Notes, cautions, and warnings

**NOTE:** A NOTE indicates important information that helps you make better use of your product.

**CAUTION:** A CAUTION indicates either potential damage to hardware or loss of data and tells you how to avoid the problem.

**WARNING:** A WARNING indicates a potential for property damage, personal injury, or death.
1 About this Guide ................................................................................................................................. 41

6 Access Control Lists (ACL)............................................................................................... 192
Commands Common to all ACL Types.................................................................................. 193
Contents

IP Standard MAC ACL Commands.................................................................................................................. 196
  access-class.................................................................................................................................................. 196
  clear counters ip access-group.................................................................................................................. 197
  ip access-group.......................................................................................................................................... 198
  ip control-plane egress-filter.................................................................................................................... 199
  show ip accounting access-list.................................................................................................................. 200
  show ip access-lists.................................................................................................................................... 202

Standard IP ACL Commands.......................................................................................................................... 202
  deny.............................................................................................................................................................. 203
  ip access-list standard................................................................................................................................. 204
  permit.......................................................................................................................................................... 206
  resequence access-list................................................................................................................................ 207
  seq............................................................................................................................................................. 208

Extended IP ACL Commands............................................................................................................................ 210
  deny.............................................................................................................................................................. 210
  deny icmp.................................................................................................................................................... 212
  deny tcp...................................................................................................................................................... 214
  deny udp..................................................................................................................................................... 217
  ip access-list extended............................................................................................................................... 220
  permit.......................................................................................................................................................... 221
  permit tcp.................................................................................................................................................. 222
  permit udp................................................................................................................................................ 225
  resequence access-list................................................................................................................................ 228
  seq............................................................................................................................................................. 229

Common MAC Access List Commands............................................................................................................ 232
  clear counters mac access-group............................................................................................................... 232
  mac access-group...................................................................................................................................... 233
  show mac access-lists................................................................................................................................. 234
  show mac accounting access-list................................................................................................................ 235

Standard MAC ACL Commands........................................................................................................................ 236
  deny.............................................................................................................................................................. 236
  mac access-list standard............................................................................................................................. 238
  permit.......................................................................................................................................................... 239
  seq............................................................................................................................................................. 240

Extended MAC ACL Commands....................................................................................................................... 242
  deny.............................................................................................................................................................. 242
  mac access-list extended............................................................................................................................. 244
  permit.......................................................................................................................................................... 245

IP Prefix List Commands................................................................................................................................. 247
  clear ip prefix-list....................................................................................................................................... 247
  deny.............................................................................................................................................................. 248
  ip prefix-list.............................................................................................................................................. 249
  seq............................................................................................................................................................. 250
show config.......................................................................................................................... 251
show ip prefix-list detail........................................................................................................ 252
show ip prefix-list summary................................................................................................ 253
Route Map Commands........................................................................................................... 254
continue............................................................................................................................... 254
description......................................................................................................................... 255
match as-path...................................................................................................................... 256
match community................................................................................................................ 257

About this Guide

This guide provides information about the Dell Networking operating system (OS) command line interface (CLI). This book also includes information about the protocols and features supported in Dell Networking OS.

References

For more information about your system, go to the Dell Networking Support page and refer to the following documents:

- Dell Networking OS Configuration Guide
- Dell Networking OS Installation Guide
- Dell Networking OS Quick Start Guide
- Dell Networking OS Release Notes

Topics:

- Objectives
- Audience
- Conventions

Objectives

This information is intended as a reference guide for the Dell Networking OS CLI commands, with detailed syntax statements, along with usage information and sample output.

NOTE: For more information about when to use the CLI commands, see the Dell Networking OS Configuration Guide for your specific system.

Audience

The Dell Networking OS CLI Guide is intended for system administrators with an understanding of Layer 2 and Layer 3 networking technologies, who are responsible for configuring or maintaining networks.

Conventions

This guide uses the following conventions to describe command syntax:

- **Keyword**: Keywords are in Courier font and must be entered in the CLI as listed.
- **parameter**: Parameters are in italics and require a number or word to be entered in the CLI.
- **(X)**: Keywords and parameters within braces must be entered in the CLI.
- **[X]**: Keywords and parameters within brackets are optional.
x|y  Keywords and parameters separated by a bar require you to choose one option.

x||y  Keywords and parameters separated by a double bar allow you to choose any or all of the options.
This chapter describes the command line interface (CLI) structure and command modes. The Dell Networking operating software commands are in a text-based interface that allows you to use the launch commands, change command modes, and configure interfaces and protocols.

Topics:
- Accessing the Command Line
- Multiple Configuration Users
- Obtaining Help
- Navigating the CLI
- Using the Keyword no Command
- Filtering show Commands
- Enabling Software Features on Devices Using a Command Option
- Command Modes

Accessing the Command Line

Access the CLI through a serial console port or a Telnet session. When the system successfully boots, enter the command line in EXEC mode.

NOTE: You must have a password configured on a virtual terminal line before you can Telnet into the system. Therefore, you must use a console connection when connecting to the system for the first time.

Example

```
telnet 172.31.1.53
Trying 172.31.1.53...
Connected to 172.31.1.53.
Escape character is '^]'.
Login: username
Password: Dell>
```

After you log in to the switch, the prompt provides you with the current command-level information. For example:

Prompt  CLI Command Mode
Dell>  EXEC
Dell#  EXEC Privilege
Dell(conf)# CONFIGURATION

NOTE: For a list of all the command mode prompts, refer to the Command Modes section.

Multiple Configuration Users

When a user enters CONFIGURATION mode and another user is already in CONFIGURATION mode, the Dell Networking operating software generates an alert warning message similar to the following:

```
Dell#conf
```
% Warning: The following users are currently configuring the system:

User "" on line console0
User "admin" on line vty0 (123.12.1.123)
User "admin" on line vty1 (123.12.1.123)
User "Irene" on line vty3 (123.12.1.321)

Dell#conf

When another user enters CONFIGURATION mode, Dell Networking OS sends a message similar to the following:

% Warning: User "admin" on line vty2 "172.16.1.210" is in configuration

In this case, the user is "admin" on vty2.

**Obtaining Help**

As soon as you are in a Command mode, there are several ways to access help:

- **To obtain a list of keywords at any command mode:** Type a `?` at the prompt or after a keyword. There must always be a space before the `?`.

- **To obtain a list of keywords with a brief functional description:** Type `help` at the prompt.

- **To obtain a list of available options:** Type a keyword, and then enter a space and a `?`.

- **To obtain a list of partial keywords using a partial keyword:** Type a partial keyword, and then enter a `?`.

**Example**

The following is an example of entering `ip` `?` at the prompt:

```
Dell(conf)#ip ?
access-list Named access-list
as-path BGP autonomous system path filter
community-list Add a community list entry
do-control-plane Control plane configuration
dhcp DHCP configuration commands
domain-list Domain name to complete unqualified host name
domain-lookup Enable IP Domain Name System hostname translation
domain-name Define the default domain name
ecmp Weighted Ecmp Configuration
ecmp-group ECMP Group Configuration
extcommunity-list Add an Extended community list entry
ftp FTP configuration commands
helper-address DHCP relay agent configuration
host Add an entry to the ip hostname table
http HTTP configuration commands
icmp ICMP configuration commands
igmp Internet Group Management Protocol
max-frag-count Max. fragmented packets allowed in IP re-assembly
mroute Multicast routes and counters
msdp Multicast source discovery protocol
multicast-limit Max entries in Multicast TIB
multicast-mdp Enable IP multicast MSDP protocol
multicast-routing Enable IP multicast forwarding
name-server Specify address of name server to use
pim Protocol Independent Multicast
prefix-list Build a prefix list
radius Interface configuration for RADIUS
redirect-list Named redirect-list
route Establish static routes
route-export Export routes
route-import Import routes
scp SCP configuration commands
source-route Process packets with source routing header options
ssh SSH configuration commands
tacacs Interface configuration for TACACS+
```
When entering commands, you can take advantage of the following timesaving features:

- Commands are not case-sensitive.
- Enter partial (truncated) command keywords. For example, you can enter `int teng 1/1` for the `interface tengigabitethernet 1/1` command.
- Use the TAB key to complete keywords in commands.
- Use the up Arrow key to display the last enabled command.
- Use either the Backspace key or Delete key to erase the previous character.
- Use the left and right Arrow keys to navigate left or right in the Dell Networking OS command line.

The shortcut key combinations at the Dell Networking OS command line are as follows:

<table>
<thead>
<tr>
<th>Key Combination</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>CNTL-A</td>
<td>Moves the cursor to the beginning of the command line.</td>
</tr>
<tr>
<td>CNTL-B</td>
<td>Moves the cursor back one character.</td>
</tr>
<tr>
<td>CNTL-D</td>
<td>Deletes the character at the cursor.</td>
</tr>
<tr>
<td>CNTL-E</td>
<td>Moves the cursor to the end of the line.</td>
</tr>
<tr>
<td>CNTL-F</td>
<td>Moves the cursor forward one character.</td>
</tr>
<tr>
<td>CNTL-I</td>
<td>Completes a keyword.</td>
</tr>
<tr>
<td>CNTL-K</td>
<td>Deletes all the characters from the cursor to the end of the command line.</td>
</tr>
<tr>
<td>CNTL-L</td>
<td>Re-enters the previous command.</td>
</tr>
<tr>
<td>CNTL-N</td>
<td>Returns to the more recent commands in the history buffer after recalling commands with Ctrl-P or the up Arrow key.</td>
</tr>
<tr>
<td>CNTL-P</td>
<td>Recalls commands, beginning with the last command.</td>
</tr>
<tr>
<td>CNTL-R</td>
<td>Re-enters the previous command.</td>
</tr>
<tr>
<td>CNTL-U</td>
<td>Deletes the line.</td>
</tr>
<tr>
<td>CNTL-W</td>
<td>Deletes the previous word.</td>
</tr>
<tr>
<td>CNTL-X</td>
<td>Deletes the line.</td>
</tr>
<tr>
<td>CNTL-Z</td>
<td>Ends continuous scrolling of the command outputs.</td>
</tr>
<tr>
<td>Esc B</td>
<td>Moves the cursor back one word.</td>
</tr>
<tr>
<td>Esc F</td>
<td>Moves the cursor forward one word.</td>
</tr>
<tr>
<td>Esc D</td>
<td>Deletes all the characters from the cursor to the end of the word.</td>
</tr>
</tbody>
</table>

## Navigating the CLI

The Dell Networking OS displays a CLI prompt comprised of the host name and CLI mode.

- Host name is the initial part of the prompt and is “Dell” by default. You can change the host name with the `hostname` command.
- CLI mode is the second part of the prompt and reflects the current CLI mode. For a list of the Dell Networking OS command modes, see the command mode list in Accessing the Command Line.
The CLI prompt changes as you move up and down the levels of the command structure. Starting with CONFIGURATION mode, the command prompt adds modifiers to further identify the mode. For more information about command modes, see Command Modes.

Using the Keyword no Command

To disable, delete or return to default values, use the no form of the commands.

For most commands, if you type the keyword no in front of the command, you disable that command or delete it from the running configuration. In this guide, the no form of the command is described in the Syntax portion of the command description.

Filtering show Commands

You can filter commands using the show command to find specific information, display certain information only, or begin the command output at the first instance of a regular expression or phrase.

Execute a show command and a pipe ( | ), and one of the following parameters and a regular expression to show output that either excludes or includes the specified parameters.

NOTE: The Dell Networking OS accepts a space before or after the pipe, no space before or after the pipe, or any combination. For example: command | grep gigabit |except regular-expression | find regular-expression.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>except</td>
<td>Displays only the text that does not match the pattern (or regular expression).</td>
</tr>
<tr>
<td>find</td>
<td>Searches for the first occurrence of a pattern.</td>
</tr>
<tr>
<td>grep</td>
<td>Displays text that matches a pattern.</td>
</tr>
</tbody>
</table>

The grep command option has an ignore-case suboption that makes the search case-insensitive. For example, the commands:

```
show run | grep Ethernet
```

Returns a search result with instances containing a capitalized Ethernet, such as interface TenGigabitEthernet 1/1.

```
show run | grep ethernet
```

Does not return the previous search result because it only searches for instances containing a noncapitalized ethernet.

```
show run | grep Ethernet ignore-case
```

Returns instances containing both Ethernet and ethernet.

no-more Does not paginate the display output.

save Copies the output to a file for future use.

Displaying All Output

Use the no-more option after the pipe to display all output at once — not one screen at a time. This operation is similar to terminal length screen-length except that the no-more option affects the output of just the specified command. For example: show running-config|no-more.
Filtering the Command Output Multiple Times

You can filter a single command output multiple times. To filter a command output multiple times, place the `save` option as the last filter. For example: `command | grep regular-expression | except regular-expression | grep other-regular-expression | find regular-expression | no-more | save.

Enabling Software Features on Devices Using a Command Option

The capability to activate software applications or components on a device using a command is supported on this platform. Starting with Release 9.4(0.0), you can enable or disable specific software features or applications that need to run on a device by using a command attribute in the CLI interface. This enables effective, streamlined management and administration of applications and utilities that run on a device. You can employ this capability to perform an on-demand activation, or turn-off a software component or protocol. A feature configuration file generated for each image contains feature names, and denotes if this enabling or disabling method is available. You can enable or disable the VRF application globally across the system by using this capability.

Activate the VRF application on a device by using the `feature vrf` command in CONFIGURATION mode.

**NOTE:** The `no feature vrf` command is not supported on any of the platforms.

To enable the VRF feature and cause all VRF-related commands to be available or viewable in the CLI interface, use the following command. You must enable the VRF feature before you can configure its related attributes.

```
Dell(conf)# feature vrf
```

Based on if the VRF feature is identified as supported in the Feature Configuration file, configuration command `feature vrf` becomes available for usage. This command is stored in the running-configuration and precedes all other VRF-related configurations.

To display the state of Dell Networking OS features:

```
Dell# show feature
```

**Example of show feature output**

For a particular target where VRF is enabled, the show output is similar to the following:

<table>
<thead>
<tr>
<th>Feature</th>
<th>State</th>
</tr>
</thead>
<tbody>
<tr>
<td>VRF</td>
<td>Enabled</td>
</tr>
</tbody>
</table>

**feature vrf**

Enable the VRF application on a switch. Once enabled, you cannot deactivate the VRF application.

**Syntax**

`feature vrf`

**Defaults**

Disabled

**Command Modes**

CONFIGURATION
**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.10(0.0)</td>
<td>Introduced on the S3148.</td>
</tr>
<tr>
<td>9.8(2.0)</td>
<td>Introduced on the S3100 series.</td>
</tr>
<tr>
<td>9.8(1.0)</td>
<td>Introduced on the Z9100–ON.</td>
</tr>
<tr>
<td>9.8(0.0P5)</td>
<td>Introduced on the S4048-ON.</td>
</tr>
<tr>
<td>9.8(0.0P2)</td>
<td>Introduced on the S3048-ON.</td>
</tr>
<tr>
<td>9.5(0.0)</td>
<td>Introduced on the Z9500.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Introduced on the S4810, S4820T, S5000, and S6000.</td>
</tr>
</tbody>
</table>

**Usage Information**

Activate the VRF application on a device using the `feature vrf` command in CONFIGURATION mode. The `no feature vrf` command is not supported on any platform.

---

**show feature**

Verify the status of software applications, such as VRF, that are activated and running on a device.

**Syntax**

```
show feature
```

**Command Modes**

- EXEC
- EXEC Privilege

**Usage Information**

You can activate VRF application on a device by using the `feature vrf` command in CONFIGURATION mode. The `no feature vrf` command is not supported on any of the platforms.

**Example**

```
Dell# show feature
Feature    State
----------
VRF        Enabled
Dell#
```
Command Modes

To navigate and launch various CLI modes, use specific commands. Navigation to these modes is described in the following sections.

BGP ADDRESS-FAMILY Mode

To enable or configure IPv4 for BGP, use BGP ADDRESS-FAMILY mode. For more information, see Border Gateway Protocol IPv4 (BGPv4).

To enter BGP ADDRESS-FAMILY mode:

1. Verify that you are logged in to ROUTER BGP mode.
2. Enter the address-family command.
3. Enter the protocol type:
   - For IPv4, enter the ipv4 multicast command. The prompt changes to include conf-router_bgp_af for IPv4.

CLASS-MAP Mode

To create or configure a class map, use CLASS-MAP mode. For more information, see Policy-Based QoS Commands.

To enter CLASS-MAP mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the class-map command, and then enter the class map name. The prompt changes to include config-class-map.

You can return to CONFIGURATION mode by using the exit command.

CONFIGURATION Mode

In EXEC Privilege mode, use the configure command to enter CONFIGURATION mode and configure routing protocols and access interfaces.

To enter CONFIGURATION mode:

1. Verify that you are logged in to EXEC Privilege mode.
2. Enter the configure command. The prompt changes to include conf.

From this mode, you can enter INTERFACE mode by using the interface command.

CONTROL-PLANE Mode

To manage control-plane traffic, use CONTROL-PLANE mode. For more information, see Control Plane Policing (CoPP).

To enter CONTROL-PLANE mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the control-plane-cpuqos command. The prompt changes to include conf-control-cpuqos.

You can return to CONFIGURATION mode by using the exit command.
**DHCP Mode**

To enable and configure Dynamic Host Configuration Protocol (DHCP), use DHCP mode. For more information, see Dynamic Host Configuration Protocol (DHCP).

To enter DHCP mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `ip dhcp server` command. The prompt changes to include `config-dhcp`.

You can return to CONFIGURATION mode by using the `exit` command.

---

**DHCP POOL Mode**

To create an address pool, use DHCP POOL mode. For more information, see Dynamic Host Configuration Protocol (DHCP).

To enter DHCP POOL mode:

1. Verify that you are logged in to DHCP mode.
2. Enter the `pool` command then the pool name. The prompt changes to include `config-dhcp-pool-name`.

You can return to DHCP mode by using the `exit` command.

---

**ECMP GROUP Mode**

To enable or configure traffic distribution monitoring on an ECMP link bundle, use ECMP GROUP mode. For more information, see ecmp_overview.

To enter ECMP GROUP mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `ecmp-group` command then enter the ECMP group ID. The prompt changes to include `conf-ecmp-group-ecmp-group-id`.

You can return to CONFIGURATION mode by using the `exit` command.

---

**EIS Mode**

To enable or configure Egress Interface Selection (EIS), use EIS mode.

To enter EIS mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `management egress-interface-selection` command. The prompt changes to include `conf-mgmt-eis`.

You can return to CONFIGURATION mode by using the `exit` command.

---

**EXEC Mode**

When you initially log in to the switch, by default, you are logged in to EXEC mode. This mode allows you to view settings and enter EXEC Privilege mode, which is used to configure the device.
When you are in EXEC mode, the > prompt is displayed following the host name prompt, which is “Dell” by default. You can change the host name prompt using the hostname command.

**NOTE:** Each mode prompt is preceded by the host name.

### EXEC Privilege Mode

The enable command accesses EXEC Privilege mode. If an administrator has configured an “Enable” password, you are prompted to enter it.

EXEC Privilege mode allows you to access all the commands accessible in EXEC mode, plus other commands, such as to clear address resolution protocol (ARP) entries and IP addresses. In addition, you can access CONFIGURATION mode to configure interfaces, routes and protocols on the switch. While you are logged in to EXEC Privilege mode, the # prompt is displayed.

### EXTENDED COMMUNITY LIST Mode

To enable and configure a BGP extended community, use EXTENDED COMMUNITY LIST mode.

To enter EXTENDED COMMUNITY LIST mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `ip extcommunity-list` command then a community list name. The prompt changes to include `conf-ext-community-list`.

You can return to CONFIGURATION mode by using the `exit` command.

### FRRP Mode

To enable or configure Force10 Resilient Ring Protocol (FRRP), use FRRP mode. For more information, see Force10 Resilient Ring Protocol (FRRP).

To enter FRRP mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `protocol frrp` command then the ring ID. The prompt changes to include `conf-frrp-ring-id`.

You can return to CONFIGURATION mode by using the `exit` command.

### INTERFACE Mode

Use INTERFACE mode to configure interfaces or IP services on those interfaces. An interface can be physical (for example, a Gigabit Ethernet port) or virtual (for example, the Null interface).

To enter INTERFACE mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `interface` command and then enter an interface type and interface number that is available on the switch.

**NOTE:** In Dell Networking OS, the stack unit number and interfaces start from 0. But in Dell Networking OS Open Networking platforms, the stack unit number and interfaces start from 1.

The prompt changes to include the designated interface and slot/port number. For example:
<table>
<thead>
<tr>
<th>Prompt</th>
<th>Interface Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Dell(conf-if)#</td>
<td>INTERFACE mode</td>
</tr>
<tr>
<td>Dell(conf-if-gi-1/1)#</td>
<td>Gigabit Ethernet interface then the slot/port information</td>
</tr>
<tr>
<td>Dell(conf-if-te-1/1)#</td>
<td>Ten-Gigabit Ethernet interface then slot/port information</td>
</tr>
<tr>
<td>Dell(conf-if-lo-0)#</td>
<td>Loopback interface number</td>
</tr>
<tr>
<td>Dell(conf-if-nu-0)#</td>
<td>Null Interface then zero</td>
</tr>
<tr>
<td>Dell(conf-if-po-0)#</td>
<td>Port-channel interface number The range is from 1 to 128.</td>
</tr>
<tr>
<td>Dell(conf-if-vl-0)#</td>
<td>VLAN Interface then VLAN number (range 1–4094)</td>
</tr>
<tr>
<td>Dell(conf-if-ma-1/1)#</td>
<td>Management Ethernet interface then slot/port information</td>
</tr>
<tr>
<td>Dell(conf-if-tu-0)#</td>
<td>Tunnel interface then tunnel ID.</td>
</tr>
<tr>
<td>Dell(conf-if-range)#</td>
<td>Designated interface range (used for bulk configuration).</td>
</tr>
</tbody>
</table>

**IP ACCESS LIST Mode**

To enter IP ACCESS LIST mode and configure either standard or extended access control lists (ACLs), use the `ip access-list standard` command or the `ip access-list extended` command.

To enter IP ACCESS LIST mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter either the `ip access-list standard` command or the `ip access-list extended` command. Include a name for the ACL. The prompt changes to include `conf-std-nacl` or `conf-ext-nacl`.

You can return to CONFIGURATION mode by using the `exit` command.

**ISIS ADDRESS-FAMILY Mode**

To enable or configure IPv6 for ISIS, use ISIS ADDRESS-FAMILY mode. For more information, see Intermediate System to Intermediate System (IS-IS).

To enter ISIS ADDRESS-FAMILY mode:

1. Verify that you are logged in to ROUTER ISIS mode.
2. Enter the `address-family ipv6 unicast` command. The prompt changes to include `conf-router_isis-af_ipv6`.
**LLDP Mode**

To enable and configure Link Layer Discovery Protocol (LLDP), use LLDP mode. For more information, see [Link Layer Discovery Protocol (LLDP)](Link Layer Discovery Protocol (LLDP)).

To enter LLDP mode:

1. To enable LLDP globally, verify that you are logged in to CONFIGURATION mode. To enable LLDP on an interface, verify that you are logged in to INTERFACE mode.
2. Enter the `protocol lldp` command. The prompt changes to include `conf-lldp` or `conf-if-interface-lldp`.

**LLDP MANAGEMENT INTERFACE Mode**

To enable and configure Link Layer Discovery Protocol (LLDP) on management interfaces, use LLDP MANAGEMENT INTERFACE mode.

To enter LLDP MANAGEMENT INTERFACE mode:

1. Verify that you are logged in to LLDP mode.
2. Enter the `management-interface` command. The prompt changes to include `conf-lldp-mgmtIf`.

**LINE Mode**

To configure the console or virtual terminal parameters, use LINE mode.

To enter LINE mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `line` command. Include the keywords `console` or `vty` and their line number available on the switch. The prompt changes to include `config-line-console` or `config-line-vty`.

You can exit this mode by using the `exit` command.

**MAC ACCESS LIST Mode**

To enter MAC ACCESS LIST mode and configure either standard or extended access control lists (ACLs), use the `mac access-list standard` or `mac access-list extended` command.

