Dell PowerEdge Command Line Reference Guide for the M I/O Aggregator 9.6.(0.0)
Notes, Cautions, and Warnings

NOTE: A NOTE indicates important information that helps you make better use of your computer.

CAUTION: A CAUTION indicates either potential damage to hardware or loss of data and tells you how to avoid the problem.

WARNING: A WARNING indicates a potential for property damage, personal injury, or death.
Contents

1 About this Guide .......................................................................................................................... 16
   Objectives ................................................................................................................................. 16
   Audience ................................................................................................................................. 17
   Conventions ............................................................................................................................. 17

2 Before You Start .......................................................................................................................... 18
   Operational Modes .................................................................................................................. 18
   Default Settings ....................................................................................................................... 18
   Other Auto-Configured Settings ............................................................................................ 19
      DCB Support .......................................................................................................................... 19
      FCoE Connectivity ................................................................................................................ 19
      iSCSI Operation .................................................................................................................... 20
      Link Aggregation .................................................................................................................. 20
      Link Tracking ....................................................................................................................... 20
      VLANs .................................................................................................................................. 20
   Where to Go From Here ............................................................................................................ 22

3 CLI Basics ................................................................................................................................... 23
   Accessing the Command Line ................................................................................................... 23
   Multiple Configuration Users ................................................................................................. 23
   Navigating the CLI .................................................................................................................... 24
   Obtaining Help .......................................................................................................................... 25
   Using the Keyword no Command ........................................................................................... 26
   Filtering show Commands ....................................................................................................... 26
   Command Modes ..................................................................................................................... 27

4 File Management ........................................................................................................................ 30

About this Guide

This book provides information about the Dell Networking OS command line interface (CLI) on the Dell PowerEdge M I/O Aggregator.
This book also includes information about the protocols and features found in the Dell Networking OS and on the Dell Networking systems supported by the Dell Networking OS.

References

For more information about your system, refer to the following documents:

- Dell PowerEdge M I/O Aggregator Configuration Guide
- Dell PowerEdge M I/O Aggregator Getting Started Guide
- Release Notes for the Dell PowerEdge M I/O Aggregator

Objectives

This book is intended as a reference guide for the Aggregator CLI commands, with detailed syntax statements, along with usage information and sample output.
This guide contains an Appendix with a list of the request for comment (RFCs) and management information base files (MIBs) supported.

NOTE: For more information about when to use the CLI commands, refer to the Dell PowerEdge M I/O Aggregator Configuration Guide for your system.
**Audience**

This book is intended for system administrators who are responsible for configuring or maintaining networks. This guide assumes that you are knowledgeable in Layer 2 and Layer 3 networking technologies.

**Conventions**

This book uses the following conventions to describe command syntax.

- **Keyword**: Keywords are in Courier font and must be entered in the CLI as listed.
- **parameter**: Parameters are in italics and require a number or word to be entered in the CLI.
- **{X}**: Keywords and parameters within braces must be entered in the CLI.
- **[X]**: Keywords and parameters within brackets are optional.
- **x|y**: Keywords and parameters separated by a bar require you to choose one option.
- **x||y**: Keywords and parameters separated by a double bar allows you to choose any or all of the options.
Before You Start

By following the instructions in the *Dell PowerEdge M I/O Aggregator Getting Started Guide* that is shipped with the product, you install the Aggregator in a Dell PowerEdge M1000e Enclosure. The Aggregator installs with zero-touch configuration. After you power it on, an Aggregator boots up with default settings and auto-configures with software features enabled. This chapter describes the default settings and software features that are automatically configured at startup. Use the tasks described in the other chapters to reconfigure the Aggregator for customized network operation.

Operational Modes

The I/O Aggregator supports four operational modes. Select the operational mode that meets your deployment needs. To enable a new operational mode, reload the switch.

- **Standalone mode** — stack-unit unit iom-mode standalone. This is the default mode for IOA. It is fully automated zero-touch mode that allows you to configure VLAN memberships. (Supported in CMC)
- **Programmable MUX mode (PMUX)** — stack-unit unit iom-mode programmable-mux. Select this mode to configure PMUX mode CLI commands.
- **Stacking mode** — stack-unit unit iom-mode stacking. Select this mode to stack up to 6 IOA stack units as a single logical switch. The stack units can be in the same or on different chassis. This is a low-touch mode where all configuration except VLAN membership is automated. To enable VLAN, you must configure it. In this operational mode, base module links are dedicated to stacking.
- **Virtual Link Trunking mode (VLT)** — stack-unit unit iom-mode vlt. Select this mode to multi-home server interfaces to different IOA modules. This is a low-touch mode where all configuration except VLAN membership is automated. To enable VLAN, you must configure it. In this mode, base module links are dedicated to VLT interconnect.

For more information, refer to the *Dell PowerEdge M I/O Aggregator Configuration Guide*.

Default Settings

The I/O Aggregator provides zero-touch configuration with the following default configuration settings:

- Default user name (*root*)
- Password (*calvin*)
- VLAN (*vlan1*) and IP address for in-band management (*DHCP-assigned*)
- IP address for out-of-band (OOB) management (*DHCP-assigned*)
- Read-only SNMP community name (*public*)
• Broadcast storm control (enabled)
• Unregistered Multicast Packets flooding (enabled)
• IGMP snooping in all VLANs except the default VLAN (enabled)
• VLAN configuration (all ports belong to all VLANs)

You can change any of these default settings using the CLI. Refer to the appropriate chapter for details.

NOTE: You can also change many of the default settings using the chassis management controller (CMC) interface. For information about how to access the CMC to configure an Aggregator, refer to the Dell PowerEdge M1000e Enclosure Hardware Owner’s Manual or Dell Chassis Management Controller (CMC) User’s Guide on the Dell Support website at http://support.dell.com/support/edocs/systems/pem/en/index.htm.

Other Auto-Configured Settings

After the Aggregator powers on, it auto-configures and is operational with software features enabled, including:

• VLANs: All ports are configured as members of all (4094) VLANs. All VLANs are up and can send or receive layer 2 traffic. For more information, refer to VLANs.
• Data Center Bridging Capability Exchange Protocol (DCBX)
• Fibre Channel over Ethernet (FCoE) connectivity
• FCoE Initiation Protocol (FIP) snooping
• Hybrid ports: Ports are administratively up and auto-configured to operate as hybrid ports to transmit tagged and untagged VLAN traffic.
• iSCSI optimization
• IGMP snooping
• Jumbo frames: Ports are set to a maximum MTU of 12,000 bytes by default.
• Link aggregation: All uplink ports are configured in a single LAG (LAG 128).
• Link Layer Discovery Protocol (LLDP): Enabled on all ports.
• Link tracking: Enables server-facing links to be brought up only if the uplink port-channel (LAG 128) is up.
• Stacking: Stacking is supported only on the 40GbE ports on the base module. A single stack is limited to six Aggregators in the same chassis. Up to three stacks are supported in an M1000e chassis. To configure a switch stack, you must use the CLI. For more information, refer to Stacking Commands.

DCB Support

DCB enhancements for data center networks are supported to eliminate packet loss and provision links with required bandwidth.

The Aggregator provides zero-touch configuration for DCB. The Aggregator auto-configures DCBX port roles to match the DCBX configuration in the ToR switches to which it connects through its uplink ports.

The Aggregator supports DCB only in standalone mode and not in the stacking mode.

FCoE Connectivity

Many data centers use Fibre Channel (FC) in storage area networks (SANs). Fibre Channel over Ethernet (FCoE) encapsulates Fibre Channel frames over Ethernet networks.
On an Aggregator, the internal ports support FCoE connectivity and connect to the converged network adapter (CNA) in blade servers. FCoE allows Fibre Channel to use 10-Gigabit Ethernet networks while preserving the Fibre Channel protocol.

The Aggregator also provides zero-touch configuration for FCoE configuration. The Aggregator auto-configures to match the FCoE settings used in the ToR switches to which it connects through its uplink ports.

**iSCSI Operation**

Support for iSCSI traffic is turned on by default when the Aggregator powers up. No configuration is required.

When the Aggregator powers up, it monitors known TCP ports for iSCSI storage devices on all interfaces. When a session is detected, an entry is created and monitored as long as the session is active.

The Aggregator also detects iSCSI storage devices on all interfaces and auto-configures to optimize performance. Performance optimization operations, such as Jumbo frame size support, and disabling storm control on interfaces connected to an iSCSI EqualLogic (EQL) storage device, are applied automatically.

CLI configuration is necessary only when the configuration includes iSCSI storage devices that cannot be automatically detected and when non-default QoS handling is required.

**Link Aggregation**

In Standalone, VLT, and Stacking modes, all uplink ports are configured in a single LAG (LAG 128). There can be multiple uplink LAGs in programmable-mux mode. Server-facing ports are auto-configured as part of link aggregation groups if the corresponding server is configured for LACP-based NIC teaming. Static LAGs are supported in PUX mode.

**NOTE:** The recommended LACP timeout is Long-Timeout mode.

**Link Tracking**

By default, all server-facing ports are tracked by the operational status of the uplink LAG. If the uplink LAG goes down, the Aggregator loses its connectivity and is no longer operational; all server-facing ports are brought down.

**NOTE:** If installed servers do not have connectivity to a ToR switch, check the Link Status LED of uplink ports on the Aggregator. If all LEDs are ON, check the LACP configuration on the ToR switch that is connected to the Aggregator to ensure the LACP is correctly configured.

**VLANs**

By default, all Aggregator ports belong to all 4094 VLANs and are members of untagged VLAN 1. You can use the CLI or CMC interface to configure only the required VLANs on a port.
When you configure VLANs on server-facing interfaces (ports 1 to 32), you can assign VLANs to a port or a range of ports by entering the `vlan tagged` or `vlan untagged` commands in interface configuration mode; for example:

```
Dell(conf)# interface tengigabitethernet 0/2 - 4
Dell(conf-if-range-te-0/2-4)# vlan tagged 5,7,10-12
Dell(conf-if-range-te-0/2-4)# vlan untagged 3
```

**NOTE:** You can also use the CMC interface to configure VLANs.

**Uplink LAG**

The tagged VLAN membership of the uplink LAG is automatically configured based on the tagged and untagged VLAN configuration of all server-facing ports (ports 1 to 32).

The untagged VLAN used for the uplink LAG is always the default VLAN.

**Server-Facing LAGs**

The tagged VLAN membership of a server-facing LAG is automatically configured based on the server-facing ports that are members of the LAG.

The untagged VLAN of a server-facing LAG is configured based on the untagged VLAN to which the lowest numbered server-facing port in the LAG belongs.

**NOTE:** Dell Networking recommends that you configure the same VLAN membership on all LAG member ports.

**Stacking Mode**

When you configure an Aggregator to operate in stacking mode (See “Configuring and Bringing Up a Stack” in the Dell Networking Configuration Guide for the M I/O Aggregator), VLANs are reconfigured as follows:

If an Aggregator port belonged to all 4094 VLANs in standalone mode (default), all VLAN membership is removed and the port is assigned only to default VLAN 1. You must configure additional VLAN membership as necessary.

If you had manually configured an Aggregator port to belong to one or more VLANs (non-default) in standalone mode, the VLAN configuration is retained in stacking mode only on the master switch.

When you reconfigure an Aggregator from stacking to standalone mode:

Aggregator ports that you manually configured for VLAN membership in stacking mode retain their VLAN configuration in standalone mode.

To restore the default auto-VLAN mode of operation (in which all ports are members of all 4094 VLANs) on a port, enter the `auto vlan` command; for example:

```
Dell(conf)# interface tengigabitethernet 0/2
Dell(conf-if-te-0/2)# auto vlan
```

To get the default standalone mode configurations:

1. Delete the `startup-config` file and reboot the system.
2. Restore to factory default settings.
3. Configure **auto vlan** command on all the server ports.

Where to Go From Here

You can customize the Aggregator for use in your data center network as necessary. To perform additional switch configuration, do one of the following:

- For remote out-of-band management, enter the OOB management interface IP address into a Telnet or SSH client and log in to the switch using the user ID and password to access the CLI.
- For local management using the CLI, use the attached console connection.
- For remote in-band management from a network management station, enter the VLAN IP address of the management port and log in to the switch to access the CLI.

If you installed the Aggregator in a stack, you can configure additional settings for switch stacking.

In case of a Dell Networking OS upgrade, you can check to see that an Aggregator is running the latest Dell Networking OS version by entering the `show version` command. To download a Dell Networking OS version, go to http://support.dell.com.

Refer to the appropriate chapter for detailed information on how to configure specific software settings.
CLI Basics

This chapter describes the command line interface (CLI) structure and command modes. The Dell operating system commands are in a text-based interface that allows you to use the launch commands, change command modes, and configure interfaces and protocols.

Accessing the Command Line

When the system boots successfully, you are positioned on the command line in EXEC mode and not prompted to log in. You can access the commands through a serial console port or a Telnet session. When you Telnet into the switch, you are prompted to enter a login name and password.

Example
telnet 172.31.1.53
Trying 172.31.1.53...
Connected to 172.31.1.53.
Escape character is '^]'.
Login: username
Password:
Dell>

After you log in to the switch, the prompt provides you with the current command-level information. For example:

<table>
<thead>
<tr>
<th>Prompt</th>
<th>CLI Command Mode</th>
</tr>
</thead>
<tbody>
<tr>
<td>Dell&gt;</td>
<td>EXEC</td>
</tr>
<tr>
<td>Dell#</td>
<td>EXEC Privilege</td>
</tr>
<tr>
<td>Dell(conf)#</td>
<td>CONFIGURATION</td>
</tr>
</tbody>
</table>

NOTE: For a list of all the command mode prompts, refer to the Command Modes Modes section.

Multiple Configuration Users

When a user enters CONFIGURATION mode and another user is already in CONFIGURATION mode, the Dell operating system generates an alert warning message similar to the following:

Dell#conf

% Warning: The following users are currently configuring the system:

User "" on line console0
User "admin" on line vty0 (123.12.1.123)
User "admin" on line vty1 (123.12.1.123)
When another user enters CONFIGURATION mode, the Dell Networking OS sends a message similar to the following:

% Warning: User "admin" on line vty2 "172.16.1.210" is in configuration

In this case, the user is “admin” on vty2.

### Navigating the CLI

The Dell Networking OS displays a CLI prompt comprised of the host name and CLI mode.

- Host name is the initial part of the prompt and is “Dell” by default. You can change the host name with the `hostname` command.
- CLI mode is the second part of the prompt and reflects the current CLI mode. For a list of the Dell Networking OS command modes, refer to the command mode list in the Accessing the Command Line section.

The CLI prompt changes as you move up and down the levels of the command structure. Starting with CONFIGURATION mode, the command prompt adds modifiers to further identify the mode. For more information about command modes, refer to the Command Modes section.

<table>
<thead>
<tr>
<th>Prompt</th>
<th>CLI Command Mode</th>
</tr>
</thead>
<tbody>
<tr>
<td>Dell&gt;</td>
<td>EXEC</td>
</tr>
<tr>
<td>Dell#</td>
<td>EXEC Privilege</td>
</tr>
<tr>
<td>Dell(conf)#</td>
<td>CONFIGURATION</td>
</tr>
<tr>
<td>Dell(conf-if-te-0/0)#</td>
<td>INTERFACE</td>
</tr>
<tr>
<td>Dell(conf-if-vl-1)#</td>
<td></td>
</tr>
<tr>
<td>Dell(conf-if-ma-0/0)#</td>
<td></td>
</tr>
<tr>
<td>Dell(conf-if-range)#</td>
<td></td>
</tr>
<tr>
<td>Dell(conf-line-console)#</td>
<td>LINE</td>
</tr>
<tr>
<td>Dell(conf-line-vty)#</td>
<td></td>
</tr>
<tr>
<td>Dell(conf-mon-sess)#</td>
<td>MONITOR SESSION</td>
</tr>
</tbody>
</table>
Obtaining Help

As soon as you are in a command mode there are several ways to access help.

To obtain a list of keywords at any command mode:
Type a ? at the prompt or after a keyword. There must always be a space before the ?.

To obtain a list of keywords with a brief functional description:
Type help at the prompt.

To obtain a list of available options:
Type a keyword and then type a space and a ?.

To obtain a list of partial keywords using a partial keyword:
Type a partial keyword and then type a ?.

Example
The following is an example of typing ip ? at the prompt:

Dell(conf)#ip ?
igmp     Internet Group Management Protocol
route    Establish static routes
telnet   Specify telnet options

When entering commands, you can take advantage of the following timesaving features:

• The commands are not case-sensitive.
• You can enter partial (truncated) command keywords. For example, you can enter int tengig int for the interface tengigabitethernet interface command.
• To complete keywords in commands, use the TAB key.
• To display the last enabled command, use the up Arrow key.
• To erase the previous character, use either the Backspace key or Delete key.
• To navigate left or right in the Dell Networking OS command line, use the left and right Arrow keys.

The shortcut key combinations at the Dell Networking OS command line are as follows:

<table>
<thead>
<tr>
<th>Key Combination</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>CNTL-A</td>
<td>Moves the cursor to the beginning of the command line.</td>
</tr>
<tr>
<td>CNTL-B</td>
<td>Moves the cursor back one character.</td>
</tr>
<tr>
<td>CNTL-D</td>
<td>Deletes the character at the cursor.</td>
</tr>
<tr>
<td>CNTL-E</td>
<td>Moves the cursor to the end of the line.</td>
</tr>
<tr>
<td>CNTL-F</td>
<td>Moves the cursor forward one character.</td>
</tr>
<tr>
<td>CNTL-I</td>
<td>Completes a keyword.</td>
</tr>
<tr>
<td>Key Combination</td>
<td>Action</td>
</tr>
<tr>
<td>-----------------</td>
<td>--------</td>
</tr>
<tr>
<td>CNTL-K</td>
<td>Deletes all the characters from the cursor to the end of the command line.</td>
</tr>
<tr>
<td>CNTL-L</td>
<td>Re-enters the previous command.</td>
</tr>
<tr>
<td>CNTL-N</td>
<td>Returns to the more recent commands in the history buffer after recalling commands with Ctrl-P or the up Arrow key.</td>
</tr>
<tr>
<td>CNTL-P</td>
<td>Recalls commands, beginning with the last command.</td>
</tr>
<tr>
<td>CNTL-U</td>
<td>Deletes the line.</td>
</tr>
<tr>
<td>CNTL-W</td>
<td>Deletes the previous word.</td>
</tr>
<tr>
<td>CNTL-X</td>
<td>Deletes the line.</td>
</tr>
<tr>
<td>CNTL-Z</td>
<td>Comes back to EXEC mode from any CONFIGURATION mode.</td>
</tr>
<tr>
<td>Esc B</td>
<td>Moves the cursor back one word.</td>
</tr>
<tr>
<td>Esc F</td>
<td>Moves the cursor forward one word.</td>
</tr>
<tr>
<td>Esc D</td>
<td>Deletes all the characters from the cursor to the end of the word.</td>
</tr>
</tbody>
</table>

**Using the Keyword no Command**

To disable, delete or return to default values, use the `no` form of the commands.

For most commands, if you type the keyword `no` in front of the command, you disable that command or delete it from the running configuration. In this guide, the `no` form of the command is described in the Syntax portion of the command description. For example:

**Syntax**

```
no {boot | default | enable | ftp-server | hardware | hostname | ip | line | logging | monitor | service | io-aggregator | broadcast storm-control | snmp-server | username}
```

**Defaults**

None

**Command Modes**

CONFIGURATION

**Command History**

Version 8.3.17.0  Supported on the M I/O Aggregator.

**Filtering show Commands**

To find specific information, display certain information only or begin the command output at the first instance of a regular expression or phrase, you can filter the display output of a `show` command.

When you execute a `show` command, and then enter a pipe ( | ), one of the following parameters, and a regular expression, the resulting output either excludes or includes those parameters.
NOTE: The Dell Networking OS accepts a space before or after the pipe, no space before or after the pipe, or any combination. For example: `Dell#command | grep TenGig|except regular-expression | find regular-expression`.

- `except` displays only the text that does not match the pattern (or regular expression)
- `find` searches for the first occurrence of a pattern
- `grep` displays text that matches a pattern.
- `no-more` does not paginate the display output
- `save` copies the output to a file for future use

The `grep` command option has an `ignore-case` sub-option that makes the search case-insensitive. For example:

- `show run | grep Ethernet` returns a search result with instances containing a capitalized “Ethernet,” such as `interface TenGigabitEthernet 0/1`.
- `show run | grep ethernet` does not return the search result above because it only searches for instances containing a non-capitalized “ethernet”.
- `show run | grep Ethernet ignore-case` returns instances containing both “Ethernet” and “ethernet”.

**Displaying All Output**

To display the output all at once (not one screen at a time), use the `no-more` option after the pipe. This operation is similar to the `terminal length screen-length` command except that the `no-more` option affects the output of just the specified command. For example:

`Dell#show running-config|no-more`

**Filtering the Command Output Multiple Times**

You can filter a single command output multiple times. To filter a command output multiple times, place the `save` option as the last filter. For example:

`Dell# command | grep regular-expression | except regular-expression | grep other-regular-expression | find regular-expression | no-more | save`

**Command Modes**

To navigate and launch various CLI modes, use specific commands. Navigation to these modes is described in the following sections.

**EXEC Mode**

When you initially log in to the switch, by default, you are logged in to EXEC mode. This mode allows you to view settings and enter EXEC Privilege mode, which is used to configure the device.

When you are in EXEC mode, the > prompt is displayed following the host name prompt, which is “Dell” by default. You can change the host name prompt using the `hostname` command.
NOTE: Each mode prompt is preceded by the host name.

EXEC Privilege Mode

The `enable` command accesses EXEC Privilege mode. If an administrator has configured an “Enable” password, you are prompted to enter it.

EXEC Privilege mode allows you to access all the commands accessible in EXEC mode, plus other commands, such as to clear address resolution protocol (ARP) entries and IP addresses. In addition, you can access CONFIGURATION mode to configure interfaces, routes and protocols on the switch. While you are logged in to EXEC Privilege mode, the # prompt displays.

CONFIGURATION Mode

In EXEC Privilege mode, use the `configure` command to enter CONFIGURATION mode and configure routing protocols and access interfaces.

To enter CONFIGURATION mode:

1. Verify that you are logged in to EXEC Privilege mode.
2. Enter the `configure` command. The prompt changes to include (conf).

From this mode, you can enter INTERFACE mode by using the `interface` command.

INTERFACE Mode

To configure interfaces or IP services on those interfaces, use INTERFACE mode. An interface can be physical (for example, a TenGigabit Ethernet port) or virtual (for example, the VLAN interface).

To enter INTERFACE mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `interface` command and then enter an interface type and interface number that is available on the switch.

The prompt changes to include the designated interface and slot/port number. For example:

<table>
<thead>
<tr>
<th>Prompt</th>
<th>Interface Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Dell(conf-if-te-0/1)#</td>
<td>Ten-Gigabit Ethernet interface then slot/port information</td>
</tr>
<tr>
<td>Dell(conf-if-vl-1)#</td>
<td>VLAN Interface then VLAN number (range 1–4094)</td>
</tr>
<tr>
<td>Dell(conf-if-ma-0/1)#</td>
<td>Management Ethernet interface then slot/port information</td>
</tr>
<tr>
<td>Dell(conf-if-range)#</td>
<td>Designated interface range (used for bulk configuration)</td>
</tr>
</tbody>
</table>

LINE Mode

To configure the console or virtual terminal parameters, use LINE mode.

To enter LINE mode:
1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `line` command. Include the keywords `console` or `vty` and their line number available on the switch. The prompt changes to include `(config-line-console)` or `(config-line-vty)`.

You can exit this mode by using the `exit` command.

**MONITOR SESSION Mode**

In CONFIGURATION mode, use the `monitor session` command to enter MONITOR SESSION mode and configure port monitoring.

To enter MONITOR SESSION mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Use the `monitor session` command. Include the monitor session ID. The prompt changes to include `(conf-mon-sess)`.

You can return to CONFIGURATION mode by using the `exit` command.

**PROTOCOL LLDP Mode**

In CONFIGURATION mode, use the `protocol lldp` command to enter PROTOCOL LLDP mode and configure the LLDP protocol.

To enter PROTOCOL LLDP mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `protocol lldp` command. The prompt changes to include `Dell(config-lldp)`.

You can return to CONFIGURATION mode by using the `exit` command.
File Management

This chapter contains commands needed to manage the configuration files and includes other file management commands. The commands in this chapter are supported by the Dell Networking OS.

boot system gateway

Specify the IP address of the default next-hop gateway for the management subnet.

Syntax

```
boot system gateway ip-address
```

Parameters

- `ip-address`: Enter an IP address in dotted decimal format.

Command Modes

- CONFIGURATION

Command History

- Version 9.4(0.0) Supported on the FN I/O aggregator.

Usage Information

Saving the address to the startup configuration file preserves the address in NVRAM in case the startup configuration file is deleted.

boot system stack-unit

Specify the location of the Dell Networking OS image to be used to boot the system.

Syntax

```
boot system stack-unit <0-5 | all> {default | primary | secondary}
```

Parameters

- `0-5`: Enter the stack member unit identifier of the stack member.
- `all`: Enter the keyword all to set the primary, secondary, and default images for the system.
- `default`: Enter the keyword default to set the default image path for the system.
primary Enter the keyword primary to set the primary image path for the system.

secondary Enter the keyword secondary to set the secondary image path for the system.

Command Modes CONFIGURATION

Command History Version 8.3.17.0 Supported on the M I/O Aggregator.

Usage Information The system first attempts to load the image from the primary path. If it fails to boot, the system tries to load the image from the secondary path and if that also fails, the system loads the default image.

cd
Change to a different working directory.

Syntax cd directory

Parameters directory (OPTIONAL) Enter one of the following:

• flash: (internal Flash) or any sub-directory
• usbflash: (external Flash) or any sub-directory

Command Modes EXEC Privilege

Command History Version 8.3.17.0 Supported on the M I/O Aggregator.

copy
Copy one file to another location. The Dell Networking OS supports IPv4 addressing for FTP, TFTP, and SCP (in the hostip field).

Syntax copy source-file-url destination-file-url

Parameters file-url Enter the following location keywords and information:

• To copy a file from the internal FLASH, enter flash:// then the filename.
• To copy the running configuration, enter the keywords running-config.

File Management 31
To copy the startup configuration, enter the keywords `startup-config`.

To copy a file on the external FLASH, enter `usbflash://` then the filename.

**Command Modes**

**EXEC Privilege**

**Command History**

**Version 8.3.17.0** Supported on the M I/O Aggregator.

**Usage Information**

The Dell Networking OS supports a maximum of 100 files, at the root directory level, on both the internal and external Flash.

The `usbflash` commands are supported. For a list of approved USB vendors, refer to the Dell Networking OS Release Notes.

When copying a file to a remote location (for example, using Secure Copy [SCP]), enter only the keywords and Dell Networking OS prompts you for the rest of the information.

For example, when using SCP, you can enter the `copy running-config scp:` command. The `running-config` is the source and the target is specified in the ensuing prompts. Dell Networking OS prompts you to enter any required information, as needed for the named destination — remote destination, destination filename, user ID and password, and so forth.

When you use the `copy running-config startup-config` command to copy the running configuration (the startup configuration file amended by any configuration changes made because the system was started) to the startup configuration file, Dell Networking OS creates a backup file on the internal flash of the startup configuration.

The Dell Networking OS supports copying the running-configuration to a TFTP server or to an FTP server:

- `copy running-config tftp:`
- `copy running-config ftp:`

In the `copy scp: flash:` example, specifying SCP in the first position indicates that the target to specify in the ensuing prompts. Entering `flash:` in the second position means that the target is the internal Flash. In this example, the source is on a secure server running SSH, so you are prompted for the UDP port of the SSH server on the remote host.

```
Dell#copy running-config scp:
Address or name of remote host [-]: 10.10.10.1
Port number of the server [22]: 99
Destination file name [startup-config]: old_running
User name to login remote host: sburgess
Password to login remote host:

Password to login remote host? dilling
```
Example (copy scp:)
Dell#copy scp: flash:
Address or name of remote host []: 10.11.199.134
Port number of the server [22]: 99
Source file name []: test.cfg
User name to login remote host: admin
Password to login remote host:
Destination file name [test.cfg]: test1.cfg

Related Commands

**copy running-config startup-config**

Copy running configuration to the startup configuration.

**Syntax**
copy running-config startup-config {duplicate}

**Command Modes**
EXEC Privilege

**Command History**
Version 8.3.17.0  Supported on the M I/O Aggregator.

**Usage Information**
This command is useful for quickly making a change configuration on one chassis available on external flash to move it to another chassis.

**delete**

Delete a file from the flash. After deletion, files cannot be restored.

**Syntax**
delete flash: ([flash://]filepath) usbflash ([usbflash://]filepath)

**Parameters**
- **flash-url**
  - Enter the following location and keywords:
    - For a file or directory on the internal Flash, enter flash:// then the filename or directory name.
    - For a file or directory on an external USB drive, enter usbflash:// then the filename or directory name.

- **no-confirm**
  - (OPTIONAL) Enter the keywords no-confirm to specify that the Dell Networking OS does not require user input for each file prior to deletion.

**Command Modes**
EXEC Privilege
**Command History**

Version 8.3.17.0  
Supported on the M I/O Aggregator

---

**dir**

Displays the files in a file system. The default is the current directory.

**Syntax**

```plaintext
dir [filename | directory name:]
```

**Parameters**

- `filename | directory name:`  
  (OPTIONAL) Enter one of the following:
  - For a file or directory on the internal Flash, enter `flash://` then the filename or directory name.
  - For a file or directory on an external USB drive, enter `usbflash://` then the filename or directory name.

**Command Modes**

EXEC Privilege

**Command History**

Version 8.3.17.0  
Supported on the M I/O Aggregator.

**Example**

```plaintext
Dell#dir
Directory of flash:

1 drwx 4096 Jan 01 1980 00:00:00 +00:00 .
2 drwx 2048 Mar 06 2010 00:36:21 +00:00 ..
3 drwx 4096 Feb 25 2010 23:32:50 +00:00 TRACE_LOG_DIR

9 -rwx 3951 Mar 06 2010 00:36:18 +00:00 startup-config

flash: 2143281152 bytes total (1389801472 bytes free)
Dell#
```

**Related Commands**

- `cd` — Changes the working directory.

---

**format flash**

Erase all existing files and reformat the filesystem in the internal flash memory. After the filesystem is formatted, files cannot be restored.

**Syntax**

```plaintext
format {flash: | usbflash:}
```
Defaults: flash memory

Command Modes: EXEC Privilege

Command History:
- Version 8.3.17.0: Supported on the M I/O Aggregator.

Usage Information:
You must include the colon (:) when entering this command.

CAUTION: This command deletes all files, including the startup configuration file. So, after executing this command, consider saving the running config as the startup config (use the write memory command or copy run start command).

Related Commands:
- `copy` — copies the current configuration to either the startup-configuration file or the terminal.
- `show file` — displays the contents of a text file in the local filesystem.
- `show file-systems` — displays information about the file systems on the system.

HTTP Copy via CLI

Copy one file to another location. Dell Networking OS supports IPv4 and IPv6 addressing for FTP, TFTP, and SCP (in the hostip field).

This feature is supported on S6000 Z9000 S4810 S4820T platform.

Syntax:
```plaintext
copy http://<hostip>/sample_file flash://sample_file
```
```plaintext
copy flash://sample_file http://<hostip>/sample_file
```

You can copy from the server to the switch and vice-versa.

Parameters:
- `copy http:`
  - Address or name of remote host []: 10.16.206.77
  - Port number of the server [80]:
- `flash:`
  - Source file name []: sample_file
  - User name to login remote host: x
  - Password to login remote host:
  - Destination file name [sample_file]:

Defaults: None.
Command Modes

EXEC

Command History

Version 9.3(0.1) Introduced on the S6000, Z9000, S4810, and S4820T.

Example

copy http://admin:admin123@10.16.206.77/sample_file flash:// sample_file

Related Commands

copy ftp:flash
Copy files from FTP server to switch

logging coredump stack-unit

Enable the coredump.

Syntax

logging coredump stack-unit all

Command Modes

CONFIGURATION

Command History

Version 8.3.17.0 Supported on the M I/O Aggregator.

Usage Information

The Kernel core dump can be large and may take up to five to 30 minutes to upload. The Dell Networking OS does not overwrite application core dumps so delete them as necessary to conserve space on the flash; if the flash is out of memory, the coredump is aborted. The Dell Networking OS completes the coredump process and waits until the upload is complete before rebooting the system.

pwd

Display the current working directory.

Syntax

pwd

Command Modes

EXEC Privilege

Command History

Version 8.3.17.0 Supported on the M I/O Aggregator.

Example

Dell#pwd
flash:
Dell#
rename

Rename a file in the local file system.

Syntax

rename url url

Parameters

url

Enter the following keywords and a filename:

- For a file on the internal Flash, enter flash:// then the filename.
- For a file on an external USB drive, enter usbflash:// then the filename.

Command Modes

EXEC Privilege

Command History

Version 8.3.17.0 Supported on the M I/O Aggregator.

restore factory-defaults

Restore factory defaults.

Syntax

restore factory-defaults stack-unit \{0-5 \| all\} \{clear-all \| nvram\}

Parameters

factory-defaults

Return the system to its factory default mode.

0-5

Enter the stack member unit identifier to restore only the mentioned stack-unit.

all

Enter the keyword all to restore all units in the stack.

clear-all

Enter the keywords clear-all to reset the NvRAM and the system startup configuration.

nvram

Enter the keyword nvram to reset the NvRAM only.

Command Modes

EXEC Privilege

Command History

Version 8.3.17.1 Supported on the M I/O Aggregator.
Restoring factory defaults deletes the existing startup configuration and all persistent settings (stacking, fanout, and so forth).

When restoring all units in a stack, all the units in the stack are placed into stand-alone mode.

When restoring a single unit in a stack, that unit placed in stand-alone mode. No other units in the stack are affected.

When restoring units in stand-alone mode, the units remain in stand-alone mode after the restoration. After the restore is complete, the units power cycle immediately.

⚠️ **CAUTION: There is no undo for this command.**

### Example (all stack units)

```
Dell#restore factory-defaults stack-unit all clear-all
*******************************************************************************
* Warning - Restoring factory defaults will delete the existing *
* startup-config and all persistent settings (stacking, fanout, etc.)*
* All the units in the stack will be split into standalone units. *
* After restoration the unit(s) will be powercycled immediately. *
* Proceed with caution ! *
*******************************************************************************
Proceed with factory settings? Confirm [yes/no]:yes
-- Restore status --
Unit Nvram      Config
------------------------
0    Success    Success
1    Success    Success
2    Success    Success
3    Not present
4    Not present
5    Not present
Power-cycling the unit(s).
Dell#
```

### Example (single stack)

```
Dell#restore factory-defaults stack-unit 0 clear-all
*******************************************************************************
* Warning - Restoring factory defaults will delete the existing *
* startup-config and all persistent settings (stacking, fanout, etc.)*
* After restoration the unit(s) will be powercycled immediately. *
* Proceed with caution ! *
*******************************************************************************
Proceed with factory settings? Confirm [yes/no]:yes
-- Restore status --
Unit Nvram      Config
------------------------
0    Success  Success
Power-cycling the unit(s).
Dell#
```
show boot system

Displays information about boot images currently configured on the system.

Syntax

show boot system stack-unit {0-5 | all}

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0–5</td>
<td>Enter this information to display the boot image information of only the entered stack-unit.</td>
</tr>
<tr>
<td>all</td>
<td>Enter the keyword all to display the boot image information of all the stack-units in the stack.</td>
</tr>
</tbody>
</table>

Defaults

none
show file

Displays contents of a text file in the local filesystem.

Syntax

```
show file url
```

Parameters

- `url` Enter one of the following:
  - For a file on the internal Flash, enter `flash://` then the filename.
  - For a file on the external Flash, enter `usbflash://` then the filename.

Command Modes

- EXEC Privilege

Command History

- **Version 8.3.17.0** Supported on the M I/O Aggregator.

Example

```
Dell#show file flash://startup-config
! Version E8-3-17-38
boot system stack-unit 1 primary tftp://10.11.9.21/dv-m1000e-2-b2
boot system stack-unit 1 default system: A:
boot system gateway 10.11.209.62
!
hostname FTOS
--More--
Dell#
```

Related Commands

- `format flash` — erases all the existing files and reformats the filesystem in the internal flash memory.
show file-systems — displays information about the file systems on the system.

**show file-systems**

Displays information about the file systems on the system.

**Syntax**

```
show file-systems
```

**Command Modes**

EXEC Privilege

**Command History**

Version 8.3.17.0 Supported on the M I/O Aggregator.

**Example**

```
Dell#show file-systems
Size(b)      Free(b)     Feature Type       Flags Prefixes
2143281152   836874240  FAT32   USERFLASH  rw    flash:
-           -      -   network    rw    ftp:
-           -      -   network    rw    tftp:
-           -      -   network    rw    scp:
Dell#
```

**Command Fields**

- **Field**
  - **size(b)**
    - Lists the size in bytes of the storage location. If the location is remote, no size is listed.
  - **Free(b)**
    - Lists the available size in bytes of the storage location. If the location is remote, no size is listed.
  - **Feature**
    - Displays the formatted DOS version of the device.
  - **Type**
    - Displays the type of storage. If the location is remote, the word network is listed.
  - **Flags**
    - Displays the access available to the storage location. The following letters indicate the level of access:
      - r = read access
      - w = write access
  - **Prefixes**
    - Displays the name of the storage location.

**Related Commands**

- `format flash` — erases all the existing files and reformats the filesystem in the internal flash memory.
- `show file` — displays the contents of a text file in the local filesystem.
show os-version

Displays the release and software image version information of the image file specified.

Syntax

show os-version [file-url]

Parameters

file-url (OPTIONAL) Enter the following location keywords and information:

- For a file on the internal Flash, enter flash:// then the filename.
- For a file on an FTP server, enter ftp://user:password@hostip/filepath.
- For a file on a TFTP server, enter tftp://hostip/path.
- For a file on the external Flash, enter usbflash://filepath then the filename.

Defaults

none

Command Modes

EXEC Privilege

Command History

Version 8.3.17.0  Supported on the M I/O Aggregator.

Usage Information

NOTE: A filepath that contains a dot (.) is not supported.

Example

Dell#show os-version

RELEASE IMAGE INFORMATION :
-------------------------------------------------------------------------------

Card            CPLD Name       Version
Stack-unit 1    IOM SYSTEM CPLD  6

Dell#
show running-config

Displays the current configuration and display changes from the default values.

Syntax

show running-config [entity] [configured] [status]

Parameters

entity (OPTIONAL) To display that entity’s current (non-default) configuration, enter one of the following keywords:

- boot for the current boot configuration
- ftp for the current FTP configuration
- igmp for the current IGMP configuration
- interface for the current interface configuration
- line for the current line configuration
- lldp for the current lldp configuration
- logging for the current logging configuration
- management-route for the current Management port forwarding configuration
- monitor for the current Monitor configuration
- snmp for the current SNMP configuration
- uplink-state-group for the uplink state group configuration
- users for the current users configuration

configured (OPTIONAL) Enter the keyword configured to display line card interfaces with non-default configurations only.

status (OPTIONAL) Enter the keyword status to display the checksum for the running configuration and the start-up configuration.

Command Modes

EXEC Privilege

Command History

Version 9.4(0.0) Supported on the FN I/O aggregator.

Example

Dell#show running-config
Current Configuration ...
! Version 9-4(0-180)
!
boot system stack-unit 0 primary tftp://10.11.8.12/dv-ci-stomp-tc-1-a1
!
redundancy auto-synchronize full
hostname Dell
...

**Example**

```
Dell#show running-config status
running-config bytes 5063, checksum 0xF6F801AC
startup-config bytes 4835, checksum 0x764D3787
Dell#
```

**Usage Information**
The `status` option allows you to display the size and checksum of the running configuration and the startup configuration.

### show version

Displays the current Dell Networking OS version information on the system.

**Syntax**

```
show version
```

**Command Modes**

EXEC Privilege

**Command History**

Version 8.3.17.0  Supported on the M I/O Aggregator.

**Example**

```
Dell#show version

**upgrade boot**

Upgrade the bootflash image or bootselector image.

**Syntax**

```
upgrade boot {all | bootflash-image | bootselector-image}
stack-unit {0-5 | all} {booted | flash: | ftp: | tftp: | usbflash:} {A: | B:}
```

**Parameters**

- **all**
  - Enter the keyword all to change both the bootflash and bootselector images.
- **bootflash-image**
  - Enter the keywords bootflash-image to change the bootflash image.
- **bootselector-image**
  - Enter the keywords bootselector-image to change the bootselector image.
- **0–5**
  - Enter the keyword 0–5 to upgrade only the mentioned stack-unit.
- **all**
  - Enter the keyword all to upgrade all the member stack-units.
- **booted**
  - Enter the keyword booted to upgrade from the current image in the M I/O Aggregator.
- **ftp:**
  - After entering the keyword ftp:, you can either follow it with the location of the source file in this form: //
userid:password@hostip/filepath or press Enter to launch a prompt sequence.

tftp: After entering the keyword tftp:, you can either follow it with the location of the source file in this form: //hostlocation/filepath or press Enter to launch a prompt sequence.

flash: After entering the keyword flash:, you can either follow it with the location of the source file in this form: //filepath or press Enter to launch a prompt sequence.

usbflash: After entering the keyword usbflash:, you can either follow it with the location of the source file in this form: //filepath or press Enter to launch a prompt sequence.

A: Enter this keyword to upgrade the bootflash partition A.

B: Enter this keyword to upgrade the bootflash partition B.

Defaults none

Command Modes EXEC Privilege

Command History

Version 8.3.17.0 Supported on the M I/O Aggregator.

Usage Information

You must reload the Dell Networking OS after executing this command.

Example

Dell#upgrade boot ?
all Upgrade both boot flash image and selector image
bootflash-image Upgrade boot flash image
bootselector-image Upgrade boot selector image
Dell#

upgrade system

Upgrade the bootflash image or system image.

Syntax

upgrade system {flash: | ftp: | scp: | tftp: | usbflash: | stack-unit {0-5 | all} {A: | B:}}

Parameters

0–5 Enter the keyword 0–5 to upgrade only the mentioned stack-unit.

all Enter the keyword all to upgrade all the member units of the stack.

ftp After entering the keyword ftp you can either follow it with the location of the source file in this form: //
userid:password@hostip/filepath, or press Enter to launch a prompt sequence.

**scp**

After entering the keyword `scp` you can either follow it with the location of the source file in this form: `scp://userid:password@hostip/filepath`, or press Enter to launch a prompt sequence.

**tftp**

After entering the keyword `tftp` you can either follow it with the location of the source file in this form: `tftp://hostlocation/filepath`, or press Enter to launch a prompt sequence.

**flash**

After entering the keyword `flash` you can either follow it with the location of the source file in this form: `flash://filepath`, or press Enter to launch a prompt sequence.

**usbflash**

After entering the keyword `usbflash` you can either follow it with the location of the source file in this form: `usbflash://filepath`, or press Enter to launch a prompt sequence.

**A:** Enter this keyword to upgrade the bootflash partition A.

**B:** Enter this keyword to upgrade the bootflash partition B.

---

**Defaults**

none

**Command Modes**

EXEC Privilege

**Command History**

**Version 8.3.17.0** Supported on the M I/O Aggregator.

**Usage Information**

You must reload Dell Networking OS after executing this command. Use the command `upgrade system stack-unit` to copy Dell Networking OS from the management unit to one or more stack members.

**Example**

```
Dell#upgrade system ?
flash: Copy from flash file system (flash://filepath)
ftp: Copy from remote file system, IPv4 or IPv6,
    (ftp://userid:password@hostip/filepath)
scp: Copy from remote file system, IPv4 or IPv6,
    (scp://userid:password@hostip/filepath)
stack-unit Sync image to the stack-unit
tftp: Copy from remote file system, IPv4 or IPv6,
    (tftp://hostip/filepath)
usbflash: Copy from usbflash file system (usbflash://filepath)
Dell#
```
Control and Monitoring

This chapter describes control and monitoring for the M I/O Aggregator.

asset-tag

Assign and store a unique asset-tag to the stack member.

Syntax

```
asset-tag stack-unit unit-id Asset-tag ID
```

To remove the asset tag, use the

```
no stack-unit unit-id Asset-tag ID
```

cmmand.

Parameters

- `stack-unit unit-id` Enter the keywords `stack-unit` then the `unit-id` to assign a tag to the specific member. The range is from 0 to 5.

- `Asset-tag ID` Enter a unique asset-tag ID to assign to the stack member. This option accepts a maximum of 10 characters, including all special characters except double quotes. To include a space in the asset-tag, enter a space within double quotes.

Defaults

No asset-tag is assigned.

Command Modes

EXEC Privilege

Command History

Version 9.2(0.0) Introduced on the M I/O Aggregator.

Related Commands

- `show system`—Displays the current status of all stack members or a specific member.

clear alarms

Clear the alarms on the system.

Syntax

```
clear alarms
```

Command Modes

EXEC Privilege
clear command history

Clear the command history log.

Syntax

```
clear command history
```

Command Modes

EXEC Privilege

Related Commands

- `show command-history` — displays a buffered log of all the commands all users enter along with a time stamp.

configure

Enter CONFIGURATION mode from EXEC Privilege mode.

Syntax

```
configure [terminal]
```

Parameters

- `terminal` (OPTIONAL) Enter the keyword terminal to specify that you are configuring from the terminal.

Command Modes

EXEC Privilege

Example

```
Dell#configure
Dell(conf)#
```

debug cpu-traffic-stats

Enable the collection of computer processor unit (CPU) traffic statistics.

Syntax

```
debug cpu-traffic-stats
```

Control and Monitoring 49
Defaults
Disabled
Command Modes
EXEC Privilege
Command History
Version 8.3.17.0  Supported on the M I/O Aggregator.
Usage Information
This command enables (and disables) the collection of CPU traffic statistics from the time this command is executed (not from system boot). However, excessive traffic a CPU receives automatically triggers (turn on) the collection of CPU traffic statics.

To view the traffic statistics, use the `show cpu-traffic-stats` command.

If the CPU receives excessive traffic, traffic is rate controlled.

**NOTE:** You must enable this command before the `show cpu-traffic-stats` command displays traffic statistics. Dell Networking recommends disabling debugging (`no debug cpu-traffic-stats`) after troubleshooting is complete.

Related Commands
`show cpu-traffic-stats` — displays the cpu traffic statistics.

dbg ifm trace-flags

Turn on the IFM internal trace-flags.

**Syntax**
```
dbg ifm trace-flags trace-flags
```
To disable this command, use the `no debug ifm trace-flags` command.

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>trace-flags</code></td>
<td>Enter a hexadecimal number representing the trace-flag.</td>
</tr>
</tbody>
</table>

**Defaults**
None

**Command Modes**
EXEC Privilege

**Command History**
Version 8.3.17.0  Supported on the M I/O Aggregator.

**NOTE:** Use this command only when you are working directly with a technical support representative to troubleshoot a problem. Do not use this command unless a technical support representative instructs you to do so.
disable

Return to EXEC mode.

Syntax:    

```plaintext
disable [level]
```

Parameters:

- **level** (OPTIONAL) Enter a number for a privilege level of the Dell Networking OS. The range is from 0 to 15. The default is 1.

Defaults:  

- 1

Command Modes:  

EXEC Privilege

Command History:  

- Version 8.3.17.0 Supported on the M I/O Aggregator.

enable

Enter EXEC Privilege mode or any other privilege level configured. After entering this command, you may need to enter a password.

Syntax:    

```plaintext
enable [level]
```

Parameters:

- **level** (OPTIONAL) Enter a number for a privilege level of the Dell Networking OS. The range is from 0 to 15. The default is 15.

Defaults:  

- 15

Command Modes:  

EXEC

Command History:  

- Version 8.3.17.0 Supported on the M I/O Aggregator.

Usage Information: Users entering EXEC Privilege mode or any other configured privilege level can access configuration commands. To protect against unauthorized access, use the `enable password` command to configure a password for the `enable` command at a specific privilege level. If no privilege level is specified, the default is privilege level 15.

Related Commands: `enable password` — configures a password for the `enable` command and to access a privilege level.
end

Return to EXEC Privilege mode from other command modes (for example, CONFIGURATION mode).

Syntax
end

Command Modes
- CONFIGURATION
- LINE
- INTERFACE
- MONITOR SESSION
- PROTOCOL LLDP

Command History
Version 8.3.17.0  Supported on the M I/O Aggregator.

Related Commands
exit — returns to the lower command mode.

exit

Return to the lower command mode.

Related Commands

- **ftp-server topdir** — sets the directory to be used for incoming FTP connections.
- **ftp-server username** — sets a username and password for incoming FTP connections.

### ftp-server topdir

Specify the top-level directory to be accessed when an incoming FTP connection request is made.

**Syntax**

```plaintext
ftp-server topdir directory
```

**Parameters**

- `directory` Enter the directory path.

**Defaults**

The internal flash is the default directory.

**Command Modes**

CONFIGURATION

**Command History**

- **Version 8.3.17.0** Supported on the M I/O Aggregator.

**Usage Information**

After you enable FTP server functions with the **ftp-server enable** command, Dell Networking recommends specifying a top-level directory path. Without a top-level directory path specified, the Dell Networking OS directs users to the flash directory when logging in to the FTP server.
Related Commands

- `ftp-server enable` — enables FTP server functions on the M I/O Aggregator.
- `ftp-server username` — sets a username and password for incoming FTP connections to the M I/O Aggregator.

**ftp-server username**

Create a user name and associated password for incoming FTP server sessions.

**Syntax**

```plaintext
ftp-server username username password [encryption-type] password
```

**Parameters**

- `username` Enter a text string up to 40 characters long as the user name.
- `password` Enter the keyword `password` then a string up to 40 characters long as the password. Without specifying an encryption type, the password is unencrypted.
- `encryption-type` (OPTIONAL) After the keyword `password`, enter one of the following numbers:
  - 0 (zero) for an unencrypted (clear text) password
  - 7 (seven) for a hidden text password

**Defaults**

Not enabled.

**Command Modes**

CONFIGURATION

**Command History**

Version 8.3.17.0 Supported on the M I/O Aggregator.

**hostname**

Set the host name of the system.

**Syntax**

```plaintext
hostname name
```

**Parameters**

- `name` Enter a text string, up to 32 characters long.

**Defaults**

Dell Networking Operating System (OS)

**Command Modes**

CONFIGURATION
ip telnet server enable

Enable the Telnet server on the switch.

Syntax

```
ip telnet server enable
```

To disable the Telnet server, use the `no ip telnet server enable` command.

Defaults

Enabled

Command Modes

CONFIGURATION

Command History

Version 8.3.17.0 Supported on the M I/O Aggregator.

ip telnet source-interface

Set an interface’s IP address as the source address in outgoing packets for Telnet sessions.

Syntax

```
ip telnet source-interface interface
```

Parameters

```
interface
```
Enter the following keyword and slot/port or number information:

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` followed by the slot/port information.
- For VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

Defaults

The IP address on the system that is closest to the Telnet address is used in the outgoing packets.

Command Modes

CONFIGURATION

Command History

Version 8.3.17.0 Supported on the M I/O Aggregator.
Related Commands

telnet — telnets to another device.

line

Enable and configure console and virtual terminal lines to the system. This command accesses LINE mode, where you can set the access conditions for the designated line.

Syntax

```
line {console 0 | vty number [end-number]}
```

Parameters

- **console 0**: Enter the keyword `console 0` to configure the console port. The console option is <0-0>.
- **vty number**: Enter the keyword `vty` followed by a number from 0 to 9 to configure a virtual terminal line for Telnet sessions. The system supports 10 Telnet sessions.
- **end-number** (OPTIONAL): Enter a number from 1 to 9 as the last virtual terminal line to configure. You can configure multiple lines at one time.

Defaults

Not configured

Command Modes

CONFIGURATION

Command History

Version 8.3.17.0  Supported on the M I/O Aggregator.

Usage Information

You cannot delete a terminal connection.

Related Commands

- **show memory** — View current memory usage on the M I/O Aggregator.

ping

Test connectivity between the system and another device by sending echo requests and waiting for replies.

Syntax

```
ping [host | ip-address] [count {number | continuous}] [datagram-size] [timeout] [source (ip src-ipv4-address) | interface] [tos] [df-bit (y|n)] [validate-reply(y|n)] [pattern pattern] [sweep-min-size] [sweep-max-size] [sweep-interval] [ointerface (ip src-ipv4-address) | interface]
```
### Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>host</strong></td>
<td>(OPTIONAL) Enter the host name of the devices to which you are testing connectivity.</td>
</tr>
<tr>
<td><strong>ip-address</strong></td>
<td>(OPTIONAL) Enter the IPv4 address of the device to which you are testing connectivity. The address must be in the dotted decimal format.</td>
</tr>
<tr>
<td><strong>count</strong></td>
<td>Enter the number of echo packets to be sent. The default is 5.</td>
</tr>
<tr>
<td></td>
<td>- number: from 1 to 2147483647</td>
</tr>
<tr>
<td></td>
<td>- continuous: transmit echo request continuously</td>
</tr>
<tr>
<td><strong>datagram size</strong></td>
<td>Enter the ICMP datagram size. The range is from 36 to 15360 bytes. The default is 100.</td>
</tr>
<tr>
<td><strong>timeout</strong></td>
<td>Enter the interval to wait for an echo reply before timing out. The range is from 0 to 3600 seconds. The default is 2 seconds.</td>
</tr>
<tr>
<td><strong>source</strong></td>
<td>Enter the IPv4 source ip address or the source interface. Enter the IP address in A.B.C.D format.</td>
</tr>
<tr>
<td></td>
<td>- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.</td>
</tr>
<tr>
<td></td>
<td>- For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.</td>
</tr>
<tr>
<td><strong>tos</strong></td>
<td>Enter the type of service required. The range is from 0 to 255. The default is 0.</td>
</tr>
<tr>
<td><strong>df-bit</strong></td>
<td>Enter Y or N for the &quot;don't fragment&quot; bit in IPv4 header.</td>
</tr>
<tr>
<td></td>
<td>- N: Do not set the “don’t fragment” bit.</td>
</tr>
<tr>
<td></td>
<td>- Y: Do set “don’t fragment” bit</td>
</tr>
<tr>
<td></td>
<td>The default is No.</td>
</tr>
<tr>
<td><strong>validate-reply</strong></td>
<td>Enter Y or N for reply validation.</td>
</tr>
<tr>
<td></td>
<td>- N: Do not validate reply data.</td>
</tr>
<tr>
<td></td>
<td>- Y: Do validate reply data.</td>
</tr>
<tr>
<td></td>
<td>The default is No.</td>
</tr>
<tr>
<td><strong>pattern pattern</strong></td>
<td>Enter the IPv4 data pattern. The range is from 0 to FFFF. The default is 0xABCD.</td>
</tr>
<tr>
<td><strong>sweep-min-size</strong></td>
<td>Enter the minimum size of datagram in sweep range. The range is from 52 to 15359 bytes.</td>
</tr>
<tr>
<td><strong>sweep-max-size</strong></td>
<td>Enter the maximum size of datagram in sweep range. The range is from 53 to 15359 bytes.</td>
</tr>
<tr>
<td><strong>sweep-interval</strong></td>
<td>Enter the incremental value for sweep size. The range is from 1 to 15308 seconds.</td>
</tr>
</tbody>
</table>
ointerface

Enter the outgoing interface for multicast packets. Enter the IP address in A.B.C.D format.

- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

Defaults

See parameters above.

Command Modes

- EXEC
- EXEC Privilege

Command History

Version 8.3.17.0 Supported on the M I/O Aggregator.

Usage Information

When you enter the ping command without specifying an IP address (Extended Ping), you are prompted for a target IP address, a repeat count, a datagram size (up to 1500 bytes), a timeout (in seconds), and for Extended Commands. For information on the ICMP message codes that return from a ping command, refer to Internet Control Message Protocol (ICMP) Message Types.

Example (IPv4)

Dell#ping 172.31.1.255

Type Ctrl-C to abort.

Sending 5, 100-byte ICMP Echos to 172.31.1.255, timeout is 2 seconds:
Reply to request 1 from 172.31.1.208 0 ms
Reply to request 1 from 172.31.1.216 0 ms
Reply to request 1 from 172.31.1.205 16 ms
::
Reply to request 5 from 172.31.1.209 0 ms
Reply to request 5 from 172.31.1.66 0 ms
Reply to request 5 from 172.31.1.87 0 ms
Dell#

reload

Reboot the Dell Networking OS.

Syntax

reload

Command Modes

EXEC Privilege

Command History

Version 8.3.17.0 Supported on the M I/O Aggregator.
Usage Information
If there is a change in the configuration, the Dell Networking OS prompts you to save the new configuration. Or you can save your running configuration with the copy running-config command.

Related Commands
reset stack-unit — resets any designated stack member except the management unit.

service timestamps
Add time stamps to debug and log messages. This command adds either the uptime or the current time and date.

Syntax
service timestamps [debug | log] [datetime [localtime] [msec] [show-timezone] | uptime]

Parameters
debug (OPTIONAL) Enter the keyword debug to add timestamps to debug messages.
log (OPTIONAL) Enter the keyword log to add timestamps to log messages with severity from 0 to 6.
datetime (OPTIONAL) Enter the keyword datetime to have the current time and date added to the message.
localtime (OPTIONAL) Enter the keyword localtime to include the localtime in the timestamp.
msec (OPTIONAL) Enter the keyword msec to include milliseconds in the timestamp.
show-timezone (OPTIONAL) Enter the keyword show-timezone to include the time zone information in the timestamp.
uptime (OPTIONAL) Enter the keyword uptime to have the timestamp based on time elapsed since system reboot.

Defaults
Not configured.

Command Modes
CONFIGURATION

Command History
Version 8.3.17.0 Supported on the M I/O Aggregator.

Usage Information
If you do not specify parameters and enter service timestamps, it appears as service timestamps debug uptime in the running-configuration.

To view the current options set for the service timestamps command, use the show running-config command.
show alarms

Display the active major and minor alarms on the system.

Syntax

show alarms

Command Modes

• EXEC
• EXEC Privilege

Command History

Version 8.3.17.0 Supported on the M I/O Aggregator.

Example

Dell# show alarms

-- Minor Alarms --
Alarm Type Duration
------------------------------
No minor alarms

-- Major Alarms --
Alarm Type Duration
-------------------------------
No major alarms
Dell#

show command-history

Display a buffered log of all commands all users enter along with a time stamp.

Syntax

show command-history

Defaults

None

Command Modes

• EXEC
• EXEC Privilege

Command History

Version 8.3.17.0 Supported on the M I/O Aggregator.

Usage Information

One trace log message is generated for each command. No password information is saved to this file.

Example

Dell#show command-history

Dell#

Related Commands

clear command history — clears the command history log.

show configuration lock

Display the configuration lock status.

Syntax

show configuration lock
**show cpu-traffic-stats**

Display the CPU traffic statistics.

**Syntax**

```
show cpu-traffic-stats [port number | all]
```

**Parameters**

- `port number`  
  (OPTIONAL) Enter the port number to display traffic statistics on that port only. The range is from 1 to 1568.

- `all`  
  (OPTIONAL) Enter the keyword `all` to display traffic statistics on all the interfaces receiving traffic, sorted based on the traffic.

**Defaults**

```
all
```

**Command Modes**

```
EXEC
```

**Command History**

Version 8.3.17.0  
Supported on the M I/O Aggregator.

**Usage Information**

Traffic statistics are sorted on a per-interface basis; the interface receiving the most traffic is displayed first. All CPU and port information is displayed unless a specific port or CPU is specified. Traffic information is displayed for router ports only; not for management interfaces. The traffic statistics are collected only after the `debug cpu-traffic-stats` command is executed; not from the system bootup.
NOTE: After debugging is complete, use the `no debug cpu-traffic-stats` command to shut off traffic statistics collection.

Example

```plaintext
Dell#show cpu-traffic-stats
Processor : CP
-------------
  Received 100% traffic on TenGigabitEthernet 8/2 Total packets:100
    LLC:0, SNAP:0, IP:100, ARP:0, other:0
    Unicast:100, Multicast:0, Broadcast:0
Dell#
```

Related Commands

- `debug cpu-traffic-stats` — enables CPU traffic statistics for debugging.

**show debugging**

View a list of all enabled debugging processes.

**Syntax**

```plaintext
show debugging
```

**Command Modes**

EXEC Privilege

**Command History**

Version 8.3.17.0 Supported on the M I/O Aggregator.

**Example**

```plaintext
Dell#show debug
Generic IP: (Access List: test)
  IP packet debugging is on for (Access List: test)
  TenGigabitEthernet 0/16
  ICMP packet debugging is on for
  TenGigabitEthernet 0/16
OSPF:1
  OSPF packet debugging is on
DHCP:
  DHCP debugging is on
Dell#
```

**show diag**

Display the diagnostics information.

**Syntax**

```plaintext
show diag {information | stack-unit number [detail | summary]} | testcase}
```

**Parameters**

- `information` Enter the keyword `information` to view current diagnostics information in the system.
show environment

Displays the system component status (for example, temperature or voltage).

**Syntax**

```
show environment [all | stack-unit unit-id]
```

**Parameters**

- `all` Enter the keyword `all` to view all components.
- `stack-unit unit-id` Enter the keywords `stack-unit` then the `unit-id` to display information on a specific stack member. The range is from 0 to 5.
- `thermal sensor` Enter the keywords `thermal-sensor` to view all components.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 8.3.17.0 Supported on the M I/O Aggregator.

**Example (all)**

```
Dell#show environment all

-- Unit Environment Status --
Unit Status Temp Voltage TempStatus
-----------------------------------------------
-----------
* 1 online 66C ok  2
* Management Unit
-- Thermal Sensor Readings (deg C) --
Unit Sensor0 Sensor1 Sensor2 Sensor3 Sensor4 Sensor5 Sensor6
```
show inventory

Displays the switch type, components (including media), and Dell Networking OS version including hardware identification numbers and configured protocols.

**Syntax**

```
show inventory [media slot][optional-module]
```

**Parameters**

- **media slot**  
  (OPTIONAL) Enter the keyword `media` then the stack ID of the stack member you want to display pluggable media inventory.

- **optional-module**  
  OPTIONAL) Enter the keyword `optional-module` to display optional module information.

**Defaults**

`none`

**Command Modes**

`EXEC`
Version 8.3.17.0  Supported on the M I/O Aggregator.

Usage Information

If there are no fiber ports in the unit, just the header under `show inventory media` displays. If there are fiber ports but no optics inserted, the output displays “Media not present or accessible”.

Example

```
Dell#show inventory
System Type            : PE-FN-410S-IOA
System Mode            : 1.0

```
show memory

Display current memory usage on the M I/O Aggregator.

Syntax
show memory [stack-unit 0-5]

Parameters
stack-unit 0-5  (OPTIONAL) Enter the keywords stack-unit then the stack unit ID of the stack member to display memory information on the designated stack member.

Command Modes
•  EXEC
•  EXEC Privilege

Command History
Version 8.3.17.0  Supported on the M I/O Aggregator.

Usage Information
The output for show memory command displays the memory usage of LP part (sysdlp) of the system. The sysdlp is an aggregate task that handles all the tasks running on the CPU.

Example
Dell#show memory

Statistics On Unit 0 Processor

===========================================
Total(b)   Used(b)  Free(b)   Lowest(b)   Largest(b)
268435456  4010354  264425102  264375410   264425102

show processes cpu

Display CPU usage information based on processes running.

Syntax
show processes cpu [management-unit 1-99 [details] | stack-unit 0-5 | summary | ipc | memory [stack-unit 0-5]]

Parameters
management-unit 1-99  [details]  (OPTIONAL) Display processes running in the control processor. The 1-99 variable sets the number of tasks to display in order of the highest CPU usage in the past five (5) seconds. Add the keyword details to display all running processes (except sysdlp). Refer to Example (management-unit).
stack-unit 0–5 (OPTIONAL) Enter the keywords stack-unit then the stack member ID. The range is from 0 to 5.

As an option of the show processes cpu command, this option displays CPU usage for the designated stack member. Or, as an option of memory, this option limits the output of memory statistics to the designated stack member. Refer to Example (stack-unit).

summary (OPTIONAL) Enter the keyword summary to view a summary view CPU utilization of processes related to line card processing. Refer to Example (summary).

ipc (OPTIONAL) Enter the keyword ipc to display interprocess communication statistics.

memory (OPTIONAL) Enter the keyword memory to display memory statistics. Refer to Example (memory).

Command Modes
- EXEC
- EXEC Privilege

Command History
Version 8.3.17.0 Supported on the M I/O Aggregator.

Example (summary)
Dell#show processes cpu summary

Dell\#
Related Commands

- **show diag** — displays the data plane or management plane input and output statistics of the designated component of the designated stack member.

- **show hardware system-flow** — displays Layer 3 ACL or QoS data for the selected stack member and stack member port-pipe.

- **show interfaces stack-unit** — displays information on all interfaces on a specific stack member.

- **show processes memory** — displays CPU usage information based on running processes.

---

**show processes ipc flow-control**

Display the single window protocol queue (SWPQ) statistics.

**Syntax**

```
show processes ipc flow-control [cp]
```

**Parameters**

- `cp` (OPTIONAL) Enter the keyword `cp` to view the control processor's SWPQ statistics.

**Defaults**

- none

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

- **Version 8.3.17.0**
  - Supported on the M I/O Aggregator.

**Usage Information**

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Source QID /Tx Process</td>
<td>Source Service Identifier</td>
</tr>
<tr>
<td>Destination QID/Rx Process</td>
<td>Destination Service Identifier</td>
</tr>
<tr>
<td>Cur Len</td>
<td>Current number of messages enqueued</td>
</tr>
<tr>
<td>High Mark</td>
<td>Highest number of packets in the queue at any time</td>
</tr>
</tbody>
</table>
### Field Description

- **#of to / Timeout**: Timeout count
- **#of Retr /Retries**: Number of retransmissions
- **#msg Sent/Msg Sent/**: Number of messages sent
- **#msg Ackd/Ack Rcvd**: Number of messages acknowledged
- **Retr /Available Retra**: Number of retries left
- **Total/ Max Retra**: Number of retries allowed

### Important Points:

- The SWP provides flow control-based reliable communication between the sending and receiving software tasks.
- A sending task enqueues messages into the SWP queue3 for a receiving task and waits for an acknowledgement.
- If no response is received within a defined period of time, the SWP timeout mechanism resubmits the message at the head of the FIFO queue.
- After retrying a defined number of times, the **SWP-2-NOMORETIMEOUT** timeout message is generated.
- In the example, a retry (Retries) value of zero indicates that the SWP mechanism reached the maximum number of retransmissions without an acknowledgement.

### Example

```
Dell#show processes ipc flow-control
```

Control and Monitoring
show processes memory

Display memory usage information based on processes running in the system.

Syntax

```
show processes memory {management-unit | stack unit 0–5 | all | summary}
```

Parameters

- **management-unit**: Enter the keywords `management-unit` for CPU memory usage of the stack management unit.
- **stack unit 0–5**: Enter the keywords `stack unit` then a stack unit ID of the member unit for which to display memory usage on the forwarding processor.
- **all**: Enter the keyword `all` for detailed memory usage on all stack members.
- **summary**: Enter the keyword `summary` for a brief summary of memory availability and usage on all stack members.

Command Modes

- EXEC
- EXEC Privilege

Command History

Version 8.3.17.0 Supported on the M I/O Aggregator.

Usage Information

```
show processes memory output
```

The output for the `show process memory` command displays the memory usage statistics running on CP part (sysd) of the system. The sysd is an aggregate task that handles all the tasks running on the M I/O Aggregator’s CP.

The output of the `show memory` command and this command differ based on which the Dell Networking OS processes are counted.

- In the `show memory` output, the memory size is equal to the size of the application processes.
- In the output of this command, the memory size is equal to the size of the application processes plus the size of the system processes.

Related Commands

**asset-tag**—Assign and store unique asset-tag to the stack member.

**show version**— Displays the Dell version.

**show processes memory**—Displays the memory usage based on the running processes.

**show system stack-ports**— Displays information about the stack ports on all switches in the stack.

**show diag**— Displays the data plane and management plane input and output statistics of a particular stack member.
show tech-support

Displays a collection of data from other show commands, necessary for Dell Networking technical support to perform troubleshooting on M I/O Aggregators.

Syntax

show tech-support [stack-unit unit-id | page]

Parameters

stack-unit  
(Optional) Enter the keyword stack-unit to view CPU memory usage for the stack member designated by unit-id. The range is 0 to 5.

page  
(Optional) Enter the keyword page to view 24 lines of text at a time. Press the SPACE BAR to view the next 24 lines. Press the ENTER key to view the next line of text. When using the pipe command ( | ), enter one of these keywords to filter command output. Refer to CLI Basics for details on filtering commands.

save  
Enter the keyword save to save the command output.

flash: Save to local flash drive (flash://filename (max 20 chars))

Command Modes

• EXEC Privilege

Command History

Version 8.3.17.0  
Supported on the M I/O Aggregator.

Usage Information

Without the page or stack-unit option, the command output is continuous, use Ctrl-z to interrupt the command output.

The save option works with other filtering commands. This allows you to save specific information of a show command. The save entry must always be the last option.

For example: Dell#show tech-support |grep regular-expression | except regular-expression | find regular-expression | save flash://result

This display output is an accumulation of the same information that is displayed when you execute one of the following show commands:

• show cam
• show clock
• show environment
• show file
• show interfaces
• show inventory
• show processes cpu
- show processes memory
- show running-conf
- show version

**Example (save)**
Dell#show tech-support ?
  page    Page through output
  stack-unit Unit Number
  |      Pipe through a command
  <cr>
Dell#show tech-support stack-unit 1 ?
  page    Page through output

show uplink brief
Displays the uplink port information.

Syntax
show uplink {brief|detail}

Parameters
brief Enter the keyword brief to display a brief summary of the uplink port information.
detail Enter the keyword detail to display uplink port information with description.
**Command Modes**

- EXEC Privilege

**Command History**

*Version 9.4(0.0)* Supported on the FN I/O aggregator.

**Example (brief)**

Dell#show uplink brief

```
show util-threshold cpu
Displays the set CPU utilization threshold values.

