# Dell Force10 FTOS Command Line Reference Guide for the MXL 10/40GbE Switch IO Module

**Publication Date: March 2013** 

Notes, Cautions, and Warnings

NOTE: A NOTE indicates important information that helps you make better use of your computer.

CAUTION: A CAUTION indicates either potential damage to hardware or loss of data and tells you how to avoid the problem.

WARNING: A WARNING indicates a potential for property damage, personal injury, or death.

# About this Guide

This book provides information about the Dell Force10 operating software (FTOS) command line interface (CLI). It includes some information about the protocols and features found in FTOS and on the Dell Force10 systems supported by FTOS.

This chapter includes:

- Objectives
- Audience
- Conventions
- Information Symbols
- Related Documents

#### Objectives

This document is intended as a reference guide for the FTOS CLI commands, with detailed syntax statements, usage information, and sample output examples.

For details about when to use the commands, refer to the *FTOS Configuration Guide*. This guide contains an Appendix with a list of the request for comment (RFCs) and management information base files (MIBs) supported.

#### Audience

This document is intended for system administrators who are responsible for configuring or maintaining networks. This document assumes you are knowledgeable in Layer 2 and Layer 3 networking technologies.

## Conventions

This document uses the following conventions to describe command syntax:

Convention	Description
keyword	Keywords are in bold and must be entered in the CLI as listed.
parameter	Parameters are in italics and require a number or word to be entered in the CLI.
{X}	Keywords and parameters within braces must be entered in the CLI.
[X]	Keywords and parameters within brackets are optional.

x   y	Keywords and parameters separated by bar require you to choose one.
x    y	Keywords and parameters separated by a double bar enables you to choose any or all of them.

# Information Symbols

Table 1-1 describes the symbols contained in this document.

#### Table 1-1. Information Symbols

Symbol	Brief	Description
U	Note	This symbol signals important operational information.
$\bigtriangleup$	Caution	This symbol signals information about situations that could result in equipment damage or loss of data.
⚠	Warning	This symbol signals information about hardware handling that could result in injury.

# **Related Documents**

For more information about the system, refer to the following documents:

- FTOS Configuration Guide
- Installation and maintenance guides for the MXL 10/40GbE Switch system
- Release Notes for the MXL 10/40GbE Switch system and FTOS version 8.3.16.4

# **CLI Basics**

This chapter describes the command structure and command modes. The Dell Force10 operating software (FTOS) commands are in a text-based interface that allows you to use launch commands, change the command modes, and configure interfaces and protocols.

This chapter includes the following sections:

- Accessing the Command Line
- Multiple Configuration Users
- Navigating the Command Line Interface
- Obtaining Help
- Using the Keyword no
- Filtering show Commands
- Command Modes

#### Accessing the Command Line

When the system boots successfully, you are positioned on the command line in EXEC mode and *not* prompted to log in. You can access the commands through a serial console port or a Telnet session. When you Telnet into the switch, you are prompted to enter a login name and password.

Figure 2-1 is an example of a successful Telnet login session.

#### Figure 2-1. Login Example

```
telnet 172.31.1.53
Trying 172.31.1.53...
Connected to 172.31.1.53.
Escape character is '^]'.
Login: username
Password:
FTOS>
```

After you log into the switch, the prompt provides you with current command-level information (Table 2-1).

## **Multiple Configuration Users**

When a user enters CONFIGURATION mode and another user(s) is already in that configuration mode, FTOS generates an alert warning message similar to Figure 2-2:

Figure 2-2. Configuration Mode User Alert

```
FTOS#conf
% Warning: The following users are currently configuring the system:
User "" on line console0
User "admin" on line vty0 ( 123.12.1.123 )
User "admin" on line vty1 ( 123.12.1.123 )
User "Irene" on line vty3 ( 123.12.1.321 )
FTOS#conf
```

When another user enters CONFIGURATION mode, FTOS sends a message similar to the following, (the user in this case is "admin" on vty2):

% Warning: User "admin" on line vty2 "172.16.1.210" is in configuration

#### **Navigating the Command Line Interface**

The command line interface (CLI) prompt displayed by FTOS is comprised of:

- "hostname"— the initial part of the prompt, "FTOS" by default. You can change it with the hostname command, as described in hostname.
- The second part of the prompt, reflecting the current CLI mode, is shown in Table 2-1.

The CLI prompt changes as you move up and down the levels of the command structure.

Table 2-1 lists the prompts and their corresponding command levels, called *modes*. Starting with CONFIGURATION mode, the command prompt adds modifiers to further identify the mode. The command modes are explained in Command Modes.

Table 2-1. Command Prompt and Corresponding Command Mode

Prompt	CLI Command Mode
FTOS>	EXEC
FTOS#	EXEC Privilege
FTOS(conf)#	CONFIGURATION
FTOS(conf-if)#	INTERFACE
FTOS(conf-if-te-0/0)#	
FTOS(conf-if-fo-0/0)#

FTOS(conf-stp)#	SPANNING TREE

Table 2-1. Command Prompt and Corresponding Command Mode

#### **Obtaining Help**

•

As soon as you are in a command mode, there are several ways to access help.

- To obtain a list of keywords at any command mode, do the following:
  - Enter a ? at the prompt or after a keyword. There must always be a space before the ?.
  - To obtain a list of keywords with a brief functional description, do the following: — Enter help at the prompt.
- To obtain a list of available options, do the following:
  - Type a keyword followed by a space and a ?
- Type a partial keyword followed by a ?
  - A display of keywords beginning with the partial keyword is listed.

Figure 2-3 shows the results of entering ip ? at the prompt.

FTOS(conf)#ip ?	
access-list	Named access-list
control-plane	Control plane configuration
dhcp	DHCP configuration commands
domain-list	Domain name to complete unqualified host name
domain-lookup	Enable IP Domain Name System hostname translation
domain-name	Define the default domain name
ftp	FTP configuration commands
helper-address	DHCP relay agent configuration
host	Add an entry to the ip hostname table
igmp	Internet Group Management Protocol
max-frag-count	Max. fragmented packets allowed in IP re-assembly
mroute	Multicast routes and counters
msdp	Multicast source discovery protocol
multicast-limit	Max entries in Multicast TIB
multicast-msdp	Enable IP multicast MSDP protocol
multicast-routing	Enable IP multicast forwarding
name-server	Specify addess of name server to use
pim	Protocol Independent Multicast
prefix-list	Build a prefix list
radius	Interface configuration for RADIUS
route	Establish static routes
scp	SCP configuration commands
source-route	Process packets with source routing header options
ssh	SSH configuration commands
tacacs	Interface configuration for TACACS+
telnet	Specify telnet options
( tftp	TFTP configuration commands
\ \	

Figure 2-3. Partial Keyword Example

When entering commands, you can take advantage of the following time saving features:

- The commands are not case sensitive.
- You can enter partial (truncated) command keywords. For example, you can enter int tengig *interface* for the interface tengigabitethernet *interface* command.
- Use the **TAB** key to complete keywords in commands.
- Use the **up arrow** key to display the last enabled command.
- Use either the **Backspace** key or the **Delete** key to erase the previous character.

Use the **left** and **right arrow** keys to navigate left or right in the FTOS command line. Table 2-2 defines the key combinations valid at the FTOS command line.

Table 2-2.	Short-cut Keys and their Actions	
------------	----------------------------------	--

Key Combination	Action	
CNTL-A	Moves the cursor to the beginning of the command line.	
CNTL-B	Moves the cursor back one character.	
CNTL-D	Deletes character at cursor.	
CNTL-E	Moves the cursor to the end of the line.	
CNTL-F	Moves the cursor forward one character.	
CNTL-I	Completes a keyword.	
CNTL-K	Deletes all characters from the cursor to the end of the command line.	
CNTL-N	Return to more recent commands in the history buffer after recalling commands with Ctrl-P or the up arrow key	
CNTL-P	Recalls commands, beginning with the last command	
CNTL-U	Deletes the line.	
CNTL-W	Deletes the previous word.	
CNTL-X	Deletes the line.	
CNTL-Z	Comes back to EXEC mode from any CONFIGURATION mode	
Esc B	Moves the cursor back one word.	
Esc F	Moves the cursor forward one word.	
Esc D	Deletes all characters from the cursor to the end of the word.	

# Using the Keyword no

To disable, delete, or return to default values, use the no form of the commands. For most commands, if you type the keyword no in front of the command, you will disable that command or delete it from the running configuration. In this document, the no form of the command is described in the "Command Syntax" portion of the command description.

## **Filtering show Commands**

You can filter the display output of a show command to find specific information, to display certain information only, or to begin the command output at the first instance of a regular expression or phrase.

When you execute a show command, followed by a pipe (|) and one of the parameters listed below and a regular expression, the resulting output either excludes or includes those parameters, as defined by the parameter:

- except— display only text that does not match the pattern (or regular expression)
- find search for the first occurrence of a pattern
- grep display text that matches a pattern

- no-more do not paginate the display output
- save copy output to a file for future use

**Note:** FTOS accepts a space before or after the pipe, no space before or after the pipe, or any combination. For example: FTOS#command | grep tengigabit |except regular-expression | find regular-expression

The grep command option has an ignore-case sub-option that makes the search case-insensitive. For example, the commands:

- show run | grep Ethernet returns a search result with instances containing a capitalized "Ethernet," such as interface TenGigabitEthernet 0/0.
- show run | grep ethernet does not return the search result above because it only searches for instances containing a non-capitalized "ethernet".
- show run | grep Ethernet ignore-case returns instances containing both "Ethernet" and "ethernet".

#### **Displaying All Output**

To display the output all at once (not one screen at a time), use the no-more command after the pipe. This is similar to the terminal length *screen-length* command except that the no-more option affects the output of just the specified command. For example:

FTOS#show running-config | no-more

#### Filtering Command Output Multiple Times

You can filter a single command output multiple times. To do this, place the save option as the last filter. For example:

FTOS# command | grep regular-expression | except regular-expression | grep other-regular-expression | find regular-expression | no-more | save

#### **Command Modes**

To navigate to various CLI modes, use specific commands to launch each mode. Navigation to these modes is described in the following sections.

#### **EXEC Mode**

When you initially log in to the switch, by default you are logged into EXEC mode. This mode allows you to view settings and to enter EXEC Privilege mode to configure the device. While you are in EXEC mode, the > prompt is displayed following the "hostname" prompt (which is "FTOS" by default). You can change this using the hostname command. For more information, refer to the hostname command. Each mode prompt is preceded by the hostname.

#### **EXEC Privilege Mode**

The enable command accesses EXEC Privilege mode. If an administrator has configured an *Enable* password, you are prompted to enter the password here.

EXEC Privilege mode allows you to access all commands accessible in EXEC mode, plus other commands, such as to clear ARP entries and IP addresses. In addition, you can access CONFIGURATION mode to configure interfaces, routes, and protocols on the switch. While you are logged in to EXEC Privilege mode, the # prompt displays.

#### **CONFIGURATION Mode**

In EXEC Privilege mode, use the **configure** command to enter CONFIGURATION mode and configure routing protocols and access interfaces.

To enter CONFIGURATION mode:

- 1. Verify that you are logged in to EXEC Privilege mode.
- 2. Enter the configure command. The prompt changes to include (conf).

From this mode, you can enter INTERFACE mode by using the interface command.

#### **INTERFACE Mode**

Use INTERFACE mode to configure interfaces or IP services on those interfaces. An interface can be physical (for example, a TenGigabit Ethernet port) or virtual (for example, the Null interface).

To enter INTERFACE mode:

- 1. Verify that you are logged into CONFIGURATION mode.
- 2. Enter the interface command followed by an interface type and interface number that is available on the switch.
- 3. The prompt changes to include the designated interface and slot/port number (Table 2-3).

Table 2-3. Interface prompts

Prompt	Interface Type
FTOS(conf-if)#	INTERFACE mode
FTOS(conf-if-te-0/0)#	Ten Gigabit Ethernet interface followed by slot/port information
FTOS(conf-if-fo-0/0)#	Forty Gigabit Ethernet interface followed by slot/port information
FTOS(conf-if-lo-0)#	Loopback interface number.
FTOS(conf-if-nu-0)#	Null Interface followed by zero
FTOS(conf-if-po-1)#	Port-channel interface number
FTOS(conf-if-vl-1)#	VLAN Interface followed by VLAN number (range 1 to 4094)
FTOS(conf-if-ma-0/0)#	Management Ethernet interface followed by slot/port information
FTOS(conf-if-range)#	Designated interface range (used for bulk configuration; refer to interface range).

#### **LINE Mode**

Use LINE mode to configure console or virtual terminal parameters.

To enter LINE mode:

- 1. Verify that you are logged in to CONFIGURATION mode.
- 2. Enter the line command. You must include the keywords console or vty and their line number available on the switch. The prompt changes to include (config-line-console) or (config-line-vty).

You can exit this mode by using the exit command.

#### MAC ACCESS LIST Mode

While in CONFIGURATION mode, use the mac access-list standard or mac access-list extended commands to enter MAC ACCESS LIST mode and configure either standard or extended access control lists (ACL).

To enter MAC ACCESS LIST mode:

- 1. Verify that you are logged in to CONFIGURATION mode.
- 2. Use the mac access-list standard or mac access-list extended command. You must include a name for the ACL. The prompt changes to include (conf-std-macl) or (conf-ext-macl).

You can return to CONFIGURATION mode by using the exit command.

#### **IP ACCESS LIST Mode**

While in CONFIGURATION mode, use the ip access-list standard or ip access-list extended commands to enter IP ACCESS LIST mode and configure either standard or extended access control lists (ACL).

To enter IP ACCESS LIST mode:

- 1. Verify that you are logged in to CONFIGURATION mode.
- 2. Use the ip access-list standard or ip access-list extended command. You must include a name for the ACL. The prompt changes to include (conf-std-nacl) or (conf-ext-nacl).

You can return to CONFIGURATION mode by using the exit command.

#### **ROUTE-MAP Mode**

While in CONFIGURATION mode, use the route-map command to enter ROUTE-MAP mode and configure a route map.

To enter ROUTE-MAP mode:

- 1. Verify that you are logged in to CONFIGURATION mode.
- 2. Use the route-map *map-name* [permit | deny] [*sequence-number*] command. The prompt changes to include (route-map).

You can return to CONFIGURATION mode by using the exit command.

#### **PREFIX-LIST Mode**

While in CONFIGURATION mode, use the ip prefix-list command to enter PREFIX-LIST mode and configure a prefix list.

To enter PREFIX-LIST mode:

- 1. Verify that you are logged in to CONFIGURATION mode.
- 2. Enter the ip prefix-list command. You must include a name for the prefix list. The prompt changes to include (conf-nprefixl).

You can return to CONFIGURATION mode by use the exit command.

#### SPANNING TREE Mode

Use STP mode to enable and configure the spanning tree protocol (STP), as described in Spanning Tree Protocol (STP).

To enter STP mode:

- 1. Verify that you are logged into CONFIGURATION mode.
- 2. Enter the protocol spanning-tree 0 command.

You can return to CONFIGURATION mode by using the exit command.

#### Per-VLAN SPANNING TREE Plus Mode

Use PVST+ mode to enable and configure the per-VLAN spanning tree (PVST+) protocol, as described in Per-VLAN Spanning Tree Plus (PVST+).

**Note:** The protocol is PVST+, but the plus sign is dropped at the CLI prompt.

To enter PVST+ mode:

- 1. Verify that you are logged into CONFIGURATION mode.
- 2. Enter the protocol spanning-tree pvst command.

You can return to CONFIGURATION mode by using the exit command.

#### RAPID SPANNING TREE Mode

Use RSTP mode to enable and configure the rapid spanning tree protocol (RSTP), as described in Rapid Spanning Tree Protocol (RSTP).

To enter RSTP mode:

- 1. Verify that you are logged into CONFIGURATION mode.
- 2. Enter the protocol spanning-tree rstp command.

You can return to CONFIGURATION mode by using the exit command.

# **MULTIPLE SPANNING TREE Mode**

Use MULTIPLE SPANNING TREE mode to enable and configure the multiple spanning tree protocol (MSTP), as described in Multiple Spanning Tree Protocol (MSTP).

To enter MULTIPLE SPANNING TREE mode:

- 1. Verify that you are logged into CONFIGURATION mode.
- 2. Enter the protocol spanning-tree mstp command.

You can return to CONFIGURATION mode by using the exit command.

#### **PROTOCOL GVRP Mode**

Use the PROTOCOL GVRP mode to enable and configure generic attribute registration protocol (GARP) virtual LAN (VLAN) registration protocol (GVRP), as described in GARP VLAN Registration (GVRP).

To enter PROTOCOL GVRP mode:

- 1. Verify that you are logged into CONFIGURATION mode.
- 2. Enter the protocol gvrp command syntax.

You can return to CONFIGURATION mode by using the exit command.

#### **ROUTER OSPF Mode**

Use the ROUTER OSPF mode to configure open shortest path first (OSPF), as described in Open Shortest Path First (OSPFv2).

To enter ROUTER OSPF mode:

- 1. Verify that you are logged into CONFIGURATION mode.
- 2. Use the router ospf {process-id} command. The prompt changes to include (conf-router\_ospf-id).

You can switch to INTERFACE mode by using the interface command or you can switch to ROUTER RIP mode by using the router rip command.

#### **ROUTER RIP Mode**

Use the ROUTER RIP mode to configure routing information protocol (RIP), as described in Routing Information Protocol (RIP).

To enter ROUTER RIP mode:

- 1. Verify that you are logged into CONFIGURATION mode.
- 2. Enter the router rip command. The prompt changes to include (conf-router\_rip).

You can switch to INTERFACE mode by using the interface command or you can switch to ROUTER OSPF mode by using the router ospf command.

# 3

# **File Management**

# **Overview**

This chapter contains commands needed to manage the configuration files and includes other file management commands found in the Dell Force10 operating software (FTOS).

# **Basic File Management Commands**

The commands included in this chapter are:

- cd
- copy
- copy running-config startup-config
- delete
- dir
- format flash
- logging coredump
- logging coredump server
- pwd
- rename
- show boot system
- show file
- show file-systems
- show os-version
- show running-config
- show startup-config
- show version
- upgrade boot
- upgrade system

cd			
	Change to a different working directory.		
Syntax	cd directory		
Parameters	directory       (OPTONAL) Enter one of the following:         • flash: (internal Flash) or any sub-directory         • usbflash: (external Flash) or any sub-directory		
Command Modes	EXEC Privilege		
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module		
сору	Copy one file to another location. FTOS supports IPv4 addressing for FTP, TFTP, and SCP (in the <i>hostip</i> field).		
Syntax	copy source-file-url destination-file-url		
Parameters	<ul> <li><i>file-url</i> Enter the following location keywords and information:</li> <li>To copy a file from the internal FLASH, enter flash:// followed by the filename.</li> <li>To copy the running configuration, enter the keyword running-config.</li> <li>To copy the startup configuration, enter the keyword startup-config.</li> <li>To copy a file on the external FLASH, enter usbflash:// followed by the filename.</li> </ul>		
Command Modes	EXEC Privilege		
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module		
Usage Information	FTOS supports a maximum of 100 files, at the root directory level, on both the internal and external Flash.		
	The usbflash commands are supported. For a list of approved USB vendors, refer to the FTOS Release Notes.		
	When copying a file to a remote location (for example, using Secure Copy [SCP]), enter only the keywords and FTOS prompts you for the rest of the information.		
	For example, when using SCP, you can enter copy running-config scp: The running-config is the source, and the target is specified in the ensuing prompts. FTOS prompts you to enter any required information, as needed for the named destination—remote destination, destination filename, user ID and password, etc.		
	When you use the copy running-config startup-config command to copy the running configuration (the startup configuration file amended by any configuration changes made since the system was started) to the startup configuration file, FTOS creates a backup file on the internal flash of the startup configuration.		

FTOS supports copying the running-configuration to a TFTP server or to an FTP server:

copy running-config tftp:

copy running-config ftp:

```
Example Figure 3-1. copy running-config scp: Command Example
```

```
FTOS#copy running-config scp:
Address or name of remote host []: 10.10.10.1
Port number of the server [22]: 99
Destination file name [startup-config]: old_running
User name to login remote host: sburgess
Password to login remote host:
Password to login remote host? dilling
```

In this example — copy scp: flash: — specifying SCP in the first position indicates that the target is to be specified in the ensuing prompts. Entering flash: in the second position means that the target is the internal Flash. In this example the source is on a secure server running SSH, so the user is prompted for the UDP port of the SSH server on the remote host.

Example Figure 3-2. Using scp to copy from an SSH Server

```
FTOS#copy scp: flash:
Address or name of remote host []: 10.11.199.134
Port number of the server [22]: 99
Source file name []: test.cfg
User name to login remote host: admin
Password to login remote host:
Destination file name [test.cfg]: test1.cfg
```

Related Commands

Changes the working directory.

#### copy running-config startup-config

cd

Copy running configuration to the startup configuration.

Syntax copy running-config startup-config {duplicate}

Command Modes EXEC Privilege

Command History

Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

**Usage** This command is useful for quickly making a changed configuration on one chassis available on external flash in order to move it to another chassis.

	Delete a file from the flash. Once deleted, files cannot be restored.		
Syntax	delete flash: ([flash://]filepath) usbflash ([usbflash://]filepath)		
Parameters	<i>flash-url</i> Enter the following location and keywords:		
	<ul> <li>For a file or directory on the internal Flash, enter flash:// followed by the filename directory name.</li> </ul>		
	<ul> <li>For a file or directory on the external Flash, enter usbflash:// followed by the filenal or directory name.</li> </ul>		
	<b>no-confirm</b> (OPTIONAL) Enter the keyword <b>no-confirm</b> to specify that FTOS does not require us input for each file prior to deletion.		
ommand Modes	EXEC Privilege		
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module		
lir	Display the files in a file system. The default is the current directory.		
Syntax	dir [filename   directory name:]		
Parameters	<i>filename</i>   <i>directory name:</i> (OPTIONAL) Enter one of the following: • For a file or directory on the internal Flash, enter flash:// fe		
	<ul> <li>by the filename or directory name.</li> <li>For a file or directory on the external Flash, enter usbflash:// followed by the filename or directory name:</li> </ul>		
Command Modes	EXEC Privilege		
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module		
Example	Figure 3-3. dir for the Internal Flash Command Example		
	FTOS#dir Directory of flash:		
	<pre>1 drwx 4096 Jan 01 1980 00:00:00 +00:00 . 2 drwx 2048 Mar 06 2010 00:36:21 +00:00 3 drwx 4096 Feb 25 2010 23:32:50 +00:00 TRACE_LOG_DIR 4 drwx 4096 Feb 25 2010 23:32:50 +00:00 CORE_DUMP_DIR 5 d 4096 Feb 25 2010 23:32:50 +00:00 ADMIN_DIR 6 -rwx 720969768 Mar 05 2010 03:25:40 +00:00 6gb 7 -rwx 4260 Mar 03 2010 22:04:50 +00:00 prem-23-5-12 8 -rwx 31969685 Mar 05 2010 17:56:26 +00:00 FTOS-XL-8-3-16-148.bin 9 -rwx 3951 Mar 06 2010 00:36:18 +00:00 startup-config flash: 2143281152 bytes total (1389801472 bytes free) FTOS#</pre>		
Related Commands	cd Changes the working directory.		

delete

24 | File Management

# format flash

Erase all existing files and reformat the filesystem in the internal flash memory. After the filesystem is formatted, files cannot be restored.

Syntax	format {flash:   usbflash:}		
Default	flash memory		
Command Modes	EXEC Privilege		
Command History	Version 8.3.16.1 In	troduced on MXL 10/40GbE Switch IO Module	
Usage Information	You must include the co	lon (:) when entering this command.	
	$\bigtriangleup$ executing this c	command deletes all files, including the startup configuration file. So, after command, consider saving the running config as the startup config (use the command or the copy run start command).	
Related Commands	сору	Copies the current configuration to either the startup-configuration file or the terminal.	
	show file	Displays the contents of a text file in the local filesystem.	
	show file-systems	Displays information about the file systems on the system.	

# logging coredump

	Enable coredump.
Syntax	logging coredump stack-unit all
Command Modes	CONFIGURATION
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Usage Information	The Kernel core dump can be large and may take up to five to 30 minutes to upload. FTOS does not overwrite application core dumps so delete them as necessary to conserve space on the flash; if the flash is out of memory, the coredump is aborted. FTOS completes the coredump process and waits until the upload is complete before rebooting the system.
Related Commands	logging coredump server     Designates a sever to upload kernel core-dumps.

# logging coredump server

Designate a server to upload core dumps.

#### Syntax logging coredump server {*ipv4-address*} username *name* password [*type*] password

Parameters			
	{ipv4-address}	Enter the server IPv4 address (A.B.C.D)	
	name	Enter a username to access the target server.	
	type	Enter the password type:	
		• Enter 0 to enter an unencrypted password.	
		• Enter 7 to enter a password that has already been encrypted using a Type 7 hashing algorithm.	
	password	Enter a password to access the target server.	
Defaults	Crash kernel files	are uploaded to flash by default.	
Command Modes	CONFIGURATIO	N	
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module		
Usage Information	Because flash space may be limited, using this command ensures your entire crash kernel files are uploaded successfully and completely. Only a single coredump server can be configured. Configuration of a new coredump server over-writes any previously configured server.		
Related Commands	Note: You your core	Disables the kernel coredump	
pwd	Display the curren	it working directory.	
Syntax	pwd		
Command Modes	EXEC Privilege		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Example	Figure 3-4. pw	vd Command Example	
	FTOS#pwd flash: FTOS#		
Related Commands	cd	Changes the directory.	
e e i i i i i i i i i i i i i i i i i i			

#### rename

Rename a file in the local file system.

Syntax	rename url url	
Parameters	url	Enter the following keywords and a filename:
		• For a file on the internal Flash, enter flash:// followed by the filename.
		• For a file on the external Flash, enter usbflash:// followed by the filename.
Command Modes	EXEC Privilege	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

show boot system Displays information about boot images currently configured on the system.

Syntax	show boot system stack-unit {0-5   all}			
Parameters	0-5	Enter this information to display the be	pot image information of only the enter	red stack-unit
	all	Enter this keyword to display the boot	image information of all the stack-unit	ts in the stack
Defaults	none			
Command Modes	EXEC			
	EXEC Privile	ge		
Command History	Version 8.3.16	5.1 Introduced on MXL 10/40GbE Swite	ch IO Module	
Example	Figure 3-5.	show boot system Command Exa	mple	
	(	y boot system stack-unit all system image information in the sy	stem: ===

System image	Image file name
Chassis Type:	System type (MXL 10/40GbE)
Control Processor:	Control processor information and amount of memory on processor.
256M bytes	Amount of boot flash memory on the system.
1 34-Port	Hardware configuration of the system, including the number and type of physical interfaces available.

#### Table 3-2. show version Command Fields

# upgrade boot

Upgrade the bootflash image or bootselector image.

Syntax upgrade boot {all | bootflash-image | bootselector-image} stack-unit {0-5 | all} {booted | flash: |ftp: | tftp: | usbflash:} (A: | B:}

Parameter	S
-----------	---

all	Enter this keyword to change both the bootflash and bootselecter images.
bootflash-image	Enter this keyword to change the bootflash image.
bootselector-image	Enter this keyword to change the bootselector image
0-5	Enter this keyword to upgrade only the mentioned stack-unit
all	Enter this keyword to upgrade all the member stack-units
booted	Enter this keyword to upgrade from the current image in the MXL 10/40GbE Switch.
ftp	After entering this keyword you can either follow it with the location of the source file in this form: <i>//userid:password@hostip/filepath</i> , or press <b>Enter</b> to launch a prompt sequence.
tftp	After entering this keyword you can either follow it with the location of the source file in this form: <i>//hostlocation/filepath</i> , or press <b>Enter</b> to launch a prompt sequence.
flash	After entering this keyword you can either follow it with the location of the source file in this form://filepath, or press Enter to launch a prompt sequence.
usbflash	After entering this keyword you can either follow it with the location of the source file in this form://filepath, or press Enter to launch a prompt sequence
А	Enter this keyword to upgrade the bootflash partition A
В	Enter this keyword to upgrade the bootflash partition B

Defaults	none					
Command Modes	EXEC Privilege					
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module					
Usage Information	You must reload FTOS after executing this command.					
Example Figure 3-13. upgrade boot Command Example						
	all Upgrade both boot flash image and selector image bootflash-image Upgrade boot flash image bootselector-image Upgrade boot selector image					

# upgrade system

Upgrade the bootflash image or system image.

FTOS#

Parameters	0-5	Enter this keyword to upgrade only the mentioned stack-unit
	all	Enter this keyword to upgrade all the member units of the stack
	ftp	After entering this keyword you can either follow it with the location of the source file in this form: <i>//userid:password@hostip/filepath</i> , or press <b>Enter</b> to launch a prompt sequence.
	scp	After entering this keyword you can either follow it with the location of the source file in this form: <i>//userid:password@hostip/filepath</i> , or press <b>Enter</b> to launch a prompt sequence.
	tftp	After entering this keyword you can either follow it with the location of the source file in this form: <i>//hostlocation/filepath</i> , or press <b>Enter</b> to launch a prompt sequence.
	flash	After entering this keyword you can either follow it with the location of the source file in this form://filepath, or press Enter to launch a prompt sequence.
	usbflash	After entering this keyword you can either follow it with the location of the source file in this form://filepath, or press Enter to launch a prompt sequence
	А	Enter this keyword to upgrade the bootflash partition A
	В	Enter this keyword to upgrade the bootflash partition B
Defaults	none	
mmand Modes	EXEC Privi	lege
Command History	Version 8.3.	16.1 Introduced on MXL 10/40GbE Switch IO Module

Usage You must reload FTOS after executing this command. Use the command upgrade system stack-unit to copy FTOS from the management unit to one or more stack members.

#### Example Figure 3-14. upgrade system Command Example

## **Control and Monitoring**

This chapter describes control and monitoring for the MXL 10/40GbE Switch IO Module.

### Commands

This chapter includes the following commands:

asf-mode	ip tftp source-interface
banner exec	line
banner login	motd-banner
banner motd	ping
clear alarms	reload
clear command history	send
clear line	service timestamps
configure	show alarms
debug cpu-traffic-stats	show command-history
debug ftpserver	show command-tree
disable	show cpu-traffic-stats
do	show debugging
enable	show environment
enable optic-info-update interval	show inventory
end	show memory
exec-banner	show processes cpu
exec-timeout	show processes ipc flow-control
exit	show processes memory
ftp-server enable	show software ifm
ftp-server topdir	show system
ftp-server username	telnet
hostname	terminal length
ip ftp password	traceroute
ip ftp source-interface	undebug all
ip ftp username	virtual-ip
ip telnet server enable	write
ip telnet source-interface	

ast-mode		
	Enable alternate st	tore and forward (ASF) mode and forward packets as soon as a threshold is reached.
Syntax	asf-mode stack-u	nit { <i>unit-id</i> / <i>all</i> } queue size
	To return to standa	ard store and forward mode, use the <b>no asf-mode stack-unit</b> command.
Parameters	unit-id	Enter the stack member unit identifier of the stack member to reset. <b>Range</b> : 0 - 5 all
	queue size	Enter the queue size of the stack member. Range: 1 - 15
Defaults	Not configured.	
Command Modes	CONFIGURATIC	N
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information		configuration and reload the system to implement ASF. When you enter the tem sends a message stating that the new mode is enabled when the system reloads.

### banner exec

Configure a message that is displayed when a user enters EXEC mode.

	С	Enter the keywords <b>banner exec</b> , and then enter a character delineator, represented here by the letter <i>c</i> , and press ENTER.
	line	Enter a text string for your banner message ending the message with your delineator.
		In the example below, the delineator is a percent character (%); the banner message is "testing, testing".
Defaults	No banner is disp	layed.
mmand Modes	CONFIGURATIO	N
Command		Introduced on MXL 10/40GbE Switch IO Module

## asf-mode

```
FTOS(conf)#banner exec ?
                      c banner-text(max length 255) c, where 'c' is a delimiting
LINE
character
FTOS(conf)#banner exec %
Enter TEXT message. End with the character '%'.
This is the banner%
FTOS(conf)#end
FTOS#exit
4d21h5m: %STKUNIT0-M P:CP %SEC-5-LOGOUT: Exec session is terminated for user on
line console
This is the banner
Dell Force10 con0 now available
Press RETURN to get started.
This is the banner
```

Related Commands	banner login	Sets a banner for login connections to the system.
	banner motd	Sets a Message of the Day banner.
	exec-banner	Enables the display of a text string when the user enters EXEC mode.
	line	Enables and configures the console and virtual terminal lines to the system.

### banner login

Set a banner to be displayed when logging on to the system.

Syntax	banner login {keyboard-interactive   no keyboard-interactive} [c line c]
--------	--

Parameters		
Farameters	keyboard-interactive	Enter this keyword to require a carriage return (CR) to get the message banner prompt.
	с	Enter a delineator character to specify the limits of the text banner. In Figure 4-2, the % character is the delineator character.
	line	Enter a text string for your text banner message ending the message with your delineator.
		In the example in Figure 4-2, the delineator is a percent character (%).
		Ranges:
		• maximum of 50 lines
		• up to 255 characters per line
Defaults	No banner is config	gured and the CR is required when creating a banner.
Command Modes	CONFIGURATION	1
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information	-	sage is displayed only in EXEC Privilege mode after entering the enable command sword. These banners are not displayed to users in EXEC mode.

#### Example Figure 4-1. banner exec Command Example

#### Example Figure 4-2. banner login Command Example

/	FTOS(conf)#banner login ?
(	keyboard-interactive Press enter key to get prompt
	LINE c banner-text(max length 255) c, where 'c' is a delimiting
	character
	FTOS(conf)#no banner login ?
	keyboard-interactive Prompt will be displayed by default <cr></cr>
	FTOS(conf)#banner login keyboard-interactive
	Enter TEXT message. End with the character '%'. This is the banner% FTOS(conf)#end FTOS#exit
	13d21h9m: %STKUNITO-M:CP %SEC-5-LOGOUT: Exec session is terminated for user on line console This is the banner
	Dell Force10 con0 now available
	Press RETURN to get started.
	13d21h10m: STKUNIT0-M:CP %SEC-5-LOGIN_SUCCESS: Login successful for user on line
l	console
`	This is the banner

```
Related
Commands
```

ommands	banner exec	Sets a banner to be displayed when you enter EXEC Privilege mode.
	banner motd	Sets a Message of the Day banner.

### banner motd

Set a Message of the Day (MOTD) banner.

Syntax	banner motd c lin	e c
Parameters		ter a delineator character to specify the limits of the text banner. In the above figures, the % aracter is the delineator character.
		ter a text string for your message of the day banner message ending the message with your lineator.
	In	the example figures above, the delineator is a percent character (%).
Defaults	No banner is confi	gured.
Command Modes	CONFIGURATIO	Ν
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information		nessage is displayed only in EXEC Privilege mode after entering the enable d by the password. These banners are not displayed to users in EXEC (non-privilege)
Related	hannanavaa	Sate a honner to be displayed when you enter the EVEC Drivilege mode
Commands	banner exec	Sets a banner to be displayed when you enter the EXEC Privilege mode.         Sets a banner to be displayed after successful login to the system.
		Sets a banner to be displayed after successful logili to the system.

## clear alarms

Clear alarms on the system.

Syntax	clear alarms
Command Modes	EXEC Privilege
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Usage Information	This command clears alarms that are no longer active. If an alarm situation is still active, it is seen in the system output.

# clear command history Clear the command history log.

Syntax	clear command history
Command Modes	EXEC Privilege
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Related Commands	show command-history Displays a buffered log of all commands entered by all users along with a time stamp.

## clear line

	Reset a terminal lin	e.
Syntax	clear line { <i>line-nul</i>	mber   console 0   vty number}
Parameters	line-number	Enter a number for one of the 12 terminal lines on the system.
		Range: 0 to 11.
	console 0	Enter the keyword console 0 to reset the Console port.
	vty number	Enter the keyword vty followed by a number to clear a Terminal line.
		Range: 0 to 9
ommand Modes	EXEC Privilege	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

## configure

Enter CONFIGURATION mode from EXEC Privilege mode.

Syntax configure [terminal]

Parameters	terminal	(OPTIONAL) Enter the keyword <b>terminal</b> to specify that you are configuring from the terminal.
Command Modes	EXEC Privilege	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Example	Figure 4-3. co	onfigure Command Example
	FTOS#configur FTOS(conf)#	re

## debug cpu-traffic-stats

Enable the collection of CPU traffic statistics.

Syntax	debug cpu-traffic-stats		
Defaults	Disabled		
Command Modes	EXEC Privilege		
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module		
Usage Information	This command enables (and disables) the collection of CPU traffic statistics from the time this command is executed (not from system boot). However, excessive traffic received by a CPU automatically triggers (turns on) the collection of CPU traffic statistics. Use the show cpu-traffic-stats to view the traffic statistics.		
If excessive traffic is received by CPU, traffic is rate controlled			
	<b>Note:</b> This command must be enabled before the show cpu-traffic-stats command displays traffic statistics. Dell Force10 recommends disabling debugging (no debug cpu-traffic-stats) after troubleshooting is complete.		
Related Commands	show cpu-traffic-stats     Displays the cpu traffic statistics		

## debug ftpserver

View transactions during an FTP session when a user is logged into the FTP server.

Syntax	debug ftpserver
Command Modes	EXEC Privilege
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
disable	Return to EXEC mode.
Syntax	disable [ <i>level</i> ]
Parameters	level (OPTIONAL) Enter a number for a privilege level of the FTOS. Range: 0 to 15. Default: 1
Defaults	1
Command Modes	EXEC Privilege
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
do	Allows the execution of most EXEC-level commands from all CONFIGURATION levels without returning to the EXEC level.
Syntax	do command
Parameters	<i>command</i> Enter an EXEC-level command.
Defaults	none
Command Modes	CONFIGURATION INTERFACE
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Usage Information	<ul> <li>The following commands are <i>not</i> supported by the do command:</li> <li>enable</li> <li>disable</li> <li>exit</li> <li>config</li> </ul>

#### Example Figure 4-4. do Command Example

/ FTOS(conf-if-te-5/0)#do clear counters
Clear counters on all interfaces [confirm]
FTOS(conf-if-te-5/0)#
FTOS(conf-if-te-5/0)#do clear logging
Clear logging buffer [confirm]
FTOS(conf-if-te-5/0)#
FTOS(conf-if-te-5/0)#do reload
System configuration has been modified. Save? [yes/no]: n
Proceed with reload [confirm yes/no]: n
FTOS(conf-if-te-5/0)#

### enable

	Enter EXEC Privilege mode or any other privilege level configured. After entering this command, you may need to enter a password.		
Syntax	enable [ <i>level</i> ]		
Parameters	level (OPTIONAL) Enter a number for a privilege level of FTOS. Range: 0 to 15. Default: 15		
Defaults	15		
Command Modes	EXEC		
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module		
Usage Information	Users entering EXEC Privilege mode or any other configured privilege level can access configuration commands. To protect against unauthorized access, use the enable password command to configure a password for the enable command at a specific privilege level. If no privilege level is specified, the default is privilege level 15.		
Related Commands	enable password Configures a password for the <b>enable</b> command and to access a privilege level.		

## enable optic-info-update interval

Enable polling intervals of optical information updates for SNMP.

Syntax	enable optical-info-update interval seconds	
_	To disable optical pow command.	er information updates, use the no enable optical-info-update interval
Parameters	interval seconds	Enter the keyword interval followed by the polling interval in seconds. Range: 120 to 6000 seconds
		Default: 300 seconds (5 minutes)
Defaults	Disabled	

Command Modes	CONFIGURATION		
Command History	Version 8.3.16.1 Replaces the enable xfp-power-updates command.		
Usage Information	The default interval for the polling is 300 seconds (5 minutes). Use this command to enable the polling and to configure the polling frequency.		
end	Return to EXEC Privilege mode from other command modes (for example, CONFIGURATION or ROUTER OSPF modes).		
Syntax	end		
Command Modes	<ul> <li>CONFIGURATION</li> <li>SPANNING TREE</li> <li>MULTIPLE SPANNING TREE</li> <li>LINE</li> <li>INTERFACE</li> <li>VRRP</li> <li>ACCESS-LIST</li> <li>PREFIX-LIST</li> <li>ROUTER OSPF</li> <li>ROUTER RIP</li> </ul>		
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module		
Related Commands	exit Returns to the lower command mode.		

## exec-banner

Enable the display of a text string when the user enters EXEC mode.

Syntax	exec-banner		
Defaults	Enabled on all lines (if configured, the banner appears).		
Command Modes	LINE		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Usage	Optionally, use the banner exec command to create a text string that is displayed when the user accesses EXEC mode. This command toggles that display.		
Related Commands	banner exec	Configures a banner to display when entering EXEC mode. Enables and configures console and virtual terminal lines to the system.	

### exec-timeout

Set a time interval for the system to wait for input on a line before disconnecting the session. **Syntax** exec-timeout minutes [seconds] To return to default settings, enter no exec-timeout. **Parameters** minutes Enter the number of minutes of inactivity on the system before disconnecting the current session. Range: 0 to 35791 Default: 10 minutes for console line; 30 minutes for VTY line. seconds (OPTIONAL) Enter the number of seconds Range: 0 to 2147483 Default: 0 seconds Defaults 10 minutes for console line; 30 minutes for VTY lines; 0 seconds **Command Modes** LINE Command Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module History Usage To remove the time interval, use the exec-timeout 0 0 command. Information Example Figure 4-5. FTOS time-out display , FTOS con0 is now available Press RETURN to get started.

### exit

Return to the lower command mode.

Syntax exit

Command Modes

- EXEC PrivilegeCONFIGURATION
- LINE

FTOS>

- INTERFACE
- PROTOCOL GVRP
- SPANNING TREE
- MULTIPLE SPANNING TREE
- MAC ACCESS LIST
- ACCESS-LIST
- PREFIX-LIST
- ROUTER OSPF
- ROUTER RIP

Command			
History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module		
Related Commands	end Returns to EXEC Privilege command mode.		
ftp-server o	Enable FTP server functions on the system.		
Syntax	ftp-server enable		
Defaults	Disabled.		
Command Modes	CONFIGURATION		
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module		
Example	Figure 4-6. Logging on to an FTP Server Example		
	Connected to 10.31.1.111. 220 Dell Forcel0 (1.0) FTP server ready Name (10.31.1.111:dch): dch 331 Password required Password: 230 User logged in ftp> pwd 257 Current directory is "flash:" ftp> dir 200 Port set okay 150 Opening ASCII mode data connection size date time name 		
Related Commands	ftp-server topdir       Sets the directory to be used for incoming FTP connections.		
••••••••	ftp-server username       Sets a username and password for incoming FTP connections.		
ftp-server t	Specify the top-level directory to be accessed when an incoming FTP connection request is made.		
Syntax	ftp-server topdir <i>directory</i>		
Parameters	<i>directory</i> Enter the directory path.		
Defaults	The internal flash is the default directory.		
Command Modes	CONFIGURATION		

Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Usage Information	After you enable FTP server functions with the ftp-server enable command, Dell Force10 recommends specifying a top-level directory path. Without a top-level directory path specified, the FTOS directs users to the flash directory when they log in to the FTP server.		
Related Commands	ftp-server enable	Enables FTP server functions on the MXL 10/40GbE Switch IO Module.	
	ftp-server username	Sets a username and password for incoming FTP connections to the MXL 10/40GbE Switch IO Module.	

## ftp-server username

Create a user name and associated password for incoming FTP server sessions.

Syntax ftp-server username username password [encryption-type] password

Parameters		
Farameters	username	Enter a text string up to 40 characters long as the user name.
	password password	Enter the keyword <b>password</b> followed by a string up to 40 characters long as the password.
		Without specifying an encryption type, the password is unencrypted.
	encryption-type	(OPTIONAL) After the keyword <b>password</b> enter one of the following numbers:
		• 0 (zero) for an unecrypted (clear text) password
		• 7 (seven) for hidden text password.
Defaults	Not enabled.	
Command Modes	CONFIGURATION	
Command History	Version 8.3.16.1 Intr	oduced on MXL 10/40GbE Switch IO Module
hostname	Set the host name of the s	ystem.
Syntax	hostname name	
Parameters		
	name Enter a	a text string, up to 32 characters long.
Defaults	FTOS	
Command Modes	CONFIGURATION	
Command History	Version 8.3.16.1 Intr	oduced on MXL 10/40GbE Switch IO Module

Usage	The hostname is used in the prompt.
Information	

## ip ftp password

Specify a password for outgoing FTP connections.

Syntax	ip ftp password [encryption-type] password		
Parameters	encryption-type	<ul><li>(OPTIONAL) Enter one of the following numbers:</li><li>0 (zero) for an unecrypted (clear text) password</li></ul>	
	password	for hidden text password Enter a string up to 40 characters as the password.	
Defaults	Defaults Not configured.		
Command Modes	CONFIGURATION		
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module		
Usage Information	The password is listed in the configuration file; you can view the password using the show running-config ftp command in EXEC mode.		
	Use the password configured by the ip ftp password command when you use the ftp: parameter in the copy command.		
Related Commands	сору	Copies the files.	
ip ftp username Sets the user name for the FTP sessions.		Sets the user name for the FTP sessions.	

## ip ftp source-interface

ip ftp source-interface interface

Syntax

Specify an interface's IP address as the source IP address for FTP connections.

eters inte	interface	Enter the following keywords and slot/port or number information:
		• For Loopback interfaces, enter the keyword <b>loopback</b> followed by a number from zero (0) to 16383.
		• For a Port Channel interface, enter the keyword port-channel followed by a number
		Range: 1-128
		• For a 10-Gigabit Ethernet interface, enter the keyword <b>TenGigabitEthernet</b> followed by the slot/port information.
		• For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE followed by the slot/port information.
		• For a VLAN interface, enter the keyword vlan followed by a number from 1 to 4094.

Command Modes	es CONFIGURATION		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Related Commands	сору	Copies files from and to the switch.	

## ip ftp username

Assign a user name for outgoing FTP connection requests.

Syntax	ip ftp username username		
Parameters	<i>username</i> Enter a text string as the user name up to 40 characters long.		
Defaults	No user name is configured.		
Command Modes	CONFIGURATION		
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module		
Usage Information	You must also configure a password with the ip ftp password command.		
Related Commands	ip ftp password Sets the password for the FTP connections.		

## ip telnet server enable

Enable the Telnet server on the switch.

Syntax	ip telnet server enable		
	To disable the Telnet server, use the no ip telnet server enable command.		
Defaults	Enabled		
Command Modes	CONFIGURATION		
Command History	Version 8.3.16.1 Introduced on MXL 10/40CbE Switch IO Module		
Related Commands	ip ssh server Enables the SSH server on the system.		

### ip telnet source-interface

**Syntax** ip telnet source-interface interface **Parameters** interface Enter the following keywords and slot/port or number information: For Loopback interfaces, enter the keyword loopback followed by a number from zero (0) to 16383. For a Port Channel, enter the keyword port-channel followed by a number: Range: 1-128 For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information. For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE followed by the slot/port information. For VLAN interface, enter the keyword vlan followed by a number from 1 to 4094. . Defaults The IP address on the system that is closest to the Telnet address is used in the outgoing packets. **Command Modes** CONFIGURATION Command Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module History Related Telnets to another device. telnet Commands

Set an interface's IP address as the source address in outgoing packets for Telnet sessions.

### ip tftp source-interface

Assign an interface's IP address in outgoing packets for TFTP traffic.

Syntax	ip tftp source-interface interface		
Parameters	interface	Enter the following keywords and slot/port or number information:	
		• For Loopback interfaces, enter the keyword <b>loopback</b> followed by a number from zero (0) to 16383.	
		• For a Port Channel, enter the keyword port-channel followed by a number: 1-128	
		<ul> <li>For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.</li> </ul>	
		<ul> <li>For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE followed by the slot/ port information.</li> </ul>	
		• For a VLAN interface, enter the keyword vlan followed by a number from 1 to 4094.	
Defaults	<b>Defaults</b> The IP address on the system that is closest to the Telnet address is used in the outgoing packets.		
Command Modes	les CONFIGURATION		
Command History	Version 8.3.	16.1         Introduced on MXL 10/40GbE Switch IO Module	

	Enable and configure console and virtual terminal lines to the system. This command accesses LINE mode, where you can set the access conditions for the designated line.		
Syntax	line {console 0   vty <i>number</i> [ <i>end-number</i> ]}		
•		Enter the keyword <b>console 0</b> to configure the console port. The console option is <0-0>.	
	vty number	Enter the keyword <b>Vty</b> followed by a number from 0 to 9 to configure a virtual terminal line for Telnet sessions. The system supports 10 Telnet sessions.	
	end-number	(OPTIONAL) Enter a number from 1 to 9 as the last virtual terminal line to configure. You can configure multiple lines at one time.	
Defaults	Not configured		
Command Modes	CONFIGURATION		
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module		
Usage Information	You cannot delete a terminal connection.		
Related         access-class         Restricts incoming connections to a (ACL).		Restricts incoming connections to a particular IP address in an IP access control list (ACL).	
	password	Specifies a password for users on terminal lines.	
	show memory View current memory usage on the MXL switch.		

### motd-banner

Enable a Message of the Day (MOTD) banner to appear when you log in to the system.

Syntax	motd-banner
Defaults	Enabled on all lines.
Command Modes	LINE
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

## ping

Test connectivity between the system and another device by sending echo requests and waiting for replies.

Syntaxping [host / ip-address] [count {number / continuous}] [datagram-size] [timeout] [source (ip<br/>src-ipv4-address) / interface] [tos] [df-bit (y/n)] [validate-reply(y/n)] [pattern pattern]<br/>[sweep-min-size] [sweep-max-size] [sweep-interval] [ointerface (ip src-ipv4-address) | interface]

line

Parameter		
	host	(OPTIONAL) Enter the host name of the devices to which you are testing connectivity.
	ip-address	(OPTIONAL) Enter the IPv4 address of the device to which you are testing connectivity. The address must be in the dotted decimal format.
	count	Enter the number of echo packets to be sent.
		number: 1- 2147483647
		<i>Continuous</i> : transmit echo request continuously Default: 5
	datagram size	Enter the ICMP datagram size.
		Range: 36 - 15360 bytes
		Default: 100
	timeout	Enter the interval to wait for an echo reply before timing out.
		Range: 0 -3600 seconds
		Default: 2 seconds
	source	Enter the IPv4 source ip address or the source interface.
		• Enter the IP address in A.B.C.D format
		• For a Port Channel interface, enter the keyword <b>port-channel</b> followed by a number:
		Range: 1-128
		<ul> <li>For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.</li> </ul>
		<ul> <li>For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE followed by the slot/port information.</li> </ul>
		• For a VLAN interface, enter the keyword vlan followed by a number from 1 to 4094.
	tos	Enter the type of service required.
		Range: 0-255
		Default: 0
	df-bit	Enter Y or N for the <b>don't fragment</b> bit in IPv4 header
		• N: Do not set the <b>don't fragment</b> bit
		• Y: Do set <b>don't fragmen</b> t bit Default is No.
	validate-reply	Enter Y or N for reply validation.
	validate-reply	<ul> <li>N: Do not validate reply data</li> </ul>
		<ul> <li>Y: Do validate reply data</li> <li>Y: Do validate reply data</li> </ul>
		Default is No.
	pattern pattern	Enter the IPv4 data pattern.
		Range: 0-FFFF
		Default: 0xABCD
	sweep-min-size	Enter the minimum size of datagram in sweep range.
		Range: 52-15359 bytes
	sweep-max-size	Enter the maximum size of datagram in sweep range.
		Range: 53-15359 bytes

**Defaults** See parameters above.

Command Modes EXEC

**EXEC** Privilege

sweep-interval

ointerface

Command History

Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

Usage Information

When you enter the ping command without specifying an IP address (Extended Ping), you are prompted for a target IP address, a repeat count, a datagram size (up to 1500 bytes), a timeout in seconds, and for Extended Commands. For information on the ICMP message codes that return from a ping command, refer to Appendix,.

Enter the incremental value for sweep size.

Enter the outgoing interface for multicast packets.Enter the IP address in A.B.C.D format

followed by the slot/port information.

the slot/port information.

For a Port Channel, enter the keyword port-channel followed by a number:

For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet

For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE followed by

For a VLAN interface, enter the keyword vlan followed by a number from 1 to

1-15308 seconds

1-128

4094.

FTOS#	

### reload

Reboot FTOS.

Syntax reload

Command Modes EXEC Privilege

Command History

Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

Usage Information

If there is a change in the configuration, FTOS prompts you to save the new configuration. Or you can save your running configuration with the copy running-config command.

Related Commands

redundancy Resets any designated stack member except the management unit. disable-auto-reboot

### send

Send messages to one or all terminal line users.

Syntax send [\*] | [*line* ] | [console] | [vty]

Parameters		
T didificters	*	Enter the asterisk character * to send a message to all tty lines.
	line	Send a message to a specific line.
		Range: 0 to 11
	console	Enter the keyword <b>console</b> to send a message to the Primary terminal line.
	vty	Enter the keyword vty to send a message to the Virtual terminal
Defaults	none	
Command Modes	EXEC	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage	Messages can cont	tain an unlimited number of lines; however, each line is limited to 255 characters. To

#### Information

move to the next line, use the <CR>. To send the message use CTR-Z, to abort a message use CTR-C.

## service timestamps

Add time stamps to debug and log messages. This command adds either the uptime or the current time and date.

**Syntax** service timestamps [debug | log] [datetime [localtime] [msec] [show-timezone] | uptime]

**Parameters** 

debug	(OPTIONAL) Enter the keyword debug to add timestamps to debug messages.
log	(OPTIONAL) Enter the keyword <b>log</b> to add timestamps to log messages with severity 0 to 6.
datetime	(OPTIONAL) Enter the keyword <b>datetime</b> to have the current time and date added to the message.
localtime	(OPTIONAL) Enter the keyword <b>localtime</b> to include the localtime in the timestamp.
msec	(OPTIONAL) Enter the keyword <b>msec</b> to include milliseconds in the timestamp.
show-timezone	(OPTIONAL) Enter the keyword <b>show-timezone</b> to include the time zone information in the timestamp.
uptime	(OPTIONAL) Enter the keyword <b>uptime</b> to have the timestamp based on time elapsed since system reboot.

Defaults	Not configured.							
Command Modes	CONFIGURATION							
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module	-						
Usage Information	If you do not specify parameters and enter service timestamps, it appears as service timestamps debug uptime in the running-configuration.							
	Use the show running-config command to view the current options set for the service timestamps command.							
show alarm	Niew alarms.							
Syntax	show alarms							
Command Modes	EXEC							
	EXEC Privilege							
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module	-						
Example	Figure 4-8. show alarms Command Example							
	FTOS# show alarms							
	Minor Alarms Alarm Type Duration							
	No minor alarms							
	Major Alarms Alarm Type Duration							
	No major alarms							
	FTOS#							

## show command-history

Display a buffered log of all commands entered by all users along with a time stamp.

Syntax	show command-history
Defaults	None.
Command Mode	EXEC
	EXEC Privilege
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

Usage One trace log message is generated for each command. No password information is saved to this file.

#### Figure 4-10. show command-tree Command Example Example

# show cpu-traffic-stats View the CPU traffic statistics.

Syntax	show cpu-traffic-stats [port number   all]					
Parameters	port number	(OPTIONAL) Enter the port number to display traffic statistics on that port only. Range: 1 to 1568				
	all	(OPTIONAL) Enter the keyword <b>all</b> to display traffic statistics on all the interfaces receiving traffic, sorted based on traffic.				
Defaults	all					
Command Modes	EXEC					

History	
Example	Figure 4-11. show cpu-traffic-stats Command Example
	FTOS#show cpu-traffic-stats Processor : CP
	Received 100% traffic on TenGigabitEthernet 8/2 Total packets:100 LLC:0, SNAP:0, IP:100, ARP:0, other:0 Unicast:100, Multicast:0, Broadcast:0
	FTOS#
Usage Information	Traffic statistics are sorted on a per-interface basis; the interface receiving the most traffic is displayed first. All CPU and port information is displayed unless a specific port or CPU is specified. Traffic information is displayed for router ports only; not for management interfaces. The traffic statistics ar collected only after the debug cpu-traffic-stats command is executed; not from the system bootup.
	<b>Note:</b> After debugging is complete, use the no debug cpu-traffic-stats command to shut off traffic statistics collection.
Related Commands	debug cpu-traffic-stats     Enables CPU traffic statistics for debugging.

## show environment

View system component status (for example, temperature, voltage).

Syntax show environment [all | stack-unit *unit-id*]

Deserved		
Parameters	all	Enter the keyword all to view all components.
	stack-unit unit-id	Enter the keyword <b>stack-unit</b> followed by the <i>unit-id</i> to display information on a specific stack member. Range: 0 to 5.
	thermal sensor	Enter the keyword thermal-sensor to view all components.
Command Modes	EXEC	
	EXEC Privilege	
Command History	Version 8.3.16.1 Intr	roduced on MXL 10/40GbE Switch IO Module
mistory		
Usage Information	Figure 4-13 shows the	output of the show environment fan command as it appears prior to FTOS 7.8.1.0.
Example	Figure 4-13. show	environment all Command Example

		============

### show processes cpu

Display CPU usage information based on running processes.

Syntax show processes cpu [management-unit 1-99 [details] | stack-unit 0-5 | summary | ipc | memory [stack-unit 0-5]]

Parameters	management-unit 1-99 [details]	(OPTIONAL) Display processes running in the control processor. The <b>1-99</b> variable sets the number of tasks to display in order of the highest CPU usage in the past five (5) seconds. Add the <b>details</b> keyword to display all running processes (except sysdlp). See Example 3.
	stack-unit 0-5	(OPTIONAL) Enter the keyword <b>Stack-unit</b> followed by the stack member ID (Range 0 to 5).
		As an option of <b>show processes cpu</b> , this option displays CPU usage for the designated stack member. See Example 2.
		Or, as an option of <b>memory</b> , this option limits the output of memory statistics to the designated stack member. See Example 5.

	summary			Enter the keyword SUN all members of the stat	nmary to view a summary view of the set of t

Table 4-1 lists the definitions of the fields shown in Figure 4-24.

Table 4-1. Des	scription of the show	processes ip	c flow-control c	p output Command
----------------	-----------------------	--------------	------------------	------------------

Field	Description
Source QID /Tx Process	Source Service Identifier
Destination QID/Rx Process	Destination Service Identifier
Cur Len	Current number of messages enqueued
High Mark	Highest number of packets in the queue at any point of time
#of to / Timeout	Timeout count
#of Retr /Retries	Number of retransmissions
#msg Sent/Msg Sent/	Number of messages sent
#msg Ackd/Ack Rcvd	Number of messages acknowledged

Field	Description
Retr /Available Retra	Number of retries left
Total/ Max Retra	Number of retries allowed

#### Table 4-1. Description of the show processes ipc flow-control cp output Command

Usage The Single window protocol (SWP) provides flow control-based reliable communication between the sending and receiving software tasks.

#### **Important Points to Remember**

- A sending task enqueues messages into the SWP queue3 for a receiving task and waits for an acknowledgement.
- If no response is received within a defined period of time, the SWP timeout mechanism resubmits the message at the head of the FIFO queue.
- After retrying a defined number of times, the following timeout message is generated:

#### SWP-2-NOMORETIMEOUT

• In the display output in Figure 4-24, a retry (Retries) value of zero indicates that the SWP mechanism reached the maximum number of retransmissions without an acknowledgement.

### show processes memory

Display memory usage information based on processes running in the system.

Parameters	management-unit	Enter the keyword management-unit for CPU memory usage of the stack management unit.				
	stack unit 0–5	Enter the keyword <b>stack unit</b> followed by a stack unit ID of the member unit for which to display memory usage on the forwarding processor.				
	all	Enter the keyword all for detailed memory usage on all stack members.				
	summary	Enter the keyword <b>summary</b> for a brief summary of memory availability and usage on all stack members.				
d Modes	EXEC					
	EXEC Privilege					
mmand History	Version 8.3.16.1 Intr	roduced on MXL 10/40GbE Switch IO Module				

The output of show memory and this command will differ based on which FTOS processes are counted.

- In the show memory display output, the memory size is equal to the size of the application processes.
- In the output of this command, the memory size is equal to the size of the application processes *plus* the size of the system processes.

Table 4-2 defines the fields that appear in the show processes memory output.

Table 4-2. Descriptions of show processes memory output

Field	Description
Total:	Total system memory available
MaxUsed:	Total maximum memory used ever (history indicated with time stamp)
CurrentUsed:	Total memory currently in use
CurrentFree:	Total system memory available
SharedUsed:	Total used shared memory
SharedFree:	Total free shared memory

Field	Description
PID	Process ID
Process	Process Name
ResSize	Actual resident size of the process in memory
Size	Process test, stack, and data size
Allocs	Total dynamic memory allocated
Frees	Total dynamic memory freed
Max	Maximum dynamic memory allocated
Current	Current dynamic memory in use

#### Table 4-2. Descriptions of show processes memory output

### show software ifm

Display interface management (IFM) data.

Syntax show software ifm {clients [summary] | ifagt number | ifcb interface | stack-unit unit-ID | trace-flags}

Ρ	ar	a	me	et	er	s
	aı	aı	110	συ	С!	2

clients	Enter the keyword clients to display IFM client information.
summary	(OPTIONAL) Enter the keyword <b>summary</b> to display brief information about IFM clients.
ifagt number	Enter the keyword <b>ifagt</b> followed by the number of an interface agent to display software pipe and IPC statistics.
ifcb interface	Enter the keyword <b>ifcb</b> followed by one of the following interface IDs followed by the slot/port information to display interface control block information for that interface:
	• For a Port Channel interface, enter the keyword <b>port-channel</b> followed by a number:
	Range: 1-128
	• For a 10G Ethernet interface, enter the keyword TenGigabitEthernet.
	• For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE.
stack-unit unit-ID	Enter the keyword <b>stack-unit</b> followed by the stack member number to display IFM information for that unit.
	Range: 0-5
trace-flags	Enter the keyword trace-flags to display IFM information for internal trace flags.

## show system

Display the current status of all stack members or a specific member.

Parameters	brief	(OPTIONAL) Enter the keyword <b>brief</b> to view an abbreviated list of system information.
	stack-unit unit-id	(OPTIONAL) Enter the keyword <b>Stack-unit</b> followed by the stack member ID for information on that stack member. Range: 0 to 5.
nand Modes	EXEC EXEC Privilege	
Command History	Version 8.3.16.1 Introd	duced on MXL 10/40GbE Switch IO Module

#### Related Comman

show version	Displays the FTOS version.
show processes memory	Displays the memory usage based on the running processes.
show system stack-ports	Displays information about the stack ports on all switches in the stack.
show hardware stack-unit	Displays the data plane and management plane input and output statistics of a particular stack member.
stack-unit priority	Configures the ability of the switch to become the management unit of a stack.

## show tech-support

Display a collection of data from other show commands, necessary for Dell Force10 technical support to perform troubleshooting on MXL switches.

Syntax	show tech-support	[stack-unit unit-id	[page]
			I baãol

Parameters		
r arameters	stack-unit	(OPTIONAL) Enter the keyword <b>stack-unit</b> to view CPU memory usage for the stack member designated by <i>unit-id</i> . Range: 0 to 5
	page	(OPTIONAL) Enter the keyword page to view 24 lines of text at a time.
		Press the SPACE BAR to view the next 24 lines.
		Press the ENTER key to view the next line of text.
		When using the pipe command (   ), enter one of these keywords to filter command output. Refer to Chapter 2, CLI Basics for details on filtering commands.
	save	Enter the <b>Save</b> keyword to save the command output.
		flash: Save to local flash drive (flash://filename (max 20 chars))
Command Modes	EXEC Privilege

```

Usage Without the page or stack-unit option, the command output is continuous, use Ctrl-z to interrupt the command output.

The save option works with other filtering commands. This allows you to save specific information of a show command. The save entry must always be the last option.

For example: FTOS#show tech-support |grep regular-expression |except regular-expression | find regular-expression | save flash://result

This display output is an accumulation of the same information that is displayed when you execute one of the following show commands:

- show cam
- show clock
- show environment
- show file
- show interfaces
- show inventory
- show ip protocols
- show ip route summary
- show processes cpu
- show processes memory
- show redundancy
- show running-conf
- show version

#### Related Commands

show version	Displays the FTOS version.
show system	Displays the current switch status.
show environment	Displays system component status.
show processes memory	Displays memory usage based on the running processes.

# telnet

Connect through Telnet to a server. The Telnet client and server in FTOS supports IPv4 connections. You can establish a Telnet session directly to the router, or a connection can be initiated from the router.

#### Syntax telnet { *host* | *ip-address*} [/source-interface]

#### Parameters

host	Enter the name of a server.
ip-address	Enter the IPv4 address in dotted decimal format of the server.
source-interface	(OPTIONAL) Enter the keywords /source-interface followed by the interface information to include the interface's IP address.
	Enter the following keywords and slot/port or number information:
	• For a Loopback interface, enter the keyword <b>loopback</b> followed by a number from zero (0) to 16383.
	• For the Null interface, enter the keyword <b>null</b> followed by 0.
	• For a Port Channel interface, enter the keyword <b>port-channel</b> followed by a number:
	Range: 1-128
	• For a 10-Gigabit Ethernet interface, enter the keyword <b>TenGigabitEthernet</b> followed by the slot/port information.
	• For a 40-Gigabit Ethernet interface, enter the keyword <b>fortyGigE</b> followed by the slot/port information.
	• For a VLAN interface, enter the keyword vlan followed by a number from 1 to 4094.

Defaults Not configured.

**Command Modes** EXEC

EXEC Privilege

Command History

Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

Usage Information

Telnet to link-local addresses is not supported.

terminal length Configure the number of lines displayed on the terminal screen.

	To return to the default values, use the terminal no length command.	
Parameters	screen-length	Enter a number of lines. Entering zero will cause the terminal to display without pausing.
		Range: 0 to 512. Default: 24 lines.
Defaults	24 lines	Default. 24 mes.
Command Modes	EXEC	
	EXEC Privilege	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
terminal xml		

Enable XML mode in Telnet and SSH client sessions.

Syntax	terminal xml		
	To exit the XML mode, use the terminal no xml command.		
Defaults	Disabled		
Command Modes	EXEC		
	EXEC Privilege		
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module		

Usage This command enables XML input mode where you can either cut and paste XML requests or enter the XML requests line-by-line. For more information about using the XML feature, refer to the XML chapter in the *FTOS Configuration Guide*.

### traceroute

View the packet path to a specific device.

**Syntax** traceroute { host | ip-address } **Parameters** host Enter the name of device. ip-address Enter the IP address of the device in dotted decimal format. Defaults Timeout = 5 seconds; Probe count = 3; 30 hops max; 40 byte packet size; UDP port = 33434**Command Modes** EXEC **EXEC** Privilege Command Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module History When you enter the traceroute command without specifying an IP address (Extended Traceroute), you Usage Information are prompted for a target and source IP address, timeout in seconds (default is 5), a probe count (default is 3), minimum TTL (default is 1), maximum TTL (default is 30), and port number (default is 33434). To keep the default setting for those parameters, press the ENTER key. Example Figure 4-32. traceroute (IPv4) Command Example FTOS#traceroute www.force10networks.com Translating "www.forcel0networks.com"...domain server (10.11.0.1) [OK] Type Ctrl-C to abort. \_\_\_\_\_ Tracing the route to www.forcelOnetworks.com (10.11.84.18), 30 hops max, 40 byte packets TTL Hostname Probe1 Probe2 Probe3 10.11.199.190 001.000 ms 001.000 ms 002.000 ms 2 gwegress-sjc-02.forcel0networks.com (10.11.30.126) 005.000 ms 001.000 ms 001.000 ms fw-sjc-01.forcel0networks.com (10.11.127.254) 000.000 ms 000.000 ms 000.000 ms Related Tests the connectivity to a device. Commands ping

# undebug all

Disable all debug operations on the system.

Syntax	undebug all	
Defaults	none	
Command Modes	EXEC Privilege	
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module	
virtual-ip	Configure a virtual IP address for the active management interface. You can configure virtual addresses for IPv4 independently.	
Syntax	virtual-ip { <i>ipv4-address</i> }	
Parameters	<i>{ipv4-address}</i> Enter the IPv4 address (A.B.C.D) of the active management interface.	
Defaults	none	
Command Modes	CONFIGURATION	
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module	
Usage Information	Each time this command is issued, it replaces the previously configured address of the same family. The no virtual-ip command now takes an address/prefix-length argument, so that the desired address only is removed. If you use the no virtual-ip command without any specified address, the IPv4 virtual addresses are removed.	
Example	Figure 4-33. virtual ip (IPv4) Command Example	
	FTOS#virtual-ip 10.11.197.99/16	

# write

 Copy the current configuration to either the startup-configuration file or the terminal.

 Syntax
 write {memory | terminal}

 Parameters
 memory
 Enter the keyword memory to copy the current running configuration to the startup configuration file. This command is similar to the Copy running-config startup-config command.

 terminal
 Enter the keyword terminal to copy the current running configuration to the terminal. This command is similar to the Show running-config command.

Command Modes	EXEC Privilege		
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module		
Usage Information	The write memory command saves the running-configuration to the file labeled startup-configuration. When using a LOCAL CONFIG FILE other than the startup-config not named "startup-configuration", the running-config is not saved to that file; use the <b>copy</b> command to save any running-configuration changes to that local file.

# u-Boot

# **Overview**

All commands in this chapter are in u-Boot mode. These commands are supported on the Dell Force10 MXL 10/40GbE Switch Module platform only.

To access this mode, hit any key when the following line appears on the console during a system boot: Hit any key to stop autoboot:

You enter u-Boot immediately, as indicated by the BOOT\_USER# prompt.

Note: This chapter describes only a few commands available in uBoot mode.

# Commands

- boot change
- boot selection
- boot show net config retries
- boot write net config retries
- boot zero
- default gateway
- enable
- help
- ignore enable password
- ignore startup config
- interface management ethernet ip address
- no default-gateway
- no interface management ethernet ip address
- reload
- show boot blc
- show boot selection
- show bootflash
- show bootvar
- show default-gateway
- show interface management Ethernet
- show interface management port config
- syntax help

Note: You cannot use the Tab key to complete commands in this mode.

# boot change

Change the operating system boot parameters.

Syntax boot change [primary | secondary | default]

Command Modes uBoot

Command History

Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

# boot selection

Change the ROM bootstrap bootflash partition.

Syntax	boot selection [a   b]		
Command Modes	uBoot		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	_

# boot show net config retries

Show the number of retries for network boot configuration failure.

Syntax	boot show net config retries
Command Modes	uBoot
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Example	Figure 5-1. boot show net config retries Command Example
	BOOT_USER# boot show net config retries Number of Network Boot Config Retries is : 0

BOOT\_USER #

# boot write net config retries

Set the number of retries for network boot configuration failure.

Syntax boot write net config retries <int>

Command Modes uBoot

Command History

Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

Example

Figure 5-2. boot write net config retries Command Example BOOT\_USER # boot write net config retries 2 Updated number of Network Boot Config retries to 2. BOOT\_USER #

# boot zero

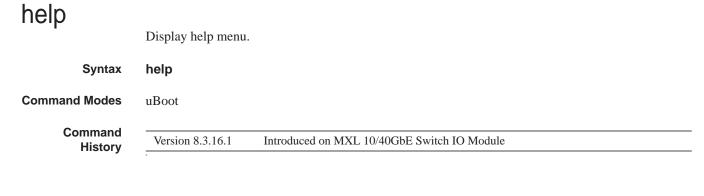

Clears the primary, secondary, or default boot parameters.

Syntax	boot zero [primary   secondary   default]		
Command Modes	uBoot		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	

# default gateway

Set the default gateway IP address.

Syntax	default-gateway <ip-address></ip-address>		
Command Modes	uBoot		
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module		
enable	Change the access privilege level.		
Syntax	enable [user   admin]		
Command Modes	uBoot		
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

# **Access Control Lists (ACL)**

# **Overview**

The Dell Force10 operating software (FTOS) supports the following types of access control lists (ACLs), IP prefix lists, and route maps:

- Commands Common to all ACL Types
- Common IP ACL Commands
- Standard IP ACL Commands
- Extended IP ACL Commands
- Common MAC Access List Commands
- Standard MAC ACL Commands
- Extended MAC ACL Commands
- IP Prefix List Commands
- Route Map Commands

**Note:** For ACL commands used in the Trace function, refer to the Secure DHCP Commands section in the chapter Security.

# **Commands Common to all ACL Types**

The following commands are available within each ACL mode and do not have mode-specific options. Some commands may use similar names, but require different options to support the different ACL types (for example, deny).

- description
- remark
- resequence access-list
- resequence prefix-list ipv4
- show config

# description

Configure a short text string describing the ACL.

Syntax	description text	
Parameters	text	Enter a text string up to 80 characters long.
Defaults	Not enabled.	
Command Modes	mmand Modes CONFIGURATION-IP ACCESS-LIST-STANDARD	
	CONFIGURATION-IP ACCESS-LIST-EXTENDED	
	CONFIGURATION-MAC ACCESS LIST-STANDARD	
	CONFIGURATION-MAC ACCESS LIST-EXTENDED	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

# remark

Enter a description for an ACL entry. Syntax remark [remark-number] [description] **Parameters** remark-number Enter the remark number. Note that you can use the same sequence number for the remark and an ACL rule. Range: 0 to 4294967290 description Enter a description of up to 80 characters. Defaults Not configured **Command Modes** CONFIGURATION-IP ACCESS-LIST-STANDARD CONFIGURATION-IP ACCESS-LIST-EXTENDED CONFIGURATION-MAC ACCESS LIST-STANDARD CONFIGURATION-MAC ACCESS LIST-EXTENDED Command Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module History Usage The remark command is available in each ACL mode. You can configure up to 4294967290 remarks

The following example shows the use of the remark command twice within CONFIGURATION-IP ACCESS-LIST-STANDARD mode. Here, the same sequence number was used for the remark and for an associated ACL rule. The remark precedes the rule in the running-config because it is assumed that the remark is for the rule with the same sequence number, or the group of rules, that follow the remark.

Information

in a given ACL.

	! ip access-list standard remark 5 Permit traffic seq 5 permit 1.1.1.0/24 remark 10 Deny rest of seq 10 Deny any FTOS(conf-std-nacl)#	c from XYZ Inc.

# **Common IP ACL Commands**

The following commands are available within both IP ACL modes (Standard and Extended) and do not have mode-specific options. When an access-list (ACL) is created without any rule and then applied to an interface, ACL behavior reflects an implicit permit.

The MXL 10/40GbE Switch IO Module platform supports both ingress and egress IP ACLs.

The following commands allow you to clear, display, and assign IP ACL configurations.

- access-class
- clear counters ip access-group
- ip access-group
- show ip access-lists
- show ip accounting access-list

Note: See also Commands Common to all ACL Types.

### access-class

Apply a standard ACL to a terminal line.

Syntax	access-class access-list-name		
Parameters	access-list-name	Enter the name of a configured Standard ACL, up to 140 characters.	
Defaults	Not configured.		
Command Modes	LINE		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	

# clear counters ip access-group

Erase all counters maintained for access lists.

 Syntax
 clear counters ip access-group [access-list-name]

 Parameters
 access-list-name

 Command Modes
 EXEC Privilege

 Command History
 Version 8.3.16.1

### ip access-group

Assign an IP access list (IP ACL) to an interface.

Syntax ip access-group access-list-name {in | out } [implicit-permit] [vlan vlan-id]

Parameters

<i>access-list-name</i> Enter the name of a configured access list, up to 140 characters.	
in	Enter the keyword in to apply the ACL to incoming traffic.
out	Enter the keyword <b>out</b> to apply the ACL to outgoing traffic.

implicit-permit	(OPTIONAL) Enter the keyword <b>implicit-permit</b> to change the default action of the ACL from implicit-deny to implicit-permit (that is, if the traffic does not match the filters in the ACL, the traffic is permitted instead of dropped).	
vlan <i>vlan-id</i>	(OPTIONAL) Enter the keyword vlan followed by the ID numbers of the VLANs.	
Not enabled.		
INTERFACE		
Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
You can assign one ACL (standard or extended ACL) to an interface.		
<b>Note:</b> This c	ommand is not supported on the MXL Switch loopback interfaces.	
* 11 *	CL that filters IGMP traffic, all IGMP traffic is redirected to the CPUs and irred, in the following scenarios:	
• on a Layer 2 interface - if a Layer 3 ACL is applied to the interface.		
• on a Layer 3 port	or on a Layer 2/Layer 3 port	
ip access-list standard	Configures a standard ACL.	
ip access-list extended	Configures an extended ACL.	
	vlan vlan-id         Not enabled.         INTERFACE         Version 8.3.16.1         You can assign one AC         ✓         Note: This c         When you apply an AC soft-forwarded, if requises on a Layer 2 inter         •       on a Layer 3 port         ip access-list standard	

# show ip access-lists

Display all of the IP ACLs configured in the system, whether or not they are applied to an interface, and the count of matches/mismatches against each ACL entry displayed.

Syntax show ip access-lists [access-list-name] [interface interface] [in]

access-list-name	Enter the name of a configured MAC ACL, up to 140 characters.		
interface interface	Enter the keyword <b>interface</b> followed by the one of the following keywords and slot/port or number information:		
	• For a Port Channel interface, enter the keyword <b>port-channel</b> followed by a number:		
	Range: 1 to 128		
	<ul> <li>For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.</li> </ul>		
	• For a 40-Gigabit Ethernet interface, enter the keyword <b>fortyGigE</b> followed by the slot/port information.		
in	Identify whether ACL is applied on ingress side.		
EXEC Privilege			
Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module		
	interface interface		

# show ip accounting access-list

Display the IP access-lists created on the switch and the sequence of filters.

#### Syntax show ip accounting {access-list access-list-name | cam\_count} interface interface

Daramotore

Parameters		
i ulumotoro	access-list-name	Enter the name of the ACL to be displayed.
	cam_count	List the count of the CAM rules for this ACL.
	interface interface	Enter the keyword <b>interface</b> followed by the interface type and slot/port or number information:
		• For a Port Channel interface, enter the keyword <b>port-channel</b> followed by a number:
		Range: 1-128
		• For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.
		• For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE followed by the slot/port information.
Command Modes	EXEC EXEC Privilege	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Example	Figure 6-3. show ip	o accounting access-lists Command Example
	Extended IP access seq 5 deny ip any	191.1.0.0 /16 count (0x00 packets) 7 191.2.0.0 /16 order 4 7 191.3.0.0 /16 7 191.4.0.0 /16

Table 6-1 defines the information in Figure 6-3.

Table 6-1. sho	ow ip accounting	access-lists (	Command Example Field
----------------	------------------	----------------	-----------------------

Field	Description
"Extended IP"	Displays the name of the IP ACL.
"seq 5"	Displays the filter. If the keywords count or byte were configured in the filter, the number of packets or bytes processed by the filter is displayed at the end of the line.
"order 4"	Displays the QoS order of priority for the ACL entry.

# **Standard IP ACL Commands**

When an ACL is created without any rule and then applied to an interface, ACL behavior reflects an implicit permit.

The MXL 10/40GbE Switch IO Module platform supports both ingress and egress IP ACLs.

The commands needed to configure a Standard IP ACL are:

- deny
- ip access-list standard
- permit

**Note:** See also Commands Common to all ACL Types and Common IP ACL Commands.

# deny

Configure a filter to drop packets with a certain IP address.

Syntax deny { source [mask] | any | host ip-address } [count [byte]] [dscp value] [order] [fragments]

To remove this filter, you have two choices:

- Use the no seq sequence-number command if you know the filter's sequence number.
- Use the no deny { *source* [*mask*] | any | host *ip-address*} command.

Parameters	source	Enter the IP address in dotted decimal format of the network from which the packet was sent.		
	mask	(OPTIONAL) Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous (discontiguous).		
	any	Enter the keyword any to specify that all routes are subject to the filter.		
	host ip-address	Enter the keyword <b>host</b> followed by the IP address to specify a host IP address only.		
	count	(OPTIONAL) Enter the keyword count to count packets processed by the filter.		
	byte	(OPTIONAL) Enter the keyword byte to count bytes processed by the filter.		
	dscp	(OPTIONAL) Enter the keyword dscp to match to the IP DSCP values.		
	order	(OPTIONAL) Enter the keyword <b>order</b> to specify the QoS order of priority for the ACL entry.		
		Range: 0-254 (where 0 is the highest priority and 254 is the lowest; lower order numbers have a higher priority)		
		Default: If the order keyword is not used, the ACLs have the lowest order by default (255).		
	fragments	Enter the keyword <b>fragments</b> to use ACLs to control packet fragments.		

Defaults Not configured.

Command Modes CONFIGURATION-IP ACCESS-LIST-STANDARD

Command History	Version 8.3.16.1 Int	roduced on MXL 10/40GbE Switch IO Module	
Usage Information	The order option is relevant in the context of the Policy QoS feature only. For more information, refer to the Quality of Service (QoS) chapter of the <i>FTOS Configuration Guide</i> .		
	•	u can configure either count (packets) or count (bytes). However, for an ACL a can configure some ACLs with count (packets) and others as count (bytes) at	
Related Commands	ip access-list standard	Configures a standard ACL.	
Commando	permit	Configures a permit filter.	
ip access-l	ist standard Create a standard IP ac	cess list (IP ACL) to filter based on IP address.	
Syntax	ip access-list standard	access-list-name	

Parameters	<i>access-list-name</i> Enter a string up to 140 characters long as the ACL name.		
Defaults	All IP access lists contain an implicit <i>deny any</i> , that is, if no match occurs, the packet is dropped.		
Command Modes	CONFIGURATION		
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module		
Usage Information	FTOS supports one ingress and one egress IP ACL per interface.		
	The number of entries allowed per ACL is hardware-dependent. For detailed specification on entries allowed per ACL, refer to your switch documentation.		
Example	Figure 6-4. ip access-list standard Command Example		
Example Related Commands	FTOS(conf)#ip access-list standard TestList		

# permit

Configure a filter to permit packets from a specific source IP address to leave the switch.

**Syntax** permit {*source* [*mask*] | any | host *ip-address*} [count [byte]] [dscp *value*] [order]

To remove this filter, you have two choices:

• Use the no seq sequence-number command if you know the filter's sequence number.

•	Use the no permit	[source [mask]	any   host <i>i</i> j	p-address}	command.
---	-------------------	----------------	-----------------------	------------	----------

Deremetere				
Parameters	source	Enter the IP address in dotted decimal format of the network from which the packet was sent.		
	mask	(OPTIONAL) Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.		
	any	Enter the keyword <b>any</b> to specify that all routes are subject to the filter.		
	host ip-address	Enter the keyword <b>host</b> followed by the IP address to specify a host IP address or hostname.		
	count	(OPTIONAL) Enter the keyword count to count packets processed by the filter.		
	dscp	(OPTIONAL) Enter the keyword dscp to match to the IP DSCP values.		
	byte	(OPTIONAL) Enter the keyword byte to count bytes processed by the filter.		
	order	<ul> <li>(OPTIONAL) Enter the keyword order to specify the QoS priority for the ACL entry.</li> <li>Range: 0-254 (where 0 is the highest priority and 254 is the lowest; lower order numbers have a higher priority)</li> </ul>		
		Default: If the order keyword is not used, the ACLs have the lowest order by default (255).		
Defaults	Not configured.

# **Extended IP ACL Commands**

When an ACL is created without any rule and then applied to an interface, ACL behavior reflects an implicit permit.

The following commands configure extended IP ACLs, which in addition to the IP address also examine the packet's protocol type.

The MXL 10/40GbE Switch IO Module platform supports both ingress and egress IP ACLs.

- deny
- deny icmp
- deny tcp
- deny udp
- ip access-list extended
- permit
- permit icmp
- permit tcp
- permit udp
- seq

U

Note: See also Commands Common to all ACL Types and Common IP ACL Commands.

# deny

Configure a filter that drops IP packets meeting the filter criteria.

**Syntax** deny {ip | *ip-protocol-number*} {source mask | any | host *ip-address*} {destination mask | any | host *ip-address*} [count [byte]] [dscp *value*] [order] [fragments]

To remove this filter, you have two choices:

- Use the no seq sequence-number command if you know the filter's sequence number.
- Use the no deny {ip | *ip-protocol-number*} {source mask | any | host *ip-address*} {destination mask | any | host *ip-address*} command.

#### Parameters

ip	Enter the keyword ip to configure a generic IP access list. The keyword ip specifies that the access list will deny all IP protocols.	
ip-protocol-number	Enter a number from 0 to 255 to deny based on the protocol identified in the IP protocol header.	
source	Enter the IP address of the network or host from which the packets were sent.	
mask	Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.	
any	Enter the keyword any to specify that all routes are subject to the filter.	
host ip-address	Enter the keyword host followed by the IP address to specify a host IP address.	
destination	Enter the IP address of the network or host to which the packets are sent.	
count	(OPTIONAL) Enter the keyword <b>count</b> to count packets processed by the filter.	

	byte	(OPTIONAL) Enter the keyword byte to count bytes processed by the filter.		
	dscp	(OPTIONAL) Enter the keyword dscp to match to the IP DSCP values.		
	order	(OPTIONAL) Enter the keyword <b>order</b> to specify the QoS priority for t ACL entry.		
		Range: 0-254 (where 0 is the highest priority and 254 is the lowest; low order numbers have a higher priority)		
		Default: If the order keyword is not used, the ACLs have the lowest order default (255).		
	fragments	Enter the keyword fragments to use ACLs to control packet fragments.		
Defaults	Not configured.			
Command Modes	CONFIGURATION	P ACCESS-LIST-EXTENDED		
Command History	Version 8.3.16.1	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module		
Usage Information	The order option is relevant in the context of the Policy QoS feature only. For more information, r to the Quality of Service (QoS) chapter of the <i>FTOS Configuration Guide</i> .			
		ou can configure either count (packets) or count (bytes). However, for an A ou can configure some ACLs with count (packets) and others as count (byte		
Related	deny tcp	Assigns a filter to deny TCP packets.		
Commands	deny udp	Assigns a filter to deny UDP packets.		

deny udp	Assigns a filter to deny UDP packets.	
ip access-list extended	Creates an extended ACL.	

# deny icmp

Configure a filter to drop all or specific ICMP messages.

Syntax deny icmp { source mask | any | host ip-address } { destination mask | any | host ip-address } [dscp] [message-type] [count [byte]] [order] [fragments]

To remove this filter, you have two choices:

- Use the no seq sequence-number command if you know the filter's sequence number.
- Use the no deny icmp { *source mask* | any | host *ip-address*} { *destination mask* | any | host *ip-address*} command.

Parameters		
i arameters	source	Enter the IP address of the network or host from which the packets were sent.
	mask	Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.
	any	Enter the keyword any to specify that all routes are subject to the filter.
	host ip-address	Enter the keyword <b>host</b> followed by the IP address to specify a host IP address.
	destination	Enter the IP address of the network or host to which the packets are sent.
	dscp	Enter this keyword to deny a packet based on DSCP value.
		Range: 0-63

	message-type	(OPTIONAL) Enter an ICMP message type, either with the type (and code, if necessary) numbers or with the name of the message type (ICMP message types are listed in Table 6-2).			
		Range: 0 to 255 for ICMP type; 0 to 255 for ICMP code			
	count	(OPTIONAL) Enter the keyword count to count packets processed by the filter.			
	byte	(OPTIONAL) Enter the keyword byte to count bytes processed by the filter.			
	order	(OPTIONAL) Enter the keyword <b>order</b> to specify the QoS priority for the ACL entry.			
		Range: 0-254 (where 0 is the highest priority and 254 is the lowest; lower order numbers have a higher priority)			
		Default: If the order keyword is not used, the ACLs have the lowest order by default (255).			
	fragments	Enter the keyword fragments to use ACLs to control packet fragments.			
Defaults	Not configured				
Command Modes	CONFIGURATION	N-IP ACCESS-LIST-EXTENDED

UsageThe order option is relevant in the context of the Policy QoS feature only. For more information, refer<br/>to the Quality of Service (QoS) chapter of the FTOS Configuration Guide.

Table 6-2 lists the keywords displayed in the CLI help and their corresponding ICMP message type name.

Keyword	ICMP Message Type Name
administratively-prohibited	Administratively prohibited
alternate-address	Alternate host address
conversion-error	Datagram conversion error
dod-host-prohibited	Host prohibited
dod-net-prohibited	Net prohibited
echo	Echo
echo-reply	Echo reply
general-parameter-problem	Parameter problem
host-isolated	Host isolated
host-precedence-unreachable	Host unreachable for precedence
host-redirect	Host redirect
host-tos-redirect	Host redirect for TOS
host-tos-unreachable	Host unreachable for TOS
host-unknown	Host unknown
host-unreachable	Host unreachable
information-reply	Information replies
information-request	Information requests

Table 6-2. ICMP Message Type Keywords

Keyword	ICMP Message Type Name
mask-reply	Mask replies
mask-request	Mask requests
mobile-redirect	Mobile host redirect
net-redirect	Network redirect
net-tos-redirect	Network redirect for TOS
net-tos-unreachable	Network unreachable for TOS
net-unreachable	Network unreachable
network-unknown	Network unknown
no-room-for-option	Parameter required but no room
option-missing	Parameter required but not present
packet-too-big	Fragmentation needed and DF set
parameter-problem	All parameter problems
port-unreachable	Port unreachable
precedence-unreachable	Precedence cutoff
protocol-unreachable	Protocol unreachable
reassembly-timeout	Reassembly timeout
redirect	All redirects
router-advertisement	Router discovery advertisements
router-solicitation	Router discovery solicitations
source-quench	Source quenches
source-route-failed	Source route failed
time-exceeded	All time exceeded
timestamp-reply	Timestamp replies
timestamp-request	Timestamp requests
traceroute	Traceroute
ttl-exceeded	TTL exceeded
unreachable	All unreachables

#### Table 6-2. ICMP Message Type Keywords

# deny tcp

Configure a filter that drops TCP packets meeting the filter criteria.

Syntax

deny tcp {source mask | any | host ip-address} [bit] [operator port [port]] {destination mask | any | host *ip-address*} [dscp] [*bit*] [*operator port* [*port*]] [count [byte]] [order] [fragments]

To remove this filter, you have two choices:

- Use the no seq sequence-number command if you know the filter's sequence number. •
- Use the no deny tcp { source mask | any | host ip-address } { destination mask | any | host • *ip-address*} command.

Parameters	source	Enter the IP address of the network or host from which the packets were sent.				
	mask	Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.				
	any	Enter the keyword any to specify that all routes are subject to the filter.				
	host ip-address	Enter the keyword host followed by the IP address to specify a host IP address				
	dscp	Enter this keyword to deny a packet based on DSCP value.				
		Range: 0-63				
	bit	Enter a flag or combination of bits:				
		• ack: acknowledgement field				
		• fin: finish (no more data from the user)				
		• psh: push function				
		• rst: reset the connection				
		• Syn: synchronize sequence numbers				
		• Urg: urgent field				
	operator	(OPTIONAL) Enter one of the following logical operand:				
		• $eq = equal to$				
		• <b>neq</b> = not equal to				
		• gt = greater than				
		<ul> <li>It = less than</li> <li>range = inclusive range of parts (you must specify two parts for the parts)</li> </ul>				
		• range = inclusive range of ports (you must specify two ports for the <i>port</i> command parameter.				
	port port	Enter the application layer port number. Enter two port numbers if using the range logical operand.				
		Range: 0 to 65535.				
		The following list includes some common TCP port numbers:				
		• 23 = Telnet				
		• 20 and 21 = FTP				
		<ul> <li>25 = SMTP</li> <li>169 = SNMP</li> </ul>				
	destination	• 109 = SIMP Enter the IP address of the network or host to which the packets are sent.				
	mask	Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.				
	count	(OPTIONAL) Enter the keyword <b>count</b> to count packets processed by the filter.				
	byte	(OPTIONAL) Enter the keyword byte to count bytes processed by the filter.				
	order	(OPTIONAL) Enter the keyword <b>order</b> to specify the QoS priority for the ACL entry.				
		Range: 0-254 (where 0 is the highest priority and 254 is the lowest; lower order numbers have a higher priority)				
		Default: If the order keyword is not used, the ACLs have the lowest order by default (255).				
	fragments	Enter the keyword <b>fragments</b> to use ACLs to control packet fragments.				
Defaults	Not configured.					
nand Modes	CONFIGURATION-IP	ACCESS-LIST-EXTENDED				

History

**Usage** The order option is relevant in the context of the Policy QoS feature only. For more information, refer to the Quality of Service (QoS) chapter of the *FTOS Configuration Guide*.

In the MXL Switch, you can configure either count (packets) or count (bytes). However, for an ACL with multiple rules, you can configure some ACLs with count (packets) and others as count (bytes) at any given time.

Most ACL rules require one entry in the CAM. However, rules with TCP and UDP port operators (gt, lt, range) may require more than one entry. The range of ports is configured in the CAM based on bit mask boundaries; the space required depends on exactly what ports are included in the range.

For example, an ACL rule with TCP port range 4000 - 8000 uses eight entries in the CAM:

Rule#	Data	Mask	From	То	#Covered
1 2 3 4 5 6 7	0000111111000000 0001000000000000 00011000000	111111100000000 11111111000000000	7680	4031 4095 6143 7167 7679 7935 7999	32 64 2048 1024 512 256 64
8 Total		11111111111111111	8000	8000	1

But an ACL rule with TCP port lt 1023 takes only one entry in the CAM:

Rule#	Data	Mask	From	То	#Covered
1	000000000000000000000000000000000000000	111111000000000	0	1023	1024
Total	Ports: 1024				

Related Commands

ls .	deny	Assigns a filter to deny IP traffic.
	deny udp	Assigns a filter to deny UDP traffic.

# deny udp

Configure a filter to drop UDP packets meeting the filter criteria.

Syntax deny udp {source mask | any | host ip-address} [operator port [port]] {destination mask | any | host ip-address} [dscp] [operator port [port]] [count [byte]] [order] [fragments]

To remove this filter, you have two choices:

- Use the no seq sequence-number command if you know the filter's sequence number.
- Use the no deny udp {source mask | any | host ip-address} {destination mask | any | host ip-address} command.

#### Parameters

source	Enter the IP address of the network or host from which the packets were sent.
mask	Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.

	any	Enter the keyword <b>any</b> to specify that all routes are subject to the filter.
	host ip-address	
	•	Enter the keyword <b>host</b> followed by the IP address to specify a host IP address.
	dscp	Enter this keyword to deny a packet based on DSCP value.
		Range: 0-63
	operator	(OPTIONAL) Enter one of the following logical operand:
		<ul> <li> eq = equal to</li> <li> peg = not equal to</li> </ul>
		<ul> <li>neq = not equal to</li> <li>gt = greater than</li> </ul>
		<ul> <li>It = less than</li> </ul>
		<ul> <li>range = inclusive range of ports</li> </ul>
	port port	(OPTIONAL) Enter the application layer port number. Enter two port numbers if
	portport	using the range logical operand.
		Range: 0 to 65535
	destination	Enter the IP address of the network or host to which the packets are sent.
	mask	Enter a network mask in /prefix format $(/x)$ or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.
	count	(OPTIONAL) Enter the keyword count to count packets processed by the filter.
	byte	(OPTIONAL) Enter the keyword byte to count bytes processed by the filter.
	order	(OPTIONAL) Enter the keyword <b>order</b> to specify the QoS priority for the ACL entry.
		Range: 0-254 (where 0 is the highest priority and 254 is the lowest; lower order numbers have a higher priority)
		Default: If the order keyword is not used, the ACLs have the lowest order by default (255).
	fragments	Enter the keyword fragments to use ACLs to control packet fragments.
Defaults	Not configured

### ip access-list extended

Name (or select) an extended IP access list (IP ACL) based on IP addresses or protocols.

Syntax	Syntaxip access-list extended access-list-nameTo delete an access list, use the no ip access-list extended access-list-name command.					
Parameters         access-list-name         Enter a string up to 140 characters long as the access list name.						
Defaults	All access lists contain an implicit <i>deny any</i> ; that is, if no match occurs, the packet is dropped.					
Command Modes	CONFIGURATION					
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module					
Usage Information	The number of entries allowed per ACL is hardware-dependent. For detailed specification on entries allowed per ACL, refer to your switch documentation.					
Example	Figure 6-5. ip access-list exte	nded Command Example

## permit

Configure a filter to pass IP packets meeting the filter criteria.

**Syntax** permit {ip | *ip-protocol-number*} {source mask | any | host *ip-address*} {destination mask | any | host *ip-address*} [count [byte] [dscp *value*] [order] [fragments]

To remove this filter, you have two choices:

- Use the no seq sequence-number command if you know the filter's sequence number.
- Use the no deny {ip | *ip-protocol-number*} {source mask | any | host *ip-address*} {destination mask | any | host *ip-address*} command.

Parameters						
i didiletere	ip	Enter the keyword ip to configure a generic IP access list. The keyword ip specifies that the access list will permit all IP protocols.				
	ip-protocol-number	Enter a number from 0 to 255 to permit based on the protocol identified in the IP protocol header.				
		Range: 0 to 128				
	source	Enter the IP address of the network or host from which the packets were sent.				
	mask	Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.				
	any	Enter the keyword any to specify that all routes are subject to the filter.				
	host ip-address	Enter the keyword host followed by the IP address to specify a host IP address				
	destination	Enter the IP address of the network or host to which the packets are sent.				
	count	(OPTIONAL) Enter the keyword <b>COUNt</b> to count packets processed by the filter.				
	byte	(OPTIONAL) Enter the keyword byte to count bytes processed by the filter.				
	dscp	(OPTIONAL) Enter the keyword dscp to match to the IP DSCP values.				
	order	(OPTIONAL) Enter the keyword <b>order</b> to specify the QoS order of priority for the ACL entry.				
		Range: 0-254 (where 0 is the highest priority and 254 is the lowest; lower order numbers have a higher priority)				
		Default: If the order keyword is not used, the ACLs have the lowest order by default (255).				
	fragments	Enter the keyword fragments to use ACLs to control packet fragments.				
Defaults	Not configured.

ip access-list extended	Creates an extended ACL.
permit tcp	Assigns a permit filter for TCP packets.
permit udp	Assigns a permit filter for UDP packets.

## permit icmp

Configure a filter to allow all or specific ICMP messages.

**Syntax** permit icmp { source mask | any | host ip-address } { destination mask | any | host ip-address } [dscp] [message-type] [count [byte]] [order] [fragments]

To remove this filter, you have two choices:

- Use the no seq sequence-number command if you know the filter's sequence number.
- Use the no permit icmp { source mask | any | host ip-address } { destination mask | any | host ip-address } command.

#### Parameters

Falameters	source	Enter the IP address of the network or host from which the packets were sent.					
	mask	Enter a network mask in /prefix format $(/x)$ or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.					
	any	Enter the keyword any to specify that all routes are subject to the filter.					
	host ip-address	Enter the keyword <b>host</b> followed by the IP address to specify a host IP address.					
	destination	Enter the IP address of the network or host to which the packets are sent.					
	dscp	Enter this keyword to deny a packet based on DSCP value. Range: 0-63 (OPTIONAL) Enter an ICMP message type, either with the type (and code, if necessary) numbers or with the name of the message type (ICMP message types are listed in Table 6-2).					
	message-type						
		Range: 0 to 255 for ICMP type; 0 to 255 for ICMP code					
	count	(OPTIONAL) Enter the keyword <b>COUNt</b> to count packets processed by the filter. (OPTIONAL) Enter the keyword <b>byte</b> to count bytes processed by the filter.					
	byte						
	order	(OPTIONAL) Enter the keyword <b>order</b> to specify the QoS priority for the ACL entry.					
		Range: 0-254 (where 0 is the highest priority and 254 is the lowest; lower order numbers have a higher priority)					
		Default: If the order keyword is not used, the ACLs have the lowest order by default (255).					
	fragments	Enter the keyword fragments to use ACLs to control packet fragments.					
Defaults	Not configured						
Command Modes	CONFIGURATION	-IP ACCESS-LIST-STANDARD					
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module					

Usage Information

The order option is relevant in the context of the Policy QoS feature only. For more information, refer to the Quality of Service chapter of the *FTOS Configuration Guide*.

## permit tcp

Configure a filter to pass TCP packets meeting the filter criteria.

**Syntax** permit tcp { source mask | any | host ip-address } [bit] [operator port [port]] { destination mask | any | host ip-address } [bit] [dscp] [operator port [port]] [count [byte]] [order] [fragments]

To remove this filter, you have two choices:

- Use the no seq sequence-number command if you know the filter's sequence number.
- Use the no permit tcp { source mask | any | host *ip-address*} { destination mask | any | host *ip-address*} command.

Parameters		
Farameters	source	Enter the IP address of the network or host from which the packets were sent.
	mask	Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.
	any	Enter the keyword any to specify that all routes are subject to the filter.
	host ip-address	Enter the keyword host followed by the IP address to specify a host IP address.
	bit	Enter a flag or combination of bits:
		• ack: acknowledgement field
		• fin: finish (no more data from the user)
		• psh: push function
		• rst: reset the connection
		• Syn: synchronize sequence numbers
		• Urg: urgent field
	dscp	Enter this keyword to deny a packet based on DSCP value.
		Range: 0-63
	operator	(OPTIONAL) Enter one of the following logical operand:
		• $eq = equal to$
		• <b>neq</b> = not equal to
		• $gt = greater than$
		• $It = less than$
		<ul> <li>range = inclusive range of ports (you must specify two port for the <i>port</i> parameter.)</li> </ul>
	port port	Enter the application layer port number. Enter two port numbers if using the range logical operand.
		Range: 0 to 65535.
		The following list includes some common TCP port numbers:
		• $23 = \text{Telnet}$
		• 20 and 21 = FTP
		• 25 = SMTP
		• 169 = SNMP
	destination	Enter the IP address of the network or host to which the packets are sent.
	mask	Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.
	count	(OPTIONAL) Enter the keyword count to count packets processed by the filter.
	byte	(OPTIONAL) Enter the keyword <b>byte</b> to count bytes processed by the filter.
	-	

	order	(OPTION	IAL) Enter the keyword <b>Order</b> to specify the QoS priority for the ACL		
		entry.			
		Range:	0-254 (where 0 is the highest priority and 254 is the lowest; lower order numbers have a higher priority)		
		Default: If the order keyword is not used, the ACLs have the lowest order by default (255).			
	fragments	Enter the keyword <b>fragments</b> to use ACLs to control packet fragments.			
Defaults	Not configured.				
Command Modes	CONFIGURATION	N-IP ACCES	S-LIST-EXTENDED		
Command	Version 8.3.16.1	Introduced o	n MXL 10/40GbE Switch IO Module		
History	Version 6.5.10.1	Introduced 0	I MAE 10/4000E Switch to Module		
Usage Information	1	on is relevant in the context of the Policy QoS feature only. For more information, refer of Service chapter of the FTOS Configuration Guide.			
	The MXL 10/40GbE System IO Module cannot count both packets and bytes, so when you enter the count byte options, only bytes are incremented.				
	Most ACL rules require one entry in the CAM. However, rules with TCP and UDP port operators <b>lt</b> , <b>range</b> ) may require more than one entry. The range of ports is configured in the CAM based or mask boundaries; the space required depends on exactly what ports are included in the range.				

For example, an ACL rule with TCP port range 4000 - 8000 uses eight entries in the CAM:

Rule#	Data	Mask	From	То	#Covered
1	0000111110100000		4000	4031	32
2	0000111111000000	111111111000000	4032	4095	64
3	0001000000000000	1111100000000000	4096	6143	2048
4	0001100000000000	1111110000000000	6144	7167	1024
5	0001110000000000	1111111000000000	7168	7679	512
6	0001111000000000	111111100000000	7680	7935	256
7	0001111100000000	111111111000000	7936	7999	64
8	0001111101000000	11111111111111111	8000	8000	1
Total	Ports: 4001				)

But an ACL rule with TCP port lt 1023 takes only one entry in the CAM:

Rule#	Data	Mask	From	То	#Covered
1	000000000000000000000000000000000000000	111111000000000	0	1023	1024
Total	Ports: 1024				

#### Related Commands

ip access-list extended	Creates an extended ACL.
permit	Assigns a permit filter for IP packets.
permit udp	Assigns a permit filter for UDP packets.

## permit udp

Configure a filter to pass UDP packets meeting the filter criteria.

**Syntax** permit udp {source mask | any | host ip-address} [operator port [port]] {destination mask | any | host ip-address} [dscp] [operator port [port]] [count [byte]] [order] [fragments]

To remove this filter, you have two choices:

- Use the no seq sequence-number command if you know the filter's sequence number.
- Use the no permit udp {source mask | any | host ip-address} {destination mask | any | host *ip-address*} command.

Parameters		
Farameters	source	Enter the IP address of the network or host from which the packets were sent.
	mask	Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.
	any	Enter the keyword any to specify that all routes are subject to the filter.
	host ip-address	Enter the keyword host followed by the IP address to specify a host IP address.
	dscp	Enter this keyword to deny a packet based on DSCP value. Range: 0-63
	operator	(OPTIONAL) Enter one of the following logical operand:
		• $eq = equal to$
		• <b>neq</b> = not equal to
		• gt = greater than
		• It = less than
		<ul> <li>range = inclusive range of ports (you must specify two ports for the port parameter.)</li> </ul>
	port port	(OPTIONAL) Enter the application layer port number. Enter two port numbers if using the range logical operand.
		Range: 0 to 65535
	destination	Enter the IP address of the network or host to which the packets are sent.
	count	(OPTIONAL) Enter the keyword count to count packets processed by the filter.
	byte	(OPTIONAL) Enter the keyword byte to count bytes processed by the filter.
	order	(OPTIONAL) Enter the keyword order to specify the QoS priority for the ACL entry
		Range: 0-254 (where 0 is the highest priority and 254 is the lowest; lower order numbers have a higher priority)
		Default: If the order keyword is not used, the ACLs have the lowest order by default (255).
	fragments	Enter the keyword fragments to use ACLs to control packet fragments.
Defaults	Not configured.

Usage The order option is relevant in the context of the Policy QoS feature only. For more information, refer Information to the Quality of Service chapter of the FTOS Configuration Guide.

In the MXL Switch, you can configure either count (packets) or count (bytes). However, for an ACL with multiple rules, you can configure some ACLs with count (packets) and others as count (bytes) at any given time.

Most ACL rules require one entry in the CAM. However, rules with TCP and UDP port operators (gt, lt, range) may require more than one entry. The range of ports is configured in the CAM based on bit mask boundaries; the space required depends on exactly what ports are included in the range.

For example, an ACL rule with TCP port range 4000 - 8000 uses eight entries in the CAM:

Rule#	Data	Mask	From	То	#Covered
1 2 3 4 5 6 7 8	0000111111000000 0001000000000000 00011000000	11111111100000 11111111000000 11111000000	4032 4096 6144 7168 7680	4031 4095 6143 7167 7679 7935 7999 8000	32 64 2048 1024 512 256 64
	Ports: 4001				-

But an ACL rule with TCP port lt 1023 takes only one entry in the CAM:

Rule#	Data	Mask	From	То	#Covered
1	000000000000000000000000000000000000000	111111000000000	0	1023	1024
Total	Ports: 1024				

#### Related Commands

ip access-list extended	Configures an extended ACL.
permit	Assigns a permit filter for IP packets.
permit tcp	Assigns a permit filter for TCP packets.

#### seq

Assign a sequence number to a deny or permit filter in an extended IP access list while creating the filter.

Syntax seq sequence-number {deny | permit} {ip-protocol-number | icmp | ip | tcp | udp} {source mask | any | host ip-address} {destination mask | any | host ip-address} [operator port [port]] [count [byte]] [dscp value] [order] [fragments]

Parameters		
i ulullotoro	sequence-number	Enter a number from 0 to 4294967290.
		Range: 1 to 65534
	deny	Enter the keyword <b>deny</b> to configure a filter to drop packets meeting this condition.
	permit	Enter the keyword <b>permit</b> to configure a filter to forward packets meeting this criteria.
	ip-protocol-number	Enter a number from 0 to 255 to filter based on the protocol identified in the IP protocol header.
	icmp	Enter the keyword icmp to configure an ICMP access list filter.

	ip	Enter the keyword ip to configure a generic IP access list. The keyword ip specifies that the access list will permit all IP protocols.
	tcp	Enter the keyword <b>tcp</b> to configure a TCP access list filter.
	udp	Enter the keyword <b>udp</b> to configure a UDP access list filter.
	source	Enter the IP address of the network or host from which the packets were sent.
	mask	Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.
	any	Enter the keyword <b>any</b> to specify that all routes are subject to the filter.
	host ip-address	Enter the keyword <b>host</b> followed by the IP address to specify a host IP address.
	operator	(OPTIONAL) Enter one of the following logical operands:
		• eq = equal to
		• <b>neq</b> = not equal to
		• $\mathbf{gt} = \mathbf{greater than}$
		• $It = less than$
		• range = inclusive range of ports (you must specify two ports for the <i>port</i> parameter.)
	port port	(OPTIONAL) Enter the application layer port number. Enter two port numbers if using the range logical operand.
		Range: 0 to 65535
		The following list includes some common TCP port numbers:
		• 23 = Telnet
		• 20 and 21 = FTP
		• $25 = \text{SMTP}$
		• $169 = \text{SNMP}$
	destination	Enter the IP address of the network or host to which the packets are sent.
	message-type	(OPTIONAL) Enter an ICMP message type, either with the type (and code, if necessary) numbers or with the name of the message type (ICMP message types are listed in Table 6-2).
		Range: 0 to 255 for ICMP type; 0 to 255 for ICMP code
	count	(OPTIONAL) Enter the keyword count to count packets processed by the filter.
	byte	(OPTIONAL) Enter the keyword byte to count bytes processed by the filter.
	dscp	(OPTIONAL) Enter the keyword dscp to match to the IP DSCP values.
	order	(OPTIONAL) Enter the keyword <b>order</b> to specify the QoS priority for the ACL entry.
		Range: 0-254 (where 0 is the highest priority and 254 is the lowest; lower order numbers have a higher priority)
		Default: If the order keyword is not used, the ACLs have the lowest order by default (255).
	fragments	Enter the keyword fragments to use ACLs to control packet fragments.
Defaults	Not configured	
Command Modes	CONFIGURATION-	IP ACCESS-LIST-EXTENDED
Command		

Command History

Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

Usage	The order op	tion is relevant in the context of the Policy QoS feature only. The following applies:
Information	<ul> <li>The order framework</li> <li>The order</li> <li>If seque accordin</li> <li>If the set</li> </ul>	sequence-number is applicable only in an ACL group. er option works across ACL groups that have been applied on an interface via QoS policy ork. er option takes precedence over the seq sequence-number. ence-number is <b>not</b> configured, then rules with the same order value are ordered g to their configuration order. equence-number is configured, then the sequence-number is used as a tie breaker for the the same order.
Related		nce-number is configured, then the sequence-number is used as a tie breaker for rules
Commands	permit	Configures a filter to forward packets.

### **Common MAC Access List Commands**

The following commands are available within both MAC ACL modes (Standard and Extended) and do not have mode-specific options.

The MXL 10/40GbE Switch IO Module platform supports both ingress and egress MAC ACLs.

The following commands allow you to clear, display and assign MAC ACL configurations.

- clear counters mac access-group
- mac access-group
- show mac access-lists
- show mac accounting access-list

### clear counters mac access-group

Clear counters for all or a specific MAC ACL.

Syntax	clear counters mac	access-group [mac-list-name]
Parameters	mac-list-name	(OPTIONAL) Enter the name of a configured MAC access list.
Command Modes	EXEC Privilege	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

### mac access-group

	Apply a MAC ACL to	o traffic entering or exiting an interface.
Syntax	mac access-group a	access-list-name {in [vlan vlan-range]   out}
Parameters	access-list-name	Enter the name of a configured MAC access list, up to 140 characters.
	vlan <i>vlan-range</i>	(OPTIONAL) Enter the keyword vlan followed a range of VLANs. Note that this option is available only with the in keyword option.
		Range: 1 to 4094, 1-2094 for ExaScale (can used IDs 1-4094)
	in	Enter the keyword in to configure the ACL to filter incoming traffic.
	out	Enter the keyword <b>OUt</b> to configure the ACL to filter outgoing traffic.
Defaults Command Modes	none INTERFACE	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information	You can assign one A	CL (standard or extended) to an interface.
Related Commands	mac access-list standar	d Configures a standard MAC ACL.
Commanus	mac access-list extended	ed Configures an extended MAC ACL.

### show mac access-lists

Displays all of the Layer 2 ACLs configured in the system, whether or not they are applied to an interface, and the count of matches/mismatches against each ACL entry.

Syntax show mac access-lists [access-list-name] [interface interface] [in | out]