To enter MAC ACCESS LIST mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Use the `mac access-list standard` command or the `mac access-list extended` command. Include a name for the ACL. The prompt changes to include `conf-std-macl` or `conf-ext-macl`.

You can return to CONFIGURATION mode by using the `exit` command.

**MONITOR SESSION Mode**

To enable and configure a traffic monitoring session using port monitoring, use MONITOR SESSION mode. For more information, see [Port Monitoring].

To enter MONITOR SESSION mode:
MULTIPLE SPANNING TREE (MSTP) Mode

To enable and configure MSTP, use MULTIPLE SPANNING TREE mode. For more information, see Multiple Spanning Tree Protocol (MSTP).

To enter MULTIPLE SPANNING TREE mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `monitor session` command, and then the session ID. The prompt changes to include `conf-mon-sess-sessionID`.

You can return to CONFIGURATION mode by using the `exit` command.

OPENFLOW INSTANCE Mode

To enable and configure OpenFlow instances, use OPENFLOW INSTANCE mode.

To enter OPENFLOW INSTANCE mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `openflow of-instance` command, and then the OpenFlow ID number of the instance you want to create or configure. The prompt changes to include `conf-of-instance of-id`.

You can return to the CONFIGURATION mode by entering the `exit` command.

Per-VLAN SPANNING TREE (PVST+) Plus Mode

To enable and configure the Per-VLAN Spanning Tree (PVST+) protocol, use PVST+ mode. For more information, see Per-VLAN Spanning Tree Plus (PVST+).

**NOTE:** The protocol name is PVST+, but the plus sign is dropped at the CLI prompt.

To enter PVST+ mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `protocol spanning-tree pvst` command. The prompt changes to include `conf-pvst`.

You can return to CONFIGURATION mode by using the `exit` command.

PORT-CHANNEL FAILOVER-GROUP Mode

To configure shared LAG state tracking, use PORT-CHANNEL FAILOVER-GROUP mode. For more information, see Port Channel Commands.

To enter PORT-CHANNEL FAILOVER-GROUP mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `port-channel failover-group` command. The prompt changes to include `conf-po-failover-grp`.

You can return to CONFIGURATION mode by using the `exit` command.
PREFIX-LIST Mode

To configure a prefix list, use PREFIX-LIST mode.

To enter PREFIX-LIST mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `ip prefix-list` command and the name for the prefix list. The prompt changes to include `conf-nprefixl`.

You can return to CONFIGURATION mode by using the `exit` command.

PROTOCOL GVRP Mode

To enable and configure GARP VLAN Registration Protocol (GVRP), use PROTOCOL GVRP mode. For more information, see GARP VLAN Registration (GVRP).

To enter PROTOCOL GVRP mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `protocol gvrp` command. The prompt changes to include `config-gvrp`.

You can return to CONFIGURATION mode by using the `exit` command.

RAPID SPANNING TREE (RSTP) Mode

To enable and configure RSTP, use RSTP mode. For more information, see Rapid Spanning Tree Protocol (RSTP).

To enter RSTP mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `protocol spanning-tree rstp` command. The prompt changes to include `conf-rstp`.

You can return to CONFIGURATION mode by using the `exit` command.

ROUTE-MAP Mode

To configure a route map, use ROUTE-MAP mode.

To enter ROUTE-MAP mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Use the `route-map map-name [permit | deny] [sequence-number]` command. The prompt changes to include `config-route-map`.

You can return to CONFIGURATION mode by using the `exit` command.

ROUTER BGP Mode

To enable and configure Border Gateway Protocol (BGP), use ROUTER BGP mode. For more information, see Border Gateway Protocol IPv4 (BGPv4)

To enter ROUTER BGP mode:
1. Verify that you are logged in to CONFIGURATION mode.
2. Use the `router bgp` command, and then enter the AS number. The prompt changes to include `conf-router_bgp`.

You can return to CONFIGURATION mode by using the `exit` command.

**ROUTER ISIS Mode**

To enable and configure Intermediate System to Intermediate System (ISIS), use ROUTER ISIS mode. For more information, see [Intermediate System to Intermediate System (IS-IS)](CLI Basics).

To enter ROUTER ISIS mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Use the `router isis` command. The prompt changes to include `conf-router_isis`.

You can return to CONFIGURATION mode by using the `exit` command.

**ROUTER OSPF Mode**

To configure OSPF, use ROUTER OSPF mode. For more information, see [Open Shortest Path First (OSPFv2)](CLI Basics).

To enter ROUTER OSPF mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `router ospf {process-id}` command. The prompt changes to include `conf-router_ospf-id`.

You can switch to INTERFACE mode by using the `interface` command or you can switch to ROUTER RIP mode by using the `router rip` command.

**ROUTER OSPFV3 Mode**

To configure OSPF for IPv6, use ROUTER OSPFV3 mode.

To enter ROUTER OSPFV3 mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `ipv6 router ospf {process-id}` command. The prompt changes to include `conf-ipv6-router_ospf`.

You can return to CONFIGURATION mode by using the `exit` command.

**ROUTER RIP Mode**

To enable and configure Router Information Protocol (RIP), use ROUTER RIP mode. For more information, see [Routing Information Protocol (RIP)](CLI Basics).

To enter ROUTER RIP mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `router rip` command. The prompt changes to include `conf-router_rip`.

You can return to CONFIGURATION mode by using the `exit` command.
**SPANNING TREE Mode**

To enable and configure the Spanning Tree protocol, use SPANNING TREE mode. For more information, see Spanning Tree Protocol (STP).

To enter SPANNING TREE mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `protocol spanning-tree stp-id` command. The prompt changes to include `conf-stp`.

You can return to CONFIGURATION mode by using the `exit` command.

**SupportAssist Mode**

To enable and configure the SupportAssist, use SupportAssist mode. For more information, see SupportAssist.

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `support-assist` command. The prompt changes to include `conf-supportassist`.

You can return to CONFIGURATION mode by using the `exit` command.

**TRACE-LIST Mode**

To configure a Trace list, use TRACE-LIST mode.

To enter TRACE-LIST mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `ip trace-list` command, and the name of the Trace list. The prompt changes to include `conf-trace-acl`.

You can exit this mode by using the `exit` command.

**VLT DOMAIN Mode**

To enable and configure the VLT domain protocol, use VLT DOMAIN mode. For more information, see Virtual Link Trunking (VLT).

To enter VLT DOMAIN mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `vlt domain` command, and then the VLT domain number. The prompt changes to include `conf-vlt-domain`.

You can return to CONFIGURATION mode by entering the `exit` command.

**VRRP Mode**

To enable and configure Virtual Router Redundancy Protocol (VRRP), use VRRP mode. For more information, see Virtual Router Redundancy Protocol (VRRP).

To enter VRRP mode:

1. To enable VRRP globally, verify that you are logged in to CONFIGURATION mode.
2. Enter the `vrrp-group` command, and then enter the VRRP group ID. The prompt changes to include `conf-if-interface-type-slot/port-vrid-vrrp-group-id`. 
This section contains command line interface (CLI) commands needed to manage the configuration files, as well as other file management commands.

Topics:
- boot system

- rename
- restore factory-defaults
- show boot system
- show bootvar
- show file-systems
- show os-version
- show running-config
- show startup-config
- show version
- upgrade

**boot system**

Specify the location where the Dell Networking OS image used to boot the system is stored.

**Syntax**

```
boot system {gateway ip-address | stack-unit {stack-unit-number | all} {default | primary | secondary} {ftp: | nfsmount: | system: {A: | B: | bmp-boot} | tftp: | usbflash:}}
```

To return to the default boot sequence, use the `no boot system` command.

**Parameters**

- `gateway` Enter the IP address of the default next-hop gateway for the management subnet.
- `ip-address` Enter an IP address in dotted decimal format.
- `stack-unit` Enter the keywords `stack-unit` to specify the stack unit number.
all Enter the keyword all for all the stack units.

stack-unit-number Enter the stack-unit number. The range is from 1 to 12.

default Enter the keyword default to specify the default Dell Networking OS image.

primary Enter the keyword primary to specify the primary Dell Networking OS image.

secondary Enter the keyword secondary to specify the secondary Dell Networking OS image.

system: Enter the keyword system: to use the system image file URL (system).

ftp: Enter the keyword FTP: to retrieve the image from an FTP server. ftp://userid:password@hostip/filepath.

nfsmount Enter the keyword nfsmount: to retrieve the image from a mounted NFS file system. nfsmount://filepath

system: Enter the keyword system: to retrieve the image from the system.

usbflash Enter the keyword usbflash: to retrieve the image from the USB flash memory. usbflash://filename.

tftp: Enter the keyword TFTP: to retrieve the image from a TFTP server. tftp://hostip/filepath.

A: | B: Enter A: or B: to boot one of the system partitions.

bmp-boot Enter the keywords bmp-boot to boot the system from the image present in the DHCP offer.

NOTE: In normal-reload, this keyword is not enabled.

Defaults Not configured.

Command Modes CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description

9.10(0.0) Introduced on the S3148.

9.8(2.0) Introduced on the S3100 series.

9.8(1.0) Introduced on the Z9100–ON.

9.8(0.0P5) Introduced on the S4048-ON.

9.8(0.0P2) Introduced on the S3048-ON.

9.7(0.0) Introduced the support for bmp-boot on the S-Series and Z-Series switches.

8.3.19.0 Introduced on the S4820T.

8.3.11.1 Introduced on the Z9000.

8.3.7.0 Introduced on the S4810.

Usage Information To display these changes in the show bootvar command output, save the running configuration to the startup configuration (using the copy command) and reload system.
Use the `bmp-boot` keyword only when the device boots up from bare metal provisioning (BMP). For an industrial standard upgraded device, the Dell networking OS stores the image partition upgraded from the DHCP offer in the `bmp-boot` option.

**cd**

Change to a different working directory.

**Syntax**

```plaintext
cd [flash: | usbflash:] <directory name and path>
```

**Parameters**

- `flash:`
  Use the keyword `flash:` to change the current directory to internal flash and its sub directories.

- `usbflash:`
  Use the keyword `usbflash:` to change the current directory to the inserted USB.

- `directory name and path`
  Enter the directory name and path as follows: `directory name ([flash://]directory_path)`

**NOTE:** The `cd` command without any arguments will change the current directory to `flash:`

**Command Modes**

EXEC Privilege

**Command History**

Copy one file to another location. Dell Networking OS supports IPv4 and IPv6 addressing for FTP, HTTP, TFTP, and SCP (in the `hostip` field).

**Syntax**

```
copy source-file-url destination-file-url
```

**Parameters**

- `compressed-config`: Enter the keywords `compressed-config` to copy a file from the current system configuration.
- `flash`: Enter the keyword `flash:` to copy from the local file system ([flash://]filepath).
- `ftp`: Enter the keyword `ftp:` to copy from the remote file system, IPv4, or IPv6, (ftp://userid:password@hostip/filepath).
- `http`: Enter the keyword `http:` to copy from the remote file system, IPv4, or IPv6, (http://hostip/filepath).
- `nfsmount`: Enter the keyword `nfsmount:` to copy from the nfs mount file system (nfsmount://<mount-point>/filepath).
- `running-config`: Enter the keywords `running-config` to copy from the current system configuration.
- `scp`: Enter the keyword `scp:` to copy from the remote file system, IPv4, or IPv6, (scp://userid:password@hostip/filepath).
- `startup-config`: Enter the keywords `startup-config` to copy from the startup configuration.
- `tftp`: Enter the keyword `tftp:` to copy from the remote file system, IPv4, or IPv6, (tftp://hostip/filepath).
- `usbflash`: Enter the keyword `usbflash:` to copy the file to or from the external USB flash.

</tr>
</tbody>
</table>

**Usage Information**

Dell Networking OS supports a maximum of 100 files at the root directory level on both the internal and external flash.

When copying a file to a remote location (for example, using Secure Copy [SCP]), enter only the keywords and Dell Networking OS prompts you for the rest of the information. For example, when using SCP, you can enter `copy running-config scp:`, where `running-config` is the source and the target is specified in the ensuing prompts. Dell Networking OS prompts you to enter any required information for the named destination — remote destination, destination filename, user ID, password, and so forth.

When you use the `copy running-config startup-config` command to copy the running configuration to the startup configuration file, Dell Networking OS creates a backup file on the internal flash of the startup configuration.

When you load the startup configuration or a configuration file from a network server such as TFTP to the running configuration, the configuration is added to the running configuration. This does not replace the existing running configuration. Commands in the configuration file have precedence over commands in the running configuration.

Dell Networking OS supports copying the running-configuration to a TFTP server, an FTP server, or a remote NFS file system. For example:

- `copy running-config tftp:`
- `copy running-config ftp:`
- `copy running-config nfsmount://<mount-point>/filepath`

You can compress the running configuration by grouping all the VLANs and the physical interfaces with the same property. You can store the operating configuration to the startup config in Compressed mode and perform an image downgrade without any configuration loss.

**Example**

```
Dell#copy running-config scp:
Address or name of remote host [1]: 192.168.1.1
Port number of the server [22]: 22
Destination file name [startup-config]:
User name to login remote host: username
Password to login remote host: !
4080 bytes successfully copied
Dell#
```
In this `copy scp: flash:` example, specifying SCP in the first position indicates that you need to specify the target in the ensuing prompts. Entering `flash:` in the second position indicates that the target is the internal flash. The source is on a secure server running secure shell (SSH), so you are prompted for the user datagram protocol (UDP) port of the SSH server on the remote host.

```
Example

Dell# copy running-config nfsmount://<mount-point>/filepath
Destination file name [test.txt]:
User name to login remote host: username
Password to login remote host:
Dell#
```

```
Example

Dell# copy scp: flash:
Address or name of remote host [ ]: 10.11.199.134
Port number of the server [22]: 99
Source file name [ ]: test.cfg
User name to login remote host: admin
Password to login remote host:
Destination file name [test.cfg]: test1.cfg
Dell#
```

```
Example

Dell# copy compressed-config compressed-cfg
!
6655 bytes successfully copied
Dell#
Dell#copy compressed-config ftp:
Address or name of remote host [ ]: 10.11.8.12
Destination file name [startup-config]:
User name to login remote host: spbalaji
Password to login remote host:
!
6655 bytes successfully copied
Dell#
```

```
Example

Dell# copy http://admin:admin123@10.16.206.77/sample_file flash://sample_file
Dell#
```

Related Commands

- `cd` – changes the working directory.

### delete

Delete a file from the flash. After deletion, files cannot be restored.

**Syntax**

```
delete {flash: | nfsmount: | usbflash:} [no-confirm]
```

**Parameters**

- `flash:`
  - To delete a file or directory on the internal flash, enter `flash://` then the filename or directory name (`flash://filepath`).

- `nfsmount:`
  - To delete a file or directory on the NFS-mounted file system, enter `nfsmount://` then the mount point and the file path (`nfsmount://filepath`).

**Note:** While deleting a file directory on a remote NFS file system, you must specify the mount-point that indicates the working directory on the NFS file system. You cannot delete the root directory of the remote NFS file system.
**usbflash:**
To delete a file or directory on the external USB flash, enter `usbflash://` then the filename or directory name `[/usbflash:]filepath`.

**no-confirm**
(Optional) Enter the keywords `no-confirm` to specify that the Dell Networking OS does not require user input for each file prior to deletion.

**Command Modes**
EXEC Privilege

**Command History**

**dir**
Display the files in a file system. The default is the current directory.

**Syntax**
```
dir [flash: | nfsmount: | usbflash:]
```

**Parameters**
- `flash:`
  For a directory on the internal Flash, enter `flash://` directory name.

- `nfsmount:`
  For a file or directory on an NFS-mounted file system, enter `nfsmount://` then the mount point and file path.

  **NOTE:** While displaying a file directory on a remote NFS file system, it is mandatory to specify the mount-point that indicates the working directory on the NFS file system. You cannot display details corresponding to the root directory of the remote NFS file system.

- `usbflash:`
  For a directory on the external USB flash, enter `usbflash://` directory name.

Usage Information

You must include the colon (:) when entering this command.

After reformatting is complete, three empty directories are automatically created on flash: CRASH_LOG_DIR, TRACE_LOG_DIR and NVTRACE_LOG_DIR.

⚠️ CAUTION: This command deletes all files, including the startup configuration file. So, after executing this command, consider saving the running config as the startup config (use the write memory command or copy running-config startup-config command).

Related Commands

- copy — copy the current configuration to either the startup-configuration file or the terminal.
- show file-systems — display information about the file systems on the system.

fsck flash

Checks the flash file system for errors.

Syntax

```plaintext
fsck {flash: | usbflash:}
```
Parameters

- **flash:** For a directory on the internal Flash, enter `flash://` directory name.
- **usbflash:** For a directory on the external USB flash, enter `usbflash://` directory name.

Defaults
None

</tbody>
</table>

Usage Information
Include the colon (:) when entering this command. This command checks the specified flash memory for errors. If errors are found, the command recommends that you format the flash.

⚠️ **CAUTION:** If you elect to format the flash, all files — including the startup configuration file — are lost. If you do decide to format the specified flash, consider saving the running configuration as the startup configuration after formatting the flash (use the `write memory` command or `copy running-config startup-config` command).

Related Commands
- `copy` — copy one file to another location.
- `show file-systems` — display information about the file systems on the system.

**mkdir**

Creates a directory on the NFS mounted file system.

Syntax
`mkdir nfsmount://mount-point/usrname`

### Version Description
- **9.8(2.0)** Introduced on the S3100 series.
- **9.8(1.0)** Introduced on the Z9100-ON.
- **9.8(0.0P5)** Introduced on the S4048-ON.
- **9.8(0.0P2)** Introduced on the S3048-ON.
- **9.7(0.0)** Introduced on the S-Series.

**Example**

```
Dell# mkdir nfs-mount:/nfs-mountpoint/guest
Dell#
```

**Related Commands**
- `rmdir` — remove a directory.

### mount nfs

Mounts an NFS file system to a device.

**Syntax**

```
mount nfs rhost:path mount-point [username password]
```

**Parameters**

- `rhost:path` Enter the remote hosts’s path directory.
- `mount-point` Enter the folder name in the local file system.
- `username` (OPTIONAL) Enter the user name to access the device.
- `password` (OPTIONAL) Enter the password.

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version**

- **9.10(0.0)** Introduced on the S3148.
- **9.8(2.0)** Introduced on the S3100 series.
- **9.8(1.0)** Introduced on the Z9100-ON.
- **9.8(0.0P5)** Introduced on the S4048-ON.
- **9.8(0.0P2)** Introduced on the S3048-ON.
- **9.7(0.0)** Introduced on the S-Series.

**Example**

```
Dell# mount nfs nfstest nfs-mount-point username pwd
Dell#
```

**Related Commands**
- `cd` — change the working directory.
rmdir

Removes a directory from the NFS mounted file system.

Syntax

rmdir nfsmount://mount-point/username

</tbody>
</table>

Example

```
Dell# rmdir nfsmount://nfs-mountpoint/guest
Proceed to remove the directory [confirm yes/no]: yes
Dell#
```

Related Commands

- `mkdir` – create a directory.

upgrade system

Upgrade the Dell Networking OS image. To upgrade the bootflash or bootselector image, use the upgrade boot command.

Syntax

```
upgrade system {flash: | ftp: | nfsmount: | scp: | stack-unit {stack-unit-id | all} | tftp: | usbflash:} file-url {A: | B:}
```

Parameters

- **system**
  - Enter the keyword system to upgrade the operating system (OS) image.
- **flash: file-url**
  - Enter the keyword flash: and specify the location of the image file in the format //directory-path or press Enter to launch a prompt sequence.
- **ftp: file-url**
  - Enter the keyword ftp: and specify the location of the image file in the format //userid:password@host-ip/filepath or press Enter to launch a prompt sequence.
- **nfsmount://<mount-point>/filepath**
  - Enter the keyword nfsmount: and specify the location of the image file in the format //<mount-point>/filepath.
- **scp: file-url**
  - Enter the keyword scp: and specify the location of the image file in the format userid:password@host-ip/filepath or press Enter to launch a prompt sequence.
stack-unit stack-unit-id
Enter the keyword stack-unit and specify the stack-unit ID to sync the image to that stack-unit.

stack-unit all
Enter the keyword stack-unit followed by the keyword all to sync the image on all stack-units.

tftp: file-url
Enter the keyword tftp: and specify the location of the image file in the format //host-ip/filepath or press Enter to launch a prompt sequence.

usbflash: file-url
Enter the keyword usbflash: and specify the location of the source file in the format //directory-path to upgrade form an external flash device or press Enter to launch a prompt sequence.

A: | B:
Specify the flash partition of the operating-system image to be upgraded.

Defaults
none

Command Modes
EXEC Privilege

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Added support for NFS mount.
9.2(1.0) Introduced on the Z9500.
9.0(0.0) Added support for IPv6 for the file-url parameter.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000. Added support for the SSD on the Z9000 only.
8.3.7.0 Introduced on the S4810.
7.7.1.0 Added support for TFTP and SCP.
7.6.1.0 Introduced on the S-Series.

Usage Information
RFC 3986 specifies that IPv6 host addresses in a uniform resource identifier (URI) must be enclosed in square brackets, [X::X::X]. For maximum flexibility this command accepts IPv6 host addresses with or without the square brackets.

After you upgrade the system image, by entering the command, specify the location where the Dell Networking OS image used to boot the system is stored (boot system), save the configuration to the start-up config file (write memory), and reload the system (reload).

Example
Dell# upgrade system tftp://10.11.8.12/dv-rainier-13 a:
Received block num: 50
Received block num: 64
!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!
..........................
rename

Rename a file in the local file system.

Syntax

rename url url

Parameters

url

Enter the following keywords and a filename:

- For a file on the internal Flash, enter flash:// followed by the filename.
- For a file on an NFS mounted file system, enter nfsmount:// followed by the mount point and file path.
- For a file on an external USB drive, enter usbflash:// followed by the filename.

Command Modes

EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description

9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100-ON.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON. Added support for NFS mount.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
8.3.7.0 Introduced on the S4810.
7.6.1.0 Introduced on S-Series
7.5.1.0 Introduced on C-Series
E-Series Original command

restore factory-defaults

Restore factory defaults.

Syntax

restore factory-defaults stack-unit {stack-unit-number | all} {clear-all | bootvar | nvram}
**Parameters**

- **factory-defaults**: Return the system to its factory default mode.
- **stack-unit-number**: Enter the stack member unit identifier to restore only the mentioned stack-unit. The range is from 1 to 12.
- **all**: Enter the keyword all to restore all units in the stack.
- **bootvar**: Enter the keyword bootvar to reset boot line.
- **clear-all**: Enter the keywords clear-all to reset the NvRAM, boot environment variables, and the system startup configuration.
- **nvram**: Enter the keyword nvram to reset the NvRAM only.

**Command Modes**

- **EXEC Privilege**

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version**  
9.10(0.0)  Introduced on the S3148.
9.10(0.0)  Increased the stacking range to 12 units in S3100 series.
9.8(2.0)   Introduced on the S3100 series.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.5(0.1)   Added bootvar as a new parameter.
9.2(1.0)   Introduced on the Z9500.
9.0.2.0     Introduced on the S6000.
9.0.0.0     Introduced on the Z9000.
8.3.19.0    Introduced on the S4820T.
8.3.12.0    Introduced on the S4810.
8.3.16.0    Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

Restoring factory defaults deletes the existing startup configuration and all persistent settings (stacking, fan-out, and so forth).

When restoring all units in a stack, all the units in the stack are placed into stand-alone mode.

When restoring a single unit in a stack, that unit placed in stand-alone mode. No other units in the stack are affected.

When restoring units in stand-alone mode, the units remain in stand-alone mode after the restoration. After the restore is complete, the units power cycle immediately.

⚠️ **CAUTION:** There is no undo for this command.

Following are the factory-default environment variables:

- baudrate
- primary_boot
- secondary_boot
Each boot path variable (primary_boot, secondary_boot, and default_boot) is further split into the following three independent variables:

- primary_server, primary_file, and primary_type
- secondary_server, secondary_file, and secondary_type
- default_server, default_file, and default_type

**NOTE:** For information on the default values that these variables take, refer to the Restoring Factory Default Environment Variables section in the Dell Networking OS Configuration guide.