Syntax
show util-threshold cpu

Command Modes
• EXEC Privilege

Command History
Version 8.3.17.0 Supported on the M I/O Aggregator.

Usage Information
This command displays all CPU utilization thresholds of the management, standby, and stack-units.

show util-threshold memory
Displays the set memory utilization threshold values.

Syntax
show util-threshold memory

Command Modes
• EXEC Privilege

Command History
Version 8.3.17.0 Supported on the M I/O Aggregator.

Usage Information
This command displays all memory utilization thresholds of the management, standby, and stack-units.
ssh-peer-stack-unit

Open an SSH connection to the peer stack-unit.

Syntax

ssh-peer-stack-unit [-| username]

Parameters

-| username  (OPTIONAL) Enter the keyword -| followed by your username.

Default: The username associated with the terminal.

Defaults

Not configured.

Command Modes

• EXEC Privilege

Command History

Version 8.3.17.0  Supported on the M I/O Aggregator.

telnet

Connect through Telnet to a server. The Telnet client and server in Dell Networking OS support IPv4 and IPv6 connections. You can establish a Telnet session directly to the router or a connection can be initiated from the router.

Syntax
telnet {host | ip-address [/source-interface]}

Parameters

host  Enter the name of a server.

ip-address  Enter the IPv4 address in dotted decimal format or the IPv6 address in the x:x:x::x format of the server.

NOTE: The :: notation specifies successive hexadecimal fields of zeros. Only one occurrence of this notation is permitted in an IPv6 address.

source-interface  (OPTIONAL) Enter the keywords /source-interface then the interface information to include the source interface. Enter the following keywords and slot/port or number information:

• For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
• For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

Defaults

Not configured.
telnet-peer-stack-unit

Open a telnet connection to the peer stack-unit.

Syntax

```
telnet-peer-stack-unit
```

Defaults
Not configured.

Command Modes
• EXEC Privilege

Command History
Version 8.3.17.0
Supported on the M I/O Aggregator.

terminal length

Configure the number of lines displayed on the terminal screen.

Syntax

```
terminal length screen-length
```

To return to the default values, use the no terminal length command.

Parameters

```
screen-length
```

Enter a number of lines. Entering zero will cause the terminal to display without pausing. The range is from 0 to 512.

Default: 24 lines

Defaults
24 lines

Command Modes
• EXEC
• EXEC Privilege

Command History
Version 8.3.17.0
Supported on the M I/O Aggregator.
**terminal monitor**

Configure the Dell Networking OS to display messages on the monitor/terminal.

**Syntax**

```
terminal monitor
```

To return to default settings, use the `no terminal monitor` command.

**Defaults**

Disabled

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 8.3.17.0  
Supported on the M I/O Aggregator.

**terminal xml**

Enable XML mode in Telnet and SSH client sessions.

**Syntax**

```
terminal xml
```

To exit the XML mode, use the `no terminal monitor` command.

**Defaults**

Disabled

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 8.3.17.0  
Supported on the M I/O Aggregator.

**Usage Information**

This command enables XML input mode where you can either cut and paste XML requests or enter the XML requests line-by-line.

**trace route**

View the packet path to a specific device.

**Syntax**

```
traceroute {host | ip-address}
```

**Parameters**

- `host`  
Enter the name of device.

- `ip-address`  
Enter the IP address of the device in dotted decimal format.
Defaults

Timeout = 5 seconds; Probe count = 3; 30 hops max; 40 byte packet size; UDP
port = 33434

Command Modes

• EXEC
• EXEC Privilege

Command History

Version 8.3.17.0  Supported on the M I/O Aggregator.

Usage

When you enter the traceroute command without specifying an IP address
(Extended Traceroute), you are prompted for a target and source IP address,
timeout in seconds (default is 5), a probe count (default is 3), minimum TTL (default
is 1), maximum TTL (default is 30), and port number (default is 33434). To keep the
default setting for those parameters, press the ENTER key.

Example (IPv4)

Dell# traceroute www.force10networks.com
Translating "www.force10networks.com"...domain server
(10.11.0.1) [OK]
Type Ctrl-C to abort.

Tracing the route to www.force10networks.com (10.11.84.18), 30
hops max, 40 byte
packets

TTL Hostname Probe1 Probe2 Probe3
1 10.11.199.190 001.000 ms 001.000 ms 002.000 ms
2 gwegress-sjc-02.force10networks.com (10.11.30.126) 005.000
ms 001.000 ms 001.000 ms
3 fw-sjc-01.force10networks.com (10.11.127.254) 000.000 ms
000.000 ms 000.000 ms
4 www.force10networks.com (10.11.84.18) 000.000 ms 000.000 ms
000.000 ms
Dell#

Related Commands

ping — Tests the connectivity to a device.

undebug all

Disable all debug operations on the system.

Syntax

undebug all

Defaults
none

Command Modes
• EXEC Privilege

Control and Monitoring
write

Copy the current configuration to either the startup-configuration file or the terminal.

Syntax
write {memory | terminal}

Parameters
- memory: Enter the keyword memory to copy the current running configuration to the startup configuration file. This command is similar to the copy running-config startup-config command.
- terminal: Enter the keyword terminal to copy the current running configuration to the terminal. This command is similar to the show running-config command.

Command Modes
• EXEC Privilege

Command History
Version 8.3.17.0 Supported on the M I/O Aggregator.

Usage Information
The write memory command saves the running-configuration to the file labeled startup-configuration. When using a LOCAL CONFIG FILE other than the startup-config not named "startup-configuration", the running-config is not saved to that file; use the copy command to save any running-configuration changes to that local file.
u-Boot

All commands in this chapter are in u-Boot mode. These commands are supported on the Dell Networking Aggregator only.

To access this mode, hit Esc key when the following line appears on the console during a system boot:

Hit Esc key to interrupt autoboot:

You enter u-Boot immediately, as indicated by the BOOT_USER# prompt.

**NOTE:** Only the most frequently used commands available in uBoot mode are described in this chapter.

In uBoot mode, you cannot use the Tab key for command completion.

**boot change**

Change the operating system boot parameters.

**Syntax**

```
boot change [primary | secondary | default]
```

**Command Modes**

- uBoot

**Command History**

- **Version 8.3.17.0** Supported on the M I/O Aggregator.

**boot selection**

Change the ROM bootstrap bootflash partition.

**Syntax**

```
boot selection[a | b]
```

**Command Modes**

- uBoot

**Command History**

- **Version 8.3.17.0** Supported on the M I/O Aggregator.
**boot show net config retries**

Show the number of retries for network boot configuration failure.

**Syntax**

```
boot show net config retries
```

**Command Modes**

- uBoot

**Command History**

*Version 8.3.17.0*  
Supported on the M I/O Aggregator.

**Example**

```
BOOT_USER# boot show net config retries
Number of Network Boot Config Retries is : 0
BOOT_USER #
```

**boot write net config retries**

Set the number of retries for network boot configuration failure.

**Syntax**

```
boot write net config retries <int>
```

**Command Modes**

- uBoot

**Command History**

*Version 8.3.17.0*  
Supported on the M I/O Aggregator.

**Example**

```
BOOT_USER # boot write net config retries 2
Updated number of Network Boot Config retries to 2.
BOOT_USER #
```

**boot zero**

Clears the primary, secondary, or default boot parameters.

**Syntax**

```
boot zero [primary| secondary| default]
```

**Command Modes**

- uBoot

**Command History**

*Version 8.3.17.0*  
Supported on the M I/O Aggregator.
default gateway

Set the default gateway IP address.

Syntax  
```
default-gateway <ip-address>
```

Command Modes  
- uBoot

Command History  
Version 8.3.17.0  Supported on the M I/O Aggregator.

enable

Change the access privilege level.

Syntax  
```
enable [user| admin]
```

Command Modes  
- uBoot

Command History  
Version 8.3.17.0  Supported on the M I/O Aggregator.

help

Displays the help menu.

Syntax  
```
help
```

Command Modes  
- uBoot

Command History  
Version 8.3.17.0  Supported on the M I/O Aggregator.

Example

```
BOOT USER # help
***** Dell Force10 Boot Interface Help Information *****
Current access level: USER LEVEL
Use "syntax help" for more information on syntax.
Available command list (22 commands total):
  boot change [primary|secondary|default]
    change operating system boot parameters
  boot selection [a|b]
    change the rom bootstrap bootflash partition
  boot show net config retries
    show number of retries for network boot config failure
  boot write net config retries <int>
    write number of retries for network boot config failure
  boot zero [primary|secondary|default]
    zero operating system boot parameters
```
default-gateway <ip-address>

default-gateway - set the default gateway ip address
enable [user|admin]
change access privilege level
help
display help menu
-(36%)-Use <CR> to continue, q to stop:

BOOT_USER #

ignore enable password

Ignore the enabled password.

Syntax

ignore enable-password

Command Modes

• uBoot

Command History

Version 8.3.17.0  Supported on the M I/O Aggregator.

ignore startup-config

Ignore the system startup configuration.

Syntax

ignore startup-config

Command Modes

• uBoot

Command History

Version 8.3.17.0  Supported on the M I/O Aggregator.

interface management ethernet ip address

Set the management port IP address and mask.

Syntax

interface management ethernet ip address <ip/mask>

Command Modes

• uBoot

Command History

Version 8.3.17.0  Supported on the M I/O Aggregator.
no default gateway
Clear the default gateway IP address.

Syntax
no default-gateway

Command Modes
• uBoot

Command History
Version 8.3.17.0  Supported on the M I/O Aggregator.

no interface management ethernet ip address
Clear the management port IP address and mask.

Syntax
no interface management ethernet ip address

Command Modes
• uBoot

Command History
Version 8.3.17.0  Supported on the M I/O Aggregator.

reload
Reload the M I/O Aggregator.

Syntax
reload

Command Modes
• uBoot

Command History
Version 8.3.17.0  Supported on the M I/O Aggregator.

show boot blc
Show the boot loop counter value.

Syntax
show boot blc

Command Modes
• uBoot
show boot selection

Displays the ROM bootstrap bootflash partition.

Syntax

    show boot selection

Command Modes

• uBoot

Command History

Version 9.4(0.0)  Supported on the FN I/O Aggregator.

Example

    BOOT_USER # show boot selection
    ROM BOOTSTRAP SELECTOR PARMETERS:
    =================================================
    Next ROM bootstrap set to occur from Bootflash partition B.
    Last ROM bootstrap occurred from Bootflash partition B.
    BOOT_USER #

show bootflash

Show the summary of boot flash information.

Syntax

    show bootflash

Command Modes

• uBoot

Command History

Version 8.3.17.0  Supported on the M I/O Aggregator.

Example

    BOOT_USER # show bootflash
    GENERAL BOOTFLASH INFO
== Bootflash Partition A: ==

## show bootvar

Show the summary of operating system boot parameters.

**Syntax**

```markdown
show bootvar
```

**Command Modes**

- uBoot

**Command History**

*Version 9.4(0.0)*

Supported on the FN I/O aggregator.

**Example**

```markdown
BOOT_USER # show bootvar
```

### PRIMARY OPERATING SYSTEM BOOT PARAMETERS:

```
====================================================================
boot device : tftp
file name   : stomp-ben
Management Etherenet IP address   : 10.16.150.160/16
Server IP address           : 10.16.127.35
No Default Gateway IP address specified!
Management Etherenet MAC address : 00:1E:C9:DE:03:79
====================================================================
```

### SECONDARY OPERATING SYSTEM BOOT PARAMETERS:

```
====================================================================
boot device : flash
file name   : systema (system://A Partition)
```

### DEFAULT OPERATING SYSTEM BOOT PARAMETERS:

```
====================================================================
boot device : tftp
file name   : FTOS-FN-1-0-0-1344.bin
Management Etherenet IP address   : 10.16.150.160/16
Server IP address           : 10.16.127.35
No Default Gateway IP address specified!
Management Etherenet MAC address : 00:1E:C9:DE:03:79
====================================================================
```
show default gateway

Displays the default gateway IP address.

Syntax

```
show default-gateway
```

Command Modes

- uBoot

Command History

Version 8.3.17.0  Supported on the M I/O Aggregator.

Example

```
BOOT_USER # show default-gateway
Gateway IP address: 15.0.0.1
BOOT_USER #
```

show interface management ethernet

Show the management port IP address and mask.

Syntax

```
show interface management ethernet
```

Command Modes

- uBoot

Command History

Version 8.3.17.0  Supported on the M I/O Aggregator.

Example

```
BOOT_USER # show interface management ethernet
Management ethernet IP address: 10.16.130.134/16
BOOT_USER #
```

show interface management port config

Show the management port boot characteristics.

Syntax

```
show interface management port config
```

Command Modes

- uBoot
syntax help

Show the syntax information.

Syntax

help

Command Modes

• uBoot

Command History

Version 8.3.17.0 Supported on the M I/O Aggregator.

Example

BOOT_USER # show interface management port config
Management ethernet Port Configuration: no Auto Negotiate
Management ethernet Port Configuration: 100M
Management ethernet Port Configuration: full duplex
BOOT_USER #
Data Center Bridging (DCB)

Data center bridging (DCB) refers to a set of IEEE Ethernet enhancements that provide data centers with a single, robust, converged network to support multiple traffic types, including local area network (LAN), server, and storage traffic. DCB features are auto-configured in standalone mode and supported in stacking mode.

The Dell Networking OS commands for DCB features include 802.1Qbb priority-based flow control (PFC), 802.1Qaz enhanced transmission selection (ETS), and the data center bridging exchange (DCBX) protocol.

CLI commands for individual DCB features are as follows:

**DCB commands**
- `dcb enable auto-detect on-next-reload`
- `dcb-map`
- `dcb-policy input stack-unit stack-ports all`

**PFC Commands**
- `clear pfc counters`
- `show interface pfc`
- `show interface pfc statistics`
- `show stack-unit stack-ports pfc details`

**ETS Commands**
- `clear ets counters`
- `show interface ets`
- `show stack-unit stack-ports ets details`
- `qos-policy-output ets`

**DCBX Commands**
- `dcbx version`
- `show dcb`
- `show interface dcbx detail`
**clear ets counters**

Clear ETS TLV counters.

**Syntax**
clear ets counters [tengigabitethernet slot/port]

**Parameters**
- **slot/port**
Enter the slot/port number.

**Command Modes**
- EXEC Privilege

**Command History**
- Version 8.3.17.0 Supported on the M I/O Aggregator.

---

**clear pfc counters**

Clear the PFC TLV counters and PFC statistics on an interface or stack unit.

**Syntax**
clear pfc counters [port-type slot/port [statistics]]| [stack-unit unit-number | all] stack-ports all

**Parameters**
- **port-type**
Enter the keywords port-type then the slot/port information.
- **stack-unit unit number**
Enter the keywords stack-unit then the stack-unit number to clear. The range is from 0 to 5.
- **all stack-ports all**
Enter the keywords all stack-ports all to clear the counters on all interfaces.
- **statistics**
Enter the keyword statistics to clear only the hardware PFC counters.

**Defaults**
None

**Command Modes**
- EXEC Privilege

**Command History**
- Version 8.3.17.0 Supported on the M I/O Aggregator.

**Usage Information**
If you do not use the statistics parameter, both hardware and DCBx counters clear.
**dcb enable auto-detect on-next-reload**

Enables or disables global DCB on a subsequent reload. This command also internally configures PFC buffers based on DCB enable/disable. Save and reload is mandatory for the configurations to take effect. Auto-detect keyword can be used to re-enable IOA with port wise DCB auto detect feature.

**Syntax**
```
dcb enable {on-next-reload | auto-detect on-next-reload}
```
To disable global DCB on a subsequent reload, use the `no dcb enable on-next-reload` command.

**Parameters**
- auto-detect
  Enter the keyword `auto-detect` to re-enable the Aggregator with port wise DCB auto detect feature.

**Defaults**
DCB is globally enabled with auto-detect feature.

**Command Modes**
- CONFIGURATION

**Command History**
- **Version 8.3.17.3** Added auto-detect parameter.
- **Version 8.3.17.0** Supported on the M I/O Aggregator.

**Example**
```
Dell#show dcb stack-unit 0 port-set 0

dcb <ets | pfc> enable

Enable priority flow control or enhanced transmission selection on interface.

Syntax

```
dcb <ets | pfc> enable
```

- To disable ETS on interface, use “no dcb ets enable” command.
- To disable PFC on interface, use “no dcb pfc enable” command.

Defaults

Enable

Command Modes

INTERFACE

Command History

Version 9.5(0.0) Supported on the M I/O aggregator.

Usage Information

PFC and ETS are enabled by default on the interfaces when DCB is globally enabled (refer to dcb enable). In some network topology, you may want to disable PFC on an interface and apply link level flow control; Similarly you may want to disable ETS on an interface and apply QoS bandwidth configurations.

Limitations

- dcb-map command on interface is mutually exclusive to no dcb ets enable and no dcb pfc enable.
- **pfc priority** command is mutually exclusive to **no dcb pfc enable** command.

- **Deprecated commands** **dcb-policy input** and **no dcb pfc enable** cannot coexist at interface level.

- **Deprecated commands** **dcb-policy output** and **no dcb ets enable** cannot coexist at interface level.

**Related Commands**

- **dcb-map** — applies dcb-map profile on interface.

**dcb-input**

To apply pause or flow control for specified priorities using a configure delay time, create a DCB input policy.

**Syntax**

```
dcb-input policy-name
```

To delete the DCB policy, use the **no dcb-input** command.

**Parameters**

- **policy-name**
  
Enter maximum 32 alphanumeric characters.

**Defaults**

None

**Command Modes**

- CONFIGURATION

**Command History**

Version 9.2(0.0)

Supported on the M I/O Aggregator.

**Usage Information**

This command is supported in Programmable-Mux (PMUX) mode only.

As soon as you apply a DCB policy with PFC enabled on an interface, DCBx starts exchanging information with PFC-enabled peers. The IEEE802.1Qbb, converged enhanced ethernet (CEE), and CIN versions of PFC TLV are supported. DCBx also validates PFC configurations received in TLVs from peer devices.

By applying a DCB input policy with PFC enabled, you enable PFC operation on ingress port traffic. To achieve complete lossless handling of traffic, also enable PFC on all DCB egress ports or configure the dot1p priority-queue assignment of PFC priorities to lossless queues (refer to **pfc no-drop queues**).

To remove a DCB input policy, including the PFC configuration it contains, enter the **no dcb-input policy-name** command in Interface Configuration mode.

**Related Commands**

- **dcb-policy input** — Applies the input policy with the PFC configuration.
**dcb-map**

Create a DCB map to configure priority flow control (PFC) and enhanced transmission selection (ETS) on Ethernet ports that support converged Ethernet traffic. Apply the DCB map to an Ethernet interface.

**I/O Aggregator**

**Syntax**

```
dcb-map map-name
```

**Parameters**

- `map-name` Enter a DCB map name. The maximum number of alphanumeric characters is 32.

**Defaults**

None. There are no pre-configured PFC and ETS settings on S5000 Ethernet interfaces.

**Command Modes**

- CONFIGURATION
- INTERFACE

**Command History**

Version 9.3(0.0) Introduced on the FC Flex IO module installed in the M I/O Aggregator.

**Usage Information**

A DCB map is a template used to configure DCB parameters and apply them on converged Ethernet interfaces. DCB parameters include priority-based flow control (PFC) and enhanced traffic selection (ETS).

To display the PFC and ETS settings in DCB maps, enter the `show qos dcb-map` command.

Use the `dcb-map` command to create a DCB map to specify PFC and ETS settings and apply it on Ethernet ports. After you apply a DCB map to an interface, the PFC and ETS settings in the map are applied when the Ethernet port is enabled. DCBx is enabled on Ethernet ports by default.

The `dcb-map` command is supported only on physical Ethernet interfaces.

To remove a DCB map from an interface, enter the `no dcb-map map-name` command in Interface configuration mode.

**Related Commands**

- `show qos dcb-map` — displays the dcb-map profiles configured on the system.
- `dcb-map stack-unit all stack-ports all` — applies a DCB map on all ports of a switch stack.
**dcb-policy input**

To apply the input policy with the PFC configuration to an ingress interface.

**Syntax**

```
dcb-policy input policy-name
```

To delete the DCB policy, use the `no dcb-policy input` command.

**Parameters**

- `policy-name`: Enter the input policy name with the PFC configuration to an ingress interface.

**Defaults**

None

**Command Modes**

- INTERFACE

**Command History**

Version 9.2(0.0) Supported on the M I/O Aggregator.

**Usage Information**

This command is supported in Programmable-Mux (PMUX) mode only.

If you apply an input policy with PFC disabled `no pfc mode`:

- You can enable link-level flow control on the interface. To delete the input policy, first disable link-level flow control. PFC is then automatically enabled on the interface because an interface is by default PFC-enabled.
- PFC still allows you to configure lossless queues on a port to ensure no-drop handling of lossless traffic.

When you apply an input policy to an interface, an error message displays if:

- The PFC dot1p priorities result in more than two lossless port queues globally on the switch.
- You already enabled link-level flow control. You cannot enable PFC and link-level flow control at the same time on an interface.

In a switch stack, configure all stacked ports with the same PFC configuration.

A DCB input policy for PFC applied to an interface may become invalid if you reconfigure the dot1p-queue mapping. This situation occurs when the new dot1p-queue assignment exceeds the maximum number (2) of lossless queues supported globally on the switch. In this case, all PFC configurations received from PFC-enabled peers are removed and resynchronized with the peer devices.

Traffic may be interrupted when you reconfigure PFC no-drop priorities in an input policy or reapply the policy to an interface.

If the priority group to QoS policy mapping configurations in the DCB output profile are not complete (for example, no priorities are mapped or only some of the priorities are mapped), all eight priorities are mapped to a single priority group with a PGID of 0 for DCBx negotiations.
dcb-policy input stack-unit stack-ports all

Apply the configuration source DCB parameters for both ETS and PFC parameters on all stack links.

Syntax
dcb-policy stack-unit {all|<0-5>} stack-ports all interface
config-source-port

To remove all configuration source DCB parameters for ETS and PFC from all stack links, use the no dcb-policy input stack-unit {all|<0-5>} stack-ports all command.

Defaults
None

Command Modes
CONFIGURATION

Command History
Version 9.2(0.0) Introduced on the M I/O Aggregator.

Usage Information
This command is supported in Programmable-Mux (PMUX) mode only.

As soon as you apply a DCB policy with PFC enabled on an interface, DCBx starts exchanging information with PFC-enabled peers. The IEEE802.1Qbb, converged enhanced ethernet (CEE), and CIN versions of PFC TLV are supported. DCBx also validates PFC configurations received in TLVs from peer devices.

By applying a DCB input policy with PFC enabled, you enable PFC operation on ingress port traffic. To achieve complete lossless handling of traffic, also enable PFC on all DCB egress ports or configure the dot1p priority-queue assignment of PFC priorities to lossless queues (refer to pfc no-drop queues).

To remove a DCB input policy, including the PFC configuration it contains, enter the no dcb-input policy-name command in Interface Configuration mode.

Related Commands
dcb-policy input — Applies the input policy with the PFC configuration.

dcbx version

Configure the DCBX version used on the interface.

Syntax
dcbx version {auto | cee | cin | ieee-v2.5}

To remove the DCBX version, use the no dcbx version {auto | cee | cin | ieee-v2.5} command.
Parameters

**Parameters**

Enter the DCBX version type used on the interface, where:

- **auto**: configures the port to operate using the DCBX version received from a peer.
- **cee**: configures the port to use CEE (Intel 1.01).
- **cin**: configures the port to use Cisco-Intel-Nuova (DCBX 1.0).
- **ieee-v2.5**: configures the port to use IEEE 802.1az (Draft 2.5).

**Defaults**

- **Auto**

**Command Modes**

- **PROTOCOL LLDP**

**Command History**

- **Version 8.3.17.0** - Supported on the M I/O Aggregator.

**Usage Information**

DCBX requires that you enable LLDP to advertise DCBX TLVs to peers.

Configure DCBX operation at the INTERFACE level on a switch or globally on the switch. To verify the DCBX configuration on a port, use the `show interface dcbx detail` command.

---

**qos-policy-output ets**

To configure the ETS bandwidth allocation and scheduling for priority traffic, create a QoS output policy.

**Syntax**

```
qos-policy-output policy-name ets
```

To remove the QoS output policy, use the `no qos-policy-output ets` command.

**Parameters**

- **policy-name**

Enter the policy name. The maximum is 32 characters.

**Command Modes**

- **CONFIGURATION**

**Command History**

- **Version 9.2(0.0)** - Supported on the M I/O Aggregator.
- **Version 8.3.16.1** - Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

- This command is supported in Programmable-Mux (PMUX) mode only.
- If an error occurs in an ETS output-policy configuration, the configuration is ignored and the scheduler and bandwidth allocation settings are reset to the ETS default.
default values (all priorities are in the same ETS priority group and bandwidth is allocated equally to each priority).

If an error occurs when a port receives a peer’s ETS configuration, the port’s configuration is reset to the previously configured ETS output policy. If no ETS output policy was previously applied, the port is reset to the default ETS parameters.

You can only associate output QoS policy profiles with the priority groups in the DCB output profile context; output QoS policy profiles are not permitted on output policy-maps.

Weighted random early detection (WRED), Explicit congestion notification (ECN), rate shaping, and rate limiting are not supported in output policies because DCBx does not negotiate these parameters with peer devices. You can apply a QoS output policy with WRED and/or rate shaping on a DCBx CIN-enabled interface (refer to Configuring Port-Based Rate Shaping and Weighted Random Early Detection).

Related Commands

- scheduler — schedules the priority traffic in port queues.
- bandwidth-percentage — bandwidth percentage allocated to the priority traffic in port queues.

show dcb

Displays the data center bridging status, the number of PFC-enabled ports, and the number of PFC-enabled queues.

Syntax

show dcb [stack-unit unit-number]

Parameters

unit number Enter the DCB unit number. The range is from 0 to 5.

Command Modes EXEC Privilege

Command History

Version 8.3.17.0 Supported on M I/O Aggregator.

Usage Information

Specify a stack-unit number on the Master switch in a stack.

Example

Dell# show dcb
stack-unit 0 port-set 0
  DCB Status : Enabled
  PFC Port Count : 56 (current), 56 (configured)
PFC Queue Count : 2 (current), 2 (configured)
show interface dcbx detail

Displays the DCBX configuration on an interface.

**Syntax**

```
show interface port-type slot/port dcbx detail
```

**Parameters**

- `port-type` Enter the port type.
- `slot/port` Enter the slot/port number.

**Command Modes**

- EXEC Privilege

**Command History**

- **Version 8.3.17.0** Supported on the M I/O Aggregator.

**Usage Information**

The following describes the `show interface dcbx detail` command shown in the following example.

<table>
<thead>
<tr>

Field | Description
--- | ---
PFC Pause TX pkts | Number of PFC pause frames transmitted.
PFC Pause Rx pkts | Number of PFC pause frames received.
PG TLV Statistics:
Input PG TLV pkts | Number of PG TLVs received.
Output PG TLV pkts | Number of PG TLVs transmitted.
Error PG TLV pkts | Number of PG error packets received.
Application Priority TLV Statistics
Input Appln Priority TLV | Number of Application TLVs received.
Output Appln Priority TLV pkts | Number of Application TLVs transmitted.
Error Appln Priority TLV pkts | Number of Application TLV error packets received.

Example:
Dell#show int te 0/34 dcbx detail
E-ETS Configuration TLV enabled e-ETS
Configuration TLV disabled
R-ETS Recommendation TLV enabled r-ETS
Recommendation TLV disabled
P-PFC Configuration TLV enabled p-PFC
Configuration TLV disabled
F-Application priority for FCOE enabled f-Application
Priority for FCOE disabled
I-Application priority for iSCSI enabled i-Application
Priority for iSCSI disabled
------------------------------------------------------------------
show interface ets

Displays the ETS configuration applied to egress traffic on an interface, including priority groups with priorities and bandwidth allocation.

Syntax

```
show interface port-type slot/port ets {summary | detail}
```

Parameters

- `port-type slot/port ets`: Enter the port-type and port ETS information.
- `{summary | detail}`: Enter the keyword `summary` for a summary list of results or enter the keyword `detail` for a full list of results.

Command Modes

EXEC Privilege

Command History

Version 8.3.17.0: Supported on the M I/O Aggregator.

Usage Information

To clear ETS TLV counters, use the `clear ets counters interface port-type slot/port` command.

The following describes the `show interface summary` command shown in the following example.

<table>
<thead>
<tr>

dell#
```
show interface pfc
Displays the PFC configuration applied to ingress traffic on an interface, including priorities and link delay.

Syntax
show interface port-type slot/port pfc {summary | detail}

Parameters
port-type slot/port pfc
Enter the port-type slot and port PFC information.

(summary | detail)
Enter the keyword summary for a summary list of results or enter the keyword detail for a full list of results.

Command Modes
EXEC Privilege

Command History
Version 8.3.17
Supported on the M I/O Aggregator.

Usage Information
The following describes the show interface pfc summary field descriptions.

Field
Interface
Admin mode is on, Admin is enabled
Remote is enabled, Priority list, Remote Willing Status is enabled
Local is enabled
Operational status (local port)
PFC DCBX Oper status

Description
Interface type with stack-unit and port number.
PFC mode: on or off. Priority list: list of the configured PFC priorities (if any). When the PFC admin mode is on, PFC advertisements are enabled to be sent and received from peers.
Remote Admin mode: (enabled if a valid TLV was received or disabled). Priority list: list of the configured PFC priorities (if any). Remote Willing Status: Willing bit received in PFC TLVs from the remote peer.
Local PFC configuration including the mode and the list of PFC priorities configured.
Port state for current operational PFC configuration:
• Init: Local PFC configuration parameters were exchanged with the peer.
• Recommend: Remote PFC configuration parameters were received from the peer.
• Internally propagated: PFC configuration parameters were received from the configuration source.
Operational status for the exchange of the PFC configuration on the local port: match (up) or mismatch (down).

Example (detail)

```
Dell# show interfaces tengigabitethernet 0/49 pfc detail
Interface TenGigabitEthernet 0/49
  Admin mode is on
  Admin is enabled
  Remote is enabled
  Remote Willing Status is enabled
  Local is enabled
  Oper status is recommended
  PFC DCBX Oper status is Up
  State Machine Type is Feature
  TLV Tx Status is enabled
  PFC Link Delay 45556 pause quanta
  Application Priority TLV Parameters :
  --------------------------------------
  FCOE TLV Tx Status is disabled
  ISCSI TLV Tx Status is disabled
  Local FCOE PriorityMap is 0x8
  Local ISCSI PriorityMap is 0x10
  Remote FCOE PriorityMap is 0x8
  Remote ISCSI PriorityMap is 0x8

  0 Input TLV pkts, 1 Output TLV pkts, 0 Error pkts, 0 Pause Tx pkts, 0 Pause Rx pkts
  0 Input Appln Priority TLV pkts, 1 Output Appln Priority TLV pkts, 0 Error
  Appln Priority TLV Pkts
```

**show interface pfc statistics**

Displays counters for the PFC frames received and transmitted (by dot1p priority class) on an interface.

**Syntax**

```
show interface port-type slot/port pfc statistics
```

**Parameters**

- **port-type**
  - Enter the port type.
- **slot/port**
  - Enter the slot/port number.

**Command Modes**

EXEC Privilege

**Command History**

Version 8.3.17.0   Supported on the M I/O Aggregator.

**Example (Summary)**

```
Dell#show interfaces te 0/3 pfc statistics
Interface TenGigabitEthernet 0/3

  Priority Rx XOFF Frames Rx Total Frames Tx Total Frames
  --------------------------------------------------------
  0            0            0            0            0
```

Data Center Bridging (DCB) 117
**show qos dcb-map**

Display the DCB parameters configured in a specified DCB map.

**FC Flex IO Modules with I/O Aggregator**

**Syntax**

```
show qos dcb-map map-name
```

**Parameters**

- `map-name` Displays the PFC and ETS parameters configured in the specified map.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

- Version 9.3(0.0) Introduced on the FC Flex IO module installed in the M I/O Aggregator.

**Usage Information**

Use the `show qos dcb-map` command to display the enhanced transmission selection (ETS) and priority-based flow control (PFC) parameters used to configure server-facing Ethernet ports. S5000 Ethernet ports are DCBx-enabled by default.

The following table describes the `show qos dcb-map` output shown in the example below.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>State</td>
<td>Complete: All mandatory DCB parameters are correctly configured. In progress: The DCB map configuration is not complete. Some mandatory parameters are not configured.</td>
</tr>
<tr>
<td>PFC Mode</td>
<td>PFC configuration in DCB map: On (enabled) or Off.</td>
</tr>
<tr>
<td>PG</td>
<td>Priority group configured in the DCB map.</td>
</tr>
<tr>
<td>TSA</td>
<td>Transmission scheduling algorithm used by the priority group: Enhanced Transmission Selection (ETS).</td>
</tr>
<tr>
<td>BW</td>
<td>Percentage of bandwidth allocated to the priority group.</td>
</tr>
<tr>
<td>PFC</td>
<td>PFC setting for the priority group: On (enabled) or Off.</td>
</tr>
</tbody>
</table>
**Field** | **Description**
---|---
Priorities | 802.1p priorities configured in the priority group.

**Example**

Dell# show qos dcb-map dcbmap2

State : Complete
PfcMode: ON

-------------------
PG: 0 TSA: ETS  BW: 50  PFC: OFF
Priorities: 0 1 2 4 5 6 7

PG: 1 TSA: ETS  BW: 50  PFC: ON
Priorities: 3

**Related Commands**

dcb-map — creates a DCB map to configure PFC and ETS parameters and applies the PFC and ETS settings on Ethernet ports.

---

**show stack-unit stack-ports ets details**

Displays the ETS configuration applied to egress traffic on stacked ports, including ETS operational mode on each unit and the configured priority groups with dot1p priorities, bandwidth allocation, and scheduler type.

**Syntax**

```
show stack-unit {all | stack-unit} stack-ports all ets details
```

**Parameters**

- `stack-unit` Enter the stack unit identification. The range is from 0 to 5.

**Command Modes**

EXEC Privilege

**Command History**

- **Version 8.3.17.0** Supported on the M I/O Aggregator.

**Example**

Dell# show stack-unit all stack-ports all ets details

Stack unit 1 stack port all
Max Supported TC Groups is 4
Number of Traffic Classes is 1
Admin mode is on

Admin Parameters:

<table>
<thead>
<tr>
<th>Admin is enabled</th>
<th>Bandwidth</th>
<th>TSA</th>
</tr>
</thead>
</table>

<table>
<thead>
<tr>
<th>TC-grp</th>
<th>Priority#</th>
<th>ETS</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>0,1,2,3,4,5,6,7</td>
<td>100%</td>
</tr>
</tbody>
</table>

---

Data Center Bridging (DCB)
show stack-unit stack-ports pfc details

Displays the PFC configuration applied to ingress traffic on stacked ports, including PFC Operational mode on each unit with the configured priorities, link delay, and number of pause packets sent and received.

Syntax

```
show stack-unit {all | stack-unit} stack-ports {all | port-number} pfc details
```

Parameters

- `stack-unit`: Enter the stack unit.
- `port-number`: Enter the port number.

Command Modes

- EXEC Privilege

Command History

- **Version 8.3.17.0**: Supported on the M I/O Aggregator.

Example

```
Dell# show stack-unit all stack-ports all pfc details

stack unit 1 stack-port all
   Admin mode is On
   Admin is enabled,
   Local is enabled,
   Link Delay 45556 pause quantum
   0 Pause Tx pkts, 0 Pause Rx pkts

Dell#
```
Dynamic Host Configuration Protocol

Dynamic host configuration protocol (DHCP) is an application layer protocol that dynamically assigns IP addresses and other configuration parameters to network end-stations (hosts) based on configuration policies determined by network administrators.

An Aggregator can operate as a DHCP client. As a DHCP client, the Aggregator requests an IP address from a DHCP server.

The following types of DHCP commands are described in this chapter:

- DHCP Client Commands
- Other Commands supported by DHCP Client

**DHCP Client Commands**

- `ip address dhcp`
- `release dhcp interface`
- `renew dhcp interface`
- `show ip dhcp client statistics`
- `show ip dhcp lease`

**Other Commands supported by DHCP Client**

- `debug ip dhcp client events`
- `debug ip dhcp client packets`

### `ip address dhcp`

Acquire an IP address dynamically on an interface from the DHCP server.

**Syntax**

```
ip address dhcp
```

To disable DHCP Client on an interface, use the `no ip address dhcp` command.

**Command Modes**

`INTERFACE`

**Default**

Enabled

**Command History**

`Version 8.3.17.0` Supported on the M I/O Aggregator.
In the M I/O Aggregator, the DHCP client is enabled only on the default vlan and management interface 0/0. Use the ip address command to assign a static ip address that overwrites the dynamically assigned IP address.

### clear ip dhcp client statistics
Displays DHCP client statistics, including the number of DHCP messages sent and received on an interface.

#### Syntax
```
clear ip dhcp client statistics {all|interface type slot/port}
```

#### Parameters
- **all**: Clear DHCP client statistics on all DHCP client-enabled interfaces on the switch.
- **interface type slot/port**: Clear DHCP client statistics on the specified interface.
  - For the management interface on the stack-unit, enter the keyword `managementethernet` followed by slot/port information. The slot and port range is 0.
  - For a VLAN, enter the keyword `vlan` followed by a number from 1 to 4094.

#### Command Modes
- EXEC Privilege

#### Default
- None

#### Command History
- **Version 8.3.17.0** Supported on the M I/O Aggregator.

### debug ip dhcp client events
Enable the display of log messages for the following events on DHCP client interfaces:
- IP address acquisition
- IP address release
- Renewal of IP address and lease time
- Release of an IP address

#### Syntax
```
d debug ip dhcp client events [interface type slot/port]
```
Parameters

**interface type slot/port**

Display log messages for DHCP packets sent and received on the specified interface.

- For the management interface on the stack-unit, enter the keyword `managementethernet` followed by slot/port information. The slot and port range is 0.
- For a VLAN, enter the keyword `vlan` followed by a number from 1 to 4094.

Command Modes

EXEC Privilege

Default

None

Command History

Version 8.3.17.0

Supported on the M I/O Aggregator.

d debug ip dhcp client packets

Enable the display of log messages for all DHCP packets sent and received on DHCP client interfaces.

Syntax

d debug ip dhcp client packets [interface type slot/port]

Parameters

**interface type slot/port**

Display log messages for DHCP packets sent and received on the specified interface.

- For the management interface on the stack-unit, enter the keyword `managementethernet` followed by slot/port information. The slot and port range is 0.
- For a VLAN, enter the keyword `vlan` followed by a number from 1 to 4094.

Command Modes

EXEC Privilege

Default

None

Command History

Version 8.3.17.0

Supported on the M I/O Aggregator.
**release dhcp interface**

Release the dynamically-acquired IP address on an Ethernet interface while retaining the DHCP client configuration on the interface.

**Syntax**

```
release dhcp interface type slot/port
```

**Parameters**

- `interface type slot/port`
  - For the management interface on the stack-unit, enter the keyword `management ethernet` followed by slot/port information. The slot and port range is 0.
  - For a VLAN, enter the keyword `vlan` followed by a number from 1 to 4094.

**Command Modes**

EXEC Privilege

**Default**

None

**Command History**

Version 9.2 (0.0)

Supported on the M I/O Aggregator.

**Usage Information**

When you enter the `release dhcp` command, although the IP address that was dynamically-acquired from a DHCP server is released from an interface, the ability to acquire a new DHCP server-assigned address remains in the running configuration for the interface. To acquire a new IP address, enter either the `renew dhcp` command at the EXEC privilege level or the `ip address dhcp` command at the interface configuration level.

**renew dhcp interface**

Re-acquire a dynamic IP address on an Ethernet interface enabled as a DHCP client.

**Syntax**

```
renew dhcp interface type slot/port
```

**Parameters**

- `interface type slot/port`
  - Enter any of the following keywords and slot/port or number to clear counters from a specified interface:
    - For the management interface on the stack-unit, enter the keyword `management ethernet` followed by slot/port information. The slot and port range is 0.
    - For a VLAN, enter the keyword `vlan` followed by a number from 1 to 4094.

**Command Modes**

EXEC Privilege

**Usage Information**

When you enter the `release dhcp` command, although the IP address that was dynamically-acquired from a DHCP server is released from an interface, the ability to acquire a new DHCP server-assigned address remains in the running configuration for the interface. To acquire a new IP address, enter either the `renew dhcp` command at the EXEC privilege level or the `ip address dhcp` command at the interface configuration level.
show ip dhcp client statistics

Displays DHCP client statistics, including the number of DHCP messages sent and received on an interface.

Syntax: `show ip dhcp client statistics {all | interface type slot/port}`

Parameters:
- **all**: Display DHCP client statistics on all DHCP client-enabled interfaces on the switch.
- **interface type slot/port**: Display DHCP client statistics on the specified interface.
  - For the management interface on the stack-unit, enter the keyword `management ethernet` followed by slot/port information. The slot and port range is 0.
  - For a VLAN, enter the keyword `vlan` followed by a number from 1 to 4094.

Command Modes: EXEC Privilege

Default: None.

Command History: Version 8.3.17.0  Supported on the M I/O Aggregator.

show ip dhcp lease

Displays lease information about the dynamic IP address currently assigned to a DHCP client-enabled interface.

Syntax: `show ip dhcp lease[interface type slot/port]`

Parameters:
- **interface type slot/port**: Display DHCP client statistics on the specified interface.
- For the management interface on the stack-unit, enter the keyword `management ethernet` followed by slot/port information. The slot and port range is 0.
- For a VLAN, enter the keyword `vlan` followed by a number from 1 to 4094.

<table>

| Command History | Version 8.3.17.0 | Supported on the M I/O Aggregator. |
FIP Snooping

In a converged Ethernet network, an Aggregator can operate as an intermediate Ethernet bridge to snoop on Fibre Channel over Ethernet Initialization Protocol (FIP) packets during the login process on Fibre Channel over Ethernet (FCoE) forwarders (FCFs). Acting as a transit FIP snooping bridge, the switch uses dynamically-created ACLs to permit only authorized FCoE traffic to be transmitted between an FCoE end-device and an FCF.

FIP Snooping Commands

The following Dell Networking OS commands are used to configure and verify the FIP snooping feature:

- debug fip-snooping
- show fip-snooping config
- show fip-snooping enode
- show fip-snooping fcf
- show fip-snooping sessions
- show fip-snooping statistics
- show fip-snooping system

show fip-snooping statistics

Displays statistics on the FIP packets snooped on all interfaces, including VLANs, physical ports, and port channels.

Syntax

show fip-snooping statistics [interface vlan vlan-id | interface port-type port/slot | interface port-channel port-channel-number]

Parameters

- vlan-id
- port-type port/slot
- port-channel-number

Enter the VLAN ID of the FIP packet statistics to be displayed.

Enter the port-type and slot number of the FIP packet statistics to be displayed.

Enter the port channel number of the FIP packet statistics to be displayed.

Command Modes

- EXEC
- EXEC Privilege
Version 8.3.17.0  
Supported on the M I/O Aggregator.

The following describes the `show fip-snooping statistics` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>

Number of Session failures due to Hardware Config :0

debug fip-snooping

Enable the debug FIP protocol specific messages.

**Syntax**

debug fip-snooping [all|acl|error|ifm|info|ipc|rx]

**Parameters**

- all: Enable all the debug options.
- acl: Enable for ACL specific debugs
- error: Enable for Error specific debugs
**show fip-snooping config**

Displays the FIP snooping status and configured FC-MAP values.

**Syntax**

```plaintext
show fip-snooping config
```

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 8.3.17.0  
Supported on the M I/O Aggregator.

**Example**

```
Dell#show fip-snooping config
FIP Snooping Feature enabled Status: Enabled
FIP Snooping Global enabled Status: Enabled
Global FC-MAP Value: 0X0EFC00
Dell#
```

**show fip-snooping enode**

Displays information on the ENodes in FIP-snooped sessions, including the ENode interface and MAC address, FCF MAC address, VLAN ID, and FC-ID.

**Syntax**

```plaintext
show fip-snooping enode [enode-mac-address]
```

**Parameters**

- `enode-mac-address`: Enter the MAC address of the ENodes to be displayed.

**Command Modes**

- EXEC
- EXEC Privilege

FIP Snooping
show fip-snooping enode

Displays information on the ENodes in FIP-snooped sessions, including the ENodes MAC address, ENodes interface, VLAN ID, and FC-ID.

Syntax
show fip-snooping enode

Parameters
- fcf-mac-address
  Enter the MAC address of the FCF to be displayed.

Command Modes
- EXEC
- EXEC Privilege

Command History
Version 8.3.17.0  Supported on the M I/O Aggregator.

Usage Information
The following describes the show fip-snooping enode command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENode MAC</td>
<td>MAC address of the ENode</td>
</tr>
<tr>
<td>ENode Interface</td>
<td>Slot/ port number of the interface connected to the ENode.</td>
</tr>
<tr>
<td>FCF MAC</td>
<td>MAC address of the FCF</td>
</tr>
<tr>
<td>VLAN</td>
<td>VLAN ID number used by the session</td>
</tr>
<tr>
<td>FC-ID</td>
<td>Fibre Channel session ID assigned by the FCF</td>
</tr>
</tbody>
</table>

Example

```
Dell# show fip-snooping enode
Enode MAC              Enode Interface          FCF
MAC              VLAN             FC-ID
---------              ---------------       ------   d4:ae:52:1b:e3:cd      Te 0/11                  54:7f:ee:37:34:40     100            62:00:11
```

show fip-snooping fcf

Displays information on the FCFs in FIP-snooped sessions, including the FCF interface and MAC address, FCF interface, VLAN ID, FC-MAP value, FKA advertisement period, and number of ENodes connected.

Syntax
show fip-snooping fcf[fcf-mac-address]

Parameters
- fcf-mac-address
  Enter the MAC address of the FCF to be displayed.

Command Modes
- EXEC
- EXEC Privilege

Command History
Version 8.3.17.0  Supported on the M I/O Aggregator.

Usage Information
The following describes the show fip-snooping fcf command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>FCF MAC</td>
<td>MAC address of the FCF</td>
</tr>
</tbody>
</table>

Example

```
Dell# show fip-snooping fcf
FCF MAC              FCF Interface              VLAN   FC-MAP  FKA Advertisement Period  Number of ENodes Connected
---------              -------------------------       ----     ------     ---------------                ---------------
54:7f:ee:37:34:40     Te 0/11                  100     62:00:11
```

FIP Snooping
### show fip-snooping sessions

Displays information on FIP-snooped sessions on all VLANs or a specified VLAN, including the ENode interface and MAC address, the FCF interface and MAC address, VLAN ID, FCoE MAC address and FCoE session ID number (FC-ID), worldwide node name (WWNN) and the worldwide port name (WWPN).

**Syntax**

```
show fip-snooping sessions[interface vlan vlan-id]
```

**Parameters**

- `vlan-id`
  
Enter the vlan-id of the specified VLAN to be displayed.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 8.3.17.0  
Supported on the M I/O Aggregator.

**Usage Information**

The following describes the `show fip-snooping sessions` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENode MAC</td>
<td>MAC address of the ENode.</td>
</tr>
<tr>
<td>ENode Interface</td>
<td>Slot/ port number of the interface connected to the ENode.</td>
</tr>
<tr>
<td>FCF MAC</td>
<td>MAC address of the FCF.</td>
</tr>
<tr>
<td>FC Interface</td>
<td>Slot/ port number of the interface to which the FCF is connected.</td>
</tr>
</tbody>
</table>

---

**Example**

```
Dell# show fip-snooping fcf

<table>
<thead>
<tr>
<th>FCF_MAC</th>
<th>FCF Interface</th>
<th>VLAN</th>
<th>FC-MAP</th>
</tr>
</thead>
<tbody>
<tr>
<td>54:7f:ee:37:34:40</td>
<td>Po 128</td>
<td>100</td>
<td>0e:fc:00</td>
</tr>
<tr>
<td>4000</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
```

---

**Field**

- **FCF Interface**
  - Slot/ port number of the interface to which the FCF is connected.
- **VLAN**
  - VLAN ID number used by the session.
- **FC-MAP**
  - FC-MAP value advertised by the FCF.
- **FKA_ADV_PERIOD**
  - Period of time (in milliseconds) during which FIP keep-alive advertisements are transmitted.
- **No of ENodes**
  - Number of ENodes connected to the FCF.
### Field Description

- **VLAN**: VLAN ID number used by the session.
- **FCoE MAC**: MAC address of the FCoE session assigned by the FCF.
- **FC-ID**: Fibre Channel ID assigned by the FCF.
- **Port WWPN**: Worldwide port name of the CNA port.
- **Port WWNN**: Worldwide node name of the CNA port.

### Example
```
Dell#show fip-snooping sessions
Enode MAC         Enode Intf      FCF MAC    FCF Intf VLAN
FCoE MAC        FC-ID
00:0e:1e:0c:54:a6 Te 0/14 00:05:73:f2:4f:ae Po128 100 0e:fc:
00:9a:00:27 9a:00:27 20:01:00:0e:1e:0c:54:a6
00:0e:1e:06:01:5e Te 0/16 00:05:73:f2:4f:af Po128 100 0e:fc:
00:9a:01:18 9a:01:18 20:01:00:0e:1e:06:01:5

Port WWNN
20:00:00:0e:1e:0c:54:a6
```

### show fip-snooping statistics

Displays statistics on the FIP packets snooped on all interfaces, including VLANs, physical ports, and port channels..

#### Syntax
```
show fip-snooping statistics [interface vlan vlan-id | interface port-type port/slot | interface port-channel port-channel-number]
```

#### Parameters
- **vlan-id**: Enter the VLAN ID of the FIP packet statistics to be displayed.
- **port-type port/slot**: Enter the port-type and slot number of the FIP packet statistics to be displayed.
- **port-channel-number**: Enter the port channel number of the FIP packet statistics to be displayed.

#### Command Modes
- EXEC
- EXEC Privilege

#### Command History
- **Version 8.3.17.0** Supported on the M I/O Aggregator.

#### Usage Information
The following describes the `show fip-snooping statistics` command shown in the following example.
<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number of Vlan Requests</td>
<td>Number of FIP-snooped VLAN request frames received on the interface.</td>
</tr>
<tr>
<td>Number of VLAN Notifications</td>
<td>Number of FIP-snooped VLAN notification frames received on the interface.</td>
</tr>
<tr>
<td>Number of Multicast Discovery Solicits</td>
<td>Number of FIP-snooped multicast discovery solicit frames received on the interface.</td>
</tr>
<tr>
<td>Number of Unicast Discovery</td>
<td>Number of FIP-snooped unicast discovery solicit frames received on the interface.</td>
</tr>
<tr>
<td>Number of FLOGI</td>
<td>Number of FIP-snooped FLOGI request frames received on the interface.</td>
</tr>
<tr>
<td>Number of FDISC</td>
<td>Number of FIP-snooped FDISC request frames received on the interface.</td>
</tr>
<tr>
<td>Number of FLOGO</td>
<td>Number of FIP-snooped FLOGO frames received on the interface.</td>
</tr>
<tr>
<td>Number of ENode Keep Alives</td>
<td>Number of FIP-snooped ENode keep-alive frames received on the interface.</td>
</tr>
<tr>
<td>Number of VN Port Keep Alives</td>
<td>Number of FIP-snooped VN port keep-alive frames received on the interface.</td>
</tr>
<tr>
<td>Number of Multicast Discovery Advertisements</td>
<td>Number of FIP-snooped multicast discovery advertisements received on the interface</td>
</tr>
<tr>
<td>Number of Unicast Discovery Advertisements</td>
<td>Number of FIP-snooped unicast discovery advertisements received on the interface</td>
</tr>
<tr>
<td>Number of FLOGI Accepts</td>
<td>Number of FIP FLOGI accept frames received on the interface</td>
</tr>
<tr>

</table>

**show fip-snooping system**

Displays information on the status of FIP snooping on the switch (enabled or disabled), including the number of FCoE VLANs, FCFs, ENodes, and currently active sessions.

**Syntax**

```
show fip-snooping system
```

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

**Version 8.3.17.0** Supported on the M I/O Aggregator.

**Example**

Dell# show fip-snooping system

<table>
<thead>
<tr>
<th>Metric</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Global Mode</td>
<td>Enabled</td>
</tr>
<tr>
<td>FCoE VLAN List (Operational)</td>

FIP Snooping
Enodes : 2
Sessions : 17
Internet Group Management Protocol (IGMP)

The Dell Networking OS supports IGMP snooping version 2 and 3 on all Dell Networking systems.

IGMP Commands

The Dell Networking OS supports the following IGMP commands:

- clear ip igmp groups
- debug ip igmp
- ip igmp snooping flood
- show ip igmp groups
- show ip igmp interface
- show ip igmp snooping mrouter

Important Points to Remember

- Dell Networking OS supports version 1, version 2, and version 3 hosts.
- Dell Networking OS IGMP snooping implementation is based on IP multicast address (not based on Layer 2 multicast mac-address) and the IGMP snooping entries are in Layer 3 flow table not in Layer 2 forwarding information base (FIB).
- Dell Networking OS IGMP snooping implementation is based on draft-ietf-magma-snoop-10.
- IGMP snooping is supported on all M I/O Aggregator stack members.
- IGMP snooping is enabled by default on the switch.
- A maximum of 8k groups and 4k virtual local area networks (VLAN) are supported.
- IGMP snooping is not supported on default VLAN interface.
- Flooding of unregistered multicast traffic is enabled by default.
- Queries are not accepted from the server side ports and are only accepted from the uplink LAG.
- Reports and Leaves are flooded by default to the uplink LAG irrespective of whether it is an mrouter port or not.

**clear ip igmp groups**

Clear entries from the group cache table.

Syntax

```
clear ip igmp groups [group-address | interface]
```
Parameters

**group-address** (OPTIONAL) Enter the IP multicast group address in dotted decimal format.

**interface** (OPTIONAL) Enter the interface type and slot/port information: For a VLAN interface enter the keyword vlan followed by a number from 1 to 4094.

Command Modes

**EXEC Privilege**

Command History

**Version 8.3.17.0** Supported on the M I/O Aggregator.

### debug ip igmp

Enable debugging of IGMP packets.

**Syntax**

debug ip igmp [group address | interface]

To disable IGMP debugging, enter the `no ip igmp` command. To disable all debugging, enter the `undebug all` command.

**Defaults**

Disabled

**Parameters**

**group-address** (OPTIONAL) Enter the IP multicast group address in dotted decimal format.

**interface** (OPTIONAL) Enter the interface type and slot/port information:

For a VLAN interface enter the keyword vlan followed by a number from 1 to 4094.

**Command Modes**

**EXEC Privilege**

**Command History**

**Version 8.3.17.0** Supported on the M I/O Aggregator.

### ip igmp snooping flood

This command controls the flooding behavior of unregistered multicast data packets. When flooding is disabled, unregistered multicast data traffic is forwarded to only multicast router ports in a VLAN. If there is no multicast router port in a VLAN, unregistered multicast data traffic is dropped.

**Syntax**

ip igmp snooping flood

**Parameters**

Enabled

**Command Modes**

**CONFIGURATION**
**show ip igmp groups**

View the IGMP groups.

**Syntax**

```
show ip igmp groups [group-address [detail] | detail | interface [group-address [detail]]]
```

**Parameters**

- `group-address` (OPTIONAL) Enter the group address in dotted decimal format to view information on that group only.
- `interface` (OPTIONAL) Enter the interface type and slot/port information:
  
  For a VLAN interface enter the keyword vlan followed by a number from 1 to 4094.

- `detail` (OPTIONAL) Enter the keyword detail to display the IGMPv3 source information.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

*Version 8.3.17.0* Supported on the M I/O Aggregator.

**Example**

```
Dell#show ip igmp groups
Total Number of Groups: 5
IGMP Connected Group Membership
Group Address Interface Mode Uptime Expires Last Reporter
225.0.0.0 Vlan 100 IGMPv2 00:00:05 00:02:04 3.0.0.51
Member Ports: Po 2
225.0.0.2 Vlan 100 IGMPv2 00:00:05 00:02:04 3.0.0.51
Member Ports: Po 2
225.0.0.3 Vlan 100 IGMPv2 00:00:05 00:02:04 3.0.0.51
Member Ports: Po 2
225.0.0.4 Vlan 100 IGMPv2 00:00:05 00:02:04 3.0.0.51
Member Ports: Po 2
```

**Field**

- **Group Address**
  
  Lists the multicast address for the IGMP group.

- **Interface**

  Lists the interface type, slot and port number.
Mode Displays the IGMP version used.
Uptime Displays the amount of time the group has been operational.
Expires Displays the amount of time until the entry expires.
Last Reporter Displays the IP address of the last host to be a member of the IGMP group.
Member Ports Indicates the member ports of the port channel. If the port channel is VLT, an asterisk (*) after the port channel number indicates the port channel is locally down and that a remote VLT port is up.

**show ip igmp interface**

View information on the interfaces participating in IGMP.

**Syntax**

```
show ip igmp interface [interface]
```

**Parameters**

- **interface** (OPTIONAL) Enter any of the following keywords and slot/port or number to clear counters from a specified interface:
  - For a Port Channel interface, enter the keyword port-channel followed by a number. Range: 1-128
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.
  - For a VLAN, enter the keyword vlan followed by a number from 1 to 4094.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

*Version 8.3.17.0* Supported on the M I/O Aggregator.