```
Parameters
                         access-list-name
                                                       Enter the name of a configured MAC ACL, up to 140 characters.
                         interface interface
                                                       Enter the keyword interface followed by the one of the following keywords
                                                       and slot/port or number information:
                                                           For a Port Channel interface, enter the keyword port-channel followed
                                                           by a number:
                                                           Range: 1 to 128
                                                           For a 10-Gigabit Ethernet interface, enter the keyword
                                                           TenGigabitEthernet followed by the slot/port information.
                                                           For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE
                                                           followed by the slot/port information.
                         in | out
                                                       Identify whether ACL is applied on ingress or egress side.
Command Modes
                       EXEC Privilege
       Command
                         Version 8.3.16.1
                                                 Introduced on MXL 10/40GbE Switch IO Module
           History
```

### show mac accounting access-list

Display MAC access list configurations and counters (if configured).

**Parameters** access-list-name Enter the name of a configured MAC ACL, up to 140 characters. interface interface Enter the keyword interface followed by the one of the following keywords and slot/port or number information: For a Port Channel interface, enter the keyword port-channel followed by a number: Range: 1-128 For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information. For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE followed by the slot/port information. in | out Identify whether ACL is applied ay Ingress (in) or egress (out) side. **Command Modes** EXEC **EXEC** Privilege Command Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module History Example Figure 6-6. show mac accounting access-list Command Example FTOS#show mac accounting access-list mac-ext interface po Extended mac access-list mac-ext on TenGigabitEthernet 0/11 seq 5 permit host 00:00:00:00:00:11 host 00:00:00:00:00:19 count (393794576 packets) seq 10 deny host 00:00:00:00:00:21 host 00:00:00:00:00:29 count (89076777 packets) seq 15 denv host 00:00:00:00:00:31 host 00:00:00:00:00:39 count (0 packets) seq 20 deny host 00:00:00:00:00:41 host 00:00:00:00:00:49 count (0 packets) seq 25 permit any any count (0 packets) Extended mac access-list mac-ext on TenGigabitEthernet 0/12 seq 5 permit host 00:00:00:00:00:11 host 00:00:00:00:00:19 count (57589834 packets) deny host 00:00:00:00:00:21 host 00:00:00:00:00:29 count (393143077 seq 10 packets) 00:00:00:00:00:31 host 00:00:00:00:00:39 seq 15 deny host count (0 packets) deny host 00:00:00:00:00:41 host seq 20 00:00:00:00:00:49 count (0 packets) seq 25 permit any any count (0 packets) FTOS#

Usage The ACL hit counters in this command increment the counters for each matching rule, not just the first Information matching rule.

## **Standard MAC ACL Commands**

When an access-list is created without any rule and then applied to an interface, ACL behavior reflects implicit permit.

The MXL 10/40GbE Switch IO Module platform supports both ingress and egress MAC ACLs.

The following commands configure standard MAC ACLs:

- deny
- mac access-list standard
- permit
- seq

**Note:** See also Commands Common to all ACL Types and Common MAC Access List Commands.

## deny

Configure a filter to drop packets with a the MAC address specified.

deny {any | mac-source-address [mac-source-address-mask]} [count [byte]]

Syntax

To remove this filter, you have two choices:

- Use the no seq sequence-number command if you know the filter's sequence number.
- Use the no deny {any | mac-source-address mac-source-address-mask} command.

Parameters	any	Enter the keyword <b>any</b> to specify that a filter.	all traffic is subject to the
	mac-source-ad	Enter a MAC address in nn:nn:nn:nn:nn	n:nn format.
	mac-source-ad	ess-mask (OPTIONAL) Specify which bits in the no mask is specified, a mask of 00:00:0 other words, the filter allows only MAC	0:00:00:00 is applied (in
	count	(OPTIONAL) Enter the keyword COUR by the filter.	t to count packets processed
	byte	(OPTIONAL) Enter the keyword byte the filter.	to count bytes processed by
Defaults	Not enabled.		
Command Modes	CONFIGURATIO	-MAC ACCESS LIST-STANDARD	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Related	permit	Configures a MAC address filter to pass packets.	
Commands	* ·		

### mac access-list standard

Name a new or existing MAC access control list (MAC ACL) and enter the MAC ACCESS LIST mode to configure a standard MAC ACL. See Commands Common to all ACL Types and Common MAC Access List Commands.

Parameters	mac-list-name	Enter a text string as the name of the standard MAC access list (140 character maximum).
Defaults	Not configured	
mmand Modes	CONFIGURATION	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information	FTOS supports one in	ngress and one egress MAC ACL per interface.
		es allowed per ACL is hardware-dependent. For detailed specification on entrie fer to your switch documentation.
	The MXL Switch sup	pports both ingress and egress ACLs.
Example	Figure 6-7, mac	access-list standard Command Example

## permit

Configure a filter to forward packets from a specific source MAC address.

Syntax permit {any | mac-source-address [mac-source-address-mask] [count [byte]]

To remove this filter, you have two choices:

- Use the no seq sequence-number command if you know the filter's sequence number.
- Use the no permit {any | mac-source-address mac-source-address-mask} command.

Parameters	any	Enter the keyword <b>any</b> to forward all packets received with a MAC address.
	mac-source-address	Enter a MAC address in nn:nn:nn:nn:nn format.
	mac-source-address-mask	(OPTIONAL) Specify which bits in the MAC address must match. If no mask is specified, a mask of 00:00:00:00:00:00 is applied (in other words, the filter allows only MAC addresses that match).

	count	(OPTIONAL) Enter the keyword <b>count</b> to count packets processed by the filter.
	byte	(OPTIONAL) Enter the keyword <b>byte</b> to count bytes processed by the filter.
Defaults	Not configured.	
Command Modes	CONFIGURATIC	DN-MAC ACCESS LIST-STANDARD
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Related Commands	deny	Configures a MAC ACL filter to drop packets.
	seq	Configures a MAC ACL filter with a specified sequence number.

## seq

Assign a sequence number to a deny or permit filter in a MAC access list while creating the filter.

Syntax seq sequence-number {deny | permit} {any | mac-source-address [mac-source-address-mask]} [count [byte]]

#### Parameters

Parameters	sequence-number	Enter a number between 0 and 65535.		
	deny	Enter the keyword <b>deny</b> to configure a filter to drop packets meeting this condition.		
	permit	Enter the keyword <b>permit</b> to configure a filter to forward packets meeting this criteria.		
	any	Enter the keyword any to filter all packets.		
	mac-source-address	Enter a MAC address in nn:nn:nn:nn:nn format.		
	mac-source-address-mask	(OPTIONAL) Specify which bits in the MAC address must match. If no mask is specified, a mask of 00:00:00:00:00:00 is applied (in other words, the filter allows only MAC addresses that match).		
	count	(OPTIONAL) Enter the keyword <b>count</b> to count packets processed by the filter.		
	byte	(OPTIONAL) Enter the keyword <b>byte</b> to count bytes processed by the filter.		
Defaults	Not configured.			
Command Modes	CONFIGURATION-MAC ACCES	S LIST-STANDARD		
Command History	Version 8.3.16.1 Introduced of	on MXL 10/40GbE Switch IO Module		

Related Commands

## **Extended MAC ACL Commands**

When an access-list is created without any rule and then applied to an interface, ACL behavior reflects implicit permit.

The MXL 10/40GbE Switch IO Module platform supports ingress and egress MAC ACLs.

The following commands configure Extended MAC ACLs.

- deny
- mac access-list extended
- permit
- seq
- U

**Note:** See also Commands Common to all ACL Types and Common MAC Access List Commands.

## deny

Configure a filter to drop packets that match the filter criteria.

Syntax deny {any | host mac-address | mac-source-address mac-source-address-mask} {any | host mac-address | mac-destination-address mac-destination-address-mask} [ethertype-operator] [count [byte]]

To remove this filter, you have two choices:

- Use the no seq sequence-number command if you know the filter's sequence number.
- Use the no deny {any | host mac-address | mac-source-address mac-source-address-mask} {any | host mac-address | mac-destination-address mac-destination-address-mask} command.

#### Parameters

any	Enter the keyword any to drop all packets.
host mac-address	Enter the keyword <b>host</b> followed by a MAC address to drop packets with that host address.
mac-source-address	Enter the source MAC address in nn:nn:nn:nn:nn format.
mac-source-address-mask	Specify which bits in the MAC address must match.
	The MAC ACL supports an inverse mask, therefore, a mask of ff:ff:ff:ff:ff:ff allows entries that do not match and a mask of 00:00:00:00:00:00 only allows entries that match exactly.
mac-destination-address	Enter the destination MAC address and mask in nn:nn:nn:nn:nn format.
mac-destination-address-mask	Specify which bits in the MAC address must match. The MAC ACL supports an inverse mask, therefore, a mask of ff:ff:ff:ff:ff allows entries that do not match and a mask of 00:00:00:00:00:00 only allows entries that match exactly.

<ul> <li>ethertype operator</li> <li>(OPTIONAL) To filter based on protocol type, enter one of the following Ethertypes:</li> <li>ev2 - is the Ethernet II frame format.</li> </ul>
• IIc - is the IEEE 802.3 frame format.
• snap - is the IEEE 802.3 SNAP frame format.
count       (OPTIONAL) Enter the keyword count to count packets         processed by the filter.
byte (OPTIONAL) Enter the keyword byte to count bytes processed by the filter.
Defaults Not configured.
Command Modes CONFIGURATION-MAC ACCESS LIST-EXTENDED
Command History Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Related       permit       Configures a filter to forward based on MAC addresses.
seq Configures a filter with specific sequence numbers.

## mac access-list extended

Name a new or existing extended MAC access control list (extended MAC ACL).

Syntax	Syntax mac access-list extended access-list-name		
Parameters	<i>access-list-name</i> Enter a text string as the MAC access list name, up to 140 characters.	-	
Defaults	No default configuration		
Command Modes	CONFIGURATION		
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module	-	
Usage Information	The number of entries allowed per ACL is hardware-dependent. For detailed specification on entries allowed per ACL, refer to your switch documentation.

## permit

Configure a filter to pass packets matching the criteria specified.

Syntax permit {any | host mac-address | mac-source-address mac-source-address-mask} {any | host mac-address | mac-destination-address mac-destination-address-mask} [ethertype operator] [count [byte]]

To remove this filter, you have two choices:

- Use the no seq sequence-number command if you know the filter's sequence number.
- Use the no permit {any | host mac-address | mac-source-address mac-source-address-mask} {any | mac-destination-address mac-destination-address-mask} command.

#### Parameters

Enter the keyword any to forward all packets.
Enter the keyword <b>host</b> followed by a MAC address to forward packets with that host address.
Enter the source MAC address in nn:nn:nn:nn:nn format.
Specify which bits in the MAC address must be matched. The MAC ACL supports an inverse mask, therefore, a mask or ff:ff:ff:ff:ff allows entries that do not match and a mask of 00:00:00:00:00:00 only allows entries that match exactly.
Enter the destination MAC address and mask in nn:nn:nn:nn:nn format.
Specify which bits in the MAC address must be matched. The MAC ACL supports an inverse mask, therefore, a mask o ff:ff:ff:ff:ff:ff allows entries that do not match and a mask of 00:00:00:00:00:00 only allows entries that match exactly.

	ethertype operator	(OPTIONAL) To filter based on protocol type, enter one of the following Ethertypes:	
		• ev2 - is the Ethernet II frame format.	
		• IIc - is the IEEE 802.3 frame format.	
		• snap - is the IEEE 802.3 SNAP frame format.	
	count	(OPTIONAL) Enter the keyword <b>count</b> to count packets processed by the filter.	
	byte	(OPTIONAL) Enter the keyword <b>byte</b> to count bytes processed by the filter.	
Defaults	Not configured.

### seq

Configure a filter with a specific sequence number.

Syntax seq sequence-number {deny | permit} {any | host mac-address | mac-source-address mac-source-address-mask} {any | host mac-address | mac-destination-address mac-destination-address-mask} [ethertype operator] [count [byte]]

#### Parameters

sequence-number	Enter a number as the filter sequence number.
	Range: zero (0) to 65535.
deny	Enter the keyword <b>deny</b> to drop any traffic matching this filter.
permit	Enter the keyword permit to forward any traffic matching this filter.
any	Enter the keyword <b>any</b> to filter all packets.
host mac-address	Enter the keyword <b>host</b> followed by a MAC address to filter packets with that host address.
mac-source-address	Enter the source MAC address in nn:nn:nn:nn:nn format.
	The MAC ACL supports an inverse mask, therefore, a mask of ff:ff:ff:ff:ff:ff:ff allows entries that do not match and a mask of 00:00:00:00:00:00:00 only allows entries that match exactly.
mac-source-address-mask	Specify which bits in the MAC address must be matched.
mac-destination-address	Enter the destination MAC address and mask in nn:nn:nn:nn:nn format.
mac-destination-address-mask	Specify which bits in the MAC address must be matched.
	The MAC ACL supports an inverse mask, therefore, a mask of ff:ff:ff:ff:ff:ff:ff allows entries that do not match and a mask of 00:00:00:00:00:00:00 only allows entries that match exactly.

	ethertype operat	or	(OPTIONAL) To filter based on protocol type, enter one of the following Ethertypes:
			• ev2 - is the Ethernet II frame format.
			• llc - is the IEEE 802.3 frame format.
			• snap - is the IEEE 802.3 SNAP frame format.
	count		(OPTIONAL) Enter the keyword <b>count</b> to count packets processed by the filter.
	byte		(OPTIONAL) Enter the keyword <b>byte</b> to count bytes processed by the filter.

## **IP Prefix List Commands**

When an access-list is created without any rule and then applied to an interface, ACL behavior reflects implicit permit.

Use these commands to configure or enable IP prefix lists.

- clear ip prefix-list
- deny
- ip prefix-list
- permit
- seq
- show config
- show ip prefix-list detail
- show ip prefix-list summary

## clear ip prefix-list

Reset the number of times traffic met the conditions ("hit" counters) of the configured prefix lists.

Syntax	clear ip prefix-lis	st [prefix-name]
Parameters	prefix-name	(OPTIONAL) Enter the name of the configured prefix list to clear only counters for that prefix list, up to 140 characters long.

Commond		
Command History	Version 8.3.16.1 In	troduced on MXL 10/40GbE Switch IO Module
Default	Clears "hit" counters for a	all prefix lists unless a prefix list is specified.
Related Commands	ip prefix-list Co	onfigures a prefix list.
deny	Configure a filter to drop	packets meeting the criteria specified.
Syntax	deny ip-prefix [ge min-pr	refix-length] [le max-prefix-length]
Parameters	ip-prefix	Specify an IP prefix in the network/length format. For example, 35.0.0.0/8 means match the first 8 bits of address 35.0.0.0.
	ge min-prefix-length	(OPTIONAL) Enter the keyword <b>ge</b> followed by the minimum prefix length, which is a number from zero (0) to 32.
	le max-prefix-length	(OPTIONAL) Enter the keyword <b>le</b> followed by the maximum prefix length, which is a number from zero (0) to 32.
Defaults	Not configured.	
Command Modes	PREFIX-LIST	
Command History	Version 8.3.16.1 In	troduced on MXL 10/40GbE Switch IO Module
Usage Information	•	s filter are automatically assigned starting at sequence number 5.
	If you do not use the optic	ons ge or le, only packets with an exact match to the prefix are filtered.
Related Commands	permit Config	ures a filter to pass packets.

## ip prefix-list

seq

Enter PREFIX-LIST mode and configure a prefix list.

Syntax	ip prefix-list pref	ïx-name
Parameters	prefix-name	Enter a string up to 16 characters long as the name of the prefix list, up to 140 characters long.
Command Modes	CONFIGURATIO	DN
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

Configures a drop or permit filter with a specified sequence number.

Usage Prefix lists redistribute OSPF and RIP routes meeting specific criteria. For related RIP commands, refer to Chapter 26, Routing Information Protocol (RIP). For related OSPF commands supported, refer to *FTOS Command Line Reference Guide* Chapter 21, Open Shortest Path First (OSPFv2).

Related Commands	show ip route list	Displays IP routes in an IP prefix list.
	show ip prefix-list summary	Displays a summary of the configured prefix lists.

### permit

Configure a filter that passes packets meeting the criteria specified.

**Syntax** permit *ip-prefix* [ge *min-prefix-length*] [le *max-prefix-length*]

Parameters	ip-prefix	Specify an IP prefix in the network/length format. For example, 35.0.0.0/8 means match the first 8 bits of address 35.0.0.0.
	ge min-prefix-length	(OPTIONAL) Enter the keyword <b>ge</b> followed by the minimum prefix length, which is a number from zero (0) to 32.
	le max-prefix-length	(OPTIONAL) Enter the keyword le followed by the maximum prefix length, which is a number from zero (0) to 32.
Command Modes	PREFIX-LIST	
Command History	Version 8.3.16.1 Introdu	aced on MXL 10/40GbE Switch IO Module
		filter are automatically assigned starting at sequence number 5.
History Usage	Sequence numbers for this	
History Usage	Sequence numbers for this If you do not use the option	filter are automatically assigned starting at sequence number 5.

#### seq

**Parameters** 

Assign a sequence number to a deny or permit filter in a prefix list while configuring the filter.

**Syntax** seq sequence-number {deny | permit} {any} | [*ip-prefix /nn* {ge *min-prefix-length*} {le *max-prefix-length*}] | [bitmask *number*]

Enter a number.
Range: 1 to 4294967294.
Enter the keyword <b>deny</b> to configure a filter to drop packets meeting this condition.
Enter the keyword <b>permit</b> to configure a filter to forward packets meeting this condition.
(OPTIONAL) Enter the keyword any to match any packets.
(OPTIONAL) Specify an IP prefix in the network/length format. For example, 35.0.0.0/8 means match the first 8 bits of address 35.0.0.0.

	ge min-prefix-length	(OPTIONAL) Enter the keyword <b>ge</b> followed by the minimum prefix length, which is a number from zero (0) to 32.
	le max-prefix-length	(OPTIONAL) Enter the keyword le followed by the maximum prefix length, which is a number from zero (0) to 32.
	bitmask <i>number</i>	Enter the keyword <b>bitmask</b> followed by a bit mask number in dotted decimal format.
Defaults	Not configured.	
ommand Modes	PREFIX-LIST	
Command History	Version 8.3.16.1 Intro	oduced on MXL 10/40GbE Switch IO Module
Usage Information	If you do not use the opti	ions ge or le, only packets with an exact match to the prefix are filtered.
Related	deny Confi	gures a filter to drop packets.
Commands	com	Sares a miter to anop paeners.

## show config

Display the current PREFIX-LIST configurations.
---

Syntax	show config	
Command Modes	PREFIX-LIST	
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module	
Example	<pre>Figure 6-9. show config Command Example  FTOS(conf-nprefixl)#show config  ip prefix-list snickers FTOS(conf-nprefixl)#</pre>	

## show ip prefix-list detail

Display details of the configured prefix lists.

Syntax	show ip prefix-list	t detail [ <i>prefix-name</i> ]
Parameters	prefix-name	(OPTIONAL) Enter a text string as the name of the prefix list, up to 140 characters.
Command Modes	EXEC	
	EXEC Privilege	

Example	Figure 6-10. show ip prefix-list detail Command Example	
	<pre>FTOS#show ip prefix-list detail Prefix-list with the last deletion/insertion: filter_ospf ip prefix-list filter_in: count: 3, range entries: 3, sequences: 5 - 10     seq 5 deny 1.102.0.0/16 le 32 (hit count: 0)     seq 6 deny 2.1.0.0/16 ge 23 (hit count: 0)     seq 10 permit 0.0.0.0/0 le 32 (hit count: 0)     ip prefix-list filter_ospf:     count: 4, range entries: 1, sequences: 5 - 10     seq 5 deny 100.100.1.0/24 (hit count: 5)     seq 6 deny 200.200.1.0/24 (hit count: 1)     seq 7 deny 200.200.2.0/24 (hit count: 1)     seq 10 permit 0.0.0.0/0 le 32 (hit count: 132) FTOS#</pre>	

# show ip prefix-list summary Display a summary of the configured prefix lists.

Syntax	show ip prefix-lis	t summary [prefix-name]		
Parameters	prefix-name	(OPTIONAL) Enter a text st	ring as the name of the prefix list, up	p to 140 characters long.
Command Modes	EXEC			
	EXEC Privilege			
Command History	Version 8.3.16.1	Introduced on MXL 10,	/40GbE Switch IO Module

	ip prefix-lis			
	count: 1, rai FTOS#	ge entries: 1, sequence	2s: 5 - 5	)

## **Route Map Commands**

When an access-list is created without any rule and then applied to an interface, ACL behavior reflects implicit permit.

The following commands allow you to configure route maps and their redistribution criteria.

- continue
- description
- match interface
- match ip address
- match ip next-hop
- match ip route-source
- match metric
- match route-type
- match tag
- route-map
- set automatic-tag
- set metric
- set metric-type
- set tag
- show config
- show route-map

## continue

Configure a route-map to go to a route-map entry with a higher sequence number.

ameters	sequence-number	(OPTIONAL) Enter the route map sequence number.
		Range: 1 - 65535
		Default: no sequence number
Defaults	Not Configured	
I Modes	ROUTE-MAP	
ommand History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

The continue feature allows movement from one route-map entry to a specific route-map entry (the sequence number). If you do not specify the sequence number, the continue feature simply moves to the next sequence number (also known as an implied continue). If a match clause exists, the continue feature executes only after a successful match occurs. If there are no successful matches, continue is ignored.

#### Match clause with Continue clause

The continue feature can exist without a match clause. A continue clause without a match clause executes and jumps to the specified route-map entry.

With a match clause and a continue clause, the match clause executes first and the continue clause next in a specified route map entry. The continue clause launches only after a successful match. The behavior is:

- A successful match with a continue clause, the route map executes the set clauses and then goes to the specified route map entry upon execution of the continue clause.
- If the next route map entry contains a continue clause, the route map executes the continue clause if a successful match occurs.
- If the next route map entry does not contain a continue clause, the route map evaluates normally. If a match does not occur, the route map does not continue and falls through to the next sequence number, if one exists.

#### Set clause with continue clause

If the route-map entry contains sets with the continue clause, set actions are performed first followed by the continue clause jump to the specified route map entry.

- If a set action occurs in the first route map entry and the same set action occurs with a different value in a subsequent route map entry, the last set of actions overrides the previous set of actions with the same set command.
- If you configure the set community additive and set as-path prepend options, the communities and AS numbers are prepended.

Related Commands	set metric	Specifies a COMMUNITY attribute
	set automatic-tag	Configures a filter to modify the AS path

## description

	Add a description	to this route map.
Syntax	description { desc	cription}
Parameters	description	Enter a description to identify the route map (80 characters maximum).
Defaults	none	
Command Modes	ROUTE-MAP	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Related Commands	route-map	Enables a route map.

## match interface

Configure a filter to match routes whose next hop is on the interface specified.

Syntax	match interfa	ce interface
	To remove a n	natch, use the no match interface interface command.
Parameters	interface	Enter the following keywords and slot/port or number information:
		• For the loopback interface, enter the keyword <b>loopback</b> followed by a number from zero (0) to 16383.
		• For a Port Channel interface, enter the keyword <b>port-channel</b> followed by a number: Range: 1-128
		• For a Ten Gigabit Ethernet interface, enter the keyword <b>TenGigabitEthernet</b> followed by the slot/port information.
Defaults Command Modes	Not configure ROUTE-MAF	
Command History	Version 8.3.16	5.1 Introduced on MXL 10/40GbE Switch IO Module
Related Commands	match ip addr	ess Redistributes routes that match an IP address.
Commands	match ip next	-hop Redistributes routes that match the next-hop IP address.
	match ip route	e-source Redistributes routes that match routes advertised by other routers.
	match metric	Redistributes routes that match a specific metric.
	match route-ty	ype Redistributes routes that match a route type.
	match tag	Redistributes routes that match a specific tag.

## match ip address

Configure a filter to match routes based on IP addresses specified in an access list.

Syntax	match ip address pre	fix-list-name
Parameters	prefix-list-name	Enter the name of configured prefix list, up to 140 characters.
Defaults	Not configured.	
Command Modes	ROUTE-MAP	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Related Commands	match interface	Redistributes routes that match the next-hop interface.
Commanus	match ip next-hop	Redistributes routes that match the next-hop IP address.
	match ip route-source	Redistributes routes that match routes advertised by other routers.

match metric Redistributes routes that match a specific metric.	
match route-type	Redistributes routes that match a route type.
match tag	Redistributes routes that match a specific tag.

## match ip next-hop

Configure a filter to match routes based on the next-hop IP addresses specified in an IP access list or IP prefix list.

**Syntax** match ip next-hop { *access-list* | prefix-list *prefix-list-name* }

Parameters		
	access-list-name	Enter the name of a configured IP access list, up to 140 characters.
	prefix-list prefix-list-nam	The Enter the keywords prefix-list followed by the name of configured prefix list.
Defaults	Not configured.	
ommand Modes	ROUTE-MAP	
Command History	Version 8.3.16.1 In	atroduced on MXL 10/40GbE Switch IO Module
Related Commands	match interface	Redistributes routes that match the next-hop interface.
Commando	match ip address	Redistributes routes that match an IP address.
	match ip route-source	Redistributes routes that match routes advertised by other routers.
	match metric	Redistributes routes that match a specific metric.
	match route-type	Redistributes routes that match a route type.
	match tag	Redistributes routes that match a specific tag.

### match ip route-source

Configure a filter to match routes based on the routes advertised by routers specified in IP access lists or IP prefix lists.

**Syntax** match ip route-source { *access-list* | prefix-list *prefix-list-name* }

Parameters	access-list-name	Enter the name of a configured IP access list, up to 140 characters.
	prefix-list prefix-list-name	Enter the keywords <b>prefix-list</b> followed by the name of configured prefix list, up 10 140 characters.
Defaults	Not configured.	
Command Modes	ROUTE-MAP	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

www.dell.com | support.dell.com

#### Related Commands

match interface	Redistributes routes that match the next-hop interface.
match ip address	Redistributes routes that match an IP address.
match ip next-hop	Redistributes routes that match the next-hop IP address.
match metric	Redistributes routes that match a specific metric.
match route-type	Redistributes routes that match a route type.
match tag	Redistributes routes that match a specific tag.

## match metric

Configure a filter to match on a specified value.

Syntax	match metric metri	ic-value
Parameters		Enter a value to match. Range: zero (0) to 4294967295.
Defaults	Not configured.	
Command Modes	ROUTE-MAP	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Related Commands	match interface	Redistributes routes that match the next-hop interface.
	match ip address	Redistributes routes that match an IP address.
	match ip next-hop	Redistributes routes that match the next-hop IP address.
	match ip route-source	Redistributes routes that match routes advertised by other routers.
	match route-type	Redistributes routes that match a route type.
	match tag	Redistributes routes that match a specific tag.

## match route-type

Configure a filter to match routes based on the how the route is defined.

Parameters	external [type-1  type-2]	Enter the keyword <b>external</b> followed by either <b>type-1</b> or <b>type-2</b> to match only on OSPF Type 1 routes or OSPF Type 2 routes.
	internal	Enter the keyword <b>internal</b> to match only on routes generated within OSPF areas.
	local	Enter the keyword <b>local</b> to match only on routes generated within the switch.
Defaults	Not configured.	
mmand Modes	ROUTE-MAP	

#### Command History

Version 8.3.16.1

1 Introduced on MXL 10/40GbE Switch IO Module

#### Related Commands

match interface	Redistributes routes that match the next-hop interface.
match ip address	Redistributes routes that match an IP address.
match ip next-hop	Redistributes routes that match the next-hop IP address.
match ip route-source	Redistributes routes that match routes advertised by other routers.
match metric	Redistributes routes that match a specific metric.
match tag	Redistributes routes that match a tag.

## match tag

Configure a filter to redistribute only routes that match a specified tag value.

Syntax	match tag tag-value	
Parameters	0	Enter a value as the tag on which to match. Range: zero (0) to 4294967295.
Defaults	Not configured	
Command Modes	ROUTE-MAP	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Related Commands	match interface match ip address	Redistributes routes that match the next-hop interface. Redistributes routes that match an IP address.
	match ip next-hop	Redistributes routes that match the next-hop IP address.
	match ip route-source	Redistributes routes that match routes advertised by other routers.
	match metric	Redistributes routes that match a specific metric.
	match route-type	Redistributes routes that match a route type.

### route-map

Enable a route map statement and configure its action and sequence number. This command also places you in ROUTE-MAP mode.

Syntax route-map map-name [permit | deny] [sequence-number]

Parameters

5	map-name	Enter a text string of up to 140 characters to name the route map for easy identification.
	permit	(OPTIONAL) Enter the keyword permit to set the route map default as permit.
		If no keyword is specified, the default is permit.

	deny	(OPTIONAL) Enter the keyword <b>deny</b> to set the route map default as deny.
	sequence-number	(OPTIONAL) Enter a number to identify the route map for editing and sequencing with other route maps. You are prompted for a sequence number if there are multiple instances of the route map.
		Range: 1 to 65535.
Defaults	Not configured	
	If no keyword (permit o	or deny) is defined for the route map, the permit action is the default.
mmand Modes	CONFIGURATION

History	1	map Command Example
History	Figure 6-12. route-ma FTOS(conf)#route-ma FTOS(conf-route-map Use caution when you d	map Command Example

Configure a filter to automatically compute the tag value of the route.

Syntax	set automatic-tag		
	To return to the def	ault, enter no set automatic-tag.	
Defaults	Not configured.		
Command Modes	ROUTE-MAP		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Related Commands	set metric	Specifies the metric value assigned to redistributed routes. Specifies the metric type assigned to redistributed routes.	
	set tag	Specifies the tag assigned to redistributed routes.	

## set metric

Configure a filter to assign a new metric to redistributed routes.

Syntax	set metric [+   -] m	netric-value
	To delete a setting,	use the no set metric command.
Parameters		
	+	(OPTIONAL) Enter + to add a metric-value to the redistributed routes.
	-	(OPTIONAL) Enter - to subtract a metric-value from the redistributed routes.
	metric-value	Enter a number as the new metric value.
		Range: zero (0) to 4294967295
Defaults	Not configured	
Command Modes	ROUTE-MAP	
Command		
History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
-		
Related Commands	set automatic-tag	Computes the tag value of the route.
cominando	set metric-type	Specifies the route type assigned to redistributed routes.
	set tag	Specifies the tag assigned to redistributed routes.

## set metric-type

Configure a filter to assign a new route type for routes redistributed to OSPF.

Syntax	set metric-type {ii	nternal   external   type-1   type-2}
Parameters	internal	Enter the keyword internal to assign the Interior Gateway Protocol metric of the next hop as the route's BGP MULTI_EXIT_DES (MED) value.
	external	Enter the keyword external to assign the IS-IS external metric.
	type-1	Enter the keyword type-1 to assign the OSPF Type 1 metric.
	type-2	Enter the keyword <b>type-2</b> to assign the OSPF Type 2 metric.
Defaults	Not configured.	
Command Modes	ROUTE-MAP	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Related Commands	set automatic-tag	Computes the tag value of the route.
	set metric	Specifies the metric value assigned to redistributed routes.
	set tag	Specifies the tag assigned to redistributed routes.

## set tag

Configure a filter to specify a tag for redistributed routes.

Syntax	set tag tag-value	
Parameters	tag-value	Enter a number as the tag.
		Range: zero (0) to 4294967295.
Defaults	Not configured	
Command Modes	ROUTE-MAP	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Related Commands	set automatic-tag	Computes the tag value of the route.
	set metric	Specifies the metric value assigned to redistributed routes.
	set metric-type	Specifies the route type assigned to redistributed routes.

## show config

Display the current route map configuration.

Syntax	show config	
Command Modes	ROUTE-MAP	
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module	
Example	Figure 6-13. show config Command Example	
	<pre>{ FTOS(conf-route-map)#show config  !  route-map hopper permit 10  FTOS(conf-route-map)#</pre>	

## show route-map

Display the current route map configurations.

Syntax	show route-map [ <i>map-name</i> ]		
Parameters	map-name	(OPTIONAL) Enter the name of a configured route map, up to 140 characters.	
Command Modes	EXEC		
	EXEC Privilege		
Command			
History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	

#### Example Figure 6-14. show route-map Command Example

```

## **Bare Metal Provisioning**

### **Overview**

Bare metal provisioning (BMP) or jumpstarting improves accessibility to the MXL 10/40GbE Switch IO Module. Bare metal provisioning performs auto configuration using a configuration file and an approved version of the Dell Force10 operating system (FTOS) from a network source. Bare metal provisioning not only allows you to configure a stack with a minimum of effort, but it is also useful for quick configuration of a stand alone system.

Bare metal provisioning eases configuration in the following key areas:

- Obtaining an IP address, running the configuration, and boot image information from a dynamic host configuration protocol (DHCP) server.
- Allowing access to the system through an Ethernet management port and data ports with or without DHCP-based dynamic IP address configuration of the user device. This does not stop BMP.
- Booting up in Layer 3 mode with interfaces already in No Shutdown mode. Only the management mode will be in No Shutdown mode and have ip address dhcp enabled, Front end ports are in the Shut mode. You can configure the username root password if the configuration file is not received.
- **Note:** The MXL 10/40GbE Switch IO Module supports BMP on the management ports and front end ports. BMP is supported on the 10GbE, 40GbE, and management interfaces.

### Commands

- reload-type
- show reload-type
- show boot jumpstart

## reload-type

Reload the system using the specified start-up mode.

Syntax reload-type [normal | jump-start auto-save [enable | disable] dhcp-timeout {minutes} config-download [enable | disable]]

mage and and m a
onse before
es to wait
higher.
the DHCP
n file.
_

## show reload-type

Display the reload type currently configured on the system.

Syntax	show reload-type	
Command Modes	EXEC Privilege	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

## show boot jumpstart

Display the jumpstart status at any instant.

Syntax show boot jumpstart

Command Modes EXEC Privilege

Command History

Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

stop jump-	Start Cancel the jump-start reload process.
Syntax	stop jump-start
Command Modes	EXEC Privilege
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Usage Information	This command stops the jump-start process while the reload is in progress. However, if the system is downloading an FTOS image or configuration file, the process is stopped AFTER the DHCP release is sent.

# **Content Addressable Memory (CAM)**

### **Overview**

**Warning:** If you are using these features for the first time, contact Dell Force10 Technical Assistance Center (TAC) for guidance. For information on contacting Dell Force10 TAC, visit the Dell Force10 website at www.force10networks.com/support

### **CAM Profile Commands**

The content addressable memory (CAM) profiling feature allows you to partition the CAM to best suit your application. For example:

- Configure more Layer 2 forwarding information base (FIB) entries when the system is deployed as a switch.
- Configure more Layer 3 FIB entries when the system is deployed as a router.
- Configure more access control list (ACLs).
- Optimize the virtual local area network (VLAN) ACL group feature, which permits group VLANs for IP egress ACLs.

### **Important Points to Remember**

- The Dell Force10 operating software (FTOS) versions 7.8.1.0 and later support CAM allocations on the MXL 10/40GbE Switch IO Module.
- The CAM configuration is applied to entire system when you use CONFIGURATION mode commands. You must save the running-configuration to affect the change.
- When budgeting your CAM allocations for ACLs and quality of service (QoS) configurations, remember that ACL and QoS rules might consume more than one CAM entry depending on complexity. For example, transmission control protocol (TCP) and user datagram protocol (UDP) rules with port range options might require more than one CAM entry.
- You MUST save your changes and reboot the system for CAM profiling or allocations to take effect.

The CAM Profiling commands are:

- cam-acl (Configuration)
- cam-optimization
- show cam-acl
- show cam-acl-egress

### cam-acl (Configuration)

Select the default CAM allocation settings or reconfigure new CAM allocation for Layer 2, IPv4 and IPv6 ACLs, Layer 2 and Layer 3 (IPv4) QoS, Layer 2 Protocol Tunneling (L2PT), IP and MAC source address validation for DHCP, Ethernet Connectivity Fault Management (CFM) ACLs, and Policy-based Routing (PBR).

Syntax cam-acl {default | l2acl number ipv4acl number ipv6acl number ipv4qos number l2qos number l2pt number ipmacacl number [vman-qos | vman-qos-dual- number | vman-qos-dual-fp number] ipv4pbr number} ecfmacl number fcoeacl number iscsioptacl number

Parameters			
Falailleteis	default	Use the default CAM profile settings, and set the CAM as follows.	
		• L3 ACL (ipv4acl): 2	
		• L2 ACL(l2acl): 2	
		• IPv6 L3 ACL(ipv6Acl):0	
		• L3 QoS (ipv4qos): 2	
		• L2 QOS(L2Qos): 1	
		• L2PT (L2PT): 0	
		• MAC ACL (IpMacAcl): 0	
		• VmanDualQos: 0	
		• EcfmAcl: 0	
		• FcoeAcl: 4	
		• iscsiOptAcl: 2	
	l2acl number ipv4acl number	Allocate space to each CAM region.	
	ipv6acl <i>number</i> , ipv4qos <i>number</i>	Enter the CAM profile name followed by the amount of CAM	
	l2qos <i>number</i> ,	space to be allotted.	
	l2pt number ipmacacl number	The total space allocated must equal 13.	
	ecfmacl <i>number</i> [vman-qos	The range for ipv4acl is 1 to 4.	
	vmanqos-dual <i>number</i>   vman-qos-dual-fp <i>number</i> ]	The ipv6acl range must be a factor of 2.	
	ipv4pbr <i>number</i>	The vman-qos-dual-fp <i>number</i> must be entered as a multiple of 4.	
Command Modes	CONFIGURATION		
Command History	Version 8.3.16.1 Introduced on MX	XL 10/40GbE Switch IO Module	
Usage Information	You must save the new CAM settings the system for the new settings to take	to the startup-config (write-mem or copy run start) then reload e effect.	
	The total amount of space allowed is 16 FP Blocks. System flow requires three blocks and these canno be reallocated. The ipv4acl profile range is 1-4.		
When configuring space for IPv6 ACLs, the total number of Blocks must equal 13.			
	On the MXL 10/40GbE Switch IO Module, there can be <i>only one</i> odd number of Blocks in the CLI configuration; the other Blocks must be in factors of two. For example, a CLI configuration of $5+4+2+1+1$ Blocks is not supported; a configuration of $6+4+2+1$ Blocks is supported.		
	Ranges for the CAM profiles are 1-10 allocation must be a factor of two (2,	0, except for the ipv6acl profile which is 0-10. The ipv6acl 4, 6, 8, 10).	

**Cam-optimization** Optimize CAM utilization for QoS Entries by minimizing require policy-map CAM space.

Syntax	cam-optimization [qos]	
Parameters	qos	Optimize CAM usage for Quality of Service (QoS)
Command Modes	CONFIGURATIO	N
Defaults	Disabled	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
<b>Usage</b> <b>Information</b> When this command is enabled, if a Policy Map containing classification rules (ACL and/o ip-precedence rules) is applied to more than one physical interface on the same port pipe, or copy of the policy will be written (only one FP entry is used).		s) is applied to more than one physical interface on the same port pipe, only a single
	interfaces	ACL may still require more that a single FP entry, regardless of the number of s. Refer to the <i>IP Access Control Lists, Prefix Lists, and Route-map in the FTOS ation Guide</i> for complete description.

### show cam-acl

Display the details of the CAM profiles on the chassis and all stack units.

Syntax	show cam-acl
Defaults	none
Command Modes	EXEC Privilege
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Usage Information	The display reflects the settings implemented with the cam-acl command.

# **Data Center Bridging**

### **Overview**

Data center bridging (DCB) refers to a set of IEEE Ethernet enhancements that provide data centers with a single, robust, converged network to support multiple traffic types, including LAN, server, and storage traffic.

The Dell Force10 operating software (FTOS) commands for data center bridging features include 802.1Qbb priority-based flow control (PFC), 802.1Qaz enhanced transmission selection (ETS), and the Data Center Bridging Exchange (DCBX) protocol. CLI commands for individual DCB features are as follows:

### **DCB** Command

• dcb-enable

### **PFC Commands**

- dcb-input
- dcb-policy input
- dcb-policy input stack-unit stack-ports all
- dcb stack-unit all pfc-buffering pfc-port-count pfc-queues
- dcb stack-unit pfc-buffering pfc-port pfc-queues
- description
- pfc link-delay
- pfc mode on
- pfc priority
- pfc no-drop queues
- show dcb
- show interface pfc
- show interface pfc statistics
- show qos priority-groups
- show stack-unit stack-ports pfc detail

### **ETS Commands**

- bandwidth-percentage
- dcb-output
- dcb-policy output
- dcb-policy output stack-unit stack-ports all
- description
- ets mode on
- priority-list
- priority-group
- priority-group qos-policy
- qos-policy-output ets
- scheduler
- set-pgid
- show interface ets
- show qos dcb-output
- show stack-unit stack-ports ets detail

### **DCBX Commands**

- advertise dcbx-appln-tlv
- advertise dcbx-tlv
- dcbx version
- dcbx port-role
- fcoe priority-bits
- iscsi priority-bits
- debug dcbx
- show interface dcbx detail

### advertise dcbx-appIn-tlv

On a DCBX port with a manual role, configure the application priority TLVs advertised on the interface to DCBX peers.

	Interface to DeDA		
Syntax	advertise dcbx-appln-tlv {fcoe   iscsi} To remove the application priority TLVs, use the no advertise dcbx-appln-tlv {fcoe   iscsi} command.		
Parameters	{fcoe   iscsi}	Enter the application priority TLVs, where:	
		• <b>fcoe</b> : enables the advertisement of FCoE in application priority TLVs.	
		• iscsi: enables the advertisement of iSCSI in application priority TLVs.	
Defaults	Application priority	TLVS are enabled to advertise FCoE and iSCSI.	
Command Modes	PROTOCOL LLDP		

Command History

Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

Usage To disable TLV transmission, use the no form of the command; for example, no advertise dcbx-appln-tlv iscsi.

### advertise dcbx-tlv

	On a DCBX port with a manual role, configure the PFC and ETS TLVs advertised to DCBX peers.
Syntax	advertise dcbx-tlv {ets-conf   ets-reco   pfc} [ets-conf   ets-reco   pfc] [ets-conf   ets-reco   pfc]
	To remove the advertised ETS TLVs, use the no advertise dcbx-tlv command.
Parameters	{ets-conf   ets-reco  Enter the PFC and ETS TLVs to be advertised, where:pfc}ets-conf: enables the advertisement of ETS configuration TLVs.ets-reco: enables the advertisement of ETS recommend TLVs.pfc: enables the advertisement of PFC TLVs.
Defaults	All PFC and ETS TLVs are advertised.
Command Modes	PROTOCOL LLDP
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Usage Information	You can configure the transmission of more than one TLV type at a time; for example: advertise dcbx-tlv ets-conf ets-reco.
	You can enable ETS recommend TLVs (ets-reco) only if ETS configuration TLVs (ets-conf) are enabled. To disable TLV transmission, use the no form of the command; for example, no advertise dcbx-tlv pfc ets-reco.
	DCBX requires that you enable LLDP to advertise DCBX TLVs to peers.
	Configure DCBX operation at the INTERFACE level on a switch or globally on the switch. To verify

Configure DCBX operation at the INTERFACE level on a switch or globally on the switch. To verify the DCBX configuration on a port, use the show interface dcbx detail command.

### bandwidth-percentage

Configure the bandwidth percentage allocated to priority traffic in port queues.

Syntax	bandwidth-percentage percentage		
Devenetere	To remove the configured bandwidth percentage, use the no bandwidth-percentage command.		
Parameters	percentage	(Optional) Enter the bandwidth percentage.	
		The percentage range is 1 to 100% in units of 1%.	

Defaults	none		
Command Modes	POLICY-MAP-OUT-ETS		
Command History	Version 8.3.16.1 Intro	duced on MXL 10/40GbE Switch IO Module	
Usage Information	By default, equal bandwidth is assigned to each port queue and each dot1p priority in a priority group. Use the <b>bandwidth-percentage</b> command to configure bandwidth amounts in associated dot1p queues. When specified bandwidth is assigned to some port queues and not to others, the remaining bandwidth (100% minus assigned bandwidth amount) is equally distributed to unassigned non-strict priority queues in the priority group. The sum of the allocated bandwidth to all queues in a priority group should be 100% of the bandwidth on the link.		
	ETS-assigned bandwidth	allocation applies only to data queues, not to control queues.	
	time for a priority group.	lwidth allocation and strict-queue scheduling is not supported at the same If both are configured, the configured bandwidth allocation will be ignored when you apply the output policy on an interface.	
	By default, equal bandwidth is assigned to each priority group in the ETS output policy applied to an egress port if no bandwidth allocation is configured. The sum of configured bandwidth allocation to dot1p priority traffic in all ETS priority groups must be 100%. You must allocate at least 1% of the total bandwidth to each priority group and queue. If bandwidth is assigned to some priority groups but not to others, the remaining bandwidth (100% minus assigned bandwidth amount) is equally distributed to non-strict-priority groups which have no configured scheduler.		
Related Commands	qos-policy-output ets	Create a QoS output policy.	
	scheduler	Schedule priority traffic in port queues.	

### dcb-enable

Enable DCB.
Syntax dcb enable
To disable DCB, use the no dcb enable command.
Defaults none
Command Modes CONFIGURATION
Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Usage
Information
DCB is not supported if link-level flow control is enabled on one or more interfaces.

### dcb-input

	Create a DCB input policy to apply pause or flow control for specified priorities using a configure delay time.		
Syntax	dcb-input policy-name		
	To delete the DCB input policy, use the no dcb-input command.		
Parameters	<i>policy-name</i> Maximum: 32 alphanumeric characters.		
Defaults	none		
Command Modes	CONFIGURATION		
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module		
Usage Information	As soon as you apply a DCB policy with PFC enabled on an interface, DCBX starts exchanging information with PFC-enabled peers. The IEEE802.1Qbb, CEE, and CIN versions of PFC TLV are supported. DCBX also validates PFC configurations received in TLVs from peer devices.		
	By applying a DCB input policy with PFC enabled, you enable PFC operation on ingress port traffic. To achieve complete lossless handling of traffic, you must also enable PFC on all DCB egress ports or configure the dot1p priority-queue assignment of PFC priorities to lossless queues (see pfc no-drop queues).		
	To remove a DCB input policy, including the PFC configuration it contains, enter the <b>no dcb-input</b> <i>policy-name</i> command in interface configuration mode.		
Related Commands	dcb-policy input     Apply the input policy with the PFC configuration.		
dcb-output			
	Create a DCB output policy to associate an ETS configuration with priority traffic.		

Syntax	dcb-output <i>policy-name</i> To remove the ETS output policy from an interface, use the no dcb-policy output command.		
Parameters	policy-name	Enter the DCB output policy name.	
		Maximum: 32 alphanumeric characters.	
Defaults	none		
Command Modes	CONFIGURATIO	Ν	
Command			
History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	

The ETS configuration associated with 802.1 priority traffic in a DCB output policy is used in DCBX negotiation with ETS peers.

Related Commands

dcb-policy output Apply the output policy.

### dcb-policy input

Apply the input policy with the PFC configuration to an ingress interface.

Syntax dcb-policy input *policy-name* 

To delete the input policy, use the no dcb-policy input command.

Parameters	<i>policy name</i> Enter the input policy name with the PFC configuration to an ingress interface.		
Defaults	none		
Command Modes	INTERFACE		
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module		
Usage	If you apply an input policy with PFC disabled (no pfc mode on):		
Information	• Link-level flow control can be enabled on the interface. To delete the input policy, you must first disable link-level flow control. PFC is then automatically enabled on the interface because an interface is by default PFC-enabled.		
	• PFC still allows you to configure lossless queues on a port to ensure no-drop handling of lossless traffic.		
	When you apply an input policy to an interface, an error message is displayed if:		
	<ul> <li>The PFC dot1p priorities result in more than two lossless port queues globally on the switch.</li> <li>Link-level flow control is already enabled. PFC and link-level flow control cannot be enabled at the same time on an interface.</li> </ul>		
	In a switch stack, you must configure all stacked ports with the same PFC configuration.		
	A DCB input policy for PFC applied to an interface may become invalid if the dot1p-queue mapping is reconfigured. This situation occurs when the new dot1p-queue assignment exceeds the maximum number (2) of lossless queues supported globally on the switch. In this case, all PFC configurations received from PFC-enabled peers are removed and re-synchronized with the peer devices.		
	Traffic may be interrupted when you reconfigure PFC no-drop priorities in an input policy or re-apply the policy to an interface.		
Related Commands	dcb-input Create a DCB input policy.		

### dcb-policy input stack-unit stack-ports all

Apply the specified DCB input policy on all ports of the switch stack or a single stacked switch.

#### **Syntax** dcb-policy input stack-unit {all | stack-unit-id} stack-ports all dcb-input-policy-name To remove all DCB input policies applied to the stacked ports and rest the PFC to its default settings, use the no dcb-policy input stack-unit all command. To remove only the DCB input policies applied to the specified switch, use the no dcb-policy input stack-unit command. **Parameters** stack-unit-id Enter the stack unit identification. dcb-input-policy-Enter the policy name for the DCB input policy. name Defaults None **Command Modes** CONFIGURATION Command History Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module Usage The dcb-policy input stack-unit all command overwrites any previous dcb-policy input stack-unit Information stack-unit-id configurations. Similarly, a dcb-policy input stack-unit stack-unit-id command overwrites any previous dcb-policy input stack-unit all configuration. Related dcb-policy output stack-unit Apply the specified DCB output policy. Commands stack-ports all

### dcb-policy output

Apply the output policy with the ETS configuration to an egress interface.

Syntax	dcb-policy output policy-name		
	To delete the output	ut policy, use the no dcb-policy output command.	
Parameters	policy name	Enter the output policy name.	
Defaults	none		
Command Modes	INTERFACE		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Usage Information		n ETS output policy to on interface, ETS-configured scheduling and bandwidth cedence over any configured settings in QoS output policies.	

	command. ETS is enabled by default with the default ETS configuration applied (all dot1p priorities in the same group with equal bandwidth allocation).
Related Commands	dcb-output Create a DCB output policy.
dcb-policy	Output stack-unit stack-ports all Apply the specified DCB output policy on all ports of the switch stack or a single stacked switch.
Syntax	dcb-policy output stack-unit {all   stack-unit-id} stack-ports all dcb-output-policy-name
	To remove all DCB input policies applied to the stacked ports, use the no dcb-policy output stack-unit all command.
	To remove only the DCB input policies applied to the specified switch, use the no dcb-policy output stack-unit command.
Parameters	<i>stack-unit-id</i> Enter the stack unit identification.
	dcb-output-policy- name     Enter the policy name for the DCB output policy.
Defaults	none
Command Modes	CONFIGURATION
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Usage Information	The dcb-policy output stack-unit all command overwrites any previous dcb-policy output stack-unit <i>stack-unit-id</i> configurations. Similarly, a dcb-policy output stack-unit <i>stack-unit-id</i> command overwrites any previous dcb-policy output stack-unit all configuration.
	You can apply a DCB output policy with ETS configuration to all stacked ports in a switch stack or an individual stacked switch. You can apply different DCB output policies to different stack units.
Related Commands	dcb-policy input stack-unitApply the specified DCB input policy.stack-ports all

To remove an ETS output policy from an interface, enter the **no dcb-policy output** policy-name

### dcb stack-unit all pfc-buffering pfc-port-count pfc-queues

Configure the PFC buffer for all switches in the stack.

Syntax dcb stack-unit all pfc-buffering pfc-port-count {1-56} pfc-queues {1-2}

To remove the configuration for the PFC buffer on all switches in the stack, use the no dcb stack-unit all pfc-buffering pfc-port-count pfc-queues command.

Parameters				
i arameters	pfc-port-count {1-56}	Enter the pfc-po	rt count.	
		The valid range	is 1 to 56.	
	pfc-queues {1-2}	Enter the pfc-qu	eue number.	
		The valid range	is 1 to 2.	
Defaults	The PFC buffer is enable	ed on all ports on	the stack unit.	
Command Modes	CONFIGURATION			
Command				
History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module			
Usage Information	If you configure PFC on number you enter in the	-	unt the 40GbE port as four PFC-enabled ports in the pfc-port	
		be greater than or	C port count and queue number used for the reserved buffer equal to the buffer size required for PFC-enabled ports and	
	You must reload the stack for the PFC buffer config	*	ack unit (use the reload command in EXEC Privilege mode) ffect.	
Related Commands	dcb stack-unit pfc-bufferi pfc-queues	ng pfc-port	Configure the PFC buffer for all port pipes in a specified stack unit.	

### dcb stack-unit pfc-buffering pfc-port pfc-queues

Configure the PFC buffer for all port pipes in a specified stack unit by specifying the port-pipe number, number of PFC-enabled ports, and number of configured lossless queues.

Syntax dcb stack-unit stack-unit-id [port-set port-set-id] pfc-buffering pfc-ports {1-56} pfc-queues {1-2}

To remove the configuration for the PFC buffer on all port pipes in a specified stack unit, use the no dcb stack-unit *stack-unit-id* [port-set *port-set-id*] pfc-buffering pfc-ports pfc-queues command.

Parameters		
r ai dilletei S	stack-unit-id	Enter the stack-unit identification.
		The valid stack-unit IDs are 0 to 5.
	port-set	Enter the port-set identification.
		The only valid port-set ID (port-pipe number) on an MXL Switch is 0.
	pfc-ports {1-56}	Enter the pfc-ports.
		The valid range is 1 to 56.
	pfc-queues {1-2}	Enter the pfc-queue number.
		The valid range is 1 to 2.
Command Modes	CONFIGURATION	
Command		
History	Version 8.3.16.1 Int	roduced on MXL 10/40GbE Switch IO Module

Usage Information				
	To achieve lossless PFC operation, the PFC port count and queue number used for the reserved buffer size that is created must be greater than or equal to the buffer size required for PFC-enabled ports and lossless queues on the switch.			
	You must reload the stack or a specified stack unit (use the <b>reload</b> command in EXEC Privilege mode) for the PFC buffer configuration to take effect.			
Related Commands	dcb stack-unit all pfc-buffering pfc-port-count pfc-queuesConfigure the PFC buffer for all switches in the stack.			

### dcbx port-role

Configure the DCBX port role used by the interface to exchange DCB information.

Syntax	dcbx port-role	{config-source	auto-downstream	auto-upstream	manual}
--------	----------------	----------------	-----------------	---------------	---------

To remove DCB	X port role, use the no dcbx port-role {config-source   auto-downstream
auto-upstream	manual} command.

Parameters		
Falalleters	config-source   auto-downstream   auto-upstream   manual	Enter the DCBX port role, where:
		• <b>Config-Source</b> : configures the port to serve as the configuration source on the switch.
		• auto-upstream: configures the port to receive a peer configuration. The configuration source is elected from auto-upstream ports.
		• <b>auto-downstream</b> : configures the port to accept the internally propagated DCB configuration from a configuration source.
		• manual: configures the port to operate only on administer-configured DCB parameters. The port does not accept a DCB configuration received form a peer or a local configuration source.
Defaults	Manual.	
Command Modes	PROTOCOL LLDP	
Command		
History	Version 8.3.16.1 Intr	roduced on MXL 10/40GbE Switch IO Module
Usage Information	DCBX requires that you	enable LLDP to advertise DCBX TLVs to peers.
	• •	tion at the INTERFACE level on a switch. To verify the DCBX configuration interface dcbx detail command.

### dcbx version

	Configure the DCBX version used on the interface.			
Syntax	x dcbx version {auto   cee   cin   ieee-v2.5}			
	To remove the DCI	3X version, use the no dcbx version {auto   cee   cin   ieee-v2.5} command.		
Parameters	auto   cee   cin   ieee-v2.5	<ul><li>Enter the DCBX version type used on the interface, where:</li><li>auto: configures the port to operate using the DCBX version received from a</li></ul>		
		peer.		
		• <b>Cee</b> : configures the port to use CDD (Intel 1.01).		
		• cin: configures the port to use Cisco-Intel-Nuova (DCBX 1.0).		
		• ieee-v2: configures the port to use IEEE 802.1az (Draft 2.5).		
Defaults	Auto			
Command Modes	PROTOCOL LLD	p		
Command				
History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module		
Usage Information	DCBX requires that	t you enable LLDP to advertise DCBX TLVs to peers.		
Configure DCBX operation at the INTERFACE level on a switch or globally on the switch of the DCBX configuration on a port, use the show interface dcbx detail command.				

### debug dcbx

Enable DCBX debugging.

Syntax debug dcbx {all | auto-detect-timer | config-exchng | fail | mgmt | resource | sem | tlv} To disable DXBX debugging, use the no debug dcbx command.

rameters	{all   auto-detect-timer   config-exchng   fail   mgmt   resource   sem   tlv}	Enter the type of debugging, where:
		• all: enables all DCBX debugging operations.
		• auto-detect-timer: enables traces for DCBX auto-detect timers.
		• config-exchng: enables traces for DCBX configuration exchanges.
		• fail: enables traces for DCBX failures.
		• mgmt: enables traces for DCBX management frames.
		• resource: enables traces for DCBX system resource frames.
		• sem: enables traces for the DCBX state machine.
		• tlv: enables traces for DCBX TLVs.

### Command Modes EXEC PRIVILEGE

Command History

Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

### description

	Enter a text description of the DCB policy (PFC input or ETS output).		
Syntax	description text		
	To remove the text	description, use the no description command.	
Parameters	text	Enter the description of the output policy.	
		Maximum: 32 characters.	
Defaults	none		
Command Modes	DCB INPUT POLICY		
	DCB OUTPUT PO	DLICY	
Command			
History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Related			
Commands	dcb-input	Create a DCB PFC input policy.	
	dcb-policy input	Apply the output policy.	
	dcb-output	Create a DCBETS output policy.	
	dcb-policy output	Apply the output policy.	

### ets mode on

Enable the ETS configuration so that scheduling and bandwidth allocation configured in an ETS output policy or received in a DCBX TLV from a peer can take effect on an interface.

Syntax	ets mode on To remove the ETS configuration, use the ets mode on command.		
Defaults	ETS mode is on.		
Command Modes	DCB OUTPUT POLICY		
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module		
Usage Information	If you disable ETS in an output policy applied to an interface using the no ets mode on command, any previously configured QoS settings at the interface or global level take effect. If QoS settings are configured at the interface or global level and in an output policy map (service-policy output command), the QoS configuration in the output policy takes precedence.		

Related Commands	dcb-output Create a DCB output policy.	
	dcb-policy output	Apply the output policy.

## fcoe priority-bits

	Configure the FCoE priority advertised for the FCoE protocol in application priority TLVs. fcoe priority-bits <i>priority-bitmap</i> To remove the configured FCoE priority, use the no fcoe priority-bits command.		
Syntax			
Parameters	priority-bitmap	Enter the priority-bitmap range.	
		The valid range is 1 to FF.	
Defaults	0x8		
Usage Information	This command is available at the global level only.		
Command Modes	PROTOCOL LLDP		
Command			
History	Version 8.3.16.1	ntroduced on MXL 10/40GbE Switch IO Module	

### iscsi priority-bits

13031 priorit	y DILO			
	Configure the iSCSI priority advertised for the iSCSI protocol in application priority TLVs.			
Syntax	iscsi priority-bits <i>priority-bitmap</i> To remove the configured iSCSI priority, use the no iscsi priority-bits command.			
Parameters	priority-bitmap	Enter the priority bitmap.		
		The valid range is 1 to FF.		
Defaults	0x10			
Usage Information	This command is a	wailable at the global level only.		
Command Modes	PROTOCOL LLD	Р		
Command History				
HISLOLY	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module		

### pfc link-delay

Configure the link delay used to pause specified priority traffic. Syntax pfc link-delay value To remove the link delay, use the no pfc link-delay command. **Parameters** value Valid values (in quanta) are 712-65535. One quantum is equal to a 512-bit transmission. Defaults 45556 quantum **Command Modes** DCB INPUT POLICY Command Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module History Usage The minimum link delay should be greater than the round-trip transmission time required by a peer to Information honor a PFC pause frame multiplied by the number of PFC-enabled ingress ports. Related Create a DCB input policy. dcb-input Commands

### pfc mode on

Enable the PFC configuration on the port so that the priorities are included in DCBX negotiation with peer PFC devices.

Syntax pfc mode on To disable the PFC configuration, use the no pfc mode on command. Defaults PFC mode is on. **Command Modes** DCB INPUT POLICY Command Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module History Usage By applying a DCB input policy with PFC enabled, you enable PFC operation on ingress port traffic. Information To achieve complete lossless handling of traffic, you must also enable PFC on all DCB egress ports or configure the dot1p priority-queue assignment of PFC priorities to lossless queues (see pfc no-drop queues). To disable PFC operation on an interface, enter the **no pfc mode on** command in DCB input policy configuration mode. PFC is enabled and disabled as global DCB operation is enabled (dcb-enable) or disabled (no dcb-enable). PFC and link-level flow control cannot be enabled at the same time on an interface.

Related Commands

dcb-input

Create a DCB input policy.

### pfc no-drop queues

	Configure the port	Configure the port queues that will still function as no-drop queues for lossless traffic.		
Syntax	pfc no-drop queues queue-range			
	To remove the no-drop port queues, use the no pfc no-drop queues command.			
Parameters	queue-range	Enter the queue range. Separate the queue values with a comma; specify a priority range with a dash; for example, pfc no-drop queues 1,3 or pfc no-drop queues 2-3.		
		Valid values: 0 to 3.		
Defaults	No lossless queues	are configured.		
Command Modes	INTERFACE			
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module		
Usage Information	The maximum nur	nber of lossless queues globally supported on the switch is two.		
	Table 9-1 lists the	dot1p priority-queue assignments.		

#### Table 9-1. dot1p Priority-Queue Assignments

dot1p Value in the Incoming Frame	Egress Queue Assignment
0	0
1	0
2	0
3	1
4	2
5	3
6	3
7	3

### pfc priority

Configure the CoS traffic to be stopped for the specified delay.

### Syntax pfc priority priority-range

To delete the pfc priority configuration, use the no pfc priority command.

Parameters

*priority-range* Enter the 802.1p values of the frames to be paused. Separate the priority values with a comma; specify a priority range with a dash; for example, pfc priority 1,3,5-7. Valued values: 0 to 7.

Defaults	none		
Command Modes	DCB INPUT POLICY		
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module		
Usage Information	you can enable any number of 802.1p priorities for PFC. Queues to which PFC priority traffic is mapped are lossless by default. Traffic may be interrupted due to an interface flap (going down and coming up) when you reconfigure the lossless queues for no-drop priorities in a PFC input policy and re-apply the policy to an interface.		
	The maximum number of lossless queues supported on the switch is two.		
	The configured priority traffic must be supported by a PFC peer (as detected by DCBX) for PFC to be applied.		
Related Commands	dcb-input Create a DCB input policy.		

### priority-group

	Create an ETS priority group to use with an ETS output policy.		
Syntax	priority-group group-name		
	To remove the priority group, use the no priority-group command.		
Parameters	<i>group-name</i> Enter the name of the ETS priority group. Maximum: 32 characters.		
Defaults	none		
Command Modes	CONFIGURATION		
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module		
Usage Information	A priority group consists of 802.1p priority values that are grouped together for similar bandwidth allocation and scheduling, and that share the same latency and loss requirements. All 802.1p priorities mapped to the same queue should be in the same priority group.		
	All 802.1p priorities should be configured in priority groups associated with an ETS output policy. You can assign each dot1p priority to only one priority group.		
	The maximum number of priority groups supported in ETS output policies on an interface is equal to the number of data queues (4) on the port. The 802.1p priorities in a priority group can map to multiple queues.		

If you configure more than one priority queue as strict priority or more than one priority group as strict priority, the higher numbered priority queue is given preference when scheduling data traffic

Related Commands	priority-list	Configure the 802.1p priorities for an ETS output policy.
	set-pgid	Configure the priority-group.

## priority-group qos-policy

	Associate the 802.1p p policy.	priority traffic in a priority group with the ETS configuration in a QoS output			
Syntax	priority-group group-name qos-policy ets-policy-name				
	To remove the 802.1p priority group, use the no priority-group qos-policy command.				
Parameters	group-name	Enter the group name of the 802.1p priority group. Maximum: 32 characters.			
	ets-policy-name	Enter the ETS policy name.			
Defaults	none				
Command Modes	DCB OUTPUT POLIC	CY			
Command					
History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module				
Usage Information	The ETS configuration associated with 802.1p priority traffic in a DCB output policy is used in DCB2 negotiation with ETS peers.				
	previously configured configured at the inter	an output policy applied to an interface using the no ets mode on command, any QoS settings at the interface or global level take effect. If QoS settings are face or global level and in an output policy map (service-policy output onfiguration in the output policy takes precedence.			
Related Commands	dcb-output	Create a DCB output policy.			
Commands	dcb-policy output	Apply the output policy.			
priority-list					
	Configure the 802.1p j	priorities for the traffic on which you want to apply an ETS output policy.			
Syntax	priority-list <i>value</i>				
	To remove the priority	list, use the no priority-list command.			
Parameters	value	Enter the priority list value. Separate priority values with a comma; specify a priority range with a dash; for example, priority-list 3,5-7			

The value range is 0 to 7.

priority range with a dash; for example, priority-list 3,5-7.

Defaults none

#### **Command Modes** PRIORITY-GROUP

Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Usage Information	<ul> <li>By default:</li> <li>All 802.1p priorities are grouped in priority group 0.</li> <li>100% of the port bandwidth is assigned to priority group 0. The complete bandwidth is equally assigned to each priority class so that each class has 12-13%.</li> </ul>
Related Commands	priority-group qos-policy     Create an ETS priority group.       set-pgid     Configure the priority-group.

### qos-policy-output ets

Create a QoS output policy to configure the ETS bandwidth allocation and scheduling for priority traffic.

#### Syntax qos-policy-output policy-name ets

To remove the QoS output policy, use the no qos-policy-output ets command.

**Parameters** policy-name Enter the policy name. Maximum: 32 characters.

#### **Command Modes** CONFIGURATION

Command History

Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

Usage If an error occurs in an ETS output-policy configuration, the configuration is ignored and the scheduler Information and bandwidth allocation settings are reset to the ETS default values (all priorities are in the same ETS priority group and bandwidth is allocated equally to each priority).

> If an error occurs when a port receives a peer's ETS configuration, the port's configuration is reset to the previously configured ETS output policy. If no ETS output policy was previously applied, the port is reset to the default ETS parameters.

Related Commands

Schedule priority traffic in port queues. bandwidth-percentage Bandwidth percentage allocated to priority traffic in port queues.

### scheduler

Configure the method used to schedule priority traffic in port queues.

**Syntax** scheduler value

scheduler

Parameters		
i uluilotoro		Enter schedule priority value.
		The valid values are:
		• <b>strict</b> : strict priority traffic is serviced before any other queued traffic.
		Werr: weighted elastic round robin (werr) provides low-latency scheduling for priority traffic on port queues.
Defaults	WERR scheduling is used to que	eue priority traffic.
Command Modes	POLICY-MAP-OUT-ETS	
Command		
History	Version 8.3.16.1 Introduced of	on MXL 10/40GbE Switch IO Module
Usage Information		ch is scheduled to the current queue mapping. dot1p priorities within same traffic properties and scheduling method.
	ETS-assigned scheduling applie	s only to data queues, not to control queues.
	time for a priority group. If both	allocation and strict-queue scheduling is not supported at the same are configured, the configured bandwidth allocation will be ignored you apply the output policy on an interface.
Related	qos-policy-output ets C	Configure the ETS bandwidth allocation.
Commands		Bandwidth percentage allocated to priority traffic in port queues.
oot paid		
set-pgid		
	Configure the priority-group ide	entifier.
Syntax	set-pgid value	
	To remove the priority group, us	se the no set-pgid command.
Parameters	value	Enter the priority group identification.
		The valid values are 0 to 7.
Defaults	none	
Command Modes	PRIORITY-GROUP	
Command		
History	Version 8.3.16.1 Introduced of	on MXL 10/40GbE Switch IO Module
Related	priority group gos policy	reate an ETS priority group
Commands		Create an ETS priority group.
		configure the 602.1p priorities.

To remove the configured priority schedule, use the no scheduler command.

show dcb				
	Displays the data center bridging status, the number of PFC-enabled ports, and the number of PFC-enabled queues.			
Syntax	show dcb [stack-unit unit-number]			
Parameters	unit numberEnter the DCB unit number.The valid values are 0 to 5.			
Command Mode	EXEC PRIVILEGE			
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module			
Example	Figure 9-1. show dcb Command Example			
	<pre>FTOS# show dcb stack-unit 0 port-set 0 DCB Status : Enabled PFC Port Count : 56 (current), 56 (configured) PFC Queue Count : 2 (current), 2 (configured)</pre>			

Usage Information

Specify a stack-unit number on the Master switch in a stack.

### show interface dcbx detail

Displays the DCBX configuration on an interface.

Syntax show interface port-type slot/port dcbx detail

Pa	ra	m	ete	er	S

port-type	Enter the port type.
slot/port	Enter the slot/port number.

Command Mode CONFIGURATION

	· · · · · · · · · · · · · · · · · · ·
Field	Description
Interface	Interface type with chassis slot and port number.
Port-Role	Configured the DCBX port role: auto-upstream, auto-downstream, config-source, or manual.
DCBX Operational Status	Operational status (enabled or disabled) used to elect a configuration source and internally propagate a DCB configuration. The DCBX operational status is the combination of PFC and ETS operational status.
Configuration Source	Specifies whether the port serves as the DCBX configuration source on the switch: true (yes) or false (no).
Local DCBX Compatibility mode	DCBX version accepted in a DCB configuration as compatible. In auto-upstream mode, a port can only received a DCBX version supported on the remote peer.