---

**Example (all stack units)**

```
Dell# restore factory-defaults stack-unit all clear-all
************************************************************
* Warning - Restoring factory defaults will delete the existing *
* startup-config and all persistent settings (stacking, fanout, etc.)*
* All the units in the stack will be split into standalone units. *
* After restoration the unit(s) will be powercycled immediately. *
* Proceed with caution ! *
************************************************************
Proceed with factory settings? Confirm [yes/no]:yes
-- Restore status --
Unit Nvram Config
------------------------
1    Success    Success
2    Success    Success
3    Success    Success
4    Not present
5    Not present
Power-cycling the unit(s).
Dell#
```
### show boot system

Displays information about boot images currently configured on the system.

**Syntax**

```plaintext
show boot system stack-unit{stack-unit-id | all}
```

**Parameters**

- **all**
  - Enter the keyword `all` to display the boot image information for all stack units.
- **stack-unit-id**
  - Enter the `stack-unit-id` to display boot image information for a stack-unit.

**Defaults**

`none`

**Command Modes**

Related Commands

- `format flash` – erases all the existing files and reformats the file system in the internal flash memory.

show os-version

Display the release and software image version information of the image file specified.

**Syntax**

```
show os-version [file-url]
```

**Parameters**

- `file-url` (OPTIONAL) Enter the following location keywords and information:
  - For a file on the internal flash, enter flash:// followed by the filename.
  - For a file on an FTP server, enter ftp://user:password@hostip/filepath.
  - For a file on a TFTP server, enter tftp://hostip/filepath.
  - For a file on the USB port, enter usbflash://filepath.

Usage Information

---

**NOTE:** A filepath that contains a dot ( . ) is not supported.

---
show running-config

Display the current configuration and display changes from the default values.

Syntax

```
show running-config [entity] [configured] [status] [compressed]
```

Parameters

- **entity** (OPTIONAL) To display that entity’s current (non-default) configuration, enter one of the following keywords:
  
  **NOTE:** If you did not configure anything that entity, nothing displays and the prompt returns.

  - `aaa` for the current AAA configuration
  - `acl` for the current ACL configuration
  - `arp` for the current static ARP configuration
  - `as-path` for the current AS-path configuration
  - `bfd` for the current BFD configuration
  - `bgp` for the current BGP configuration
  - `boot` for the current boot configuration
  - `cam-profile` for the current CAM profile in the configuration
  - `class-map` for the current class-map configuration
  - `community-list` for the current community-list configuration
  - `ecmp-group` for the current ECMP group configuration
  - `eis` for the current EIS configuration
  - `ethernet` for the current Ethernet CFM configuration
  - `fefd` for the current FEFD configuration
  - `ftp` for the current FTP configuration
  - `frrp` for the current FRRP configuration
  - `fvrp` for the current FVRP configuration
  - `gvrp` for the current GVRP configuration
  - `host` for the current host configuration
  - `hardware-monitor` for hardware-monitor action-on-error settings
  - `hypervisor` for the current hypervisor configuration
  - `igmp` for the current IGMP configuration
  - `interface` for the current interface configuration
  - `interface port-channel` for the current port-channel interface configuration.
  - `interface tunnel` for all configured tunnels. For a specific tunnel, enter the tunnel ID. The range is from 1 to 16383.

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100-ON.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.2(1.0) Introduced on the Z9500.
9.0.2.0 Introduced on the S6000.
9.2.(0.0) Added support for the tunnel and EIS interface types.
9.0.0.0 Added support for the VLT option.
Version Description
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
8.3.7.0 Introduced on the S4810.
7.8.1.0 Added the hardware-monitor option.
7.6.1.0 Introduced on the S-Series.
7.5.1.0 Introduced on the C-Series.
7.4.1.0 Expanded to include the last configuration change, start-up last updated (date and time), and who made the change.
6.5.4.0 Added the status option.

Example
Dell# show running-config
Current Configuration ...

Example
Dell# show running-config status
running-config bytes 10257, checksum 0xFD33339F
startup-config bytes 10257, checksum 0xFD33339F

Usage Information
The status option allows you to display the size and checksum of the running configuration and the startup configuration.

show startup-config

Display the startup configuration.

Syntax
show startup-config

Command Modes
EXEC Privilege
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

## Command History

This command was introduced in version 7.4.1.0.

### Version Description

- **9.10(0.0)** Introduced on the S3148.
- **9.8(2.0)** Introduced on the S3100 series.
- **9.8(1.0)** Introduced on the Z9100-ON.
- **9.8(0.0P5)** Introduced on the S4048-ON.
- **9.8(0.0P2)** Introduced on the S3048-ON.
- **9.7(0.0)** Introduced on the S6000-ON.
- **9.2(1.0)** Introduced on the Z9500.
- **9.0.2.0** Introduced on the S6000.
- **8.3.19.0** Introduced on the S4820T.
- **8.3.11.1** Introduced on the Z9000.
- **8.3.7.0** Introduced on the S4810.
- **7.6.1.0** Introduced on S-Series
- **7.5.1.0** Introduced on the C-Series.
- **7.4.1.0** Expanded to include the last configuration change, start-up last updated (date and time), and who made the change.

### Example

```
Dell# show startup-config
! Version 1-0(0-4781)
! Startup-config last updated at Sun Mar 20 18:28:22 2016 by default
!
boot system stack-unit 1 primary system: A:
boot system stack-unit 1 secondary system: A:
boot system stack-unit 1 default system: A:
boot system gateway 10.16.132.254
!
logging coredump stack-unit 1
logging coredump stack-unit 2
logging coredump stack-unit 3

Dell#

upgrade

Upgrade the bootflash image or system image of the management unit.

Syntax

upgrade boot {all | bootflash-image | bootselector-image} stack-unit {stack-unit-number | all} {booted | flash: | ftp: | nfsmount | scp: | tftp: | usbflash:} file-url

Parameters

boot
Enter the keyword boot to change the boot image.

system
Enter the keyword system to change the system image.

ftp:
After entering the keyword ftp:, you can either follow it with the location of the source file in this form: //userid:password@hostip/filepath or press Enter to launch a prompt sequence.

scp:
After entering the keyword scp:, you can either follow it with the location of the source file in this form: //userid:password@hostip/filepath or press Enter to launch a prompt sequence.

slot0:
After entering the keyword slot0:, you can either follow it with the location of the source file in this form: //hostlocation/filepath or press Enter to launch a prompt sequence.

tftp:
After entering the keyword tftp:, you can either follow it with the location of the source file in this form: //hostlocation/filepath or press Enter to launch a prompt sequence.
After entering the keyword `flash:`, you can either follow it with the location of the source file in this form:`flash://filepath` or press Enter to launch a prompt sequence.

Enter the partition to upgrade from the flash.

Enter the keywords `stack-unit:` to synch the image to the stack-unit.

Enter the following location keywords and information to upgrade using an Dell Networking OS image other than the one currently running:

- To specify an Dell Networking OS image on the internal flash, enter `flash://file-path/filename`.
- To specify an Dell Networking OS image on an FTP server, enter `ftp://user:password@hostip/filepath`.
- To specify an Dell Networking OS image on the external flash, enter `slot0://file-path/filename`.
- To copy a file on a TFTP server, enter `tftp://hostip/filepath/filename`.

where `hostip` is either an IPv4 dotted decimal address or an IPv6 URI [x::x::x] format address.

**Defaults**

`none`

**Command Modes**

EXEC Privilege

<td>Introduced on the S-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

RFC 3986 specifies that IPv6 host addresses in a uniform resource identifier (URI) must be enclosed in square brackets, `[X::X::X]`. For maximum flexibility this command accepts IPv6 host addresses with or without the square brackets.

Reload Dell Networking OS after executing this command. To copy Dell Networking OS from the management unit to one or more stack members, use the `upgrade system stack-unit (S-Series stack member)` command.

**Example**

```
Dell# upgrade system ?
ftp: Copy from remote file system (ftp://userid:password@hostip/filepath)
scp: Copy from remote file system (scp://userid:password@hostip/filepath)
```
tftp: Copy from remote file system (tftp://hostip/filepath)
Dell# upgrade system ftp://username:password@10.11.1.1/FTOS-SB-7.7.1.0.bin

### banner exec

Configure a message that is displayed when your enter EXEC mode.

**Syntax**

```
banner exec c line c
```

To delete a banner, use the `no banner exec` command.

**Parameters**

- `c` Enter the keywords `banner exec`, then enter a character delineator, represented here by the letter `c`. Press **ENTER**.
- `line` Enter a text string for your banner message ending the message with your delineator. In the following example, the delineator is a percent character (%); the banner message is “testing, testing”.

**Defaults**

No banner is displayed.

**Command Modes**

Version | Description
--- | ---
7.5.1.0 | Introduced on the C-Series.
E-Series | Original Command

**Usage Information**
After entering the banner login command, type one or more spaces and a delineator character. Enter the banner text then the second delineator character. When the user is connected to the router, if a message of the day banner is configured, it displays first. If no message of the day banner is configured, the login banner and prompt appear. After the user has logged in, the banner EXEC (if configured) displays.

**Example**
```
Dell(conf)# banner exec ?
LINE c banner-text c, where 'c' is a delimiting character
Dell(conf)# banner exec %
Enter TEXT message. End with the character '%'.
This is the banner%
Dell(conf)# end
Dell# exit
2d18h1m: %STKUNIT1-M:CP %SEC-5-LOGOUT: Exec session is terminated on console
This is the banner
Dell con0 now available
Press RETURN to get started.
2d18h2m: %STKUNIT1-M:CP %SEC-5-LOGIN_SUCCESS: Login successful on console
This is the banner
Dell>
```

**Related Commands**
- `line` — enables and configures the console and virtual terminal lines to the system.

**banner login**
Set a message of the day banner to appear after logging on to the system.

**Syntax**
```
banner login {acknowledgement | keyboard-interactive | c line c}
```
Enter no banner login to delete the banner text. Enter no banner login keyboard-interactive to automatically go to the banner message prompt (does not require a carriage return).

**Parameters**
- `keyboard-interactive` Enter the keyboard-interactive keyword and then press Enter (carriage return) to retrieve the message banner prompt.
- `acknowledgement` Enter the acknowledgement keyword to require a positive acknowledgement from the user while logging in to the system.
- `c` Enter a delineator character to specify the start and end of the text banner. You cannot use the delineator character in the banner message.
- `line` Enter text string for your text banner message, with a maximum of 50 lines and up to 255 characters per line.

**Defaults**
No banner is configured and a carriage return (CR) is required when creating a banner.

**Command Modes**
CONFIGURATION

</tr>
<tr>
<td>E-Series</td>
<td>Original command</td>
</tr>
</tbody>
</table>

Usage Information
Enter the banner login command, type one or more spaces and a delineator character, type the banner text, and then type the second delineator character. The message of the day banner displays first when you are connected to the router; otherwise the login banner and prompt appear. After you have logged in, the banner EXEC (if configured) displays.

Example
Dell(conf)#banner login ?
acknowledgement Require positive acknowledgment after login prompt
keyboard-interactive Press enter key to get prompt
LINE c banner-text(max length 255) c, where 'c' is a delimiting character
Dell(conf)#no banner login?
acknowledgement Disable positive acknowledgment required after login prompt
keyboard-interactive Prompt will be displayed by default

If you configure the acknowledgement keyword, the system requires a positive acknowledgement from the user while logging in to the system.

Related Commands

- `banner motd` — sets a Message of the Day banner.
- `banner exec` — enables the display of a text string when you enter EXEC mode.

**banner motd**

Set a message of the day (MOTD) banner.

**Syntax**

```
banner motd \( c \) \texttt{line} \( c \)
```

To delete a Message of the Day banner, enter `no banner motd`.

**Parameters**

- **c**
  
  Enter a delineator character to specify the limits of the text banner. The delineator is a percent character (%).

- **line**
  
  Enter a text string for your MOTD banner the message with your delineator. The delineator is a percent character (%).

**Defaults**

No banner is configured.

**Usage Information**

After entering the banner login command, type one or more spaces and a delineator character. Enter the banner text then the second delineator character. When the user is connected to the router, if a message of the day banner is configured, it displays first. If no message of the day banner is configured, the login banner and prompt appear. After the user has logged in, the banner EXEC (if configured) displays.
Related Commands

- `banner exec` — enables the display of a text string when you enter EXEC mode.
- `banner login` — sets a banner to display after successful login to the system.

**cam-acl**

Allocate content addressable memory (CAM) for IPv4 and IPv6 ACLs.

**Syntax**

```
cam-acl {default | l2acl number ipv4acl number ipv6acl number ipv4qos number l2qos number l2pt number ipmacacl number [vman-qos | vman-dual-qos] number ecfmacl number {fcoeacl number} {iscsioptacl {0|2}} {openflow {4|8}}}
```

**Parameters**

- `default` Use the default CAM profile settings and set the CAM as follows:
  - L2Acl : 2
  - Ipv4Acl : 2
  - Ipv6Acl : 0
  - Ipv4Qos : 2
  - L2Qos : 2
  - L2PT : 0
  - IpMacAcl : 1
  - VmanQos : 0
  - EtsAcl : 0
  - FcoeAcl : 0
  - iscsiOptAcl : 0
  - ipv4pbr : 0
  - vrfv4Acl : 0
  - Openflow : 0
  - fedgovacl : 0
  - nbcclusteracl : 0

Allocate space to each CAM region.

Enter the CAM profile name then the amount of CAM space to be allotted. The total space allocated must equal to 13. The ipv6acl range must be a factor of 2.

Enter 4 or 8 for the number of OpenFlow FP blocks.

- **4**: Creates 242 entries for use by the OpenFlow controller (256 total entries minus the 14 entries reserved for internal functionality)
- **8**: Creates 498 entries for use by the OpenFlow controller (512 total entries minus the 14 entries reserved for internal functionality)

**cam-acl-vlan**

Specify the number of VFP blocks allocated to OpenFlow.

**Syntax**

```plaintext
cam-acl-vlan {default | vlanopenflow {0|1}}
```

**Defaults**

Disabled.

**Parameters**

- **default**
  - Reset VLAN CAM ACL entries to default settings

- **vlanopenflow**
  - Enter the number 1 to allocate VFP blocks and enable OpenFlow.
  - (Default) Enter the number 0 to disable OpenFlow.

**Command Modes**

- CONFIGURATION
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

Reboot the switch after changing the parameter values for changes to take effect.

For platform-specific instructions about using this command, see the SDN section of the Dell Networking OS Configuration Guide.

**clear average-power**

This CLI command helps the user reset the average power and average power start time.

**Syntax**

```
clear average-power stack-unit {stack-unit-number}
```

**Parameters**

- `stack-unit-number` Enter the stack unit number.

**Defaults**

None

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.11(2.1P1)</td>
<td>Introduced on all Dell Networking OS platforms</td>
</tr>
</tbody>
</table>

This command resets the average power and average power start time to the current time. Average power and average power start time will be calculated from the reset time (i.e current time).

**Example**

```
Dell#clear average-power stack-unit 1
Proceed to clear Average power ? Confirm [yes/no]:yes
Dell#
```

**clear line**

Reset a terminal line.

**Syntax**

```
clear line {line-number | console 0 | vty number}
```
configure

Enter CONFIGURATION mode from EXEC Privilege mode.

Syntax

configure [terminal]

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>terminal</td>
<td>(OPTIONAL) Enter the keyword <code>terminal</code> to specify that you are configuring from the terminal.</td>

### do

Allows the execution of most EXEC-level commands from all CONFIGURATION levels without returning to the EXEC level.

#### Syntax

```plaintext
do command
```

#### Parameters

- **command**
  
Enter an EXEC-level command.

#### Defaults

none

#### Command Modes

- CONFIGURATION
- INTERFACE

#### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.10(0.0)</td>

<td>Introduced on the S3100 series.</td>
</tr>
<tr>
<td>9.8(1.0)</td>
<td>Introduced on the Z9100–ON.</td>
</tr>
</tbody>
</table>
### Version Description

- **9.8(0.0P5)** Introduced on the S4048-ON.
- **9.8(0.0P2)** Introduced on the S3048-ON.
- **9.7(0.0)** Introduced on the S6000-ON.
- **9.2(1.0)** Introduced on the Z9500.
- **9.0.2.0** Introduced on the S6000.
- **8.3.19.0** Introduced on the S4820T.
- **8.3.12.0** Introduced on the S4810.
- **8.3.11.1** Introduced on the Z9000.
- **8.1.1.0** Introduced on the E-Series.
- **7.6.1.0** Introduced on the S-Series.
- **7.5.1.0** Introduced on the C-Series.
- **6.1.1.0** Introduced on the E-Series.

### Usage Information

The following commands are not supported by the `do command`:

- `enable`
- `disable`
- `exit`
- `config`

### Example

```
Dell(conf-if-gi-5/1)#do clear counters
Clear counters on all interfaces [confirm]
Dell(conf-if-gi-5/1)#
Dell(conf-if-gi-5/1)#do clear logging
Clear logging buffer [confirm]
Dell(conf-if-gi-5/1)#
Dell(conf-if-gi-5/1)# do reload
System configuration has been modified. Save? [yes/no]: n
Proceed with reload [confirm yes/no]: n
Dell(conf-if-gi-5/1)#
```

### enable

Enter EXEC Privilege mode or any other privilege level configured. After entering this command, you may need to enter a password.

#### Syntax

```
enable [level]
```

#### Parameters

- `level` (OPTIONAL) Enter a number for a privilege level of Dell Networking OS. The range is from 0 to 15.

#### Defaults

- 15

#### Command Modes

- EXEC

#### Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.
Version                  Description
9.10(0.0)                Introduced on the S3148.
9.8(2.0)                 Introduced on the S3100 series.
9.8(1.0)                 Introduced on the Z9100-ON.
9.8(0.0P5)               Introduced on the S4048-ON.
9.8(0.0P2)               Introduced on the S3048-ON.
9.7(0.0)                 Introduced on the S6000-ON.
9.5(0.0)                 Added support for roles on the Z9000, S6000, S4820T, S4810, and MXL.
9.2(1.0)                 Introduced on the Z9500.
9.0.2.0                  Introduced on the S6000.
8.3.19.0                 Introduced on the S4820T.
8.3.12.0                 Introduced on the S4810.
8.3.11.1                 Introduced on the Z9000.
8.1.1.0                  Introduced on the E-Series.
7.6.1.0                  Introduced on the S-Series.
7.5.1.0                  Introduced on the C-Series.
E-Series                Original command.

Usage Information

Users entering EXEC Privilege mode or any other configured privilege level can access configuration commands. To protect against unauthorized access, use the enable password command to configure a password for the enable command at a specific privilege level. If no privilege level is specified, the default is privilege level 15.

**NOTE:** If you are authorized for the EXEC Privilege mode by your role, you do not need to enter an enable password.

Related Commands

- **enable password** — configures a password for the enable command and to access a privilege level.

### enable optic-info-update interval

Enable polling intervals of optical information updates for simple network management protocol (SNMP).

**Syntax**

```
enable optic-info-update [interval seconds]
```

To disable optical power information updates, use the no enable optic-info-update interval command.

**Parameters**

- **interval seconds**
  
  Enter the keyword interval then the polling interval in seconds. The range is from 120 to 6000 seconds. The default is 300 seconds (5 minutes).

**Defaults**

Disabled

**Command Modes**

<td>Replacement command for the S4810 only. Replaces the enable xfp-power-updates command.</td>
</tr>
</tbody>
</table>

Usage Information

To enable polling and to configure the polling frequency, use this command.

end

Return to EXEC Privilege mode from other command modes (for example, CONFIGURATION or ROUTER OSPF modes).

Syntax

end

Command Modes

- CONFIGURATION
- SPANNING TREE
- MULTIPLE SPANNING TREE
- LINE
- INTERFACE
- TRACE-LIST
- VRRP
- ACCESS-LIST
- PREFIX-LIST
- AS-PATH ACL
- COMMUNITY-LIST
- ROUTER OSPF
- ROUTER RIP
- ROUTER ISIS
- ROUTER BGP
### exec-timeout

Set a time interval that the system waits for input on a line before disconnecting the session.

**Syntax**

```
exec-timeout minutes [seconds]
```

To return to default settings, use the `no exec-timeout` command.

**Parameters**

- **minutes**
  - Enter the number of minutes of inactivity on the system before disconnecting the current session. The range is from 0 to 35791. The default is 10 minutes for the console line and 30 minutes for the VTY line.
- **seconds**
  - (OPTIONAL) Enter the number of seconds. The range is from 0 to 2147483. The default is 0 seconds.

**Defaults**

- **10 minutes** for console line; **30 minutes** for VTY lines; **0 seconds**

**Command Modes**

- LINE

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Usage Information

After you enable FTP server functions with the `ftp-server enable` command, Dell Networking recommends specifying a top-level directory path. Without a top-level directory path specified, the Dell Networking OS directs users to the flash directory when logging in to the FTP server.

Related Commands

- `ftp-server username` — sets a username and password for incoming FTP connections to the E-Series.

**ftp-server username**

Create a user name and associated password for incoming FTP server sessions.

**Syntax**

```
ftp-server username username password [encryption-type] password
```

To delete a user name and its password, use the `no ftp-server username username` command.

**Parameters**

- `username` Enter a text string up to 40 characters long as the user name.
- `password password` Enter the keyword `password` then a string up to 40 characters long as the password.
  - Without specifying an encryption type, the password is unencrypted.
  - (Optional) After the keyword `password`, enter one of the following numbers:
    - 0 (zero) for an unencrypted (clear text) password
hostname

Set the host name of the system.

Syntax

    hostname name

Parameters

    name

        Enter a text string, up to 32 characters long.

Defaults

    Dell

Command Modes

    CONFIGURATION

Command History

    This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

    Version            Description
    9.10(0.0)           Introduced on the S3148.
    9.8(2.0)            Introduced on the S3100 series.
    9.8(1.0)            Introduced on the Z9100-ON.
    9.8(0.0P5)          Introduced on the S4048-ON.
    9.8(0.0P2)          Introduced on the S3048-ON.
    9.7(0.0)            Introduced on the S6000-ON.
    9.2(1.0)            Introduced on the Z9500.
    9.0.2.0             Introduced on the S6000.
    9.0.0.0             Introduced on the Z9000.
    8.3.19.0            Introduced on the S4820T.
    8.3.12.0            Introduced on the S4810.
    8.3.11.1            Introduced on the Z9000.
    8.1.1.0             Introduced on the E-Series.
    7.6.1.0             Introduced on the S-Series.
    7.5.1.0             Introduced on the C-Series.
    E-Series            Original command.
### Version Description
- **9.8(2.0)**: Introduced on the S3100 series.
- **9.8(1.0)**: Introduced on the Z9100-ON.
- **9.8(0.0P5)**: Introduced on the S4048-ON.
- **9.8(0.0P2)**: Introduced on the S3048-ON.
- **9.7(0.0)**: Introduced on the S6000-ON.
- **9.2(1.0)**: Introduced on the Z9500.
- **9.0.2.0**: Introduced on the S6000.
- **8.3.19.0**: Introduced on the S4820T.
- **8.3.12.0**: Introduced on the S4810.
- **8.3.11.1**: Introduced on the Z9000.
- **8.1.1.0**: Introduced on the E-Series.
- **7.6.1.0**: Introduced on the S-Series.
- **7.5.1.0**: Introduced on the C-Series.
- **E-Series**: Original command.

### Usage Information
The hostname is used in the prompt.

### ip http source-interface

Specify an interface as the source interface for HTTP connections.

**Syntax**

```
ip http source-interface interface
```

To delete an interface, use the `no ip http source-interface interface` command.

**Parameters**

- **interface**: Enter the following keywords and the interface information:
  - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
  - For a port channel interface, enter the keywords `port-channel` then a number.
  - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults**

The IP address on the system that is closest to the Telnet address is used in the outgoing packets.

**Command Modes**

- `CONFIGURATION`

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.
ip http vrf

Configure an HTTP client with a VRF used to connect to the HTTP server.

Syntax