**Example**

```
Dell#show ip igmp interface
Vlan 2 is up, line protocol is down
Inbound IGMP access group is not set
Interface IGMP group join rate limit is not set
IGMP snooping is enabled on interface
IGMP Snooping query interval is 60 seconds
IGMP Snooping querier timeout is 125 seconds
IGMP Snooping last member query response interval is 1000 ms
IGMP snooping fast-leave is disabled on this interface
IGMP snooping querier is disabled on this interface
Vlan 3 is up, line protocol is down
Inbound IGMP access group is not set
```
Interface IGMP group join rate limit is not set
IGMP snooping is enabled on interface
IGMP Snooping query interval is 60 seconds
IGMP Snooping querier timeout is 125 seconds
IGMP Snooping last member query response interval is 1000 ms
IGMP snooping fast-leave is disabled on this interface
IGMP snooping querier is disabled on this interface

--More--

**show ip igmp snooping mrouter**
Displays multicast router interfaces.

**Syntax**
```
show ip igmp snooping mrouter [vlan number]
```

**Parameters**
- `vlan number` Enter the keyword vlan followed by the vlan number. Range: 1 to 4094

**Command Modes**
- EXEC
- EXEC Privilege

**Command History**
- **Version 8.3.17.0** Supported on the M I/O Aggregator.

**Example**
```
Dell#show ip igmp snooping mrouter vlan 2
Interface Router Ports
Vlan 2 Po 128
Dell#
```

**Related Commands**
- `show ip igmp groups` — Use this IGMP command to view groups.
Interfaces

This chapter defines interface commands and is divided into the following sections:

- Port Interface Commands
- Port Channel Commands
- Time Domain Reflectometer (TDR) Commands

Port Interface Commands

The following commands are for physical, loopback, and null interfaces:

- clear counters
- clear mac-address-table dynamic
- interface range
- interface range macro (define)
- interface range macro name
- interface vlan
- keepalive
- monitor interface
- name
- show config (INTERFACE mode)
- show config (from INTERFACE RANGE mode)
- show config (from INTERFACE VLAN mode)
- show interfaces configured
- show interfaces description
- show interfaces stack-unit
- show interfaces port-channel
- show interfaces status
- show interfaces switchport
- show range
- show vlan
- shutdown
- speed (for 1000/10000 interfaces)
Port Channel Commands

A Link Aggregation Group (LAG) is a group of links that appear to a MAC client as if they were a single link according to IEEE 802.3ad. In Dell Networking OS, a LAG is referred to as a Port Channel.

- For the Aggregator, the maximum port channel ID is 128 and the maximum members per port channel is 16.

Because each port can be assigned to only one Port Channel, and each Port Channel must have at least one port, some of those nominally available Port Channels might have no function because they could have no members if there are not enough ports installed. In the Aggregator, stack members can provide those ports.

The commands in this section are specific to Port Channel interfaces:

- auto vlan
- group
- monitor interface
- show config (from INTERFACE RANGE mode)
- show interfaces port-channel

**NOTE:** The Dell Networking OS implementation of LAG or Port Channel requires that you configure a LAG on both switches manually. For information about Dell Networking OS link aggregation control protocol (LACP) for dynamic LAGs, refer to the Link Aggregation Control Protocol (LACP) chapter. For more information about configuring and using Port Channels, refer to the Dell PowerEdge M I/O Aggregator Configuration Guide

Time Domain Reflectometer (TDR) Commands

TDR is useful for troubleshooting an interface that is not establishing a link; either it is flapping or not coming up at all. TDR detects open or short conditions of copper cables on 100/1000/10G Base-T modules.

- tdr-cable-test
- show tdr

Important Points to Remember

- The interface and port must be enabled (configured—see the interface command) before running TDR. An error message is generated if you have not enabled the interface.
- The interface on the far-end device must be shut down before running TDR.
- Because TDR is an intrusive test on an interface that is not establishing a link, do not run TDR on an interface that is passing traffic.
- When testing between two devices, do not run the test on both ends of the cable.
Virtual LAN (VLAN) Commands

The following commands configure and monitor virtual local area networks (VLANs). VLANs are a virtual interface and use many of the same commands as physical interfaces.

You can configure an IP address only on the default VLAN and Layer 3 protocols on a VLAN called Inter-VLAN routing. FTP, TFTP, ACLs, and SNMP are not supported on a VLAN.

Occasionally, while sending broadcast traffic over multiple Layer 3 VLANs, state of a VLAN interface may continually switch between Master and Backup.

- `auto vlan`
- `default vlan-id`
- `name`
- `show config (from INTERFACE VLAN mode)`
- `show vlan`
- `vlan tagged`
- `vlan untagged`

### auto vlan

Change the port to auto or admin vlan mode (enable or disable all auto VLANs).

**Syntax**

```
auto vlan <cr>
```

To remove membership from 4K VLAN, use the `no auto vlan` command.

**Defaults**

none

**Parameters**

- `description`
  Enter a text string description to identify the VLAN (80 characters maximum).

**Command Modes**

INTERFACE

**Usage Information**

The `auto vlan` command adds the port as untagged to default vlan and tagged to all other 4094 VLAN.

**Command History**

`Version 8.3.17.0` Supported on the M I/O Aggregator.

### clear counters

Clear the counters used in the `show interfaces` commands for VLANs, and physical interfaces, or selected ones.

**Syntax**

```
clear counters interface
```
**clear counters**

Without a specific interface specified, the command clears all interface counters.

**Parameters**

- `interface` (OPTIONAL) Enter any of the following keywords and slot/port or number to clear counters from a specified interface:
  - For the management interface on the stack-unit, enter the keyword `management ethernet` followed by slot/port information. The slot and port range is 0.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` followed by the slot/port information.
  - For a Port Channel interface, enter the keyword port-channel followed by a number. Range: 1-128

**Command Modes**

- EXEC Privilege

**Command History**

- Version 8.3.17.0 Supported on the M I/O Aggregator.

**Example**

```
Dell#clear counters
Clear counters on all interfaces [confirm]
```

---

**clear mac-address-table dynamic**

Clear the MAC address table of all MAC addresses learned dynamically.

**Syntax**

```
clear mac-address-table dynamic [interface tengigabitethernet slot/port-id]
```

**Parameters**

- `interface` Enter the keyword `interface range` and one of the interfaces — slot/port, port-channel or VLAN number. Select the range of interfaces for bulk configuration. You can enter up to six comma separated ranges-spaces are not required between the commas. Comma-separated ranges can include VLANs, port-channels and physical interfaces.

  Slot/Port information must contain a space before and after the dash. For example, interface range tengigabitethernet 0/1 - 5 is valid; interface range tengigabitethernet 0/1-5 is not valid.

  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` followed by the slot/port information.

**Command Modes**

- EXEC Privilege
clear mac-address-table dynamic

Clear the MAC address table of all MAC addresses learned dynamically.

Syntax

clear mac-address-table dynamic {interface tengigabitethernet slot/port-id}

Parameters

interface

Enter the keyword interface range and one of the interfaces — slot/port, port-channel or VLAN number. Select the range of interfaces for bulk configuration. You can enter up to six comma separated ranges-spaces are not required between the commas. Comma-separated ranges can include VLANs, port-channels and physical interfaces. Slot/Port information must contain a space before and after the dash. For example, interface range tengigabitethernet 0/1 - 5 is valid; interface range tengigabitethernet 0/1-5 is not valid.

• For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.

Command Modes

EXEC Privilege

Command History

Version 8.3.17.0  Supported on the M I/O Aggregator.

default vlan-id

Set the default VLAN-id.

Syntax

default vlan-id <vlan-id>

To set the default VLAN-id, use the no default vlan-id command.

Defaults

none

Command Modes

CONFIGURATION

Command History

Version 8.3.17.0  Supported on the M I/O Aggregator.
**description**

Assign a descriptive text string to the interface.

**Syntax**

description desc_text

To delete a description, enter no description command.

**Parameters**

`desc_text` Enter a text string up to 240 characters long.

**Defaults**

No description is defined.

**Command Modes**

INTERFACE

**Command History**

Version 8.3.17.0 Supported on the M I/O Aggregator.

**Usage Information**

- Spaces between characters are not preserved after entering this command unless you enclose the entire description in quotation marks ("desc_text").
- Entering a text string after the default vlan-id command overwrites any previous text string configured as the description.
- The `show tdr` and `default vlan-id` commands are the only commands that you can configure on an interface that is a member of a port-channel.
- Use the `show interfaces description` command to display descriptions configured for each interface.

**Related commands**

- `show interfaces description`— Displays the description field of interfaces.

**flowcontrol**

Control how the system responds to and generates 802.3x pause frames on 10G and 40Gig stack units.

**Syntax**

flowcontrol rx {off | on} tx {off | on} [negotiate]

**Parameters**

- `rx on` Enter the keywords `rx on` to process the received flow control frames on this port. This is the default value for the receive side.
- `rx off` Enter the keywords `rx off` to ignore the received flow control frames on this port.
tx on Enter the keywords `tx on` to send control frames from this port to the connected device when a higher rate of traffic is received. This is the default value on the send side.

**tx off** Enter the keywords `tx off` so that flow control frames are not sent from this port to the connected device when a higher rate of traffic is received.

**negotiate** (Optional) Enter the keyword `negotiate` to enable the pause-negotiation with the egress port of the peer device. If the `negotiate` command is not used, pause-negotiation is disabled. 40 gigabit Ethernet interfaces do not support pause-negotiation.

**Defaults**

- rx off
- tx off

**Command Modes**

`INTERFACE`

**Command History**

- **Version 9.6.0.0** Added support for the negotiate feature on the M I/O Aggregator.
- **Version 9.2(0.0)** Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The globally assigned 48-bit Multicast address 01-80-C2-00-00-01 is used to send and receive pause frames. To allow full-duplex flow control, stations implementing the pause operation instruct the MAC to enable the reception of frames with a destination address equal to this multicast address.

The pause:

- Starts when either the packet pointer or the buffer threshold is met (whichever is met first). When the discard threshold is met, packets are dropped.
- Ends when both the packet pointer and the buffer threshold fall below 50% of the threshold settings.

The **discard threshold** defines when the interface starts dropping the packet on the interface. This may be necessary when a connected device does not honor the flow control frame sent by the switch. The discard threshold should be larger than the **buffer threshold** so that the buffer holds at least hold at least three packets.

**On 4–port 10G stack units:** Changes in the flow-control values may not be reflected automatically in the `show interface` output for 10G interfaces. This is because 10G interfaces do not support auto-negotiation.
Important Points to Remember

- Do not enable `tx pause` when buffer carving is enabled. For information and assistance, consult Dell Networking TAC.

- Asymmetric flow control (`rx on tx off` or `rx off tx on`) setting for the interface port less than 100 Mb/s speed is not permitted. The following error is returned:

  Can’t configure Asymmetric flowcontrol when speed <1G, config ignored

- The only configuration applicable to half duplex ports is `rx off tx off`. The following error is returned:

  Cannot configure Asymmetric flowcontrol when speed <1G, config ignored

- You cannot configure half duplex when the flow control configuration is on (default is `rx on tx on`). The following error is returned: Cannot configure half duplex when flowcontrol is on, config ignored

   **NOTE:** The flow control must be off (`rx off tx off`) before configuring the half duplex.

**Example (partial)**

```
Dell(conf-if-tengig-0/1)#show config
!
interface TenGigabitEthernet 0/1
  no ip address
  switchport
  no negotiation auto
  flowcontrol rx off tx on
  no shutdown
  ...
```

**Example (Values)**

This Example shows how the Dell Networking OS negotiates the flow control values between two Dell Networking chassis connected back-to-back using 1G copper ports.

**Configured**

```
LocRxConf LocTxConf RemoteRxConf RemoteTxConf
off    off      off    off
off    on       off    on
on     off      on     off
on     on       on     on
off    on       off    on
off    on       on     on
on     off      off    on
on     off      on     on
on     on       off    on
on     on       on     on
```

```
LocNegRx LocNegTx RemNegRx RemNegTx
```

**Interfaces** 151
show running-config — displays the flow configuration parameters (non-default values only).

show interfaces — displays the negotiated flow control parameters.

**group**

Group two LAGs in a supergroup ("fate-sharing group" or "failover group").

**Syntax**

```
group group_number port-channel number port-channel number
```

To remove an existing LAG supergroup, use the no group `group_number` command.

**Parameters**

- **group_number**
  
Enter an integer from 1 to 32 that will uniquely identify this LAG fate-sharing group.

- **port-channel number**
  
Enter the keyword port-channel followed by an existing LAG number.
  
Enter this keyword/variable combination twice, identifying the two LAGs to be paired.

**Defaults**

none

**Command Modes**

PORT-CHANNEL FAILOVER-GROUP (conf-po-failover-grp)

**Command History**

*Version 8.3.17.0* Supported on the M I/O Aggregator.
Example

Dell(conf)#port-channel failover-group
Dell(conf-po-failover-grp)#group 1 port-channel 1 port-channel 2
Dell(conf-po-failover-grp)#

Related commands

show interfaces port-channel — Displays information on configured Port Channel groups.

interface range

This command permits configuration of a range of interfaces to which subsequent commands are applied (bulk configuration). Using the interface range command, you can enter identical commands for a range of interface.

Syntax

interface range interface, interface,...

To delete a description, enter no description command.

Parameters

interface, interface,...

Enter the keyword interface range and one of the interfaces — slot/port, port-channel or VLAN number. Select the range of interfaces for bulk configuration. You can enter up to six comma separated ranges—spaces are not required between the commas. Comma-separated ranges can include VLANs, port-channels and physical interfaces.

Slot/Port information must contain a space before and after the dash. For example, interface range TenGigabitEthernet 0/1 - 5 is valid; interface range TenGigabitEthernet 0/1-5 is not valid.

- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.
- For a VLAN, enter the keyword vlan followed by a number from 1 to 4094.

Defaults

none

Command Modes

CONFIGURATION

Command History

Version 8.3.17.0 Supported on the M I/O Aggregator.

Usage Information

When creating an interface range, interfaces appear in the order they are entered; they are not sorted. The command verifies that interfaces are present (physical) or configured (logical). Important things to remember:

- Bulk configuration is created if at least one interface is valid.
• Non-existing interfaces are excluded from the bulk configuration with a warning message.

• The interface range prompt includes interface types with slot/port information for valid interfaces. The prompt allows for a maximum of 32 characters. If the bulk configuration exceeds 32 characters, it is represented by an ellipsis (...).

• When the interface range prompt has multiple port ranges, the smaller port range is excluded from the prompt.

• If overlapping port ranges are specified, the port range is extended to the smallest start port and the biggest end port.

Example-Bulk Configuration

Warning Message

Dell(conf)#interface range tengig 2/0 - 1 , tengig 10/0 ,
tengig 3/0
, fa 0/0
% Warning: Non-existing ports (not configured) are ignored by
interface-range

Example-Interface Range prompt with Multiple Ports

Dell(conf)#interface range tengig 2/0 - 23 , tengig 2/1 - 10
Dell(conf-if-range-tengig-2/0-23#

Example-Interface Range prompt Overlapping Port Ranges

Dell(conf)#interface range tengig 2/1 - 11 , tengig 2/1 - 23
Dell(conf-if-range-tengig-2/1-23#

Only VLAN and port-channel interfaces created using the `interface vlan` and `vlan tagged` commands can be used in the `interface range` command.

Use the `show running-config` command to display the VLAN and port-channel interfaces. VLAN or port-channel interfaces that are not displayed in the `show running-config` command cannot be used with the bulk configuration feature of the `interface range` command. You cannot create virtual interfaces (VLAN, Port-channel) using the interface range command.

**NOTE:** If a range has VLAN, physical, and port-channel interfaces, only commands related to physical interfaces can be bulk configured. To configure commands specific to VLAN or port-channel, only those respective interfaces should be configured in a particular range.

Example-Single Range Bulk Configuration

Dell(conf)# interface range tengigabitethernet 5/1 - 23
Dell(conf-if-range)# no shutdown
Dell(conf-if-range)#

Example-Multiple Range Bulk Configuration

The following example shows how to use commas to add different interface types to the range enabling all TenGigabit Ethernet interfaces in the range 5/1 to 5/23 and both Ten Gigabit Ethernet interfaces 1/1 and 1/2.

Dell(conf-if)# interface range tengigabitethernet 5/1 - 23,
tengigabitethernet 1/1 - 2
Dell(conf-if-range)# no shutdown
Dell(conf-if-range)#
The following example shows how to use commas to add VLAN and port-channel interfaces to the range.

Dell(conf-if)# interface range tengigabitethernet 5/1 - 23, tengigabitethernet 1/1 – 2, Vlan 2 – 100 , Port 1 – 25
Dell(conf-if-range)# no shutdown
Dell(conf-if-range)#

Related commands
show config (from INTERFACE RANGE mode) — Shows the bulk configuration interfaces.
show interfaces status — Displays a summary of interface information.
interface range macro (define) — Defines a macro for an interface-range.

interface range macro (define)

Defines a macro for an interface range and then saves the macro in the running configuration.

Syntax
define interface range macroname interface, interface,...

Parameters
name
Enter up to 16 characters for the macro name.

interface, interface,

Enter the interface keyword range and one of the interfaces — slot/port, port-channel or VLAN number. Select the range of interfaces for bulk configuration. You can enter up to six comma separated ranges—spaces are not required between the commas. Comma-separated ranges can include VLANs, port-channels and physical interfaces.

Slot/Port information must contain a space before and after the dash. For example, interface range tengigabitethernet 0/1 - 5 is valid; interface range tengigabitethernet 0/1-5 is not valid.

- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.
- For a VLAN, enter the keyword vlan followed by a number from 1 to 4094.

Defaults
none

Command Modes
CONFIGURATION

Command History
Version 8.3.17.0 Supported on the M I/O Aggregator.
The following example shows how to define an interface range macro named test.
To display the macro definition, execute the `show running-config` command.

Example:

```bash
Dell(conf)# define interface-range test tengigabitethernet 0/0 - 3, tengigabitethernet 5/0 - 47, tengigabitethernet 13/0 - 89
Dell# show running-config | grep define
define interface-range test tengigabitethernet 0/0 - 3, tengigabitethernet 5/0 - 47, tengigabitethernet 13/0 - 89
Dell(conf)# interface range macro test
Dell(conf-if-range-te-0/0-3,te-5/0-47,te-13/0-89)#
```

Related commands:
- `group` — Configures a range of command (bulk configuration)
- `interface range macro name` — Runs an interface range macro.

---

**interface range macro name**

Run the interface-range macro to automatically configure the pre-defined range of interfaces.

**Syntax**

```plaintext
interface range macro name
```

**Parameters**

- `name` Enter the name of an existing macro.

**Defaults**

none

**Command Modes**

CONFIGURATION

**Command History**

Version 8.3.17.0 Supported on the M I/O Aggregator.

**Usage Information**

The following example runs the macro named test that was defined earlier.

Example:

```bash
Dell(conf)# interface range macro test
Dell(conf-if-range-te-0/0-3,te-5/0-47,te-13/0-89)#
```

Related commands:
- `group` — Configures a range of command (bulk configuration)
- `interface range macro (define)` — Defines a macro for an interface range (bulk configuration).
interface vlan

Configure the default VLAN to enable Static or DCHP IP configuration

**Syntax**

```
interface vlan
```

**Parameters**

- `def-vlan-id`  
  Parameter to configure the default VLAN ID.

**Defaults**

- `Not configured`

**Command Modes**

- `CONFIGURATION`

**Command History**

- **Version 8.3.17.0**  
  Supported on the M I/O Aggregator.

**Usage Information**

For more information about VLANs and the commands to configure them, refer to Virtual LAN (VLAN) Commands.

**Example**

```
Dell(conf)#int vlan 1
Dell(conf-if-vl-1)#
```

**Related commands**

- `show vlan` — Displays the current VLAN configuration on the switch.
- `vlan tagged` — Adds a Layer 2 interface to a VLAN as a tagged interface.
- `vlan untagged` — Adds a Layer 2 interface to a VLAN as an untagged interface.

intf-type cr4 autoneg

Set the interface type as CR4 with auto-negotiation enabled.

**Syntax**

```
intf-type cr4 autoneg
```

**Defaults**

- `Not configured`

**Command Modes**

- `CONFIGURATION`

**Command History**

- **Version 9.0.2.0**  
  Introduced on the S6000.
- **Version 8.3.19.0**  
  Introduced on the S4820T.
- **Version 8.3.16.1**  
  Introduced on the MXL 10/40GbE Switch IO Module.
Usage Information

If you configure interface type as CR4 with auto-negotiation enabled, also configure CR4 with auto-negotiation. Many DAC cable link issues are resolved by setting the interface type as CR4.

keepalive

Keep the interface alive when it is not transmitting data.

Syntax

keepalive

Parameters

def-vlan-id

Enter 1 for the default VLAN.

Defaults

Enabled

Command Modes

INTERFACE

Command History

Version 8.3.17.0

Supported on the M I/O Aggregator.

Usage Information

When you configure keepalive, the system keeps the link up even if the link is not active at the time.

monitor interface

Monitor counters on a single interface or all interfaces on a stack unit. The screen is refreshed every five seconds and the CLI prompt disappears.

Syntax

monitor interface [interface]

To disable monitoring and return to the CLI prompt, press the q key.

Parameters

interface

(OPTIONAL) Enter the following keywords and slot/port or number information:

- For the management port, enter the keyword managementethernet followed by the slot (0 or 1) and the port (0).
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.
- For a Port Channel interface, enter the keyword port-channel followed by a number. The range is from 1 to 4094.
**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

**Version 8.3.17.0**

Supported on M I/O Aggregator.

**Usage Information**

The delta column displays changes since the last screen refresh.

The following are the `monitor` command menu options.

<table>
<thead>
<tr>
<th>Key</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>systest-3</td>
<td>Displays the host name assigned to the system.</td>
</tr>
<tr>
<td>monitor time</td>
<td>Displays the amount of time since the <code>monitor interface</code> command was entered.</td>
</tr>
<tr>
<td>time</td>
<td>Displays the amount of time the chassis is up (since last reboot).</td>
</tr>
<tr>
<td>m</td>
<td>Change the view from a single interface to all interfaces on the stack unit or visa-versa.</td>
</tr>
<tr>
<td>c</td>
<td>Refresh the view.</td>
</tr>
<tr>
<td>b</td>
<td>Change the counters displayed from Packets on the interface to Bytes.</td>
</tr>
<tr>
<td>r</td>
<td>Change the [delta] column from change in the number of packets/bytes in the last interval to rate per second.</td>
</tr>
<tr>
<td>l</td>
<td>Change the view to the next interface on the stack unit, or if in the stack unit mode, the next stack unit in the chassis.</td>
</tr>
<tr>
<td>a</td>
<td>Change the view to the previous interface on the stack unit, or if in line stack unit mode, the previous stack unit in the chassis.</td>
</tr>
<tr>
<td>T</td>
<td>Increase the screen refresh rate.</td>
</tr>
<tr>
<td>t</td>
<td>Decrease the screen refresh rate.</td>
</tr>
<tr>
<td>q</td>
<td>Return to the CLI prompt.</td>
</tr>
</tbody>
</table>

**Example (Single Interface)**

```
systest-3 Monitor time: 00:00:06 Refresh Intvl.: 2s Time: 03:26:26

</tbody>
</table>

Assign a name to the Default VLAN.

**Syntax**

```
name vlan-name
```
To remove the name from the VLAN, use the `no name` command.

**Parameters**

```
vlan-name
```
Enter up to 32 characters as the name of the VLAN.

**Defaults**

Not configured.

**Command Modes**

INTERFACE VLAN

**Command History**

Version 8.3.17.0 Supported on the M I/O Aggregator.

**Usage Information**

This CLI applies only to the Default VLAN.

To display information about a named VLAN, enter the `show vlan` command with the name parameter or the `show interfaces description` command.

**Related commands**

- `default vlan-id`—Assigns a descriptive text string to the interface.
- `interface vlan`—Configures a VLAN.
- `show vlan`—Displays the current VLAN configurations on the switch.

---

**negotiation auto**

Enable auto-negotiation on an interface.

**Syntax**

```
negotiation auto
```

To disable auto-negotiation, enter `no negotiation auto` command.

**Defaults**

Enabled.

**Command Modes**

INTERFACE

**Command History**

Version 8.3.17.0 Supported on the M I/O Aggregator

**Usage Information**

The `no negotiation auto` command is only available if you first manually set the speed of a port to 10Mbits or 100Mbits.

The `negotiation auto` command provides a mode option for configuring an individual port to forced-master/forced slave once auto-negotiation is enabled.

If the mode option is not used, the default setting is slave. If you do not configure forced-master or forced slave on a port, the port negotiates to either a master or a slave state. Port status is one of the following:

- Forced-master
• Force-slave
• Master
• Slave
• Auto-neg Error—typically indicates that both ends of the node are configured with forced-master or forced-slave

⚠️ CAUTION: Ensure that one end of your node is configured as forced-master and one is configured as forced-slave. If both are configured the same (that is forced-master or forced-slave), the show interfaces command will flap between an auto-neg-error and forced-master/slave states.

You can display master/slave settings with the `show interfaces` command.

**Example**

(Master/Slave)

```
Dell(conf)# interface tengig 0/0
Dell(conf-if)#neg auto
Dell(conf-if-autoneg)# ?
```

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>end</td>
<td>Exit from configuration mode</td>
</tr>
<tr>
<td>exit</td>
<td>Exit from autoneg configuration mode</td>
</tr>
<tr>
<td>mode</td>
<td>Specify autoneg mode</td>
</tr>
<tr>
<td>no</td>
<td>Negate a command or set its defaults</td>
</tr>
<tr>
<td>show</td>
<td>Show autoneg configuration information</td>
</tr>
</tbody>
</table>

```
Dell(conf-if-autoneg)#mode ?
forced-master Force port to master mode
forced-slave Force port to slave mode
Dell(conf-if-autoneg)#
```

**Example**

(Configured)

```
Dell#show interfaces configured
TenGigabitEthernet 13/18 is up, line protocol is up
Hardware is Dell Eth, address is 00:01:e8:05:f7:fc
   Current address is 00:01:e8:05:f7:fc
Interface index is 474791997
Internet address is 1.1.1.1/24
   MTU 1554 bytes, IP MTU 1500 bytes
LineSpeed 1000 Mbit, Mode full duplex, Master
ARP type: ARPA, ARP Timeout 04:00:00
Last clearing of "show interfaces" counters 00:12:42
Queueing strategy: fifo
Input Statistics:
... 
```

**User Information**

Both sides of the link must have auto-negotiation enabled or disabled for the link to come up.

The following details the possible speed and auto-negotiation combinations for a line between two 10/100/1000 Base-T Ethernet interfaces.

**Port 0**

- auto-negotiation enabled* speed 1000 or auto
- auto-negotiation enabled speed 100
- auto-negotiation disabled speed 100
- auto-negotiation disabled speed 100
flowcontrol

Control how the system responds to and generates 802.3x pause frames on 10G and 40Gig stack units.

Syntax

```
flowcontrol rx {off | on} tx {off | on} [negotiate]
```

Parameters

- **rx on**
  - Enter the keywords `rx on` to process the received flow control frames on this port. This is the default value for the receive side.

- **rx off**
  - Enter the keywords `rx off` to ignore the received flow control frames on this port.

- **tx on**
  - Enter the keywords `tx on` to send control frames from this port to the connected device when a higher rate of traffic is received. This is the default value on the send side.

- **tx off**
  - Enter the keywords `tx off` so that flow control frames are not sent from this port to the connected device when a higher rate of traffic is received.

- **negotiate**
  - (Optional) Enter the keyword `negotiate` to enable the pause-negotiation with the egress port of the peer device. If the `negotiate` command is not used, pause-negotiation is disabled. 40 gigabit Ethernet interfaces do not support pause-negotiation.

Related Commands

- `speed (for 1000/10000 interfaces)` — sets the link speed to 1000, 10000, or auto-negotiate the speed.
Usage Information

The globally assigned 48-bit Multicast address 01-80-C2-00-00-01 is used to send and receive pause frames. To allow full-duplex flow control, stations implementing the pause operation instruct the MAC to enable the reception of frames with a destination address equal to this multicast address.

The pause:

- Starts when either the packet pointer or the buffer threshold is met (whichever is met first). When the discard threshold is met, packets are dropped.
- Ends when both the packet pointer and the buffer threshold fall below 50% of the threshold settings.

The discard threshold defines when the interface starts dropping the packet on the interface. This may be necessary when a connected device does not honor the flow control frame sent by the switch. The discard threshold should be larger than the buffer threshold so that the buffer holds at least hold at least three packets.

On 4–port 10G stack units: Changes in the flow-control values may not be reflected automatically in the show interface output for 10G interfaces. This is because 10G interfaces do not support auto-negotiation.

Important Points to Remember

- Do not enable tx pause when buffer carving is enabled. For information and assistance, consult Dell Networking TAC.
- Asymmetric flow control (rx on tx off, or rx off tx on) setting for the interface port less than 100 Mb/s speed is not permitted. The following error is returned:
  Cannot configure Asymmetric flowcontrol when speed <1G, config ignored
- The only configuration applicable to half duplex ports is rx off tx off. The following error is returned:
  Cannot configure Asymmetric flowcontrol when speed <1G, config ignored
- You cannot configure half duplex when the flow control configuration is on (default is rx on tx on). The following error is returned: Cannot configure half duplex when flowcontrol is on, config ignored
NOTE: The flow control must be off (rx off tx off) before configuring the half duplex.

Example (partial)

Dell(conf-if-tengig-0/1)#show config
!
interface TenGigabitEthernet 0/1
no ip address
switchport
no negotiation auto
flowcontrol rx off tx on
no shutdown
...

Example (Values)

This Example shows how the Dell Networking OS negotiates the flow control values between two Dell Networking chassis connected back-to-back using 1G copper ports.

Interfaces 165
Related Commands

- **show running-config** — displays the flow configuration parameters (non-default values only).
- **show interfaces** — displays the negotiated flow control parameters.

### source (port monitoring for 40-Gigabit Ethernet)

Configure a port monitor source and destination. Starting with Dell Networking OS Release 9.3(0.0), you can also configure a 40-Gigabit Ethernet interface as the destination interface or port to which the monitored traffic is sent.

**Syntax**

```
source interface destination interface direction {rx | tx | both}
```

To disable a monitor source, use the `no source interface destination interface direction {rx | tx | both}` command.

**Parameters**

- **interface**
  - Enter the one of the following keywords and slot/port information:
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
    - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

- **destination**
  - Enter the keyword `destination` to indicate the interface destination.

- **direction (rx | tx | both)**
  - Enter the keyword `direction` then one of the packet directional indicators:
    - `rx`: to monitor receiving packets only.
    - `tx`: to monitor transmitting packets only.
    - `both`: to monitor both transmitting and receiving packets.

**Defaults**

- `none`

**Command Modes**

- `MONITOR SESSION (conf-mon-sess-session-ID)`

**Command History**

- **Version 9.3(0.0)**
  - Added support for the `fortyGigE` keyword on M I/O Aggregator

- **Version 8.3.17.0**
  - Supported on M I/O Aggregator

**Example**

```
Dell(conf-mon-sess-1)# source tengigabitethernet 0/1
destination tengigabitethernet 0/45 direction rx
```
show config (INTERFACE mode)

Displays the interface configuration.

**Syntax**

```
show config
```

**Command Modes**

INTERFACE

**Command History**

Version 8.3.17.0  Supported on the M I/O Aggregator.

**Example**

```
Dell(conf-if)#show conf
!
interface TenGigabitEthernet 1/7
 no ip address
 switchport
 no shutdown
Dell(conf-if)#
```

show config (from INTERFACE RANGE mode)

Display the bulk configured interfaces (group).

**Syntax**

```
show config
```

**Command Modes**

CONFIGURATION INTERFACE (conf-if-range)

**Command History**

Version 8.3.17.0  Supported on the M I/O Aggregator.

**Example**

```
Dell(conf)#interface range tengigabitethernet 1/1 - 2
Dell(conf-if-range-tengig-1/1-2)#show config
!
interface TenGigabitEthernet 1/1
 no ip address
 switchport
 no shutdown
!
interface TenGigabitEthernet 1/2
 no ip address
 switchport
```
show config (from INTERFACE VLAN mode)

Displays the current configuration of the Default VLAN.

Syntax
show config

Command Modes
INTERFACE VLAN

Command History
Version 8.3.17.0  Supported on the M I/O Aggregator.

Example
Dell(conf-if-vl-1)#show config
!
interface Vlan 1
description a
no ip address
mtu 2500
shutdown
Dell(conf-if-vl-1)#

show config (from PROTOCOL LLDP mode)

Displays the LLDP configuration.

Syntax
show config

Command Modes
PROTOCOL LLDP

Example
Dell(conf-lldp)#show conf
!
protocol lldp
Dell(conf-lldp)#

show interfaces

Displays information on a specific physical interface or virtual interface.

Syntax
show interfaces interface

Parameters
interface Enter one of the following keywords and slot/port or number information:
• For the management interface on the stack-unit, enter the keyword `managementethernet` followed by slot/port information. The slot and port range is 0.

• For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

• For a VLAN interface, enter the keyword `vlan` followed by a number from 1 to 4094.

• For a Port Channel interface, enter the keyword `port-channel` followed by a number. The range is from 1 to 128.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

- **Version 9.6.0.0**
  
  Added support for Auto-LAG on the M I/O Aggregator.

- **Version 8.3.17.0**
  
  Supported on the M I/O Aggregator

**Usage Information**

Use this `show interfaces` command for details on a specific interface. Use the `show interfaces stack-unit` command for details on all interfaces on the designated stack unit.

On the M I/O Aggregator, the show interface output displays incorrect rate information details over time for link monitoring when the rate-interval is configured for 5 seconds. Dell Networking recommends using higher rate-intervals such as 15 to 299 seconds to minimize the errors seen.

- **NOTE**: In the CLI output, the power value will be rounded to a 3-digit value. For receive/transmit power that is less than 0.000, an snmp query will return the corresponding dbm value even though the CLI displays as 0.000.

- **NOTE**: After the counters are cleared, the line-rate continues to increase until it reaches the maximum line rate. When the maximum line rate is reached, there will be no change in the line-rate.

**User Information**

The following describes the `show interfaces` command shown in the 10G example below.

<table>
<thead>
<tr>
<th>Line</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>TenGigabitEthernet 2/0...</td>
<td>Displays the interface’s type, slot/port, and administrative and line protocol status.</td>
</tr>
<tr>
<td>Hardware is...</td>
<td>Displays the interface’s hardware information and its assigned MAC address.</td>
</tr>
<tr>
<td>Interface index...</td>
<td>Displays the interface index number used by SNMP to identify the interface.</td>
</tr>
<tr>
<td>Line</td>
<td>Description</td>
</tr>
<tr>
<td>--------------------------</td>
<td>-------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Internet address...</td>
<td>States whether an IP address is assigned to the interface. If an IP address is assigned, that address is displayed.</td>
</tr>
<tr>
<td>MTU 1554...</td>
<td>Displays link and IP MTU information. If the chassis is in Jumbo mode, this number can range from 576 to 12000.</td>
</tr>
<tr>
<td>LineSpeed</td>
<td>Displays the interface's line speed.</td>
</tr>
<tr>
<td>ARP type:...</td>
<td>Displays the ARP type and the ARP timeout value for the interface.</td>
</tr>
<tr>
<td>Last clearing...</td>
<td>Displays the time when the <code>show interfaces counters</code> where cleared.</td>
</tr>
<tr>
<td>Queuing strategy...</td>
<td>States the packet queuing strategy. FIFO means first in first out.</td>
</tr>
</tbody>
</table>

**Input Statistics:** Displays all the input statistics including:

- Number of packets and bytes into the interface
- Number of packets with IP headers and VLAN tagged headers.

**NOTE:** The sum of the number of packets may not be as expected since a VLAN tagged IP packet counts as both a VLAN packet and an IP packet.

- Packet size and the number of those packets inbound to the interface
- Number of symbol errors, runts, giants, and throttles packets:
  - symbol errors = number packets containing bad data. That is, the port MAC detected a physical coding error in the packet.
  - runts = number of packets that are less than 64B
  - giants = packets that are greater than the MTU size
  - throttles = packets containing PAUSE frames
- Number of CRC, IP Checksum, overrun, and discarded packets:
  - CRC = packets with CRC/FCS errors
  - IP Checksum = packets with IP Checksum errors
  - overrun = number of packets discarded due to FIFO overrun conditions
  - discarded = the sum of runts, giants, CRC, IP Checksum, and overrun packets discarded without any processing

**Output Statistics:** Displays output statistics sent out of the interface including:

- Number of packets, bytes, and underruns out of the interface
  - packets = total number of packets
Line | Description
--- | ---
- bytes = total number of bytes  
- underruns = number of packets with FIFO underrun conditions

- Number of Multicast, Broadcast, and Unicast packets:
  - Multicasts = number of MAC multicast packets
  - Broadcasts = number of MAC broadcast packets
  - Unicasts = number of MAC unicast packets

- Number of throttles and discards packets:
  - throttles = packets containing PAUSE frames
  - discarded = number of packets discarded without any processing

Rate information... Estimate of the input and output traffic rate over a designated interval (30 to 299 seconds). Traffic rate is displayed in bits, packets per second, and percent of line rate.

Time since... Elapsed time since the last interface status change (hh:mm:ss format).

Usage Information

The interface counter “over 1023-byte pkts” does not increment for packets in the range 9216 > x <1023.

The Management port is enabled by default (no shutdown). If necessary, use the `ip address` command to assign an IP address to the Management port.

Example 10G Port

Dell-IOA-A1(conf-if-te-0/1)#do show int te 0/1
TenGigabitEthernet 0/1 is up, line protocol is down(error-disabled[UFD])
Hardware is DellEth, address is f8:b1:56:07:1d:8e
  Current address is f8:b1:56:07:1d:8e
Server Port AdminState is Up
Pluggable media not present
Interface index is 15274753
Internet address is not set
Mode of IPv4 Address Assignment : NONE
DHCP Client-ID :f8b156071d8e
MTU 12000 bytes, IP MTU 11982 bytes
LineSpeed auto
Auto-lag is disabled
Flowcontrol rx on tx off
ARP type: ARPA, ARP Timeout 04:00:00
Last clearing of "show interface" counters 00:12:53
Queueing strategy: fifo
Input Statistics:
  0 packets, 0 bytes
  0 64-byte pkts, 0 over 64-byte pkts, 0 over 127-byte pkts
  0 over 255-byte pkts, 0 over 511-byte pkts, 0 over 1023-byte pkts
  0 Multicasts, 0 Broadcasts
  0 runts, 0 giants, 0 throttles
  0 CRC, 0 overrun, 0 discarded
Output Statistics:
0 packets, 0 bytes, 0 underruns
0 64-byte pkts, 0 over 64-byte pkts, 0 over 127-byte pkts
0 over 255-byte pkts, 0 over 511-byte pkts, 0 over 1023-byte pkts
0 Multicasts, 0 Broadcasts, 0 Unicasts
0 throttles, 0 discarded, 0 collisions, 0 wreddrops
Rate info (interval 299 seconds):
 Input 00.00 Mbits/sec, 0 packets/sec, 0.00% of line-rate
 Output 00.00 Mbits/sec, 0 packets/sec, 0.00% of line-rate
Time since last interface status change: 00:11:36

Example
(ManagementEthernet)
Dell#show interface managementethernet ?
0/0 Management Ethernet interface number
Dell#show interface managementethernet 0/0
ManagementEthernet 0/0 is up, line protocol is up
Hardware is DellForce10Eth, address is 00:1e:c9:f1:00:05
Current address is 00:1e:c9:f1:00:05
Pluggable media not present
Interface index is 235159752
Internet address is 10.11.209.87/16
Mode of IP Address Assignment : MANUAL
DHCP Client-ID: mgmt001ec9f10005
Virtual-IP is not set
Virtual-IP IPv6 address is not set
MTU 1554 bytes, IP MTU 1500 bytes
LineSpeed 100 Mbit, Mode full duplex
ARP type: ARPA, ARP Timeout 04:00:00
Last clearing of "show interface" counters 5d4h57m
Queueing strategy: fifo
Input 3448753 packets, 950008323 bytes, 3442163 multicast
Received 0 errors, 0 discarded
Output 4627 packets, 814226 bytes, 0 multicast
Output 0 errors, 0 invalid protocol

Related Commands
show interfaces configured — Displays any interface with a non-default configuration.
show interfaces port-channel — Displays information on all interfaces on a specific stack unit.
show interfaces switchport — Displays Layer 2 information about the interfaces.
show inventory — Displays the M I/O Aggregator type, components (including media), Dell Networking OS version including hardware identification numbers and configured protocols.
show ip interface — Displays Layer 3 information about the interfaces.
show memory — Displays the stack unit(s) status.
show interfaces status — Displays all interfaces configured using the interface range command.
show interfaces configured

Displays any interface with a non-default configuration.

**Syntax**

show interfaces configured

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 8.3.17.0 Supported on the M I/O Aggregator

**Example**

Dell#show interfaces configured
TenGigabitEthernet 1/1 is up, line protocol is down(error-disabled[UFD])
Hardware is Dellforce10Eth, address is 00:01:e8:00:ab:01
Current address is 00:01:e8:00:ab:01

0 throttles, 0 discarded, 0 collisions, 0 wreddrops
Rate info (interval 299 seconds):
Input 00.00 Mbits/sec, 0 packets/sec, 0.00% of line-rate
Output 00.00 Mbits/sec, 0 packets/sec, 0.00% of line-rate
Time since last interface status change: 05:14:12
TenGigabitEthernet 1/2 is up, line protocol is down(error-disabled[UFD])
Dell#
show interfaces description

Display the descriptions configured on the interface.

Syntax

show interfaces [interface] description

Parameters

interface

Enter one of the following keywords and slot/port or number information:

- For the management interface on the stack unit enter the keyword ManagementEthernet followed by the slot/port information. The slot range is 0-0 and the port range is 0.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.
- For VLAN interfaces, enter the keyword vlan followed by a number from 1 to 4094.

Command Modes

- EXEC
- EXEC Privilege

Command History

Version 8.3.17.0 Supported on the M I/O Aggregator

Usage Information

The following describes the show interfaces description command shown in the Example below.

Field Description

Interface Displays the type of interface and associated slot and port number.

OK? Indicates if the hardware is functioning properly.

Status States whether the interface is enabled (up) or disabled (administratively down).

Protocol States whether IP is enabled (up) or disabled (down) on the interface.

Description Displays the description (if any) manually configured for the interface.

Example

Dell#show interface description

<table>
<thead>
<tr>
<th>Interface</th>
<th>OK</th>
<th>Status</th>
<th>Protocol</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>TenGigabitEthernet 0/1</td>

<td>up</td>
<td></td>
</tr>
<tr>
<td>TenGigabitEthernet 0/9</td>
<td>NO</td>
<td>admin down</td>
<td>down</td>
<td></td>
</tr>
</tbody>
</table>
show interfaces port-channel

Display information on configured Port Channel groups.

Syntax

show interfaces port-channel [channel-number] [brief|description]

Parameters

- **channel-number**: For a Port Channel interface, enter the keyword `port-channel` followed by a number. The range is from 1 to 128.
- **brief**: (OPTIONAL) Enter the keyword `brief` to display only the port channel number, the state of the port channel, and the number of interfaces in the port channel.
- **description**: (OPTIONAL) Enter the keyword `description` to display interface information with description.

Command Modes

- EXEC
- EXEC Privilege

Command History

Version 8.3.17.0  Supported on the M I/O Aggregator.

Usage Information

The following describes the `show interfaces port-channel` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Port-Channel</td>
<td>Displays the LAG's status. In the Example, the status of the LAG's LAG fate-sharing group (&quot;Failover-group&quot;) is listed.</td>
</tr>
<tr>
<td>Hardware is...</td>
<td>Displays the interface's hardware information and its assigned MAC address.</td>
</tr>
<tr>
<td>Port-channel is part...</td>
<td>Indicates whether the LAG is part of a LAG fate-sharing group (&quot;Failover-group&quot;).</td>
</tr>
<tr>
<td>Internet address...</td>
<td>States whether an IP address is assigned to the interface. If an IP address is assigned, that address is displayed.</td>
</tr>
</tbody>
</table>
**Field** | **Description**
---|---
MTU 1554... | Displays link and IP MTU.
LineSpeed | Displays the interface's line speed. For a port channel interface, it is the line speed of the interfaces in the port channel.
Members in this... | Displays the interfaces belonging to this port channel.
ARP type:.. | Displays the ARP type and the ARP timeout value for the interface.
Last clearing... | Displays the time when the `show interfaces counters` were cleared.
Queueing strategy. | States the packet queuing strategy. FIFO means first in first out.
packets input... | Displays the number of packets and bytes into the interface.
Input 0 IP packets... | Displays the number of packets with IP headers, VLAN tagged headers, and MPLS headers. The number of packets may not add correctly because a VLAN tagged IP packet counts as both a VLAN packet and an IP packet.
0 64-byte... | Displays the size of packets and the number of those packets entering that interface. This information is displayed over two lines.
Received 0... | Displays the type and number of errors or other specific packets received. This information is displayed over three lines.
Output 0... | Displays the type and number of packets sent out the interface. This information is displayed over three lines.
Rate information... | Displays the traffic rate information into and out of the interface. Traffic rate is displayed in bits and packets per second.
Time since... | Displays the time since the last change in the configuration of this interface.

**Example**

Dell#show interfaces port-channel
Port-channel 1 is down, line protocol is down
Hardware address is 00:1e:c9:f1:00:05, Current address is 00:1e:c9:f1:00:05
Interface index is 1107755009
Minimum number of links to bring Port-channel up is 1
Internet address is not set
Mode of IP Address Assignment : NONE
DHCP Client-ID :lag1001ec9f10005
MTU 12000 bytes, IP MTU 1500 bytes
LineSpeed auto
Members in this channel:
ARP type: ARPA, ARP Timeout 04:00:00
Last clearing "show interface" counters 03:28:00
Queueing strategy: fifo
Input Statistics:
0 packets, 0 bytes
0 64-byte pkts, 0 over 64-byte pkts, 0 over 127-byte pkts
0 over 255-byte pkts, 0 over 511-byte pkts, 0 over 1023-byte pkts
0 Multicasts, 0 Broadcasts
0 runts, 0 giants, 0 throttles
0 CRC, 0 overrun, 0 discarded
Output Statistics:
0 packets, 0 bytes, 0 underruns
0 64-byte pkts, 0 over 64-byte pkts, 0 over 127-byte pkts
0 over 255-byte pkts, 0 over 511-byte pkts, 0 over 1023-byte pkts
0 Multicasts, 0 Broadcasts, 0 Unicasts
0 throttles, 0 discarded, 0 collisions

User Information

The following describes the `show interfaces port-channel brief` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>LAG</td>
<td>Lists the port channel number.</td>
</tr>
<tr>
<td>Mode</td>
<td>Lists the mode:</td>
</tr>
<tr>
<td></td>
<td>• L3 — for Layer 3</td>
</tr>
<tr>
<td></td>
<td>• L2 — for Layer 2</td>
</tr>
<tr>
<td>Status</td>
<td>Displays the status of the port channel.</td>
</tr>
<tr>
<td></td>
<td>• down — if the port channel is disabled (shutdown)</td>
</tr>
<tr>
<td></td>
<td>• up — if the port channel is enabled (no shutdown)</td>
</tr>
<tr>
<td>Uptime</td>
<td>Displays the age of the port channel in hours:minutes:seconds.</td>
</tr>
<tr>
<td>Ports</td>
<td>Lists the interfaces assigned to this port channel.</td>
</tr>
<tr>
<td>(untitled)</td>
<td>Displays the status of the physical interfaces (up or down).</td>
</tr>
<tr>
<td></td>
<td>• In Layer 2 port channels, an * (asterisk) indicates which interface is the primary port of the port channel. The primary port sends out interface PDU.</td>
</tr>
<tr>
<td></td>
<td>• In Layer 3 port channels, the primary port is not indicated.</td>
</tr>
</tbody>
</table>

Example

```
Dell#show int po 1 brief
Codes: L - LACP Port-channel
LAG Mode Status Uptime Ports
1 L2 down 00:00:00 Te 0/16 (Down)
Dell#
```

Related Commands

- `show lacp` — displays the LACP matrix.
show interfaces stack-unit

Display information on all interfaces on a specific M I/O Aggregator stack member.

Syntax

```
show interfaces stack-unit unit-number
```

Parameters

- **unit-number**
  
Enter the stack member number (0 to 5).

Command Modes

- EXEC
- EXEC Privilege

Command History

- **Version 8.3.17.0**
  
  Supported on the M I/O Aggregator.

Example

```
Dell#show interfaces stack-unit 0
TenGigabitEthernet 0/1 is down, line protocol is down
Hardware is DellForce10Eth, address is 00:1e:c9:f1:00:05
Current address is 00:1e:c9:f1:00:05
Server Port AdminState is Down
Pluggable media not present
Interface index is 34148609
Internet address is not set
Mode of IP Address Assignment : NONE
DHCP Client-ID :tenGl30001ec9f10005
MTU 1554 bytes, IP MTU 1500 bytes
LineSpeed auto
Flowcontrol rx off tx off
ARP type: ARPA, ARP Timeout 04:00:00
Last clearing of "show interface" counters 04:00:00
Queueing strategy: fifo
Input Statistics:
0 packets, 0 bytes
0 64-byte pkts, 0 over 64-byte pkts, 0 over 127-byte pkts
0 over 255-byte pkts, 0 over 511-byte pkts, 0 over 1023-byte pkts
0 Multicasts, 0 Broadcasts
0 runts, 0 giants, 0 throttles
0 CRC, 0 overrun, 0 discarded
Output Statistics:
0 packets, 0 bytes
0 64-byte pkts, 0 over 64-byte pkts, 0 over 127-byte pkts
0 over 255-byte pkts, 0 over 511-byte pkts, 0 over 1023-byte pkts
0 Multicasts, 0 Broadcasts
0 Multicasts, 0 Broadcasts
0 unicast, 0 packets, 0 underruns
0 CRC, 0 overrun, 0 discarded
Rate info (interval 299 seconds):
Input 00.00 Mbits/sec, 0 packets/sec, 0.00% of line-rate
Output 00.00 Mbits/sec, 0 packets/sec, 0.00% of line-rate
Time since last interface status change: 04:00:00

!-------------output truncated ----------------!
```

Related Commands

- **show diag** — Displays data plane and management plane input/output statistics.

178 Interfaces
show interfaces status

Displays a summary of interface information or specify a stack unit and interface to display status information for that specific interface only.

Syntax  
show interfaces [interface | stack-unit unit-number] status

Parameters

- **interface**  
  (OPTIONAL) Enter one of the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.

- **linecard slot-number**  
  (OPTIONAL) Enter the keyword linecard then the slot number.

Defaults  
none

Command Modes  
- EXEC
- EXEC Privilege

Command History  
Version 8.3.17.0  
Supported on the M I/O Aggregator

Example

```
Dell#show interface status
Port    Description    Status   Speed   Duplex   Vlan
Te 0/1                  Down     Auto    Auto    --
Te 0/2                  Down     Auto    Auto    --
Te 0/3                  Down     Auto    Auto    --
Te 0/4                  Down     Auto    Auto    --
Te 0/5                  Down     Auto    Auto    --

Te 0/16                 Up  10000 Mbit Full    --
```

show interfaces switchport

Display only virtual and physical interfaces in Layer 2 mode. This command displays the Layer 2 mode interfaces' IEEE 802.1Q tag status and VLAN membership.

Syntax  
show interfaces switchport [interface | stack-unit unit-id ]

Interfaces
Parameters

- **interface**: (OPTIONAL) Enter one of the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` followed by the slot/port information.
  - Enter the keyword `backup` to view the backup interface for this interface.

- **stack-unit unit-id**: (OPTIONAL) Enter the keywords `stack-unit` followed by the stack member number. The range is from 0 to 5.

Command Modes

- EXEC
- EXEC Privilege

Command History

- **Version 8.3.17.0**: Supported on the M I/O Aggregator.

Usage Information

The following describes the `show interfaces switchport` command for the following example.

<table>
<thead>
<tr>
<th>Items</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Name</td>
<td>Displays the interface's type, slot, and port number.</td>
</tr>
<tr>
<td>802.1QTagged</td>
<td>Displays whether if the VLAN tagged (&quot;True&quot;), untagged (&quot;False&quot;), or hybrid (&quot;Hybrid&quot;), which supports both untagged and tagged VLANs by port 13/0.</td>
</tr>
<tr>
<td>Vlan membership</td>
<td>Lists the VLANs to which the interface is a member. Starting with Dell Networking OS version 7.6.1, this field can display native VLAN membership by port 13/0.</td>
</tr>
</tbody>
</table>

Example

```
Dell#show interfaces switchport
Codes: U - Untagged, T - Tagged
x - Dot1x untagged, X - Dot1x tagged
G - GVRP tagged, M - Trunk, H - VSN tagged
i - Internal untagged, I - Internal tagged, v - VLT untagged,
V - VLT tagged
Name: TenGigabitEthernet 1/1
802.1QTagged: Hybrid
IO-AGG port mode: Auto VLANs enabled
Vlan membership:
  Q Vlans
  U 1
  T 2-4094
Native VlanId: 1.
Name: TenGigabitEthernet 1/2
802.1QTagged: Hybrid
IO-AGG port mode: Auto VLANs enabled
Vlan membership:
  Q Vlans
  U 1
  T 2-4094
```
Native VlanId: 1.

Related Commands

**show ip interface** — displays Layer 3 information about the interfaces.

---

**show range**

Display all interfaces configured using the **group** command.

**Syntax**

```
show range
```

**Command Modes**

```
INTERFACE RANGE (config-if-range)
```

**Command History**

```
Version 8.3.17.0  Supported on the M I/O Aggregator
```

**Example**

```
Dell(conf-if-range-te-0/16)#show range
interface tengigabitethernet 0/16
Dell(conf-if-range-te-0/16)#
```

**Related Commands**

**show ip interface** — displays Layer 3 information about the interfaces.

---

**show tdr**

Displays the TDR test results.

**Syntax**

```
show tdr interface
```

**Parameters**

```
interface  Enter the keyword TenGigabitEthernet followed by the slot/port information for the 100/1000/10 GbaseT Ethernet interface.
```

**Defaults**

```
none
```

**Command Modes**

```
EXEC
```

**Command History**

```
Version 8.3.17.0  Supported on the M I/O Aggregator.
```

**Usage Information**

If the TDR test has not been run, an error message is generated:

```
%Error: Please run the TDR test first
```

The following describes the TDR test status.

---
<table>
<thead>
<tr>
<th>Status</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>OK Status:</strong></td>
<td>TDR test is complete, no fault is detected on the cable, and the test is terminated.</td>
</tr>
<tr>
<td>Terminated</td>
<td></td>
</tr>
<tr>
<td><strong>Length:</strong></td>
<td>A short is detected on the cable. The location, in this Example is 92 meters. The short is accurate to plus or minus one meter.</td>
</tr>
<tr>
<td>92 (+/- 1) meters, Status: Shorted</td>
<td></td>
</tr>
<tr>
<td><strong>Length:</strong></td>
<td>An opening is detected on the cable. The location, in this Example is 93 meters. The open is accurate to plus or minus one meter.</td>
</tr>
<tr>
<td>93 (+/- 1) meters, Status: Open</td>
<td></td>
</tr>
<tr>
<td><strong>Status:</strong></td>
<td>There is an impedance mismatch in the cables.</td>
</tr>
<tr>
<td>Impedance Mismatch</td>
<td></td>
</tr>
</tbody>
</table>

**Example**

Dell#show tdr tengigabitethernet 1/1
Time since last test: 00:00:02
Pair A, Length: OK Status: Terminated
Pair B, Length: 92 (+/- 1) meters, Status: Short
Pair C, Length: 93 (+/- 1) meters, Status: Open
Pair D, Length: 0 (+/- 1) meters, Status: Impedance Mismatch

**Related Commands**

- `vlan tagged` — Runs the TDR test.

**show vlan**

Displays the current VLAN configurations on the switch.

**Syntax**

`show vlan [brief | id vlan-id | name vlan-name]`

**Parameters**

- **brief** (OPTIONAL) Enter the keyword `brief` to display the following information:
  - VLAN ID
  - VLAN name (left blank if none is configured.)
  - Spanning Tree Group ID
  - MAC address aging time
  - IP address

- **id vlan-id** (OPTIONAL) Enter the keyword `id` followed by a number from 1 to 4094. Only information on the VLAN specified is displayed

- **name vlan-name** (OPTIONAL) Enter the keyword `name` followed by the name configured for the VLAN. Only information on the VLAN named is displayed.
### Command Modes
- EXEC
- EXEC Privilege

### Command History
**Version 8.3.17.0**
Supported on the M I/O Aggregator.

### Usage Information
The following describes the `show vlan` command information given in the following example:

<table>
<thead>
<tr>
<th>Column Heading</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NUM</td>
<td>Displays existing VLAN IDs.</td>
</tr>
<tr>
<td>Status</td>
<td>Displays the word Inactive for inactive VLANs and the word Active for active VLANs.</td>
</tr>
<tr>
<td>Q</td>
<td>Displays G for GVRP tagged, M for member of a VLAN-Stack VLAN, T for tagged interface, U (for untagged interface), x (uncapitalized x) for Dot1x untagged, or X (capitalized X) for Dot1x tagged.</td>
</tr>
<tr>
<td>Ports</td>
<td>Displays the type, slot, and port information. For the type, Po = port channel, Fo= fortygigabit ethernet, and Te = ten gigabit ethernet.</td>
</tr>
</tbody>
</table>

#### Example
Dell# show vlan id 40
Codes: * - Default VLAN, G - GVRP VLANs, R - Remote Port Mirroring VLANs, P - Primary, C - Community, I - Isolated
Q: U - Untagged, T - Tagged
x - Dot1x untagged, X - Dot1x tagged
G - GVRP tagged, M - Vlan-stack, H - VSN tagged
i - Internal untagged, I - Internal tagged, v - VLT untagged, V - VLT tagged
NUM Status Description Q Ports
1 Inactive a

#### Example (Brief)
Dell# show vlan brief
VLAN Name | STG MAC Aging | IP Address
--- | --- | ---
unassigned | 0 | 0
unassigned | 0 | 0
unassigned | 0 | 0
unassigned | 0 | 0
Example (Using a VLAN Name)

```plaintext
Dell(conf)#interface vlan 222
Dell(conf-if-vl-222)#name test
Dell(conf-if-vl-222)#do show vlan name test
Codes: * - Default VLAN, G - GVRP VLANs
Q: U - Untagged, T - Tagged
x - Dot1x untagged, X - Dot1x tagged
G - GVRP tagged, M - Vlan-stack
NUM Status Description Q Ports
222 Inactive U TenGig 1/22
Dell(conf-if-vl-222)#
Dell#
```

Related Commands

- `interface vlan` — Configures a VLAN.

### shutdown

Disable an interface.

**Syntax**

```plaintext
shutdown
```

To activate an interface, use the `no shutdown` command.

**Defaults**

The interface is disabled.

**Command Modes**

INTERFACE

**Command History**

Version 8.3.17.0 Supported on the M I/O Aggregator.

**Usage Information**

The `show tdr` command marks a physical interface as unavailable for traffic. To discover if an interface is disabled, use the `show ip interface` command. Disabled interfaces are listed as down.

Disabling a VLAN or a port channel causes different behavior. When a VLAN is disabled, the Layer 3 functions within that VLAN are disabled. Layer 2 traffic continues to flow. Entering the `show tdr` command on a port channel disables all traffic on the port channel and the individual interfaces within the port channel. To enable a port channel, you must enter `no show tdr` on the port channel interface and at least one interface within that port channel.

The `show tdr` and `description` commands are the only commands that you can configure on an interface that is a member of a port channel.

**Related Commands**

- `vlan tagged` — Test the condition of copper cables on 100/1000/10G Base-T modules.
- `interface vlan` — Creates a VLAN.
**show ip interface** — Displays the interface routing status. Add the keyword **brief** to display a table of interfaces and their status.

---

**speed (for 1000/10000 interfaces)**

Set the speed for 1000/10000 Base-T Ethernet interfaces. Both sides of a link must be set to the same speed (1000/10000) or to auto or the link may not come up.

**Syntax**

```
speed {1000 | 10000 | auto}
```

To return to the default setting, use the `no speed {1000 | 10000 | auto}` command.

**Parameters**

- **1000**
  
Enter the keyword `1000` to set the interface’s speed to 1000 Mb/s.

- **10000**
  
Enter the keyword `10000` to set the interface’s speed to 10000 Mb/s. Auto-negotiation is enabled. For more information, refer to `name`

- **auto**
  
Enter the keyword `auto` to set the interface to auto-negotiate its speed. Auto-negotiation is enabled. For more information, refer to `name`.

**Defaults**

`auto`

**Command Modes**

`INTERFACE`

**Command History**

`Version 8.3.17.0` Supported on the M I/O Aggregator.

**Usage Information**

This command is found on the 1000/10000 Base-T Ethernet interfaces.

When you enable `auto`, the system performs and automatic discovery to determine the optics installed and configure the appropriate speed.

When you configure a speed for the 1000/10000 interface, confirm the `negotiation auto` command setting. Both sides of the link must should have auto-negotiation either enabled or disabled. For speed settings of 1000 or auto, the software sets the link to auto-negotiation and you cannot change that setting.

**Related Commands**

- `negotiation auto` — Enables or disables auto-negotiation on an interface.
**tdr-cable-test**

Test the condition of copper cables on 100/1000/10GBase-T modules.

**Syntax**

```
tdr-cable-test interface
```

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>interface</code></td>
<td>Enter the keyword TenGigabitEthernet followed by the slot/port information for the 100/1000/10GBase-T Ethernet interface.</td>
</tr>
</tbody>
</table>

**Defaults**

`none`

**Command Modes**

`EXEC`

**Command History**

Version 8.3.17.0 Supported on the M I/O Aggregator.

**Usage Information**

The interface must be enabled to run the test or an error message is generated:

```
Dell#tdr-cable-test tengigabitethernet 5/2
%Error: Interface is disabled TenGIG 5/2
```

**Related Commands**

- `show tdr` — Displays the results of the TDR test.

---

**vlan tagged (CMC)**

Add a Layer 2 interface to a VLAN as a tagged interface.

**Syntax**

```
tagged interface
```

To remove a tagged interface from a VLAN, use the `no tagged interface` command.

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>interface</code></td>
<td>Enter the following keywords and slot/port or number information:</td>
</tr>
<tr>
<td>-</td>
<td>For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.</td>
</tr>
</tbody>
</table>

**Defaults**

All interfaces in Layer 2 mode are untagged.

**Command Modes**

`INTERFACE`
Command History

Version 8.3.17.0  Supported on the M I/O Aggregator.

Usage Information

When you use the `no tagged` command, the interface is automatically placed in the default VLAN as an untagged interface unless the interface is a member of another VLAN. If the interface belongs to several VLANs, you must remove it from all VLANs to change it to an untagged interface.

Tagged interfaces can belong to multiple VLANs, while untagged interfaces can only belong to one VLAN at a time.

When two or more ports configured for VLANs form a LAG, the resulting LAG is a tagged member of all the configured VLANs and an untagged member of the VLAN to which the port with the lowest port ID belongs.

For example, if port 0/1-32 is an untagged member of VLAN 2 and port 0/41 is an untagged member of VLAN 3, the resulting LAG consisting of the two ports is an untagged member of VLAN 2 and a tagged member of VLAN3.

Example

```
Dell(conf-if-te-0/2)#vlan tagged ?
VLAN-RANGE  Comma/Hyphen separated VLAN ID set
Dell(conf-if-te-0/2)#vlan tagged 2,3-4
Dell(conf-if-te-0/2)#show config
!
interface TenGigabitEthernet 0/2
  mtu 12000
  vlan tagged 2-4
  !
  port-channel-protocol LACP
  port-channel 1 mode active
  !
  protocol lldp
  advertise management-tlv system-name
dcbx port-role auto-downstream
  no shutdown
Dell(conf-if-te-0/2)#
```

Related Commands

- `interface vlan` — Configures a VLAN.
- `vlan untagged` — Specifies which interfaces in a VLAN are untagged.

**vlan untagged (CMC)**

Add a Layer 2 interface to a VLAN as an untagged interface.

**Syntax**

`untagged interface`

To remove a untagged interface from a VLAN, use the `no untagged interface` command.
Parameters

**interface**
Enter the following keywords and slot/port or number information:

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` followed by the slot/port information.

Defaults

All interfaces in Layer 2 mode are untagged.

Command Modes

INTERFACE VLAN

Command History

Version 8.3.17.0 Supported on the M I/O Aggregator.

Usage Information

Untagged interfaces can only belong to one VLAN.

In the default VLAN, you cannot use the `no untagged interface` command. To remove an untagged interface from all VLANs, including the default VLAN, enter INTERFACE mode and use the `no vlan tagged` command.

Tagged interfaces can belong to multiple VLANs, while untagged interfaces can only belong to one VLAN at a time.

When two or more ports configured for VLANs form a LAG, the resulting LAG is a tagged member of all the configured VLANs and an untagged member of the VLAN to which the port with the lowest port ID belongs.

For example, if port 0/33 is an untagged member of VLAN 2 and port 0/41 is an untagged member of VLAN 3, the resulting LAG consisting of the two ports is an untagged member of VLAN 2 and a tagged member of VLANs 2 and 3.

Example