Table 9-2. show interface dcbx detail Command Example Fields

Field	Description
Local DCBX Configured mode	DCBX version configured on the port: CEE, CIN, IEEE v2.5, or Auto (port auto-configures to use the DCBX version received from a peer).
Peer Operating version	DCBX version that the peer uses to exchange DCB parameters.
Local DCBX TLVs Transmitted	Transmission status (enabled or disabled) of advertised DCB TLVs (see TLV code at the top of the show command output).
Local DCBX Status: DCBX Operational Version	DCBX version advertised in Control TLVs.
Local DCBX Status: DCBX Max Version Supported	Highest DCBX version supported in Control TLVs.
Local DCBX Status: Sequence Number	Sequence number transmitted in Control TLVs.
Local DCBX Status: Acknowledgment Number	Acknowledgement number transmitted in Control TLVs.
Local DCBX Status: Protocol State	Current operational state of the DCBX protocol: ACK or IN-SYNC.
Peer DCBX Status: DCBX Operational Version	DCBX version advertised in Control TLVs received from the peer device.
Peer DCBX Status: DCBX Max Version Supported	Highest DCBX version supported in Control TLVs received from the peer device.
Peer DCBX Status: Sequence Number	Sequence number transmitted in Control TLVs received from the peer device.
Peer DCBX Status: Acknowledgment Number	Acknowledgement number transmitted in Control TLVs received from the peer device.
Total DCBX Frames transmitted	Number of DCBX frames sent from the local port.
Total DCBX Frames received	Number of DCBX frames received from the remote peer port.
Total DCBX Frame errors	Number of DCBX frames with errors received.
Total DCBX Frames unrecognized	Number of unrecognizable DCBX frames received.

Table 9-3 lists the show interface ets detail field descriptions.

Field	Description
Interface	Interface type with stack-unit and port number.
Max Supported TC Group	Maximum number of priority groups supported.
Number of Traffic Classes	Number of 802.1p priorities currently configured.
Admin mode	ETS mode: on or off. When on, the scheduling and bandwidth allocation configured in an ETS output policy or received in a DCBX TLV from a peer can take effect on an interface.
Admin Parameters	ETS configuration on local port, including priority groups, assigned dot1p priorities, and bandwidth allocation.
Remote Parameters	ETS configuration on remote peer port, including admin mode (enabled if a valid TLV was received or disabled), priority groups, assigned dot1p priorities, and bandwidth allocation. If ETS admin mode is enabled on the remote port for DCBX exchange, the Willing bit received in ETS TLVs from the remote peer is included.
Local Parameters	ETS configuration on local port, including admin mode (enabled when a valid TLV is received from a peer), priority groups, assigned dot1p priorities, and bandwidth allocation.
Operational status (local	Port state for current operational ETS configuration:
port)	<ul> <li>Init: Local ETS configuration parameters were exchanged with the peer.</li> <li>Recommend: Remote ETS configuration parameters were received from the peer.</li> <li>Internally propagated: ETS configuration parameters were received from the configuration source.</li> </ul>
ETS DCBX Oper status	Operational status of the ETS configuration on the local port: match or mismatch.
State Machine Type	Type of state machine used for DCBX exchanges of ETS parameters: Feature - for legacy DCBX versions; Asymmetric - for an IEEE version.
Conf TLV Tx Status	Status of ETS Configuration TLV advertisements: enabled or disabled.
ETS TLV Statistic: Input Conf TLV pkts	Number of ETS Configuration TLVs received.
ETS TLV Statistic: Output Conf TLV pkts	Number of ETS Configuration TLVs transmitted.
ETS TLV Statistic: Error Conf TLV pkts	Number of ETS Error Configuration TLVs received.

0 Input TLV pkts, 1 Output TLV pkts, 0 Error pkts, 0 Pause Tx pkts, 0 Pause Rx pkts
```

Usage To clear the PFC TLV counters, use the clear pfc counters interface *port-type slot/port* command. Information

Table 9-4 lists the show interface pfc summary field descriptions.

Table 9-4. show interfaces pfc summary Command Example Fields

Field	Description
Interface	Interface type with stack-unit and port number.
Admin mode is on Admin is enabled	PFC admin mode is on or off with a list of the configured PFC priorities. When the PFC admin mode is on, PFC advertisements are enabled to be sent and received from peers; received PFC configuration will take effect. The admin operational status for a DCBX exchange of PFC configuration is enabled or disabled.

Field	Description
Remote is enabled, Priority list Remote Willing Status is enabled	Operational status (enabled or disabled) of peer device for DCBX exchange of PFC configuration with a list of the configured PFC priorities. Willing status of peer device for DCBX exchange (Willing bit received in PFC TLV): enabled or disabled.
Local is enabled	DCBX operational status (enabled or disabled) with a list of the configured PFC priorities.
Operational status (local	Port state for current operational PFC configuration:
port)	<ul> <li>Init: Local PFC configuration parameters were exchanged with the peer.</li> <li>Recommend: Remote PFC configuration parameters were received from the peer.</li> <li>Internally propagated: PFC configuration parameters were received from the configuration source.</li> </ul>
PFC DCBX Oper status	Operational status for the exchange of the PFC configuration on the local port: match (up) or mismatch (down).
State Machine Type	Type of state machine used for DCBX exchanges of the PFC parameters: Feature - for legacy DCBX versions; Symmetric - for an IEEE version.
TLV Tx Status	Status of the PFC TLV advertisements: enabled or disabled.
PFC Link Delay	Link delay (in quanta) used to pause specified priority traffic.
Application Priority TLV: FCOE TLV Tx Status	Status of FCoE advertisements in application priority TLVs from the local DCBX port: enabled or disabled.
Application Priority TLV: SCSI TLV Tx Status	Status of ISCSI advertisements in application priority TLVs from the local DCBX port: enabled or disabled.
Application Priority TLV: Local FCOE Priority Map	Priority bitmap used by the local DCBX port in FCoE advertisements in application priority TLVs.
Application Priority TLV: Local ISCSI Priority Map	Priority bitmap used by the local DCBX port in ISCSI advertisements in application priority TLVs.
Application Priority TLV: Remote FCOE Priority Map	Status of FCoE advertisements in application priority TLVs from the remote peer port: enabled or disabled.
Application Priority TLV: Remote ISCSI Priority Map	Status of iSCSI advertisements in application priority TLVs from the remote peer port: enabled or disabled.
PFC TLV Statistics: Input TLV pkts	Number of PFC TLVs received.
PFC TLV Statistics: Output TLV pkts	Number of PFC TLVs transmitted.
PFC TLV Statistics: Error pkts	Number of PFC error packets received.
PFC TLV Statistics: Pause Tx pkts	Number of PFC pause frames transmitted.
PFC TLV Statistics: Pause Rx pkts	Number of PFC pause frames received.

#### Table 9-4. show interfaces pfc summary Command Example Fields (continued)

## show interface pfc statistics

Displays counters for the PFC frames received and transmitted (by dot1p priority class) on an interface.

**Syntax** show interface *port-type slot/port* pfc statistics

port-type	Enter the port type.		
slot/port	Enter the slot/port nun	nber.	
INTERFACE			
Version 8.3.16.	1 Introduced on MXL 10/4	10GbE Switch IO Module

#### show qos dcb-input

Displays the PFC configuration in a DCB input policy.

Syntax	show qos dcb-in	show qos dcb-input [pfc-profile]		
Parameters	[pfc-profile]	Enter the PFC profile.		
Command Mode	CONFIGURATI	ON		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module		
Example		now qos dcb-input Command Example		
	<pre>FTOS(conf)# s dcb-input pfc pfc link-de pfc priorit dcb-input pfc no pfc mode pfc priorit</pre>	lay 32 y 0-1 -profile1 on		
		-		

#### show qos dcb-output

	Displays the ETS configuration in a DCB output policy.				
Syntax	show qos dcb-output [ets-profile]				
Parameters	[ets-profile]	Enter the ETS profile.			
Command Mode	EXEC PRIVILEGE				
Command History	Version 8.3.16.1 In	ntroduced on MXL 10/40GbE Switch IO Module			
Example	Figure 9-7. show of	qos dcb-output Command Example			
	priority-group i	p-output san qos-policy san ipc qos-policy ipc Lan qos-policy lan			

#### show qos priority-groups

Displays the ETS priority groups configured on the switch, including the 802.1p priority classes and ID of each group.

Syntax	show qos priority-groups
Command Mode	EXEC PRIVILEGE
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Example	Figure 9-8. show qos priority-groups Command Example Force10#Force10#show qos priority-groups priority-group ipc priority-list 4 set-pgid 2

# show stack-unit stack-ports ets detail

Displays the ETS configuration applied to egress traffic on stacked ports, including ETS operational mode on each unit and the configurated priority groups with dot1p priorities, bandwidth allocation, and scheduler type.

Syntax show stack-unit {all | stack-unit} stack-ports {all | port-number} ets detail

Parameters	stack-unit	Enter the sta	ck unit identification	20	
	port-number			лі. 	
	pon-number	Enter the pol	t number.		
nmand Mode	CONFIGURA	ΓΙΟΝ			
Command

# Dynamic Host Configuration Protocol (DHCP)

#### Overview

Dynamic host configuration protocol (DHCP) is an application layer protocol that dynamically assigns IP addresses and other configuration parameters to network end-stations (hosts) based on configuration policies determined by network administrators.

An MXL Switch can operate as a DHCP server or DHCP client. As a DHCP client, the switch requests an IP address from a DHCP server.

The following types of DHCP commands are described in this chapter:

- Commands to Configure the System to be a DHCP Server
- Commands to Configure the System to be a DHCP Client
- Other Commands supported by DHCP Client
- Commands to Configure Secure DHCP

#### Commands to Configure the System to be a DHCP Server

- clear ip dhcp
- debug ip dhcp server
- default-router
- disable
- dns-server
- domain-name
- excluded-address
- hardware-address
- host
- disable
- lease
- netbios-name-server
- netbios-node-type
- network
- show ip dhcp binding
- show ip dhcp configuration
- show ip dhcp conflict
- show ip dhcp server

Reset DHCP counters.

**Syntax** clear ip dhcp [binding {*address*} | conflict | server statistics]

arameters	binding	Enter this keyword to delete all entries in the binding table.
	address	Enter the IP address to clear the binding entry for a single IP address.
	conflict	Enter this keyword to delete all of the log entries created for IP address conflicts.
	server statistics	Enter this keyword to clear all the server counter information.
and Mode Default	EXEC Privilege	
Command		

#### debug ip dhcp server

Display FTOS debugging messages for DHCP.

Syntax	debug ip dł	debug ip dhcp server [events   packets]			
Parameters	events	Enter this keyword to display DHCP state changes.			
	packet	Enter this keyword to display packet transmission/reception.			
Command Mode	EXEC Privi	lege			
Default	none				
Command History	Version 8.3.	16.1     Introduced on MXL 10/40GbE Switch IO Module			

#### default-router

Assign a default gateway to clients based on address pool.

Syntax	default-router address [address2address8]					
Parameters	address	Enter the a list of routers that may be the default gateway for clients on the subnet. You may				
		specify up to 8. List them in order of preference.				
Command Mode	DHCP <po< th=""><th>DL&gt;</th></po<>	DL>				

Default	none
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
disable	
	Disable the DHCP server.
	DHCP Server is disabled by default. Enable the system to be a DHCP server using the <b>no</b> form of the <b>disable</b> command.
Syntax	disable
Command Mode	DHCP
Default	Disabled
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

#### dns-server

Assign a DNS server to clients based on address pool.

Syntax	dns-server address [address2address8]		
Parameters	<i>address</i> Enter the a list of DNS servers that may service clients on the subnet. You may list up to 8 servers, in order of preference.		
Command Mode	DHCP <pool></pool>		
Default	none		
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module		

#### domain-name

Assign a domain to clients based on address pool.

Syntax	domain-nar	domain-name name	
Parameters	name	Give a name to the group of addresses in a pool.	
Command Mode	DHCP <po< th=""><th>OL&gt;</th></po<>	OL>	
Default	none		

Command History

Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

#### excluded-address

Prevent the server from leasing an address or range of addresses in the pool.

Syntax excluded-address [address | low-address high-address]

Parameters		
T di di litetei 5	address	Enter a single address to be excluded from the pool.
	low-address	Enter the lowest address in a range of addresses to be excluded from the pool.
	high-address	Enter the highest address in a range of addresses to be excluded from the pool.
Command Mode	DHCP	
Default	none	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

#### hardware-address

For manual configurations, specify the client hardware address.

Parameters	address	Enter the hardware address of the client.	
Command Mode	DHCP <pool></pool>		
Default	none		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
host			

For manual (rather than automatic) configurations, assign a host to a single-address pool.

Syntax	host address	
Parameters	address/mask	Enter the host IP address and subnet mask.
Command Mode	DHCP < POOL>	
Default	none	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

#### lease

	Specify a lease time for the addresses in a pool.	
Syntax	lease { days [ hou	rs] [ <i>minutes</i> ]   infinite }
Parameters	days	Enter the number of days of the lease. Range: 0-31
	hours	Enter the number of hours of the lease. Range: 0-23
	minutes	Enter the number of minutes of the lease. Range: 0-59
	infinite	Specify that the lease never expires.
Command Mode	DHCP <pool></pool>	
Default	24 hours	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

#### netbios-name-server

Specify the NetBIOS windows internet naming service (WINS) name servers, in order of preference, that are available to Microsoft dynamic host configuration protocol (DHCP) clients.

Syntax	netbios-name-se	rver address [address2address8]
Parameters	address	Enter the address of the NETBIOS name server. You may enter up to 8, in order of preference.
Command Mode	DHCP <pool></pool>	
Default	none	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

#### netbios-node-type

Specify the NetBIOS node type for a Microsoft DHCP client. Dell Force10 recommends specifying clients as hybrid.

Syntax netbios-node-type type

Parameters	-		
	type	Enter the NETBIOS node type.	
		Broadcast: Enter the keyword b-node.	
		Hybrid: Enter the keyword h-node.	
		Mixed: Enter the keyword m-node.	
		Peer-to-peer: Enter the keyword p-node.	
Command Mode	DHCP <pool></pool>		
Default	Hybrid		
Command	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
History			
network	Specify the range	of addresses in an address pool.	
Syntax	network network	prefix-length	
Parameters	network/	Specify a range of addresses.	
	prefix-length	Prefix-length Range: 17-31	
	DHCP <pool></pool>		
Command Mode			
Command Mode Default	none		
		Introduced on MXL 10/40GbE Switch IO Module	

#### show ip dhcp binding

Display the DHCP binding table.

Syntax	show ip	dhcp	binding

Command Mode EXEC Privilege

Default none

Command History

Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

## show ip dhcp configuration

Display the DHCP configuration.

Syntax show ip dhcp configuration [global | pool name]

Parameters	pool name	Display the configuration for a DHCP pool.
	global	Display the DHCP configuration for the entire system.
Command Mode	EXEC Privilege	
Default	none	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

# show ip dhcp conflict Display the address conflict log.

Syntax	show ip dhcp conflict address	
Parameters	address	Display a particular conflict log entry.
Command Mode	EXEC Privilege	
Default	none	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

# show ip dhcp server Display the DHCP server statistics.

Syntax	show ip dhcp server statistics
Command Mode	EXEC Privilege
Default	none
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

#### Commands to Configure the System to be a DHCP Client

• clear ip dhcp

#### ip address dhcp

Configure an Ethernet interface to acquire its IP address from a DHCP network server.

Syntax ip address dhcp

Command Mode INTERFACE

**Default** The Ethernet is not configured to operate as a DHCP client and receive a dynamic IP address.

Command History

Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

Usage Information The ip address dhcp command enables an Ethernet interface to acquire a DHCP server-assigned dynamic IP address. This setting persists after a switch reboot. If you enter the shutdown command on the interface, DHCP transactions are stopped and the dynamically-acquired IP address is saved. Use the show interface *type slot/port* command to display the dynamic IP address and DHCP as the mode of IP address assignment. If you later enter the **no shutdown** command and the lease timer for the dynamic IP address has expired, the IP address is unconfigured and the interface tries to acquire a new dynamic address from DHCP server.

You cannot configure a secondary (backup) IP address on an interface using the **ip address dhcp** command; you must use the **ip address** command at the interface configuration level.

To release a DHCP-assigned IP address and remove the interface from being a DHCP client, enter the **no ip address dhcp** command. When you enter the no ip address dhcp command:

- The IP address dynamically acquired from a DHCP server is released from the interface.
- The DHCP client is disabled on the interface; it can no longer acquire a dynamic IP address from a DHCP server.
- DHCP packet transactions on the interface are stopped.

To display the currently configure dynamic IP address and lease time, enter the **show ip dhcp lease** command.

#### Other Commands supported by DHCP Client

- clear ip dhcp client statistics
- debug ip dhcp clients events
- debug ip dhcp clients packets
- release dhcp interface
- renew dhcp interface
- show ip dhcp client statistics
- show ip dhcp lease

#### clear ip dhcp client statistics

Display DHCP client statistics, including the number of DHCP messages sent and received on an interface.

Parameters	all	Clear DHCP client statistics on all DHCP client-enabled interfaces on the switch.
	interface type slot/	Clear DHCP client statistics on the specified interface.
	port	For a 10-GigabitEthernet Ethernet interface, enter <b>TenGigabitEthernet</b> followed by the <i>slot/port</i> numbers; for example, <b>tengigabitethernet 1/3</b> .
		For a 40-GigabitEthernet Ethernet interface, enter <b>FortyGigabitEthernet</b> followed by the <i>slot/port</i> numbers; for example, <b>fortygigabitethernet 0/2</b> .
Command Mode	EXEC Privilege	
Default	None.	
Command History	Version 8.3.16.1 Intr	roduced on MXL 10/40GbE Switch IO Module

#### **Syntax** clear ip dhcp client statistics {all | interface *type slot/port*}

#### debug ip dhcp clients events

Enable the display of log messages for the following events on DHCP client interfaces:

- IP address acquisition
- IP address release
- Renewal of IP address and lease time
- Release of an IP address

Syntax debug ip dhcp client events [interface type slot/port]

#### Parameters

arameters	interface type slot/	Display log messages for DHCP events on the specified interface.
	port	For a 10-GigabitEthernet Ethernet interface, enter TenGigabitEthernet followed
		by the <i>slot/port</i> numbers; for example, <b>tengigabitethernet 1/3</b> .
		For a 40-GigabitEthernet Ethernet interface, enter FortyGigabitEthernet followed
		by the <i>slot/port</i> numbers; for example, <b>fortygigabitethernet 0/2</b> .

Command Mode EXEC Privilege

Default None

Command History

Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

## debug ip dhcp clients packets

Enable the display of log messages for all DHCP packets sent and received on DHCP client interfaces.

For a 10-GigabitEthernet Ethernet interface, enter <b>Te</b> by the <i>slot/port</i> numbers; for example, <b>tengigabiteth</b> For a 40-GigabitEthernet Ethernet interface, enter <b>Fo</b> by the <i>slot/port</i> numbers; for example, <b>fortygigabite</b>	ernet 1/3. rtyGigabitEthernet followed
6	v 8
de EXEC Privilege	
ault None	

## release dhcp interface

Release the dynamically-acquired IP address on an Ethernet interface while retaining the DHCP client configuration on the interface.

Syntax	release dhcp interface type slot/port	
Parameters	interface type slot/ port	For a 10-GigabitEthernet Ethernet interface, enter <b>TenGigabitEthernet</b> followed by the <i>slot/port</i> numbers; for example, <b>tengigabitethernet 1/3</b> .
		For a 40-GigabitEthernet Ethernet interface, enter <b>FortyGigabitEthernet</b> followed by the <i>slot/port</i> numbers; for example, <b>fortygigabitethernet 0/2</b> .
Command Mode	EXEC Privilege	
Default	None.	
Command History	Version 8.3.16.1 Intr	roduced on MXL 10/40GbE Switch IO Module
Usage Information	from a DHCP server is address remains in the r	<b>ease dhcp</b> command, although the IP address that was dynamically-acquired released from an interface, the ability to acquire a new DHCP server-assigned unning configuration for the interface. To acquire a new IP address, enter either and at the EXEC privilege level or the <b>ip address dhcp</b> command at the level.

# renew dhcp interface

Syntax	renew dhcp interface type slot/port		
Parameters	interface type slot/ port	For a 10-GigabitEthernet Ethernet interface, enter <b>TenGigabitEthernet</b> followed by the <i>slot/port</i> numbers; for example, <b>tengigabitethernet 1/3</b> . For a 40-GigabitEthernet Ethernet interface, enter <b>FortyGigabitEthernet</b> followed by the <i>slot/port</i> numbers; for example, <b>fortygigabitethernet 0/2</b> .	
Command Mode	EXEC Privilege		
Default	None.		
Command History	Version 8.3.16.1 Int	roduced on MXL 10/40GbE Switch IO Module	
History Usage Information		new dhcp command, a new dynamic IP address is acquired on the specified	

To display the currently configure dynamic IP address and lease time, enter the **show ip dhcp lease** command.

#### show ip dhcp client statistics

Display DHCP client statistics, including the number of DHCP messages sent and received on an interface.

Parameters	all	Display DHCP client statistics on all DHCP client-enabled interfaces on the switch
	interface type slot/	Display DHCP client statistics on the specified interface.
	port	For a 10-GigabitEthernet Ethernet interface, enter <b>TenGigabitEthernet</b> followed by the <i>slot/port</i> numbers; for example, <b>tengigabitethernet 1/3</b> .
		For a 40-GigabitEthernet Ethernet interface, enter <b>FortyGigabitEthernet</b> followed by the <i>slot/port</i> numbers; for example, <b>fortygigabitethernet 0/2</b> .
ommand Mode	EXEC Privilege	
Default	None.	
Command History	Version 8.3.16.1 Intr	roduced on MXL 10/40GbE Switch IO Module

show ip dhcp client statistics {all | interface type slot/port}

#### show ip dhcp lease

Syntax

Display lease information about the dynamic IP address currently assigned to a DHCP client-enabled interface.

Syntax show ip dhcp lease [interface type slot/port]

Devenuetere		
Parameters	interface type slot/	Display DHCP lease information on the specified interface.
	port	For a 10-GigabitEthernet Ethernet interface, enter <b>TenGigabitEthernet</b> followed by the <i>slot/port</i> numbers; for example, <b>tengigabitethernet 1/3</b> .
		For a 40-GigabitEthernet Ethernet interface, enter <b>FortyGigabitEthernet</b> followed by the <i>slot/port</i> numbers; for example, <b>fortygigabitethernet 0/2</b> .
Command Mode	EXEC Privilege	
Default	Display DHCP lease in	formation on all DHCP client-enabled interfaces on the switch.
Command		
History	Version 8.3.16.1 Int	roduced on MXL 10/40GbE Switch IO Module
2		

#### **Commands to Configure Secure DHCP**

DHCP as defined by RFC 2131 provides no authentication or security mechanisms. Secure DHCP is a suite of features that protects networks that use dynamic address allocation from spoofing and attacks.

- arp inspection
- arp inspection-trust
- clear ip dhcp snooping
- ip dhcp snooping
- ip dhcp snooping database
- ip dhcp snooping binding
- ip dhcp snooping database renew
- ip dhcp snooping trust
- ip dhcp source-address-validation
- ip dhcp snooping vlan
- ip dhcp relay
- ip dhcp snooping verify mac-address
- show ip dhcp snooping

#### arp inspection

Enable dynamic ARP inspection (DAI) on a VLAN.

Syntax	arp inspection	
Command Modes	INTERFACE VLAN	
Default	Disabled	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Related Commands	arp inspection-trust	Specifies a port as trusted so that ARP frames are not validated against the binding table.

#### arp inspection-trust

Specify a port as trusted so that ARP frames are not validated against the binding table.

Syntax	arp inspection-trust
Command Modes	INTERFACE
	INTERFACE PORT-CHANNEL
Default	Disabled
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Related	
Commands	arp inspection Enables Dynamic ARP Inspection on a VLAN.

#### clear ip dhcp snooping

Clear the DHCP binding table.

Syntax	clear ip dhcp snooping	binding
Command Modes	EXEC Privilege	
Default	none	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Related Commands	show ip dhcp snooping	Displays the contents of the DHCP binding table.

## ip dhcp snooping

Enable DHCP snooping globally.

Syntax	[no] ip dhcp snooping	
Command Modes	CONFIGURATION	
Default	Disabled	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information		ng takes place until you enable snooping on a VLAN. AFter disabling DHCP ble is deleted, and Option 82. IP Source Guard, and Dynamic ARP Inspection

snooping, the binding table is deleted, and Option 82, IP Source Guard, and Dynamic ARP Inspection are disabled.

Introduced in FTOS version 7.8.1.0, DHCP snooping was available for Layer 3 only and dependent on DHCP Relay Agent (**ip helper-address**). FTOS version 8.2.1.0 extends DHCP Snooping to Layer 2, and you do not have to enable relay agent to snoop on Layer 2 interfaces.

Related Commands

ip dhcp snooping vlan Enables DHCP snooping on one or more VLANs.

## ip dhcp snooping database

Delay writing the binding table for a specified time.

Syntax	ip dhcp snooping	g database write-delay <i>minutes</i>
Deremetere		
Parameters	minutes	Range: 5-21600

Command Modes CONFIGURATION
Default none

Command History

Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

#### ip dhcp snooping binding

Create a static entry in the DHCP binding table.

Parameters	mac address	Enter the keyword <b>mac</b> followed by the MAC address of the host to which the server is leasing the IP address.
	vlan-id <i>vlan-id</i>	Enter the keyword vlan-id followed by the VLAN to which the host belongs. Range: 2-4094
	ip ip-address	Enter the keyword ip followed by the IP address that the server is leasing.
	interface type	Enter the keyword <b>interface</b> followed by the type of interface to which the host is connected.
		• For a Ten Gigabit Ethernet interface, enter the keyword tengigabitethernet.
		• For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE.
	slot/port	Enter the slot and port number of the interface.
	lease <i>time</i>	Enter the keyword <b>lease</b> followed by the amount of time the IP address will be leased.
		Range: 1-4294967295

Default none

Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Related Commands	show ip dhcp snooping	Displays the contents of the DHCP binding table.	
ip dhcp sno	Doping databa		
Syntax	ip dhcp snooping datal	base renew	

2	1 1 1 0	
Command Modes	EXEC	
	EXEC Privilege	
Default	none	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

# ip dhcp snooping trust Configure an interface as trusted.

Syntax	[no] ip dhcp snooping trust
Command Modes	INTERFACE
Default	Untrusted
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

## ip dhcp source-address-validation

Enable IP source guard.

Parameters	ipmac	Enable IP+MAC Source Address Validation (Not available on E-Series).
mand Modes	INTERFACE	
Default	Disabled	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

ipmaca e y Information Validation.

- 1 Use the command cam-acl l2acl from CONFIGURATION mode
- **2** Save the running-config to the startup-config
- **3** Reload the system.

## ip dhcp snooping vlan

Enable DHCP snooping on one or more VLANs.

Syntax	[no] ip dhcp snooping vlan <i>name</i>		
Parameters	name	Enter the name of a VLAN on which to enable DHCP Snooping.	
Command Modes	CONFIGURATION		
Default	Disabled		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Usage Information		stem begins creating entries in the binding table for the specified VLAN(s). Note opens if there is a trusted port in the VLAN.	
Related Commands	ip dhcp snooping trust	Configures an interface as trusted.	

## ip dhcp relay

Enable Option 82.

**Syntax** ip dhcp relay information-option [remote-id | trust-downstream]

Parameters	remote-id	Configure the system to enable remote-id string in Option 82.
	trust-downstream	Configure the system to trust Option 82 when it is received from the previous-hop router.
Command Modes	CONFIGURATION	
Default	Disabled	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

#### show ip dhcp snooping

Display the contents of the DHCP binding table or display the interfaces configured with IP source guard.

Syntax show ip dhcp snooping [binding | source-address-validation]

Parameters		
i di dificter 5	binding	Display the binding table.
	source-address-validation	Display the interfaces configured with IP Source Guard.
Command Modes	EXEC	
	EXEC Privilege	
Default	none	
Command		
History	Version 8.3.16.1 Introdu	aced on MXL 10/40GbE Switch IO Module
Related Commands	clear ip dhcp snooping C	lears the contents of the DHCP binding table.
Commanus		

# ip dhcp snooping verify mac-address Validate a DHCP packet's source hardware address against the client hardware address field

(CHADDR) in the payload.

Syntax	[no] ip dhcp snooping	y verify mac-address	
Command Modes	CONFIGURATION		
Default	Disabled		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	

# 11

# **FIP Snooping**

#### Overview

In a converged Ethernet network, an MXL Switch can operate as an intermediate Ethernet bridge to snoop on Fibre Channel over Ethernet Initialization Protocol (FIP) packets during the login process on Fibre Channel over Ethernet (FCoE) forwarders (FCFs). Acting as a transit FIP snooping bridge, the switch uses dynamically-created ACLs to permit only authorized FCoE traffic to be transmitted between an FCoE end-device and an FCF.

The following FTOS commands are used to configure and verify the FIP snooping feature:

- clear fip-snooping database interface vlan
- clear fip-snooping statistics
- feature fip-snooping
- fip-snooping enable
- fip-snooping fc-map
- fip-snooping port-mode fcf
- show fip-snooping config
- show fip-snooping enode
- show fip-snooping fcf
- show fip-snooping sessions
- show fip-snooping statistics
- show fip-snooping system
- show fip-snooping vlan

#### clear fip-snooping database interface vlan

Clear FIP snooping information on a VLAN for a specified FCoE MAC address, ENode MAC address, or FCF MAC address, and remove the corresponding ACLs generated by FIP snooping.

Syntax clear fip-snooping database interface vlan vlan-id {fcoe-mac-address | enode-mac-address | fcf-mac-address}

Parameters -

fcoe-mac-addressEnter the FCoE MAC address to be cleared of FIP snooping information.enode-mac-addressEnter the ENode MAC address to be cleared of FIP snooping information.fcf-mac-addressEnter the FCF MAC address to be cleared of FIP snooping information.

#### Command Modes EXEC Privilege

Command History

Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

clear fip-sr	Clears the statistics on the interface.	tics he FIP packets snooped on all VLANs, a specified VLAN, or a specified port
Syntax	clear fip-snooping stat port-chan	istics [interface vlan <i>vlan-id</i>   interface <i>port-type port/slot</i>   interface nnel-number]
Parameters	vlan-id port-type port/slot port-channel- number]	Enter the VLAN ID of the FIP packet statistics to be cleared.Enter the port-type and slot number of the FIP packet statistics to be cleared.Enter the port channel number of the FIP packet statistics to be cleared.
Command Modes Command	EXEC Privilege	
History	Version 8.3.16.1 Intr	roduced on MXL 10/40GbE Switch IO Module

# feature fip-snooping Enable the FIP snooping feature on a switch.

Syntax	feature fip-snooping		
	To disable the FIP snooping feature, use the no feature fip-snooping command.		
Defaults	Disabled.		
Command Modes	CONFIGURATION		
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module		

## fip-snooping enable

Syntax	fip-snooping enable
	To disable the FIP snooping feature on all or a specified VLAN, use the no fip-snooping enable command.
Defaults	FIP snooping is disabled on all VLANs.
Command Modes	<ul><li>CONFIGURATION</li><li>VLAN INTERFACE</li></ul>
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

# fip-snooping fc-map

Configure the FC-MAP value used by FIP snooping on all VLANs.

Syntax	fip-snooping fc-map <i>fc-map-value</i>	
	To remove the configur	ed FM-MAP value, use the no fip-snooping fc-map command.
Parameters	fc-map-value	Enter the FC-MAP value used by FIP snooping. The valid values are from 0EFC00 to 0EFCFF.
Defaults	0x0EFC00	
Command Mode	<ul><li>CONFIGURATION</li><li>VLAN INTERFACE</li></ul>	
Command History	Version 8.3.16.1 Int	roduced on MXL 10/40GbE Switch IO Module

#### fip-snooping port-mode fcf

Configure the port for bridge-to-FCF links.

Syntax	fip-snooping port-mode fcf
	To disable the bridge-to-FCF link on a port, use the no fip-snooping port-mode fcf command.
Command Modes	INTERFACE
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Usage Information	The maximum number of FCFs supported per FIP snooping-enabled VLAN is four.

show fip-si	nooping config	
	Display the FIP snooping status and configured FC-MAP values.	
Syntax	show fip-snooping config	
Command Mode	<ul><li>EXEC</li><li>EXEC Privilege</li></ul>	
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module	
Example	Figure 11-1. show fip-snooping config Command Example FTOS# show fip-snooping config FIP Snooping Feature enabled Status: Enabled FIP Snooping Global enabled Status: Enabled Global FC-MAP Value: 0X0EFC00 FIP Snooping enabled VLANS

Field	Description	
ENode MAC	MAC address of the ENode.	
ENode Interface	Slot/ port number of the interface connected to the ENode.	

Field	Description
FCF MAC	MAC address of the FCF.
FCF Interface	Slot/ port number of the interface to which the FCF is connected.
VLAN	VLAN ID number used by the session.
FCoE MAC	MAC address of the FCoE session assigned by the FCF.
FC-ID	Fibre Channel ID assigned by the FCF.
Port WWPN	Worldwide port name of the CNA port.
Port WWNN	Worldwide node name of the CNA port.

#### Table 11-3. show fip-snooping sessions Command Field Description (continued)

## show fip-snooping statistics

Display statistics on the FIP packets snooped on all interfaces, including VLANs, physical ports, and port channels.

Syntax

show fip-snooping statistics [interface vlan *vlan-id* | interface *port-type port/slot* | interface port-channel *port-channel-number*]

Parameters		
Farameters	vlan-id	Enter the VLAN ID of the FIP packet statistics to be displayed.
	port-type port/slot	Enter the port-type and slot number of the FIP packet statistics to be displayed.
	port-channel- number]	Enter the port channel number of the FIP packet statistics to be displayed.
Command Mode	<ul><li>EXEC</li><li>EXEC Privilege</li></ul>	
Command		
History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

# **GARP VLAN Registration (GVRP)**

#### Commands

The generic attribute registration protocol (GVRP) commands are:

- clear gvrp statistics
- debug gvrp
- disable
- garp timers
- gvrp enable
- gvrp registration
- protocol gvrp
- show config
- show garp timers
- show gvrp
- show gvrp statistics
- show vlan

The GARP mechanism allows the configuration of a GARP participant to propagate through a network quickly. A GARP participant registers or de-registers its attributes with other participants by making or withdrawing declarations of attributes. At the same time, based on received declarations or withdrawals, GARP handles attributes of other participants.

GVRP enables a device to propagate virtual local area network (VLAN) registration information to other participant devices and dynamically update the VLAN registration information from other devices. The registration information updates local databases regarding active VLAN members and through which port the VLANs can be reached.

GVRP ensures that all participants on a bridged LAN maintain the same VLAN registration information. The VLAN registration information propagated by GVRP include both manually configured local static entries and dynamic entries from other devices.

GVRP participants have the following components:

- The GVRP application
- GARP information propagation (GIP)
- GARP information declaration (GID)

#### **Important Points to Remember**

- GVRP is supported on Layer 2 ports only.
- All VLAN ports added by GVRP are tagged.
- GVRP is supported on untagged ports belonging to a default VLAN, and tagged ports.
- GVRP cannot be enabled on untagged ports belonging to a non-default VLAN *unless* native VLAN is turned on.
- GVRP requires end stations with dynamic access network interface controller (NICs).
- Based on updates from GVRP-enabled devices, GVRP allows the system to dynamically create a port-based VLAN (unspecified) with a specific VLAN ID and a specific port.
- On a port-by-port basis, GVRP allows the system to learn about GVRP updates to an existing port-based VLAN with that VLAN ID and IEEE 802.1Q tagging.
- GVRP allows the system to send dynamic GVRP updates about your existing port-based VLAN.
- GVRP updates are not sent to any blocked spanning tree protocol (STP) ports. GVRP operates only on ports that are in the forwarding state.
- GVRP operates only on ports that are in the STP forwarding state. If GVRP is enabled, a port that changes to the STP forwarding state automatically begins to participate in GVRP. A port that changes to an STP state other than forwarding no longer participates in GVRP.
- VLANs created dynamically with GVRP exist only as long as a GVRP-enabled device is sending updates. If the devices no longer send updates, or GVRP is disabled, or the system is rebooted, all dynamic VLANs are removed.
- GVRP manages the active topology, not non-topological data such as VLAN protocols. If a local bridge needs to classify and analyze packets by VLAN protocols, you must manually configure protocol-based VLANs, and simply rely on GVRP for VLAN updates. But if the local bridge needs to know only how to reach a given VLAN, then GVRP provides all necessary information.
- The VLAN topologies that GVRP learns are treated differently from VLANs that are statically configured. The GVRP dynamic updates are not saved in NVRAM, while static updates are saved in NVRAM. When GVRP is disabled, the system deletes all VLAN interfaces that were learned through GVRP and leaves unchanged all VLANs that were manually configured.

#### clear gvrp statistics

Syntax

Clear GVRP statistics on an interface.

clear gvrp statistics interface interface

Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Command Modes	EXEC	
Defaults	none	
		• For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE followed by the slot/port information.
		<ul> <li>For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.</li> </ul>
		• For a Port Channel interface, enter the keyword <b>port-channel</b> followed by a number: Range: 1 to 128
Parameters	interface interface	Enter the following keywords and slot/port or number information:

Related Commands

show gvrp statistics

debug gvrp	)		
555	Enable debugging	on GVRP.	
Syntax	debug gvrp {config   events   pdu}		
	To disable debugg	ing, use the no debug gvrp {config   events   pdu} command.	
Parameters	config	Enter the keyword <b>config</b> to enable debugging on the GVRP configuration.	
	event	Enter the keyword <b>event</b> to enable debugging on the OVIA comparation.	
	pdu	Enter the keyword <b>pdu</b> followed one of the following Interface keywords and slot/port or number information:	
		<ul> <li>For a Port Channel interface, enter the keyword port-channel followed by a number: Range: 1-128</li> </ul>	
		<ul> <li>For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.</li> </ul>	
		• For a 40-Gigabit Ethernet interface, enter the keyword <b>fortyGigE</b> followed by the slot/port information.	
Defaults	Disabled		
Command Modes	EXEC Privilege		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
disable			
	Globally disable C	JVKP.	
Syntax	disable		
	To re-enable GVR	P, use the no disable command.	
Defaults	Enabled		
Command Modes	CONFIGURATION-GVRP		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Related	gvrp enable	Enables GVRP on physical interfaces and LAGs.	
Commands	protocol gvrp	Accesses the GVRP protocol.	
		-	

### garp timers

Set the intervals (in milliseconds) for sending GARP messages.

Syntax garp timers {join | leave | leave-all}

To return to the previous setting, use the no garp timers {join | leave | leave-all} command.

Parameters	join	Enter the keyword <b>join</b> followed by the number of milliseconds to configure the join time.
		Range: 100 to 147483647 milliseconds
		Default: 200 milliseconds
		Note: Designate the milliseconds in multiples of 100
	leave	Enter the keyword <b>leave</b> followed by the number of milliseconds to configure the leave time.
		Range: 100 to 2147483647 milliseconds
		Default: 600 milliseconds
		Note: Designate the milliseconds in multiples of 100
	leave-all	Enter the keyword <b>leave-all</b> followed by the number of milliseconds to configure the leave-all time.
		Range: 100 to 2147483647 milliseconds
		Default: 1000 milliseconds
		Note: Designate the milliseconds in multiples of 100
Defaults Command Modes	Default as above

### gvrp enable

gvrp enable	9
5	Enable GVRP on physical interfaces and LAGs.
Syntax	gvrp enable
	To disable GVRP on the interface, use the no gvrp enable command.
Defaults	Disabled
Command Modes	CONFIGURATION-INTERFACE
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Related Commands	disable Globally disables the GVRP.

## gvrp registration

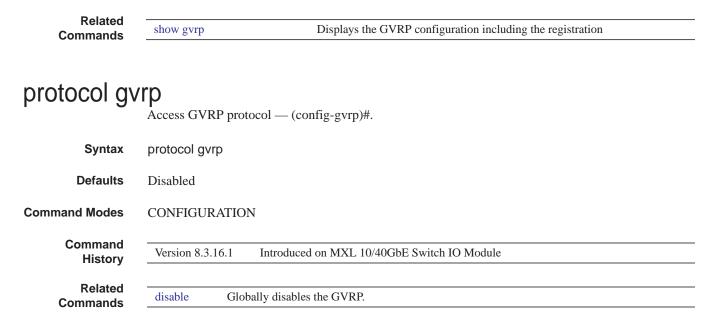

Configure the GVRP register type.

Syntax gvrp registration {fixed | normal | forbidden}

To return to the default, use the gvrp register normal command.

Parameters			
Faialleters	fixed	Enter the keyword <b>fixed</b> followed by the VLAN range in a comma separated VLAN ID set.	
	normal	Enter the keyword <b>normal</b> followed by the VLAN range in a comma separated VLAN ID set.	
		This is the default	
	forbidden	Enter the keyword <b>forbidden</b> followed by the VLAN range in a comma separated VLAN ID set.	
Defaults	Default registration is normal		
Command Modes	CONFIGURATION-INTERF	ACE	
Command History	Version 8.3.16.1 Introduced	d on MXL 10/40GbE Switch IO Module	
Usage Information	The fixed registration prevents an interface, configured via the command line to belong to a VLAN (static configuration), from being un-configured when it receives a Leave message. Therefore, the registration mode on that interface is fixed.		
	GVRP. The interface becomes	default registration. The port's membership in the VLANs depends on a member of VLANs after learning about the VLAN through GVRP. If e port that sends GVRP advertisements to this device, then the port will LAN.	

Use forbidden when you do not want the interface to advertise or learn about VLANs through GVRP.

### show config

Display the global GVRP configuration.

Syntax	show config	
Command Modes	CONFIGURATION-GVRP	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Related Commands	gvrp enable protocol gvrp	Enables GVRP on physical interfaces and LAGs. Accesses the GVRP protocol.

#### show garp timers

Display the GARP timer settings for sending GARP messages.

Syntax	show garp timers
Defaults	none
Command Modes	EXEC EXEC Privilege

- The attribute that was being parsed had an invalid attribute length.
- The attribute that was being parsed had an invalid GARP event.
- The attribute that was being parsed had an invalid VLAN ID. The valid range is 1 4095.

A failed registration can occur for the following reasons:

- Join requests were received on a port that was blocked from learning dynamic VLANs (GVRP Blocking state).
- An entry for a new GVRP VLAN could not be created in the GVRP database.

## Internet Group Management Protocol (IGMP)

#### **IGMP Snooping Commands**

The Dell Force10 operating software (FTOS) supports internet group management protocol (IGMP) snooping version 2 and 3 on all Dell Force10 systems:

- ip igmp access-group
- ip igmp group-join-limit
- ip igmp querier-timeout
- ip igmp query-interval
- ip igmp query-max-resp-time
- ip igmp version
- ip igmp snooping enable
- ip igmp snooping fast-leave
- ip igmp snooping flood
- ip igmp snooping last-member-query-interval
- ip igmp snooping mrouter
- ip igmp snooping querier
- show ip igmp snooping mrouter

#### Important Points to Remember for IGMP Snooping

- FTOS supports version 1, version 2, and version 3 hosts.
- FTOS IGMP snooping implementation is based on IP multicast address (not based on Layer 2 multicast mac-address) and the IGMP snooping entries are in Layer 3 flow table not in Layer 2 forwarding information base (FIB).
- FTOS IGMP snooping implementation is based on draft-ietf-magma-snoop-10.
- IGMP snooping is supported on all MXL 10/40GbE stack members.
- IGMP snooping is not enabled by default on the switch.
- A maximum of 1800 groups and 600 virtual local area network (VLAN) are supported.
- IGMP snooping is not supported on default VLAN interface.
- IGMP snooping is not supported over VLAN-Stack-enabled VLAN interfaces (you must disable IGMP snooping on a VLAN interface before configuring VLAN-Stack-related commands).
- IGMP snooping does not react to Layer 2 topology changes triggered by spanning tree protocol (STP).
- IGMP snooping reacts to Layer 2 topology changes triggered by multiple spanning tree protocol (MSTP) by sending a general query on the interface that comes in FWD state.

#### Important Points to Remember for IGMP Querier

- The IGMP snooping Querier supports version 2.
- You must configure an IP address to the VLAN interface for IGMP snooping Querier to begin. The IGMP snooping Querier disables itself when a VLAN IP address is cleared, and then it restarts itself when an IP address is re-assigned to the VLAN interface.
- When enabled, IGMP snooping Querier will not start if there is a statically configured multicast router interface in the VLAN.
- When enabled, IGMP snooping Querier starts after one query interval in case no IGMP general query (with IP SA lower than its VLAN IP address) is received on any of its VLAN members.
- When enabled, IGMP snooping Querier periodically sends general queries with an IP source address of the VLAN interface. If it receives a general query on any of its VLAN member, it will check the IP source address of the incoming frame.
- If the IP SA in the incoming IGMP general query frame is lower than the IP address of the VLAN interface, then the switch disables its IGMP snooping Querier functionality.
- If the IP SA of the incoming IGMP general query is higher than the VLAN IP address, the switch will continue to work as an IGMP snooping Querier.

#### ip igmp access-group

Use this feature to specify access control for packets.

Syntax	ip igmp access-group access-list		
	To remove the feature, u	use the no ip igmp access-group access-list command.	
Parameters	access-list	Enter the name of the extended ACL (16 characters maximum).	
Defaults	Not configured		
Command Modes	INTERFACE (conf-if-in	nterface-slot/port)	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Usage Information		is an extended ACL. This feature is used to block IGMP reports from hosts, on sed on the group address and source address specified in the access list.	

### ip igmp group-join-limit

Use this feature to limit the number of IGMP groups that can be joined in a second.

ip igmp group-join-limit number		
number	number Enter the number of IGMP groups permitted to join in a second. Range: 1 to 10000	
none		
CONFIGURAT	TON (conf-if- <i>interface-slot/port</i> )	
	number	number       Enter the number of IGMP groups permitted to join in a second.         Range: 1 to 10000

History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
ip igmp qu	erier-timeo	out
	Change the interva	al that must pass before a multicast router decides that there is no longer another at should be the querier.
Syntax	ip igmp querier-tir	meout seconds
	To return to the de	fault value, enter no ip igmp querier-timeout.
Parameters	seconds	Enter the number of seconds the router must wait to become the new querier. Default: 125 seconds Range: 60 to 300
Defaults	125 seconds	
Command Modes	INTERFACE	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

#### ip igmp query-interval

Command

Change the transmission frequency of IGMP general queries sent by the Querier.

Syntax	ip igmp query-interval seconds		
	To return to the de	fault values, enter no ip igmp query-interval.	
Parameters	seconds	Enter the number of seconds between queries sent out.	
		Default: 60 seconds	
		Range: 1 to 18000	
Defaults	60 seconds		
Command Modes	INTERFACE		
Command			
History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	

#### ip igmp query-max-resp-time

Set the maximum query response time advertised in general queries.

Syntax ip igmp query-max-resp-time seconds

To return to the default values, enter no ip igmp query-max-resp-time.

Parameters			
	seconds	Enter the number of seconds for the maximum response time.	
		Default: 10 seconds	
		Range: 1 to 25	
Defaults	10 seconds		
Command Modes	INTERFACE		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Syntax	Manually set the version {2	ersion of the router to IGMPv2 or IGMPv3.	
_			
Parameters	2	Enter the number 2 to set the IGMP version number to IGMPv2.	
Parameters	2 3	Enter the number <b>2</b> to set the IGMP version number to IGMPv2. Enter the number <b>3</b> to set the IGMP version number to IGMPv3.	
Parameters Defaults		Enter the number 3 to set the IGMP version number to IGMPv3.	
	3	Enter the number 3 to set the IGMP version number to IGMPv3.	

ip igmp snooping enable Enable IGMP snooping on all or a single VLAN. This is the master on/off switch to enable IGMP snooping.

Syntax	ip igmp snooping enable		
	To disable IGMP snooping, enter no ip igmp snooping enable command.		
Defaults	Disabled		
Command Modes	CONFIGURATION		
	INTERFACE VLAN		
Command History Usage Information	Version 8.3.16.1       Introduced on MXL 10/40GbE Switch IO Module         You must enter this command to enable IGMP snooping. When enabled from CONFIGURATION mode, IGMP snooping is enabled on all VLAN interfaces (except default VLAN).		

Note: You must execute the no shutdown command on the VLAN interface for IGMP Snooping to function.

U

Deleted		
Related Commands	no shutdown	Activates an interface.
ip igmp sno	poping fas	st-leave
·p ·9···p orig		poping fast leave for this VLAN.
Syntax	ip igmp snooping	g fast-leave
	To disable IGMP	snooping fast leave, use the no igmp snooping fast-leave command.
Defaults	Not configured	
Command Modes	INTERFACE VL	AN - (conf-if-vl-n)
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information	a group from the	y send a certain number of queries when a leave message is received prior to deleting membership database. There may be situations in which <i>fast</i> deletion of a group is you enable IGMP fast leave processing, the switch removes an interface from the

## ip igmp snooping flood

	This command controls the flooding behavior of unregistered multicast data packets. When flooding is disabled, unregistered multicast data traffic is forwarded to <i>only</i> multicast router ports, both static and dynamic, in a VLAN. If there is no multicast router port in a VLAN, unregistered multicast data traffic is dropped.		
	On the MXL Switch, when you configure no ip igmp snooping flood, the system forwards the frames on mrouter ports for first 96 IGMP snooping enabled VLANs. For all other VLANs, unregistered multicast packets are dropped.		
Syntax	ip igmp snooping flood		
Defaults	Enabled		
Command Modes	CONFIGURATION		
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module		

multicast group as soon as it detects an IGMP version 2 leave message on the interface.

ip igmp sno	oping last	-member-query-interval
	sent in response to	uery interval is the <i>maximum response time</i> inserted into Group-Specific queries Group-Leave messages. This interval is also the interval between successive hery messages. Use this command to change the last member query interval.
Syntax	yntax ip igmp snooping last-member-query-interval milliseconds	
	To return to the de	fault value, enter no ip igmp snooping last-member-query-interval.
Parameters		
i di di liotoro	milliseconds	Enter the interval in milliseconds.
		Default: 1000 milliseconds
		Range: 100 to 65535
Defaults	1000 milliseconds	
Command Modes	INTERFACE VLA	AN
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

#### ip igmp snooping mrouter

Statically configure a VLAN member port as a multicast router interface.

#### Syntax ip igmp snooping mrouter interface interface

To delete a specific multicast router interface, use the no igmp snooping mrouter interface *interface* command.

Devenuetere		
Parameters	interface interface	Enter the following keywords and slot/port or number information:
		• For a 10-Gigabit Ethernet interface, enter the keyword <b>TenGigabitEthernet</b> followed by the slot/port information.
		• For a 40-Gigabit Ethernet interface, enter the keyword <b>fortyGigE</b> followed by the slot/port information.
		• For a Port Channel interface, enter the keyword <b>port-channel</b> followed by a number:
		Range: 1 to 128
Defaults	Not configured	
Command Modes	INTERFACE VLAN	-(conf-if-vl-n)
Command History	Version 8.3.16.1	ntroduced on MXL 10/40GbE Switch IO Module
Usage Information	To configure a static c	pability of statically configuring interface to which a multicast router is attached. onnection to the multicast router, enter the ip igmp snooping mrouter interface N context. The interface to the router must be a part of the VLAN where you are l.

#### ip igmp snooping querier Enable IGMP querier processing for the VLAN interface.

Syntax	ip igmp snooping querier
	To disable IGMP querier processing for the VLAN interface, enter no ip igmp snooping querier command.
Defaults	Not configured
Command Modes	INTERFACE VLAN — (conf-if-vl- <i>n</i> )
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
•	
Usage Information	This command enables the IGMP switch to send General Queries periodically. This is useful when there is no multicast router present in the VLAN because the multicast traffic does not need to be

there is no multicast router present in the VLAN because the multicast traffic does not need to be routed. An IP address must be assigned to the VLAN interface for the switch to act as a querier for this VLAN.

### show ip igmp snooping mrouter

Display multicast router interfaces.

## Interfaces

#### Overview

This chapter defines interface commands and is divided into the following sections:

- Basic Interface Commands
- Port Channel Commands
- Time Domain Reflectometer (TDR)
- UDP Broadcast

#### **Basic Interface Commands**

The following commands are for physical, loopback, and null interfaces:

- clear counters
- clear dampening
- cx4-cable-length
- dampening
- description
- duplex (1000/10000 Interfaces)
- flowcontrol
- interface
- interface loopback
- interface ManagementEthernet
- interface null
- interface range
- interface range macro (define)
- interface range macro name
- interface vlan
- intf-type cr4 autoneg
- keepalive
- monitor interface
- mtu
- negotiation auto
- portmode hybrid
- rate-interval
- show config

- show config (from INTERFACE RANGE mode) .
- show interfaces
- show interfaces configured
- show interfaces dampening
- show interfaces description
- show interfaces stack-unit
- show interfaces status
- show interfaces switchport
- show interfaces transceiver
- show range
- shutdown
- speed (for 1000/10000/auto interfaces)
- stack-unit portmode

#### clear counters

Clear the counters used in the show interfaces commands for all VRRP groups, VLANs, and physical interfaces, or selected ones.

Syntax	clear counters [in	nterface] [vrrp [{ vrid   vrf instance}]   learning-limit]
Parameters	interface	(OPTIONAL) Enter any of the following keywords and slot/port or number to clear counters from a specified interface:
		• For a Loopback interface, enter the keyword <b>loopback</b> followed by a number from 0 to 16383.
		• For a Port Channel interface, enter the keyword <b>port-channel</b> followed by a number. Range: 1-128
		• For the management interface on the stack-unit, enter the keyword managementethernet followed by slot/port information. The slot range is 0-1, and the port range is 0.
		• For a 10-Gigabit Ethernet interface, enter the keyword <b>TenGigabitEthernet</b> followed by the slot/port information.
		• For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE followed by the slot/port information.
		• For a VLAN, enter the keyword vlan followed by a number from 1 to 4094.
	vrrp [ <i>vrid</i> ]	(OPTIONAL) Enter the keyword Vrrp to clear the counters of all VRRP groups. To clear the counters of a specified group, enter a <i>Vrid</i> number from 1 to 255.
	vrrp [vrf instance]	(OPTIONAL): Enter the keyword <b>vrrp</b> to clear counters for all VRRP groups. To clear the counters of VRRP groups in a specified VRF instance, enter the name of the instance (32 characters maximum).
	learning-limit	(OPTIONAL) Enter the keyword <b>learning-limit</b> to clear unknown source address (SA) drop counters when MAC learning limit is configured on the interface.
Defaults	Without a specific	interface specified, the command clears all interface counters.
Command Modes	EXEC Privilege	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

Example	Figure 14-1. clear	counters Command Example
	FTOS#clear counte Clear counters on	ers h all interfaces [confirm]
Related Commands	mac learning-limit	Limit the maximum number of MAC addresses (static + dynamic) learned on a selected interface.
	show interfaces	Display information on a specific physical interface or virtual interface.

#### clear dampening

Clear the dampening counters on all the interfaces or just the specified interface.

Syntax	clear dampening [in	terface]
Parameters	interface	(OPTIONAL) Enter one of the following keywords and slot/port or number information:
		• For a Port Channel interface, enter the keyword <b>port-channel</b> followed by a number. Range: 1 to 128.
		<ul> <li>For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.</li> </ul>
		• For a 40-Gigabit Ethernet interface, enter the keyword <b>fortyGigE</b> followed by the slot/port information.
Defaults	Without a specific interview of the specific interview of the specific interview of the specific speci	erface specified, the command clears all interface dampening counters
Command Modes	EXEC Privilege	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information		after you enter the clear counters command and verify the results with the show the line rate is not reset to 0.00%.
Example	Figure 14-2. clea	r dampening Command Example

Commanus	dampening	Configures dampening on an interface.

### cx4-cable-length

Configure the length of the cable to be connected to the selected CX4 port.

Syntax [no] cx4-cable-length {long | medium | short}

i didiletters	long   medium   short	Enter the keyword that matches the cable length to be used at the selected port:
		short = For 1-meter and 3-meter cable lengths
		medium = For 5-meter cable length
		long = For 10-meter and 15-meter cable lengths
Defaults	medium	
Command Mode	INTERFACE	
Command		
History	Version 8.3.16.1 Introduc	ced on MXL 10/40GbE Switch IO Module
Usage Information	•	on ports that the system recognizes as CX4 ports. The figure below shows KFP port with the command after inserting a CX4 converter into the port:
Example	Figure 14-3. Example of	of Unsuccessful CX4 Cable Length Configuration
	FTOS#show interfaces t	engigabitethernet 0/26   grep "XFP type"
	Pluggable media presen	t, XFP type is 10GBASE-CX4

```
Pluggable media present, XFP type is 10GBASE-CX4
FTOS(conf-if-te-0/26)#cx4-cable-length short
% Error: Unsupported command.
FTOS(conf-if-te-0/26)#cx4-cable-length medium
% Error: Unsupported command.
FTOS(conf-if-te-0/26)#cx4-cable-length long
% Error: Unsupported command.
FTOS(conf-if-te-0/26)#
```

Figure 14-4 shows a successful CX4 cable length configuration.

#### Example Figure 14-4. Example of CX4 Cable Length Configuration

```
/FTOS#config
FTOS(conf)#interface tengigabitethernet 0/52
FTOS(conf-if-0/52)#cx4-cable-length long
FTOS(conf-if-0/52)#show config
!
interface TenGigabitEthernet 0/51
no ip address
cx4-cable-length long
shutdown
FTOS(conf-if-0/52)#exit
FTOS(conf)#
```

For details on using XFP ports with CX4 cables, refer to your MXL Switch hardware guide.

Related		
Commands	show config	Displays the configuration of the selected interface.

#### dampening

Configures dampening on an interface.

Syntax dampening [[[[half-life] [reuse-threshold]] [suppress-threshold]] [max-suppress-time]]

To disable dampening, use the no dampening [[[[half-life] [reuse-threshold]] [suppress-threshold]] [max-suppress-time]] command syntax.

**Parameters** 

Parameters		
i ulumotoro	half-life	Enter the number of seconds after which the penalty is decreased. The
		penalty is decreased by half after the half-life period expires.
		Range: 1 to 30 seconds Default: 5 seconds
	reuse-threshold	Enter a number as the reuse threshold, the penalty value below which the interface state is changed to "up".
		Range: 1 to 20000
		Default: 750
	suppress-threshold	Enter a number as the suppress threshold, the penalty value above which the interface state is changed to "error disabled".
		Range: 1 to 20000
		Default: 2500
	max-suppress-time	Enter the maximum number for which a route can be suppressed. The default is four times the half-life value.
		Range: 1 to 86400
		Default: 20 seconds
Defaults	Disabled	
ommand Modes	INTERFACE (conf-if-)

Displays interface dampening information.

show interfaces dampening

#### description

I	Assign a descriptive text string to the interface.
Syntax	description desc_text
	To delete a description, enter no description.
Parameters	<i>desc_text</i> Enter a text string up to 240 characters long.
Defaults	No description is defined.
Command Modes	INTERFACE
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Usage Information	• Spaces between characters are not preserved after entering this command unless you enclose the entire description in quotation marks (" <i>desc_text</i> ").
	• Entering a text string after the description command overwrites any previous text string configured as the description.
	• The shutdown and description commands are the only commands that you can configure on an interface that is a member of a port-channel.
	• Use the show interfaces description command to display descriptions configured for each interface.
Related Commands	show interfaces description Displays the description field of interfaces.

## duplex (1000/10000 Interfaces)

Configure duplex mode on any physical interfaces where the speed is set to 1000/10000.

Syntax	duplex {half   full}		
	To return to the default setting, use the no duplex command.		
Parameters	half Enter the keyword half to set the physical interface to transmit only in one direction.		
	full Enter the keyword full to set the physical interface to transmit in both directions.		
Defaults	Not configured		
Command Modes	INTERFACE		
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module		
Usage Information	This command applies to any physical interface with speed set to 1000/10000.		
	<b>Note:</b> Starting with FTOS 7.8.1.0, when a copper SFP2 module with catalog number GP-SFP2-1T is used, its speed can be manually set with the <b>speed</b> command. When the speed		

is set to 10 or 100 Mbps, the duplex command can also be executed.

speed (for 1000/10000/auto interfaces)	Sets the speed on the Base-T Ethernet interface.
negotiation auto	Enables or disables auto-negotiation on an interface.

#### flowcontrol

Control how the system responds to and generates 802.3x pause frames on 10G and 40G stack units.

Syntax flowcontrol rx {off | on} tx {off | on} threshold

Parameters		
i ulumotoro	rx on	Enter the keywords <b>rx on</b> to process the received flow control frames on this port. This is the default value for the receive side.
	rx off	Enter the keywords <b>rx off</b> to ignore the received flow control frames on this port.
	tx on	Enter the keywords <b>tx on</b> to send control frames from this port to the connected device when a higher rate of traffic is received. This is the default value on the send side.
	tx off	Enter the keywords <b>tx off</b> so that flow control frames are not sent from this port to the connected device when a higher rate of traffic is received.
Defaults	rx off tx off	
Command Modes	INTERFACE	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information		gned 48-bit Multicast address 01-80-C2-00-00-01 is used to send and receive pause full duplex flow control, stations implementing the pause operation instruct the MAC

frames. To allow full duplex flow control, stations implementing the pause operation instruct the MAC to enable reception of frames with a destination address equal to this multicast address.

The pause:

- Starts when either the packet pointer or the buffer threshold is met (whichever is met first). When the discard threshold is met, packets are dropped.
- Ends when both the packet pointer and the buffer threshold fall below 50% of the threshold settings.

The *discard threshold* defines when the interface starts dropping the packet on the interface. This may be necessary when a connected device does not honor the flow control frame sent by the MXL Switch. The discard threshold should be larger than the *buffer threshold* so that the buffer holds at least hold at least 3 packets.

On 4-port 10G stack units: Changes in the flow-control values are not reflected automatically in the show interface output for 10G interfaces. This issue results from the fact that 10G interfaces do not support auto-negotiation per-se.

Important Points to Remember

- Do not enable tx pause when buffer carving is enabled. Consult Dell Force10 TAC for information and assistance.
- Asymmetric flow control (rx on tx off or rx off tx on) setting for the interface port less than 100 Mb/s speed is not permitted. The following error is returned:

Cannot configure Asymmetric flowcontrol when speed <1G, config ignored

• The only configuration applicable to half duplex ports is rx off tx off. The following error is returned:

Cannot configure flowcontrol when half duplex is configure, config ignored

• Half duplex cannot be configured when the flow control configuration is on (default is rx on tx on). The following error is returned:

Cannot configure half duplex when flowcontrol is on, config ignored

**Note:** The flow control must be off (rx off tx off) before configuring the half duplex.

#### Example Figure 14-6. show running config (partial) Command Example

```
FTOS(conf-if-tengig-0/1)#show config
!
interface TenGigabitEthernet 0/1
no ip address
switchport
no negotiation auto
flowcontrol rx off tx on
no shutdown
```

Table 14-1 lists how FTOS negotiates the flow control values between two Dell Force10 chassis connected back-to-back using 10G copper ports.

#### interface range

This command permits configuration of a range of interfaces to which subsequent commands are applied (bulk configuration). Using the interface range command, you can enter identical commands for a range of interface.

Syntax interface range interface, interface,...

Deremetere					
Parameters	interface, interface,				
		Slot/Port information must contain a space before and after the dash. For example, interface range tengigabitethernet 0/1 - 5 is valid; interface range tengigabitethernet 0/1-5 is not valid.			
		<ul> <li>For a Port Channel interface, enter the keyword port-channel followed by a number:</li> </ul>			
		<ul> <li>Range: 1 to 128</li> <li>For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.</li> </ul>			
		• For a 40-Gigabit Ethernet interface, enter the keyword <b>fortyGigE</b> followed by the slot/port information.			
		• For a VLAN, enter the keyword vlan followed by a number from 1 to 4094.			
Defaults	none				
Command Modes	CONFIGURATION	N			
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module			
Usage Information	•	nterface range, interfaces appear in the order they are entered; they are not sorted. fies that interfaces are present (physical) or configured (logical). Important things to			
	• Bulk configura	ation is created if at least one interface is valid.			
	•	nterfaces are excluded from the bulk configuration with a warning message.			
	• The interface r The prompt all	range prompt includes interface types with slot/port information for valid interfaces. lows for a maximum of 32 characters. If the bulk configuration exceeds 32 s represented by an ellipsis ( ).			
	• When the inter the prompt.	face range prompt has multiple port ranges, the smaller port range is excluded from			
	• If overlapping biggest end po	port ranges are specified, the port range is extended to the smallest start port and the rt.

-	FTOS(conf)#inte	erface range tengig 2/0 - 23 , tengig 2/1 - 10 ange-tengig-2/0-23#			

#### Example Figure 14-13. Interface Range prompt Overlapping Port Ranges

```
FTOS(conf)#interface range tengig 2/1 - 11 , tengig 2/1 - 23
FTOS(conf-if-range-tengig-2/1-23#
```

Only VLAN and port-channel interfaces created using the interface vlan and interface port-channel commands can be used in the interface range command.

Use the show running-config command to display the VLAN and port-channel interfaces. VLAN or port-channel interfaces that are not displayed in the show running-config command cannot be used with the bulk configuration feature of the interface range command. You cannot create virtual interfaces (VLAN, Port-channel) using the interface range command.

```
U
```

**Note:** If a range has VLAN, physical, and port-channel interfaces, only commands related to physical interfaces can be bulk configured. To configure commands specific to VLAN or port-channel, only those respective interfaces should be configured in a particular range.

Figure 14-14 is an example of a single range bulk configuration.

```
Example Figure 14-14. Single Range Bulk Configuration
```

```
FTOS(conf)# interface range tengigabitethernet 5/1 - 23
FTOS(conf-if-range)# no shutdown
FTOS(conf-if-range)#
```

Figure 14-15 shows how to use commas to add different interface types to the range enabling all Ten Gigabit Ethernet interfaces in the range 5/1 to 5/23 and both Ten Gigabit Ethernet interfaces 1/1 and 1/2.

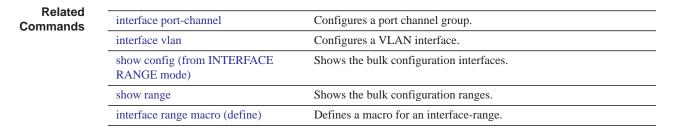

## Example Figure 14-15. Multiple Range Bulk Configuration Gigabit Ethernet and Ten Gigabit Ethernet

FTOS(conf-if)# interface range tengigabitethernet 5/1 - 23, tengigabitethernet 1/1 - 2 FTOS(conf-if-range)# no shutdown FTOS(conf-if-range)#

Figure 14-16 shows how to use commas to add VLAN and port-channel interfaces to the range.

#### Example Figure 14-16. Multiple Range Bulk Configuration with VLAN and port channel

```
FTOS(conf-if)# interface range tengigabitethernet 5/1 - 23, tengigabitethernet 1/1 - 2,
Vlan 2 - 100 , Port 1 - 25
FTOS(conf-if-range)# no shutdown
FTOS(conf-if-range)#
```

# interface range macro (define) Defines a macro for an interface range and then saves the macro in the running configuration.

Syntax define interface range macro name interface, interface, ....

Parameters				
i arametero	name	Enter up to 16 characters for the macro name.		
	interface , interface ,	Enter the interface keyword (see below) and one of the interfaces slot/port, port-channel or VLAN numbers. Select the range of interfaces for bulk configuration. You can enter up to six comma separated ranges—spaces are <b>not</b> required between the commas. Comma-separated ranges can include VLANs, port-channels and physical interfaces.		
		Slot/Port information must contain a space before and after the dash. For example, interface range tengigabitethernet 0/1 - 5 is valid; interface range tengigabitethernet 0/1-5 is not valid.		
		• For a Port Channel interface, enter the keyword <b>port-channel</b> followed by a number:		
		<ul> <li>Range: 1-128</li> <li>For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.</li> </ul>		
		• For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE followed by the slot/port information.		
		• For a VLAN, enter the keyword vlan followed by a number from 1 to 4094.		
Defaults	none			
Command Modes	CONFIGURATION

Related Commands	interface range	Configures a range of command (bulk configuration)		
e e i i i i i i i i i i i i i i i i i i	interface range macro name	Runs an interface range macro.		

## interface range macro name

Run the interface-range macro to automatically configure the pre-defined range of interfaces.

Syntax	interface range n	nacro name	
Parameters	name	Enter the name of an existing macro.	
Defaults	none		
Command Modes	CONFIGURATIC	DN	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Usage Information	Figure 14-18 runs	the macro named <i>test</i> that was defined earlier.	
Example	Figure 14-18.	interface-range macro Command Example	
		erface range macro test ange-te-0/0-3,tengig-5/0-47,tengig-13/0-89)#	
Related Commands	interface range	Configures a range of command (bulk configuration)	

Defines a macro for an interface range (bulk configuration)

#### interface vlan

Configure a VLAN. You can configure up to 4094 VLANs.

interface range macro (define)

Syntax	interface vlan vlan-id		
	To delete a VLAN, use the no interface vlan vlan-id command.		
Parameters	vlan-idEnter a number as the VLAN Identifier. Range: 1 to 4094.		
Defaults	Not configured, except for the Default VLAN, which is configured as VLAN 1.		
Command Modes	CONFIGURATION		
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module		
Example	Figure 14-19. interface vlan Command Example		
	<pre>FTOS(conf)#int vlan 3 FTOS(conf-if-vl-3)#</pre>		
Usage Information	For more information about VLANs and the commands to configure them, refer to Virtual LAN (VLAN) Commands.		

FTP, TFTP, and SNMP operations are not supported on a VLAN. MAC ACLs are not supported in VLANs. IP ACLs are supported. Refer to Chapter 6, Access Control Lists (ACL).

#### Related Commands

interface	Configures a physical interface.	
interface loopback	Configures a loopback interface.	
interface null	e null Configures a null interface.	
interface port-channel	Configures a port channel group.	
show vlan	Displays the current VLAN configuration on the switch.	
shutdown	Disables/Enables the VLAN.	
tagged	Adds a Layer 2 interface to a VLAN as a tagged interface.	
untagged	Adds a Layer 2 interface to a VLAN as an untagged interface.	

#### intf-type cr4 autoneg

Set the interface type as CR4 with auto-negotiation enabled.

Syntax	intf-type cr4 autoneg If intf-type cr4 autoneg is configured, use the no intf-type cr4 autoneg command to set the interface type as cr4 with autonegotiation disabled.		
Defaults	Not configured		
Command Modes	CONFIGURATION		
Command History Usage Information	Version 8.3.16.1       Introduced on MXL 10/40GbE Switch IO Module         If interface type is configured as CR4 with auto-negotiation enabled, then the peer should also be configured as CR4 with auto-negotiation. Many DAC cable link issues can be resolved by setting the		
Related Commands	interface type as CR4. interface interface loopback interface null interface port-channel	Configures a physical interface.         Configures a loopback interface.         Configures a null interface.         Configures a port channel group.	

#### keepalive

Send keepalive packets periodically to keep an interface alive when it is not transmitting data.

Syntax keepalive [seconds]

To stop sending keepalive packets, use the no keepalive command.

Parameters		
Farameters	seconds	(OPTIONAL) For interfaces with PPP encapsulation enabled, enter the number of seconds
		between keepalive packets.
		Range: 0 to 23767
		Default: 10 seconds
Defaults	Enabled	
Command Modes	INTERFACE	
Command		
History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage	When you config	ure keepalive, the system sends a self-addressed packet out of the configured
Information	interface to verify	that the far end of a WAN link is up. When you configure no keepalive, the system
	does not send kee	palive packets and so the local end of a WAN link remains up even if the remote end

### monitor interface

is down.

Monitor counters on a single interface or all interfaces on a stack unit. The screen is refreshed every 5 seconds and the CLI prompt disappears.

Syntax	monitor interface [interface]		
	To disable monito	bring and return to the CLI prompt, press the q key.	
Parameters	interface	(OPTIONAL) Enter the following keywords and slot/port or number information:	
		• For the management port, enter the keyword <b>managementethernet</b> followed by the slot (0-1) and the port (0).	
		• For a 10-Gigabit Ethernet interface, enter the keyword <b>TenGigabitEthernet</b> followed by the slot/port information.	
		• For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE followed by the slot/port information.	
ommand Modes	EXEC		
	EXEC Privilege		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Usage	The delta column	displays changes since the last screen refresh.

l - Page up		a - Page	down
T - Increase refresh i g - Ouit	nterval		cease refresh interval

#### Table 14-2. monitor Command Menu Options

Key	Description
systest-3	Displays the host name assigned to the system.
monitor time	Displays the amount of time since the monitor interface command was entered.
time	Displays the amount of time the chassis is up (since last reboot).
m	Change the view from a single interface to all interfaces on the stack unit or visa-versa.
с	Refresh the view.
b	Change the counters displayed from Packets on the interface to Bytes.
r	Change the [delta] column from change in the number of packets/bytes in the last interval to rate per second.
1	Change the view to next interface on the stack unit, or if in the stack unit mode, the next stack unit in the chassis.
а	Change the view to the previous interface on the stack unit, or if the stack unit mode, the previous stack unit in the chassis.
Т	Increase the screen refresh rate.
t	Decrease the screen refresh rate.
q	Return to the CLI prompt.

#### mtu

Set the Maximum Link MTU (frame size) for an Ethernet interface.

#### Syntax mtu value

To return to the default MTU value, use the no mtu command.

Parameters			
Farameters	value	Enter a maximum frame size in bytes.	
		Range: 594 to 9252	
		MXL Switch Range: 594 to 12000	
		Default: 1554	
Defaults	1554		
Command Modes	INTERFACE		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Usage If the packet includes a Layer 2 header, the difference between the link MTU and IP M <sup>2</sup> command) must be enough bytes to include the Layer 2 header:		•	
	• The IP MTU command.	will get adjusted automatically when the Layer 2 MTU is configured with the mtu	
	When you enter the no mtu command, FTOS reduces the IP MTU value to 1536 bytes.		
	Link MTU and IP MTU considerations for port channels and VLANs are as follows.		
	port channels:		
	All members	must have the same link MTU value and the same IP MTU value.	
	*	nnel link MTU and IP MTU must be less than or equal to the link MTU and IP MTU gured on the channel members.	
	*	nembers have a link MTU of 2100 and an IP MTU 2000, the port channel's MTU higher than 2100 for link MTU or 2000 bytes for IP MTU.	
	VLANs:		
	All members	of a VLAN must have same IP MTU value.	
		have different Link MTU values. Tagged members must have a link MTU 4 bytes intagged members to account for the packet tag.	
	• The VLAN li	ink MTU and IP MTU must be less than or equal to the link MTU and IP MTU values n the VLAN members.	
Example	members with Lin	ins tagged members with Link MTU of 1522 and IP MTU of 1500 and untagged nk MTU of 1518 and IP MTU of 1500. The VLAN's Link MTU cannot be higher nd its IP MTU cannot be higher than 1500 bytes.	

#### Table 14-3. Difference between Link MTU and IP MTU

Layer 2 Overhead	Link MTU and IP MTU Delta
Ethernet (untagged)	18 bytes
VLAN Tag	22 bytes
Untagged Packet with VLAN-Stack Header	22 bytes
Tagged Packet with VLAN-Stack Header	26 bytes

С

### negotiation auto

Enable auto-negotiation on an interface.

Syntax	negotiation auto To disable auto-negotiation, enter no negotiation auto.
Defaults	Enabled
Command Modes	INTERFACE
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

Usage Information

The no negotiation auto command is only available if you first manually set the speed of a port to 10Mbits or 100Mbits.

The negotiation auto command provides a mode option for configuring an individual port to forced-master/forced slave once auto-negotiation is enabled

#### Figure 14-21. negotiation auto Master/Slave Example

```
FTOS(conf)# int tengig 0/0
FTOS(conf-if) #neg auto
FTOS(conf-if-autoneg)# ?
                         Exit from configuration mode
end
                         Exit from autoneg configuration mode
exit
                         Specify autoneg mode
mode
                        Negate a command or set its defaults
no
show
                        Show autoneg configuration information
FTOS(conf-if-autoneg) #mode ?
                        Force port to master mode
forced-master
forced-slave
                        Force port to slave mode
FTOS(conf-if-autoneg)#
```

If the mode option is not used, the default setting is slave. If you do not configure forced-master or forced slave on a port, the port negotiates to either a master or a slave state. Port status is one of the following:

- Forced-master
- Force-slave
- Master
- Slave
- Auto-neg Error—typically indicates that both ends of the node are configured with forced-master or forced-slave.

**Caution:** Ensure that one end of your node is configured as forced-master and one is configured as forced-slave. If both are configured the same (that is forced-master or forced-slave), the show interfaces command will flap between an auto-neg-error and forced-master/slave states.

You can display master/slave settings with the show interfaces command.

Figure 14-22. Display Auto-negotiation Master/Slave Setting (partial)

```
FTOS#show interfaces configured
TenGigabitEthernet 13/18 is up, line protocol is up
Hardware is Dell Force10Eth, address is 00:01:e8:05:f7:fc

Queueing strategy: fifo
Input Statistics:
...
```

Both sides of the link must have auto-negotiation enabled or disabled for the link to come up.

The following table details the possible speed and auto-negotiation combinations for a line between two 100/1000 Base-T Ethernet interfaces.

 Table 14-4.
 Auto-negotiation and Link Speed Combinations

Port 0	Port 1	Link Status between Port 1 and Port 2
auto-negotiation enabled* speed 1000 or auto	auto-negotiation enabled* speed 1000 or auto	Up at 1000 Mb/s
auto-negotiation enabled speed 100	auto-negotiation enabled speed 100	Up at 100 Mb/s
auto-negotiation disabled speed 100	auto-negotiation disabled speed 100	Up at 100 Mb/s
auto-negotiation disabled speed 100	auto-negotiation enabled speed 100	Down
auto-negotiation enabled* speed 1000 or auto	auto-negotiation disabled speed 100	Down

\* You cannot disable auto-negotiation when the speed is set to 1000 or auto.

Related Commands

### portmode hybrid

Set a physical port or port-channel to accept *both* tagged and untagged frames. A port configured this way is identified as a hybrid port in report displays.

Syntax portmode hybrid

To return a port to accept *either* tagged or untagged frames (non-hybrid), use the **no portmode** hybrid command.

Defaults non-hybrid

**Command Modes** INTERFACE (conf-if-*interface-slot/port*)

Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module	
Example	Figure 14-23. portmode hybrid Configuration Example	
	<pre>FTOS(conf)#interface tengig 0/20 FTOS(conf-if-te-0/20)#no shut FTOS(conf-if-te-0/20)#portmode hybrid FTOS(conf-if-te-0/20)#sw FTOS(conf-if-te-0/20)#int vlan 10 FTOS(conf-if-vl-10)#tag tengig 0/20 FTOS(conf-if-vl-10)#int vlan 20 FTOS(conf-if-vl-20)#untag tengig 0/20 FTOS(conf-if-vl-20)#</pre>	

Usage Figure 14-23 sets a port as hybrid, makes the port a tagged member of VLAN 20, and an untagged member of VLAN 10, which becomes the native VLAN of the port. The port will now accept:

- untagged frames and classify them as VLAN 10 frames
- VLAN 20 tagged frames

The next figure is an example show output with "Hybrid" as the newly added value for 802.1QTagged. The options for this field are:

- True—port is tagged
- False—port is untagged
- Hybrid—port accepts both tagged and untagged frames

```
Example Figure 14-24. Display the Tagged Hybrid Interface
```

```
FTOS(conf)#interface tengig 0/20
FTOS(conf-if-te-0/20)#no shut
FTOS(conf-if-te-0/20) #portmode hybrid

FTOS(conf)#
```

Figure 14-25 is an example of unconfiguration of the hybrid port using the no portmode hybrid command.

vlan-stack trunk

**Note:** You must remove all other configurations on the port before you can remove the hybrid configuration from the port.

Specifies an interface as a trunk port to the Stackable VLAN network.

