                                                                 | Enter the keywords <code>peer-down-vlan</code> then a VLAN ID to configure the VLAN that the VLT peer link uses when the VLT peer is down. |
| <b>Defaults</b>        | Not configured.                                                                                                                                               |                                                                                                                                            |
| <b>Command Modes</b>   | VLT DOMAIN                                                                                                                                                    |                                                                                                                                            |
| <b>Command History</b> | This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> . |                                                                                                                                            |

| Version    | Description                                                                                         |
|------------|-----------------------------------------------------------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.                                                           |
| 9.10(0.0)  | Introduced on the S3148.                                                                            |
| 9.10(0.0)  | Introduced on the S6100-ON.                                                                         |
| 9.8(2.0)   | Introduced on the S3100 series.                                                                     |
| 9.8(1.0)   | Introduced on the Z9100-ON.                                                                         |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                                                         |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                                                         |
| 9.7(0.0)   | Introduced on the S6000-ON.                                                                         |
| 9.5(0.1)   | Introduced on the Z9500.                                                                            |
| 9.2(0.0)   | Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only. |
| 9.0.2.0    | Introduced on the S6000.                                                                            |
| 9.0.0.0    | Introduced on the Z9000.                                                                            |
| 8.3.19.0   | Introduced on the S4820T.                                                                           |
| 8.3.12.0   | Added support for the <code>peer-down-vlan</code> option.                                           |
| 8.3.8.0    | Introduced on the S4810.                                                                            |

|                          |                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Usage Information</b> | To configure the VLAN from where the VLT peer forwards packets received over the VLTi from an adjacent VLT peer that is down, use the <code>peer-down-vlan</code> option. When a VLT peer with bare metal provisioning (BMP) is booting up, it sends untagged DHCP discover packets to its peer over the VLTi. To ensure that the DHCP discover packets are forwarded to the VLAN that has the DHCP server, use this configuration. |
|--------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

# peer-routing

Enable Layer 3 (L3) VLT peer-routing. This command is applicable for both IPv6 and IPv4 interfaces.

|                        |                                                                                                                                                               |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | <code>peer-routing</code><br>To disable L3 VLT peer-routing, use the <code>no peer-routing</code> command.                                                    |
| <b>Defaults</b>        | Disabled.                                                                                                                                                     |
| <b>Command Modes</b>   | VLT DOMAIN (conf-vlt-domain)                                                                                                                                  |
| <b>Command History</b> | This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> . |

| Version    | Description                                                                                         |
|------------|-----------------------------------------------------------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.                                                           |
| 9.10(0.0)  | Introduced on the S3148.                                                                            |
| 9.10(0.0)  | Introduced on the S6100-ON.                                                                         |
| 9.8(2.0)   | Introduced on the S3100 series.                                                                     |
| 9.8(1.0)   | Introduced on the Z9100-ON.                                                                         |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                                                         |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                                                         |
| 9.7(0.0)   | Introduced on the S6000-ON.                                                                         |
| 9.5(0.1)   | Introduced on the Z9500.                                                                            |
| 9.4(0.0)   | Added the support for IPV6 / IPV4.                                                                  |
| 9.2(0.0)   | Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only. |
| 9.2(0.2)   | Introduced on the Z9000, S4810, and S4820T.                                                         |

# peer-routing-timeout

Configure the delay after which peer routing disables when the peer is unavailable. This command is applicable for both IPv6 and IPv4.

|                        |                                                                                                                                                               |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | <code>peer-routing-timeout value</code><br>To restore the default value, use the <code>no peer-routing-timeout</code> command.                                |
| <b>Parameters</b>      | <b>value</b> Enter the timeout value (in seconds). The range is from 1 to 65535. The default value is <b>infinity</b> .                                       |
| <b>Command Modes</b>   | VLT DOMAIN (conf-vlt-domain)                                                                                                                                  |
| <b>Default</b>         | Infinity                                                                                                                                                      |
| <b>Command History</b> | This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> . |

| Version   | Description                               |
|-----------|-------------------------------------------|
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0) | Introduced on the S3148.                  |
| 9.10(0.0) | Introduced on the S6100-ON.               |
| 9.8(2.0)  | Introduced on the S3100 series.           |

| Version    | Description                                                   |
|------------|---------------------------------------------------------------|
| 9.8(1.0)   | Introduced on the Z9100-ON.                                   |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                   |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                   |
| 9.7(0.0)   | Introduced on the S6000-ON.                                   |
| 9.7(0.0)   | Added support for default value on the S-Series and Z-Series. |
| 9.5(0.1)   | Introduced on the Z9500.                                      |
| 9.4(0.0)   | Added the support for IPV6 / IPV4.                            |
| 9.2(0.2)   | Introduced on the Z9000, S4810, and S4820T.                   |
| 9.0.2.0    | Introduced on the S6000.                                      |

**Usage Information**

When the timer expires, the software checks to see if the VLT peer is available. If the VLT peer is not available, peer-routing disables on that peer.

If you do not configure this delay value, peer-routing is not disabled even when the peer is unavailable.

## primary-priority

Assign the priority for master election among VLT peers.

**Syntax** [no] primary-priority

**Parameters** *value* To configure the primary role on a VLT peer, enter a lower value than the priority value of the remote peer. The range is from 1 to 65535. The default value is **32768**.

**Default** 32768

**Command Modes** VLT DOMAIN

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                                                                         |
|------------|-----------------------------------------------------------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.                                                           |
| 9.10(0.0)  | Introduced on the S3148.                                                                            |
| 9.10(0.0)  | Introduced on the S6100-ON.                                                                         |
| 9.8(2.0)   | Introduced on the S3100 series.                                                                     |
| 9.8(1.0)   | Introduced on the Z9100-ON.                                                                         |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                                                         |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                                                         |
| 9.7(0.0)   | Introduced on the S6000-ON.                                                                         |
| 9.5(0.1)   | Introduced on the Z9500.                                                                            |
| 9.2(0.0)   | Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only. |
| 9.0.2.0    | Introduced on the S6000.                                                                            |
| 8.3.19.0   | Introduced on the S4820T.                                                                           |
| 8.3.8.0    | Introduced on the S4810.                                                                            |

**Usage Information**

After you configure a VLT domain on each peer switch and connect (cable) the two VLT peers on each side of the VLT interconnect, the system elects a primary and secondary VLT peer device. To configure

the primary and secondary roles before the election process, use the `primary-priority` command. Enter a lower value on the primary peer and a higher value on the secondary peer.

If the primary peer fails, the secondary peer (with the higher priority) takes the primary role. If the primary peer (with the lower priority) later comes back online, it is assigned the secondary role (there is no preemption).

## show vlt brief

Displays summarized status information about VLT domains configured on the switch.

**Syntax** `show vlt brief`

**Default** Not configured.

**Command Modes** EXEC

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                               |
|-------------------|-------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.               |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.               |
| <b>9.5(0.1)</b>   | Introduced on the Z9500.                  |
| <b>9.0.2.0</b>    | Introduced on the S6000.                  |
| <b>9.0.0.0</b>    | Introduced on the Z9000.                  |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                 |
| <b>8.3.8.0</b>    | Introduced on the S4810.                  |

**Usage Information** The version shown in the `show vlt brief` output command displays the VLT version number which is different from the Dell EMC Networking OS version number. VLT version numbers begin with odd numbers.

### Example (Brief)

```
DellEMC#show vlt brief
VLT Domain Brief

Domain ID : 1
Role : Secondary
Role Priority : 32768
ICL Link Status : Up
HeartBeat Status : Up
VLT Peer Status : Up
Version : 6(3)
Local System MAC address : 00:01:e8:8a:e9:91
Remote System MAC address : 00:01:e8:8a:e9:76
Remote system version : 6(3)
Delay-Restore timer : 90 seconds
Delay-Restore Abort Threshold : 60 seconds
Peer-Routing : Disabled
Peer-Routing-Timeout timer : 0 seconds
```

```
Multicast peer-routing timeout: 150 seconds
DellEMC#
```

## show vlt backup-link

Displays information about the backup link operation.

**Syntax** show vlt backup-link

**Default** Not configured.

**Command Modes** EXEC

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.5(0.1)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 9.0.0.0    | Introduced on the Z9000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.8.0    | Introduced on the S4810.                  |

### Example

```
Dell_VLTpeer1# show vlt backup-link

VLT Backup Link

Destination: 10.11.200.18
Peer HeartBeat status: Up
HeartBeat Timer Interval: 1
HeartBeat Timeout: 3
UDP Port: 34998
HeartBeat Messages Sent: 1026
HeartBeat Messages Received: 1025
```

## show vlt counters

Displays counter information.

**Syntax** show vlt counters [arp| igmp-snoop | interface | mac | ndp]

**Parameters**

|                   |                                                                                                          |
|-------------------|----------------------------------------------------------------------------------------------------------|
| <b>arp</b>        | Enter the keyword <code>arp</code> to display the ARP counter information for the VLT.                   |
| <b>igmp-snoop</b> | Enter the keywords <code>igmp-snoop</code> to display the igmp-snooping counter information for the VLT. |

|                  |                                                                                                    |
|------------------|----------------------------------------------------------------------------------------------------|
| <b>interface</b> | Enter the keyword <code>interface</code> to display the interface counter information for the VLT. |
| <b>mac</b>       | Enter the keyword <code>mac</code> to display the MAC address counter information for the VLT.     |
| <b>ndp</b>       | Enter the keyword <code>ndp</code> to display the VLT counter information for NDP.                 |

**Default** Not configured.

**Command Modes** EXEC

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| <b>Version</b>    | <b>Description</b>                        |
|-------------------|-------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.               |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.               |
| <b>9.5(0.1)</b>   | Introduced on the Z9500.                  |
| <b>9.0.2.0</b>    | Introduced on the S6000.                  |
| <b>9.0.0.0</b>    | Introduced on the Z9000.                  |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                 |
| <b>8.3.12.0</b>   | Introduced on the S4810.                  |

**Usage Information** If you do not add a parameter such as `arp` or `mac`, the output displays all the counters.

**Example**

```
DelleMC# show vlt counter
Total VLT counters

L2 Total MAC-Address Count :
IGMP MRouter Vlans count :
IGMP Mcast Groups count :
ARP entries count :
```

**Example (igmp-snoop)**

```
DelleMC# show vlt counter igmp-snoop
Total IGMP VLT counters

IGMP MRouter Vlans count : 1
IGMP Mcast Groups count : 5
```

**Example (igmp-snoop interface port-channel)**

```
DelleMC# show vlt counter igmp-snoop interface port-channel 2
VLT Port-ID: 2 IGMP Counter

IGMP MRouter Vlans count : 0
IGMP Mcast Groups count : 5

DelleMC# show vlt counter igmp-snoop interface port-channel 100
VLT Port-ID: 100 IGMP Counter

IGMP MRouter Vlans count : 1
```

```
IGMP Mcast Groups count : 0
Ve
```

### Example (NDP and Non-VLT ARP)

```
DellEMC#show vlt counters
Total VLT Counters

L2 Total MAC-Address Count: 2
Total Arp Entries Learnt : 0
Total Arp Entries Synced : 0
Total Non-VLT Arp entries Learnt: 0
Total Non-VLT Arp Entries Synced 0
IGMP MRouter Vlans count :
IGMP Mcast Groups count :
Total VLT Ndp Entries Learnt : 2
Total VLT Ndp Entries Synced : 0
Total Non-VLT Ndp Entries Learnt : 0
Total Non-VLT Ndp Entries Synced : 0
```

## show vlt detail

Displays detailed status information about VLT domains configured on the switch.

**Syntax** show vlt detail

**Default** Not configured.

**Command Modes** EXEC

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                               |
|-------------------|-------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.               |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.               |
| <b>9.5(0.1)</b>   | Introduced on the Z9500.                  |
| <b>9.0.2.0</b>    | Introduced on the S6000.                  |
| <b>9.0.0.0</b>    | Introduced on the Z9000.                  |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                 |
| <b>8.3.8.0</b>    | Introduced on the S4810.                  |

### Example

```
DellEMC# DellEMC(conf-if-vl-100)#show vlt detail
Local LAG Id Peer LAG Id Local Status Peer Status Active VLANs

10 10 UP UP 100, 200, 300, 400,
```

# show vlt inconsistency

Display run-time inconsistencies in the incoming interface (IIF) for spanned multicast routes (mroutes).