```
ip http vrf {management | vrf-name}
```

To undo the HTTP client configuration, use the `ip http vrf` command.

Parameters

- **management**: Enter the keyword `management` for configuring the management VRF that uses an HTTP client.
- **vrf-name**: Enter a VRF name that the HTTP client uses. If you do not specify a VRF name, the HTTP client uses the default VRF.

Defaults

Disabled

Version Description
9.8(0.0P2) Introduced on the S3048-ON.
9.8(0.0) Introduced on the S4810, S4820T, S5000, S6000, S6000-ON, and Z9500.

Usage Information
To make the HTTP clients VRF-aware, use the `ip http vrf` command. The HTTP client uses the VRF name that you specify to reach the HTTP server. If you do not specify a VRF name, the HTTP client uses the default VRF.

**ip ftp password**

Specify a password for outgoing FTP connections.

**Syntax**

```
ip ftp password [encryption-type] password
```

To remove a password and return to the default setting, use the `no ip ftp password [password]` command.

**Parameters**

- `encryption-type` (OPTIONAL) Enter one of the following numbers:
  - 0 (zero) for an unencrypted (clear text) password
  - 7 (seven) for a hidden text password

- `password` Enter a string up to 40 characters as the password.

**Defaults**
Not configured.

</table>
The password is listed in the configuration file; you can view the password by entering the `show running-config ftp` command.

Use the `ip ftp password` command when you use the `ftp:` parameter in the `copy` command.

Related Commands

**ip ftp source-interface**

Specify an interface's IP address as the source IP address for FTP connections.

**Syntax**

```
ip ftp source-interface interface
```

To delete an interface, use the `no ip ftp source-interface interface` command.

**Parameters**

`interface`

Enter the following keywords and the interface information:

- For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
- For a port-channel interface, enter the keywords `port-channel` then the port-channel ID.
- For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.
- For a tunnel interface, enter the keyword `tunnel`.

**Defaults**

The IP address on the system that is closest to the Telnet address is used in the outgoing packets.

**Command Modes**

`CONFIGURATION`

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

**Version** | **Description**
--- | ---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100–ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.2(1.0) | Introduced on the Z9500.
9.0.2.0 | Introduced on the S6000.

Assign a user name for outgoing FTP connection requests.

**Syntax**

```plaintext
ip ftp username username
```

To return to anonymous FTP connections, use the `no ip ftp username [username]` command.

**Parameters**

- `username` Enter a text string as the user name up to 40 characters long.

**Defaults**

No user name is configured.

**Command Modes**

- CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version**

- 9.10(0.0) Introduced on the S3148.
- 9.8(2.0) Introduced on the S3100 series.
- 9.8(1.0) Introduced on the Z9100-ON.
- 9.8(0.0P5) Introduced on the S4048-ON.
- 9.8(0.0P2) Introduced on the S3048-ON.
- 9.7(0.0) Introduced on the S6000-ON.
- 9.2(1.0) Introduced on the Z9500.
- 9.0.2.0 Introduced on the S6000.
- 8.3.19.0 Introduced on the S4820T.
- 8.3.12.0 Introduced on the S4810.
- 8.3.11.1 Introduced on the Z9000.
- 8.1.1.0 Introduced on the E-Series.
- 7.6.1.0 Introduced on the S-Series.
- E-Series Original command.
### ip ftp vrf

Configures an FTP client with a VRF that is used to connect to the FTP server.

**Syntax**

```
ip ftp [vrf {vrf-name | management}]
```

To undo the FTP client configuration, use the `ip ftp [vrf vrf-name]` command.

**Parameters**

- **vrf-name**
  - Enter the `vrf-name` to specify the VRF that is used by the FTP client.

- **management**
  - Enter the keyword `management` to specify that the VRF used by the FTP client is a management VRF.

**Defaults**

Disabled

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</table>

**Usage Information**

Use this command to make the FTP clients VRF-aware. The VRF name that you specify is used by the FTP client to reach the FTP server. If no VRF name is specified, then the default VRF is used.

### ip telnet server enable

Enable the Telnet server on the switch.

**Syntax**

```
ip telnet server enable
```

Enable the Telnet server on the switch.
To disable the Telnet server, use the `no ip telnet server enable` command.

**Defaults**

Enabled

**Command Modes**

**Related Commands**

- `ip ssh server` — enables the secure shell (SSH) server on the system.

**ip telnet server vrf**

Configures the TELNET server on either a specific VRF or a management VRF.

**Syntax**

```
ip telnet server vrf {vrf-name | any | management}
```

To undo the TELNET server configuration, use the `no ip telnet server [vrf vrf-name]` command.

**Parameters**

- `vrf-name` Enter the `vrf-name` to specify the VRF that is used by the TELNET server.
- `any` Enter the keyword `any` to enable server from any VRF.
- `management` Enter the keyword `management` to specify a management VRF that is used by the TELNET server.

**Defaults**

Disabled
Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100-ON.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.5(0.0) Introduced on the Z9500.
9.4.(0.0) Introduced on the S-Series and Z9000.

Usage Information

You can enable the TELNET server on either a management VRF or a user-defined VRF but not both. If you do not specify a VRF name, then the TELNET server is enabled on the default VRF.

Example

Dell(conf)# ip telnet server vrf vrf1
Dell(conf)# no ip telnet server vrf
Dell(conf)# ip telnet server vrf management
Dell(conf)# no ip telnet server vrf
Dell(conf)#

ip telnet source-interface

Set an interface’s IP address as the source address in outgoing packets for Telnet sessions.

Syntax

ip telnet source-interface interface

To return to the default setting, use the no ip telnet source-interface [interface] command.

Parameters

interface Enter the following keywords and the interface information:

- For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For Loopback interfaces, enter the keyword loopback then a number from zero (0) to 16383.
- For a port channel interface, enter the keywords port-channel then a number.
- For VLAN interface, enter the keyword vlan then a number from 1 to 4094.
- For a tunnel interface, enter the keyword tunnel.

Defaults

The IP address on the system that is closest to the Telnet address is used in the outgoing packets.

Command Modes

E-Series    Original command

Related Commands

- telnet — telnet to another device.

**ip telnet vrf**

Configures a TELNET client to use a specific VRF.

**Syntax**

```
ip telnet [vrf vrf-name]
```

To undo the TELNET client configuration, use the `ip telnet [vrf vrf-name]` command.

**Parameters**

- **vrf vrf-name**
  
  Enter the keyword `vrf` and then the name of the VRF to specify the VRF that is used by the TELNET client.

**Defaults**

- Disabled

</tr>
</tbody>
</table>

### Usage Information

If you configure a TELNET client to use a specific VRF, then you need not explicitly specify the same VRF during the TELNET client sessions corresponding to that VRF.

### Example

```
Dell(conf)# ip telnet vrf vrf1
Dell(conf)# do telnet 10.10.10.2
Dell(conf)# no ip telnet vrf vrf1
Dell(conf)#
```

## ip tftp source-interface

Assign an interface’s IP address in outgoing packets for TFTP traffic.

### Syntax

```
ip tftp source-interface interface
```

To return to the default setting, use the `no ip tftp source-interface interface` command.

### Parameters

- **interface**
  - Enter the following keywords and slot/port or number information:
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
    - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
    - For a port channel interface, enter the keywords `port-channel` then a number.
    - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

### Defaults

The IP address on the system that is closest to the Telnet address is used in the outgoing packets.

</tr>
</tbody>
</table>
Usage Information

Use this command to make the TFTP clients VRF aware. The VRF name that you specify is used by the TFTP client to reach the TFTP server. If no VRF is specified, then the default VRF is used.

Related Commands

- `ftp-server topdir` — sets the directory to be used for incoming FTP connections.
- `ftp-server username` — sets a username and password for incoming FTP connections.

### line

Enable and configure console and virtual terminal lines to the system. This command accesses LINE mode, where you can set the access conditions for the designated line.

**Syntax**

```
line {aux 0 |console 0 | vty number [end-number]}
```

**Parameters**

- `aux 0` Enter the keyword `aux 0` to configure the auxiliary terminal connection.
- `console 0` Enter the keyword `console 0` to configure the console port. The console option is `<0-0>`.
- `vty number` Enter the keyword `vty` then a number from 0 to 9 to configure a virtual terminal line for remote sessions. The system supports 10 remote sessions.
- `end-number` (OPTIONAL) Enter a number from 1 to 9 as the last virtual terminal line to configure. You can configure multiple lines at one time.

**Defaults**

Not configured

**Command Modes**

CONFIGURATION

--- | ---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100-ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.7(0.0) | Introduced on the S6000-ON.
9.2(1.0) | Introduced on the Z9500.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.12.0 | Introduced on the S4810.
8.3.11.1 | Introduced on the Z9000.
8.1.1.0 |Introduced on the E-Series.
7.6.1.0 | Introduced on the S-Series.
7.5.1.0 | Introduced on the C-Series.
login concurrent-session

Configures the limit of concurrent sessions for all users on console and virtual terminal lines.

Syntax

login concurrent-session {limit number-of-sessions | clear-line enable}

no login concurrent-session {limit number-of-sessions | clear-line enable}

Parameters

- **limit number-of-sessions**: Sets the number of concurrent sessions that any user can have on console and virtual terminal lines. The range is from 1 to 12 (10 VTY lines, one console, and one AUX line).

- **clear-line enable**: Enables you to clear your existing sessions.

Defaults

Not configured. You can use all the available sessions.

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description

9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100–ON.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.8(0.0) Introduced on the S4810, S4820, S5000, S6000, S6000-ON, and Z9500.

Usage Information

You must have either the System Administrator or Security Administrator privileges to configure login concurrent-session limit or to enable clear-line.

To limit the number of concurrent sessions that any user can have on console, auxiliary, and virtual terminal lines, use the login concurrent-session limit number-of-sessions command.

If the login concurrent-session clear-line enable command is configured, you are provided with an option to clear any of your existing sessions after a successful login authentication. When you reach the maximum concurrent session limit, you can still log in by clearing any of your existing sessions.
The following example shows how to limit the number of concurrent sessions that any user can have to four:

```
Dell(conf)# login concurrent-session limit 4
Dell(conf)#
```

The following example shows how to use the `login concurrent-session clear-line enable` command.

```
Dell(conf)# login concurrent-session clear-line enable
Dell(conf)#
```

When you try to log in, the following message appears with all your existing concurrent sessions, providing an option to close any one of the existing sessions:

```
$ telnet 10.11.178.14
Trying 10.11.178.14...
Connected to 10.11.178.14.
Escape character is '^}'.
Login: admin
Password:
Current sessions for user admin:

3  vty 1          10.14.1.97
Clear existing session? [line number/Enter to cancel]:
```

When you try to create more than the permitted number of sessions, the following message appears, prompting you to close one of your existing sessions. Close any of your existing sessions to log in to the system.

```
$ telnet 10.11.178.14
Trying 10.11.178.14...
Connected to 10.11.178.14.
Escape character is '^}'.
Login: admin
Password:

5  vty 3          10.14.1.97
Clear existing session? [line number/Enter to cancel]:
```

**Related Commands**

- `login statistics` — enable and configure user login statistics on console and virtual terminal lines.
- `show login statistics` — displays login statistics of users who have used the console or virtual terminal lines to log in to the system.

## login statistics

Enable and configure user login statistics on console and virtual terminal lines.

**Syntax**

```
login statistics {enable | time-period days}
no login statistics {enable | time-period days}
```

**Parameters**

- `enable` Enables login statistics for the last 30 days by default.
**time-period days**  
Sets the number of days the system stores user login statistics; range is from 1 to 30.

**Defaults**  
Not configured

**Command Modes**  
CONFIGURATION

**Command History**  
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.10(0.0)</td>
<td>Introduced on the S3148.</td>
</tr>
<tr>
<td>9.8(2.0)</td>
<td>Introduced on the S3100 series.</td>
</tr>
<tr>
<td>9.8(1.0)</td>
<td>Introduced on the Z9100-ON.</td>
</tr>
<tr>
<td>9.8(0.0P5)</td>

</tr>
<tr>
<td>9.8(0.0)</td>
<td>Introduced on the S4810, S4820, S5000, S6000, S6000-ON, and Z9500.</td>
</tr>
</tbody>
</table>

**Usage Information**  
Only the system and security administrators can configure login activity tracking and view the login activity details of other users.

If you enable user login statistics, the system displays the last successful login details of the current user, the details of any failed login attempts by others, and if the current user’s permissions have changed since the last login.

If you use the `login statistics time-period days` command to set a custom time period, the system only reports the login statistics during that interval.

**NOTE:** Login statistics are not applicable for login sessions that do not use authentication on user names. For example, the system does not report login activity for a telnet session that prompts only a password field.

**Example**  
When you log into the system, it displays a message similar to the following:

```bash
$ telnet 10.11.178.14
Trying 10.11.178.14...
Connected to 10.11.178.14.
Escape character is '^[]'.
Login: admin
Password:
Last successful login: 12:52:01 UTC Tue Mar 22 2016 Line vty0 (10.11.178.14).
There were 1 unsuccessful login attempt(s) since the last successful login.
There were 1 unsuccessful login attempt(s) for user admin in the last 30 day(s).
There were 1 successful login attempt(s) for user admin in the last 30 day(s).
```

The preceding message shows that the user had previously logged in to the system using the VTY line from 10.11.178.14. It also displays the number of unsuccessful login attempts since the last login and the number of unsuccessful login attempts in the last 30 days.

```bash
$ telnet 10.11.178.14
Trying 10.11.178.14...
Connected to 10.11.178.14.
Escape character is '^[]'.
Login: admin
Password:
```

122  Control and Monitoring
Last successful login: 12:52:01 UTC Tue Mar 22 2016 on console
There were 2 unsuccessful login attempt(s) since the last successful login.
There were 3 unsuccessful login attempt(s) for user admin in last 12 day(s).
There were 1 successful login attempt(s) for user admin in the last 30 day(s).

The preceding message shows that the user had previously logged in to the system using the console line. It also displays the number of unsuccessful login attempts since the last login and the number of unsuccessful login attempts during a custom time period.

Related Commands
- `login concurrent-session` — configures the limit of concurrent sessions for all users on console and virtual terminal lines.
- `show login statistics` — displays login statistics of users who have used the console or virtual terminal lines to log in to the system.

motd-banner

Enable a message of the day (MOTD) banner to appear when you log in to the system.

Syntax

```
motd-banner
```

To disable the MOTD banner, use the `no motd-banner` command.

Defaults

Enabled on all lines.

Command Modes

LINE

</table>
**ping**

Test connectivity between the system and another device by sending echo requests and waiting for replies.

**Syntax**

    ping [host | ip-address | ipv6-address] [count {number | continuous}]
    [datagram-size] [timeout] [source (ip src-ipv4-address) | interface] [tos] [df-bit (y|n)] [validate-reply(y|n)] [outgoing-interface] [pattern pattern] [sweep-min-size] [sweep-max-size] [sweep-interval] [oointerface (ip src-ipv4-address) | interface] [ethernet | vrf vrf-name]

**Parameters**

- **host** (OPTIONAL) Enter the host name of the devices to which you are testing connectivity.
- **ip-address** (OPTIONAL) Enter the IPv4 address of the device to which you are testing connectivity. The address must be in the dotted decimal format.
- **ipv6-address** (OPTIONAL) Enter the IPv6 address, in the x:x:x:x::x format, to which you are testing connectivity.

> **NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

- **count** Enter the number of echo packets to be sent. The default is 5.
  - number: from 1 to 2147483647
  - continuous: transmit echo request continuously

- **datagram size** Enter the ICMP datagram size. The range is from 36 to 15360 bytes. The default is 100.

- **timeout** Enter the interval to wait for an echo reply before timing out. The range is from 0 to 3600 seconds. The default is 2 seconds.

- **source** Enter the IPv4 or IPv6 source ip address or the source interface. For IPv6 addresses, you may enter global addresses only. Enter the IP address in A.B.C.D format.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a port channel interface, enter the keywords port-channel then a number.
  - For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.
  - For a Tunnel interface, enter the keyword tunnel then a number from 1 to 16383.

- **tos** (IPv4 only) Enter the type of service required. The range is from 0 to 255. The default is 0.

- **df-bit** (IPv4 only) Enter Y or N for the “don’t fragment” bit in IPv4 header.
  - N: Do not set the “don’t fragment” bit.
  - Y: Do set “don’t fragment” bit

Default is No.

- **validate-reply** (IPv4 only) Enter Y or N for reply validation.
  - N: Do not validate reply data.
  - Y: Do validate reply data.

Default is No.
outgoing-interface (IPv6 link-local address) Enter the outgoing interface for ping packets to a destination link-local address.

pattern pattern (IPv4 only) Enter the IPv4 data pattern. Range: 0-FFFF. Default: 0xABCD.
sweep-min-size Enter the minimum size of datagram in sweep range. The range is from 52 to 15359 bytes.
sweep-max-size Enter the maximum size of datagram in sweep range. The range is from 53 to 15359 bytes.
sweep-interval Enter the incremental value for sweep size. The range is from 1 to 15308 seconds.
interface (IPv4 only) Enter the outgoing interface for multicast packets. Enter the IP address in A.B.C.D format.
  • For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
  • For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  • For a port channel interface, enter the keywords port-channel then a number.
  • For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.
ethernet Enter the keyword ethernet to test layer2 connectivity.
vrf vrf-name Enter the keyword vrf followed by the name of the VRF to test connectivity to the VRF.

Defaults
None.

Command Modes
• EXEC
• EXEC Privilege

</tbody>
</table>
### Version Description

- **8.3.7.0**: Introduced on the S4810.
- **8.5.1.0**: Added support for 4-port 40G line cards.
- **8.4.1.0**: IPv6 pinging available on management interface.
- **8.3.1.0**: Introduced extended ping options.
- **8.2.1.0**: Introduced on the E-Series (IPv6).
- **8.1.1.0**: Introduced on the E-Series (IPv4).
- **7.9.1.0**: Introduced VRF.
- **7.6.1.0**: Introduced on the S-Series.
- **7.5.1.0**: Introduced on the C-Series.
- **7.4.1.0**: Added support for IPv6 address on the E-Series.

### Usage Information

When you enter the `ping` command without specifying an IP/IPv6 address (Extended Ping), you are prompted for a target IP/IPv6 address, a repeat count, a datagram size (up to 1500 bytes), a timeout (in seconds), and for Extended Commands.

The following table provides descriptions for the `ping` command status response symbols displayed in the output.

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>!</td>
<td>Each exclamation point indicates receipt of a reply.</td>
</tr>
<tr>
<td>.</td>
<td>Each period indicates the network server timed out while waiting for a reply.</td>
</tr>
<tr>
<td>U</td>
<td>A destination unreachable error PDU was received.</td>
</tr>
<tr>
<td>Q</td>
<td>Source quench (destination too busy).</td>
</tr>
<tr>
<td>M</td>
<td>Could not fragment.</td>
</tr>
<tr>
<td>?</td>
<td>Unknown packet type.</td>
</tr>
<tr>
<td>&amp;</td>
<td>Packet lifetime exceeded.</td>
</tr>
</tbody>
</table>

### Example (IPv4)

```
Dell# ping 172.31.1.255
Type Ctrl-C to abort.
Sending 5, 100-byte ICMP Echos to 172.31.1.255, timeout is 2 seconds:
Reply to request 1 from 172.31.1.208 0 ms
Reply to request 1 from 172.31.1.216 0 ms
Reply to request 1 from 172.31.1.205 16 ms
!: Reply to request 5 from 172.31.1.209 0 ms
Reply to request 5 from 172.31.1.66 0 ms
Reply to request 5 from 172.31.1.87 0 ms
Dell#
```

### Example (IPv6)

```
Dell# ping 100::1
Type Ctrl-C to abort.
Sending 5, 100-byte ICMP Echos to 100::1, timeout is 2 seconds:
!!!!!
Success rate is 100.0 percent (5/5), round-trip min/avg/max = 0/0/0 (ms)
Dell#
```
**reload**

Reboot the system.

**Syntax**

```
reload [conditional nvram-cfg-change | no-confirm [discard-running]]
```

**Parameters**

- **conditional nvram-cfg-change** *(OPTIONAL)* Reload into the Dell Networking Operating System (OS) if the condition is true. A configuration change to the NVRAM requires a switch reload. To reload the switch, select `nvram-cfg-change`.

- **no-confirm** *(discard-running)* Reload the chassis without prompting for further confirmation.

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
<tr>
<td>7.5(1.0)</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>E-Series</td>
<td>Original command.</td>
</tr>
</tbody>
</table>

**Usage Information**

If you use only the `reload` command, the system boots into the Dell Networking OS.

If there is a change in the running configuration, the system prompts you to save the new configuration when you reload the system using the `reload` command. You can also save your running configuration manually using the `copy running-config` command.
You can use the **conditional** parameter if any configuration changes made to the NVRAM, such as, stack-group and fanout configurations, must be saved.

### send

Send messages to one or all terminal line users.

**Syntax**

```
send [*] | [line ] | [console] | [vty]
```

**Parameters**

- **[*]** Enter the asterisk character * to send a message to all tty lines.
- **line** Send a message to a specific line. The range is from 0 to 11.
- **console** Enter the keyword console to send a message to the primary terminal line.
- **vty** Enter the keyword vty to send a message to the virtual terminal.

**Defaults**

none

**Command Modes**

EXEC

**Command History**

</tbody>
</table>

**Usage Information**

Messages can contain an unlimited number of lines; however, each line is limited to 255 characters. To move to the next line, use `<CR>`. To send the message use `CTR-Z`; to abort a message, use `CTR-C`. 
service timestamps

To debug and log messages, add time stamps. This command adds either the uptime or the current time and date.

Syntax

```
service timestamps {debug | log} [datetime [localtime] [msec] [show-timezone] | uptime]
```

To disable timestamping, use the `no service timestamps [debug | log]` command.

Parameters

- **debug**  
  (OPTIONAL) Enter the keyword `debug` to add timestamps to debug messages.
- **log**  
  (OPTIONAL) Enter the keyword `log` to add timestamps to log messages with severity from 0 to 6.
- **datetime**  
  (OPTIONAL) Enter the keyword `datetime` to have the current time and date added to the message.
- **localtime**  
  (OPTIONAL) Enter the keyword `localtime` to include the localtime in the timestamp.
- **msec**  
  (OPTIONAL) Enter the keyword `msec` to include milliseconds in the timestamp.
- **show-timezone**  
  (OPTIONAL) Enter the keyword `show-timezone` to include the time zone information in the timestamp.
- **uptime**  
  (OPTIONAL) Enter the keyword `uptime` to have the timestamp based on time elapsed since system reboot.

Defaults

Not configured.

</tbody>
</table>
show alarms

View alarms currently active in the system.

Syntax

    show alarms [threshold]

Parameters

    threshold  (OPTIONAL) Enter the keyword threshold to display the temperature thresholds in Celsius for each level.

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Usage Information

If you do not specify parameters and enter service timestamps, it appears as service timestamps debug uptime in the running-configuration.

To view the current options set for the service timestamps command, use the show running-config command.

show alarms

View alarms currently active in the system.

Syntax

    show alarms [threshold]

Parameters

    threshold  (OPTIONAL) Enter the keyword threshold to display the temperature thresholds in Celsius for each level.

Command Modes

    •  EXEC
    •  EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version    Description

    9.10(0.0)  Introduced on the S3148.
    9.8(2.0)   Introduced on the S3100 series.
    9.8(1.0)   Introduced on the Z9100–ON.
    9.8(0.0P5) Introduced on the S4048-ON.
    9.8(0.0P2) Introduced on the S3048-ON.
    9.7(0.0)   Introduced on the S6000-ON.
    9.2(1.0)   Introduced on the Z9500.
    9.0.2.0     Introduced on the S6000.
    9.0.0.0     Introduced on the Z9000.
    8.3.19.0    Introduced on the S4820T.
    8.3.12.0    Introduced on the S4810.
    8.3.11.1    Introduced on the Z9000.
    8.1.1.0     Introduced on the E-Series.
    7.6.1.0     Introduced on the S-Series.
    7.5.1.0     Introduced on the C-Series.
    E-Series    Original command.
Example