```
Example Figure 14-25. Unconfigure the hybrid port
```

	<pre>FTOS(conf-if-vl-20)#interface vlan 10 FTOS(conf-if-vl-10)#no untagged tengig 0/20 FTOS(conf-if-vl-10)#interface vlan 20 FTOS(conf-if-vl-20)#no tagged tengig 0/20 FTOS(conf-if-vl-20)#interface tengig 0/20 FTOS(conf-if-te-0/20)#no portmode hybrid FTOS(conf-if-vl-20)#</pre>
Deleted	
Related Commands	show interfaces switchport Displays the configuration of switchport (Layer 2) interfaces on the switch.

### rate-interval

Configure the traffic sampling interval on the selected interface.	
--------------------------------------------------------------------	--

Syntax	rate-interval seconds		
Parameters	seconds	Enter the number of seconds for which to collect traffic data.	
		Range: 5 to 299 seconds	
		<b>Note:</b> For 0-5 seconds, polling occurs every 5 seconds. For 6-10 seconds, polling occurs every 10 seconds. For any other value, polling occurs every 15 seconds.	
Defaults	299 seconds		
Command Modes	INTERFACE		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Usage Information	The configured rate interval is displayed, along with the collected traffic data, in the output of show interfaces commands.		
Related Commands	show interfaces	Displays information on physical and virtual interfaces.	

show config

Display the interface configuration.

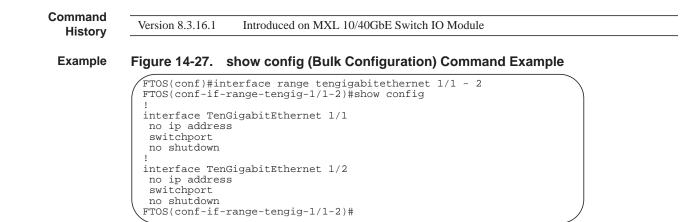

Syntax	show config	
ommand Modes	INTERFACE	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Example	Figure 14-26. show confi	g Command Example for the INTERFACE Mode
	<pre>FTOS(conf-if)#show conf ! interface TenGigabitEthe no ip address switchport no shutdown FTOS(conf-if)#</pre>	rnet 1/7

### show config (from INTERFACE RANGE mode)

Display the bulk configured interfaces (interface range).

Syntax show config

Command Modes CONFIGURATION INTERFACE (conf-if-range)

### show interfaces

Display information on a specific physical interface or virtual interface.

Syntax	show interfaces interface		
Parameters	interface	Enter one of the following keywords and slot/port or number information:	
		• For a Loopback interface, enter the keyword <b>loopback</b> followed by a number from 0 to 16383.	
		• For the management interface, enter the keyword ManagementEthernet followed by the slot/port information. The slot range is 0 to 1 and the port range is 0.	
		• For a Null interface, enter the keywords null 0.	
		• For a Port Channel interface, enter the keyword port-channel followed by a number:	
		Range: 1 to 128	
		• For a 10-Gigabit Ethernet interface, enter the keyword <b>TenGigabitEthernet</b> followed by the slot/port information.	
		• For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE followed by the slot/port information.	
		• For a VLAN interface, enter the keyword vlan followed by a number from 1 to 4094.	
Command Modes	EXEC		
	EXEC Privile	ege	
Command History	Version 8.3.1	6.1 Introduced on MXL 10/40GbE Switch IO Module	
Usage		w interfaces command for details on a specific interface. Use the show interfaces ommand for details on all interfaces on the designated stack unit.	
	link monitori	Switch, the show interface output displays incorrect rate information details over time for ng when the rate-interval is configured for 5 seconds. Dell Force10 recommends using intervals such as 15 to 299 seconds to minimize the errors seen.	

**Note:** In the CLI output, the power value will be rounded to a 3-digit value. For receive/ transmit power that is less than 0.000, an snmp query will return the corresponding dbm value even though the CLI displays as 0.000.

**Note:** After the counters are cleared, the line-rate continues to increase until it reaches the maximum line rate. When the maximum line rate is reached, there will be no change in the line-rate.

#### Example Figure 14-28. show interfaces Command Example for 10G Port

#### Table 14-5. Lines in show interfaces Command Example

Line	Description
TenGigabitEthernet 2/0	Displays the interface's type, slot/port, and administrative and line protocol status.
Hardware is	Displays the interface's hardware information and its assigned MAC address.
Interface index	Displays the interface index number used by SNMP to identify the interface.
Internet address	States whether an IP address is assigned to the interface. If one is, that address is displayed.
MTU 1554	Displays link and IP MTU information. If the chassis is in Jumbo mode, this number can range from 576 to 9252.
LineSpeed	Displays the interface's line speed.
ARP type:	Displays the ARP type and the ARP timeout value for the interface.
Last clearing	Displays the time when the show interfaces counters where cleared.
Queuing strategy	States the packet queuing strategy. FIFO means first in first out.

Line	Description
Input Statistics:	Displays all the input statistics including:
	• Number of packets and bytes into the interface
	• Number of packets with IP headers and VLAN tagged headers.
	<b>Note:</b> The sum of the number of packets may not be as expected since a VLAN tagged IP packet counts as both a VLAN packet and an IP packet.
	• Packet size and the number of those packets inbound to the interface
	• Number of symbol errors, runts, giants, and throttles packets:
	symbol errors = number packets containing bad data. That is, the port MAC detected a physical coding error in the packet.
	runts = number of packets that are less than $64B$
	giants = packets that are greater than the MTU size
	throttles = packets containing PAUSE frames
	Number of CRC, IP Checksum, overrun, and discarded packets:
	CRC = packets with CRC/FCS errors
	IP Checksum = packets with IP Checksum errors
	overrun = number of packets discarded due to FIFO overrun conditions
	discarded = the sum of input symbol errors, runts, giants, CRC, IP Checksum, and overrun packets discarded without any processing
Output Statistics:	Displays output statistics sent out of the interface including:
	• Number of packets, bytes and underruns out of the interface
	packets = total number of packets
	bytes = total number of bytes
	underruns = number of packets with FIFO underrun conditions
	• Number of Multicast, Broadcast and Unicast packets:
	Multicasts = number of MAC multicast packets
	Broadcasts = number of MAC broadcast packets
	Unicasts = number of MAC unicast packets
	Number of throttles and discards packets:
	throttles = packets containing PAUSE frames
	discarded = number of packets discarded without any processing
Rate information	Estimate of the input and output traffic rate over a designated interval (30 to 299 seconds).
	Traffic rate is displayed in bits, packets per second, and percent of line rate.
Time since	Elapsed time since the last interface status change (hh:mm:ss format).

Related							
Commands	dampening		Configures da	ampening on an in	terface		
	show interfaces		Displays info	rmation on a speci	ific physical in	nterface or virtu	al interface.
	show interfaces of	configured	Displays any	interface with a no	on-default cor	figuration.	

## show interfaces description Display the descriptions configured on the interface.

interface	Enter one of the f	following keywords	and slot/port o	r number information:	
			-	pback followed by a num	ber from 0 to
				enter the keyword port information. The slot	range is 0-0 a
		interface, enter the k	evwords null (	0	
			-	port-channel followed b	w a number
		,	i the keyword		by a number.
	Range: 1-128				
	the slot/port i	nformation.		yword TenGigabitEther	
	<ul> <li>For a 40-Giga port informat</li> </ul>		ce, enter the ke	eyword fortyGigE followe	ed by the slo
	For VLAN in	terfaces, enter the k	eyword <b>vlan</b> f	ollowed by a number from	1 to 4094.

#### Table 14-6. show interfaces description Command Example Fields

Field	Description
Interface	Displays type of interface and associated slot and port number.
OK?	Indicates if the hardware is functioning properly.
Status	States whether the interface is enabled (up) or disabled (administratively down).

#### Table 14-6. show interfaces description Command Example Fields

Field	Description
Protocol	States whether IP is enabled (up) or disabled (down) on the interface.
Description	Displays the description (if any) manually configured for the interface.

Enter the stack member number (0 to 5).

Related Commands

show interfaces	Display information on a specific physical interface or virtual inter	face
Show interfaces	Display information on a specific physical interface of virtual inter	race.

### show interfaces stack-unit

Display information on all interfaces on a specific MXL Switch stack member.

Syntax	show interfaces stack-unit unit-number

**Parameters** 

**Command Modes** EXEC

EXEC Privilege

unit-number

Command History

Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

Example

Figure 14-34. show interfaces status Command Example

```
FTOS#show interfaces stack-unit 0
TenGigabitEthernet 0/1 is down, line protocol is down
Hardware is DellForce10Eth, address is 00:1e:c9:f1:00:05
   Current address is 00:1e:c9:f1:00:05
Server Port AdminState is Down
Pluggable media not present
Interface index is 34148609
Internet address is not set
Mode of IP Address Assignment : NONE
DHCP Client-ID :tenG130001ec9f10005
MTU 1554 bytes, IP MTU 1500 bytes
LineSpeed auto
Flowcontrol rx off tx off
ARP type: ARPA, ARP Timeout 04:00:00
Last clearing of "show interface" counters 5d5h24m
Queueing strategy: fifo
Input Statistics:
     0 packets, 0 bytes
     0 64-byte pkts, 0 over 64-byte pkts, 0 over 127-byte pkts
     0 over 255-byte pkts, 0 over 511-byte pkts, 0 over 1023-byte pkts
     0 Multicasts, 0 Broadcasts
     0 runts, 0 giants, 0 throttles
     0 CRC, 0 overrun, 0 discarded
Output Statistics:
     0 packets, 0 bytes, 0 underruns
     0 64-byte pkts, 0 over 64-byte pkts, 0 over 127-byte pkts
     0 over 255-byte pkts, 0 over 511-byte pkts, 0 over 1023-byte pkts
     0 Multicasts, 0 Broadcasts, 0 Unicasts
     0 throttles, 0 discarded, 0 collisions
Rate info (interval 299 seconds):
     Input 00.00 Mbits/sec,
                                     0 packets/sec, 0.00% of line-rate
     Output 00.00 Mbits/sec,
                                     0 packets/sec, 0.00% of line-rate
Time since last interface status change: 5d5h23m
           ---output truncated ----
```

Related Commands	show hardware stack-unit	Displays data plane and management plane input/output statistics.
	show interfaces	Displays information on a specific physical interface or virtual interface.

### show interfaces status

Display a summary of interface information or specify a stack unit and interface to display status information for that specific interface only.

interface	(OPTIONAL) Enter one of the following keywords and slot/po information:	rt or number
	<ul> <li>For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information</li> </ul>	on.
	• For a 40-Gigabit Ethernet interface, enter the keyword <b>forty</b> by the slot/port information.	GigE followe

Items	Description	
Name	Displays the interface's type, slot and port number.	
802.1QTagged	Displays whether if the VLAN tagged ("True"), untagged ("False"), or hybrid ("Hybrid"), which supports both untagged and tagged VLANs by port 13/0.	
Vlan membership	Lists the VLANs to which the interface is a member. Starting with FTOS 7.6.1, this field can display native VLAN membership by port 13/0.	

#### Table 14-7. Items in show interfaces switchport Command Example

#### Related Commands

interface	Configures a physical interface on the switch.	
show ip interface	Displays Layer 3 information about the interfaces.	
show interfaces	Displays information on a specific physical interface or virtual interface.	
show interfaces transceiver	Displays the physical status and operational status of an installed transceiver. The output also displays the transceiver's serial number.	

#### Display the physical status and operational status of an installed transceiver. The output also displays the transceiver's serial number. show interfaces [tengigabitethernet slot/port | fortyGigE slot/port] transceiver Syntax **Parameters** tengigabitethernet For a 10G interface, enter the keyword tengigabitethernet followed by the slot/port information. fortyGigE For a 40G interface, enter the keyword fortyGigE followed by the slot/port information. **Command Modes** EXEC EXEC Privilege Command Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module History Usage See Figure 14-37 for an command example and see Table 14-8 for a description of the output fields.

### show interfaces transceiver

Interfaces I

270

#### Example Figure 14-37. show interfaces tengigabitethernet transceiver Command Example

FTOS#show interfaces tengigabitethernet 1/0 transceiver SFP is present. SFP 0 Serial Base ID fields  $\begin{array}{ccc} \text{SFP U Id} & = 0 \times 03 \\ \text{SFP 0 Ext Id} & = 0 \times 04 \\ \text{SFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\ \text{GFP 0 Connector} & = 0 \times 07 \\$ SFP 0 Length Copyet,SFP 0 Vendor RevSFP 0 Laser WavelengthChackCodeBase= 0x66 SFP 0 CheckCodeBase = 0x SFP 0 Serial Extended ID fields SFP 0 Options= 0x00 0x12 SFP 0 BR max= 0 SFP 0 BR min= 0 SFP 0 Vendor SN= P5N1ACE SFP 0 Datecode = 040528SFP 0 CheckCodeExt = 0x5bSFP 1 Diagnostic Information \_\_\_\_\_ SFP 1 Rx Power measurement type = Average SFP 1 Temp High Alarm threshold= 95.000CSFP 1 Voltage High Alarm threshold= 3.900VSFP 1 Bias High Alarm threshold= 17.000MA SFP 1 Voltage light Alarm threshold= 5.000 mASFP 1 Bias High Alarm threshold= 17.000mASFP 1 TX Power High Alarm threshold= 0.631mWSFP 1 RX Power High Alarm threshold= 1.259mWSFP 1 Temp Low Alarm threshold= -25.000CSFP 1 Voltage Low Alarm threshold= 2.700V = 2.700V = 2.700V = 1.000mA = 0.067mW = 0.010mW SFP 1 Bias Low Alarm threshold SFP 1 TX Power Low Alarm threshold SFP 1 RX Power Low Alarm threshold SFP 1 Temp High Warning threshold= 90.000CSFP 1 Voltage High Warning threshold= 3.700VSFP 1 Bias High Warning threshold= 14.000MA SFP 1 Blas High Warning threshold= 14.000MKSFP 1 TX Power High Warning threshold= 0.631mWSFP 1 RX Power High Warning threshold= 0.794mWSFP 1 Temp Low Warning threshold= -20.000CSFP 1 Voltage Low Warning threshold= 2.900VSFP 1 Bias Low Warning threshold= 2.000mA SFP 1Bias Low Warning threshold= 2.000mASFP 1TX Power Low Warning threshold= 0.079mWSFP 1RX Power Low Warning threshold= 0.016mW \_\_\_\_\_ SFP 1 Temperature = 39.930CSFP 1 Voltage = 3.293V SFP 1 Tx Bias Current = 6.894mA = 0.328mW SFP 1 Tx Power SFP 1 Rx Power = 0.000mW \_\_\_\_\_ SFP 1 Data Ready state Bar = False SFP 1 Rx LOS state SFP 1 Tx Fault state = True = False = False SFP 1 Rate Select state SFP 1 RS state SFP 1 Tx Disable state SFP 1 Tx Disable state The performance of the pe = False SFP 1 Tx Bhas High Alarm Flag SFP 1 Tx Power High Alarm Flag SFP 1 Rx Power High Alarm Flag SFP 1 Temperature Low Alarm Flag SFP 1 Voltage Low Alarm Flag SFP 1 Tx Bias Low Alarm Flag SFP 1 Tx Power Low Alarm Flag SFP 1 Rx Power Low Alarm Flag = False = False = False = False = False = True SFP 1 Rx Power Low Alarm Flag !-----!

Line	Description	
Rx Power measurement type	Output depends on the vendor, typically either "Average" or "OMA" (Receiver optical modulation amplitude).	
Temp High Alarm threshold	Factory-defined setting, typically in Centigrade. Value differs between SFPs and SFP+.	
Voltage High Alarm threshold	Displays the interface index number used by SNMP to identify the interface.	
Bias High Alarm threshold	Factory-defined setting. Value can differ between SFP and SFP+.	
TX Power High Alarm threshold	Factory-defined setting. Value can differ between SFP and SFP+.	
RX Power High Alarm threshold	Factory-defined setting. Value can differ between SFP and SFP+.	
Temp Low Alarm threshold	Factory-defined setting. Value can differ between SFP and SFP+.	
Voltage Low Alarm threshold	Factory-defined setting. Value can differ between SFP and SFP+.	
Bias Low Alarm threshold	Factory-defined setting. Value can differ between SFP and SFP+.	
TX Power Low Alarm threshold	Factory-defined setting. Value can differ between SFP and SFP+.	
RX Power Low Alarm threshold	Factory-defined setting. Value can differ between SFP and SFP+.	
Temp High Warning threshold	Factory-defined setting. Value can differ between SFP and SFP+.	
Voltage High Warning threshold	Factory-defined setting. Value can differ between SFP and SFP+.	
Bias High Warning threshold	Factory-defined setting. Value can differ between SFP and SFP+.	
TX Power High Warning threshold	Factory-defined setting. Value can differ between SFP and SFP+.	
RX Power High Warning threshold	Factory-defined setting. Value can differ between SFP and SFP+.	
Temp Low Warning threshold	Factory-defined setting. Value can differ between SFP and SFP+.	
Voltage Low Warning threshold	Factory-defined setting. Value can differ between SFP and SFP+.	
Bias Low Warning threshold	Factory-defined setting. Value can differ between SFP and SFP+.	
TX Power Low Warning threshold	Factory-defined setting. Value can differ between SFP and SFP+.	
Power Low Warning threshold	Factory-defined setting. Value can differ between SFP and SFP+.	
Temperature	Current temperature of the sfps.If this temperature crosses Temp High alarm/ warning thresholds, then the temperature high alarm/warning flag is set to true.	
Voltage	Current voltage of the sfps.If this voltage crosses voltage high alarm/warning thresholds, then the voltage high alarm/warning flag is set to true.	
Tx Bias Current	Present Tx bias current of the SFP. If this crosses bias high alarm/warning thresholds, then the tx bias high alarm/warning flag is set to true. If it falls below the low alarm/warning thresholds, then the tx bias low alarm/warning flag is set to true.	

#### Table 14-8. Diagnostic Data in show interfaces transceiver

Line	Description		
Tx Power	Present Tx power of the SFP. If this crosses Tx power alarm/warning thresholds, then the Tx power high alarm/warning flag is set to true. If it falls below the low alarm/warning thresholds, then the Tx power low alarm/ warning flag is set to true.		
Rx Power	Present Rx power of the SFP. This value is either average Rx power or OMA. This depends upon on the Rx Power measurement type displayed above. If this crosses Rx power alarm/warning thresholds, then the Rx power high alarm/warning flag is set to true. If it falls below the low alarm/warning thresholds, then the Rx power low alarm/warning flag is set to true.		
Data Ready state Bar	This field indicates that the transceiver has achieved power up and data is ready. This is set to true if data is ready to be sent, false if data is being transmitted.		
Rx LOS state	This is the digital state of the Rx_LOS output pin. This is set to true if the operating status is down.		
Tx Fault state	This is the digital state of the Tx Fault output pin.		
Rate Select state	This is the digital state of the SFP rate_select input pin.		
RS state	This is the reserved digital state of the pin AS(1) per SFF-8079 and RS(1) per SFF-8431.		
Tx Disable state	If the admin status of the port is down then this flag will be set to true.		
Temperature High Alarm Flag	This can be either true/False and it depends on the Current Temperature value displayed above.		
Voltage High Alarm Flag	This can be either true or false, depending on the Current voltage value displayed above.		
Tx Bias High Alarm Flag	This can be either true or false, depending on the present Tx bias current value displayed above.		
Tx Power High Alarm Flag	This can be either true or false, depending on the Current Tx power value displayed above.		
Rx Power High Alarm Flag	This can be either true or false, depending on the Current Rx power value displayed above.		
Temperature Low Alarm Flag	This can be either true or false, depending on the Current Temperature value displayed above.		
Voltage Low Alarm Flag	This can be either true or false, depending on the Current voltage value displayed above.		
Tx Bias Low Alarm Flag	This can be either true or false, depending on the Tx bias current value displayed above.		
Tx Power Low Alarm Flag	This can be either true or false, depending on the Current Tx power value displayed above.		
Rx Power Low Alarm Flag	This can be either true or false, depending on the Current Rx power value displayed above.		
Temperature High Warning Flag	This can be either true or false, depending on the Current Temperature value displayed above.		
Voltage High Warning FlagThis can be either true or false, depending on the Current voltage displayed above.			
Tx Bias High Warning Flag	This can be either true or false, depending on the Tx bias current value displayed above.		

#### Table 14-8. Diagnostic Data in show interfaces transceiver (continued)

Line	Description	
Tx Power High Warning Flag	This can be either true or false, depending on the Current Tx power value displayed above.	
Rx Power High Warning Flag	This can be either true or false, depending on the Current Tx power value displayed above.	
Temperature Low Warning Flag	This can be either true or false, depending on the Current Temperature value displayed above.	
Voltage Low Warning Flag	This can be either true or false, depending on the Current voltage value displayed above.	
Tx Bias Low Warning Flag	This can be either true or false, depending on the present Tx bias current value displayed above.	
Tx Power Low Warning FlagThis can be either true or false, depending on the Current Tx power displayed above.		
Rx Power Low Warning Flag	This can be either true or false, depending on the Current Rx power value displayed above.	

#### Table 14-8. Diagnostic Data in show interfaces transceiver (continued)

Related Commands

interface	Configures a physical interface on the switch.	
show ip interface	Displays Layer 3 information about the interfaces.	
show interfaces	Displays information on a specific physical interface or virtual interface.	
show inventory	Displays the switch type, FTOS version including hardware identification numbers and configured protocols.	

### show range

show interfaces

Display all interfaces configured using the interface range command.

Syntax	show range	
Command Mode	INTERFACE RAN	GE (config-if-range)
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Example	<pre>Figure 14-38. show range Command Example FTOS(conf-if-range-te-0/16)#show range interface tengigabitethernet 0/16 FTOS(conf-if-range-te-0/16)#</pre>	
Related Commands	interface show ip interface	Configures a physical interface on the switch. Displays Layer 3 information about the interfaces.

Displays information on a specific physical interface or virtual interface.

### shutdown

	Disable an interface.	
Syntax	shutdown	
	To activate an interface, enter	er no shutdown.
Defaults	The interface is disabled.	
Command Modes	INTERFACE	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information		
	functions within that VLAN command on a port channel	channel causes different behavior. When a VLAN is disabled, the Layer 3 are disabled. Layer 2 traffic continues to flow. Entering the shutdown disables all traffic on the port channel and the individual interfaces within a port channel, you must enter no shutdown on the port channel interface thin that port channel.
	The shutdown and description interface that is a member of	on commands are the only commands that you can configure on an f a port channel.
Related	interface port-channel	Creates a port channel interface.
Commands	interface vlan	Creates a VLAN.
	show in interface	Displays the interface routing status. Add the keyword brief to display a table

### speed (for 1000/10000/auto interfaces)

Set the speed for 1000/10000 Base-T Ethernet interfaces. Both sides of a link must be set to the same speed (1000/10000) or to auto or the link may not come up.

**Syntax** speed {1000 | 10000 | auto}

show ip interface

To return to the default setting, use the no speed {1000 | 10000 | auto} command.

of interfaces and their status.

Parameters		
T arameters	1000	Enter the keyword 1000 to set the interface's speed to 1000 Mb/s.
	10000	Enter the keyword 10000 to set the interface's speed to 10000 Mb/s.
		(Auto-negotiation is enabled. See negotiation auto for more information)
	auto	Enter the keyword auto to set the interface to auto-negotiate its speed.
		(Auto-negotiation is enabled. See negotiation auto for more information)
Defaults	auto	
mmand Modes	INTERFACE	

Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module		
Usage Information	This command is found on the 1000/10000 Base-T Ethernet interfaces.		
	When you enable auto, the system performs and automatic discovery to determine the optics instal and configure the appropriate speed.	iled	
	When you configure a speed for the 1000/10000 interface, you should confirm negotiation auto command setting. Both sides of the link should have auto-negotiation either enabled or disabled. F speed settings of 1000 or auto, the software sets the link to auto-negotiation and you cannot change setting.		
	In FTOS, the command <b>speed 1000</b> is an exact equivalent of <b>speed auto 1000</b> in IOS.		
elated	duplex (1000/10000 Configures duplex mode on physical interfaces with the speed set to 1000/		

Commands	duplex (1000/10000 Interfaces)	Configures duplex mode on physical interfaces with the speed set to 1000/1000.
	negotiation auto	Enables or disables auto-negotiation on an interface.

### stack-unit portmode

Split a single 40G port into 4-10G ports on the MXL Switch.

Syntax	stack-unit stack	<i>c-unit</i> port <i>number</i> portmode quad
Parameters	stack-unit	Enter the stack member unit identifier of the stack member to reset. <b>MXL Switch range</b> : 0 to 5 <b>Note:</b> The MXL Switch commands accept Unit ID numbers 0-5, though MXL Switch supports stacking up to 3 units only with FTOS version 8.3.7.1.
	number	Enter the port number of the 40G port to be split. <b>MXL Switch range</b> : Enter one of the following port numbers: 48, 52, 56, or 60.
Defaults Command Modes	Disabled CONFIGURATI	ON
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information	<ul> <li>Split ports c</li> <li>Split ports N</li> <li>The unit nut</li> <li>This can be</li> </ul>	bort into 4x10G port is supported only on a standalone unit. annot be used as stack-link to stack an <b>MXL Switch</b> . <i>AXL Switch unit cannot be a part of any stacked system</i> . nber with the split ports must be the default (stack-unit 0) verified using CLI "show system brief". If the unit ID is different than 0, then it must red to 0 before ports are split. By using the stack unit id renumber 0 command in e.

The quad port must be in a default configuration before it can be split into 4x10G ports. The 40G port is lost in the config when the port is split, so be sure the port is also removed from other L2/L3 feature configurations. The system must be reloaded after issuing the CLI for the change to take effect.

### **Port Channel Commands**

A link aggregation group (LAG) is a group of links that appear to a MAC client as if they were a single link according to IEEE 802.3ad. In FTOS, a LAG is referred to as a Port Channel.

Platform	Maximum Port Channel IDs	Maximum Members per Port Channel
MXL Switch	128	16

Because each port can be assigned to only one Port Channel, and each Port Channel must have at least one port, some of those nominally available Port Channels might have no function because they could have no members if there are not enough ports installed. In the MXL 10/40GbE Switch IO Module, those ports could be provided by stack members.

The commands in this section are specific to Port Channel interfaces:

- channel-member
- group
- interface port-channel
- minimum-links
- port-channel failover-group
- show config
- show interfaces port-channel

**Note:** The FTOS implementation of LAG or Port Channel requires that you configure a LAG on both switches manually. For information on FTOS Link Aggregation Control Protocol (LACP) for dynamic LAGs, refer to Chapter 17, Link Aggregation Control Protocol (LACP).

For more information on configuring and using Port Channels, refer to the *FTOS Configuration Guide*.

### channel-member

С

Add an interface to the Port Channel, while in the INTERFACE PORTCHANNEL mode.

Syntax	channel-membe	r interface
	To delete an inter	face from a Port Channel, use the no channel-member interface command.
Parameters	interface	Enter the following keywords and slot/port or number information:
		• For a Ten Gigabit Ethernet interface, enter the keyword <b>TenGigabitEthernet</b> followed by the slot/port information.
		• For a 40-Gigabit Ethernet interface, enter the keyword <b>fortyGigE</b> followed by the slot/port information.
Defaults	Not configured.	
ommand Modes	INTERFACE PO	RTCHANNEL
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

### Usage Use the interface port-channel command to access this command. Information

You cannot add an interface to a Port Channel if the interface contains an IP address in its configuration.

Link MTU and IP MTU considerations for Port Channels are:

- All members must have the same link MTU value and the same IP MTU value.
- The Port Channel link MTU and IP MTU must be less than or equal to the link MTU and IP MTU values configured on the channel members.

For example, if the members have a link MTU of 2100 and an IP MTU 2000, the Port Channel's MTU values cannot be higher than 2100 for link MTU or 2000 bytes for IP MTU.

When an interface is removed from a Port Channel with the no channel-member command syntax, the interface reverts to its configuration prior to joining the Port Channel.

An interface can belong to only one Port Channel.

You can have sixteen interfaces per Port Channel on the MXL Switch. The interfaces can be located on different stack units but must be the same physical type and speed (for example, all 10-Gigabit Ethernet interfaces). However, you can combine 100/1000 interfaces and GE interfaces in the same Port Channel.

If the Port Channel contains a mix of interfaces with 100 Mb/s speed and 1000 Mb/s speed, the software disables those interfaces whose speed does not match the speed of the first interface configured and enabled in the Port Channel. If that first interface goes down, the Port Channel does not change its designated speed; you must disable and re-enable the Port Channel or change the order of the channel members configuration to change the designated speed. Refer to the *FTOS Configuration Guide* for more information on Port Channels.

#### Related Commands

description	Assigns a descriptive text string to the interface.
interface port-channel	Creates a Port Channel interface.
shutdown	Disables/Enables the port channel.

### group

Group two LAGs in a supergroup ("fate-sharing group" or "failover group").

**Syntax** group *group\_number* port-channel *number* port-channel *number* 

To remove an existing LAG supergroup, use the no group group\_number command.

Parameters	group_number	Enter an integer from 1 to 32 that will uniquely identify this LAG fate-sharing group.
	port-channel number	Enter the keyword <b>port-channel</b> followed by an existing LAG <i>number</i> . Enter this keyword/variable combination twice, identifying the two LAGs to be paired.

#### Defaults none

Command Modes	PORT-CHANNEL FAILOVE	R-GROUP (conf-po-failover-grp)
Command History	Version 8.3.16.1 Introduced	on MXL 10/40GbE Switch IO Module
Example	Figure 14-39. group Com	nmand Example
	FTOS(conf)#port-channel FTOS(conf-po-failover-gr) FTOS(conf-po-failover-gr)	p)#group 1 port-channel 1 port-channel 2
Related Commands	port-channel failover-group	Accesses the PORT-CHANNEL FAILOVER-GROUP mode to configure a LAG failover group.
	show interfaces port-channel	Displays information on configured Port Channel groups.

### interface port-channel

Create a Port Channel interface, which is a link aggregation group containing up to 16 physical interfaces on an MXL Switch. Syntax interface port-channel channel-number To delete a Port Channel, use the no interface port-channel channel-number command. Parameters channel-number For a Port Channel interface, enter the keyword port-channel followed by a number: Range: 1-128 Defaults Not configured. **Command Modes** CONFIGURATION Command Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module History Example Figure 14-40. interface port-channel Command Example FTOS(conf)#int port-channel 2 FTOS(conf-if-po-2)# Usage Port Channel interfaces are logical interfaces and can be either in Layer 2 mode (by configuring Information port-channel with switchport command) or Layer 3 mode (by configuring an IP address). You can add a Port Channel in Layer 2 mode to a VLAN. A Port Channel can contain both 100/1000 interfaces and GE interfaces. Based on the first interface configured in the Port Channel and enabled, FTOS determines if the Port Channel uses 100 Mb/s or 1000 Mb/s as the common speed. Refer to channel-member for more information.

If the stack unit is in a Jumbo mode chassis, then the mtu and ip mtu commands can also be configured. The Link MTU and IP MTU values configured on the channel members must be greater than the Link MTU and IP MTU values configured on the Port Channel interface.

**Note:** In a Jumbo-enabled system, all members of a Port Channel must be configured with the same link MTU values and the same IP MTU values.

www.dell.com | support.dell.com

#### Related Commands

ed		
ds	channel-member	Adds a physical interface to the LAG.
	interface	Configures a physical interface.
	interface loopback	Configures a Loopback interface.
	interface null	Configures a null interface.
	interface vlan	Configures a VLAN.
	shutdown	Disables/Enables the port channel.

### minimum-links

Configure the minimum number of links in a LAG (Port Channel) that must be in "oper up" status for the LAG to be also in "oper up" status.

Syntax	minimum-links number	
Parameters		
	number	Enter the number of links in a LAG that must be in "oper up" status.
		Range: 1 to 16

Defaults 1 Command Modes INTERFACE

Command	
History	

Usage If you use this command to configure the minimum number of links in a LAG that must be in "oper up" Information status, the LAG must have at least that number of "oper up" links before it can be declared as up

Default: 1

status, the LAG must have at least that number of "oper up" links before it can be declared as up.

For example, if the required minimum is four, and only three are up, then the LAG is considered down.

Introduced on MXL 10/40GbE Switch IO Module

### port-channel failover-group

Version 8.3.16.1

Access the PORT-CHANNEL FAILOVER-GROUP mode to configure a LAG failover group.

Syntax	port-channel failover-group
	To remove all LAG failover groups, use the no port-channel failover-group command.
Defaults	none
Command Modes	CONFIGURATION
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Usage Information	This feature groups two LAGs to work in tandem as a supergroup, so that, if one LAG goes down, the other LAG is taken down automatically, providing an alternate path to reroute traffic, avoiding oversubscription on the other LAG. You can use both static and dynamic (LACP) LAGs to configure failover groups. For details, refer to the Port Channel chapter in the <i>FTOS Configuration Guide</i> .

Related	group	Groups two LAGs in a supergroup ("fate-sharing group").
Commands	show interfaces port-channel	Displays information on configured Port Channel groups.
show confi	<b>g</b> Display the current configurat	ion of the selected LAG.
Syntax	show config	
Command Modes	INTERFACE PORTCHANNE	EL
Example	Figure 14-41. show conf	ig Command Sample Output for a Selected LAG
	<pre>FTOS(conf-if-po-1)#show ! interface Port-channel 1 no ip address shutdown FTOS(conf-if-po-1)#</pre>	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

## show interfaces port-channel Display information on configured Port Channel groups.

arameters	channel-number	For a Port Channel interface, enter the keyword <b>port-channel</b> followed by a number:
		Range: 1-128
	brief	(OPTIONAL) Enter the keyword <b>brief</b> to display only the port channel number, the state of the port channel, and the number of interfaces in the port channel.
nd Modes	EXEC	
	EXEC Privilege

0 CRC, 0 overrun, 0 discarded
Output Statistics:
      0 packets, 0 bytes, 0 underruns
0 64-byte pkts, 0 over 64-byte pkts, 0 over 127-byte pkts
0 over 255-byte pkts, 0 over 511-byte pkts, 0 over 1023-byte pkts
0 Multicasts, 0 Broadcasts, 0 Unicasts
0 throttles, 0 discarded, 0 collisions
```

#### Table 14-10. show interfaces port-channel Command Example Fields

Field	Description
Port-Channel 1	Displays the LAG's status. In the example, the status of the LAG's LAG fate-sharing group ("Failover-group") is listed.
Hardware is	Displays the interface's hardware information and its assigned MAC address.
Port-channel is part	Indicates whether the LAG is part of a LAG fate-sharing group ("Failover-group").
Internet address	States whether an IP address is assigned to the interface. If one is, that address is displayed.
MTU 1554	Displays link and IP MTU.
LineSpeed	Displays the interface's line speed. For a port channel interface, it is the line speed of the interfaces in the port channel.
Members in this	Displays the interfaces belonging to this port channel.
ARP type:	Displays the ARP type and the ARP timeout value for the interface.
Last clearing	Displays the time when the show interfaces counters were cleared.
Queueing strategy.	States the packet queuing strategy. FIFO means first in first out.
packets input	Displays the number of packets and bytes into the interface.
Input 0 IP packets	Displays the number of packets with IP headers, VLAN tagged headers and MPLS headers. The number of packets may not add correctly because a VLAN tagged IP
	packet counts as both a VLAN packet and an IP packet.
0 64-byte	Displays the size of packets and the number of those packets entering that interface. This information is displayed over two lines.
Received 0	Displays the type and number of errors or other specific packets received. This information is displayed over three lines.

Field	Description
Output 0	Displays the type and number of packets sent out the interface. This information is displayed over three lines.
Rate information	Displays the traffic rate information into and out of the interface. Traffic rate is displayed in bits and packets per second.
Time since	Displays the time since the last change in the configuration of this interface.

Table 14-10. show interfaces port-channel Command Example Fields (continued)

#### Figure 14-43. show interfaces port-channel brief Command Example

```
FTOS#show int po 1 brief
Codes: L - LACP Port-channel
LAG Mode Status Uptime Ports
1 L3 down 00:00:00 Te 0/16 (Down)
FTOS#
```

Table 14-11.	show interfaces port-channel brief Command Example Fields
--------------	-----------------------------------------------------------

Field	Description	
LAG	Lists the port channel number.	
Mode	Lists the mode:	
	• L3 - for Layer 3	
	• L2 - for Layer 2	
Status	Displays the status of the port channel.	
	• down - if the port channel is disabled (shutdown)	
	• up - if the port channel is enabled (no shutdown)	
Uptime	Displays the age of the port channel in hours:minutes:seconds.	
Ports	Lists the interfaces assigned to this port channel.	
(untitled)	Displays the status of the physical interfaces (up or down).	
	In Layer 2 port channels, an * (asterisk) indicates which interface is the primary port of the port channel. The primary port sends out interface PDU.	
	In Layer 3 port channels, the primary port is not indicated.	

Related Commands

show lacp

Displays the LACP matrix.

### **Time Domain Reflectometer (TDR)**

Time domain reflectormeter (TDR) is useful for troubleshooting an interface that is not establishing a link; either it is flapping or not coming up at all. TDR detects open or short conditions of copper cables on 100/1000 Base-T modules.

- tdr-cable-test
- show tdr

#### **Important Points to Remember**

- The interface and port must be enabled (configured—see the interface command) before running TDR. An error message is generated if you have not enabled the interface.
- The interface on the far-end device must be shut down before running TDR.
- Because TDR is an intrusive test on an interface that is not establishing a link, do not run TDR on an interface that is passing traffic.
- When testing between two devices, do not run the test on both ends of the cable.

### tdr-cable-test

Test the condition of copper cables on 100/1000 Base-T modules.

Syntax	tdr-cable-test inter	
Parameters	interface	Enter the keyword TenGigabitEthernet followed by the slot/port information for the 100/1000 Ethernet interface.
Defaults	none	
mand Modes	EXEC	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information	The interface must b	be enabled to run the test or an error message is generated:
	FTOS#tdr-cable-	test tengigabitethernet 5/2
	%Error: Interfa	ce is disabled TenGIG 5/2
Related	show tdr	Displays the results of the TDR test.

### show tdr

Display the TDR test results.

Syntax :

show tdr interface

Devenuetare		
Parameters	interface	Enter the keyword <b>TenGigabitEthernet</b> followed by the slot/port information for the 100/1000 Ethernet interface.
Defaults	none	
Command Modes	EXEC	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Example	Figure 14-44.	show tdr tengigabitethernet Command Example
		tengigabitethernet 10/47 t test: 00:00:02

Time since last test: 00:00:02 Pair A, Length: OK Status: Terminated Pair B, Length: 92 (+/- 1) meters, Status: Short Pair C, Length: 93 (+/- 1) meters, Status: Open Pair D, Length: 0 (+/- 1) meters, Status: Impedance Mismatch

#### Table 14-12. TDR Test Status

Status	Definition
OK Status: Terminated	TDR test is complete, no fault is detected on the cable, and the test is terminated
Length: 92 (+/- 1) meters, Status: Shorted	A short is detected on the cable. The location, in this example is 92 meters, of the short is accurate to plus or minus one meter.
Length: 93 (+/- 1) meters, Status: Open	An opening is detected on the cable. The location, in this example is 93 meters, of the open is accurate to plus or minus one meter.
Status: Impedance Mismatch	There is an impedance mismatch in the cables.

**Usage** If the TDR test has not been run, an error messages is generated:

Information

%Error: Please run the TDR test first

Related Commands

tdr-cable-test

Runs the TDR test.

### **UDP Broadcast**

The user datagram protocol (UDP) broadcast feature is a software-based method to forward low throughput (not to exceed 200 pps) IP/UDP broadcast traffic arriving on a physical or VLAN interface.

#### **Important Points to Remember**

- Routing information protocol (RIP) is not supported with the UDP broadcast feature.
- If this feature is configured on an interface using ip udp-helper udp-port, the ip directed-broadcast command becomes ineffective on that interface.
- The existing command show interface has been modified to display the configured broadcast address.

The commands for UDP Broadcast are:

- debug ip udp-helper
- ip udp-broadcast-address
- ip udp-helper udp-port
- show ip udp-helper

### debug ip udp-helper

Enable UDP debug and display the debug information on a console.

Syntax debug ip udp-helper To disable debug information, use the no debug ip udp-helper command. Defaults Debug disabled Command Modes EXEC **EXEC** Privilege Example Figure 14-45. Debug Output Command Example . FTOS#debug ip udp-helper UDP helper debugging is on 01:20:22: Pkt rcvd on TenGig 5/0 with IP DA (0xffffffff) will be sent on TenGig 5/1 TenGig 5/2 Vlan 3 01:44:54: Pkt rcvd on TenGig 7/0 is handed over for DHCP processing. Command Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module History Related Configures a UDP IP address for broadcast ip udp-broadcast-address Commands Enables the UDP broadcast feature on an interface. ip udp-helper udp-port Displays the configured UDP helper(s) on all interfaces. show ip udp-helper

### ip udp-broadcast-address Configure an IP UDP address for broadcast.

	8		
Syntax	ress address		
	To delete the configura	tion, use the no ip udp-broadcast-address address command.	
Parameters	address	Enter an IP broadcast address in dotted decimal format (A.B.C.D).	
Defaults	Not Configured		
Command Modes	INTERFACE (config-if)		
Usage Information	When a UDP broadcast packet is flooded out of an interface, and the outgoing interface is configured using this command, the outgoing packet's IP destination address is replaced with the configured broadcast address.		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Related Commands	debug ip udp-helper	Enables debug and display the debug information on a console.	
	show ip udp-helper	Displays the configured UDP helper(s) on all interfaces.	

### ip udp-helper udp-port

	Enable the UDP broad ports.	dcast feature on an interface either for all UDP ports or a specified list of UDP
Syntax	ip udp-helper udp-po	prt [udp-port-list]
	To disable the UDP by	roadcast on a port, use the no ip udp-helper udp-port [udp-port-list] command.
Parameters	udp-port-list	(OPTIONAL) Enter up to 16 comma separated UDP port numbers. <b>Note:</b> If this option is not used, all UDP Ports are considered by default.
Defaults	none	
Command Modes	INTERFACE (config-	if)
Usage Information	is that the UDP broad the ip helper-address	b helper-address command and ip udp-helper udp-port command, the behavior cast traffic with port numbers 67/68 is unicast relayed to the DHCP server as per s configuration. This occurs regardless of whether the ip udp-helper udp-port rt numbers 67/68 or not.
		the ip udp-helper udp-port command, all the UDP broadcast traffic is flooded, traffic if those ports are part of the <i>udp-port-list</i> .
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

# Related<br/>Commandsip helper-addressConfigures the destination broadcast or host address for DHCP server.debug ip udp-helperEnables debug and display the debug information on a console.show ip udp-helperDisplays the configured UDP helper(s) on all interfaces.

### show ip udp-helper

Display the configured UDP helper(s) on all interfaces.

Syntax show ip udp-helper

Defaults none

Command Modes EXEC

Example

## **IPv4** Routing

## Commands

This chapter describes the IPv4-related commands. They are:

- arp
- arp learn-enable
- arp retries
- arp timeout
- clear arp-cache
- clear host
- clear ip fib stack-unit
- clear ip route
- clear tcp statistics
- debug arp
- debug ip dhcp
- debug ip icmp
- debug ip packet
- ip address
- ip directed-broadcast
- ip domain-list
- ip domain-lookup
- ip domain-name
- ip helper-address
- ip helper-address hop-count disable
- ip host
- ip max-frag-count
- ip name-server
- ip proxy-arp
- ip route
- ip source-route
- ip unreachables
- management route
- show arp
- show arp retries
- show hosts
- show ip cam stack-unit
- show ip fib stack-unit
- show ip interface

- show ip management-route
- show ip protocols
- show ip route
- show ip route list
- show ip route summary
- show ip traffic
- show tcp statistics

### arp

Use the address resolution protocol (ARP) to associate an IP address with a MAC address in the switch.

Syntax arp ip-address mac-address interface

To remove an ARP address, use the no arp *ip-address* command.

Parameters

Parameters	ip-address	Enter an IP address in dotted decimal format.
mac-address		Enter a MAC address in nnnn.nnnn format.
	interface	Enter the following keywords and slot/port or number information:
		• For the Management interface, enter the keyword ManagementEthernet followed by the slot/port information. The slot range is 0-1 and the port range is 0.
		• For a Port Channel interface, enter the keyword <b>port-channel</b> followed by a number:
		Range: 1-128
		• For a 10-Gigabit Ethernet interface, enter the keyword <b>TenGigabitEthernet</b> followed by the slot/port information.
		• For a 40-Gigabit Ethernet interface, enter the keyword <b>fortyGigE</b> followed by the slot/port information.
Defaults	Not configured.	
Command Modes	CONFIGURATION	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information		D or Class E IP addresses or zero IP address (0.0.0.0) when creating a static resses (00:00:00:00:00:00) are also invalid.
Related	clear arp-cache	Clears dynamic ARP entries from the ARP table.
Commands	show arp	Displays the ARP table.

## arp learn-enable

Enable ARP learning via Gratuitous ARP.

Syntax arp learn-enable

Defaults	Disabled	
Command Modes	CONFIGURATION	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

## arp retries

-	Set the number of ARP retries in case the system does not receive an ARP reply in response to an ARP request.		
Syntax	arp retries number		
Parameters	number	Enter the number of retries. Range: 5 to 20. Default: 5	
Defaults	5		
Command Modes	CONFIGURA	ΓΙΟΝ	
Command History	Version 8.3.16.	1 Introduced on MXL 10/40GbE Switch IO Module	
Usage Information	Retries are 20	seconds apart.	
Related Commands	show arp retrie	s Displays the configured number of ARP retries.	

## arp timeout

arp arroout	Set the time interval for an ARP entry to remain in the ARP cache.		
Syntax	arp timeout minutes		
	To return to the default value, use the no arp timeout command.		
Parameters	seconds	Enter the number of minutes.	
		Range: 0 to 35790	
		Default: 240 minutes	
Defaults	240 minutes (4 ho	urs)	
Command Modes	INTERFACE		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Related Commands	show interfaces	Displays the ARP timeout value for all available interfaces.	

## clear arp-cache

Clear the dynamic ARP entries from a specific interface or optionally delete (no-refresh) ARP entries from CAM.

Syntax clear arp-cache [interface | ip ip-address] [no-refresh]

Parameters	interface	(OPTIONAL) Enter the following keywords and slot/port or number information:
	monace	<ul> <li>For the Management interface, enter the keyword ManagementEthernet followed by the slot/port information. The slot range is 0 and the port range is 0.</li> <li>For a Port Channel interface, enter the keyword port-channel followed by a number:</li> </ul>
		Range: 1 to 128
		• For a 10-Gigabit Ethernet interface, enter the keyword <b>TenGigabitEthernet</b> followed by the slot/port information.
		• For a 40-Gigabit Ethernet interface, enter the keyword <b>fortyGigE</b> followed by the slot/port information.
		• For a VLAN, enter the keyword vlan followed by a number from 1 to 4094.
	ip <i>ip-address</i>	(OPTIONAL) Enter the keyword ip followed by the IP address of the ARP entry you wish to clear.
	no-refresh	(OPTIONAL) Enter the keyword <b>no-refresh</b> to delete the ARP entry from CAM. Or use this option with <i>interface</i> or ip <i>ip-address</i> to specify which dynamic ARP entries you want to delete.
		<b>Note:</b> Transit traffic may not be forwarded during the period when deleted ARP entries are resolved again and re-installed in CAM. Use this option with extreme caution.
Command Modes	EXEC Privilege	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
clear host	Remove one or all dy	vnamically learnt host table entries.
Syntax	clear host name	
Parameters	name	Enter the name of the host to delete. Enter * to delete all host table entries.
Command Modes	EXEC Privilege	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

## clear ip fib stack-unit

Clear all forwarding information base (fib) entries in the specified stack unit (use this command with caution, refer to Usage Information).

Syntax	clear ip fib stack-un	it <i>unit-number</i>	
Parameters	unit-number	Enter the stack-unit number. Range: 0 to 5	
Command Mode	EXEC EXEC Privilege		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Usage Information	Use this command to clear Layer 3 CAM inconsistencies.		
	Caution: H	Executing this command causes traffic disruption.	
Related Commands	show ip fib stack-un	nit Shows the FIB entries.	
clear ip rou		so in the routing table	
Syntax	clear ip route {*   <i>ip</i>	es in the routing tableaddress mask}	
Parameters	*	Enter an asterisk (*) to clear all learned IP routes.	
	ip-address mask	Enter a specific IP address and mask in dotted decimal format to clear that IP address from the routing table.	
Command Modes	EXEC Privilege		

Command History

Related Commands ip routeAssigns an IP route to the switch.show ip routeViews the routing table.show ip route summaryViews a summary of the routing table.

Introduced on MXL 10/40GbE Switch IO Module

## clear tcp statistics

Clear TCP counters.

Version 8.3.16.1

Syntax clear tcp statistics

## Command Modes EXEC Privilege Command History Version 8.3.16.1

debug arp			
	View information	on ARP transactions.	
Syntax	Syntax debug arp [interface] [count value]		
	To stop debugging	g ARP transactions, use the no debug arp command.	
Parameters	interface	(OPTIONAL) Enter the following keywords and slot/port or number information:	
		• For the Management interface, enter the keyword <b>managementethernet</b> followed by the slot/port information. The slot range is 0 and the port range is 0.	
		• For a Port Channel interface, enter the keyword <b>port-channel</b> followed by a number:	
		Range: 1-128	
		• For a 10-Gigabit Ethernet interface, enter the keyword <b>tengigabitethernet</b> followed by the slot/port information.	
		• For a 40-Gigabit Ethernet interface, enter the keyword <b>fortyGigE</b> followed by the slot/port information.	
		• For a VLAN, enter the keyword vlan followed by a number from 1 to 4094.	
	count value	(OPTIONAL) Enter the keyword <b>count</b> followed by the count value.	
		Range: 1 to 65534	
Defaults	none		
Command Modes	EXEC Privilege		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Usage Information	Use the count opt	ion to stop packets from flooding the user terminal when debugging is turned on.	

Introduced on MXL 10/40GbE Switch IO Module

## debug ip dhcp

Enable debug information for DHCP relay transactions and display the information on the console.

Syntax	debug ip dhcp	
	To disable debug, use the no debug ip dhcp command.	
Defaults	Debug disabled	
Command Modes	EXEC Privilege	
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module	

15-1.	debug ip	dhcp (	Command	Example

Related Commands	ip helper-address	Specifies the destination broadcast or host address for the DHCP server request.	
	ip helper-address hop-count disable	Disables the hop-count increment for the DHCP relay agent.	

## debug ip icmp

View information on the internal control message protocol (ICMP).

Syntax debug ip icmp [interface] [count value]

To disable debugging, use the no debug ip icmp command.

Parameters		
Farameters	interface	(OPTIONAL) Enter the following keywords and slot/port or number information:
		• For the Management interface, enter the keyword ManagementEthernet followed by the slot/port information. The slot range is 0 and the port range is 0.
		• For a Port Channel interface, enter the keyword port-channel followed by a number:
		Range: 1-128
		• For a 10-Gigabit Ethernet interface, enter the keyword <b>TenGigabitEthernet</b> followed by the slot/port information.
		• For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE followed by the slot/port information.
		• For VLAN, enter the keyword vlan followed by a number from 1 to 4094.
	count value	(OPTIONAL) Enter the keyword count followed by the count value.
		Range: 1 to 65534
		Default: Infinity
Command Modes	EXEC Privilege	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

Example

Figure 15-2. debug ip icmp Command Example (Partial)

		echo request sent to dst 40.40.40.40

**Usage** Use the count option to stop packets from flooding the user terminal when debugging is turned on. **Information** 

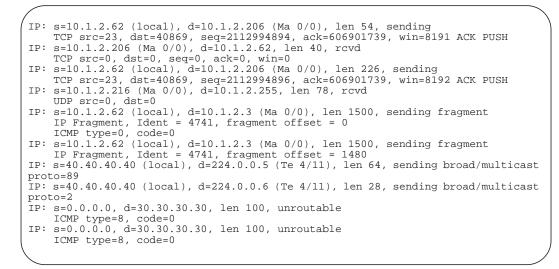

## debug ip packet

View a log of IP packets sent and received.

Syntax debug ip packet [access-group name] [count value] [interface]

To disable debugging, use the no debug ip packet [access-group *name*] [count *value*] [*interface*] command.

Devenuetere		
Parameters	access-group name	Enter the keyword <b>access-group</b> followed by the access list name (maximum 16 characters) to limit the debug output based on the defined rules in the ACL.
	count value	(OPTIONAL) Enter the keyword count followed by the count value.
		Range: 1 to 65534
		Default: Infinity
	interface	(OPTIONAL) Enter the following keywords and slot/port or number information:
		• For the management interface, enter the keyword managementethernet followed by the slot/port information. The slot range is 0 and the port range is 0.
		• For a Port Channel interface, enter the keyword <b>port-channel</b> followed by a number:
		Range: 1-128
		• For a 10-Gigabit Ethernet interface, enter the keyword tengigabitethernet followed by the slot/port information.
		• For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE followed by the slot/port information.
		• For a VLAN, enter the keyword vlan followed by a number from 1 to 4094.
Command Mode	EXEC Privilege	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

#### Example Figure 15-3. debug ip packet Command Example (Partial)

Table 15-1. debug ip packet Command Example Fields

Field	Description
s=	Lists the source address of the packet and the name of the interface (in parentheses) that received the packet.
d=	Lists the destination address of the packet and the name of the interface (in parentheses) through which the packet is being sent out on the network.
len	Displays the packet's length.
sending rcvd fragment sending broad/multicast proto unroutable	The last part of each line lists the status of the packet.
TCP src=	Displays the source and destination ports, the sequence number, the acknowledgement number, and the window size of the packets in that TCP packets.
UDP src=	Displays the source and destination ports for the UDP packets.
ICMP type=	Displays the ICMP type and code.
IP Fragment	States that it is a fragment and displays the unique number identifying the fragment (Ident) and the offset (in 8-byte units) of this fragment (fragment offset) from the beginning of the original datagram.

#### Usage Information

Use the count option to stop packets from flooding the user terminal when debugging is turned on.

The access-group option supports only the equal to (eq) operator in TCP ACL rules. Port operators not equal to (neq), greater than (gt), less than (lt), or **range** are not supported in access-group option (see Figure 15-4). ARP packets (arp) and Ether-type (ether-type) are also not supported in access-group option. The entire rule is skipped to compose the filter.

The access-group option pertains to:

•	IP Protocol Number	0 to 255
•	Internet Control Message Protocol* * but not the ICMP message type (0-255)	icmp
•	Any Internet Protocol	ip
•	Transmission Control Protocol* * but not on the rst, syn, or urg bit	tcp
•	User Datagram Protocol	udp

In the case of ambiguous access control list rules, the debug ip packet access-control command will be disabled. A message appears identifying the error (see Figure 15-4).

#### Example Figure 15-4. debug ip packet access-group Command Errors

Assign a primary and secondary IP address to the interface.

/	FTOS#debug ip packet access-group test

(		

## ip address

Syntax	ip address <i>ip-ad</i>	dress mask [secondary]
	To delete an IP ad	dress from an interface, use the no ip address [ip-address] command.
Parameters	ip-address	Enter an IP address in dotted decimal format.
	mask	Enter the mask of the IP address in slash prefix format (for example, /24).
	secondary	(OPTIONAL) Enter the keyword <b>secondary</b> to designate the IP address as the secondary address.
Defaults	Not configured.	
Command Modes	INTERFACE	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information		TERFACE mode before you add an IP address to an interface. Assign an IP address or to entering ROUTER OSPF mode.

## ip directed-broadcast Enables the interface to receive directed broadcast packets.

Syntax	ip directed-broadcast
	To disable the interface from receiving directed broadcast packets, use the no ip directed-broadcast command.
Defaults	Disabled (that is, the interface does not receive directed broadcast packets)
Command Modes	INTERFACE
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

## ip domain-list

	Configure names to complete unqualified host names.
Syntax	ip domain-list <i>name</i>
	To remove the name, use the no ip domain-list name command.
Parameters	<i>name</i> Enter a domain name to be used to complete unqualified names (that is, incomplete domain names that cannot be resolved).
Defaults	Disabled.
Command Modes	CONFIGURATION
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Usage Information	Configure the ip domain-list command up to 6 times to configure a list of possible domain names.
	If both the ip domain-name and ip domain-list commands are configured, the software will try to resolve the name using the ip domain-name command. If the name is not resolved, the software goes through the list of names configured with the ip domain-list command to find a match.
	Use the following steps to enable dynamic resolution of hosts:
	<ul> <li>specify a domain name server with the ip name-server command.</li> <li>enable DNS with the ip domain-lookup command.</li> </ul>
	To view current bindings, use the show hosts command. To view DNS related configuration, use the show running-config resolve command.
Related Commands	ip domain-name Specifies a DNS server.

## ip domain-lookup

Enable dynamic host-name to address resolution (that is, DNS). **Syntax** ip domain-lookup To disable DNS lookup, use the no ip domain-lookup command. Defaults Disabled. **Command Mode** CONFIGURATION Command Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module History Usage To fully enable DNS, also specify one or more domain name servers with the ip name-server Information command. FTOS does not support sending DNS queries over a VLAN. DNS queries are sent out all other interfaces, including the Management port. To view current bindings, use the show hosts command. Related ip name-server Specifies a DNS server. Commands show hosts Views current bindings.

## ip domain-name

Configure one domain name for the switch.

Syntax	ip domain-name name
	To remove the domain name, use the no ip domain-name command.
Parameters	name       Enter one domain name to be used to complete unqualified names (that is, incomplete domain names that cannot be resolved).
Defaults	Not configured.
Command Modes	CONFIGURATION
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Usage Information	You can only configure one domain name with the ip domain-name command. To configure more than one domain name, configure the ip domain-list command up to 6 times.
	Use the following steps to enable dynamic resolution of hosts:
	<ul> <li>specify a domain name server with the ip name-server command.</li> <li>enable DNS with the ip domain-lookup command.</li> </ul>
	To view current bindings, use the show hosts command.

Related Commands

ip domain-list

Configures additional names.

## ip helper-address

Specify the address of a DHCP server so that DHCP broadcast messages can be forwarded when the DHCP server is not on the same subnet as the client.

Syntax	ip helper-address i	p-address
	To remove a DHCP	server address, use the no ip helper-address command.
Parameters	ip-address	Enter an IP address in dotted decimal format (A.B.C.D).
Defaults	Not configured.	
Command Modes	INTERFACE	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information	multiple servers are	e DHCP servers by entering the ip helper-address command multiple times. If defined, an incoming request is sent simultaneously to all configured servers and ed to the DHCP client.
	services. It listens or	DHCP ports, that is UDP ports 67 (server) and 68 (client) for DHCP relay a port 67 and if it receives a broadcast, the software converts it to unicast, and DHCP-server with source port=68 and destination port=67.

The server replies with source port=67, destination port=67 and FTOS forwards to the client with source port=67, destination port=68.

## ip helper-address hop-count disable

Disable the hop-count increment for the DHCP relay agent.

Syntax	ip helper-address hop-count disable To re-enable the hop-count increment, use the no ip helper-address hop-count disable command.
Defaults	Enabled; the hops field in the DHCP message header is incremented by default
Command Modes	CONFIGURATION
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Usage Information	This command disables the incrementing of the hops field when boot requests are relayed to a DHCP server through FTOS. If the incoming boot request already has a non-zero hops field, the message will be relayed with the same value for hops. However, the message is discarded if the hops field exceeds 16, to comply with the relay agent behavior specified in RFC 1542.

Related Commands	ip helper-address	Specifies the destination broadcast or host address for DHCP server requests.
Commands	show running-confi	g Displays the current configuration and changes from the default values.
o host		
	Assign a name and	IP address to be used by the host-to-IP address mapping table.
Syntax	ip host <i>name ip-a</i>	ddress
Syntax		ddress ost, use the no ip host name [ip-address] command.
Syntax Parameters	To remove an IP he	ost, use the no ip host name [ip-address] command.
-	To remove an IP he	ost, use the no ip host name [ip-address] command. Enter a text string to associate with one IP address.
-	To remove an IP he	ost, use the no ip host name [ip-address] command.
-	To remove an IP he	ost, use the no ip host name [ip-address] command. Enter a text string to associate with one IP address.
Parameters	To remove an IP he name ip-address	Enter a text string to associate with one IP address. Enter an IP address, in dotted decimal format, to be mapped to the name.
Parameters Defaults	To remove an IP he name ip-address Not configured.	Enter a text string to associate with one IP address. Enter an IP address, in dotted decimal format, to be mapped to the name.

## ip max-frag-count

Set the maximum number of fragments allowed in one packet for packet re-assembly.

Syntax	ip max-frag-count count		
	To place no limit on	the number of fragments allowed, use the no ip max-frag-count command.	
Parameters	count	Enter a number for the number of fragments allowed for re-assembly.	
		Range: 2 to 256	
Defaults	No limit is set on nu	mber of fragments allowed.	
Command Modes	CONFIGURATION		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Usage Information	To avoid denial of se	ervice (DOS) attacks, keep the number of fragments allowed for re-assembly low	

## ip name-server

Enter up to 6 IPv4 addresses of name servers. The order you enter the addresses determines the order of their use.

**Syntax** ip name-server *ipv4-address* [*ipv4-address2...ipv4-address6*]

To remove a name server, use the no ip name-server ip-address command.

Parameters				
i didiliotoro	ipv4-address	Enter the IPv4 address, in dotted decimal format, of the name server to be used.		
	ipv4-address2 ipv4-address6	(OPTIONAL) Enter up five more IPv4 addresses, in dotted decimal format, of name servers to be used.		
		Separate the addresses with a space.		
Defaults	No name servers ar	e configured.		
ommand Modes	CONFIGURATION	3		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module		
	FTOS does not support sending DNS queries over a VLAN. DNS queries are sent out all other interfaces, including the Management port.			

## ip proxy-arp Enable Proxy ARP on an interface.

Syntax	ip proxy-arp	
	To disable Proxy ARP, e	nter no ip proxy-arp.
Defaults	Enabled.	
Command Modes	INTERFACE	
Command	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
History		
Related	show ip interface	Displays the interface routing status and configuration.
Commands	*	

## ip route

Assign a static route to the switch.

Syntax ip route destination mask {ip-address | interface [ip-address]} [distance] [permanent] [tag tag-value] To delete a specific static route, use the no ip route destination mask {address | interface [*ip-address*]} command.

To delete all routes matching a certain route, use the no ip route destination mask command.

Parameters	destination	Enter the IP address in dotted decimal format of the destination device.
mask		Enter the mask in slash prefix formation $(/x)$ of the destination device's IP address.
	ip-address	Enter the IP address in dotted decimal format of the forwarding router.

	interface	Enter the following keywords and slot/port or number information:
		• For a loopback interface, enter the keyword <b>loopback</b> followed by a number from zero (0) to 16383.
		• For the null interface, enter the keyword <b>null</b> followed by zero (0).
		• For a Port Channel interface, enter the keyword <b>port-channel</b> followed by a number:
		Range: 1-128
		<ul> <li>For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.</li> </ul>
		• For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE followed by the slot/port information.
		• For a VLAN, enter the keyword vlan followed by a number from 1 to 4094.
	distance	(OPTIONAL) Enter a number as the distance metric assigned to the route.
		Range: 1 to 255
	permanent	(OPTIONAL) Enter the keyword <b>permanent</b> to specify the route is not removed, even if the interface assigned to that route goes down. The route must be up initially to install it in the routing table.
		If you disable the interface with an IP address associated with the keyword
		permanent, the route disappears from the routing table.
	tag <i>tag-value</i>	(OPTIONAL) Enter the keyword tag followed by a number to assign to the route.
		Range: 1 to 4294967295
Defaults	Not configured.	
Command Modes	CONFIGURATIO	Ν
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage	Using the followin	g example of a static route:
Information	-	0 /24 tengigabitethernet 0/0 172.31.5.43
	resolves to a n address on sub static route.	nstalls a next hop that is not on the directly connected subnet but which recursively ext hop on the interface's configured subnet. In the example, if gig 0/0 has ip onet 2.2.2.0 and if 172.31.5.43 recursively resolves to 2.2.2.0, FTOS installs the
		rface goes down, FTOS withdraws the route.
		rface comes up, FTOS re-installs the route.
		re resolution is "broken," FTOS withdraws the route.
	When recursiv	re resolution is satisfied, FTOS re-installs the route.
Related Commands	show ip route	Views the switch routing table.

## ip source-route

Enable FTOS to forward IP packets with source route information in the header.

Syntax ip source-route

To drop packets with source route information, use the no ip route-source command.

Defaults	Enabled.	
Command Modes	CONFIGURATION	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

## ip unreachables

Enable the generation of Internet Control Message Protocol (ICMP) unreachable messages.

Syntax	ip unreachables To disable the generation of ICMP messages, use the no ip unreachables command.
Defaults	Disabled
Command Modes	INTERFACE
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

### management route

Configure a static route that points to the Management interface or a forwarding router.

Syntax management route { ipv4-address}/mask { forwarding-router-address | managementethernet } **Parameters** {ipv4-address}/mask Enter an IPv4 address (A.B.C.D) followed by the prefix-length for the IP address of the management interface. forwarding-router-address Enter an IPv4 address of a forwarding router. managementethernet Enter the keyword managementethernet for the Management interface. Defaults Not configured. **Command Modes** CONFIGURATION Command Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module History Usage When a static route (or a protocol route) overlaps with Management static route, the static route (or a Information protocol route) is preferred over the Management Static route. Also, Management static routes and the Management Connected prefix are not reflected in the hardware routing tables. Separate routing tables are maintained for IPv4 management routes. This command manages both tables. Related interface ManagementEthernet Configures the Management port on the system. Commands

## show arp

Display the ARP table.

**Syntax** show arp [interface interface | ip ip-address [mask] | macaddress mac-address [mac-address mask]] [static | dynamic] [summary]

Parameters

interface interface	(OPTIONAL) Enter the following keywords and slot/port or number information:
	• For the Management interface, enter the keyword managementethernet followed by the slot/port information.
	• For a Port Channel interface, enter the keyword <b>port-channel</b> followed by a number:
	Range: 1 to 128
	<ul> <li>For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.</li> </ul>
	• For a 40-Gigabit Ethernet interface, enter the keyword <b>fortyGigE</b> followed by the slot/port information.
	• For a VLAN, enter the keyword vlan followed by a number from 1 to 4094.
ip <i>ip-address mask</i>	(OPTIONAL) Enter the keyword ip followed by an IP address in the dotted decimal format. Enter the optional IP address mask in the slash prefix format (/ x).
macaddress mac-address mask	(OPTIONAL) Enter the keyword macaddress followed by a MAC address in nn:nn:nn:nn:nn format. Enter the optional MAC address mask in nn:nn:nn:nn format also.
static	(OPTIONAL) Enter the keyword static to view entries entered manually.
dynamic	(OPTIONAL) Enter the keyword dynamic to view dynamic entries.
summary	(OPTIONAL) Enter the keyword summary to view a summary of ARP entries.

#### Command Modes EXEC Privilege

Command History

Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

Usage Information Figure 15-5 shows two VLANs that are associated with a private VLAN (PVLAN) (refer to Chapter 23, Private VLAN (PVLAN)).

#### Example Figure 15-5. show arp Command Example (Partial)

Z10-3	(perm, OK	() –	IP	192.71.23.1	
FTOS#	. 2				
					/

Table 15-4. show hosts Command Example Fields

Field	Description
Default domain	Displays the domain name (if configured).
Name/address lookup	States if DNS is enabled on the system. If DNS is enabled, the Name/Address lookup is domain service. If DNS is not enabled, the Name/Address lookup is static mapping.
Name servers are	Lists the name servers, if configured.
Host	Displays the host name assigned to the IP address.

Field	Description
Flags	Classifies the entry as one of the following:
	• perm - the entry was manually configured and will not time out
	• temp - the entry was learned and will time out after 72 hours of inactivity.
	Also included in the flag is an indication of the validity of the route:
	• ok - the entry is valid.
	• ex - the entry expired.
	• ?? - the entry is suspect.
TTL	Displays the amount of time until the entry ages out of the cache. For dynamically learnt entries only.
Туре	Displays IP as the type of entry.
Address	Displays the IP address(es) assigned to the host.

Related Commands

traceroute	Views the DNS resolution	
ip host	Configures a host.	

## show ip cam stack-unit

Display content-addressable memory (CAM) entries.

**Syntax** show ip cam stack-unit 0-5 port-set *pipe-number* [*ip-address mask* [longer-prefixes] | detail | member-info | summary]

Parameters							
r ai aitietei 5	0-5	nter the stack-unit ID, from 0 to 5.					
	pipe-number	Enter the number of the Port-Pipe number.					
		Range: 0 to 0					
	<i>ip-address mask</i> [longer-prefix]	(OPTIONAL) Enter the IP address and mask of a route to CAM entries for that route only.					
		Enter the keyword longer-prefixes to view routes with a common prefix.					
	detail	Enter the keyword <b>detail</b> to display the group index ID used by the ecmp routes in the CAM.					
	member-info	Enter the keyword <b>member-info</b> to display the group index used by the ecmp, the number of egress ports (members) for the ecmp, and the port details of each member.					
		The detail information under member-info will give the MAC address, VLAN ID and gateway of every member port of the ecmp.					
	summary	(OPTIONAL) Enter the keyword <b>summary</b> to view a table listing route prefixes and the total number routes which can be entered in to CAM.					
Command Modes	EXEC						
	EXEC Privilege						
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

Field	Description	
Destination	Lists the destination IP address.	
Gateway	Displays either the word Direct and an interface for a directly connected route or the remote IP address to be used to forward the traffic.	
First-Hop	Displays the first hop IP address.	
Mac-Addr	Displays the MAC address.	
Port	Displays the egress-port information.	
VId	Displays the VLAN ID. If no VLAN is assigned, zero (0) is listed.	
EC	Displays the number of ECMP paths.	

Related Commands

clear ip fib stack-unit

FTOS>

Clears FIB entries on a specified stack unit.

## show ip interface View IP-related information on all interfaces.

show ip interface [*interface* | brief] [configuration] Syntax

ameter interface	(OPTIONAL) Enter the following keywords and slot/port or number information:
	• For a Loopback interface, enter the keyword Loopback followed by a number from 0 to 16383.
	• For the Management interface, enter the keyword ManagementEthernet followed by zero (0).
	• For the Null interface, enter the keyword <b>null</b> followed by zero (0).
	• For a Port Channel interface, enter the keyword <b>port-channel</b> followed by a number:
	Range: 1 to 128
	• For a 10-Gigabit Ethernet interface, enter the keyword <b>TenGigabitEthernet</b> followed by the slot/port information.
	<ul> <li>For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE followed by th slot/port information.</li> </ul>
	• For a VLAN, enter the keyword $vlan$ followed by a number from 1 to 4094.
brief	(OPTIONAL) Enter the keyword <b>brief</b> to view a brief summary of the interfaces and whether an IP address is assigned.
configuration	(OPTIONAL) Enter the keyword configuration to display the physical interfaces
	with non-default configurations only.
Modes EXEC	with non-default configurations only.

Lines	Description	
TenGigabitEthernet 0/0	Displays the interface's type, slot/port and physical and line protocol status.	
Internet address	States whether an IP address is assigned to the interface. If one is, that address is displayed.	

Lines	Description	
IP MTU is	Displays IP MTU value.	
Inbound access	Displays the name of the any configured incoming access list. If none is configured, the phrase "not set" is displayed.	
Proxy ARP	States whether proxy ARP is enabled on the interface.	
Split horizon	States whether split horizon for RIP is enabled on the interface.	
Poison Reverse	States whether poison for RIP is enabled on the interface	
ICMP redirects	States if ICMP redirects are sent.	
ICMP unreachables	States if ICMP unreachable messages are sent.

/	TenGigabitEthernet	0/9	unassigned	NO	None	up	down

Table 15-8. show ip interface brief Column Headings

Field	Description	
Interface	Displays type of interface and the associated slot and port number.	
IP-Address	Displays the IP address for the interface, if configured.	
Ok?	Indicates if the hardware is functioning properly.	
Method	Displays Manual if the configuration is read from the saved configuration.	
Status	States whether the interface is enabled (up) or disabled (administratively down).	
Protocol	States whether IP is enabled (up) or disabled (down) on the interface.	

## show ip management-route

View the IP addresses assigned to the Management interface.

Syntax show ip management-route [all | connected | summary | static]

Parameters	
------------	--

all	(OPTIONAL) Enter the keyword <b>all</b> to view all IP addresses assigned to all Management interfaces on the switch.
connected	(OPTIONAL) Enter the keyword <b>connected</b> to view only routes directly connected to the Management interface.

summary       (OPTIONAL) Enter the keyword summary to view a table listing the number of active and non-active routes and their sources.         static       (OPTIONAL) Enter the keyword static to view non-active routes also.         Command Modes       EXEC         EXEC Privilege       EXEC Privilege         Figure 15-15.       show ip management route Command Example         FTOS#show ip management-route       State         Destination       Gateway         10.1.2.0/24       ManagementEthernet 0/0         Connected       Active

Total 2 non-active route(s) using 128 bytes
FTOS>
```

#### Table 15-10. show ip route summary Column Headings

Column Heading	Description	
Route Source	Identifies how the route is configured in FTOS.	
Active Routes	Identifies the best route if a route is learned from two protocol sources.	
Non-active Routes	Identifies the back-up routes when a route is learned by two different protocols. If the best route or active route goes down, the non-active route will become the best route.	
ospf 100	If routing protocols (OSPF, RIP) are configured and routes are advertised, then information on those routes is displayed.	
Total 1388 active	Displays the number of active and non-active routes and the memory usage of those routes.	
	If there are no routes configured in the FTOS, this line does not appear.	

Related Commands

show ip route

Version 8.3.16.1

Displays information about the routes found in switch.

## show ip traffic

View IP, ICMP, UDP, TCP, and ARP traffic statistics.

Syntax show ip traffic

Command Modes EXEC Privilege

Command History

Introduced on MXL 10/40GbE Switch IO Module

Example Figure 15-21. show ip traffic Command Example (partial)

```
FTOS#show ip traffic
IP statistics:
 Rcvd: 10021161 total, 3197480 local destination
     2501 format errors, 390 checksum errors, 0 bad hop count 0 unknown protocol, 0 not a gateway

UDP statistics:
Rcvd: 2938110 total, 14 checksum errors, 1 no port
0 short packets, 0 bad length, 1883908 no port broadcasts, 0 socket full
Sent: 329731 total, 1883908 forwarded broadcasts
--More--
```

#### Table 15-11. show ip traffic output definitions

Keyword	Definition
unknown protocol	No receiver for these packets. Counts those packets whose protocol type field is not recognized by FTOS.
not a gateway	Packets can not be routed; host/network is unreachable.
security failures	Counts the number of received unicast/multicast packets that could not be forwarded due to:
	• route not found for unicast/multicast; ingress interfaces do not belong to the destination multicast group
	destination IP address belongs to reserved prefixes; host/network unreachable
bad options	Unrecognized IP option on a received packet.
Frags:	IP fragments received.
reassembled	Number of IP fragments that were reassembled.
timeouts	Number of times a timer expired on a reassembled queue.
too big	Number of invalid IP fragments received.
couldn't fragment	Number of packets that could not be fragmented and forwarded.
encapsulation failed	Counts those packets which could not be forwarded due to ARP resolution failure. FTOS sends an arp request prior to forwarding an IP packet. If a reply is not received, FTOS repeats the request three times. These packets are counted in encapsulation failed.
Rcvd:	
short packets	The number of bytes in the packet are too small.
bad length	The length of the packet was not correct.
no port broadcasts	The incoming broadcast/multicast packet did not have any listener.
socket full	The applications buffer was full and the incoming packet had to be dropped.

12 Total rxmt timeout, 1 connections dropped in rxmt timeout
26 Keepalive timeout, 25 keepalive probe, 1 Connections dropped in keepalive
FTOS#
```

Table 15-13. show tcp statistics cp Command Example Fie
---------------------------------------------------------

Field	Description
Rcvd:	Displays the number and types of TCP packets received by the switch.
	• Total = total packets received
	• no port = number of packets received with no designated port.
0 checksum error	Displays the number of packets received with the following:
	checksum errors
	bad offset to data
	too short
329 packets	Displays the number of packets and bytes received in sequence.
17 dup	Displays the number of duplicate packets and bytes received.
0 partially	Displays the number of partially duplicated packets and bytes received.
7 out-of-order	Displays the number of packets and bytes received out of order.
0 packets with data after window	Displays the number of packets and bytes received that exceed the switch's window size.
0 packets after close	Displays the number of packet received after the TCP connection was closed.
0 window probe packets	Displays the number of window probe and update packets received.
41 dup ack	Displays the number of duplicate acknowledgement packets and acknowledgement packets with data received.
10184 ack	Displays the number of acknowledgement packets and bytes received.
Sent:	Displays the total number of TCP packets sent and the number of urgent packets sent.
25 control packets	Displays the number of control packets sent and the number retransmitted.
11603 data packets	Displays the number of data packets sent.
24 data packets retransmitted	Displays the number of data packets resent.

Field     Description	
355 ack	Displays the number of acknowledgement packets sent and the number of packet delayed.
0 window probe	Displays the number of window probe and update packets sent.
7 Connections initiated	Displays the number of TCP connections initiated, accepted, and established.
14 Connections closed Displays the number of TCP connections closed, dropped.	
20 Total rxmt	Displays the number of times the switch tried to re-send data and the number of connections dropped during the TCP retransmit timeout period.
0 Keepalive	Lists the number of keepalive packets in timeout, the number keepalive probes and the number of TCP connections dropped during keepalive.

#### Table 15-13. show tcp statistics cp Command Example Fields (continued)

# 16

## **iSCSI** Optimization

### **Overview**

Internet Small Computer System Interface (iSCSI) optimization enables quality-of-service (QoS) treatment for iSCSI storage traffic on an MXL Switch.

The following FTOS commands are used to configure and verify the iSCSI Optimization feature:

- advertise dcbx-app-tlv
- iscsi aging time
- iscsi cos
- iscsi enable
- iscsi priority-bits
- iscsi profile-compellant
- iscsi target port
- show iscsi
- show iscsi sessions
- show iscsi sessions detailed
- show run iscsi

## advertise dcbx-app-tlv

Configure DCBX to send iSCSI TLV advertisements.

Syntax	advertise dcbx-app-tlv iscsi To disable DCBX iSCSI TLV advertisements, use the no advertise dcbx-app-tlv iscsi command.
Defaults	Enabled.
Command Mode	PROTOCOL LLDP
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Usage Information	You can configure iSCSI TLVs to be sent either globally or on a specified interface. The interface configuration takes priority over global configuration.

iSCSI Optimization | 323

## iscsi aging time

Set the aging time for iSCSI sessions. Syntax iscsi aging time time To remove the iSCSI session aging time, use the no iscsi aging time command. **Parameters** Enter the aging time for the iSCSI session. time Valid values: 5 to 43,200 minutes. Defaults 10 minutes. **Command Mode** CONFIGURATION Command History Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

## iscsi cos

arameters ena	able	Enter the keyword <b>enable</b> to allow the application of preferential QoS treatment iSCSI traffic so that the iSCSI packets are scheduled in the switch with a dot1p priority 4 regardless of the VLAN priority tag in the packet. Default: iSCSI packets are handled with dotp1 priority 4 without remark.
dis	able	Enter the keyword <b>disable</b> to disable the application of preferential QoS treatment to iSCSI frames.
dot1p vlan-priority	1p n-priority-value	Enter the dot1p value of the VLAN priority tag assigned to the incoming packets an iSCSI session.
		The valid range is 0 to 7. Default: The dot1p value in ingress iSCSI frames is not changed and is used in iSCSI TLV advertisements if you did not enter the iscsi priority-bits command.
dso	cp dscp-value	Enter the DSCP value assigned to the incoming packets in an iSCSI session. The valid range is 0 to 63.
ren	nark	Default: The DSCP value in ingress packets is not changed. Marks the incoming iSCSI packets with the configured dot1p or DSCP value whe they egress to the switch.
		Default: The dot1 and DSCP values in egress packets are not changed.

## clobally enable iSCSI optimization

	Globally enable 1S	CSI optimization.
Syntax	iscsi enable	
	To disable iSCSI o	ptimization, use the no iscsi command.
Parameters	enable	Enter the keyword enable to enable the iSCSI optimization feature.
Defaults	Enabled.	
Command Modes	CONFIGURATIO	Ν
Command History		
Thistory	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information	When you enable t on tx off on all int	he iSCSI feature using the iscsi enable command, flow control settings are set to <b>rx</b> erfaces.

## iscsi priority-bits

Configure the priority bitmap to be advertised in iSCSI application TLVs.

Syntax	iscsi priority-bits To remove the configured priority bitmap, use the no iscsi priority-bits command.
Defaults	4 (0x10 in the bitmap)
Command Modes	PROTOCOL LLDP (only on global, not on interface)
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

## iscsi profile-compellant

Configure the auto-detection of Compellent arrays on a port.

Syntax	iscsi profile-comp	ellent	
Defaults	Compellent disk arrays are not detected.		
Command Modes	INTERFACE		
Command			
History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	

## iscsi target port

Configure the iSCSI target ports and optionally, the IP addresses on which iSCSI communication will be monitored.

### Syntax iscsi target port tcp-port-1[tcp-port-2...tcp-port-16][address ip-address]

To remove the configured iSCSI target ports or IP addresses, use the no iscsi target port command.

Development		
Parameters	tcp-port-2tcp-	Enter the tcp-port number of the iSCSI target ports.
	port-16	The tcp-port-n is the TCP port number or a list of TCP port numbers on which the
		iSCSI target listens to requests. Separate port numbers with a comma.
		Default: 860, 3260.
	ip-address	(OPTIONAL) Enter the ip-address that the iSCSI will monitor.
		The ip-address specifies the IP address of the iSCSI target.
Defaults	860, 3260.	
Command Modes	CONFIGURATION	1
Command		
History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information	You can configure u	up to 16 target TCP ports on the switch in one command or multiple commands.
	2	iscsi target port command, and the TCP port to be deleted is one bound to a specific IP as value must be included in the command.

### show iscsi

 Display the currently configured iSCSI settings.

 Syntax
 show iscsi

 Command Mode
 EXEC

 EXEC Privilege

 Version 8.3.16.1

## Link Aggregation Control Protocol (LACP)

## **Overview**

This chapter contains commands for Dell Force10's implementation of the link aggregation control protocol (LACP) for the creation of dynamic link aggregation groups (LAGs — called *port-channels* in FTOS parlance). For static LAG commands, refer to the section Port Channel Commands in the *Interfaces* chapter), based on the standards specified in the IEEE 802.3 Carrier sense multiple access with collision detection (CSMA/CD) access method and physical layer specifications.

## Commands

Use the following commands for LACP:

- clear lacp counters
- debug lacp
- lacp long-timeout
- lacp port-priority
- lacp system-priority
- port-channel mode
- port-channel-protocol lacp
- show lacp

### clear lacp counters

Clear Port Channel counters.

port-channel-number	Enter a port-channel number:
	Range: 1 to 128
Faults Without a Port Channel sp	becified, the command clears all Port Channel counters.
Infaults         Without a Port Channel sp           Modes         EXEC	becified, the command clears all Port Channel counters.

Related Show lacp

## debug lacp

Debug LACP (configuration, events etc.)

Syntax debug lacp [config | events | pdu [in | out | [interface [in | out]]]]

To disable LACP debugging, use the no debug lacp [config | events | pdu [in | out | [interface [in | out]]]] command.

#### Parameters

Devenetore		
Parameters	config	(OPTIONAL) Enter the keyword config to debug the LACP configuration.
	events	(OPTIONAL) Enter the keyword <b>events</b> to debug LACP event information.
	pdu in   out	(OPTIONAL) Enter the keyword <b>pdu</b> to debug LACP Protocol Data Unit information. Optionally, enter an <b>in</b> or <b>out</b> parameter to:
		• Receive enter in
		• Transmit enter OUt
	<i>interface</i> in   out	Enter the following keywords and slot/port or number information:
		• For a Ten Gigabit Ethernet interface, enter the keyword <b>TenGigabitEthernet</b> followed by the slot/port information.
		• For a 40-Gigabit Ethernet interface, enter the keyword <b>fortyGigE</b> followed by the slot/port information.
		Optionally, enter an in or out parameter:
		Receive enter in
		• Transmit enter OUt
Defaults	none	
Command Modes	EXEC	
	EXEC Privilege	
Command History	Version 8.3.16.1 In	ntroduced on MXL 10/40GbE Switch IO Module

## lacp long-timeout

Configure a long timeout period (30 seconds) for an LACP session. Syntax lacp long-timeout
To reset the timeout period to a short timeout (1 second), use the no lacp long-timeout command. Defaults 1 second Command Modes INTERFACE (conf-if-po-*number*) Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module Usage This command applies to dynamic port-channel interfaces only. When applied on a static port-channel, the command has no effect.

Related Commands

Displays the lacp configuration

## lacp port-priority

show lacp

Configure the port priority to influence which ports will be put in standby mode when there is a hardware limitation that prevents all compatible ports from aggregating.

Syntax	lacp port-priority	priority-value
	To return to the de	fault setting, use the no lacp port-priority priority-value command.
Parameters	priority-value	Enter the port-priority value. The higher the value number the lower the priority.
		Range: 1 to 65535
		Default: 32768
Defaults	32768	
Command Modes	INTERFACE	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

## lacp system-priority

Configure the LACP system priority.

Parameters	priority-value	Enter the system-priority value. The higher the value, the lower the priority.
	, ,	Range: 1 to 65535
		Default: 32768
Defaults	32768	
Command Modes	CONFIGURATION	
Command History	Version 8.3.16.1 Intr	oduced on MXL 10/40GbE Switch IO Module

## port-channel mode

Configure the LACP port channel mode.

Syntax port-channel number mode [active] [passive] [off]

Deverseleve		
Parameters	<i>number</i> Enter the keyword <b>port-channel</b> followed by a number:	
		Range: 1 to 128
	active	Enter the keyword <b>active</b> to set the mode to the active state.*
	passive	Enter the keyword <b>passive</b> to set the mode to the passive state.*
	off	Enter the keyword <b>Off</b> to set the mode to the off state.*
	* The LACP mode	s are defined in Table 17-1.
Defaults	off	
Command Modes	INTERFACE-LAC	CP
Command		
History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information	Table 17-1 lists the	ELACP modes.
	<b>TIL (TA LA</b>	

### Table 17-1. LACP Modes

Mode	Function
active	An interface is in an active negotiating state in this mode. LACP runs on any link configured in the active state and also automatically initiates negotiation with other ports by initiating LACP packets.
passive	An interface is not in an active negotiating state in this mode. LACP runs on any link configured in the passive state. Ports in a passive state respond to negotiation requests from other ports that are in active states. Ports in a passive state respond to LACP packets.
off	An interface can not be part of a dynamic port channel in the off mode. LACP will not run on a port configured in the off mode.

## port-channel-protocol lacp

Enable LACP on any LAN port.

Syntax port-channel-protocol lacp

To disable LACP on a LAN port, use the no port-channel-protocol lacp command.

### Command Modes INTERFACE

Command History

Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

#### Example

FTOS(conf)#interface TenGigabitethernet 3/15
FTOS(conf-if-tengig-3/15)#no shutdown
FTOS(conf-if-tengig-3/15)#port-channel-protocol lacp
FTOS(conf)#interface TenGigabitethernet 3/16
FTOS(conf-if-tengig-3/16)#no shutdown
FTOS(conf-if-tengig-3/16)#port-channel-protocol lacp
FTOS(conf-if-tengig-3/16)#port-channel-protocol lacp
FTOS(conf-if-tengig-3/16)#port-channel 32 mode active

Related
Commands

show lacpDisplays the LACP information.show interfaces port-channelDisplays information on configured Port Channel groups.

## show lacp

Display the LACP matrix.

Syntax show lacp *port-channel-number* [sys-id | counters]

Parameters

port-channel-number	Enter a port-channel number:
	Range: 1 to 128
sys-id	(OPTIONAL) Enter the keyword <b>sys-id</b> and the value that identifies a system.
counters	(OPTIONAL) Enter the keyword <b>counters</b> to display the LACP counters.

## Layer 2

## Overview

This chapter describes commands to configure Layer 2 features. It contains the following sections:

- MAC Addressing Commands
- Virtual LAN (VLAN) Commands

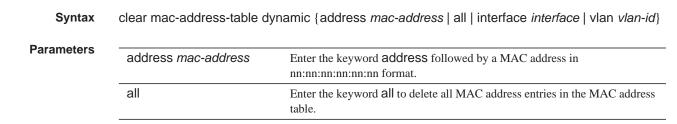

## **MAC Addressing Commands**

The following commands are related to configuring, managing, and viewing MAC addresses:

- clear mac-address-table dynamic
- mac-address-table aging-time
- mac-address-table static
- mac-address-table station-move refresh-arp
- mac learning-limit
- mac learning-limit learn-limit-violation
- mac learning-limit station-move-violation
- mac learning-limit reset
- show cam mac stack-unit
- show mac-address-table
- show mac-address-table aging-time
- show mac learning-limit

## clear mac-address-table dynamic

Clear the MAC address table of all MAC address learned dynamically.

	interface interface	Enter the following keywords and slot/port or number information:			
		• For a Port Channel interface, enter the keyword <b>port-channel</b> followed by a number:			
		Range: 1 to 128			
		<ul> <li>For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.</li> </ul>			
		<ul> <li>For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE followed by the slot/port information.</li> </ul>			
	vlan <i>vlan-id</i>	Enter the keyword vlan followed by a VLAN ID number from 1 to 4094.			
Command Modes	EXEC Privilege				
Command	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module			

## mac-address-table aging-time

Specify an aging time for MAC addresses to be removed from the MAC Address Table.

Syntax	mac-addres	s-table aging-time seco	onds	
Parameters	seconds	· · ·	Enter either zero (0) or a number as the number of seconds before MAC addresses are relearned. To disable aging of the MAC address table, enter 0.	
		Range: 10 - 1000000		
		Default: 1800 seconds		
Defaults	1800 seconds	\$		
Command Modes	CONFIGUR	ATION		
Command History	Version 8.3.	6.1 Introduc	eed on MXL 10/40GbE Switch IO Module	
Related Commands	mac learning	limit	Sets the MAC address learning limits for a selected interface.	
Commanus	show mac-ad	dress-table aging-time	Displays the MAC aging time.	

## mac-address-table static

Associate specific MAC or hardware addresses to an interface and VLANs.

Syntax mac-address-table static mac-address output interface vlan vlan-id

To remove a MAC address, use the no mac-address-table static *mac-address* output *interface* vlan *vlan-id* command.

Parameters		
i arameters	mac-address	Enter the 48-bit hexidecimal address in nn:nn:nn:nn:nn format.
	output interface	Enter the keyword output followed by one of the following interfaces:
		• For a Port Channel interface, enter the keyword <b>port-channel</b> followed by a number:
		Range: 1 to 128
		<ul> <li>For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.</li> </ul>
		• For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE followed by the slot/port information.
	vlan <i>vlan-id</i>	Enter the keyword vlan followed by a VLAN ID.
		Range:1 to 4094.
Defaults	Not configured.	
Command Modes	CONFIGURATION	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Related Commands	show mac-address-table	Displays the MAC address table.

## mac-address-table station-move refresh-arp

Ensure that ARP refreshes the egress interface when a station move occurs due to a topology change.

Syntax	[no] mac-address-table station-move refresh-arp	
Defaults	none	
Command Modes	CONFIGURATION	
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module	
Usage Information	For details about using this command, refer to the "NIC Teaming" section of the Layer 2 chapter in the <i>FTOS Configuration Guide</i> .	

## mac learning-limit

Limit the maximum number of MAC addresses (static + dynamic) learned on a selected interface.

Syntax	mac learning-limit address_limit [dynamic] [no-station-move   station-move] [sticky]	
Parameters	address_limit	Enter the maximum number of MAC addresses that can be learned on the interface. Range: 1 to 1000000
	dynamic	(OPTIONAL) Enter the keyword <b>dynamic</b> to allow aging of MACs even though a learning limit is configured.

	no-station-move	(OPTIONAL) Enter the keyword <b>no-station-move</b> to disallow a station move (associate the learned MAC address with the most recently accessed port) on learned MAC addresses.	
	station-move	(OPTIONAL) Enter the keyword <b>station-move</b> to allow a station move on learned MAC addresses.	
	sticky	(OPTIONAL) Enter the keyword sticky to allow configuring the sticky mac feature along with the learning limit.	
Defaults	The default behavior is dyn	namic.	
	"Static" means manually er	ntered addresses, which do not age.	
Command Modes	INTERFACE		
Command History	Version 8.3.16.1 Introd	duced on MXL 10/40GbE Switch IO Module	
Usage Information	This command and its options are supported on physical interfaces, static LAGs, LACP LAGs, and VLANs.		
	If the vlan option is not specified, the MAC address counters is not VLAN-based. That is, the sum of the addresses learned on all VLANs (not having any learning limit configuration) is counted against the MAC learning limit.		
	MAC learning limit violation	on logs and actions are not available on a per-VLAN basis.	
	With the no-station-move option, MAC addresses learned through this feature on the selected interface persist on a per-VLAN basis, even if received on another interface. Enabling or disabling this option has no effect on already learned MAC addresses.		
	After the MAC address learning limit is reached, the MAC addresses do not age out unless you add the dynamic option. To clear statistics on MAC address learning, use the clear counters command with the learning-limit parameter.		
	When a channel member is added to a port-channel and there is not enough ACL CAM space, the MAC limit functionality on that port-channel is undefined. When this occurs, un-configure the existing configuration first and then reapply the limit with a lower value.		
Related Commands	clear counters	Clears counters used in the show interface command	
	clear mac-address-table dynamic	Clears the MAC address table of all MAC address learned dynamically.	
	show mac learning-limit	Displays MAC learning-limit configuration.	

## mac learning-limit learn-limit-violation

	Configure an action for a MA	C address learning-limit violation.
Syntax	mac learning-limit learn-limit	-violation {log   shutdown}
	To return to the default, use th command.	e no mac learning-limit learn-limit-violation {log   shutdown}
Parameters	log	Enter the keyword <b>log</b> to generate a syslog message on a learning-limit violation.
	shutdown	Enter the keyword <b>shutdown</b> to shut down the port on a learning-limit violation.
Defaults	none	
Command Modes	INTERFACE (conf-if-interfac	e-slot/port)
Command History	Version 8.3.16.1 Introduce	ed on MXL 10/40GbE Switch IO Module
Usage Information	This is supported on physical	interfaces, static LAGs, and LACP LAGs.
Related Commands	show mac learning-limit	Displays details of the mac learning-limit

## mac learning-limit station-move-violation

Specify the actions for a station move violation.

Syntax mac learning-limit station-move-violation {log | shutdown-both | shutdown-offending | shutdown-original}

To disable a configuration, use the no mac learning-limit station-move-violation command, followed by the configured keyword.

Parameters		
Falameters	log	Enter the keyword <b>log</b> to generate a syslog message on a station move violation.
	shutdown-both	Enter the keyword <b>shutdown</b> to shut down both the original and offending interface and generate a syslog message.
	shutdown-offending	Enter the keyword <b>shutdown-offending</b> to shut down the offending interface and generate a syslog message.
	shutdown-original	Enter the keyword <b>shutdown-original</b> to shut down the original interface and generate a syslog message.
Defaults	none	
Command Modes	INTERFACE (conf-if-inter	face-slot/port)
Command History	Version 8.3.16.1 Introd	duced on MXL 10/40GbE Switch IO Module

Usage Information	This is supported on physical interfaces, static LAGs, and LACP LAGs.		
Related Commands	show mac learning-limit	Displays details of the mac learning-limit.	

## mac learning-limit reset Reset the MAC address learning-limit error-disabled state.

Syntax	mac learning-limit reset
Defaults	none
Command Modes	EXEC
	EXEC Privilege
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

## show cam mac stack-unit

Display the Content Addressable Memory (CAM) size and the portions allocated for MAC addresses and for MAC ACLs.

1 T A CD T A C

show cam mac stack-unit unit\_number port-set port-pipe count [vlan vlan-id] [interface interface] **Syntax** 

```
Parameters
```

stack-unit <i>unit_number</i>	(REQUIRED) Enter the keyword <b>stack-unit</b> followed by a stack member number to select the stack unit for which to gather information.
	Range: 0 to 5
port-set port-pipe	(REQUIRED) Enter the keyword <b>port-set</b> followed by a Port-Pipe number to select the Port-Pipe for which to gather information.
	Range: 0
address mac-addr	(OPTIONAL) Enter the keyword <b>address</b> followed by a MAC address in the nn:nn:nn:nn:nn format to display information on that MAC address.
dynamic	(OPTIONAL) Enter the keyword <b>dynamic</b> to display only those MAC addresses learned dynamically by the switch.
static	(OPTIONAL) Enter the keyword <b>static</b> to display only those MAC address specifically configured on the switch.

	interface interface	(OPTIONAL) Enter the keyword interface followed by the interface type, slot and port information:
		• For a Port Channel interface, enter the keyword <b>port-channel</b> followed by a number:
		Range: 1 to 128
		<ul> <li>For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.</li> </ul>
		• For a 40-Gigabit Ethernet interface, enter the keyword <b>fortyGigE</b> followed by the slot/port information.
	vlan <i>vlan-id</i>	(OPTIONAL) Enter the keyword vlan followed by the VLAN ID to display the MAC address assigned to the VLAN.
		Range: 1 to 4094.
ommand Modes	EXEC	
	EXEC Privilege	
Command	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

## show mac-address-table

Display the MAC address table.

**Syntax** show mac-address-table [dynamic | static] [address *mac-address* | interface *interface* | vlan *vlan-id*] [count [vlan *vlan-id*] [interface *interface-type* [*slot* [/*port*]]]]

Parameters		
	dynamic	(OPTIONAL) Enter the keyword <b>dynamic</b> to display only those MAC addresses learned dynamically by the switch. Optionally, you can also add one of these combinations: address/ <i>mac-address</i> , interface/ <i>interface</i> , or vlan <i>vlan-id</i> .
	static	(OPTIONAL) Enter the keyword <b>static</b> to display only those MAC address specifically configured on the switch. Optionally, you can also add one of these combinations: address/ <i>mac-address</i> , interface/ <i>interface</i> , or vlan <i>vlan-id</i> .
	address mac-address	(OPTIONAL) Enter the keyword <b>address</b> followed by a MAC address in the nn:nn:nn:nn:nn format to display information on that MAC address.
	interface interface	(OPTIONAL) Enter the keyword <b>interface</b> followed by the interface type, slot and port information:
		• For a Port Channel interface, enter the keyword <b>port-channel</b> followed by a number:
		Range: 1 to 128
		• For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.
		• For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE followed by the slot/port information.
	interface interface-type	(OPTIONAL) Instead of entering the keyword interface followed by the interface type, slot and port information, as above, you can enter the interface type, followed by just a slot number.

	vlan <i>vlan-id</i>	(OPTIONAL) Enter the keyword vlan followed by the VLAN ID to display the MAC address assigned to the VLAN.
		Range: 1 to 4094.
	count	(OPTIONAL) Enter the keyword <b>count</b> , followed optionally, by an interface or VLAN ID, to display total or interface-specific static addresses dynamic addresses, and MAC addresses in use.
Command Modes	EXEC	
	EXEC Privilege	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

### Table 18-1. show mac-address-table Command Information

Column Heading	Description
VlanId	Displays the VLAN ID number.
Mac Address	Displays the MAC address in nn:nn:nn:nn:nn format.
Туре	Lists whether the MAC address was manually configured (Static) or learned dynamically (Dynamic).
Interface	Displays the interface type and slot/port information. The following abbreviations describe the interface types:
	<ul> <li>tengig — Ten Gigabit Ethernet followed by a slot/port.</li> <li>po — Port Channel followed by a number. Range: 1 to 32 for EtherScale, 1 to 255 for TeraScale</li> </ul>
	<ul> <li>so — Sonet followed by a slot/port.</li> <li>te — 10-Gigabit Ethernet followed by a slot/port.</li> </ul>
State	Lists if the MAC address is in use (Active) or not in use (Inactive).

### Figure 18-2. show mac-address-table count Command Example

## show mac learning-limit Display MAC address learning limits set for various interfaces.

#### Syntax show mac learning-limit [violate-action] [detail] [interface interface

Parameters				
T drameters	violate-action	(OPTIONALY) Enter the keyword violate-action to display the MAC learning limit violation status.		
	detail	(OPTIONAL) Enter the keyword <b>detail</b> to display the MAC learning limit in detail.		
	interface interface	(OPTIONAL) Enter the keyword interface with the following keywords and slot/port or number information:		
		<ul> <li>For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.</li> <li>For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE followed by the slot/port information.</li> </ul>		
		• For a Port Channel interface, enter the keyword <b>port-channel</b> followed by a number:

## Virtual LAN (VLAN) Commands

The following commands configure and monitor virtual local area networks (VLANs). VLANs are a virtual interface and use many of the same commands as physical interfaces.

You can configure an IP address and Layer 3 protocols on a VLAN called Inter-VLAN routing. FTP, TFTP, ACLs, and SNMP are not supported on a VLAN.

Occasionally, while sending broadcast traffic over multiple Layer 3 VLANs, the virtual router redundancy protocol (VRRP) state of a VLAN interface may continually switch between Master and Backup.

- description
- default vlan-id
- default-vlan disable
- name
- show config
- show vlan
- tagged
- track ip
- untagged

For more information, also refer to VLAN Stacking and VLAN-related commands, such as portmode hybrid, in Chapter 14, Interfaces.

## description

-	Add a description	about the selected VLAN.				
Syntax	SyntaxdescriptionTo remove the description from the VLAN, use the no description command.					
Parameters	description	Enter a text string description to identify the VLAN (80 characters maximum).				
Defaults	none					
Command Modes	INTERFACE VLA	AN				
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module				
Related Commands	show vlan	Displays VLAN configuration.				

## default vlan-id

	Specify a VLAN as the Default VLAN.					
Syntax	default vlan-id					
	To remove the default VLAN status from a VLAN and VLAN 1 does not exist, use the no default vlan-id vlan-id command.					
Parameters	vlan-id	Enter the VLAN ID number of the VLAN to become the new Default VLAN. Range: 1 to 4094. Default: 1				
Defaults	The Default VLAN is VLAN 1.					
Command Modes	CONFIGURATIO	DN				
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module				
Usage Information	To return VLAN 1 as the Default VLAN, use this command syntax (default-vlan-id 1). The default VLAN contains only untagged interfaces.					
Related Commands	interface vlan	Configures a VLAN.				