**Syntax** `show vlt inconsistency ip mroute`

**Command Modes** EXEC

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                                                                         |
|------------|-----------------------------------------------------------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.                                                           |
| 9.10(0.0)  | Introduced on the S3148.                                                                            |
| 9.10(0.0)  | Introduced on the S6100-ON.                                                                         |
| 9.8(2.0)   | Introduced on the S3100 series.                                                                     |
| 9.8(1.0)   | Introduced on the Z9100-ON.                                                                         |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                                                         |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                                                         |
| 9.7(0.0)   | Introduced on the S6000-ON.                                                                         |
| 9.5(0.1)   | Introduced on the Z9500.                                                                            |
| 9.2(0.2)   | Introduced on the Z9000, S4810, and S4820T.                                                         |
| 9.2(0.0)   | Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only. |
| 9.0.2.0    | Introduced on the S6000.                                                                            |

## Example

```
DellEMC#show vlt inconsistency ip mroute
Spanned Multicast Routing IIF Inconsistency

Multicast Route LocalIIF PeerIIF

(22.22.22.200, 225.1.1.2) VLAN 5 VLAN 6
(*, 225.1.1.2) VLAN 15 te 1/5
DellEMC#
```

# show vlt mismatch

Display mismatches in VLT parameters.

**Syntax** `show vlt mismatch`

**Command Modes** EXEC

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                                            |
|-----------|--------------------------------------------------------|
| 9.13(0.0) | Updated to show mismatch in VXLAN instance parameters. |
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON.              |
| 9.10(0.0) | Introduced on the S3148.                               |
| 9.10(0.0) | Introduced on the S6100-ON.                            |
| 9.8(2.0)  | Introduced on the S3100 series.                        |

| Version    | Description                                                                                                     |
|------------|-----------------------------------------------------------------------------------------------------------------|
| 9.8(1.0)   | Introduced on the Z9100-ON.                                                                                     |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                                                                     |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                                                                     |
| 9.7(0.0)   | Introduced support for Q-in-Q implementation over VLT on the S-Series and Z-Series. Introduced on the S6000-ON. |
| 9.5(0.1)   | Introduced on the Z9500.                                                                                        |
| 9.2(0.2)   | Introduced on the Z9000, S4810, and S4820T.                                                                     |
| 9.2(0.0)   | Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.             |
| 9.0.2.0    | Introduced on the S6000.                                                                                        |

### Example

```
DellEMC#show vlt mismatch
Domain

Parameters Local Peer

Unit-ID 0 1

Vlan-config

Vlan-ID Local Mode Peer Mode

00 -- L3

Vlan IPV4 Multicast Status

Vlan-ID Local Status Peer Status

4094 Active Inactive

DellEMC#
```

### Example for Q-in-Q implementation over VLT

```
DellEMC#show vlt mismatch
Domain

Parameters Local Peer

PB for stp Enabled Disabled

Vlan-type-config

Codes:: P - Primary, C - Community, I - Isolated, N - Normal vlan, M -
Vlan-stack

Vlan-ID Local Peer

100 N M

Port-type-config

Codes:: p - PVLAN Promiscuous port, h - PVLAN Host port, t - PVLAN Trunk
port,
 mt - Vlan-stack trunk port, mu - Vlan-stack access port, n -
Normal port

Vlt Lag Local Peer

128 mt mu

DellEMC#
```

```

Vlan-stack protocol-type

Local Peer

0x4100 0x8100

VLT-VLAN config

Local Lag Peer Lag Local VLANs Peer VLANs

128 128 4094 100

DellEMC#

```

## show vlt private-vlan

Display the private VLAN (PVLAN) associated with the VLT LAG for VLT peer nodes.

**Syntax** `show vlt private-vlan`

**Command Modes** EXEC

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                                 |
|-------------------|---------------------------------------------|
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.                 |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                 |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.                 |
| <b>9.5(0.1)</b>   | Introduced on the Z9500.                    |
| <b>9.4(0.0)</b>   | Introduced on the S6000.                    |
| <b>9.3(0.0)</b>   | Introduced on the Z9000, S4810, and S4820T. |

**Usage Information** If you add an ICL or VLTi link as a member of a primary VLAN, the ICL becomes a part of the primary VLAN and its associated secondary VLANs, similar to the behavior for normal trunk ports. VLAN symmetry is not validated if you associate an ICL to a PVLAN.

Similarly, if you dissociate an ICL from a PVLAN, although the PVLAN symmetry exists, ICL is removed from that PVLAN. The **ICL Status** field displays the type of VLAN port of the VLTi link configured in a PVLAN.

### Example

```

DellEMC#show vlt private-vlan vlan-id

Codes: C- Community, I - Isolated, V - Internally tagged, T - tagged, *
- VLT Pvlan
Primary Secondary ICL Status
10
 20 (C) V
 30 (I) V

40
 50 (C) T
 60 (I) T

```

# show vlt role

Displays the VLT peer status, role of the local VLT switch, VLT system MAC address and system priority, and the MAC address and priority of the local VLT device.

**Syntax** `show vlt role`

**Default** Not configured.

**Command Modes** EXEC

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.5(0.1)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 9.0.0.0    | Introduced on the Z9000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.8.0    | Introduced on the S4810.                  |

## Example

```
Dell_VLTpeer1# show vlt role

VLT Role

VLT Role: Primary
System MAC address: 00:01:e8:8a:df:bc
System Role Priority: 32768
Local System MAC address: 00:01:e8:8a:df:bc
Local System Role Priority: 32768

Dell_VLTpeer2# show vlt role

VLT Role

VLT Role: Secondary
System MAC address: 00:01:e8:8a:df:bc
System Role Priority: 32768
Local System MAC address: 00:01:e8:8a:df:e6
Local System Role Priority: 32768
```

# show vlt statistics

Displays VLT operations statistics.

**Syntax** `show vlt statistics [arp | domain | igmp-snoop | mac | multicast | ndp]`

**Parameters** **arp** Enter the keyword `arp` to display the ARP VLT statistics.

|                   |                                                                                         |
|-------------------|-----------------------------------------------------------------------------------------|
| <b>domain</b>     | Enter the keyword <code>domain</code> to display the domain VLT statistics.             |
| <b>igmp-snoop</b> | Enter the keywords <code>igmp-snoop</code> to display the IGMP snooping VLT statistics. |
| <b>mac</b>        | Enter the keyword <code>mac</code> to display the VLT MAC addresses VLT statistics.     |
| <b>multicast</b>  | Enter the keyword <code>multicast</code> to display the multicast VLT statistics.       |
| <b>ndp</b>        | Enter the keyword <code>ndp</code> to display the NDP VLT statistics.                   |

**Default** Not configured.

**Command Modes** EXEC

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| <b>Version</b>    | <b>Description</b>                                           |
|-------------------|--------------------------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON.                    |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                                     |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.                                  |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.                              |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.                                  |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.                                  |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                                  |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.                                  |
| <b>9.5(0.1)</b>   | Introduced on the Z9500.                                     |
| <b>9.2(0.2)</b>   | Added parameters <code>multicast</code> and <code>ndp</code> |
| <b>9.0.2.0</b>    | Introduced on the S6000.                                     |
| <b>9.0.0.0</b>    | Introduced on the Z9000.                                     |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                                    |
| <b>8.3.12.0</b>   | Added support in the output for ARP, MAC, and IGMP snooping. |
| <b>8.3.8.0</b>    | Introduced on the S4810.                                     |

**Related Commands**

- [clear vlt statistics](#) — clears the statistics on VLT operations.

**Example**  **NOTE:** The following example shows the statistics for all the VLT parameters. If you enter a specific keyword, such as `mac`, only the statistics for that VLT parameter displays.

```
Dell_VLTpeer1# show vlt statistics

## show vlt statistics igmp-snoop

Displays the informational packets and IGMP control PDUs that are exchanged between VLT peer nodes.

**Syntax** `show vlt statistics igmp-snoop`

**Default** Not configured.

**Command Modes** EXEC

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                               |

```

## system-mac

Reconfigure the default MAC address for the domain.

**Syntax** `system-mac mac-address`

**Parameters** `mac-address` Enter the system MAC address for the VLT domain.

**Defaults** Not configured.

**Command Modes** VLT DOMAIN

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                                                                         |
|------------|-----------------------------------------------------------------------------------------------------|
| 9.8(0.0P5) | Introduced on the S4048-ON.                                                                         |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                                                         |
| 9.5(0.1)   | Introduced on the Z9500.                                                                            |
| 9.2(0.0)   | Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only. |
| 9.0.0.0    | Introduced on the Z9000.                                                                            |
| 8.3.19.0   | Introduced on the S4820T.                                                                           |
| 8.3.8.0    | Introduced on the S4810.                                                                            |

**Usage Information** When you create a VLT domain on a switch, the Dell EMC Networking OS automatically creates a VLT-system MAC address used for internal system operations.

To reconfigure the default MAC address for the domain, use the `system-mac` command. The MAC address must be in the `nn:nn:nn:nn:nn:nn` format. Also reconfigure the same MAC address on the VLT peer switch.

## unit-id

Configure the default unit ID of a VLT peer switch.

**Syntax** `unit-id [0 | 1]`

**Parameters**      **0 | 1**      Configure the default unit ID of a VLT peer switch. Enter 0 for the first peer. Enter 1 for the second peer.

**Defaults**      Automatically assigned based on the MAC address of each VLT peer. The peer with the lower MAC address is assigned unit 0; the peer with the higher MAC address is assigned unit 1.

**Command Modes**      VLT DOMAIN

**Command History**      This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| <b>Version</b>    | <b>Description</b>                                                                                  |
|-------------------|-----------------------------------------------------------------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON.                                                           |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                                                                            |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.                                                                     |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.                                                                         |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                                                                         |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.                                                                         |
| <b>9.5(0.1)</b>   | Introduced on the Z9500.                                                                            |
| <b>9.2(0.0)</b>   | Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only. |
| <b>9.0.2.0</b>    | Introduced on the S6000.                                                                            |
| <b>9.0.0.0</b>    | Introduced on the Z9000.                                                                            |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                                                                           |
| <b>8.3.8.0</b>    | Introduced on the S4810.                                                                            |

**Usage Information**      When you create a VLT domain on a switch, the Dell EMC Networking OS automatically assigns a unique unit ID (0 or 1) to each peer switch. The unit IDs are used for internal system operations. To explicitly configure the unit ID of a VLT peer, use the `unit-id` command. Configure a different unit ID (0 or 1) on each peer switch.

This command minimizes the time required for the VLT system to determine the unit ID assigned to each peer switch when one peer reboots.

## vlt domain

Enable VLT on a switch, configure a VLT domain, and enter VLT-Domain Configuration mode.

**Syntax**      `vlt domain domain-id`

**Parameters**      **domain-id**      Enter the domain ID number. Configure the same domain ID on the peer switch. The range of domain IDs is from 1 to 1000.

**Command Modes**      CONFIGURATION

**Command History**      This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| <b>Version</b>    | <b>Description</b>                        |
|-------------------|-------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                  |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.           |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.               |

| Version           | Description                                                                                         |
|-------------------|-----------------------------------------------------------------------------------------------------|
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                                                                         |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.                                                                         |
| <b>9.5(0.1)</b>   | Introduced on the Z9500.                                                                            |
| <b>9.2(0.0)</b>   | Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only. |
| <b>9.0.2.0</b>    | Introduced on the S6000.                                                                            |
| <b>9.0.0.0</b>    | Introduced on the Z9000.                                                                            |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                                                                           |
| <b>8.3.8.0</b>    | Introduced on the S4810.                                                                            |

**Usage Information**

The VLT domain ID must be the same between the two VLT devices. If the domain ID is not the same, a syslog message generates and VLT does not launch.

**Related Commands**

- [show vlt brief](#) — display the delay-restore value.

## vlt-peer-lag port-channel

Associate the port channel to the corresponding VLT peer port channel for the VLT connection to an attached device.

**Syntax**

`vlt-peer-lag port-channel id-number`

**Parameters**

***id-number*** Enter the respective VLT port-channel number of the peer device. The range is from 1 to 512.

**Defaults**

Not configured.

**Command Modes**

INTERFACE PORT-CHANNEL

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                                                                                         |
|-------------------|-----------------------------------------------------------------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON.                                                           |

| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.                                                                         |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.                                                                     |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.                                                                         |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.                                                                         |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                                                                         |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.                                                                         |
| <b>9.5(0.1)</b>   | Introduced on the Z9500.                                                                            |
| <b>9.0.2.0</b>    | Introduced on the S6000.                                                                            |
| <b>9.0.0.0</b>    | Introduced on the Z9000.                                                                            |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                                                                           |
| <b>8.3.8.0</b>    | Introduced on the S4810.                                                                            |
| <b>9.2(0.0)</b>   | Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only. |

# VLT Proxy Gateway

The virtual link trucking (VLT) proxy gateway feature allows a VLT domain to locally terminate and route L3 packets that are destined to a Layer 3 (L3) end point in another VLT domain. Enable the VLT proxy gateway using the link layer discover protocol (LLDP) method or the static configuration. For more information, see the *Command Line Reference Guide*.