```
Dell#show alarms

--  Minor Alarms  --
 Alarm Type                      Duration
   -----------------------------------------------------------

--  Major Alarms  --
 Alarm Type                      Duration
   -----------------------------------------------------------
 PEM 2 in unit 1 down            13 min, 36 sec
 Fan 1 in PSU 2 of Unit 1 is down or removed 13 min, 34 sec

Dell#
```

**show cam-acl-vlan**

Display the block sizes allocated for the VLAN CAM ACL.

**Syntax**

```
show cam-acl-vlan
```

**Command Modes**

- EXEC

**Command History**

## Usage Information

One trace log message is generated for each command. No password information is saved to this file. A command-history trace log is saved to a file after failover. Dell Networking TAC analyzes this file to help identify the root cause of it.

## Example

Dell# show command-history
[11/20 15:47:22]: CMD-(CLI):[service password-encryption]by default from console
- Repeated 3 times.
[11/20 15:47:23]: CMD-(CLI):[service timestamps log datetime]by default from console

show cpu-traffic-stats

View the CPU traffic statistics.

Syntax

```
show cpu-traffic-stats [port number | all | cp ]
```

Parameters

- `port number` (OPTIONAL) Enter the port number to display traffic statistics on that port only. The range is from 1 to 1568.
- `all` (OPTIONAL) Enter the keyword all to display traffic statistics on all the interfaces receiving traffic, sorted based on traffic.
- `cp` (OPTIONAL) Enter the keyword cp to display traffic statistics on the specified CPU.

Defaults

all

Command Modes

EXEC

Command History

<td>Introduced on the E-Series</td>
</tr>
</tbody>
</table>

Usage Information

Traffic statistics are sorted on a per-interface basis; the interface receiving the most traffic is displayed first. All CPU and port information is displayed unless a specific port or CPU is specified. Traffic information is displayed for router ports only; not for management interfaces. The traffic statistics are collected only after the `debug cpu-traffic-stats` command is executed; not from the system bootup.
NOTE: After debugging is complete, use the no debug cpu-traffic-stats command to shut off traffic statistics collection.

Example

Dell# show cpu-traffic-stats
Processor : CP
-----------
Received 100% traffic on GigabitEthernet 8/2 Total packets:100
    LLC:0, SNAP:0, IP:100, ARP:0, other:0
    Unicast:100, Multicast:0, Broadcast:0
Processor : RP1
-----------
Received 62% traffic on GigabitEthernet 8/2 Total packets:500
    LLC:0, SNAP:0, IP:500, ARP:0, other:0
    Unicast:500, Multicast:0, Broadcast:0
Received 37% traffic on GigabitEthernet 8/1 Total packets:300
    LLC:0, SNAP:0, IP:300, ARP:0, other:0
    Unicast:300, Multicast:0, Broadcast:0
Processor : RP2
-----------
No CPU traffic statistics.
Dell#

show debugging

View a list of all enabled debugging processes.

Syntax

show debugging

show environment

View system component status (for example, temperature or voltage).

Syntax
show environment [all | fan | pem | stack-unit unit-id | thermal-sensor ]

Parameters
- **all** Enter the keyword all to view all components.
- **fan** Enter the keyword fan to view information on the fans. The output of this command is chassis-dependent.
- **pem** Enter the keyword pem to view only information on power entry modules.
- **stack-unit unit-id** Enter the keywords stack-unit then the unit-id to display information on a specific stack member.
- **thermal-sensor** Enter the keywords thermal-sensor to view information on thermal sensors.

Command Modes
- EXEC
- EXEC Privilege

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.11(2.1P1) The CLI has been enhanced to show the power, average power and average power start time.
9.10(0.1) Introduced on the S6010-ON and S4048T-ON.
9.10(0.0) Introduced on the S3148.
9.10(0.0) Introduced on the S6100-ON.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100-ON.
9.8(0.0P6) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.

Example

```
Dell# show debug
Generic IP:
  IP packet debugging is on for
  ManagementEthernet 1/1
  Port-channel 1-2
  Port-channel 5
  GigabitEthernet 4/1-4/3,4/5-4/6,4/10-4/11,20
  GigabitEthernet 5/1-5/3,5/5-5/6,5/10-5/11,15,17,19,21
ICMP packet debugging is on for
  GigabitEthernet 5/1,5/2,5/4,5/6,5/8,5/10,5/12,5/14,5/16
Dell#
```
### show environment

The following example shows the output of the `show environment` command.

```plaintext
show env
-- Fan Status --
Unit Bay TrayStatus Fan1    Speed     Fan2    Speed
-----------------   --------   -------   -------
1     1   up         up   9056     up   9056
1     2   up         up   9037     up   9037
Speed in RPM
-- Power Supplies --
Unit Bay Status Type FanStatus FanSpeed(rpm)
-------------------   --------   -------   --------   --------
1     1   up    AC     up         NA
1     2   up    AC     up         NA
```

### show inventory

Display the switch type, components (including media), and Dell Networking Operating System (OS), including hardware identification numbers and configured protocols.

**Syntax**

```
show inventory [media slot]
```

**Parameters**

- `media slot`:
  - **(OPTIONAL)** Enter the keyword `media` then the stack ID of the stack member for which you want to display pluggable media inventory.

**Defaults**

none

**Command Modes**

CONFIGURATION

**Usage Information**

- **Example (all)**
  - `show inventory`

**Example (System Power Log)**

```plaintext
show env
-- Fan Status --
Unit Bay TrayStatus Fan1    Speed     Fan2    Speed
-----------------   --------   -------   -------
1     1   up         up   9056     up   9056
1     2   up         up   9037     up   9037
Speed in RPM
-- Power Supplies --
Unit Bay Status Type FanStatus FanSpeed(rpm)
-------------------   --------   -------   --------   --------
1     1   up    AC     up         NA
1     2   up    AC     up         NA
```

**NOTE:** This parameter is available but not supported in Dell Networking Operating System version 8.3.11.4. Because stacking is not supported, if you use this parameter, the output displays “Media not present or accessible” (refer to the Usage Information section).
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
--- | ---
9.11(0.0) | Added support to display 10GBASE-T information on the S4048, S4048T, S6000, S6000-ON, S6100, Z9500, S6100, and Z9100.
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100–ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.7(0.0) | Introduced on the S6000-ON.
9.2(1.0) | Introduced on the Z9500.
9.0.2.0 | Introduced on the S6000.
9.0.0.0 | Introduced on the Z9000.
8.3.19.0 | Introduced on the S4820T.
8.3.12.0 | Introduced on the S4810.
8.3.11.4 | Output expanded to include Piece Part ID (PPID) and eSR4 optics.
8.3.11.1 | Introduced on the Z9000.
7.6.1.0 | Introduced this version of the command for S-Series. S-Series output differs from E-Series.

**Usage Information**

If there are no fiber ports in the unit, just the header under show inventory media displays. If there are fiber ports but no optics inserted, the output displays *Media not present or accessible*.

**Example (S3100)**

```plaintext
Dell#show inventory
System Type : S3124P
System Mode : 1.0
Software Version : 9-8(2-126)

Unit Type  Serial  Part  Rev  Piece Part ID  Rev  Tag  Exprs  Svc Tag  Svc Code
Number     Number
------------------------------------------------------------------------------
 1  S3124P-01-FE-28   N/A  N/A  N/A  N/A
 2  S3124P-01-FE-28   N/A  N/A  N/A  N/A
 3  S3124P-01-FE-28   N/A  N/A  N/A  N/A
 1  S3124P-PWR-UNKNOWN  NA  N/A  N/A  0
 1  S3100-FAN         N/A  N/A  N/A  N/A
 2  S3124P-PWR-UNKNOWN  NA  N/A  N/A  0
 2  S3100-FAN         N/A  N/A  N/A  N/A
 3  S3124P-PWR-UNKNOWN  NA  N/A  N/A  0
 3  S3100-FAN         N/A  N/A  N/A  N/A

* - Management Unit

Dell#show inventory media
Slot  Port  Type  Media  Serial Number  F10Qualified
---  ---  ---  -------  -----------------  ------------
 1   25  SFP  1000BASE-SX  PG35F0B  Yes
 1   26  SFP  1000BASE-SX  PML1ZW3  Yes
 1   27  Media not present or accessible
 1   28  Media not present or accessible
```
show login statistics

Displays login statistics of users who have used the console or virtual terminal lines to log in to the system.

**Syntax**

```
show login statistics [all | [([successful-attempts | unsuccessful-attempts]
[| user login-id] [time-period days] | user login-id]
```

**Parameters**

- **all**  
  (Optional) Displays the login statistics of all users in the last 30 days or the custom defined time period.

- **time-period days**  
  (Optional) Displays the number of failed login attempts by the current user in the specified period.

- **successful-attempts**  
  (Optional) Displays the number of successful login attempts by the current user in the last 30 days or the custom defined time period.

- **unsuccessful-attempts**  
  (Optional) Displays the number of failed login attempts by the current user in the last 30 days or the custom defined time period.

- **user login-id**  
  (Optional) Displays the login statistics of a specific user in the last 30 days or the custom defined time period. When you use it with the unsuccessful-attempts keyword, the system displays the number of failed login attempts by a specific user in the last 30 days or the custom defined time period.

**Defaults**

None

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version**

<table>
<thead>
<tr>

<td>Introduced the successful-attempts keyword.</td>
</tr>
<tr>
<td>9.8(2.0)</td>
<td>Introduced on the S3100 series.</td>
</tr>
</tbody>
</table>
Usage Information

To view the successful and failed login details of the current user in the last 30 days or the custom defined period, use the `show login statistics` command.

To view the successful and failed login details of all users in the last 30 days or the custom defined period, use the `show login statistics all` command. You can use this command only if you have system or security administrator rights.

To view the successful and failed login details of a specific user in the last 30 days or the custom defined time period, use the `show login statistics user user-id` command. If you have system or security administrator rights, you can view the login statistics of other users. If you do not have system or security administrator rights, you can view your login statistics but not the login statistics of others.

**NOTE:** By default, these commands display the details for the last 30 days. If you set a custom-defined time period for login statistics using the `login statistics time-period days` command, these commands display details only for that period.

**Example**

The following is sample output of the `show login statistics` command.

```
Dell#show login statistics
------------------------------------------------------------------
User: admin
Last login time: 12:52:01 UTC Tue Mar 22 2016
Last login location: Line vty0 ( 10.16.127.143 )
Unsuccessful login attempt(s) since the last successful login: 0
Unsuccessful login attempt(s) in last 30 day(s): 0
Successful login attempt(s) in last 30 day(s): 1
------------------------------------------------------------------
```

The following is sample output of the `show login statistics all` command.

```
Dell#show login statistics all
------------------------------------------------------------------
User: admin
Last login time: 08:54:28 UTC Wed Mar 23 2016
Last login location: Line vty0 ( 10.16.127.145 )
Unsuccessful login attempt(s) since the last successful login: 0
Unsuccessful login attempt(s) in last 30 day(s): 3
Successful login attempt(s) in last 30 day(s): 4
------------------------------------------------------------------

User: admin1
Last login time: 12:49:19 UTC Tue Mar 22 2016
Last login location: Line vty0 ( 10.16.127.145 )
Unsuccessful login attempt(s) since the last successful login: 0
Unsuccessful login attempt(s) in last 30 day(s): 3
Successful login attempt(s) in last 30 day(s): 2
------------------------------------------------------------------

User: admin2
Last login time: 12:49:27 UTC Tue Mar 22 2016
```

```
Last login location: Line vty0 (10.16.127.145)
Unsuccessful login attempt(s) since the last successful login: 0
Unsuccessful login attempt(s) in last 30 day(s): 3
Successful login attempt(s) in last 30 day(s): 2

User: admin3
Last login time: 13:18:42 UTC Tue Mar 22 2016
Last login location: Line vty0 (10.16.127.145)
Unsuccessful login attempt(s) since the last successful login: 0
Unsuccessful login attempt(s) in last 30 day(s): 3
Successful login attempt(s) in last 30 day(s): 2

The following is sample output of the show login statistics user user-id command.

Dell# show login statistics user admin
User: admin
Last login time: 12:52:01 UTC Tue Mar 22 2016
Last login location: Line vty0 (10.16.127.143)
Unsuccessful login attempt(s) since the last successful login: 0
Unsuccessful login attempt(s) in last 30 day(s): 0
Successful login attempt(s) in last 30 day(s): 1

The following is sample output of the show login statistics unsuccessful-attempts command.

Dell# show login statistics unsuccessful-attempts
There were 3 unsuccessful login attempt(s) for user admin in last 30 day(s).

The following is sample output of the show login statistics unsuccessful-attempts time-period days command.

Dell# show login statistics unsuccessful-attempts time-period 15
There were 0 unsuccessful login attempt(s) for user admin in last 15 day(s).

The following is sample output of the show login statistics unsuccessful-attempts user login-id command.

Dell# show login statistics unsuccessful-attempts user admin
There were 3 unsuccessful login attempt(s) for user admin in last 12 day(s).

The following is sample output of the show login statistics successful-attempts command.

Dell# show login statistics successful-attempts
There were 4 successful login attempt(s) for user admin in last 30 day(s).

Related Commands
- login statistics — enable and configure user login statistics on console and virtual terminal lines.
- login concurrent-session — configures the limit of concurrent sessions for all users on console and virtual terminal lines.

show memory

View current memory usage on the switch.

Syntax
show memory [stack-unit id]
show memory

Parameters

```
stack-unit id
```

(OPTIONAL) Enter the keyword `stack-unit` then the stack unit ID to display memory information on the designated stack member.

Command Modes

- EXEC
- EXEC Privilege

Command History

</tbody>
</table>

Usage Information

The output for `show memory` displays the memory usage of LP part (sysdlp) of the system. The sysdlp is an aggregate task that handles all the tasks running on the S-Series’ CPU.

Example

```
Dell#show memory stack-unit 1

Statistics On Unit 1 Processor
===========================
Total(b)      Used(b)       Free(b)      Lowest(b)      Largest(b)
3177185280    2310248      3174875032   3174676264   3174875032

Dell#
```

**show processes cpu**

Display CPU usage information based on processes running.

Syntax

```
```

Parameters

- **management-unit [1-99 | details]** (OPTIONAL) Display processes running in the control processor. The 1–99 variable sets the number of tasks to display in order of the highest CPU usage in the past five (5) seconds. Add the keyword `details` to display all running processes (except sysdlp). Refer to Example (management-unit).
- **stack-unit id** (OPTIONAL) Enter the keyword `stack-unit` then the stack member ID.
As an option of the `show processes cpu` command, this option displays CPU usage for the designated stack member. Or, as an option of the `command`, this option limits the output of memory statistics to the designated stack member.

Refer to Example (stack-unit).

**summary**

(OPTIONAL) Enter the keyword `summary` to view CPU utilization of processes related to stack-unit processing.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

```
show hardware stack-unit — displays Layer 2 ACL data for the selected stack member and stack member port-pipe.

show hardware layer3 — displays Layer 3 ACL or GoS data for the selected stack member and stack member port-pipe.

show hardware stack-unit — displays data plane or management plane input and output statistics of the designated component of the designated stack member.
show hardware system-flow — displays Layer 3 ACL or QoS data for the selected stack member and stack member port-pipe.

show interfaces stack-unit — displays information on all interfaces on a specific S-Series stack member.

show processes memory (S-Series) — displays CPU usage information based on processes running in an S-Series.

show processes ipc flow-control

Display the single window protocol queue (SWPQ) statistics.

Syntax

show processes ipc flow-control [cp]

Parameters

cp (OPTIONAL) Enter the keyword cp to view the control processor’s SWPQ statistics.

Defaults

none

Command Modes

- EXEC
- EXEC Privilege

Command History

Usage Information

Field | Description
--- | ---
Source QID /Tx Process | Source Service Identifier
### Field Description

- **Destination QID/Rx Process**
- **Cur Len** Current number of messages enqueued
- **High Mark** Highest number of packets in the queue at any time
- **# of to / Timeout** Timeout count
- **# of Retr /Retries** Number of retransmissions
- **# msg Sent/Msg Sent/** Number of messages sent
- **# msg Ackd/Ack Rcvd** Number of messages acknowledged
- **Retr /Available Retra** Number of retries left
- **Total/ Max Retra** Number of retries allowed

#### Important Points:

- The SWP provides flow control-based reliable communication between the sending and receiving software tasks.
- A sending task enqueues messages into the SWP queue for a receiving task and waits for an acknowledgement.
- If no response is received within a defined period of time, the SWP timeout mechanism resubmits the message at the head of the FIFO queue.
- After retrying a defined number of times, the SWP-NOMORETIMEOUT timeout message is generated.
- In the S-Series example, a retry (Retries) value of zero indicates that the SWP mechanism reached the maximum number of retransmissions without an acknowledgement.

#### Example

```
Dell# show processes ipc flow-control cp
Q Statistics on CP Processor
TxProcess RxProcess Cur Len High Mark #of to/Timeout #of Retr /Retries #msg Sent/Msg #msg Ackd/Ack Rcvd Retr /Available Total/ Max Retra

show processes memory

Display memory usage information based on processes running in the S-Series or Z-Series system.

Syntax

show processes memory {management-unit | stack unit {unit-id | all | summary}}

Parameters

management-unit Enter the keyword management-unit for CPU memory usage of the stack management unit.

stack unit unit-id Enter the keyword stack unit then a stack unit ID of the member unit for which to display memory usage on the forwarding processor.

all Enter the keyword all for detailed memory usage on all stack members.

summary Enter the keyword summary for a brief summary of memory availability and usage on all stack members.

Command Modes

- EXEC
- EXEC Privilege

Command History

Usage Information

show processes memory output

Field | Description
--- | ---
Total: | Total system memory available
MaxUsed: | Total maximum memory used ever (history indicated with time stamp)
CurrentUsed: | Total memory currently in use
CurrentFree: | Total system memory available
SharedUsed: | Total used shared memory
SharedFree: | Total free shared memory
show processes memory output

Field                  Description
PID                   Process ID
Process                Process Name
ResSize                Actual resident size of the process in memory
Size                   Process test, stack, and data size
Allocs                 Total dynamic memory allocated
Frees                  Total dynamic memory freed
Max                    Maximum dynamic memory allocated
Current                Current dynamic memory in use

The output for the `show process memory` command displays the memory usage statistics running on CP part (sysd) of the system. The sysd is an aggregate task that handles all the tasks running on S-Series' CP.

For the S-Series, the output of the `show memory` command and this command differ based on which Dell OS processes are counted.

- In the `show memory` output, the memory size is equal to the size of the application processes.
- In the output of this command, the memory size is equal to the size of the application processes plus the size of the system processes.

Example

Dell# show processes memory stack-unit 1
Total: 268435456, MaxUsed: 2420244, CurrentUsed: 2420244, CurrentFree: 266015212

show software ifm

Display interface management (IFM) data.

Syntax

show software ifm {clients [summary] | ifagt number | ifcb interface | stack-unit unit-ID | trace-flags}

Parameters

clients
Enter the keyword clients to display IFM client information.

summary
(Optional) Enter the keyword summary to display brief information about IFM clients.

ifagt number
Enter the keyword ifagt then the number of an interface agent to display software pipe and IPC statistics.

ifcb interface
Enter the keyword ifcb then one of the following interface IDs then the interface information to display interface control block information for that interface:

  • For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
  • For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

stack-unit unit-ID
Enter the keyword stack-unit then the stack member number to display IFM information for that unit.

trace-flags
Enter the keyword trace-flags to display IFM information for internal trace flags.

Defaults
None.

Command Modes

• EXEC
• EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.10(0.0) Introduced on the S3148.
9.8(1.0) Introduced on the Z9100-ON.
9.7(0.0) Introduced on the S6000-ON.
9.2(1.0) Introduced on the Z9500.
show system

Display the status of all stack members or a specific member.

Syntax

show system [brief | stack-unit unit-id]

Parameters

brief

(OPTIONAL) Enter the keyword brief to view an abbreviated list of system information.

stack-unit unit-id

(OPTIONAL) Enter the keywords stack-unit then the stack member ID for information on that stack member.

Command Modes

• EXEC
• EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description

9.10(0.1) Introduced on the S6010-ON and S4048T-ON.

9.10(0.0) Introduced on the S3148.

9.10(0.0) Introduced on the S6100-ON.
Example (show system brief)

**Dell#show system brief**

show tech-support

Display a collection of data from other show commands, necessary for Dell Networking technical support to perform troubleshooting.

Syntax

show tech-support [stack-unit unit-id | page]

Parameters

stack-unit (OPTIONAL) Enter the keywords stack-unit to view CPU memory usage for the stack member designated by unit-id.

page (OPTIONAL) Enter the keyword page to view 24 lines of text at a time. Press the SPACE BAR to view the next 24 lines. Press the ENTER key to view the next line of text.

When using the pipe command ( | ), enter one of these keywords to filter command output. For details about filtering commands, refer to CLI Basics.

save Enter the keyword save to save the command output.
**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.10(0.0)</td>
<td>Introduced on the S3148.</td>
</tr>
<tr>
<td>9.8(1.0)</td>
<td>Introduced on the Z9100-ON.</td>
</tr>
<tr>
<td>9.8(0.0P5)</td>
<td>Introduced on the S4048-ON.</td>
</tr>
<tr>
<td>9.8(0.0P2)</td>
<td>Introduced on the S3048-ON.</td>
</tr>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>

<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced save to the file options.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

Without the page or stack-unit option, the command output is continuous. To interrupt the command output, use Ctrl-z.

The save option works with other filtering commands. This allows you to save specific information of a show command. The save entry must always be the last option. For example: `Dell#show tech-support | grep regular-expression | except regular-expression | find regular-expression | save flash://result`

This display output is an accumulation of the same information that is displayed when you execute one of the following show commands:

- show version
- show clock
- show running-config
- show system stack-ports
- show interfaces
- show process memory
- show process cpu
- show file system
- show system
- show environment
- show ip traffic
- show ip management route
- show ip route summary
- show Inventory
• show log summary
• show command-history (last 20 commands)
• show log

Example (S-Series)

Dell# show tech-support ?
  page  Page through output
  stack-unit  Unit Number
  |  Pipe through a command
  <cr>
Dell# show tech-support stack-unit 1 ?
  |  Pipe through a command
  <cr>
Dell# show tech-support stack-unit 1 | ?
  except  Show only text that does not match a pattern
  find  Search for the first occurrence of a pattern
  grep  Show only text that matches a pattern
  no-more  Don't paginate output
  save  Save output to a file

Dell# show tech-support stack-unit 1 | save ?
  flash:  Save to local file system (flash://filename (max 20 chars) )

Dell# show tech-support stack-unit 1 | save flash://LauraSave
Start saving show command report .......

**ssh-peer-stack-unit**

Open an SSH connection to the peer stack-unit.

**Syntax**

```
ssh-peer-stack-unit [-l username]
```

**Parameters**

```
-l username
```

(Optional) Enter the keyword -l then your user name. The default is the user name associated with the terminal.

**Defaults**

Not configured.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

telnet

Connect through Telnet to a server. The Telnet client and server in Dell Networking support IPv4 and IPv6 connections. You can establish a Telnet session directly to the router or a connection can be initiated from the router.

NOTE: The Telnet server and client are VRF-aware. Using the vrf parameter in this command, you can make a Telnet server or client to listen to a specific VRF. This capability enables a Telnet server or client to look up the correct routing table and establish a connection.

Syntax

telnet {host | ip-address | ipv6-address prefix-length | vrf vrf instance name} [/source-interface]

Parameters

host
Enter the name of a server.

ip-address
Enter the IPv4 address in dotted decimal format of the server.

ipv6-address prefix-length
Enter the IPv6 address in the x:x:x:x format then the prefix length in the /x format. The range is from /0 to /128.

NOTE: The :: notation specifies successive hexadecimal fields of zeros.

vrf instance
(Optional) Enter the keyword vrf then the VRF instance name.

source-interface
(Optional) Enter the keywords /source-interface then the interface information to include the source interface. Enter the following keywords and the interface information:

- For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a Loopback interface, enter the keyword loopback then a number from 0 to 16383.
- For a Null interface, enter the keyword null then the Null interface number.
- For a port channel interface, enter the keywords port-channel then a number.
- For Tunnel interface types, enter the keyword tunnel then the slot/ port information. The range is from 1 to 16383.
- For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

Defaults

Not configured.