```
Dell(conf-if-te-0/2)#vlan untagged ?
<1-4094> Untagged VLAN id
Dell(conf-if-te-0/2)#
Dell(conf-if-te-0/2)#vlan untagged 4094
Dell(conf-if-te-0/2)#show config
!
interface TenGigabitEthernet 0/2
mtu 12000
vlan untagged 4094
!
port-channel-protocol LACP
port-channel 1 mode active
!
protocol lldp
advertise management-tlv system-name
dcbx port-role auto-downstream
no shutdown
Dell(conf-if-te-0/2)#
```

Related Commands

- `interface vlan` — Configures a VLAN.
**vlan tagged** — Specifies which interfaces in a VLAN are tagged.
IPv4 Routing

IP Commands
This chapter describes the IPv4-related commands. They are:

- clear tcp statistics
- debug ip dhcp
- debug ip icmp
- ip route
- management route
- show arp
- show ip management-route
- show ip multicast-cam stack-unit
- show ip interface
- show ip route
- show ip management-route

clear tcp statistics
Clear the TCP counters.

**Syntax**
clear tcp statistics

**Command Modes**
EXEC Privilege

**Command History**
Version 8.3.17.0  Supported on the M I/O Aggregator.

debug ip dhcp
Enable debug information for dynamic host configuration protocol (DHCP) relay transactions and display the information on the console.

**Syntax**
debug ip dhcp

To disable debug, use the no debug ip dhcp command.
debug ip icmp

View information on the internal control message protocol (ICMP).

Syntax

debug ip icmp [interface] [count value]

To disable debugging, use the no debug ip icmp command.
Parameters

**interface**  (OPTIONAL) Enter the following keywords and slot/port or number information:

- For the Management interface, enter the keyword ManagementEthernet followed by the slot/port information. The slot range is 0 and the port range is 0.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.
- For a VLAN, enter the keyword vlan followed by a number from 1 to 4094.

**count value**  (OPTIONAL) Enter the keyword count followed by the count value. The range is from 1 to 65534. The default is Infinity.

Command Modes

EXEC Privilege

Command History

Version 8.3.17.0  Supported on the M I/O Aggregator.

Example

ICMP: echo request rcvd from src 40.40.40.40
ICMP: src 40.40.40.40, dst 40.40.40.40, echo reply
ICMP: src 40.40.40.40, dst 40.40.40.40, echo reply
ICMP: echo request sent to dst 40.40.40.40
ICMP: echo request rcvd from src 40.40.40.40
ICMP: src 40.40.40.40, dst 40.40.40.40, echo reply
ICMP: src 40.40.40.40, dst 40.40.40.40, echo reply
ICMP: echo request sent to dst 40.40.40.40

Usage Information

Use the count option to stop packets from flooding the user terminal when debugging is turned on.

**ip route**

Assign a static route to the switch.

**Syntax**

```
ip route destination mask (ip-address | interface [ip-address]) [distance] [permanent][tag tag-value]
```

To delete a specific static route, use the no ip route destination mask

```
address | interface [ip-address]] command.
```

To delete all routes matching a certain route, use the no ip route

destination mask command.

**Parameters**

**destination**  Enter the IP address in dotted decimal format of the destination device.
**mask**
Enter the mask in the slash prefix format (/x) of the destination device’s IP address.

**ip-address**
Enter the IP address in dotted decimal format of the forwarding router.

**interface**
Enter the following keywords and slot/port or number information:

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` followed by the slot/port information.
- For a VLAN, enter the keyword `vlan` followed by a number from 1 to 4094.

**distance**
(Optional) Enter a number as the distance metric assigned to the route. The range is from 1 to 255.

**permanent**
(Optional) Enter the keyword `permanent` to specify the route is not removed, even if the interface assigned to that route goes down. The route must be up initially to install it in the routing table.

If you disable the interface with an IP address associated with the keyword `permanent`, the route disappears from the routing table.

**tag tag-value**
(Optional) Enter the keyword `tag` followed by a number to assign to the route. The range is from 1 to 4294967295.

---

**Defaults**
Not configured.

**Command Modes**
CONFIGURATION

**Command History**
Version 8.3.17.0 Supported on the M I/O Aggregator.

**Usage Information**
Using the following example of a static route: `ip route 33.33.33.0 /24 tengigabitethernet 0/0 172.31.5.43`

- The software installs a next hop that is not on the directly connected subnet but which recursively resolves to a next hop on the interface’s configured subnet. In the example, if gig 0/0 has an ip address on subnet 2.2.2.0 and if 172.31.5.43 recursively resolves to 2.2.2.0, Dell Networking OS installs the static route.
- When the interface goes down, Dell Networking OS withdraws the route.
- When the interface comes up, Dell Networking OS re-installs the route.
- When recursive resolution is “broken,” Dell Networking OS withdraws the route.
- When recursive resolution is satisfied, Dell Networking OS re-installs the route.

**Related Commands**
`show ip route` — views the switch routing table.
management route

Configure a static route that points to the Management interface or a forwarding router.

Syntax

```
management route {ipv4-address}/mask{forwarding-router-address |
managementethernet}
```

Parameters

- `(ipv4-address)/mask` Enter an IPv4 address (A.B.C.D) followed by the prefix-length for the IP address of the management interface.
- `forwarding-router-address` Enter an IPv4 address of a forwarding router.
- `managementethernet` Enter the keyword managementethernet for the Management interface.

Defaults

Not configured.

Command Modes

CONFIGURATION

Command History

Version 8.3.17.0 Supported on the M I/O Aggregator.

Usage Information

When a static route (or a protocol route) overlaps with Management static route, the static route (or a protocol route) is preferred over the Management Static route. Also, Management static routes and the Management Connected prefix are not reflected in the hardware routing tables. Separate routing tables are maintained for IPv4 management routes. This command manages both tables.

show arp

Displays the ARP table.

Syntax

```
show arp [interface interface | ip ip-address [mask] | macaddress mac-address [mac-address mask]] [static | dynamic] [summary]
```

Parameters

- `interface` (OPTIONAL) Enter the following keywords and slot/port or number information:
  - For the Management interface, enter the keyword managementethernet followed by the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.
  - For a VLAN, enter the keyword vlan followed by a number from 1 to 4094.

IPv4 Routing
ip ip-address mask  
(Optionalal) Enter the keyword ip followed by an IP address in the dotted decimal format. Enter the optional IP address mask in the slash prefix format (/ x).

macaddress mac-address mask  

static  
(Optionalal) Enter the keyword static to view entries entered manually.

retries  
(Optionalal) Enter the keyword retries to view the number of ARP retries before a 20–second back off.

dynamic  
(Optionalal) Enter the keyword dynamic to view dynamic entries.

summary  
(Optionalal) Enter the keyword summary to view a summary of ARP entries.

inspection  
(Optionalal) Enter the keyword inspection to view dynamic ARP Inspection details.

Command Modes

EXEC Privilege

Command History

Version 8.3.17.0  
Supported on the M I/O Aggregator.

Usage Information

The following describes the show arp command shown in the following example.

Row Heading  Description

Protocol  Displays the protocol type.

Address  Displays the IP address of the ARP entry.

Age(min)  Displays the age (in minutes) of the ARP entry.

Hardware Address  Displays the MAC address associated with the ARP entry.

Interface  Displays the first two letters of the interfaces type and the slot/port associated with the ARP entry.

VLAN  Displays the VLAN ID, if any, associated with the ARP entry.

CPU  Lists which CPU the entries are stored on.

Example

Dell#show arp

<table>
<thead>
<tr>
<th>Protocol</th>
<th>Address</th>
<th>Age(min)</th>
<th>Hardware Address</th>
</tr>
</thead>
<tbody>
<tr>
<td>Interface</td>
<td>VLAN</td>
<td>CPU</td>
<td>------------------</td>
</tr>
<tr>
<td>Internet 10.11.8.6</td>
<td>167</td>
<td>00:01:e9:45:00:03</td>
<td>Ma 0/0</td>
</tr>
<tr>
<td>Internet 10.11.68.14</td>
<td>124</td>
<td>00:01:e9:45:00:03</td>
<td>Ma 0/0</td>
</tr>
</tbody>
</table>

IPv4 Routing
Example (Private VLAN)

NOTE: In this example, Line 1 shows community VLAN 200 (in primary VLAN 10) in a PVLAN. Line 2 shows primary VLAN 10.

Dell#show arp

<table>
<thead>
<tr>
<th>Protocol Address</th>
<th>Age(min)</th>
<th>Hardware Address</th>
</tr>
</thead>
<tbody>
<tr>
<td>Internet 10.11.209.254</td>
<td>0</td>
<td>00:01:e9:45:00:03 Ma</td>
</tr>
<tr>
<td>0/0</td>
<td>-</td>
<td>CP</td>
</tr>
</tbody>
</table>

Usage Information

The following describes the show arp summary command shown in the following example.

<table>
<thead>
<tr>
<th>Row Heading</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Total Entries</td>
<td>Lists the total number of ARP entries in the ARP table.</td>
</tr>
<tr>
<td>Static Entries</td>
<td>Lists the total number of configured or static ARP entries.</td>
</tr>
<tr>
<td>Dynamic Entries</td>
<td>Lists the total number of learned or dynamic ARP entries.</td>
</tr>
<tr>
<td>CPU</td>
<td>Lists which CPU the entries are stored on.</td>
</tr>
</tbody>
</table>

Example (Summary)

Dell#show arp summary

| TotalEntries Static Entries Dynamic Entries CPU |
|-----------------|----------------|----------------|----------|
| 3 | 0 | 3 | CP |

show ip interface

View IP-related information on all interfaces.

Syntax

show ip interface [interface | brief] [configuration]

Parameters

<table>
<thead>
<tr>
<th>interface</th>
<th>(OPTIONAL) Enter the following keywords and slot/port or number information:</th>
</tr>
</thead>
</table>
• For the Management interface, enter the keyword ManagementEthernet followed by zero (0).
• For a Port Channel interface, enter the keywords port-channel followed by a number. The range is from 1 to 128.
• For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.
• For a VLAN, enter the keyword vlan followed by a number from 1 to 4094.

brief (OPTIONAL) Enter the keyword brief to view a brief summary of the interfaces and whether an IP address is assigned.
configuration (OPTIONAL) Enter the keyword configuration to display the physical interfaces with non-default configurations only.

Command Modes
• EXEC
• EXEC Privilege

Command History
Version 8.3.17.0 Supported on the M I/O Aggregator.

Usage Information
The following describes the show ip interface command shown in the following example.

<table>
<thead>
<tr>
<th>Lines</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>TenGigabitEthernet 0/0...</td>
<td>Displays the interface's type, slot/port and physical and line protocol</td>
</tr>
<tr>
<td>Internet address...</td>
<td>States whether an IP address is assigned to the interface. If one is, that address is displayed.</td>
</tr>
<tr>
<td>IP MTU is...</td>
<td>Displays IP MTU value.</td>
</tr>
<tr>
<td>Inbound access...</td>
<td>Displays the name of the any configured incoming access list. If none is configured, the phrase &quot;not set&quot; is displayed.</td>
</tr>
<tr>
<td>Proxy ARP...</td>
<td>States whether proxy ARP is enabled on the interface.</td>
</tr>
<tr>
<td>Split horizon...</td>
<td>States whether split horizon for RIP is enabled on the interface.</td>
</tr>
<tr>
<td>Poison Reverse...</td>
<td>States whether poison for RIP is enabled on the interface.</td>
</tr>
<tr>
<td>ICMP redirects...</td>
<td>States if ICMP redirects are sent.</td>
</tr>
<tr>
<td>ICMP unreachable...</td>
<td>States if ICMP unreachable messages are sent.</td>
</tr>
</tbody>
</table>

Example
Dell#show ip int te 0/0
TenGigabitEthernet 0/0 is down, line protocol is down
Internet address is not set
IP MTU is 1500 bytes
Inbound access list is not set
Proxy ARP is enabled
Split Horizon is enabled
Poison Reverse is disabled
ICMP redirects are not sent
ICMP unreachables are not sent
Dell#

Usage
Information

The following describes the `show ip interface brief` command shown in the following example.

**Fields** | **Description**
--- | ---
**Interface** | Displays type of interface and the associated slot and port number.
**IP-Address** | Displays the IP address for the interface, if configured.
**Ok?** | Indicates if the hardware is functioning properly.
**Method** | Displays “Manual” if the configuration is read from the saved configuration.
**Status** | States whether the interface is enabled (up) or disabled (administratively down).
**Protocol** | States whether IP is enabled (up) or disabled (down) on the interface.

**Example (Brief)**

```plaintext
Dell#show ip int brief
Interface       IP-Address  OK? Method Status Protocol
TenGigabitEthernet 0/1 unassigned NO None   up     down
TenGigabitEthernet 0/2 unassigned YES None   up      up
TenGigabitEthernet 0/3 unassigned YES None   up      up
TenGigabitEthernet 0/4 unassigned NO None   up      down
TenGigabitEthernet 0/5 unassigned NO None   up     down
TenGigabitEthernet 0/6 unassigned NO None   up     down
TenGigabitEthernet 0/7 unassigned NO None   up     down
TenGigabitEthernet 0/8 unassigned NO None   up     down
TenGigabitEthernet 0/9 unassigned NO None   up     down
```

**show ip management-route**

View the IP addresses assigned to the Management interface.

**Syntax**

```
show ip management-route [all | connected | summary | static]
```

**Parameters**

- **all** (OPTIONAL) Enter the keyword `all` to view all IP addresses assigned to all Management interfaces on the switch.
- **connected** (OPTIONAL) Enter the keyword `connected` to view only routes directly connected to the Management interface.
- **summary** (OPTIONAL) Enter the keyword `summary` to view a table listing the number of active and non-active routes and their sources.
static (OPTIONAL) Enter the keyword `static` to view non-active routes also.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 8.3.17.0 Supported on M I/O Aggregator.

**Example**

```
Dell#show ip management-route
Destination    Gateway                 State
-----------    -------                 -----    
10.1.2.0/24    ManagementEthernet 0/0  Connected
172.16.1.0/24   10.1.2.4               Active
Dell#```

**show ip multicast-cam stack-unit**

Displays content-addressable memory (CAM) entries.

**Syntax**

```
show ip multicast-cam stack-unit {0-5} [port-set pipe-number [ip-address mask [longer-prefixes] | detail | member-info | summary]}
```

**Parameters**

- **0-5** Enter the stack-unit ID, from 0 to 5.
- **pipe-number** Enter the number of the Port-Pipe number. The range is from 0 to 0.
- **ip-address mask** (OPTIONAL) Enter the IP address and mask of a route to CAM entries for that route only.
- **longer-prefixes** Enter the keyword `longer-prefixes` to view routes with a common prefix.
- **detail** Enter the keyword `detail` to display the group index ID used by the ecmp routes int he CAM.
- **member-info** Enter the keyword `member-info` to display the group index used by the ecmp, the number of egress ports (members) for the ecmp, and the port details of each member. The detail information under `member-info` will give the MAC address, VLAN ID and gateway of every member port of the ecmp.
- **summary** (OPTIONAL) Enter the keyword `summary` to view a table listing route prefixes and the total number routes which can be entered in to CAM.
Command Modes

- EXEC
- EXEC Privilege

Command History

Version 8.3.17.0 Supported on the M I/O Aggregator.

Usage Information

The following describes the show ip fib stack-unit command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Destination</td>
<td>Displays the destination route of the index.</td>
</tr>
<tr>
<td>CG</td>
<td>Displays 0.</td>
</tr>
<tr>
<td>V</td>
<td>Displays a 1 if the entry is valid and a 0 otherwise.</td>
</tr>
<tr>
<td>C</td>
<td>Displays the CPU bit. 1 indicates that a packet hitting this entry is forwarded to the control processor, depending on Egress port.</td>
</tr>
<tr>
<td>V Id</td>
<td>Displays the VLAN ID. If the entry is 0, the entry is not part of a VLAN.</td>
</tr>
<tr>
<td>Mac Addr</td>
<td>Displays the next-hop router’s MAC address.</td>
</tr>
<tr>
<td>Port</td>
<td>Displays the egress interface. Use the second half of the entry to determine the interface. For example, in the entry 17cl CP, the CP is the pertinent portion.</td>
</tr>
<tr>
<td></td>
<td>• CP = control processor</td>
</tr>
<tr>
<td></td>
<td>• Fo= 40 Gigabit Ethernet interface</td>
</tr>
<tr>
<td></td>
<td>• Te = 10 Gigabit Ethernet interface</td>
</tr>
</tbody>
</table>

Example

```
Dell#show ip multicast-cam stack-unit 0 port-set 0
longer-prefixes
Destination    EC    CG    V    C  VId   Mac-Addr        Port
----------------- -- -- - - ----- ------------------
-------------
10.10.10.10          0     0   1   1 0 00:00:00:00:00:00
3f01 CP
Dell#
```

**show ip route**

View information, including how they were learned, about the IP routes on the switch.

Syntax

```
show ip route [hostname | ip-address [mask] [longer-prefixes] | list prefix-list [process-id] | connected | static | summary]
```
Parameters

- **ip-address** (OPTIONAL) Specify a name of a device or the IP address of the device to view more detailed information about the route.
- **mask** (OPTIONAL) Specify the network mask of the route. Use this parameter with the IP address parameter.
- **longer-prefixes** (OPTIONAL) Enter the keywords `longer-prefixes` to view all routes with a common prefix.
- **list prefix-list** (OPTIONAL) Enter the keyword `list` and the name of a configured prefix list.
- **process-id** (OPTIONAL) Specify that only OSPF routes with a certain process ID must be displayed.
- **connected** (OPTIONAL) Enter the keyword `connected` to view only the directly connected routes.
- **static** (OPTIONAL) Enter the keyword `static` to view only routes configured by the `ip route` command.
- **summary** (OPTIONAL) Enter the keyword `summary`.

Command Modes

- EXEC
- EXEC Privilege

Command History

Version 8.3.17.0 Supported on the M I/O Aggregator.

Usage Information

The following describes the `show ip route all` command in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>(undefined)</td>
<td>Identifies the type of route:</td>
</tr>
<tr>
<td></td>
<td>• C = connected</td>
</tr>
<tr>
<td></td>
<td>• S = static</td>
</tr>
<tr>
<td></td>
<td>• R = RIP</td>
</tr>
<tr>
<td></td>
<td>• B = BGP</td>
</tr>
<tr>
<td></td>
<td>• IN = internal BGP</td>
</tr>
<tr>
<td></td>
<td>• EX = external BGP</td>
</tr>
<tr>
<td></td>
<td>• LO = Locally Originated</td>
</tr>
<tr>
<td></td>
<td>• O = OSPF</td>
</tr>
<tr>
<td></td>
<td>• IA = OSPF inter area</td>
</tr>
<tr>
<td></td>
<td>• N1 = OSPF NSSA external type 1</td>
</tr>
<tr>
<td></td>
<td>• N2 = OSPF NSSA external type 2</td>
</tr>
<tr>
<td></td>
<td>• E1 = OSPF external type 1</td>
</tr>
<tr>
<td></td>
<td>• E2 = OSPF external type 2</td>
</tr>
<tr>
<td></td>
<td>• i = IS-IS</td>
</tr>
</tbody>
</table>
### Field Description
- L1 = IS-IS level-1
- L2 = IS-IS level-2
- IA = IS-IS inter-area
- * = candidate default
- > = non-active route
- + = summary routes

#### Destination
Identifies the route’s destination IP address.

#### Gateway
Identifies whether the route is directly connected and on which interface the route is configured.

#### Dist/Metric
Identifies if the route has a specified distance or metric.

#### Last Change
Identifies when the route was last changed or configured.

---

**Example**

```
Dell#show ip route summary
Route Source Active Routes Non-active Routes
connected 2 0
static 1 0
Total 3 0
Total 3 active route(s) using 612 bytes
Dell#show ip route static ?
| Pipe through a command
<cr>
Dell#show ip route static
  Destination Gateway Dist/Metric Last Change
  ----------- ------- ----------- --------
  *S 0.0.0.0/0 via 10.10.91.9, Te 1/2 1/0 3d2h
Dell#
```

---

**show tcp statistics**

View information on TCP traffic through the switch.

**Syntax**

```
show tcp statistics
```

**Command Modes**

EXEC Privilege

**Command History**

Version 8.3.17.0  Supported on the M I/O Aggregator.

**Usage Information**

The following describes the `show tcp statistics` command shown in the following example.
<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Rcvd:</strong></td>
<td>Displays the number and types of TCP packets received by the switch.</td>
</tr>
<tr>
<td></td>
<td>• Total = total packets received</td>
</tr>
<tr>
<td></td>
<td>• no port = number of packets received with no designated port</td>
</tr>
<tr>
<td>0 checksum error...</td>
<td>Displays the number of packets received with the following:</td>
</tr>
<tr>
<td></td>
<td>• checksum errors</td>
</tr>
<tr>
<td></td>
<td>• bad offset to data</td>
</tr>
<tr>
<td></td>
<td>• too short</td>
</tr>
<tr>
<td>329 packets...</td>
<td>Displays the number of packets and bytes received in sequence.</td>
</tr>
<tr>
<td>17 dup...</td>
<td>Displays the number of duplicate packets and bytes received.</td>
</tr>
<tr>
<td>0 partially...</td>
<td>Displays the number of partially duplicated packets and bytes received.</td>
</tr>
<tr>
<td>7 out-of-order...</td>
<td>Displays the number of packets and bytes received out of order.</td>
</tr>
<tr>
<td>0 packets with data after window</td>
<td>Displays the number of packets and bytes received that exceed the switch’s window size.</td>
</tr>
<tr>
<td>0 packets after close</td>
<td>Displays the number of packet received after the TCP connection was closed.</td>
</tr>
<tr>
<td>0 window probe packets...</td>
<td>Displays the number of window probe and update packets received.</td>
</tr>
<tr>
<td>41 dup ack...</td>
<td>Displays the number of duplicate acknowledgement packets and acknowledgement packets with data received.</td>
</tr>
<tr>
<td>10184 ack...</td>
<td>Displays the number of acknowledgement packets and bytes received.</td>
</tr>
<tr>
<td><strong>Sent:</strong></td>
<td>Displays the total number of TCP packets sent and the number of urgent packets sent.</td>
</tr>
<tr>
<td>25 control packets...</td>
<td>Displays the number of control packets sent and the number retransmitted.</td>
</tr>
<tr>
<td>11603 data packets...</td>
<td>Displays the number of data packets sent.</td>
</tr>
<tr>
<td>24 data packets retransmitted</td>
<td>Displays the number of data packets resent.</td>
</tr>
<tr>
<td>355 ack...</td>
<td>Displays the number of acknowledgement packets sent and the number of packet delayed.</td>
</tr>
<tr>
<td>Field</td>
<td>Description</td>
</tr>
<tr>
<td>----------------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>0 window probe...</td>
<td>Displays the number of window probe and update packets sent.</td>
</tr>
<tr>
<td>7 Connections initiated...</td>
<td>Displays the number of TCP connections initiated, accepted, and established.</td>
</tr>
<tr>
<td>14 Connections closed...</td>
<td>Displays the number of TCP connections closed, dropped.</td>
</tr>
<tr>
<td>20 Total rxmt...</td>
<td>Displays the number of times the switch tried to re-send data and the number of connections dropped during the TCP retransmit timeout period.</td>
</tr>
<tr>
<td>0 Keepalive...</td>
<td>Lists the number of keepalive packets in timeout, the number keepalive probes and the number of TCP connections dropped during keepalive.</td>
</tr>
</tbody>
</table>

**Example**

Dell#show tcp statistics

Rcvd: 9849 Total, 0 no port
0 checksum error, 0 bad offset, 0 too short
5735 packets (7919 bytes) in sequence
20 dup packets (2 bytes)
0 partially dup packets (0 bytes)
1 out-of-order packets (0 bytes)
0 packets (0 bytes) with data after window
0 packets after close
0 window probe packets, 0 window update packets
0 dup ack packets, 0 ack packets with unsend data
6671 ack packets (152813 bytes)
Sent: 6778 Total, 0 urgent packets
7 control packets
6674 data packets (152822 bytes)
12 data packets (1222 bytes) retransmitted
85 ack only packets (5677 delayed)
0 window probe packets, 0 window update packets
0 Connections initiated, 7 connections accepted, 7 connections established
8 Connections closed (including 4 dropped, 0 embryonic dropped)
12 Total rxmt timeout, 1 connections dropped in rxmt timeout
26 Keepalive timeout, 25 keepalive probe, 0 Connections dropped in keepalive

Dell#
iSCSI Optimization

Internet small computer system interface (iSCSI) optimization enables quality-of-service (QoS) treatment for iSCSI storage traffic on an Aggregator.

**NOTE:** When iSCSI storage devices are detected on the server-ports, storm-control is disabled on those ports. When the iSCSI devices are off the ports, storm-control is enabled again.

The following commands are used to verify the iSCSI Optimization feature:

- `show iscsi`
- `show iscsi sessions`
- `show iscsi sessions detailed`

### show iscsi

Display the currently configured iSCSI settings.

**Syntax**

```
show iscsi
```

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 8.3.17.0 Supported on the M I/O Aggregator.

**Example**

```
Dell#show iscsi
iSCSI is enabled
iSCSI COS : dot1p is 4 no-remark
Session aging time: 10
Maximum number of connections is 256
------------------------------------------------
iSCSI Targets and TCP Ports:
------------------------------------------------
TCP Port Target IP Address
3260
860
Dell#
```

**Related Commands**

- `show iscsi sessions` — displays information on active iSCSI sessions on the switch.
show iscsi session detailed — displays detailed information on active iSCSI sessions on the switch.

show iscsi sessions

Display information on active iSCSI sessions on the switch.

Syntax

```
show iscsi sessions
```

Command Modes

- EXEC
- EXEC Privilege

Command History

Version 8.3.17.0   Supported on the M I/O Aggregator.

Example

```
Dell# show iscsi sessions
Session 0:
Target: iqn.2001-05.com.equallogic:0-8a0906-0e70c2002-10a0018426a48c94-iom010
Initiator: iqn.1991-05.com.microsoft:win-x9l8v27yajg
ISID: 400001370000

Session 1:
Target: iqn.2001-05.com.equallogic:0-8a0906-0f60c2002-0360018428d48c94-iom011
Initiator: iqn.1991-05.com.microsoft:win-x9l8v27yajg
ISID: 400001370000.
```

Related Commands

- `show iscsi` — displays the currently configured iSCSI settings.
- `show iscsi sessions detailed` — displays detailed information on active iSCSI sessions on the switch.

show iscsi sessions detailed

Displays detailed information on active iSCSI sessions on the switch.

Syntax

```
show iscsi sessions detailed [session isid]
```

Parameters

- `isid`  
  Enter the session's iSCSI ID to display detailed information on specified iSCSI session.

Command Modes

- EXEC
- EXEC Privilege
**Example**

Dell# show iscsi sessions detailed
Session 0 :
---------------------------------------------------------------
Up Time:00:00:01:28 (DD:HH:MM:SS)
Time for aging out:00:00:09:34 (DD:HH:MM:SS)
ISID:806978696102
Initiator Initiator Target Target Connection
IP Address TCP Port IP Address TCP Port ID
10.10.0.44 33345 .10.0.101 3260 0

Session 1 :
---------------------------------------------------------------
Up Time:00:00:01:22 (DD:HH:MM:SS)
Time for aging out:00:00:09:31 (DD:HH:MM:SS)
ISID:806978696102
Initiator Initiator Target Target Connection
IP Address TCP Port IP Address TCP Port ID
10.10.0.53 33432 10.10.0.101 3260 0

**Related Commands**

- `show iscsi` — displays the currently configured iSCSI settings.
- `show iscsi sessions` — displays information about active iSCSI sessions on the switch.
Isolated Networks

This chapter describes the isolated networks commands in the Dell Networking OS.

**io-aggregator isolated-network vlan**

Enable the isolated-network functionality for a particular VLAN or a set of VLANs.

**Syntax**

```
[no] io-aggregator isolated-network vlan vlan-range
```

**Parameters**

- **isolated-network**: Specify an isolated network to be configured.
- **vlan vlan-range**: Enter the keyword vlan followed by the member VLANs using VLAN IDs (separated by commas), a range of VLAN IDs (separated by a hyphen), a single VLAN ID, or a combination. For example: VLAN IDs (comma-separated): 3, 4, 6. Range (hyphen-separated): 5-10. Combination: 3, 4, 5-10, 8.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Usage Information**

To add more VLANs into an isolated network, you can enter this same command at any later point. The VLANs specified are appended to the existing set of VLANs. To remove a VLAN or a set of VLANs from an isolated network, use the no form of command.

**Command History**

Version 9.5(0.0) Supported on the M I/O aggregator.

**Example**

```
Dell(conf)#io-aggregator isolated-network vlan 5-10
```

**show io-aggregator isolated-networks**

Display the VLANs that are configured to be part of an isolated network on an Aggregator.

**Syntax**

```
show io-aggregator isolated-networks
```

---

**Isolated Networks**

This chapter describes the isolated networks commands in the Dell Networking OS.

**io-aggregator isolated-network vlan**

Enable the isolated-network functionality for a particular VLAN or a set of VLANs.

**Syntax**

```
[no] io-aggregator isolated-network vlan vlan-range
```

**Parameters**

- **isolated-network**: Specify an isolated network to be configured.
- **vlan vlan-range**: Enter the keyword vlan followed by the member VLANs using VLAN IDs (separated by commas), a range of VLAN IDs (separated by a hyphen), a single VLAN ID, or a combination. For example: VLAN IDs (comma-separated): 3, 4, 6. Range (hyphen-separated): 5-10. Combination: 3, 4, 5-10, 8.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Usage Information**

To add more VLANs into an isolated network, you can enter this same command at any later point. The VLANs specified are appended to the existing set of VLANs. To remove a VLAN or a set of VLANs from an isolated network, use the no form of command.

**Command History**

Version 9.5(0.0) Supported on the M I/O aggregator.

**Example**

```
Dell(conf)#io-aggregator isolated-network vlan 5-10
```

**show io-aggregator isolated-networks**

Display the VLANs that are configured to be part of an isolated network on an Aggregator.

**Syntax**

```
show io-aggregator isolated-networks
```
### Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>isolated-networks</td>
<td>Specify an isolated network to be configured</td>
</tr>
<tr>
<td>vlan vlan-range</td>
<td>Enter the keyword <code>vlan</code> followed by the member VLANs using VLAN IDs (separated by commas), a range of VLAN IDs (separated by a hyphen), a single VLAN ID, or a combination. For example: VLAN IDs (comma-separated): 3, 4, 6. Range (hyphen-separated): 5-10. Combination: 3, 4, 5-10, 8.</td>
</tr>
</tbody>
</table>

### Defaults

None

### Command Modes

EXEC Privilege

### Usage Information

This command is used to show the isolated-network feature status and the VLANs configured for this feature. Show running-config will save this command under io-aggregator.

### Command History

Version 9.5(0.0) Supported on the M I/O aggregator.

### Example

Dell#show io-aggregator isolated-networks
Isolated Network Enabled VLANs : 5-10
Link Aggregation Control Protocol (LACP)

This chapter contains commands for Dell Networking’s implementation of the link aggregation control protocol (LACP) for the creation of dynamic link aggregation groups (LAGs — called port-channels in Dell Networking OS parlance).

auto-lag enable

Enable auto-lag on a server facing port.

Syntax

```
auto-lag enable
```

To disable the auto-lag use the `no auto-lag enable` command.

When disabled, the server port associated in a LAG is removed and the LAG itself gets removed. Any LACPDUs received on the server port are discarded.

Defaults

Enabled

Command Modes

INTERFACE

Command History

Version 9.6 (0.0) Supported on the M I/O Aggregator.

Usage information

This command is supported in Standalone, Stacking, and VLT modes.

clear lacp counters

Clear Port Channel counters.

Syntax

```
clear lacp port-channel-number counters
```

Parameters

- `port-channel-number` Enter a port-channel number:
  - The range is from 1 to 128.
debug lacp

Debug LACP (events).

**Syntax**

debug lacp [events | pdu interface [in | out]]

To disable LACP debugging, use the no debug lacp [events | pdu interface [in | out]] command.

**Parameters**

- `events` (OPTIONAL) Enter the keyword events to debug the LACP event information.
- `pdu in | out` (OPTIONAL) Enter the keyword pdu to debug the LACP Protocol Data Unit information. Optionally, enter an in or out parameter to:
  - Receive enter `in`
  - Transmit enter `out`
- `interface in | out` Enter the following keywords and slot/port or number information:
  - For a Ten-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.
**io-aggregator auto-lag enable**

Enable auto-lag globally on the server facing ports

**Syntax**

```
io-aggregator auto-lag enable
```

To disable the auto-lag, use the `no io-aggregator auto-lag enable` command.

When disabled, all the server ports associated in a LAG are removed and the LAG itself gets removed. Any LACPDUs received on the server ports are discarded.

**Defaults**

Enabled

**Command Modes**

CONFIGURATION

**Command History**

Version 9.6(0.0) Supported on the M I/O Aggregator.

**Related Commands**

`show` — displays global information on the auto-lag status.

**Usage Information**

This command is supported in Standalone, Stacking, and VLT modes.

**show io-aggregator auto-lag status**

Displays global information on the auto-lag status.

**Syntax**

```
show io-aggregator auto-lag status
```

**Command Modes**

EXEC

**Command History**

Version 9.6(0.0) Supported on the M I/O Aggregator.

**Example**

```
Dell-ct-mxi-i-bl(conf)#do show io-aggregator auto-lag status
Auto LAG creation on server port(s) is disabled
```

**show lacp**

Displays the LACP matrix.

**Syntax**

```
show lacp port-channel-number [sys-id | counters]
```
Parameters

- **port-channel-number**: Enter a port-channel number.
  The range is from 1 to 128.

- **sys-id**: (OPTIONAL) Enter the keywords `sys-id` and the value that identifies a system.

- **counters**: (OPTIONAL) Enter the keyword `counters` to display the LACP counters.

Command Modes

- EXEC
- EXEC Privilege

Command History

**Version 8.3.17.0**
Supported on the M I/O Aggregator.

Example (Port-Channel-Number)

```
Dell#show lacp 128
Port-channel 1 admin up, oper up, mode lacp
Actor   System ID:Priority 32768, Address 0001.e800.a12b
Partner System ID:Priority 32768, Address 0001.e801.45a5
    Actor Admin Key 1, Oper Key 1, Partner Oper
    Key 1
    LACP LAG 1 is an aggregatable link
A-Active LACP, B-Passive LACP, C-Short Timeout, D-Long Timeout
E-Aggregatable Link, F-Individual Link, G-IN_SYNC, H-OUT_OF_SYNC
I-Collection enabled, J-Collection disabled, K-Distribution enabled
M-Partner Defaulted, N-Partner Non-defaulted, O-Receiver is in expired state,
F-Receiver is not in expired state
Port Te 0/1 is enabled, LACP is enabled and mode is lacp
    Actor Admin: State ACEHJLMP Key 1    Priority 128
    Oper: State ACEGIKNP Key 1    Priority 128
    Partner Admin: State BDFHJLMP Key 0    Priority 0
    Oper: State BCEGIKNP Key 1    Priority 128
Dell#
```

Example (Sys-id)

```
Dell#show lacp 1 sys-id
Actor    System ID: Priority 32768, Address 0001.e800.a12b
Partner  System ID: Priority 32768, Address 0001.e801.45a5
Dell#
```

Example (Counter)

```
Dell#show lacp 1 counters
----------------------------------------------------
<table>
<thead>
<tr>
<th>Port</th>
<th>LACP PDU Xmit</th>
<th>Marker PDU Xmit</th>
<th>Unknown Pkts Rx</th>
<th>Illegal Pkts Rx</th>
</tr>
</thead>
<tbody>
<tr>
<td>TenGig 0/1</td>
<td>200</td>
<td>200</td>
<td>0</td>
<td>0</td>
</tr>
</tbody>
</table>
Dell#
```
Related Commands

- **clear lACP counters**—Clears the LACP counters.
- **show interfaces port-channel**—Displays the information on configured Port Channel groups.

**show link-bundle-distribution port-channel**

Display the traffic-handling and utilization of the member interfaces of the port channel.

**Syntax**

`show link-bundle-distribution port-channel`

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

- **Version 9.3.0.0**—Introduced on the M I/O Aggregator

**Usage Information**

The following table describes the output fields of this show command:

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Link-bundle trigger threshold</td>
<td>Threshold value that is the checkpoint, exceeding which the link bundle is marked as being overutilized and alarm is generated</td>
</tr>
<tr>
<td>LAG bundle number</td>
<td>Number of the LAG bundle</td>
</tr>
<tr>
<td>Utilization (In Percent)</td>
<td>Traffic usage in percentage of the packets processed by the port channel</td>
</tr>
<tr>
<td>Alarm State</td>
<td>Indicates whether an alarm is generated if overutilization of the port channel occurred. Possible values are Active and Inactive</td>
</tr>
<tr>
<td>Interface</td>
<td>Slot and port number, and the type of the member interface of the port channel</td>
</tr>
<tr>
<td>Line Protocol</td>
<td>Indicates whether the interface is administratively up or down</td>
</tr>
<tr>
<td>Utilization (In Percent)</td>
<td>Traffic usage in percentage of the packets processed by the particular member interface</td>
</tr>
</tbody>
</table>

**Example**

```plaintext
Dell#show link-bundle-distribution port-channel
Link-bundle trigger threshold - 60

LAG bundle - 1   Utilization[In Percent] - 0   Alarm State - Inactive
```
<table>
<thead>
<tr>
<th>Interface</th>
<th>Line Protocol</th>
<th>Utilization [In Percent]</th>
</tr>
</thead>
<tbody>
<tr>
<td>Te 0/5</td>
<td>Up</td>
<td>0</td>
</tr>
<tr>
<td>Te 0/13</td>
<td>Up</td>
<td>0</td>
</tr>
</tbody>
</table>

Link Aggregation Control Protocol (LACP)
Layer 2

This chapter describes commands to configure Layer 2 features. This chapter contains the following sections:

- MAC Addressing Commands
- Virtual LAN (VLAN) Commands

MAC Addressing Commands

The following commands are related to configuring, managing, and viewing MAC addresses:

- clear mac-address-table dynamic
- show cam mac stack-unit

Virtual LAN (VLAN) Commands

The following commands configure and monitor virtual local area networks (VLANs). VLANs are a virtual interface and use many of the same commands as physical interfaces.

You can configure an IP address and Layer 3 protocols on a VLAN called Inter-VLAN routing. FTP, TFTP, ACLs and SNMP are not supported on a VLAN.

For more information, also refer to Virtual LAN (VLAN) Commands.

clear mac-address-table dynamic

Clear the MAC address table of all MAC address learned dynamically.

**Syntax**

```
clear mac-address-table dynamic {address mac-address | all | interface interface | vlan vlan-id}
```

**Parameters**

- **address mac-address**
  Enter the keyword address followed by a MAC address in nn:nn:nn:nn:nn:nn format.

- **all**
  Enter the keyword all to delete all MAC address entries in the MAC address table.
Enter the following keywords and slot/port or number information:

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` followed by the slot/port information.

For a VLAN interface, enter the keyword `Vlan` followed by the VLAN ID number.

### Command Modes

- **EXEC Privilege**

### Command History

- **Version 8.3.17.0** Supported on the M I/O Aggregator.

---

### description

Add a description about the selected VLAN.

#### Syntax

```
description description
```

To remove the description from the VLAN, use the `no description` command.

#### Parameters

- **description**

  Enter a text string description to identify the VLAN (80 characters maximum).

- **Defaults**

  - none

- **Command Modes**

  - INTERFACE VLAN

- **Command History**

  - **Version 8.3.17.0** Supported on the M I/O Aggregator.

- **Related Commands**

  - `show vlan` — displays the VLAN configuration.

---

### show cam mac stack-unit

Display the content addressable memory (CAM) size and the portions allocated for MAC addresses and for MAC ACLs.

#### Syntax

```
show cam mac stack-unit unit_number port-set port-pipe count [vlan vlan-id] [interface interface]
```
Parameters

- **stack-unit**
  (REQUIRED) Enter the keyword `stack-unit` followed by a stack member number to select the stack unit for which to gather information. The range is 0 to 5.

- **unit_number**
  (REQUIRED) Enter the keyword `unit_number` followed by a stack member number to select the stack unit for which to gather information. The range is 0 to 5.

- **port-set port-pipe**
  (REQUIRED) Enter the keywords `port-set` followed by a Port-Pipe number to select the Port-Pipe for which to gather information. The range is 0.

- **address mac-addr**
  (OPTIONAL) Enter the keyword `address` followed by a MAC address in the `nn:nn:nn:nn:nn:nn` format to display information on that MAC address.

- **dynamic**
  (OPTIONAL) Enter the keyword `dynamic` to display only those MAC addresses learned dynamically by the switch.

- **static**
  (OPTIONAL) Enter the keyword `static` to display only those MAC address specifically configured on the switch.

- **interface interface**
  (OPTIONAL) Enter the keyword `interface` followed by the interface type, slot and port information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` followed by the slot/port information.

- **vlan vlan-id**
  (OPTIONAL) Enter the keyword `vlan` followed by the VLAN ID to display the MAC address assigned to the VLAN. The range is from 1 to 4094.

Command Modes

- EXEC
- EXEC Privilege

Command History

- Version 8.3.17.0  Supported on the M I/O Aggregator.
Link Layer Discovery Protocol (LLDP)

The link layer discovery protocol (LLDP) advertises connectivity and management from the local station to the adjacent stations on an IEEE 802 LAN. LLDP facilitates multi-vendor interoperability by using standard management tools to discover and make available a physical topology for network management. The Dell Networking OS implementation of LLDP is based on IEEE standard 801.1ab.

This chapter contains the following commands, in addition to the commands:

- `clear lldp counters`
- `debug lldp interface`
- `protocol lldp (Configuration)`
- `protocol lldp (Interface)`
- `show lldp neighbors`
- `show lldp statistics`

The starting point for using LLDP is invoking LLDP with the `protocol lldp` command in either `CONFIGURATION` or `INTERFACE` mode.

The information LLDP distributes is stored by its recipients in a standard management information base (MIB). You can access the information by a network management system through a management protocol such as simple network management protocol (SNMP).

For details about implementing LLDP/LLDP-MED, refer to the Link Layer Discovery Protocol chapter of the Dell PowerEdge M I/O Aggregator Configuration Guide.

clear lldp counters

Clear LLDP transmitting and receiving counters for all physical interfaces or a specific physical interface.

**Syntax**
```
clear lldp counters interface
```

**Parameters**
- `interface` Enter the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `tenGigabitEthernet` followed by the slot/port information.

**Defaults**
- none
debug lldp interface

Enable LLDP debugging to display timer events, neighbor additions or deletions, and other information about incoming and outgoing packets.

Syntax
debug lldp interface {interface | all}{events | packet {brief | detail} {tx | rx | both}}

To disable debugging, use the no debug lldp interface {interface | all}{events} {packet {brief | detail} {tx | rx | both}} command.

Parameters

- **interface**
  - Enter the following keywords and slot/port or number information:
    - For a 10-Gigabit Ethernet interface, enter the keyword `tenGigabitEthernet` followed by the slot/port information.

- **all**
  - (OPTIONAL) Enter the keyword `all` to display information on all interfaces.

- **events**
  - (OPTIONAL) Enter the keyword `events` to display major events such as timer events.

- **packet**
  - (OPTIONAL) Enter the keyword `packet` to display information regarding packets coming in or going out.

- **brief**
  - (OPTIONAL) Enter the keyword `brief` to display brief packet information.

- **detail**
  - (OPTIONAL) Enter the keyword `detail` to display detailed packet information.

- **tx**
  - (OPTIONAL) Enter the keyword `tx` to display transmit-only packet information.

- **rx**
  - (OPTIONAL) Enter the keyword `rx` to display receive-only packet information.

- **both**
  - (OPTIONAL) Enter the keyword `both` to display both receive and transmit packet information.

Defaults

- none

Command Modes

- EXEC Privilege

Command History

- Version 8.3.17.0 Supported on the M I/O Aggregator.
**protocol lldp (Configuration)**

Enable LLDP globally on the switch.

**Syntax**  
```
protocol lldp
```

To disable LLDP globally on the chassis, use the `no protocol lldp` command.

**Defaults**  
Enabled.

**Command Modes**  
CONFIGURATION (conf-lldp)

**Command History**  
Version 8.3.17.0  
Supported on the M I/O Aggregator.

---

**protocol lldp (Interface)**

Enter the LLDP protocol in the INTERFACE mode.

**Syntax**  
```
[no] protocol lldp
```

To return to the global LLDP configuration mode, use the `no protocol lldp` command from Interface mode.

**Defaults**  
Enabled

**Command Modes**  
INTERFACE (conf-if-interface-lldp)

**Command History**  
Version 8.3.17.0  
Supported on the M I/O Aggregator.

**Usage Information**  
By default, protocol lldp is enabled. To disable, use the `no protocol lldp` command.

When you enter the LLDP protocol in the Interface context, it overrides global configurations. When you execute the `no protocol lldp` from INTERFACE mode, interfaces begin to inherit the configuration from global LLDP CONFIGURATION mode.
show lldp neighbors

Display LLDP neighbor information for all interfaces or a specified interface.

Syntax

show lldp neighbors [interface] [detail]

Parameters

interface (OPTIONAL) Enter the following keywords and slot/port or number information:
- For a 10-Gigabit Ethernet interface, enter the keyword tenGigabitEthernet then the slot/port information.

detail (OPTIONAL) Enter the keyword detail to display all the TLV information, timers, and LLDP tx and rx counters.

Defaults

none

Command Modes

EXEC Privilege

Command History

Version 8.3.17.0  Supported on the M I/O Aggregator.

Usage Information

Omitting the keyword detail displays only the remote chassis ID, Port ID, and Dead Interval.

Example

Dell (conf-if-te-1/31)#do show lldp neighbors
Loc PortID    Rem Host Name  Rem Port Id             Rem
Chassis Id
---------------------------------------------------------------
----------
Te 1/37       FTOS         TenGigabitEthernet 0/37
00:01:e8:05:40:46
Te 1/38       FTOS         TenGigabitEthernet 0/38
00:01:e8:05:40:46
Te 1/39       FTOS         TenGigabitEthernet 0/39
00:01:e8:05:40:46
Te 1/40       FTOS         TenGigabitEthernet 0/40
00:01:e8:05:40:46
Dell (conf-if-te-1/31)#

show lldp statistics

Displays the LLDP statistical information.

Syntax

show lldp statistics

Defaults

none

Command Modes

EXEC Privilege
Example

Dell#show lldp statistics
---------- LLDP GLOBAL STATISTICS ON CHASSIS ----------
Total number of neighbors: 4
Last table change time: 00:01:17, In ticks: 3859
Total number of Table Inserts: 7
Total number of Table Deletes: 3
Total number of Table Drops: 0
Total number of Table Age Outs: 0
Dell#
Port Monitoring

The port monitoring feature allows you to monitor network traffic by forwarding a copy of each incoming or outgoing packet from one port to another port.

Important Points to Remember

- Port monitoring is supported on physical ports only. Port-channel interfaces and virtual local area networks (VLANs), are not supported.
- The monitoring (destination, "MG") and monitored (source, "MD") ports must be on the same switch.
- The monitored (source) interface must be a server-facing interface in the format slot/port, where valid slot numbers are 0-1 and server-facing port numbers are from 1 to 32. The monitoring interface must be an uplink port in the chassis.
- Dell Networking OS permits a limited set of commands for monitoring ports. To display these commands, use the ? command.
- Only one MG and one MD may be in a single port-pipe.
- A monitoring port may not be a member of a VLAN.
- There may only be one destination port in a monitoring session.
- A source port (MD) can only be monitored by one destination port (MG). If you try to assign a monitored port to more than one monitoring port, the following error is displayed as shown in example.

Example

```
Dell(conf)#mon ses 1
Dell(conf-mon-sess-1)#source tengig 0/0 destination tengig 0/60 direction both
Dell(conf-mon-sess-1)#do show mon ses
SessionID Source      Destination  Direction  Mode  Type
--------- ------      -----------  ---------  ----  ----
1    TenGig 0/0  TenGig 0/60  both            interface
          Port-based
Dell(conf-mon-sess-1)#mon ses 2
Dell(conf-mon-sess-2)#source tengig 0/0 destination tengig 0/61 direction both
% Error: MD port is already being monitored.
```

NOTE: There is no limit to the number of monitoring sessions per system, provided that there are only four destination ports per port-pipe. If each monitoring session has a unique destination port, the maximum number of session is four per port-pipe.
**description**

Enter a description of this monitoring session.

**Syntax**

```
description {description}
```

To remove the description, use the `no description {description}` command.

**Parameters**

- `description` Enter a description regarding this session (80 characters maximum).

**Defaults**

none

**Command Modes**

MONITOR SESSION (conf-mon-sess-session-ID)

**Command History**

Version 8.3.17.0 Supported on the M I/O Aggregator.

**Related Commands**

- `monitor session`—enables a monitoring session.

---

**monitor session**

Create a session for monitoring traffic with port monitoring.

**Syntax**

```
monitor session session-ID
```

To delete a session, use the `no monitor session session-ID` command.

To delete all monitor sessions, use the `no monitor session all` command.

**Parameters**

- `session-ID` Enter a session identification number. The range is from 0 to 65535.

**Defaults**

none

**Command Modes**

CONFIGURATION

**Command History**

Version 8.3.17.0 Supported on M I/O Aggregator

**Usage Information**

The `monitor` command is saved in the running configuration at Monitor Session mode level and can be restored after a chassis reload.

**Example**

```
Dell(conf)# monitor session 60
Dell(conf-mon-sess-60)
```
show config

Display the current monitor session configuration.

Syntax

```
show config
```

Defaults

```
none
```

Command

```
MONITOR SESSION (conf-mon-sess-session-ID)
```

Command History

```
Version 8.3.17.0
Supported on the M I/O Aggregator.
```

Example

```
Dell(conf-mon-sess-1)#show config

monitor session 1
source TenGigabitEthernet 0/1 destination Port-channel 1 direction rx
```

show monitor session

Display the monitor information of a particular session or all sessions.

Syntax

```
show monitor session {session-ID}
```

To display monitoring information for all sessions, use the show monitor session command.

Parameters

```
session-ID
```

(OPTIONAL) Enter a session identification number. The range is from 0 to 65535.

Defaults

```
none
```

Command

```
EXEC
EXEC Privilege
```

Command History

```
Version 8.3.17.0
Supported on the M I/O Aggregator.
```
Example

Dell#show monitor session

SessID  Source         Destination         Dir  Mode  Source
IP      Dest IP         -----------         ---  ----  ------
---------      --------

           1   Vl 10             Te 0/8            rx   Flow  N/  
A            N/A

Related Commands

monitor session — creates a session for monitoring.

show running-config monitor session

Displays the running configuration of all monitor sessions or a specific session.

Syntax

show running-config monitor session {session-ID}

To display the running configuration for all monitor sessions, use the show running-config monitor session command.

Parameters

session-ID (OPTIONAL) Enter a session identification number. The range is from 0 to 65535.

Defaults

none

Command Modes

• EXEC
• EXEC Privilege

Command History

Version 8.3.17.0 Supported on the M I/O Aggregator.

Usage Information

The monitoring command is saved in the running configuration at the Monitor Session mode level and can be restored after a chassis reload.

Example

Dell# show running-config monitor session

!  
monitor session 1
source TenGigabitEthernet 0/1 destination TenGigabitEthernet 0/2 direction rx

Related Commands

monitor session — creates a session for monitoring.

show monitor session — displays a monitor session.
source (port monitoring)

Configure a port monitor source.

**Syntax**

```
source interface destination interface direction {rx | tx | both}
```

To disable a monitor source, use the `no source interface destination interface direction {rx | tx | both}` command.

**Parameters**

- **interface**
  Enter the one of the following keywords and slot/port information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

- **destination**
  Enter the keyword `destination` to indicate the interface destination.

- **direction (rx | tx | both)**
  Enter the keyword `direction` followed by one of the packet directional indicators.
  - `rx`: to monitor receiving packets only.
  - `tx`: to monitor transmitting packets only.
  - `both`: to monitor both transmitting and receiving packets.

**Defaults**

none

**Command Modes**

MONITOR SESSION (conf-mon-sess-session-ID)

**Command History**

Version 8.3.17.0  Supported on the M I/O Aggregator.

**Example**

```
Dell(conf-mon-sess-11)#source tengig 10/0 destination tengig
10/47 direction
rx
Dell(conf-mon-sess-11)#
```

**Usage Information**

The monitored (source) interface must be a server-facing interface in the format slot/port, where valid slot numbers are 0-1 and server-facing port numbers are from 1 to 32.
Quality of Service (QoS)

The Dell Networking OS commands for quality of service (QoS) include traffic conditioning and congestion control.

This chapter contains the following section:

- Policy-Based QoS Commands

Policy-Based QoS Commands

Policy-based traffic classification is handled with class maps. These maps classify unicast traffic into one of four classes. The system allows you to match multiple class maps and specify multiple match criteria. Policy-based QoS is not supported on logical interfaces, such as port-channels, VLANs, or Loopbacks.

show qos dot1p-queue-mapping

View dot1p to queue mapping.

**Syntax**

```
show qos dot1p-queue-mapping
```

**Defaults**

none

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 8.3.17.0 Supported on the M I/O Aggregator.

**Example**

```
Dell#show qos dot1p-queue-mapping
Dot1p Priority : 0 1 2 3 4 5 6 7
    Queue : 0 0 0 1 2 3 3 3
Dell#
```
Security for M I/O Aggregator

Security features are supported on the M I/O Aggregator.
This chapter describes several ways to provide access security to the Dell Networking system.

For details about all the commands described in this chapter, refer to the Security chapter in the Dell Networking OS Command Reference Guide.

AAA Accounting Commands

AAA Accounting enables tracking of services that users are accessing and the amount of network resources being consumed by those services. When you enable AAA Accounting, the network server reports user activity to the TACACS+ security server in the form of accounting records. Each accounting record is comprised of accounting AV pairs and is stored on the access control server.

As with authentication and authorization, you must configure AAA Accounting by defining a named list of accounting methods, and then applying that list to various interfaces.

aaa accounting

Enable AAA Accounting and create a record for monitoring the accounting function.

Syntax

```
aaa accounting {system | exec | commands level} {name | default}{start-stop | wait-start | stop-only} {tacacs+}
```

To disable AAA Accounting, use the `no aaa accounting {system | exec | commands level} {name | default}{start-stop | wait-start | stop-only} {tacacs+}` command.

Parameters

- **system**: Enter the keyword `system` to send accounting information of any other AAA configuration.
- **exec**: Enter the keyword `exec` to send accounting information when a user has logged in to EXEC mode.
- **commands**
  - **level**: Enter the keyword `command` then a privilege level for accounting of commands executed at that privilege level.
- **name | default**: Enter one of the following:
  - For `name`, enter a user-defined name of a list of accounting methods.
For default, the default accounting methods used.

- **start-stop**: Enter the keywords `start-stop` to send a "start accounting" notice at the beginning of the requested event and a "stop accounting" notice at the end of the event.

- **wait-start**: Enter the keywords `wait-start` to ensure that the TACACS+ security server acknowledges the start notice before granting the user's process request.

- **stop-only**: Enter the keywords `stop-only` to instruct the TACACS+ security server to send a "stop record accounting" notice at the end of the requested user process.

- **tacacs+**: Enter the keyword `tacacs+` to use TACACS+ data for accounting. Dell Networking OS currently only supports TACACS+ accounting.

**Defaults**

- none

**Command Modes**

- **CONFIGURATION**

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant **Dell Networking OS Command Line Reference Guide**.

The following is a list of the Dell Networking OS version history for this command.

- **Version 9.4(0.0)**: Introduced on the I/O Aggregator.
- **Version 9.0.2.0**: Introduced on the S6000.
- **Version 8.3.19.0**: Introduced on the S4820T.
- **Version 8.3.11.1**: Introduced on the Z9000.
- **Version 8.3.7.0**: Introduced on the S4810.
- **Version 7.6.1.0**: Introduced on the S-Series.
- **Version 7.5.1.0**: Introduced on the C-Series.
- **Version 6.3.1.0**: Introduced on the E-Series.

**Usage Information**

In the example above, TACACS+ accounting is used to track all usage of EXEC command and commands on privilege level 15.

Privilege level 15 is the default. If you want to track usage at privilege level 1 for example, use the `aaa accounting command level 1` command.

**Example**

```
Dell(conf)# aaa accounting exec default start-stop tacacs+
Dell(conf)# aaa accounting command 15 default start-stop tacacs+
Dell(config)#
```
Related Commands

- **enable password** — changes the password for the `enable` command.
- **login authentication** — enables AAA login authentication on the terminal lines.
- **tacacs-server host** — specifies a TACACS+ server host.

### aaa accounting suppress

Prevent the generation of accounting records of users with the user name value of NULL.

#### Syntax

```plaintext
aaa accounting suppress null-username
```

To permit accounting records to users with user name value of NULL, use the `no aaa accounting suppress null-username` command.

#### Defaults

Accounting records are recorded for all users.

#### Command Modes

- CONFIGURATION

#### Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant **Dell Networking OS Command Line Reference Guide**.

The following is a list of the Dell Networking OS version history for this command.

- **Version 9.4.0.0**
  - Introduced on the I/O Aggregator.
- **Version 9.0.2.0**
  - Introduced on the S6000.
- **Version 8.3.19.0**
  - Introduced on the S4280T.
- **Version 8.3.11.1**
  - Introduced on the Z9000.
- **Version 8.3.7.0**
  - Introduced on the S4810.
- **Version 7.6.1.0**
  - Introduced on the S-Series.
- **Version 7.5.1.0**
  - Introduced on the C-Series.
- **Version 6.3.1.0**
  - Introduced on the E-Series.

#### Usage Information

Dell Networking OS issues accounting records for all users on the system, including users whose username string, due to protocol translation, is NULL. For example, a user who comes on line with the `aaa authentication login method-list none` command is applied. To prevent the accounting records from being generated for sessions that do not have user names associated to them, use the `aaa accounting suppress` command.
aaa authorization commands

Set parameters that restrict (or permit) a user’s access to EXEC and CONFIGURATION level commands.

Syntax

```
aaa authorization commands {level | role role-name}|{name|default} {local | tacacs+ | none}
```

Undo a configuration with the `no aaa authorization commands {level | role role-name}|{name|default} {local | tacacs+ | none}` command.

Parameters

- **commands level**
  - Enter the keyword `commands` then the command privilege level for command level authorization.
- **role role-name**
  - Enter the keyword `role` then the role name.
- **name**
  - Define a name for the list of authorization methods.
- **default**
  - Define the default list of authorization methods.
- **local**
  - Use the authorization parameters on the system to perform authorization.
- **tacacs+**
  - Use the TACACS+ protocol to perform authorization.
- **none**
  - Enter the keyword `none` to apply no authorization.

Defaults

- None

Command Modes

- **CONFIGURATION**

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

- **Version 9.6(0.0)**
  - Supported on the M I/O Aggregator
- **Version 9.5(0.0)**
  - Added support for roles on the Z9000, S6000, S4820T, S4810, MXL
- **Version 9.2(1.0)**
  - Introduced on the Z9500.
- **Version 9.0.2.0**
  - Introduced on the S6000.
- **Version 9.0.1.0**
  - Introduced on the S4820T.
- **Version 8.3.19.0**
  - Introduced on the S4810.
- **Version 8.3.11.1**
  - Introduced on the Z9000.
- **Version 8.3.7.0**
  - Introduced on the S4810.
- **Version 7.6.1.0**
  - Introduced on the S-Series.
- **Version 7.5.1.0**
  - Introduced on the C-Series.
aaa authorization config-commands

Set parameters that restrict (or permit) a user’s access to EXEC level commands.

Syntax

```
aaa authorization config-commands
```

Disable authorization checking for CONFIGURATION level commands using the `no aaa authorization config-commands` command.

Defaults

Enabled when you configure `aaa authorization commands` command.

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

- Version 9.6.(0.0) Supported on the M I/O Aggregator
- Version 9.0.2.0 Introduced on the S6000.
- Version 8.3.19.0 Introduced on the S4820T.
- Version 8.3.11.1 Introduced on the Z9000.
- Version 8.3.7.0 Introduced on the S4810.
- Version 7.6.1.0 Introduced on the S-Series.
- Version 7.5.1.0 Introduced on the E-Series.

Usage Information

By default, the `aaa authorization commands` command configures the system to check both EXEC level and CONFIGURATION level commands. Use the `command` no `aaa authorization config-commands` to enable only EXEC-level command checking.

aaa authorization exec

Set parameters that restrict (or permit) a user’s access to EXEC-level commands.

Syntax

```
aaa authorization exec {name | default} {local || tacacs+ || if-authenticated || none}
```
To disable authorization checking for EXEC level commands, use the `no aaa authorization exec` command.

**Parameters**

- **name**
  Define a name for the list of authorization methods.

- **default**
  Define the default list of authorization methods.

- **local**
  Use the authorization parameters on the system to perform authorization.

- **tacacs+**
  Use the TACACS+ protocol to perform authorization.

- **none**
  Enter the keyword `none` to apply no authorization.

**Defaults**
none

**Command Modes**
CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

- **Version 9.6.(0.0)**
  Supported on the M I/O Aggregator.

- **Version 9.0.2.0**
  Introduced on the S6000.

- **Version 8.3.19.0**
  Introduced on the S4820T.

- **Version 8.3.11.1**
  Introduced on the Z9000.

- **Version 8.3.7.0**
  Introduced on the S4810.

- **Version 7.6.1.0**
  Introduced on the S-Series.

- **Version 7.5.1.0**
  Introduced on the C-Series.

- **Version 6.1.1.0**
  Added support for RADIUS.

### show accounting

Display the active accounting sessions for each online user.

**Syntax**

```
show accounting
```

**Defaults**

none

**Command Modes**
EXEC

Security for M I/O Aggregator
Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

- **Version 9.4(0.0)** Introduced on the I/O Aggregator.
- **Version 9.0.2.0** Introduced on the S6000.
- **Version 8.3.19.0** Introduced on the S4820T.
- **Version 8.3.11.1** Introduced on the Z9000.
- **Version 8.3.7.0** Introduced on the S4810.
- **Version 7.6.1.0** Introduced on the S-Series.
- **Version 7.5.1.0** Introduced on the C-Series.
- **Version 6.3.1.0** Introduced on the E-Series.

Usage Information

This command steps through all active sessions and then displays the accounting records for the active account functions.

Example

```
Dell#show accounting
Active accounted actions on tty2, User admin Priv 1 Role <none>
    Task ID 2, EXEC Accounting record, 00:02:03 Elapsed, 
    service=shell
Active accounted actions on tty3, User ad Priv 15 Role <none>
    Task ID 7, EXEC Accounting record, 00:01:22 Elapsed, 
    service=shell
Active accounted actions on tty4, User ad Priv 15 Role <none>
    Task ID 11, EXEC Accounting record, 00:00:35 Elapsed, 
    service=shell
Active accounted actions on tty5, User ad1 Priv1 Role sysadmin
    Task ID 16, EXEC Accounting record, 00:00:04 Elapsed, 
    service=shell
Dell#
```

Related Commands

- **aaa accounting** — enables AAA Accounting and creates a record for monitoring the accounting function.