## Topics:

- [proxy-gateway lldp](#)
- [proxy-gateway static](#)
- [remote-mac-address exclude-vlan](#)
- [peer-domain-link port-channel exclude-vlan](#)
- [proxy-gateway peer-timeout](#)
- [vlt-peer-mac transmit](#)
- [show vlt-proxy-gateway](#)

## proxy-gateway lldp

Enables the proxy-gateway feature using the LLDP protocol.

**Syntax** [no] proxy-gateway lldp

**Command Modes** VLT DOMAIN

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                                        |
|-------------------|----------------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON.          |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                           |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.                        |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.                    |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.                        |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.                        |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                        |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.                        |
| <b>9.4(0.0)</b>   | Introduced on the S4810, S4820T, S6000, and Z9000. |

**Usage Information** The configuration is cached and sent to LLDP only in one of the following conditions:

1. The port-channel connecting the two VLT domains, across the DC, is a VLT LAG.
2. The `protocol lldp` command is globally enabled.
3. The proxy-gateway LLDP configuration is applied.

### Example

```
DellEMC(conf)# vlt-domain 1
DellEMC(conf-vlt-domain)# proxy-gateway lldp
DellEMC(conf-vlt-domain)#
```

# proxy-gateway static

Enables the proxy-gateway feature using static configurations.

**Syntax** [no] proxy-gateway static

**Command Modes** VLT DOMAIN

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                    |
|------------|------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.      |
| 9.10(0.0)  | Introduced on the S3148.                       |
| 9.10(0.0)  | Introduced on the S6100-ON.                    |
| 9.8(2.0)   | Introduced on the S3100 series.                |
| 9.8(1.0)   | Introduced on the Z9100-ON.                    |
| 9.8(0.0P5) | Introduced on the S4048-ON.                    |
| 9.8(0.0P2) | Introduced on the S3048-ON.                    |
| 9.7(0.0)   | Introduced on the S6000-ON.                    |
| 9.4(0.0)   | Introduced on the S4810, S4820T, S6000, Z9000. |

**Usage Information** When you add a proxy-gateway static configuration, the setting is saved in the Layer 2 module. When you remove the static proxy gateway configuration, each proxy-gateway static MAC configured is deleted from the Layer 2 module.

## Example

```
DellEMC(conf)# vlt-domain 1
DellEMC(conf-vlt-domain)# proxy-gateway static
DellEMC(conf-vlt-domain)#
```

# remote-mac-address exclude-vlan

Configure the proxy-gateway static entry and exclude a VLAN or a range of VLANs from proxy routing.

**Syntax** [no] remote-mac-address mac-address [exclude-vlan vlan-range]

**Parameters** **remote-mac-address** Specify the mac-addresses of the VLT peers which are in the remote VLT domain.

**mac-address** Enter the 48-bit hexadecimal address in nn:nn:nn:nn:nn:nn format.

**vlan-range** Enter the VLAN IDs in which proxy gateway is not needed. The VLANs are excluded from doing proxy gateway. The value can be a single VLAN ID, comma-separated VLAN IDs, a range of VLAN IDs, or a combination. For example:

Comma-separated: 3, 4, 6

Range: 5-10

Combination: 3, 4, 5-10, 8

**Command Modes** VLT DOMAIN PROXY GW STATIC

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                        |
|------------|----------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.          |
| 9.10(0.0)  | Introduced on the S3148.                           |
| 9.10(0.0)  | Introduced on the S6100-ON.                        |
| 9.8(2.0)   | Introduced on the S3100 series.                    |
| 9.8(1.0)   | Introduced on the Z9100-ON.                        |
| 9.8(0.0P5) | Introduced on the S4048-ON.                        |
| 9.8(0.0P2) | Introduced on the S3048-ON.                        |
| 9.7(0.0)   | Introduced on the S6000-ON.                        |
| 9.4(0.0)   | Introduced on the S4810, S4820T, S6000, and Z9000. |

### Usage Information

You can configure the MAC address of a VLT peer in a remote VLT domain to associate with the static VLT proxy gateway and exclude a VLAN, or a range of VLANs, from proxy routing.

### Example

```
DellEMC(conf)# vlt-domain 1
DellEMC(conf-vlt-domain#proxy-gateway static
DellEMC(conf-vlt-domain-proxy-gw-static)# remote-mac-address
00:01:e8:06:95:ac exclude-vlan 3
DellEMC(conf-vlt-domain-proxy-gw-static)#
```

## peer-domain-link port-channel exclude-vlan

Configure the VLT port channel, which is connected to the remote VLT domain, for the proxy gateway or configure the VLANs you want to exclude from VLT proxy gateway.

### Z9500

**Syntax** [no] peer-domain-link port-channel *interface-identifier* exclude-vlan *vlan-range*

### Parameters

|                             |                                                                                                                                                                                                                                                                   |
|-----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>port-channel</b>         | Configure the proxy-gateway interface port-channel.                                                                                                                                                                                                               |
| <b>interface-identifier</b> | Enter the interface type.                                                                                                                                                                                                                                         |
| <b>vlan-range</b>           | Enter the VLAN IDs that you want to exclude from the proxy gateway. The value can be a single VLAN ID, comma-separated VLAN IDs, a range of VLAN IDs, or a combination. For example:<br><br>Comma-separated: 3, 4, 6<br>Range: 5-10<br>Combination: 3, 4, 5-10, 8 |

**Command Modes** VLT DOMAIN PROXY GW LLDP

### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                               |
|-----------|-------------------------------------------|
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0) | Introduced on the S3148.                  |
| 9.10(0.0) | Introduced on the S6100-ON.               |

| Version    | Description                                        |
|------------|----------------------------------------------------|
| 9.8(2.0)   | Introduced on the S3100 series.                    |
| 9.8(1.0)   | Introduced on the Z9100-ON.                        |
| 9.8(0.0P5) | Introduced on the S4048-ON.                        |
| 9.8(0.0P2) | Introduced on the S3048-ON.                        |
| 9.7(0.0)   | Introduced on the S6000-ON.                        |
| 9.5(0.1)   | Introduced on the Z9500.                           |
| 9.4(0.0)   | Introduced on the S4810, S4820T, S6000, and Z9000. |

**Usage Information**

You must configure the VLT port channel interface which is connecting to the remote VLT domain as peer-domain-link. You can also configure the VLANs you want to exclude from the VLT proxy gateway.

**Example**

```
DellEMC(conf)#vlt-domain 1
DellEMC(conf-vlt-domain)#proxy-gateway lldp
DellEMC(conf-vlt-domain-proxy-gw-lldp)#peer-domain-link port-channel 20
exclude-vlan 3
```

## proxy-gateway peer-timeout

Enables the VLT node to timeout the transmission of the peer MAC address when the VLT peer is down.

**Syntax** [no] peer-timeout *value*

**Parameters** *value* Enter the timeout value (in seconds). The range is from 1 to 65535. The default is **infinity**.

**Default** Infinity

**Command Modes** VLT DOMAIN PROXY GW LLDP

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                                    |
|------------|----------------------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.                      |
| 9.10(0.0)  | Introduced on the S6100-ON.                                    |
| 9.8(2.0)   | Introduced on the S3100 series.                                |
| 9.8(1.0)   | Introduced on the Z9100-ON.                                    |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                    |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                    |
| 9.7(0.0)   | Introduced on the S6000-ON.                                    |
| 9.7(0.0)   | Removed the default value on the S-Series and Z-Series.        |
| 9.4(0.0)   | Introduced on the S4810, S4820T, S6000, Z9000, and MXL Switch. |

**Usage Information**

When a VLT peer goes down, the local VLT node stops sending its peer's MAC address. If you configure this timeout, the local VLT node sends its peer's MAC address until the timer expires.

Use this timer when you enable `vlt-peer-mac transmit`. A typical use example is a square VLT topology with a single link connecting to the remote peers.

**Example**

```
DellEMC(conf-vlt-domain-proxy-gw-lldp)# peer-timeout 5
```

# vlt-peer-mac transmit

Enables the device to transmit the peer MAC address along with its own MAC address in LLDP TLV packets to the remote VLT domain.

**Syntax** [no] vlt-peer-mac transmit

**Command Modes** VLT DOMAIN PROXY GW LLDP

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                        |
|------------|----------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.          |
| 9.10(0.0)  | Introduced on the S3148.                           |
| 9.10(0.0)  | Introduced on the S6100-ON.                        |
| 9.8(2.0)   | Introduced on the S3100 series.                    |
| 9.8(1.0)   | Introduced on the Z9100-ON.                        |
| 9.8(0.0P5) | Introduced on the S4048-ON.                        |
| 9.8(0.0P2) | Introduced on the S3048-ON.                        |
| 9.7(0.0)   | Introduced on the S6000-ON.                        |
| 9.4(0.0)   | Introduced on the S4810, S4820T, S6000, and Z9000. |

**Usage Information** This command enables the device to transmit its VLT peer MAC address along with its own MAC address to the remote VLT domain. By default, a node sends only its own MAC address to the remote VLT domain.

This configuration is applicable only for an LLDP proxy gateway. A typical use example is a square VLT topology with single link connecting to the remote peers.

## Example

```
DellEMC(conf-vlt-domain-proxy-gw-lldp)# vlt-peer-mac transmit
```

# show vlt-proxy-gateway

Displays the VLT proxy gateway configuration.

**Syntax** show vlt-proxy-gateway [info] {lldp | static}

**Parameters**

|               |                                                                                                            |
|---------------|------------------------------------------------------------------------------------------------------------|
| <b>lldp</b>   | Enter the keyword <code>lldp</code> to display details about the LLDP VLT proxy gateway configuration.     |
| <b>static</b> | Enter the keyword <code>static</code> to display details about the static VLT proxy gateway configuration. |

**Command Modes**

- EXEC
- EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                               |
|-----------|-------------------------------------------|
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON. |

| Version    | Description                                        |
|------------|----------------------------------------------------|
| 9.10(0.0)  | Introduced on the S3148.                           |
| 9.10(0.0)  | Introduced on the S6100-ON.                        |
| 9.8(2.0)   | Introduced on the S3100 series.                    |
| 9.8(1.0)   | Introduced on the Z9100-ON.                        |
| 9.8(0.0P5) | Introduced on the S4048-ON.                        |
| 9.8(0.0P2) | Introduced on the S3048-ON.                        |
| 9.7(0.0)   | Introduced on the S6000-ON.                        |
| 9.4(0.0)   | Introduced on the S4810, S4820T, S6000, and Z9000. |

### Usage Information

The proxy-gateway feature may go operationally down for any of the following reasons:

- LLDP is globally disabled.
- LDP is disabled per port.
- VLT port-channel is down.
- LLDP neighbor is down.

If any of these conditions is true, the proxy-gateway feature could be operationally down. If so, it is shown in the `show` command output.

When more than one VLT port-channel terminates on the same ToR, the `show vlt proxy-gateway info lldp` command output may show the port-channel ID incorrectly.

### Example

```
DellEMC#show vlt proxy-gateway
VLT Proxy Gateway Brief

Config Mode: LLDP
Global LLDP Config Status: Enabled
peer-mac-transmit Status: Disabled

DellEMC#show vlt proxy-gateway info static
Mac Address Exclude Vlan

00:01:e8:8a:e8:f7 3,7-8
00:01:e8:8b:1c:c0 3,7-8

DellEMC#show vlt proxy-gateway info lldp
LagId Mac Address Exclude Vlan

Po 55 00:01:e8:8a:e8:f7 3,7-8 << Macs learnt via port-channel 55
Po 55 00:01:e8:8b:1c:c0 3,7-8
```

# Virtual Router Redundancy Protocol (VRRP)

Virtual router redundancy protocol (VRRP) is supported by the Dell EMC Networking OS.

## Topics:

- [IPv4 VRRP Commands](#)
- [IPv6 VRRP Commands](#)

## IPv4 VRRP Commands

The following are IPv4 VRRP commands.

### advertise-interval

Set the time interval between VRRP advertisements.

**Syntax** `advertise-interval {seconds | centiseconds centiseconds }`  
To return to the default settings, use the `no advertise-interval` command.