## default-vlan disable

Disable the default VLAN so that all switchports are placed in the Null VLAN until they are explicitly configured as a member of another VLAN.

Defaults	The default VLAN is enabled.
Command Modes	CONFIGURATION
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Usage Information	The no default vlan disable command is not listed in the running-configuration, but when you disable the default VLAN, default-vlan disable is listed in the running-configuration.

### name

	Assign a name to the V	/LAN.	
Syntax	name vlan-name		
	To remove the name fr	om the VLAN, use the no name command.	
Parameters	vlan-name	Enter up to 32 characters as the name of the VLAN.	

Defaults	Not configured.				
Command Modes	INTERFACE VL	AN			
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module			
Usage Information	To display information about a named VLAN, enter the show vlan command with the name parameter or the show interfaces description command.				
Related Commands	description	Assigns a descriptive text string to the interface.			
	interface vlan show vlan	Configures a VLAN.         Displays the current VLAN configurations on the switch.			
show confi	a				
	•	nt configuration of the selected VLAN.			
0	· · ·				

Syntax	show config					
Command Modes	INTERFACE VLAN

#### Related Commands

vlan-stack compatible	Enables the Stackable VLAN feature on the selected VLAN.
interface vlan	Configures a VLAN.

### tagged

Add a Layer 2 interface to a VLAN as a tagged interface.

#### Syntax tagged interface

To remove a tagged interface from a VLAN, use no tagged interface command.

Parameters		
	interface	Enter the following keywords and slot/port or number information:
		<ul> <li>For a Port Channel interface, enter the keyword port-channel followed by a number: Range: 1-128</li> </ul>
		• For a 10-Gigabit Ethernet interface, enter the keyword <b>TenGigabitEthernet</b> followed by the slot/port information.
		• For a 40-Gigabit Ethernet interface, enter the keyword <b>fortyGigE</b> followed by the slot/port information.
Defaults	All interfaces in	Layer 2 mode are untagged.
Command Modes	INTERFACE V	LAN
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information	an untagged inte	he no tagged command, the interface is automatically placed in the default VLAN as erface unless the interface is a member of another VLAN. If the interface belongs to you must remove it from all VLANs to change it to an untagged interface.
	Tagged interface VLAN at a time	es can belong to multiple VLANs, while untagged interfaces can only belong to one

## Link Layer Discovery Protocol (LLDP)

### **Overview**

The link layer discovery protocol (LLDP) advertises connectivity and management from the local station to the adjacent stations on an IEEE 802 LAN. LLDP facilitates multi-vendor interoperability by using standard management tools to discover and make available a physical topology for network management. The Dell Fore10 operating software (FTOS) implementation of LLDP is based on IEEE standard 801.1ab.

### Commands

This chapter contains the following commands, in addition to the commands in the related section — LLDP-MED Commands.

- advertise dot1-tlv
- advertise dot3-tlv
- advertise management-tlv
- clear lldp counters
- clear lldp neighbors
- debug lldp interface
- disable
- hello
- mode
- multiplier
- protocol lldp (Configuration)
- protocol lldp (Interface)
- show lldp neighbors
- show lldp statistics
- show running-config lldp

The starting point for using LLDP is invoking LLDP with the protocol lldp command in either CONFIGURATION or INTERFACE mode.

The information distributed by LLDP is stored by its recipients in a standard management information base (MIB). The information can be accessed by a network management system through a management protocol such as SNMP.

For details about implementing LLDP/LLDP-MED, refer to the Link Layer Discovery Protocol chapter of the *FTOS Configuration Guide*.

## advertise dot1-tlv

	Advertise dot1 TLVs (Type, L	ength, Value).
Syntax	advertise dot1-tlv {port-proto	ocol-vlan-id   port-vlan-id   vlan-name}
	To remove advertised dot1-tlv vlan-name} command.	, use the no advertise dot1-tlv {port-protocol-vlan-id   port-vlan-id
Parameters	port-protocol-vlan-id	Enter the keyword <b>port-protocol-vlan-id</b> to advertise the port protocol VLAN identification TLV.
	port-vlan-id	Enter the keyword <b>port-vlan-id</b> to advertise the port VLAN identification TLV.
	vlan-name	Enter the keyword vlan-name to advertise the vlan-name TLV.
Defaults	Disabled	
Command Modes	CONFIGURATION (conf-lld	p) and INTERFACE (conf-if- <i>interface</i> -lldp)
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Related Commands	protocol lldp (Configuration)	Enables LLDP globally.
	debug lldp interface	Debugs LLDP.
	show lldp neighbors	Displays the LLDP neighbors.
	show running-config lldp	Displays the LLDP running configuration.

## advertise dot3-tlv

Advertise dot3 TLVs (Type, Length, Value).

Syntax	advertise dot3-tlv {ma To remove advertised	ax-frame-size} dot3-tlv, use the no advertise dot3-tlv {max-frame-size} command.
Parameters	max-frame-size	Enter the keyword <b>max-frame-size</b> to advertise the dot3 maximum frame size.
Defaults	none	
Command Modes	CONFIGURATION (c	conf-lldp) and INTERFACE (conf-if- <i>interface</i> -lldp)
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

## advertise management-tlv

Advertise management TLVs (Type, Length, Value). **Syntax** advertise management -tlv {system-capabilities | system-description | system-name} To remove advertised management TLVs, use the no advertise management -tlv {system-capabilities | system-description | system-name } command. **Parameters** system-capabilities Enter the keyword system-capabilities to advertise the system capabilities TLVs. system-description Enter the keyword system-description to advertise the system description TLVs. system-name Enter the keyword system-description to advertise the system description TLVs. Defaults none **Command Modes** CONFIGURATION (conf-lldp) Command Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module History Usage All three command options — system-capabilities, system-description, and system-name — can be Information invoked individually or together, in any sequence.

### clear lldp counters

Clear LLDP transmitting and receiving counters for all physical interfaces or a specific physical interface.

Syntax	clear lldp counters interface		
Parameters	interface	Enter the following keywords and slot/port or number information:	
		• For a 10-Gigabit Ethernet interface, enter the keyword tenGigabitEthernet followed by the slot/port information.	
		• For a 40-Gigabit Ethernet interface, enter the keyword <b>fortyGigE</b> followed by the slot/port information.	
Defaults	none		
Command Modes	EXEC Privilege		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	

## clear lldp neighbors

Clear LLDP neighbor information for all interfaces or a specific interfaces.

Syntax clear lldp neighbors { interface }

Parameters	interface	Enter the following keywords and slot/port or number information:
		• For a 10-Gigabit Ethernet interface, enter the keyword tenGigabitEthernet followed by the slot/port information.
		• For a 40-Gigabit Ethernet interface, enter the keyword <b>fortyGigE</b> followed by the slot/port information.
Defaults	none	
Command Modes	EXEC Privilege	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

## debug lldp interface

Enable LLDP debugging to display timer events, neighbor additions or deletions, and other information about incoming and outgoing packets.

**Syntax** debug lldp interface { *interface* | all} {events | packet {brief | detail} {tx | rx | both} }

To disable debugging, use the no debug lldp interface { *interface* | all} {events} {packet {brief | detail} {tx | rx | both} command.

Parameters	interface	Enter the following bounded and det/next or number information.
	menace	Enter the following keywords and slot/port or number information:
		• For a 10-Gigabit Ethernet interface, enter the keyword tenGigabitEthernet followed by the slot/port information.
		• For a 40-Gigabit Ethernet interface, enter the keyword <b>fortyGigE</b> followed by the slot/port information.
	all	(OPTIONAL) Enter the keyword all to display information on all interfaces.
	events	(OPTIONAL) Enter the keyword <b>events</b> to display major events such as timer events.
	packet	(OPTIONAL) Enter the keyword <b>packet</b> to display information regarding packets coming in or going out.
	brief	(OPTIONAL) Enter the keyword brief to display brief packet information.
	detail	(OPTIONAL) Enter the keyword detail to display detailed packet information.
	tx	(OPTIONAL) Enter the keyword tx to display transmit only packet information.
	rx	(OPTIONAL) Enter the keyword FX to display receive only packet information
	both	(OPTIONAL) Enter the keyword <b>both</b> to display both receive and transmit packet information.
Defaults	none	
Command Modes	EXEC Privilege	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

## disable

	Enable or disable LLDP.		
Syntax	disable		
	To enable LLDP, use the no d	isable	
Defaults	Enabled, that is no disable		
Command Modes	CONFIGURATION (conf-lld	p) and INTERFACE (conf-if- <i>interface</i> -lldp)	
Command			
	Version 8 3 16 1	Introduced on MXL 10/40GbE Switch IO Module	
History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
	Version 8.3.16.1 protocol lldp (Configuration)	Introduced on MXL 10/40GbE Switch IO Module Enables LLDP globally.	
History Related			
History Related	protocol lldp (Configuration)	Enables LLDP globally.	

## hello

	Configure the rate	at which the LLDP control packets are sent to its peer.	
Syntax	hello seconds		
	To revert to the default, use the no hello seconds command.		
Parameters	seconds	Enter the rate, in seconds, at which the control packets are sent to its peer.	
		Rate: 5 to 180 seconds	
		Default: 30 seconds	
Defaults	30 seconds		
ommand Modes	CONFIGURATIO	N (conf-lldp) and INTERFACE (conf-if- <i>interface</i> -lldp)	

## mode

IX I	mode {tx   r	
		<b>^</b> ]
r	To return to the default, use the no mode $\{tx \mid rx\}$ command.	
eters -	tx	Enter the keyword tx to set the mode to transmit.

History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Related	
Commands	protocol lldp (Configuration) Enables LLDP globally.
	show lldp neighbors Displays the LLDP neighbors
nultiplier	Set the number of consecutive misses before LLDP declares the interface dead.
Currenter	
Syntax	multiplier integer
	To return to the default, use the <b>no multiplior</b> integer command
	To return to the default, use the no multiplier <i>integer</i> command.
Parameters	<i>integer</i> Enter the number of consecutive misses before the LLDP declares the interface dead. Range: 2 - 10
Parameters Defaults	<i>integer</i> Enter the number of consecutive misses before the LLDP declares the interface dead.
	<i>integer</i> Enter the number of consecutive misses before the LLDP declares the interface dead. Range: 2 - 10

## protocol IIdp (Configuration)

Enable LLDP globally on the switch.

Syntax	protocol lldp To disable LLDP globally on the chassis, use the no protocol lldp command.
Defaults	Disabled
Command Modes	CONFIGURATION (conf-lldp)
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

## protocol lldp (Interface)

Enter the LLDP protocol in the INTERFACE mode.

Syntax [no] protocol lldp To return to the global LLDP configuration mode, use the no protocol lldp command from the Interface mode.

**Defaults** LLDP is not enabled on the interface.

Command Modes	INTERFACE (conf-if- <i>interface</i> -lldp)	
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module	
Usage Information	You must enable LLDP globally from CONFIGURATION mode before you can configure it on an interface. This command places you in LLDP mode on the interface; it does not enable the protocol.	

When you enter the LLDP protocol in the Interface context, it overrides global configurations. When you execute the no protocol lldp from INTERFACE mode, interfaces begin to inherit the configuration from global LLDP CONFIGURATION mode.

## show lldp neighbors

Display LLDP neighbor information for all interfaces or a specified interface.

Syntax	show lldp neighbo	ors [ <i>interface</i> ] [detail]
Parameters	interface	<ul> <li>(OPTIONAL) Enter the following keywords and slot/port or number information:</li> <li>For a 10-Gigabit Ethernet interface, enter the keyword tenGigabitEthernet followed by the slot/port information.</li> </ul>
		• For a 40-Gigabit Ethernet interface, enter the keyword <b>fortyGigE</b> followed by the slot/port information.
	detail	(OPTIONAL) Enter the keyword <b>detail</b> to display all the TLV information, timers, and LLDP tx and rx counters.
Defaults	none	
Command Modes	EXEC Privilege	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Example	Figure 19-1. s	how Ildp neighbors Command Example
		-1/31)#do show lldp neighbors Rem Host Name Rem Port Id Rem Chassis Id
	TenGig 1/21 TenGig 1/31	R2         TenGigabitEthernet 2/11         00:01:e8:06:95:3e           R3         TenGigabitEthernet 3/11         00:01:e8:09:c2:4a

Usage Information

Omitting the keyword detail displays only the remote chassis ID, Port ID, and Dead Interval.

## show lldp statistics

Display the LLDP statistical information.

- Syntax show lldp statistics
- Defaults none

## **LLDP-MED Commands**

The LLDP-media endpoint discovery (MED) commands in this section are:

- advertise med guest-voice
- advertise med guest-voice-signaling
- advertise med location-identification
- advertise med power-via-mdi
- advertise med softphone-voice
- advertise med streaming-video
- advertise med video-conferencing
- advertise med video-signaling
- advertise med voice
- advertise med voice-signaling

FTOS LLDP-MED commands are an extension of the set of LLDP TLV advertisement commands.

As defined by ANSI/TIA-1057, LLDP-MED provides organizationally specific type length value (TLVs), so that endpoint devices and network connectivity devices can advertise their characteristics and configuration information. The Organizational Unique Identifier (OUI) for the Telecommunications Industry Association (TIA) is 00-12-BB.

- **LLDP-MED Endpoint Device** any device that is on an IEEE 802 LAN network edge, can communicate using IP, and uses the LLDP-MED framework.
- **LLDP-MED Network Connectivity Device** any device that provides access to an IEEE 802 LAN to an LLDP-MED endpoint device, and supports IEEE 802.1AB (LLDP) and TIA-1057 (LLDP-MED). The Dell Force10 system is an LLDP-MED network connectivity device.

With regard to connected endpoint devices, LLDP-MED provides network connectivity devices with the ability to:

- manage inventory
- manage Power over Ethernet (POE)
- identify physical location
- identify network policy

## advertise med guest-voice

Configure the system to advertise a separate limited voice service for a guest user with their own IP telephony handset or other appliances that support interactive voice services.

Syntax advertise med guest-voice { vlan-id layer2\_priority DSCP\_value} | { priority-tagged number}

To return to the default, use the no advertise med guest-voice { *vlan-id layer2\_priority DSCP\_value*} | {priority-tagged *number*} command.

Parameters

vlan-id	Enter the VLAN ID.
	Range: 1 to 4094
layer2_priority	Enter the Layer 2 priority.
	Range: 0 to 7

	DSCP_value	Enter the DSCP value.
		Range: 0 to 63
	priority-tagged number	Enter the keyword priority-tagged followed the Layer 2 priority.
		Range: 0 to 7
Defaults	Unconfigured	
Command Modes	CONFIGURATION (conf-lld	p)
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Related Commands	protocol lldp (Configuration)	Enables LLDP globally.
Commands	debug lldp interface	Debugs LLDP.
	show lldp neighbors	Displays the LLDP neighbors.
	show running-config lldp	Displays the LLDP running configuration.

## advertise med guest-voice-signaling

Configure the system to advertise a separate limited voice service for a guest user when the guest voice control packets use a separate network policy than the voice data.

## **Syntax** advertise med guest-voice-signaling {*vlan-id layer2\_priority DSCP\_value*} | {priority-tagged number}

To return to the default, use the no advertise med guest-voice-signaling {*vlan-id layer2\_priority DSCP\_value*} | {priority-tagged *number*} command.

Parameters		
Falameter 5	vlan-id	Enter the VLAN ID.
		Range: 1 to 4094
	layer2_priority	Enter the Layer 2 priority.
		Range: 0 to 7
	DSCP_value	Enter the DSCP value.
		Range: 0 to 63
	priority-tagged number	Enter the keyword priority-tagged followed the Layer 2 priority.
		Range: 0 to 7
Defaults Command Modes	unconfigured CONFIGURATION (conf-lld	dn)
		up)
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Command History Related Commands	Version 8.3.16.1 debug lldp interface	Introduced on MXL 10/40GbE Switch IO Module Debugs LLDP
History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

## advertise med location-identification

Configure the system to advertise a location identifier.

#### Syntax advertise med location-identification {coordinate-based value | civic-based value | ecs-elin value}

To return to the default, use the no advertise med location-identification {coordinate-based value | civic-based value | ecs-elin value} command.

Development		
Parameters	coordinate-based value	Enter the keyword <b>coordinate-based</b> followed by the coordinated based location in hexadecimal value of 16 bytes.
	civic-based value	Enter the keyword <b>civic-based</b> followed by the civic based location in hexadecimal format.
		Range: 6 to 255 bytes
	ecs-elin value	Enter the keyword <b>ecs-elin</b> followed by the Emergency Call Service ( <b>ecs</b> ) Emergency Location Identification Number ( <b>elin</b> ) numeric location string.
		Range: 10 to 25 characters
Defaults	unconfigured	

Command Modes CONFIGURATION (conf-lldp)

Command	Version 8 3 16 1	Introduced on MXL 10/40GbE Switch IO Module	· .
History			

Usage Information

**ECS** — Emergency Call Service such as defined by TIA or National Emergency Numbering Association (NENA)

**ELIN** — Emergency Location Identification Number, a valid North America Numbering Plan format telephone number supplied for ECS purposes.

Related Commands	debug lldp interface	Debugs LLDP
••••••	show lldp neighbors	Displays the LLDP neighbors
	show running-config lldp	Displays the LLDP running configuration

## advertise med power-via-mdi

Configure the system to advertise the Extended Power via MDI TLV.

Syntax	advertise med power-via-mdi	
	To return to the default, use the no advertise med power-via-mdi command.	
Defaults	unconfigured	
Command Modes	CONFIGURATION (conf-lldp)	
Command	Version 9.2.16.1 Letter based on MVL 10/40CLE Smith IO Medule	
History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module	
Usage Information	Advertise the Extended Power via MDI on all ports that are connected to an 802.3af powered, LLDP-MED endpoint device.	

#### Related Commands

d s	debug lldp interface	Debugs LLDP
	show lldp neighbors	Displays the LLDP neighbors
	show running-config lldp	Displays the LLDP running configuration

## advertise med softphone-voice

Configure the system to advertise softphone to enable IP telephony on a computer so that the computer can be used as a phone.

Syntax advertise med softphone-voice { *vlan-id*} | {priority-tagged *number*}

To return to the default, use the no advertise med softphone-voice {*vlan-id*} | {priority-tagged *number*} command.

Parameters	vlan-id	Enter the VLAN ID.
		Range: 1 to 4094
	priority-tagged number	Enter the keyword priority-tagged followed the Layer 2 priority.
		Range: 0 to 7
Defaults	unconfigured	
Command Modes	CONFIGURATION (conf-lle	dp)
Command

Related		
	Version 8.3.16.1 debug lldp interface show lldp neighbors	Introduced on MXL 10/40GbE Switch IO Module Debugs LLDP Displays the LLDP neighbors

## advertise med streaming-video

Configure the system to advertise streaming video services for broadcast or multicast-based video. This does not include video applications that rely on TCP buffering.

#### **Syntax** advertise med streaming-video {*vlan-id*} | {priority-tagged *number*}

To return to the default, use the no advertise med streaming-video {*vlan-id*} | {priority-tagged *number*} command.

Parameters	vlan-id	Enter the VLAN ID.
		Range: 1 to 4094
	priority-tagged number	Enter the keyword priority-tagged followed the Layer 2 priority.
		Range: 0 to 7

Defaults unconfigured

Command Modes CONFIGURATION (conf-lldp)

Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Related Commands	debug lldp interface	Debugs LLDP	
	show lldp neighbors	Displays the LLDP neighbors	
	show lldp neighbors	Displays the LLDP running configuration	

## advertise med video-conferencing

Configure the system to advertise dedicated video conferencing and other similar appliances that support real-time interactive video.

**Syntax** advertise med video-conferencing {*vlan-id*} | {priority-tagged *number*}

To return to the default, use the no advertise med video-conferencing {*vlan-id layer2\_priority DSCP\_value*} | {priority-tagged *number*} command.

Parameters	vlan-id	Enter the VLAN ID.
		Range: 1 to 4094
	priority-tagged number	Enter the keyword priority-tagged followed the Layer 2 priority.
		Range: 0 to 7
Defaults	unconfigured	
Command Modes	CONFIGURATION (conf-ll-	dp)
Command	Vaniar 0.2.16.1	
History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Related		
-	debug lldp interface show lldp neighbors	Introduced on MXL 10/40GbE Switch IO Module Debugs LLDP Displays the LLDP neighbors

## advertise med video-signaling

Configure the system to advertise video control packets that use a separate network policy than video data.

**Syntax** advertise med video-signaling {*vlan-id*} | {priority-tagged *number*}

To return to the default, use the no advertise med video-signaling {*vlan-id layer2\_priority DSCP\_value*} | {priority-tagged *number*} command.

Parameters	vlan-id	Enter the VLAN ID.
		Range: 1 to 4094
	priority-tagged number	Enter the keyword priority-tagged followed the Layer 2 priority.
		Range: 0 to 7

Defaults unconfigured

#### Command Modes CONFIGURATION (conf-lldp)

Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Related Commands	debug lldp interface	Debugs LLDP	
e e manue	show lldp neighbors	Displays the LLDP neighbors	
	show lldp neighbors	Displays the LLDP running configuration	

## advertise med voice

Configure the system to advertise a dedicated IP telephony handset or other appliances supporting interactive voice services.

#### **Syntax** advertise med voice {*vlan-id*} | {priority-tagged *number*}

To return to the default, use the no advertise med voice {*vlan-id layer2\_priority DSCP\_value*} | {priority-tagged *number*} command.

Parameters		
Falameters	vlan-id	Enter the VLAN ID.
		Range: 1 to 4094
	priority-tagged number	Enter the keyword priority-tagged followed the Layer 2 priority.
		Range: 0 to 7
Defaults	unconfigured	
ommand Modes	CONFIGURATION (conf-ll	dp)

-		
Related Commands	debug lldp interface	Debugs LLDP
	show lldp neighbors	Displays the LLDP neighbors
	show running-config lldp	Displays the LLDP running configuration

## advertise med voice-signaling

Configure the system to advertise when voice control packets use a separate network policy than voice data.

**Syntax** advertise med voice-signaling {*vlan-id*} | {priority-tagged *number*}

To return to the default, use the no advertise med voice-signaling {*vlan-id layer2\_priority DSCP\_value*} | {priority-tagged *number*} command.

Parameters	vlan-id	Enter the VLAN ID. Range: 1 to 4094
	priority-tagged number	Enter the keyword <b>priority-tagged</b> followed the Layer 2 priority. Range: 0 to 7

Defaults	unconfigured	
Command Modes	CONFIGURATION (conf	-lldp)
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Related Commands	debug lldp interface show lldp neighbors	Debugs LLDP Displays the LLDP neighbors
	show lldp neighbors	Displays the LLDP running configuration

# **Multiple Spanning Tree Protocol (MSTP)**

## Overview

The multiple spanning tree protocol (MSTP), as implemented by the Dell Force10 operating software (FTOS), conforms to IEEE 802.1s.

## Commands

The following commands configure and monitor MSTP:

- debug spanning-tree mstp
- disable
- edge-port bpdufilter default
- hello-time
- max-age
- max-hops
- msti
- name
- protocol spanning-tree mstp
- revision
- show config
- show spanning-tree mst configuration
- show spanning-tree msti
- spanning-tree
- spanning-tree msti
- spanning-tree mstp
- tc-flush-standard

## debug spanning-tree mstp

Enable debugging of the multiple spanning tree protocol and view information on the protocol.

#### Syntax debug spanning-tree mstp [all | bpdu interface {in | out} | events]

To disable debugging, use the no debug spanning-tree mstp command.

**Parameters** 

Developed		
Parameters	all	(OPTIONAL) Enter the keyword all to debug all spanning tree operations.
	bpdu interface {in	(OPTIONAL) Enter the keyword bpdu to debug Bridge Protocol Data Units.
	out}	(OPTIONAL) Enter the interface keyword along with the type slot/port of the interface you want displayed. Type slot/port options are the following:
		• For a Port Channel interface, enter the keyword <b>port-channel</b> followed by a number:
		Range: 1 to 128
		• For a 10-Gigabit Ethernet interface, enter the keyword <b>TenGigabitEthernet</b> followed by the slot/port information.
		• For a 40-Gigabit Ethernet interface, enter the keyword <b>fortyGigE</b> followed by the slot/port information.
		Optionally, enter an in or out parameter in conjunction with the optional interface:
		• For Receive, enter <b>in</b>
		• For Transmit, enter <b>out</b>
	events	(OPTIONAL) Enter the keyword events to debug MSTP events.
Command Modes	EXEC Privilege	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Thotory		

Example

#### Figure 20-1. debug spanning-tree mstp bpdu Command Example

```
FTOS#debug spanning-tree mstp bpdu tengigabitethernet 0/16 ?
in Receive (in)
out Transmit (out)
FTOS#
```

## description

	Enter a description	on of the multiple spanning tree protocol.
Syntax	description { description }	
	To remove the de	escription, use the no description { description} command.
Parameters	description	Enter a description to identify the Multiple Spanning Tree (80 characters maximum).
Defaults	none	
Command Modes	SPANNING TRI	EE (The prompt is "config-mstp".)

Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Related Commands	protocol spanning-tree mstp Enters MULTIPLE SPANNING TREE mode on the switch.
disable	
	Globally disable the multiple spanning tree protocol on the switch.
Syntax	disable
	To enable Multiple Spanning Tree Protocol, use the no disable command.
Defaults	MSTP is disabled
Command Modes	MULTIPLE SPANNING TREE
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Related Commands	protocol spanning-tree mstp Enters MULTIPLE SPANNING TREE mode.

## edge-port bpdufilter default

Enable bridge protocol data units (BPDU) filter globally to filter transmission of BPDU on port-fast enabled interfaces.
edge-port bpdufilter default
To disable global bpdu filter default, use the no edge-port bpdufilter default command.
Disable
MULTIPLE SPANNING TREE
Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

## forward-delay

The amount of time the interface waits in the Blocking State and the Learning State before transitioning to the Forwarding State.

Syntax forward-delay seconds

To return to the default setting, use the no forward-delay command.

Parameters		
Falameters	seconds	Enter the number of seconds the interface waits in the Blocking State and the Learning State before transiting to the Forwarding State.
		Range: 4 to 30
		Default: 15 seconds.
Defaults	15 seconds	
ommand Modes	MULTIPLE SPAN	NNING TREE
Command		
History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Related Commands	max-age	Changes the wait time before MSTP refreshes protocol configuration information.

## hello-time

Set the time interval between generation of Multiple Spanning Tree Bridge Protocol Data Units (BPDUs). **Syntax** hello-time seconds To return to the default value, use the no hello-time command. **Parameters** seconds Enter a number as the time interval between transmission of BPDUs. Range: 1 to 10. Default: 2 seconds. Defaults 2 seconds **Command Modes** MULTIPLE SPANNING TREE Command Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module History Related edge-port The amount of time the interface waits in the Blocking State and the Learning State Commands bpdufilter default before transitioning to the Forwarding State. Changes the wait time before MSTP refreshes protocol configuration information. max-age

## max-age

Set the time interval for the MSTP bridge to maintain configuration information before refreshing that information.

Syntax max-age seconds

To return to the default values, use the no max-age command.

Parameters		
Farameters	max-age	Enter a number of seconds the FTOS waits before refreshing configuration information.
		Range: 6 to 40
		Default: 20 seconds.
Defaults	20 seconds	
Command Modes	MULTIPLE SPAN	INING TREE
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Related	edge-port	The amount of time the interface waits in the Blocking State and the Learning State
Commands	bpdufilter default	before transitioning to the Forwarding State.
	hello-time	Changes the time interval between BPDUs.
_		
max-hops		
	Configure the max	imum hop count.
Syntax	max-hops numbe	r
	To return to the de	fault values, use the no max-hops command.
Parameters	range	Enter a number for the maximum hop count.
		Range: 1 to 40
		Default: 20
Defaults	20 hops	
Command Modes	MULTIPLE SPAN	INING TREE
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage	The max-hops is a	a configuration command that applies to both the IST and all MST instances in the
Information	MSTP region. The	BPDUs sent out by the root switch set the remaining-hops parameter to the
		f max-hops. When a switch receives the BPDU, it decrements the received value of s and uses the resulting value as remaining-hops in the BPDUs. If the
		aches zero, the switch discards the BPDU and ages out any information that it holds
msti		
	Configure multiple MST instance.	e spanning tree instance, bridge priority, and one or multiple VLANs mapped to the
Syntax	msti <i>instance</i> {vla	an <i>range</i>   bridge-priority <i>priority</i> }
	To disable mapping	g or bridge priority, use the no msti instance {vlan range   bridge-priority priority}

command.

Parameters
Defaults
Command Modes
Command

**INTERFACE** 

msti instance

vlan *range* 

bridge-priority priority

default bridge-priority is 32768

Command	
History	

Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

Usage By default, all VLANs are mapped to MST instance zero (0) unless you use the vlan range command Information to map it to a non-zero instance.

> Although MSTP instance IDs range from 0 to 4094, only 64 active instances are supported on the switch.

Enter the MST instance number.

Enter the keyword vlan followed by the identifier range value.

Enter the keyword bridge-priority followed by a value in increments of

Valid priority values are: 0, 4096, 8192, 12288, 16384, 20480, 24576, 28672, 32768, 36864, 40960, 45056, 49152, 53248, 57344, and 61440. All

Range: 0 to 4094.

Range: 1 to 4094

4096 as the bridge priority. Range: zero (0) to 61440

other values are rejected.

### name

The name you assign to the multiple spanning tree region.

Syntax	name region-nar	ne
	To remove the reg	ion name, use the no name command.
Parameters	region-name	Enter the MST region name.
		Range: 32 character limit
Defaults	none	
Command Modes	MULTIPLE SPAN	INING TREE
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information	For two MSTP sw	itches to be within the same MSTP region, the switches must share the same region

Related msti Commands

name (including matching case).

Maps the VLAN(s) to an MST instance. Assigns the revision number to the MST configuration. revision

## protocol spanning-tree mstp Enter MULTIPLE SPANNING TREE mode to enable and configure the multiple spanning tree group.

name

Syntax	protocol spanning-tree mstp
Cyntax	To disable the multiple spanning tree group, use the no protocol spanning-tree mstp command.
Defeulte	
Defaults	Not configured.
Command Modes	CONFIGURATION
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Example	Figure 20-2. protocol spanning-tree mstp Command Example
	<pre>FTOS(conf)#protocol spanning-tree mstp FTOS(conf-mstp)#no disable</pre>
Usage Information	MSTP is not enabled when you enter the MULTIPLE SPANNING TREE mode. To enable MSTP globally on the switch, enter no disable while in MULTIPLE SPANNING TREE mode.
	For more information about the multiple spanning tree protocol, refer to the <i>FTOS Configuration Guide</i> .
Related Commands	disable Disables MSTP.
revision	The revision number for the multiple spanning tree configuration
Syntax	revision range
-	To return to the default values, use the <b>no revision</b> command.
Parameters	
Falameters	rangeEnter the revision number for the MST configuration.Range: 0 to 65535Default: 0
Defaults	0
Command Modes	MULTIPLE SPANNING TREE
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Usage Information	For two MSTP switches to be within the same MST region, the switches must share the same revision number.
Related Commands	msti Maps the VLAN(s) to an MST instance

Assigns the region name to the MST region.

## show config

View the current configuration for the mode. Only non-default values are shown.

Syntax show config

Command Modes MULTIPLE SPANNING TREE

Command History

Guard Type	Type of STP guard configured (Root or BPDU guard)
BPDU Filter	BPDU filter enabled (Yes) or BPDU filter disabled (No)

#### Table 20-1. show spanning-tree msti guard Command Information

## spanning-tree

Enable the multiple spanning tree protocol on the interface.

Syntax	spanning-tree	
	To disable the multip	le spanning tree protocol on the interface, use the no spanning-tree command.
Parameters	spanning-tree	Enter the keyword <b>spanning-tree</b> to enable the MSTP on the interface. Default: Enable
Defaults	Enable	
Command Modes	INTERFACE	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

## spanning-tree msti

Configure multiple spanning tree instance cost and priority for an interface.

**Syntax** spanning-tree msti *instance* {cost *cost* | priority *priority*}

Parameters		
	msti <i>instance</i>	Enter the MST instance number.
		Range: 0 to 4094.
	cost cost	(OPTIONAL) Enter the keyword <b>cost</b> followed by the port cost value.
		Range: 1 to 200000
		Defaults:
		• 40-Gigabit Ethernet interface = 1400
		• 10-Gigabit Ethernet interface = 2000
		• Port Channel interface with one 10-Gigabit Ethernet = 2000
		• Port Channel with two 10-Gigabit Ethernet = 1800
		• Port Channel with two 100-Mbps Ethernet = 180000
	priority priority	Enter keyword priority followed by a value in increments of 16 as the priority.
		Range: 0 to 240.
		Default: 128

**Defaults** cost = depends on the interface type; priority = 128

Command Modes INTERFACE

Command History

## spanning-tree mstp

Configures a Layer 2 MSTP interface as an edge port with (optionally) a BPDU guard, a BPDU filter or enables the root guard feature on the interface.

Syntax spanning-tree mstp {edge-port [bpduguard [shutdown-on-violation | bpdufilter] | rootguard}

Parameters		
T drameters	edge-port	Enter the keyword edge-port to configure the interface as a Multiple Spanning Tree edge port.
	bpduguard	(OPTIONAL) Enter the keyword <b>edgeport</b> to enable edge port configuration to move the interface into forwarding mode immediately after the root fails.
		Enter the keyword bpduguard to disable the port when it receives a BPDU.
	bpdufilter	(OPTIONAL) Enter the keyword <b>edgeport</b> to enable edge port configuration to move the interface into forwarding mode immediately after the root fails. Enter the keyword bpdufilter to stop sending and receiving BPDUs on the port-fast enabled ports.
	shutdown-on-vi olation	(OPTIONAL) Enter the keyword shutdown-on-violation to hardware disable an interface when a BPDU is received and the port is disabled.
	rootguard	Enter the keyword <b>rootguard</b> to enable root guard on an MSTP port or port-channel interface.
Command Modes	INTERFACE	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information	state. Only ports co	h, a port configured as an edge port will immediately transition to the forwarding nnected to end-hosts should be configured as an edge port. Consider an edge port h spanning-tree portfast enabled.
	loop guard on a por displayed:	o guard cannot be enabled at the same time on a port. For example, if you configure t on which root guard is already configured, the following error message is hard is configured. Cannot configure LoopGuard.
	When used in an M blocked in all other	STP network, if root guard blocks a boundary port in the CIST, the port is also MST instances.
	in a blocking state a	PDU guard and loop guard at the same time on a port results in a port that remains and prevents traffic from flowing through it. For example, when Portfast BPDU rd are both configured:
	<ul><li>blocking state a</li><li>If no BPDU is</li></ul>	ecceived from a remote device, BPDU guard places the port in an err-disabled and no traffic is forwarded on the port. received from a remote device, loop guard places the port in a loop-inconsistent and no traffic is forwarded on the port.

## tc-flush-standard

Enable the MAC address flushing after receiving every topology change notification.

Syntax	tc-flush-standard To disable, use the no tc-flush-standard command.
Defaults	Disabled
Command Modes	CONFIGURATION
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Usage Information	By default, FTOS implements an optimized flush mechanism for MSTP. This helps in flushing the MAC addresses only when necessary (and less often) allowing for faster convergence during topology changes. However, if a standards-based flush mechanism is needed, you can turn on the knob

command to enable flushing MAC addresses after receiving every topology change notification.

# **Open Shortest Path First (OSPFv2)**

## **Overview**

The MXL 10/40GbE Switch IO Module platform supports open shortest path first (OSPFv2) only. Up to 16 OSPF instances can be run simultaneously on the MXL Switch.

OSPF is an interior gateway protocol (IGP), which means that it distributes routing information between routers in a single autonomous system (AS). OSPF is also a link-state protocol in which all routers contain forwarding tables derived from information about their links to their neighbors.

## **OSPFv2** Commands

The Dell Force10 implementation of OSPFv2 is based on IETF RFC 2328. The following commands allow you to configure and enable OSPFv2.

- area default-cost
- area nssa
- area range
- area stub
- auto-cost
- clear ip ospf
- clear ip ospf statistics
- debug ip ospf
- default-information originate
- default-metric
- description
- distance
- distance ospf
- distribute-list in
- distribute-list out
- fast-converge
- flood-2328
- graceful-restart helper-reject
- ip ospf auth-change-wait-time
- ip ospf authentication-key
- ip ospf cost
- ip ospf dead-interval
- ip ospf hello-interval

- ip ospf mtu-ignore
- ip ospf network
- ip ospf priority
- ip ospf retransmit-interval
- ip ospf transmit-delay
- log-adjacency-changes
- maximum-paths
- mib-binding
- network area
- passive-interface
- redistribute
- router-id
- router ospf
- show config
- show ip ospf
- show ip ospf asbr
- show ip ospf database
- show ip ospf database asbr-summary
- show ip ospf database external
- show ip ospf database network
- show ip ospf database nssa-external
- show ip ospf database opaque-area
- show ip ospf database opaque-as
- show ip ospf database opaque-link
- show ip ospf database router
- show ip ospf database summary
- show ip ospf interface
- show ip ospf neighbor
- show ip ospf routes
- show ip ospf statistics
- show ip ospf timers rate-limit
- show ip ospf topology
- summary-address
- timers spf
- timers throttle lsa all
- timers throttle lsa arrival

## area default-cost

Set the metric for the summary default route generated by the area border router (ABR) into the stub area. Use this command on the border routers at the edge of a stub area.

Syntax	area area-id default-cost cost	
	To return default	values, use the <b>no area</b> area-id <b>default-cost</b> command.
Parameters	area-id	Specify the OSPF area in dotted decimal format (A.B.C.D.) or enter a number from zero (0) to 65535.
	cost	Specifies the stub area's advertised external route metric. Range: zero (0) to 65535.
		Kange. Zeio (0) to 05555.
Defaults	cost = 1; no area	s are configured.
Command Modes	ROUTER OSPF	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information	In FTOS, cost is	defined with reference to bandwidth.
Related Commands	area stub	Creates a stub area.
area nssa		

Specify an area as a not so stubby area (NSSA).

Syntax area area-id nssa [default-information-originate] [no-redistribution] [no-summary]

To delete an NSSA, use the **no area** area-id **nssa** command.

Parameters		
Falameters	area-id	Specify the OSPF area in dotted decimal format (A.B.C.D) or enter a number from 0 and 65535.
	no-redistribution	(OPTIONAL) Specify that the redistribute command should not distribute routes into the NSSA. You should only use this command in a NSSA Area Border Router (ABR).
	default-information-ori ginate	(OPTIONAL) Allows external routing information to be imported into the NSSA by using Type 7 default.
	no-summary	(OPTIONAL) Specify that no summary LSAs should be sent into the NSSA.
Defaults	Not configured	
Command Mode	ROUTER OSPF	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

## area range

Summarize routes matching an address/mask at an area border router (ABR).

#### Syntax area area-id range ip-address mask [not-advertise]

To disable route summarization, use the **no area** area-id range ip-address mask command.

Parameters		
Falameters	area-id	Specify the OSPF area in dotted decimal format (A.B.C.D.) or enter a number from zero (0) to 65535.
	ip-address	Specify an IP address in dotted decimal format.
	mask	Specify a mask for the destination prefix. Enter the full mask (for example, 255.255.255.0).
	not-advertise	(OPTIONAL) Enter the keyword <b>not-advertise</b> to set the status to DoNotAdvertise (that is, the Type 3 summary-LSA is suppressed and the component networks remain hidden from other areas.)
Defaults	No range is configu	ured.
	No range is config ROUTER OSPF	ured.
	0 0	ured. Introduced on MXL 10/40GbE Switch IO Module
Command Modes	ROUTER OSPF Version 8.3.16.1 Only the routes with	
command Modes Command History Usage	ROUTER OSPF Version 8.3.16.1 Only the routes with	Introduced on MXL 10/40GbE Switch IO Module thin an area are summarized, and that summary is advertised to other areas by the

## area stub

Configure a stub area, which is an area not connected to other areas.

Syntax	area area-id stub	[no-summary]
	To delete a stub are	ea, use the <b>no area</b> area-id stub command.
Parameters	area-id	Specify the stub area in dotted decimal format (A.B.C.D.) or enter a number from zero (0) to 65535.
	no-summary	(OPTIONAL) Enter the keyword <b>no-summary</b> to prevent the ABR from sending summary Link State Advertisements (LSAs) into the stub area.
Defaults	Disabled	
Command Modes	ROUTER OSPF	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information	Use this command	to configure all routers and access servers within a stub.

Related Commands	router ospf	Enters the ROUTER OSPF mode to configure an OSPF instance.
auto-cost	Specify how the 0	OSPF interface cost is calculated based on the reference bandwidth method.
Syntax	auto-cost [refe	rence-bandwidth ref-bw]
		efault bandwidth or to assign cost based on the interface type, use the <b>no auto-cost</b> dwidth] command.
Parameters	ref-bw	(OPTIONAL) Specify a reference bandwidth in megabits per second. Range: 1 to 4294967 Default: 100 megabits per second.
Defaults	100 megabits per	second.
Command Modes	ROUTER OSPF	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
clear ip osp	<b>Of</b> Clear all OSPF ro	outing tables.
Syntax	clear ip ospf pro	ocess-id [process]

Parameters	process-id	Enter the OSPF Process ID to clear a specific process.
		If no Process ID is entered, all OSPF processes are cleared.
	process	(OPTIONAL) Enter the keyword <b>process</b> to reset the OSPF process.
nd Modes	EXEC Privilege	
Command		

## clear ip ospf statistics

Clear the packet statistics in interfaces and neighbors.

#### Syntax clear ip ospf process-id statistics [interface name {neighbor router-id}]

Parameters		
Farameter 5	process-id	Enter the OSPF Process ID to clear statistics for a specific process.
		If no Process ID is entered, all OSPF processes are cleared.
	interface name	(OPTIONAL) Enter the keyword <b>interface</b> followed by one of the following interface keywords and slot/port or number information:
		• For Port Channel groups, enter the keyword <b>port-channel</b> followed by a number:
		• Range: 1-128
		<ul> <li>For a 10-Gigabit Ethernet interface, enter the keyword</li> <li>TenGigabitEthernet followed by the slot/port information.</li> </ul>
		• For a VLAN, enter the keyword <b>vlan</b> followed by a number from 1 to 4094.
		• For a 40-Gigabit Ethernet interface, enter the keyword <b>fortyGigE</b> followed by the slot/port information.
	neighbor router-id	(OPTIONAL) Enter the keyword <b>neighbor</b> followed by the neighbor's router-id in dotted decimal format (A.B.C.D.).
Defaults	none	
Command Modes	EXEC Privilege	
Command History	Version 8.3.16.1 Introdu	aced on MXL 10/40GbE Switch IO Module
Related Commands	show ip ospf statistics	Displays OSPF statistics.

## debug ip ospf

Display debug information on OSPF. Entering **debug ip ospf** enables OSPF debugging for the first OSPF process.

#### Syntax debug ip ospf *process-id* [event | packet | spf | database-timer rate-limit]

To cancel the debug command, enter **no debug ip ospf**.

Parameters		
i arameters	process-id	Enter the OSPF Process ID to debug a specific process.
		If no Process ID is entered, command applies only to the first OSPF process.
packet (OPTIONAL) Enter the keyword packet to deb		(OPTIONAL) Enter the keyword <b>event</b> to debug only OSPF event information.
		(OPTIONAL) Enter the keyword <b>packet</b> to debug only OSPF packet information.
		(OPTIONAL) Enter the keyword <b>spf</b> to display the Shortest Path First information.
	database-t imer rate-limit	(OPTIONAL) Enter the keyword <b>database-timer rate-limit</b> to display the LSA throttling timer information.

#### Command Modes EXEC Privilege

and ory	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

#### Table 21-1. debug ip ospf process-id packet Output Descriptions

Field	Description		
8:14	Displays the time stamp.		
OSPF	Displays the OSPF process ID: instance ID.		
v:	Displays the OSPF version. FTOS supports version 2 only.		
t:	Displays the type of packet sent:		
	• 1 - Hello packet		
	• 2 - database description		
	• 3 - link state request		
	• 4 - link state update		
	• 5 - link state acknowledgement		
1:	Displays the packet length.		
rid:	Displays the OSPF router ID.		
aid:	Displays the Autonomous System ID.		
chk:	Displays the OSPF checksum.		
aut:	States if OSPF authentication is configured. One of the following is listed:		
	• 0 - no authentication configured		
	• 1 - simple authentication configured using the ip ospf authentication-key command)		
	• 2 - MD5 authentication configured using the ip ospf message-digest-key command.		
auk:	If the ip ospf authentication-key command is configured, this field displays the key used.		
keyid:	If the ip ospf message-digest-key command is configured, this field displays the MD5 key		
to:	Displays the interface to which the packet is intended.		
dst:	Displays the destination IP address.		
netmask:	Displays the destination IP address mask.		
pri:	Displays the OSPF priority		

Field	Description		
N, MC, E, T	Displays information available in the Options field of the HELLO packet:		
	• $N + (N-bit is set)$		
	• N - (N-bit is not set)		
	• MC+ (bit used by MOSPF is set and router is able to forward IP multicast packets)		
	• MC- (bit used by MOSPF is not set and router cannot forward IP multicast packets)		
	• E + (router is able to accept AS External LSAs)		
	• E - (router cannot accept AS External LSAs)		
	• T + (router can support TOS)		
	• T - (router cannot support TOS)		
hi:	Displays the amount of time configured for the HELLO interval.		
di:	Displays the amount of time configured for the DEAD interval.		
dr:	Displays the IP address of the designated router.		
bdr:	Displays the IP address of the Border Area Router.		

Table 21-1.	debug ip ospf	process-id packet	<b>Output Descriptions</b>

## default-information originate

Configure the FTOS to generate a default external route into an OSPF routing domain.

#### Syntax default-information originate [always] [metric metric-value] [metric-type type-value] [route-map map-name]

To return to the default values, use the **no default-information originate** command.

Parameters		
Falalleters	always	(OPTIONAL) Enter the keyword <b>always</b> to specify that default route information must always be advertised.
	metric metric-value	(OPTIONAL) Enter the keyword metric followed by a number to configure a metric value for the route.
		Range: 1 to 16777214
	metric-type type-value	(OPTIONAL) Enter the keyword <b>metric-type</b> followed by an OSPF link state type of 1 or 2 for default routes. The values are:
		• 1 = Type 1 external route
		• 2 = Type 2 external route.
	route-map map-name	(OPTIONAL) Enter the keyword <b>route-map</b> followed by the name of an established route map.
Defaults	Disabled.	
Command Modes	ROUTER OSPF	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Related Commands	redistribute Redistrib	utes routes from other routing protocols into OSPF.

## default-metric

Change the metrics of redistributed routes to a value useful to OSPF. Use this command with the redistribute command.

Syntax	default-metric number		
	To return to the default values, use the <b>no default-metric</b> [number] command.		
Parameters	number	Enter a number as the metric.	
		Range: 1 to 16777214.	
Defaults	Disabled.		
Command Modes	ROUTER OSPF		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Related Commands	redistribute	Redistributes routes from other routing protocols into OSPF.	

## description

Add a description about the selected OSPF configuration.

Syntax	description description		
	To remove the OS	SPF description, use the <b>no description</b> command.	
Parameters	description	Enter a text string description to identify the OSPF configuration (80 characters maximum).	
Defaults	none		
Command Modes	ROUTER OSPF		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Related Commands	show ip ospf asbr	Displays the VLAN configuration.	

## distance

Define an administrative distance for particular routes to a specific IP address.

#### Syntax

**distance** weight [ip-address mask access-list-name]

To delete the settings, use the **no distance** weight [ip-address mask access-list-name] command.

Parameters		
T di di lictori 5	weight	Specify an administrative distance.
		Range: 1 to 255.
		Default: 110
	ip-address	(OPTIONAL) Enter a router ID in the dotted decimal format.
		If you enter a router ID, you must include the mask for that router address.
	mask	(OPTIONAL) Enter a mask in dotted decimal format or /n format.
	access-list-name	(OPTIONAL) Enter the name of an IP standard access list, up to 140 characters.
Defaults	110	
Command Modes	ROUTER OSPF	
Command		
History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

## distance ospf

Configure an OSPF distance metric for different types of routes.

#### Syntax distance ospf [external dist3] [inter-area dist2] [intra-area dist1]

To delete these settings, use the **no distance ospf** command.

Parameters	external dist3	(OPTIONAL) Enter the keyword <b>external</b> followed by a number to specify a distance for external type 5 and 7 routes.
		Range: 1 to 255
		Default: 110.
	inter-area dist2	(OPTIONAL) Enter the keyword <b>inter-area</b> followed by a number to specify a distance metric for routes between areas.
		Range: 1 to 255
		Default: 110.
	intra-area dist1	(OPTIONAL) Enter the keyword <b>intra-area</b> followed by a number to specify a distance metric for all routes within an area.
		Range: 1 to 255
		Default: 110.

**Defaults** external dist3 = 110; inter-area dist2 = 110; intra-area dist1 = 110.

#### Command Modes ROUTER OSPF

Command History

Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

Usage Information

To specify a distance for routes learned from other routing domains, use the redistribute command.

## distribute-list in

Apply a filter to incoming routing updates from OSPF to the routing table.

#### Syntax distribute-list prefix-list-name in [interface]

To delete a filter, use the **no distribute-list** prefix-list-name in [interface] command.

Parameters	prefix-list-name	Enter the name of a configured prefix list.
	interface	(OPTIONAL) Enter one of the following keywords and slot/port or number information:
		<ul> <li>For Port Channel groups, enter the keyword <b>port-channel</b> followed by a number:</li> </ul>
		Range: 1-128
		<ul> <li>For a 10-Gigabit Ethernet interface, enter the keyword</li> <li>TenGigabitEthernet followed by the slot/port information.</li> </ul>
		• For a VLAN, enter the keyword <b>vlan</b> followed by a number from 1 to 4094.
		• For a 40-Gigabit Ethernet interface, enter the keyword <b>fortyGigE</b> followed by the slot/port information.
Defaults	Not configured.	
Command Modes	ROUTER OSPF	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

## distribute-list out

Apply a filter to restrict certain routes destined for the local routing table after the SPF calculation.

#### Syntax distribute-list prefix-list-name out [connected | rip | static]

To remove a filter, use the **no distribute-list** *prefix-list-name* **out** [**connected** | **rip** | **static**] command.

Parameters		
i didiletti 5	prefix-list-name	Enter the name of a configured prefix list.
	connected	(OPTIONAL) Enter the keyword <b>connected</b> to specify that connected routes are distributed.
	rip	(OPTIONAL) Enter the keyword <b>rip</b> to specify that RIP routes are distributed.*
	static	(OPTIONAL) Enter the keyword <b>static</b> to specify that only manually configured routes are distributed.
Defaults	Not configured.	
Command Modes	ROUTER OSPF	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

Usage Information	The distribute-list out command applies to routes being redistributed by autonomous system boundary routers (ASBRs) into OSPF. It can be applied to external type 2 and external type 1 routes, but not to intra-area and inter-area routes.		
fast-conver	<b>TYPE</b> This command sets the minimum LSA origination and arrival times to zero (0), allowing more rapid route computation so that convergence takes less time.		
Syntax	fast-converge {number}		
	To cancel fast-convergence, use the <b>no fast converge</b> command.		
Parameters	number	Enter the convergence level desired. The higher this parameter is set, the faster OSPF converge takes place. Range: 1-4	
Defaults	none		
Command Modes	ROUTER OSPF		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Usage Information	The higher this parameter is set, the faster OSPF converge takes place. Note that the faster the convergence, the more frequent the route calculations and updates. This will impact CPU utilization and may impact adjacency stability in larger topologies.		
	Generally, convergence level 1 meets most convergence requirements. Higher convergence levels should only be selected following consultation with Dell Force10 Technical Support.		
flood-2328	Enable RFC-2328 floodi	ng behavior.	

Syntax flood-2328 To disable, use the **no flood-2328** command. Defaults Disabled **Command Modes** ROUTER OSPF Command Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module History Usage In OSPF, flooding is the most resource-consuming task. The flooding algorithm, described in Information RFC-2328, requires that OSPF flood LSAs (Link State Advertisements) on all interfaces, as governed by LSA's flooding scope (see Section 13 of the RFC). When multiple direct links connect two routers, the RFC-2328 flooding algorithm generates significant redundant information across all links.

By default, FTOS implements an enhanced flooding procedure that dynamically and intelligently determines when to optimize flooding. Whenever possible, the OSPF task attempts to reduce flooding overhead by selectively flooding on a subset of the interfaces between two routers.

When **flood-2328** is enabled, this command configures FTOS to flood LSAs on all interfaces.

### graceful-restart helper-reject

Specify the OSPF router to not act as a helper during graceful restart.

Syntax	graceful-restart help	er-reject ip-address
	To return to default valu	ue, enter no graceful-restart helper-reject.
Parameters	ip-address	Enter the OSPF router-id, in IP address format, of the restart router that <i>will not</i> act as a helper during graceful restart.
Defaults	Not Configured	
Command Modes	ROUTER OSPF	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

### ip ospf auth-change-wait-time

OSPF provides a grace period while OSPF changes its interface authentication type. During the grace period, OSPF sends out packets with new and old authentication scheme till the grace period expires.

Syntax ip ospf auth-change-wait-time seconds

To return to the default, use the **no ip ospf auth-change-wait-time** command.

Baramotora		
Parameters	seconds	Enter seconds
		Range: 0 to 300
Defaults	zero (0) seconds	
Command Modes	INTERFACE	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

### ip ospf authentication-key

Enable authentication and set an authentication key on OSPF traffic on an interface.

#### Syntax ip ospf authentication-key [encryption-type] key

To delete an authentication key, use the **no ip ospf authentication-key** command.

Parameters	encryption-type	(OPTIONAL) Enter 7 to encrypt the key.
	key	Enter an 8 character string. Strings longer than 8 characters are truncated.
Defaults	Not configured.	
Command Modes	INTERFACE	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

Usage All neighboring routers in the same network must use the same password to exchange OSPF information.

# ip ospf cost

Change the cost associated with the OSPF traffic on an interface.

Syntax	ip ospf cost <i>cost</i> To return to default value, use the <b>no ip ospf cost</b> command.	
Parameters	costEnter a number as the cost.Range: 1 to 65535.	
Defaults	The default cost is based on the reference bandwidth.	
Command Modes	INTERFACE	
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module	
Usage Information	If this command is not configured, cost is based on the auto-cost command.	
	When you configure OSPF over multiple vendors, use the ip ospf cost command to ensure that all routers use the same cost. Otherwise, OSPF routes improperly.	
Related Commands	auto-cost Controls how the OSPF interface cost is calculated.	

### ip ospf dead-interval

Set the time interval since the last hello-packet was received from a router. After the interval elapses, the neighboring routers declare the router dead.

Syntax	ip ospf dead-interval seconds		
	To return to the defaul	t values, use the <b>no ip ospf dead-interval</b> command.	
Parameters		ter the number of seconds for the interval. nge: 1 to 65535. Default: 40 seconds.	
Defaults	40 seconds		
Command Modes	INTERFACE		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Usage Information	By default, the dead in	nterval is four times the default hello-interval.	
Related Commands	ip ospf hello-interval	Sets the time interval between hello packets.	

# ip ospf hello-interval

Specify the time interval between the hello packets sent on the interface.

Syntax	ip ospf hello-interval seconds	
	To return to the de	efault value, use the <b>no ip ospf hello-interval</b> command.
Parameters	seconds	Enter a the number of second as the delay between hello packets. Range: 1 to 65535. Default: 10 seconds.
Defaults	10 seconds	
Command Modes	INTERFACE	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information	The time interval	between hello packets must be the same for routers in a network.
Related Commands	ip ospf dead-interv	Val         Sets the time interval before a router is declared dead.

## ip ospf message-digest-key

Enable OSPF MD5 authentication and send an OSPF message digest key on the interface. **Syntax** ip ospf message-digest-key keyid md5 key To delete a key, use the **no ip ospf message-digest-key** keyid command. **Parameters** kovid Ent 1 4h - 1---- ID

	keyid	Enter a number as the key ID.
		Range: 1 to 255.
	key	Enter a continuous character string as the password.
Defaults	No MD5 authentication is configured.	
Command Modes	INTERFACE	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

To change to a different key on the interface, enable the new key while the old key is still enabled. The FTOS will send two packets: the first packet authenticated with the old key, and the second packet authenticated with the new key. This process ensures that the neighbors learn the new key and communication is not disrupted by keeping the old key enabled.

After the reply is received and the new key is authenticated, you must delete the old key. Dell Force10 recommends keeping only one key per interface.

**Note:** The MD5 secret is stored as plain text in the configuration file with service password encryption.

### ip ospf mtu-ignore

Disable OSPF MTU mismatch detection upon receipt of database description (DBD) packets.

Syntax	ip ospf mtu-ignore
	To return to the default, use the <b>no ip ospf mtu-ignore</b> command.
Defaults	Enabled
Command Modes	INTERFACE
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

Usage Information

### ip ospf network

	Set the network type to	Si the interface.	
Syntax	ip ospf network {broadcast   point-to-point}		
	To return to the defaul	t, use the <b>no ip ospf network</b> command.	
Parameters	broadcast	Enter the keyword <b>broadcast</b> to designate the interface as part of a broadcast network.	
	point-to-point	Enter the keyword <b>point-to-point</b> to designate the interface as part of a point-to-point network.	
Defaults	Not configured.		
Command Modes	INTERFACE		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	

Set the network type for the interface

### ip ospf priority

Set the priority of the interface to determine the Designated Router for the OSPF network.

Syntax	ip ospf priority number	
	To return to the d	efault setting, use the <b>no ip ospf priority</b> command.
Parameters	number	Enter a number as the priority.
		Range: 0 to 255.
		The default is 1.
Defaults	1	
Command Modes	INTERFACE	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information	Setting a priority Designated Route	of 0 makes the router ineligible for election as a Designated Router or Backup er.

Use this command for interfaces connected to multi-access networks, not point-to-point networks.

### ip ospf retransmit-interval

Set the retransmission time between lost link state advertisements (LSAs) for adjacencies belonging to the interface.

#### Syntax ip ospf retransmit-interval seconds

To return to the default values, use the **no ip ospf retransmit-interval** command.

Parameters		
Farameter 5	seconds	Enter the number of seconds as the interval between retransmission.
		Range: 1 to 3600.
		Default: 5 seconds.
		This interval must be greater than the expected round-trip time for a packet to travel between two routers.
Defaults	5 seconds	
Command Modes	INTERFACE	
Command		
History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information	Set the time interv	al to a number large enough to prevent unnecessary retransmissions.

# ip ospf transmit-delay

Set the estimated time elapsed to send a link state update packet on the interface.

Syntax	ip ospf transmit-delay seconds		
	To return to the default value, use the <b>no ip ospf transmit-delay</b> command.		
Parameters	seconds	Enter the number of seconds as the transmission time. This value should be greater than the transmission and propagation delays for the interface.	
		Range: 1 to 3600.	
		Default: 1 second.	
Defaults	1 second		
Command Modes	INTERFACE		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	

# log-adjacency-changes

Set FTOS to send a Syslog message about changes in the OSPF adjacency state.

Syntax	log-adjacency-changes To disable the Syslog messages, use the <b>no log-adjacency-changes</b> command.
Defaults	Disabled.
Command Mode	ROUTER OSPF
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

### maximum-paths Enable the software to forward packets over multiple paths.

	Lindole the solution	te to for while publicles of or multiple public.
Syntax	maximum-paths	
	To disable packet	forwarding over multiple paths, use the <b>no maximum-paths</b> command.
Parameters		
	number	Specify the number of paths.
		Range: 1 to 64.
		Default: 4 paths.
Defaults	4	
Command Modes	ROUTER OSPF	
Command		
History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Command		Introduced on MXL 10/40GbE Switch IO Module

### mib-binding

Enable this OSPF process ID to manage the SNMP traps and process SNMP queries.

Syntax	mib-binding
	To mib-binding on this OSPF process, use the <b>no mib-binding</b> command.
Defaults	none
Command Modes	ROUTER OSPF
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Usage Information	This command is either enabled or disabled. If no OSPF process is identified as the MIB manager, the first OSPF process will be used.
	If an OSPF process has been selected, it must be disabled prior to assigning new process ID the MIB responsibility.

### network area

Define which interfaces run OSPF and the OSPF area for those interfaces.

Syntax	network ip-address mask area area-id		
	To disable an OSPF area, use the <b>no network</b> <i>ip-address mask</i> <b>area</b> <i>area-id</i> command.		
Parameters	ip-address	Specify a primary or secondary address in dotted decimal format. The primary address is required before adding the secondary address.	

	mask	Enter a network mask in /prefix format. (/x)
	area-id	Enter the OSPF area ID as either a decimal value or in a valid IP address.
		Decimal value range: 0 to 65535
		IP address format: dotted decimal format A.B.C.D.
		<b>Note:</b> If the area ID is smaller than 65535, it will be converted to a decimal value. For example, if you use an area ID of 0.0.0.1, it will be converted to 1.
Command Modes	ROUTER OSPF	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information	To enable OSPF on the primary IP addr	an interface, the network area command must include, in its range of addresses, ess of an interface.

IJ

**Note:** An interface can be attached only to a single OSPF area.

If you delete all the network area commands for Area 0, the show ip ospf command output will not list Area 0.

### passive-interface

Suppress both receiving and sending routing updates on an interface.

#### Syntax passive-interface {default | interface}

To enable both the receiving and sending routing, enter the **no passive-interface** *interface command*.

To return all OSPF interfaces (current and future) to active, enter the **no passive-interface default** command.

Deremetere		
Parameters	default	Enter the keyword <b>default</b> to make all OSPF interfaces (current and future) passive.
	interface	Enter the following keywords and slot/port or number information:
		• For Port Channel groups, enter the keyword <b>port-channel</b> followed by a number: Range: 1-128
		• For a 10-Gigabit Ethernet interface, enter the keyword <b>TenGigabitEthernet</b> followed by the slot/port information.
		• For a VLAN, enter the keyword <b>vlan</b> followed by a number from 1 to 4094.
		• For a 40-Gigabit Ethernet interface, enter the keyword <b>fortyGigE</b> followed by the slot/port information.
mmand Modes	ROUTER OSPF	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information	0 1	ive interface will neither send nor receive routing updates, the network on that be included in OSPF updates sent via other interfaces.

С

The default keyword sets all interfaces as passive. You can then configure individual interfaces, where adjacencies are desired, using the **no passive-interface** *interface* command. The no form of this command is inserted into the configuration for individual interfaces when the **no passive-interface** *interface* command is issued while **passive-interface default** is configured.

This command behavior has changed as follows:

#### passive-interface interface

- The previous **no passive-interface** interface is removed from the running configuration.
- The ABR status for the router is updated.
- Save **passive-interface** *interface* into the running configuration.

#### passive-interface default

- All present and future OSPF interface are marked as *passive*.
- Any adjacency are explicitly terminated from all OSPF interfaces.
- All previous **passive-interface** *interface* commands are removed from the running configuration.
- All previous **no passive-interface** *interface* commands are removed from the running configuration.

#### no passive-interface interface

- Remove the interface from the passive list.
- The ABR status for the router is updated.
- If **passive-interface default** is specified, then save **no passive-interface** into the running configuration.

#### No passive-interface default

- Clear everything and revert to the default behavior.
- All previously marked passive interfaces are removed.
- May update ABR status.

### redistribute

Redistribute information from another routing protocol throughout the OSPF process.

Syntax	redistribute {connected   rip     ospf   static} [metric metric-value   metric-type type-value]
	[route-map map-name] [tag tag-value]

To disable redistribution, use the **no redistribute** {connected | ospf | rip | static} command.

Parameters		
	connected	Enter the keyword <b>connected</b> to specify that information from active routes on interfaces is redistributed.
	rip	Enter the keyword <b>rip</b> to specify that RIP routing information is redistributed.
	ospf	Enter the keyword <b>ospf</b> to specify that RIP routing information is redistributed.
	static	Enter the keyword <b>static</b> to specify that information from static routes is redistributed.
	metric metric-value	(OPTIONAL) Enter the keyword <b>metric</b> followed by a number.
		Range: 0 (zero) to 16777214.

	metric-type	(OPTIONAL) Enter the keyword <b>metric-type</b> followed by one of the
	type-value	following:
		• $1 = OSPF$ External type 1
		• $2 = OSPF$ External type 2
	route-map <i>map-name</i>	(OPTIONAL) Enter the keyword <b>route-map</b> followed by the name of the route map.
	tag tag-value	(OPTIONAL) Enter the keyword <b>tag</b> followed by a number.
		Range: 0 to 4294967295
Defaults	Not configured.	
ommand Modes	ROUTER OSPF	
Command	Version 8.3.16.1 I	Introduced on MXL 10/40GbE Switch IO Module
History	version 8.5.10.1	Introduced on MAL 10/40G0E Switch to Module
Usage Information	To redistribute the default	t route (0.0.0/0), configure the default-information originate command.

### router-id

Use this command to configure a fixed router ID.

Syntax	router-id ip-address
	To remove the fixed router ID, use the <b>no router-id</b> <i>ip-address</i> command.
Parameters	<i>ip-address</i> Enter the router ID in the IP address format
Defaults	none
Command Modes	ROUTER OSPF
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Example	Figure 21-2. router-id Command Example
	<pre>FTOS(conf)#router ospf 100 FTOS(conf-router_ospf)#router-id 1.1.1.1 Changing router-id will bring down existing OSPF adjacency [y/n]:</pre>
	<pre>FTOS(conf-router_ospf)#show config ! router ospf 100 router-id 1.1.1.1 FTOS(conf-router_ospf)#no router-id Changing router-id will bring down existing OSPF adjacency [y/n]: FTOS#</pre>

Usage You can configure an arbitrary value in the IP address format for each router. However, each router ID must be unique. If this command is used on an OSPF router process, which is already active (that is, has neighbors), a prompt reminding you that changing router-id will bring down the existing OSPF adjacency. The new router ID is effective at the next reload

router ospf			
-	Enter the ROUTH	ER OSPF mode to configure an OSPF instance.	
Syntax	router ospf process-id		
	To clear an OSPF	Finstance, use the <b>no router ospf</b> process-id command.	
Parameters	process-id	Enter a number for the OSPF instance. Range: 1 to 65535.	
Defaults	Not configured.		
Command Modes	CONFIGURATIO	N	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Example	Figure 21-3. r	outer ospf Command Example	
	FTOS(conf)#ro FTOS(conf-rou		
Usage	You must have an	IP address assigned to an interface to enter the ROUTER OSPF mode and configure	

Usage You must have an IP address assigned to an interface to enter the ROUTER OSPF mode and config Information OSPF.

### show config

Display the non-default values in the current OSPF configuration.

Syntax	show config
Command Modes	ROUTER OSPF
Command History Example	Version 8.3.16.1       Introduced on MXL 10/40GbE Switch IO Module         Figure 21-4.       show config Command Example
Liample	FTOS(conf-router_ospf)#show config router ospf 1 FTOS(conf-router_ospf-1)#

### show ip ospf

Display information on the OSPF process configured on the switch.

Syntax	show ip ospf process-id		
Parameters	process-id	Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.	
Command Modes	EXEC EXEC Privilege		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Usage Information	If you delete all the Area 0.	e network area commands for Area 0, the show ip ospf command output will not list	
Example	FTOS#show ip or Routing Process Supports only a SPF schedule d Convergence Le	s ospf 10 with ID 1.1.1.1 Virtual router default-vrf single TOS (TOSO) routes elay 5 secs, Hold time between two SPFs 10 secs	

Min LSA hold time 5000 msec, Max LSA wait time 5000 msec Number of area in this router is 1, normal 1 stub 0 nssa 0

> Number of interface in this area is 1 SPF algorithm executed 205 times

Area BACKBONE (0)

FTOS#

Area ranges are

Line Beginning with	Description	
"Routing Process"	Displays the OSPF process ID and the IP address associated with the process ID.	
"Supports only "	Displays the number of Type of Service (TOS) rouse supported.	
"SPF schedule"	Displays the delay and hold time configured for this process ID.	
"Convergence Level"		
"Min LSA"	Displays the intervals set for LSA transmission and acceptance.	
"Number of"	Displays the number and type of areas configured for this process ID.	

Related Commands

show ip ospf database	Displays information about the OSPF routes configured.
show ip ospf interface	Displays the OSPF interfaces configured.
show ip ospf neighbor	Displays the OSPF neighbors configured.

### show ip ospf asbr

	Display all ASBR routers visible to OSPF.		
Syntax	show ip ospf process-id asbr		
Parameters	process-idEnter the OSPF Process ID to show a specific process.If no Process ID is entered, command applies only to the first OSPF process.		
Defaults	No default values or behavior		
Command Modes	EXEC		
	EXEC Privilege		
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module		
Usage Information	Use this command to isolate problems with external routes. In OSPF, external routes are calculated by adding the LSA cost to the cost of reaching the ASBR router. If an external route does not have the correct cost, use this command to determine if the path to the originating router is correct. The display output is not sorted in any order.		
	<b>Note:</b> ASBRs that are not in directly connected areas are also displayed.		
Example	Figure 21-6. show ip ospf process-id asbr Command Example		
	FTOS#show ip ospf 1 asbr		
	RouterID         Flags         Cost         Nexthop         Interface         Area           3.3.3.3         -/-/-/         2         10.0.0.2         TenGig 0/1         1           1.1.1.1         E/-/-/         0         0.0.0.0         -         0         FTOS#		

You can determine if an ASBR is in a directly connected area (or not) by the flags. For ASBRs in a directly connected area, E flags are set. In the figure above, router 1.1.1.1 is in a directly connected area since the Flag is E/-/-/. For remote ASBRs, the E flag is clear (-/-/-/)

# show ip ospf database

Display all LSA information. If OSPF is not enabled on the switch, no output is generated.

Syntax	show ip ospf process-id database [database-summary]		
Parameters	process-id	Enter the OSPF Process ID to show a specific process.	
		If no Process ID is entered, command applies only to the first OSPF process.	
	database-summary	(OPTIONAL) Enter the keywords <b>database-summary</b> to the display the number of LSA types in each area and the total number of LSAs.

#### Table 21-3. show ip ospf process-id database Command Description

Field	Description
Link ID	Identifies the router ID.
ADV Router	Identifies the advertising router's ID.
Age	Displays the link state age.
Seq#	Identifies the link state sequence number. This number enables you to identify old or duplicate link state advertisements.
Checksum	Displays the Fletcher checksum of an LSA's complete contents.
Link count	Displays the number of interfaces for that router.

#### Related Commands

show ip ospf database asbr-summary

Displays only ASBR summary LSA information.

# show ip ospf database asbr-summary

Display information about AS Boundary LSAs.

Syntax show ip ospf process-id database asbr-summary [link-state-id] [adv-router ip-address]

eters	
process-id	Enter the OSPF Process ID to show a specific process.
	If no Process ID is entered, command applies only to the first OSPF process.
link-state-id	(OPTIONAL) Specify LSA ID in dotted decimal format. The LSA ID value depends on the LSA type, and it can be one of the following:
	<ul> <li>the network's IP address for Type 3 LSAs or Type 5 LSAs</li> </ul>
	<ul> <li>the network s fr address for Type 3 LSAs or Type 5 LSAs</li> <li>the router's OSPF router ID for Type 1 LSAs or Type 4 LSAs</li> </ul>
	<ul> <li>the default destination (0.0.0.0) for Type 5 LSAs</li> </ul>

### Table 21-4. show ip ospf database asbr-summary Command Description

Item	Description
LS Age	Displays the LSA's age.
Options	Displays the optional capabilities available on router. The following options can be found in this item:
	• TOS-capability or No TOS-capability is displayed depending on whether the router can support Type of Service.
	• DC or No DC is displayed depending on whether the originating router can support OSPF over demand circuits.
	• E or No E is displayed on whether the originating router can accept AS External LSAs.
LS Type	Displays the LSA's type.

Item Description		
Link State ID	Displays the Link State ID.	
Advertising Router	Identifies the advertising router's ID.	
Checksum	Displays the Fletcher checksum of the an LSA's complete contents.	
Length	Displays the length in bytes of the LSA.	
Network Mask	Displays the network mask implemented on the area.	
TOS	Displays the Type of Service (TOS) options. Option 0 is the only option.	
Metric	Displays the LSA metric.

Table 21-5. show ip ospf process-id database external Command Description

Item	Description	
LS Age	Displays the LSA age.	
Options	Displays the optional capabilities available on router. The following options can be found in this item:	
	• TOS-capability or No TOS-capability is displayed depending on whether the router can support Type of Service.	
	• DC or No DC is displayed depending on whether the originating router can support OSPF over demand circuits.	
	• E or No E is displayed on whether the originating router can accept AS External LSAs.	
LS Type	Displays the LSA's type.	
Link State ID	Displays the Link State ID.	
Advertising Router	Identifies the router ID of the LSA's originating router.	
LS Seq Number	Identifies the link state sequence number. This number enables you to identify old or duplicate LSAs.	
Checksum	Displays the Fletcher checksum of an LSA's complete contents.	
Length	Displays the length in bytes of the LSA.	
Network Mask	Displays the network mask implemented on the area.	
Metrics Type	Displays the external type.	
TOS	Displays the TOS options. Option 0 is the only option.	

Item	Description
Metrics	Displays the LSA metric.
Forward Address	Identifies the address of the forwarding router. Data traffic is forwarded to this router. If the forwarding address is 0.0.0.0, data traffic is forwarded to the originating router.
External Route Tag	Displays the 32-bit field attached to each external route. This field is not used by the OSPF protocol, but can be used for external route management.
show ip ospf database	Displays OSPF database information.

Table 21-8. show ip ospf process-id database router Command Description

Item	Description	
LS Age	Displays the LSA age.	
Options	Displays the optional capabilities available on router. The following options can be found in this item:	
	• TOS-capability or No TOS-capability is displayed depending on whether the router can support Type of Service.	
	• DC or No DC is displayed depending on whether the originating router can support OSPF over demand circuits.	
	• E or No E is displayed on whether the originating router can accept AS External LSAs.	
LS Type	Displays the LSA type.	
Link State ID	Displays the Link State ID.	
Advertising Router	Identifies the router ID of the LSA's originating router.	

Item	Description	
LS Seq Number	Displays the link state sequence number. This number detects duplicate or old LSAs.	
Checksum	Displays the Fletcher checksum of an LSA's complete contents.	
Length	Displays the length in bytes of the LSA.	
Number of Links	Displays the number of active links to the type of router (Area Border Router AS Boundary Router) listed in the previous line.	
Link connected to:	Identifies the type of network to which the router is connected.	
(Link ID)	Identifies the link type and address.	
(Link Data)	Identifies the router interface address.	
Number of TOS Metric	Lists the number of TOS metrics.	
TOS 0 Metric	Lists the number of TOS 0 metrics.	

Table 21-8. show ip ospf process-id database router Command Description

Related Commands

show ip ospf database

Displays OSPF database information.

# show ip ospf database summary

Display the network summary (type 3) LSA routing information.

#### Syntax show ip ospf process-id database summary [link-state-id] [adv-router ip-address]

Parameters	process-id	Enter the OSPF Process ID to show a specific process.			
		If no Process ID is entered, command applies only to the first OSPF process.			
	link-state-id	(OPTIONAL) Specify LSA ID in dotted decimal format. The LSA ID value depends on the LSA type, and it can be one of the following:			
		• the network's IP address for Type 3 LSAs or Type 5 LSAs			
		• the router's OSPF router ID for Type 1 LSAs or Type 4 LSAs			
		• the default destination (0.0.0) for Type 5 LSAs			
	adv-router ip-address	(OPTIONAL) Enter the keywords <b>adv-router</b> ip-address to display only the LSA information about that router.			
Command Modes	EXEC

Table 21-10. show ip ospf process-id interface Command Description

Line beginning with	Description	
TenGigabitEthernet	This line identifies the interface type slot/port and the status of the OSPF protocol on that interface.	
Internet Address	This line displays the IP address, network mask and area assigned to this interface.	
Process ID	This line displays the OSPF Process ID, Router ID, Network type and cost metric for this interface.	
Transmit Delay	This line displays the interface's settings for Transmit Delay, State, and Priority. In the State setting, BDR is Backup Designated Router.	
Designated Router	This line displays the ID of the Designated Router and its interface address.	
Backup Designated	This line displays the ID of the Backup Designated Router and its interface address.	
Timer intervals	This line displays the interface's timer settings for Hello interval, Dead interval Transmit Delay (Wait), and Retransmit Interval.	
Hello due	This line displays the amount time till the next Hello packet is sent out this interface.	
Neighbor Count	This line displays the number of neighbors and adjacent neighbors. Listed below this line are the details about each adjacent neighbor.	

# show ip ospf neighbor Display the OSPF neighbors connected to the local router.

Parameters	process-id	Enter the OSPF Process ID to show a specific process.
		If no Process ID is entered, command applies only to the first OSPF process.
mmand Modes	EXEC Privilege	
Command	Version 8.3.16.1	Interduced on MVI 10/400EE Socials IO Medule
History	version 8.5.10.1	Introduced on MXL 10/40GbE Switch IO Module
History Example		show ip ospf process-id neighbor Command Example
	Figure 21-15.	

#### Table 21-11. show ip ospf process-id neighbor Command Description

Row Heading	Description	
Neighbor ID	Displays the neighbor router ID.	
Pri	Displays the priority assigned neighbor.	
State	Displays the OSPF state of the neighbor.	
Dead Time	Displays the expected time until FTOS declares the neighbor dead.	
Address	Displays the IP address of the neighbor.	
Interface	Displays the interface type slot/port information.	
Area	Displays the neighbor's area (process ID).	

### show ip ospf routes

Display routes as calculated by OSPF and stored in OSPF RIB.

Syntax	show ip ospf process-id routes			
Parameters	process-id	Enter the OSPF Process ID to show a specific process.	-	
	,	If no Process ID is entered, command applies only to the first OSPF process.	_	
Defaults	none			
Command Modes	EXEC			
	EXEC Privilege			

Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module				
Usage Information	This command is useful in isolating routing problems between OSPF and RTM. For example, if a route is missing from the RTM/FIB but is visible from the display output of this command, then likely the problem is with downloading the route to the RTM.				
	This command has the following limitations:				
	<ul><li>The display output is sorted by prefixes; intra-area ECMP routes are not displayed together.</li><li>For Type 2 external routes, type1 cost is not displayed.</li></ul>				
Example	Figure 21-16. show ip ospf process-id routes Command Example				
	FTOS#show ip ospf 100 route				

FTOS#show ip os	pf 100 r	route

FTOS#					

# show ip ospf statistics

Display OSPF statistics.

Syntax show ip ospf process-id statistics global | [interface name {neighbor router-id}]

Parameters					
Farameters	process-id	Enter the OSPF Process ID to show a specific process.			
		If no Process ID is entered, command applies only to the first OSPF process.			
	global	Enter the keyword <b>global</b> to display the packet counts received on all running OSPF interfaces and packet counts received and transmitted by all OSPF neighbors.			
	interface name	(OPTIONAL) Enter the keyword <b>interface</b> followed by one of the following interface keywords and slot/port or number information:			
		• For Port Channel groups, enter the keyword <b>port-channel</b> followed by a number:			
		Range: 1-128			
		<ul> <li>For a 10-Gigabit Ethernet interface, enter the keyword</li> <li>TenGigabitEthernet followed by the slot/port information.</li> </ul>			
		• For a VLAN, enter the keyword <b>vlan</b> followed by a number from 1 to 4094.			
		• For a 40-Gigabit Ethernet interface, enter the keyword <b>fortyGigE</b> followed by the slot/port information.			
	neighbor router-id	(OPTIONAL) Enter the keyword <b>neighbor</b> followed by the neighbor's router-id in dotted decimal format (A.B.C.D.).			
Defaults	none				
Command Modes	EXEC				

EXEC Privilege

Table 21-12.	show ip ospf statistics	process-id global Command Descriptions
--------------	-------------------------	----------------------------------------

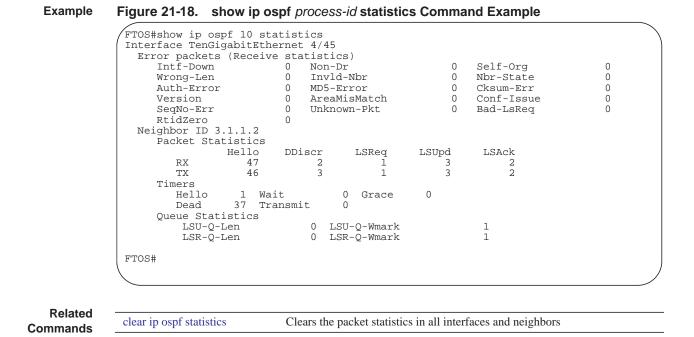

Row Heading	Description	
Total	Displays the total number of packets received/transmitted by the OSPF process	
Error	Displays the error count while receiving and transmitting packets by the OSPF process	
Hello	Number of OSPF Hello packets	
DDiscr	Number of database description packets	
LSReq	Number of link state request packets	
LSUpd	Number of link state update packets	
LSAck	Number of link state acknowledgement packets	
TxQ-Len	The transmission queue length	
RxQ-Len	The reception queue length	
Tx-Mark	The highest number mark in the transmission queue	
Rx-Mark	The highest number mark in the reception queue	
Hello-Q	The queue, for transmission or reception, for the hello packets	
LSR-Q	The queue, for transmission or reception, for the link state request packets.	
Other-Q	The queue, for transmission or reception, for the link state acknowledgement, database description, and update packets.	

Error Type	Description
Intf_Down	Received packets on an interface that is either down or OSPF is not enabled.
Non-Dr	Received packets with a destination address of ALL_DRS even though SELF is not a designated router
Self-Org	Receive the self originated packet
Wrong_Len	The received packet length is different to what was indicated in the OSPF header
Invld-Nbr	LSA, LSR, LSU, and DDB are received from a peer which is not a neighbor peer
Nbr-State	LSA, LSR, and LSU are received from a neighbor with stats less than the loading state
Auth-Error	Simple authentication error
MD5-Error	MD5 error
Cksum-Err	Checksum Error
Version	Version mismatch
AreaMismatch	Area mismatch
Conf-Issue	The received hello packet has a different hello or dead interval than the configuration
No-Buffer	Buffer allocation failure
Seq-no	A sequence no errors occurred during the database exchange process
Socket	Socket Read/Write operation error
Q-overflow	Packet(s) dropped due to queue overflow
Unknown-Pkt	Received packet is not an OSPF packet
RtidZero	Router-id received from the peer is 0.0.0.0.

 Table 21-13.
 show ip ospf statistics process-id global Error Descriptions

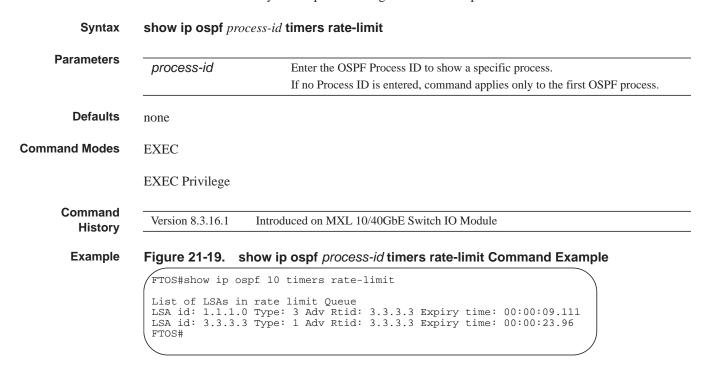

The **show ip ospf** *process-id* **statistics** command displays the error packet count received on each interface as:

- The hello-timer remaining value for each interface
- The wait-timer remaining value for each interface
- The grace-timer remaining value for each interface
- The packet count received and transmitted for each neighbor
- Dead timer remaining value for each neighbor
- Transmit timer remaining value for each neighbor
- The LSU Q length and its highest mark for each neighbor
- The LSR Q length and its highest mark for each neighbor

# show ip ospf timers rate-limit

Show the LSA currently in the queue waiting for timers to expire.

### show ip ospf topology

Display routers in directly connected areas. Syntax show ip ospf process-id topology **Parameters** process-id Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process. Defaults none **Command Modes** EXEC **EXEC** Privilege Command Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module History Usage This command can be used to isolate problems with inter-area and external routes. In OSPF inter-area Information and external routes are calculated by adding LSA cost to the cost of reaching the router. If an inter-area or external route is not of correct cost, the display can determine if the path to the originating router is

Example

#### Figure 21-20. show ip ospf process-id topology Command Example

FTOS#show ip ospf 1 topology

correct or not.

		Flags E/B/-/ 1 E/-/-/	20.	Nexthop 0.0.3 10.0.0.1	Interface TenGig 13/1 TenGig 7/1	Area 0 1	
--	--	-----------------------------	-----	------------------------------	----------------------------------------	-------------	--

### summary-address

Set the OSPF ASBR to advertise one external route.

#### Syntax summary-address ip-address mask [not-advertise] [tag tag-value]

To disable summary address, use the no summary-address ip-address mask command.

Parameters		
Farameters	ip-address	Specify the IP address in dotted decimal format of the address to be summarized
	mask	Specify the mask in dotted decimal format of the address to be summarized.
	not-advertise	(OPTIONAL) Enter the keyword <b>not-advertise</b> to suppress that match the network prefix/mask pair.
	tag tag-value	(OPTIONAL) Enter the keyword <b>tag</b> followed by a value to match on routes redistributed through a route map.
		Range: 0 to 4294967295
Defaults	Not configured.	
mmand Modes	ROUTER OSPF	

Command			
History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Usage Information	The command area range summarizes routes for the different areas.		
	With "not-advertise" parameter configured, this command can be used to filter out some external routes. For example, you want to redistribute static routes to OSPF, but you don't want OSPF to advertise routes with prefix 1.1.0.0. Then you can configure summary-address 1.1.0.0 255.255.0.0 not-advertise to filter out all the routes fall in range 1.1.0.0/16.		
Related Commands	area range	Summarizes routes within an area.	
timers spf			
·	Set the time interv (SPF) calculation	val between when the switch receives a topology change and starts a shortest path first	
Syntax	timers spf delay	y holdtime	
	To return to the d	efault, use the <b>no timers spf</b> command.	
Parameters	delay	Enter a number as the delay.	
		Range: 0 to 4294967295.	
		Default: 5 seconds	
	holdtime	Enter a number as the hold time.	
		Range: 0 to 4294967295.	
		Default: 10 seconds.	
Defaults	delay = 5 second	s; <i>holdtime</i> = 10 seconds	
Command Modes	ROUTER OSPF		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Usage Information		and <i>holdtime</i> parameters to a low number enables the switch to switch to an alternate requires more CPU usage.	

# timers throttle Isa all

Configure LSA transmit intervals.

### Syntax timers throttle Isa all {start-interval | hold-interval | max-interval}

To return to the default, use the **no timers throttle Isa** command.

Parameters				
F al allielei S	start-interval	Set the minimum interval between initial sending and resending the same LSA.		
		Range: 0-600,000 milliseconds		
	hold-interval	Set the next interval to send the same LSA. This is the time between sending the same LSA after the start-interval has been attempted.		
		Range: 1-600,000 milliseconds		
	max-interval	Set the maximum amount of time the system waits before sending the LSA.		
		Range: 1-600,000 milliseconds		
Defaults	start-interval : 0 ms hold-interval : 5000 max-interval: 5000	msec		
Command Modes	ROUTER OSPF			
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module		
Usage Information	In throttling, expone	the start-interval and then after hold-interval until the maximum interval is reached. ential backoff is used when sending same LSA, so that the interval is multiplied time is reached. For example, if the <b>start-interval</b> <i>5000</i> and <b>hold-interval</b> <i>1000</i>		

and max-interval 100,000, the LSA is sent at 5000 msec, then 1000 msec, then 2000 msec, them 4000

### timers throttle Isa arrival

Configure the LSA acceptance intervals.

until 100,000 msec is reached.

Syntax	timers throttle lsa arrival arrival-time To return to the default, use the <b>no timers throttle lsa</b> command.		
Parameters	arrival-time	Set the interval between receiving the same LSA repeatedly, to allow sufficient time for the system to accept the LSA.	
		Range: 0-600,000 milliseconds	
Defaults	1000 msec		
Command Modes	ROUTER OSPF		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	

# 22

## **Port Monitoring**

#### **Overview**

The port monitoring feature allows you to monitor network traffic by forwarding a copy of each incoming or outgoing packet from one port to another port.

#### Commands

- description
- monitor session
- show config
- show monitor session
- show running-config monitor session
- source (port monitoring)

#### **Important Points to Remember**

- Port monitoring is supported on physical ports only. Logical interfaces, such as Port Channels and virtual local are networks (VLANs), are not supported.
- The Dell Force10 operating software (FTOS) supports as many monitor sessions on a system as the number of port-pipes.
- The monitoring (destination, "MG") and monitored (source, "MD") ports must be on the same switch.
- A monitoring port can monitor any physical port in the chassis.
- Only one MG and one MD may be in a single port-pipe.
- A monitoring port can monitor more than one port.
- More than one monitored port can have the same destination monitoring port.
- FTOS supports multiple source ports to be monitored by a single destination port in one monitor session.
- One monitor session can have only one MG port.

Note: The monitoring port should not be a part of any other configuration.

## description

·	Enter a description of this monitoring session.			
Syntax	description { description }			
	To remove the desc	cription, use the no description { description } command.		
Parameters	description	Enter a description regarding this session(80 characters maximum).		
Defaults	none			
Command Modes	MONITOR SESSI	ON (conf-mon-sess-session-ID)		
Command History	Version 8.3.16.1	Introduced on M I/O Aggregator		
Related Commands	monitor session	Enables a monitoring session.		

## monitor session

Create a session for monitoring traffic with port monitoring.

Syntax	monitor session session-ID			
	To delete a session, use the no monitor session session-ID command.			
	To delete all monitor sessions, use the n	o monitor session all command.		
Parameters		ession identification number. ) to 65535		
Defaults	none			
Command Modes	CONFIGURATION

Usage Information	The monitoring command is saved in the running configuration at the Monitor Session mode level and can be restored after a chassis reload.

Related Commands	monitor session	Creates a session for monitoring.
	show monitor session	Displays a monitor session.

# source (port monitoring) Configure a port monitor source.

Parameters	interface	Enter the one of the following keywords and slot/port information:			
		• For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.			
		• For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE followed by the slot/port information.			
	destination	Enter the keyword <b>destination</b> to indicate the interface destination.			
	direction {rx   tx   both}	Enter the keyword <b>direction</b> followed by one of the packet directional indicators.			
		rx: to monitor receiving packets only			
		tx: to monitor transmitting packets only			
		both: to monitor both transmitting and receiving packets			
Defaults	none				
nmand Modes	MONITOR SESSION (conf-n	non-sess-session-ID)			
Command History	Version 8.3.16.1 Introduced on M I/O Aggregator

# 23

## **Private VLAN (PVLAN)**

## Commands

This chapter describes the following commands:

- ip local-proxy-arp
- private-vlan mode
- private-vlan mapping secondary-vlan
- show interfaces private-vlan
- show vlan private-vlan
- show vlan private-vlan mapping
- switchport mode private-vlan

For more information, also refer to the following commands. The command output is augmented in FTOS 7.8.1.0 to provide PVLAN data:

- show arp in Chapter 15, IPv4 Routing
- show vlan in Chapter 18, Layer 2

Private virtual local area networks (VLANs) extend the Dell Force10 operating software (FTOS) security suite by providing Layer 2 isolation between ports within the same private VLAN. A private VLAN partitions a traditional VLAN into subdomains identified by a *primary* and *secondary VLAN* pair.