Authentication and Password Commands

This section contains the following commands controlling management access to the system:

- **enable password**
- **enable restricted**
- **service password-encryption**
- **show users**
- **username**
aaa authentication enable

Configure AAA Authentication method lists for user access to EXEC privilege mode (the "Enable" access).

**Syntax**

```plaintext
aaa authentication enable {default | method-list-name} method [ ... method2]
```

To return to the default setting, use the **no aaa authentication enable** {default | method-list-name} method [ ... method2] command.

**Parameters**

- **default**
  - Enter the keyword `default` then the authentication methods to use as the default sequence of methods for the Enable login. The default is `default enable`.

- **method-list-name**
  - Enter a text string (up to 16 characters long) to name the list of enabled authentication methods activated at login.

- **method**
  - Enter one of the following methods:
    - `enable`: use the password the `enable password` command defines in CONFIGURATION mode.
    - `line`: use the password the `password` command defines in LINE mode.
    - `none`: no authentication.
    - `radius`: use the RADIUS servers configured with the `radius-server host` command.
    - `tacacs+`: use the TACACS+ server(s) configured with the `tacacs-server host` command.

- **... method2**
  - (OPTIONAL) In the event of a "no response" from the first method, Dell Networking Operating System (OS) applies the next configured method.

**Defaults**

- Use the `enable password`.

**Command Modes**

- **CONFIGURATION**

**Command History**

- **Version 9.3(0.0)**
  - Introduced on the M I/O Aggregator.

**Usage Information**

- By default, the **Enable password** is used. If you configure `aaa authentication enable default`, Dell Networking Operating System (OS) uses the methods defined for **Enable access** instead.

- Methods configured with the `aaa authentication enable` command are evaluated in the order they are configured. If authentication fails using the primary method, Dell Networking Operating System (OS) employs the second method (or third method, if necessary) automatically. For example, if the TACACS+ server is reachable, but the server key is invalid, Dell Networking OS proceeds to the next authentication method. The TACACS+ is incorrect, but the user is still authenticated by the secondary method.
Related Commands

- **enable password** — changes the password for the `enable` command.
- **login authentication** — enables AAA login authentication on the terminal lines.
- **radius-server host** — specifies a RADIUS server host.
- **tacacs-server host** — specifies a TACACS+ server host.

### aaa authentication login

Configure AAA Authentication method lists for user access to EXEC mode (Enable log-in).

**Syntax**

```plaintext
aaa authentication login {method-list-name | default} method [ ... method4]
```

To return to the default setting, use the `no aaa authentication login {method-list-name | default}` command.

**Parameters**

- **method-list-name**
  Enter a text string (up to 16 characters long) as the name of a user-configured method list that can be applied to different lines.

- **default**
  Enter the keyword `default` to specify that the method list specified is the default method for all terminal lines.

- **method**
  Enter one of the following methods:
  - `enable`: use the password the `enable password` command defines in CONFIGURATION mode.
  - `line`: use the password the `password` command defines in LINE mode.
  - `none`: no authentication.
  - `radius`: use the RADIUS servers configured with the `radius-server host` command.
  - `tacacs+`: use the TACACS+ servers configured with the `tacacs-server host` command.

- **... method4**
  (OPTIONAL) Enter up to four additional methods. In the event of a "no response" from the first method, Dell Networking Operating System (OS) applies the next configured method (up to four configured methods).

**Defaults**

Not configured (that is, no authentication is performed).

**Command Modes**

CONFIGURATION
Command History

Version 9.3(0.0) Introduced on the M I/O Aggregator.

Usage Information

By default, the locally configured username password is used. If you configure `aaa authentication login default`, Dell Networking Operating System (OS) uses the methods this command defines for login instead.

Methods configured with the `aaa authentication login` command are evaluated in the order they are configured. If users encounter an error with the first method listed, Dell Networking Operating System (OS) applies the next method configured. If users fail the first method listed, no other methods are applied. The only exception is the local method. If the user's name is not listed in the local database, the next method is applied. If the correct user name/password combination is not entered, the user is not allowed access to the switch.

**NOTE:** If authentication fails using the primary method, Dell Networking Operating System (OS) employs the second method (or third method, if necessary) automatically. For example, if the TACACS+ server is reachable, but the server key is invalid, Dell Networking Operating System (OS) proceeds to the next authentication method. The TACACS+ is incorrect, but the user is still authenticated by the secondary method.

After configuring the `aaa authentication login` command, configure the `login authentication` command to enable the authentication scheme on terminal lines.

Connections to the SSH server work with the following login mechanisms: local, radius, and tacacs.

Related Commands

- `login authentication` — enables AAA login authentication on the terminal lines.
- `radius-server host` — specifies a RADIUS server host.
- `tacacs-server host` — specifies a TACACS+ server host.

**banner exec**

Configure a message that is displayed when you enter EXEC mode.

**Syntax**

```
banner exec c line c
```

To delete a banner, use the `no banner exec` command.

**Parameters**

- `c` Enter the keywords `banner exec`, then enter a character delineator, represented here by the letter `c`. Press ENTER.
- `line` Enter a text string for your banner message ending the message with your delineator. In the following example, the
banner login

Set a banner to display when logging on to the system.

Syntax

```
banner login {keyboard-interactive | no keyboard-interactive} [c line c]
```
### Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>keyboard-interactive</td>
<td>Enter the keyword <code>keyboard-interactive</code> to require a carriage return (CR) to get the message banner prompt.</td>
</tr>
<tr>
<td><code>c</code></td>
<td>Enter a delineator character to specify the limits of the text banner. The delineator is a percent character (<code>%</code>).</td>
</tr>
<tr>
<td><code>line</code></td>
<td>Enter a text string for your text banner message ending the message with your delineator. The delineator is a percent character (<code>%</code>). Range: maximum of 50 lines, up to 255 characters per line</td>
</tr>
</tbody>
</table>

### Defaults

No banner is configured and the CR is required when creating a banner.

### Command Modes

- **CONFIGURATION**

### Command History

- **Version 9.3(0.0)**
  - Introduced on the M I/O Aggregator.

### Usage Information

After entering the `banner login` command, type one or more spaces and a delineator character. Enter the banner text then the second delineator character. When the user is connected to the router, if a message of the day banner is configured, it displays first. If no message of the day banner is configured, the login banner and prompt appear. After the user has logged in, the EXEC banner (if configured) displays.

### Example

```
Dell(conf)#banner login ?
keyboard-interactive Press enter key to get prompt
LINE c banner-text c, where 'c' is a delimiting character
Dell(conf)#no banner login ?
keyboard-interactive Prompt will be displayed by default
<cr>
Dell(conf)#banner login keyboard-interactive

Enter TEXT message. End with the character '%'.
This is the banner%
Dell(conf)#end
Dell#exit

13d21h9m: %RPM0-P:CP %SEC-5-LOGOUT: Exec session is terminated for user on line console

This is the banner
Dell con0 now available

Press RETURN to get started.
13d21h10m: %RPM0-P:CP %SEC-5-LOGIN_SUCCESS: Login successful for user on line console
This is the banner
Dell>
```

### Related Commands

- `banner motd` — sets a Message of the Day banner.
- `exec-banner` — enables the display of a text string when you enter EXEC mode.
**banner motd**

Set a message of the day (MOTD) banner.

**Syntax**

```
banner motd c line c
```

**Parameters**

- `c`
  - Enter a delineator character to specify the limits of the text banner. The delineator is a percent character (%).
- `line`
  - Enter a text string for your MOTD banner the message with your delineator. The delineator is a percent character (%).

**Defaults**

No banner is configured.

**Command Modes**

CONFIGURATION

**Command History**

*Version 9.3(0.0)*

Introduced on the M I/O Aggregator.

**Usage Information**

After entering the banner login command, type one or more spaces and a delineator character. Enter the banner text then the second delineator character. When the user is connected to the router, if a message of the day banner is configured, it displays first. If no message of the day banner is configured, the login banner and prompt appear. After the user has logged in, the EXEC banner (if configured) displays.

**Related Commands**

- `banner exec` — enables the display of a text string when you enter EXEC mode.
- `banner login` — sets a banner to display after successful login to the system.

---

**debug radius**

View RADIUS transactions to assist with troubleshooting.

**Syntax**

```
debug radius
```

To disable debugging of RADIUS, use the `no debug radius` command.

**Defaults**

Disabled.

**Command Modes**

EXEC Privilege

**Command History**

*Version 9.3(0.0)*

Introduced on the M I/O Aggregator.
**debug tacacs+**

To assist with troubleshooting, view TACACS+ transactions.

**Syntax**

```plaintext
debug tacacs+
```

To disable debugging of TACACS+, use the `no debug tacacs+` command.

**Defaults**

Disabled.

**Command Modes**

EXEC Privilege

**Command History**

Version 9.3.0.0  Introduced on the M I/O Aggregator.

---

**exec-banner**

Enable the display of a text string when the user enters EXEC mode.

**Syntax**

```plaintext
exec-banner
```

To disable the banner on terminal lines, use the `no exec-banner` command.

**Defaults**

Enabled on all lines (if configured, the banner appears).

**Command Modes**

LINE

**Command History**

Version 9.3.0.0  Introduced on the M I/O Aggregator.

**Usage Information**

Optionally, use the `banner exec` command to create a text string that is displayed when you access EXEC mode. This command toggles that display.

**Related Commands**

- `banner exec` — configures a banner to display when entering EXEC mode.
- `line` — enables and configures console and virtual terminal lines to the system.

---

**ip radius source-interface**

Specify an interface’s IP address as the source IP address for RADIUS connections.

**Syntax**

```plaintext
ip radius source-interface interface
```

To delete a source interface, use the `no ip radius source-interface` command.
Enter the following keywords and slot/port or number information:

- For a 100/1000 Ethernet interface, enter the keyword GigabitEthernet then the slot/port information.
- For a Gigabit Ethernet interface, enter the keyword GigabitEthernet then the slot/port information.
- For Loopback interfaces, enter the keyword loopback then a number from zero (0) to 16838.
- For the Null interface, enter the keywords null 0.
- For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
- For a ten-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
- For VLAN interface, enter the keyword vlan then a number from 1 to 4094.

Defaults Not configured.

Command Modes CONFIGURATION

Command History

Version 9.3.(0.0) Introduced on the M I/O Aggregator.

ip tacacs source-interface

Specify an interface’s IP address as the source IP address for TACACS+ connections.

Syntax ip tacacs source-interface interface

To delete a source interface, use the no ip tacacs source-interface command.

Parameters interface Enter the following keywords and slot/port or number information:

- For a 100/1000 Ethernet interface, enter the keyword GigabitEthernet then the slot/port information.
- For a Gigabit Ethernet interface, enter the keyword GigabitEthernet then the slot/port information.
- For Loopback interfaces, enter the keyword loopback then a number from zero (0) to 16838.
- For the Null interface, enter the keywords null 0.
For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.

- For a ten-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults**
Not configured.

**Command Modes**
CONFIGURATION

**Command History**
Version 9.3(0.0) Introduced on the M I/O Aggregator.

### login authentication

To designate the terminal lines, apply an authentication method list.

**Syntax**
```
login authentication {method-list-name | default}
```

To use the local user/password database for login authentication, use the `no login authentication` command.

**Parameters**
- `method-list-name` Enter the keywords `method-list-name` to specify that method list, created in the `aaa authentication login` command, to be applied to the designated terminal line.
- `default` Enter the keyword `default` to specify that the default method list, created in the `aaa authentication login` command, is applied to the terminal line.

**Defaults**
No authentication is performed on the console lines. Local authentication is performed on the virtual terminal and auxiliary lines.

**Command Modes**
LINE

**Command History**
Version 9.3(0.0) Introduced on the M I/O Aggregator.

**Usage Information**
If you configure the `aaa authentication login default` command, the `login authentication default` command automatically is applied to all terminal lines.
RADIUS Commands

The following RADIUS commands are supported by Dell Networking Operating System (OS).

radius-server deadtime

Configure a time interval during which non-responsive RADIUS servers to authentication requests are skipped.

Syntax

```
radius-server deadtime seconds
```

To disable this function or return to the default value, use the `no radius-server deadtime` command.

Parameters

- `seconds` Enter a number of seconds during which non-responsive RADIUS servers are skipped. The range is from 0 to 2147483647 seconds. The default is 0 seconds.

Defaults

0 seconds

Command Modes

CONFIGURATION

Command History

Version 9.3.(0.0) Introduced on the M I/O Aggregator.

radius-server host

Configure a RADIUS server host.

Syntax

```
radius-server host {hostname | ipv4-address | ipv6-address} [auth-port port-number] [retransmit retries] [timeout seconds] [key [encryption-type] key]
```

Parameters

- `hostname` Enter the name of the RADIUS server host.
- `ipv4-address | ipv6-address` Enter the IPv4 address (A.B.C.D) or IPv6 address (X:X::X::X) of the RADIUS server host.
auth-port port-number  (OPTIONAL) Enter the keywords auth-port then a number as the port number. The range is from zero (0) to 65535. The default port-number is 1812.

retransmit retries  (OPTIONAL) Enter the keyword retransmit then a number as the number of attempts. This parameter overwrites the radius-server retransmit command. The range is from zero (0) to 100. The default is 3 attempts.

timeout seconds  (OPTIONAL) Enter the keyword timeout then the seconds the time interval the switch waits for a reply from the RADIUS server. This parameter overwrites the radius-server timeout command. The range is from 0 to 1000. The default is 5 seconds.

key [encryption-type] key  (OPTIONAL) Enter the keyword key then an optional encryption-type and a string up to 42 characters long as the authentication key. The RADIUS host server uses this authentication key and the RADIUS daemon operating on this switch.

For the encryption-type, enter either zero (0) or 7 as the encryption type for the key entered. The options are:

- 0 is the default and means the password is not encrypted and stored as clear text.
- 7 means that the password is encrypted and hidden.

Configure this parameter last because leading spaces are ignored.

Defaults
Not configured.

Command Modes
CONFIGURATION

Command History
Version 9.3(0.0) Introduced on the M I/O Aggregator.

Usage Information
To configure any number of RADIUS server hosts for each server host that is configured, use this command. Dell Networking Operating System (OS) searches for the RADIUS hosts in the order they are configured in the software.

The global default values for the timeout, retransmit, and key optional parameters are applied, unless those values are specified in the radius-server host or other commands. To return to the global default values, if you configure the timeout, retransmit, or key values, include those keywords when using the no radius-server host command syntax.

Related Commands
login authentication — sets the database to be checked when a user logs in.

Security for M I/O Aggregator 247
radius-server retransmit — sets the number of times the RADIUS server attempts to send information.

radius-server timeout — sets the time interval before the RADIUS server times out.

radius-server retransmit

Configure the number of times the switch attempts to connect with the configured RADIUS host server before declaring the RADIUS host server unreachable.

Syntax

radius-server retransmit retries

To configure zero retransmit attempts, use the no radius-server retransmit command.

To return to the default setting, use the radius-server retransmit 3 command.

Parameters

retries Enter a number of attempts that Dell Networking Operating System (OS) tries to locate a RADIUS server. The range is from zero (0) to 100. The default is 3 retries.

Defaults 3 retries

Command Modes CONFIGURATION

Command History

Version 9.3(0.0) Introduced on the M I/O Aggregator.

Related Commands

radius-server host — configures a RADIUS host.

radius-server timeout

To reply to a request, configure the amount of time the RADIUS client (the switch) waits for a RADIUS host server .

Syntax

radius-server timeout seconds

To return to the default value, use the no radius-server timeout command.

Parameters

seconds Enter the number of seconds between an unsuccessful attempt and the radius-server timeout times out. The range is from zero (0) to 1000 seconds. The default is 5 seconds.
radius-server key

Configure a key for all RADIUS communications between the switch and the RADIUS host server.

Syntax

radius-server key [encryption-type] key

To delete a password, use the no radius-server key command.

Parameters

- **encryption-type** (OPTIONAL) Enter either zero (0) or 7 as the encryption type for the key entered. The options are:
  - 0 is the default and means the key is not encrypted and stored as clear text.
  - 7 means that the key is encrypted and hidden.
- **key** Enter a string that is the key to be exchanged between the switch and RADIUS servers. It can be up to 42 characters long.

Defaults Not configured.

Command Modes CONFIGURATION

Command History

Version 9.3(0.0) Introduced on the M I/O Aggregator.

Usage Information

The key configured on the switch must match the key configured on the RADIUS server daemon.

If you configure the key parameter in the radius-server host command, the key configured with the radius-server key command is the default key for all RADIUS communications.

Related Commands

radius-server host — configures a RADIUS host.
show privilege

View your access level.

Syntax  
show privilege

Command Modes  
• EXEC
• EXEC Privilege

Command History  
Version 9.3(0.0) Introduced on the M I/O Aggregator.

Example  
Dell#show privilege
Current privilege level is 15
Dell#
Dell#show privilege
Current privilege level is 14
Dell#
Dell#show privilege
Current privilege level is 10
Dell#

Suppressing AAA Accounting for Null Username Sessions

When you activate AAA accounting, the Dell Networking OS software issues accounting records for all users on the system, including users whose username string, because of protocol translation, is NULL. An example of this is a user who comes in on a line where the AAA authentication login method-list none command is applied. To prevent accounting records from being generated for sessions that do not have usernames associated with them, use the following command.

• Prevent accounting records from being generated for users whose username string is NULL.

  CONFIGURATION mode

    aaa accounting suppress null-username

TACACS+ Accounting

Enable AAA Accounting and create a record for monitoring the accounting function.

Syntax  
aaa accounting {system | exec | commands level} {name | default}{(start-stop | wait-start | stop-only} {tacacs+}

To disable AAA Accounting, use the

no aaa accounting {system | exec | command level} {name | default}{(start-stop | wait-start | stop-only} {tacacs+} command

Defaults.
Parameters

**system**
Enter the keyword system to send accounting information of any other AAA configuration.

**exec**
Enter the keyword exec to send accounting information when a user has logged in to EXEC mode.

**commands level**
Enter the keyword command then a privilege level for accounting of commands executed at that privilege level.

**name | default**
Enter one of the following:

- For name, enter a user-defined name of a list of accounting methods.
- For default, the default accounting methods used.

**start-stop**
Enter the keywords start-stop to send a “start accounting” notice at the beginning of the requested event and a “stop accounting” notice at the end of the event.

**wait-start**
Enter the keywords wait-start to ensure that the TACACS+ security server acknowledges the start notice before granting the user’s process request.

**stop-only**
Enter the keywords stop-only to instruct the TACACS+ security server to send a “stop record accounting” notice at the end of the requested user process.

**tacacs+**
Enter the keyword tacacs+ to use TACACS+ data for accounting.

Dell Networking OS currently only supports TACACS+ accounting.

Defaults
None

Command Modes
CONFIGURATION

Usage Information
In the example above, TACACS+ accounting is used to track all usage of EXEC command and commands on privilege level 15. Privilege level 15 is the default. If you want to track usage at privilege level 1 for example, use the `aaa accounting command 1` command.

Command History
Version 9.5(0.0) Supported on the M I/O aggregator.

Example
Dell(config)# aaa accounting exec default start-stop tacacs+
Dell(config)# aaa accounting command 15 default start-stop tacacs+
Dell(config)#

Related Commands
**enable** changes the password for the enable command.

**password**
TACACS+ Commands

Dell Networking OS supports TACACS+ as an alternate method for login authentication.

**tacacs-server host**

Specify a TACACS+ host.

**Syntax**

```
tacacs-server host {hostname | ipv4-address | ipv6-address} [port number] [timeout seconds] [key key]
```

**Parameters**

- `hostname`: Enter the name of the TACACS+ server host.
- `ipv4-address`: Enter the IPv4 address (A.B.C.D) or IPv6 address (X:X:X::X) of the TACACS+ server host.
- `port number`: (OPTIONAL) Enter the keyword `port` then a number as the port to be used by the TACACS+ server. The range is from zero (0) to 65535. The default is 49.
- `timeout seconds`: (OPTIONAL) Enter the keyword `timeout` then the number of seconds the switch waits for a reply from the TACACS+ server. The range is from 0 to 1000. The default is 10 seconds.
- `key key`: (OPTIONAL) Enter the keyword `key` then a string up to 42 characters long as the authentication key. This authentication key must match the key specified in the `tacacs-server key` for the TACACS+ daemon.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Command History**

Version 9.3(0.0) Introduced on the M I/O Aggregator.
To list multiple TACACS+ servers to be used by the `aaa authentication login` command, configure this command multiple times.

If you are not configuring the switch as a TACACS+ server, you do not need to configure the `port`, `timeout`, and `key` optional parameters. If you do not configure a key, the key assigned in the `tacacs-server key` command is used.

Related Commands

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>aaa authentication login</code></td>
<td>specifies the login authentication method.</td>
</tr>
<tr>
<td><code>tacacs-server key</code></td>
<td>configures a TACACS+ key for the TACACS server.</td>
</tr>
</tbody>
</table>

**tacacs-server key**

Configure a key for communication between a TACACS+ server and a client.

**Syntax**

```
tacacs-server key [encryption-type] key
```

To delete a key, use the `no tacacs-server key key` command.

**Parameters**

- **encryption-type** (OPTIONAL) Enter either zero (0) or 7 as the encryption type for the key entered. The options are:
  - 0 is the default and means the key is not encrypted and stored as clear text.
  - 7 means that the key is encrypted and hidden.
- **key** Enter a text string, up to 42 characters long, as the clear text password. Leading spaces are ignored.

**Defaults**

Not configured.

**Command Modes**

- CONFIGURATION

**Command History**

- **Version 9.3.0.0** Introduced on the M I/O Aggregator.

**Usage Information**

The key configured with this command must match the key configured on the TACACS+ daemon.
timeout login response

Specify how long the software waits for the login input (for example, the user name and password) before timing out.

Syntax

```
timeout login response seconds
```

To return to the default values, use the `no timeout login response` command.

Parameters

- `seconds`
  
  Enter a number of seconds the software waits before logging you out. The range is:
  
  - VTY: the range is from 1 to 30 seconds, the default is **30 seconds**.
  - Console: the range is from 1 to 300 seconds, the default is **0 seconds** (no timeout).
  - AUX: the range is from 1 to 300 seconds, the default is **0 seconds** (no timeout).

Defaults

See the defaults settings shown in `Parameters`.

Command Modes

LINE

Command History

Version 9.3.0.0

Introduced on the M I/O Aggregator.

Usage Information

The software measures the period of inactivity defined in this command as the period between consecutive keystrokes. For example, if your password is “password” you can enter “p” and wait 29 seconds to enter the next letter.

SSH Server and SCP Commands

The Dell Networking OS supports secure shell (SSH) protocol versions 1.5 and 2.0. SSH is a protocol for secure remote login over an insecure network. SSH sessions are encrypted and use authentication. The SSH and SCP commands are:

- `show ip ssh`
- `show ip ssh client-pub-keys`
- `show ip ssh rsa-authentication`
- `ssh`
enable password

Change the password for the enable command.

Syntax

```
enable password [level level] [encryption-type] password
```

To delete a password, use the no enable password [encryption-type] password [level level] command.

Parameters

- **level level** (OPTIONAL) Enter the keyword level followed by a number as the level of access. The range is from 1 to 15.
- **encryption-type** (OPTIONAL) Enter the number 7 or 0 as the encryption type.

Enter a 7 followed by a text string as the hidden password. The text string must be a password that was already encrypted by a Dell Networking router.

Use this parameter only with a password that you copied from the show running-config file of another Dell Networking router.

- **password** Enter a text string, up to 32 characters long, as the clear text password.

Defaults

No password is configured. level = 15.

Command Modes

CONFIGURATION

Command History

Version 8.3.17.0 Supported on the M I/O Aggregator.

Usage Information

Use this command to define a password for a level.

Passwords must meet the following criteria:

- Start with a letter, not a number.
- Passwords can have a regular expression as the password. To create a password with a regular expression in it, use CNTL + v prior to entering regular expression. For example, to create the password abcd\]e, you type "abcd CNTL v \]e". When the password is created, you do not use the CNTL + v key combination and enter "abcd\]e".

**NOTE:** The question mark (?) and the tilde (~) are not supported characters.

Related Commands

- **show running-config**— views the current configuration.
enable restricted

Allows Dell Networking technical support to access restricted commands.

Syntax

```
enable restricted [encryption-type] password
```

To disallow access to restricted commands, use the `no enable restricted` command.

Parameters

- `encryption-type` (OPTIONAL) Enter the number 7 as the encryption type.

  Enter 7 followed a text string as the hidden password. The text string must be a password that was already encrypted by a Dell Networking router.

  Use this parameter only with a password that you copied from the `show running-config` file of another Dell Networking router.

- `password` Enter a text string, up to 32 characters long, as the clear text password.

Command Modes

- Not configured.

Command History

- Version 8.3.17.0 Supported on the M I/O Aggregator.

Usage Information

Only Dell Networking Technical Support staff use this command.

enable ioa-debug

Enable IOA debug-level commands.

⚠️ **NOTE:** This command has been deprecated in Dell Networking OS version 9.2(0.0).

Syntax

```
enable ioa-debug
```

To disable SMUX debug, use `no enable ioa-debug` command.

Command Modes

- Not configured.

Command History

- Version 8.3.17.0 Supported on the M I/O Aggregator.
- Version 9.2(0.0) Deprecated command
**service password-encryption**

Encrypt all passwords configured in Dell Networking OS.

**Syntax**

```
service password-encryption
```

To store new passwords as clear text, use the `no service password-encryption` command.

**Defaults**

Enabled.

**Command Modes**

CONFIGURATION

**Command History**

Version 8.3.17.0 Supported on the M I/O Aggregator.

**Usage Information**

⚠️ **CAUTION:** Encrypting passwords with this command does not provide a high level of security. When the passwords are encrypted, you cannot return them to plain text unless you re-configure them. To remove an encrypted password, use the `no password password` command.

To keep unauthorized people from viewing passwords in the switch configuration file, use the `service password-encryption` command. This command encrypts the clear-text passwords created for user name passwords, authentication key passwords, the privileged command password, and console and virtual terminal line access passwords.

To view passwords, use the `show running-config` command.

**show ip ssh**

Display information about established SSH sessions.

**Syntax**

```
show ip ssh
```

**Command Modes**

- EXEC
- EXEC Privilege

**Example**

```
Dell#show ip ssh
SSH server            : enabled.
SSH server version    : v1 and v2.
SSH server vrf        : default.
Password Authentication : enabled.
Hostbased Authentication : disabled.
RSA Authentication    : disabled.
```
### show ip ssh client-pub-keys

Displays the client public keys used in host-based authentication

**Syntax**

```
show ip ssh client-pub-keys
```

**Defaults**

none

**Command Modes**

EXEC

**Command History**

Version 8.3.17.0  
Supported on the M I/O Aggregator.

**Usage Information**

This command displays the contents of the flash://ADMIN_DIR/ssh/knownhosts file.

**Example**

```
Dell# show ip ssh client-pub-keys
4.8.1.2 ssh-rsa
AAAAB3NzaC1yc2EAAAABIwAAAIEAu5NoTbmnLxBknaeXZmUJMupNwNUoGlo1/yLPi5eehQTya

Dell#
```

**Related Commands**

- `show ip ssh client-pub-keys` — displays the client-public keys.
show ip ssh rsa-authentication

Displays the authorized-keys for the RSA authentication.

**Syntax**

```
show ip ssh rsa-authentication {my-authorized-keys}
```

**Parameters**

- **my-authorized-keys**: Display the RSA authorized keys.

**Defaults**

- none

**Command Modes**

- EXEC

**Command History**

- **Version 8.3.17.0** Supported on the M I/O Aggregator.

**Usage Information**

This command displays the contents of the `flash:/ADMIN_DIR/ssh/authorized-keys.username` file.

**Example**

```
Dell#show ip ssh rsa-authentication my-authorized-keys
ssh-rsa
AAAAB3NzaC1yc2EAAAABAIAyB17l4gFp4r2DRHiVp2V2d0Sg5GQxRVly1X1J0MeO6Nd0WuYzrQMM

VxdH4x4km3c3t5Jvc=
freedom@poclab4
Dell#
```

show users

Allows you to view information on all users logged in to the switch.

**Syntax**

```
show users [all]
```

**Parameters**

- **all** *(OPTIONAL)* Enter the keyword all to view all terminal lines in the switch.

**Command Modes**

- EXEC Privilege

**Command History**

- **Version 8.3.17.0** Supported on the M I/O Aggregator.

**Usage Information**

The following describes the `show user` command shown in the following example.
<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>(untitled)</td>
<td>Indicates with an asterisk (*) which terminal line you are using.</td>
</tr>
<tr>
<td>Line</td>
<td>Displays the terminal lines currently in use.</td>
</tr>
<tr>
<td>User</td>
<td>Displays the user name of all users logged in.</td>
</tr>
<tr>
<td>Host(s)</td>
<td>Displays the terminal line status.</td>
</tr>
<tr>
<td>Location</td>
<td>Displays the IP address of the user.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell# show users
Authorization Mode: role or privilege
Line              User           Role        Priv
Host(s)       Location
*   0  console 0                    unassigned       1 idle
     10.16.127.35
   2  vty 0          admin         unassigned       1 idle
          10.16.127.35
   3  vty 1          ad            unassigned       15 idle
          10.16.127.145
   4  vty 2          adl           sysadmin         1 idle
          10.16.127.141
   5  vty 3          ad            unassigned       1 idle
          10.16.127.145
   6  vty 4          admin         sysadmin         1 idle
          10.16.127.141
   7  vty 5          ad            unassigned       15 idle
          10.16.127.141
Dell#
```

**Related Commands**

`ssh` — enables a user.

### ssh

Open an SSH connection specifying the host name, username, port number and version of the SSH client.

Dell Networking OS supports both inbound and outbound SSH sessions using IPv4 addressing. Inbound SSH supports accessing the system through the management interface as well as through a physical Layer 3 interface.

**Syntax**

```
ssh {hostname | ipv4 address} [-l username | -p port-number|-v {1|2}]
```

**Parameters**

- `hostname` (OPTIONAL) Enter the IP address or the host name of the remote device.
- `ipv4 address` (OPTIONAL) Enter the IP address in dotted decimal format A.B.C.D.
- `-l username` (OPTIONAL) Enter the keyword -l followed by the user name used in this SSH session. The default is the user name of the user associated with the terminal.
-p port-number  (OPTIONAL) Enter the keyword -p followed by the port number. The range is from 1 to 65536. The default is 22.

-v (1 | 2)  (OPTIONAL) Enter the keyword -v then the SSH version 1 or 2. The default is the version from the protocol negotiation.

Defaults  
As shown in the Parameters section.

Command Modes  
EXEC Privilege

Command History  
Version 8.3.17.0  Supported on the M I/O Aggregator.

Example  
Dell#ssh 10.16.151.48 -l anvltest

Trying 10.16.151.48...
01:18:16: %STKUNIT0-M:CP %SEC-5-SSH_USAGE: Initiated SSH Client v2 (FIPS Disabled) to anvltest@10.16.151.48 by default from console
anvltest@10.16.151.48's password:
Last login: Thu Jan  5 00:17:47 2012 from login-maa-101
[anvltest@dt-maa-linux-1 ~]# exit
logout
Dell#

username  
Establish an authentication system based on user names.

Syntax  
username name access-list-name [nopassword | {password | secret} [encryption-type] password] [privilege level]

If you do not want a specific user to enter a password, use the nopassword option.

To delete authentication for a user, use the no username name command.

Parameters  

name  Enter a text string for the name of the user up to 63 characters.

access-list-name  Enter the name of a configured access control list (either an IP access control list or MAC access control list).

nopassword  Enter the keyword nopassword to specify that the user should not enter a password.

password  Enter the keyword password followed by the encryption-type or the password.

secret  Enter the keyword secret followed by the encryption-type or the password.
encryption-type  Enter an encryption type for the password that you enter.

- 0 directs Dell Networking OS to store the password as clear text. It is the default encryption type when using the password option.
- 7 to indicate that a password encrypted using a DES hashing algorithm follows. This encryption type is available with the password option only.
- 5 to indicate that a password encrypted using an MD5 hashing algorithm follow. This encryption type is available with the secret option only, and is the default encryption type for this option.

password  Enter a string up to 32 characters long.

privilege level  Enter the keyword privilege then a number from zero (0) to 15.

secret  Enter the keyword secret then the encryption type.

Defaults  The default encryption type for the password option is 0. The default encryption type for the secret option is 0.

Command Modes  CONFIGURATION

Command History  Version 8.3.17.0  Supported on the M I/O Aggregator.

Usage Information  To view the defined user names, use the show running-config user command.

Related Commands  service password-encryption—specifies a password for users on terminal lines.

show running-config—views the current configuration.
Simple Network Management Protocol (SNMP) and Syslog

This chapter contains commands to configure and monitor the simple network management protocol (SNMP) v1/v2 and Syslog.

The chapter contains the following sections:

- **SNMP Commands**
- **Syslog Commands**

SNMP Commands

The SNMP commands available in the Dell Networking OS are:

- `snmp-server enable traps`
- `snmp-server host`

The simple network management protocol (SNMP) is used to communicate management information between the network management stations and the agents in the network elements. Dell Networking OS supports SNMP versions 1, and 2c supporting only read-only mode.

**Important Points to Remember**

- Typically, 5-second timeout and 3-second retry values on an SNMP server are sufficient for both local area network (LAN) and wide area network (WAN) applications. If you experience a timeout with these values, the recommended best practice on Dell Networking switches (to accommodate their high port density) is to increase the timeout and retry values on your SNMP server to the following:
  - SNMP Timeout — greater than 3 seconds.
  - SNMP Retry count — greater than 2 seconds.
- SNMP operations are not supported on a virtual local area network (VLAN).

Syslog Commands

The following commands allow you to configure logging functions on all Dell Networking switches.

- `clear logging`
- `logging buffered`
clear logging

Clear the messages in the logging buffer.

Syntax

clear logging

Defaults

none

Command Modes

EXEC Privilege

Command History

Version 8.3.17.0 Supported on the M I/O Aggregator.

Related Commands

show logging — displays logging settings and system messages in the internal buffer.

logging buffered

Enable logging and specify which messages are logged to an internal buffer. By default, all messages are logged to the internal buffer.

Syntax

logging buffered [level] [size]

To return to the default values, use the no logging buffered command.

To disable logging stored to an internal buffer, use the no logging buffered command.

Parameters

- **level**: (OPTIONAL) Indicate a value from 0 to 7 or enter one of the following equivalent words: emergencies, alerts, critical, errors, warnings, notifications, informational, or debugging. The default is 7 or debugging.

- **size**: (OPTIONAL) Indicate the size, in bytes, of the logging buffer. The number of messages buffered depends on the size of each message. The range is from 40960 to 524288. The default is 40960 bytes.
Defaults
level = 7; size = 40960 bytes

Command Modes
CONFIGURATION

Command History
Version 8.3.17.0  Supported on the M I/O Aggregator.

Usage Information
When you decrease the buffer size, all messages stored in the buffer are lost.
Increasing the buffer size does not affect messages stored in the buffer.

Related Commands
clear logging — clears the logging buffer.
logging hostname — returns the logging buffered parameters to the default setting.
show logging — displays the logging setting and system messages in the internal buffer.

---

logging console

Specify which messages are logged to the console.

Syntax
logging console [level]

To return to the default values, use the logging hostname command.

To disable logging to the console, use the no logging console command.

Parameters
level (OPTIONAL) Indicate a value from 0 to 7 or enter one of the following parameters: emergencies, alerts, critical, errors, warnings, notifications, informational, or debugging. The default is 7 or debugging.

Defaults
level = 7; size = debugging

Command Modes
CONFIGURATION

Command History
Version 8.3.17.0  Supported on the M I/O Aggregator.

Related Commands
clear logging — clears the logging buffer.
logging hostname — returns the logging console parameters to the default setting.
show logging — displays the logging setting and system messages in the internal buffer.
logging hostname

Configure an IP address or host name of a Syslog server where logging messages are sent. Multiple logging servers of both IPv4 and/or IPv6 can be configured.

Syntax

logging {ipv4-address | hostname}
To disable logging, use the no logging command.

Parameters

ipv4-address
Enter the IPv4 address (A.B.C.D).

hostname
Enter the name of a host already configured and recognized by the switch.

Defaults
Disabled.

Command Modes
CONFIGURATION

Command History
Version 8.3.17.0 Supported on the M I/O Aggregator.

Related Commands
logging trap — enables logging to the Syslog server based on severity.

logging monitor

Specify which messages are logged to Telnet applications.

Syntax

logging monitor [level]
To disable logging to terminal connections, use the no logging monitor command.

Parameters

level
Indicate a value from 0 to 7 or enter one of the following parameters: emergencies, alerts, critical, errors, warnings, notifications, informational, or debugging. The default is 7 or debugging.

Defaults
7 or debugging

Command Modes
CONFIGURATION

Command History
Version 8.3.17.0 Supported on the M I/O Aggregator.

Related Commands
logging hostname — returns the logging monitor parameters to the default setting.
logging source-interface

Specify that the IP address of an interface is the source IP address of Syslog packets sent to the Syslog server.

Syntax

```
logging source-interface interface
```

To disable this command and return to the default setting, use the `no logging source-interface` command.

Parameters

`interface` Enter the following keywords and slot/port or number information:

- For a Ten-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` followed by the slot/port information.
- For VLAN interface, enter the keyword `vlan` followed by a number from 1 to 4094.

Defaults

Not configured.

Command Modes

CONFIGURATION

Command History

Version 8.3.17.0 Supported on the M I/O Aggregator

Usage Information

Syslog messages contain the IP address of the interface used to egress the router. By configuring the `logging source-interface` command, the Syslog packets contain the IP address of the interface configured.

Related Commands

- `logging hostname` — enables logging to the Syslog server.

logging trap

Specify which messages are logged to the Syslog server based on the message severity.

Syntax

```
logging trap [level]
```

To return to the default values, use the `default logging trap` command.

To disable logging, use the `no logging trap` command.

Parameters

`level` Indicate a value from 0 to 7 or enter one of the following parameters: emergencies, alerts, critical, errors, warnings, notifications, informational, or debugging. The default is 6 or informational.
show logging

Displays the logging settings and system messages logged to the internal buffer of the switch.

Syntax

show logging [number | history [reverse][number] | reverse [number] | summary | | driverlog[stack-unit number] | kernellog [stack-unit number]]

Parameters

number (OPTIONAL) Enter the number of messages displayed in the output. The range is from 1 to 65535.

history (OPTIONAL) Enter the keyword history to view only information in the Syslog history table.

reverse (OPTIONAL) Enter the keyword reverse to view the Syslog messages in FIFO (first in, first out) order.

summary (OPTIONAL) Enter the keyword summary to view a table showing the number of messages per type and per slot.

driverlog (OPTIONAL) Enter the keyword driverlog to view the driverlog information per stack-unit.

Enter the keyword stack-unit followed by the stack member ID of the switch for which you want to display the driver log. The range is from 0 to 1.

kernellog (OPTIONAL) Enter the keyword kernellog to view the kernellog information per stack-unit.

Enter the keyword stack-unit followed by the stack member ID of the switch for which you want to display the driver log. The range is from 0 to 1.

Command Modes

• EXEC
• EXEC Privilege

Command History

Version 8.3.17.0 
Supported on the M I/O Aggregator.
Dell#show logging

Simple Network Management Protocol (SNMP) and Syslog
terminal monitor

Configure the Dell Networking OS to display messages on the monitor/terminal.

**Syntax**

```
terminal monitor
```

To return to default settings, use the `terminal no monitor` command.

**defaults**

Disabled.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

- Version 8.3.17.0  
  Supported on the M I/O Aggregator.

**Related Commands**

- `logging monitor` — sets the logging parameters on the monitor/terminal.
Stacking Commands

Stacking is supported on an Aggregator only on the 40GbE ports on the base module. Stacking is limited to two Aggregators in the same chassis in a single stack. Up to three stacks are supported in an M1000e chassis.

Stacking provides a single point of management and NIC teaming for high availability and higher throughput. To configure an Aggregator stack, you must use the CLI.

The stacking commands are always available and operational, whether or not an Aggregator has a stacking module inserted. You can use the commands to pre-configure an Aggregator, so that the configuration settings are invoked when the Aggregator is attached to other Aggregator blades.

For more information about using the Aggregator stacking feature, refer to the Stacking Aggregators chapter in the Dell Networking OS Configuration Guide for the M I/O Aggregator.

You can use the following commands to manage a stack of Aggregator I/O modules:

- `power-cycle stack-unit`
- `reset stack-unit`
- `show system stack-ports`
- `show system stack-unit iom-mode`
- `show system stack-unit stack-group`
- `stack-unit iom-mode`

**power-cycle stack-unit**

To hard reset any stack unit including master unit.

**Syntax**

```
power-cycle stack-unit [0-5 | all]
```

**Defaults**

None

**Command Modes**

EXEC Privilege

**Command History**

Version 9.6.0.0

Supported on the FN I/O Aggregator.

**Usage Information**

This command is supported on the FN410S (4x10G SFP+) and the FN410T (4x10G Base-T) Aggregators.
This command is used to reset the stack-unit. The master unit can also be power cycled using this command.

reset stack-unit

Reset any designated stack member except the management unit (master unit).

Syntax
reset stack-unit 0–5 hard

Parameters
0–5
Enter the stack member unit identifier of the stack member to reset.

hard
Reset the stack unit if the unit is in a problem state.

Defaults
none

Command Modes
EXEC Privilege

Command History
Supported on the FN I/O Aggregator.

Usage Information
This command is supported on the FN410S (4x10G SFP+) and the FN410T (4x10G Base-T) Aggregators.

Resetting the management unit is not allowed and an error message displays if you try to do so. Resetting is a soft reboot, including flushing the forwarding tables.

You can run this command directly on the stack standby unit (Standby Master) to reset the standby. You cannot reset any other unit from the standby unit.

Example
Dell#show system brief
Stack MAC : 00:1e:c9:f1:00:9b
-- Stack Info --
Unit    UnitType      Status      ReqTyp        CurTyp
Version      Ports
---------------------------------------------------------------
------------------
---
0       Management     online    I/O-Aggregator I/O-Aggregator 8-3-17-46   56
1       Standby        online    I/O-Aggregator I/O-Aggregator 8-3-17-46   56
2       Member      not present
3       Member      not present
4       Member      not present
5       Member      not present

Dell#reset stack-unit 0 >>>Resetting master not allowed
% Error: Reset of master unit is not allowed.
Dell#
Dell#reset stack-unit 1
show system stack-ports

Display information about the stacking ports on all switches in the M I/O Aggregator switch stack.

Syntax

```
show system stack-ports [status | topology]
```

Parameters

- **status**
  - (OPTIONAL) Enter the keyword `status` to display the command output without the Connection field.
- **topology**
  - (OPTIONAL) Enter the keyword `topology` to limit the table to just the Interface and Connection fields.

Defaults

none

Command Modes

- EXEC
- EXEC Privilege

Command History

- **Version 8.3.17.0** Supported on the M I/O Aggregator.

Usage Information

The following describes the `show interfaces command` shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Topology</td>
<td>Lists the topology of stack ports connected: Ring, Daisy chain, or Standalone.</td>
</tr>
<tr>
<td>Interface</td>
<td>The unit/port ID of the connected stack port on this unit.</td>
</tr>
</tbody>
</table>
Field          Description
Link Speed     Link Speed of the stack port (10 or 40) in Gb/s.
Admin Status  The only currently listed status is Up.
Connection     The stack port ID to which this unit’s stack port is connected.

Example

Dell# show system stack-ports
Topology: Ring

Related Commands

- **power-cycle stack-unit**—resets the designated stack member.
- **show diag**—displays the data plane or management plane input and output statistics of the designated component of the designated stack member.
- **show system**—displays the current status of all stack members or a specific member.
**show system stack-unit fanout**

Displays the current 40GbE ports configured in fanout mode.

**Syntax**

```
show system stack-unit <unit-number> fanout[configured]
```

**Parameters**

- `<unit-number>`
  - Enter the number of the member stack unit. The range is from 0 to 5.

**Defaults**

none

**Command Modes**

- EXEC Privilege

**Command History**

- Version 8.3.17.0  
  - Supported on the M I/O Aggregator.

**Example**

```
Dell#show system stack-unit 0 fanout ?
configured Configured fan out ports
Dell#show system stack-unit 0 fanout configured ?
| Pipe through a command <cr>
Dell#show system stack-unit 0 fanout configured
Configured fan out ports in stack-unit 0
Configured Next Boot
33          33
37          37
41          41
45          45
Dell#
```

**show system stack-unit iom-mode**

Displays the current iom-mode (stack/standalone) and the mode configured after next reboot.

**Syntax**

```
show system stack-unit unit-number iom-mode
```

**Parameters**

- `<unit-number>`
  - Enter the number of the member stack unit. The range is from 0 to 5.

**Command Modes**

- EXEC Privilege

**Command History**

- Version 8.3.17.0  
  - Supported on the M I/O Aggregator.

**Example**

```
Dell#show system stack-unit all iom-mode ?
| Pipe through a command <cr>
Dell#show system stack-unit all iom-mode
Unit  Boot-Mode  Next-Boot
--------------------------------------------
0  stack  stack
```

Stacking Commands
show system stack-unit iom-uplink-speed

Display the uplink speed of the LAG bundles configured on the Flex IO modules installed on the Aggregator.

**Syntax**

```
show system stack-unit unit-number iom-uplink-speed
```

**Parameters**

- `unit number`  
  - Enter the number of the member stack unit. The range is from 0 to 5.

**Command Modes**

- EXEC Privilege

**Command History**

- Version 9.3.0.0  
  - Introduced on the M I/O Aggregator

**Usage Information**

The value under the Boot-speed field in the output of the show command indicates the uplink speed that is currently effective on the LAG bundles, whereas the value under the Next-Boot field indicates the uplink speed that is applicable for the LAG bundle after the next reboot of the switch.

**Example**

```
Dell# show system stack-unit 0 iom-uplink-speed
Unit    Boot-speed                      Next-Boot
------------------------------------------------
0         10G                               40G
```
**Command History**

**Version 8.3.17.0**

Supported on the M I/O Aggregator.

**Example**

Dell#show system stack-unit 0 stack-group ?
configured            Configured stack groups
| Pipe through a command <cr>
Dell#show system stack-unit 0 stack-group configured
Configured stack groups in stack-unit 0
Dell#show system stack-unit 0 stack-group
Stack group Ports
-----------------------------
0    0/33
1    0/37
2    0/41
3    0/45
Dell#

**Related Commands**

reload — reboots the system.

show system — displays the current status of all stack members or a specific member.

---

**stack-unit iom-mode**

Toggle the M I/O Aggregator operating mode between programmable multiplex, stand-alone, stack, and VLT modes.

**Syntax**

```
stack-unit <unit-number> iom-mode [programmable-mux | stack | standalone | vlt]
```

**Parameters**

- **unit number**
  - Enter the number of the member stack unit. The range is from 0 to 5.

- **programmable-mux**
  - Enable programmable multiplex mode.

- **stack**
  - Enable stack mode.

- **standalone**
  - Enable stand-alone mode.

- **vlt**
  - Enable virtual link trunking mode.

**Defaults**

standalone

**Command Modes**

- CONFIGURATION

**Command History**

**Version 8.3.17.0**

Supported on the M I/O Aggregator.

**Example**

Dell(conf)#stack-unit 0 iom-mode stack
% You are about to stack your IOA module, please reload the IOA
and then plug in the stacking cable for the changes to take effect.
Dell (conf) #
Dell# 

Related Commands

reload — Reboots the operating system.

show system — displays the current status of all stack members or a specific member.

stack-unit iom-mode uplink-speed

Specify the uplink speed of the member interfaces in a LAG bundle for the Aggregator that operates in standalone, stacking, or VLT mode to be 40 GbE. By default, the uplink speed of the LAG bundle is set as 10 GbE.

Syntax

stack-unit unit-number iom-mode {stack | standalone | vlt}
uplink-speed 40G

To restore the default uplink speed of the LAG bundle, which is 10 GbE, use the stack-unit unit-number iom-mode {stack | standalone | vlt} command.

Parameters

unit number <0-5> Enter the number of the member stack unit. The range is from 0 to 5.

iom-mode Denotes the operating mode of the I/O Aggregator.

stack Specify that the uplink speed of the member interfaces in a LAG bundle applies for the Aggregator in stacking mode.

standalone Specify that the uplink speed of the member interfaces in a LAG bundle applies for the Aggregator in standalone mode.

vlt Specify that the uplink speed of the member interfaces in a LAG bundle applies for the Aggregator in VLT mode.

uplink-speed 40G Set the uplink speed of the member or child interfaces of the LAG bundle to function at 40 Gigabit Ethernet per second.

Command Modes CONFIGURATION

Command History

Version 9.3.0.0 Introduced on the M I/O Aggregator

Usage Information

This functionality to set the uplink speed is available from the CMC interface when the I/O Aggregator functions as a simple MUX or a VLT node with all of the uplink interfaces configured to be member links in the same LAG bundle. You cannot configure the uplink speed to be set as 40 GbE by default if the Aggregator functions in programmable MUX mode with mutiple uplink LAG interfaces or in
stacking mode because CMC is not involved with configuration of parameters when the Aggregator operates in either of these modes with uplink interfaces being part of different LAG bundles.

When you configure the native mode to be 40 GbE, the CMC sends a notification to the IOA to set the default internal working of all of the ports to be 40 GbE after the reload of the switch is performed. After you configure the native mode that denotes the uplink speed of the module ports to be 40 GbE, you must enter the `reboot` command (not pressing the Reset button, which causes the factory default settings to be applied when the device comes up online) from the CMC to cause the configuration of the uplink speed to be effective.

### stack-unit priority

Configure the ability of a switch to become the management unit of a stack.

**Syntax**

```
stack-unit stack-number priority 1-14
```

**Parameters**

- `stack-number`
  - Enter the stack member unit identifier.
- `1-14`
  - This preference parameter allows you to specify the management priority of one backup switch over another, with 0 the lowest priority and 14 the highest. The switch with the highest priority value is chosen to become the management unit if the active management unit fails or on the next reload.

**Defaults**

0

**Command Modes**

CONFIGURATION

**Command History**

Version 9.3(0.0)  Introduced on the M I/O Aggregator.

**Related Commands**

- `reload` – reboots Dell Networking Operating System (OS).
- `show system` – displays the status of all stack members or a specific member.

### stack-unit renumber

Change the stack member ID of any stack member or a stand-alone unit.

**Syntax**

```
stack-unit 0-5 renumber 0-5
```

**Parameters**

- `0-5`
  - The first instance of this value is the stack member unit identifier, from 0 to 5, of the switch that you want add to the
You can renumber any switch, including the management unit or a stand-alone unit.

You cannot renumber a unit to a number of an active member in the stack.

When executing this command on the master, the stack reloads. When the members are renumbered, only that specific unit is reset and comes up with the new unit number.

```
Dell#stack-unit 5 renumber 4
Renumbering will reset the unit.
Warning: Interface configuration for current unit will be lost!
Proceed to renumber [confirm yes/no]:
```

**Related Commands**

- `reload` – reboots Dell Networking Operating System (OS).
- `reset stack-unit` – resets the designated S-Series stack member.
- `show system` – displays the current status of all stack members or a specific member.
System Time

The commands in this chapter configure time values on the system, either using the Dell Networking OS, the hardware, or using the network time protocol (NTP). With NTP, the switch can act only as a client to an NTP clock host.

For more information, refer to the Network Time Protocol section of the Management chapter in the Dell PowerEdge M I/O Aggregator Configuration Guide.

The NTP commands are:

- calendar set
- ntp server
- show calendar
- show clock
- clock read-calendar
- clock set
- clock summer-time date
- clock summer-time recurring
- clock timezone
- clock update-calendar

### calendar set

Set the time and date for the switch hardware clock.

**Syntax**

```
calendar set time month day year
```

**Parameters**

- **time**
  - Enter the time in hours:minutes:seconds. For the hour variable, use the 24-hour format; for example, 17:15:00 is 5:15 pm.

- **month**
  - Enter the name of one of the 12 months in English. You can enter the name of a day to change the order of the display to time day month.

- **day**
  - Enter the number of the day. The range is from 1 to 31. You can enter the name of a month to change the order of the display to time day month.
**year**  
Enter a four-digit number as the year. The range is from 1993 to 2035.

**Command Modes**  
EXEC Privilege

**Command History**  
Version 8.3.17.0  
Supported on the M I/O Aggregator.

**Usage Information**  
You can change the order of the month and day parameters to enter the time and date as time day month year.

In the switch, the hardware clock is separate from the software and is called the calendar. This hardware clock runs continuously. After the hardware clock (the calendar) is set, the operating system automatically updates the software clock after system bootup. You cannot delete the hardware clock (calendar).

To manually update the software with the hardware clock, use the `clock read-calendar` command.

**Example**  
Dell#calendar set 08:55:00 june 18 2006  
Dell#

**Related Commands**  
- `clock read-calendar` — sets the software clock based on the hardware clock.
- `clock set` — sets the software clock.
- `clock update-calendar` — sets the hardware clock based on the software clock.
- `show clock` — displays the clock settings.

---

**ntp server**  
Configure an NTP time-serving host.

**Syntax**  
```  
ntp server {hostname | ipv4-address} [key keyid] [prefer] [version number]  
```

**Parameters**  
- `ipv4-address`  
Enter an IPv4 address (A.B.C.D).
- `hostname`  
Enter the hostname of the server.
- `key keyid`  
(Optional) Enter the keyword `key` and a number as the NTP peer key. The range is from 1 to 4294967295.
- `prefer`  
(Optional) Enter the keyword `prefer` to indicate that this peer has priority over other servers.
version number

(Optionalal) Enter the keyword version and a number to correspond to the NTP version used on the server. The range is from 1 to 3.

Defaults
Not configured.

Command Modes
CONFIGURATION

Command History
Version 9.2(0.0) Supported on the M I/O Aggregator.

Usage Information
You can configure multiple time-serving hosts (up to 250). From these time-serving hosts, the operating system chooses one NTP host with which to synchronize.

Because many polls to NTP hosts can impact network performance, Dell Networking recommends limiting the number of hosts configured.

show calendar

Display the current date and time based on the switch hardware clock.

Syntax
show calendar

Command Modes
• EXEC
• EXEC Privilege

Command History
Version 8.3.17.0 Supported on the M I/O Aggregator.

Example
Dell#show calendar
12:29:34 pacific Tue May 22 2012
Dell#

Related Commands
show clock — displays the time and date from the switch software clock.

show clock
Displays the current clock settings.

Syntax
show clock [detail]

Parameters
detail
(Optionalal) Enter the keyword detail to view the source information of the clock.
**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

**Version 8.3.17.0** Supported on the M I/O Aggregator.

**Example**

Dell#show clock
12:30:04.402 pacific Tue May 22 2012
Dell#

Dell#show clock detail
12:30:26.892 pacific Tue May 22 2012
Time source is RTC hardware
Summer time starts 00:00:00 UTC Wed Mar 14 2012
Summer time ends 00:00:00 pacific Wed Nov 7 2012
Dell#

**Related Commands**

- `clock summer-time recurring` — displays the time and date from the switch hardware clock.
- `ntp server` — displays the time and date from the switch hardware clock.

---

**clock read-calendar**

Set the software clock on the switch from the information set in hardware clock (calendar).

**Syntax**

```plaintext
clock read-calendar
```

**Defaults**

Not configured.

**Command Modes**

EXEC Privilege

**Command History**

**Version 8.3.17.0** Supported on the M I/O Aggregator.

**Usage Information**

In the switch, the hardware clock is separate from the software and is called the calendar. This hardware clock runs continuously. After the hardware clock (the calendar) is set, the operating system automatically updates the software clock after system bootup.

You cannot delete this command (there is not a `no` version of this command).
clock set

Set the software clock in the switch.

Syntax

```
clock set time month day year
```

Parameters

- **time**
  - Enter the time in hours:minutes:seconds. For the hour variable, use the 24-hour format; example, 17:15:00 is 5:15 pm.

- **month**
  - Enter the name of one of the 12 months, in English. You can enter the number of a day and change the order of the display to `time day month year`.

- **day**
  - Enter the number of the day. The range is from 1 to 31. You can enter the name of a month to change the order of the display to `time month day year`.

- **year**
  - Enter a four-digit number as the year. The range is from 1993 to 2035.

Defaults

Not configured.

Command Modes

EXEC Privilege

Command History

Version 8.3.17.0 Supported on the M I/O Aggregator.

Usage Information

You can change the order of the month and day parameters to enter the time and date as `time day month year`. You cannot delete the software clock.

The software clock runs only when the software is up. The clock restarts, based on the hardware clock, when the switch reboots.

Dell Networking recommends using an outside time source, such as NTP, to ensure accurate time on the switch.

Example

```
Dell#clock set 12:11:00 21 may 2012
Dell#
```

clock summer-time date

Set a date (and time zone) on which to convert the switch to daylight saving time on a one-time basis.

Syntax

```
clock summer-time time-zone date start-month start-day start-year start-time end-month end-day end-year end-time [offset]
```

To delete a daylight saving time zone configuration, use the `no clock summer-time` command.
Parameters

- **time-zone** Enter the three-letter name for the time zone. This name is displayed in the show clock output.

- **start-month** Enter the name of one of the 12 months in English. You can enter the name of a day to change the order of the display to *time day month year*.

- **start-day** Enter the number of the day. The range is from 1 to 31. You can enter the name of a month to change the order of the display to *time day month year*.

- **start-year** Enter a four-digit number as the year. The range is from 1993 to 2035.

- **start-time** Enter the time in hours:minutes. For the hour variable, use the 24-hour format; example, 17:15 is 5:15 pm.

- **end-day** Enter the number of the day. The range is from 1 to 31. You can enter the name of a month to change the order of the display to *time day month year*.

- **end-month** Enter the name of one of the 12 months in English. You can enter the name of a day to change the order of the display to *time day month year*.

- **end-time** Enter the time in hours:minutes. For the hour variable, use the 24-hour format; example, 17:15 is 5:15 pm.

- **end-year** Enter a four-digit number as the year. The range is from 1993 to 2035.

- **offset** (OPTIONAL) Enter the number of minutes to add during the summer-time period. The range is from 1 to 1440. The default is 60 minutes.

Defaults

Not configured.

Command Modes

CONFIGURATION

Command History

Version 8.3.17.0 Supported on the M I/O Aggregator.

Related Commands

- **calendar set** — sets the hardware clock.
- **clock summer-time recurring** — sets a date (and time zone) on which to convert the switch to daylight saving time each year.
- **show clock** — displays the current clock settings.
clock summer-time recurring

Set the software clock to convert to daylight saving time on a specific day each year.

Syntax

```
clock summer-time time-zone recurring [start-week start-day
start-month start-time end-week end-day end-month end-time
[offset]]
```

To delete a daylight saving time zone configuration, use the `no clock summer-time` command.

Parameters

- **time-zone**: Enter the three-letter name for the time zone. This name is displayed in the `show clock` output. You can enter up to eight characters.

- **start-week**: (OPTIONAL) Enter one of the following as the week that daylight saving begins and then enter values for start-day through end-time:
  - `week-number`: Enter a number from 1 to 4 as the number of the week in the month to start daylight saving time.
  - `first`: Enter this keyword to start daylight saving time in the first week of the month.
  - `last`: Enter this keyword to start daylight saving time in the last week of the month.

- **start-day**: Enter the name of the day that you want daylight saving time to begin. Use English three letter abbreviations; for example, Sun, Sat, Mon, and so on. The range is from Sun to Sat.

- **start-month**: Enter the name of one of the 12 months in English.

- **start-time**: Enter the time in hours:minutes. For the hour variable, use the 24-hour format; example, 17:15 is 5:15 pm.

- **end-week**: Enter the one of the following as the week that daylight saving ends:
  - `week-number`: enter a number from 1 to 4 as the number of the week to end daylight saving time.
  - `first`: enter the keyword `first` to end daylight saving time in the first week of the month.
  - `last`: enter the keyword `last` to end daylight saving time in the last week of the month.

- **end-day**: Enter the weekday name that you want daylight saving time to end. Enter the weekdays using the three letter abbreviations; for example Sun, Sat, Mon, and so on. The range is from Sun to Sat.

- **end-month**: Enter the name of one of the 12 months in English.
end-time

Enter the time in hours:minutes:seconds. For the hour variable, use the 24-hour format; example, 17:15:00 is 5:15 pm.

offset

(Optional) Enter the number of minutes to add during the summer-time period. The range is from 1 to 1440. The default is 60 minutes.

Defaults

Not configured.

Command Modes

CONFIGURATION

Command History

Version 8.3.17.0 Supported on the M I/O Aggregator.

Related Commands

calendar set — sets the hardware clock.
clock summer-time date — sets a date (and time zone) on which to convert the switch to daylight saving time on a one-time basis.
show clock — displays the current clock settings.

clock timezone

Configure a timezone for the switch.

Syntax

clock timezone timezone-name offset

To delete a timezone configuration, use the no clock timezone command.

Parameters

timezone-name

Enter the name of the timezone. You cannot use spaces.

offset

Enter one of the following:

• a number from 1 to 23 as the number of hours in addition to universal time coordinated (UTC) for the timezone.
• a minus sign (-) then a number from 1 to 23 as the number of hours.

Defaults

Not configured.

Command Modes

CONFIGURATION

Command History

Version 8.3.17.0 Supported on the M I/O Aggregator.
Coordinated universal time (UTC) is the time standard based on the International Atomic Time standard, commonly known as Greenwich Mean time. When determining system time, include the differentiator between UTC and your local timezone. For example, San Jose, CA is the Pacific Timezone with a UTC offset of -8.

**clock update-calendar**

Set the switch hardware clock based on the software clock.

**Syntax**

```
clock update-calendar
```

**Defaults**

Not configured.

**Command Modes**

EXEC Privilege

**Command History**

Version 8.3.17.0 Supported on the M I/O Aggregator.

**Usage Information**

Use this command only if you are sure that the hardware clock is inaccurate and the software clock is correct. You cannot delete this command (there is not a no form of this command).

**Related Commands**

- `calendar set` — sets the hardware clock.
Uplink Failure Detection (UFD)

Uplink failure detection (UFD) provides detection of the loss of upstream connectivity and, if you use this with network interface controller (NIC) teaming, automatic recovery from a failed link.

**NOTE:** In Standalone, VLT, and Stacking modes, the UFD group number is 1 by default and cannot be changed.

**defer-timer**

Configure a timer that prevents unwanted flapping of downstream ports when the uplink port channel goes down and comes up.

**Syntax**

```plaintext
defer-timer seconds
```

**Defaults**

10 (Standalone mode)

**Parameters**

- **seconds**
  
  Specify the time (in seconds) to wait for the upstream port channel (LAG 128) to come back up before server ports are brought down. The range is from 1 to 120.

**Command Modes**

- UPLINK-STATE-GROUP

**Command History**

- **Version 9.2(0.0)**  
  Introduced on the M I/O Aggregator.

**Usage Information**

This command is not supported in programmable-mux mode.

**enable**

Re-enable upstream-link tracking for an uplink-state group after it has been disabled.

**Syntax**

```plaintext
enable
```

**To disable upstream-link tracking without deleting the uplink-state group, use the no enable command.**

**group-id**

Enables debugging on the specified uplink-state group. Valid group-id values are 1 to 16.

Virtual Link Trunking (VLT)

Virtual link trunking (VLT) allows physical links between two chassis to appear as a single virtual link to the network core. VLT domain configuration is automatic and you must connect the base module ports for VLT interconnect (VLTi) communication. In VLT mode, all LAGs are peer-LAG VLT enabled, so you do not need to configure any VLT LAGs. If you change to VLT mode, reboot the I/O aggregator. VLT mode VLT provides Layer 2 multipathing, creating redundancy through increased bandwidth, enabling multiple parallel paths between nodes and load-balancing traffic where alternative paths exist.

The VLT commands described in this chapter are:

- show vlt backup-link
- show vlt brief
- show vlt detail
- show vlt role
- show vlt statistics
- stack-unit iom-mode

show vlt backup-link

Displays information on the backup link operation.

**Syntax**