**Parameters**

|                                            |                                                                                                                                                                                    |
|--------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>seconds</b>                             | Enter the number of seconds. The range is from 1 to 255. The default is <b>1 second</b> .                                                                                          |
| <b>centiseconds</b><br><b>centiseconds</b> | Enter the keyword <code>centiseconds</code> then the number of centiseconds in multiples of 25 centiseconds. The range is 25 to 4075 centiseconds in multiples of 25 centiseconds. |

**Defaults** 1 second or 100 centiseconds.

**Command Modes** INTERFACE-VRRP

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version           | Description                                                                 |
|-------------------|-----------------------------------------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON.                                   |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                                                    |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.                                                 |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.                                             |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.                                                 |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.                                                 |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.                                                 |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.                                                 |
| <b>9.5(0.0)</b>   | Added support for centiseconds on the Z9000, S6000, S4820T, S4810, and MXL. |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                                                    |
| <b>9.0.2.0</b>    | Introduced on the S6000.                                                    |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                                                   |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                                                    |
| <b>8.3.7.0</b>    | Introduced on the S4810.                                                    |

| Version | Description                 |
|---------|-----------------------------|
| 7.6.1.0 | Introduced on the S-Series. |
| 7.5.1.0 | Introduced on the C-Series. |
| 6.2.1.1 | Introduced on the E-Series. |

**Usage Information**

Dell EMC Networking recommends keeping the default setting for this command. If you do change the time interval between VRRP advertisements on one router, change it on all routers.

## authentication-type

Enable authentication of VRRP data exchanges.

**Syntax**

`authentication-type simple [encryption-type] password`

To delete an authentication type and password, use the `no authentication-type` command.

**Parameters**

|                        |                                                                                                                                                                                                                                                                                              |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>simple</b>          | Enter the keyword <code>simple</code> to specify simple authentication.                                                                                                                                                                                                                      |
| <b>encryption-type</b> | (OPTIONAL) Enter one of the following: <ul style="list-style-type: none"> <li>0 (zero) specifies an unencrypted authentication data follows.</li> <li>7 (seven) specifies a hidden authentication data follows.</li> <li>LINE is the unencrypted (cleartext) authentication data.</li> </ul> |
| <b>password</b>        | Enter a character string up to eight characters long as a password. If you do not enter an encryption-type, the password is stored as clear text.                                                                                                                                            |

**Defaults**

Not configured.

**Command Modes**

VRRP

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |
| 7.6.1.0    | Introduced on the S-Series.               |
| 7.5.1.0    | Introduced on the C-Series.               |
| 6.2.1.1    | Introduced on the E-Series.               |

## Usage Information

The system encrypts the password and the `show config` command displays the encrypted text string.

# clear counters vrrp

Clear the counters maintained on VRRP operations.

## Z9500

**Syntax** `clear counters vrrp [vrrp-id] [ipv6]`

**Parameters**

|                |                                                                                                             |
|----------------|-------------------------------------------------------------------------------------------------------------|
| <b>vrrp-id</b> | (OPTIONAL) Enter the number of the VRRP group ID to clear the group's counters. The range is from 1 to 255. |
| <b>ipv6</b>    | (OPTIONAL) Enter the keyword <code>ipv6</code> to clear counters from the IPv6 VRRP group.                  |

**Command Modes** EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                                                            |
|------------|----------------------------------------------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.                                              |
| 9.10(0.0)  | Introduced on the S3148.                                                               |
| 9.9(0.0)   | Added support to clear the interface configurations corresponding to a range of ports. |
| 9.10(0.0)  | Introduced on the S6100-ON.                                                            |
| 9.8(2.0)   | Introduced on the S3100 series.                                                        |
| 9.8(1.0)   | Introduced on the Z9100-ON.                                                            |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                                            |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                                            |
| 9.7(0.0)   | Introduced on the S6000-ON.                                                            |
| 9.4.(0.0)  | Added support for VRF.                                                                 |
| 9.2(1.0)   | Introduced on the Z9500.                                                               |
| 9.0.2.0    | Introduced on the S6000.                                                               |
| 8.3.19.0   | Introduced on the S4820T.                                                              |
| 8.3.11.1   | Introduced on the Z9000.                                                               |
| 8.3.7.0    | Introduced on the S4810.                                                               |
| 7.6.1.0    | Introduced on the S-Series.                                                            |
| 7.5.1.0    | Introduced on the C-Series.                                                            |
| 6.2.1.1    | Introduced on the E-Series.                                                            |

## Usage Information

- NOTE:** This command also enables you to clear the port configurations corresponding to a range of ports. However, for Open Networking (ON) platforms the notation for specifying port range in the command is different from how you specify in non-ON platforms.
- For non-ON platforms, you can specify multiple ports as `slot/port-range`. For example, if you want to clear the port configurations corresponding to all ports between 1 and 4, specify the port range as `clear counters interfaces interface-type 1/1 - 4`.

- For ON platforms, you can specify multiple ports as `slot/port/[subport] - slot/port/[subport]`. For example, if you want to clear the port configurations corresponding to all ports between 1 and 4, specify the port range as `clear counters interfaces interface-type 1/1/1 - 1/1/4`.

## debug vrrp

Enable VRRP debugging.

**Syntax** `debug vrrp [vrrp-id] {all | bfd | database | interface | ipv6 | packets | state | timer}`

To disable debugging, use the `no debug vrrp [vrrp-id] {all | bfd | database | interface | ipv6 | packets | state | timer}` command.

| Parameters       |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>vrrp-id</b>   | (OPTIONAL) | Enter a number from 1 to 255 as the VRRP group ID.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>all</b>       |            | Enter the keyword <code>all</code> to enable debugging of all VRRP groups.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>bfd</b>       |            | Enter the keyword <code>bfd</code> to enable debugging of VRRP BFD interactions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>database</b>  |            | Enter the keyword <code>database</code> to enable debugging of configuration changes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>interface</b> |            | Enter the following keywords and the interface information: <ul style="list-style-type: none"> <li>• For Port Channel interface types, enter the keywords <code>port-channel</code> then the number.</li> <li>• For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information.</li> <li>• For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information.</li> <li>• For a VLAN interface, enter the keyword <code>vlan</code> then the VLAN ID. The VLAN ID range is from 1 to 4094.</li> </ul> |
| <b>interface</b> |            | Enter the keyword <code>interface</code> to enable debugging of interface state changes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>ipv6</b>      |            | Enter the keyword <code>ipv6</code> to enable debugging for IPv6.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>packets</b>   |            | Enter the keyword <code>packets</code> to enable debugging of VRRP control packets.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>state</b>     |            | Enter the keyword <code>state</code> to enable debugging of VRRP state changes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>timer</b>     |            | Enter the keyword <code>timer</code> to enable debugging of the VRRP timer.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| Version           | Description                               |
|-------------------|-------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.               |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.               |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                  |
| <b>9.0.2.0</b>    | Introduced on the S6000.                  |

| <b>Version</b>  | <b>Description</b>          |
|-----------------|-----------------------------|
| <b>8.3.19.0</b> | Introduced on the S4820T.   |
| <b>8.3.11.1</b> | Introduced on the Z9000.    |
| <b>8.3.7.0</b>  | Introduced on the S4810.    |
| <b>7.5.1.0</b>  | Introduced on the C-Series. |
| <b>6.2.1.1</b>  | Introduced on the E-Series. |

**Usage Information**

If you do not specify an option, debug is active on all interfaces and all VRRP groups.

## description

Configure a short text string describing the VRRP group.

**Syntax** `description text`  
 To delete a VRRP group description, use the `no description` command.

**Parameters** **text** Enter a text string up to 80 characters long.

**Defaults** Not enabled.

**Command Modes** VRRP

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| <b>Version</b>    | <b>Description</b>                        |
|-------------------|-------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.               |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.               |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                  |
| <b>9.0.2.0</b>    | Introduced on the S6000.                  |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                 |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                  |
| <b>8.3.7.0</b>    | Introduced on the S4810.                  |
| <b>7.6.1.0</b>    | Introduced on the S-Series.               |
| <b>7.5.1.0</b>    | Introduced on the C-Series.               |
| <b>6.2.1.1</b>    | Introduced on the E-Series.               |

## disable

Disable a VRRP group.

**Syntax** `disable`

To re-enable a disabled VRRP group, use the `no disable` command.

**Command Modes** VRRP

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |
| 7.6.1.0    | Introduced on the S-Series.               |
| 7.5.1.0    | Introduced on the C-Series.               |
| 6.2.1.1    | Introduced on the E-Series.               |

**Usage Information** To enable VRRP traffic, assign an IP address to the VRRP group using the `virtual-address` command and enter `no disable`.

**Related Commands**

- [virtual-address](#) — specify the IP address of the virtual router.

## hold-time

Specify a delay (in seconds) before a switch becomes the MASTER virtual router. By delaying the initialization of the VRRP MASTER, the new switch can stabilize its routing tables.

**Syntax** `hold-time {seconds | centisecs centisecs}`

To return to the default value, use the `no hold-time` command.

**Parameters**

|                                      |                                                                                                                                                                     |
|--------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>seconds</b>                       | Enter the number of seconds. The range is from 0 to 65535. The default is <b>zero (0) seconds</b> .                                                                 |
| <b>centisecs</b><br><b>centisecs</b> | Enter the keyword <code>centisecs</code> then the number of <code>centisecs</code> in units of 25 centisecs. The range is from 0 to 65525 in units of 25 centisecs. |

**Defaults** **zero (0) seconds or (0) centiseconds**

**Command Modes** VRRP

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                                                 |
|------------|-----------------------------------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.                                   |
| 9.10(0.0)  | Introduced on the S3148.                                                    |
| 9.10(0.0)  | Introduced on the S6100-ON.                                                 |
| 9.8(2.0)   | Introduced on the S3100 series.                                             |
| 9.8(1.0)   | Introduced on the Z9100-ON.                                                 |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                                 |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                                 |
| 9.7(0.0)   | Introduced on the S6000-ON.                                                 |
| 9.5(0.0)   | Added support for centiseconds on the Z9000, S6000, S4820T, S4810, and MXL. |
| 9.2(1.0)   | Introduced on the Z9500.                                                    |
| 9.0.2.0    | Introduced on the S6000.                                                    |
| 8.3.19.0   | Introduced on the S4820T.                                                   |
| 8.3.11.1   | Introduced on the Z9000.                                                    |
| 8.3.7.0    | Introduced on the S4810.                                                    |
| 7.6.1.0    | Introduced on the S-Series.                                                 |
| 7.5.1.0    | Introduced on the C-Series.                                                 |
| 6.2.1.1    | Introduced on the E-Series.                                                 |

**Usage Information**

If a switch is a MASTER and you change the hold timer, disable and re-enable VRRP for the new hold timer value to take effect.

**Related Commands**

- `disable` — disables a VRRP group.

## preempt

To preempt or become the MASTER router, configure a BACKUP router with a higher priority value.

**Syntax**

```
preempt
```

To prohibit preemption, use the `no preempt` command.

**Defaults**

Enabled (that is, a BACKUP router can preempt the MASTER router).

**Command Modes**

VRRP

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |

| Version  | Description                 |
|----------|-----------------------------|
| 9.7(0.0) | Introduced on the S6000-ON. |
| 9.2(1.0) | Introduced on the Z9500.    |
| 9.0.2.0  | Introduced on the S6000.    |
| 8.3.19.0 | Introduced on the S4820T.   |
| 8.3.11.1 | Introduced on the Z9000.    |
| 8.3.7.0  | Introduced on the S4810.    |
| 7.6.1.0  | Introduced on the S-Series. |
| 7.5.1.0  | Introduced on the C-Series. |
| 6.2.1.1  | Introduced on the E-Series. |

## priority

Specify a VRRP priority value for the VRRP group. The VRRP protocol uses this value during the MASTER election process.

**Syntax** `priority priority`

To return to the default value, use the `no priority` command.

**Parameters** `priority` Enter a number as the priority. Enter 255 only if the router's virtual address is the same as the interface's primary IP address (that is, the router is the OWNER). The range is from 1 to 255. The default is **100**.

**Defaults** 100

**Command Modes** VRRP

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.16.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |
| 7.6.1.0    | Introduced on the S-Series.               |
| 7.5.1.0    | Introduced on the C-Series.               |
| 6.2.1.1    | Introduced on the E-Series.               |

## Usage Information

To guarantee that a VRRP group becomes MASTER, configure the VRRP group's virtual address with same IP address as the interface's primary IP address and change the priority of the VRRP group to 255.

If you set the `priority` command to 255 and the `virtual-address` is not equal to the interface's primary IP address, an error message appears.

## show config

View the non-default VRRP configuration.

**Syntax** `show config [verbose]`

**Parameters** **verbose** (OPTIONAL) Enter the keyword `verbose` to view all the VRRP group configuration information, including default information.

**Command Modes** VRRP

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.2(1.0)   | Introduced on the Z9500.                  |
| 9.0.2.0    | Introduced on the S6000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.11.1   | Introduced on the Z9000.                  |
| 8.3.7.0    | Introduced on the S4810.                  |
| 7.6.1.0    | Introduced on the S-Series.               |
| 7.5.1.0    | Introduced on the C-Series.               |
| 6.2.1.1    | Introduced on the E-Series.               |

## Example

```
DellEMC(conf-if-vrid-4)# show config
 vrrp-group 4
 virtual-address 119.192.182.124
 !
DellEMC(conf-if-vrid-4)#
```

# show vrrp

View the VRRP groups that are active. If no VRRP groups are active, the Dell EMC Networking OS returns `No Active VRRP group`.