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>
### telnet-peer-stack-unit

Open a Telnet connection to the peer stack unit.

**Syntax**

```plaintext
telnet-peer-stack-unit
```

**Defaults**

Not configured.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.
terminal length

Configure the number of lines displayed on the terminal screen.

Syntax

```
terminal length screen-length
```

Parameters

- `screen-length` Enter a number of lines. Entering zero causes the terminal to display without pausing. The range is from 0 to 512.

Defaults

24 lines

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description

9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100-ON.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.0.2.0 Introduced on the S6000.
9.0.0.0 Introduced on the Z9000.
8.3.19.0 Introduced on the S4820T.
8.3.12.0 Introduced on the S4810.
8.3.11.1 Introduced on the Z9000.
8.3.11.1 Introduced on the S-Series.
**traceroute**

View a packet’s path to a specific device.

**Syntax**

```plaintext
traceroute { host | vrf instance | ip-address | ipv6-address }
```

**Parameters**

- `host` Enter the name of device.
- `vrf instance` (Optional) E-Series Only: Enter the keyword `vrf` then the VRF Instance name.
- `ip-address` Enter the IP address of the device in dotted decimal format.
- `ipv6-address` Enter the IPv6 address, in the `x::x::x` format, to which you are testing connectivity.

**Defaults**

- Timeout = 5 seconds
- Probe count = 3
- 30 hops max
- 40 byte packet size
- UDP port = 33434

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>7.4.1.0</td>
<td>Added support for IPv6 address on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

When you enter the `traceroute` command without specifying an IP address (Extended Traceroute), you are prompted for a target and source IP address, timeout (in seconds) (default is 5), a probe count (default is 3), minimum TTL (default is 1), maximum TTL (default is 30), and port number (default is 33434). To keep the default setting for those parameters, press the ENTER key.

For IPv6, you are prompted for a minimum hop count (default is 1) and a maximum hop count (default is 64).

**Example (IPv4)**

```plaintext```
Dell# traceroute www.Dell Networking.com

Translating "www.Dell Networking.com"...domain server (10.11.0.1) [OK]
Type Ctrl-C to abort.

-----------------------------------------------
Tracing the route to www.Dell Networking.com (10.11.84.18),
30 hops max, 40 byte packets
-----------------------------------------------

TTL  Hostname          Probe1     Probe2     Probe3
 1   10.11.199.190  001.000 ms 001.000 ms 002.000 ms
 2   gwegress-sjc-02.Dell Networking.com (10.11.30.126) 005.000 ms 001.000 ms
                          001.000 ms
 3   fw-sjc-01.Dell Networking.com (10.11.127.254) 000.000 ms 000.000 ms

**E-Series**

Original command.
virtual-ip

Configure a virtual IP address for the active management interface. You can configure virtual addresses both for IPv4 and IPv6 independently.

Syntax

```
virtual-ip {ipv4-address | ipv6-address}
```

To return to the default, use the `no virtual-ip {ipv4-address | ipv6-address}` command.

Parameters

- **ipv4-address**
  - Enter the IP address of the active management interface in a dotted decimal format (A.B.C.D.).

- **ipv6-address**
  - Enter an IPv6 address of the active management interface, in the x:x:x:x format.

**NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

Defaults

none

</tr>
</tbody>
</table>

Usage Information

You can configure both IPv4 and IPv6 virtual addresses simultaneously, but only one of each. Each time this command is issued, it replaces the previously configured address of the same family, IPv4 or IPv6. The `no virtual-ip` command takes an address/prefix-length argument, so that the desired address only is removed. If you enter the `no virtual-ip` command without any specified address, then both IPv4 and IPv6 virtual addresses are removed.
Related Commands

- `ip address` — assigns a primary and secondary IP address to the interface.

**write**

Copy the current configuration to either the startup-configuration file or the terminal.

**Syntax**

```
write [memory [compressed] | terminal]
```  

**Parameters**

- `memory` Enter the keyword `memory` to copy the current running configuration to the startup configuration file. This command is similar to the `copy running-config startup-config` command.

- `compressed` Enter the keyword `compressed` to write the operating configuration to the startup-config file in the compressed mode.

- `terminal` Enter the keyword `terminal` to copy the current running configuration to the terminal. This command is similar to the `show running-config` command.

**Command Modes**

- EXEC Privilege

**Command History**

</tbody>
</table>

**Usage Information**

The `write memory` command saves the running-configuration to the file labeled startup-configuration. When using a LOCAL CONFIG FILE other than the startup-config not named “startup-configuration” (for example, you
used a specific file during the `boot config` command), the running-config is not saved to that file; use the `copy` command to save any running-configuration changes to that local file.
802.1X is a port-based Network Access Control (PNAC) that provides an authentication mechanism to devices wishing to attach to a LAN or WLAN. Until the authentication, only extensible authentication protocol over LAN (EAPOL) traffic is allowed through the port to which a client is connected. After authentication is successful, normal traffic passes through the port.

The Dell Networking OS supports remote authentication dial-in service (RADIUS) and active directory environments using 802.1X Port Authentication.

**Important Points to Remember**

Dell Networking OS limits network access for certain users by using virtual local area network (VLAN) assignments. 802.1X with VLAN assignment has these characteristics when configured on the switch and the RADIUS server.

- If the primary RADIUS server becomes unresponsive, the authenticator begins using a secondary RADIUS server, if configured.
- If no VLAN is supplied by the RADIUS server or if you disable 802.1X authorization, the port configures in its access VLAN after successful authentication.
- If you enable 802.1X authorization but the VLAN information from the RADIUS server is not valid, the port returns to the Unauthorized state and remains in the configured access VLAN. This safeguard prevents ports from appearing unexpectedly in an inappropriate VLAN due to a configuration error. Configuration errors create an entry in Syslog.
- If you enable 802.1X authorization and all information from the RADIUS server is valid, the port is placed in the specified VLAN after authentication.
- If you enable port security on an 802.1X port with VLAN assignment, the port is placed in the RADIUS server assigned VLAN.
- If you disable 802.1X on the port, it returns to the configured access VLAN.
- When the port is in the Force Authorized, Force Unauthorized, or Shutdown state, it is placed in the configured access VLAN.
- If an 802.1X port is authenticated and put in the RADIUS server assigned VLAN, any change to the port access VLAN configuration does not take effect.
- The 802.1X with VLAN assignment feature is not supported on trunk ports, dynamic ports, or with dynamic-access port assignment through a VLAN membership.

dot1x critical-vlan

Configure critical-VLAN for users or devices when authentication server is not reachable.

Syntax

[no] dot1x critical-vlan vlan-id

Parameters

vlan-id

- Enter the VLAN identifier. The VLAN-ID range is from 1 to 4094.

Defaults

Not Configured.

Command Modes

INTERFACE

INTERFACE (BATCH MODE)

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

Version Description

9.10(0.0) Introduced on the S3148.

9.10(0.0) Introduced on the S3100 series, S4048--ON, S4048--ON, S4810, S4820T, S5000, S6000, S6000--ON, the Configuration Terminal Batch mode on C9010, Z9100--ON, and Z9500.

9.9(0.0) Introduced on the C9000 Series.

Usage Information

The dot1x critical-vlan command configures critical VLAN for the interface. If the authentication server is not reachable or not responding, the authenticator places the port or the supplicant in critical VLAN within the first attempt.

Use this command in Interface Batch mode to configure critical VLAN for users in a dual-homing setup.

Example

Dell(conf)#show dot1x interface ten gigabit ethernet 0/41

802.1x information on Te 0/41:

debug dot1x
Display 802.1X debugging information.

Syntax                  debug dot1x [all | auth-pae-fsm | backend-fsm | eapol-pdu] [interface
interface]

Parameters              
                           all              Enable all debugging in dot1x.
                           auth-pae-fsm    Enable Authentication PAE FSM debugging in dot1x.
                           backend-fsm     Enable Backend Auth FSM debugging in dot1x.
                           eapol-pdu       Enable EAPOL frame trace in dot1x.
                           interface interface   Restricts the debugging information to an interface. The interface option is available only
                                   when the interface is either operationally up or dot1x related interface configuration exists
                                   before enabling debugging for that interface.

Defaults                Disabled

Command Modes           EXEC Privilege

Command History         This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking
                         OS Command Line Reference Guide.

Version                 Description
9.10(0.0)               Introduced on the S3148.
9.8(2.0)                Introduced on the S3100 series.
9.8(1.0)                Introduced on the Z9100-ON.
9.8(0.0P5)              Introduced on the S4048-ON.
9.8(0.0P2)              Introduced on the S3048-ON.
9.7(0.0)                Introduced on the S6000-ON.
9.2(1.0)                Introduced on the Z9500.
dot1x auth-fail-vlan

Configure an authentication failure VLAN for users and devices that fail 802.1X authentication.

Syntax

```
dot1x auth-fail-vlan vlan-id [max-attempts number]
```

To delete the authentication failure VLAN, use the `no dot1x auth-fail-vlan vlan-id [max-attempts number]` command.

Parameters

- **vlan-id**: Enter the VLAN Identifier. The range is from 1 to 4094.
- **max-attempts number** (OPTIONAL): Enter the keywords `max-attempts` followed number of attempts desired before authentication fails. The range is from 1 to 5. The default is 3.

Defaults

- 3 attempts

</tbody>
</table>
Usage Information

If the host responds to 802.1X with an incorrect login/password, the login fails. The switch attempts to authenticate again until the maximum attempts configured is reached. If the authentication fails after all allowed attempts, the interface moves to the authentication failed VLAN.

After the authentication VLAN is assigned, the port-state must be toggled to restart authentication. Authentication occurs at the next reauthentication interval (dot1x reauthentication).

Related Commands

- `dot1x port-control` — enable port control on an interface
- `dot1x guest-vlan` — configure a guest VLAN for limited access users or for devices that are not 802.1X capable.
- `show dot1x interface` — display the 802.1X configuration of an interface.

**dot1x auth-server**

Configure the authentication server to RADIUS.

<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.4.2.1</td>
<td>Introduced on the C-Series and S-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

The prerequisites for enabling MAB-only authentication on a port are:

- Enable 802.1X authentication globally on the switch and on the port (the `dot1x authentication` command).
- Enable MAC authentication bypass on the port (the `dot1x mac-auth-bypass` command).

In MAB-only authentication mode, a port authenticates using the host MAC address even though 802.1X authentication is enabled. If the MAB-only authentication fails, the host is placed in the guest VLAN (if configured).

To disable MAB-only authentication on a port, enter the `no dot1x auth-type mab-only` command.

**Related Commands**

- `dot1x mac-auth-bypass` — enable MAC authentication bypass.
dot1x authentication (Configuration)

Enable dot1x globally. Enable dot1x both globally and at the interface level.

Syntax

```
dot1x authentication
```

To disable dot1x on a globally, use the `no dot1x authentication` command.

Defaults

Disabled

</tr>
</tbody>
</table>

**Related Commands**

- `dot1x authentication (Configuration)` — enable dot1x globally.

---
### Usage Information

1X authentication is enabled when an interface is connected to the switch. If the host fails to respond within a designated amount of time, the authenticator places the port in the guest VLAN.

If a device does not respond within 30 seconds, it is assumed that the device is not 802.1X capable. Therefore, a guest VLAN is allocated to the interface and authentication, for the device, occurs at the next reauthentication interval (dot1x reauthentication).

If the host fails authentication for the designated number of times, the authenticator places the port in authentication failed VLAN (dot1x auth-fail-vlan).

![NOTE: You can create the Layer 3 portion of a guest VLAN and authentication fail VLANs regardless if the VLAN is assigned to an interface or not. After an interface is assigned a guest VLAN (which has an IP address), routing through the guest VLAN is the same as any other traffic. However, the interface may join/leave a VLAN dynamically.]

### Related Commands

- `dot1x auth-fail-vlan` — Configure an authentication failure VLAN.
- `dot1x reauthentication` — Enable periodic re-authentication of the client.
- `dot1x reauth-max` — Configure the maximum number of times to re-authenticate a port before it becomes unauthorized.

### `dot1x host-mode`

Enable single-host or multi-host authentication.

**Syntax**

```
dot1x host-mode {single-host | multi-host | multi-auth}
```

**Parameters**

- `single-host` — Enable single-host authentication.
- `multi-host` — Enable multi-host authentication.
- `multi-auth` — Enable multi-suppliant authentication.

**Defaults**

```
single-host
```

**Command Modes**

```
INTERFACE
```

</tr>
<tr>
<td>8.3.2.0</td>
<td>Added the single-host and multi-host options on the C-Series, E-Series, and S-Series.</td>
</tr>
</tbody>
</table>

Usage Information

- Single-host mode authenticates only one host per authenticator port and drops all other traffic on the port.
- Multi-host mode authenticates the first host to respond to an Identity Request and then permits all other traffic on the port.
- Multi-supplicant mode authenticates every device attempting to connect to the network on the authenticator port.

Related Commands

- `show dot1x interface` — display the 802.1X configuration of an interface.

`dot1x mac-auth-bypass`

Enable MAC authentication bypass. If 802.1X times out because the host did not respond to the Identity Request frame, Dell Networking OS attempts to authenticate the host based on its MAC address.

Syntax

```
  dot1x mac-auth-bypass
```

To disable MAC authentication bypass on a port, use the `no dot1x mac-auth-bypass` command.

Defaults

Disabled

Usage Information

To disable MAC authentication bypass on a port, enter the no dot1x mac-auth-bypass command.

**dot1x max-eap-req**

Configure the maximum number of times an extensive authentication protocol (EAP) request is transmitted before the session times out.

**Syntax**

```
dot1x max-eap-req number
```

To return to the default, use the `no dot1x max-eap-req` command.

**Parameters**

- `number` Enter the number of times an EAP request is transmitted before a session time-out. The range is from 1 to 10. The default is 2.

**Defaults**

## dot1x max-suppliants

Restrict the number of supplicants that can be authenticated and permitted to access the network through the port. This configuration is only takes effect in Multi-auth mode.

### Syntax

```
dot1x max-suppliants number
```

### Parameters

- **number**
  
Enter the number of supplicants that can be authenticated on a single port in Multi-auth mode. The range is from 1 to 128. The default is **128**.

### Defaults

128 hosts can be authenticated on a single authenticator port.

### Related Commands

- `dot1x host-mode` — enable single-host or multi-host authentication.
**dot1x port-control**

Enable port control on an interface.

**Syntax**

```plaintext
dot1x port-control {force-authorized | auto | force-unauthorized}
```

**Parameters**

- **force-authorized**
  - Enter the keywords `force-authorized` to forcibly authorize a port.
- **auto**
  - Enter the keyword `auto` to authorize a port based on the 802.1X operation result.
- **force-unauthorized**
  - Enter the keywords `force-unauthorized` to forcibly de-authorize a port.

**Defaults**

None

**Command Modes**

Auto

</tr>
</tbody>
</table>

Usage Information

The `dot1x profile` command configures a `dot1x` profile to define a list of trusted supplicant MAC addresses. Maximum number of `dot1x` profiles is limited to 10. This command launches `dot1x` profile mode for entering profile related commands such as the `mac` command. The `dot1x static-mab` command assigns the `dot1x` profile to an interface.

Use this command in Configuration Terminal Batch mode to configure the `dot1x` profile in a dual-homing setup.

Related Commands

- `dot1x static-mab`
- `mac`

**dot1x quiet-period**

Set the number of seconds that the authenticator remains quiet after a failed authentication with a client.

Syntax

```
dot1x quiet-period seconds
```

To disable quiet time, use the `no dot1x quiet-time` command.

Parameters

- `seconds` 
  Enter the number of seconds. The range is from 1 to 65535. The default is 60.

Defaults

60 seconds

Command Modes

<td>Introduced on the C-Series and S-Series.</td>
</tr>
<tr>
<td>7.4.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

When you configure the `dot1x server-timeout` value, take into account the communication medium used to communicate with an authentication server and the number of RADIUS servers configured. Ideally, the `dot1x server-timeout` value (in seconds) is based on the configured RADIUS-server timeout and retransmit values and calculated according to the following formula: `dot1x server-timeout seconds > (radius-server retransmit seconds + 1) * radius-server timeout seconds`.

Where the default values are as follows: `dot1x server-timeout` (30 seconds), radius-server retransmit (3 seconds), and radius-server timeout (5 seconds).

**Example**

```
Dell(conf)# radius-server host 10.11.197.105 timeout 6
Dell(conf)# radius-server host 10.11.197.105 retransmit 4
Dell(conf)# interface gigabitethernet 2/23
```
**dot1x static-mab**

Enable static MAC authorization bypass (MAB) and configure static MAB profile to an interface.

**Syntax**

```
[no] dot1x static-mab profile profile-name
```

**Parameters**

- **profile profile-name**: Enter the keyword `profile` and the `profile-name` to configure the static MAB profile name. The profile name length is limited to 32 characters.

**Defaults**

Disabled.

**Command Modes**

INTERFACE

INTERFACE (BATCH MODE)

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>

</tr>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the C9010.</td>
</tr>
</tbody>
</table>

**Usage Information**

The `dot1x static-mab` command enables static MAB (mac auth bypass) and configures the associated profile on a dot1x interface. Static MAB bypasses the authentication server for the supplicant MAC addresses configured in the associated profile.

Before you enable static MAB, you must do the following:

- Enable MAC authentication bypass on the port by configuring the `dot1x mac-auth-bypass` command.
- Ensure that no configured profile exists at the time of configuring the `static-mab` command.
- Use this command in Interface Batch Mode to enable static MAB in a dual-homing setup.

**Example**

```
Dell(conf)#do show dot1x interface ten gigabit ethernet 0/41
802.1x information on Te 0/41:
----------------------------------------
Dot1x Status:            Enable
Port Control:            AUTO
Port Auth Status:        AUTHORIZED (STATIC-MAB)
Re-Authentication:       Enable
Untagged VLAN id:        400
Guest VLAN:              Enable
Guest VLAN id:           400
Auth-Fail VLAN:          Enable
Auth-Fail VLAN id:       400
Auth-Fail Max-Attempts:  3
Critical VLAN:           Enable
Critical VLAN id:        400
Mac-Auth-Bypass:         Disable
Mac-Auth-Bypass Only:    Disable
Static-MAB:              Enable
```

---

Dell(conf-if-gi-2/23)# dot1x server-timeout 40
Dell(conf-if-gi-2/23)#
dot1x supplicant-timeout

Configure the amount of time after which exchanges with the supplicant time-out.

Syntax

```
dot1x supplicant-timeout seconds
```

To return to the default, use the `no dot1x supplicant-timeout` command.

Parameters

```
seconds
```
Enter a time-out value in seconds. The range is from 1 to 300, where 300 is implementation dependent. The default is **30**.

Defaults

30 seconds

dot1x tx-period

Configure the intervals at which EAPOL PDUs the Authenticator PAE transmits.

**Syntax**

```plaintext
dot1x tx-period seconds
```

To return to the default, use the `no dot1x tx-period` command.

**Parameters**

- `seconds`
  
  Enter the interval time, in seconds, that EAPOL PDUs are transmitted. The range is from 1 to 65535. The default is **30**.

**Defaults**

**30 seconds**

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

mac

Configure a list of supplicant MAC addresses for dot1x profile represented with a profile-name.

**Syntax**

```plaintext
[no] mac {mac-address1 mac-address2... mac-address6}
```

**Parameters**

- `mac-address1 mac-address2... mac-address6`
  
  Enter the keyword `mac` and type the 48–bit MAC addresses using the H.H.H format. A maximum of 6 MAC addresses are allowed.
Defaults
None

Command Modes
DOT1X PROFILE CONFIG (conf-dot1x-profile)
CONFIGURATION TERMINAL BATCH

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.10(0.0) Introduced on the S3148.
9.10(0.0) Introduced on the S3100 series, S4048–ON, S4810, S4820T, S5000, S6000, S6000–ON, the Configuration Terminal Batch mode on C9010, Z9100–ON, and Z9500.
9.9(0.0) Introduced on the C9010.

Usage Information
The `mac` command configures a list of supplicant MAC addresses for a dot1x profile represented with a profile-name. You can configure up to 6 MAC addresses in a single `mac` command. The maximum number of MAC addresses that you can configure in a single profile is limited to 100.

Use this command in Configuration Terminal Batch mode to configure a list of supplicant MAC addresses for dot1x profile in a dual-homing setup.

Example
```
Dell(conf)#dot1x profile mySupplicants
Dell(conf-dot1x-profile)#mac 00:50:56:AA:01:10 00:50:56:AA:01:11
Dell(conf-dot1x-profile)#show config
dot1x profile mySupplicants
  mac 00:50:56:aa:01:10
  mac 00:50:56:aa:01:11
Dell(conf-dot1x-profile)#
Dell(conf-dot1x-profile)#exit
```

show dot1x cos-mapping interface

Display the CoS priority-mapping table the RADIUS server provides and applies to authenticated supplicants on an 802.1X-enabled system.

Syntax
```
show dot1x cos-mapping interface [mac-address mac-address]
```

Parameters
- `interface` Enter one of the following keywords and the interface information:
  - For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

- `mac-address` (Optional) MAC address of an 802.1X-authenticated supplicant.

Defaults
None

Command Modes
- EXEC
EXEC privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>

Usage Information

Enter a supplicant’s MAC address using the `mac-address` option to display CoS mapping information only for the specified supplicant.

You can display the CoS mapping information applied to traffic from authenticated supplicants on 802.1X-enabled ports that are in Single-Hot, Multi-Host, and Multi-Supplicant authentication modes.

Example

```
Dell# show dot1x cos-mapping interface gigabitethernet 1/32
802.1p CoS re-map table on Gi 1/32:
----------------------------------
Dot1p | Remapped Dot1p
0     | 7
1     | 6
2     | 5
3     | 4
4     | 3
5     | 2
6     | 1
7     | 0
Dell#

Dell# show dot1x cos-mapping interface gigabitethernet 1/32 mac-address 00:00:00:00:00:10
Supplicant Mac: 0 0 0 0 0 10 Lookup for Mac:
802.1p CoS re-map table on Gi 1/32:
----------------------------------
802.1p CoS re-map table for Supplicant: 00:00:00:00:00:10

Dot1p | Remapped Dot1p
0     | 7
1     | 6
```
show dot1x interface

Display the 802.1X configuration of an interface.

Syntax

```
show dot1x interface interface [mac-address mac-address]
```

Parameters

- `interface`
  - Enter one of the following keywords and the interface information:
  - For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

- `mac-address`
  - (Optional) MAC address of a supplicant.

Defaults

None

Command Modes

- EXEC
- EXEC privilege

Command History

Dell# show dot1x interface gigabitethernet 1/32 mac-address 00:00:00:00:00:11
802.1X 189
```
show dot1x profile

Display all the dot1x profiles or the details of a specific profile configured in the system.

Syntax

    show dot1x profile profile-name

Parameters

    profile-name Specify a static dot1x profile-name. The maximum character limit for a profile name is 32 characters.

Defaults

    None

Command Modes

    EXEC

Command History

    This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

    Version    Description
    9.10(0.0)  Introduced on the S3148.
    9.10(0.0)  Introduced on the S3100 series, S4048--ON, S4810, S4820T, S5000, S6000, S6000--ON, C9010, Z9100--ON, and Z9500.
    9.9(0.0)   Introduced on the C9010.

Example

    Dell#show dot1x profile
    
    802.1x profile information
    --------------------------
    Dot1x Profile mySupplicants

Access Control Lists (ACL)

Access control lists (ACLs) are supported by the Dell Networking OS.

Dell Networking OS supports the following types of ACL, IP prefix list, and route maps:

- Commands Common to all ACL Types
- Common IP ACL Commands
- Standard IP ACL Commands
- Extended IP ACL Commands
- Common MAC Access List Commands
- Standard MAC ACL Commands
- Extended MAC ACL Commands
- IP Prefix List Commands
- Route Map Commands
- AS-Path Commands
- IP Community List Commands

NOTE: For ACL commands that use the Trace function, see Trace List Commands section in Security.

