

Statement of Volatility – Dell 5230n/dn

△ CAUTION: A CAUTION indicates either potential damage to hardware or loss of data and tells you how to avoid the problem.

The Dell 5230n/dn Mono Laser Printer contains both volatile and non-volatile (NV) components. Volatile components lose their data immediately after power is removed from the component. Non-volatile (NV) components continue to retain their data even after power is removed from the component. The following NV components are present on the system board.

Table 1. List of Volatile and Non-Volatile Components on System Board

| Mono Laser Products | Memory Application | Memory Size | Memory Type | Volatile/ Non-Volatile | User Data |
|---------------------|--|--------------------|-------------|------------------------|-----------|
| 5230n/dn | Firmware, Usage, Statistics, Configuration | 64 MB (code store) | NAND | Non-volatile | Yes |
| | EEPROM | 16 Kb | EEPROM | Non-volatile | Yes |
| | Base Memory | 128 MB | SDRAM | Volatile | No |
| | Optional Memory | 128, 256, 512 MB | SDRAM | Volatile | No |
| | Cartridge | 16 Kb | EEPROM | Non-volatile | No |
| | Fuser | 2 Kb | EEPROM | Non-volatile | No |

△ CAUTION: All other components on the motherboard will lose data if power is removed from the system. Primary power loss (unplugging the power cord) will cause user data on the memory to be lost.

Notes:

- EEPROM may be used and could contain user data.
- User Data utilized by memory type.