## Z9500

**Syntax** `show vrrp [vrrp-id] [brief] [interface type] [ipv6] [interface type] [vrf vrf-name]`

|                   |                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-------------------|-----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Parameters</b> | <b>vrrp-id</b>        | (OPTIONAL) Enter the virtual router identifier for the VRRP group to view only that group. The range is from 1 to 255.                                                                                                                                                                                                                                                                                                                                                                                  |
|                   | <b>brief</b>          | (OPTIONAL) Enter the keyword <code>brief</code> to view a table of information about the VRRP groups.                                                                                                                                                                                                                                                                                                                                                                                                   |
|                   | <b>interface type</b> | (OPTIONAL) Enter the following keywords and the interface information: <ul style="list-style-type: none"><li>• For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information.</li><li>• For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information.</li><li>• For a VLAN interface, enter the keyword <code>vlan</code>, and then the VLAN ID. The VLAN ID range is from 1 to 4094.</li></ul> |
|                   | <b>ipv6</b>           | (OPTIONAL) Enter the keyword <code>ipv6</code> to view only VRRP IPv6 groups.                                                                                                                                                                                                                                                                                                                                                                                                                           |
|                   | <b>vrf vrf-name</b>   | (OPTIONAL) Enter the keyword <code>vrf</code> and then the name of the VRF to view active VRRP groups corresponding to that VRF.                                                                                                                                                                                                                                                                                                                                                                        |

| <b>Version</b>    | <b>Description</b>                        |
|-------------------|-------------------------------------------|
| <b>9.10(0.1)</b>  | Introduced on the S6010-ON and S4048T-ON. |
| <b>9.10(0.0)</b>  | Introduced on the S3148.                  |
| <b>9.10(0.0)</b>  | Introduced on the S6100-ON.               |
| <b>9.8(2.0)</b>   | Introduced on the S3100 series.           |
| <b>9.8(1.0)</b>   | Introduced on the Z9100-ON.               |
| <b>9.8(0.0P5)</b> | Introduced on the S4048-ON.               |
| <b>9.8(0.0P2)</b> | Introduced on the S3048-ON.               |
| <b>9.7(0.0)</b>   | Introduced on the S6000-ON.               |
| <b>9.4.(0.0)</b>  | Added support for VRF.                    |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                  |
| <b>9.0.2.0</b>    | Introduced on the S6000.                  |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                 |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                  |
| <b>8.3.7.0</b>    | Introduced on the S4810.                  |
| <b>7.6.1.0</b>    | Introduced on the S-Series.               |
| <b>7.5.1.0</b>    | Introduced on the C-Series.               |
| <b>6.2.1.1</b>    | Introduced on the E-Series.               |

## Usage Information

The following describes the `show vrrp brief` command.

| Item                   | Description                                                                                                                                                                                                                                                                                                   |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Interface</b>       | Lists the interface type, slot, and port of the configured VRRP group.                                                                                                                                                                                                                                        |
| <b>Grp</b>             | Displays the VRRP group ID.                                                                                                                                                                                                                                                                                   |
| <b>Pri</b>             | Displays the priority value assigned to the interface. If you configured the <code>track</code> command to track that interface and you disable the interface, the cost is subtracted from the priority value assigned to the interface.                                                                      |
| <b>Pre</b>             | States whether preempt is enabled on the interface: <ul style="list-style-type: none"><li>• Y = Preempt is enabled.</li><li>• N = Preempt is not enabled.</li></ul>                                                                                                                                           |
| <b>State</b>           | Displays the operational state of the interface using one of the following: <ul style="list-style-type: none"><li>• NA/IF (the interface is not available).</li><li>• MASTER (the interface associated with the MASTER router).</li><li>• BACKUP (the interface associated with the BACKUP router).</li></ul> |
| <b>Master addr</b>     | Displays the IP address of the MASTER router.                                                                                                                                                                                                                                                                 |
| <b>Virtual addr(s)</b> | Displays the virtual IP addresses of the VRRP routers associated with the interface.                                                                                                                                                                                                                          |

## Example (Brief)

```
DelleMC> Interface Grp Pri Pre State Master addr Virtual addr(s)
Description-----
Te 1/37 1 100 Y Master 200.200.200.200 200.200.200.201
Te 1/37 2 100 Y Master 200.200.200.200 200.200.200.202 200.200.200.203
Description
Te 1/37 3 100 Y Master 1.1.1.1 1.1.1.2
Te 1/37 4 100 Y Master 200.200.200.200 200.200.200.206 200.200.200.207
... short desc
Te 1/37 254 254 Y Master 200.200.200.200 200.200.200.204 200.200.200.205
DelleMC>
```

## Usage Information

The following describes the `show vrrp` command.

| Item                             | Description                                                                                                                                                                                                                                                                                                                           |
|----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>TenGigabitEthernet 1/3...</b> | Displays the interface, VRRP group ID, and network address. If the interface is not sending VRRP packets, 0.0.0.0 appears as the network address.                                                                                                                                                                                     |
| <b>State: master...</b>          | Displays the interface's state: <ul style="list-style-type: none"><li>• Na/If (not available)</li><li>• master (MASTER virtual router)</li><li>• backup (BACKUP virtual router)</li></ul> Also displays the interface's priority and IP address of the MASTER.                                                                        |
| <b>Hold Down:...</b>             | Displays additional VRRP configuration information: <ul style="list-style-type: none"><li>• Hold Down displays the hold down timer interval in seconds.</li><li>• Preempt displays TRUE if preempt is configured and FALSE if preempt is not configured.</li><li>• AdvInt displays the Advertise Interval in seconds.</li></ul>       |
| <b>Adv rcvd:...</b>              | Displays counters for the following: <ul style="list-style-type: none"><li>• Adv rcvd displays the number of VRRP advertisements received on the interface.</li><li>• Adv sent displays the number of VRRP advertisements sent on the interface.</li><li>• Gratuitous ARP sent displays the number of gratuitous ARPs sent.</li></ul> |
| <b>Virtual MAC address</b>       | Displays the virtual MAC address of the VRRP group.                                                                                                                                                                                                                                                                                   |
| <b>Virtual IP address</b>        | Displays the virtual IP address of the interface's VRRP router.                                                                                                                                                                                                                                                                       |

| Item                     | Description                                                                                                                                                                                                                                                                                                  |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Authentication...</b> | States whether authentication is configured for the VRRP group. If it is configured, this lists the authentication type and password.                                                                                                                                                                        |
| <b>Tracking states..</b> | Displays if the <code>track</code> command is configured on an interface. Also displays the following information about the tracked interface: <ul style="list-style-type: none"> <li>• Dn or Up states whether the interface is down or up.</li> <li>• The interface type slot/port information.</li> </ul> |

### Example

```
DelleMC> show vrrp

TenGigabitEthernet 1/3, VRID: 1, Net: 10.1.1.253
VRF: 0 default
State: Master, Priority: 105, Master: 10.1.1.253 (local)
Hold Down: 0 sec, Preempt: TRUE, AdvInt: 1 sec
Adv rcvd: 0, Adv sent: 1862, Gratuitous ARP sent: 0
Virtual MAC address:
 00:00:5e:00:01:01
Virtual IP address:
 10.1.1.252
Authentication: (none)
Tracking states for 1 interfaces:
 Up TenGigabitEthernet 1/17 priority-cost 10

TenGigabitEthernet 1/4, VRID: 2, Net: 10.1.2.253
VRF: 0 default
State: Master, Priority: 110, Master: 10.1.2.253 (local)
Hold Down: 10 sec, Preempt: TRUE, AdvInt: 1 sec
Adv rcvd: 0, Adv sent: 1862, Gratuitous ARP sent: 0
Virtual MAC address:
 00:00:5e:00:01:02
Virtual IP address:
 10.1.2.252
Authentication: (none)
Tracking states for 2 interfaces:
 Up TenGigabitEthernet 2/1 priority-cost 10
 Up TenGigabitEthernet 1/17 priority-cost 10
DelleMC>
```

## version

Set the VRRP protocol version for the IPv4 group.

**Syntax** `version {2 | 3 | both}`

To return to the default setting, use the `no version` command.

| Parameters  |                                                                                                                                |  |
|-------------|--------------------------------------------------------------------------------------------------------------------------------|--|
| <b>2</b>    | Enter the keyword <code>2</code> to specify VRRP version 2 as defined by RFC 3768, <i>Virtual Router Redundancy Protocol</i> . |  |
| <b>3</b>    | Enter the keyword <code>3</code> to specify VRRP version 3 as defined by RFC 5798, <i>Virtual Router Redundancy Protocol</i> . |  |
| <b>both</b> | Enter the keyword <code>both</code> for in-service migration from VRRP version 2 to VRRP version 3.                            |  |

**Defaults** 2

**Command Modes** VRRP

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                             |
|------------|---------------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.               |
| 9.10(0.0)  | Introduced on the S3148.                                |
| 9.10(0.0)  | Introduced on the S6100-ON.                             |
| 9.8(2.0)   | Introduced on the S3100 series.                         |
| 9.8(1.0)   | Introduced on the Z9100-ON.                             |
| 9.8(0.0P5) | Introduced on the S4048-ON.                             |
| 9.8(0.0P2) | Introduced on the S3048-ON.                             |
| 9.7(0.0)   | Introduced on the S6000-ON.                             |
| 9.5(0.1)   | Introduced on the Z9500.                                |
| 9.5(0.0)   | Introduced on the Z9000, S6000, S4820T, S4810, and MXL. |

### Usage Information

You can use the `both` command to migrate from VRRPv2 to VRRPv3. When you set the VRRP protocol version to `both`, the switch sends only VRRPv3 advertisements but can receive either VRRPv2 or VRRPv3 packets. To migrate an IPv4 VRRP group from VRRPv2 to VRRPv3:

1. Set the switches with the lowest priority to `both`.
2. Set the switch with the highest priority to version 3.
3. Set all the switches from `both` to version 3.

 **NOTE:** Do not run VRRP version 2 and version 3 in the same group for an extended period of time.

### Example

```
DellEMC(conf-if-te-1/1-vrid-100)# version ?
2 VRRPv2
3 VRRPv3
both Interoperable, send VRRPv3 receive both

DellEMC(conf-if-te-1/1-vrid-100)# version 3
```

## virtual-address

Configure up to 12 virtual router IP addresses in the VRRP group. To start sending VRRP packets, set at least one virtual IP address for the VRRP group.

### Syntax

```
virtual-address ip-address1 [... ip-address12]
```

To delete one or more virtual IP addresses, use the `no virtual-address ip-address1 [... ip-address12]` command.

### Parameters

- ip-address1*** Enter an IP address of the virtual router in dotted decimal format. The IP address must be on the same subnet as the interface's primary IP address.
- ... ip-address12*** (OPTIONAL) Enter up to 11 additional IP addresses of virtual routers in dotted decimal format. Separate the IP addresses with a space. The IP addresses must be on the same subnet as the interface's primary IP address.

### Defaults

Not configured.

### Command Modes

VRRP

### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version   | Description                               |
|-----------|-------------------------------------------|
| 9.10(0.1) | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0) | Introduced on the S3148.                  |

| Version    | Description                                                                                 |
|------------|---------------------------------------------------------------------------------------------|
| 9.8(2.0)   | Introduced on the S3100 series.                                                             |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                                                 |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                                                 |
| 9.7(0.0)   | Introduced on the S6000-ON.                                                                 |
| 9.0.2.0    | Introduced on the S6000.                                                                    |
| 8.3.19.0   | Introduced on the S4820T.                                                                   |
| 8.3.11.1   | Introduced on the Z9000.                                                                    |
| 8.3.7.0    | Introduced on the S4810.                                                                    |
| 7.6.1.0    | Introduced on the S-Series.                                                                 |
| 7.5.1.0    | Introduced on the C-Series.                                                                 |
| 7.4.1.0    | Introduced support for telnetting to the VRRP group IP address assigned using this command. |
| 6.2.1.1    | Introduced on the E-Series.                                                                 |

### Usage Information

The VRRP group only becomes active and sends VRRP packets when you configure a virtual IP address. When you delete the virtual address, the VRRP group stops sending VRRP packets.

A system message appears after you enter or delete the `virtual-address` command.

To guarantee that a VRRP group becomes MASTER, configure the VRRP group's virtual IP address with the same address as the interface's primary IP address and change the priority of the VRRP group to 255.

You can ping the virtual IP addresses configured in all VRRP groups.