The FTOS private VLAN implementation is based on RFC 3069.

#### **Private VLAN Concepts**

#### Primary VLAN:

The *primary VLAN* is the base VLAN and can have multiple secondary VLANs. There are two types of secondary VLAN — *community VLAN* and *isolated VLAN*:

- A primary VLAN can have any number of community VLANs and isolated VLANs.
- Private VLANs block all traffic to isolated ports except traffic from promiscuous ports. Traffic received from an isolated port is forwarded only to promiscuous ports or trunk ports.

#### **Community VLAN:**

A community VLAN is a secondary VLAN of the primary VLAN:

- Ports in a community VLAN can talk to each other. Also, all ports in a community VLAN can talk to all *promiscuous ports* in the primary VLAN and vice-versa.
- Devices on a community VLAN can communicate with each other via member ports, while devices in an isolated VLAN cannot.

#### Isolated VLAN:

An isolated VLAN is a secondary VLAN of the primary VLAN:

- Ports in an isolated VLAN cannot talk to each other. Servers would be mostly connected to isolated VLAN ports.
- Isolated ports can talk to promiscuous ports in the primary VLAN, and vice-versa.

#### Port types:

- **Community port:** A *community port* is, by definition, a port that belongs to a community VLAN and is allowed to communicate with other ports in the same community VLAN and with promiscuous ports.
- **Isolated port:** An *isolated port* is, by definition, a port that, in Layer 2, can only communicate with promiscuous ports that are in the same PVLAN.
- **Promiscuous port:** A *promiscuous port* is, by definition, a port that is allowed to communicate with any other port type.
- Trunk port: A trunk port, by definition, carries VLAN traffic across switches:
- A trunk port in a PVLAN is always tagged.
- Primary or secondary VLAN traffic is carried by the trunk port in tagged mode. The tag on the packet helps identify the VLAN to which the packet belongs.
- A trunk port can also belong to a regular VLAN (non-private VLAN).

#### ip local-proxy-arp

Enable/disable Layer 3 communication between secondary VLANs in a private VLAN.

Syntax [no] ip local-proxy-arp

To disable Layer 3 communication between secondary VLANs in a private VLAN, use the no ip local-proxy-arp command in INTERFACE VLAN mode for the primary VLAN.

To disable Layer 3 communication in a particular secondary VLAN, use the no ip local-proxy-arp command in INTERFACE VLAN mode for the selected secondary VLAN.

**Note:** Even after ip-local-proxy-arp is disabled (no ip-local-proxy-arp) in a secondary VLAN, Layer 3 communication may happen between some secondary VLAN hosts, until the ARP timeout happens on those secondary VLAN hosts.

**Defaults** Layer 3 communication is disabled between secondary VLANs in a private VLAN.

#### Command Modes INTERFACE VLAN

Command History

Related Commands

Version 8.3.16.1 Introdu	aced on MXL 10/40GbE Switch IO Module	
private-vlan mode	Sets the mode of the selected VLAN to community, isolated, or primary.	
private-vlan mapping secondary-vlan	Maps the secondary VLANs to the selected primary VLAN.	
show arp	Displays the ARP table.	
show interfaces private-vlan	Displays the type and status of the PVLAN interfaces.	
show vlan private-vlan	Displays PVLANs and/or interfaces that are part of a PVLAN.	
switchport mode private-vla	Sets PVLAN mode of the selected port.	

### private-vlan mode

Set PVLAN mode of the selected VLAN to community, isolated, or primary.

Syntax	[no] private-vlan mode {community   isolated   primary}		
	To remove the P primary} comma	VLAN configuration, use the no private-vlan mode {community   isolated   nd.	
Parameters	community	Enter community to set the VLAN as a community VLAN, as described above.	
	isolated	Enter isolated to configure the VLAN as an isolated VLAN, as described above.	
	primary	Enter primary to configure the VLAN as a primary VLAN, as described above.	
Defaults	none		
Command Modes	INTERFACE VI	AN	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Usage Information	The VLAN:		
	• Can be in on	ly one mode, either community, isolated, or primary.	
	<ul> <li>Mode can be set to community or isolated even before associating it to a primary VLAN. This secondary VLAN will continue to work normally as a normal VLAN even though it is not associated to a primary VLAN. (A syslog message indicates this.)</li> <li>Must not have a port in it when the VLAN mode is being set.</li> </ul>		

Only ports (and port channels) configured as promiscuous, host, or PVLAN trunk ports (as described above) can be added to the PVLAN. No other regular ports can be added to the PVLAN.

After using this command to configure a VLAN as a primary VLAN, use the private-vlan mapping secondary-vlan command to map secondary VLANs to this VLAN.

Related Commands	private-vlan mapping secondary-vlan	Sets the mode of the selected VLAN to primary and then associate secondary VLANs to it.		
	show interfaces private-vlan	Displays the type and status of PVLAN interfaces.		
show vlan private-vlan		Displays the PVLANs and/or interfaces that are part of a PVLAN.		
	show vlan private-vlan mapping	Displays the primary-secondary VLAN mapping.		
	switchport mode private-vlan	Sets the PVLAN mode of the selected port.		

## private-vlan mapping secondary-vlan

Map secondary VLANs to the selected primary VLAN.

Syntax	[no] private-vlan mapping secondary-vlan vlan-list				
	To remove specific secondary secondary-vlan vlan-list com	VLANs from the configuration, use the no private-vlan mapping nmand.			
Parameters		secondary VLANs to associate with the selected primary VLAN, as described can be in comma-delimited or hyphenated-range format, following the r range input.			
Defaults	none				
Command Modes	INTERFACE VLAN				
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module				
Usage Information	The list of secondary VLANs can be:				
	• Specified in comma-delimited or hyphenated-range format.				
	• Specified with this comm	hand even before they have been created.			
	• Amended by specifying t	he new secondary VLAN to be added to the list.			
Related Commands	private-vlan mode	Sets the mode of the selected VLAN to community, isolated, or primary.			
Commands	show interfaces private-vlan	Displays the type and status of PVLAN interfaces.			
	show vlan private-vlan	Displays the PVLANs and/or interfaces that are part of a PVLAN.			
	show vlan private-vlan mapping	Displays the primary-secondary VLAN mapping.			
	switchport mode private-vlan	Sets the PVLAN mode of the selected port.			

## show interfaces private-vlan

Display type and status of PVLAN interfaces.

Syntax	show interfaces private-vlan [interface interface]			
Parameters	interface interface	(OPTIONAL) Enter the kee interface for which to disp	eyword <b>interface</b> , followed by the ID of the specific lay PVLAN status.	
Defaults	none			
Command Modes	EXEC			
	EXEC Privilege			
Command History	Version 8.3.16.1 Int	roduced on MXL 10/40GbE Sv	witch IO Module	
Usage Information		ypes of display — a list of a of output are shown below.	ll PVLAN interfaces or for a specific interface.	
Examples	Figure 23-1. show i	nterfaces private-vlan C	ommand Example

#### Table 23-1. show interfaces Command Description

Field	Description
Interface	Displays type of interface and associated slot and port number
Vlan	Displays the VLAN ID of the designated interface
PVLAN-Type	Displays the type of VLAN in which the designated interface resides
Interface Type	Displays the PVLAN port type of the designated interface.
Status	States whether the interface is operationally up or down.

#### Related Commands

private-vlan mode	Sets the mode of the selected VLAN to community, isolated, or primary.
show vlan private-vlan	Displays the PVLANs and/or interfaces that are part of a PVLAN.

show vlan private-vlan mapping	Displays the primary-secondary VLAN mapping.
switchport mode private-vlan	Sets the PVLAN mode of the selected port.

## show vlan private-vlan

Display PVLANs and/or interfaces that are part of a PVLAN.

**Syntax** show vlan private-vlan [community | *interface* | isolated | primary | *primary\_vlan* | interface *interface*]

#### Parameters

Parameters		
	community	(OPTIONAL) Enter the keyword <b>community</b> to display VLANs configured as community VLANs, along with their interfaces.
	interface	(OPTIONAL) Enter the keyword <b>community</b> to display VLANs configured as community VLANs, along with their interfaces.
	isolated	(OPTIONAL) Enter the keyword <b>isolated</b> to display VLANs configured as isolated VLANs, along with their interfaces.
	primary	(OPTIONAL) Enter the keyword <b>primary</b> to display VLANs configured as primary VLANs, along with their interfaces.
	primary_vlan	(OPTIONAL) Enter a private VLAN ID or secondary VLAN ID to display interface details about the designated PVLAN.
	interface interface	(OPTIONAL) Enter the keyword <b>interface</b> and an interface ID to display the PVLAN configuration of the designated interface.
Defaults	none	
Command Modes	EXEC	
	EXEC Privilege	
Command History	Version 8.3.16.1 Intro	duced on MXL 10/40GbE Switch IO Module
Usage Information	entering an optional keywo	ommand output are shown below. The first type of output is the result of not ord. It displays a detailed list of all PVLANs and their member VLANs and of output show details about PVLAN subsets.
Examples	Figure 23-3. show vla	n private-vlan Command Example

show interfaces private-vlan	Displays the type and status of PVLAN interfaces.
show vlan private-vlan mapping	Displays the primary-secondary VLAN mapping.
switchport mode private-vlan	Sets PVLAN mode of the selected port.

## switchport mode private-vlan

Set PVLAN mode of the selected port.

**Syntax** [no] switchport mode private-vlan {host | promiscuous | trunk}

To remove the PVLAN mode from the selected port, use the no switchport mode private-vlan command.

Parameters		
	host	Enter <b>host</b> to configure the selected port or port channel as an isolated interface in a PVLAN, as described above.
	promiscuous	Enter <b>promiscuous</b> to configure the selected port or port channel as an promiscuous interface, as described above.
	trunk	Enter <b>trunk</b> to configure the selected port or port channel as a trunk port in a PVLAN, as described above.
Defaults	disabled

# 24

## Per-VLAN Spanning Tree Plus (PVST+)

## Overview

The FTOS implementation of PVST+ (Per-VLAN Spanning Tree plus) is based on the IEEE 802.1d standard Spanning Tree Protocol, but it creates a separate spanning tree for each VLAN configured.

#### Commands

The FTOS PVST+ commands are:

- disable
- description
- edge-port bpdufilter default
- protocol spanning-tree pvst
- show spanning-tree pvst
- spanning-tree pvst
- spanning-tree pvst err-disable
- tc-flush-standard
- vlan bridge-priority
- vlan forward-delay
- vlan hello-time
- vlan max-age

Note: For easier command line entry, the plus (+) sign is not used at the command line.

## disable

Disable PVST+ globally.

Syntax disable

To enable PVST+, enter no disable.

**Defaults** PVST+ is disabled

Command Modes CONFIGURATION (conf-pvst)

Command	
History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

#### extend system-id

Use Extend System ID to augment the Bridge ID with a VLAN ID so that PVST+ differentiate between BPDUs for each VLAN. If for some reason a VLAN receives a BPDU meant for another VLAN, PVST+ will then not detect a loop, and both ports can remain in forwarding state.

**Syntax** extend system-id Defaults Disabled **Command Modes** PROTOCOL PVST Command Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module History Example Figure 24-1. Related Commands

spanning-tree pvst

Configure PVST+ on an interface.

#### spanning-tree pvst

Configure a PVST+ interface with one of the following settings: edge port with optional Bridge Port Data Unit (BPDU) guard, BPDU filter, port disablement if an error condition occurs, port priority or cost for a VLAN range, or root guard.

Syntax spanning-tree pvst {edge-port [bpduguard [shutdown-on-violation] | bpdufilter] | err-disable | vlan vlan-range {cost number | priority value} | rootguard}

#### Parame

-		
Parameters	edge-port	Enter the keyword edge-port to configure the interface as a PVST+ edge port.
	bpduguard	(OPTIONAL) Enter the keyword <b>bpduguard</b> to disable the port when it receives a BPDU.
	shutdown-on-vi olation	(OPTIONAL) Enter the keyword shutdown-on-violation to hardware disable an interface when a BPDU is received and the port is disabled.
	bpdufilter	(OPTIONAL) Enter the keyword bpdufilter to stop sending and receiving BPDUs on port fast enabled ports.
	err-disable	Enter the keyword <b>err-disable</b> to enable the port to be put into error-disable state (EDS) if an error condition occurs.
	vlan <i>vlan-range</i>	Enter the keyword vlan followed by the VLAN number(s). Range: 1 to 4094
	cost number	Enter the keyword <b>cost</b> followed by the port cost value. Range: 1 to 200000
		Defaults: 10-Gigabit Ethernet interface = 2000
		40-Gigabit Ethernet interface = 1400
		Port Channel interface with one 10-Gigabit Ethernet = 2000
		Port Channel with two 10-Gigabit Ethernet = 1800
		Port Channel with two 40-Gigabit Ethernet = 600
	priority value	Enter the keyword <b>priority</b> followed the Port priority value in increments of 16. Range: 0 to 240. Default: 128
	rootguard	Enter the keyword rootguard to enable root guard on a PVST+ port or port-channel interface.
Defaults	Not Configured	
nd Modes	INTERFACE	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
History Usage Information	The BPDU guard of	ption prevents the port from participating in an active STP topology in case a port unintentionally, or is misconfigured, or is subject to a DOS attack. This opt

BPDU appears on a port unintentionally, or is misconfigured, or is subject to a DOS attack. This option places the port into an error disable state if a BPDU appears, and a message is logged so that the administrator can take corrective action. When BPDU guard and BPDU filter is enabled on the port, then BPDU filter takes the highest precedence.

**Command M** 

By default bpdu filtering on an interface is disabled.

**Note:** A port configured as an edge port, on a PVST switch, will immediately transition to the forwarding state. Only ports connected to end-hosts should be configured as an edge port. Consider an edge port similar to a port with a spanning-tree portfast enabled.

Example	Figure 24-8. spanning-tree pvst vlan Command Example
	<pre>FTOS(conf-if-te-1/1)#spanning-tree pvst vlan 3 cost 18000 FTOS(conf-if-te-1/1)#end FTOS(conf-if-te-1/1)#show config ! interface TenGigabitEthernet 1/1 no ip address switchport spanning-tree pvst vlan 3 cost 18000 no shutdown FTOS(conf-if-te-1/1)#end</pre>

spanning-tree pvst err-disable Place ports in an err-disabled state if they receive a PVST+ BPDU when they are members an untagged VLAN. Syntax spanning-tree pvst err-disable cause invalid-pvst-bpdu Defaults Enabled; ports are placed in err-disabled state if they receive a PVST+ BPDU when they are members of an untagged VLAN. **Command Modes INTERFACE** Command Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module History Usage Some non-Dell Force10 systems which have hybrid ports participating in PVST+ transmit two kinds of Information BPDUs: an 802.1D BPDU and an untagged PVST+ BPDU. Dell Force10 systems do not expect PVST+ BPDU on an untagged port. If this happens, FTOS places the port in error-disable state. This behavior might result in the network not converging. To prevent FTOS from executing this action, use the command no spanning-tree pvst err-disable cause invalid-pvst-bpdu. Related show spanning-tree pvst View the PVST+ configuration. Commands

## tc-flush-standard

Enable the MAC address flushing upon receiving every topology change notification.

Syntax	tc-flush-standard To disable, use the no tc-flush-standard command.
Defaults	Disabled
Command Modes	CONFIGURATION
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Usage Information	By default FTOS implements an optimized flush mechanism for PVST+. This helps in flushing the MAC addresses only when necessary (and less often) allowing for faster convergence during topology

By default FTOS implements an optimized flush mechanism for PVST+. This helps in flushing the MAC addresses only when necessary (and less often) allowing for faster convergence during topology changes. However, if a standards-based flush mechanism is needed, this *knob* command can be turned on to enable flushing MAC addresses upon receiving every topology change notification.

## vlan bridge-priority

Set the PVST+ bridge-priority for a VLAN or a set of VLANs.

Syntax	vlan <i><vlan-id></vlan-id></i> bridge-prio	ority <i>value</i>		
	To return to the default value, enter no vlan bridge-priority command.			
Parameters	vlan vlan-range	Enter the keyword vlan followed by the VLAN number(s). Range: 1 to 4094		
	bridge-priority value	Enter the keyword <b>bridge-priority</b> followed by the bridge priority value in increments of 4096.		
		Range: 0 to 61440 Default: 32768		
Defaults	32768			
Command Modes	CONFIGURATION (conf	-pvst)		
Command History	Version 8.3.16.1 Introd	luced on MXL 10/40GbE Switch IO Module		
Related Commands	vlan forward-delay	Change the time interval before FTOS transitions to the forwarding state		
	vlan hello-time vlan max-age	Change the time interval before PVST+ refreshes		
	show spanning-tree pvst	Display the PVST+ configuration		

## vlan forward-delay

Set the amount of time the interface waits in the Listening State and the Learning State before transitioning to the Forwarding State.

Syntax	vlan <i><vlan-id></vlan-id></i> forwa	rd-delay seconds
	To return to the defau	lt setting, enter no vlan forward-delay command.
Parameters	vlan <i>vlan-range</i>	Enter the keyword vlan followed by the VLAN number(s).
	vian vian-range	Range: 1 to 4094
	forward-delay seconds	Enter the keyword <b>forward-delay</b> followed by the time interval, in seconds, that FTOS waits before transitioning PVST+ to the forwarding state.
		Range: 4 to 30 seconds
		Default: 15 seconds
Defaults	15 seconds	
Command Modes	CONFIGURATION (	(conf-pvst)
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Related Commands	vlan bridge-priority	Set the bridge-priority value

	vlan max-age	Change the time interval before PVST+ refreshes
	show spanning-tree pv	st Display the PVST+ configuration

## vlan hello-time

Set the time interval between generation of PVST+ 7Bridge Protocol Data Units (BPDUs).

Syntax	vlan < <i>vlan-id</i> > hello-time	seconds
	To return to the default value	ue, enter no vlan hello-time command.
Parameters	vlan <i>vlan-range</i>	Enter the keyword vlan followed by the VLAN number(s).
		Range: 1 to 4094
	hello-time seconds	Enter the keyword <b>hello-time</b> followed by the time interval, in seconds, between transmission of BPDUs.
		Range: 1 to 10 seconds
		Default: 2 seconds
Defaults	2 seconds	
Command Modes	CONFIGURATION (conf-	·pvst)
Command History	Version 8.3.16.1 Introdu	uced on MXL 10/40GbE Switch IO Module

#### Relate Command

vlan bridge-priority	Set the bridge-priority value
vlan forward-delay	Change the time interval before FTOS transitions to the forwarding state
vlan max-age	Change the time interval before PVST+ refreshes
show spanning-tree pvst	Display the PVST+ configuration

## vlan max-age

Set the time interval for the PVST+ bridge to maintain configuration information before refreshing that information.

Syntax	vlan <i>vlan-range</i> max-age	seconds	
	e the no vlan max-age command.		
Parameters	vlan vlan-range	Enter the keyword vlan followed by the VLAN number(s). Range: 1 to 4094	
	max-age seconds	Enter the keyword <b>max-age</b> followed by the time interval, in seconds, that FTOS waits before refreshing configuration information.	
		Range: 6 to 40 seconds Default: 20 seconds	
Defaults	20 seconds		
Command Modes	CONFIGURATION (conf-pvst)

## **Quality of Service (QoS)**

#### **Overview**

The Dell Force10 operating software (FTOS) commands for quality of service (QoS) include traffic conditioning and congestion control. This chapter contains the following sections:

- Global Configuration Commands
- Policy-Based QoS Commands

## **Global Configuration Commands**

- qos-rate-adjust
- service-class dot1p-mapping

## qos-rate-adjust

By default, for rate policing and rate shaping, FTOS does not include the Preamble, SFD, or the IFG fields. These fields are overhead; only the fields from MAC Destination Address to the CRC are used for forwarding and are included in these rate metering calculations. You can optionally include overhead fields in rate metering calculations by enabling QoS Rate Adjustment.

Parameters	overhead-bytes	Include a specified number of bytes of packet overhead to include in rate policing and rate shaping calculations.
		Range: 1-31
Defaults	QoS rate adjustment i running-configuratior	is disabled by default, and no qos-rate-adjust is listed in the n.

## service-class dot1p-mapping

	This command maps an 802.1p priority to an internal traffic class.					
Syntax	service-class dot1p-mapping user-priority trafficclass					
	The user-priority value can range from 0-7 and traffic class can range from 0-6.					
	The no form of this command is not supported.					
Command Modes	CONFIGURATION					
Command						
History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module					

## **Per-Port QoS Commands**

Per-port QoS ("port-based QoS") allows users to defined QoS configuration on a per-physical-port basis. The commands include:

- dot1p-priority
- rate police
- rate shape
- service-class dynamic dot1p
- strict-priority unicast

## dot1p-priority

Assign a value to the IEEE 802.1p bits on the traffic received by this interface.

Syntax dot1p-priority priority-value

To delete the IEEE 802.1p configuration on the interface, use the no dot1p-priority command.

Parameters	priority-value	Enter a v	alue from 0 to 7.
		dot1p	Queue Number
		0	0
		1	0
		2	0
		3	1
		4	2
		5	3
		6	3
		7	3

Defaults none

Command Modes INTERFACE

Command		
History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
motory		

Usage Information The dot1p-priority command changes the priority of incoming traffic on the interface. The system places traffic marked with a priority in the correct queue and processes that traffic according to its queue.

When you set the priority for a Port Channel, the physical interfaces assigned to the Port Channel are configured with the same value. You cannot assign dot1p-priority command to individual interfaces in a Port Channel.

#### rate police

Police the incoming traffic rate on the selected interface.

Syntax rate police [kbps] committed-rate [burst-KB] [peak [kbps] peak-rate [burst-KB]] [vlan vlan-id]

Parameters

kbps	Enter this keyword to specify the rate police in Kilobits per second (Kbps). On MXL Switch make the following value a multiple of 64. The default granularity is
	MALE Switch make the following value a multiple of 64. The default granularity r Megabits per second (Mbps).
	Range: 0 to 40000000 (Kbps)
committed-rate	Enter a number as the bandwidth in Mbps.
	Range: 0 to 10000
burst-KB	(OPTIONAL) Enter a number as the burst size in KB.
	Range: 16 to 200000
	Default: 50
peak peak-rate	(OPTIONAL) Enter the keyword <b>peak</b> followed by a number to specify the peak rate in Mbps.
	Range: 0 to 10000
vlan <i>vlan-id</i>	(OPTIONAL) Enter the keyword vlan followed by a VLAN ID to police traffic to
	those specific VLANs. Range: 1 to 4094

**Defaults** Granularity for *commit ed-rate* and *peak-rate* is Mbps unless the kbps option is used.

#### Command Mode INTERFACE

U

Command History

Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

Usage Information

**Note:** Per Port rate police is supported for Layer 2 tagged and untagged switched traffic and for Layer 3 traffic. Per VLAN rate police is supported on only tagged ports with Layer 2 switched traffic.

On *one* interface, you can configure the rate police command for a VLAN or you can configure the rate police command for an interface. For each physical interface, you can configure three rate police commands specifying different VLANS.

After configuring VLANs in the rate police command, if this error message appears:

%Error: Specified VLANs overlap with existing config.

Related Commands

### rate shape

Shape the traffic output on the selected interface.

Syntax rate shape [kbps] rate [burst-KB]

rate-police

Parameters		
i arameters	kbps	Enter this keyword to specify the rate shape in Kilobits per second (Kbps). On
		MXL Switch. make the following value a multiple of 64. The default granularity
		is Megabits per second (Mbps).
		Range: 0-40000000 (Kbps)
	rate	Enter the outgoing rate in multiples of 10 Mbps.
		Range: 10 to 10000
	burst-KB	(OPTIONAL) Enter a number as the burst size in KB.
		Range: 0 to 10000
		Default: 50
Defaults	Granularity for <i>rat</i>	e is Mbps unless the kbps option is used.
Command Modes	INTERFACE	
Command	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
History		
Related		
Commands	rate-shape	Shapes the traffic output as part of the designated policy.

### service-class dynamic dot1p

Honor all 802.1p markings on incoming switched traffic on an interface (from INTERFACE mode) or on all interfaces (from CONFIGURATION mode). A CONFIGURATION mode entry supersedes INTERFACE mode entries.

Syntax service-class dynamic dot1p

To return to the default setting, use the no service-class dynamic dot1p command.

**Defaults** All dot1p traffic is mapped to Queue 0 unless you enable the service-class dynamic dot1p command. Then the default mapping is as follows:

#### Table 25-1. Default dot1p to Queue Mapping

dot1p	Queue ID	
0	0	
1	0	
2	0	

dot1p	Queue ID	
3	1	
4	2	
5	3	
6	3	
7	3	

#### Table 25-1. Default dot1p to Queue Mapping (continued)

#### Command Modes INTERFACE

CONFIGURATION

Version 8.3.16.1

Command History

Usage Information Enter this command to honor all incoming 802.1p markings, on incoming switched traffic, on the interface. By default, this facility is not enabled (that is, the 802.1p markings on incoming traffic are not honored).

Introduced on MXL 10/40GbE Switch IO Module

This command can be applied on both physical interfaces and port channels. When you set the service-class dynamic for a port channel, the physical interfaces assigned to the port channel are automatically configured; you cannot assign the service-class dynamic command to individual interfaces in a port channel.

On the MXL Switch, all traffic is by default mapped to the same queue, Queue 0. If you honor dot1p on ingress, then you can create service classes based the queueing strategy using the command service-class dynamic dot1p from INTERFACE mode. You may apply this queuing strategy to all interfaces by entering this command from CONFIGURATION mode.

- All dot1p traffic is mapped to Queue 0 unless service-class dynamic dot1p is enabled on an interface or globally.
- Layer 2 or Layer 3 service policies supercede dot1p service classes.

#### service-class bandwidth-percentage

Specify a minimum bandwidth for queues

Syntax	service-class bandwidt number	bandwidth-percentage queue0 number queue1 number queue2 number queue3	
Parameters	number	Enter the bandwidth-weight. The value must be a power of 2.	
		Range 1-100.	
Defaults	none		
Command Modes	CONFIGURATION		

	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
	bandwidth-percent	um bandwidth to different queues globally using the command service-class age from CONFIGURATION mode. The DCB ETS supersedes the global and andwidth configurations.
When you enable ETS, the egress QoS features in the output QoS policy-map (such as service-class bandwidth-percentage and bandwidth-percentage), the default bandwidth allocation ratio for egress queues are superseded by ETS configurations. This is to provide compatibility with DCBX. Hence, it is recommended to have ETS disabled when you wish to apply these features exclusively. Once ETS is disabled on an interface, configured parameters will be applied.		

## strict-priority unicast

Configure a unicast queue as a strict-priority (SP) queue.

bandwidth configuration on strict priority scheduler queues.

Parameters	unicast number	Enter the keyword <b>unicast</b> followed by the queue number.
		Range: 1 to 3
Defaults	none	
Command Modes	CONFIGURATION	
Command History	Version 8.3.16.1 In	troduced on MXL 10/40GbE Switch IO Module
Usage Information	treated as strict-priority serviced. For example,	s configured as strict-priority, that particular queue, on the entire chassis, is y queue. Traffic for a strict priority is scheduled before any other queues are if you send 100% line rate traffic over the SP queue, it will <i>starve</i> all other which this traffic is flowing. To assign the strict priority schedule type to egress

When you enable ETS, egress QoS features in the output QoS policy-map (such as strict priority unicast <0-3> and scheduler strict), default scheduler for egress queues are superseded by ETS configurations. This is to provide compatibility with DCBX. Hence, it is recommended to have the ETS disabled when you wish to apply these features exclusively. Once ETS disabled on an interface, configured parameters will be applied.

queues, use the scheduler strict command in QOS-POLICY-OUT mode. FTOS does not support

### **Policy-Based QoS Commands**

Policy-based traffic classification is handled with class maps. These maps classify unicast traffic into one of four classes in the MXL Switch. FTOS enables you to match multiple class maps and specify multiple match criteria. Policy-based QoS is not supported on logical interfaces, such as port-channels, VLANS, or loopbacks. The commands are:

- bandwidth-percentage
- class-map
- clear qos statistics
- description
- match ip access-group
- match ip dscp
- match ip precedence
- match mac access-group
- match mac dot1p
- match mac vlan
- policy-aggregate
- policy-map-input
- policy-map-output
- qos-policy-input
- qos-policy-output
- rate-police
- rate-shape
- service-policy input
- service-policy output
- service-queue
- set
- show qos class-map
- show qos policy-map
- show qos policy-map-input
- show qos policy-map-output
- show qos qos-policy-input
- show qos qos-policy-output
- show qos statistics
- show qos wred-profile
- test cam-usage
- trust
- wred
- wred-profile

## bandwidth-percentage

Assign a percentage of weight to class/queue.

#### Syntax bandwidth-percentage percentage

To remove the bandwidth percentage, use the no bandwidth-percentage command.

Parameters			
i arameters	percentage	Enter the percentage assignment of weight to class/queue.	
		Range: 1 to 100% (granularity 1%)	
Defaults	none		
Command Modes	CONFIGURATION	(conf-qos-policy-out)	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Usage Information	The unit of bandwidth percentage is 1%. A bandwidth percentage of 0 is allowed and will disable the scheduling of that class. If the sum of the bandwidth percentages given to all four classes exceeds 100%, the bandwidth percentage will automatically scale down to 100%.		
Related Commands	qos-policy-output	Creates a QoS output policy.	

### class-map

Create/access a class map. Class maps differentiate traffic so that you can apply separate quality of service policies to each class.

Syntax class-map {match-all | match-any} class-map-name [layer2]

Parameters		
	match-all	Determines how packets are evaluated when multiple match criteria exist. Enter the keyword <b>match-all</b> to determine that the packets must meet all the match criteria in order to be considered a member of the class.
	match-any	Determines how packets are evaluated when multiple match criteria exist. Enter the keyword <b>match-any</b> to determine that the packets must meet at least one of the match criteria in order to be considered a member of the class.
	class-map-name	Enter a name of the class for the class map in a character format (32 character maximum).
	layer2	Enter the keyword <b>layer2</b> to specify a Layer 2 Class Map. Default: Layer 3
Defaults	Layer 3	
Command Modes	CONFIGURATION	
Command History	Version 8.3.16.1 Introd	luced on MXL 10/40GbE Switch IO Module

# Usage Packets arriving at the input interface are checked against the match criteria, configured using this command, to determine if the packet belongs to that class. This command accesses the CLASS-MAP mode, where the configuration commands include match ip and match mac options.

Related Commands	ip access-list extended	Configures an extended IP ACL.
eminando	ip access-list standard	Configures a standard IP ACL.
	match ip access-group	Configures the match criteria based on the access control list (ACL)
	match ip precedence	Identifies IP precedence values as match criteria
	match ip dscp	Configures the match criteria based on the DSCP value
	match mac access-group	Configures a match criterion for a class map, based on the contents of the designated MAC ACL.
	match mac dot1p	Configures a match criterion for a class map, based on a dot1p value.
	match mac vlan	Configures a match criterion for a class map based on VLAN ID.
	service-queue	Assigns a class map and QoS policy to different queues.
	show qos class-map	Views the current class map information.

#### clear qos statistics

Clears matched packets, matched bytes, and dropped packets.

Parameters	interface-name	Enter one of the following keywords:
		<ul> <li>For a 40-Gigabit Ethernet interface, enter the keyword FortyGigabitEthernet followed by the slot/port information.</li> </ul>
		• For a 10-Gigabit Ethernet interface, enter the keyword <b>TenGigabitEthernet</b> followed by the slot/port information.
Defaults	none	
ommand Modes	EXEC	
	EXEC Privilege	
Command History	Version 8.3.16.1 Int	roduced on MXL 10/40GbE Switch IO Module
Usage Information	These statistics can be a	nmand, statistical information stored regarding QoS is cleared and reset to 0. accessed using the show qos statistics command in EXEC mode. When the he QoS classification criteria flows, the corresponding counters are
Related Commands	show qos statistics	Displays the qos statistics.

match ip a	CCESS-GIOUD Configure match criteria f	or a class map, based on the access control list (ACL).	
Syntax	match ip access-group access-group-name [set-ip-dscp value]		
	To remove ACL match criteria from a class map, use the no match ip access-group access-group-name [set-ip-dscp value] command.		
Parameters	access-group-name	Enter the ACL name whose contents are used as the match criteria in determining if packets belong to the class specified by <b>class-map</b> .	
	set-ip-dscp value	(OPTIONAL) Enter the keyword <b>set-ip-dscp</b> followed by the IP DSCP value. The matched traffic will be marked with the DSCP value. Range: 0 to 63	
Defaults	none		
Command Modes	CLASS-MAP CONFIGU	RATION (config-class-map)	
Command History	Version 8.3.16.1 Introd	luced on MXL 10/40GbE Switch IO Module	
Usage Information	identified, you can config	map command in order to access this command. After the class map is ure the match criteria. For class-map match-any, a maximum of five ACL . For class-map match-all, only one ACL match criteria is allowed.	
Related Commands	class-map	Identifies the class map.	

## description

·	Add a description to the selected policy map or QOS policy.		
Syntax	description { description }		
	To remove the description, use the no description { description} command.		
Parameters	<i>description</i> Enter a description to identify the policies (80 characters maximum).		
Defaults	none		
Command Modes	CONFIGURATION (policy-map-input and policy-map-output; conf-qos-policy-in and conf-qos-policy-out; wred)		
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module		
Related Commands	policy-map-input Creates an input policy map.		
	policy-map-output Creates an output policy map.		
	gos-policy-input	Creates an input QOS-policy on the router.	

qos-policy-output	Creates an output QOS-policy on the router.
wred-profile	Creates a WRED profile.

#### match ip dscp

Use a differentiated services code point (DSCP) value as a match criteria.

Syntax	match ip dscp dscp-list [set-ip-dscp value]		
	To remove a DSCP val set-ip-dscp value] con	ue as a match criteria, use the no match ip dscp dscp-list [[multicast] nmand.	
Parameters	dscp-list	Enter the IP DSCP value(s) that is to be the match criteria. Separate values by commas — no spaces (1,2,3) or indicate a list of values separated by a hyphen (1-3). Range: 0 to 63	
	set-ip-dscp value	(OPTIONAL) Enter the keyword <b>set-ip-dscp</b> followed by the IP DSCP value. The matched traffic will be marked with the DSCP value.	
		Range: 0 to 63	
Defaults	none		
Command Modes	CLASS-MAP CONFIG	GURATION (config-class-map)	
Command History	Version 8.3.16.1 In	troduced on MXL 10/40GbE Switch IO Module	
Usage Information		ss-map command in order to access this command. After the class map is figure the match criteria.	
	The match ip dscp and	I match ip precedence commands are mutually exclusive.	
	-	tes can be matched in one match statement. For example, to indicate IP DCSP, 7, enter either the command match ip dscp 0,1,2,3,4,5,6,7 or match ip dscp	
		ne of the IP DSCP values must be a successful match criterion, not all of the SCP values need to match.	
Related Commands	class-map	Identifies the class map.	

#### match ip precedence

Use IP precedence values as a match criteria.

Syntax

tax match ip precedence ip-precedence-list [set-ip-dscp value]

To remove IP precedence as a match criteria, use the no match ip precedence ip-precedence-list [set-ip-dscp value] command.

Parameters		
i ulumotoro	ip-precedence-list	Enter the IP precedence value(s) as the match criteria. Separate values by commas — no spaces $(1,2,3)$ or indicate a list of values separated by a
		hyphen (1-3).
		Range: 0 to 7
	set-ip-dscp value	(OPTIONAL) Enter the keyword <b>set-ip-dscp</b> followed by the IP DSCP value. The matched traffic will be marked with the DSCP value.
		Range: 0 to 63
Defaults	none	
Command Modes	CLASS-MAP CONFIGU	RATION (conf-class-map)
Command History	Version 8.3.16.1 Introd	duced on MXL 10/40GbE Switch IO Module
Usage Information	You must enter the class- identified, you can config	map command in order to access this command. After the class map is ure the match criteria.
	The match ip precedence	e command and the match ip dscp command are mutually exclusive.
	1 0 1	lues can be matched in one match statement. For example, to indicate the IP enter either the command match ip precedence 0-3 or match ip
		of the IP precedence values must be a successful match criterion, not all of precedence values need to match.
Related Commands	class-map	Identifies the class map.

#### match mac access-group

Configure a match criterion for a class map, based on the contents of the designated MAC ACL.

Syntax	match mac access-group { mac-acl-name}		
Parameters	mac-acl-name	Enter a MAC ACL name. Its contents will be used as the match criteria in the class map.	
Defaults	none		
Command Modes	CLASS-MAP		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Usage Information		e class-map command in order to access this command. After the class map is a configure the match criteria.	
Related Commands	class-map	Identifies the class map.	

#### match mac dot1p

Syntax	match mac dot1p { <i>dot1p-list</i> }	
Parameters	dot1p-list	Enter a dot1p value. Range: 0 to 7
Defaults	none	
mmand Modes	CLASS-MAP	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information	You must enter the class-map command in order to access this command. After the class map is identified, you can configure the match criteria.	
Related Commands	class-map	Identifies the class map.

Configure a match criterion for a class map, based on a dot1p value

#### match mac vlan

Configure a match criterion for a class map based on VLAN ID.

Syntax	match mac vlan number	
Parameters	number	Enter the VLAN ID. Range: 1 to 4094
Defeation		Kalige. 1 10 4094
Defaults	none	
Command Modes	CLASS-MAP	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information	You must first ente only one VLAN II	er the class-map command in order to access this command. You can match against <i>D</i> .
Related Commands	class-map	Creates/accesses a class map.

#### policy-aggregate

Allow an aggregate method of configuring per-port QoS via policy maps. An aggregate QoS policy is part of the policy map (input/output) applied on an interface.

**Syntax** policy-aggregate qos-policy-name

To remove a policy aggregate configuration, use the no policy-aggregate qos-policy-name command.

Parameters	
r di dilletei S	<i>qos-policy-name</i> Enter the name of the policy map in character format (32 characters maximum)
Defaults	none
Command Modes	CONFIGURATION (policy-map-input and policy-map-output)
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Usage Information	Aggregate input/output QoS policy applies to all the port ingoing/outgoing traffic. Aggregate input/ output QoS policy can co-exist with per queue input/output QoS policies.
	<ol> <li>If only aggregate input QoS policy exists, input traffic conditioning configurations (rate-police) will apply. Any marking configurations in aggregate input QoS policy will be ignored.</li> </ol>
	2. If aggregate input QoS policy and per class input QoS policy co-exist, then aggregate input QoS policy will preempt per class input QoS policy on input traffic conditioning (rate-police). In other words, if rate police configuration exists in aggregate QoS policy, the configurations in per class QoS are ignored. Marking configurations in per class input QoS policy still apply to each queue.
Related Commands	policy-map-input Creates an input policy map
o o minando	policy-map-output Creates an output policy map

## policy-map-input

Create an input policy map.

Syntax policy-map-input policy-map-name [layer2]

To remove an input policy map, use the no policy-map-input policy-map-name [layer2] command.

Parameters	policy-map-name	Enter the name for the policy map in character format (32 characters maximum).
	layer2	(OPTIONAL) Enter the keyword layer2 to specify a Layer 2 Class Map. Default: Layer 3
Defaults	Layer 3	
Command Modes	CONFIGURATION	
Command History	Version 8.3.16.1 In	troduced on MXL 10/40GbE Switch IO Module
Usage Information	1 1 4 1	ed to classify incoming traffic to different flows using class-map, QoS policy, or g packets DSCP. This command enables policy-map-input configuration mode
Related Commands	service-queue	Assigns a class map and QoS policy to different queues.
ee.iiiidada	policy-aggregate	Allows an aggregate method of configuring per-port QoS via policy maps.
	service-policy input	Applies an input policy map to the selected interface.

#### policy-map-output

	Create an output policy	y map.
Syntax	policy-map-output pol	licy-map-name
	To remove a policy ma	p, use the no policy-map-output policy-map-name command.
Parameters	policy-map-name	Enter the name for the policy map in character format (16 characters maximum).
Defaults	none	
Command Modes	CONFIGURATION	
Command History	Version 8.3.16.1 In	troduced on MXL 10/40GbE Switch IO Module
Usage Information		sed to assign traffic to different flows using QoS policy. This command enables configuration mode (conf-policy-map-out).
Related Commands	service-queue	Assigns a class map and QoS policy to different queues.
	policy-aggregate	Allows an aggregate method of configuring per-port QoS via policy maps.
	service-policy output	Applies an output policy map to the selected interface.

#### qos-policy-input

Create a QoS input policy on the router.

**Syntax** 

qos-policy-input qos-policy-name [layer2]

To remove an existing input QoS policy from the router, use the no qos-policy-input qos-policy-name [layer2] command.

Parameters		
Farameters	qos-policy-name	Enter your input QoS policy name in character format (32 character maximum).
	layer2	(OPTIONAL) Enter the keyword layer2 to specify a Layer 2 Class Map.
		Default: Layer 3
Defaults	Layer 3	
Command Modes	CONFIGURATION	
Command History	Version 8.3.16.1 Intro	duced on MXL 10/40GbE Switch IO Module
Usage Information	_	cify the name of the input QoS policy. After input policy is specified, I. This command enables the qos-policy-input configuration mode—

When changing a *service-queue* configuration in a QoS policy map, all QoS rules are deleted and re-added automatically to ensure that the order of the rules is maintained. As a result, the Matched Packets value shown in the "show qos statistics" command is reset.

Related Commands

Incoming traffic policing function

#### qos-policy-output

rate-police

qos-policy-	OUTPUT Create a QoS output policy.	
Syntax	qos-policy-output qos-poli	cy-name
	To remove an existing output	at QoS policy, use the no qos-policy-output qos-policy-name command.
Parameters	qos-policy-name	Enter your output QoS policy name in character format (32 character maximum).
Defaults	none	
Command Modes	CONFIGURATION	
Command History	Version 8.3.16.1 Introduc	ced on MXL 10/40GbE Switch IO Module
Usage Information	rate-limit, bandwidth-percer	y the name of the output QoS policy. After output policy is specified, ntage, and WRED can be defined. This command enables the tion mode—(conf-qos-policy-out).
	re-added automatically to er	<i>ueue</i> configuration in a QoS policy map, all QoS rules are deleted and asure that the order of the rules is maintained. As a result, the Matched show qos statistics command is reset.
Related Commands	bandwidth-percentage	Assigns weight to class/queue percentage.
	wred	Assigns yellow or green drop precedence.
rate-police	Specify the policing functio	nality on incoming traffic.

Syntax rate-police [kbps] committed-rate [burst-KB] [peak [kbps] peak-rate [burst-KB]]

Parameters	kbps	Enter this keyword to specify the rate limit in Kilobits per second (Kbps). On MXL Switch, make the following value a multiple of 64. The default granularity is Megabits per second (Mbps). Range: 0-40000000 (Kbps)
	committed-rate	Enter the committed rate in Mbps. Range: 0 to 10000 Mbps
		Kange. 0 to 10000 mops

	burst-KB	(OPTIONAL) Enter the burst size in KB.
		Range: 16 to 200000 KB
		Default: 100 KB
	peak peak-rate	(OPTIONAL) Enter the keyword peak followed by the peak rate in Mbps.
		Range: 0 to 10000 Mbps
		Default: Same as designated for committed-rate
Command Modes	QOS-POLICY-IN	id <i>peak-rate</i> is Mbps unless the kbps option is used.
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Related Commands		
	rate police	Specifies traffic policing on the selected interface.
	rate police qos-policy-input	Specifies traffic policing on the selected interface. Creates a QoS output policy.

## rate-shape

Shape traffic output as part of the designated policy.

Parameters	kbps	Enter this keyword to specify the rate limit in Kilobits per second (Kbps). On MXL Switch, make the following value a multiple of 64. The default granularity is Megabits per second (Mbps).
		Range: 0-40000000 (Kbps)
	rate	Enter the outgoing rate in multiples of 10 Mbps. Range: 10 to 10000
	burst-KB	(OPTIONAL) Enter a number as the burst size in KB. Range: 0 to 10000
		Default: 50
Defaults	Burst size is 50 KB	
Defaults mmand Modes	Burst size is 50 KB. QOS-POLICY-OUT	Granularity for <i>rate</i> is Mbps unless the kbps option is used.
2010010		Granularity for <i>rate</i> is Mbps unless the kbps option is used.
nmand Modes	QOS-POLICY-OUT Version 8.3.16.1 When rate-shape in	Granularity for <i>rate</i> is Mbps unless the kbps option is used. Introduced on MXL 10/40GbE Switch IO Module
nmand Modes Command History Usage	QOS-POLICY-OUT Version 8.3.16.1 When rate-shape in	Granularity for <i>rate</i> is Mbps unless the kbps option is used. Introduced on MXL 10/40GbE Switch IO Module QoS policy is applied both on queue level and aggregate mode, the queue-based

#### Service-policy input Apply an input policy map to the selected interface.

	To remove the input polic [layer2] command.	by map from the interface, use the no service-policy input policy-map-name
Parameters	policy-map-name	Enter the name for the policy map in character format (16 characters maximum). You can identify an existing policy map or name one that does not yet exist.
	layer2	(OPTIONAL) Enter the keyword layer2 to specify a Layer 2 Class Map. Default: Layer 3
Defaults	Layer 3	
Command Modes	INTERFACE	
Command History	Version 8.3.16.1 Intro	duced on MXL 10/40GbE Switch IO Module
Usage Information		be attached to one or more interfaces to specify the service-policy for those attached to an interface can be modified.
	The service-po	vice-policy commands are not allowed on a port channel. blicy input <i>policy-map-name</i> command and the service-class dynamic dot1p t allowed simultaneously on an interface.
Related Commands	policy-map-input	Creates an input policy map.

#### service-policy output

Apply an output policy map to the selected interface.

Syntax	service-policy output polic	cy-map-name
	To remove the output policy map from the interface, use the <b>no service-policy output</b> <i>policy-map-name</i> command.	
Parameters	policy-map-name	Enter the name for the policy map in character format (16 characters maximum). You can identify an existing policy map or name one that does not yet exist.
Defaults	none	
Command Modes	INTERFACE	
Command History	Version 8.3.16.1 Introdu	uced on MXL 10/40GbE Switch IO Module

**Usage** A single policy-map can be attached to one or more interfaces to specify the service-policy for those interfaces. A policy map attached to an interface can be modified.

Related Commands

policy-map-output Creates an output policy map.

#### \_\_\_\_\_

#### service-queue

Assign a class map and QoS policy to different queues.

Syntax service-queue queue-id [class-map class-map-name] [qos-policy qos-policy-name]

To remove the queue assignment, use the no service-queue *queue-id* [class-map *class-map-name*] [qos-policy *qos-policy-name*] command.

Parameters		
r al ameter 5	queue-id	Enter the value used to identify a queue.
		Range:0-3 (four queues per interface; four queues are reserved for control traffic.)
	class-map class-map-name	(OPTIONAL) Enter the keyword <b>class-map</b> followed by the class map name assigned to the queue in character format (16 character maximum). <b>Note:</b> This option is available under policy-map-input only.
	qos-policy qos-policy-name	(OPTIONAL) Enter the keyword <b>qos-policy</b> followed by the QoS policy name assigned to the queue in text format (16 characters maximum). This specifies the input QoS policy assigned to the queue under policy-map-input and output QoS policy under policy-map-output context.
Defaults	none	
Command Modes	CONFIGURATION (conf	-policy-map-in and conf-policy-map-out)
Command History	Version 8.3.16.1 Introd	duced on MXL 10/40GbE Switch IO Module
Usage Information	There are four (4) queues policy to different queues.	per interface on the MXL Switch. This command assigns a class map or QoS
Related Commands	class-map	Identifies the class map.
	service-policy input	Applies an input policy map to the selected interface.
	service-policy output	Applies an output policy map to the selected interface.

	Mark outgoing tra	ffic with a Differentiated Service Code Point (DSCP) or dot1p value.
Syntax	set {ip-dscp value	e   mac-dot1p <i>value</i> }
Parameters	ip-dscp value	(OPTIONAL) Enter the keyword <b>ip-dscp</b> followed by the IP DSCP value.
	mac-dot1p value	e Range: 0 to 63 Enter the keyword mac-dot1p followed by the dot1p value.
		Range: 0 to 7 On the MXL Switch, allowed values are:0,2,4,6
Defaults	none	
command Modes	CONFIGURATIO	N (conf-qos-policy-in)
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information	After the IP DSCP	bit is set, other QoS services can then operate on the bit settings.

# show qos class-map View the current class map information.

#### test cam-usage

Check the Input Policy Map configuration for the CAM usage.

**Syntax** test cam-usage service-policy input *policy-map* stack-unit {[*number*] | [all]}

**Parameters** policy-map Enter the policy map name. (OPTIONAL) Enter the keyword stack-unit followed by the stack-unit stack-unit number number. stack-unit all (OPTIONAL) Enter the keywords stack-unit all to indicate all stack units. **Defaults** none **Command Modes** EXEC Command Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module History Example Figure 25-11. test cam-usage service-policy input policy-map stack-unit all Command

Example Figure 25-11. test cam-usage service-policy input policy-map stack-unit all Command Example

FTOS# tes	t cam-usage s	service-policy in	put pmap_12 stack	k-unit all	
For a L2	Input Policy	Map pmap_12, the	e output must be a	as follows,	
Stack-uni	t Status  Po 	rtpipe   CAM Part 		e CAM   Es per Port	timated CAM  Status   (Allowed ports)
0	0	L2ACL	500	200	Allowed (2)
0	1	L2ACL	100	200	Exception
1	0	L2ACL	1000	200	Allowed (5)
1	1	L2ACL	0	200	Exception
13	1	L2ACL	400	200	Allowed (2)
(FTOS#					,

**Note:** In a Layer 2 Policy Map, IPv4 rules are not allowed and hence the output contains only L2ACL CAM partition entries.

Field	Description
stack-unit	Indicates the stack-unit number.
Portpipe	Indicates the portpipe number.
CAM Partition	The CAM space where the rules are added.
Available CAM	Indicates the free CAM space, in the partition, for the classification rules. <b>Note:</b> The CAM entries reserved for the default rules are not included in the Available CAM column; free entries, from the default rules space, can not be used as a policy map for the classification rules.
Estimated CAM per Port	Indicates the number of free CAM entries required (for the classification rules) to apply the input policy map on a single interface. <b>Note:</b> The CAM entries for the default rule are not included in this column; a CAM entry for the default rule is always dedicated to a port and is always available for that interface.
Status (Allowed ports)	Indicates if the input policy map configuration on an interface belonging to a stack-unit/port-pipe is successful—Allowed ( <i>n</i> )—or not successful— Exception. The allowed number ( <i>n</i> ) indicates the number of ports in that port-pipe on which the Policy Map can be applied successfully.

#### Table 25-4. test cam-usage Command Description

**Usage** This features allows you to determine if the CAM has enough space available before applying the configuration on an interface.

An input policy map with both Trust and Class-map configuration, the Class-map rules are ignored and only the Trust rule is programmed in the CAM. In such an instance, the Estimated CAM output column will contain the size of the CAM space required for the Trust rule and *not* the Class-map rule.

#### trust

Specify dynamic classification (DSCP) or dot1p to trust.

**Syntax** trust {diffserv [fallback]| dot1p [fallback]|}

Parameters	
------------	--

 diffserv
 Enter the keyword diffserv to specify trust of DSCP markings.

 dot1p
 Enter the keyword dot1p to specify trust dot1p configuration.

 fallback
 Enter this keyword to classify packets according to their DSCP value as a secondary option in case no match occurs against the configured class maps.

Defaults

#### **Command Modes** CONFIGURATION (conf-policy-map-in)

none

Command History

Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

#### Usage When trust is configured, matched bytes/packets counters are not incremented in the show qos statistics command.

Dynamic mapping honors packets marked according to the standard definitions of DSCP. The default mapping table is detailed in the following table.

DSCP/CP hex range (XXX)	DSCP Definition	Traditional IP Precedence	MXL Switch Internal Queue ID	DSCP/CP decimal
111XXX		Network Control	3	- 48-63
110XXX		Internetwork Control	3	- +0 05
101XXX	EF (Expedited Forwarding)	CRITIC/ECP	2	- 32-47
100XXX	AF4 (Assured Forwarding)	Flash Override	2	- 32-47
011XXX	AF3	Flash	1	16 21
010XXX	AF2	Immediate	1	- 16–31
001XXX	AF1	Priority	0	0.15
000XXX	BE (Best Effort)	Best Effort	0	- 0–15

Table 25-5. Standard Default DSCP Mapping Table

#### wred

Designate the WRED profile to yellow or green traffic.

Syntax

wred [[(yellow | green) profile-name] ecn]

To remove the WRED drop precedence, use the no wred {yellow | green} [profile-name] command.

Parameters	yellow   green	Enter the keyword <b>yellow</b> for yellow traffic. DSCP value of xxx110 and xxx100 maps to yellow.
		Enter the keyword <b>green</b> for green traffic. DSCP value of xxx010 maps to green.
	profile-name	Enter your WRED profile name in character format (16 character maximum). Or use one of the 5 pre-defined WRED profile names.
		Pre-defined Profiles:
		wred_drop, wred_teng_y, wred_teng_
	ecn	When wred ecn <cr> command is configured, instead of droppping the packets exponentially, Explicit Congestion Notification (ECN) marking is made on the packets.</cr>
Defaults	none	
mmand Modes	CONFIGURATION (co	nf-qos-policy-out)
Command		

Command History

Version 8.3.16.1

Introduced on MXL 10/40GbE Switch IO Module

Usage Information

Use this command to assign drop precedence to green or yellow traffic. If there is no honoring enabled on the input, all the traffic defaults to green drop precedence.

 
 Related Commands
 wred-profile
 Creates a WRED profile and name that profile

 trust
 Defines the dynamic classification to trust DSCP

#### wred-profile

Syntax	wred-profile wred-prof	file-name
	To remove an existing	WRED profile, use the no wred-profile command.
Parameters	wred-profile-name	Enter your WRED profile name in character format (16 character maximum). Or use one of the pre-defined WRED profile names. You can configure up to 26 WRED profiles plus the 5 pre-defined profiles, for a total of 31 WRED profiles.
		Pre-defined Profiles:
		wred_drop, wred_ge_y, wred_ge_g, wred_teng_y, wred_teng_g
Defaults	1	RED profiles. When a new profile is configured, the minimum and maximum edefined wred_ge_g values

# Routing Information Protocol (RIP)

#### Overview

Routing information protocol (RIP) is a distance vector routing protocol. The Dell Force10 operating software (FTOS) supports both RIP version 1 (RIPv1) and RIP version 2 (RIPv2).

The FTOS implementation of RIP is based on IETF RFCs 2453 and RFC 1058. For more information about configuring RIP, refer to the *FTOS Configuration Guide*.

#### Commands

The following commands allow you to configure RIP:

- auto-summary
- clear ip rip
- debug ip rip
- default-information originate
- default-metric
- description
- distance
- distribute-list in
- distribute-list out
- ip poison-reverse
- ip rip receive version
- ip rip send version
- ip split-horizon
- maximum-paths
- neighbor
- network
- offset-list
- output-delay
- passive-interface
- redistribute
- redistribute ospf
- router rip
- show config
- show ip rip database

- timers basic
- version

#### auto-summary

	Restore the default behavior of automatic summarization of subnet routes into network routes. This command applies only to RIP version 2.
Syntax	auto-summary
	To send sub-prefix routing information, use the no auto-summary command.
Default	Enabled.
Command Modes	ROUTER RIP
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
HISTOLY	

#### clear ip rip

	Update all the RIP routes in the FTOS routing table.
Syntax	clear ip rip
Command Modes	EXEC Privilege
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Usage Information	This command triggers updates of the main RIP routing tables.

## debug ip rip

Examine RIP routing information for troubleshooting.

Syntax debug ip rip [interface | database | events [interface] | packet [interface] | trigger]

To turn off debugging output, use the no debug ip rip command.

Devenetere		
Parameters	interface	(OPTIONAL) Enter the interface type and ID as one of the following:
		• For a Port Channel interface, enter the keyword port-channel followed by a number:
		Range: 1-128
		• For a 10-Gigabit Ethernet interface, enter the keyword <b>TenGigabitEthernet</b> followed by the slot/port information.
		• For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE followed by the slot/port information.
		• For a VLAN, enter the keyword vlan followed by a number from 1 to 4094.
	database	(OPTIONAL) Enter the keyword <b>database</b> to display messages when there is a change to the RIP database.
	events	(OPTIONAL) Enter the keyword events to debug only RIP protocol changes.
	trigger	(OPTIONAL) Enter the keyword trigger to debug only RIP trigger extensions.
Command Modes	EXEC Privilege	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

# default-information originate

Generate a default route for the RIP traffic.

Syntax default-information originate [always] [metric metric-value] [route-map map-name]

To return to the default values, use the no default-information originate command.

Parameters	always	(OPTIONAL) Enter the keyword <b>always</b> to enable the switch software to always advertise the default route.
	metric metric-value	(OPTIONAL) Enter the keyword <b>metric</b> followed by a number as the metric value.
		Range: 1 to 16
		Default: 1
	route-map map-name	(OPTIONAL) Enter the keyword <b>route-map</b> followed by the name of a configured route-map.
Defaults	Disabled	
	metric: 1	
Command Modes	ROUTER RIP	
Command History	Version 8.3.16.1 Introduc	ed on MXL 10/40GbE Switch IO Module
Usage Information	The default route must be pro- command to take effect.	esent in the switch routing table for the default-information originate

default-met	Change the defaul	t metric for routes. Use this command with the redistribute command to ensure ed routes use the same metric value.
	that all redistribut	ed routes use the same metric value.
Syntax	default-metric nu	Imber
	To return the defa	ult metric to the original values, use the no default-metric command.
Parameters	number	Specify a number.
		Range: 1 to 16.
		The default is 1.
Default	1	
Command Modes	ROUTER RIP	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information	This command en	sures that route information being redistributed is converted to the same metric value.
Related Commands	redistribute	Allows you to redistribute routes learned by other methods.

## description

	Enter a description	n of the RIP routing protocol
Syntax	description { desc	cription}
	To remove the des	cription, use the no description { description} command.
Parameters	description	Enter a description to identify the RIP protocol (80 characters maximum).
Defaults	none	
Command Modes	ROUTER RIP	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Related Commands	router rip	Enters ROUTER mode on the switch.

#### distance

Assign a weight (for prioritization) to all routes in the RIP routing table or to a specific route. Lower weights ("administrative distance") are preferred.

#### Syntax distance weight [ip-address mask [prefix-name]]

To return to the default values, use the no distance weight [ip-address mask] command.

Parameters		
i alameters	weight	Enter a number from 1 to 255 for the weight (for prioritization).
		The default is 120.
	ip-address	(OPTIONAL) Enter the IP address, in dotted decimal format (A.B.C.D), of the host or network to receive the new distance metric.
	mask	If you enter an IP address, you must also enter a mask for that IP address, in either dotted decimal format or /prefix format (/x)
	prefix-name	(OPTIONAL) Enter a configured prefix list name.
Defaults	weight = 120	
Command Modes	ROUTER RIP	
Command History		
Command motory	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Related Commands	default-metric	Assigns one distance metric to all routes learned using the redistribute command.

#### distribute-list in

	Configure a filter fo	or incoming routing updates.
Syntax	distribute-list prefix-list-name in [interface]	
	To delete the filter,	use the no distribute-list prefix-list-name in command.
Parameters	prefix-list-name	Enter the name of a configured prefix list.
	interface	(OPTIONAL) Identifies the interface type slot/port as one of the following:
		<ul> <li>For a Port Channel interface, enter the keyword port-channel followed by a number:</li> <li>Range: 1-128</li> </ul>
		<ul> <li>For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.</li> </ul>
		• For a 40-Gigabit Ethernet interface, enter the keyword <b>fortyGigE</b> followed by the slot/port information.
		• For a VLAN, enter the keyword vlan followed by a number from 1 to 4094.
Defaults	Not configured.	
Command Modes	ROUTER RIP	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

Related Commands

ip prefix-list

Enters PREFIX-LIST mode and configures a prefix list.

#### distribute-list out

Configure a filter for outgoing routing updates.

Syntax distribute-list prefix-list-name out [interface | bgp | connected | ospf | static]

To delete the filter, use the no distribute-list prefix-list-name out command.

Parameters	prefix-list-name	Enter the name of a configured prefix list.
	interface	(OPTIONAL) Identifies the interface type slot/port as one of the following:
		• For a Port Channel interface, enter the keyword <b>port-channel</b> followed by a number:
		Range: 1 to 128
		• For a 10-Gigabit Ethernet interface, enter the keyword <b>TenGigabitEthernet</b> followed by the slot/port information.
		• For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE followed by the slot/port information.
		• For a VLAN, enter the keyword vlan followed by a number from 1 to 4094.
	connected	(OPTIONAL) Enter the keyword <b>connected</b> to filter only directly connected routes.
	ospf	(OPTIONAL) Enter the keyword ospf to filter all OSPF routes.
	static	(OPTIONAL) Enter the keyword static to filter manually configured routes.
Defaults	Not configured.	
Command Modes	ROUTER RIP	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Related	ip prefix-list	Enters PREFIX-LIST mode and configures a prefix list.

#### ip poison-reverse

Set the prefix of the RIP routing updates to the RIP infinity value.

Syntax	ip poison-reverse
	To disable poison reverse, use the no ip poison-reverse command.
Defaults	Disabled.
Command Modes	INTERFACE
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

Related Commands	ip split-horizon	Sets the RIP routing updates to exclude routing prefixes.
ip rip receiv	Set the interface to rec	ceive specific versions of RIP. The RIP version you set on the interface overrides in ROUTER RIP mode.
Syntax	ip rip receive versior	n [1] [2]
	To return to the defau	lt, use the no ip rip receive version command.
Parameters		OPTIONAL) Enter the number 1 for RIP version 1.         OPTIONAL) Enter the number 2 for RIP version 2.
Defaults	RIPv1 and RIPv2	
Command Modes	INTERFACE	
Command History	Version 8.3.16.1 I	Introduced on MXL 10/40GbE Switch IO Module
Usage Information	If you want the interfa	ace to receive both versions of RIP, use ip rip receive version 1 2.
Related Commands	ip rip send version	Sets the RIP version to be used for sending RIP traffic on an interface.
	version	Sets the RIP version to be used for the switch software.

## ip rip send version

Related

		o send a specific version of RIP. The version you set on the interface overrides the in ROUTER RIP mode.
Syntax	ip rip send versio	on [1] [2]
	To return to the de	fault value, use the no ip rip send version command.
Parameters	1	(OPTIONAL) Enter the number 1 for RIP version 1.
		The default is RIPv1.
	2	(OPTIONAL) Enter the number 2 for RIP version 2.
Defaults	RIPv1	
Command Modes	INTERFACE	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information	To enable the inter	rface to send both version of RIP packets, use ip rip send version 1 2.

Sets the RIP version for the interface to receive traffic. Sets the RIP version to be used for the switch software.

#### ip split-horizon Enable split-horizon for RIP data on the interface. As described in REC 2453, the split-horizon scheme

Related

	prevents any routes learned over a specific interface to be sent back out that interface.
Syntax	ip split-horizon
	To disable split-horizon, enter no ip split-horizon.
Defaults	Enabled
Command Modes	INTERFACE
Command History	
	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Related	in noisen sources
Commands	ip poison-reverse Sets the prefix for RIP routing updates.

#### maximum-paths

Set RIP to forward packets over multiple paths.

Syntax	maximum-paths number		
	To return to the de	efault values, use the no maximum-paths command.	
Parameters	number	Enter the number of paths.	
		Range: 1 to 16.	
		The default is 4 paths.	
Defaults	4		
Command Modes	ROUTER RIP		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Usage Information	RIP supports a ma	aximum of 16 ECMP paths.	

#### neighbor Define a neighbor router with which to exchange RIP information. Syntax neighbor ip-address To delete a neighbor setting, use the no neighbor ip-address command.

Parameters	<i>ip-address</i> Enter the IP address, in dotted decimal format, of a router with winformation.	hich to exchange
Defaults	Not configured.	
Command Modes	ROUTER RIP	
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module	
Usage Information	When a neighbor router is identified, unicast data exchanges occur. Multiple ne possible.	eighbor routers are
	Use the passive-interface command in conjunction with the neighbor command specific interfaces are receiving and sending data.	d to ensure that only
Related Commands	passive-interface Sets the interface to only listen to RIP broadcasts.	

#### network

	Enable RIP for a specified network. Use this command to enable RIP on all networks connected to the switch.
Syntax	network ip-address
	To disable RIP for a network, use the no network <i>ip-address</i> command.
Parameter	<i>ip-address</i> Specify an IP network address in dotted decimal format. You cannot specify a subnet.
Defaults	No RIP network is configured.
Command Modes	ROUTER RIP
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Usage Information	You can enable an unlimited number of RIP networks. RIP operates over interfaces configured with any address specified by the network command.

#### offset-list

Specify a number to add to the incoming or outgoing route metrics learned via RIP.

Syntax

offset-list *prefix-list-name* {in | out} offset [interface] To delete an offset list, use the no offset-list *prefix-list-name* {in | out} offset [interface] command.

support.dell.com			F

**a**ta

Parameters	prefix-list-name	Enter the name of an established Prefix list to determine which incoming routes will be modified.
	offset	Enter a number from zero (0) to 16 to be applied to the incoming route metric matching the access list specified.
		If you set an offset value to zero (0), no action is taken.
	interface	(OPTIONAL) Enter the following keywords and slot/port or number information:
		• For a Port Channel interface, enter the keyword <b>port-channel</b> followed by a number:
		Range: 1-128
		• For a 10-Gigabit Ethernet interface, enter the keyword <b>TenGigabitEthernet</b> followed by the slot/port information.
		• For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE followed by the slot/port information.
		• For a VLAN, enter the keyword vlan followed by a number from 1 to 4094.
Defaults	Not configured.	
Command Modes	ROUTER RIP	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information	When the offset me is not extended to a	tric is applied to an interface, that value takes precedence over an offset value that n interface.
Related		
Commands	ip prefix-list	Enters PREFIX-LIST mode and configures a prefix list.

# output-delay

Set the interpacket delay of successive packets to the same neighbor.

Syntax	output-delay <i>delay</i>	
	To return to the sw	vitch software defaults for interpacket delay, use the no output-delay command.
Parameters	delay	Specify a number of milliseconds as the delay interval. Range: 8 to 50
Default	Not configured.	
Command Modes	ROUTER RIP	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information	This command is i	ntended for low-speed interfaces.

#### passive-interface

Suppress routing updates on a specified interface.

Syntax	passive-interfact	e interface
	To delete a passiv	re interface, use the no passive-interface interface command.
Parameters	interface	<ul> <li>Enter the following information:</li> <li>For a Port Channel interface, enter the keyword port-channel followed by a number: Range: 1-128</li> <li>For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.</li> <li>For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE followed by the slot/port information.</li> <li>For a VLAN, enter the keyword vlan followed by a number from 1 to 4094.</li> </ul>
Defaults	Not configured.	
Command Modes	ROUTER RIP	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information	• •	sive interface neither sends nor receives routing updates, the network on that interface n RIP updates sent via other interfaces.
Related Commands	neighbor	Enables RIP for a specified network.
	network	Defines a neighbor.

#### redistribute

Redistribute information from other routing instances. Syntax redistribute {connected | static} To disable redistribution, use the no redistribute {connected | static} command. Parameters connected Enter the keyword connected to specify that information from active routes on interfaces is redistributed. static Enter the keyword static to specify that information from static routes is redistributed. Defaults Not configured. **Command Modes** ROUTER RIP Command Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module History Usage To redistribute the default route (0.0.0/0), configure the default-information originate command. Information

default-information originate

#### redistribute ospf

Redistribute routing information from an OSPF process.

Syntax redistribute ospf *process-id* [match external {1 | 2} | match internal | metric *metric-value*] [route-map *map-name*]

To disable redistribution, use the no redistribute ospf *process-id* [match external {1 | 2} | match internal | metric *metric-value*] [route-map *map-name*] command.

Parameters

Parameters	process-id	Enter a number that corresponds to the OSPF process ID to be redistributed.
		Range: 1 to 65355.
	match external {1   2}	(OPTIONAL) Enter the keywords match external followed by the numbers 1 or 2 to indicated that external 1 routes or external 2 routes should be redistributed.
	match internal	(OPTIONAL) Enter the keywords match internal to indicate that internal routes should be redistributed.
	metric metric-value	(OPTIONAL) Enter the keyword metric followed by a number as the metric value.
		Range: 0 to 16
	route-map <i>map-name</i>	(OPTIONAL) Enter the keyword <b>route-map</b> followed by the name of a configured route map.
Defaults	Not configured.	
Command Modes	ROUTER RIP

Table 26-1. show ip rip database Command Description

Field	Description
Total number of routes in RIP database	Displays the number of RIP routes stored in the RIP database.
100.10.10.0/24 directly connected	Lists the route(s) directly connected.
150.100.0.0 redistributed	Lists the routes learned through redistribution.
209.9.16.0/24	Lists the routes and the sources advertising those routes.

#### show running-config rip

Use this feature to display the current RIP configuration.

History

## timers basic

	Manipulate the RIP timers for routing updates, invalid, holddown times and flush time.		
Syntax	timers basic update invalid holddown flush		
	To return to the default settings, use the no timers basic command.		
Parameters	update	Enter the number of seconds to specify the rate at which RIP routing updates are sent. Range: zero (0) to 4294967295. Default: 30 seconds.	
	invalid	Enter the number of seconds to specify the time interval before routing updates are declared invalid or expired. The <i>invalid</i> value should be at least three times the <i>update</i> timer value. Range: zero (0) to 4294967295. Default: 180 seconds.	
	holddown	Enter the number of seconds to specify a time interval during which the route is marked as unreachable but still sending RIP packets. The <i>holddown</i> value should be at least three times the <i>update</i> timer value. Range: zero (0) to 4294967295. Default: 180 seconds.	
	flush	Enter the number of seconds to specify the time interval during which the route is advertised as unreachable. When this interval expires, the route is flushed from the routing table. The <i>flush</i> value should be greater than the <i>update</i> value.	
		Range: zero (0) to 4294967295. Default is 240 seconds.	
Defaults	<ul> <li>update = 30</li> <li>invalid = 18</li> <li>holddown =</li> <li>flush = 240</li> </ul>	0 seconds = 180 seconds	
Command Modes	ROUTER RIP		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Usage Information	If you change the timers on one router, the timers on all routers in the RIP domain must also be synchronized.		
version	Specify either R	IP version 1 or RIP version 2.	
Syntax	version {1   2}		
	To return to the	default version setting, use the no version command.	
Parameters	1	Enter the keyword 1 to specify RIP version 1.	
	2	Enter the keyword <b>2</b> to specify RIP version 2.	

Default	The FTOS sends RIPv1 and	d receives RIPv1 and RIPv2.	
Command Modes	ROUTER RIP		
Command History	Version 8.3.16.1 Introdu	uced on MXL 10/40GbE Switch IO Module	
Related Commands	ip rip receive version	Sets the RIP version to be received on the interface.	
	ip rip send version	Sets the RIP version to be sent out the interface.	

# 27

## Remote Monitoring (RMON)

## Overview

Dell Force10 operating software (FTOS) remote monitoring (RMON) is based on IEEE standards, providing both 32-bit and 64-bit monitoring and long-term statistics collection. FTOS RMON supports the following RMON groups, as defined in RFC-2819, RFC-3273, and RFC-3434:

- Ethernet Statistics Table
- RFC-2819
- Ethernet Statistics High-Capacity Table

Ethernet History High-Capacity Table

- Ethernet History Control Table
- Ethernet History Table
- Alarm Table
- High-Capacity Alarm Table (64bits)
- Event Table
- Log Table

RFC-3273, 64bits RFC-2819 RFC-2819 RFC-3273, 64bits RFC-2819 RFC-3434, 64bits RFC-2819

RFC-2819

FTOS RMON does not support the following statistics:

- etherStatsCollisions
- etherHistoryCollisions
- etherHistoryUtilization

Note: Only the simple network management protocol (SNMP) GET/GETNEXT access is supported. Configure RMON using the RMON commands. Collected data is lost during a chassis reboot.

## Commands

The FTOS RMON commands are:

- rmon alarm
- rmon collection history
- rmon collection statistics
- rmon event
- rmon hc-alarm
- show rmon
- show rmon alarms
- show rmon events
- show rmon hc-alarm

- show rmon history
- show rmon log
- show rmon statistics

## rmon alarm

Set an alarm on any MIB object.

Syntax rmon alarm *number variable interval* {delta | absolute} rising-threshold *value event-number* falling-threshold *value event-number* [owner *string*]

To disable the alarm, use the no rmon alarm *number* command.

Parameters

number	Enter the alarm integer number from 1 to 65535. The value must be unique in the RMON Alarm Table.
variable	The MIB object to monitor. The variable must be in the SNMP OID formation for example, 1.3.6.1.2.1.1.3 The object type must be a 32 bit integer.
interval	Time, in seconds, the alarm monitors the MIB variables; this is the alarmSampleType in the RMON Alarm table. Range: 5 to 3600 seconds
delta	Enter the keyword <b>delta</b> to test the change between MIB variables. This is the alarmSampleType in the RMON Alarm table.
absolute	Enter the keyword <b>absolute</b> to test each MIB variable directly. This is the alarmSampleType in the RMON Alarm table.
rising-threshold <i>value</i> event-number	Enter the keyword rising-threshold followed by the value (32bit) the rising-threshold alarm is either triggered or reset. Then enter the event-number to trigger when the rising threshold exceeds its limit. This value is the same as the alarmRisingEventIndex or alarmTable of the RMON MIB. If there is no corresponding rising-threshold even the value is zero.
falling-threshold value event-number	Enter the keyword falling-threshold followed by the value (32bit) the falling-threshold alarm is either triggered or reset. Then enter the event-number to trigger when the falling threshold exceeds its limit. This value is the same as the alarmFallingEventIndex or the alarmTable of the RMON MIB. If there is no corresponding falling-threshold event, the value is zero.
owner string	(OPTIONAL) Enter the keyword <b>OWNEr</b> followed by the owner name to specify an owner for the alarm. This is the alarmOwner object in the alarmTable of the RMON MIB.
owner	
CONFIGURATION	
Version 8.3.16.1 Introduc	ed on MXL 10/40GbE Switch IO Module

Default

**Command Modes** 

**Command History** 

## rmon collection history

Enable the RMON MIB history group of statistics collection on an interface.

#### Syntax rmon collection history {controlEntry integer} [owner name] [buckets number] [interval seconds]

To remove a specified RMON history group of statistics collection, use the no rmon collection history {controlEntry *integer*} command.

**Command History** 

Parameters	controlEntry integer	Enter the keyword <b>controlEntry</b> to specify the RMON group of statistics using a value. Then enter an integer value from 1 to 65535 that identifies the RMON group of statistics. The integer value must be a unique index in the RMON History Table.
	owner name	(OPTIONAL) Enter the keyword <b>OWNEr</b> followed by the owner name to record the owner of the RMON group of statistics.
	buckets number	(OPTIONAL) Enter the keyword <b>buckets</b> followed the number of buckets for the RMON collection history group of statistics.
		Bucket Range: 1 to 1000
		Default: 50
	interval seconds	(OPTIONAL) Enter the keyword <b>interval</b> followed the number of seconds in each polling cycle.
		Range: 5 to 3600 seconds
		Default: 1800 seconds
Defaults	No default behavior	
Command Modes	CONFIGURATION INTER	RFACE (config-if)

Introduced on MXL 10/40GbE Switch IO Module

## rmon collection statistics

Version 8.3.16.1

Enable RMON MIB statistics collection on an interface.

Syntax rmon collection statistics {controlEntry integer} [owner name]

> To remove RMON MIB statistics collection on an interface, use the no rmon collection statistics {controlEntry *integer*} command.

Developed		
Parameters	controlEntry integer	Enter the keyword <b>controlEntry</b> to specify the RMON group of statistics using a value. Then enter an integer value from 1 to 65535 that identifies the RMON Statistic Table. The integer value must be a unique in the RMON Statistic Table.
	owner name	(OPTIONAL) Enter the keyword <b>OWNEr</b> followed by the owner name to record the owner of the RMON group of statistics.
Defaults	none	
Command Modes	CONFIGURATION INTERFACE (config-if)	

- Command History Version 8.3.16.1
  - Introduced on MXL 10/40GbE Switch IO Module

rmon even	t		
	Add an event in the	RMON event table.	
Syntax	rmon event numbe	r [log] [trap community] [description string] [owner name]	
	To disable RMON on an interface, use the no rmon event <i>number</i> [log] [trap <i>community</i> ] [description <i>string</i> ] command.		
Parameters	number	Assign an event number in integer format from 1 to 65535. The number value must be unique in the RMON Event Table.	
	log	(OPTIONAL) Enter the keyword log to generate an RMON log entry. The log entry is triggered and sets the eventType in the RMON MIB to log or log-and-trap. Default: No log	
	trap community	(OPTIONAL) Enter the keyword <b>trap</b> followed by an SNMP community string to configure the eventType setting in the RMON MIB. This sets either snmp-trap or log-and-trap. Default: public	
	description string	(OPTIONAL) Enter the keyword <b>description</b> followed by a string describing the event.	
	owner name	(OPTIONAL) Enter the keyword <b>OWNEr</b> followed by the name of the owner of this event.	
Defaults	as described above		
Command Modes	CONFIGURATION		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	

## rmon hc-alarm

Set an alarm on any MIB object.

Syntax rmon hc-alarm number variable interval {delta | absolute} rising-threshold value event-number falling-threshold value event-number [owner string]

To disable the alarm, use the no rmon hc-alarm number command.

Parameters		
Falameters	number	Enter the alarm integer number from 1 to 65535. The value must be unique in the RMON Alarm Table.
	variable	The MIB object to monitor. The variable must be in the SNMP OID format, for example, 1.3.6.1.2.1.1.3 The object type must be a 64 bit integer.
	interval	Time, in seconds, the alarm monitors the MIB variables; this is the alarmSampleType in the RMON Alarm table. Range: 5 to 3600 seconds
	delta	Enter the keyword <b>delta</b> to test the change between MIB variables. This is the alarmSampleType in the RMON Alarm table.
	absolute	Enter the keyword <b>absolute</b> to test each MIB variable directly. This is the alarmSampleType in the RMON Alarm table.

	rising-threshold value event-number	Enter the keyword <b>rising-threshold</b> followed by the value (64 bit) the rising-threshold alarm is either triggered or reset. Then enter the event-number to trigger when the rising threshold exceeds its limit. This value is the same as the alarmRisingEventIndex or alarmTable of the RMON MIB. If there is no corresponding rising-threshold event, the value is zero.
	falling-threshold value event-number	Enter the keyword falling-threshold followed by the value (64 bit) the falling-threshold alarm is either triggered or reset. Then enter the event-number to trigger when the falling threshold exceeds its limit. This value is the same as the alarmFallingEventIndex or the alarmTable of the RMON MIB. If there is no corresponding falling-threshold event, the value is zero.
	owner string	(OPTIONAL) Enter the keyword <b>OWNEr</b> followed the owner name to specify an owner for the alarm. This is the alarmOwner object in the alarmTable of the RMON MIB.
Defaults	owner	
Command Modes	CONFIGURATION	
Command History	Version 8.3.16.1 Introduc	ed on MXL 10/40GbE Switch IO Module

## show rmon

Display the RMON running status including the memory usage.

Syntax	show rmon
Defaults	none
Command Modes	EXEC
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Example	FIGURE 27-1. show rmon Command Example FTOS# show rmon RMON status total memory used 218840 bytes. ether statistics table: 8 entries, 4608 bytes ether history table: 8 entries, 6000 bytes alarm table: 390 entries, 102960 bytes high-capacity alarm table: 5 entries, 1680 bytes event table: 500 entries, 206000 bytes log table: 2 entries, 552 bytes FTOS#

## **Rapid Spanning Tree Protocol (RSTP)**

## **Overview**

The Dell Force10 operating software (FTOS) implementation of the rapid spanning tree protocol (RSTP) is based on the IEEE 802.1w standard spanning-tree protocol. The RSTP algorithm configures connectivity throughout a bridged local area network (LAN) that is comprised of LANs interconnected by bridges.

## Commands

The FTOS RSTP commands are:

- bridge-priority
- debug spanning-tree rstp
- description
- forward-delay
- hello-time
- max-age
- edge-port bpdufilter default
- protocol spanning-tree rstp
- show config
- show spanning-tree rstp
- spanning-tree rstp
- tc-flush-standard

## bridge-priority

Set the bridge priority for RSTP.

Syntax	bridge-priority priority-value		
	To return to the default value, use the no bridge-priority command.		
Parameters	priority-value	Enter a number as the bridge priority value in increments of 4096.	
		Range: 0 to 61440	
		Default: 32768	
Defaults	32768		

#### **Command Modes** CONFIGURATION RSTP (conf-rstp)

Command History

Introduced on MXL 10/40GbE Switch IO Module Version 8.3.16.1

Related Commands

#### protocol spanning-tree rstp Enters rapid spanning tree mode

## debug spanning-tree rstp

Enable debugging of RSTP and view information on the protocol.

**Syntax** debug spanning-tree rstp [all | bpdu interface {in | out} | events]

To disable debugging, use the no debug spanning-tree rstp command.

Pa	ra	m	et	er	S

Developed		
Parameters	all	(OPTIONAL) Enter the keyword all to debug all spanning tree operations.
	bpdu <i>interface</i> {in	(OPTIONAL) Enter the keyword bpdu to debug Bridge Protocol Data Units.
	out}	(OPTIONAL) Enter the interface keyword along with the type slot/port of the interface you want displayed. Type slot/port options are the following:
		• For a Port Channel interface, enter the keyword <b>port-channel</b> followed by a number:
		Range: 1 to 128
		• For a 10-Gigabit Ethernet interface, enter the keyword <b>TenGigabitEthernet</b> followed by the slot/port information.
		• For a 40-Gigabit Ethernet interface, enter the keyword <b>fortyGigE</b> followed by the slot/port information.
		Optionally, enter an in or out parameter in conjunction with the optional interface:
		• For Receive, enter in
		• For Transmit, enter <b>Out</b>
	events	(OPTIONAL) Enter the keyword events to debug RSTP events.
Command Modes	EXEC Privilege	
Command History	Version 8.3.16.1	ntroduced on MXL 10/40GbE Switch IO Module

## description

Enter a description of the rapid spanning tree

Syntax description { description }

To remove the description, use the no description { description} command.

Parameters		
T di di licitorio	description	Enter a description to identify the Rapid Spanning Tree (80 characters maximum).
Defaults	none	
Command Modes	SPANNING TRE	E (The prompt is "config-rstp".)
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Related Commands	protocol spanning	the sector of the sector.
disable	Disable RSTP glo	obally on the system.
Syntax	disable	
	To enable rapid s	panning tree protocol, use the no disable command.
Defaults	RSTP is disabled	
Command Modes	CONFIGURATIO	ON RSTP (conf-rstp)
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Related Commands	protocol spanning	-tree rstp Enters Rapid Spanning Tree mode

## forward-delay

Configure the amount of time the interface waits in the Listening State and the Learning State before transitioning to the Forwarding State.

Syntax	forward-delay seconds			
	To return to the default setting, use the no forward-delay command.			
Parameters		Enter the number of seconds that FTOS waits before transitioning RSTP to the forwarding state.		
		Range: 4 to 30		
		Default: 15 seconds		
Defaults	15 seconds			
Command Modes	CONFIGURAT	ON RSTP (conf-rstp)		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module		

Related	hello-time	Changes the time interval between BPDUs.
Commands	max-age	Changes the wait time before RSTP refreshes protocol configuration information.
hello-time		
	Set the time int	erval between generation of RSTP bridge protocol data units (BPDUs).
Syntax	hello-time [mil	li-second] seconds
	To return to the	default value, use the no hello-time command.
Parameters	seconds	Enter a number as the time interval between transmission of BPDUs. Range: 1 to 10 seconds Default: 2 seconds.
	milli-second	Enter this keyword to configure a hello time on the order of milliseconds. Range: 50 - 950 milliseconds
Defaults	2 seconds	
Command Modes	CONFIGURAT	TON RSTP (conf-rstp)
Command History	Version 8.3.16.	I Introduced on MXL 10/40GbE Switch IO Module
Usage Information	hello time in se values less than When millisecc	is encoded in BPDUs in increments of $1/256$ ths of a second. The standard minimum conds is 1 second, which is encoded as 256. Millisecond hello times are encoded using 256; the millisecond hello time equals $(x/1000)*256$ . and hellos are configured, the default hello interval of 2 seconds is still used for edge second hello interval is not used.
Related Commands	forward-delay	Changes the wait time before RSTP transitions to the Forwarding state.
Commanus	max-age	Changes the wait time before RSTP refreshes protocol configuration information.
max-age	Set the time int information.	erval for the RSTP bridge to maintain configuration information before refreshing that
Syntax	max-age seco	nds
	To return to the	default values, use the no max-age command.
Parameters	max-age	Enter a number of seconds the FTOS waits before refreshing configuration information. Range: 6 to 40 seconds Default: 20 seconds
Defaults	20 seconds	

## Command Modes CONFIGURATION RSTP (conf-rstp) Command History Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module Related Commands max-age Changes the wait time before RSTP transitions to the Forwarding state. hello-time Changes the time interval between BPDUs.

## edge-port bpdufilter default

Enable BPDU Filter globally to filter transmission of BPDU on port fast enabled interfaces.

Syntax	edge-port bpdufilter default			
	To disable global bpdu filter default, use the no edge-port bpdufilter default command.			
Defaults	Disabled			
Command Modes	CONFIGURATION (conf-rstp)			
Command				
History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module			

## protocol spanning-tree rstp

Enter the RSTP mode to configure RSTP.

Syntax	protocol spanning-tree rstp
	To exit the RSTP mode, use the exit command.
Defaults	Not configured
Command Modes	CONFIGURATION RSTP (conf-rstp)
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Example	Figure 28-2. protocol spanning-tree rstp Command Example
	<pre>FTOS(conf)#protocol spanning-tree rstp FTOS(conf-rstp)##no disable</pre>
Usage Information	RSTP is not enabled when you enter RSTP mode. To enable RSTP globally on the system, use the no description command from RSTP mode.
Related Commands	description Disable RSTP globally on the system.

## show config

View the current configuration for the mode. Only non-default values are displayed.

Syntax	show config	
Command Modes	CONFIGURATION RSTP (conf-rstp)	
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module	
Example	Figure 28-3. show config Command Example for RSTP Mode	

## show spanning-tree rstp

Display the RSTP configuration.

Syntax	show spanning-tree r	stp [brief] [guard]
Parameters	brief	(OPTIONAL) Enter the keyword <b>brief</b> to view a synopsis of the RSTP configuration information.
	guard	(OPTIONAL) Enter the keyword guard to display the type of guard enabled on an RSTP interface and the current port state.
Command Modes	EXEC	
	EXEC Privilege

Guard Type	Type of STP guard configured (Root, Loop, or BPDU guard)	
BPDU Filter	Yes - BPDU Filter enabled No - BPDU Filter disabled	

U

Note: Loop guard is not supported in the show spanning-tree rstp guard command.

## spanning-tree rstp

Configure an RSTP interface with one of these settings: port cost, edge port with optional Bridge Port Data Unit (BPDU) guard, port priority, loop guard, or root guard.

Syntax spanning-tree rstp {cost *port-cost* | edge-port [bpduguard [shutdown-on-violation] | bpdufilter] | priority *priority* | {rootguard} }

**Parameters** cost port-cost Enter the keyword **cost** followed by the port cost value. Range: 1 to 200000 Defaults: 10-Gigabit Ethernet interface = 200040-Gigabit Ethernet interface = 1400 Port Channel interface with one 10-Gigabit Ethernet = 2000 Port Channel interface with one 40-Gigabit Ethernet = 1400 Port Channel with two 10-Gigabit Ethernet = 1800 Port Channel with two 40-Gigabit Ethernet = 600edge-port Enter the keyword edge-port to configure the interface as a Rapid Spanning Tree edge port. bpduguard (OPTIONAL) Enter the keyword portfast to enable Portfast to move the interface into forwarding mode immediately after the root fails. Enter the keyword bpduguard to disable the port when it receives a BPDU. shutdown-on-vi (OPTIONAL) Enter the keyword shutdown-on-violation to hardware disable an olation interface when a BPDU is received and the port is disabled. bpdufilter (OPTIONAL) Enter the keyword bpdufilter to enable BPDU Filter to stop sending and receiving BPDUs on port enabled interfaces. priority priority Enter keyword priority followed by a value in increments of 16 as the priority. Range: 0 to 240 Default: 128 rootguard Enter the keyword rootguard to enable root guard on an RSTP port or port-channel interface. Defaults Not configured **Command Modes INTERFACE** Command Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module History

## Usage The BPDU guard option prevents the port from participating in an active STP topology in case a BPDU appears on a port unintentionally, or is mis-configured, or is subject to a DOS attack. This option places the port into an error disable state if a BPDU appears, and a message is logged so that the administrator can take corrective action.

**Note:** A port configured as an edge port on an RSTP switch, immediately transitions to the Forwarding state. Only ports connected to end-hosts should be configured as edge ports. Consider an edge port similar to a port with a spanning-tree portfast enabled.

If you do not enable the shutdown-on-violation command, BPDUs are still sent to the CPU.

You cannot enable STP root guard and loop guard at the same time on a port. For example, if you configure loop guard on a port on which root guard is already configured, the following error message is displayed:

% Error: RootGuard is configured. Cannot configure LoopGuard.

Enabling Portfast BPDU guard and loop guard at the same time on a port results in a port that remains in a blocking state and prevents traffic from flowing through it. For example, when Portfast BPDU guard and loop guard are both configured:

- If a BPDU is received from a remote device, BPDU guard places the port in an Err-Disabled blocking state and no traffic is forwarded on the port.
- If no BPDU is received from a remote device, loop guard places the port in a Loop-Inconsistent blocking state and no traffic is forwarded on the port.

#### Example Figure 28-7. spanning-tree rstp edge-port Command Example

```
FTOS(conf)#interface tengigabitethernet 4/0
FTOS(conf-if-tengig-4/0)#spanning-tree rstp edge-port
FTOS(conf-if-tengig-4/0)#show config
!
interface TenGigabitEthernet 4/0
no ip address
switchport
spanning-tree rstp edge-port
no shutdown
FTOS#
```

## tc-flush-standard

Enable the MAC address flushing after receiving every topology change notification.

Syntax	tc-flush-standard			
	To disable, use the no tc-flush-standard command.			
Defaults	Disabled			
Command Modes	CONFIGURATION			
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module			

Usage By default FTOS implements an optimized flush mechanism for RSTP. This helps in flushing MAC addresses only when necessary (and less often), allowing for faster convergence during topology changes. However, if a standards-based flush mechanism is needed, you can turn on this knob command to enable flushing MAC addresses after receiving every topology change notification.