NOTE: For IPv6 ACL commands, see IPv6 Access Control Lists (IPv6 ACLs).

Topics:
- Commands Common to all ACL Types
- Common IP ACL Commands
- Standard IP ACL Commands
- Extended IP ACL Commands
- Common MAC Access List Commands
- Standard MAC ACL Commands
- Extended MAC ACL Commands
- IP Prefix List Commands
- Route Map Commands
- AS-Path Commands
- IP Community List Commands
- deny (for Standard IP ACLs)
- deny (for Extended IP ACLs)
- seq (for Standard IPv4 ACLs)
- deny tcp (for Extended IP ACLs)
- deny udp (for Extended IP ACLs)
- deny arp (for Extended MAC ACLs)
- deny icmp (for Extended IP ACLs)
- deny ether-type (for Extended MAC ACLs)
- deny (for Standard MAC ACLs)
Deny (for Extended MAC ACLs)
permit (for Standard IP ACLs)
permit arp (for Extended MAC ACLs)
permit ether-type (for Extended MAC ACLs)
permit icmp (for Extended IP ACLs)
permit (for Extended IP ACLs)
permit (for Standard MAC ACLs)
seq (for Standard MAC ACLs)
permit tcp (for Extended IP ACLs)
seq (for IP ACLs)
seq (for IPv6 ACLs)
permit udp (for IPv6 ACLs)
permit (for IPv6 ACLs)
deny udp (for IPv6 ACLs)
deny tcp (for IPv6 ACLs)
deny icmp (for Extended IPv6 ACLs)
deny (for IPv6 ACLs)

Commands Common to all ACL Types

The following commands are available within each ACL mode and do not have mode-specific options. Some commands in this chapter may use similar names, but require different options to support the different ACL types (for example, the deny and permit commands).

remark

Enter a description for an ACL entry.

Syntax
remark [remark-number] [description]

Parameters
remark-number Enter the remark number. The range is from 0 to 65535 for MAC ACL and 0 to 4294967290 for IP ACL.

NOTE: You can use the same sequence number for the remark and an ACL rule.

description Enter a description of up to 80 characters.

Defaults
Not configured.

Command Modes
- CONFIGURATION-STANDARD-ACCESS-LIST
- CONFIGURATION-EXTENDED-ACCESS-LIST
- CONFIGURATION-MAC ACCESS LIST-STANDARD
CONFIGURATION-MAC ACCESS LIST-EXTENDED

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>6.4.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information

The remark command is available in each ACL mode. You can configure up to 4294967291 remarks for a given IP ACL and 65536 remarks for a given MAC ACL.

The following example shows the use of the remark command twice within CONFIGURATION-STANDARD-ACCESS-LIST mode. The same sequence number was used for the remark and for an associated ACL rule. The remark precedes the rule in the running-config because it is assumed that the remark is for the rule with the same sequence number, or the group of rules that follow the remark.

Example

Dell(config-std-nacl)# remark 10 Deny rest of the traffic
Dell(config-std-nacl)# remark 5 Permit traffic from XYZ Inc.
Dell(config-std-nacl)# show config
!
ip access-list standard test
remark 5 Permit traffic from XYZ Inc.
seq 5 permit 1.1.1.0/24
remark 10 Deny rest of the traffic
seq 10 deny any

Related Commands

- `show config` — display the current ACL configuration.
**show config**

Display the current ACL configuration.

  seq 10 deny 2.1.1.0/24 count
Dell(config-std-nacl)#
```
Common IP ACL Commands

The following commands are available within both Ingress and Egress IP ACL modes (Standard and Extended) and do not have mode-specific options. When an ACL is created without a rule and then is applied to an interface, ACL behavior reflects an implicit permit. The platform supports both Ingress and Egress IP ACLs.

NOTE: Also refer to the Commands Common to all ACL Types section.

access-class

Apply a standard ACL to a terminal line.

Syntax
access-class access-list-name [ipv4 | ipv6]

To remove an ACL, use the no access-class command.

Parameters
access-list-name
Enter the name of a configured Standard ACL, up to 140 characters.

ipv4
Enter the keyword ipv4 to configure an IPv4 access class.

ipv6
Enter the keyword ipv6 to configure an IPv6 access class.

Defaults
Not configured.

Command Modes
LINE

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<tr>
<td>7.8.1.0</td>
<td>Increase the name string to accept up to 140 characters. Prior to 7.8.1.0, names were up to 16 characters long.</td>
</tr>
</tbody>
</table>
Usage Information

When you use the `access-class access-list-name` command without specifying the `ipv4` or `ipv6` attribute, both IPv4 as well as IPv6 rules that are defined in that ACL are applied to the terminal. This method is a generic way of configuring access restrictions.

To be able to filter access exclusively using either IPv4 or IPv6 rules, use either the `ipv4` or `ipv6` attribute along with the `access-class access-list-name` command. Depending on the attribute that you specify (ipv4 or ipv6), the ACL processes either IPv4 or IPv6 rules, but not both. Using this configuration, you can set up two different types of access classes with each class processing either IPv4 or IPv6 rules separately.

However, if you already have configured generic IP ACL on a terminal line, then you cannot further apply IPv4 or IPv6 specific filtering on top of this configuration. Because, both IPv4 and IPv6 access classes are already configured on this terminal line. Before applying either IPv4 or IPv6 filtering, first undo the generic configuration using the `no access-class access-list-name` command.

Similarly, if you have configured either IPv4 or IPv6 specific filtering on a terminal line, you cannot apply generic IP ACLs on top of this configuration. Before applying the generic ACL configuration, first undo the existing configuration using the `no access-class access-list-name [ipv4 | ipv6]` command.

clear counters ip access-group

Erase all counters maintained for access lists.

**Syntax**

```plaintext
clear counters ip access-group [access-list-name]
```

**Parameters**

- **access-list-name**  
  (OPTIONAL) Enter the name of a configured access-list, up to 140 characters.

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

### ip access-group

Assign an IP access list (IP ACL) to an interface.

**Syntax**

```
ip access-group access-list-name {in | out} [implicit-permit] [vlan vlan-id] [vrf vrf-name]
```

To delete an IP access-group configuration, use the `no ip access-group access-list-name {in | out} [implicit-permit] [vlan vlan-id] [layer3] [vrf vrf-name]` command.

**Parameters**

- **access-list-name**
  - Enter the name of a configured access list, up to 140 characters.

- **in**
  - Enter the keyword `in` to apply the ACL to incoming traffic.

- **out**
  - Enter the keyword `out` to apply the ACL to outgoing traffic.

- **implicit-permit**
  - (OPTIONAL) Enter the keyword `implicit-permit` to change the default action of the ACL from implicit-deny to implicit-permit (that is, if the traffic does not match the filters in the ACL, the traffic is permitted instead of dropped).

- **vlan vlan-id**
  - (OPTIONAL) Enter the keyword `vlan` then the ID numbers of the VLANs. The range is from 1 to 4094 (you can use IDs from 1 to 4094).

- **vrf vrf-name**
  - (OPTIONAL) Enter the keyword `vrf` then the ID numbers of the VRFs. The range is from 1 to 63 (you can use IDs from 1 to 63).

  **NOTE:** When you specify a single VRF, use the name of the VRF instead of the VRF ID number. Use the VRF ID numbers only when you specify a range of VRFs.

- **layer3**
  - (OPTIONAL) Enter the keyword `layer3` to enable layer 3 mode. It ensures that all the ACL rules in the access-group are applied only for L3 router packets.

**Defaults**

Not enabled.

**Command Modes**

INTERFACE/VRF MODE

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.
Version                  Description
9.10(0.0)                Introduced on the S3148.
9.8(2.0)                 Introduced on the S3100 series.
9.8(1.0)                 Introduced on the Z9100-ON.
9.8(0.0P5)               Introduced on the S4048-ON.
9.8(0.0P2)               Introduced on the S3048-ON.
9.7(0.0)                 Introduced on the S6000-ON.
9.2(1.0)                 Introduced on the Z9500.
9.0.2.0                  Introduced on the S6000.
8.3.19.0                 Introduced on the S4820T.
8.3.11.1                 Introduced on the Z9000.
8.3.7.0                  Introduced on the S4810.
8.1.1.0                  Introduced on the E-Series.
7.8.1.0                  Increased the name string to accept up to 140 characters. Prior to 7.8.1.0, names were up to 16 characters long.
7.6.1.0                  Introduced on the S-Series.
7.5.1.0                  Introduced on the C-Series.
6.2.1.1                  Introduced on the E-Series.

Usage Information
You can assign one ingress ACL and one egress ACL to an interface.

NOTE: This command supports Loopback interfaces EE3 and EF series route processor modules (RPMs). This command does not support Loopback interfaces ED series RPMs and S-Series Loopback interfaces.

NOTE: If you apply outbound(egress) IP acl on a switch port, the filter applies only for routed traffic egressing out of that port.

To associate an access-list to a non-default VRF, use the vrf attribute of this command. You can use this command at the interface context (physical/LAG) to apply the access-list to a range of VRFs.

The VRF MODE is not available for the default and management VRFs.

Related Commands
• ip access-list standard — configure a standard ACL.
• ip access-list extended — configure an extended ACL.

ip control-plane egress-filter

Enable egress Layer 3 ACL lookup for IPv4 CPU traffic.

Syntax ip control-plane egress-filter

Defaults Not enabled.

Command Modes EXEC Privilege

**show ip accounting access-list**

Display the IP access-lists created on the switch and the sequence of filters.

**Syntax**

```
show ip accounting {access-list access-list-name | cam_count} interface interface [vrf vrf-name]
```

**Parameters**

- `access-list-name` Enter the name of the ACL to be displayed.
- `cam_count` List the count of the CAM rules for this ACL.
- `interface interface` Enter the keyword `interface` then the one of the following keywords and the interface information:
  - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a port channel interface, enter the keywords `port-channel` then a number.
  - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.
- `in | out` Identify whether ACL is applied on the ingress or egress side.
- `vrf vrf-name` (Optional) Enter the keyword `vrf` and then the name of the VRF to view the IP accounting information on either a default or a non-default VRF.

</tbody>
</table>

Usage Information

**NOTE:** The vrf option is available only when VRF feature is enabled.

```
show ip accounting access-lists
Field          Description
"Extended IP..." Displays the name of the IP ACL.
"seq 5..."     Displays the filter. If the keywords count or byte were configured in the filter, the number of packets or bytes the filter processes is displayed at the end of the line.
"order 4"      Displays the QoS order of priority for the ACL entry.
```

Example

```
Dell# show ip accounting access-list L3-ACL vrf vrf3
Standard Ingress IP access list L3-ACL on vrf3
Total cam count 3
  seq 5 permit 10.1.2.0/24 any negotiate 150 monitor 300 count (0 packets)
  seq 10 permit 20.1.2.0/24
  seq 15 permit 30.1.2.0/24
Dell#
```
show ip access-lists

Display all of the IP ACLs configured in the system, whether or not they are applied to an interface, and the count of matches/mismatches against each ACL entry displayed.

Syntax

```
show ip access-lists [access-list-name] [interface interface] [in | out] [vrf vrf-name]
```

Parameters

**Standard IP ACL Commands**

When you create an ACL without any rule and then apply it to an interface, the ACL behavior reflects an implicit permit.
The platform supports both Ingress and Egress IP ACLs.

**NOTE:** Also refer to the Commands Common to all ACL Types and Common IP ACL Commands sections.

### deny

To drop packets with a certain IP address, configure a filter.

**Syntax**

```
deny {source | any | host {ip-address}} [count [bytes] | log] [dscp value] [ecn value] [fragments] [monitor [session-ID]] [no-drop] [order]
```

To remove this filter, you have two choices:

- Use the **no seq sequence-number** command if you know the filter's sequence number.
- Use the **no deny {source [mask] | any | host ip-address}** command.

**Parameters**

- **source**
  
  Enter the IP address in dotted decimal format of the network from which the packet was sent.

- **any**
  
  Enter the keyword any to specify that all routes are subject to the filter.

- **host ip-address**
  
  Enter the keyword host and then enter the IP address to specify a host IP address only.

- **count**
  
  (OPTIONAL) Enter the keyword count to count the packets.

- **bytes**
  
  (OPTIONAL) Enter the keyword bytes to count the bytes.

- **log**
  
  (OPTIONAL) Enter the keyword log to enter ACL matches in the log.

- **dscp**
  
  (OPTIONAL) Enter the keyword dscp to match the IP DSCP values. The range is from 0 to 63.

- **ecn**
  
  (OPTIONAL) Enter the keyword ecn to match the ECN bits. The range is from 0 to 3.

- **order**
  
  (OPTIONAL) Enter the keyword order to specify the QoS order for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have higher priority). If you do not use the keyword order, the ACLs have the lowest order by default (255).

- **monitor**
  
  (OPTIONAL) Enter the keyword monitor then the session-ID to describe the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface. The session-ID range is from 0 to 65535.

  **NOTE:** For more information, see "Flow-based Monitoring" in the Port Monitoring section of the Dell Networking OS Configuration Guide.

- **fragments**
  
  Enter the keyword fragments to use ACLs to control packet fragments.

- **no-drop**
  
  Enter the keywords no-drop to match only the forwarded packets.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION-STANDARD-ACCESS-LIST

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<td>Added support for the non-contiguous mask and added the monitor option.</td>
</tr>
<tr>
<td>6.5.1.0</td>
<td>Expanded to include the optional QoS order priority for the ACL entry.</td>
</tr>
</tbody>
</table>

**Usage Information**

The `order` option is relevant in the context of the Policy QoS feature only. For more information, see the Quality of Service section in the Dell Networking OS Configuration Guide.

The software cannot count both packets and bytes; when you enter the `count byte` options, only bytes increment.

**Related Commands**

- `ip access-list standard` — configure a standard ACL.
- `permit` — configure a permit filter.

---

**ip access-list standard**

Create a standard IP access list (IP ACL) to filter based on IP address.

**Syntax**

```
ip access-list standard access-list-name
```

To delete an access list, use the `no ip access-list standard access-list-name` command.

**Parameters**

- `access-list-name`  
  Enter a string up to 140 characters long as the ACL name.
Defaults
All IP access lists contain an implicit "deny any," that is, if no match occurs, the packet is dropped.

<td>Added support for the non-contiguous mask and added the monitor option.</td>
</tr>
<tr>
<td>6.5.1.0</td>
<td>Expanded to include the optional QoS order priority for the ACL entry.</td>
</tr>
</tbody>
</table>

Usage Information
Dell Networking OS supports one ingress and one egress IP ACL per interface.

Prior to Dell Networking OS version 7.8.1.0, names are up to 16 characters long.

The number of entries allowed per ACL is hardware-dependent. For detailed specifications on entries allowed per ACL, refer to your line card documentation.

Example
Dell(conf)# ip access-list standard TestList
Dell(config-std-nacl) #

Related Commands
- `ip access-list extended` — create an extended access list.
- `show config` — display the current configuration.
To permit packets from a specific source IP address to leave the switch, configure a filter.

**Syntax**
```plaintext
permit {source [mask] | any | host ip-address} [count [bytes] | log] [dscp value] [ecn value] [fragments] [monitor [session-ID]] [no-drop] [order]
```

To remove this filter, you have two choices:
- Use the no seq sequence-number command if you know the filter’s sequence number.
- Use the no permit {source [mask] | any | host ip-address} command.

**Parameters**
- **source** Enter the IP address in dotted decimal format of the network from which the packet was sent.
- **mask** (OPTIONAL) Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.
- **any** Enter the keyword any to specify that all routes are subject to the filter.
- **host ip-address** Enter the keyword host then the IP address to specify a host IP address or hostname.
- **count** (OPTIONAL) Enter the keyword count to count the packets.
- **bytes** (OPTIONAL) Enter the keyword bytes to count the bytes.
- **log** (OPTIONAL) Enter the keyword log to enter ACL matches in the log.
- **dscp** (OPTIONAL) Enter the keyword dscp to match the IP DSCP values. The range is from 0 to 63.
- **ecn** (OPTIONAL) Enter the keyword ecn to match the ECN bits. The range is from 0 to 3.
- **order** (OPTIONAL) Enter the keyword order to specify the QoS order for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority). If you do not use the keyword order, the ACLs have the lowest order by default (255).
- **monitor** (OPTIONAL) Enter the keyword monitor then the session-ID to describe the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface. The session-ID range is from 0 to 65535.

**NOTE:** For more information, see “Flow-based Monitoring” in the Port Monitoring section of the Dell Networking OS Configuration Guide.

- **fragments** Enter the keyword fragments to use ACLs to control packet fragments.
- **no-drop** Enter the keywords no-drop to match only the forwarded packets.

**Defaults**
Not configured.

**Command Modes**
- CONFIGURATION-STANDARD-ACCESS-LIST

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>
### resequence access-list

Re-assign sequence numbers to entries of an existing access-list.

**Syntax**

```
resequence access-list {ipv4 | ipv6 | mac} {access-list-name StartingSeqNum Step-to-Increment}
```

**Parameters**

- **ipv4 | ipv6 | mac**
  - Enter the keyword `ipv4` or `mac` to identify the access list type to resequence.

- **access-list-name**
  - Enter the name of a configured IP access list.

- **StartingSeqNum**
  - Enter the starting sequence number to resequence. The range is from 0 to 4294967290.

- **Step-to-Increment**
  - Enter the step to increment the sequence number. The range is from 1 to 4294967290.

**Defaults**

None

**Usage Information**

The `order` option is relevant in the context of the Policy QoS feature only. For more information, see the “Quality of Service” section of the Dell Networking OS Configuration Guide.

**Related Commands**

- `deny` — assign a IP ACL filter to deny IP packets.
- `ip access-list standard` — create a standard ACL.

---

### Version

- **9.10(0.0)**
  - Introduced on the S3148.

- **9.8(2.0)**
  - Introduced on the S3100 series.

- **9.8(1.0)**
  - Introduced on the Z9100–ON.

- **9.8(0.0P5)**
  - Introduced on the S4048-ON.

- **9.8(0.0P2)**
  - Introduced on the S3048-ON.

- **9.8(0.0)**
  - Added the no-drop parameter.

- **9.7(0.0)**
  - Introduced on the S6000–ON.

- **9.2(1.0)**
  - Introduced on the Z9500.

- **9.0.2.0**
  - Introduced on the S6000.

- **8.3.19.0**
  - Introduced on the S4820T.

- **8.3.11.1**
  - Introduced on the Z9000.

- **8.3.7.0**
  - Introduced on the S4810.

- **8.3.1.0**
  - Added the DSCP value for ACL matching.

- **8.2.1.0**
  - Allows ACL control of fragmented packets for IP (Layer 3) ACLs.

- **8.1.1.0**
  - Introduced on the E-Series.

- **7.6.1.0**
  - Introduced on the S-Series.

- **7.5.1.0**
  - Introduced on the C-Series.

- **7.4.1.0**
  - Added support for the non-contiguous mask and added the `monitor` option.

- **6.5.10**
  - Expanded to include the optional GoS order priority for the ACL entry.
Command Modes

- EXEC
- EXEC Privilege

Usage Information

When you have exhausted all the sequence numbers, this feature permits re-assigning a new sequence number to entries of an existing access-list.

seq

Assign a sequence number to a deny or permit filter in an IP access list while creating the filter.

Syntax

```
seq sequence-number {deny | permit} {source [mask] | any | host ip-address} [count [byte] | log] [dscp value] [ecn value] [fragments] [monitor [session-ID]] [no-drop] [order]
```

To delete a filter, use the no seq sequence-number command.

Parameters

- `sequence-number` Enter a number from 0 to 4294967290.
- `deny` Enter the keyword deny to configure a filter to drop packets meeting this condition.
- `permit` Enter the keyword permit to configure a filter to forward packets meeting this criteria.
source
Enter an IP address in dotted decimal format of the network from which the packet was received.

mask
(OPTIONAL) Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.

any
Enter the keyword any to specify that all routes are subject to the filter.

host ip-address
Enter the keyword host then the IP address to specify a host IP address or hostname.

count
(OPTIONAL) Enter the keyword count to count packets the filter processes.

bytes
(OPTIONAL) Enter the keyword bytes to count bytes the filter processes.

log
(OPTIONAL) Enter the keyword log to enter ACL matches in the log.

dscp
(OPTIONAL) Enter the keyword dscp to match to the IP DCSCP values. The range is from 0 to 63.

ecn
(OPTIONAL) Enter the keyword ecn to match to the ECN values. The range is from 0 to 3.

order
(OPTIONAL) Enter the keyword order to specify the QoS order for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority). If you do not use the keyword order, the ACLs have the lowest order by default (255).

monitor
(OPTIONAL) Enter the keyword monitor then the session-ID to describe the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface. The session-ID range is from 0 to 65535.

NOTE: For more information, see “Flow-based Monitoring” in the Port Monitoring section of the Dell Networking OS Configuration Guide.

fragments
Enter the keyword fragments to use ACLs to control packet fragments.

no-drop
Enter the keywords no-drop to match only the forwarded packets.

Defaults
Not configured

<td>Added support for the non-contiguous mask and added the monitor option.</td>
</tr>
<tr>
<td>6.5.10</td>
<td>Expanded to include the optional QoS order priority for the ACL entry.</td>
</tr>
</tbody>
</table>

**Usage Information**
The `order` option is relevant in the context of the Policy QoS feature only. The following applies:

- The `seq sequence-number` command is applicable only in an ACL group.
- The order option works across ACL groups that are applied on an interface via the QoS policy framework.
- The order option takes precedence over `seq sequence-number`.
- If you do not configure `sequence-number`, the rules with the same order value are ordered according to their configuration order.
- If you configure `sequence-number`, the sequence-number is used as a tie breaker for rules with the same order.

**Related Commands**
- `deny` — configure a filter to drop packets.
- `permit` — configure a filter to forward packets.

**Extended IP ACL Commands**

When an ACL is created without any rule and then applied to an interface, ACL behavior reflects an implicit permit.

The following commands configure extended IP ACLs, which in addition to the IP address, also examine the packet’s protocol type.

The platform supports both Ingress and Egress IP ACLs.

**NOTE:** Also refer to the **Commands Common to all ACL Types** and **Common IP ACL Commands** sections.

**deny**

Configure a filter that drops IP packets meeting the filter criteria.

**Syntax**

```
deny {ip | ip-protocol-number} {source mask | any | host ip-address} {destination mask | any | host ip-address} [count [byte]] [log] [dscp value] [order] [monitor [session-ID]] [fragments] [no-drop]
```
To remove this filter, you have two choices:

- Use the no seq sequence-number command if you know the filter’s sequence number.
- Use the no deny {ip | ip-protocol-number} {source mask | any | host ip-address} (destination mask | any | host ip-address) command.

### Parameters

- **ip**: Enter the keyword ip to configure a generic IP access list. The keyword ip specifies that the access list denies all IP protocols.
- **ip-protocol-number**: Enter a number from 0 to 255 to deny based on the protocol identified in the IP protocol header.
- **source**: Enter the IP address of the network or host from which the packets were sent.
- **mask**: Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or noncontiguous.
- **any**: Enter the keyword any to specify that all routes are subject to the filter.
- **host ip-address**: Enter the keyword host then the IP address to specify a host IP address.
- **destination**: Enter the IP address of the network or host to which the packets are sent.
- **count**: (OPTIONAL) Enter the keyword count to count packets that the filter processes.
- **byte**: (OPTIONAL) Enter the keyword byte to count bytes that the filter processes.
- **log**: (OPTIONAL, E-Series only) Enter the keyword log to enter ACL matches in the log.
- **dscp**: (OPTIONAL) Enter the keyword dscp to match to the IP DCSCP values.
- **order**: (OPTIONAL) Enter the keyword order to specify the QoS priority for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority). If you do not use the keyword order, the ACLs have the lowest order by default (255).
- **monitor**: (OPTIONAL) Enter the keyword monitor then the session-ID to describe the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface. The session-ID range is from 0 to 65535. For more information, see Flow-based Monitoring in the Port Monitoring section in the Dell Networking OS Configuration Guide.
- **fragments**: Enter the keyword fragments to use ACLs to control packet fragments.
- **no-drop**: Enter the keywords no-drop to match only the forwarded packets.

</tr>
</tbody>
</table>

**Usage Information**

The `order` option is relevant in the context of the Policy GoS feature only. For more information, see the Quality of Service section in the *Dell Networking OS Configuration Guide*.

When you use the `log` option, the CP processor logs detail the packets that match. Depending on how many packets match the log entry and at what rate, the CP may become busy as it has to log these packets’ details.

The `monitor` option is relevant in the context of flow-based monitoring only. For more information, see *Port Monitoring*.

The C-Series and S-Series cannot count both packets and bytes, when you enter the count byte options, only bytes are incremented.

**NOTE:** When you configure ACL logging and byte counters simultaneously, byte counters may display an incorrect value. Configure packet counters with logging instead.

**Related Commands**

- `deny tcp` — assign a filter to deny TCP packets.
- `deny udp` — assign a filter to deny UDP packets.
- `ip access-list extended` — create an extended ACL.

---

**deny icmp**

To drop all or specific internet control message protocol (ICMP) messages, configure a filter.

**Syntax**

`deny icmp {source mask | any | host ip-address} {destination mask | any | host ip-address} [dscp] [count [byte] [order] [fragments] [monitor [session-ID]] [no-drop]`
To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no deny icmp {source mask | any | host ip-address} {destination mask | any | host ip-address}` command.

### Parameters

- **source**
Enter the IP address of the network or host from which the packets were sent.

- **mask**
Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.

- **any**
Enter the keyword `any` to specify that all routes are subject to the filter.

- **host ip-address**
Enter the keyword `host` then the IP address to specify a host IP address.

- **destination**
Enter the IP address of the network or host to which the packets are sent.

- **dscp**
Enter this keyword `dscp` to deny a packet based on the DSCP value. The range is from 0 to 63.

- **count**
(Optional) Enter the keyword `count` to count packets processed by the filter.

- **byte**
(Optional) Enter the keyword `byte` to count bytes processed by the filter.

- **order**
(Optional) Enter the keyword `order` to specify the QoS priority for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower order numbers have a higher priority) If you did not use the keyword `order`, the ACLs have the lowest order by default (255).

- **fragments**
Enter the keyword `fragments` to use ACLs to control packet fragments.

- **monitor**
(Optional) Enter the keyword `monitor` then the session-ID to describe the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface. The session-ID range is from 0 to 65535. For more information, see Flow-based Monitoring in the Port Monitoring section in the Dell Networking OS Configuration Guide.

- **no-drop**
Enter the keywords `no-drop` to match only the forwarded packets.

### deny tcp

Configure a filter that drops transmission control protocol (TCP) packets meeting the filter criteria.

#### Syntax

```
deny tcp {source mask | any | host ip-address} [bit] [operator port [port]]
          {destination mask | any | host ip-address} [dscp] [bit] [operator port [port]]
          [count [bytes] [order] [fragments] [monitor [session-ID]]] [no-drop]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no deny tcp {source mask | any | host ip-address} {destination mask | any | host ip-address}` command.