## vrrp delay minimum

Set the delay time for VRRP initialization after an interface comes up.

**Syntax** `vrrp delay minimum seconds`

**Parameters** **seconds** Enter the number of seconds for the delay for VRRP initialization after an interface becomes operational. The range is from 0 to 900 (0 indicates no delay).

**Defaults** 0

**Command Modes** INTERFACE

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.0.2.0    | Introduced on the S6000.                  |
| 9.0.0.0    | Introduced on the Z9000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.8.0    | Introduced on the S4810.                  |

## Usage Information

This command applies to a single interface. When you use this command with the `vrrp delay reload` command, the later timer rules VRRP enabling. For example, if `vrrp delay reload` is 600 and `vrrp delay minimum` is 300:

- When the system reloads, VRRP waits 600 seconds (10 minutes) to bring up VRRP on all interfaces that are up and configured for VRRP.
- When an interface comes up, whether as part of a system reload or an interface reload, the system waits 300 seconds (5 minutes) to bring up VRRP on that interface.

## Related Command

- [vrrp delay reload](#) — sets the delay time for VRRP initialization after a system reboot.

# vrrp delay reload

Set the delay time for VRRP initialization after a system reboot.

## Syntax

`vrrp delay reload seconds`

## Parameters

**seconds**

Enter the number of seconds for the delay. The range is from 0 to 900 (0 indicates no delay).

## Defaults

0

## Command Modes

INTERFACE

## Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |
| 9.10(0.0)  | Introduced on the S3148.                  |
| 9.10(0.0)  | Introduced on the S6100-ON.               |
| 9.8(2.0)   | Introduced on the S3100 series.           |
| 9.8(1.0)   | Introduced on the Z9100-ON.               |
| 9.8(0.0P5) | Introduced on the S4048-ON.               |
| 9.8(0.0P2) | Introduced on the S3048-ON.               |
| 9.7(0.0)   | Introduced on the S6000-ON.               |
| 9.0.2.0    | Introduced on the S6000.                  |
| 9.0.0.0    | Introduced on the Z9000.                  |
| 8.3.19.0   | Introduced on the S4820T.                 |
| 8.3.8.0    | Introduced on the S4810.                  |

## Usage Information

This command applies to all the VRRP interfaces on a system. When you use this command with the `vrrp delay minimum` command, the later timer rules VRRP enabling. For example, if `vrrp delay reload` is 600 and `vrrp delay minimum` is 300:

- When the system reloads, VRRP waits 600 seconds (10 minutes) to bring up VRRP on all interfaces that are up and configured for VRRP.
- When an interface comes up, whether as part of a system reload or an interface reload, the system waits 300 seconds (5 minutes) to bring up VRRP on that interface.

For the delay timers to take effect, save the configuration and reload the system.

## Related Command

- [vrrp delay minimum](#) — sets the delay time for VRRP initialization after a line card reboot.

## vrrp-group

Assign a VRRP ID to an interface. You can configure up to 12 VRRP groups per interface.

**Syntax** `vrrp-group vrrp-id`

**Parameters** `vrrp-id` Enter a number as the group ID. The range is from 1 to 255.

**Defaults** Not configured.

**Command Modes** INTERFACE

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                               |
|------------|-------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON. |

| 6.2.1.1    | Introduced on the E-Series.               |

**Usage Information** The VRRP group only becomes active and sends VRRP packets when you configure a virtual IP address. When you delete the virtual IP address, the VRRP group stops sending VRRP packets.

**Related Command**

- [virtual-address](#) — assigns up to 12 virtual IP addresses per VRRP group.

## IPv6 VRRP Commands

The following are IPv6 VRRP commands.

- [clear counters vrrp ipv6](#)
- [debug vrrp ipv6](#)
- [show vrrp ipv6](#)
- [vrrp-ipv6-group](#)

The following commands apply to IPv4 and IPv6:

- [advertise-interval](#)
- [description](#)
- [disable](#)
- [hold-time](#)
- [preempt](#)
- [priority](#)

- [show config](#)
- [virtual-address](#)

## clear counters vrrp ipv6

Clear the counters recorded for IPv6 VRRP groups.

**Syntax** `clear counters vrrp ipv6 [vrid | vrf vrf-name]`

**Parameters**

- vrid** (OPTIONAL) Enter the number of an IPv6 VRRP group; range is from 1 to 255.
- vrf vrf-name** (OPTIONAL) Enter the name of a VRF instance to clear the counters of all IPv6 VRRP groups in the specified VRF. The maximum is 32 characters.

**Command Modes** EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                                                                                         |
|------------|---------------------------------------------------------------------------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.                                                                           |
| 9.10(0.0)  | Introduced on the S3148.                                                                                            |
| 9.9(0.0)   | Added support to clear the interface configurations corresponding to a range of ports.                              |
| 9.10(0.0)  | Introduced on the S6100-ON.                                                                                         |
| 9.8(2.0)   | Introduced on the S3100 series.                                                                                     |
| 9.8(1.0)   | Introduced on the Z9100-ON.                                                                                         |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                                                                         |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                                                                         |
| 9.7(0.0)   | Introduced on the S6000-ON.                                                                                         |
| 9.2(1.0)   | Introduced on the Z9500.                                                                                            |
| 8.3.19.0   | Introduced on the S4820T.                                                                                           |
| 8.3.10.0   | Introduced on the S4810.                                                                                            |
| 8.4.1.0    | Introduced on E-Series, C-Series, and S-Series. Support was added for IPv6 VRRP groups in nondefault VRF instances. |
| 8.3.2.0    | Introduced on the E-Series.                                                                                         |

### Usage Information

**NOTE:** You can also clear the port configurations corresponding to a range of ports. For Open Networking (ON) platforms, the notation for specifying the port range in the command is different from how you specify the port range in non-ON platforms.

- For non-ON platforms, you can specify multiple ports as `slot/port-range`. For example, if you want to clear the port configurations corresponding to all ports between 1 and 4, specify the port range as `clear counters interfaces interface-type 1/1 - 4`.
- For ON platforms, you can specify multiple ports as `slot/port/[subport] - slot/port/[subport]`. For example, if you want to clear the port configurations corresponding to all ports between 1 and 4, specify the port range as `clear counters interfaces interface-type 1/1/1 - 1/1/4`.

## debug vrrp ipv6

Enable VRRP debugging.

**Syntax** `debug vrrp ipv6 interface [vrid] {all | packets | state | timer}`

|                   |                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-------------------|------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Parameters</b> | <b>interface</b> | Enter the following keywords and the interface information: <ul style="list-style-type: none"><li>• For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information.</li><li>• For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information.</li><li>• For a Port Channel interface, enter the keywords <code>port-channel</code>, and then a number.</li><li>• For a VLAN interface, enter the keyword <code>vlan</code>, and then the VLAN ID. The VLAN ID range is from 1 to 4094.</li></ul> |
|                   | <b>vrid</b>      | (OPTIONAL) Enter a number from 1 to 255 as the VRRP group ID.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|                   | <b>all</b>       | Enter the keyword <code>all</code> to enable debugging of all VRRP groups.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|                   | <b>bfd</b>       | Enter the keyword <code>bfd</code> to enable debugging of all VRRP BFD interactions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|                   | <b>database</b>  | Enter the keyword <code>database</code> to display changes related to group, prefix, and interface entries in the VRRP table.                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|                   | <b>packets</b>   | Enter the keyword <code>packets</code> to enable debugging of VRRP control packets.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|                   | <b>state</b>     | Enter the keyword <code>state</code> to enable debugging of VRRP state changes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|                   | <b>timer</b>     | Enter the keyword <code>timer</code> to enable debugging of the VRRP timer.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

**Command Modes** EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                                                                                         |
|------------|---------------------------------------------------------------------------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.                                                                           |
| 9.10(0.0)  | Introduced on the S3148.                                                                                            |
| 9.10(0.0)  | Introduced on the S6100-ON.                                                                                         |
| 9.8(2.0)   | Introduced on the S3100 series.                                                                                     |
| 9.8(1.0)   | Introduced on the Z9100-ON.                                                                                         |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                                                                         |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                                                                         |
| 9.7(0.0)   | Introduced on the S6000-ON.                                                                                         |
| 9.2(1.0)   | Introduced on the Z9500.                                                                                            |
| 8.3.19.0   | Introduced on the S4820T.                                                                                           |
| 8.3.10.0   | Introduced on the S4810.                                                                                            |
| 8.4.1.0    | Introduced on E-Series, C-Series, and S-Series. Support was added for IPv6 VRRP groups in nondefault VRF instances. |
| 8.3.2.0    | Introduced on the E-Series.                                                                                         |

**Usage Information** If you do not specify an option, debugging is active on all interfaces and all VRRP groups.

# show vrrp ipv6

View the active IPv6 VRRP groups. If no VRRP groups are active, the Dell EMC Networking OS returns `No Active VRRP group`.

|                   |                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-------------------|-----------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>     | <code>show vrrp ipv6 [vrid] [interface] [brief] [vrf vrf-name]</code> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Parameters</b> | <b>vrid</b>                                                           | (OPTIONAL) Enter the virtual router identifier for the VRRP group to view only that group. The range is from 1 to 255.                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|                   | <b>interface</b>                                                      | Enter the following keywords and the number information: <ul style="list-style-type: none"><li>• For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information.</li><li>• For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information.</li><li>• For a port channel interface, enter the keywords <code>port-channel</code>, and then a number.</li><li>• For a VLAN interface, enter the keyword <code>vlan</code>, and then a number from 1 to 4094.</li></ul> |
|                   | <b>brief</b>                                                          | (OPTIONAL) Enter the keyword <code>brief</code> to view a table of information on the VRRP groups.                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|                   | <b>vrf vrf-name</b>                                                   | Enter the keyword <code>vrf</code> then the name of the VRF to view IPv6 VRRP groups corresponding to that VRF.                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

  - EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

| Version    | Description                                        |
|------------|----------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.          |
| 9.10(0.0)  | Introduced on the S3148.                           |
| 9.10(0.0)  | Introduced on the S6100-ON.                        |
| 9.8(2.0)   | Introduced on the S3100 series.                    |
| 9.8(1.0)   | Introduced on the Z9100-ON.                        |
| 9.8(0.0P5) | Introduced on the S4048-ON.                        |
| 9.8(0.0P2) | Introduced on the S3048-ON.                        |
| 9.7(0.0)   | Added support for VRF. Introduced on the S6000-ON. |
| 9.2(1.0)   | Introduced on the Z9500.                           |
| 8.3.19.0   | Introduced on the S4820T.                          |
| 8.3.10.0   | Introduced on the S4810.                           |
| 8.3.2.0    | Introduced on the E-Series.                        |

**Usage Information** The following describes the `show vrrp ipv6` command.

| Line starting with       | Description                                                                                                                                          |
|--------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>GigabitEthernet..</b> | Displays the interface, VRRP group ID, and network address. If the interface is not sending VRRP packets, 0.0.0.0 appears as the network IP address. |
| <b>VRF</b>               | VRF instance to which the VRRP group interface belongs.                                                                                              |
| <b>State: master...</b>  | Displays the interface's state: <ul style="list-style-type: none"><li>• Na/If (not available)</li></ul>                                              |

| <b>Line starting with</b>  | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                            | <ul style="list-style-type: none"> <li>• master (MASTER virtual router)</li> <li>• backup (BACKUP virtual router)</li> </ul> <p>Also displays the interface's priority and IP address of the MASTER.</p>                                                                                                                                                                                                                                                                                                            |
| <b>Hold Down:...</b>       | <p>Displays additional VRRP configuration information:</p> <ul style="list-style-type: none"> <li>• Hold Down displays the hold down timer interval in seconds.</li> <li>• Preempt displays TRUE if preempt is configured and FALSE if preempt is not configured.</li> <li>• AdvInt displays the Advertise Interval in seconds.</li> </ul>                                                                                                                                                                          |
| <b>Adv rcvd:...</b>        | <p>Displays counters for the following:</p> <ul style="list-style-type: none"> <li>• Adv rcvd displays the number of VRRP advertisements received on the interface.</li> <li>• Adv sent displays the number of VRRP advertisements sent on the interface.</li> <li>• Bad pkts rcvd displays the number of invalid packets received on the interface.</li> </ul>                                                                                                                                                     |
| <b>Virtual MAC address</b> | Displays the virtual MAC address of the VRRP group.                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Virtual IP address</b>  | Displays the virtual IP address of the VRRP router to which the interface is connected.                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Tracking states...</b>  | <p>Displays information on the tracked interfaces or objects configured for a VRRP group (<code>track</code> command), including:</p> <ul style="list-style-type: none"> <li>• UP or DOWN state of the tracked interface or object (Up or Dn).</li> <li>• Interface type and slot/port or object number, description, and time since the last change in the state of the tracked object.</li> <li>• Cost subtracted from the VRRP group priority if the state of the tracked interface/object goes DOWN.</li> </ul> |