## Security

## Commands

This chapter describes various types of security commands in the Dell Force10 operating software (FTOS), in the following sections:

- AAA Accounting Commands
- Authorization and Privilege Commands
- Authentication and Password Commands
- RADIUS Commands
- TACACS+ Commands
- SSH Server and SCP Commands
- Secure DHCP Commands

For configuration details, refer to the Security chapter in the FTOS Configuration Guide.

**Note:** Starting with FTOS version 7.2.1.0, LEAP with MSCHAP v2 supplicant is implemented.

## **AAA Accounting Commands**

AAA accounting enables tracking of services that users are accessing and the amount of network resources being consumed by those services. When you enable AAA accounting, the network server reports user activity to the terminal access controller access control system (TACACS+) security server in the form of accounting records. Each accounting record is comprised of accounting Attribute/ Value (AV) pairs and is stored on the access control server.

As with authentication and authorization, you must configure AAA accounting by defining named list of accounting methods, and then applying that list to various interfaces. The commands in this section are:

- aaa accounting
- aaa accounting suppress
- accounting
- show accounting

## aaa accounting

Enable AAA accounting and create a record for monitoring the accounting function.

## Syntax aaa accounting {system | exec | commands *level*} {*name* | default} {start-stop | wait-start | stop-only} {tacacs+}

To disable AAA Accounting, use the no aaa accounting {system | exec | command *level*} {*name* | *default*} {start-stop | wait-start | stop-only} {tacacs+} command.

#### Parameters

Parameters	system	Enter the keyword <b>system</b> to send accounting information of any other AAA configuration.
	exec	Enter the keyword <b>exec</b> to send accounting information when a user has logged in to the EXEC mode.
	commands level	Enter the keyword <b>command</b> followed by a privilege level for accounting of commands executed at that privilege level.
	name default	Enter one of the following:
		<ul> <li>For <i>name</i>, a user-defined name of a list of accounting methods</li> <li>default for the default accounting methods</li> </ul>
	start-stop	Enter the keyword <b>start-stop</b> to send a "start accounting" notice at the beginning of the requested event and a "stop accounting" notice at the end of the event.
	wait-start	Enter the keyword wait-start to ensure that the TACACS+ security server acknowledges the start notice before granting the user's process request.
	stop-only	Enter the keyword <b>stop-only</b> to instruct the TACACS+ security server to send a "stop record accounting" notice at the end of the requested user process.
	tacacs+	Enter the keyword <b>tacacs+</b> to use TACACS+ data for accounting. FTOS currently only supports TACACS+ accounting.
Defaults	none	
Command Modes	CONFIGURATION	
0		

Command History Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

Example

Figure 29-1. aaa accounting Command Examples

```
FTOS(conf)# aaa accounting exec default start-stop tacacs+
FTOS(conf)# aaa accounting command 15 default start-stop tacacs+
FTOS (config)#
```

Usage In Figure 29-1, TACACS+ accounting is used to track all usage of EXEC command and commands on privilege level 15.

Privilege level 15 is the default. If you want to track usage at privilege level 1, for example, use aaa accounting command 1.

Related Commands

enable password Changes the password for the enable command.	
login authentication Enables AAA login authentication on terminal lines.	
password	Creates a password.
tacacs-server host	Specifies a TACACS+ server host.

### aaa accounting suppress

Prevent the generation of accounting records of users with user name value of NULL. Syntax aaa accounting suppress null-username To permit accounting records to users with user name value of NULL, use the no aaa accounting suppress null-username command Defaults Accounting records are recorded for all users. Command Modes CONFIGURATION Command Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module History Usage FTOS issues accounting records for all users on the system, including users whose username string, Information due to protocol translation, is NULL. For example, a user who comes on line with the aaa authentication login method-list none command is applied. Use aaa accounting suppress command to prevent accounting records from being generated for sessions that do not have user names associated to them.

## accounting

Apply an accounting method list to terminal lines.

Syntax accounting { exec | commands level } method-list

Parameters	•

i uluillotoro	exec	Enter this keyword to apply an EXEC level accounting method list.
	commands level	Enter this keyword to apply an EXEC and CONFIGURATION level accounting method list.
	method-list	Enter a method list that you defined using the command aaa accounting exec or aaa accounting commands.
Defaults	none	
Command Modes	LINE	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information	aaa accounting	Enables AAA Accounting and create a record for monitoring the accounting function.

## show accounting

Display the active accounting sessions for each online user.

- **Syntax** show accounting
- Defaults none

Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Example	Figure 29-2. show accounting Command Example FTOS#show accounting Active accounted actions on tty2, User admin Priv 1 Task ID 1, EXEC Accounting record, 00:00:39 Elapsed, service=shell Active accounted actions on tty3, User admin Priv 1 Task ID 2, EXEC Accounting record, 00:00:26 Elapsed, service=shell
Usage	FTOS# This command steps through all active sessions and then displays the accounting records for the a

Information acco

This command steps through all active sessions and then displays the accounting records for the active account functions.

## **Authorization and Privilege Commands**

Set command line authorization and privilege levels with the following commands:

- authorization
- aaa authorization commands
- aaa authorization config-commands
- aaa authorization exec
- privilege level (CONFIGURATION mode)
- privilege level (LINE mode)

## authorization

Apply an authorization method list to terminal lines.

Syntax	authorization	{ exec	commands	level}	method-list
		( · · · ]		· · )	

Parameters	exec	Enter this keyword to apply an EXEC level authorization method list.
	commands level	Enter this keyword to apply an EXEC and CONFIGURATION level authorization method list.
	method-list	Enter a method list that you defined using the command aaa authorization exec or aaa authorization commands.
Defaults	none	
Command Modes	LINE	
Command History	Version 8.3.16.1 Intro	duced on MXL 10/40GbE Switch IO Module

Usage	
Information	

aaa authorization commands

Sets the parameters that restrict (or permit) a user's access to EXEC and CONFIGURATION level commands

aaa authorization exec

```
Sets the parameters that restrict (or permit) a user's access to EXEC level commands.
```

## aaa authorization commands

Set parameters that restrict (or permit) a user's access to EXEC and CONFIGURATION level commands

Syntax aaa authorization commands *level* { *name* | default } { local || tacacs+ || none }

To undo a configuration, use the no aaa authorization commands level {name | default} {local || tacacs+  $\parallel$  none} command.

#### Parameters

Parameters	commands level	Enter the keyword <b>commands</b> followed by the command privilege level for command level authorization.
	name	Define a name for the list of authorization methods.
	default	Define the default list of authorization methods.
	local	Use the authorization parameters on the system to perform authorization.
	tacacs+	Use the TACACS+ protocol to perform authorization.
	none	Enter this keyword to apply no authorization.
Defaults	none	
Command Modes	CONFIGURATION	
Command History	Version 8.3.16.1 Introduce	d on MXL 10/40GbE Switch IO Module

## aaa authorization config-commands

Set parameters that restrict (or permit) a user's access to EXEC level commands.

Syntax	aaa authorization config-commands		
	To disable authorization checking for CONFIGURATION level commands, use the no aaa authorization config-commands command.		
Defaults	Enabled when you configure aaa authorization commands		
Command Modes	CONFIGURATION		
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module		
Usage Information	By default, the aaa authorization commands command configures the system to check both EXEC level and CONFIGURATION level commands. To enable only EXEC-level command checking, use the no aaa authorization config-commands command.		

aaa author	ization exec Set parameters that restrict (or p	ermit) a user's access to EXEC-level commands.	
Syntax	aaa authorization exec { name   default } { local    tacacs+    if-authenticated    none }		
	To disable authorization checkir command.	g for EXEC level commands, use the no aaa authorization exec	
Parameters	name	Define a name for the list of authorization methods.	
	default	Define the default list of authorization methods.	
	local	Use the authorization parameters on the system to perform authorization.	
	tacacs+	Use the TACACS+ protocol to perform authorization.	
	none	Enter this keyword to apply no authorization.	
Defaults	none		
Command Modes	CONFIGURATION		
Command History	Version 8.3.16.1 Introduced of	on MXL 10/40GbE Switch IO Module	

## privilege level (CONFIGURATION mode)

Change the access or privilege level of one or more commands.

Syntax	privilege mode {level command   reset command}			
	To delete access t	o a level and command, use the no privilege mode level level command command.		
Parameters	mode	<ul> <li>Enter one of the following keywords as the mode for which you are controlling access:</li> <li>configure for the CONFIGURATION mode</li> <li>exec for the EXEC mode</li> <li>interface for the INTERFACE modes</li> <li>line for the LINE mode</li> <li>route-map for the ROUTE-MAP</li> <li>router for the ROUTER OSPF, ROUTER RIP, and ROUTER BGP modes.</li> </ul>		
	level level	Enter the keyword <b>level</b> followed by a number for the access level. Range: 0 to 15. Level 1 is the EXEC mode and Level 15 allows access to all CLI modes and commands.		
	reset	Enter the keyword reset to return the security level to the default setting.		
	command	Enter the command's keywords to assign the command to a certain access level. You can enter one or all of the keywords		
Defaults	Not configured.			
Command Modes	CONFIGURATIO	DN		

Command History

Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

Usage Information To define a password for the level to which you are assigning privilege or access, use the enable password command.

## privilege level (LINE mode)

Change the access level for users on the terminal lines.

Syntax	privilege level level		
	To delete access to a terminal line, use the no privilege level level command.		
Parameters	level level	Enter the keyword <b>level</b> followed by a number for the access level. Range: 0 to 15.	
		Level 1 is the EXEC mode and Level 15 allows access to all CLI modes.	
Defaults	<i>level</i> = 15		
Command Modes	LINE		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	

## **Authentication and Password Commands**

This section contains the following commands controlling management access to the system:

- aaa authentication enable
- aaa authentication login
- access-class
- enable password
- enable restricted
- enable secret
- login authentication
- password
- password-attributes
- privilege level (CONFIGURATION mode)
- privilege level (LINE mode)
- service password-encryption
- show privilege
- show users
- timeout login response
- username

## aaa authentication enable

Configure AAA Authentication method lists for user access to the EXEC privilege mode (the "Enable" access).

#### **Syntax** aaa authentication enable {default | method-list-name} method [... method2]

To return to the default setting, use the no aaa authentication enable {default | method-list-name} method [... method2] command.

Parameters

• • • • • • • • • • • • • •			
Parameters	default	Enter the keyword <b>default</b> followed by the authentication methods to use as the default sequence of methods to be used for the Enable log-in.	
		Default: default enable	
	method-list-name	Enter a text string (up to 16 characters long) to name the list of enabled authentication methods activated at log in.	
	method	Enter one of the following methods:	
		• <b>enable</b> - use the password defined by the enable password command in the CONFIGURATION mode.	
		<ul> <li>line - use the password defined by the password command in the LINE mode.</li> </ul>	
		• none - no authentication.	
		• radius - use the RADIUS server(s) configured with the radius-server host command.	
		• tacacs+ - use the TACACS+ server(s) configured with the tacacs-server host command.	
	method2	(OPTIONAL) In the event of a "no response" from the first method, FTOS applies the next configured method.	
Defaults	Use the enable password	1.	
and Modes	CONFIGURATION		
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module		
Usage nformation	By default, the Enable password is used. If you configure aaa authentication enable default, FTOS uses the methods defined for Enable access instead.		
	configured. If authenticat third method, if necessar	a the aaa authentication enable command are evaluated in the order they are tion fails using the primary method, FTOS employs the second method (or y) automatically. For example, if the TACACS+ server is reachable, but the OS proceeds to the next authentication method. The TACACS+ is incorrect,	

Rela -+ Comma

Command

Infor

enable password	Changes the password for the enable command.
login authentication	Enables AAA login authentication on terminal lines.
password	Creates a password.
radius-server host	Specifies a RADIUS server host.
tacacs-server host	Specifies a TACACS+ server host.

but the user is still authenticated by the secondary method.

## aaa authentication login

Configure AAA Authentication method lists for user access to the EXEC mode (Enable log-in).

#### Syntax aaa authentication login { method-list-name | default } method [... method4]

To return to the default setting, use the no aaa authentication login {*method-list-name* | default} command.

**Parameters** 

method-list-name	Enter a text string (up to 16 characters long) as the name of a user-configured method list that can be applied to different lines.	
default	Enter the keyword <b>default</b> to specify that the method list specified is the default method for all terminal lines.	
method	Enter one of the following methods:	
	• <b>enable</b> - use the password defined by the enable password command in the CONFIGURATION mode.	
	<ul> <li>line - use the password defined by the password command in the LINE mode.</li> </ul>	
	• local - use the user name/password defined by the in the local configuration	
	• none - no authentication.	
	• radius - use the RADIUS server(s) configured with the radius-server host command.	
	• <b>tacacs+</b> - use the TACACS+ server(s) configured with the tacacs-server host command.	
method4	(OPTIONAL) Enter up to four additional methods. In the event of a "no response" from the first method, FTOS applies the next configured method (up to four configured methods).	

**Default** Not configured (that is, no authentication is performed)

#### Command Modes CONFIGURATION

Command History

Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

Usage Information

By default, the locally configured username password is used. If you configure aaa authentication login default, FTOS uses the methods defined by this command for login instead.

Methods configured with the aaa authentication login command are evaluated in the order they are configured. If users encounter an error with the first method listed, FTOS applies the next method configured. If users fail the first method listed, no other methods are applied. The only exception is the local method. If the user's name is not listed in the local database, the next method is applied. If the correct user name/password combination are not entered, the user is not allowed access to the switch.

**Note:** If authentication fails using the primary method, FTOS employs the second method (or third method, if necessary) automatically. For example, if the TACACS+ server is reachable, but the server key is invalid, FTOS proceeds to the next authentication method. The TACACS+ is incorrect, but the user is still authenticated by the secondary method.

After configuring the aaa authentication login command, to enable the authentication scheme on terminal lines, configure the login authentication command.

Connections to the SSH server works with the following login mechanisms: local, radius, and tacacs.

Related Commands	login authentication	Applies an authentication method list to designated terminal lines.
	password	Creates a password.
	radius-server host	Specifies a RADIUS server host.
	tacacs-server host	Specifies a TACACS+ server host.

### access-class

Restrict incoming connections to a particular IP address in a defined IP access control list (ACL). **Syntax** access-class access-list-name To delete a setting, use the no access-class command. **Parameters** access-list-name Enter the name of an established IP Standard ACL. Defaults Not configured. **Command Modes** LINE Command Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module History Related line Applies an authentication method list to designated terminal lines. Commands ip access-list standard Names (or selects) a standard access list to filter based on IP address. ip access-list extended Names (or selects) an extended access list based on IP addresses or protocols.

## enable password

Change the password for the enable command.

Syntax enable password [level level] [encryption-type] password

To delete a password, use the no enable password [*encryption-type*] *password* [level *level*] command.

Parameters		
	level level	(OPTIONAL) Enter the keyword level followed by a number as the level of
		access.
		Range: 1 to 15
	encryption-type	(OPTIONAL) Enter the number $7 \text{ or } 0$ as the encryption type.
		Enter a <b>7</b> followed by a text string as the hidden password. The text string must be a password that was already encrypted by a Dell Force10 router.
		Use this parameter only with a password that you copied from the <b>show</b> running-config file of another Dell Force10 router.
	password	Enter a text string, up to 32 characters long, as the clear text password.

Defaults	No password is configured. <i>level</i> = 15			
Command Modes	CONFIGURATION			
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module			
Usage Information	Use this command to define a password for a level. Use the privilege level (CONFIGURATION mode) command to control access to command modes.			
	Passwords must meet the following criteria:			
	<ul> <li>Start with a letter, not a number.</li> <li>Passwords can have a regular expression as the password. To create a password with a regular expression in it, you must use CNTL + v prior to entering regular expression. For example, to create the password abcd]e, you type "abcd CNTL v ]e". When the password is created, you do not use the CNTL + v key combination and enter "abcd]e".</li> <li>Note: The question mark (?) and the tilde (~) are not supported characters.</li> </ul>			
Related Commands	show running-config	Views the current configuration.		
••••••••	privilege level (CONFIGURATION mode)	Controls access to command modes within the switch.		
enable rest	<b>ricted</b> Allows Dell Force10 technical support to acc	cess restricted commands.		

support

Syntax	enable restricted [encryption-type] password		
	To disallow access to restricted commands, use the no enable restricted command.		
Parameters	encryption-type	(OPTIONAL) Enter the number 7 as the encryption type. Enter 7 followed a text string as the hidden password. The text string must be a password that was already encrypted by a Dell Force10 router. Use this parameter only with a password that you copied from the show running-config file of another Dell Force10 router.	
	password	Enter a text string, up to 32 characters long, as the clear text password.	
Command Modes	Not configured.		
Command History Usage	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Information	Unity Dell Force10	Technical Support staff use this command.	

#### enable secret

Change the password for the enable command.

#### Syntax enable secret [level level] [encryption-type] password

To delete a password, use the no enable secret [encryption-type] password [level level] command.

Parameters	·			
	level level	(OPTIONAL) Enter the keyword level followed by a number as the level of		
	Range: 1 to 15			
	encryption-type	(OPTIONAL) Enter the number $5 \text{ or } 0$ as the encryption type.		
		Enter a 5 followed by a text string as the hidden password. The text string must be a password that was already encrypted by a Dell Force10 router.		
	Use this parameter only with a password that you copied from the <b>show</b> running-config file of another Dell Force10 router.			
	password	Enter a text string, up to 32 characters long, as the clear text password.		
Defaults	No password is configur	red. <i>level</i> = 15		
Command Modes	CONFIGURATION			
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module			
Usage Information	Use this command to define a password for a level. Use the privilege level (CONFIGURATION mode) command to control access to command modes.			
	Passwords must meet the following criteria:			
	• Start with a letter, n	ot a number.		
<ul> <li>Passwords can have a regular expression as the password. To create a password with a expression in it, you must use CNTL + v prior to entering regular expression. For exam create the password abcd ]e, you type abcd CNTL v]e and when the password is c do not use the CNTL + v key combination and enter abcd ]e.</li> </ul>				
	<b>Note:</b> The	question mark (?) and the tilde (~) are not supported characters.		
Related	show running config	Views the current configuration		
Commands	show running-config	Views the current configuration.		
	privilege level (CONFIG	URATION mode) Controls access to command modes.		

#### login authentication

Apply an authentication method list to designated terminal lines.

**Syntax** login authentication { *method-list-name* | default }

To use the local user/password database for login authentication, use the no login authentication command.

Parameters				
Faidilieleis	method-list-name	Enter the <i>method-list-name</i> to specify that method list, created in the aaa authentication login command, to be applied to the designated terminal line.		
	default	Enter the keyword <b>default</b> to specify that the default method list, created in the aaa authentication login command, is applied to the terminal line.		
Defaults	No authentication is po virtual terminal and au	erformed on the console lines, and local authentication is performed on the axiliary lines.		
Command Modes	LINE			
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module			
Usage Information	If you configure the aaa authentication login default command, the login authentication default command automatically is applied to all terminal lines.			
Related Commands	aaa authentication logir	n Selects login authentication methods.		
password	Specify a password for	r users on terminal lines.		
Syntax	password [encryption-type] password			
	To delete a password, use the no password password command.			
Parameters	encryption-type	<ul> <li>(OPTIONAL) Enter either zero (0) or 7 as the encryption type for the <i>password</i> entered. The options are:</li> <li>0 is the default and means the password is not encrypted and stored as clear text.</li> </ul>		
	password	<ul> <li>7 means that the password is encrypted and hidden.</li> <li>Enter a string up to 32 characters long. The first character of the <i>password</i> must be a letter.</li> <li>You cannot use spaces in the password.</li> </ul>		
Defaults	No password is config	ured.		
Command Modes	LINE			
Command History	Version 8.3.16.1 In	ntroduced on MXL 10/40GbE Switch IO Module		
Usage Information	FTOS prompts users for "line".	or these passwords when the method for authentication or authorization used is		
Related Commands	enable password	Sets the password for the enable command.		
	login authentication	Configures an authentication method to log in to the switch.		
	service password-encryption	Encrypts all passwords configured in FTOS.		

radius-server key	Configures a key for all RADIUS communications between the switch and the RADIUS host server.
tacacs-server key	Configures a key for communication between a TACACS+ server and client.
username	Establishes an authentication system based on user names.

#### password-attributes

Configure the password attributes (strong password).

**Syntax** password-attributes [min-length *number*] [max-retry *number*] [character-restriction [upper *number*] [lower *number*] [numeric *number*] [special-char *number*]]

To return to the default, use the no password-attributes [min-length *number*] [max-retry *number*] [character-restriction [upper *number*] [lower *number*] [numeric *number*] [special-char *number*]] command.

#### Parameters

min-length number	(OPTIONAL) Enter the keyword min-length followed by the number of characters.
	Range: 0 - 32 characters
max-retry number	(OPTIONAL) Enter the keyword <b>max-retry</b> followed by the number of maximum password retries.
	Range: 0 - 16
character-restriction	(OPTIONAL) Enter the keyword character-restriction to indicate a character restriction for the password.
upper number	(OPTIONAL) Enter the keyword upper followed the upper number.
	Range: 0 - 31
lower number	(OPTIONAL) Enter the keyword lower followed the lower number.
	Range: 0 - 31
numeric number	(OPTIONAL) Enter the keyword numeric followed the numeric number.
	Range: 0 - 31
special-char number	(OPTIONAL) Enter the keyword special-char followed the number of
	special characters permitted.
	Range: 0 - 31

#### Defaults none

#### Command Modes CONFIGURATION

password

Command History

Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

Related Commands

Specifies a password for users on terminal lines.

#### service password-encryption

Encrypt all passwords configured in FTOS.		Encrypt all	passwords	configured	in	FTOS.
-------------------------------------------	--	-------------	-----------	------------	----	-------

Syntax	service password-encryption		
	To store new passwords as clear text, use the no service password-encryption command.		
Defaults	Enabled.		
Command Modes	CONFIGURATION		
Command History	Version 8.3.16.1     Introduced on MXL 10/40GbE Switch IO Module		

**Caution:** Encrypting passwords with this command does not provide a high level of security. When the passwords are encrypted, you cannot return them to plain text unless you re-configure them. To remove an encrypted password, use the no password password command.

Usage Information To keep unauthorized people from viewing passwords in the switch configuration file, use the service password-encryption command. This command encrypts the clear-text passwords created for user name passwords, authentication key passwords, the privileged command password, and console and virtual terminal line access passwords.

To view passwords, use the show running-config command.

#### show privilege

 $\triangle$ 

View your access level.

Syntax	show privilege
Command Modes	EXEC
	EXEC Privilege
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Example	Figure 29-3. show privilege Command Example
	FTOS#show privilege Current privilege level is 15 FTOS#
Related Commands	privilege level (CONFIGURATION mode) Assigns access control to different command modes.

#### show users

View information on all users logged into the switch.

Syntax show users [all]

Parameters	all	(OPTIONAL) Enter the	keyword all to view all termi	nal lines in the switch.	
Command Modes	EXEC Privilege				
Command History	Version 8.3.16.1	Introduced on MXL 10	/40GbE Switch IO Module		
Example	Figure 29-4. sh	ow users Comman	d Example		
	FTOS#show user Line 0 console ( * 3 vty 1 FTOS#	User ) admin admin	Host(s) idle idle	Location 172.31.1.4	

Table 1 describes the information in the show users command example.

#### Table 1 show users Command Description

Field	Description
(untitled)	Indicates with am asterisk (*) which terminal line you are using.
Line	Displays the terminal lines currently in use.
User	Displays the user name of all users logged in.
Host(s)	Displays the terminal line status.
Location	Displays the IP address of the user.

Related Commands

Enables a user.

#### timeout login response

username

Specify how long the software will wait for login input (for example, user name and password) before timing out.

Syntax timeout login response seconds

To return to the default values, use the no timeout login response command.

Deremetere		
Parameters	seconds	Enter a number of seconds the software will wait before logging you out.
		Range:
		VTY: 1 to 30 seconds, default: 30 seconds.
		Console: 1 to 300 seconds, default: 0 seconds (no timeout).
		AUX: 1 to 300 seconds, default: 0 seconds (no timeout).

**Defaults** see above

Command Modes	LINE
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Usage Information	The software measures the period of inactivity defined in this command as the period between consecutive keystrokes. For example, if your password is "password" you can enter "p" and wait 29 seconds to enter the next letter.
username	Establish an authentication system based on user names.

Syntax username name [access-class access-list-name] [nopassword | {password | secret} [encryption-type] password] [privilege level]

If you do not want a specific user to enter a password, use the nopassword option.

To delete authentication for a user, use the no username name command.

Parameters		
Farameters	name	Enter a text string for the name of the user up to 63 characters.
	access-class access-list-name	Enter the keyword <b>access-class</b> followed by the name of a configured access control list (either an IP access control list or MAC access control list).
	nopassword	Enter the keyword <b>nopassword</b> to specify that the user should not enter a password.
	password	Enter the keyword password followed by the <i>encryption-type</i> or the password.
	secret	Enter the keyword secret followed by the <i>encryption-type</i> or the password.
	encryption-type	Enter an encryption type for the <i>password</i> that you will enter.
		• 0 directs FTOS to store the password as clear text. It is the default encryption type when using the <b>password</b> option.
		• 7 to indicate that a password encrypted using a DES hashing algorithm will follow. This encryption type is available with the <b>password</b> option only.
		• 5 to indicate that a password encrypted using an MD5 hashing algorithm will follow. This encryption type is available with the <b>secret</b> option only, and is the default encryption type for this option.
	password	Enter a string up to 32 characters long.
	privilege level	Enter the keyword <b>privilege</b> followed by a number from zero (0) to 15.
	secret	Enter the keyword <b>secret</b> followed by the encryption type.
Defaults	The default encryption option is 0.	n type for the password option is 0. The default encryption type for the secret
mmand Modes	CONFIGURATION	
Command History	Version 8.3.16.1	ntroduced on MXL 10/40GbE Switch IO Module
Usage	To view the defined us	ser names, use the show running-config user command.

Usage Information

Related password

show running-config

Specifies a password for users on terminal lines. Views the current configuration.

#### **RADIUS Commands**

The RADIUS commands supported by FTOS are:

- debug radius
- ip radius source-interface
- radius-server deadtime
- radius-server host
- radius-server key
- radius-server retransmit
- radius-server timeout

#### debug radius

View RADIUS transactions to assist with troubleshooting.

Syntax	debug radius		
	To disable debugging of RADIUS, use the no debug radius command.		
Defaults	Disabled.		
Command Modes	EXEC Privilege		
Command			
History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module		

#### ip radius source-interface

Specify an interface's IP address as the source IP address for RADIUS connections.

Syntax

ip radius source-interface interface

To delete a source interface, use the no ip radius source-interface command.

Parameters		
Farameters	interface	Enter the following keywords and slot/port or number information:
		• For Loopback interfaces, enter the keyword <b>loopback</b> followed by a number from zero (0) to 16838.
		• For the Null interface, enter the keywords null 0.
		• For a Port Channel interface, enter the keyword port-channel followed by a number:
		Range: 1 to 128
		<ul> <li>For a Ten Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.</li> </ul>
		• For a 40-Gigabit Ethernet interface, enter the keyword <b>fortyGigE</b> followed by the slot/port information.
		• For VLAN interface, enter the keyword vlan followed by a number from 1 to 4094.
Defaults	Not configured.	
Command Mode	CONFIGURATI	ON
Command		
History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

#### radius-server deadtime

Configure a time interval during which non-responsive RADIUS servers to authentication requests are skipped.

Syntax	radius-server deadtime seconds To disable this function or return to the default value, use the no radius-server deadtime command.	
Parameters	seconds	Enter a number of seconds during which non-responsive RADIUS servers are skipped.
		Range: 0 to 2147483647 seconds.
		Default: 0 seconds.
Defaults	0 seconds	
Command Modes	CONFIGURATIO	N
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

#### radius-server host

Configure a RADIUS server host.

**Syntax** radius-server host {*hostname* | *ipv4-address*} [auth-port *port-number*] [retransmit *retries*] [timeout *seconds*] [key [*encryption-type*] *key*]

Parameters

5	hostname	Enter the name of the RADIUS server host.
	ipv4-address	Enter the IPv4 address (A.B.C.D) of the RADIUS server host.

	auth-port port-number	(OPTIONAL) Enter the keyword <b>auth-port</b> followed by a number as the port number.	
		Range: zero (0) to 65535	
		The default <i>port-number</i> is 1812.	
	retransmit retries	(OPTIONAL) Enter the keyword <b>retransmit</b> followed by a number as the number of attempts. This parameter overwrites the radius-server retransmit command.	
		Range: zero (0) to 100	
		Default: 3 attempts	
	timeout seconds	(OPTIONAL) Enter the keyword <b>timeout</b> followed by the seconds the time interval the switch waits for a reply from the RADIUS server. This parameter overwrites the radius-server timeout command.	
		Range: 0 to 1000	
		Default: 5 seconds	
	key [encryption-type] key	(OPTIONAL) Enter the keyword <b>key</b> followed by an optional encryption-type and a string up to 42 characters long as the authentication key. This authentication key is used by the RADIUS host server and the RADIUS daemon operating on this switch.	
		For the encryption-type, enter either zero (0) or 7 as the encryption type for the $key$ entered. The options are:	
		• 0 is the default and means the password is not encrypted and stored as clear text.	
		• 7 means that the password is encrypted and hidden.	
		Configure this parameter last because leading spaces are ignored.	
Defaults	Not configured.		
Command Modes	CONFIGURATION		
Command History	Version 8.3.16.1 Introduced of	on MXL 10/40GbE Switch IO Module	
Usage Information	Use this command to configure any number of RADIUS server hosts for each server host that is configured. FTOS searches for the RADIUS hosts in the order they are configured in the software.		
	values are specified in the radius	eout, retransmit, and key optional parameters are applied, unless those s-server host or other commands. If you configure timeout, retransmit, those keywords when entering the no radius-server host command fault values.	
Related Commands	login authentication	Sets the database to be checked when a user logs in.	
	radius-server key	Sets a authentication key for RADIUS communications.	
	radius-server retransmit	Sets the number of times the RADIUS server will attempt to send information.	
	radius-server timeout	Sets the time interval before the RADIUS server times out.	

# radius-server key

	,	all RADIUS communications between the switch and the RADIUS host server.
Syntax	radius-server key [encryption-type] key	
	To delete a password	d, use the no radius-server key command.
Parameters	encryption-type	(OPTIONAL) Enter either zero (0) or 7 as the encryption type for the <i>key</i> entered. The options are:
		<ul><li>0 is the default and means the key is not encrypted and stored as clear text.</li><li>7 means that the key is encrypted and hidden.</li></ul>
	key	Enter a string that is the key to be exchanged between the switch and RADIUS servers. It can be up to 42 characters long.
Defaults	Not configured.	
Command Modes	CONFIGURATION	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information	The key configured	on the switch must match the key configured on the RADIUS server daemon.
	• •	in the radius-server host command is configured, the key configured with the mmand is the default key for all RADIUS communications.
Related Commands	radius-server host	Configures a RADIUS host.

#### radius-server retransmit

Configure the number of times the switch attempts to connect with the configured RADIUS host server before declaring the RADIUS host server unreachable.

Syntax radius-server retransmit retries

> To configure zero retransmit attempts, use the no radius-server retransmit command. To return to the default setting, use the radius-server retransmit 3 command.

Parameters		
	retries	Enter a number of attempts that FTOS tries to locate a RADIUS server.
		Range: zero (0) to 100.
		Default: 3 retries.
Defaults	3 retries	
Command Modes	CONFIGURATION	
Command History	Version 8.3.16.1 In	ntroduced on MXL 10/40GbE Switch IO Module

Related Commands	radius-server host	Configures a RADIUS host.
radius-serv	•••••••	ant of time the RADIUS client (the switch) waits for a RADIUS host server to reply
	to a request.	
Syntax	radius-server time	out seconds
	To return to the def	ault value, use the no radius-server timeout command.
Parameters	seconds	Enter the number of seconds between an unsuccessful attempt and the FTOS times out.
		Range: zero (0) to 1000 seconds. Default: 5 seconds.
Defaults	5 seconds	
Command Modes	CONFIGURATION	Ν
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Related Commands	radius-server host	Configures a RADIUS host.

#### **TACACS+** Commands

FTOS supports TACACS+ as an alternate method for login authentication. The following are TACACS+ commands:

- debug tacacs+
- ip tacacs source-interface
- tacacs-server host
- tacacs-server key

#### debug tacacs+

View TACACS+ transactions to assist with troubleshooting.

Syntax	debug tacacs+	
	To disable debugging of TACACS+, use the no debug tacacs+ command.	
Defaults	Disabled.	
Command Modes	EXEC Privilege	

Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
	OURCE-INTER	rface be's IP address as the source IP address for TACACS+ connections.
Syntax	ip tacacs source-	interface interface
	To delete a source	interface, use the no ip tacacs source-interface command.
Parameters	interface	<ul> <li>Enter the following keywords and slot/port or number information:</li> <li>For Loopback interfaces, enter the keyword loopback followed by a number from zero (0) to 16838.</li> <li>For the Null interface, enter the keywords null 0.</li> <li>For a Port Channel interface, enter the keyword port-channel followed by a number: Range: 1 to 128</li> <li>For a Ten Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.</li> <li>For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE followed by the slot/port information.</li> <li>For VLAN interface, enter the keyword Vlan followed by a number from 1 to 4094.</li> </ul>
Defaults	Not configured.	
Command Mode	CONFIGURATIO	Ν
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

#### tacacs-server host

Specify a TACACS+ host.

Syntax tacacs-server host { hostname | ipv4-address } [port number] [timeout seconds] [key key]

Da	rom	oto	re
- Pa	ram	iete	rs

hostname	Enter the name of the TACACS+ server host.
ipv4-address	Enter the IPv4 address (A.B.C.D) of the TACACS+ server host.
port number	(OPTIONAL) Enter the keyword <b>port</b> followed by a number as the port to be used by the TACACS+ server.
	Range: zero (0) to 65535
	Default: 49

	timeout seconds	(OPTIONAL) Enter the keyword <b>timeout</b> followed by the number of seconds the switch waits for a reply from the TACACS+ server.
		Range: 0 to 1000
		Default: 10 seconds
	key <i>key</i>	(OPTIONAL) Enter the keyword <b>key</b> followed by a string up to 42 characters long as the authentication key. This authentication key must match the key specified in the tacacs-server key for the TACACS+ daemon.
		Configure this parameter last because leading spaces are ignored.
Defaults	Not configured.	
Command Modes	CONFIGURATION	
Command History	Version 8.3.16.1 Intro	duced on MXL 10/40GbE Switch IO Module
Usage Information	To list multiple TACACS command multiple times.	+ servers to be used by the aaa authentication login command, configure this
		g the switch as a TACACS+ server, you do not need to configure the port, parameters. If you do not configure a key, the key assigned in the nd is used.
Related	aaa authentication login	Specifies the login authentication method.
Commands	tacacs-server key	Configures a TACACS+ key for the TACACS server.

## tacacs-server key

Configure a key for communication between a TACACS+ server and client.

Syntax	tacacs-server key	[encryption-type] key
	To delete a key, use	e the no tacacs-server key key command.
Parameters	encryption-type	(OPTIONAL) Enter either zero (0) or 7 as the encryption type for the <i>key</i> entered. The options are:
		<ul><li>0 is the default and means the key is not encrypted and stored as clear text.</li><li>7 means that the key is encrypted and hidden.</li></ul>
	key	Enter a text string, up to 42 characters long, as the clear text password. Leading spaces are ignored.
Defaults	Not configured.	
Command Modes	CONFIGURATION	N
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information	The key configured	l with this command must match the key configured on the TACACS+ daemon.

#### **SSH Server and SCP Commands**

FTOS supports secure shell (SSH) protocol versions 1.5 and 2.0. SSH is a protocol for secure remote login over an insecure network. SSH sessions are encrypted and use authentication. The SSH and SCP commands are:

- crypto key generate
- debug ip ssh
- ip scp topdir
- ip ssh authentication-retries
- ip ssh connection-rate-limit
- ip ssh hostbased-authentication
- ip ssh key-size
- ip ssh password-authentication
- ip ssh pub-key-file
- ip ssh rhostsfile
- ip ssh rsa-authentication (Config)
- ip ssh rsa-authentication (EXEC)
- ip ssh server
- show crypto
- show ip ssh
- show ip ssh client-pub-keys
- show ip ssh rsa-authentication
- ssh

## crypto key generate

Generate keys for the SSH server.

Parameters	rsa	Enter the keyword <b>rsa</b> followed by the key size to generate a SSHv2 RSA host keys.
		Range: 1024 to 2048
		Default: 1024
	rsa1	Enter the keyword <b>rsa1</b> followed by the key size to generate a SSHv1 RSA host keys.
		Range: 1024 to 2048
		Default: 1024
Defaults	Key size 1024	
nmand Modes	CONFIGURATION	

#### Example Figure 29-5. crypto key generate rsa1 Command Example

/ FTOS#conf	
FTOS(conf)#crypto key generate rsal	
Enter key size <1024-2048>. Default<1024>: 1024	
Host key already exists. Do you want to replace. $[y/n]$ FTOS(conf)#	:у

**Usage** The host keys are required for key-exchange by the SSH server. If the keys are not found when the server is enabled (ip ssh server enable), the keys are automatically generated.

This command requires user interaction and generates a prompt prior to overwriting any existing host keys.

Note: Only a user with superuser permissions should generate host-keys.

 Related
 ip ssh server
 Enables the SSH server.

 Show crypto
 Displays the SSH host public keys

#### debug ip ssh

Enables collecting SSH debug information.

Syntax debug ip ssh {client | server} To disable debugging, use the no debug ip ssh {client | server} command. **Parameters** client Enter the keyword client to enable collecting debug information on the client. Enter the keyword server to enable collecting debug information on the server server. Defaults Disabled on both client and server. **Command Modes** EXEC Command Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module History Usage Debug information includes details for key-exchange, authentication, and established session for each

Information

ip scp topdir

Identify a location for files used in secure copy transfer.

Syntax ip scp topdir directory

connection.

To return to the default setting, use the no ip scp topdir command.

Parameters	directory	Enter a directory name.
Defaults	The internal flas	h (flash:) is the default directory.
Command Modes	CONFIGURAT	ON
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information	To configure the	switch as a SCP server, use the ip ssh server command.
Related Commands	ip ssh server	Enables the SSH and SCP server on the switch.

#### ip ssh authentication-retries

Configure the maximum number of attempts that should be used to authenticate a user.

Syntax	ip ssh authentica	tion-retries 1-10
Parameters	1-10	Enter the number of maximum retries to authenticate a user.
		Range: 1 to 10
		Default: 3
Defaults	3	
Command Modes	CONFIGURATIC	N
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information	with the remote he	ecifies the maximum number of attempts to authenticate a user on a SSH connection ost for password authentication. SSH disconnects when the number of password uthentication-retries.

#### ip ssh connection-rate-limit

Configure the maximum number of incoming SSH connections per minute.

Syntax	ip ssh connection-rate	ssh connection-rate-limit 1-10	
Parameters	1-10	Enter the number of maximum number of incoming SSH connections allowed per minute.	
		Range: 1 to 10 per minute	
		Default: 10 per minute	
Defaults	10 per minute		
Command Modes	CONFIGURATION		

ip ssh hostbased-authentication Enable hostbased-authentication for the SSHv2 server. Syntax ip ssh hostbased-authentication enable To disable hostbased-authentication for SSHv2 server, use the no ip ssh hostbased-authentication enable command. **Parameters** enable Enter the keyword enable to enable hostbased-authentication for SSHv2 server. Defaults Disable by default **Command Modes** CONFIGURATION Command Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module History Usage If you enable this command, clients can login without a password prompt. This provides two levels of Information authentication: rhost-authentication is done with the file specified in the ip ssh rhostfile command checking client host-keys is done with the file specified in the ip ssh pub-key-file command If you execute no ip ssh rsa-authentication enable, host-based authentication is disabled. Note: Administrators must specify the two files (rhosts and pub-key-file) to configure U host-based authentication. Related ip ssh pub-key-file Public keys of trusted hosts from a file. Commands ip ssh rhostsfile Trusted hosts and users for rhost authentication.

Introduced on MXL 10/40GbE Switch IO Module

#### ip ssh key-size

Command

History

Version 8.3.16.1

Configure the size of the server-generated RSA SSHv1 key.

Syntax	ip ssh key-size <i>512-869</i>	
Parameters	512-869	Enter the key-size number for the server-generated RSA SSHv1 key.
		Range: 512 to 869
		Default: 768
Defaults	Key size 768	
Command Modes	CONFIGURATION	

Command History

Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

Usage The server-generated key is used for SSHv1 key-exchange. Information

#### ip ssh password-authentication

Enable password authentication for the SSH server.

Syntax	ip ssh password-authentication enable
	To disable password-authentication, use the no ip ssh password-authentication enable command.
Parameters	enable Enter the keyword enable to enable password-authentication for the SSH server.
Defaults	Enabled
Command Modes	CONFIGURATION
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Usage Information	With password authentication enabled, you can authenticate using local, RADIUS, or TACACS+ password fallback order as configured.

#### ip ssh pub-key-file

Specify the file to be used for host-based authentication.

Parameters	WORD	Enter the file name for the host-based authentication.
Defaults	none	
nmand Modes	CONFIGURATION	
Command History	Version 8.3.16.1 In	troduced on MXL 10/40GbE Switch IO Module
Example	Figure 29-6. ip ssl	h pub-key-file Command Example

Usage Information	This command specifies the file to be used for the host-based authentication. The file creates/ overwrites the file flash://ADMIN_DIR/ssh/knownhosts and deletes the user specified file. Even though this is a global configuration command, it does not appear in the running configuration because this command needs to be run just once.	
	The file contains the OpenSSH compatible public keys of the host for which host-based authentication is allowed. An example known host file format:	
poclab4,123.12.1.123 ssh-rsa AAAAB3NzaC1yc2EAAAABIwAAAIEAox/ QQp8xYhzOxn07yh4VGPAoUfgKoieTHO9G4sNV+ui+DWEc3cgYAcU5Lai1MU2ODrzhCwyDN ReG1o8AxLi6+S4hyEMqHzkzBFNVqHzpQc+Rs4p2urzV0F4pRKnaXdHf3Lk4D460HZRhhVrxq WIMPJi0ds= ashwani@poclab4		
	<b>Note:</b> For rhostfile and pub-key-file, the administrator must FTP the file to the chassis.	
Related Commands	show ip ssh client-pub-keys Displays the client-public keys used for the host-based authentication.	

## ip ssh rhostsfile

Specify the rhost file to be used for host-based authorization.

Syntax	ip ssh rhostsfile {	WORD}		
Parameters	WORD	Enter the rhost file name for the host-based authentication.		
Defaults	none			
Command Modes	CONFIGURATIC	N		
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module			
Example	Figure 29-7. ip	o ssh rhostsfile Command Example		
	FTOS#conf FTOS(conf)# ip FTOS(conf)#	ssh rhostsfile flash://shosts		
Usage Information	overwrites the file	ecifies the rhost file to be used for host-based authentication. This file creates/ flash:/ADMIN_DIR/ssh/shosts and deletes the user specified file. Even though this iration command, it does not appear in the running configuration because this o be run just once.		
	This file contains	hostnames and usernames, for which hosts and users, rhost-authentication can be		

allowed.

Note: For rhostfile and pub-key-file, the administrator must FTP the file to the switch.

# ip ssh rsa-authentication (Config) Enable RSA authentication for the SSHv2 server.

Syntax	ip ssh rsa-authentication enable				
	To disable RSA authentication, use the no ip ssh rsa-authentication enable command.				
Parameters	enable Enter the keyword enable to enable RSA authentication for the SSHv2 server.				
Defaults	RSA authentication is disabled by default.				
Command Modes	CONFIGURATION				
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module				
Usage Information	Enabling RSA authentication allows you to login without being prompted for a password. In addition, the OpenSSH compatible SSHv2 RSA public key must be added to the list of authorized keys (ip ssh rsa-authentication my-authorized-keys <i>device://filename</i> command).				
Related Commands	ip ssh rsa-authentication (EXEC) Adds keys for RSA authentication.				

#### ip ssh rsa-authentication (EXEC)

Add keys for the RSA authentication.

authorized-keys-username

Syntax	ip ssh rsa-authentication {my-authorized-keys WORD}			
	To delete the authorized keys, use th	e no ip ssh rsa-authentication {my-authorized-keys} command.		
Parameters	my-authorized-keys WORD	Enter the keyword <b>my-authorized-keys</b> followed by the file name of the RSA authorized-keys.		
Defaults	none			
Command Modes	EXEC			
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module			
Usage Information				
	<b>Note:</b> The no form of this	command deletes the file flash://ADMIN_DIR/ssh/		

Related Commands	show ip ssh rsa-authentication	Displays RSA authorized keys.
	ip ssh rsa-authentication (Config)	Enables RSA authentication.

#### ip ssh server

Configure an SSH server.

**Syntax** ip ssh server {enable | port port-number} [version {1 | 2}] To disable SSH server functions, use the no ip ssh server enable command. **Parameters** enable Enter the key word enable to start the SSH server. port port-number (OPTIONAL) Enter the keyword port followed by the port number of the listening port of the SSH server. Range: 1 to 65535 Default: 22 [version {1 | 2}] (OPTIONAL) Enter the keyword version followed by the SSH version 1 or 2 to specify only SSHv1 or SSHv2. Defaults Default listening port is 22. **Command Modes** CONFIGURATION Command Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module History Usage This command enables the SSH server and begins listening on a port. If a port is not specified, listening Information is on SSH default port 22. Example Figure 29-8. ip ssh server port Command Example , FTOS# conf FTOS(conf)# ip ssh server port 45 FTOS(conf) # ip ssh server enable FTOS# Related show ip ssh Displays the ssh information Commands

#### show crypto

Display the public part of the SSH host-keys.

Syntax

show crypto key mypubkey {rsa | rsa1}

Parameters

Key Enter the keyword key to display the host public key.	
mypubkey	Enter the keyword mypubkey to display the host public key.

	rsa Enter the keyword rsa to display the host SSHv2 RSA public key.					
	rsa1 Enter the keyword rsa1 to display the host SSHv1 RSA public key.					
Defaults	none					
Command Modes	EXEC					
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module					
Example	Figure 29-9. show crypto Command Examples					
	FTOS#show crypto key mypubkey rsa ssh-rsa AAAB3NzaClyc2EAAABIwAAAIEAtzkZME/ e8V8smnXR22EJGQhCMkEOkuisa+OILVoMYU1ZKGfj0W5BPCSvF/ x5ifqYFFwUzJNOcsJK7vjSsnmMhChF2YSvXlvTJ6h971FJAQlOsgd0ycpocsF+DNLKfJnx7SAjhakFQMwG g/g78ZkDT3Ydr8KKjfSI4Bg/WS8B740=					
	FTOS#show crypto key mypubkey rsal 1024 35 1310600154808733989532575153972496578500722064442949636740809356830889610203172266 7988956754966765265006379622189779927609278523638839223055081819166009928132616408 6643457746022192295189039929663345791173742247431553750501676929660273790601494434 050000015179864425629613385774919236081771341059533760063913083 FTOS#					
Usage Information	This command is useful if the remote SSH client implements Strict Host Key Checking. You can copy the host key to your list of known hosts.					
Related Commands	crypto key generate Generates SSH keys.					
show ip ss	Sh Display information about established SSH sessions.					
Syntax	show ip ssh					
Command Modes	EXEC					
	EXEC Privilege					
Example	Figure 29-10. show ip ssh Command Example					
	FTOS#show ip ssh2#show ip sshSSH serverSSH server version: v1 and v2.Password Authentication: enabled.Hostbased Authentication: disabled.RSAAuthentication: disabled.FTOS#					

Related Commands

ea ds	ip ssh server	Configures an SSH server.
	show ip ssh client-pub-keys	Displays the client-public keys.

Syntax	show ip ssh client-pub-keys				
Defaults	none				
Command Modes	EXEC				
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module				
Example	<pre>Figure 29-11. show ip ssh client-pub-keys Command Example FTOS#show ip ssh client-pub-keys poclab4,123.12.1.123 ssh-rsa AAAAB3NzaClyc2EAAAABIwAAAIEAox/ QQp8xYhz0xn07yh4VGPAoUfgKoieTH09G4sNV+ui+DWEc3cgYAcU5Lai1MU2ODrzhCwyDNp05tKBU3tReG1 o8AxLi6+S4hyEMqHzkzBFNVqHzpQc+Rs4p2urzV0F4pRKnaXdHf3Lk4D460HZRhhVrxqeNxPDpEnWIMPJi0 ds= ashwani@poclab4 FTOS#</pre>				
Usage Information	This command displays the contents of the file flash://ADMIN_DIRssh/knownhosts				
Related Commands	ip ssh pub-key-file Configures the file name for the host-based authentication				

#### show ip ssh rsa-authentication

Display the authorized-keys for the RSA authentication.

Syntax	show ip ssh rsa-authentication {my-authorized-keys}			
Parameters	my-authorized-keys Display the RSA authorized keys.			
Defaults	none			
Command Modes	EXEC			
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module			
Example	Figure 29-12. show ip ssh rsa-authentication Command Example			
	FTOS#show ip ssh rsa-authentication my-authorized-keys ssh-rsa AAAAB3NzaClyc2EAAAABIwAAAIEAyB17l4gFp4r2DRHIvMc1VZd0Sg5GQxRV1y1X1JOMeO6Nd0WuYyzrQMM 4qJAoBwtneOXfLBcHF3V2hcMIqaZN+CRCnw/ zCMlnCf0+qVTd1oofsea5r09kS0xTp0CNfHXZ3NuGCq90v33m9+U9tMwhS8vy8AVxdH4x4km3c3t5Jvc= freedom@poclab4 FTOS#			

Usage Information	This command display	vs the contents	of the file flash:/ADMIN_DIR/ssh/authorized-keys.username.		
Related Commands	ip ssh rsa-authenticatio	n (Config)	Configures the RSA authorized keys.		
ssh					
	Open an SSH connection specifying the hostname, username, port number and version of the SSH client.				
			tbound SSH sessions using IPv4 addressing. Inbound SSH gh the management interface as well as through a physical Layer 3		
Syntax	ssh { <i>hostname</i>   <i>ipv4</i>	address} [-l ı	username   -p port-number   -v {1   2}]		
Parameters	hostname	(OPTIONA	AL) Enter the IP address or the hostname of the remote device.		
	ipv4 address	(OPTIONA	AL) Enter the IP address in dotted decimal format A.B.C.D.		
	-l username	(OPTIONA session.	AL) Enter the keyword -l followed by the user name used in this SSH		
		Default: Th	he user name of the user associated with the terminal.		
	-p port-number	(OPTIONA Range: 1 to Default: 22			
	-v {1   2}	(OPTIONA	AL) Enter the keyword -V followed by the SSH version 1 or 2. he version from the protocol negotiation		
Defaults	As above.				
Command Modes	EXEC Privilege				
Command History	Version 8.3.16.1 In	ntroduced on M2	XL 10/40GbE Switch IO Module		
Example	Figure 29-13. ssh				
	FTOS#ssh 123.12.1	.123 -1 ashwa	ani -p 5005 -v 2		

#### **Secure DHCP Commands**

The dynamic host configuration protocol (DHCP) as defined by RFC 2131 provides no authentication or security mechanisms. Secure DHCP is a suite of features that protects networks that use dynamic address allocation from spoofing and attacks. The DHCP commands are:

- clear ip dhcp snooping
- ip dhcp relay
- ip dhcp snooping
- ip dhcp snooping database
- ip dhcp snooping binding
- ip dhcp snooping database renew
- ip dhcp snooping trust
- ip dhcp source-address-validation
- ip dhcp snooping vlan
- show ip dhcp snooping

## clear ip dhcp snooping

Clear the DHCP binding table.

Syntax	clear ip dhcp snooping binding		
Command Modes	EXEC Privilege		
Default	none		
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module		
Related Commands	show ip dhcp snooping Displays the contents of the DHCP binding table.		

#### ip dhcp relay

Enable Option 82.

Syntax ip dhcp relay information-option [trust-downstream]

Parameters	trust-downstream	Configure the system to trust Option 82 when it is received from the previous-hop router.
Command Modes	CONFIGURATION	N
Default	Disabled	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

# ip dhcp snooping Enable DHCP Snooping globally.

Syntax	[no] ip dhcp snooping
Command Modes	CONFIGURATION
Default	Disabled
Command History Usage Information	Version 8.3.16.1       Introduced on MXL 10/40GbE Switch IO Module         When enabled, no learning takes place until snooping is enabled on a VLAN. After disabling DHCP Snooping, the binding table is deleted, and Option 82, IP Source Guard, and Dynamic ARP Inspection are disabled.
Related Commands	ip dhcp snooping vlan Enables DHCP Snooping on one or more VLANs.

#### ip dhcp snooping database

Delay writing the binding table for a specified time.

Syntax	ip dhcp snooping database write-delay <i>minutes</i>		
Parameters	minutes Range: 5 to 21600		
Command Modes	CONFIGURATION		
Default	none		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	

#### ip dhcp snooping binding

Create a static entry in the DHCP binding table.

Syntax	[no] ip dhcp snooping binding mac <i>address</i> vlan-id <i>vlan-id</i> ip <i>ip-address</i> interface <i>type slot/por</i> lease <i>number</i>	
Parameters	mac address	Enter the keyword <b>mac</b> followed by the MAC address of the host to which the server is leasing the IP address.
	vlan-id <i>vlan-id</i>	Enter the keyword vlan-id followed by the VLAN to which the host belongs.
		Range: 2 to 4094
	ip <i>ip-address</i>	Enter the keyword ip followed by the IP address that the server is leasing.

	interface type	Enter the keyword <b>interface</b> followed by the type of interface to which the host is connected.
		• For a Ten Gigabit Ethernet interface, enter the keyword tengigabitethernet.
		• For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE.
	slot/port	Enter the slot and port number of the interface.
	lease time	Enter the keyword <b>lease</b> followed by the amount of time the IP address will be leased.
		Range: 1-4294967295
Command Modes	EXEC	
	EXEC Privilege	
Default	none	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Related Commands	show ip dhcp snoop	Displays the contents of the DHCP binding table.

#### ip dhcp snooping database renew

Renew the binding table.

Syntax ip dhcp snooping database renew

Command Modes EXEC

EXEC Privilege

Default none

Command History

Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

#### ip dhcp snooping trust

Configure an interface as trusted.

Syntax	[no] ip dhcp snooping trust
Command Modes	INTERFACE
Default	Untrusted
Commond	

Command History

Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

# ip dhcp source-address-validation Enable IP Source Guard.

Syntax	[no] ip dhcp source-address-validation
Command Modes	INTERFACE
Default	Disabled
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

# ip dhcp snooping vlan Enable DHCP Snooping on one or more VLANs.

Syntax	[no] ip dhcp snooping vlan name	
Parameters	name Enter the name of	f a VLAN on which to enable DHCP Snooping.
Command Modes	CONFIGURATION	
Default	Disabled	
Command History	Version 8.3.16.1 Introduced on MXL 1	0/40GbE Switch IO Module
Usage Information	When enabled, the system begins creating that learning only happens if there is a true	g entries in the binding table for the specified VLAN(s). Note asted port in the VLAN.
Related Commands	ip dhcp snooping trust Configures	an interface as trusted.

## show ip dhcp snooping

Display the contents of the DHCP binding table.

Syntax	show ip dhcp snooping binding
Command Modes	EXEC
	EXEC Privilege
Default	none
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Related Commands	clear ip dhcp snooping Clears the contents of the DHCP binding table.

# 30

# sFlow

#### **Overview**

The Dell Force10 operating software (FTOS) sFlow monitoring system includes an sFlow agent and an sFlow collector.

- The sFlow agent combines the flow samples and interface counters into sFlow datagrams and forwards them to the sFlow collector.
- The sFlow collector analyses the sFlow datagrams received from the different devices and produces a network-wide view of traffic flows.

#### **Important Points to Remember**

- FTOS exports all sFlow packets to the sFlow collector. A small sampling rate can equate to a large number of exported packets. A backoff mechanism is automatically applied to reduce this amount. Some sampled packets may be dropped when the exported packet rate is high and the backoff mechanism is about to or is starting to take effect. The dropEvent counter, in the sFlow packet, is always zero.
- sFlow sampling is done on a per-port basis.
- Community list and local preference fields are not filled up in the extended gateway element in the sFlow datagram.
- The 802.1P source priority field is not filled up in the extended switch element in the sFlow datagram.
- Only Destination and Destination Peer AS numbers are packed in the dst-as-path field in the extended gateway element.
- If the packet being sampled is redirected using policy-based routing (PBR), the sFlow datagram may contain incorrect extended gateway/router information.
- The source virtual local area network (VLAN) field in the extended switch element is not packed in case of a routed packet.
- The destination VLAN field in the extended switch element is not packed in case of a multicast packet.
- The maximum number of packets that can be sampled and processed per second is:
  - 7500 packets when no extended information packing is enabled
  - 7500 packets when only extended-switch information packing is enabled (refer to sflow extended-switch enable)
  - 1600 packets when extended-router and/or extended-gateway information packing is enabled

#### Commands

The sFlow commands are:

- sflow collector
- sflow enable (Global)
- sflow enable (Interface)
- sflow extended-switch enable
- sflow polling-interval (Global)
- sflow polling-interval (Interface)
- sflow sample-rate (Global)
- sflow sample-rate (Interface)
- show sflow
- show sflow stack-unit

#### sflow collector

Configure a collector device to which sFlow datagrams are forwarded.

## **Syntax** sflow collector {*ipv4-address*} agent-addr {*ipv4-address*} [*number*[max-datagram-size *number*]] | [max-datagram-size *number*]

To delete a configured collector, use the no sflow collector {*ipv4-address*} agent-addr {*ipv4-address*} [*number* [max-datagram-size *number*] | [max-datagram-size *number*] command.

Parameters		
Farameters	sflow collector ipv4-address	Enter the IPv4 (A.B.C.D) of the sFlow collector device.
	agent-addr ipv4-address	Enter the IPv4 (A.B.C.D) of the sFlow agent in the router.
	number	(OPTIONAL) Enter the UDP port number (User Datagram Protocol).
		Range: 0 to 65535
		Default: 6343
	max-datagram-size number	(OPTIONAL) Enter the keyword max-datagram-size followed by the size number in bytes.
		Range: 400 to 1500
		Default: 1400
Defaults	Not configured	
Command Modes	CONFIGURATION	
Command History	Version 8.3.16.1 Introduced on M	XL 10/40GbE Switch IO Module
Usage Information	You can configure up to two sFlow c are sent to both.	collectors (IPv4). If two collectors are configured, traffic samples
	The sFlow agent address is carried in the sFlow agent.	a field in SFlow packets and is used by the collector to identify

С

As part of the sFlow-MIB, if the simple network management protocol (SNMP) request originates from a configured collector, FTOS returns the corresponding configured agent IP in management information base (MIB) requests. FTOS checks to ensure that two entries are not configured for the same collector IP with a different agent IP. Should that happen, FTOS generates the following error: %Error: Different agent-addr attempted for an existing collector

## sflow enable (Global)

Enable sFlow globally.

Syntax	sflow enable
	To disable sFlow, use the no sflow enable command.
Defaults	sFlow is disabled by default
Command Modes	CONFIGURATION
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Usage Information	In addition to this command, sFlow needs to be enabled on individual interfaces where you want sFlow sampling.
Related Commands	sflow enable (Interface) Enables sFlow on interfaces.

#### sflow enable (Interface)

Enable sFlow on Interfaces.

Syntax	sflow enable
	To disable sFlow, use the no sflow enable command.
Defaults	sFlow is disabled by default on all interfaces
Command Modes	INTERFACE
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Usage Information	When you enable sFlow on an interface, flow sampling is done on any traffic going out of the interface.
	<b>Note:</b> After a physical port is a member of a LAG, it inherits the sFlow configuration from the LAG port.
Related Commands	sflow enable (Global) Turns sFlow on globally

#### sflow extended-switch enable

Enable packing information on a switch only.

To disable packing information, use the no sflow extended-switch [enable] command.

Parameters	enable	Enter the keyword <b>enable</b> to enable global extended information.	
Defaults	Disabled		
ommand Modes	CONFIGURATION	1	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Usage Information	FTOS version 7.8.1.0 and later enhances the sflow implementation for real time traffic analysis to provide extended gateway information in cases where the destination IP addresses are learned by different routing protocols and for cases where the destination is reachable over ECMP.		
Related	show sflow	Displays the sFlow configuration	

## sflow polling-interval (Global)

Set the sFlow polling interval at a global level.

Syntax	sflow polling-interval interval value		
	To return to the default, use the no sflow polling-interval interval command.		
Parameters	<i>interval value</i> Enter the interval value in seconds.	_	
	Range: 15 to 86400 seconds		
	Default: 20 seconds		
Defaults	20 seconds		
Command Modes	CONFIGURATION		
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module		
Usage Information	The polling interval for an interface is the maximum number of seconds between successive samples of counters to be sent to the collector. This command changes the global default counter polling (20 seconds) interval. You can configure an interface to use a different polling interval.		
Related Commands	sflow polling-interval (Interface) Sets the polling interval for an interface		

#### **sflow polling-interval (Interface)** Set the sFlow polling interval at an interface (overrides the global-level setting.)

	1 0		
Syntax	sflow polling-interval interval value		
	To return to the default	t, use the no sflow polling-interval interval command.	
Parameters	interval value	Enter the interval value in seconds.	
		Range: 15 to 86400 seconds	
		Default: The global counter polling interval	
Defaults	The same value as the o	current global default counter polling interval.	
Command Modes	INTERFACE		
Command History	Version 8.3.16.1 In	ntroduced on MXL 10/40GbE Switch IO Module	
Usage Information	This command sets the	e counter polling interval for an interface.	
Related Commands	sflow polling-interval (C	Global) Globally set the polling interval	

## sflow sample-rate (Global)

Change the global default sampling rate.

Syntax	sflow sample-rate value			
	To return to the default sampling rate, use the no sflow sample-rate command.			
Parameters	value	Enter the sampling rate value. Range: 256 to 8388608 packets Enter values in powers of 2 only, for example 4096, 8192, 16384 etc. Default: 32768 packets		
Defaults	32768			
Command Modes	CONFIGURATION			
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module			
Usage Information	Sample-rate is the average number of packets skipped before the sample is taken. This command changes the global default sampling rate. You can configure an interface to use a different sampling rate than the global sampling rate. If the value entered is not a correct power of 2, the command generates an error message with the previous and next power of 2 value. Select one of these two packet numbers and re-enter the command.			

Related Commands	sflow sample-rate (Interface) Changes the Interface sampling rate.				
Commands					
sflow samp	Die-rate (Interface) Change the Interface default sampling rate.				
Syntax	sflow sample-rate value				
	To return to the default sampling rate, use the no sflow sample-rate command.				
Parameters	valueEnter the sampling rate value.Range:256 to 8388608 packets				
	Enter values in powers of 2 only, for example 4096, 8192, 16384 etc. Default: 32768 packets				
Defaults	The global default sampling				
Command Modes	CONFIGURATION				
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module				
Usage Information	This command changes the sampling rate for an interface. By default, the sampling rate of an interface is set to the same value as the current global default sampling rate. If the value entered is not a correct power of 2, the command generates an error message with the previous and next power-of-2 value. Select one of these two number and re-enter the command.				
Related Commands	sflow sample-rate (Global) Changes the sampling rate globally.				
show sflow					

Display the current sFlow configuration

Syntax	show sflow [inte	rface]
Parameters	interface	(OPTIONAL) Enter the following keywords and slot/port or number information:
		• For a 40-Gigabit Ethernet interface, enter the keyword FortyGigabitEthernet followed by the slot/port information.
		• For a Loopback interface, enter the keyword <b>loopback</b> followed by a number from 0 to 16383.
		• For a 10-Gigabit Ethernet interface, enter the keyword <b>TenGigabitEthernet</b> followed by the slot/port information.
Command Modes	EXEC	
	EXEC Privilege	

kample	Figure 30-1. show sflow Command Example			
	FTOS##show sflow			
	sFlow services are disabled			
	Global default sampling rate: 32768			
	Global default counter polling interval: 20 Global extended information enabled: none			
	0 collectors configured			
	0 UDP packets exported			
	0 UDP packets dropped			
	0 sFlow samples collected			
	FTOS#			
	F105#			

Usage Information The dropEvent counter (*sFlow samples dropped due to sub-sampling*) shown in Figure 30-1 always displays a value of zero.

#### show sflow stack-unit

Display the sFlow information on a stack unit.

	unit number	(OPTIONAL) Enter a unit number to view information on the stack unit in that slot.
		Range: 0 to 5.
mand Modes	EXEC

# Simple Network Management Protocol (SNMP) and Syslog

#### **Overview**

This chapter contains commands to configure and monitor the simple network management protocol (SNMP) v1/v2/v3 and Syslog. The chapter contains the following sections:

- SNMP Commands
- Syslog Commands

#### **SNMP Commands**

The SNMP commands available in the Dell Force10 operating software (FTOS) are:

- show snmp
- show snmp engineID
- show snmp group
- show snmp user
- snmp ifmib ifalias long
- snmp-server community
- snmp-server contact
- snmp-server enable traps
- snmp-server engineID
- snmp-server group
- snmp-server host
- snmp-server location
- snmp-server packetsize
- snmp-server trap-source
- snmp-server user
- snmp-server view
- snmp trap link-status

The SNMP is used to communicate management information between the network management stations and the agents in the network elements. FTOS supports SNMP versions 1, 2c, and 3, supporting both read-only and read-write modes. FTOS sends SNMP traps, which are messages informing an SNMP management system about the network. FTOS supports up to 16 SNMP trap receivers.

#### **Important Points to Remember**

- Typically, 5-second timeout and 3-second retry values on an SNMP server are sufficient for both local area network (LAN) and wide area network (WAN) applications. If you experience a timeout with these values, the recommended best practice on Dell Force10 switches (to accommodate their high port density) is to increase the timeout and retry values on your SNMP server to the following:
  - SNMP Timeout—greater than 3 seconds
  - SNMP Retry count—greater than 2 seconds
- If you are using access control lists (ACLs) in SNMP v3 configuration, group ACL overrides user ACL if the user is part of that group.
- SNMP operations are not supported on a virtual LAN (VLAN).

#### show snmp

Display the status of SNMP network elements.

and Modes EX	XEC
E	XEC Privilege
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Example Fi	igure 31-1. show snmp Command Example
	<pre>FTOS#show snmp 32685 SNMP packets input 0 Bad SNMP version errors 0 Unknown community name 0 Illegal operation for community name supplied 0 Encoding errors 96988 Number of requested variables 0 Number of altered variables 31681 Get-request PDUs 968 Get-next PDUs 0 Set-request PDUs 61727 SNMP packets output 0 Too big errors (Maximum packet size 1500) 9 No such name errors 0 Bad values errors 0 General errors 32649 Response PDUs 29078 Trap PDUs FTOS#</pre>

#### show snmp engineID

Display the identification of the local SNMP engine and all remote engines that are configured on the router.

Syntax show snmp engineID

command Modes	EXEC			
	EXEC Privilege			
Command History	Version 8.3.16.1 Introduced	on MXL 10/40GbE Switch I	O Module	
Example	Figure 31-2. show snmp	engineID Command E	kample	
	FTOS#show snmp engineID Local SNMP engineID: 0000	0178802000001E80214A8		
	Remote Engine ID	IP-addr	Port

	80001F88043938373635	172.31.1.3	5008	
	FTOS#			)
Related				
Commands	snmp-server engineID	Configures local and ren	mote SNMP engines	on the router.

# show snmp group

Display the group name, security model, status, and storage type of each group.

Syntax	show snmp group
Command Modes	EXEC EXEC Privilege
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Usage Information	Figure 31-3 displays a group named ngroup. The ngroup has a security model of version 3 (v3), with authentication (auth), the read and notify name is nview with no write view name specified, and the row status is active.
Example	Figure 31-3. show snmp group Command Example
	groupname: ngroup security model: v3 auth readview : nview writeview: no write view specified notifyview: nview row status: active
	FTOS#
Related Commands	snmp-server group     Configures an SNMP server group

## show snmp user

Display the information configured on each SNMP user name.

Syntax show snmp user

ommand Modes	EXEC	
	EXEC Privilege	
Example	Figure 31-4. show snmp user Command Example	
	FTOS#show snmp user User name: vlv2creadu Engine ID: 0000178B02000001E80214A8 storage-type: nonvolatile active Authentication Protocol: None Privacy Protocol: None	
	FTOS#	
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module	

#### shimp limib lialias long

Display the entire description string through the Interface MIB, which would be truncated otherwise to 63 characters.

Syntax	snmp ifmib ifalias long			
Defaults	Interface description truncated beyond 63 characters			
Command Modes	CONFIGURATION			
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module			
Example Figure 31-5. snmp ifmib ifalias long Command Example          !command run on host connected to switch:!         > snmpwalk -c public 10.10.10.130 .1.3.6.1.2.1.31   grep -i alias   mor         IF-MIB::ifAlias.134530304 = STRING: This is a port connected to Router2.         port connected to         IF-MIB::ifAlias.134792448 = STRING:         !command run on Dell Force10 switch:!         FTOS#snmp ifmib ifalias long         !command run on server connected to switch:!         > snmpwalk -c public 10.10.130 .1.3.6.1.2.1.31   grep -i alias   mor         IF-MIB::ifAlias.134530304 = STRING:				

#### snmp-server community

Configure a new community string access for SNMPv1, v2, and v3.

Syntax snmp-server community community-name {ro | rw} [security-name name] [access-list-name]

> To remove access to a community, use the no snmp-server community community-string {ro | rw} [security-name name] [access-list-name] command.

community-name	Enter a text string (up to 20 characters long) to act as a password for SNMP.	
ro	Enter the keyword <b>ro</b> to specify read-only permission.	
rw	Enter the keyword <b>rw</b> to specify read-write permission.	
security-name name	(OPTIONAL) Enter the keyword <b>security-name</b> followed by the security name as defined by the community MIB.	
access-list-name	(OPTIONAL) Enter a standard IPv4 access list name (a string up to 16 characters long).	
none		
CONFIGURATION		
Version 8.3.16.1 Introduc	ed on MXL 10/40GbE Switch IO Module	
Figure 31-6 configures a community named guest that is mapped to the security named guestuser with Read Only (ro) permissions.		
Figure 31-6. snmp-serv	ver community Command Example	
	ro rw security-name name access-list-name none CONFIGURATION Version 8.3.16.1 Introduc Figure 31-6 configures a cor with Read Only (ro) permiss	

```
FTOS#config
FTOS(conf)# snmp-server community guest ro
FTOS(conf)# snmp-server community guest ro security-name guestuser
FTOS(conf)#
```

The security-name parameter maps the community string to an SNMPv3 user/security name as defined by the community MIB.

If a community string is configured without a security-name (for example, snmp-server community public ro), the community is mapped to a default security-name/group:

- v1v2creadu / v1v2creadg maps to a community with ro permissions
- v1v2cwriteu/ v1v2cwriteg maps to a community with rw permissions

This command is indexed by the community-name parameter.

If you do not configure the snmp-server community command, you cannot query SNMP data. Only Standard IPv4 ACL is supported in the optional *access-list-name*.

The command options security-name and *access-list-name* are recursive. In other words, each option can, in turn, accept any of the three options as a sub-option, and each of those sub-options can accept any of the three sub-options as a sub-option, and so forth. Figure 31-7 shows the creation of a standard IPv4 ACL called "snmp-ro-acl" and then assigning it to the SNMP community "guest":

#### Example Figure 31-7. snmp-server community Command Example

```
FTOS(conf)# ip access-list standard snmp-ro-acl
FTOS(conf-std-nacl)#seq 5 permit host 10.10.10.224
FTOS(conf-std-nacl)#seq 10 deny any count
!
FTOS(conf)#snmp-server community guest ro snmp-ro-acl
FTOS(conf)#
```

Related			
Commands	ip access-list standa	ard	Names (or selects) a standard access list to filter based on IP address.

## snmp-server enable traps

Enable SNMP traps.

**Syntax** snmp-server enable traps [notification-type] [notification-option]

To disable traps, use the no snmp-server enable traps [notification-type] [notification-option] command.

Parameters			
	notification-type	Enter the type of notification from the list below:	
		• ecfm — Notification of changes to ECFM	
		entity — Notification of changes to entity	
		envmon—Device notification when an environmental threshold is     exceeded	
		eoam — Notification of changes to the EOAM state	
		• ets — Notification of changes to the ets traps	
		• fips — Notification of changes to the FIP snooping state	
		lacp — Notification of changes to the LACP state	
		pfc — Notification of changes to pfc traps	
		snmp — Notification of RFC 1157 traps.	
		• stp — Notification of state change in Spanning Tree protocol (RFC 1493)	
		• vrrp—Notification of state change in a VRRP group	
		<ul> <li>xstp—Notification of state change in MSTP (802.1s), RSTP (802.1w), and PVST+</li> </ul>	
	notification-option	For the <b>envmon</b> notification-type, enter one of the following optional parameters:	
		• temperature	
		For the snmp notification-type, enter one of the following optional parameters:	
		• authentication	
		• coldstart	
		• linkdown	
		• linkup	
Defaults	Not enabled.		
	CONFICUENTION		
Command Modes	CONFIGURATION		
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module		
Usage Information	FTOS supports up to 16	SNMP trap receivers.	
		this command, no traps controlled by this command are sent. If you do not one and <i>notification-option</i> , all traps are enabled.	
Related Commands	snmp-server community	Enables SNMP and set the community string.	

#### snmp-server engineID

Configure name for both the local and remote SNMP engines on the router.

**Syntax** snmp-server engineID [local *engineID*] [remote *ip-address* udp-port *port-number engineID*]

To return to the default, use the no snmp-server engineID [local *engineID*] [remote *ip-address* udp-port *port-number engineID*] command.

Parameters		
Parameters	local engineID	Enter the keyword <b>local</b> followed by the engine ID number that identifies the copy of the SNMP on the <i>local</i> device.
		Format (as specified in RFC 3411): 12 octets.
		• The first 4 octets are set to the private enterprise number.
		• The remaining 8 octets are the MAC address of the chassis.
	remote ip-address	Enter the keyword <b>remote</b> followed by the IP address that identifies the copy of the SNMP on the <i>remote</i> device.
	udp-port <i>port-number</i> engineID	Enter the keyword <b>udp-port</b> followed by the UDP (User Datagram Protocol) port number on the remote device.
		Range: 0 to 65535
		Default: 162
Defaults	As above	
Command Modes	CONFIGURATION	
Command History	Version 8.3.16.1 Introduc	ced on MXL 10/40GbE Switch IO Module
Usage Information	the command line) is conver (SHA) security digest. This command line password is t	NMP Engine ID has important side effects. A user's password (entered on rted to a message digest 5 algorithm (MD5) or secure hash algorithm digest is based on both the password and the local Engine ID. The hen destroyed, as required by RFC 2274. Because of this deletion, if the changes, the security digests of SNMPv3 users will be invalid, and the igured.
	For the remote Engine ID, the to either overwrite or remov	he host IP and UDP port are the indexes to the command that are matched be the configuration.
Related Commands	show snmp engineID	Displays SNMP engine and all remote engines that are configured on the
		router.
	show running-config snmp	Displays the SNMP running configuration.

#### snmp-server group

Configure a new SNMP group or a table that maps SNMP users to SNMP views.

**Syntax** snmp-server group [group\_name {1 | 2c | 3 {auth | noauth | priv}}] [read name] [write name] [notify name] [access-list-name | access-list-name]]

To remove a specified group, use the no snmp-server group [*group\_name* {v1 | v2c | v3 {auth | noauth | priv}}] [read *name*] [write *name*] [notify *name*] [access-list-name | access-list-name]] command.

Parameters	aroup pomo	Enter a taxt string (up to 20 abaractors long) as the name of the group
	group_name	Enter a text string (up to 20 characters long) as the name of the group. Defaults: The following groups are created for mapping to read/write community/security-names.
		<ul> <li>v1v2creadg — maps to a community/security-name with ro permissions</li> </ul>
		<ul> <li>lv2cwriteg — maps to a community/security-name rw permissions</li> </ul>
	1   2c   3	(OPTIONAL) Enter the security model version number (1, 2c, or 3).
		• 1 is the least secure version
		• 3 is the most secure of the security modes.
		• 2c allows transmission of informs and counter 64, which allows for integers twice the width of what is normally allowed.
		Default: 1
	auth	(OPTIONAL) Enter the keyword <b>auth</b> to specify authentication of a packet without encryption.
	noauth	(OPTIONAL) Enter the keyword <b>noauth</b> to specify no authentication of a packet.
	priv	(OPTIONAL) Enter the keyword priv to specify both authentication and then scrambling of the packet.
	read name	(OPTIONAL) Enter the keyword <b>read</b> followed by a name (a string of up to 20 characters long) as the read view name.
		Default: GlobalView is set by default and is assumed to be every object belonging to the Internet (1.3.6.1) OID space.
	write name	(OPTIONAL) Enter the keyword <b>Write</b> followed by a name (a string of up to 20 characters long) as the write view name.
	notify name	(OPTIONAL) Enter the keyword <b>notify</b> followed by a name (a string of up to 20 characters long) as the notify view name.
	access-list-name	(OPTIONAL) Enter the standard IPv4 access list name (a string up to 16 characters long).
Defaults	As defined above	
Command Modes	CONFIGURATION	
Command History	Version 8.3.16.1 Introd	duced on MXL 10/40GbE Switch IO Module
Usage Information		oup named harig as a version 3 user requiring both authentication and s limited to the read named rview.
Example	Figure 31-8. snmp-se	erver group Command Example
	FTOS#conf FTOS(conf)# snmp-serv FTOS#	ver group harig 3 priv read rview

**Note:** The number of configurable groups is limited to 16 groups.

Related Commands	show snmp group	Displays the group name, security model, view status, and storage type of each group.
	show running-config snmp	Displays the SNMP running configuration.

## snmp-server host

Configure the recipient of an SNMP trap operation.

**Syntax** snmp-server host *ip-address* [traps | informs] [version 1 | 2c | 3] [auth | no auth | priv] [community-string] [udp-port port-number] [notification-type]

To remove the SNMP host, use the no snmp-server host *ip-address* [traps | informs] [version 1 | 2c | 3] [auth | noauth | priv] [community-string] [udp-port number] [notification-type] command.

Parameters

ip-address	Enter the keyword <b>host</b> followed by the IP address of the host (configurable hosts is limited to 16).
traps	(OPTIONAL) Enter the keyword <b>traps</b> to send trap notifications to the specified host. Default: traps
informs	(OPTIONAL) Enter the keyword <b>informs</b> to send inform notifications to the specified host. Default: traps
version 1   2c   3	(OPTIONAL) Enter the keyword <b>version</b> to specify the security model followed by the security model version number <b>1</b> , <b>2c</b> , or <b>3</b> .
	• Version 1 is the least secure version
	• version <b>3</b> is the most secure of the security modes.
	• Version 2c allows transmission of informs and counter 64, which allows for integers twice the width of what is normally allowed.
	Default: Version 1
auth	(OPTIONAL) Enter the keyword <b>auth</b> to specify authentication of a packet without encryption.
noauth	(OPTIONAL) Enter the keyword <b>noauth</b> to specify no authentication of a packet.
priv	(OPTIONAL) Enter the keyword <b>priv</b> to specify both authentication and then scrambling of the packet.
community-string	Enter a text string (up to 20 characters long) as the name of the SNMP community.
	<b>Note:</b> For version 1 and version 2c security models, this string represents the name of the SNMP community. The string can be set using this command, however it is recommended that you set the community string using the snmp-server community command before executing this command. For version 3 security model, this string is the USM user security name.

	udp-port port-number	(OPTIONAL) Enter the keywords udp-port followed by the port number of the remote host to use.
		Range: 0 to 65535.
		Default: 162
	notification-type	(OPTIONAL) Enter one of the following keywords for the type of trap to be sen to the host:
		ecfm - Notification of ECFM state changes
		entity - Notification of entity changes
		envmon - Environment monitor trap
		eoam - Notification of EOAM state changes
		• ets - Notification of ets trap changes
		• fips - Notification of FIP snooping state changes
		lacp - Notification of LACP state changes
		• pfc - Notification of pfc trap changes
		• snmp - SNMP notification (RFC 1157)
		• <b>stp</b> - Spanning Tree protocol notification (RFC 1493)
		• vrrp - State change in a VRRP group
		• xstp - State change in MSTP (802.1s), RSTP (802.1w), and PVST+
		Default: All trap types are sent to host.
Defaults	As shown	
ommand Modes	CONFIGURATION	
Commond		
Command History	Version 8.3.16.1 Introd	luced on MXL 10/40GbE Switch IO Module

Usage In order to configure the router to send SNMP notifications, you must enter at least one snmp-server host command. If you enter the command with no keywords, all trap types are enabled for the host. If you do not enter an snmp-server host command, no notifications are sent.

In order to enable multiple hosts, you must issue a separate snmp-server host command for each host. You can specify multiple notification types in the command for each host.

When multiple snmp-server host commands are given for the same host and type of notification (trap or inform), each succeeding command overwrites the previous command. Only the last snmp-server host command will be in effect. For example, if you enter an snmp-server host inform command for a host and then enter another snmp-server host inform command for the same host, the second command will replace the first.

The snmp-server host command is used in conjunction with the snmp-server enable command. Use the snmp-server enable command to specify which SNMP notifications are sent globally. For a host to receive most notifications, at least one snmp-server enable command and the snmp-server host command for that host must be enabled.

**Note:** For v1 / v2c trap configuration, if the community-string is not defined using the snmp-server community command prior to using this command, the default form of the snmp-server community command will automatically be configured, with the community-name the same as specified in the snmp-server host command.

To send an inform, follow these steps:

- 1. Configure a remote engine ID.
- 2. Configure a remote user.
- 3. Configure a group for this user with access rights.
- 4. Enable traps.
- 5. Configure a host to receive informs.

Related Commands	snmp-server enable traps	Enables the SNMP traps.
	snmp-server community	Configures a new community SNMPv1 or SNMPv2c.

#### snmp-server location

Configure the location of the SNMP server.

Syntax	snmp-server	location	text
--------	-------------	----------	------

To delete the SNMP location, use the no snmp-server location command.

Parameters	text	Enter an alpha-numeric text string, up to 55 characters long.
Defaults	Not configured.	
Command Modes	CONFIGURATIO	DN
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

#### snmp-server packetsize

Set the largest SNMP packet size permitted when the SNMP server is receiving a request or generating a reply, use the snmp-server packet global configuration command.

Syntax	snmp-server packetsize byte-count	
Parametersbyte-countEnter one of the following values 8, 16, 24 or 32. Packet sizes are 800 32000 bytes, and 64000 bytes.		Enter one of the following values 8, 16, 24 or 32. Packet sizes are 8000 bytes, 16000 bytes, 32000 bytes, and 64000 bytes.
Defaults	8	
Command Modes	CONFIGURAT	ION
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

# snmp-server trap-source

p	Configure a specific	e interface as the source for SNMP traffic.	
Syntax	snmp-server trap-s	snmp-server trap-source interface	
	To disable sending t	raps out a specific interface, use the no snmp trap-source command.	
Parameter	interface	Enter the following keywords and slot/port or number information:	
		• For a Loopback interface, enter the keyword <b>loopback</b> followed by a number from 0 to 16383.	
		<ul> <li>For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.</li> </ul>	
		• For a 40-Gigabit Ethernet interface, enter the keyword <b>fortyGigE</b> followed by the slot/port information.	
Defaults	The IP address assigned to the management interface is the default.		
Command Modes	CONFIGURATION		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Usage Information	-	r trap-source command to be enabled, you must configure an IP address on the the interface configured as an SNMP trap source.	
Related Commands	snmp-server commu	nity Sets the community string.	

#### snmp-server user

Configure a new user to an SNMP group.

**Syntax** snmp-server user *name* {*group\_name* remote *ip-address* udp-port *port-number*} [1 | 2c | 3] [encrypted] [auth {md5 | sha} auth-password] [priv des56 *priv password*] [access-list-name]

To remove a user from the SNMP group, use the no snmp-server user name {group\_name remote *ip-address* udp-port *port-number*} [1 | 2c | 3] [encrypted] [auth {md5 | sha} auth-password] [priv des56 *priv* password] [access-list-name] command.

Parameters	name	Enter the name of the user (not to exceed 20 characters), on the host, that connects to the agent.
	group_name	Enter a text string (up to 20 characters long) as the name of the group.
		Defaults: The following groups are created for mapping to read/write community/security-names.
		• v1v2creadu — maps to a community with <b>ro</b> permissions
		• v1v2cwriteu — maps to a community rW permissions
	remote ip-address	Enter the keyword <b>remote</b> followed by the IP address that identifies the copy of the SNMP on the <i>remote</i> device.

	udp-port port-number	Enter the keyword <b>udp-port</b> followed by the UDP (User Datagram Protocol) port number on the remote device.
		Range: 0 to 65535. Default: 162
	1   2c   3	(OPTIONAL) Enter the security model version number (1, 2c, or 3).
	.   _0   0	• 1 is the least secure version
		• 3 is the most secure of the security modes.
		• 2c allows transmission of informs and counter 64, which allows for integers twice the width of what is normally allowed.
		Default: 1
	encrypted	(OPTIONAL) Enter the keyword <b>encrypted</b> to specify the password appear in encrypted format (a series of digits, masking the true characters of the string).
	auth	(OPTIONAL) Enter the keyword <b>auth</b> to specify authentication of a packet without encryption.
	md5   sha	(OPTIONAL) Enter the keyword md5 or sha to designate the authentication level.
		md5 — Message Digest Algorithm
		sha — Secure Hash Algorithm
	auth-password	(OPTIONAL) Enter a text string (up to 20 characters long) password that will enable the agent to receive packets from the host.
		Minimum: 8 characters long
	priv des56	(OPTIONAL) Enter the keyword priv des56 to initiate a privacy authentication level setting using the CBC-DES privacy authentication algorithm (des56).
	priv password	(OPTIONAL) Enter a text string (up to 20 characters long) password that will enables the host to encrypt the contents of the message it sends to the agent. Minimum: 8 characters long
	access-list-name	(OPTIONAL) Enter the standard IPv4 access list name (a string up to 16 characters long).
	access-list-name	(OPTIONAL) Enter an IPv4 access list name.
Defaults	As above	
Command Modes	CONFIGURATION	
Command History	Version 8.3.16.1 Introd	luced on MXL 10/40GbE Switch IO Module
Usage Information	forget a password, you can plain-text password or an	authentication or privacy algorithms and no default password exist. If you not recover it; the user must be reconfigured. You can specify either a encrypted cypher-text password. In either case, the password will be stored encrypted form and displayed as encrypted in the show running-config
		bassword, you can specify the encrypted string instead of the plain-text ows how to specify the command with an encrypted string.
Examples	Figure 31-9. snmp-se	erver user Command Example (Encrypted)
		er privuser v3group v3 encrypted auth md5 e80e3ba8763d priv des56 d0452401a8c3ce42804fe80e3ba8763d

Figure 31-10 shows how to enter a plain-text password as the string authpasswd for user authuser of group v3group.

#### Figure 31-10. snmp-server user Command Example (Plain-text)

FTOS#conf FTOS(conf)# snmp-server user authuser v3group v3 auth md5 authpasswd

Figure 31-11 configures a remote user named n3user with a v3 security model and a security level of authNOPriv.

#### Figure 31-11. config Command Example

```
FTOS#conf
FTOS(conf)# snmp-server user n3user ngroup remote 172.31.1.3 udp-port 5009 3 auth
md5 authpasswd
```

Note: The number of configurable users is limited to 16.

Related Commands

show snmp user Displays the information configured on each SNMP user name.

#### snmp-server view

Configure an SNMPv3 view.

Syntax snmp-server view view-name oid-tree {included | excluded}

> To remove an SNMPv3 view, use the no snmp-server view view-name oid-tree {included | excluded} command.

#### **Parameters**

T di difficier 5	view-name	Enter the name of the view (not to exceed 20 characters).
	oid-tree	Enter the OID sub tree for the view (not to exceed 20 characters).
	included	(OPTIONAL) Enter the keyword <b>included</b> to include the MIB family in the view.
	excluded	(OPTIONAL) Enter the keyword <b>excluded</b> to exclude the MIB family in the view.
Defaults	none	
Command Modes	CONFIGURATION	

Command Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module History Usage The oid-tree variable is a full sub-tree starting from 1.3.6 and can not specify the name of a sub-tree or Information a MIB. Figure 31-12 configures a view named rview that allows access to all objects under 1.3.6.1. Example

Figure 31-12. snmp-server view Command Example

FTOS#(conf) snmp-server view rview 1.3.6.1 included

Related Commands	show running-config snmp Displays the SNMP running configuration.
snmp trap	link-status Enable the interface to send SNMP link traps, which indicate whether the interface is up or down.
Syntax	snmp trap link-status To disable sending link trap messages, use the no snmp trap link-status command.
Defaults	Enabled.
Command Modes	INTERFACE
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Usage Information	If the interface is expected to flap during normal usage, you can disable this command.

#### **Syslog Commands**

The following commands allow you to configure logging functions on all Dell Force10 switches:

- clear logging
- default logging buffered
- default logging console
- default logging monitor
- default logging trap
- logging
- logging buffered
- logging console
- logging facility
- logging history
- logging history size
- logging monitor
- logging on
- logging source-interface
- logging synchronous
- logging trap
- show logging
- show logging driverlog stack-unit
- terminal monitor

# clear logging Clear the messages in the logging buffer.

Syntax	clear logging	
Defaults	none	
Command Modes	EXEC Privilege	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Related Commands	show logging	Displays logging settings and system messages in the internal buffer.

# default logging buffered

Return to the default setting for messages logged to the internal buffer.

Syntax	default logging buffered
Defaults	size = 40960; level = 7 or debugging
Command Modes	CONFIGURATION
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Related Commands	logging buffered Sets the logging buffered parameters.

# default logging console

Return the default settings for messages logged to the console.

Syntax	default logging co	nsole
Defaults	level = 7 or debugg	ing
Command Modes	CONFIGURATION	1
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Related Commands	logging console	Sets the logging console parameters.

Return to the default settings for messages logged to the terminal.

Syntax	default logging m	onitor
Defaults	level = 7 or $debugg$	ging
Command Modes	CONFIGURATIO	Ν
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Related Commands	logging monitor terminal monitor	Sets the logging monitor parameters. Sends system messages to the terminal/monitor.

# default logging trap

Return to the default settings for logging messages to the Syslog servers.

Syntax	default logging tra	ap
Defaults	level = 6 or inform	national
Command Modes	CONFIGURATIO	Ν
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Related Commands	logging trap	Limits the messages logged to the Syslog servers based on severity.
logging	-	dress or host name of a Syslog server where logging messages will be sent. Multiple IPv4 can be configured.
Syntax	logging { ipv4-add	fress   hostname}
	To disable logging	, enter no logging.
Parameters	ipv4-address hostname	Enter an IPv4 address (A.B.C.D). Enter the name of a host already configured and recognized by the switch.
Defaults	Disabled	
Command Modes	CONFIGURATIO	Ν
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

History

Related Commands	logging on	Enables the logging asynchronously to logging buffer, console, Syslog server, and terminal lines.
	logging trap	Enables logging to the Syslog server based on severity.

# logging buffered

Enable logging and specify which messages are logged to an internal buffer. By default, all messages are logged to the internal buffer.