```text
show vlt backup-link
```

**Default**

Not configured.

**Command Modes**

EXEC

**Command History**

Version 9.2.(0.0) Introduced on the DELL Poweredge I/O Aggregator Switch IO Module.

**Example**

```text
Dell# show vlt backup-link
VLT Backup Link
----------------
Destination: 169.254.31.23
Peer HeartBeat status: Up
HeartBeat Timer Interval: 1
HeartBeat Timeout: 3
UDP Port: 34998
HeartBeat Messages Sent: 24
HeartBeat Messages Received: 25
```
**show vlt brief**

Display brief status information about VLT domains currently configured on the switch.

**Syntax**

```
show vlt brief
```

**Default**

Not configured.

**Command Modes**

EXEC

**Command History**

**Example (Brief)**

```
Dell# show vlt brief
VLT Domain Brief
------------------
Domain ID:                        1
Role:                            Primary
Role Priority:                  32768
ICL Link Status:                Up
HeartBeat Status:               Up
VLT Peer Status:                Up
Local Unit Id:                  0
Version:                        6(1)
Local System MAC address:       00:01:e8:00:ab:03
Remote System MAC address:      00:01:e8:e1:e1:c3
Configured System MAC address:  00:01:05:08:02:05
Remote system version:          6(1)
Delay-Restore timer:            90 seconds
Peer-Routing :                  Disabled
Peer-Routing-timeout timer:      0 seconds
Multicast peer-routing timeout: 150 seconds
Dell#
```

**show vlt detail**

Displays detailed status information about VLT domains currently configured on the switch.

**Syntax**

```
show vlt detail
```

**Default**

Not configured.

**Command Modes**

EXEC

**Command History**

**Example**

```
Dell# show vlt detail
Local LAG Id Peer LAG Id Local Status  Peer Status  Active VLANs
------------- ----------- ------------  ----------- ------------
```

Virtual Link Trunking (VLT)
show vlt role

Display the VLT peer status, role of the local VLT switch, VLT system MAC address and system priority, and the MAC address and priority of the locally-attached VLT device.

Syntax
show vlt role

Default
Not configured.

Command Modes
EXEC

Command History
Version 9.2.0.0
Introduced on the DELL Poweredge I/O Aggregator Switch I/O Module.

Example
Dell#show vlt role
VLT Role
----------
VLT Role: Primary
System MAC address: 00:01:05:08:02:05
Primary Role Priority: 32768
Local System MAC address: 00:01:e8:00:ab:03
Local System Role Priority: 32768
Local Unit Id: 0
Dell#

show vlt statistics

Displays statistics on VLT operations.

Syntax
show vlt statistics

Default
Not configured.

Command Modes
EXEC

Command History
Version 9.2(0.0)
Introduced on the DELL Poweredge I/O Aggregator.

Example
Dell#show vlt statistics

VLT multicast not enabled
stack-unit iom-mode

Set the M I/O Aggregator operating mode to VLT mode.

Syntax

```
stack-unit <unit-number> iom-mode vlt
```

Parameters

- **unit number**: Enter the number of the member stack unit. The range is from 0 to 5. The default is 0.
- **vlt**: Enable virtual link trunking mode.

Command Modes

- CONFIGURATION

Command History

- Version 9.2(0.0): Introduced on the DELL Poweredge I/O Aggregator Switch IO Module.

Usage Information

This command resets the operating mode to VLT. You must reboot the I/O Aggregator after using this command.
Debugging and Diagnostics

This chapter contains the following sections:

- Offline Diagnostic Commands
- Hardware Commands

Offline Diagnostic Commands

The offline diagnostics test suite is useful for isolating faults and debugging hardware. While tests are running, the Dell Networking OS results are saved as a text file (TestReport-SU-X.txt) in the flash directory. The `show file` command is available only on Master and Standby.

Important Points to Remember

- Offline diagnostics can only be run when the unit is offline.
- Offline diagnostics cannot be run in Stacking mode.
- You can only run offline diagnostics on a unit to which you are connected via the console. In other words, you cannot run diagnostics on a unit to which you are connected via a stacking link.
- Diagnostic results are stored in a file (TestReport-SU-X.txt) in the flash directory. To review the results, use the `show file` command, which prints the results to the screen.
- Diagnostics only test connectivity, not the entire data path.

The offline diagnostics commands are:

- `diag stack-unit`
- `offline stack-unit`
- `show diag`

Hardware Commands

These commands display information from a hardware sub-component or ASIC.

The hardware commands are:

- `clear hardware stack-unit`
- `show diag`
- `show hardware stack-unit`
- `show hardware system-flow`
clear hardware stack-unit

Clear statistics from selected hardware components.

Syntax

```plaintext
clear hardware stack-unit 0–5 {counters | unit 0–1 counters | cpu data-plane statistics | cpu party-bus statistics | stack-port 0–52}
```

Parameters

- **stack-unit 0–5** Enter the keywords `stack-unit` then 0 to 5 to select a particular stack member and then enter one of the following command options to clear a specific collection of data.
- **counters** Enter the keyword `counters` to clear the counters on the selected stack member.
- **unit 0–0 counters** Enter the keyword `unit` along with a port-pipe number, from 0 to 1, then the keyword `counters` to clear the counters on the selected port-pipe.
- **cpu data-plane statistics** Enter the keywords `cpu data-plane statistics` to clear the data plane statistics.
- **cpu party-bus statistics** Enter the keywords `cpu party-bus statistics` to clear the management statistics.
- **stack-port 33–56** Enter the keywords `stack-port` then the port number of the stacking port to clear the statistics of the particular stacking port. The range is from 33 to 56.

**NOTE:** You can identify stack port numbers by physical inspection of the rear modules. The numbering is the same as for the 10G ports. You can also inspect the output of the `show system stack-ports` command.

Defaults

none

Command Modes

EXEC Privilege

Command History

Version 8.3.17.0 Supported on the M I/O Aggregator.

Related Commands

- `show diag` — displays the data plane or management plane input and output statistics of the designated component of the designated stack member.

---

diag stack-unit

Run offline diagnostics on a stack unit.

Syntax

```plaintext
diag stack-unit number {alllevels | level0 | level1 | level2 [verbose no-reboot] | terminate | interactive test <id>}
```
Parameters

**number**
Enter the stack-unit number. The range is from 0 to 5.

**alllevels**
Enter the keyword `alllevels` to run the complete set of offline diagnostic tests.

**level0**
Enter the keyword `level0` to run Level 0 diagnostics. Level 0 diagnostics check for the presence of various components and perform essential path verifications. In addition, they verify the identification registers of the components on the board.

**level1**
Enter the keyword `level1` to run Level 1 diagnostics. Level 1 diagnostics is a smaller set of diagnostic tests with support for automatic partitioning. They perform status/self test for all the components on the board and test their registers for appropriate values. In addition, they perform extensive tests on memory devices (for example, SDRAM, flash, NVRAM, EEPROM, and CPLD) wherever possible. There are no tests on 10G links. At this level, stack ports are shut down automatically.

**level2**
Enter the keyword `level2` to run Level 2 diagnostics. Level 2 diagnostics are a full set of diagnostic tests with no support for automatic partitioning. Level 2 diagnostics are used primarily for on-board loopback tests and more extensive component diagnostics. Various components on the board are put into Loopback mode and test packets are transmitted through those components. These diagnostics also perform snake tests using VLAN configurations. To test 10G links, physically remove the unit from the stack.

**verbose**
Enter the keyword `verbose` to run the diagnostic in Verbose mode. Verbose mode gives more information in the output than Standard mode.

**no-reboot**
Enter the keyword `no-reboot` to avoid automatic rebooting of the chassis after completion of diagnostic execution. Generally, this option is never used because if you run the diagnostic once again without rebooting the chassis, it may cause an issue with the diagnostic results.

**terminate**
Enter the keyword `terminate` to stop the execution of the level diag that is already started using the diag stack-unit command. Once this CLI is issued, syslogs indicating the termination of the diag test is displayed. The diag results for the executed tests are stored in the flash directory (TestReport-SU-X.txt).

**interactive**
Enter the keyword `interactive` to run some individual diag tests such as POWERLEDTEST, STATUSLEDTEST and so on. The help option under the interactive command displays the list of tests that can be run.
hardware watchdog

Set the watchdog timer to trigger a reboot and restart the system.

Syntax:
```
hardware watchdog
```

Defaults:
Enabled

Command Modes:
- CONFIGURATION

Command History:
Version 8.3.17.0  Supported on the M I/O Aggregator.

Usage Information:
This command enables a hardware watchdog mechanism that automatically reboots an Dell Networking OS switch/router with a single unresponsive unit. This is a last resort mechanism intended to prevent a manual power cycle.

offline stack-unit

Place a stack unit in the offline state.

Syntax:
```
offline stack-unit number
```

Parameters:
- `number`  Enter the stack-unit number. The range is from 0 to 5.

Defaults:
none

Command Modes:
EXEC Privilege

Command History:
Version 9.4(0.0)  Supported on the FN I/O aggregator.

Usage Information:
While executing the offline stack unit CLI, the following warning message is displayed:

```
Dell#offline stack-unit 0
Warning - offline of unit will bring down all the protocols and
```

300  Debugging and Diagnostics
the unit will be operationally down, except for running
Diagnostics.
Please make sure that stacking/fanout not configured for
Diagnostics execution.
Also reboot/online command is necessary for normal operation
after the offline command is issued.
Proceed with Offline [confirm yes/no]: no
Dell#

Make sure that stacking is not configured for Diagnostics execution. Also, reboot/
online command is necessary for normal operation after the offline command is
issued.

### show diag

View diagnostics information.

**Syntax**

```
show diag {information | stack-unit number [detail | periodic | summary] | testcase}
```

**Parameters**

- **information**: Enter the keyword `information` to view current diagnostics information in the system.
- **stack-unit unit-id**: Enter the keyword `stack-unit` followed by the `unit-id` to display information on a specific stack member. The range is from 0 to 5.
- **detail** (OPTIONAL) Enter the keyword `detail` to view detailed diagnostics information.
- **summary** (OPTIONAL) Enter the keyword `summary` to view a summary of the diagnostics information. By default, the summary is displayed.
- **testcase** Enter the keyword `testcase` to view the list of all the diag tests available.

**Defaults**
Summary

**Command Modes**
EXEC Privilege

**Command History**
Version 8.3.17.0 Supported on the M I/O Aggregator.

**Example 1**

```
Dell#show diag information
Dell#show diag

Information:
---

Stack-unit Member 0: Unit diags are terminated (Stackunit Offline).
Stack-unit Member 1: Not present.
```
Stack-unit Member 2: Not present.
Stack-unit Member 3: Not present.
Stack-unit Member 4: Not present.
Stack-unit Member 5: Not present.

Example 2
(show diag stack-unit Command)

Dell#show diag stackunit 0
Diag status of Stackunit member 0:
---------------------------------------------------------------
-----------
Stackunit is currently offline.
Stackunit level0 diag issued at Tue May 15, 2012 11:11:47 AM.
Current diag status:     Unit diags are terminated.
Total number of diags:         17
Number of diags performed:     1
Number of diags passed:       1
Number of diags failed:       0
Number of diags pending:      16
Last Test executed:            POWERRAILSTATUSTEST
Last notification received at: Tue May 15, 2012 11:12:24 AM
---------------------------------------------------------------
-----------

302 Debugging and Diagnostics
show hardware stack-unit

Display the data plane or management plane input and output statistics of the designated component of the designated stack member.

Syntax

```
show hardware stack-unit 0-5 {buffer [buffer unit | port [(1-56) | all] total buffer | buffer unit (1) port (1-56) queue [(0-14) | all] buffer-info] [phy-firmware-version] [cpu data-plane statistics [stack-port 0-52] | cpu party-bus statistics | cpu private-mgmt statistics | drops [unit 0-1 [port 1-56]] | stack-port 33-56 | unit 0-0 [counters | details | port-stats [detail] | register]}
```
### Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>stack-unit 0–5</code></td>
<td>Enter the keywords <code>stack-unit</code> then 0 to 5 to select a particular stack member and then enter one of the following command options to display a collection of data based on the option entered.</td>
</tr>
<tr>
<td><code>command-option</code></td>
<td></td>
</tr>
<tr>
<td><code>buffer</code></td>
<td>Enter the keyword <code>buffer</code>. To display the total buffer statistics for the stack unit, enter the keyword <code>total-buffer</code>. Enter the keys <code>buffer unit</code> then <code>total-buffer</code> to display the buffer details per unit and mode of allocation.</td>
</tr>
<tr>
<td></td>
<td>To display the forwarding plane statistics containing the packet buffer usage per port per stack unit, enter the keywords <code>buffer unit</code> then <code>port</code> and the port number (1-56 or all), then <code>buffer-info</code>. To display the forwarding plane statistics containing the packet buffer statistics per COS per port, enter the keywords <code>buffer unit</code> and <code>port</code> (1-56), and <code>queue</code> (0-14 or all), and <code>buffer-info</code>. The buffer unit default is 1.</td>
</tr>
<tr>
<td><code>fpga</code></td>
<td>Enter the keyword <code>fpga</code>, to display fpga details.</td>
</tr>
<tr>
<td><code>fru</code></td>
<td>Enter the keyword <code>fru</code>, to display fru details.</td>
</tr>
<tr>
<td><code>phy-firmware-version</code></td>
<td>Each member of the stack is updated automatically with the latest firmware while booting as well as during OIR. To dump the physical firmware version for stack units, enter the keywords <code>phy-firmware-version</code>.</td>
</tr>
<tr>
<td><code>cpu data-plane statistics</code></td>
<td>Enter the keywords <code>cpu data-plane statistics</code>, optionally followed by the keywords <code>stack port</code> and its number from 0 to 52 to display the data plane statistics, which shows the High Gig (Higig) port raw input/output counter statistics to which the stacking module is connected.</td>
</tr>
<tr>
<td><code>cpu party-bus statistics</code></td>
<td>Enter the keywords <code>cpu party-bus statistics</code>, to display the Management plane input/output counter statistics of the Private Management interface.</td>
</tr>
<tr>
<td><code>cpu private-mgmt statistics</code></td>
<td>Enter the keywords <code>cpu private-mgmt statistics</code>, to display the Management plane input/output counter statistics of the Private Management interface.</td>
</tr>
<tr>
<td><code>drops [unit 0–0 [port 1-56]]</code></td>
<td>Enter the keyword <code>drops</code> to display internal drops on the selected stack member. Optionally, use the keyword <code>unit</code> with 0 to select port-pipe 0, and then use <code>port</code> 1-56 to select a port on that port-pipe.</td>
</tr>
<tr>
<td><code>stack-port 33–56</code></td>
<td>Enter the keywords <code>stack-port</code> and a stacking port number to select a stacking port for which to display statistics. Identify the stack port number as you would to identify a 10G port that was in the same place in one of the rear modules.</td>
</tr>
</tbody>
</table>
NOTE: You can identify stack port numbers by physical inspection of the rear modules. The numbering is the same as for the 10G ports. You can also inspect the output of the `show system stack-ports` command.

```
unit 0–0
(counters | details | port-stats [detail] | register)
```

Enter the keyword `unit` then 0 for port-pipe 0, and then enter one of the following keywords to troubleshoot errors on the selected port-pipe and to give status on why a port is not coming up to register level: `counters`, `details`, `port-stats [detail]`, or `register`.

**Defaults**

None

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

**Version 8.3.17.0**

Supported on the M I/O Aggregator.

**Example (show hardware stack-unit phy-firmware-version Command)**

```
Dell#show hardware stack-unit 1 phy-firmware-version
PortNumber Status Programmed Version SW Version
==================================================================================================
41 Present 01.05 01.05
42 Present 01.05 01.05
43 Present 01.05 01.05
44 Present 01.05 01.05
45 Not Present N/A N/A
46 Not Present N/A N/A
47 Not Present N/A N/A
48 Not Present N/A N/A
49 Present 01.06 01.06
50 Present 01.06 01.06
51 Present 01.06 01.06
52 Present 01.06 01.06

Related Commands
- show interfaces stack-unit — displays information on all interfaces on a specific stack member.
- show processes cpu — displays CPU usage information based on running processes.
- show system stack-ports — displays information about the stacking ports on all switches in the stack.
- show system — displays the current status of all stack members or a specific member.

show hardware system-flow

Display Layer 2 ACL or QoS data for the selected stack member and stack member port-pipe.

Syntax
show hardware system-flow layer2 stack-unit 0–5 port-set 0–0 [counters]

Parameters
- acl | qos
  For the selected stack member and stack member port-pipe, display which system flow entry the packet hits and what queue the packet takes as it dumps the raw system flow tables.
- stack-unit 0–5
  Enter the keywords stack-unit then 0 to 5 to select a stack member ID.
Enter the keywords `port-set` with a port-pipe number—0.

(Optional) Enter the keyword `counters` to display hit counters for the selected ACL or QoS option.

```
Dell#show hardware system-flow layer2 stack-unit 0 port-set 0 counters
```

```

!---------- output truncated ------------------!
FC Flex IO Modules

This part provides a generic, broad-level description of the operations, capabilities, and configuration commands of the Fiber Channel (FC) Flex IO module.

Data Center Bridging (DCB) for FC Flex IO Modules

Data center bridging (DCB) refers to a set of IEEE Ethernet enhancements that provide data centers with a single, robust, converged network to support multiple traffic types, including local area network (LAN), server, and storage traffic.

The Fibre Channel (FC) Flex IO module is supported on Dell Networking OS MXL 10/40GbE Switch and Dell PowerEdge IO Aggregator (IOA). The MXL and IOA switch installed with the FC Flex IO module functions as a top-of-rack edge switch that supports converged enhanced ethernet (CEE) traffic — Fibre channel over Ethernet (FCoE) for storage, inter-process communication (IPC) for servers, and Ethernet local area network (LAN) (IP cloud) for data — as well as FC links to one or more storage area network (SAN) fabrics.

The `dcb-input` and `dcb-output` configuration commands are deprecated, starting with Dell Networking OS Release 9.3.0.0 on the M I/O Aggregator. You must use the `dcb-map` command to create a DCB map to configure priority flow control (PFC) and enhanced transmission selection (ETS) on Ethernet ports that support converged Ethernet traffic.

The Dell Networking Operating System (OS) commands for data center bridging features include 802.1Qbb priority-based flow control (PFC), 802.1Qaz enhanced transmission selection (ETS), and the data center bridging exchange (DCBX) protocol.
Interworking of DCB Map With DCB Buffer Threshold Settings

DCB map functionality is supported on the Aggregator.

The `dcb-input` and `dcb-output` configuration commands are deprecated. You must use the `dcb-map` command to create a DCB map to configure priority flow control (PFC) and enhanced transmission selection (ETS) on Ethernet ports that support converged Ethernet traffic.

Configure the `dcb-buffer-threshold` command and its related parameters only on ports with either auto configuration or `dcb-map` configuration. This command is not supported on existing front-panel interfaces or stack ports that are configured with the `dcb-input` or `dcb-output` commands. Similarly, if the `dcb-buffer-threshold` configuration is present on a stack port or any interface, the `dcb-input` or `dcb-output` policies cannot be applied on those interfaces.

Example: When the `dcb-buffer-threshold` policy is applied on interfaces or stack ports with the `dcb-input` or `dcb-output` policies, the following error message is displayed:

```
%Error: dcb-buffer-threshold not supported on interfaces with deprecated commands
```

Example: When the `dcb-input` or `dcb-output` policy is configured on interfaces or stack ports with the `dcb-buffer` threshold policy, the following error message is displayed:

```
%Error: Deprecated command is not supported on interfaces with dcb-buffer-threshold configured
```

You must not modify the `service-class dot1p` mappings when any buffer-threshold-policy is configured on the system.

Dell(conf)#service-class dot1p-mapping dot1p0 3

% Error: PFC buffer-threshold policies conflict with dot1p mappings. Please remove all dcb-buffer-threshold policies to change mappings.

The `show dcb` command has been enhanced to display the following additional buffer-related information:

```
Dell (conf)#do show dcb
dcb Status : Enabled
PFC Queue Count : 2 --Indicate the PFC queue configured.
Total buffer (lossy + lossless)(in KB): 7787 --Total buffer space for lossy and lossless queues
PFC total buffer (in KB): 6526 --Indicates the total buffer (configured or default)
PFC shared buffer (in KB): 832 --Indicates the shared buffer (Configured or default)
PFC available buffer (in KB): 5694 --Indicates remaining available buffers for PFC that are free to be allocated
```

**dcb-map**

Create a DCB map to configure priority flow control (PFC) and enhanced transmission selection (ETS) on Ethernet ports that support converged Ethernet traffic. Apply the DCB map to an Ethernet interface.

**Syntax**

```
dcb-map map-name
```
Parameters

**map-name**

Enter a DCB map name. The maximum number of alphanumeric characters is 32.

Defaults

None. There are no pre-configured PFC and ETS settings on S5000 Ethernet interfaces.

Command Modes

CONFIGURATION

INTERFACE

Command History

Version 9.3(0.0) Introduced on the FC Flex IO module installed in the M I/O Aggregator.

Usage Information

A DCB map is a template used to configure DCB parameters and apply them on converged Ethernet interfaces. DCB parameters include priority-based flow control (PFC) and enhanced traffic selection (ETS).

To display the PFC and ETS settings in DCB maps, enter the `show qos dcb-map` command.

Use the `dcb-map` command to create a DCB map to specify PFC and ETS settings and apply it on Ethernet ports. After you apply a DCB map to an interface, the PFC and ETS settings in the map are applied when the Ethernet port is enabled. DCBx is enabled on Ethernet ports by default.

The `dcb-map` command is supported only on physical Ethernet interfaces.

To remove a DCB map from an interface, enter the `no dcb-map map-name` command in Interface configuration mode.

Related Commands

- `show qos dcb-map`— Displays the dcb-map profiles configured on the system.
- `dcb-map stack-unit all stack-ports all`— Applies a DCB map on all ports of a switch stack.

**priority-pgid**

Assign 802.1p priority traffic to a priority group in a DCB map.

### FC Flex IO Modules with M I/O Aggregator

**Syntax**

```
priority-pgid dot1p0_group-num dot1p1_group-num dot1p2_group-num dot1p3_group-num dot1p4_group-num dot1p5_group-num dot1p6_group-num dot1p7_group-num
```

**Parameters**

- `dot1p0_group-num`
  - Enter the priority group number for each 802.1p class of traffic in a DCB map.
PFC and ETS settings are not pre-configured on Ethernet ports. You must use the `dcb-map` command to configure different groups of 802.1p priorities with PFC and ETS settings.

Using the `priority-pgid` command, you assign each 802.1p priority to one priority group. A priority group consists of 802.1p priority values that are grouped together for similar bandwidth allocation and scheduling, and that share latency and loss requirements. All 802.1p priorities mapped to the same queue must be in the same priority group. For example, the `priority-pgid 0 0 0 1 2 4 4 4` command creates the following groups of 802.1p priority traffic:

- Priority group 0 contains traffic with dot1p priorities 0, 1, and 2.
- Priority group 1 contains traffic with dot1p priority 3.
- Priority group 2 contains traffic with dot1p priority 4.
- Priority group 4 contains traffic with dot1p priority 5, 6, and 7.

To remove a priority-pgid configuration from a DCB map, enter the `no priority-pgid` command.

**Related Commands**

- `dcb-map` — Creates a DCB map to configure PFC and ETS parameters and applies the PFC and ETS settings on Ethernet ports.
priority-group bandwidth pfc — Configures the ETS bandwidth allocation and the PFC setting used to manage the port traffic in an 802.1p priority group.

priority-group bandwidth pfc

Configure the ETS bandwidth allocation and PFC mode used to manage port traffic in an 802.1p priority group.

**FC Flex IO Modules with M I/O Aggregator**

**Syntax**

```
priority-group group-num {bandwidth percentage| strict-priority} pfc {on | off}
```

**Parameters**

- `priority-group group-num`
  - Enter the keyword `priority-group` followed by the number of an 802.1p priority group. Use the `priority-pgid` command to create the priority groups in a DCB map.

- `bandwidth percentage`
  - Enter the keyword `bandwidth` followed by a bandwidth percentage allocated to the priority group. The range of valid values is 1 to 100. The sum of all allocated bandwidth percentages in priority groups in a DCB map must be 100%.

- `strict-priority`
  - Configure the priority-group traffic to be handled with strict priority scheduling. Strict-priority traffic is serviced first, before bandwidth allocated to other priority groups is made available.

- `pfc {on | off}`
  - Configure whether priority-based flow control is enabled (on) or disabled (off) for port traffic in the priority group.

**Defaults**

None

**Command Modes**

DCB MAP

**Command History**

Version 9.3(0.0)

Introduced on the FC Flex IO module installed in the M I/O Aggregator.

**Usage Information**

Use the `dcb-map` command to configure priority groups with PFC and/or ETS settings and apply them to Ethernet interfaces.

Use the `priority-pgid` command to map 802.1p priorities to a priority group. You can assign each 802.1p priority to only one priority group. A priority group consists of 802.1p priority values that are grouped together for similar bandwidth allocation and scheduling, and that share latency and loss requirements. All 802.1p priorities mapped to the same queue must be in the same priority group.

Repeat the `priority-group bandwidth pfc` command to configure PFC and ETS traffic handling for each priority group in a DCB map.

You can enable PFC on a maximum of two priority queues.
If you configure more than one priority group as strict priority, the higher numbered priority queue is given preference when scheduling data traffic.

If a priority group does not use its allocated bandwidth, the unused bandwidth is made available to other priority groups.

To remove a priority-group configuration in a DCB map, enter the `no priority-group bandwidth pfc` command.

By default, equal bandwidth is assigned to each dot1p priority in a priority group. Use the `bandwidth` parameter to configure the bandwidth percentage assigned to a priority group. The sum of the bandwidth allocated to all priority groups in a DCB map must be 100% of the bandwidth on the link. You must allocate at least 1% of the total port bandwidth to each priority group.

**Related Commands**
- `dcb-map` — Creates a DCB map to configure PFC and ETS parameters and applies the PFC and ETS settings on Ethernet ports.
- `priority-pgid` — Configures the 802.1p priority traffic in a priority group for a DCB map.

**dcb-map stack-unit all stack-ports all**

Apply the specified DCB map on all ports of the switch stack.

**FC Flex IO Modules with I/O Aggregator**

**Syntax**
```
dcb-map stack-unit all stack-ports all [dcb-map-name]
```

To remove the PFC and ETS settings in a DCB map from all stack units, use the `no dcb-map stack-unit all stack-ports all command`.

**Parameters**
- `dcb-map-name` Enter the name of the DCB map.

**Defaults**
None

**Command Modes**
CONFIGURATION

**Command History**
Version 9.3(0.0) Introduced on the FC Flex IO Modules with I/O Aggregator.

**Usage Information**
The `dcb-map stack-unit all stack-ports all command` overwrites any previous DCB maps applied to stack ports.

**Related Commands**
- `dcb-map` — creates a DCB map to configure PFC and ETS parameters and applies the PFC and ETS settings on Ethernet ports.
**show qos dcb-map**
Display the DCB parameters configured in a specified DCB map.

**FC Flex IO Modules with M I/O Aggregator**

**Syntax**

```
show qos dcb-map map-name
```

**Parameters**

- `map-name` Displays the PFC and ETS parameters configured in the specified map.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version 9.3(0.0) Introduced on the FC Flex IO module installed in the M I/O Aggregator.

**Usage Information**

Use the `show qos dcb-map` command to display the enhanced transmission selection (ETS) and priority-based flow control (PFC) parameters used to configure server-facing Ethernet ports. S5000 Ethernet ports are DCBx-enabled by default.

The following table describes the `show qos dcb-map` output shown in the example below.

<table>

<tr>
<td>PG</td>
<td>Priority group configured in the DCB map.</td>
</tr>
<tr>
<td>TSA</td>
<td>Transmission scheduling algorithm used by the priority group: Enhanced Transmission Selection (ETS).</td>
</tr>
<tr>
<td>BW</td>
<td>Percentage of bandwidth allocated to the priority group.</td>
</tr>
<tr>
<td>PFC</td>
<td>PFC setting for the priority group: On (enabled) or Off.</td>
</tr>
<tr>
<td>Priorities</td>
<td>802.1p priorities configured in the priority group.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell# show qos dcb-map dcbmap2

State      :Complete
PfcMode:ON

-----------------------
PG:0      TSA:ETS      BW:50      PFC:OFF
Priorities:0 1 2 4 5 6 7
```
Related Commands

dcb-map — creates a DCB map to configure PFC and ETS parameters and applies the PFC and ETS settings on Ethernet ports.

DCB Command

The following DCB command is supported on the FC Flex IO module installed in the M I/O Aggregator.

dcb-enable

Enable data center bridging.

Syntax
dcb enable

To disable DCB, use the no dcb enable command.

Defaults
none

Command Modes CONFIGURATION

Command History
Version 9.3.0.0 Introduced on the FC Flex IO module installed in the M I/O Aggregator.

Usage Information
DCB is not supported if you enable link-level flow control on one or more interfaces.

DCBX Commands

The following DCBX commands are supported on the FC Flex IO module installed in the M I/O Aggregator.

advertise dcbx-appln-tlv

On a DCBX port with a manual role, configure the application priority TLVs advertised on the interface to DCBX peers.

Syntax
advertise dcbx-appln-tlv {fcoe | iscsi}

To remove the application priority TLVs, use the no advertise dcbx-appln-tlv {fcoe | iscsi} command.

Parameters

(fcoe | iscsi) Enter the application priority TLVs, where:

- fcoe: enables the advertisement of FCoE in application priority TLVs.
- iscsi: enables the advertisement of iSCSI in application priority TLVs.

Defaults
Application priority TLVs are enabled to advertise FCoE and iSCSI.
Command Modes
PROTOCOL LLDP

Command History
Version 9.3.0.0 Introduced on the FC Flex IO module installed in the M I/O Aggregator and MXL 10/40GbE Switch

Usage Information
To disable TLV transmission, use the **no** form of the command; for example, **no advertise dcbx-appln-tlv iscsi**.

**advertise dcbx-tlv**

On a DCBX port with a manual role, configure the PFC and ETS TLVs advertised to DCBX peers.

**Syntax**
```
advertise dcbx-tlv (ets-conf | ets-reco | pfc) [ets-conf | ets-reco | pfc] [ets-conf | ets-reco | pfc]
```

To remove the advertised ETS TLVs, use the **no advertise dcbx-tlv** command.

**Parameters**

| (ets-conf | ets-reco | pfc) | Enter the PFC and ETS TLVs advertised, where: |
| --- | --- | --- |
| ets-conf | enables the advertisement of ETS configuration TLVs. |
| ets-reco | enables the advertisement of ETS recommend TLVs. |
| pfc | enables the advertisement of PFC TLVs. |

**Defaults**
All PFC and ETS TLVs are advertised.

**Command Modes**
PROTOCOL LLDP

**Command History**
Version 9.3.0.0 Introduced on the FC Flex IO module installed in the M I/O Aggregator and MXL 10/40GbE Switch

**Usage Information**
You can configure the transmission of more than one TLV type at a time; for example: **advertise dcbx-tlv ets-conf ets-reco**.

You can enable ETS recommend TLVs (**ets-reco**) only if you enable ETS configuration TLVs (**ets-conf**). To disable TLV transmission, use the **no** form of the command; for example, **no advertise dcbx-tlv pfc ets-reco**.

DCBX requires that you enable LLDP to advertise DCBX TLVs to peers.

Configure DCBX operation at the INTERFACE level on a switch or globally on the switch. To verify the DCBX configuration on a port, use the **show interface dcbx detail** command.
**dcbx port-role**
Configure the DCBX port role the interface uses to exchange DCB information.

**Syntax**
```
dcbx port-role {config-source | auto-downstream | auto-upstream | manual}
```
To remove DCBX port role, use the `no dcbx port-role {config-source | auto-downstream | auto-upstream | manual}` command.

**Parameters**
- `config-source` Enter the DCBX port role, where:
  - `config-source`: configures the port to serve as the configuration source on the switch.
- `auto-upstream` configures the port to receive a peer configuration. The configuration source is elected from auto-upstream ports.
- `auto-downstream` configures the port to accept the internally propagated DCB configuration from a configuration source.
- `manual` configures the port to operate only on administer-configured DCB parameters. The port does not accept a DCB configuration received form a peer or a local configuration source.

**Defaults**
Manual

**Command Modes**
- INTERFACE PROTOCOL LLDP

**Command History**
- **Version 9.3.0.0** Introduced on the FC Flex IO module installed in the M I/O Aggregator and MXL 10/40GbE Switch

**Usage Information**
DCBX requires that you enable LLDP to advertise DCBX TLVs to peers.

Configure DCBX operation at the INTERFACE level on a switch or globally on the switch. To verify the DCBX configuration on a port, use the `show interface dcbx detail` command.

**dcbx version**
Configure the DCBX version used on the interface.

**Syntax**
```
dcbx version {auto | cee | cin | ieee-v2.5}
```
To remove the DCBX version, use the `dcbx version {auto | cee | cin | ieee-v2.5}` command.

**Parameters**
- `auto | cee | cin | ieee-v2.5` Enter the DCBX version type used on the interface, where:

FC Flex IO Modules
auto: configures the port to operate using the DCBX version received from a peer.
cee: configures the port to use CDD (Intel 1.01).
cin: configures the port to use Cisco-Intel-Nuova (DCBX 1.0).
ieee-v2: configures the port to use IEEE 802.1az (Draft 2.5).

Defaults

Command Modes
INTERFACE PROTOCOL LLDP

Command History
Version 9.3.0.0 Introduced on the FC Flex IO module installed in the M I/O Aggregator and MXL 10/40GbE Switch

Usage Information
DCBX requires that you enable LLDP to advertise DCBX TLVs to peers.
Configure DCBX operation at the INTERFACE level on a switch or globally on the switch. To verify the DCBX configuration on a port, use the show interface dcbx detail command.

debg dcbx
Enable DCBX debugging.

Syntax
debg dcbx {all | auto-detect-timer | config-exchng | fail | mgmt | resource | sem | tlv}

To disable DCBX debugging, use the no debg dcbx command.

Parameters
(all | auto-detect-timer | config-exchng | fail | mgmt | resource | sem | tlv)
Enter the type of debugging, where:

- all: enables all DCBX debugging operations.
- auto-detect-timer: enables traces for DCBX auto-detect timers.
- config-exchng: enables traces for DCBX configuration exchanges.
- fail: enables traces for DCBX failures.
- mgmt: enables traces for DCBX management frames.
- resource: enables traces for DCBX system resource frames.
- sem: enables traces for the DCBX state machine.
- tlv: enables traces for DCBX TLVs.

Defaults

none

### fcoe priority-bits
Configure the FCoE priority advertised for the FCoE protocol in application priority TLVs.

**Syntax**
```
fcoe priority-bits priority-bitmap
```
To remove the configured FCoE priority, use the `no fcoe priority-bits` command.

**Parameters**
- `priority-bitmap` Enter the priority-bitmap range. The range is from 1 to FF.

**Defaults**
0x8

**Command Modes**
PROTOCOL LLDP

**Command History**
Version 9.3.0.0 | Introduced on the FC Flex IO module installed in the M I/O Aggregator and MXL 10/40GbE Switch

**Usage Information**
This command is available at the global level only.

### iscsi priority-bits
Configure the iSCSI priority advertised for the iSCSI protocol in application priority TLVs.

**Syntax**
```
iscsi priority-bits priority-bitmap
```
To remove the configured iSCSI priority, use the `no iscsi priority-bits` command.

**Parameters**
- `priority-bitmap` Enter the priority-bitmap range. The range is from 1 to FF.

**Defaults**
0x10

**Command Modes**
PROTOCOL LLDP

**Command History**
Version 9.3.0.0 | Introduced on the FC Flex IO module installed in the M I/O Aggregator and MXL 10/40GbE Switch

**Usage Information**
This command is available at the global level only.
**show interface dcbx detail**

Displays the DCBX configuration on an interface.

**Syntax**

```
show interface port-type slot/port dcbx detail
```

**Parameters**

- **port-type**
  - Enter the port type.
- **slot/port**
  - Enter the slot/port number.

**Command Modes**

CONFIGURATION

**Command History**

Version 9.3.0.0
- Introduced on the FC Flex IO module installed in the M I/O Aggregator and MXL 10/40GbE Switch.

**Usage Information**

To clear DCBX frame counters, use the `clear dcbx counters interface stack-unit/port` command.

The following describes the `show interface dcbx detail` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>

PFC Commands

The following PFC commands are supported on the FC Flex IO module installed in the M I/O Aggregator.

clear pfc counters

Clear the PFC TLV counters and PFC statistics on an interface or stack unit.

Syntax

```
clear pfc counters [port-type slot/port | stack-unit {unit number | all } all stack-ports all] | interface {statistics}
```

Parameters

- **port-type**
  Enter the keywords `port-type` then the slot/port information.

- **stack-unit unit number**
  Enter the keywords `stack-unit` then the stack-unit number to be cleared.

- **all stack-ports all**
  Enter the keywords `all stack-ports all` to clear the counters on all interfaces.
**show dcb**
Displays the data center bridging status, the number of PFC-enabled ports, and the number of PFC-enabled queues.

**Syntax**
```
show dcb [stack-unit unit-number]
```

**Parameters**
- **unit number**: Enter the DCB unit number. The range is from 0 to 5.

**Command Modes**
EXEC Privilege

**Command History**
Version 9.3.0.0
Introduced on the FC Flex IO module installed in the M I/O Aggregator and MXL 10/40GbE Switch.

**Usage Information**
Specify a stack-unit number on the Master switch in a stack.

**Example**
```
Dell# show dcb
stack-unit 0 port-set 0
  DCB Status : Enabled
  PFC Port Count : 56 (current), 56 (configured)
  PFC Queue Count : 2 (current), 2 (configured)
```

**show interface pfc**
Displays the PFC configuration applied to ingress traffic on an interface, including priorities and link delay.

**Syntax**
```
show interface port-type slot/port pfc {summary | detail}
```

**Parameters**
- **port-type slot/port pfc**: Enter the port-type slot and port PFC information.
- **(summary | detail)**: Enter the keyword summary for a summary list of results or enter the keyword detail for a full list of results.

**Command Modes**
INTERFACE
Command History

Version 9.3.0.0  Introduced on the FC Flex IO module installed in the M I/O Aggregator and MXL 10/40GbE Switch.

Usage Information

To clear the PFC TLV counters, use the `clear pfc counters interface port-type slot/port` command.

The following describes the `show interface pfc summary` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>

Remote FCOE PriorityMap is 0x8
Remote ISCSI PriorityMap is 0x8
0 Input TLV pkts, 1 Output TLV pkts, 0 Error pkts,
0 Pause Tx pkts, 0 Pause Rx pkts

**show interface pfc statistics**
Displays counters for the PFC frames received and transmitted (by dot1p priority class) on an interface.

**Syntax**
show interface port-type slot/port pfc statistics

**Parameters**
- **port-type**
  Enter the port type.
- **slot/port**
  Enter the slot/port number.

**Command Modes**
INTERFACE

**Command History**
Version 9.3.0.0  Introduced on the FC Flex IO module installed in the M I/O Aggregator and MXL 10/40GbE Switch.

**Example**
Dell#show interfaces te 0/3 pfc statistics
Interface TenGigabitEthernet 0/3

FC Flex IO Modules  337
**show stack-unit stack-ports pfc details**

Displays the PFC configuration applied to ingress traffic on stacked ports, including PFC Operational mode on each unit with the configured priorities, link delay, and number of pause packets sent and received.

**Syntax**

```
show stack-unit {all | stack-unit} stack-ports {all | port-number} pfc details
```

**Parameters**

- **stack-unit**: Enter the stack unit.
- **port-number**: Enter the port number.

**Command Modes**

CONFIGURATION

**Command History**

Version 9.3.0.0  Introduced on the FC Flex IO module installed in the M I/O Aggregator and MXL 10/40GbE Switch.

**Example**

```
Dell(conf)# show stack-unit all stack-ports all pfc details

stack unit 0 stack-port all
  Admin mode is On
  Admin is enabled, Priority list is 4-5
  Local is enabled, Priority list is 4-5
  Link Delay 45556 pause quantum
  0 Pause Tx pkts, 0 Pause Rx pkts

stack unit 1 stack-port all
  Admin mode is On
  Admin is enabled, Priority list is 4-5
  Local is enabled, Priority list is 4-5
  Link Delay 45556 pause quantum
  0 Pause Tx pkts, 0 Pause Rx pkts
```

---

**Fibre Channel over Ethernet for FC Flex IO Modules**

FCoE provides a converged Ethernet network that allows the combination of storage-area network (SAN) and LAN traffic on a Layer 2 link by encapsulating Fibre Channel data into Ethernet frames.

The Fibre Channel (FC) Flex IO module is supported on Dell Networking Operating System (OS) MXL 10/40GbE Switch and M I/O Aggregator (IOA). The MXL and IOA switch installed with the FC Flex IO module functions as a top-of-rack edge switch that supports converged enhanced Ethernet (CEE) traffic — Fibre channel over Ethernet (FCoE) for storage, Interprocess Communication (IPC) for servers, and Ethernet local area network (LAN) (IP cloud) for data — as well as FC links to one or more storage area network (SAN) fabrics.

FCoE works with the Ethernet enhancements provided in Data Center Bridging (DCB) to support lossless (no-drop) SAN and LAN traffic. In addition, DCB provides flexible bandwidth sharing for different traffic types, such as LAN and SAN, according to 802.1p priority classes of service. DCBx should be enabled on the system before the FIP snooping feature is enabled.

All of the commands that are supported for FCoE on the MXL and I/O Aggregator apply to the FC Flex IO modules. Similarly, all of the configuration procedures and the settings that are applicable for FCoE on the MXL and I/O Aggregator are valid for the FC Flex IO modules.
NPIV Proxy Gateway for FC Flex IO Modules
The N-port identifier virtualization (NPIV) Proxy Gateway (NPG) feature provides FCoE-FC bridging capability on the M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module switch, allowing server CNAs to communicate with SAN fabrics over the M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module.

To configure the M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module to operate as an NPIV proxy gateway, use the following commands:

show fcoe-map
Display the Fibre Channel and FCoE configuration parameters in FCoE maps.

Syntax

show fcoe-map [brief | map-name]

Parameters

brief Displays an overview of currently configured FCoE maps.
map-name Displays the FC and FCoE configuration parameters in a specified FCoE map. The FCoE map is applied on Ethernet (FCoE) and FC ports to transmit FC storage traffic to a specified fabric.

Command Modes

• EXEC
• EXEC Privilege

Command History

Version 9.3(0.0) Introduced on the M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module.

Usage Information

Use the show fcoe-map command to display the FC and FCoE parameters used to configure server-facing Ethernet (FCoE) and fabric-facing FC ports in all FCoE maps on an M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module NPIV proxy gateway.

In each FCoE map, the values for the fabric ID and FC-MAP that identify the SAN fabric to which FC storage traffic is sent, and the FCoE VLAN to be used must be unique.

An FCoE map is used to identify the SAN fabric to which FCoE storage traffic is sent and to virtualize M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module FC ports so that they appear to downstream server CNA ports as FCoE Forwarder (FCF) ports on an FCoE network.

The following table describes the show fcoe-map brief output shown in the example below.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fabric-Name</td>
<td>Name of a SAN fabric.</td>
</tr>
</tbody>
</table>
**Field** | **Description**
--- | ---
**Fabric ID** | The ID number of the SAN fabric to which FC traffic is forwarded.
**VLAN ID** | The dedicated FCoE VLAN used to transport FCoE storage traffic between servers and a fabric over the NPIV proxy gateway. The configured VLAN ID must be the same as the fabric ID.
**FC-MAP** | FCoE MAC address-prefix value - The unique 24-bit MAC address prefix that identifies a fabric.
**FCF Priority** | The priority used by a server to select an upstream FCoE forwarder.
**Config-State** | Indicates whether the configured FCoE and FC parameters in the FCoE map are valid: Active (all mandatory FCoE and FC parameters are correctly configured) or Incomplete (either the FC-MAP value, fabric ID, or VLAN ID are not correctly configured).
**Oper-State** | Operational status of link to the fabric: Up (link is up and transmitting FC traffic), Down (link is down and not transmitting FC traffic), Link-wait (link is up and waiting for FLOGI to complete on peer FC port), or Removed (port has been shut down).

The following table describes the `show fcoe-map map-name` output shown in the example below.

**Field** | **Description**
--- | ---
**Fabric-Name** | Name of a SAN fabric.
**Fabric ID** | The ID number of the SAN fabric to which FC traffic is forwarded.
**VLAN ID** | The dedicated FCoE VLAN used to transport FCoE storage traffic between servers and a fabric over the NPIV proxy gateway. The configured VLAN ID must be the same as the fabric ID.
**VLAN priority** | FCoE traffic uses VLAN priority 3. (This setting is not user-configurable.)
**FC-MAP** | FCoE MAC address-prefix value - The unique 24-bit MAC address prefix that identifies a fabric.
**FKA-ADV-period** | Time interval (in seconds) used to transmit FIP keepalive advertisements.
**FCF Priority** | The priority used by a server to select an upstream FCoE forwarder.
**Config-State** | Indicates whether the configured FCoE and FC parameters in the FCoE map are valid: Active (all mandatory FCoE and FC parameters are correctly configured) or Incomplete (either the FC-MAP value, fabric ID, or VLAN ID are not correctly configured).
<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>

<td>FC parameters are correctly configured) or Incomplete (either the FC-MAP value, fabric ID, or VLAN ID are not correctly configured).</td>
</tr>
<tr>
<td>Oper-State</td>
<td>Operational status of link to the fabric: Up (link is up and transmitting FC traffic), Down (link is down and not transmitting FC traffic), Link-wait (link is up and waiting for FLOGI to complete on peer FC port), or Removed (port has been shut down).</td>
</tr>
<tr>
<td>Members</td>
<td>Members are M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module Ethernet and FC ports that are members of the dedicated FCoE VLAN that carries storage traffic to the specified fabric.</td>
</tr>
</tbody>
</table>

**Example**

Dell#show fcoe-map brief
Fabric-Name  Fabric-Id  Vlan-Id  FC-MAP  FCF-Priority Config-State Oper-State
  test        16          16      0efc02  128  ACTIVE  UP
  cnatest     1003         1003    0efc03  128  ACTIVE  UP
  sitest      1004         1004    0efc04  128  ACTIVE  DOWN

Dell#show fcoe-map si
  Fabric Name  si
  Fabric Id    1004
  Vlan Id      1004
  Vlan priority 3
  FC-MAP       0efc04
  PKA-ADV-Period 8
  FCF Priority 128
  Config-State  ACTIVE
  Oper-State    DOWN

**Related Commands**

- **fcoe-map** — creates an FCoE map which contains the parameters used in the communication between servers and a SAN fabric.

**show npiv devices**

Display the FCoE and FC devices currently logged in to an M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module NPIV proxy gateway.

M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module

**Syntax**

show npiv devices [brief]

**Parameters**

- **brief**

  Displays an overview of current server CNA-fabric connections over an M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module NPIV proxy gateway.
Command Modes

- EXEC
- EXEC Privilege

Command History

Version 9.3(0.0)  Introduced on the M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module.

Usage Information

Use the `show npiv devices` command to display information on the server CNA, server-facing Ethernet and fabric-facing FC ports, and the SAN fabric in each server-fabric connection over an M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module NPIV proxy gateway.

The following table describes the `show npiv devices brief` output shown in the example below.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENode-Intf</td>
<td>M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module Ethernet interface (slot/port) to which a server CNA is connected.</td>
</tr>
<tr>
<td>ENode-WWPN</td>
<td>Worldwide port name (WWPN) of a server CNA port.</td>
</tr>
<tr>
<td>FCoE-Vlan</td>
<td>VLAN ID of the dedicated VLAN used to transmit FCoE traffic to and from the fabric.</td>
</tr>
<tr>
<td>Fabric-Intf</td>
<td>Fabric-facing Fibre Channel port (slot/port) on which FC traffic is transmitted to the specified fabric.</td>
</tr>
<tr>
<td>Fabric-Map</td>
<td>Name of the FCoE map containing the FCoE/FC configuration parameters for the server CNA-fabric connection.</td>
</tr>
<tr>
<td>LoginMethod</td>
<td>Method used by the server CNA to log in to the fabric; for example: FLOGI - ENode logged in using a fabric login (FLOGI).</td>
</tr>
<tr>
<td></td>
<td>FDISC - ENode logged in using a fabric discovery (FDISC).</td>
</tr>
<tr>
<td>Status</td>
<td>Operational status of the link between a server CNA port and a SAN fabric: Logged In - Server has logged in to the fabric and is able to transmit FCoE traffic.</td>
</tr>
</tbody>
</table>

Example

Dell# show npiv devices brief

Total NPIV Devices = 2
---------------------------------------------------------------------
<table>
<thead>
<tr>
<th>ENode-Intf</th>
<th>ENode-WWPN</th>
<th>FCoE-Vlan</th>
<th>Fabric-Intf</th>
<th>Fabric-Map</th>
<th>LoginMethod</th>
<th>Status</th>

</thead>
</table>
---------------------------------------------------------------------
Usage Information

The following table describes the `show npiv devices` output shown in the example below.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENode [number]</td>
<td>A server CNA that has successfully logged in to a fabric over an M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module Ethernet port in ENode mode.</td>
</tr>
<tr>
<td>Enode MAC</td>
<td>MAC address of a server CNA port.</td>
</tr>
<tr>
<td>Enode Intf</td>
<td>Port number of a server-facing Ethernet port operating in ENode mode.</td>
</tr>
<tr>
<td>FCF MAC</td>
<td>Fibre Channel forwarder MAC: MAC address of M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module FCF interface.</td>
</tr>
<tr>
<td>Fabric Intf</td>
<td>Fabric-facing Fibre Channel port (slot/port) on which FCoE traffic is transmitted to the specified fabric.</td>
</tr>
<tr>
<td>FCoE VLAN</td>
<td>ID of the dedicated VLAN used to transmit FCoE traffic from a server CNA to a fabric and configured on both the server-facing M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module port and server CNA port.</td>
</tr>
<tr>
<td>Fabric Map</td>
<td>Name of the FCoE map containing the FCoE/FC configuration parameters for the server CNA-fabric connection.</td>
</tr>
<tr>
<td>Enode WWPN</td>
<td>Worldwide port name of the server CNA port.</td>
</tr>
<tr>
<td>Enode WWNN</td>
<td>Worldwide node name of the server CNA.</td>
</tr>
<tr>
<td>FCoE MAC</td>
<td>Fabric-provided MAC address (FPMA). The FPMA consists of the FC-MAP value in the FCoE map and the FC-ID provided by the fabric after a successful FLOGI. In the FPMA, the most significant bytes are the FC-MAP; the least significant bytes are the FC-ID.</td>
</tr>
<tr>
<td>FC-ID</td>
<td>FC port ID provided by the fabric.</td>
</tr>
<tr>
<td>LoginMethod</td>
<td>Method used by the server CNA to log in to the fabric; for example, FLOGI or FDISC.</td>
</tr>
<tr>
<td>Secs</td>
<td>Number of seconds that the fabric connection is up.</td>
</tr>
<tr>
<td>State</td>
<td>Status of the fabric connection: logged in.</td>
</tr>
</tbody>
</table>

Example

```plaintext
ENode[0]:
ENode MAC : 00:10:18:fl:94:21
ENode Intf : Te 0/12
FCF MAC : 5c:f9:dd:ef:10:c8
Fabric Intf : Fc 0/5

**Related Commands**

- **dcb-map** — creates a DCB map to configure DCB parameters on Ethernet ports that support converged Ethernet traffic.

- **fcoe-map** — creates an FCoE map which contains the parameters used in the communication between servers and a SAN fabric.
PMUX Mode of the I/O Aggregator

This chapter describes the various CLI commands applicable in PMUX mode.

Data Center Bridging (DCB)

Data center bridging (DCB) refers to a set of IEEE Ethernet enhancements that provide data centers with a single, robust, converged network to support multiple traffic types, including local area network (LAN), server, and storage traffic.

The Dell Networking Operating System (OS) commands for data center bridging features include 802.1Qbb priority-based flow control (PFC), 802.1Qaz enhanced transmission selection (ETS), and the data center bridging exchange (DCBX) protocol.

advertise dcbx-appln-tlv

On a DCBX port with a manual role, configure the application priority TLVs advertised on the interface to DCBX peers.

Syntax

advertise dcbx-appln-tlv {fcoe | iscsi}

To remove the application priority TLVs, use the no advertise dcbx-appln-tlv {fcoe | iscsi} command.

Parameters

{fcoe | iscsi}

Enter the application priority TLVs, where:

- fcoe: enables the advertisement of FCoE in application priority TLVs.
- iscsi: enables the advertisement of iSCSI in application priority TLVs.

Defaults

Application priority TLVs are enabled to advertise FCoE and iSCSI.

Command Modes

PROTOCOL LLDP

Command History

Version 9.2(0.0) Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

To disable TLV transmission, use the no form of the command; for example, no advertise dcbx-appln-tlv iscsi.
advertise dcbx-tlv

On a DCBX port with a manual role, configure the PFC and ETS TLVs advertised to DCBX peers.

Syntax

advertise dcbx-tlv {ets-conf | ets-reco | pfc} [ets-conf | ets-reco | pfc] [ets-conf | ets-reco | pfc]

To remove the advertised ETS TLVs, use the no advertise dcbx-tlv command.

Parameters

{ets-conf | ets-reco | pfc} Enter the PFC and ETS TLVs advertised, where:

- ets-conf: enables the advertisement of ETS configuration TLVs.
- ets-reco: enables the advertisement of ETS recommend TLVs.
- pfc: enables the advertisement of PFC TLVs.

Defaults

All PFC and ETS TLVs are advertised.

Command Modes

PROTOCOL LLDP

Command History

Version 9.2(0.0) Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

You can configure the transmission of more than one TLV type at a time; for example: advertise dcbx-tlv ets-conf ets-reco.

You can enable ETS recommend TLVs (ets-reco) only if you enable ETS configuration TLVs (ets-conf). To disable TLV transmission, use the no form of the command; for example, no advertise dcbx-tlv pfc ets-reco.

DCBX requires that you enable LLDP to advertise DCBX TLVs to peers.

Configure DCBX operation at the INTERFACE level on a switch or globally on the switch. To verify the DCBX configuration on a port, use the show interface dcbx detail command.

bandwidth-percentage

Configure the bandwidth percentage allocated to priority traffic in port queues.

Syntax

bandwidth-percentage percentage

To remove the configured bandwidth percentage, use the no bandwidth-percentage command.
Parameters

- **percentage**  (Optional) Enter the bandwidth percentage. The percentage range is from 1 to 100% in units of 1%.

Defaults

- none

Command Modes

- QOS-POLICY-OUT-ETS

Command History

- **Version 9.2(0.0)**  Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
- **Version 8.3.16.1**  Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

By default, equal bandwidth is assigned to each port queue and each dot1p priority in a priority group. To configure bandwidth amounts in associated dot1p queues, use the `bandwidth-percentage` command. When specified bandwidth is assigned to some port queues and not to others, the remaining bandwidth (100% minus assigned bandwidth amount) is equally distributed to unassigned nonstrict priority queues in the priority group. The sum of the allocated bandwidth to all queues in a priority group must be 100% of the bandwidth on the link.

ETS-assigned bandwidth allocation applies only to data queues, not to control queues.

The configuration of bandwidth allocation and strict-queue scheduling is not supported at the same time for a priority group. If you configure both, the configured bandwidth allocation is ignored for priority-group traffic when you apply the output policy on an interface.

By default, equal bandwidth is assigned to each priority group in the ETS output policy applied to an egress port if you did not configure bandwidth allocation. The sum of configured bandwidth allocation to dot1p priority traffic in all ETS priority groups must be 100%. Allocate at least 1% of the total bandwidth to each priority group and queue. If bandwidth is assigned to some priority groups but not to others, the remaining bandwidth (100% minus assigned bandwidth amount) is equally distributed to nonstrict-priority groups which have no configured scheduler.

Related Commands

- `qos-policy-output ets` — creates a QoS output policy.
- `scheduler` — schedules priority traffic in port queues.

**dcb-enable**

Enable data center bridging.

**Syntax**

dcb enable

To disable DCB, use the `no dcb enable` command.
dcb-map

Create a DCB map to configure priority flow control (PFC) and enhanced transmission selection (ETS) on Ethernet ports that support converged Ethernet traffic. Apply the DCB map to an Ethernet interface.

M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module

Syntax

dcb-map  map-name

Parameters

map-name  Enter a DCB map name. The maximum number of alphanumeric characters is 32.

Defaults

None. There are no pre-configured PFC and ETS settings on M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module Ethernet interfaces. With auto-detection of DCB enabled, a DCB map named ‘dcb-map’ is applied on all the Ethernet interfaces on which the DCBx frames are observed.

Command Modes

CONFIGURATION

Command History

Version 9.3(0.0)  Introduced on the M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module.

Usage Information

A DCB map is a template used to configure DCB parameters and apply them on converged Ethernet interfaces. DCB parameters include priority-based flow control (PFC) and enhanced traffic selection (ETS).

To display the PFC and ETS settings in DCB maps, enter the show qos dcb-map command.

Use the dcb-map command to create a DCB map to specify PFC and ETS settings and apply it on Ethernet ports. After you apply a DCB map to an interface, the PFC and ETS settings in the map are applied when the Ethernet port is enabled. DCBx is enabled on Ethernet ports by default.

The dcb-map command is supported only on physical Ethernet interfaces.
To remove a DCB map from an interface, enter the `no dcb-map map-name` command in Interface configuration mode.

**Related Commands**
- `show qos dcb-map`— displays the dcb-map profiles configured on the system.

### dcb-policy input stack-unit stack-ports all

Apply the specified DCB input policy on all ports of the switch stack or a single stacked switch.

**Syntax**
```markdown
dcb-policy input stack-unit {all | stack-unit-id} stack-ports all dcb-input-policy-name
```

To remove all DCB input policies applied to the stacked ports and rest the PFC to its default settings, use the `no dcb-policy input stack-unit all` command.

To remove only the DCB input policies applied to the specified switch, use the `no dcb-policy input stack-unit stack-unit-id` command.

**Parameters**
- **stack-unit-id**
  - Enter the stack unit identification.
- **dcb-input-policy-name**
  - Enter the policy name for the DCB input policy.

**Defaults**
- none

**Command Modes**
- CONFIGURATION

**Command History**
- **Version 9.2(0.0)**
  - Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
- **Version 8.3.16.1**
  - Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**
- The `dcb-policy input stack-unit all` command overwrites any previous `dcb-policy input stack-unit stack-unit-id` configurations. Similarly, a `dcb-policy input stack-unit stack-unit-id` command overwrites any previous `dcb-policy input stack-unit all` configuration.

### dcb-policy output

Apply the output policy with the ETS configuration to an egress interface.

**Syntax**
```markdown
dcb-policy output policy-name
```

To delete the output policy, use the `no dcb-policy output policy-name` command.

**Parameters**
- **policy-name**
  - Enter the output policy name.

**Defaults**
- none
Command Modes

INTERFACE

Command History

Version 9.2(0.0) Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

When you apply an ETS output policy to an interface, ETS-configured scheduling and bandwidth allocation take precedence over any configured settings in QoS output policies.

To remove an ETS output policy from an interface, use the no dcb-policy output policy-name command. ETS is enabled by default with the default ETS configuration applied (all dot1p priorities in the same group with equal bandwidth allocation).

dcb-map stack-unit all stack-ports all

Apply the specified DCB map on all ports of the switch stack.

Syntax
dcb-map stack-unit all stack-ports all dcb-map-name

To remove the PFC and ETS settings in a DCB map from all stack units, use the no dcb-map stack-unit all stack-ports all command.

Parameters

dcb-map-name Enter the name of the DCB map.

Defaults None

Command Modes CONFIGURATION

Command History

Version 9.3(0.0) Introduced on the FC Flex IO module installed in the M I/O Aggregator.

Usage Information

The dcb-map stack-unit all stack-ports all command overwrites any previous DCB maps applied to stack ports.

Related Commands
dcb-map – creates a DCB map to configure PFC and ETS parameters and applies the PFC and ETS settings on Ethernet ports.

dcb-policy input stack-unit stack-ports all

Apply the specified DCB input policy on all ports of the switch stack or a single stacked switch.

Syntax
dcb-policy input stack-unit {all | stack-unit-id} stack-ports all dcb-input-policy-name

PMUX Mode of the I/O Aggregator
To remove all DCB input policies applied to the stacked ports and rest the PFC to its default settings, use the no dcb-policy input stack-unit all command.

To remove only the DCB input policies applied to the specified switch, use the no dcb-policy input stack-unit command.

**Parameters**

- **stack-unit-id**
  - Enter the stack unit identification.

- **dcb-input-policy-name**
  - Enter the policy name for the DCB input policy.

**Defaults**

none

**Command Modes**

- INTERFACE

**Command History**

- **Version 9.2(0.0)**
  - Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

- **Version 8.3.16.1**
  - Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The dcb-policy input stack-unit all command overwrites any previous dcb-policy input stack-unit stack-unit-id configurations. Similarly, a dcb-policy input stack-unit stack-unit-id command overwrites any previous dcb-policy input stack-unit all configuration.

---

**dcb-policy output**

Apply the output policy with the ETS configuration to an egress interface.

**Syntax**

```
dcb-policy output policy-name
```

To delete the output policy, use the no dcb-policy output command.

**Parameters**

- **policy-name**
  - Enter the output policy name.

**Defaults**

none

**Command Modes**

- INTERFACE

**Command History**

- **Version 9.2(0.0)**
  - Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

- **Version 8.3.16.1**
  - Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

When you apply an ETS output policy to an interface, ETS-configured scheduling and bandwidth allocation take precedence over any configured settings in QoS output policies.

To remove an ETS output policy from an interface, use the no dcb-policy output policy-name command. ETS is enabled by default with the default ETS...
configuration applied (all dot1p priorities in the same group with equal bandwidth allocation).

dcb stack-unit all pfc-buffering pfc-port-count pfc-queues

Configure the PFC buffer for all switches in the stack.

Syntax

dcb stack-unit all pfc-buffering pfc-port-count {1-56} pfc-queues {1-2}

To remove the configuration for the PFC buffer on all switches in the stack, use the no dcb stack-unit all pfc-buffering pfc-port-count pfc-queues command.

Parameters

- **pfc-port-count**
  - Enter the pfc-port count. The range is 1 to 56.

- **pfc-queues**
  - Enter the pfc-queue number. The range is 1 to 2.

Defaults

The PFC buffer is enabled on all ports on the stack unit.

Command Modes

- **CONFIGURATION**

Command History

- **Version 9.2(0.0)**
  - Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

- **Version 8.3.16.1**
  - Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

If you configure PFC on a 40GbE port, count the 40GbE port as four PFC-enabled ports in the pfc-port number you enter in the command syntax.

To achieve lossless PFC operation, the PFC port count and queue number used for the reserved buffer size that is created must be greater than or equal to the buffer size required for PFC-enabled ports and lossless queues on the switch.

You must reload the stack or a specified stack unit (use the reload command in EXEC Privilege mode) for the PFC buffer configuration to take effect.

Related Commands

- **dcb stack-unit pfc-buffering pfc-port pfc-queues** — configures the PFC buffer for all port pipes in a specified stack unit.

**dcb stack-unit pfc-buffering pfc-port-count pfc-queues**

Configure the PFC buffer for all port pipes in a specified stack unit by specifying the port-pipe number, number of PFC-enabled ports, and number of configured lossless queues.

Syntax

dcb stack-unit stack-unit-id [port-set port-set-id] pfc-buffering pfc-pipes {1-56} pfc-queues {1-2}
To remove the configuration for the PFC buffer on all port pipes in a specified stack unit, use the `no dcb stack-unit stack-unit-id [port-set port-set-id] pfc-buffering pfc-ports pfc-queues` command.

**Parameters**

- **stack-unit-id**
  - Enter the stack unit identification. The range is from 0 to 5.

- **port-set**
  - Enter the port-set identification. The only valid port-set ID (port-pipe number) on an MXL Switch is 0.

- **pfc-ports**
  - Enter the pfc-ports. The range is from 1 to 56.

- **pfc-queues**
  - Enter the pfc-queue number. The range is from 1 to 2.

**Command Modes**

- **CONFIGURATION**

**Command History**

- **Version 9.2(0.0)**
  - Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

- **Version 8.3.16.1**
  - Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

If you configure PFC on a 40GbE port, count the 40GbE port as four PFC-enabled ports in the pfc-port number you enter in the command syntax.

To achieve lossless PFC operation, the PFC port count and queue number used for the reserved buffer size that is created must be greater than or equal to the buffer size required for PFC-enabled ports and lossless queues on the switch.

You must reload the stack or a specified stack unit (use the `reload` command in EXEC Privilege mode) for the PFC buffer configuration to take effect.

**Related Commands**

- `dcb stack-unit all pfc-buffering pfc-port pfc-queues` — configures the PFC buffer for all switches in the stack.

---

**dcbx port-role**

Configure the DCBX port role the interface uses to exchange DCB information.

**Syntax**