### Example

```
DellEMC# show vrrp ipv6

TenGigabitEthernet 5/6, IPv6 VRID: 255, Version: 3, Net:
fe80::201:e8ff:fe7a:6bb9
State: Master, Priority: 101, Master: fe80::201:e8ff:fe7a:6bb9 (local)
Hold Down: 0 centisec, Preempt: TRUE, AdvInt: 100 centisec
Accept Mode: FALSE, Master AdvInt: 100 centisec
Adv rcvd: 0, Bad pkts rcvd: 0, Adv sent: 64
Virtual MAC address:
 00:00:5e:00:02:ff
Virtual IP address:
 1::255 fe80::255
```

## vrrp-ipv6-group

Assign an interface to a VRRP group.

|                        |                                                                                                                                                               |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | <code>vrrp-ipv6-group vrid</code>                                                                                                                             |
| <b>Parameters</b>      | <p><b><i>vrid</i></b> Enter the virtual-router ID number of the VRRP group. The VRID range is from 1 to 255.</p>                                              |
| <b>Defaults</b>        | Not configured.                                                                                                                                               |
| <b>Command Modes</b>   | INTERFACE                                                                                                                                                     |
| <b>Command History</b> | This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> . |

| Version    | Description                                                                                              |
|------------|----------------------------------------------------------------------------------------------------------|
| 9.10(0.1)  | Introduced on the S6010-ON and S4048T-ON.                                                                |
| 9.10(0.0)  | Introduced on the S3148.                                                                                 |
| 9.10(0.0)  | Introduced on the S6100-ON.                                                                              |
| 9.8(2.0)   | Introduced on the S3100 series.                                                                          |
| 9.8(1.0)   | Introduced on the Z9100-ON.                                                                              |
| 9.8(0.0P5) | Introduced on the S4048-ON.                                                                              |
| 9.8(0.0P2) | Introduced on the S3048-ON.                                                                              |
| 9.7(0.0)   | Introduced on the S6000-ON.                                                                              |
| 9.2(1.0)   | Introduced on the Z9500.                                                                                 |
| 8.4.2.1    | The range of valid VRID values on the E-Series when VRF microcode is loaded in CAM changed from 1 to 15. |
| 8.4.1.0    | Introduced on the E-Series, C-Series, and S-Series.                                                      |
| 8.3.19.0   | Introduced on the S4820T.                                                                                |
| 8.3.7.0    | Introduced on the S4810.                                                                                 |
| 8.3.2.0    | Introduced on the E-Series.                                                                              |

#### Usage Information

The VRRP group only becomes active and sends VRRP packets when you configure a link-local virtual IP address. When you delete the virtual address, the VRRP group stops sending VRRP packets.

- When you do not load the VRF microcode in the CAM, the VRID for a VRRP group is the same as the VRID number configured with the `vrrp-group` or `vrrp-ipv6-group` commands.
- When you load the VRF microcode in the CAM, the VRID for a VRRP group equals 16 times the `vrrp-group` or `vrrp-ipv6-group vrid` number, plus the `ip vrf vrf-id` number. For example, if you load the VRF microcode and you configure the VRRP group as 10 in VRF 2, the VRID for the VRRP group is  $(16 \times 10) + 2$ , or 162. This VRID value is used in the lowest byte of the virtual MAC address of the VRRP group and is also used for VRF routing.

**NOTE:** For all routers to interoperate, configure the same VRID on neighboring routers (Dell EMC Networking or non- Networking) in the same VRRP group.

#### Related Commands

- [virtual-address](#) — assigns up to 12 virtual IP addresses per VRRP group.

# X.509v3

X.509v3 is a standard for public key infrastructure (PKI) to manage digital certificates and public key encryption. This standard specifies a format for public-key certificates or digital certificates.

Dell EMC Networking OS supports X.509v3 standards.

## crypto ca-cert delete

Deletes a CA certificate.

**Syntax** `crypto ca-cert delete [index]`

**Parameters** **index** (Optional) Enter the keyword `index` to specify the index of the CA certificate. If `index` is not specified, the system deletes all of the installed CA certificates.

**Defaults** NA.

**Command Modes** EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

The following is a list of the Dell EMC Networking OS version history for this command:

| Version  | Description             |
|----------|-------------------------|
| 9.11.0.0 | Introduced the command. |

**Usage Information** The following RBAC roles are allowed to issue this command:

- `sysadmin`
- `secadmin`

Before deleting a CA certificate, the system checks whether that certificate is an issuer of other installed certificate on the system. If so, the system informs you to delete other installed certificates first.

**Related Commands** [crypto ca-cert install](#)[crypto cert generate](#)[crypto ca-cert install](#)

# crypto ca-cert install

Downloads and installs the certificate of a Certificate Authority (CA) on to the device.

**Syntax** `crypto ca-cert install path`

**Parameters** **path** Enter the path where the CA certificate is available for download. The format that you use to specify the location of the CA certificate also includes the protocol that is used to contact the CA. You can use the following options that you can use to download and install a certificate from the CA:

- tftp — `tftp://ca-ip-address/tftp/CAcert.pem`
- usbflash: — `usbflash:/certs/CAcert.pem`
- ftp — `ftp://userid:password@ca-ip-address/certs/CAcert.pem`
- scp — `scp://userid:password@ca-ip-address/certs/CAcert.pem`
- http — `http://192.168.1.100/certs/CAcert.pem`
- flash — `flash://filepath/filename`

**Defaults** NA.

**Command Modes** EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

The following is a list of the Dell EMC Networking OS version history for this command:

| Version  | Description             |
|----------|-------------------------|
| 9.11.0.0 | Introduced the command. |

**Usage Information** The following RBAC roles are allowed to issue this command:

- sysadmin
- secadmin

Upon successful installation, the system displays a notification on the device. If remote logging is configured, the notification is also sent to the syslog server. Contents of the CA certificate's subject are displayed.

**Related Commands**

- [crypto cert install](#)

# crypto cert delete

Deletes a trusted certificate.

**Syntax** `crypto cert delete`

**Defaults** NA.

**Command Modes** EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

The following is a list of the Dell EMC Networking OS version history for this command:

| Version  | Description             |
|----------|-------------------------|
| 9.11.0.0 | Introduced the command. |

**Usage Information** The following RBAC roles are allowed to issue this command:

- sysadmin

- `secadmin`

The certificate matching the current FIPS state is deleted. If the system is in FIPS mode, the FIPS certificate is deleted. If the system is in non-FIPS mode, the non-FIPS certificate is deleted.

Before deleting the system's trusted certificate, the system prompts you to specify whether to proceed with deletion. If you proceed, the system deletes the certificate and also the private key.

#### Related Commands

- [crypto ca-cert install](#)
- [crypto cert generate](#)

## crypto cert generate

Generates a Certificate Signing Request (CSR) or a self-signed certificate.

**Syntax** `crypto cert generate {self-signed | request} [cert-file cert-path key-file {private | key-path}] [country 2-letter code] [state state] [locality city] [organization organization-name] [orgunit unit-name] [cname common-name] [email email-address] [validity days] [length length] [altname alt-name]`

#### Parameters

|                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|---------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>self-signed</b>                    | Enter the keyword <code>self-signed</code> to create a self-signed certificate.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>request</b>                        | Enter the keyword <code>request</code> to create a certificate signing request.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>cert-file</b>                      | Enter the keyword <code>cert-file</code> to specify that the certificate needs to be created.<br><b>i</b> <b>NOTE:</b> If the <code>cert-file</code> option is not specified in the command, then the system interactively prompts you to fill in rest of the fields of the certificate signing request (CSR).                                                                                                                                                                                                                                                                                                                                 |
| <b>cert-path</b>                      | Enter the path to locally store the self-signed certificate or CSR. The path can be a full path or a relative path. If the system accepts this path, a notification is sent indicating the location where the CSR file is stored. You can then export the CSR to a CA using the "copy" command. Following is an example of a path that you can specify: <code>flash://certs/s4810-001-request.csr</code> .                                                                                                                                                                                                                                     |
| <b>key-file</b>                       | Enter the keyword <code>key-file</code> to specify the private key.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>private</b>                        | Enter the keyword <code>private</code> to specify that the key is stored in a hidden location in the NVRAM. Only one private key can exist in a hidden location at any given point in time.                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>key-path</b>                       | Enter the absolute or relative location on the device where the key is stored.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>country 2-letter-code</b>          | (OPTIONAL) Enter the keyword <code>country</code> followed by the two letter code that is used to identify the country name.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>state state</b>                    | (OPTIONAL) Enter the keyword <code>state</code> followed by the name of the state.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>locality city</b>                  | (OPTIONAL) Enter the keyword <code>locality</code> followed by the name of the city.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>organization organization-name</b> | (OPTIONAL) Enter the keyword <code>organization</code> followed by the name of the organization.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>orgunit unit-name</b>              | (OPTIONAL) Enter the keyword <code>orgunit</code> followed by the name of the unit.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>cname common-name</b>              | Enter the keyword <code>cname</code> followed by the common name that you want to assign.<br><b>i</b> <b>NOTE:</b> Common Name is an important attribute while creating a CSR or a self-signed certificate. Common name is the main identity presented to connecting entities. By default, the device's host name acts as the common name. However, you can still configure a different common name for the device. For example, you can specify an IP address to act as a Common Name for the device. If the Common Name does not match the device's presented identity, then even a properly signed certificate does not validate correctly. |

|                                   |                                                                                                                                                                                                                                                                                                                                                              |
|-----------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>email <i>email-address</i></b> | (OPTIONAL) Enter the keyword <code>email</code> followed a valid email address used for communication with the organization.                                                                                                                                                                                                                                 |
| <b>validity <i>days</i></b>       | (OPTIONAL) Enter the keyword <code>validity</code> followed by the number of days for which the certificate is valid.<br> <b>NOTE:</b> For CSRs, validity has no effect. For self-signed certificates, if validity is not specified, it defaults to 3650 days, or 10 years. |
| <b>length <i>length</i></b>       | (OPTIONAL) Enter the keyword <code>length</code> followed by a bit length value. The default key length for both FIPS and non-FIPS mode is 2048. Minimum key length value for FIPS mode is 2048. The range is from 2048 to 4096. Minimum key length value for non-FIPS mode is 1024. The range is from 1024 to 4096.                                         |
| <b>altname <i>altname</i></b>     | (OPTIONAL) Enter the keyword <code>altname</code> followed by the subject alternate name for the organization. For example, <code>altname IP:192.168.1.100</code> .                                                                                                                                                                                          |

**Defaults** NA.

**Command Modes** EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

The following is a list of the Dell EMC Networking OS version history for this command:

| Version  | Description             |
|----------|-------------------------|
| 9.11.0.0 | Introduced the command. |

**Usage Information** The following RBAC roles are allowed to issue this command:

- `sysadmin`
- `secadmin`

If the `cert-file` option is not specified in the command, then the system interactively prompts you to fill in various fields of the certificate signing request (CSR). You are prompted to fill out some metadata information for the certificate. The following example shows the fields that you are prompted to fill:

```
You are about to be asked to enter information that will be incorporated
into your certificate request.
What you are about to enter is what is called a Distinguished Name or a
DN.
There are quite a few fields but you can leave some blank.
For some fields there will be a default value; if you enter '.', the
field will be left blank.

Country Name (2 letter code) [US]:
State or Province Name (full name) [Some-State]:California
Locality Name (eg, city) []:San Francisco
Organization Name (eg, company) []:Starfleet Command
Organizational Unit Name (eg, section) []:NCC-1701A
Common Name (eg, YOUR name) [S4810-001]:
Email Address []:scotty@starfleet.com
```

You can enter only 256 characters per command. If you have field values that are larger than 256 characters in length, use the interactive mode of the command.

**Related Commands**

- [crypto ca-cert install](#)

## crypto cert install

Installs a trusted certificate on a device.