Syntax logging buffered [*level*] [*size*]

To return to the default values, use the **default logging buffered** command. To disable logging stored to an internal buffer, use the **no logging buffered** command.

Parameters		
Farameters	level	(OPTIONAL) Indicate a value from 0 to 7 or enter one of the following equivalent words: emergencies, alerts, critical, errors, warnings, notifications, informational, or debugging.
		Default: 7 or debugging.
	size	(OPTIONAL) Indicate the size, in bytes, of the logging buffer. The number of messages buffered depends on the size of each message.
		Range: 40960 to 524288.
		Default: 40960 bytes.
Defaults	<i>level</i> = 7; <i>size</i> = 40960 b	ytes
Command Modes	CONFIGURATION	
Command History	Version 8.3.16.1 Intro	duced on MXL 10/40GbE Switch IO Module
Usage Information	When you decrease the bud does not affect messages	uffer size, all messages stored in the buffer are lost. Increasing the buffer size stored in the buffer.
Related	clear logging	Clears the logging buffer.
Commands		
	default logging buffered	Returns the logging buffered parameters to the default setting.
	show logging	Displays the logging setting and system messages in the internal buffer.

## logging console

Specify which messages are logged to the console.

Syntax	logging console [level]	
5	To return to the default values, use the default logging console command. To disable logging to the console, use the no logging console command.	
Parameters	level(OPTIONAL) Indicate a value from 0 to 7 or enter one of the following parameters: emergencies, alerts, critical, errors, warnings, notifications, informational, or debugging. Default: 7 or debugging.	

#### Defaults 7 or debugging

**Command Modes** CONFIGURATION

> Command History

Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Mode
------------------------------------------------------------

Related Commands	clear logging	Clears the logging buffer.
Commands	default logging console	Returns the logging console parameters to the default setting.
	show logging	Displays the logging settings and system messages in the internal buffer.

# logging facility

Configure the Syslog facility, used for error messages sent to Syslog servers.

Syntax logging facility [facility-type]

To return to the default values, use the no logging facility command.

arameters	facility-type	(OPTIONAL) Enter one of the following parameters.
		• auth (authorization system)
		<ul> <li>cron (Cron/at facility)</li> </ul>
		deamon (system deamons)
		kern (kernel)
		<ul> <li>local0 (local use)</li> </ul>
		local 1 (local use)
		<ul> <li>local 2 (local use)</li> </ul>
		<ul> <li>local3 (local use)</li> </ul>
		local4 (local use)
		local5 (local use)
		• local6 (local use)
		• local7 (local use)
		• lpr (line printer system)
		• mail (mail system)
		• news (USENET news)
		• sys9 (system use)
		• sys10 (system use)
		• sys11 (system use)
		• sys12 (system use)
		• sys13 (system use)
		• sys14 (system use)
		• syslog (Syslog process)
		• user (user process)
		• uucp (Unix to Unix copy process)
		The default is local7.

Command Modes CONFIGURATION

Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Related Commands	logging	Enables logging to a Syslog server.
eennanae	logging on	Enables logging.

#### **logging history** Specify which messages are logged to the history table of the switch and the SNMP network

	management station	(if configured).
Syntax	logging history leve	el
	To return to the defa	ult values, use the no logging history command.
Parameters	level	Indicate a value from 0 to 7 or enter one of the following equivalent words: emergencies, alerts, critical, errors, warnings, notifications, informational, or debugging.
		The default is 4.
Defaults	4 or warnings	
Command Modes	CONFIGURATION	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information	• 0	the snmp-server trap-source command, the system messages logged to the history the SNMP network management station.
Related Commands	show logging history	Displays information logged to the history buffer.

## logging history size

Specify the number of messages stored in the FTOS logging history table.

Syntax	logging history size <i>size</i> To return to the default values, use the <b>no logging history size</b> command.			
Parameters	size Indicate a value as the number of messages to be stored. Range: 0 to 500.			
		Default: 1 message.		
Defaults	1 message			
Command Modes	CONFIGURATIO	N		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module		

Usage When the number of messages reaches the limit you set with the logging history size command, older messages are deleted as newer ones are added to the table.

Related Commands

show logging history Displays information logged to the history buffer.

#### logging monitor

Specify which messages are logged to Telnet applications.

Syntax	logging monitor [ <i>level</i> ]		
	To disable logging	to terminal connections, use the no logging monitor command.	
Parameters	level	Indicate a value from 0 to 7 or enter one of the following parameters: emergencies, alerts, critical, errors, warnings, notifications, informational, or debugging. The default is 7 or debugging.	
Defaults	7 or debugging		
Command Modes	CONFIGURATIO	Ν	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Related Commands	default logging mo	nitor Returns the logging monitor parameters to the default setting.	

# logging on

Specify that debug or error messages are asynchronously logged to multiple destinations, such as logging buffer, Syslog server, or terminal lines.

Syntax logging on To disable logging to logging buffer, Syslog server and terminal lines, use the no logging on command.

Defaults Enabled

#### Command Modes CONFIGURATION

Command History

Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

Usage Information When you use the no logging on command, messages are logged only to the console.

Related Commands

logging	Enables logging to Syslog server.
logging buffered	Sets the logging buffered parameters.
logging console	Sets the logging console parameters.
logging monitor	Sets the logging parameters for the terminal connections.

# logging source-interface

Specify that the IP address of an interface is the source IP address of Syslog packets sent to the Syslog server.

Syntax logging source-interface interface

To disable this command and return to the default setting, use the no logging source-interface command.

Parameters	interface	Enter the following keywords and slot/port or number information:
		• For Loopback interfaces, enter the keyword <b>loopback</b> followed by a number from zero (0) to 16383.
		• For a Port Channel interface, enter the keyword port-channel followed by a number:
		Range: 1-128
		• For a Ten Gigabit Ethernet interface, enter the keyword <b>TenGigabitEthernet</b> followed by the slot/port information.
		• For a 40-Gigabit Ethernet interface, enter the keyword <b>fortyGigE</b> followed by the slot/port information.
		• For VLAN interface, enter the keyword vlan followed by a number from 1 to 4094.
Defaults	Not configured.	
Command Modes	CONFIGURATIO	DN
Command		
History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information		contain the IP address of the interface used to egress the router. By configuring the terface command, the Syslog packets contain the IP address of the interface
Related Commands	logging	Enables the logging to another device.

#### logging synchronous

Synchronize unsolicited messages and FTOS output.

#### Syntax logging synchronous [level level | all] [limit number-of-buffers]

To disable message synchronization, use the no logging synchronous [level /evel | all] [limit *number-of-buffers*] command.

Parameters		
	all	Enter the keyword $all$ to ensure that all levels are printed asynchronously.
	level level	Enter the keyword <b>level</b> followed by a number as the severity level. A high number indicates a low severity level and visa versa.
		Range: 0 to 7.
		Default: 2

	all	Enter the keyword all to turn off all
	limit number-of-buffers	Enter the keyword limit followed by the number of buffers to be queued for the terminal after which new messages are dropped
		Range: 20 to 300
		Default: 20
Defaults	Disabled. If enabled without number-of-buffers = 20 are t	<i>level</i> or <i>number-of-buffers</i> options specified, <i>level</i> = 2 and he defaults.
command Modes	LINE	
Command History	Version 8.3.16.1 Introduce	ed on MXL 10/40GbE Switch IO Module
Usage Information	•	heteronous, unsolicited messages appear between software prompts and with a severity at or below the set level are sent to the console.
	•	reached on a terminal line and messages are discarded, a system message Messages may continue to appear on other terminal lines.
Related Commands	logging on Enables lo	gging.

# logging trap

Specify which messages are logged to the Syslog server based the message severity.

Syntax	logging trap [level]		
	To return to the default values, use the default logging trap command. To disable logging, use the no logging trap command.		
Parameters	level	Indicate a value from 0 to 7 or enter one of the following parameters: emergencies, alerts, critical, errors, warnings, notifications, informational, or debugging.	
		The default is 6.	
Defaults	6 or informationa	1.	
Command Modes	CONFIGURATIO	DN	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Related Commands	logging	Enables the logging to another device.	
commands	logging on	Enables logging.	

### show logging

History

Syntax	show logging [ <i>nt</i>	umber   history [reverse][number]   reverse [number]   summary]
Parameters	number	(OPTIONAL) Enter the number of message to be displayed on the output.
		Range: 1 to 65535
	history	(OPTIONAL) Enter the keyword <b>history</b> to view only information in the Syslog history table.
	reverse	(OPTIONAL) Enter the keyword <b>reverse</b> to view the Syslog messages in FIFO (first in, first out) order.
	summary	(OPTIONAL) Enter the keyword <b>summary</b> to view a table showing the number of messages per type and per slot.
Command Modes	EXEC	
	EXEC Privilege	
Command	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

Display the logging settings and system messages logged to the internal buffer of the switch.

Figure 31-13. show logging Command Example (Partial)

## show logging driverlog stack-unit

Display the driver log for the specified stack member.

Parameters	stack-unit unit#	Enter the keyword <b>stack-unit</b> followed by the stack member ID of the switch for which you want to display the driver log.
		Range: 0 to 1
Defaults	none	
mmand Modes	EXEC	
	EXEC Privilege	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

### terminal monitor

Configure the FTOS to display messages on the monitor/terminal.

Syntax	terminal monitor
	To return to default settings, use the terminal no monitor command.
Defaults	Disabled.
Command Modes	EXEC
	EXEC Privilege
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Related Commands	logging monitor Sets the logging parameters on the monitor/terminal.

# 32

# **Storm Control**

#### **Overview**

The Dell Force10 operating software (FTOS) storm control feature allows users to limit or suppress traffic during a traffic storm.

#### Commands

The storm control commands are:

- show storm-control broadcast
- show storm-control multicast
- show storm-control unknown-unicast
- storm-control broadcast (Configuration)
- storm-control broadcast (Interface)
- storm-control multicast (Configuration)
- storm-control multicast (Interface)
- storm-control unknown-unicast (Configuration)
- storm-control unknown-unicast (Interface)

#### **Important Points to Remember**

- You can only apply interface commands on physical interfaces (virtual local area networks [VLANs] and link aggregation group [LAG] interfaces are not supported).
- An INTERFACE-level command only supports storm control configuration on ingress.
- An INTERFACE-level command overrides any CONFIGURATION-level ingress command for that physical interface, if both are configured.
- Do not apply per-VLAN quality of service (QoS) on an interface that has storm control enabled (either on an interface or globally).

#### show storm-control broadcast

Display the storm control broadcast configuration.

Syntax show storm-control broadcast [interface]

Parameters		
Farameters	interface	(OPTIONAL) Enter one of the following interfaces to display the interface specific storm control configuration.
		• For a 10-Gigabit Ethernet interface, enter the keyword <b>TenGigabitEthernet</b> followed by the slot/port information.
		<ul> <li>For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE followed by the slot/ port information.</li> </ul>
Defaults	none	
Command Modes	EXEC	
	EXEC Privileg	e
Command		
History	Version 8.3.16.	1 Introduced on MXL 10/40GbE Switch IO Module
Example	Figure 32-1.	show storm-control broadcast Command Example
	FTOS#show s	torm-control broadcast tengigabitethernet 3/24
	Broadcast	storm control configuration
	Interface	Direction Packets/Second
	TenGig 3/24	Ingress 1000
	FTOS#	

# show storm-control multicast

Display the storm control multicast configuration.

Parameters	interface	(OPTIONAL) Enter one of the following interfaces to display the interface specific storm control configuration.
		• For a 10-Gigabit Ethernet interface, enter the keyword <b>TenGigabitEthernet</b> followed by the slot/port information.
		<ul> <li>For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE followed by the slot/ port information.</li> </ul>
Defaults	none	
Command Modes	EXEC	
	EXEC Privile	ge

	Unknown-unicast storm control configuration	
	Interface Direction Packets/Second	
	TenGig 3/0 Ingress 1000	
	FTOS#	)

# storm-control broadcast (Configuration)

Configure the packets per second of broadcast traffic.

Syntax storm-control broadcast [packets\_per\_second] in

To disable broadcast rate-limiting, use the no storm-control broadcast [packets\_per\_second] in command.

Devenue ( even		
Parameters	packets_per_second	Enter the packets per second of broadcast traffic allowed from the network.
		Range: 0 to 33554368.
Defaults	none	
Command Modes	CONFIGURATION (conf)	)
Command History	Version 8.3.16.1 Introdu	uced on MXL 10/40GbE Switch IO Module
Usage Information	Broadcast storm control is as unknown-unicast traffic	valid on Layer 2/Layer 3 interfaces only. Layer 2 broadcast traffic is treated .

### storm-control broadcast (Interface)

Configure the packets per second of broadcast traffic to be limited on the interface.

Syntax	storm-control broadcast [packets_per_second] in
	To disable broadcast storm control on the interface, use the no storm-control broadcast [packets_per_second] in command.
Parameters	packets_per_secondEnter the packets per second of broadcast traffic allowed from the network.Range: 0 to 33554368
Defaults	none
Command Modes	INTERFACE (conf-if- <i>interface-slot/port</i> )
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

# storm-control multicast (Configuration)

Configure the packets per second (pps) of multicast traffic.

Syntax	storm-control multicast [ <i>packets_per_second</i> ] in To disable storm-control for multicast traffic into the network, use the <b>no storm-control multicast</b> [ <i>packets_per_second</i> ] in command.	
Parameters	packets_per_second	Enter the packets per second of multicast traffic allowed from the network followed by the keyword in. Range: 0 to 33554368
Defaults	none	
Command Modes	CONFIGURATION (conf)	
Command History	Version 8.3.16.1 Introd	uced on MXL 10/40GbE Switch IO Module

Usage Broadcast traffic (all 0xFs) should be counted against broadcast storm control meter, not against the multicast storm control meter. It is possible, however, that some multicast control traffic may get dropped when storm control thresholds are exceeded.

#### storm-control multicast (Interface)

	Configure the packets per second of multicast traffic allowed on a MXL Switch interface (ingress only).
Syntax	storm-control multicast [packets_per_second] in
	To disable multicast storm control on the interface, use the no storm-control multicast [packets_per_second] in command.
Parameters	packets_per_second       Enter the packets per second of broadcast traffic allowed from the network.         Range: 0 to 33554368
Defaults	none
Command Modes	INTERFACE (conf-if- <i>interface-slot/port</i> )
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

## storm-control unknown-unicast (Configuration)

	Configure the packets per second of unknown-unicast traffic allowed on a MXL Switch (ingress rate only).
Syntax	storm-control unknown-unicast [packets_per_second] in
	To disable storm control for unknown-unicast traffic, use the no storm-control unknown-unicast [packets_per_second] in command.
Parameters	<i>packets_per_second</i> Enter the packets per second of broadcast traffic allowed from the network.
	Range: 0 to 33554368
Defaults	none
Command Modes	CONFIGURATION
Command	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
History	
Usage Information	Unknown Unicast Storm-Control is valid for Layer 2 and Layer 2/Layer 3 interfaces.

storm-contr	<b>Configure the packets per second of unknown-unicast traffic allowed on a MXL Switch interface</b> (ingress only).
Syntax	storm-control unknown-unicast [packets_per_second] in
	To disable unknown-unicast storm control on the interface, use the no storm-control unknown-unicast [packets_per_second] in command.
Parameters	packets_per_secondEnter the packets per second of broadcast traffic allowed from the network.Range: 0 to 33554368
Defaults	none
Command Modes	INTERFACE (conf-if- <i>interface-slot/port</i> )
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

# 33

# **Stacking Commands**

#### **Overview**

For more information about using the MXL 10/40GbE Switch stacking feature, refer to the "Stacking MXL 10/40GbE Switches" chapter in the FTOS Configuration Guide.

#### Commands

The commands described in this chapter are used for managing the stacking of MXL 10/40GbE switch systems. The stacking commands are:

- redundancy disable-auto-reboot
- redundancy force-failover stack-unit
- reset stack-unit
- show redundancy
- show system stack-ports
- show system stack-unit stack-group
- stack-unit stack group
- stack-unit priority
- stack-unit provision
- stack-unit renumber

#### redundancy disable-auto-reboot

Prevent the MXL 10/40GbE switch stack unit from rebooting if they fail.

Syntax	redundancy disable-auto-reboot stack-unit [0-5 / members]
	To return to the default, use the no redundancy disable-auto-reboot stack-unit [0-5
	members] command.
Default	Disabled (the failed switch is automatically rebooted).
Command Modes	CONFIGURATION
Command	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
History	version 8.3.10.1 Introduced on WIAL 10/4000E Switch IO Module

Usage Information	When the command is given as redundancy disable-auto-reboot stack-unit, it prevents the MXL 10/ 40GbE switch stack management unit and standby unit from rebooting if they fail.		
	When a particular unit numb unit from rebooting upon fail	er in the range 0-5 is issued as part of the CLI, it prevents that particular ure.	
	When members is issued as p upon failure.	part of the CLI, all the units part of the stack are prevented from rebooting	
	The unit does not reboot unti	l it is manually rebooted.	
Related Commands	show redundancy	Displays the current redundancy status.	

# redundancy force-failover stack-unit

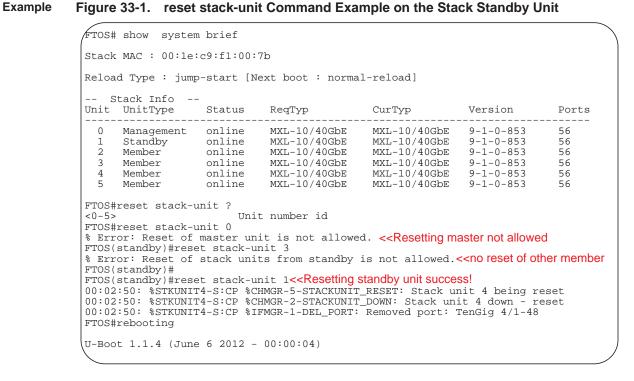

Force the backup unit in the stack to become the management unit.

Syntax	redundancy force-failover stack-unit
Defaults	Not enabled
Command Modes	EXEC Privilege
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

### reset stack-unit

Reset any designated stack member except the management unit (master unit).

Syntax	reset stack-unit	set stack-unit 0-5 hard	
Parameters	0-5	Enter the stack member unit identifier of the stack member to reset.	
	hard	Reset the stack unit if the unit is in a problem state.	
Default	none		
Command Modes	EXEC Privilege		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Usage Information	Resetting the management unit is not allowed (an error message is displayed if you try to do so). Resetting is a soft reboot, including flushing the forwarding tables.		
		ommand directly on the stack standby unit (Standby Master) to reset the standby. ny other unit from the standby unit.	

#### Related

Commands

Reboots FTOS. redundancy disable-auto-reboot Resets the designated stack member.

#### show redundancy

Display the current redundancy configuration (status of automatic reboot configuration on stack management unit).

Syntax show redundancy

EXEC

reload

Commands

redundancy disable-auto-reboot

Prevents the system from auto-rebooting if it fails.

#### show system stack-ports

FTOS#

Display information about the stacking ports on all switches in the MXL 10/40GbE switch stack.

		(OPTIONAL) Enter the keyword <b>status</b> to display the command output without the Connection field.
	topology	(OPTIONAL) Enter the keyword <b>topology</b> to limit the table to just the Interface and Connection fields.
Defaults	none	
d Modes	EXEC	
	EXEC Privilege	

#### Example Figure 33-3. show system stack-ports Command Example

Field	Description
Topology	Lists the topology of stack ports connected: Ring, Daisy chain, or Standalone
Interface	The unit/port ID of the connected stack port on this unit
Link Speed	Link Speed of the stack port in Gb/s
Admin Status	The only currently listed status is Up.
Connection	The stack port ID to which this unit's stack port is connected

#### Table 33-1. show system stack-ports Command Description

#### Related Commands

redundancy disable-auto-reboot	Resets the designated stack member.
show hardware stack-unit	Displays the data plane or management plane input and output statistics of the designated component of the designated stack member.
show system	Displays the current status of all stack members or a specific member.
	Upgrades the system image of the management unit.

### show system stack-unit stack-group

Display the stack-groups present/configured for a MXL 10/40GbE switch stack unit.

# Syntax show system stack-unit <unit-number> stack-group [configured] Parameters unit number <0-5> Number of the member stack unit. Valid values: 0 to 5. Default: 0. Command Modes EXEC Privilege Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

Related Commands	reload	Reboots FTOS.
	show system	Displays the current status of all stack members or a specific member.

### stack-unit stack group

Configure a 40GbE port for stacking mode.

#### Syntax stack-unit <unit number> stack-group <group number>

Parameters	unit number <0-5>	Number of the member stack unit. Valid values: 0 to 5.
	group number <0-5>	Number of the stacked port on the unit. Valid values: 0 to 5.

Command Modes CONFIGURATION

Command History

Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

Related Commands

reload	Reboots FTOS.
show system	Displays the current status of all stack members or a specific member.
show system stack-unit stack-group	Display the stack-groups present/configured for a MXL 10/40GbE switch stack unit.

#### stack-unit priority

Configure the ability of an MXL 10/40GbE switch to become the management unit of a stack.

Syntax	stack-unit 0-5 priority 1-14		
Parameters		the stack member unit identifier, from 0 to 5, of the switch on which you want to set the gement priority.	
		preference parameter allows you to specify the management priority of one backup switch another, with 1 the lowest priority and 14 the highest.	
	The s	witch with the highest priority value will be chosen to become the management unit.	
Defaults	0		
Command Modes	CONFIGURATI	ON	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Related Commands	reload	Reboots FTOS.	
	show system	Displays the current status of all stack members or a specific member.	

## stack-unit provision

Pre-configure a logical stacking ID of a switch that will join the stack. This is an optional command that is executed on the management unit.

Syntax	stack-unit 0-5 pr	ovision { <i>MXL-10/40GbE</i> }
Parameters	0-5	Enter a stack member identifier, from 0 to 5, of the switch that you want to add to the stack.
	MXL-10/40GbE	Enter the model identifier of the switch to be added as a stack member. This identifier is also referred to as the <i>provision type</i> .
Command Modes	CONFIGURATIO	Ν
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Related Commands	reload	Reboots FTOS.
	show system	Displays the current status of all stack members or a specific member.

## stack-unit renumber

	Change the stack m	ember ID of any stack member or a stand-alone switch.
Syntax	stack-unit 0-5 rer	number 0-5
Parameters	0-5	The first instance of this value is the stack member unit identifier, from 0 to 5, of the switch that you want add to the stack. The second instance of this value is the desired new unit identifier number.
Defaults	none	
Command Modes	EXEC Privilege	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information	renumber a unit to a When executing this	any switch, including the management unit or a stand-alone unit. You cannot a number of an active member in the stack.
Example	Figure 33-6. sta	nit resets and comes up with the new unit number. ack-unit renumber Command Example 0 renumber 2 ter unit will reload the stack. Proceed to renumber [confirm yes/
Related Commands	reload redundancy disable-auto-reboot	Reboots FTOS. Resets the designated stack member.
	show system	Displays the current status of all stack members or a specific member.

## **Spanning Tree Protocol (STP)**

#### Overview

The commands described in this chapter configure and monitor the IEEE 802.1d spanning tree protocol (STP). The STP commands are:

- bridge-priority
- debug spanning-tree
- description
- disable
- forward-delay
- hello-time
- max-age
- portfast bpdufilter default
- protocol spanning-tree
- show config
- show spanning-tree 0
- spanning-tree 0

## bridge-priority

Set the bridge priority of the switch in an IEEE 802.1D Spanning Tree.

**Syntax** bridge-priority {*priority-value* | primary | secondary}

To return to the default value, use the no bridge-priority command.

Parameters		
	priority-value	Enter a number as the bridge priority value.
		Range: 0 to 65535.
		Default: 32768.
	primary	Enter the keyword primary to designate the bridge as the root bridge.
	secondary	Enter the keyword <b>secondary</b> to designate the bridge as a secondary root bridge.
Defaults	priority-value = 32768	
Command Modes	SPANNING TREE (The p	rompt is "conf-stp".)

debug spa	•	of the spanning tree protocol and view information on the protocol.
Syntax	debug spanning-tr	ree { <i>stp-id</i> [all   bpdu   events   exceptions]   <i>protocol</i> }
	To disable debuggin	ng, use the no debug spanning-tree command.
Parameters	stp-id	Enter zero (0). The switch supports one Spanning Tree group with a group ID of 0.
	protocol	Enter the keyword for the type of STP to debug, either mstp, pvst, or rstp.
	all	(OPTIONAL) Enter the keyword all to debug all spanning tree operations.
	bpdu	(OPTIONAL) Enter the keyword bpdu to debug Bridge Protocol Data Units.
	events	(OPTIONAL) Enter the keyword <b>events</b> to debug STP events.
Command Modes	EXEC Privilege	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information	•	ebug spanning-tree bpdu for multiple interfaces, the software only sends DUs for the last interface specified.
Related Commands	portfast bpdufilter default	Enters SPANNING TREE mode on the switch.
description		

Introduced on MXL 10/40GbE Switch IO Module

#### Court

Command

History

Version 8.3.16.1

	Enter a description of the spanning tree.
Syntax	description { <i>description</i> }
	To remove the description from the Spanning Tree, use the no description { description} command.
Parameters	<i>description</i> Enter a description to identify the Spanning Tree (80 characters maximum).
Defaults	none
Command Modes	SPANNING TREE (The prompt is "conf-stp".)
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Related Commands	portfast bpdufilter default Enters SPANNING TREE mode on the switch.

### disable

	Disable the spanning tree protocol globally on the switch.
Syntax	disable
	To enable STP, use the no disable command.
Defaults	Enabled (that is, the spanning tree protocol is disabled.)
Command Modes	SPANNING TREE
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Related Commands	portfast bpdufilter default Enters SPANNING TREE mode.

#### forward-delay

 The amount of time the interface waits in the Listening State and the Learning State before transitioning to the Forwarding State.

 Syntax
 forward-delay seconds

 To return to the default setting, use the no forward-delay command.

Parameters	seconds	Enter the number of seconds the FTOS waits before transitioning STP to the forwarding state.
		Range: 4 to 30
		Default: 15 seconds.
Defaults	15 seconds	
Command Modes	SPANNING TREE	E
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Related Commands	max-age	Changes the wait time before STP refreshes protocol configuration information.
eennando	hello-time	Changes the time interval between BPDUs.

#### hello-time

Set the time interval between generation of the spanning tree bridge protocol data units (BPDUs).

#### Syntax hello-time seconds

To return to the default value, use the no hello-time command.

seconds 2 seconds	Enter a number as the time interval between transmission of BPDUs. Range: 1 to 10. Default: 2 seconds.
2 seconds	-
2 seconds	Default: 2 seconds.
2 seconds	
SPANNING TREE	
Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
forward-delay	Changes the wait time before STP transitions to the Forwarding state.
max-age	Changes the wait time before STP refreshes protocol configuration information.
	l for the spanning tree bridge to maintain configuration information before rmation.
max-age seconds	
To return to the def	ault values, use the no max-age command.
soconde	Enter a number of seconds the FTOS waits before refreshing configuration
Seconds	information.
	Range: 6 to 40
	Default: 20 seconds.
	forward-delay max-age Set the time interva refreshing that infor max-age seconds

Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Related	forward-delay	Changes the wait time before STP transitions to the Forwarding state.	
Commands	hello-time	Changes the time interval between BPDUs.	

## portfast bpdufilter default

SPANNING TREE

Enable BPDU Filter globally to filter transmission of BPDU on port fast enabled interfaces.

Syntax	portfast bpdufilter default
	To disable global bpdu filter default, use the no edge-port bpdufilter default command.
Defaults	Disabled
Command Modes	SPANNING TREE

**Command Modes** 

Command History

Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

# protocol spanning-tree Enter SPANNING TREE mode to enable and configure the spanning tree group.

Syntax	protocol spannin	g-tree stp-id
	To disable the Spa	nning Tree group, use the no protocol spanning-tree stp-id command.
Parameters	stp-id	Enter zero (0). FTOS supports one Spanning Tree group, group 0.
Defaults	Not configured.	
Command Modes	CONFIGURATIC	N
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Example		rotocol spanning-tree Command Example
Usage Information Related	use the no disable	d when you enter SPANNING TREE mode. To enable STP globally on the switch, command from SPANNING TREE mode.
Commands		ables spanning tree group 0. To enable spanning tree group 0, use the <b>no disable</b> nmand.
show config		t configuration for the mode. Only non-default values are displayed.

Syntax	show config
Command Modes	SPANNING TREE
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Example	<pre>Figure 34-2. show config Command Example  FTOS(conf-stp)#show config protocol spanning-tree 0 no disable FTOS(conf-stp)#</pre>

## show spanning-tree 0

Display the spanning tree group configuration and status of interfaces in the spanning tree group.

Syntax show spanning-tree 0 [active | brief | guard | interface interface | root | summary]

Parameters	0	Enter 0 (zero) to display information about that specific Spanning Tree group.
	active	(OPTIONAL) Enter the keyword <b>active</b> to display only active interfaces in Spanning Tree group 0.
	brief	(OPTIONAL) Enter the keyword brief to display a synopsis of the Spanning Tree group configuration information.
	guard	(OPTIONAL) Enter the keyword guard to display the type of guard enabled on an STP interface and the current port state.
	interface interface	(OPTIONAL) Enter the keyword interface and the type slot/port of the interface you want displayed. Type slot/port options are the following:
		<ul> <li>For a Port Channel interface, enter the keyword port-channel followed by a number:</li> <li>Range: 1-128</li> </ul>
		• For a 10-Gigabit Ethernet interface, enter the keyword <b>TenGigabitEthernet</b> followed by the slot/port information.
		• For a 40-Gigabit Ethernet interface, enter the keyword <b>fortyGigE</b> followed by the slot/port information.
	root	(OPTIONAL) Enter the keyword root to display configuration information on the Spanning Tree group root.
	summary	(OPTIONAL) Enter the keyword <b>summary</b> to only the number of ports in the Spanning Tree group and their state.
ommand Modes	EXEC Privilege	
Usage Information	You must enable	spanning tree group 0 prior to using this command.
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

#### Example Figure 34-3. show spanning-tree 0 Command Example

FTOS#show spanning-tree 0 Executing IEEE compatible Spanning Tree Protocol Bridge Identifier has priority 32768, Address 0001.e800.0a56 Configured hello time 2, max age 20, forward delay 15 Bpdu filter disabled globally We are the root of the spanning tree Current root has priority 32768 address 0001.e800.0a56 Topology change flag set, detected flag set Number of topology changes 1 last change occurred 0:00:05 ago from Tengigabitethernet 1/3 Timers: hold 1, topology change 35 hello 2, max age 20, forward\_delay 15 Times: hello 1, topology change 1, notification 0, aging 2 Port 26 (Tengigabitethernet 1/1) is Forwarding Port path cost 4, Port priority 8, Port Identifier 8.26 Designated root has priority 32768, address 0001.e800.0a56 Designated bridge has priority 32768, address 0001.e800.0a56 Designated port id is 8.26, designated path cost 0 Timers: message age 0, forward\_delay 0, hold 0 Number of transitions to forwarding state 1 BPDU: sent:18, received 0 The port is not in the portfast mode Port 27 (Tengigabitethernet 1/2) is Forwarding Port path cost 4, Port priority 8, Port Identifier 8.27 Designated root has priority 32768, address 0001.e800.0a56 Designated bridge has priority 32768, address 0001.e800.0a56 Designated port id is 8.27, designated path cost 0 Timers: message age 0, forward\_delay 0, hold 0 Number of transitions to forwarding state 1 BPDU: sent:18, received 0 The port is not in the portfast mode Port 28 (Tengigabitethernet 1/3) is Forwarding Port path cost 4, Port priority 8, Port Identifier 8.28 Designated root has priority 32768, address 0001.e800.0a56 Designated bridge has priority 32768, address 0001.e800.0a56 Designated port id is 8.28, designated path cost 0 Timers: message age 0, forward\_delay 0, hold 0 Number of transitions to forwarding state 1 BPDU: sent:31, received 0 The port is not in the portfast mode

#### Table 34-1. show spanning-tree 0 Command Description

FTOS#

Field	Description
"Bridge Identifier"	Lists the bridge priority and the MAC address for this STP bridge.
"Configured hello"	Displays the settings for hello time, max age, and forward delay.
"Bpdu filter"	States whether BPDU Filter is enabled/disabled globally.
"We are"	States whether this bridge is the root bridge for the STG.
"Current root"	Lists the bridge priority and MAC address for the root bridge.
"Topology flag"	States whether the topology flag and the detected flag were set.
"Number of"	Displays the number of topology changes, the time of the last topology change, and on what interface the topology change occurred.
"Timers"	Lists the values for the following bridge timers: hold time, topology change, hello time, max age, and forward delay.

Field	Description
"Times"	List the number of seconds since the last:
	hello time
	topology change
	notification
	• aging
"Port 1"	Displays the Interface type slot/port information and the status of the interface (Disabled or Enabled).
"Port path"	Displays the path cost, priority, and identifier for the interface.
"Designated root"	Displays the priority and MAC address of the root bridge of the STG that the interface belongs.
"Designated port"	Displays the designated port ID

Bpdu Filter	BPDU Filter enabled - Yes, BPDU Filter disabled - No

#### Table 34-2. show spanning-tree 0 guard Command Description

#### spanning-tree 0

Assigns a Layer 2 interface to STP instance 0 and configures a port cost or port priority, or enables loop guard, root guard, or the Portfast feature on the interface.

Syntax spanning-tree stp-id {cost cost | {rootguard} | portfast [bpduguard [shutdown-on-violation] | bpdufilter] | priority priority}

To disable the spanning tree group on an interface, use the no spanning-tree stp-id {cost cost | {rootguard} | portfast [bpduguard [shutdown-on-violation] | bpdufilter] | priority priority} command.

Parameters		
	stp-id	Enter the STP instance ID. Range: 0
	cost <i>cost</i>	Enter the keyword <b>cost</b> followed by a number as the cost.
		Range: 1 to 65535
		Defaults:
		• 40-Gigabit Ethernet interface = 1
		• 10-Gigabit Ethernet interface = 2
		• Port Channel interface with 40-Gigabit Ethernet = 1
		• Port Channel interface with 10-Gigabit Ethernet = 1
	rootguard	Enter the keyword <b>rootguard</b> to enable STP root guard on a port or port-channel interface.
	portfast [bpduguard [shutdown-on-violat	Enter the keyword <b>portfast</b> to enable Portfast to move the interface into forwarding mode immediately after the root fails.
	ion]   bpdufilter]	Enter the optional keyword bpduguard to disable the port when it receives a BPDU.
		Enter the optional keyword shutdown-on-violation to hardware disable an interface when a BPDU is received and the port is disabled.
		Enter the keyword bpdufilter to enable on an interface; it should stop sending and receiving BPDUs on the port fast enabled ports.
	priority priority	Enter keyword priority followed by a number as the priority.
		Range: zero (0) to 15
		Default: 8
Defaults	cost = depends on th	e interface type; <i>priority</i> = 8
Command Modes	INTERFACE	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information	disables the interface appears in the <b>show</b>	<b>St bpduguard</b> on an interface and the interface receives a BPDU, the software and sends a message stating that fact. The port is in ERR_DISABLE mode, yet <b>interface</b> commands as enabled. If you do not enable the <b>shutdown-on-violation</b> re still sent to the CPU.

STP root guard is supported on a port or port-channel enabled in any Spanning Tree mode: Spanning Tree Protocol (STP), Rapid Spanning Tree Protocol (RSTP), Multiple Spanning Tree Protocol (MSTP), and Per-VLAN Spanning Tree Plus (PVST+).

Root guard is supported on any STP-enabled port or port-channel except when used as a stacking port. When enabled on a port, root guard applies to all VLANs configured on the port.

# 35

## **System Time and Date**

#### Overview

The commands in this chapter configure time values on the system, either using the Dell Force10 operating software (FTOS), the hardware, or using the network time protocol (NTP). With NTP, the switch can act only as a client to an NTP clock host. For more information, refer to the "Network Time Protocol" section of the Management chapter in the *FTOS Configuration Guide*.

#### Commands

The NTP commands are:

- calendar set
- clock read-calendar
- clock set
- clock summer-time date
- clock summer-time recurring
- clock timezone
- clock update-calendar
- debug ntp
- ntp authenticate
- ntp authentication-key
- ntp broadcast client
- ntp disable
- ntp multicast client
- ntp server
- ntp source
- ntp trusted-key
- ntp update-calendar
- show calendar
- show clock
- show ntp associations
- show ntp status

## calendar set

Set the time and date for the switch hardware clock.

Syntax calendar set	time month day year
---------------------	---------------------

Parameters						
	time	Enter the time in hours:minutes:seconds. For the hour variable, use the 24-hour format, for example, 17:15:00 is 5:15 pm.				
	month					
		You can enter the name of a day to change the order of the display to <i>time day month year</i> .				
	day	Enter the number of the day. Range: 1 to 31.				
		You can enter the name of a month to change the order of the display to <i>time day month</i> year.				
	year	Enter a four-digit number as the year. Range: 1993 to 2035.				
ommand Modes	EXEC Privilege					
Command	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

#### clock summer-time date

Set a date (and time zone) on which to convert the switch to daylight saving time on a one-time basis.

Syntax clock summer-time time-zone date start-month start-day start-year start-time end-month end-day end-year end-time [offset]

To delete a daylight saving time zone configuration, use the no clock summer-time command.

Parameters						
	time-zone	Enter the three-letter name for the time zone. This name is displayed in the show clock output.				
	start-month	Enter the name of one of the 12 months in English.				
		You can enter the name of a day to change the order of the display to time day month				
		year.				
	start-day	Enter the number of the day.				
		Range: 1 to 31.				
		You can enter the name of a month to change the order of the display to <i>time day month year</i> .				
	start-year	Enter a four-digit number as the year.				
		Range: 1993 to 2035.				
	start-time	Enter the time in hours:minutes. For the hour variable, use the 24-hour format, example, 17:15 is 5:15 pm.				
	end-day	Enter the number of the day.				
		Range: 1 to 31.				
		You can enter the name of a month to change the order of the display to <i>time day month year</i> .				
	end-month	Enter the name of one of the 12 months in English.				
		You can enter the name of a day to change the order of the display to <i>time day month year</i> .				
	end-time	Enter the time in hours:minutes. For the hour variable, use the 24-hour format, example, 17:15 is 5:15 pm.				
	end-year	Enter a four-digit number as the year.				
		Range: 1993 to 2035.				
	offset	(OPTIONAL) Enter the number of minutes to add during the summer-time period.				
		Range: 1 to1440.				
		Default: 60 minutes				
Defaults	Not configured.					
Command Modes	CONFIGURATIO	NC				
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module				
Related						
Commands	calendar set	Sets the hardware clock.				
	clock summer-tin	ne recurring Sets a date (and time zone) on which to convert the switch to daylight saving time each year.				
	show clock	Displays the current clock settings.				
	-					

## clock summer-time recurring

show clock

Set the software clock to convert to daylight saving time on a specific day each year.

**Syntax** clock summer-time time-zone recurring [start-week start-day start-month start-time end-week end-day end-month end-time [offset]]

To delete a daylight saving time zone configuration, use the no clock summer-time command.

Parameters		
T diameters	time-zone	Enter the three-letter name for the time zone. This name is displayed in the show clock output.
		You can enter up to eight characters.
	start-week	(OPTIONAL) Enter one of the following as the week that daylight saving begins and then enter values for <i>start-day</i> through <i>end-time</i> :
		• <i>week-number:</i> Enter a number from 1-4 as the number of the week in the month to start daylight saving time.
		<ul> <li>first: Enter this keyword to start daylight saving time in the first week of the month.</li> <li>last: Enter this keyword to start daylight saving time in the last week of the month.</li> </ul>
	start-day	Enter the name of the day that you want daylight saving time to begin. Use English three letter abbreviations, for example, Sun, Sat, Mon, etc.
		Range: Sun – Sat
	start-month	Enter the name of one of the 12 months in English.
	start-time	Enter the time in hours:minutes. For the hour variable, use the 24-hour format, example, 17:15 is 5:15 pm.
	end-week	Enter the one of the following as the week that daylight saving ends:
		• <i>week-number:</i> enter a number from 1-4 as the number of the week to end daylight saving time.
		• <b>first:</b> enter the keyword first to end daylight saving time in the first week of the month.
		• <b>last:</b> enter the keyword last to end daylight saving time in the last week of the month.
	end-day	Enter the weekday name that you want daylight saving time to end. Enter the weekdays using the three letter abbreviations, for example Sun, Sat, Mon etc.
		Range: Sun to Sat
	end-month	Enter the name of one of the 12 months in English.
	end-time	Enter the time in hours:minutes:seconds. For the hour variable, use the 24-hour format, example, 17:15:00 is 5:15 pm.
	offset	(OPTIONAL) Enter the number of minutes to add during the summer-time period. Range: 1 to 1440.
		Default: 60 minutes.
Defaults	Not configured.	
Command Modes	CONFIGURATIO	NC
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Related Commands	calendar set	Sets the hardware clock.
Commands	clock summer-tin	ne date Sets a date (and time zone) on which to convert the switch to daylight saving time on a one-time basis.

Displays the current clock settings.

## clock timezone

	Configure a timezone	for the switch.
Syntax	clock timezone timezone-name offset	
	To delete a timezone of	configuration, use the no clock timezone command.
Parameters	timezone-name	Enter the name of the timezone. You cannot use spaces.
	offset	Enter one of the following:
		• a number from 1 to 23 as the number of hours in addition to UTC for the timezone.
		• a minus sign (-) followed by a number from 1 to 23 as the number of hours
Default	Not configured.	
Command Modes	CONFIGURATION	
Command History	Version 8.3.16.1 I	Introduced on MXL 10/40GbE Switch IO Module
Usage Information	standard, commonly k	l time (UTC) is the time standard based on the International Atomic Time known as Greenwich Mean time. When determining system time, you must ator between UTC and your local timezone. For example, San Jose, CA is the h a UTC offset of -8.

## clock update-calendar

Set the switch hardware clock based on the software clock.

Syntax	clock update-calendar		
Defaults	Not configured.		
Command Modes	EXEC Privilege		
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module		
Usage Information	Use this command only if you are sure that the hardware clock is inaccurate and the software clock is correct.		
	You cannot delete this command (that is, there is not a "no" form of this command).		
Related Commands	calendar set Sets the hardware clock.		

## debug ntp

Display NTP transactions and protocol messages for troubleshooting. **Syntax** debug ntp {adjust | all | authentication | events | loopfilter | packets | select | sync} To disable debugging of NTP transactions, use the no debug ntp {adjust | all | authentication | events | **loopfilter** | **packets** | **select** | **sync** } command. **Parameters** adjust Enter the keyword **adjust** to display information on NTP clock adjustments. Enter the keyword **all** to display information on all NTP transactions. all Enter the keyword authentication to display information on NTP authentication authentication transactions. events Enter the keyword events to display information on NTP events. loopfilter Enter the keyword loopfilter to display information on NTP local clock frequency. packets Enter the keyword packets to display information on NTP packets. select Enter the keyword select to display information on the NTP clock selection. Enter the keyword sync to display information on the NTP clock synchronization. sync **Command Modes EXEC** Privilege Command Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module History ntp authenticate Enable authentication of NTP traffic between the switch and the NTP time serving hosts. Syntax ntp authenticate To disable NTP authentication, use the no ntp authentication command. Defaults Not enabled. **Command Modes** CONFIGURATION Command Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module History Usage You also must configure an authentication key for NTP traffic using the ntp authentication-key Information command. Related Configures the authentication key for NTP traffic. ntp authentication-key Commands

Configures a key to authenticate.

ntp trusted-key

## ntp authentication-key Specify a key for authenticating the NTP server.

Syntax	ntp authentication-key nu	umber md5 [0   7] key
--------	---------------------------	-----------------------

Parameters		
i di di li cici o	number	Specify a number for the authentication key.
		Range: 1 to 4294967295.
		This number must be the same as the number parameter configured in the ntp trusted-key command.
	md5	Specify that the authentication key will be encrypted using MD5 encryption algorithm.
	0	Specify that authentication key will be entered in an unencrypted format (default).
	7	Specify that the authentication key will be entered in DES encrypted format.
	key	Enter the authentication key in the previously specified format.
Defaults	NTP authenticat default.	ion is not configured by default. If you do not specify the option $[0   7]$ , 0 is selected by
Command Modes	CONFIGURAT	ION
Command Modes Command History	CONFIGURATI	ION Introduced on MXL 10/40GbE Switch IO Module

In this case you must re-enter this command and save the running-config to

## ntp broadcast client

Set up the interface to receive NTP broadcasts from an NTP server.

Syntax	ntp broadcast client		
	To disable broadcast, use the no ntp broadcast client command.		
Defaults	Disabled		
Command Modes	INTERFACE		
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module		

### ntp disable

·	Prevent an interface from receiving NTP packets.		
Syntax	ntp disable		
	To re-enable NTP on an interface, use the no ntp disable command.		
Default	Disabled (that is, if an NTP host is configured, all interfaces receive NTP packets)		
Command Modes	INTERFACE		
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module		

## ntp multicast client

Configure the switch to receive NTP information from the network via multicast.

Syntax	ntp multicast client [multicast-address]		
	To disable multicast reception, use the no ntp multicast client [multicast-address] command.		
Parameters	multicast-address	(OPTIONAL) Enter a multicast address. Enter an IPv4 address in dotted decimal format. If you do not enter a multicast address, the address 224.0.1.1 is configured if the interface address is IPv4.	
Defaults	Not configured.		
Command Modes	INTERFACE		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	

## ntp server

Configure an NTP time-serving host.

Syntax ntp server { hostname | ipv4-address } [key keyid] [prefer] [version number]

Parameters

ipv4-address	Enter an IPv4 address (A.B.C.D).		
hostname	<i>ne</i> Enter the hostname of the server.		
key keyid	(OPTIONAL) Enter the keyword <b>key</b> and a number as the NTP peer key.		
	Range: 1 to 4294967295		
prefer	(OPTIONAL) Enter the keyword <b>prefer</b> to indicate that this peer has priority over other servers.		
version number	(OPTIONAL) Enter the keyword <b>version</b> and a number to correspond to the NTP version used on the server.		
	Range: 1 to 3		

**Defaults** Not configured.

Command Modes	CONFIGURATION
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Usage Information	You can configure multiple time serving hosts (up to 250). From these time serving hosts, the FTOS chooses one NTP host with which to synchronize. To determine which server was selected, use the show ntp associations.
	Because a large number of polls to NTP hosts can impact network performance, Dell Force10 recommends limiting the number of hosts configured.
Related Commands	show ntp associations Displays NTP servers configured and their status.

#### ntp source

Specify an interface's IP address to be included in the NTP packets.

Syntax	ntp source interface		
	To delete the conf	To delete the configuration, use the no ntp source command.	
Parameters	interface	Enter the following keywords and slot/port or number information:	
		• For Loopback interfaces, enter the keyword <b>loopback</b> followed by a number from zero (0) to 16383.	
		• For a Port Channel interface, enter the keyword <b>lag</b> followed by a number:	
		Range: 1-128	
		• For a 10-Gigabit Ethernet interface, enter the keyword <b>TenGigabitEthernet</b> followed by the slot/port information.	
		• For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE followed by the slot/port information.	
		• For VLAN interface, enter the keyword <b>vlan</b> followed by a number from 1 to 4094.	
Defaults	Not configured.		
Command Modes	CONFIGURATIC	DN	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	

### ntp trusted-key

Set a key to authenticate the system to which NTP will synchronize.

Syntax	ntp trusted-key number		
_	To delete the key, use the no ntp trusted-key <i>number</i> command. neters number Enter a number as the trusted key ID. Range: 1 to 4294967295.		
Parameters			

Defaults	Not configured.		
Command Modes	CONFIGURATIO	ſ	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
Usage Information	parameter in the nt	eter in the ntp trusted-key command must be the same number as the <i>number</i> authentication-key command. If you change the ntp authentication-key command, ge the ntp trusted-key command.	
Related Commands	ntp authentication-l	ey Sets an authentication key for NTP.	
	ntp authenticate	Enables the NTP authentication parameters you set.	

ntp update-calendar Configure the FTOS to update the calendar (the hardware clock) with the NTP-derived time.

Syntax	ntp update-calendar [minutes]			
	To return to defau	It setting, use the no ntp update-calendar command.		
Parameters	minutes	(OPTIONAL) Enter the number of minutes between updates from NTP to the hardware clock.		
		Range: 1 to 1440.		
		Default: 60 minutes.		
Defaults	Not enabled.			
Command Modes	CONFIGURATIO	DN		
Command				
History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module		
show caler	ndar			

Display the current date and time based on the switch hardware clock.

Table 35-1. show ntp associations Command Fields

Field	Description
(none)	One or more of the following symbols could be displayed:
	* means synchronized to this peer
	# means almost synchronized to this peer
	• + means the peer was selected for possible synchronization
	• - means the peer is a candidate for selection
	• ~ means the peer is statically configured
remote	Displays the remote IP address of the NTP peer.
ref clock	Displays the IP address of the remote peer's reference clock.
st	Displays the peer's stratum, that is, the number of hops away from the external time source. A 16 in this column means the NTP peer cannot reach the time source.
when	Displays the last time the switch received an NTP packet.
poll	Displays the polling interval (in seconds).
reach	Displays the reachability to the peer (in octal bitstream).
delay	Displays the time interval or delay for a packet to complete a round-trip to the NTP time source (in milliseconds).
offset	Displays the relative time of the NTP peer's clock to the switch clock (in milliseconds).
disp	Displays the dispersion.

## **Uplink Failure Detection (UFD)**

#### Overview

Uplink failure detection (UFD) provides detection of the loss of upstream connectivity and, if used with network interface controller (NIC) teaming, automatic recovery from a failed link.

#### Commands

The UFD commands described in this chapter are:

- clear ufd-disable
- debug uplink-state-group
- description
- downstream
- downstream auto-recover

#### clear ufd-disable

Re-enable one or more downstream interfaces on the switch/router that are in a UFD-disabled error state so that an interface can send and receive traffic.

Syntax clear ufd-disable {interface interface | uplink-state-group group-id}

Parameters		
Parameters	interface interfac	Specifies one or more downstream interfaces.
		For <i>interface</i> , enter one of the following interface types: 10-Gigabit Ethernet: <b>tengigabitethernet</b> { <i>slot/port</i>   <i>slot/port-range</i> }
		40-Gigabit Ethernet: <b>fortygigabitethernet</b> { <i>slot/port</i>   <i>slot/port-range</i> } Port channel: <b>port-channel</b> {1-512   <i>port-channel-range</i> }
		Where <i>port-range</i> and <i>port-channel-range</i> specify a range of ports separated by a dash (-) and/or individual ports/port channels in any order; for example:
		tengigabitethernet 1/1-2,5,9,11-12
		port-channel 1-3,5
		A comma is required to separate each port and port-range entry.
	uplink-state-gro group-id	upRe-enables all UFD-disabled downstream interfaces in the group. Valid group-id values are 1 to 16.
Command Modes	EXEC Mode	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Related Commands	downstream	Assigns a port or port-channel to the uplink-state group as a downstream interface.
	upstream	Assigns a port or port-channel to the uplink-state group as an upstream interface.
	uplink-state-group	Creates an uplink-state group and enable the tracking of upstream links.

## debug uplink-state-group

Enable debug messages for events related to a specified uplink-state group or all groups.

Syntax	debug uplink-st	ate-group [group-id]
	To turn off debugg	ing event messages, use the <b>no debug uplink-state-group</b> [group-id] command.
Parameters	group-id	Enables debugging on the specified uplink-state group. Valid <i>group-id</i> values are 1 to 16.
Defaults	none	
Command Modes	EXEC Privilege	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Related Commands	clear ufd-disable	Re-enables downstream interfaces that are in a UFD-disabled error state.

## description

	Maximum length: 80 alphanumeric characters.
Defaults none	
d Modes UPLINK-STAT	E-GROUP

Related uplink-state-grou	p Creates an uplink-state group and enable the tracking of upstream links
Example Figure 36-1.	description Command Example

#### Enter a text description of an uplink-state group.

## downstream

Assign a port or port-channel to the uplink-state group as a downstream interface.

Syntax	downstream inte	erface
	To delete a downst	ream interface, use the <b>no downstream</b> interface command.
Parameters	interface	Enter one of the following interface types: 10-Gigabit Ethernet: <b>tengigabitethernet</b> { <i>slot/port</i>   <i>slot/port-range</i> } 40-Gigabit Ethernet: <b>fortygigabitethernet</b> { <i>slot/port</i>   <i>slot/port-range</i> } Port channel: <b>port-channel</b> {1-512   <i>port-channel-range</i> } Where <i>port-range</i> and <i>port-channel-range</i> specify a range of ports separated by a dash (-) and/or individual ports/port channels in any order; for example: tengigabitethernet 1/1-2,5,9,11-12 port-channel 1-3,5 A comma is required to separate each port and port-range entry.
Defaults	none	
Command Modes	UPLINK-STATE-	GROUP
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

Usage Information	You can assign physica	ll port or port-channel interfaces to an uplink-state group.
	U	face to only one uplink-state group. You must configure each interface assigned p as either an upstream or downstream interface, but not both.
	•	ual member ports of a port channel to the group. An uplink-state group can ber ports of a port channel or the port channel itself, but not both.
Related Commands	downstream	Assigns a port or port-channel to the uplink-state group as a downstream interface.
	upstream	Assigns a port or port-channel to the uplink-state group as an upstream interface.
	uplink-state-group	Creates an uplink-state group and enable the tracking of upstream links.

#### downstream auto-recover

Enable auto-recovery so that UFD-disabled downstream ports in an uplink-state group automatically come up when a disabled upstream port in the group comes back up.

Syntax

#### downstream auto-recover

To disable auto-recovery on downstream links, use the **no downstream auto-recover** command.

**Defaults** The auto-recovery of UFD-disabled downstream ports is enabled.

#### Command Modes UPLINK-STATE-GROUP

Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Related Commands	downstream	Assigns a port or port-channel to the uplink-state group as a downstream interface.
	upstream	Assigns a port or port-channel to the uplink-state group as an upstream interface.
	uplink-state-group	Creates an uplink-state group and enable the tracking of upstream links.

#### downstream disable links

Configure the number of downstream links in the uplink-state group that are disabled if one upstream link in an uplink-state group goes down.

Syntax downstream disable links {number | all}

number

To revert to the default setting, use the no downstream disable links command.

Parameters

Enter the number of downstream links to be brought down by UFD. Range: 1 to 1024.

 Range: 1 to 1024.

 all
 Brings down all downstream links in the group.

Defaults All

#### Command Modes UPLINK-STATE-GROUP

Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information	*	m interface in an uplink-state group goes down, a user-configurable number of aces in an uplink-state group are put into a link-down state with an UFD-Disabled
	1	erfaces in an uplink-state group go down, all downstream interfaces in the same are put into a link-down state.

# **VLAN Stacking**

# **Overview**

With the virtual local area network (VLAN)-stacking feature (also called stackable VLANs and *QinQ*), you can "stack" VLANs into one tunnel and switch them through the network transparently.

The VLAN stacking commands described in this chapter are:

- dei enable
- dei honor
- dei mark
- member
- show interface dei-honor
- show interface dei-mark
- vlan-stack access
- vlan-stack compatible
- vlan-stack dot1p-mapping
- vlan-stack protocol-type
- vlan-stack trunk

For information about basic VLAN commands, refer to Virtual LAN (VLAN) Commands in the Layer 2 chapter.

#### **Important Points to Remember**

- If the spanning tree protocol (STP) is *not* enabled across the stackable VLAN network, STP bridge protocol data units (BPDUs) from the customer's networks are tunneled across the stackable VLAN network.
- If STP *is* enabled across the stackable VLAN network, STP BPDUs from the customer's networks are consumed and *not* tunneled across the stackable VLAN network *unless* you enable the tunneling protocol.
- Layer 3 protocols are not supported on a stackable VLAN network.
- Assigning an IP address to a stackable VLAN is supported when all the members are only stackable VLAN trunk ports. IP addresses on a stackable VLAN-enabled VLAN is not supported if the VLAN contains stackable VLAN access ports. This facility is provided for the simple network management protocol (SNMP) over a stackable VLAN-enabled VLAN containing only stackable VLAN trunk interfaces. Layer 3 routing protocols on such a VLAN are not supported.

• Interfaces configured using stackable VLAN access or stackable VLAN trunk commands do not switch traffic for the default VLAN. These interfaces switch traffic only when they are added to a non-default VLAN.

# dei enable

Make packets eligible for dropping based on their drop eligible indicator (DEI) value.

Syntax	dei enable
Defaults	Packets are colored green; no packets are dropped.
Command Mode	CONFIGURATION
Command	

History

Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

# dei honor

Honor the incoming DEI value by mapping it to an FTOS drop precedence. You can enter the command once for 0 and once for 1.

Syntax	dei honor {0   1} {green   red   yellow}
--------	------------------------------------------

Parameters

0   1	Enter the bit value you want to map to a color.
green   red   yellow	<ul> <li>Choose a color:</li> <li>Green: High priority packets that are the least preferred to be dropped.</li> <li>Yellow: Lower priority packets that are treated as best-effort.</li> <li>Red: Lowest priority packets that are always dropped (regardless of congestion status).</li> </ul>

**Defaults** Disabled; packets with an unmapped DEI value are colored green.

#### Command Mode INTERFACE

Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

#### Figure 37-3. show vlan Command Example with Stackable VLANs

# vlan-stack dot1p-mapping

Map C-Tag dot1p values to a S-Tag dot1p value. C-Tag values may be separated by commas and dashed ranges are permitted. Dynamic Mode CoS overrides any Layer 2 QoS configuration in case of conflicts.

**Syntax** vlan-stack dot1p-mapping c-tag-dot1p values sp-tag-dot1p value **Parameters** c-tag-dot1p value Enter the keyword followed by the customer dot1p value that will be mapped to a service provider do1p value. Range: 0 to 5 sp-tag-dot1p value Enter the keyword followed by the service provider dot1p value. Range: 0 to 5 Defaults none **Command Modes INTERFACE** Command Introduced on MXL 10/40GbE Switch IO Module Version 8.3.16.1 History

# vlan-stack protocol-type

Define the Stackable VLAN tag protocol identifier (TPID) for the outer VLAN tag (also called the *VMAN tag*). If you do not configure this command, FTOS assigns the value 0x9100.

Syntax	vlan-stack protocol-type number		
Parameters	number	Enter the hexadecimal number as the Stackable VLAN tag.	
		You may specify both bytes of the 2-byte S-Tag TPID.	
		Range: 0 to FFFF	
		Default: 9100	
Defaults	0x9100		

Command Modes	CONFIGURATION				
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module			
Usage Information	For specific intero	perability limitations regarding the S-Tag TPID, refer to the FTOS Configuration			
Related Commands	portmode hybrid	Sets a port (physical ports only) to accept both tagged and untagged frames. A port configured this way is identified as a hybrid port in report displays.			
	vlan-stack trunk	Specifies a Layer 2 port or port channel as a trunk port to the stackable VLAN network.			

# vlan-stack trunk

Specify a Layer 2 port or port channel as a trunk port to the stackable VLAN network.

Syntax	vlan-stack trunk
	To remove a trunk port designation from the selected interface, use the no vlan-stack trunk command.
Defaults	Not configured.
Command Modes	INTERFACE
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module
Usage Information	Prior to using this command, to place the interface in Layer 2 mode, you must execute the switchport command.
	To remove the trunk port designation, the port must first be removed (using the no member <i>interface</i> command) from all stackable VLAN-enabled VLANs.

A VLAN-Stack trunk port is also allowed to be configured as a tagged port and as an untagged port for single-tagged VLANs. When the VLAN-Stack trunk port is also a member of an untagged VLAN, the port should be in hybrid mode. For more information, refer to portmode hybrid.

In Figure 37-4, a VLAN-Stack trunk port is configured and then also made part of a single-tagged VLAN.

In Figure 37-5, the tag protocol identifier (TPID) is set to 8848. The "Tengig 3/10" port is configured to act as a VLAN-stack access port, while the "Tengig 8/0" port acts as a VLAN-Stack trunk port, switching stackable VLAN traffic for VLAN 10, while also switching untagged traffic for VLAN 30 and tagged traffic for VLAN 40. (To allow VLAN 30 traffic, the native VLAN feature is required, by using the portmode hybrid command. For more information, refer to portmode hybrid in the Interfaces chapter.

# Virtual Router Redundancy Protocol (VRRP)

# **IPv4 VRRP Commands**

The virtual router redundancy protocol (VRRP) chapter describes the commands:

- advertise-interval
- authentication-type
- clear counters vrrp
- debug vrrp
- description
- disable
- hold-time
- preempt
- priority
- show config
- show vrrp
- track
- virtual-address
- vrrp delay minimum
- vrrp delay reload
- vrrp-group

# advertise-interval

Set the time interval between VRRP advertisements.

Syntax	advertise-interval seconds				
	To return to the default settings, use the no advertise-interval command.				
Parameters	seconds	Enter a number of seconds.			
		Range: 1 to 255.			
		Default: 1 second.			
Defaults	1 second.				
Command Modes	INTERFACE-VRRP				

Command	
History	

Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

Usage Dell Force10 recommends keeping the default setting for this command. If you do change the time interval between VRRP advertisements on one router, you must change it on all routers.

# authentication-type

Enable authentication of VRRP data exchanges.

Syntax authentication-type simple [encryption-type] password

To delete an authentication type and password, use the no authentication-type command.

Parameters		
Farameters	simple	Enter the keyword simple to specify simple authentication.
	encryption-type	(OPTIONAL) Enter one of the following numbers:
		• 0 (zero) for an un-encrypted (clear text) password
		• 7 (seven) for hidden text password.
	password	Enter a character string up to 8 characters long as a password. If you do not enter an encryption-type, the password is stored as clear text.
Defaults	Not configured.	
Command Modes	VRRP	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage	The password is di	splayed in the show config output if the encryption-type is unencrypted or clear text

Usage<br/>InformationThe password is displayed in the show config output if the encryption-type is unencrypted or clear text.<br/>If you choose to encrypt the password, the show config displays an encrypted text string.

#### clear counters vrrp

Clear the counters maintained on VRRP operations.

Syntax	clear counters vrrp [vrrp-id]		
Parameters	vrrp-id	(OPTIONAL) Enter the number of the VRRP group ID.	
	·	Range: 1 to 255	
Command Modes	EXEC Privilege		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	

С

# debug vrrp

	Allows you to en	able debugging of VRRP.
Syntax	debug vrrp inter	face [vrrp-id] {all   packets   state   timer}
	To disable debug command.	ging, use the no debug vrrp interface [vrrp-id] {all   packets   state   timer}
Parameters	interface	Enter the following keywords and slot/port or number information:
		<ul> <li>For Port Channel interface types, enter the keyword port-channel followed by the number:</li> </ul>
		Range: 1 to 128
		<ul> <li>For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.</li> </ul>
		• For a VLAN interface, enter the keyword vlan followed by the VLAN ID. The VLAN ID range is from 1 to 4094.
	vrrp-id	(OPTIONAL) Enter a number from 1 to 255 as the VRRP group ID.
	all	Enter the keyword all to enable debugging of all VRRP groups.
	bfd	Enter the keyword <b>bfd</b> to enable debugging of all VFFP BFD interactions
	packets	Enter the keyword packets to enable debugging of VRRP control packets.
	state	Enter the keyword state to enable debugging of VRRP state changes.
	timer	Enter the keyword timer to enable debugging of the VRRP timer.
Command Modes	EXEC Privilege	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information	If no options are	specified, debug is active on all interfaces and all VRRP groups.
description	Configure a shor	t text string describing the VRRP group.
Syntax	description text	
	To delete a VRR	P group description, use the no description command.
Parameters	text	Enter a text string up to 80 characters long.
Defaults	Not enabled.	
Command Modes	VRRP	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

# disable Disable a VRRP group. Syntax disable To re-enable a disabled VRRP group, use the no disable command. Defaults VRRP is enabled. Command Modes VRRP

Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information	To enable VRRP to and enter no disab	raffic, assign an IP address to the VRRP group using the virtual-address command ble.

 Related
 virtual-address
 Specifies the IP address of the virtual router.

# hold-time

Specify a delay (in seconds) before a switch becomes the MASTER virtual router. By delaying the initialization of the VRRP MASTER, the new switch can stabilize its routing tables.

#### Syntax hold-time seconds

disable

To return to the default value, use the **no hold-time** command.

Range: 0 to 65535. Default: zero (0) seconds.

- P	ara	ime	tel	S

seconds Enter a number of seconds.

**Defaults** zero (0) seconds

Command Modes VRRP

Command History

Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

Usage If a switch is a MASTER and you change the hold timer, you must disable and re-enable VRRP for the new hold timer value to take effect.

Related Commands

Disables a VRRP group.

## preempt

	Permit a BACKUP router with a higher priority value to preempt or become the MASTER router.
Syntax	preempt
	To prohibit preemption, use the no preempt command.
Defaults	Enabled (that is, a BACKUP router can preempt the MASTER router).
Command Modes	VRRP
Command History	Version 8.3.16.1 Introduced on MXL 10/40GbE Switch IO Module

# priority

	Specify a VRRP p the MASTER elec	priority value for the VRRP group. This value is used by the VRRP protocol during ction process.
Syntax	priority <i>priority</i>	
	To return to the de	efault value, use the no priority command.
Parameters	priority	Enter a number as the priority. Enter 255 only if the router's virtual address is the same as the interface's primary IP address (that is, the router is the OWNER). Range: 1 to 255 Default: 100
Defaults	100	
Command Modes	VRRP	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information		a VRRP group becomes MASTER, configure the VRRP group's virtual address with s the interface's primary IP address and change the priority of the VRRP group to
	If you set the prior an error message a	rity to 255 and the virtual-address is not equal to the interface's primary IP address, appears.

**Note:** Configuring VRRP priority 255 on an interface on which DHCP Client is enabled is not supported.

show config		
0		ault VRRP configuration.
Syntax	show config [ver	rbose]
Parameters	verbose	(OPTIONAL) Enter the keyword <b>verbose</b> to view all VRRP group configuration information, including defaults.
Command Modes	VRRP	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Example	Figure 38-1.	show config Command Example
	vrrp-group 4	vrid-4)#show con

# show vrrp

View the VRRP groups that are active. If no VRRP groups are active, the FTOS returns "No Active VRRP group."

**Syntax** show vrrp [*vrrp-id*] [*interface*] [brief]

Parameters

Parameters	vrrp-id	(OPTIONAL) Enter the Virtual Router Identifier for the VRRP group to view only that
		group. Range: 1 to 255.
	interface	(OPTIONAL) Enter the following keywords and slot/port or number information:
		• For Port Channel interface types, enter the keyword <b>port-channel</b> followed by the number:
		Range: 1 to 128
		<ul> <li>For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.</li> </ul>
		• For a VLAN interface, enter the keyword vlan followed by the VLAN ID. The VLAN ID range is from 1 to 4094.
	brief	(OPTIONAL) Enter the keyword <b>brief</b> to view a table of information on the VRRP groups.
Command Modes	EXEC	
	EXEC Privilege	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

Example Figure 38-2. show vrrp brief Command Example
------------------------------------------------------

(	FTOS>Interfac Description	ce G	rp Pri	L P:	re State Master addr Virtual addr(s)	١
		1	100	Y	Master 200.200.200.200 200.200.200	
		2	100	Y	Master 200.200.200.200 200.200.200.202 200.200.	
	Description TenGiq10/37	3	100	v	Master 1.1.1.1 1.1.1.2	
	TenGig10/37					
	desc					
	FTOS>					

Item Description Interface Lists the interface type, slot and port on which the VRRP group is configured. Grp Displays the VRRP group ID. Pri Displays the priority value assigned to the interface. If the track command is configured to track that interface and the interface is disabled, the *cost* is subtracted from the priority value assigned to the interface. Pre States whether preempt is enabled on the interface. . Y = Preempt is enabled. . N = Preempt is not enabled.State Displays the operational state of the interface by using one of the following: NA/IF (the interface is not available). • • MASTER (the interface associated with the MASTER router). • BACKUP (the interface associated with the BACKUP router). Master addr Displays the IP address of the MASTER router. Virtual addr(s) Displays the virtual IP addresses of the VRRP routers associated with the interface.

FTOS>
```

#### Table 38-2. show vrrp Command Description

Line Beginning with	Description
Tengigabitethernet 12/3	Displays the Interface, the VRRP group ID, and the network address.
	If the interface is not sending VRRP packets, $0.0.0.0$ appears as the network address.
State: master	Displays the interface's state:
	• <b>Na/lf</b> (not available),
	• <b>master</b> (MASTER virtual router)
	• <b>backup</b> (BACKUP virtual router)
	the interface's priority and the IP address of the MASTER.
Hold Down:	This line displays additional VRRP configuration information:
	• Hold Down displays the hold down timer interval in seconds.
	• <b>Preempt</b> displays TRUE if preempt is configured and FALSE if preempt is not configured.
	• <b>AdvInt</b> displays the Advertise Interval in seconds.
Adv rcvd:	This line displays counters for the following:
	• <b>Adv rcvd</b> displays the number of VRRP advertisements received on the interface.
	• <b>Adv sent</b> displays the number of VRRP advertisements sent on the interface.
	• <b>Gratuitous</b> ARP sent displays the number of gratuitous ARPs sent.
Virtual MAC address	Displays the virtual MAC address of the VRRP group.
Virtual IP address	Displays the virtual IP address of the VRRP router to which the interface is connected.

Authentication:	States whether authentication is configured for the VRRP group. If it is, the authentication type and the password are listed.	
Tracking states	This line is displayed if the track command is configured on an interface. Below this line, the following information on the tracked interface is displayed:	
	<ul> <li>Dn or Up states whether the interface is down or up.</li> <li>the interface type slot/port information</li> </ul>	

#### Table 38-2. show vrrp Command Description

# track

Syntax	track interface [priority-cost cost]		
	To disable monito	ring, use the no track interface command.	
Parameters	interface	Enter the following keywords and slot/port or number information:	
		• For a Loopback interface, enter the keyword <b>loopback</b> followed by a number from 0 to 16383.	
		• For Port Channel interface types, enter the keyword <b>port-channel</b> followed by the number:	
		Range: 1-128	
		• For a 10-Gigabit Ethernet interface, enter the keyword <b>TenGigabitEthernet</b> followed by the slot/port information.	
		• For a VLAN interface, enter the keyword vlan followed by a number from 1 to 4094.	
	cost	(OPTIONAL) Enter a number as the amount to be subtracted from the priority value.	
		Range: 1 to 254.	
		Default: 10.	
Defaults	<i>cost</i> = 10		
Command Modes	VRRP		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	
History Usage Information	If you disable the	interface, the cost value is subtracted from the priority value and forces a new n if the priority value is lower than the priority value in the BACKUP virtual routers	

#### virtual-address

Configure up to 12 IP addresses of virtual routers in the VRRP group. You must set at least one virtual address for the VRRP group to start sending VRRP packets.

Syntax virtual-address ip-address1 [... ip-address12]

To delete one or more virtual IP addresses, use the no virtual-address *ip-address1* [... *ip-address12*] command.

Parameters		
r ai aiiietei S	ip-address1	Enter an IP address of the virtual router in dotted decimal format.
		The IP address must be on the same subnet as the interface's primary IP address.
	ip-address12	(OPTIONAL) Enter up to 11 additional IP addresses of virtual routers in dotted decimal format. Separate the IP addresses with a space.
		The IP addresses must be on the same subnet as the interface's primary IP address.
Defaults	Not configured.	
Command Modes	VRRP	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information		
	A system message a	ppears after you enter or delete the virtual-address command.
		VRRP group becomes MASTER, configure the VRRP group's virtual address with as the interface's primary IP address and change the priority of the VRRP group to

You can ping the virtual addresses configured in all VRRP groups.

# vrrp delay minimum

Set the delay time for VRRP initialization after an interface comes up.

Parameters	seconds	Enter the number of seconds for the delay for VRRP initialization after an interface becomes operational.
		Range: 0 to 900 (0 indicates no delay)
Defaults	0	
mand Modes	INTERFACE	

Usage Information	This command applies to a single interface. When used in conjunction with the vrrp delay reload CLI, the later timer rules the VRRP enabling. For example, if vrrp delay reload is 600 and the vrrp delay minimum is 300:
	• When the system reloads, VRRP waits 600 seconds (10 minutes) to bring up VRRP on all interfaces that are up and configured for vrrp.
	• When an interface comes up, whether as part of a system reload or an interface reload, the system waits 300 seconds (5 minutes) to bring up VRRP on that interface.
Related Commands	vrrp delay reload       Sets the delay time for VRRP initialization after a system reboot.

# vrrp delay reload

Set the delay time for VRRP initialization after a system reboot.

Syntax	vrrp delay minimum seconds	
Parameters	seconds	Enter the number of seconds for the delay. Range: 0 to 900 (0 indicates no delay)
Defaults	0	
Command Modes	INTERFACE	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage This command applies to a all the VRRP configured interfaces on a system. When used in with the vrrp delay minimum CLI, the later timer rules the VRRP enabling. For example, reload is 600 and the vrrp delay minimum is 300:		y minimum CLI, the later timer rules the VRRP enabling. For example, if vrrp delay
	•	tem reloads, VRRP waits 600 seconds (10 minutes) to bring up VRRP on all t are up and configured for vrrp.
		rface comes up, whether as part of a system reload or an interface reload, the system conds (5 minutes) to bring up VRRP on that interface.
	You must save the	e configuration and reload the system for the delay timers to take affect.
Related Commands	vrrp delay minim	um Sets the delay time for VRRP initialization after a line card reboot.

## vrrp-group

Assign a VRRP ID to an interface. You can configure up to 12 VRRP groups per interface.

Parameters	vrrp-id	Enter a number as the group ID.
		Range: 1 to 255.
Defaults	Not configured.	
nmand Modes	INTERFACE	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information	The VRRP group only becomes active and sends VRRP packets when a virtual IP address is configured. When you delete the virtual address, the VRRP group stops sending VRRP packets.	

# 39

# **Debugging and Diagnostics**

This chapter contains three sections:

- Offline Diagnostic Commands
- Buffer Tuning Commands
- Hardware Commands

# **Offline Diagnostic Commands**

The offline diagnostics test suite is useful for isolating faults and debugging hardware. While tests are running, the Dell Force10 operating software (FTOS) results are saved as a text file (TestReport-SU-X.txt) in the flash directory. The show file command is available only on Master and Standby.

# **Important Points to Remember**

- Offline diagnostics can only be run when the unit is offline.
- You can only run offline diagnostics on a unit to which you are connected via the console. In other words, you cannot run diagnostics on a unit to which you are connected via a stacking link.
- Diagnostic results are stored in a file (TestReport-SU-X.txt) in the flash directory. To review the results, use the show file command, which prints the results to the screen.

• Diagnostics only test connectivity, not the entire data path.

The offline diagnostics commands are:

- diag stack-unit
- offline stack-unit
- online stack-unit

# diag stack-unit

Run offline diagnostics on a stack unit.

Syntax	diag stack-unit number [alllevels   level0   level1   level2] verbose no-reboot	
Parameters		
, aramotoro	number	Enter the stack-unit number.
		Range: 0 to 5
<b>allevels</b> Enter the keyword <b>allevels</b> to run the complete set of offline diagnostic te		Enter the keyword <b>allevels</b> to run the complete set of offline diagnostic tests.

	level0	Enter the keyword <b>level0</b> to run Level 0 diagnostics. Level 0 diagnostics check for the presence of various components and perform essential path verifications. In addition, they verify the identification registers of the components on the board.
	level1	Enter the keyword <b>Level1</b> to run Level 1 diagnostics. Level 1 diagnostics is a smaller set of diagnostic tests with support for automatic partitioning. They perform status/self test for all the components on the board and test their registers for appropriate values. In addition, they perform extensive tests on memory devices (e.g., SDRAM, flash, NVRAM, EEPROM, and CPLD) wherever possible. There are no tests on 10G links. At this level, stack ports are shut down automatically.
	level2	Enter the keyword <b>level2</b> to run Level 2 diagnostics. Level 2 diagnostics is a full set of diagnostic tests with no support for automatic partitioning. Level 2 diagnostics are used primarily for on-board loopback tests and more extensive component diagnostics. Various components on the board are put into loop back mode, and test packets are transmitted through those components. These diagnostics also perform snake tests using VLAN configurations. You must physically remove the unit from the stack to test 10G links.
	verbose	Enter the keyword <b>verbose</b> to run the diagnostic in verbose mode. Verbose mode gives more information in the output than standard mode.
	no-reboot	Enter the keyword <b>no-reboot</b> to avoid automatic rebooting of the chassis after completion of diagnostic execution. Generally, this option is never used because if you run the diagnostic once again without rebooting the chassis, it may cause an issue with the diagnostic results.
Defaults	none	
Command Modes	EXEC Privilege	,
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module

# offline stack-unit

Place a stack unit in the offline state.

Syntax	offline stack-unit number	
Parameters	number	Enter the stack unit number. Range: 0 to 5
Defaults	none	
Command Mode	EXEC Privilege	
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
Usage Information	The system reboots when the off-line diagnostics complete. This is an automatic process. A warning message appears when the <b>offline stack-unit</b> command is implemented.	
	Warning - Diagnostic execution will cause stack-unit to reboot after completion of diags.	
	Proceed with O	ffline-Diags [confirm yes/no]:y

# online stack-unit

Syntax	online stack-unit number		
Parameters	number	Enter the stack unit number.	
		range: 0 to 5	
Defaults	none		
Command Mode	EXEC Privilege		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	

Place a stack unit in the online state.

# **Buffer Tuning Commands**

The buffer tuning commands are:

- buffer (Buffer Profile)
- buffer (Configuration)
- buffer-profile (Configuration)
- buffer-profile (Interface)
- show buffer-profile
- show buffer-profile interface

Warning: Altering the buffer allocations is a sensitive operation. Do not use any buffer tuning commands without first contacting the Dell Force10 Technical Assistance Center (TAC).

# buffer (Buffer Profile)

Allocate an amount of dedicated buffer space, dynamic buffer space, or packet pointers to queues 0 to 3.

Syntax buffer [dedicated | dynamic | packets-pointers] queue0 number queue1 number queue2 number queue3 number

Parameters	dedicated	Enter this keyword to configure the amount of dedicated buffer space per queue.
	dynamic	Enter this keyword to configure the amount of dynamic buffer space per Field Processor.
	packets-pointers	Enter this keyword to configure the number of packet pointers per queue.
		Field Processor.

	queue0 number	Enter this keyword to allocate an amount of buffer space or packet pointers to Queue 0.
		Dedicated Buffer Range: 0-2013
		Dynamic Buffer Range:
		FP: 0-2013
		CSF: 0-131200 (in multiples of 80)
		Packet Pointer Range: 0-2047
	queue1 number	Enter this keyword to allocate an amount of buffer space or packet pointers to Queue 1.
		Dedicated Buffer Range: 0-2013
		Dynamic Buffer Range:
		FP: 0-2013
		CSF: 0-131200 (in multiples of 80)
		Packet Pointer Range: 0-2047
	queue2 number	
		to Queue 2. Dedicated Buffer Range: 0-2013
		Dynamic Buffer Range:
		FP: 0-2013
		CSF: 0-131200 (in multiples of 80)
		Packet Pointer Range: 0-2047
	queue3 number	-
	queues number	to Queue 3.
		Dedicated Buffer Range: 0-2013
		Dynamic Buffer Range:
		FP: 0-2013
		CSF: 0-131200 (in multiples of 80)
		Packet Pointer Range: 0-2047
Defaults	none	
Command Mode	BUFFER PROFIL	E
Command	<sup>*</sup> Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
History		
Related Commands	buffer-profile (Cont	figuration) Creates a buffer profile that can be applied to an interface.

# buffer (Configuration)

Apply a buffer profile to all Field or Switch Fabric processors in a port-pipe.

#### buffer [csf | fp-uplink] port-set port-pipe buffer-policy buffer-profile

<b>Parameters</b>
-------------------

csf	Enter this keyword to apply a buffer profile to all Switch Fabric processors in a port-pipe.
fp-uplink	Enter this keyword to apply a buffer profile to all Field Processors in a a port-pipe.

	port-set port-pipe	Enter the keyword <b>port-set</b> followed by the port-pipe number.	
		Range: 0-1	
	buffer-policy <i>buffer-profile</i>	Enter the keyword <b>buffer-policy</b> followed by the name of a buffer profile you created.	
Defaults	none		
Command Mode	BUFFER PROFILE		
Usage Information	If you attempt to apply a buffer profile to a non-existent port-pipe, FTOS displays the following message. However, the configuration still appears in the running-config.		
		ARVING_INVALID_PORT_SET: Invalid FP port-set 2 for nge of port-set is <0-1>	
	When you remove a buffer-profile using the no buffer-profile [fp   csf] command from CONFIGURATION mode, the buffer-profile name still appears in the output of show buffer-profile [detail   summary]. After a line card reset, the buffer profile correctly returns to the default values, bu the profile name remains. Remove it from the show buffer-profile [detail   summary] command output by entering no buffer [fp-uplink   csf] buffer-policy from CONFIGURATION mode and no buffer-policy from INTERFACE mode.		
Command History	Version 8.3.16.1 Introduced	d on MXL 10/40GbE Switch IO Module	
Related Commands	buffer-profile (Configuration)	Creates a buffer profile that can be applied to an interface.	

# buffer-profile (Configuration)

Syntax

Create a buffer profile that can be applied to an interface.

 $buffer-profile \; \{ \{ fp \; | \; csf \} \; \textit{profile-name} \; | \; global \; \{ 1Q | 4Q \} \;$ 

Parameters	fp	Enter this keyword to create a buffer profile for the Field Processor.
	csf	Enter this keyword to create a buffer profile for the Switch Fabric Processor
	profile-name	Create a name for the buffer profile.
	global	Apply one of two pre-defined buffer profiles to all of the port-pipes in the system.
	1Q	Enter this keyword to choose a pre-defined buffer profile for single queue (i.e non-QoS) applications.
	4Q	Enter this keyword to choose a pre-defined buffer profile for four queue (i.e QoS) applications.
Defaults	global 4Q	
ommand Mode	CONFIGURATION	
Command History	Version 8.3.16.1 Introd	luced on MXL 10/40GbE Switch IO Module

Usage Information		nmand fails if you have already applied a custom buffer-profile on an u configure buffer-profile global, you cannot not apply buffer-profile on
	1	4Q) is active, FTOS displays an error message instructing you to remove ng the no buffer-profile global command.
	You must reload the system f	for the global buffer-profile to take effect.
Related Commands	buffer (Buffer Profile)	Allocates an amount of dedicated buffer space, dynamic buffer space, or packet pointers to queues 0 to 3.

# buffer-profile (Interface) Apply a buffer profile to an interface.

Defaults     none       ommand Mode     INTERFACE	
mmand Mode INTERFACE

S

buffer-profile (Configuration) Creates a buffer profile that can be applied to an interface.

# **Hardware Commands**

These commands display information from a hardware sub-component or ASIC.

The hardware commands are:

- clear hardware stack-unit
- clear hardware system-flow
- show hardware layer2 acl
- show hardware layer3
- show hardware stack-unit
- show hardware system-flow

# clear hardware stack-unit

Clear statistics from selected hardware components.

**Syntax** clear hardware stack-unit 0–5 {counters | unit 0–1 counters | cpu data-plane statistics | cpu party-bus statistics | stack-port 0–52}

Parameters		
Farameters	stack-unit 0-5	Enter the keyword <b>stack-unit</b> followed by 0 to 5 to select a particular stack member and then enter one of the following command options to clear a specific collection of data.
	counters	Enter the keyword <b>COUNTERS</b> to clear the counters on the selected stack member.
	unit 0–0 counters	Enter the keyword <b>unit</b> along with a port-pipe number, from <i>O</i> to <i>1</i> , followed by the keyword <b>counters</b> to clear the counters on the selected port-pipe.
	cpu data-plane statistics	Enter the keywords <b>cpu data-plane statistics</b> to clear the data plane statistics.
	cpu party-bus statistics	Enter the keywords <b>cpu party-bus statistics</b> to clear the management statistics.
	stack-port 33-56	Enter the keyword <b>stack-port</b> followed by the port number of the stacking port to clear the statistics of the particular stacking port. Range: 33 to 56
		<b>Note</b> : You can identify stack port numbers by physical inspection of the rear modules. The numbering is the same as for the 10G ports. You can also inspect the output of the show system stack-ports command.
Defaults	none	
Command Modes	EXEC Privilege	
Command History	Version 8.3.16.1 Introduced	d on MXL 10/40GbE Switch IO Module
Related Commands		Displays the data plane or management plane input and output statistics of the designated component of the designated stack member.

# clear hardware system-flow

		Enter the keyword <b>Stack-unit</b> followed by 0 to 5 to select a particular stack member and then enter one of the following command options to clear a specific collection of data.
	port-set 0–0 counters	Enter the keyword <b>port-set</b> along with a port-pipe number, followed by the keyword <b>counters</b> to clear the system-flow counters on the selected port-pipe.
Defaults	none	
ommand Modes	EXEC Privilege	
Command History	Version 8.3.16.1 Introdu	ced on MXL 10/40GbE Switch IO Module

#### Clear system-flow statistics from selected hardware components.

# show hardware layer2 acl

Display Layer 2 ACL data for the selected stack member and stack member port-pipe.

Syntax	show hardware layer2 acl stack-unit 0-5 port-set 0-0		
Parameters	stack-unit 0-5	Enter the keyword stack-unit followed by 0 to 5 to select a stack ID.	
	port-set 0-0	Enter the keyword <b>port-set</b> with a port-pipe number — 0.	
Defaults	none		
nmand Modes	EXEC Privilege		
Command History	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module	

# show hardware layer3

Display Layer 3 ACL or QoS data for the selected stack member and stack member port-pipe.

**Syntax** show hardware layer3 {acl | qos} stack-unit 0-5 port-set 0-0

 Parameters
 acl | qos
 Enter either the keyword acl or the keyword qos to select between ACL or QoS data.

stack-unit 0-5	Enter the keyword <b>stack-unit</b> followed by a numeral from 0 to 5 to select a stack ID.
port-set 0-0	Enter the keyword <b>port-set</b> with a port-pipe number $- 0$ .
none	
EXEC Privilege	
Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module
	port-set 0-0 none EXEC Privilege

# show hardware stack-unit

Display the data plane or management plane input and output statistics of the designated component of the designated stack member.

Syntaxshow hardware stack-unit 0-5 {buffer [buffer unit | port [(1-56) | all] total buffer | buffer unit (1) port<br/>(1-56) queue [(0-14) | a11] buffer-info} {phy-firmware-version} {cpu data-plane statistics<br/>[stack-port 0-52] | cpu party-bus statistics | cpu private-mgmt statistics | drops [unit 0-1 [port<br/>1-56]] | stack-port 33-56 | unit 0-0 {counters | details | port-stats [detail] | register}}

#### Parameters

Enter the keyword <b>stack-unit</b> followed by 0 to 5 to select a particular stack member and then enter one of the following command options to display a collection of data based on the option entered.
Enter the keyword <b>buffer</b> , optionally followed by the keywords <b>total-buffer</b> to show the total buffer statistics per stack unit. Enter the keywords <b>buffer</b> unit then <b>total-buffer</b> to display the buffer details per unit and mode of allocation. To display the forwarding plane statistics containing the packet buffer usage per port per stack unit, enter the keywords <b>buffer</b> <b>unit</b> followed by <b>port</b> and the port number ( <i>1-56</i> or all), then <b>buffer-info</b> . To display the forwarding plane statistics containing the packet buffer statistics per COS per port, enter the keywords <b>buffer unit</b> and <b>port</b> ( <i>1-56</i> ), and <b>queue</b> ( <i>0-14</i> or all), and <b>buffer-info</b> . Buffer unit default: 1
Each member of the stack is updated automatically with the latest firmware while booting as well as during OIR. Enter the keyword phy-firmware-version, to dump the physical firmware version for stack units.
Enter the keywords <b>cpu data-plane statistics</b> , optionally followed by the keywords <b>stack port</b> and its number — 0 to $52$ — to display the data plane statistics, which shows the High Gig (Higig) port raw input/output counter statistics to which the stacking module is connected.
Enter the keywords <b>CPU party-bus statistics</b> , to display the Management plane input/output counter statistics of the pseudo party bus interface.
Enter the keywords <b>CPU private-mgmt statistics</b> , to display the Management plane input/output counter statistics of the Private Management interface.

show system	Displays the current status of all stack members or a specific member.

# show hardware system-flow

Display Layer 3 ACL or QoS data for the selected stack member and stack member port-pipe.

Syntax show hardware system-flow layer2 stack-unit 0-5 port-set 0-0 [counters]

Deremetere							
Parameters	acl qos	For the selected stack member and stack member port-pipe, display which system flow entry the packet hits and what queue the packet takes as it dumps the raw system flow tables.					
	stack-unit 0-5	Enter the keyword stack-unit followed by 0 to 5 to select a stack member ID.					
	port-set 0-0	Enter the keyword <b>port-set</b> with a port-pipe number $-0$ .					
	[counters]	(OPTIONAL) Enter the keyword <b>counters</b> to display hit counters for the selected ACL or QoS option.					
Defaults	none						
Command Modes	EXEC Privilege						
Command	Version 8.3.16.1	Introduced on MXL 10/40GbE Switch IO Module					
History

# Internet Control Message Protocol (ICMP) Message Types

This chapter lists and describes the possible internet control message protocol (ICMP) Message Types resulting from a ping. The first three columns list the possible symbol or type/code. For example, you would receive a ! or 03 as an echo reply from your ping.

Symbol	Туре	Code	Description	Query	Error
•			Timeout (no reply)		
!	0	3	echo reply	•	
U	3		destination unreachable:		
		0	network unreachable		•
		1	host unreachable		•
		2	protocol unreachable		•
		3	port unreachable		•
		4	fragmentation needed but don't fragment bit set		•
		5	source route failed		•
		6	destination network unknown		•
		7	destination host unknown		•
		8	source host isolated (obsolete)		•
		9	destination network administratively prohibited		•
		10	destination host administratively prohibited		•
		11	network unreachable for TOS		•
		12	host unreachable for TOS		•
		13	communication administratively prohibited by filtering		•
		14	host precedence violation		•
		15	precedence cutoff in effect		•
С	4	0	source quench		•
	5		redirect		•
		0	redirect for network		•
		1	redirect for host		•
		2	redirect for type-of-service and network		•
		3	redirect for type-of-service and host		•
	8	0	echo request	•	

#### Table 40-1. ICMP Messages and Their Definitions

Symbol	Туре	Code	Description	Query	Error
	9	0	router advertisement	•	
	10	0	router solicitation	•	
&	11		time exceeded:		
		0	time-to-live equals 0 during transit		•
		1	time-to-live equals 0 during reassembly		•
	12		parameter problem:		
		1	IP header bad (catchall error)		•
		2	required option missing		•
	13	0	timestamp request	•	
	14	0	timestamp reply	•	
	15	0	information request (obsolete)	•	
	16	0	information reply (obsolete)	•	
	17	0	address mask request	•	
	18	0	address mask reply	•

# **SNMP** Traps

This chapter lists the traps sent by FTOS. Each trap is listed by the fields Message ID, Trap Type, and Trap Option, and the next is the message(s) associated with the trap.

Table 41-1. SNMP Traps and Error Messages

Message ID	Тгар Туре	Trap Option