```
dcbx port-role {config-source | auto-downstream | auto-upstream | manual}
```

To remove DCBX port role, use the `no dcbx port-role {config-source | auto-downstream | auto-upstream | manual}` command.
Parameters

- config-source | auto-downstream | auto-upstream | manual

Enter the DCBX port role, where:

- **config-source**: configures the port to serve as the configuration source on the switch.
- **auto-upstream**: configures the port to receive a peer configuration. The configuration source is elected from auto-upstream ports.
- **auto-downstream**: configures the port to accept the internally propagated DCB configuration from a configuration source.
- **manual**: configures the port to operate only on administer-configured DCB parameters. The port does not accept a DCB configuration received from a peer or a local configuration source.

Defaults

**Manual**

Command Modes

**INTERFACE PROTOCOL LLDP**

Command History

- **Version 9.2(0.0)**: Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
- **Version 8.3.16.1**: Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

DCBX requires that you enable LLDP to advertise DCBX TLVs to peers.

Configure DCBX operation at the INTERFACE level on a switch or globally on the switch. To verify the DCBX configuration on a port, use the **show interface dcbx detail** command.

dcbx version

Configure the DCBX version used on the interface.

**Syntax**

```
dcbx version {auto | cee | cin | ieee-v2.5}
```

To remove the DCBX version, use the **dcbx version {auto | cee | cin | ieee-v2.5}** command.

**Parameters**

- auto | cee | cin | ieee-v2.5

Enter the DCBX version type used on the interface, where:

- **auto**: configures the port to operate using the DCBX version received from a peer.
- **cee**: configures the port to use CDD (Intel 1.01).
- **cin**: configures the port to use Cisco-Intel-Nuova (DCBX 1.0).
- **ieee-v2.5**: configures the port to use IEEE 802.1az (Draft 2.5).
**Defaults**

Auto

**Command Modes**

INTERFACE PROTOCOL LLDP

**Command History**

**Version 9.2(0.0)**  Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

**Version 8.3.16.1**  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

DCBX requires that you enable LLDP to advertise DCBX TLVs to peers.

Configure DCBX operation at the INTERFACE level on a switch or globally on the switch. To verify the DCBX configuration on a port, use the `show interface dcbx detail` command.

### debug dcbx

Enable DCBX debugging.

**Syntax**

d debug dcbx {all | auto-detect-timer | config-exchng | fail | mgmt | resource | sem | tlv}

To disable DCBX debugging, use the `no debug dcbx` command.

**Parameters**

Enter the type of debugging, where:

- **all**: enables all DCBX debugging operations.
- **auto-detect-timer**: enables traces for DCBX auto-detect timers.
- **config-exchng**: enables traces for DCBX configuration exchanges.
- **fail**: enables traces for DCBX failures.
- **mgmt**: enables traces for DCBX management frames.
- **resource**: enables traces for DCBX system resource frames.
- **sem**: enables traces for the DCBX state machine.
- **tlv**: enables traces for DCBX TLVs.

**Defaults**

none

**Command Modes**

EXEC Privilege

**Command History**

**Version 9.2(0.0)**  Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

**Version 8.3.16.1**  Introduced on the MXL 10/40GbE Switch IO Module.
**fc-map**

In an FCoE map, configure the FCoE mapped address prefix (FC-MAP) value which is used to identify FCoE traffic transmitted on the FCoE VLAN for the specified fabric.

**M I/O Aggregator with the PMUX module**

**Syntax**

```
fcoe priority-bits priority-bitmap
```

**Parameters**

- `priority-bitmap` Enter the priority-bitmap range. The range is from 1 to FF.

**Defaults**

None

**Command Modes**

FCOE MAP

**Command History**

Version 9.3(0.0) Introduced on the M I/O Aggregator with the PMUX module.

**Usage Information**

The FC-MAP value you enter must match the FC-MAP value used by an FC switch or FCoE forwarder (FCF) in the fabric. An FCF switch accepts only FCoE traffic that uses the correct FC-MAP value.

The FC-MAP value is used to generate the fabric-provided MAC address (FP-MAC). The FPMA is used by servers to transmit FCoE traffic to the fabric. An FC-MAP can be associated with only one FCoE VLAN and vice versa.

In an FCoE map, the FC-MAP value, fabric ID, and FCoE VLAN parameters must be unique.

To remove a configured FC-MAP value from an FCoE map, enter the `no fc-map` command.

**Related Commands**

- `fcoe-map` — creates an FCoE map which contains the parameters used in the communication between servers and a SAN fabric.

**fcoe priority-bits**

Configure the FCoE priority advertised for the FCoE protocol in application priority TLVs.

**Syntax**

```
fcoe priority-bits priority-bitmap
```

To remove the configured FCoE priority, use the `no fcoe priority-bits` command.

**Parameters**

- `priority-bitmap` Enter the priority-bitmap range. The range is from 1 to FF.
Defaults
0x8

Command Modes
PROTOCOL LLDP

Command History
Version 9.2(0.0)  Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
This command is available at the global level only.

**fcoe-map**

Create an FCoE map which contains the parameters used to configure the links between server CNAs and a SAN fabric. Apply the FCoE map on a server-facing Ethernet port.

**M I/O Aggregator with the PMUX module**

Syntax
```
fcoe-map map-name
```

Parameters
- **map-name**  Maximum: 32 alphanumeric characters.

Defaults
On the I/O Aggregator with PMUX modules, the following parameters are applied on all the PMUX module interfaces:

- Description: SAN_FABRIC
- Fabric-id: 1002
- Fcoe-vlan: 1002
- Fc-map: 0x0efc00
- Fcf-priority: 128
- Fka-adv-period: 8000mSec
- Keepalive: enable
- Vlan priority: 3

Command Modes
- CONFIGURATION
- INTERFACE

Command History
Version 9.3(0.0)  Introduced on the M I/O Aggregator with the PMUX module.

Usage Information
An FCoE map is a template used to map FCoE and FC parameters in a converged fabric. An FCoE map is used to virtualize upstream FC ports on an M I/O Aggregator and MXL 10/40GbE Switch with the PMUX module NPIV proxy gateway so that they appear to downstream server CNA ports as FCoE forwarder (FCF) ports on an FCoE network. When applied to FC and Ethernet ports on an NPIV proxy gateway, an FCoE map allows the switch to operate as an FCoE-FC bridge.
between an FC SAN and an FCoE network by providing FCoE-enabled servers and switches with the necessary parameters to log in to a SAN fabric.

On an M I/O Aggregator and MXL 10/40GbE Switch with the PMUX module NPIV proxy gateway, you cannot apply an FCoE map is applied on fabric-facing FC ports and server-facing 10–Gigabit Ethernet ports.

An FCoE map consists of the following parameters: the dedicated FCoE VLAN used for storage traffic, the destination SAN fabric (FC-MAP value), FCF priority used by a server, and the FIP keepalive (FKA) advertisement timeout.

In each FCoE map, the fabric ID, FC-MAP value, and FCoE VLAN parameters must be unique. Use one FCoE map to access one SAN fabric. You cannot use the same FCoE map to access different fabrics.

To remove an FCoE map from an Ethernet interface, enter the `no fcoe-map map-name` command in Interface configuration mode.

**Related Commands**

- `show fcoe-map` — displays the Fibre Channel and FCoE configuration parameters in FCoE maps.

### fka-adv-period

In an FCoE map, configure the time interval used to transmit FIP keepalive (FKA) advertisements.

**M I/O Aggregator with the PMUX module**

**Syntax**

```
fka-adv-period seconds
```

**Parameters**

- `seconds` Enter the time period (in seconds) used to send FIP keepalive messages to peer devices. The range is from 8 to 90 seconds.

**Defaults**

- 8 seconds

**Command Modes**

FCOE MAP

**Command History**

- Version 9.3(0.0) Introduced on the M I/O Aggregator with the PMUX module.

**Usage Information**

To delete the FIP keepalive time period from an FCoE map, enter the `no fka-adv-period` command.

**Related Commands**

- `fcoe-map` — creates an FCoE map which contains the parameters used in the communication between servers and a SAN fabric.
**iscsi priority-bits**

Configure the iSCSI priority advertised for the iSCSI protocol in application priority TLVs.

**Syntax**

```
iscsi priority-bits priority-bitmap
```

To remove the configured iSCSI priority, use the `no iscsi priority-bits` command.

**Parameters**

- **priority-bitmap**

  Enter the priority-bitmap range. The range is from 1 to FF.

**Defaults**

0x10

**Command Modes**

- PROTOCOL LLDP

**Command History**

- **Version 9.2(0.0)**

  Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

- **Version 8.3.16.1**

  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

This command is available at the global level only.

---

**keepalive**

In an FCoE map, enable the monitoring of FIP keepalive messages (if it is disabled).

**M I/O Aggregator with the PMUX module**

**Syntax**

```
keepalive
```

**Parameters**

None

**Defaults**

FIP keepalive monitoring is enabled on Ethernet and Fibre Channel interfaces.

**Command Modes**

- FCOE MAP

**Command History**

- **Version 9.3(0.0)**

  Introduced on the M I/O Aggregator with the PMUX module.

**Usage Information**

FIP keepalive (FKA) messaging is used to detect if other FCoE devices are reachable.

To remove FIP keepalive monitoring from an FCoE map, enter the `no keepalive` command.

**Related Commands**

- `fcoe-map` — creates an FCoE map which contains the parameters used in the communication between servers and a SAN fabric.
interface vlan (NPIV proxy gateway)

Create a dedicated VLAN to be used to send and receive Fibre Channel traffic over FCoE links between servers and a fabric over an M I/O Aggregator and MXL 10/40GbE Switch with the PMUX module NPIV proxy gateway.

M I/O Aggregator with the PMUX module

Syntax

```
interface vlan vlan-id
```

Parameters

- `vlan-id` Enter a number as the VLAN Identifier. The range is 1 to 4094.

Defaults

Not configured.

Command Modes

CONFIGURATION

Command History

Version 9.3.0.0 Introduced on the M I/O Aggregator and MXL 10/40GbE Switch with the PMUX module configured as an NPIV proxy gateway.

Usage Information

FCoE storage traffic received from servers on an M I/O Aggregator and MXL 10/40GbE Switch with the PMUX module NPIV proxy gateway is de-capssulated into Fibre Channel packets and forwarded over FC links to SAN switches in a specified fabric. You must configure a separate FCoE VLAN for each fabric to which FCoE traffic is forwarded. Any non-FCoE traffic sent on a dedicated FCoE VLAN will be dropped.

You configure the association between a dedicated VLAN, which carries FCoE traffic from server CNAs over the NPIV proxy gateway to a SAN fabric in which destination storage arrays are installed, in an FCoE map by using the `fabric id vlan` command.

When you apply an FCoE map to a server-facing Ethernet port, the port is automatically configured as a tagged member of the FCoE VLAN.

For more information about VLANs and the commands to configure them, refer to the Virtual LAN (VLAN) Commands section of the Layer 2 chapter.

Example (Single Range)

Dell(conf)#interface vlan 10
Dell(conf-if-vl-3)#

Related Commands

fcoe-map — creates an FCoE map which contains the parameters used in the communication between servers and a SAN fabric.
pfc link-delay

Configure the link delay used to pause specified priority traffic.

Syntax

```
pfc link-delay value
```

To remove the link delay, use the `no pfc link-delay` command.

Parameters

- **value**
  - The range is (in quanta) from 712 to 65535. One quantum is equal to a 512-bit transmission.

Defaults

```
45556 quantum
```

Command Modes

```
DCB INPUT POLICY
```

Command History

- **Version 9.2(0.0)**
  - Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
- **Version 8.3.16.1**
  - Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The minimum link delay must be greater than the round-trip transmission time a peer must honor a PFC pause frame multiplied by the number of PFC-enabled ingress ports.

pfc mode on

Enable the PFC configuration on the port so that the priorities are included in DCBX negotiation with peer PFC devices.

Syntax

```
pfc mode on
```

To disable the PFC configuration, use the `no pfc mode on` command.

Defaults

PFC mode is on.

Command Modes

```
DCB MAP
```

Command History

- **Version 9.2(0.0)**
  - Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
- **Version 8.3.16.1**
  - Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

By applying a DCB input policy with PFC enabled, you enable PFC operation on ingress port traffic. To achieve complete lossless handling of traffic, also enable PFC on all DCB egress ports or configure the dot1p priority-queue assignment of PFC priorities to lossless queues (refer to `pfc no-drop queues`).
To disable PFC operation on an interface, enter the `no pfc mode on` command in DCB Input Policy Configuration mode. PFC is enabled and disabled as global DCB operation is enabled (`dcb-enable`) or disabled (`no dcb-enable`).

You cannot enable PFC and link-level flow control at the same time on an interface.

**pfc no-drop queues**

Configure the port queues that still function as no-drop queues for lossless traffic.

**Syntax**

```
pfc no-drop queues queue-range
```

To remove the no-drop port queues, use the `no pfc no-drop queues` command.

**Parameters**

- **queue-range**
  
Enter the queue range. Separate the queue values with a comma; specify a priority range with a dash; for example, `pfc no-drop queues 1,3` or `pfc no-drop queues 2-3`. The range is from 0 to 3.

**Defaults**

No lossless queues are configured.

**Command Modes**

`INTERFACE`

**Command History**

- **Version 9.2(0.0)**
  Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

- **Version 8.3.16.1**
  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The maximum number of lossless queues globally supported on the switch is two.

- The following lists the dot1p priority-queue assignments.

<table>

</tbody>
</table>

PMUX Mode of the I/O Aggregator
**pfc priority**

Configure the CoS traffic to be stopped for the specified delay.

**Syntax**

```
pfc priority priority-range
```

To delete the pfc priority configuration, use the `no pfc priority` command.

**Parameters**

- `priority-range` Enter the 802.1p values of the frames to be paused. Separate the priority values with a comma; specify a priority range with a dash; for example, `pfc priority 1,3,5-7`. The range is from 0 to 7.

**Defaults** none

**Command Modes** Interface

**Command History**

- **Version 9.2(0.0)** Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

You can enable any number of 802.1p priorities for PFC. Queues to which PFC priority traffic is mapped are lossless by default. Traffic may be interrupted due to an interface flap (going down and coming up) when you reconfigure the lossless queues for no-drop priorities in a PFC input policy and reapply the policy to an interface.

The maximum number of lossless queues supported on the I/O Aggregator switch is four.

A PFC peer must support the configured priority traffic (as DCBX detects) to apply PFC.

**priority-pgid**

Assign 802.1p priority traffic to a priority group in a DCB map.

**FC Flex IO Modules I/O Aggregator**

**Syntax**

```
priority-pgid dot1p0_group-num dot1p1_group-num dot1p2_group-num dot1p3_group-num dot1p4_group-num dot1p5_group-num dot1p6_group-num dot1p7_group-num
```

**Parameters**

- `dot1p0_group-num` Enter the priority group number for each 802.1p class of traffic in a DCB map.
dot1p1_group-num
dot1p2_group-num
dot1p3_group-num
dot1p4_group-num
dot1p5_group-num
dot1p6_group-num
dot1p7_group-num

Defaults
None

Command Modes
DCB MAP

Command History
Version 9.3(0.0) Introduced on the FC Flex IO module installed in the M I/O Aggregator.

Usage Information
PFC and ETS settings are not pre-configured on Ethernet ports. You must use the dcb-map command to configure different groups of 802.1p priorities with PFC and ETS settings.

Using the priority-pgid command, you assign each 802.1p priority to one priority group. A priority group consists of 802.1p priority values that are grouped together for similar bandwidth allocation and scheduling, and that share latency and loss requirements. All 802.1p priorities mapped to the same queue must be in the same priority group. For example, the priority-pgid 0 0 0 1 2 4 4 4 command creates the following groups of 802.1p priority traffic:

- Priority group 0 contains traffic with dot1p priorities 0, 1, and 2.
- Priority group 1 contains traffic with dot1p priority 3.
- Priority group 2 contains traffic with dot1p priority 4.
- Priority group 4 contains traffic with dot1p priority 5, 6, and 7.

To remove a priority-pgid configuration from a DCB map, enter the no priority-pgid command.

Related Commands
dcb-map — Creates a DCB map to configure PFC and ETS parameters and applies the PFC and ETS settings on Ethernet ports.
priority-group bandwidth pfc — Configures the ETS bandwidth allocation and the PFC setting used to manage the port traffic in an 802.1p priority group.

pfc mode on

Enable the PFC configuration on the port so that the priorities are included in DCBX negotiation with peer PFC devices.

Syntax

pfc mode on

To disable the PFC configuration, use the no pfc mode on command.

Defaults

PFC mode is on.

Command Modes

DCB INPUT POLICY

Command History

Version 9.3(0.0) Introduced on the M I/O Aggregator.

Usage Information

By applying a DCB input policy with PFC enabled, you enable PFC operation on ingress port traffic. To achieve complete lossless handling of traffic, also enable PFC on all DCB egress ports or configure the dot1p priority-queue assignment of PFC priorities to lossless queues (refer to pfc no-drop queues).

To disable PFC operation on an interface, enter the no pfc mode on command in DCB Input Policy Configuration mode. PFC is enabled and disabled as global DCB operation is enabled (dcb-enable) or disabled (no dcb-enable).

You cannot enable PFC and link-level flow control at the same time on an interface.

priority-group bandwidth pfc

Configure the ETS bandwidth allocation and PFC mode used to manage port traffic in an 802.1p priority group.

I/O Aggregator

Syntax

priority-group group-num {bandwidth percentage| strict-priority} pfc {on | off}

Parameters

priority-group group-num

Enter the keyword priority-group followed by the number of an 802.1p priority group. Use the priority-pgid command to create the priority groups in a DCB map.

bandwidth percentage

Enter the keyword bandwidth followed by a bandwidth percentage allocated to the priority group. The range of valid values is 1 to 100. The sum of all allocated bandwidth percentages in priority groups in a DCB map must be 100%.

strict-priority

Configure the priority-group traffic to be handled with strict priority scheduling. Strict-priority traffic is serviced first.
before bandwidth allocated to other priority groups is made available.

```pfc (on | off)`
```
Configure whether priority-based flow control is enabled (on) or disabled (off) for port traffic in the priority group.

**Defaults**
None

**Command Modes**
DCB MAP

**Command History**
Version 9.3(0.0) Introduced on the FC Flex IO module installed in the M I/O Aggregator.

**Usage Information**
Use the `dcb-map` command to configure priority groups with PFC and/or ETS settings and apply them to Ethernet interfaces.

Use the `priority-pgid` command to map 802.1p priorities to a priority group.
You can assign each 802.1p priority to only one priority group. A priority group consists of 802.1p priority values that are grouped together for similar bandwidth allocation and scheduling, and that share latency and loss requirements. All 802.1p priorities mapped to the same queue must be in the same priority group.

Repeat the `priority-group bandwidth pfc` command to configure PFC and ETS traffic handling for each priority group in a DCB map.

You can enable PFC on a maximum of two priority queues.

If you configure more than one priority group as strict priority, the higher numbered priority queue is given preference when scheduling data traffic.

If a priority group does not use its allocated bandwidth, the unused bandwidth is made available to other priority groups.

To remove a priority-group configuration in a DCB map, enter the `no priority-group bandwidth pfc` command.

By default, equal bandwidth is assigned to each dot1p priority in a priority group.
Use the `bandwidth` parameter to configure the bandwidth percentage assigned to a priority group. The sum of the bandwidth allocated to all priority groups in a DCB map must be 100% of the bandwidth on the link. You must allocate at least 1% of the total port bandwidth to each priority group.

**Related Commands**
- `dcb-map` — Creates a DCB map to configure PFC and ETS parameters and applies the PFC and ETS settings on Ethernet ports.
- `priority-pgid` — Configures the 802.1p priority traffic in a priority group for a DCB map.
qos-policy-output ets
To configure the ETS bandwidth allocation and scheduling for priority traffic, create a QoS output policy.

Syntax
qos-policy-output policy-name ets
To remove the QoS output policy, use the no qos-policy-output ets command.

Parameters
policy-name
Enter the policy name. The maximum is 32 characters.

Command Modes
CONFIGURATION

Command History
Version 9.2(0.0)
Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

Version 8.3.16.1
Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
If an error occurs in an ETS output-policy configuration, the configuration is ignored and the scheduler and bandwidth allocation settings are reset to the ETS default values (all priorities are in the same ETS priority group and bandwidth is allocated equally to each priority).

If an error occurs when a port receives a peer's ETS configuration, the port's configuration is reset to the previously configured ETS output policy. If no ETS output policy was previously applied, the port is reset to the default ETS parameters.

Related Commands
- scheduler — schedules the priority traffic in port queues.
- bandwidth-percentage — bandwidth percentage allocated to the priority traffic in port queues.

scheduler
Configure the method used to schedule priority traffic in port queues.

Syntax
scheduler value
To remove the configured priority schedule, use the no scheduler command.

Parameters
value
Enter schedule priority value. The valid values are:

- strict: strict-priority traffic is serviced before any other queued traffic.
- werr: weighted elastic round robin (werr) provides low-latency scheduling for priority traffic on port queues.
### Defaults
Weighted elastic round robin (WERR) scheduling is used to queue priority traffic.

### Command Modes
**POLICY-MAP-OUT-ETS**

### Command History
<table>
<thead>
<tr>
<th>Version</th>
<th>Feature Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

### Usage Information
- **dot1p priority traffic** on the switch is scheduled to the current queue mapping.
- **dot1p priorities** within the same queue must have the same traffic properties and scheduling method.
- ETS-assigned scheduling applies only to data queues, not to control queues.
- The configuration of bandwidth allocation and strict-queue scheduling is not supported at the same time for a priority group. If you configure both, the configured bandwidth allocation is ignored for priority-group traffic when you apply the output policy on an interface.

### Related Commands
- `bandwidth-percentage` — bandwidth percentage allocated to priority traffic in port queues.

### show dcb
Displays the data center bridging status, the number of PFC-enabled ports, and the number of PFC-enabled queues.

#### Syntax
```
show dcb [stack-unit unit-number]
```

#### Parameters
- **unit number**
  - Enter the DCB unit number. The range is from 0 to 5.

#### Command Modes
**EXEC Privilege**

#### Command History
<table>

<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

#### Usage Information
Specify a stack-unit number on the Master switch in a stack.

#### Example
```
Dell# show dcb
stack-unit 0 port-set 0
  DCB Status : Enabled
  PFC Port Count : 56 (current), 56 (configured)
PFC Queue Count : 2 (current), 2 (configured)
```
**show interface dcbx detail**

Displays the DCBX configuration on an interface.

**Syntax**

```
show interface port-type slot/port dcbx detail
```

**Parameters**

- `port-type` Enter the port type.
- `slot/port` Enter the slot/port number.

**Command Modes**

CONFIGURATION

**Command History**

- **Version 9.2(0.0)** Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

To clear DCBX frame counters, use the `clear dcbx counters interface stack-unit/port` command.

The following describes the `show interface dcbx detail` command shown in the following example.

<table>

show interface ets
Displays the ETS configuration applied to egress traffic on an interface, including priority groups with
priorities and bandwidth allocation.

Syntax
show interface port-type slot/port ets {summary | detail}

Parameters
port-type slot/
  port ets
(summary |
detail)  Enter the port-type slot and port ETS information.
Enter the keyword summary for a summary list of results or
enter the keyword detail for a full list of results.

Command Modes
CONFIGURATION

Command History
Version 9.2(0.0)  Introduced on the M I/O Aggregator. This command is
  supported in Programmable-Mux (PMUX) mode only.

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.
To clear ETS TLV counters, use the `clear ets counters interface port-type slot/port` command.

The following describes the `show interface summary` command shown in the following example.

show interface pfc

Displays the PFC configuration applied to ingress traffic on an interface, including priorities and link delay.

**Syntax**

show interface port-type slot/port pfc {summary | detail}

**Parameters**

- `port-type slot/port pfc` Enter the port-type slot and port PFC information.
- `{summary | detail}` Enter the keyword `summary` for a summary list of results or enter the keyword `detail` for a full list of results.

**Command Modes**

show interface pfc statistics

Displays counters for the PFC frames received and transmitted (by dot1p priority class) on an interface.

Syntax
show interface port-type slot/port pfc statistics

Parameters
port-type Enter the port type.
slot/port Enter the slot/port number.

Command Modes
INTERFACE

Command History
Version 9.2(0.0) Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Example
Dell#show interfaces te 0/3 pfc statistics
Interface TenGigabitEthernet 0/3
Priority Rx XOFF Frames Rx Total Frames Tx Total Frames
--------------------------------------------------------------------------------
 0   0      0          0
 1   0      0          0
 2   0      0          0
 3   0      0          0
 4   0      0          0
 5   0      0          0
 6   0      0          0
 7   0      0          0
**show stack-unit stack-ports ets details**

Displays the ETS configuration applied to egress traffic on stacked ports, including ETS Operational mode on each unit and the configured priority groups with dot1p priorities, bandwidth allocation, and scheduler type.

**Syntax**

```
show stack-unit {all | stack-unit} stack-ports {all | port-number} ets details
```

**Parameters**

- **stack-unit**
  - Enter the stack unit identification.

- **port-number**
  - Enter the port number.

**Command Modes**

- CONFIGURATION

**Command History**

- **Version 9.2(0.0)**
  - Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

- **Version 8.3.16.1**
  - Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

```
Dell(conf)# show stack-unit all stack-ports all ets details

Stack unit 0 stack port all
Max Supported TC Groups is 4
Number of Traffic Classes is 1
Admin mode is on

Admin Parameters:
-------------------

-------------------
0 0,1,2,3,4,5,6,7 100% ETS
1 - -
2 - -
3 - -
4 - -
5 - -
```

PMUX Mode of the I/O Aggregator
show stack-unit stack-ports pfc details

Displays the PFC configuration applied to ingress traffic on stacked ports, including PFC Operational mode on each unit with the configured priorities, link delay, and number of pause packets sent and received.

Syntax

```
show stack-unit {all | stack-unit} stack-ports {all | port-number} pfc details
```

Parameters

- **stack-unit**: Enter the stack unit.
- **port-number**: Enter the port number.

Command Modes

-**CONFIGURATION**

Command History

- **Version 9.2(0.0)**: Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
- **Version 8.3.16.1**: Introduced on the MXL 10/40GbE Switch IO Module.

Example

```
Dell(conf)# show stack-unit all stack-ports all pfc details
stack unit 0 stack-port all
  Admin mode is On
  Admin is enabled, Priority list is 4-5
  Local is enabled, Priority list is 4-5
  Link Delay 45556 pause quantum
  0 Pause Tx pkts, 0 Pause Rx pkts

stack unit 1 stack-port all
  Admin mode is On
  Admin is enabled, Priority list is 4-5
  Local is enabled, Priority list is 4-5
  Link Delay 45556 pause quantum
  0 Pause Tx pkts, 0 Pause Rx pkts
```

FIP Snooping

In a converged Ethernet network, an Aggregator can operate as an intermediate Ethernet bridge to snoop on Fibre Channel over Ethernet Initialization Protocol (FIP) packets during the login process on Fibre Channel over Ethernet (FCoE) forwarders (FCFs). Acting as a transit FIP snooping bridge, the switch uses dynamically-created ACLs to permit only authorized FCoE traffic to be transmitted between an FCoE end-device and an FCF.
FIP Snooping Commands

The following Dell Networking OS commands are used to configure and verify the FIP snooping feature:

- `debug fip-snooping`
- `show fip-snooping config`
- `show fip-snooping enode`
- `show fip-snooping fcf`
- `show fip-snooping sessions`
- `show fip-snooping statistics`
- `show fip-snooping system`

`clear fip-snooping database interface vlan`

Clear FIP snooping information on a VLAN for a specified FCoE MAC address, ENode MAC address, or FCF MAC address, and remove the corresponding ACLs FIP snooping generates.

**Syntax**
```
clear fip-snooping database interface vlan vlan-id {fcoe-mac-address | enode-mac-address | fcf-mac-address}
```

**Parameters**
- `fcoe-mac-address` Enter the FCoE MAC address to be cleared of FIP snooping information.
- `enode-mac-address` Enter the ENode MAC address to be cleared of FIP snooping information.
- `fcf-mac-address` Enter the FCF MAC address to be cleared of FIP snooping information.

**Command Modes**
EXEC Privilege

**Command History**
Version 9.2(0.0) Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

`clear fip-snooping statistics`

Clears the statistics on the FIP packets snooped on all VLANs, a specified VLAN, or a specified port interface.

**Syntax**
```
clear fip-snooping statistics [interface vlan vlan-id | interface port-type port/slot | interface port-channel port-channel-number]
```

**Parameters**
- `vlan-id` Enter the VLAN ID of the FIP packet statistics to be cleared.
- `port-type port/slot` Enter the port-type and slot number of the FIP packet statistics to be cleared.
Enter the port channel number of the FIP packet statistics to be cleared.

**Command Modes**
- EXEC Privilege

**Command History**
- **Version 9.2(0.0)** Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

---

**feature fip-snooping**

Enable FCoE transit and FIP snooping on a switch.

**Syntax**

```
feature fip-snooping
```

To disable the FCoE transit feature, use the `no feature fip-snooping` command.

**Defaults**
- Disabled

**Command Modes**
- CONFIGURATION

**Command History**
- **Version 9.2(0.0)** Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

---

**fip-snooping enable**

Enable FIP snooping on all VLANs or on a specified VLAN.

**Syntax**

```
fip-snooping enable
```

To disable the FIP snooping feature on all or a specified VLAN, use the `no fip-snooping enable` command.

**Defaults**
- FIP snooping is disabled on all VLANs.

**Command Modes**
- • CONFIGURATION
- • VLAN INTERFACE

**Command History**
- **Version 9.2(0.0)** Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.
**Usage Information**
The maximum number of FCFs supported per FIP snooping-enabled VLAN is four.
The maximum number of FIP snooping sessions supported per ENode server is 16.

**fip-snooping fc-map**
Configure the FC-MAP value FIP snooping uses on all VLANs.

**Syntax**
```
fip-snooping fc-map fc-map-value
```
To return the configured FC-MAP value to the default value, use the no fip-snooping fc-map command.

**Parameters**
- `fc-map-value` Enter the FC-MAP value FIP snooping uses. The range is from 0EFC00 to 0EFCFF.

**Defaults**
0x0EFC00

**Command Modes**
- CONFIGURATION
- VLAN INTERFACE

**Command History**
- **Version 9.2(0.0)** Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

**fip-snooping port-mode fcf**
Configure the port for bridge-to-FCF links.

**Syntax**
```
fip-snooping port-mode fcf
```
To disable the bridge-to-FCF link on a port, use the no fip-snooping port-mode fcf command.

**Command Modes**
INTERFACE

**Command History**
- **Version 9.2(0.0)** Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**
The maximum number of FCFs supported per FIP snooping-enabled VLAN is four.
iSCSI Optimization

Internet small computer system interface (iSCSI) optimization enables quality-of-service (QoS) treatment for iSCSI storage traffic.

To configure and verify the iSCSI optimization feature, use the following Dell Networking Operating System (OS) commands.

**advertise dcbx-app-tlv**

Configure DCBX to send iSCSI TLV advertisements.

**Syntax**

```
advertise dcbx-app-tlv iscsi
```

To disable DCBX iSCSI TLV advertisements, use the `no advertise dcbx-app-tlv iscsi` command.

**Defaults**

Disabled.

**Command Modes**

PROTOCOL LLDP

**Command History**

Version 9.2(0.0) Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

You can configure iSCSI TLVs to send either globally or on a specified interface.

The interface configuration takes priority over global configuration.

**iscsi aging time**

Set the aging time for iSCSI sessions.

**Syntax**

```
iscsi aging time time
```

To remove the iSCSI session aging time, use the `no iscsi aging time` command.

**Parameters**

- `time` Enter the aging time for the iSCSI session. The range is from 5 to 43,200 minutes.

**Defaults**

10 minutes

**Command Modes**

CONFIGURATION

**Command History**

Version 9.2(0.0) Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
**iscsi cos**

Set the QoS policy that is applied to the iSCSI flows.

**Syntax**

```
iscsi cos {enable | disable | dot1p vlan-priority-value [remark] | dscp dscp-value [remark]}
```

To disable the QoS policy, use the `no iscsi cos dscp` command.

**Parameters**

- **enable**
  - Enter the keyword `enable` to allow the application of preferential QoS treatment to iSCSI traffic so that the iSCSI packets are scheduled in the switch with a dot1p priority 4 regardless of the VLAN priority tag in the packet. The default is: the iSCSI packets are handled with dotp1 priority 4 without remark.

- **disable**
  - Enter the keyword `disable` to disable the application of preferential QoS treatment to iSCSI frames.

- **dot1p vlan-priority-value**
  - Enter the dot1p value of the VLAN priority tag assigned to the incoming packets in an iSCSI session. The range is from 0 to 7. The default is the dot1p value in ingress iSCSI frames is not changed and is the same priority is used in iSCSI TLV advertisements if you did not enter the `iscsi priority-bits` command.

- **dscp dscp-value**
  - Enter the DSCP value assigned to the incoming packets in an iSCSI session. The valid range is from 0 to 63. The default is: the DSCP value in ingress packets is not changed.

- **remark**
  - Marks the incoming iSCSI packets with the configured dot1p or DSCP value when they egress to the switch. The default is: the dot1and DSCP values in egress packets are not changed.

**Defaults**

The default dot1p VLAN priority value is 4 without the `remark` option.

**Command Modes**

CONFIGURATION

**Command History**

- **Version 9.2(0.0)**
  - Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

- **Version 8.3.16.1**
  - Introduced on the MXL 10/40GbE Switch IO Module.

**iscsi enable**

Globally enable iSCSI optimization.

**Syntax**

```
iscsi enable
```

To disable iSCSI optimization, use the `no iscsi enable` command.
Parameters  

**enable**  
Enter the keyword `enable` to enable the iSCSI optimization feature.

Defaults  
Disabled.

Command Modes  
CONFIGURATION

Command History  

**Version 9.2(0.0)**  
Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

**Version 8.3.16.1**  
Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information  
When you enable the iSCSI feature using the `iscsi enable` command, flow control settings are set to `rx on tx off` on all interfaces.

**iscsi priority-bits**  
Configure the priority bitmap that advertises in the iSCSI application TLVs.

**Syntax**  

```
iscsi priority-bits
```

To remove the configured priority bitmap, use the `no iscsi priority-bits` command.

**Defaults**  
4 (0x10 in the bitmap)

**Command Modes**  
PROTOCOL LLDP (only on the global, not on the interface)

Command History  

**Version 9.2(0.0)**  
Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

**Version 8.3.16.1**  
Introduced on the MXL 10/40GbE Switch IO Module.

**iscsi profile-compellant**  
Configure the auto-detection of Dell Compellent arrays on a port.

**Syntax**  

```
iscsi profile-compellant
```

**Defaults**  
Dell Compellent disk arrays are not detected.

**Command Modes**  
INTERFACE

Command History  

**Version 9.2(0.0)**  
Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

**Version 8.3.16.1**  
Introduced on the MXL 10/40GbE Switch IO Module.
**iscsi target port**

Configure the iSCSI target ports and optionally, the IP addresses on which iSCSI communication is monitored.

**Syntax**

```
iscsi target port [tcp-port-2...tcp-port-16]ip-address [ip-address]
```

To remove the configured iSCSI target ports or IP addresses, use the `no iscsi target port` command.

**Parameters**

- `tcp-port-2...tcp-port-16` Enter the tcp-port number of the iSCSI target ports. The `tcp-port-n` is the TCP port number or a list of TCP port numbers on which the iSCSI target listens to requests. Separate port numbers with a comma. The default is `860, 3260`.

- `ip-address` (Optional) Enter the ip-address that the iSCSI monitors. The ip-address specifies the IP address of the iSCSI target.

**Defaults**

- `860, 3260`

**Command Modes**

- `CONFIGURATION`

**Command History**

- **Version 9.2(0.0)** Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

- You can configure up to 16 target TCP ports on the switch in one command or multiple commands.

- When you use the `no iscsi target port` command and the TCP port you wish to delete is one bound to a specific IP address, the IP address value must be included in the command.

**Interfaces**

The commands in this chapter are supported by Dell Networking Operating System (OS).

This chapter contains the following sections:

- [Basic Interface Commands](#)
- [Port Channel Commands](#)
Basic Interface Commands

The following commands are for Physical interfaces.

**clear counters**

Clear the counters used in the `show interfaces` commands for all virtual router redundancy protocol (VRRP) groups, virtual local area networks (VLANs), and physical interfaces, or selected ones.

**Syntax**
clear counters interface

**Parameters**
- **interface** (OPTIONAL) Enter any of the following keywords and slot/port or number to clear counters from a specified interface:
  - For the management interface on the stack-unit, enter the keyword `management ethernet` followed by slot/port information. The slot and port range is 0.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` followed by the slot/port information.
  - For a Port Channel interface, enter the keyword `port-channel` followed by a number. Range: 1-128

**Defaults**
Without an interface specified, the command clears all interface counters.

**Command Modes**
EXEC Privilege

**Command History**
- **Version 9.2(0.0)** Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

**Example**
```
Dell#clear counters
Clear counters on all interfaces [confirm]
```

**Related Commands**
- `show interfaces` — displays information on the interfaces.

**description**

Assign a descriptive text string to the interface.

**Syntax**
description desc_text

To delete a description, use the `no description` command.

**Parameters**
- **desc_text** Enter a text string up to 240 characters long. To use special characters as a part of the description string, you must enclose the whole string in double quotes.
Defaults

Command Modes

Command History

Usage Information

Important Points to Remember:

• Spaces between characters are not preserved after entering this command unless you enclose the entire description in quotation marks ("desc_text").

• Entering a text string after the description command overwrites any previous text string that you previously configured as the description.

• The shutdown and description commands are the only commands that you can configure on an interface that is a member of a port-channel.

• Use the show interfaces description command to display descriptions configured for each interface.

Related Commands

flowcontrol

Control how the system responds to and generates 802.3x pause frames on 10G and 40Gig stack units.

Syntax

flowcontrol rx {off | on} tx {off | on} threshold

Parameters

rx on  
Enter the keywords rx on to process the received flow control frames on this port. This is the default value for the receive side.

rx off  
Enter the keywords rx off to ignore the received flow control frames on this port.

tax on  
Enter the keywords tx on to send control frames from this port to the connected device when a higher rate of traffic is received. This is the default value on the send side.

tax off  
Enter the keywords tx off so that flow control frames are not sent from this port to the connected device when a higher rate of traffic is received.

Defaults

• rx off

• tx off

Command Modes

INTERFACE
Command History

Version 9.2(0.0)  Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The globally assigned 48-bit Multicast address 01-80-C2-00-00-01 is used to send and receive pause frames. To allow full-duplex flow control, stations implementing the pause operation instruct the MAC to enable the reception of frames with a destination address equal to this multicast address.

The pause:

- Starts when either the packet pointer or the buffer threshold is met (whichever is met first). When the discard threshold is met, packets are dropped.
- Ends when both the packet pointer and the buffer threshold fall below 50% of the threshold settings.

The discard threshold defines when the interface starts dropping the packet on the interface. This may be necessary when a connected device does not honor the flow control frame sent by the switch. The discard threshold should be larger than the buffer threshold so that the buffer holds at least hold at least three packets.

On 4–port 10G stack units: Changes in the flow-control values may not be reflected automatically in the show interface output for 10G interfaces. This is because 10G interfaces do not support auto-negotiation.

Important Points to Remember

- Do not enable tx pause when buffer carving is enabled. For information and assistance, consult Dell Networking TAC.
- Asymmetric flow control (rx on tx off, or rx off tx on) setting for the interface port less than 100 Mb/s speed is not permitted. The following error is returned:
  Can’t configure Asymmetric flowcontrol when speed <1G, config ignored
- The only configuration applicable to half duplex ports is rx off tx off. The following error is returned:
  Cannot configure Asymmetric flowcontrol when speed <1G, config ignored
- You cannot configure half duplex when the flow control configuration is on (default is rx on tx on). The following error is returned: Cannot configure half duplex when flowcontrol is on, config ignored

NOTE: The flow control must be off (rx off tx off) before configuring the half duplex.

Example (partial)

Dell(conf-if-tengig-0/1)#show config
!
interface TenGigabitEthernet 0/1
no ip address
switchport
no negotiation auto
flowcontrol rx off tx on
This Example shows how the Dell Networking OS negotiates the flow control values between two Dell Networking chassis connected back-to-back using 1G copper ports.

**Example (Values)**

```
no shutdown
...
```

**Related Commands**

- `show running-config` — displays the flow configuration parameters (non-default values only).
- `show interfaces` — displays the negotiated flow control parameters.
**interface ManagementEthernet**

Configure the Management port on the system.

**Syntax**

```plaintext
interface ManagementEthernet slot/port
```

**Parameters**

- **slot/port**
  
  Enter the keyword `ManagementEthernet`, then the slot number 0 and port number zero (0).

**Defaults**

Not configured.

**Command Modes**

- CONFIGURATION

**Command History**

- **Version 9.2(0.0)**
  
  Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

- **Version 8.3.16.1**
  
  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

- You cannot delete a Management port.

- The Management port is enabled by default (`no shutdown`). To assign an IP address to the Management port, use the `ip address` command.

**Example**

```plaintext
Dell(conf)#interface managementethernet 0/0
Dell(conf-if-ma-0/0)#
```

**interface**

Configure a physical interface on the switch.

**Syntax**

```plaintext
interface interface
```

**Parameters**

- **interface**
  
  Enter one of the following keywords and slot/port or number information:

  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For a Fibre Channel interface, enter the keyword `FibreChannel`, then the slot/port information.

**Defaults**

Not configured.

**Command Modes**

- CONFIGURATION
**Command History**

- **Version 9.4(0.0)**: Added the support for interfaces.
- **Version 9.2(0.0)**: Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
- **Version 8.3.16.1**: Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

You cannot delete a physical interface.

By default, physical interfaces are disabled (shutdown) and are in Layer 3 mode. To place an interface in mode, ensure that the interface’s configuration does not contain an IP address and enter the Port Channel Commands command.

The tunnel interface operates as an ECMP (equal cost multi path) only when the next hop to the tunnel destination is over a physical interface. If you select any other interface as the next hop to the tunnel destination, the tunnel interface does not operate as an ECMP.

**Example**

Dell (conf) #interface tengig 0/1
Dell (conf-if-tengig-0/0) #exit#

**Related Commands**

- `interface port-channel` — configures a port channel.
- `interface vlan` — configures a VLAN.
- `show interfaces` — displays the interface configuration.

---

**interface vlan**

Configure the default VLAN to enable Static or DCHP IP configuration

**Syntax**

```
interface vlandef-vlan-id
```

**Parameters**

- `def-vlan-id` Enter 1 for the default VLAN.

**Defaults**

Not configured

**Command Modes**

CONFIGURATION

**Command History**

- **Version 8.3.17.0**: Supported on the M I/O Aggregator.

**Usage Information**

For more information about VLANs and the commands to configure them, refer to **Virtual LAN (VLAN) Commands**.

**Example**

Dell (conf)#int vlan 1
Dell (conf-if-vl-1)#
Related commands

- `show vlan` — Displays the current VLAN configuration on the switch.
- `vlan tagged` — Adds a Layer 2 interface to a VLAN as a tagged interface.
- `vlan untagged` — Adds a Layer 2 interface to a VLAN as an untagged interface.

**interface range**

This command permits configuration of a range of interfaces to which subsequent commands are applied (bulk configuration). Using the `interface range` command, you can enter identical commands for a range of interface.

**Syntax**

```
interface range interface, interface,...
```

**Parameters**

- `interface, interface,...`

  Enter the keywords `interface range` and one of the interfaces — slot/port, port-channel, or VLAN number. Select the range of interfaces for bulk configuration. You can enter up to six comma-separated ranges. Spaces are not required between the commas. Comma-separated ranges can include VLANs, port-channels, and physical interfaces.

  Slot/Port information must contain a space before and after the dash. For example, `interface range gigabitethernet 0/1 - 5` is valid; `interface range gigabitethernet 0/1-5` is NOT valid.

  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults**

- `none`

**Command Modes**

- `CONFIGURATION`

**Command History**

- **Version 9.2(0.0)**
  Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

- **Version 8.3.16.1**
  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

When creating an interface range, interfaces appear in the order they are entered; they are not sorted. The command verifies that interfaces are present (physical) or configured (logical).

**Important Points to Remember:**
• Bulk configuration is created if at least one interface is valid.
• Non-existing interfaces are excluded from the bulk configuration with a warning message.
• The interface range prompt includes interface types with slot/port information for valid interfaces. The prompt allows for a maximum of 32 characters. If the bulk configuration exceeds 32 characters, it is represented by an ellipsis (...).
• When the interface range prompt has multiple port ranges, the smaller port range is excluded from the prompt.
• If overlapping port ranges are specified, the port range is extended to the smallest start port and the biggest end port.

Example (Bulk)
Dell(conf)#interface range so 2/0-1, te 10/0, gi 3/0, fa 0/0
% Warning: Non-existing ports (not configured) are ignored by interface-range

Example (Multiple Ports)
Dell(conf)#interface range gi 2/0 - 23, gi 2/1 - 10
Dell(conf-if-range-gi-2/0-23#)

Example (Overlapping Ports)
Dell(conf)#interface range gi 2/1 - 11, gi 2/1 - 23
Dell(conf-if-range-gi-2/1-23#)

Usage Information
Only VLAN and port-channel interfaces created using the interface vlan and interface port-channel commands can be used in the interface range command.

Use the show running-config command to display the VLAN and port-channel interfaces. VLAN or port-channel interfaces that are not displayed in the show running-config command cannot be used with the bulk configuration feature of the interface range command. You cannot create virtual interfaces (VLAN, Port-channel) using the interface range command.

NOTE: If a range has VLAN, physical, port-channel, and SONET interfaces, only commands related to physical interfaces can be bulk configured. To configure commands specific to VLAN or port-channel, only those respective interfaces should be configured in a particular range.

Example (Single Range)
This example shows a single range bulk configuration.

Dell(config)# interface range gigabitethernet 5/1 - 23
Dell(config-if-range)# no shutdown
Dell(config-if-range)#

Example (Multiple Range)
This example shows how to use commas to add different interface types to the range enabling all Gigabit Ethernet interfaces in the range 5/1 to 5/23 and both Ten-Gigabit Ethernet interfaces 1/1 and 1/2.

Dell(config-if)# interface range gigabitethernet5/1-23,
tengigabitethernet1/1-2
Dell(config-if-range)# no shutdown
Dell(config-if-range)
Example (Multiple Range)

This example shows how to use commas to add SONET, VLAN, and port-channel interfaces to the range.

```
Dell(config-if)# interface range gigabitethernet5/1-23, tigabitethernet1/1–2, Vlan 2–100, Port 1–25
Dell(config-if-range)# no shutdown
Dell(config-if-range)#
```

Related Commands

- `interface port-channel` — configures a port channel group.
- `interface vlan` — configures a VLAN interface.

**keepalive**

Send keepalive packets periodically to keep an interface alive when it is not transmitting data.

**Syntax**

```
keepalive [seconds]
```

To stop sending keepalive packets, use the `no keepalive` command.

**Parameters**

- `seconds` (OPTIONAL) For interfaces with PPP encapsulation enabled, enter the number of seconds between keepalive packets. The range is from 0 to 23767. The default is 10 seconds.

**Defaults**

Enabled.

**Command Modes**

INTERFACE

**Command History**

- **Version 9.2(0.0)** Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

When you configure `keepalive`, the system sends a self-addressed packet out of the configured interface to verify that the far end of a WAN link is up. When you configure `no keepalive`, the system does not send keepalive packets and so the local end of a WAN link remains up even if the remote end is down.

**mtu**

Set the link maximum transmission unit (MTU) (frame size) for an Ethernet interface.

**Syntax**

```
mtu value
```

To return to the default MTU value, use the `no mtu` command.

**Parameters**

- `value` Enter a maximum frame size in bytes. The range is from 594 to 9252. MXL Switch Range is from 594 to 12000. The default is 1554.
Defaults

Command Modes

Command History

Usage Information

If the packet includes a Layer 2 header, the difference between the link MTU and IP MTU (ip mtu command) must be enough bytes to include the Layer 2 header.

- The IP MTU is adjusted automatically when you configure the Layer 2 MTU with the mtu command.

When you enter the no mtu command, the Dell Networking OS reduces the IP MTU value to 1536 bytes.

Link MTU and IP MTU considerations for port channels and VLANs are as follows.

**port channels:**
- All members must have the same link MTU value and the same IP MTU value.
- The port channel link MTU and IP MTU must be less than or equal to the link MTU and IP MTU values configured on the channel members. For example, if the members have a link MTU of 2100 and an IP MTU 2000, the port channel’s MTU values cannot be higher than 2100 for link MTU or 2000 bytes for IP MTU.

**VLANs:**
- All members of a VLAN must have same IP MTU value.
- Members can have different Link MTU values. Tagged members must have a link MTU 4 bytes higher than untagged members to account for the packet tag.
- The VLAN link MTU and IP MTU must be less than or equal to the link MTU and IP MTU values configured on the VLAN members. For example, the VLAN contains tagged members with Link MTU of 1522 and IP MTU of 1500 and untagged members with Link MTU of 1518 and IP MTU of 1500. The VLAN’s Link MTU cannot be higher than 1518 bytes and its IP MTU cannot be higher than 1500 bytes.

The following shows the difference between Link MTU and IP MTU.

<table>
<thead>
<tr>
<th>Layer 2 Overhead</th>
<th>Link MTU and IP MTU Delta</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ethernet (untagged)</td>
<td>18 bytes</td>

<td>22 bytes</td>
</tr>
</tbody>
</table>

PMUX Mode of the I/O Aggregator
**negotiation auto**

Enable auto-negotiation on an interface.

**Syntax**

```
  negotiation auto
```

To disable auto-negotiation, use the `no negotiation auto` command.

**Defaults**

Enabled.

**Command Modes**

INTERFACE

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Release</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.</td>
<td></td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
<td></td>
</tr>
</tbody>
</table>

**Usage Information**

The `no negotiation auto` command is only available if you first manually set the speed of a port to 10Mbits or 100Mbits.

The `negotiation auto` command provides a `mode` option for configuring an individual port to forced-master/forced slave after you enable auto-negotiation.

If you do not use the `mode` option, the default setting is `slave`. If you do not configure forced-master or forced-slave on a port, the port negotiates to either a master or a slave state. Port status is one of the following:

- Forced-master
- Force-slave
- Master
- Slave
- Auto-neg Error — typically indicates that both ends of the node are configured with forced-master or forced-slave.

**CAUTION:** Ensure that one end of your node is configured as forced-master and one is configured as forced-slave. If both are configured the same (that is, forced-master or forced-slave), the `show interfaces` command flaps between an auto-neg-error and forced-master/slave states.

You can display master/slave settings with the `show interfaces` command.

**Example**

```
Dell(conf)# int tengig 0/0
Dell(conf-if)#neg auto
Dell(conf-if-autoneg)# ?
```
end         Exit from configuration mode
exit        Exit from autoneg configuration mode
mode        Specify autoneg mode
no          Negate a command or set its defaults
show        Show autoneg configuration information
Dell(conf-if-autoneg)#mode ?
forced-master Force port to master mode
forced-slave Force port to slave mode
Dell(conf-if-autoneg)#

Example
(Master/Slave, partial)

Dell#show interfaces configured

Queueing strategy: fifo
Input Statistics:
...

User Information

Both sides of the link must have auto-negotiation enabled or disabled for the link to come up.

The following details the possible speed and auto-negotiation combinations for a line between two 10/100/1000 Base-T Ethernet interfaces.

Port 0
- auto-negotiation enabled* speed 1000 or auto
- auto-negotiation enabled speed 100
- auto-negotiation disabled speed 100
- auto-negotiation disabled speed 100
- auto-negotiation enabled* speed 1000 or auto

Port 1
- auto-negotiation enabled* speed 1000 or auto
- auto-negotiation enabled speed 100
- auto-negotiation disabled speed 100
- auto-negotiation enabled speed 100
- auto-negotiation disabled speed 100

Link Status Between Port 1 and Port 2
- Up at 1000 Mb/s
- Up at 100 Mb/s
- Up at 100 Mb/s
- Down
- Down

* You cannot disable auto-negotiation when the speed is set to 1000 or auto.
Related Commands

- **speed (for 1000/10000 interfaces)** — sets the link speed to 1000, 10000, or auto-negotiate the speed.

**portmode hybrid**

To accept both tagged and untagged frames, set a physical port or port-channel. A port configured this way is identified as a hybrid port in report displays.

**Syntax**

```
portmode hybrid
```

To return a port to accept either tagged or untagged frames (non-hybrid), use the `no portmode hybrid` command.

**Defaults**

`non-hybrid`

**Command Modes**

`INTERFACE (conf-if-interface-slot/port)`

**Command History**

- **Version 9.2(0.0)** 
  Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
- **Version 8.3.16.1** 
  Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The following describes the `interface` command shown in the following example. This example sets a port as hybrid, makes the port a tagged member of VLAN 20, and an untagged member of VLAN 10, which becomes the native VLAN of the port. The port now accepts:

- untagged frames and classify them as VLAN 10 frames
- VLAN 20 tagged frames

The following describes the `do show interfaces` command shown in the following example. This example shows output with "Hybrid" as the newly added value for 802.1QTagged. The options for this field are:

- True — port is tagged
- False — port is untagged
- Hybrid — port accepts both tagged and untagged frames

The following describes the `interface vlan` command shown in the following example. This example shows unconfiguration of the hybrid port using the `no portmode hybrid` command.

**NOTE:** Remove all other configurations on the port before you can remove the hybrid configuration from the port.

**Example**

```
Dell(conf)#int tengigabitethernet 0/2

Related Commands

- `show interfaces switchport` — displays the configuration of switchport (Layer 2) interfaces on the switch.
- `vlan-stack trunk` — specifies an interface as a trunk port to the Stackable VLAN network.

**stack-unit portmode**

Split a single 40G port into 4-10G ports on the MXL switch.

**Syntax**

```
stack-unit stack-unit port number portmode quad
```

**Parameters**

- `stack-unit` Enter the stack member unit identifier of the stack member to reset. The range is 0 to 5.

  **NOTE:** The MXL switch commands accept Unit ID numbers from 0 to 5, though the MXL switch supports stacking up to three units only with the Dell Networking OS version 8.3.7.1.

- `number` Enter the port number of the 40G port to be split. Enter one of the following port numbers for the MXL switch: 48, 52, 56, or 60.

**Defaults**

Disabled.

**Command Modes**

CONFIGURATION

**Command History**

- **Version 9.2(0.0)** Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

Splitting a 40G port into 4x10G port is supported on standalone and stacked units.

- You cannot use split ports as stack-link to stack an MXL Switch.
- The split ports MXL switch unit cannot be a part of any stacked system.
• The unit number with the split ports must be the default (stack-unit 0).
• This setup can be verified using the `show system brief` command. If the unit ID is different than 0, it must be renumbered to 0 before ports are split by using the `stack-unit id renumber 0` command in EXEC mode.

The quad port must be in a default configuration before it can be split into 4x10G ports. The 40G port is lost in the config when the port is split, so be sure that the port is also removed from other L2/L3 feature configurations.

The system must be reloaded after issuing the CLI for the change to take effect.

**Port Channel Commands**

A link aggregation group (LAG) is a group of links that appear to a MAC client as if they were a single link according to IEEE 802.3ad. In the Dell Networking OS, a LAG is referred to as a Port Channel.

• For the MXL switch, the maximum port channel ID is 128 and the maximum members per port channel is 16.

Because each port can be assigned to only one Port Channel, and each Port Channel must have at least one port, some of those nominally available Port Channels might have no function because they could have no members if there are not enough ports installed. In the MXL 10/40GbE Switch IO Module, those ports could be provided by stack members.

**NOTE:** The Dell Networking OS implementation of LAG or Port Channel requires that you configure a LAG on both switches manually. For information about Dell Networking OS link aggregation control protocol (LACP) for dynamic LAGs, refer to the Link Aggregation Control Protocol (LACP) chapter. For more information about configuring and using Port Channels, refer to the Dell Networking OS Configuration Guide.

**channel-member**

Add an interface to the Port Channel, while in INTERFACE PORTCHANNEL mode.

**Syntax**

```
channel-member interface
```

To delete an interface from a Port Channel, use the `no channel-member interface` command.

**Parameters**

- **interface**
  - (OPTIONAL) Enter any of the following keywords and slot/port or number information:
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
    - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

**Defaults**

Not configured.

**Command Modes**

INTERFACE PORTCHANNEL

---

404 PMUX Mode of the I/O Aggregator
Command History

- **Version 9.2(0.0)**: Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
- **Version 8.3.16.1**: Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

Use the `interface port-channel` command to access this command.

You cannot add an interface to a Port Channel if the interface contains an IP address in its configuration.

Link MTU and IP MTU considerations for Port Channels are:

- All members must have the same link MTU value and the same IP MTU value.
- The Port Channel link MTU and IP MTU must be less than or equal to the link MTU and IP MTU values configured on the channel members. For example, if the members have a link MTU of 2100 and an IP MTU 2000, the Port Channel's MTU values cannot be higher than 2100 for link MTU or 2000 bytes for IP MTU.

When an interface is removed from a Port Channel with the `no channel-member` command, the interface reverts to its configuration prior to joining the Port Channel.

An interface can belong to only one Port Channel.

You can add up to 16 interfaces to a Port Channel on the MXL switch. The interfaces can be located on different line cards but must be the same physical type and speed (for example, all 10-Gigabit Ethernet interfaces). However, you can combine 100/1000 interfaces and GE interfaces in the same Port Channel.

If the Port Channel contains a mix of interfaces with 100 Mb/s speed and 1000 Mb/s speed, the software disables those interfaces whose speed does not match the speed of the first interface configured and enabled in the Port Channel. If that first interface goes down, the Port Channel does not change its designated speed; disable and re-enable the Port Channel or change the order of the channel members configuration to change the designated speed. If the Port Channel contains a mix of interfaces with 100 Mb/s speed and 1000 Mb/s speed, the software disables those interfaces whose speed does not match the speed of the first interface configured and enabled in the Port Channel. If that first interface goes down, the Port Channel does not change its designated speed; disable and re-enable the Port Channel or change the order of the channel members configuration to change the designated speed. For more information about Port Channels, refer to the Dell Networking OS Configuration Guide.

Related Commands:

- `interface port-channel` — creates a Port Channel interface.
interface port-channel

Create a Port Channel interface, which is a link aggregation group (LAG) containing 16 physical interfaces on the XML switch.

Syntax

interface port-channel channel-number

To delete a Port Channel, use the no interface port-channel channel-number command.

Parameters

channel-number For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.

Defaults

Not configured.

Command Modes

CONFIGURATION

Command History

Version 9.2(0.0) Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

Port Channel interfaces are logical interfaces and can be either in Layer 2 mode (by using the switchport command) or Layer 3 mode (by configuring an IP address). You can add a Port Channel in Layer 2 mode to a VLAN.

A Port Channel can contain both 100/1000 interfaces and GE interfaces. Based on the first interface configured in the Port Channel and enabled, the Dell Networking OS determines if the Port Channel uses 100 Mb/s or 1000 Mb/s as the common speed. For more information, refer to channel-member.

If the line card is in a Jumbo mode chassis, you can also configure the mtu and ip mtu commands. The Link MTU and IP MTU values configured on the channel members must be greater than the Link MTU and IP MTU values configured on the Port Channel interface.

**NOTE:** In a Jumbo-enabled system, you must configure all members of a Port Channel with the same link MTU values and the same IP MTU values.

Example

Dell(conf)#int port-channel 2
Dell(conf-if-po-2)#

Related Commands

channel-member — adds a physical interface to the LAG.

interface — configures a physical interface.

interface vlan — configures a VLAN.
**minimum-links**

Configure the minimum number of links in a LAG (Port Channel) that must be in "oper up" status for the LAG to be also in "oper up" status.

**Syntax**

```
minimum-links number
```

**Parameters**

- `number` Enter the number of links in a LAG that must be in "oper up" status. The range is from 1 to 16. The default is 1.

**Defaults**

1

**Command Modes**

INTERFACE

**Command History**

- **Version 9.2(0.0)** Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

If you use this command to configure the minimum number of links in a LAG that must be in "oper up" status, the LAG must have at least that number of "oper up" links before it can be declared as up. For example, if the required minimum is four, and only three are up, the LAG is considered down.

---

**Internet Group Management Protocol (IGMP)**

The IGMP commands are supported by the Dell Networking operating software on the Aggregator. This chapter contains the following sections:

- [IGMP Commands](#)
- [IGMP Snooping Commands](#)

**IGMP Commands**

Dell Networking OS supports IGMPv1/v2/v3 and is compliant with RFC-3376.

**Important Points to Remember**

- IGMPv2 is the default version of IGMP on interfaces. You can configure IGMPv3 on interfaces. It is backward compatible with IGMPv2.
- There is no hard limit on the maximum number of groups supported.
- IGMPv3 router interoperability with IGMPv2 and IGMPv1 routers on the same subnet is not supported.
- An administrative command (`ip igmp version`) is added to manually set the IGMP version.
- All commands previously used for IGMPv2 are compatible with IGMPv3.
ip igmp group-join-limit

To limit the number of IGMP groups that can be joined in a second, use this feature.

**Syntax**

```
ip igmp group-join-limit number
```

**Parameters**

- `number`  
Enter the number of IGMP groups permitted to join in a second. The range is from 1 to 10000.

**Defaults**

none

**Command Modes**

CONFIGURATION (conf-if-interface-slot/port)

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

```
Version 9.2(0.0)  Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
Version 9.0.2.0  Introduced on the S6000.
Version 8.3.19.0  Introduced on the S4820T.
Version 8.3.11.1  Introduced on the Z9000.
Version 8.3.7.0  Introduced on the S4810.
Version 7.8.1.0  Introduced on the C-Series and S-Series.
Version 7.6.1.0  Introduced on the E-Series.
```

ip igmp querier-timeout

Change the interval that must pass before a multicast router decides that there is no longer another multicast router that should be the querier.

**Syntax**

```
ip igmp querier-timeout seconds
```

To return to the default value, use the `no ip igmp querier-timeout` command.

**Parameters**

- `seconds`  
Enter the number of seconds the router must wait to become the new querier. The range is from 60 to 300. The default is 125 seconds.

**Defaults**

125 seconds

**Command Modes**

INTERFACE

408  
PMUX Mode of the I/O Aggregator
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version 9.5(0.0) Introduced on the Z9500.

Version 7.6.1.0 Introduced on the S-Series in Interface VLAN mode only to enable the system to act as an IGMP Proxy Querier.
Version 7.5.1.0 Introduced on the C-Series in Interface VLAN mode only to enable the system to act as an IGMP Proxy Querier.

E-Series legacy command.

ip igmp query-interval

Change the transmission frequency of IGMP general queries the Querier sends.

Syntax

ip igmp query-interval seconds

To return to the default values, use the no ip igmp query-interval command.

Parameters

seconds Enter the number of seconds between queries sent out. The range is from 1 to 18000. The default is 60 seconds.

Defaults

60 seconds

Command Modes INTERFACE

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version 9.2(0.0) Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
ip igmp query-max-resp-time

Set the maximum query response time advertised in general queries.