**Syntax** `crypto cert install cert-file cert-path key-file {key-path | private} [password passphrase]`

## Parameters

|                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|--------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>cert-file</b>                     | Enter the keyword <code>cert-file</code> to specify that the certificate needs to be downloaded.                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>cert-path</b>                     | Enter the path where the certificate is locally stored. The path can be a full path or a relative path. If the system accepts this path, a notification is sent indicating the location where the certificate file is stored. Following are example of a path that you can specify: <code>flash://certs/s4810-001-request.crt</code> and <code>usbflash:/certs/s4810-001-cert.pem</code><br><b>i</b> <b>NOTE:</b> Before installing a trusted certificate, you first need to download it from a remote CA using the copy command. |
| <b>key-file</b>                      | Enter the keyword <code>key-file</code> to specify the private key.                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>private</b>                       | Enter the keyword <code>private</code> to specify that the key is stored in a hidden location in the NVRAM. Only one private key can exist in a hidden location at any given point in time.                                                                                                                                                                                                                                                                                                                                       |
| <b>key-path</b>                      | Enter the absolute or relative location on the device where the key is stored.<br><b>i</b> <b>NOTE:</b> After the certificate is successfully installed, the private key is deleted from the specified location and copied to the hidden location in NVRAM.                                                                                                                                                                                                                                                                       |
| <b>password</b><br><b>passphrase</b> | (Optional) Enter the keyword <code>password</code> followed by the password phrase used to decrypt the private key.<br><b>i</b> <b>NOTE:</b> You can generate the private key and certificate on another host. While doing so, you must keep the private key encrypted with a passphrase so that the private key is not compromised during transport. The password phrase acts a facility to decrypt the private key before installing it on the switch.                                                                          |

## Defaults

NA.

## Command Modes

EXEC Privilege

## Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

The following is a list of the Dell EMC Networking OS version history for this command.

| Version  | Description             |
|----------|-------------------------|
| 9.11.0.0 | Introduced the command. |

## Usage Information

The following RBAC roles are allowed to issue this command:

- sysadmin
- secadmin

Certain parameters must be met in order for this command to succeed:

- The downloaded certificate should be formatted properly.
- In order for verification to work, the CA certificate must be installed on the system before running this command.
- The downloaded certificate's public key must correspond to the private key.
- If the certificate is not self-signed, then the CA certificate (from the CA that has signed the certificate) must be installed on the system prior to running this command for verification to work.

**i** **NOTE:** It is possible for the switch to store two types of certificates: one for the FIPS mode and one for the non-FIPS mode. If the system is in FIPS mode, the certificate is installed as the FIPS certificate. If the system is in non-FIPS mode, the certificate is installed as the non-FIPS certificate. When FIPS mode is enabled or disabled, the certificates (and keys) are switched by the system.

**i** **NOTE:** For the switch, there are two possible certificates stored - one for FIPS mode, one for non-FIPS mode. If the system is in FIPS mode, the certificate will be installed as the FIPS certificate.

If the system is in non-FIPS mode, the certificate will be installed as the non-FIPS certificate. When FIPS mode is enabled/disabled, the certificates (and keys) are switched by the system.

#### Related Commands

- [crypto ca-cert install](#)

## crypto x509 ocspp

Configures the OCSP behavior.

**Syntax** `crypto x509 ocspp [nonce] [sign-requests]`

**Parameters**

|                      |                                                                                                                                                                                                                                                                                                                                                                                       |
|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>nonce</b>         | Enter the keyword <code>nonce</code> to use the nonce feature for the OCSP requests to OCSP responder communication. This is a one-time value that must be returned in the OCSP response. If the OCSP responder is using precomputed responses, then it does not reply with the nonce. The nonce feature is off by default. The no version of the command disables the nonce feature. |
| <b>sign-requests</b> | Enter the keyword <code>sign-requests</code> to sign the OCSP requests to OCSP responder communication with the system's own certificate so that the OCSP responder may verify the requestor. The sign-requests feature is off by default. The no version of the command disables signing of requests.                                                                                |

**Defaults** NA.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

The following is a list of the Dell EMC Networking OS version history for this command:

| Version  | Description             |

- [crypto cert install](#)

## crypto x509 revocation

Configure the revocation check behavior for the certificate.

**Syntax** `crypto x509 revocation ocspp {accept | reject}`

**Parameters**

|               |                                                                                                                                                                               |
|---------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>ocspp</b>  | Enter the method used to check certificate revocation details. In this release, OCSP is the only option that is supported. So, you can specify OCSP as the method-list value. |
| <b>accept</b> | Enter the keyword <code>accept</code> to accept the presented certificate and log in if OCSP retrieval fails.                                                                 |
| <b>reject</b> | Enter the keyword <code>reject</code> to reject the presented certificate and log in if OCSP retrieval fails.                                                                 |

**Defaults** `crypto x509 revocation ocspp accept`

**Command Modes** • CONFIGURATION Mode

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

The following is a list of the Dell EMC Networking OS version history for this command:

| Version  | Description              |
|----------|--------------------------|
| 9.11.0.0 | Introduced this command. |

**Related Commands** • [crypto x509 ocsf](#)

## debug crypto

This command allows you to test a certificate chain file for validity and checking revocation outside of its use in TLS communication.

**Syntax** `debug crypto {flash://path}`

**Parameters** **path** Enter the path to a local file where a certificate chain is stored in PEM format.

**Defaults** None.

**Command Modes** EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

The following is a list of the Dell EMC Networking OS version history for this command:

| Version  | Description              |
|----------|--------------------------|
| 9.11.0.0 | Introduced this command. |

**Usage Information** The following RBAC roles are allowed to issue this command:

- sysadmin
- secadmin

You can use this command to verify an X509 certificate outside of use with Syslog over TLS.

**Related Commands** • [crypto cert install](#)  
• [crypto cert generate](#)  
• [crypto ca-cert install](#)

## logging secure

Creates a log file for various events related to X.509v3 certificates.

**Syntax** `logging {hostname} {secure | tcp | udp} [vrf vrf-name] [sha1 fingerprint] [port port-number]`

**Parameters** **hostname** Enter the name of the host or device for which you wish to record logs corresponding to the certificates.

 **NOTE:** The hostname can be an IPV4 address, an IPV6 address, or a DNS hostname—with or without DNS suffix.

**secure** Enter the keyword `secure` to enable the Syslog feature to communicate with a compatible Syslog server using the secure TLS protocol over the default port (6514). The range is from 1024 to 65535.

|                                |                                                                                                                                                                                                                                                                                                                                                                                  |
|--------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>tcp</b>                     | Enter the keyword <code>tcp</code> to enable TCP.                                                                                                                                                                                                                                                                                                                                |
| <b>udp</b>                     | Enter the keyword <code>udp</code> to enable UDP.                                                                                                                                                                                                                                                                                                                                |
| <b>vrf <i>vrf-name</i></b>     | Enter the keyword <code>vrf</code> followed by the name of the VRF.                                                                                                                                                                                                                                                                                                              |
| <b>sha1 <i>fingerprint</i></b> | Enter the keyword <code>sha1</code> followed by the finger print. This option is only available when the <code>secure</code> option is configured. This new option enables the Syslog feature to compare the received certificate's sha-1 fingerprint against this configured sha-1 fingerprint. If present, only the fingerprint is used for certificate revocation validation. |
| <b>port <i>port-number</i></b> | Enter the keyword <code>port</code> followed by the port number. The default port number is 6514 for secure logging.                                                                                                                                                                                                                                                             |

**Defaults** None.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

The following is a list of the Dell EMC Networking OS version history for this command:

| Version         | Description              |
|-----------------|--------------------------|
| <b>9.11.0.0</b> | Introduced this command. |

**Usage Information** The following RBAC roles are allowed to issue this command:

- `sysadmin`
- `secadmin`

Following are the pre-requisites to configure logging:

- The logging command must be configured to enable event logging.
- A certificate must be installed on the switch. This certificate is only used for secure logging.
- At least one CA certificate must be installed on the switch so that the logging server's certificate can be verified. If a SHA1 fingerprint is present, only the fingerprint is used for certificate revocation validation.

- Related Commands**
- [crypto cert install](#)
  - [crypto ca-cert install](#)
  - [crypto cert generate](#)

## crypto x509 ca-keyid

Creates a per-certificate configuration context using the specified subject key identifier.

**Syntax** `crypto x509 ca-keyid subject-key-identifier`

Use to the `no crypto x509 ca-keyid` command to remove this configuration.

**Parameters** ***subject-key-identifier*** Enter the content of the `SubjectKeyIdentifier` field from the CA certificate.

 **NOTE:** To get the subject key identifier details, enter the `show crypto ca-cert` command. This command displays the CA certificate details.

**Defaults** None.

**Command Modes** • CONFIGURATION Mode

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

The following is a list of the Dell EMC Networking OS version history for this command:

| Version  | Description              |
|----------|--------------------------|
| 9.11.0.0 | Introduced this command. |

### Usage Information

The following RBAC roles are allowed to issue this command:

- sysadmin
- secadmin

When you use this command, the device maps the current certificate context in the certificate store to a CA certificate through the subject key identifier field. The subject key identifier field contains the SHA-1 hash of the CA's public key. This configuration provides a way to uniquely identify a CA and associate it with any CA-specific settings.

This context is used to store certificate-specific settings such as alternate CRL and OCSP locations. Incoming X.509 certificates whose `AuthorityKeyIdentifier` extensions match the configured subject key identifier has these settings applied to them.

The `crypto x509 ca-keyid` command when used with the `ocsp-server` command in the global configuration mode creates a per-certificate configuration context under which the remaining commands are entered.

### Related Commands

- [ocsp-server](#)
- [crypto x509 ocsp](#)

## ocsp-server

Configures OCSP server on a CA.

**Syntax** `ocsp-server url [nonce] [sign-requests]`

### Parameters

|                      |                                                                                                                                                                                                                                                                                                                                                                                              |
|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>url</b>           | Enter the URL for the OCSP responder using standard URI format. Either http or https protocol can be used. For example, <code>http://[1100::101]:8888</code> .                                                                                                                                                                                                                               |
| <b>nonce</b>         | Enter the keyword <code>nonce</code> to use the nonce feature for the OCSP requests to OCSP responder communication. This number is a one-time value that must be returned in the OCSP response. If the OCSP responder is using precomputed responses, then it does not reply with the nonce. The nonce feature is off by default. The no version of the command disables the nonce feature. |
| <b>sign-requests</b> | Enter the keyword <code>sign-requests</code> to sign the OCSP requests to OCSP responder communication with the system's own certificate so that the OCSP responder may verify the requestor. The <code>sign-requests</code> feature is off by default. The no version of the command disables signing of requests.                                                                          |

**Defaults** None.

**Command Modes** CERTIFICATE

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

The following is a list of the Dell EMC Networking OS version history for this command:

| Version  | Description              |
|----------|--------------------------|
| 9.11.0.0 | Introduced this command. |

### Usage Information

The following RBAC roles are allowed to issue this command:

- sysadmin
- secadmin

Multiple OCSP responders may be configured per CA. The system tries each one until it gets a valid response. No priority may be specified or guaranteed; the system tries them in the order in which they were configured.

**Related  
Commands**

- [crypto x509 ocs](#)

## ocsp-server prefer

Configures OCSP responder preference. You can configure the preference or order that the CA or a device should follow while contacting multiple OCSP responders.

**Syntax** `ocsp-server prefer`

**Defaults** None.

**Command Modes** CERTIFICATE

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

The following is a list of the Dell EMC Networking OS version history for this command:

| Version  | Description              |
|----------|--------------------------|
| 9.11.0.0 | Introduced this command. |

**Usage  
Information**

The following RBAC roles are allowed to issue this command:

- sysadmin
- secadmin

When this command is specified, the system checks the configured OCSP URLs before checking the URL of the OCSP server in the authorityInfoAccess extension of the certificate. If this command is not specified, then the system checks the OCSP server in the authorityInfoAccess extension of the certificate before checking the configured OCSP servers.

**Related  
Commands**

- [crypto x509 ocs](#)

## show crypto ca-cert

Displays the certificate information corresponding to the root CA.

**Syntax** `show crypto ca-certs`

**Defaults** None.

**Command Modes** EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

The following is a list of the Dell EMC Networking OS version history for this command:

| Version  | Description              |
|----------|--------------------------|
| 9.11.0.0 | Introduced this command. |

**Usage  
Information**

The following RBAC roles are allowed to issue this command:

- sysadmin
- secadmin

This show command should display the index, the certificate's subject field in plaintext, not-before and not-after dates, and the fingerprint in hexadecimal format. The index assigned to each CA certificate is used by the `crypto cert delete certificate-authority` command to allow the user to specify which certificate authority to remove.

**Related  
Commands**

- [crypto ca-cert install](#)

# show crypto cert

Displays the certificate information that is specified.

**Syntax** `show crypto cert {path}`

**Parameters**

|             |                                                                                                                                                                                             |
|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>path</b> | (OPTIONAL) Enter the path to a local file where a certificate chain is stored in PEM format. If a path is not specified, display the certificate that is currently installed on the system. |
|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

**Defaults** None.

**Command Modes** EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

The following is a list of the Dell EMC Networking OS version history for this command:

| Version  | Description              |
|----------|--------------------------|
| 9.11.0.0 | Introduced this command. |

**Usage Information** The following RBAC roles are allowed to issue this command:

- sysadmin
- secadmin

**Related Commands**

- [crypto cert install](#)