Syntax

```
ip igmp query-max-resp-time seconds
```

To return to the default values, use the no ip igmp query-max-resp-time command.

Parameters

- **seconds**: Enter the number of seconds for the maximum response time. The range is from 1 to 25. The default is **10 seconds**.

Defaults

**10 seconds**

Command Modes

Version 7.5.1.0  
Introduced on the E-Series.
**IGMP Snooping Commands**

Dell Networking OS supports IGMP Snooping version 2 and 3 on all Dell Networking systems.

**Important Points to Remember for IGMP Snooping**

- Dell Networking OS supports version 1, version 2, and version 3 hosts.
- Dell Networking OS IGMP snooping implementation is based on IP multicast address (not based on Layer 2 multicast mac address) and the IGMP snooping entries are in Layer 3 flow table not in Layer 2 forwarding information base (FIB).
- Dell Networking OS IGMP snooping implementation is based on draft-ietf-magma-snoop-10.
- Dell Networking OS supports IGMP snooping on JUMBO-enabled cards.
- IGMP snooping is not enabled by default on the switch.
- A maximum of 1800 groups and 600 VLAN are supported.
- IGMP snooping is not supported on a default VLAN interface.
- IGMP snooping is not supported over VLAN-Stack-enabled VLAN interfaces (you must disable IGMP snooping on a VLAN interface before configuring VLAN-Stack-related commands).

**ip igmp snooping enable**

Enable IGMP snooping on all or a single VLAN. This command is the master on/off switch to enable IGMP snooping.

**Syntax**

```
ip igmp snooping enable
```

To disable IGMP snooping, use the `no ip igmp snooping enable` command.

**Defaults**

Disabled.

**Command Modes**

- CONFIGURATION
- INTERFACE VLAN

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

- **Version 9.2(0.0)** Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
- **Version 9.0.2.0** Introduced on the S6000.
- **Version 8.3.19.0** Introduced on the S4820T.
- **Version 8.3.11.1** Introduced on the Z9000.
- **Version 8.3.7.0** Introduced on the S4810.
- **Version 7.6.1.0** Introduced on the S-Series.
- **Version 7.5.1.0** Introduced on the C-Series.
To enable IGMP snooping, enter this command. When you enable this command from CONFIGURATION mode, IGMP snooping enables on all VLAN interfaces (except the default VLAN).

**NOTE:** Execute the **no shutdown** command on the VLAN interface for IGMP Snooping to function.

**Related Commands**
- **shutdown** — (no shutdown) activates an interface.

**ip igmp snooping fast-leave**

Enable IGMP snooping fast-leave for this VLAN.

**Syntax**

```
ip igmp snooping fast-leave
```

To disable IGMP snooping fast leave, use the **no igmp snooping fast-leave** command.

**Defaults**

Not configured.

**Command Modes**

INTERFACE VLAN — (conf-if-vl-n)

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

- **Version 9.2(0.0)**
  Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

- **Version 9.0.2.0**
  Introduced on the S6000.

- **Version 8.3.19.0**
  Introduced on the S4820T.

- **Version 8.3.11.1**
  Introduced on the Z9000.

- **Version 8.3.7.0**
  Introduced on the S4810.

- **Version 7.6.1.0**
  Introduced on the S-Series.

- **Version 7.5.1.0**
  Introduced on the C-Series.

**E-Series legacy command.**

**Usage Information**

Queriers normally send some queries when a leave message is received prior to deleting a group from the membership database. There may be situations when you require a fast deletion of a group. When you enable IGMP fast leave...
processing, the switch removes an interface from the multicast group as soon as it
detects an IGMP version 2 leave message on the interface.

**ip igmp snooping last-member-query-interval**
The last member query interval is the maximum response time inserted into Group-Specific queries sent
in response to Group-Leave messages.

**Syntax**
```
ip igmp snooping last-member-query-interval milliseconds
```
To return to the default value, use the `no ip igmp snooping last-member-query-interval` command.

**Parameters**
- `milliseconds` Enter the interval in milliseconds. The range is from 100 to 65535. The default is 1000 milliseconds.

**Defaults**
1000 milliseconds

**Command Modes**
INTERFACE VLAN

**Command History**
This guide is platform-specific. For command information about other platforms,
refer to the relevant Dell Networking OS Command Line Reference Guide.
The following is a list of the Dell Networking OS version history for this command.

- **Version 9.2(0.0)** Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
- **Version 9.0.2.0** Introduced on the S6000.
- **Version 8.3.19.0** Introduced on the S4820T.
- **Version 8.3.11.1** Introduced on the Z9000.
- **Version 8.3.7.0** Introduced on the S4810.
- **Version 7.6.1.0** Introduced on the S-Series.
- **Version 7.5.1.0** Introduced on the C-Series.
- **E-Series legacy command**

**Usage Information**
This last-member-query-interval is also the interval between successive Group-
Specific Query messages. To change the last-member-query interval, use this
command.

**ip igmp snooping mrouter**
Statically configure a VLAN member port as a multicast router interface.

**Syntax**
```
ip igmp snooping mrouter interface interface
```

PMUX Mode of the I/O Aggregator
To delete a specific multicast router interface, use the `no igmp snooping mrouter interface interface` command.

**Parameters**

- **interface**
  - **interface**
    - Enter the following keywords and slot/port or number information:
      - For a 100/1000 Ethernet interface, enter the keyword `gigabitethernet` followed by the slot/port information.
      - For a 1-Gigabit Ethernet interface, enter the keyword `gigabitethernet` followed by the slot/port information.
      - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
      - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
      - For a Port Channel interface, enter the keywords `port-channel` then a number. For the C-Series and S-Series, the range is from 1 to 128.

**Defaults**

Not configured.

**Command Modes**

- **INTERFACE VLAN — (conf-if-vl-n)**

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

- **Version 9.2(0.0)**
  - Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

- **Version 9.0.2.0**
  - Introduced on the S6000.

- **Version 8.3.19.0**
  - Introduced on the S4820T.

- **Version 8.3.11.1**
  - Introduced on the Z9000.

- **Version 8.3.7.0**
  - Introduced on the S4810.

- **Version 7.6.1.0**
  - Introduced on the S-Series.

- **Version 7.5.1.0**
  - Introduced on the C-Series.

**E-Series legacy command.**

**Usage Information**

Dell Networking OS provides the capability of statically configuring the interface to which a multicast router is attached. To configure a static connection to the multicast router, enter the `ip igmp snooping mrouter interface interface` command.
ip igmp snooping querier

Enable IGMP querier processing for the VLAN interface.

Syntax

    ip igmp snooping querier

To disable IGMP querier processing for the VLAN interface, use the no ip igmp
snooping querier command.

Defaults

Not configured.

Command Modes

INTERFACE VLAN — (conf-if-vl-n)

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version 9.2(0.0)  Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

Version 9.0.2.0  Introduced on the S6000.

Version 8.3.19.0  Introduced on the S4820T.

Version 8.3.11.1  Introduced on the Z9000.

Version 8.3.7.0  Introduced on the S4810.

Version 7.6.1.0  Introduced on the S-Series.

Version 7.5.1.0  Introduced on the C-Series.

E-Series legacy command

Usage Information

This command enables the IGMP switch to send General Queries periodically. This
behavior is useful when there is no multicast router present in the VLAN because the multicast traffic is not routed. Assign an IP address to the VLAN interface for the switch to act as a querier for this VLAN.

Layer 2

This chapter describes commands to configure Layer 2 features.

This chapter contains:

- MAC Addressing Commands
MAC Addressing Commands

The following commands are related to configuring, managing, and viewing MAC addresses.

mac-address-table aging-time

Specify an aging time for MAC addresses to remove from the MAC address table.

**Syntax**

mac-address-table aging-time  
seconds

To delete the configured aging time, use the no mac-address-table aging-time seconds command.

**Parameters**

- **seconds**
  Enter either zero (0) or a number as the number of seconds before MAC addresses are relearned. To disable aging of the MAC address table, enter 0. The range is from 10 to 1000000. The default is 1800 seconds.

**Defaults**

1800 seconds

**Command Modes**

CONFIGURATION

**Command History**

Version 9.2(0.0)  Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

mac-address-table static

Associate specific MAC or hardware addresses to an interface and virtual local area networks (VLANs).

**Syntax**

mac-address-table static  
mac-address  output  interface vlan  
vlan-id

To remove a MAC address, use the no mac-address-table static  
mac-address  output  interface vlan  
vlan-id command.

**Parameters**

- **mac-address**
  Enter the 48-bit hexadecimal address in nn:nn:nn:nn:nn:nn format.

- **output**
  Enter the keyword output then one of the following interfaces for which traffic is forwarded:

  - For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
vlan vlan-id

Enter the keyword `vlan` then a VLAN ID number from 1 to 4094.

Defaults
Not configured.

Command Modes
CONFIGURATION

Command History

Version 9.2(0.0)  Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

mac-address-table station-move refresh-arp

Ensure that address resolution protocol (ARP) refreshes the egress interface when a station move occurs due to a topology change.

Syntax
[no] mac-address-table station-move refresh-arp

Defaults
none

Command Modes
CONFIGURATION

Command History

Version 9.2(0.0)  Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
For details about using this command, refer to the “NIC Teaming” section of the Layer 2 chapter in the Dell Networking OS Configuration Guide.

Link Aggregation Control Protocol (LACP)

This chapter contains commands for Dell Networks's implementation of the link aggregation control protocol (LACP) for creating dynamic link aggregation groups (LAGs) — known as port-channels in the Dell Networking Operating System (OS).

NOTE: For static LAG commands, refer to the Interfaces chapter, based on the standards specified in the IEEE 802.3 Carrier sense multiple access with collision detection (CSMA/CD) access method and physical layer specifications.

lacp long-timeout

Configure a long timeout period (30 seconds) for an LACP session.

Syntax
lacp long-timeout

To reset the timeout period to a short timeout (1 second), use the no lacp long-timeout command.
Defaults
1 second

Command Modes
INTERFACE (conf-if-po-number)

Command History
Version 9.2(0.0) Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
This command applies to dynamic port-channel interfaces only. When applied on a static port-channel, this command has no effect.

**lacp port-priority**

To influence which ports will be put in Standby mode when there is a hardware limitation that prevents all compatible ports from aggregating, configure the port priority.

**Syntax**

lacp port-priority priority-value

To return to the default setting, use the no lacp port-priority priority-value command.

**Parameters**

- **priority-value**  
  Enter the port-priority value. The higher the value number, the lower the priority. The range is from 1 to 65535. The default is 32768.

**Defaults**

32768

**Command Modes**

INTERFACE

**Command History**

Version 9.2(0.0) Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**port-channel mode**

Configure the LACP port channel mode.

**Syntax**

port-channel number mode [active] [passive] [off]

**Parameters**

- **number**  
  Enter the keywords number then a number.

- **active**  
  Enter the keyword active to set the mode to the active state.

- **passive**  
  Enter the keyword passive to set the mode to the passive state.

**NOTE:** LACP modes are defined in Usage Information.
NOTE: LACP modes are defined in Usage Information.

off
Enter the keyword off to set the mode to the off state.

NOTE: LACP modes are defined in Usage Information.

Defaults
off

Command Modes
INTERFACE

Command History

Version 9.2(0.0) Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

<table>
<thead>
<tr>
<th>Mode</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>active</td>
<td>An interface is in an active negotiating state in this mode. LACP runs on any link configured in the active state and also automatically initiates negotiation with other ports by initiating LACP packets.</td>
</tr>
<tr>
<td>passive</td>
<td>An interface is not in an active negotiating state in this mode. LACP runs on any link configured in the passive state. Ports in a passive state respond to negotiation requests from other ports that are in active states. Ports in a passive state respond to LACP packets</td>
</tr>
<tr>
<td>off</td>
<td>An interface cannot be part of a dynamic port channel in off mode. LACP does not run on a port configured in off mode.</td>
</tr>
</tbody>
</table>

**port-channel-protocol lacp**

Enable LACP on any LAN port.

**Syntax**

`port-channel-protocol lacp`

To disable LACP on a LAN port, use the `no port-channel-protocol lacp` command.

**Command Modes**

INTERFACE

**Command History**

Version 9.2(0.0) Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
Example

Dell(conf)#interface TenGigabitethernet 3/15
Dell(conf-if-tengig-3/15)#no shutdown
Dell(conf-if-tengig-3/15)#port-channel-protocol lacp
Dell(conf-if-tengig-3/15-lacp)#port-channel 32 mode active

Dell(conf)#interface TenGigabitethernet 3/16
Dell(conf-if-tengig-3/16)#no shutdown
Dell(conf-if-tengig-3/16)#port-channel-protocol lacp
Dell(conf-if-tengig-3/16-lacp)#port-channel 32 mode active

Link Layer Discovery Protocol (LLDP)

Link layer discovery protocol (LLDP) advertises connectivity and management from the local station to the adjacent stations on an IEEE 802 LAN.

LLDP facilitates multi-vendor interoperability by using standard management tools to discover and make available a physical topology for network management. The Dell Networking operating software implementation of LLDP is based on IEEE standard 801.1ab.

The starting point for using LLDP is invoking LLDP with the protocol lldp command in either CONFIGURATION or INTERFACE mode.

The information LLDP distributes is stored by its recipients in a standard management information base (MIB). You can access the information by a network management system through a management protocol such as simple network management protocol (SNMP).

For details about implementing LLDP/LLDP-MED, refer to the Link Layer Discovery Protocol chapter of the Dell Networking OS Configuration Guide.

advertise dot3-tlv

Advertise dot3 TLVs (Type, Length, Value).

Syntax

advertise dot3-tlv {max-frame-size}

To remove advertised dot3-tlv, use the no advertise dot3-tlv {max-frame-size} command.

Parameters

max-frame-size

- Enter the keywords max-frame-size to advertise the dot3 maximum frame size.

Defaults

none

Command Modes

CONFIGURATION (conf-lldp) and INTERFACE (conf-if-interface-lldp)

Command History

Version 9.2(0.0) Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
clear lldp counters

Clear LLDP transmitting and receiving counters for all physical interfaces or a specific physical interface.

Syntax:
```
clear lldp counters interface
```

Parameters:
```
interface
```
Enter the following keywords and slot/port or number information:

- For a 10-Gigabit Ethernet interface, enter the keyword `tenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

Defaults:

```
one
```

Command Modes:

```
EXEC Privilege
```

Command History:

```
Version 9.2(0.0)  Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.
```

ddebug lldp interface

To display timer events, neighbor additions or deletions, and other information about incoming and outgoing packets, enable LLDP debugging.

Syntax:
```
ddebug lldp interface {interface | all}{events | packet {brief | detail} {tx | rx | both}}
```

To disable debugging, use the `no debug lldp interface {interface | all}{events} {packet {brief | detail} {tx | rx | both}}` command.

Parameters:
```
interface
```
Enter the following keywords and slot/port or number information:

- For a 10-Gigabit Ethernet interface, enter the keyword `tenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

```
all  (OPTIONAL) Enter the keyword all to display information on all interfaces.
```

```
events  (OPTIONAL) Enter the keyword events to display major events such as timer events.
```

packet (OPTIONAL) Enter the keyword packet to display information regarding packets coming in or going out.

brief (OPTIONAL) Enter the keyword brief to display brief packet information.

detail (OPTIONAL) Enter the keyword detail to display detailed packet information.

tax (OPTIONAL) Enter the keyword tx to display transmit-only packet information.

rx (OPTIONAL) Enter the keyword rx to display receive-only packet information.

both (OPTIONAL) Enter the keyword both to display both receive and transmit packet information.

Defaults none

Command Modes EXEC Privilege

Command History

Version 9.2(0.0) Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

advertise management-tlv

Advertise management TLVs (Type, Length, Value).

Syntax advertise management-tlv {system-capabilities | system-description | system-name}

To remove advertised management TLVs, use the no advertise management-tlv {system-capabilities | system-description | system-name} command.

Parameters system-capabilities Enter the keywords system-capabilities to advertise the system capabilities TLVs to the LLDP peer.

system-description Enter the keywords system-description to advertise the system description TLVs to the LLDP peer.

system-name Enter the keywords system-name to advertise the system name TLVs to the LLDP peer.

Defaults none

Command Modes CONFIGURATION (conf-lldp)

PMUX Mode of the I/O Aggregator
clear lldp neighbors

Clear LLDP neighbor information for all interfaces or a specific interface.

Syntax

```
clear lldp neighbors {interface}
```

Parameters

interface

Enter the following keywords and slot/port or number information:

- For a 10-Gigabit Ethernet interface, enter the keyword `tenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

Defaults

none

Command Modes

EXEC Privilege

Command History

Version 9.2(0.0)  Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

disable

Enable or disable LLDP.

Syntax

```
disable
```

To enable LLDP, use the `no disable` command.

Defaults

Enabled, that is `no disable`.

Command Modes

CONFIGURATION (conf-lldp) and INTERFACE (conf-if-interface-lldp)

Command History

Version 9.2(0.0)  Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.
hello

Configure the rate at which the LLDP control packets are sent to its peer.

**Syntax**

```
hello seconds
```

To revert to the default, use the `no hello seconds` command.

**Parameters**

- **seconds**
  
Enter the rate, in seconds, at which the control packets are sent to its peer. The rate is from 5 to 180 seconds. The default is **30 seconds**.

**Defaults**

- **30 seconds**

**Command Modes**

- **CONFIGURATION (conf-lldp) and INTERFACE (conf-if-interface-lldp)**

**Command History**

- **Version 9.2(0.0)**
  
  Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

- **Version 8.3.16.1**
  
  Introduced on the MXL 10/40GbE Switch IO Module.

multiplier

Set the number of consecutive misses before LLDP declares the interface dead.

**Syntax**

```
multiplier integer
```

To return to the default, use the `no multiplier integer` command.

**Parameters**

- **integer**
  
Enter the number of consecutive misses before the LLDP declares the interface dead. The range is from 2 to 10.

**Defaults**

- **4 x hello**

**Command Modes**

- **CONFIGURATION (conf-lldp) and INTERFACE (conf-if-interface-lldp)**

**Command History**

- **Version 9.2(0.0)**
  
  Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

- **Version 8.3.16.1**
  
  Introduced on the MXL 10/40GbE Switch IO Module.
Quality of Service (QoS)

The Dell Networking operating software commands for quality of service (QoS) include traffic conditioning and congestion control. QoS commands are not universally supported on all Dell Networking Products.

Per-Port QoS Commands

Per-port QoS (port-based QoS) allows you to define the QoS configuration on a per-physical-port basis.

**dot1p-priority**

Assign a value to the IEEE 802.1p bits on the traffic this interface receives.

**Syntax**

```plaintext
dot1p-priority priority-value
```

To delete the IEEE 802.1p configuration on the interface, use the `no dot1p-priority` command.

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>priority-value</code></td>
<td>Enter a value from 0 to 7.</td>
</tr>
</tbody>
</table>

**Defaults**

`none`

**Command Modes**

`INTERFACE`

**Command History**

- **Version 9.2(0.0)**
  - Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

- **Version 8.3.16.1**
  - Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The `dot1p-priority` command changes the priority of incoming traffic on the interface. The system places traffic marked with a priority in the correct queue and processes that traffic according to its queue.
When you set the priority for a port channel, the physical interfaces assigned to the port channel are configured with the same value. You cannot assign the dot1p-priority command to individual interfaces in a port channel.

**service-class dynamic dot1p**

Honor all 802.1p markings on incoming switched traffic on an interface (from INTERFACE mode) or on all interfaces (from CONFIGURATION mode). A CONFIGURATION mode entry supersedes an INTERFACE mode entry.

**Syntax**

```
service-class dynamic dot1p
```

To return to the default setting, use the `no service-class dynamic dot1p` command.

**Defaults**

All dot1p traffic is mapped to Queue 0 unless you enable the `service-class dynamic dot1p` command. The default mapping is as follows:

<table>
<thead>
<tr>
<th>dot1p</th>
<th>Queue ID</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>0</td>
</tr>
<tr>
<td>1</td>
<td>0</td>
</tr>
<tr>
<td>2</td>
<td>0</td>
</tr>
<tr>
<td>3</td>
<td>1</td>
</tr>
<tr>
<td>4</td>
<td>2</td>
</tr>
<tr>
<td>5</td>
<td>3</td>
</tr>
<tr>
<td>6</td>
<td>3</td>
</tr>
<tr>
<td>7</td>
<td>3</td>
</tr>
</tbody>
</table>

**Command Modes**

- INTERFACE
- CONFIGURATION

**Command History**

- **Version 9.2(0.0)** Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

To honor all incoming 802.1p markings on incoming switched traffic on the interface, enter this command. By default, this facility is not enabled (that is, the 802.1p markings on incoming traffic are not honored).

You can apply this command on both physical interfaces and port channels. When you set the service-class dynamic for a port channel, the physical interfaces
assigned to the port channel are automatically configured; you cannot assign the
service-class dynamic command to individual interfaces in a port channel.

- All dot1p traffic is mapped to Queue 0 unless you enable the service-class
dynamic dot1p command on an interface or globally.
- Layer 2 or Layer 3 service policies supersede dot1p service classes.

**service-class dot1p-mapping**

Configure a service-class criterion based on a dot1p value.

**Syntax**

```
service-class dot1p-mapping {dot1p0 value | dot1p1 value | dot1p2 queue | dot1p3 value | dot1p4 value | dot1p5 value | dot1p6 value | dot1p7 value}
```

**Parameters**

- **value**
  - Enter a dot1p list number and value. The list number range is from 0 to 7. The range is from 0 to 3.

**Defaults**

For each dot1p Priority, the default CoS queue value is:

- dot1p CoS Queue

  0 0-7
  1 0-7
  2 0-7
  3 0-7
  4 0-7
  5 0-7
  6 0-7
  7 0-7

**Command Modes**

CONFIGURATION

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

- **Version 9.2(0.0)**
  - Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

- **Version 9.0.2.0**
  - Introduced on the S6000.
Version 8.3.19.0  Introduced on the S4820T.

Version 8.3.11.1  Introduced on the Z9000.

Version 8.3.7.0  Introduced on the S4810.

Usage Information
To apply dot1p-queue-mapping, use the service-class dynamic dot1p command.

Related Commands
service-class dot1p-mapping — displays the dot1p priority to queue mapping on the switch.

service-class bandwidth-percentage
Specify a minimum bandwidth for queues.

Syntax
service-class bandwidth-percentage queue0 number queue1 number queue2 number queue3 number

Parameters
number  Enter the bandwidth-weight, as a percentage. The range is from 1 to 100.

Defaults
none

Command Modes
CONFIGURATION

Command History
Version 9.2(0.0)  Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

Version 8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
Guarantee a minimum bandwidth to different queues globally using the service-class bandwidth-percentage command from CONFIGURATION mode. The command is applied in the same way as the bandwidth-percentage command in an output QoS policy. The bandwidth-percentage command in QOS-POLICY-OUT mode supersedes the service-class bandwidth-percentage command.

When you enable ETS, the egress QoS features in the output QoS policy-map (such as service-class bandwidth-percentage and bandwidth-percentage), the default bandwidth allocation ratio for egress queues are superseded by ETS configurations. This is to provide compatibility with DCBX. Therefore, Dell Networking OS recommends disabling ETS when you wish to apply these features exclusively. After you disable ETS on an interface, the configured parameters are applied.
Policy-Based QoS Commands

Policy-based traffic classification is handled with class maps. These maps classify unicast traffic into one of four classes. The system allows you to match multiple class maps and specify multiple match criteria. Policy-based QoS is not supported on logical interfaces, such as port-channels, VLANs, or Loopbacks.

**bandwidth-percentage**

Assign a percentage of weight to the class/queue.

**Syntax**

```
bandwidth-percentage percentage
```

To remove the bandwidth percentage, use the `no bandwidth-percentage` command.

**Parameters**

- `percentage` Enter the percentage assignment of weight to the class/queue. The range is from 1 to 100% (granularity 1%).

**Defaults**

`none`

**Command Modes**

`CONFIGURATION (conf-qos-policy-out)`

**Command History**

- **Version 9.2(0.0)** Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The unit of bandwidth percentage is 1%. If the sum of the bandwidth percentages given to all eight classes exceeds 100%, the bandwidth percentage automatically scales down to 100%.

**Related Commands**

- `qos-policy-output` — creates a QoS output policy.

**description**

Add a description to the selected policy map or QoS policy.

**Syntax**

```
description {description}
```

To remove the description, use the `no description {description}` command.

**Parameters**

- `description` Enter a description to identify the policies (80 characters maximum).

**Defaults**

`none`
policy-aggregate

Allow an aggregate method of configuring per-port QoS via policy maps. An aggregate QoS policy is part of the policy map (input/output) applied on an interface.

**Syntax**

```
policy-aggregate  qos-policy-name
```

To remove a policy aggregate configuration, use the `no policy-aggregate qos-policy-name` command.

**Parameters**

- `qos-policy-name` Enter the name of the policy map in character format (32 characters maximum).

**Defaults**

none

**Command Modes**

CONFIGURATION (policy-map-input and policy-map-output)

**Command History**

- **Version 9.2(0.0)** Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

If the rate shape exists in both aggregate and per-queue qos-policy, minimum of two take effect. Some of all Queue-rate will not exceed aggregate.

**Related Commands**

- `policy-map-output` — creates an output policy map.

policy-map-output

Create an output policy map.

**Syntax**

```
policy-map-output  policy-map-name
```

To remove a policy map, use the `no policy-map-output policy-map-name` command.

PMUX Mode of the I/O Aggregator
Parameters

policy-map-name Enter the name for the policy map in character format (32 characters maximum).

Defaults

none

Command Modes

CONFIGURATION

Command History

Version 9.2(0.0) Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

Version 8.3.16.1 Introduced on the MxL 10/40GbE Switch IO Module.

Usage Information

To assign traffic to different flows using QoS policy, use the Output Policy map. This command enables Policy-Map-Output Configuration mode (conf-policy-map-out).

Related Commands

service-queue — assigns a class map and QoS policy to different queues.

policy-aggregate — allows an aggregate method of configuring per-port QoS using policy maps.

service-policy output — applies an output policy map to the selected interface.

qos-policy-output

Create a QoS output policy.

Syntax

qos-policy-output qos-policy-name

To remove an existing output QoS policy, use the no qos-policy-output qos-policy-name command.

Parameters

qos-policy-name Enter your output QoS policy name in character format (32 characters maximum).

Defaults

none

Command Modes

CONFIGURATION

Command History

Version 8.3.16.1 Introduced on the MxL 10/40GbE Switch IO Module.

Usage Information

To specify the name of the output QoS policy, use this command. After the output policy is specified, rate shape, scheduler strict, bandwidth-percentage, and WRED can be defined. This command enables Qos-Policy-Output Configuration mode — (conf-qos-policy-out).
Related Commands

- `bandwidth-percentage` — assigns weight to the class/queue percentage.

**rate-shape**

Shape the traffic output on the selected interface.

**Syntax**

```
rate-shape [kbps] rate [burst-KB]
```

**Parameters**

- **kbps**
  - Enter the keyword `kbps` to specify the rate limit in Kilobits per second (Kbps). Make the following value a multiple of 64. The range is from 0 to 40000000. The default granularity is Megabits per second (Mbps).
- **rate**
  - Enter the outgoing rate in multiples of 10 Mbps. The range is from 10 to 10000.
- **burst-KB**
  - (OPTIONAL) Enter the burst size in KB. The range is from 0 to 10000. The default is 50.

**Defaults**

Granularity for rate is **Mbps** unless you use the `kbps` option.

**Command Modes**

QOS-POLICY-OUT

**Command History**

- **Version 9.2(0.0)**
  - Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
- **Version 8.3.16.1**
  - Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

When you apply `rate-shape` in QoS policy both on the Queue Level and in Aggregate mode, the queue-based shaping occurs first then aggregate rate shaping.

**service-policy output**

Apply an output policy map to the selected interface.

**Syntax**

```
service-policy output policy-map-name
```

To remove the output policy map from the interface, use the `no service-policy output policy-map-name` command.

**Parameters**

- **policy-map-name**
  - Enter the name for the policy map in character format (16 characters maximum). You can identify an existing policy map or name one that does not yet exist.

**Defaults**

none

**Command Modes**

INTERFACE
**service-queue**

Assign a class map and QoS policy to different queues.

**Syntax**

```plaintext
service-queue queue-id [class-map class-map-name] [qos-policy qos-policy-name]
```

To remove the queue assignment, use the `no service-queue queue-id [class-map class-map-name] [qos-policy qos-policy-name]` command.

**Parameters**

- `queue-id` Enter the value used to identify a queue. The range is from 0 to 3 (four queues per interface; four queues are reserved for control traffic).
- `class-map class-map-name` (OPTIONAL) Enter the keyword `class-map` then the class map name assigned to the queue in character format (32 character maximum).
  
  **NOTE:** This option is available under `policy-map-input` only.
- `qos-policy qos-policy-name` (OPTIONAL) Enter the keywords `qos-policy` then the QoS policy name assigned to the queue in text format (32 characters maximum). This specifies the input QoS policy assigned to the queue under `policy-map-input` and output QoS policy under `policy-map-output` context.

**Defaults**

none

**Command Modes**

CONFIGURATION (conf-policy-map-in and conf-policy-map-out)

**Command History**

- **Version 9.2(0.0)** Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.
show qos qos-policy-output

View the output QoS policy details.

Syntax: show qos qos-policy-output [qos-policy-name]

Parameters:
- qos-policy-name: Enter the QoS policy name.

Defaults: none

Command Modes:
- EXEC
- EXEC Privilege

Command History:
Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Example:
```
Dell#show qos qos-policy-output
Qos-policy-output qmap_out
Bandwidth-percentage 10
Qos-policy-output qmap_wg
Rate-shape 100 50
Wred yellow wy
Wred green wg
Dell#
```
OS sends SNMP traps, which are messages informing an SNMP management system about the network. Dell Networking OS supports up to 16 SNMP trap receivers.

**Important Points to Remember**

- Typically, 5-second timeout and 3-second retry values on an SNMP server are sufficient for both LAN and WAN applications. If you experience a timeout with these values, the recommended best practice on Dell Networking switches (to accommodate their high port density) is to increase the timeout and retry values on your SNMP server to the following:
  - SNMP Timeout — greater than 3 seconds.
  - SNMP Retry count — greater than 2 seconds.
- If you want to query an E-Series switch using SNMP v1/v2/v3 with an IPv6 address, configure the IPv6 address on a non-management port on the switch.
- If you want to send SNMP v1/v2/v3 traps from an E-Series using an IPv6 address, use a non-management port.
- SNMP v3 informs are not currently supported with IPv6 addresses.
- If you are using access control lists (ACLs) in an SNMP v3 configuration, group ACL overrides user ACL if the user is part of that group.
- SNMP operations are not supported on a virtual local area network (VLAN).

**snmp-server enable traps**

Enable SNMP traps.

**Syntax**

```
no snmp-server enable traps [notification-type] [notification-option]
```

To disable traps, use the `no snmp-server enable traps [notification-type] [notification-option]` command.

**Parameters**

- `notification-type`
  - Enter the type of notification from the following list:
    - `snmp` — Notification of RFC 1157 traps.
    - `stack` — Notification of stacking traps.

- `notification-option`
  - For the `envmon` notification-type, enter one of the following optional parameters:
    - `cam-utilization`
    - `fan`
    - `supply`
    - `temperature`
  - For the `snmp` notification-type, enter one of the following optional parameters:
    - `authentication`
    - `coldstart`
    - `linkdown`
    - `linkup`
Defaults

Not enabled.

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version 9.2(0.0) Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

Version 9.1(0.0) Added support for copy-config and ecmp traps.

Version 8.3.19.0 Introduced on the S4820T.

Version 8.3.11.1 Introduced on the Z9000.

Version 8.3.7.0 Introduced on the S4810.

Version 8.4.1.0 Added support for VRRP traps.

Version 7.6.1.0 Added support for STP and xSTP traps. Introduced on the S-Series.

Version 7.5.1.0 Introduced on the C-Series.

E-Series legacy command

Usage Information

Dell Networking OS supports up to 16 SNMP trap receivers.

If you do not configure this command, no traps controlled by this command are sent. If you do not specify a notification-type and notification-option, all traps are enabled.

snmp-server host

Configure the recipient of an SNMP trap operation.

Syntax

snmp-server host ip-address | ipv6-address traps | informs [version 1| 2c|3] [auth |no auth | priv] [community-string]

To remove the SNMP host, use the no snmp-server host ip-address | ipv6-address traps | informs [version 1| 2c|3] [auth |no auth | priv] [community-string] command.

Parameters

ip-address Enter the keyword host then the IP address of the host (configurable hosts is limited to 16).

ipv6-address Enter the keyword host then the IPv6 address of the host in the x:x:x:x::x format.
traps  (OPTIONAL) Enter the keyword traps to send trap notifications to the specified host. The default is traps.

informs (OPTIONAL) Enter the keyword informs to send inform notifications to the specified host. The default is traps.

version 1 | 2c | 3  (OPTIONAL) Enter the keyword version to specify the security model then the security model version number 1, 2c, or 3:

• Version 1 is the least secure version.
• Version 3 is the most secure of the security modes.
• Version 2c allows transmission of informs and counter 64, which allows for integers twice the width of what is normally allowed.

The default is version 1.

auth  (OPTIONAL) Enter the keyword auth to specify authentication of a packet without encryption.

noauth (OPTIONAL) Enter the keyword noauth to specify no authentication of a packet.

priv  (OPTIONAL) Enter the keyword priv to specify both authentication and then scrambling of the packet.

community-string  Enter a text string (up to 20 characters long) as the name of the SNMP community.

NOTE: For version 1 and version 2c security models, this string represents the name of the SNMP community. The string can be set using this command; however, Dell Networking OS recommends setting the community string using the snmp-server community command before executing this command. For version 3 security model, this string is the USM user security name.

Defaults As above.
Command Modes CONFIGURATION

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version 9.2(0.0) Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
## Usage Information

In order to configure the router to send SNMP notifications, enter at least one `snmp-server host` command. If you enter the command with no keywords, all trap types are enabled for the host. If you do not enter an `snmp-server host` command, no notifications are sent.

In order to enable multiple hosts, issue a separate `snmp-server host` command for each host. You can specify multiple notification types in the command for each host.

When multiple `snmp-server host` commands are given for the same host and type of notification (trap or inform), each succeeding command overwrites the previous command. Only the last `snmp-server host` command will be in effect. For example, if you enter an `snmp-server host inform` command for a host and then enter another `snmp-server host inform` command for the same host, the second command replaces the first command.

The `snmp-server host` command is used with the `snmp-server enable` command. Use the `snmp-server enable` command to specify which SNMP notifications are sent globally. For a host to receive most notifications, at least one `snmp-server enable` command and the `snmp-server host` command for that host must be enabled.

**NOTE:** For v1 / v2c trap configuration, if the community-string is not defined using the `snmp-server community` command prior to using this command, the default form of the `snmp-server community` command automatically is configured with the community-name the same as specified in the `snmp-server host` command.

### Configuring Informs

To send an inform, use the following steps:

1. Configure a remote engine ID.
2. Configure a remote user.
3. Configure a group for this user with access rights.
4. Enable traps.
5. Configure a host to receive informs.

Related Commands

- `snmp-server enable traps` — enables SNMP traps.

Syslog Commands

The following commands allow you to configure logging functions on all Dell Networking switches.

**clear logging**

Clear the messages in the logging buffer.

**Syntax**

```
clear logging
```

**Defaults**

```
none
```

**Command Modes**

```
EXEC Privilege
```

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

- **Version 9.2(0.0)**
  Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

- **Version 8.3.19.0**
  Introduced on the S4820T.

- **Version 8.3.11.1**
  Introduced on the Z9000.

- **Version 8.3.7.0**
  Introduced on the S4810.

- **Version 7.6.1.0**
  Introduced on the S-Series.

- **Version 7.5.1.0**
  Introduced on the C-Series.

- **E-Series legacy command**

  **Related Commands**

  - `show logging` — displays logging settings and system messages in the internal buffer.

**logging**

Configure an IP address or host name of a Syslog server where logging messages are sent. Multiple logging servers of both IPv4 and/or IPv6 can be configured.

**Syntax**

```
logging {ip-address | ipv6-address | hostname} [vrf vrf-name]
```

To disable logging, use the `no logging` command.
Parameters

- **ip-address**: Enter the IPv4 address in dotted decimal format.
- **ipv6-address**: Enter the IPv6 address in the x:x:x:x::X format.

**NOTE**: The :: notation specifies successive hexadecimal fields of zeros.

- **hostname**: Enter the name of a host already configured and recognized by the switch.

Defaults

Disabled.

Command Modes

- **CONFIGURATION**

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

- **Version 9.2(0.0)**: Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
- **Version 8.3.19.0**: Introduced on the S4820T.
- **Version 8.3.11.1**: Introduced on the Z9000.
- **Version 8.3.7.0**: Introduced on the S4810.
- **Version 8.4.1.0**: Added support for IPv6.
- **Version 7.6.1.0**: Introduced on the S-Series.
- **Version 7.5.1.0**: Introduced on the C-Series.
- **E-Series legacy command**

Usage Information

Multiple logging servers of both IPv4 and/or IPv6 can be configured.

logging buffered

Enable logging and specify which messages are logged to an internal buffer. By default, all messages are logged to the internal buffer.

Syntax

```
logging buffered [level] [size]
```

To return to the default values, use the no logging buffered command.

To disable logging stored to an internal buffer, use the no logging buffered command.

Parameters

- **level**: (OPTIONAL) Indicate a value from 0 to 7 or enter one of the following equivalent words: emergencies, alerts.
critical, errors, warnings, notifications, informational, or debugging. The default is 7 or debugging.

size (OPTIONAL) Indicate the size, in bytes, of the logging buffer. The number of messages buffered depends on the size of each message. The range is from 40960 to 524288. The default is 40960 bytes.

Defaults level = 7; size = 40960 bytes

Command Modes CONFIGURATION

Command History
Version 8.3.17.0 Supported on the M I/O Aggregator.

Usage Information
When you decrease the buffer size, all messages stored in the buffer are lost. Increasing the buffer size does not affect messages stored in the buffer.

Related Commands clear logging — clears the logging buffer.
logging hostname — returns the logging buffered parameters to the default setting.
show logging — displays the logging setting and system messages in the internal buffer.

logging console
Specify which messages are logged to the console.

Syntax logging console [level]

To return to the default values, use the default logging console command.

To disable logging to the console, use the no logging console command.

Parameters

level (OPTIONAL) Indicate a value from 0 to 7 or enter one of the following parameters: emergencies, alerts, critical, errors, warnings, notifications, informational, or debugging. The default is 7 or debugging.

Defaults level = 7; size = debugging

Command Modes CONFIGURATION

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version 9.2(0.0) Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
logging monitor

Specify which messages are logged to Telnet applications.

Syntax

```
logging monitor [level]
```

To disable logging to terminal connections, use the no logging monitor command.

Parameters

- **level**
  
  Indicate a value from 0 to 7 or enter one of the following parameters: emergencies, alerts, critical, errors, warnings, notifications, informational, or debugging. The default is 7 or debugging.

Defaults

```
7 or debugging
```

Command Modes

Related Commands

- clear logging — clears the logging buffer.
- show logging — displays the logging setting and system messages in the internal buffer.
logging source-interface

Specify that the IP address of an interface is the source IP address of Syslog packets sent to the Syslog server.

**Syntax**

```
logging source-interface interface
```

To disable this command and return to the default setting, use the `no logging source-interface` command.

**Parameters**

- **interface**
  Enter the following keywords and slot/port or number information:
  - For a 100/1000 Ethernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For Loopback interfaces, enter the keyword `loopback` then a number from zero (0) to 16383.
  - For the management interface on the RPM, enter the `ManagementEthernet` then the slot/port information. The slot range is from 0 to 1 and the port range is 0.
  - For a Port Channel interface, enter the keywords `port-channel` then a number. Tthe range is from 1 to 128.
  - For a ten-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults**

Not configured.

  Introduced on the S6000.

- **Version 8.3.19.0**
  Introduced on the S4820T.
Syslog messages contain the IP address of the interface used to egress the router. By configuring the `logging source-interface` command, the Syslog packets contain the IP address of the interface configured.

**Related Commands**

- `logging` - enables logging to the Syslog server.

### show logging

Display the logging settings and system messages logged to the internal buffer of the switch.

**Syntax**

```
show logging [number | history [reverse][number] | reverse [number] | summary]
```

**Parameters**

- `number` (OPTIONAL) Enter the number of messages displayed in the output. The range is from 1 to 65535.
- `history` (OPTIONAL) Enter the keyword `history` to view only information in the Syslog history table.
- `reverse` (OPTIONAL) Enter the keyword `reverse` to view the Syslog messages in FIFO (first in, first out) order.
- `summary` (OPTIONAL) Enter the keyword `summary` to view a table showing the number of messages per type and per slot. Slots *7* and *8* represent RPMs.

**Command Modes**

- EXEC
- EXEC Privilege

Display the driver log for the specified stack member.

Syntax
show logging driverlog stack-unit unit#

Parameters

stack-unit

unit#

Enter the keywords stack-unit followed by the stack
member ID of the switch for which you want to display the
driver log. The range is from 0 to 7.

defaults

none

Command
Modes

• EXEC
• EXEC Privilege

Command
History

This guide is platform-specific. For command information about other platforms,
refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version 9.2(0.0) Introduced on the M I/O Aggregator. This command is
supported in Programmable-Mux (PMUX) mode only.

Version 9.0.2.0 Introduced on the S6000.

Version 8.3.19.0 Introduced on the S4820T.

Version 8.3.11.1 Introduced on the Z9000.

Version 8.3.7.0 Introduced on the S4810.

Version 7.6.1.0 Introduced on the S-Series.

Usage
Information

This command displays internal software driver information, which may be useful
during troubleshooting switch initialization errors, such as a downed Port-Pipe.

terminal monitor

Configure the Dell Networking OS to display messages on the monitor/terminal.

Syntax
terminal monitor

To return to default settings, use the terminal no monitor command.

defaults

Disabled.
Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

- **Version 9.2(0.0)**
  - Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
- **Version 9.0.2.0**
  - Introduced on the S6000.
- **Version 8.3.19.0**
  - Introduced on the S4820T.
- **Version 8.3.11.1**
  - Introduced on the Z9000.
- **Version 8.3.7.0**
  - Introduced on the S4810.
- **Version 7.6.1.0**
  - Introduced on the S-Series.
- **Version 7.5.1.0**
  - Introduced on the C-Series.
- **E-Series legacy command**

Related Commands

logging monitor — sets the logging parameters on the monitor/terminal.

Storm Control

The Dell Networking operating software storm control feature allows you to limit or suppress traffic during a traffic storm.

Important Points to Remember

- Interface commands can only be applied on physical interfaces (virtual local area networks [VLANs] and link aggregation group [LAG] interfaces are not supported).
- An INTERFACE-level command only supports storm control configuration on ingress.
- An INTERFACE-level command overrides any CONFIGURATION-level ingress command for that physical interface, if both are configured.
- You can apply the CONFIGURATION-level storm control commands at ingress or egress and are supported on all physical interfaces.
- When storm control is applied on an interface, the percentage of storm control applied is calculated based on the advertised rate of the line card. It is not based on the speed setting for the line card.
- Do not apply per-VLAN quality of service (QoS) on an interface that has storm control enabled (either on an interface or globally).
- When you enable broadcast storm control on an interface or globally on ingress, and DSCP marking for a DSCP value 1 is configured for the data traffic, the traffic goes to queue 1 instead of queue 0.
Similarly, if you enable unicast storm control on an interface or globally on ingress, and DSCP marking for a DSCP value 2 is configured for the data traffic, the traffic goes to queue 2 instead of queue 0.

**NOTE:** Bi-directional traffic (unknown unicast and broadcast) along with egress storm control causes the configured traffic rates split between the involved ports. The percentage of traffic that each port receives after the split is not predictable. These ports can be in the same/different port pipes or the same/different line cards.

**NOTE:** The policy discard drop counters are common across storm-control drops, ACL drops and QoS drops. Therefore, if your configuration includes ACL and QoS, those drops are also computed and displayed in the policy discard drops counter field along with storm-control drops. The packets dropped by the storm control feature can be monitored by viewing the value of the Policy Discard Drops field of the output of the `show hardware stack-unit 0 drops` command.

### show storm-control unknown-unicast

Display the storm control unknown-unicast configuration.

**Syntax**

```plaintext
show storm-control unknown-unicast [interface]
```

**Parameters**

- **interface**
  
  (OPTIONAL) Enter one of the following interfaces to display the interface specific storm control configuration:
  
  - For a 1-Gigabit Ethernet interface, enter the keyword `GigabitEthernet` then `y` the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

**Defaults**

none

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

- **Version 9.2(0.0)** Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
- **Version 8.3.19.0** Introduced on the S4820T.
- **Version 8.3.11.1** Introduced on the Z9000.
- **Version 8.5.1.0** Added support for 4-port 40G line cards on ExaScale.
- **Version 8.3.7.0** Introduced on the S4810.
- **Version 7.6.1.0** Introduced on the S-Series.
Version 7.5.1.0  Introduced on the C-Series.
Version 6.5.1.0  Introduced on the E-Series.

**show io-aggregator broadcast storm-control status**

Shows if storm control is enabled or disabled. If enabled, displays information on the rate limit value.

**Syntax**
```
show io-aggregator broadcast storm-control status
```

**Command Modes**
- EXEC Privilege

**Command History**
- Version 8.3.17.0  Supported on the M I/O Aggregator.

**Example**
```
Dell#show io-aggregator broadcast storm-control status
Storm-Control Enabled  
Broadcast Traffic limited to 1000 Mbps  
Dell#
```

---

**Uplink Failure Detection (UFD)**

Uplink failure detection (UFD) provides detection of the loss of upstream connectivity and, if you use this with network interface controller (NIC) teaming, automatic recovery from a failed link.

**NOTE:** In Standalone, VLT, and Stacking modes, the UFD group number is 1 by default and cannot be changed.

**debug uplink-state-group**

Enable debug messages for events related to a specified uplink-state group or all groups.

**Syntax**
```
debug uplink-state-group [group-id]
```

To turn off debugging event messages, enter the `no debug uplink-state-group [group-id]` command.

**Parameters**
- **group-id**  Enables debugging on the specified uplink-state group. The valid group-id values are from 1 to 16.

**Defaults**
- none

**Command Modes**
- EXEC Privilege

**Command History**
- This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.
description

Enter a text description of an uplink-state group.

Syntax
description text

Parameters
text Text description of the uplink-state group. The maximum length is 80 alphanumeric characters.

Defaults
none

Command Modes
UPLINK-STATE-GROUP

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version 9.2(0.0) Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

Version 8.3.19.0 Introduced on the S4820T.

Version 8.3.12.0 Introduced on the S4810.

Version 8.4.2.3 Introduced on the S-Series S50.

Example
Dell(conf-uplink-state-group-16)# description test
Dell(conf-uplink-state-group-16)#

Related Commands
uplink-state-group — creates an uplink-state group and enables the tracking of upstream links.

downstream

Assign a port or port-channel to the uplink-state group as a downstream interface.

Syntax
downstream interface
To delete an uplink-state group, enter the no downstream interface command.

**Parameters**

- **interface**
  - Enter one of the following interface types:
    - **Fast Ethernet**: `fastethernet {slot/port | slot/port-range}`
    - **1 Gigabit Ethernet**: `gigabitethernet {slot/port | slot/port-range}`
    - **10 Gigabit Ethernet**: `tengigabitethernet {slot/port | slot/port-range}`
    - **Port channel**: `port-channel {1-512 | port-channel-range}`

  Where `port-range` and `port-channel-range` specify a range of ports separated by a dash (-) and/or individual ports/port channels in any order; for example: `gigabitethernet 1/1-2,5,9,11-12 port-channel 1-3,5`. A comma is required to separate each port and port-range entry.

**Defaults**

none

**Command Modes**

UPLINK-STATE-GROUP

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

- **Version 9.2(0.0)**
  - Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

- **Version 8.3.19.0**
  - Introduced on the S4820T.

- **Version 8.3.12.0**
  - Introduced on the S4810.

- **Version 8.4.2.3**
  - Introduced on the S-Series S50.

**Usage Information**

You can assign physical port or port-channel interfaces to an uplink-state group.

You can assign an interface to only one uplink-state group. Configure each interface assigned to an uplink-state group as either an upstream or downstream interface, but not both.

You can assign individual member ports of a port channel to the group. An uplink-state group can contain either the member ports of a port channel or the port channel itself, but not both.
downstream auto-recover

Enable auto-recovery so that UFD-disabled downstream ports in an uplink-state group automatically come up when a disabled upstream port in the group comes back up.

Syntax
downstream auto-recover

To disable auto-recovery on downstream links, use the no downstream auto-recover command.

Defaults
The auto-recovery of UFD-disabled downstream ports is enabled.

Command Modes
UPLINK-STATE-GROUP

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Related Commands
- downstream — assigns a port or port-channel to the uplink-state group as a downstream interface.
- uplink-state-group — creates an uplink-state group and enables the tracking of upstream links.

downstream disable links

Configure the number of downstream links in the uplink-state group that are disabled if one upstream link in the uplink-state group goes down.

Syntax
downstream disable links {number | all}

To revert to the default setting, use the no downstream disable links command.
Parameters

- **number**
  - Enter the number of downstream links to be brought down by UFD. The range is from 1 to 1024.
  - **all**
    - Brings down all downstream links in the group.

Defaults

No downstream links are disabled when an upstream link in an uplink-state group goes down.

Command Modes

- UPLINK-STATE-GROUP

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command:

- **Version 9.2(0.0)**
  - Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

- **Version 8.3.19.0**
  - Introduced on the S4820T.

- **Version 8.3.12.0**
  - Introduced on the S4810.

- **Version 8.4.2.3**
  - Introduced on the S-Series S50.

Usage Information

A user-configurable number of downstream interfaces in an uplink-state group are put into a link-down state with an UFD-Disabled error message when one upstream interface in an uplink-state group goes down.

If all upstream interfaces in an uplink-state group go down, all downstream interfaces in the same uplink-state group are put into a link-down state.

Related Commands

- **downstream** — assigns a port or port-channel to the uplink-state group as a downstream interface.
- **uplink-state-group** — creates an uplink-state group and enables the tracking of upstream links.

**enable**

Enable uplink state group tracking for a specific UFD group.

Syntax

```
enable
```

To disable upstream-link tracking without deleting the uplink-state group, use the no enable command.

Defaults

Upstream-link tracking is automatically enabled in an uplink-state group.
Command Modes

- UPLINK-STATE-GROUP

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

- **Version 9.2(0.0)**: Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
- **Version 8.3.19.0**: Introduced on the S4820T.
- **Version 8.3.12.0**: Introduced on the S4810.
- **Version 8.4.2.3**: Introduced on the S-Series S50.

Related Commands

- **uplink-state-group** — creates an uplink-state group and enables the tracking of upstream links.

**show running-config uplink-state-group**

Display the current configuration of one or more uplink-state groups.

**Syntax**

```
show running-config uplink-state-group [group-id]
```

**Parameters**

- **group-id**: Displays the current configuration of all uplink-state groups or a specified group. The valid group-id values are from 1 to 16.

**Defaults**

none

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

- **Version 9.2(0.0)**: Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
- **Version 8.3.19.0**: Introduced on the S4820T.
- **Version 8.3.12.0**: Introduced on the S4810.
show uplink-state-group

Display status information on a specified uplink-state group or all groups.

Syntax

show uplink-state-group [group-id] [detail]

Parameters

- **group-id**: Displays status information on a specified uplink-state group or all groups. The valid group-id values are from 1 to 16.
- **detail**: Displays additional status information on the upstream and downstream interfaces in each group.

Defaults

- none

Command Modes

- EXEC
- EXEC Privilege

Command History

The following is a list of the Dell Networking OS version history for this command.

- **Version 9.2(0.0)** Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

Related Commands

- **show running-config uplink-state-group** — displays the current configuration of one or more uplink-state groups.
- **uplink-state-group** — create an uplink-state group and enables the tracking of upstream links.

**uplink-state-group**

Create an uplink-state group and enable the tracking of upstream links on a switch/ router.

**Syntax**

```
uplink-state-group group-id
```

To delete an uplink-state group, enter the **no uplink-state-group group-id** command.

**Parameters**

- **group-id**
  Enter the ID number of an uplink-state group. The range is from 1 to 16.
Defaults
none

Command Modes
CONFIGURATION

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version 9.2(0.0) Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

Version 8.3.19.0 Introduced on the S4820T.

Version 8.3.12.0 Introduced on the S4810.

Version 8.4.2.3 Introduced on the S-Series S50.

Usage Information
After you enter the command, to assign upstream and downstream interfaces to the group, enter Uplink-State-Group Configuration mode.

An uplink-state group is considered to be operationally up if at least one upstream interface in the group is in the Link-Up state.

An uplink-state group is considered to be operationally down if no upstream interfaces in the group are in the Link-Up state. No uplink-state tracking is performed when a group is disabled or in an operationally down state.

To disable upstream-link tracking without deleting the uplink-state group, use the no enable command in uplink-state-group configuration mode.

Example
Dell (conf)# uplink-state-group 16
Dell (conf) #
02:23:17: %RPM0-P:CP %IFMGR-5-ASTATE_UP: Changed uplink state group Admin state to up: Group 16

Related Commands
• show running-config uplink-state-group — displays the current configuration of one or more uplink-state groups.
• show uplink-state-group — displays the status information on a specified uplink-state group or all groups.

upstream
Assign a port or port-channel to the uplink-state group as an upstream interface.

Syntax
upstream interface

To delete an uplink-state group, use the no upstream interface command.
**Parameters**

`interface` Enter one of the following interface types:

- **Fast Ethernet**: `fastethernet {slot/port | slot/port-range}`
- **1 Gigabit Ethernet**: `gigabitethernet {slot/port | slot/port-range}`
- **10 Gigabit Ethernet**: `tengigabitethernet {slot/port | slot/port-range}`
- **40 Gigabit Ethernet**: `fortyGigE {slot/port | slot/port-range}`
- **Port channel**: `port-channel {1-512 | port-channel-range}`

Where `port-range` and `port-channel-range` specify a range of ports separated by a dash (-) and/or individual ports/port channels in any order; for example: `gigabitethernet 1/1-2,5,9,11-12` `port-channel 1-3,5`. A comma is required to separate each port and port-range entry.

**Defaults**

none

**Command Modes**

UPLINK-STATE-GROUP

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

- **Version 9.2(0.0)** Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
- **Version 8.3.19.0** Introduced on the S4820T.
- **Version 8.3.12.0** Introduced on the S4810.
- **Version 8.4.2.3** Introduced on the S-Series S50.

**Usage Information**

You can assign physical port or port-channel interfaces to an uplink-state group.

You can assign an interface to only one uplink-state group. Configure each interface assigned to an uplink-state group as either an upstream or downstream interface, but not both.

You can assign individual member ports of a port channel to the group. An uplink-state group can contain either the member ports of a port channel or the port channel itself, but not both.
Virtual Link Trunking (VLT)

VLT allows physical links between two chassis to appear as a single virtual link to the network core. VLT eliminates the requirement for Spanning Tree protocols by allowing link aggregation group (LAG) terminations on two separate distribution or core switches, and by supporting a loop-free topology. VLT provides Layer 2 multipathing, creating redundancy through increased bandwidth and enabling multiple parallel paths between nodes and load-balancing traffic where alternative paths exist.

**NOTE:** When you launch the VLT link, the VLT peer-ship is not established if any of the following is TRUE:

- The VLT System-MAC configured on both the VLT peers do not match.
- The VLT Unit-Id configured on both the VLT peers are identical.
- The VLT System-MAC or Unit-Id is configured only on one of the VLT peers.
- The VLT domain ID is not the same on both peers.

If the VLT peer-ship is already established, changing the System-MAC or Unit-Id does not cause VLT peer-ship to go down.

Also, if the VLT peer-ship is already established and the VLT Unit-Id or System-MAC are configured on both peers, then changing the CLI configurations on the VLT Unit-Id or System-MAC is rejected if any of the following become TRUE:

- After making the CLI configuration change, the VLT Unit-Id becomes identical on both peers.
- After making the CLI configuration change, the VLT System-MAC do not match on both peers.

When the VLT peer-ship is already established, you can remove the VLT Unit-Id or System-MAC configuration from either or both peers. However, removing configuration settings can cause the VLT ports to go down if you configure the Unit-Id or System-MAC on only one of the VLT peers.

**back-up destination**

Configure the IPv4 or IPv6 address of the management interface on the remote VLT peer to be used as the endpoint of the VLT backup link for sending out-of-band hello messages.

**Syntax**

```
back-up destination {{ipv4-address | [ipv6 ipv6-address] [interval seconds]}}
```

**Parameters**

- `ipv4-address` Enter the IPv4 address of the backup destination.
ipv6

Enter the keyword `ipv6` then an IPv6 address in the `X:X:X::X` format.

interval seconds

Enter the keyword `interval` to specify the time interval to send hello messages. The range is from 1 to 5 seconds. The default is 1 second.

**Defaults**

1 second

**Command Modes**

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

- **Version 9.2(0.0)**
  
  Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

- **Version 9.2(0.2)**
  
  Added support for IPv6.

- **Version 9.0.2.0**
  
  Introduced on the S6000.

- **Version 9.0.0.0**
  
  Introduced on the Z9000.

- **Version 8.3.19.0**
  
  Introduced on the S4820T.

- **Version 8.3.8.0**
  
  Introduced on the S4810.

### clear vlt statistics

Clear the statistics on VLT operations.

**Syntax**

```plaintext
clear vlt statistics [arp | domain | igmp-snoop | mac | multicast | ndp]
```

**Parameters**

- **domain**
  
  Clear the VLT statistics for the domain.

- **multicast**
  
  Clear the VLT statistics for multicast.

- **mac**
  
  Clear the VLT statistics for the MAC address.

- **arp**
  
  Clear the VLT statistics for ARP.

- **igmp-snoop**
  
  Clear the VLT statistics for IGMP snooping.

- **ndp**
  
  Clear the VLT statistics for NDP.

**Command Modes**

EXEC

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.
lacp ungroup member-independent

Prevent possible loop during the bootup of a VLT peer switch or a device that accesses the VLT domain.

Syntax

lacp ungroup member-independent {vlt | port-channel}

Parameters

port-channel  Force all LACP port-channel members to become switchports.

vlt  Force all VLT LACP members to become switchports.

Defaults

Not configured.

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version 9.2(0.0)  Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

Version 9.0.2.0  Introduced on the S6000.

Version 9.0.0.0  Introduced on the Z9000.

Version 8.3.19.0  Introduced on the S4820T.

Version 8.3.12.0  Introduced on the S4810.
LACP on the VLT ports (on a VLT switch or access device), which are members of the virtual link trunk, is not brought up until the VLT domain is recognized on the access device.

On the S4810, during boot-up in a stacking configuration, the system must be able to reach the DHCP server with the boot image and configuration image. During boot-up, only untagged DHCP requests are sent to the DHCP server to receive an offer on static LAGs between switches. The DHCP server must be configured to start in BMP mode. If switches are connected using LACP port-channels like the VLT peer and Top of Rack (ToR), use the `port-channel` parameter on the ToR-side configuration to allow member ports of an ungrouped LACP port-channel to inherit vlan membership of that port channel to ensure untagged packets that are sent by a VLT peer device reach the DHCP server located on the ToR.

To ungroup the VLT and port-channel configurations, use the `no lacp ungroup member independent` command on a VLT port channel, depending on whether the port channel is VLT or non-VLT.

```
Example
Dell(conf)#lacp ungroup member-independent ?
port-channel LACP port-channel members become switchports
vlt All VLT LACP members become switchports
```

**peer-link port-channel**

Configure the specified port channel as the chassis interconnect trunk between VLT peers in the domain.

**Syntax**

```
peer-link port-channel port-channel-number {peer-down-vlan vlan id}
```

**Parameters**

- `port-channel-number` Enter the port-channel number that acts as the interconnect trunk.
- `peer-down-vlan vlan id` Enter the keyword `peer-down-vlan` then a VLAN ID to configure the VLAN that the VLT peer link uses when the VLT peer is down.

**Defaults**

- Not configured.

**Command Modes**

- VLT DOMAIN

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.
Usage Information
To configure the VLAN from where the VLT peer forwards packets received over the VLTi from an adjacent VLT peer that is down, use the peer-down-vlan parameter. When a VLT peer with bare metal provisioning (BMP) is booting up, it sends untagged DHCP discover packets to its peer over the VLTi. To ensure that the DHCP discover packets are forwarded to the VLAN that has the DHCP server, use this configuration.

show vlt mismatch
Display mismatches in VLT parameters.

Syntax
show vlt mismatch

Command Modes
EXEC

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version 9.2(0.0)  Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

Version 9.2(0.2)  Introduced on the Z9000, S4810, and S4820T.

Example
Dell#show vlt mismatch
Domain

Dell#

**system-mac**

Reconfigure the default MAC address for the domain.

**Syntax**

```
system-mac mac-address
```

**Parameters**

mac-address Enter the system MAC address for the VLT domain.

**Defaults**

Not configured.

**Command Modes**

VLT DOMAIN

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

- **Version 9.2(0.0)** Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
- **Version 9.0.0.0** Introduced on the Z9000.
- **Version 8.3.19.0** Introduced on the S4820T.
- **Version 8.3.8.0** Introduced on the S4810.

**Usage Information**

When you create a VLT domain on a switch, Dell Networking OS automatically creates a VLT-system MAC address used for internal system operations.

To reconfigure the default MAC address for the domain by entering a new MAC address in the format nn:nn:nn:nn:nn:nn, use the `system-mac` command.

You must also reconfigure the same MAC address on the VLT peer switch.

**unit-id**

Explicitly configure the default unit ID of a VLT peer switch.

**Syntax**

```
unit-id [0 | 1]
```

**Parameters**

0 | 1 Configure the default unit ID of a VLT peer switch. Enter 0 for the first peer or enter 1 for the second peer.
Automatically assigned based on the MAC address of each VLT peer. The peer with the lower MAC address is assigned unit 0; the peer with the higher MAC address is assigned unit 1.

**Command Modes**

VLT DOMAIN

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

- **Version 9.2(0.0)**
  - Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

- **Version 9.0.2.0**
  - Introduced on the S6000.

- **Version 9.0.0.0**
  - Introduced on the Z9000.

- **Version 8.3.19.0**
  - Introduced on the S4820T.

- **Version 8.3.8.0**
  - Introduced on the S4810.

**Usage Information**

When you create a VLT domain on a switch, Dell Networking OS automatically assigns a unique unit ID (0 or 1) to each peer switch. The unit IDs are used for internal system operations. Use the `unit-id` command to explicitly configure the unit ID of a VLT peer. Configure a different unit ID (0 or 1) on each peer switch.

To minimize the time required for the VLT system to determine the unit ID assigned to each peer switch when one peer reboots, use this command.

### vlt domain

Enable VLT on a switch, configure a VLT domain, and enter VLT-domain configuration mode.

**Syntax**

```
vlt domain domain-id
```

**Parameters**

- **domain-id**
  
  Enter the Domain ID number. Configure the same domain ID on the peer switch. The range of domain IDs is from 1 to 1000.

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

- **Version 9.2(0.0)**
  - Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
vlt-peer-lag port-channel

Associate the port channel to the corresponding port channel in the VLT peer for the VLT connection to an attached device.

Syntax

vlt-peer-lag port-channel id-number

Parameters

id-number Enter the respective vlt port-channel number of the peer device.

Defaults

Not configured.

Command Modes

INTERFACE PORT-CHANNEL

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version 9.2(0.0) Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

Version 9.0.0.2 Introduced on the S6000.

Version 9.0.0.0 Introduced on the Z9000.

Version 8.3.19.0 Introduced on the S4820T.

Version 8.3.8.0 Introduced on the S4810.

Usage Information

The VLT domain ID must be the same between the two VLT devices. If the domain ID is not the same, a syslog message is generated and VLT does not launch.

Related Commands

show vlt brief — uses the show vlt brief command to display the delay-restore value.

Internet Control Message Protocol (ICMP) Message Types

This chapter lists and describes the possible ICMP message type resulting from a ping. The first three columns list the possible symbol or type/code. For example, you would receive a ! or 03 as an echo reply from your ping.