#### Parameters

- **source**: Enter the IP address of the network or host from which the packets are sent.
- **mask**: Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.
- **any**: Enter the keyword `any` to specify that all routes are subject to the filter.
- **host ip-address**: Enter the keyword `host` then the IP address to specify a host IP address.
- **dscp**: Enter this keyword `dscp` to deny a packet based on the DSCP value. The range is from 0 to 63.
- **bit**: Enter a flag or combination of bits:
• `ack`: acknowledgement field
• `fin`: finish (no more data from the user)
• `psh`: push function
• `rst`: reset the connection
• `syn`: synchronize sequence numbers
• `urg`: urgent field

**operator**  
(Optional) Enter one of the following logical operand:
• `eq` = equal to
• `neq` = not equal to
• `gt` = greater than
• `lt` = less than
• `range` = inclusive range of ports (you must specify two ports for the `port` command)

**port port**  
Enter the application layer port number. Enter two port numbers if using the range logical operand. The range is from 0 to 65535.

The following list includes some common TCP port numbers:
• 23 = Telnet
• 20 and 21 = FTP
• 25 = SMTP
• 169 = SNMP

**destination**  
Enter the IP address of the network or host to which the packets are sent.

**mask**  
Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.

**count**  
(Optional) Enter the keyword `count` to count packets the filter processes.

**byte**  
(Optional) Enter the keyword `byte` to count bytes the filter processes.

**order**  
(Optional) Enter the keyword `order` to specify the QoS priority for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority). If you did not use the keyword `order`, the ACLs have the lowest order by default (255).

**fragments**  
Enter the keyword `fragments` to use ACLs to control packet fragments.

**monitor**  
(Optional) Enter the keyword `monitor` then the session-ID to describe the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface. The session-ID range is from 0 to 65535. For more information, see Flow-based Monitoring in the Port Monitoring section in the Dell Networking OS Configuration Guide.

**no-drop**  
Enter the keywords `no-drop` to match only the forwarded packets.

**Defaults**  
Not configured.

</tr>
</tbody>
</table>

### Usage Information

The `order` option is relevant in the context of the Policy GoS feature only. For more information, see the Quality of Service section of the Dell Networking OS Configuration Guide.

The `monitor` option is relevant in the context of flow-based monitoring only. For more information, see the Port Monitoring section.

The C-Series and S-Series cannot count both packets and bytes; when you enter the count byte options, only bytes are incremented.

**NOTE:** When you configure ACL logging and byte counters simultaneously, byte counters may display an incorrect value. Configure packet counters with logging instead.

Most ACL rules require one entry in the CAM. However, rules with TCP and UDP port operators (for example, gt, lt, or range) may require more than one entry. The range of ports is configured in the CAM based on bit mask boundaries; the space required depends on exactly what ports are included in the range.
Example

An ACL rule with a TCP port range of 4000–8000 uses eight entries in the CAM.

Total Ports: 1024

Related Commands
- `deny` — assign a filter to deny IP traffic.
- `deny udp` — assign a filter to deny UDP traffic.

**deny udp**

To drop user datagram protocol (UDP) packets meeting the filter criteria, configure a filter.

**Syntax**

```
deny udp {source mask | any | host ip-address} [destination mask | any | host ip-address] [operator port [port]] [dscp] [byte] [order] [fragments] [monitor [session-ID]] [no-drop]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no deny udp {source mask | any | host ip-address} {destination mask | any | host ip-address}` command.

**Parameters**

- **source**
  - Enter the IP address of the network or host from which the packets were sent.
- **mask**
  - Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.
- **any**
  - Enter the keyword any to specify that all routes are subject to the filter.
- **host ip-address**
  - Enter the keyword host then the IP address to specify a host IP address.
- **dscp**
  - Enter this keyword dscp to deny a packet based on the DSCP value. The range is from 0 to 63.
- **operator**
  - (OPTIONAL) Enter one of the following logical operand:
    - `eq` = equal to
    - `neq` = not equal to
    - `gt` = greater than
- `lt = less than`
- `range = inclusive range of ports (you must specify two ports for the `port` command)`

`port port` Enter the application layer port number. Enter two port numbers if using the range logical operand. The range is from 0 to 65535.

`destination` Enter the IP address of the network or host to which the packets are sent.

`mask` Enter a network mask in `/prefix format (/x)` or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.

`count` (OPTIONAL) Enter the keyword `count` to count packets processed by the filter.

`byte` (OPTIONAL) Enter the keyword `byte` to count bytes processed by the filter.

`order` (OPTIONAL) Enter the keyword `order` to specify the QoS priority for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority) If you did not use the keyword `order`, the ACLs have the lowest order by default (255).

`fragments` Enter the keyword `fragments` to use ACLs to control packet fragments.

`monitor` (OPTIONAL) Enter the keyword `monitor` then the session-ID to describe the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface. The session-ID range is from 0 to 65535. For more information, see `Flow-based Monitoring` in the Port Monitoring section in the `Dell Networking OS Configuration Guide`.

`no-drop` Enter the keywords `no-drop` to match only the forwarded packets.

**Defaults**
Not configured.

**Command Modes**
`CONFIGURATION-EXTENDED-ACCESS-LIST`

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant `Dell Networking OS Command Line Reference Guide`.

<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
</tbody>
</table>
### Version Description
- **8.3.7.0**: Introduced on the S4810.
- **8.3.1.0**: Added the keyword `dscp`.
- **8.2.1.0**: Allows ACL control of fragmented packets for IP (Layer 3) ACLs.
- **8.1.1.0**: Introduced on the E-Series.
- **7.6.1.0**: Introduced on the S-Series.
- **7.5.1.0**: Introduced on the C-Series.
- **7.4.1.0**: Added support for non-contiguous mask and added the `monitor` option. Deprecated the keyword `established`.
- **6.5.1.0**: Expanded to include the optional QoS `order` priority for the ACL entry.

### Usage Information
The `order` option is relevant in the context of the Policy GoS feature only. For more information, see the Quality of Service section of the *Dell Networking OS Configuration Guide*.

The `monitor` option is relevant in the context of flow-based monitoring only. For more information, see the Port Monitoring section.

The C-Series and S-Series cannot count both packets and bytes; when you enter the count byte options, only bytes are incremented.

**NOTE**: When you configure ACL logging and byte counters simultaneously, byte counters may display an incorrect value. Configure packet counters with logging instead.

Most ACL rules require one entry in the CAM. However, rules with TCP and UDP port operators (for example, `gt`, `lt` or range) may require more than one entry. The range of ports is configured in the CAM based on bit mask boundaries; the space required depends on exactly what ports are included in the range.

### Example
An ACL rule with a TCP port range of 4000–8000 uses eight entries in the CAM.

### Related Commands
- `deny` — assign a filter to deny IP traffic.
- `deny tcp` — assign a filter to deny TCP traffic.
**ip access-list extended**

Name (or select) an extended IP access list (IP ACL) based on IP addresses or protocols.

**Syntax**

```
ip access-list extended access-list-name
```

To delete an access list, use the `no ip access-list extended access-list-name` command.

**Parameters**

- `access-list-name` Enter a string up to 140 characters long as the access list name.

**Defaults**

All access lists contain an implicit “deny any”; that is, if no match occurs, the packet is dropped.

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

The number of entries allowed per ACL is hardware-dependent. For detailed specification about entries allowed per ACL, refer to your line card documentation.

Prior to 7.8.1.0, names are up to 16 characters long.

**Example**

```
Dell(conf)# ip access-list extended TESTListEXTEND
Dell(config-ext-nacl)#
```
Related Commands

- `ip access-list standard` — configure a standard IP access list.
- `show config` — display the current configuration.

**permit**

To pass IP packets meeting the filter criteria, configure a filter.

**Syntax**

```
permit {source mask | any | host ip-address} {destination mask | any | host ip-address} [count [bytes]] [dscp value] [order] [fragments] [monitor [session-ID]] [no-drop]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no deny {source mask | any | host ip-address} {destination mask | any | host ip-address}` command.

**Parameters**

- `source` Enter the IP address in dotted decimal format of the network from which the packet was sent.
- `mask` (OPTIONAL) Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.
- `any` Enter the keyword any to specify that all routes are subject to the filter.
- `host ip-address` Enter the keyword host then the IP address to specify a host IP address or hostname.
- `destination` Enter the IP address of the network or host to which the packets are sent.
- `count` (OPTIONAL) Enter the keyword count to count packets processed by the filter.
- `bytes` (OPTIONAL) Enter the keyword bytes to count bytes processed by the filter.
- `dscp` (OPTIONAL) Enter the keyword dscp to match to the IP DCSCP values.
- `order` (OPTIONAL) Enter the keyword order to specify the QoS priority for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority). If you do not use the keyword order, the ACLs have the lowest order by default (255).
- `fragments` Enter the keyword fragments to use ACLs to control packet fragments.
- `monitor` (OPTIONAL) Enter the keyword monitor then the session-ID to describe the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface. The session-ID range is from 0 to 65535. For more information, see “Flow-based Monitoring” in the Port Monitoring section of the Dell Networking OS Configuration Guide.
- `no-drop` Enter the keywords no-drop to match only the forwarded packets.

**Defaults**

Not configured.

**Command Modes**

`CONFIGURATION-EXTENDED-ACCESS-LIST`

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.
### Usage Information

The `order` option is relevant in the context of the Policy QoS feature only. For more information, see the “Quality of Service” section of the *Dell Networking OS Configuration Guide*.

The software cannot count both packets and bytes; when you enter the count byte options, only bytes are incremented.

### Related Commands

- `ip access-list extended` — create an extended ACL.
- `permit tcp` — assign a permit filter for TCP packets.
- `permit udp` — assign a permit filter for UDP packets.

### permit tcp

To pass TCP packets meeting the filter criteria, configure a filter.

**Syntax**

```
permit tcp {source mask | any | host ip-address} [bit] [operator port [port]]
{destination mask | any | host ip-address} [bit] [dscp] [operator port [port]]
[count [byte] [order] [fragments] [monitor [session-ID]]] [no-drop]
```
To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no permit tcp {source mask | any | host ip-address} {destination mask | any | host ip-address}` command.

### Parameters

- **source**
  - Enter the IP address of the network or host from which the packets were sent.

- **mask**
  - Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.

- **any**
  - Enter the keyword `any` to specify that all routes are subject to the filter.

- **host ip-address**
  - Enter the keyword `host` then the IP address to specify a host IP address.

- **bit**
  - Enter a flag or combination of bits:
    - `ack`: acknowledgement field
    - `fin`: finish (no more data from the user)
    - `psh`: push function
    - `rst`: reset the connection
    - `syn`: synchronize sequence numbers
    - `urg`: urgent field

- **dscp**
  - Enter the keyword `dscp` to deny a packet based on the DSCP value. The range is from 0 to 63.

- **operator**
  - (OPTIONAL) Enter one of the following logical operand:
    - `eq` = equal to
    - `neq` = not equal to
    - `gt` = greater than
    - `lt` = less than
    - `range` = inclusive range of ports (you must specify two ports for the port parameter)

- **port port**
  - Enter the application layer port number. Enter two port numbers if you are using the range logical operand. The range is from 0 to 65535.
  - The following list includes some common TCP port numbers:
    - `23` = Telnet
    - `20` and `21` = FTP
    - `25` = SMTP
    - `169` = SNMP

- **destination**
  - Enter the IP address of the network or host to which the packets are sent.

- **mask**
  - Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.

- **count**
  - (OPTIONAL) Enter the keyword `count` to count packets the filter processes.

- **byte**
  - (OPTIONAL) Enter the keyword `byte` to count bytes the filter processes.

- **order**
  - (OPTIONAL) Enter the keyword `order` to specify the QoS priority for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-
order numbers have a higher priority). If you do not use the keyword order, the ACLs
have the lowest order by default (255).

**fragments**
Enter the keyword fragments to use ACLs to control packet fragments.

**monitor**
(Optional) Enter the keyword monitor then the session-ID to describe the traffic
that you want to monitor and the ACL in which you are creating the rule is applied to the
monitored interface. The session-ID range is from 0 to 65535. For more information, see
“Flow-based Monitoring” in the Port Monitoring section of the Dell Networking OS
Configuration Guide.

**no-drop**
Enter the keywords no-drop to match only the forwarded packets.

**Defaults**
Not configured.

**Command Modes**
CONFIGURATION-EXTENDED-ACCESS-LIST

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking
OS Command Line Reference Guide.

</tr>
</tbody>
</table>
Usage Information

The order option is relevant in the context of the Policy GoS feature only. For more information, see the “Quality of Service” section of the Dell Networking OS Configuration Guide.

NOTE: When you configure ACL logging and byte counters simultaneously, byte counters may display an incorrect value. Configure packet counters with logging instead.

The S-Series cannot count both packets and bytes; when you enter the count byte options, only bytes increment.

The monitor option is relevant in the context of flow-based monitoring only. For more information, see the Port Monitoring section.

Most ACL rules require one entry in the CAM. However, rules with TCP and UDP port operators (for example, gt, lt, or range) may require more than one entry. The range of ports is configured in the CAM based on bit mask boundaries; the space required depends on exactly what ports are included in the range.

Example

An ACL rule with a TCP port range of 4000–8000 uses eight entries in the CAM.

Total Ports: 1024

Related Commands

- `ip access-list extended` — create an extended ACL.
- `permit` — assign a permit filter for IP packets.
- `permit udp` — assign a permit filter for UDP packets.

**permit udp**

To pass UDP packets meeting the filter criteria, configure a filter.

**Syntax**

```
permit udp {source mask | any | host ip-address} [operator port {port}]
{destination mask | any | host ip-address} [dscp] [operator port {port}]
[count [byte] [order] [fragments] [monitor [session-ID]] [no-drop]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no permit udp {source mask | any | host ip-address} {destination mask | any | host ip-address}` command.
Parameters

- **source**: Enter the IP address of the network or host from which the packets were sent.
- **mask**: Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.
- **any**: Enter the keyword any to specify that all routes are subject to the filter.
- **host ip-address**: Enter the keyword host and then enter the IP address to specify a host IP address.
- **dscp**: Enter the keyword dscp to deny a packet based on the DSCP value. The range is from 0 to 63.
- **operator** *(OPTIONAL)*: Enter one of the following logical operand:
  - `eq` = equal to
  - `neq` = not equal to
  - `gt` = greater than
  - `lt` = less than
  - `range` = inclusive range of ports (you must specify two ports for the `port` parameter)
- **port port**: Enter the application layer port number. Enter two port numbers if you are using the `range` logical operand. The range is 0 to 65535.
- **destination**: Enter the IP address of the network or host to which the packets are sent.
- **count** *(OPTIONAL)*: Enter the keyword count to count packets processed by the filter.
- **byte** *(OPTIONAL)*: Enter the keyword byte to count bytes processed by the filter.
- **order** *(OPTIONAL)*: Enter the keyword order to specify the QoS priority for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority). If you do not use the keyword order, the ACLs have the lowest order by default (255).
- **fragments** *(OPTIONAL)*: Enter the keyword fragments to use ACLs to control packet fragments.
- **monitor** *(OPTIONAL)*: Enter the keyword monitor then the session-ID to describe the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface. The session-ID range is from 0 to 65535. For more information, see “Flow-based Monitoring” in the Port Monitoring section of the Dell Networking OS Configuration Guide.
- **no-drop** *(OPTIONAL)*: Enter the keywords no-drop to match only the forwarded packets.

**Defaults**
Not configured.

<td>Added support for non-contiguous mask and added the monitor option.</td>
</tr>
<tr>
<td>6.5.10</td>
<td>Expanded to include the optional QoS order priority for the ACL entry.</td>
</tr>
</tbody>
</table>

**Usage Information**

The `order` option is relevant in the context of the Policy QoS feature only. For more information, see the “Quality of Service” section of the Dell Networking OS Configuration Guide.

**NOTE:** When you configure ACL logging and byte counters simultaneously, byte counters may display an incorrect value. Configure packet counters with logging instead.

The S-Series cannot count both packets and bytes; when you enter the `count byte` options, only bytes increment.

The `monitor` option is relevant in the context of flow-based monitoring only. For more information, refer to Port Monitoring.

Most ACL rules require one entry in the CAM. However, rules with TCP and UDP port operators (for example, `gt`, `lt`, or `range`) may require more than one entry. The range of ports is configured in the CAM based on bit mask boundaries; the space required depends on exactly what ports are included in the range.

**Example**

An ACL rule with a TCP port range of 4000–8000 uses eight entries in the CAM.

```
Dell# Data             Mask         From To   #Covered
1 000011111110100000 111111111111000000 4000 4031 32
2 000011111110100000 111111111110000000 4032 4095 64
3 0001000000000000 111111000000000000 4096 6143 2048
4 0001100000000000 111111100000000000 6144 7167 1024
5 0001110000000000 111111110000000000 7168 7679 512
6 0001111000000000 111111110000000000 7680 7935 256
7 0001111100000000 111111110000000000 7936 7999 64
8 0001111101000000 111111111111111111 8000 8000 1
```

Total Ports: 4001
Example

An ACL rule with a TCP port lt 1023 uses only one entry in the CAM.

```
Dell# Data            Mask          From To   #Covered
1 0000000000000000 1111110000000000 0 1023 1024
Total Ports: 1024
```

Related Commands

- `ip access-list extended` — create an extended ACL.
- `permit` — assign a permit filter for IP packets.
- `permit tcp` — assign a permit filter for TCP packets.

**resequence access-list**

Re-assign sequence numbers to entries of an existing access-list.

**Syntax**

```
resequence access-list {ipv4 | mac} {access-list-name StartingSeqNum Step-to-Increment}
```

**Parameters**

- `ipv4 | mac` Enter the keyword `ipv4` or `mac` to identify the access list type to resequence.
- `access-list-name` Enter the name of a configured IP access list, up to 140 characters.
- `StartingSeqNum` Enter the starting sequence number to resequence. The range is from 0 to 4294967290.
- `Step-to-Increment` Enter the step to increment the sequence number. The range is from 1 to 4294967290.

**Defaults**

None

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

</table>
Version | Description
--- | ---
7.8.1.0 | Increased the name string to accept up to 140 characters. Prior to 7.8.1.0, names were up to 16 characters long.
7.6.1.0 | Introduced on the S-Series.
7.5.1.0 | Introduced on the C-Series.
7.4.1.0 | Introduced on the E-Series.

Usage Information
When all sequence numbers are exhausted, this feature permits re-assigning a new sequence number to entries of an existing access-list.

seq
Assign a sequence number to a deny or permit filter in an extended IP access list while creating the filter.

Syntax

```
seq sequence-number {deny | permit} {ip-protocol-number | icmp | ip | tcp | udp} {source mask | any | host ip-address} {destination mask | any | host ip-address} [operator [portnumber ]]] [count [byte] | log] [dscp value] [ecn value] [fragments] [monitor [session-ID]] [no-drop] [order]
```

Parameters

- `sequence-number` Enter a number from 0 to 4294967290.
- `deny` Enter the keyword deny to configure a filter to drop packets meeting this condition.
- `permit` Enter the keyword permit to configure a filter to forward packets meeting this criteria.
- `ip-protocol-number` Enter a number from 0 to 255 to filter based on the protocol identified in the IP protocol header.
- `icmp` Enter the keyword icmp to configure an ICMP access list filter.
- `ip` Enter the keyword ip to configure a generic IP access list. The keyword ip specifies that the access list permits all IP protocols.
- `tcp` Enter the keyword tcp to configure a TCP access list filter.
- `udp` Enter the keyword udp to configure a UDP access list filter.
- `source` Enter an IP address in dotted decimal format of the network from which the packet was received.
- `mask` (OPTIONAL) Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.
- `any` Enter the keyword any to specify that all routes are subject to the filter.
- `host ip-address` Enter the keyword host and then enter the IP address to specify a host IP address or hostname.
- `operator` (OPTIONAL) Enter one of the following logical operands:
  - `eq` = equal to
  - `neq` = not equal to
  - `gt` = greater than
  - `lt` = less than
- range = inclusive range of ports (you must specify two ports for the port parameter.)

**portnumber**

(Optional) Enter the application layer port number. Enter two port numbers if you are using the range logical operand. The range is from 0 to 65535.

The following list includes some common TCP port numbers:

- 23 = Telnet
- 20 and 21 = FTP-DATA and FTP
- 25 = SMTP
- 169 = SNMP

**destination**

Enter the IP address of the network or host to which the packets are sent.

**count**

(Optional) Enter the keyword count to count the packets.

**bytes**

(Optional) Enter the keyword bytes to count the bytes.

**log**

(Optional) Enter the keyword log to enter ACL matches in the log.

**dscp**

(Optional) Enter the keyword dscp to match to the IP DSCP values. The range is from 0 to 63.

**ecn**

(Optional) Enter the keyword ecn to match to the ECN values. The range is from 0 to 3.

**order**

(Optional) Enter the keyword order to specify the QoS order for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority). If you do not use the keyword order, the ACLs have the lowest order by default (255).

**monitor**

(Optional) Enter the keyword monitor then the session-ID to describe the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface. The session-ID range is from 0 to 65535.

**fragments**

Enter the keyword fragments to use ACLs to control packet fragments.

**no-drop**

Enter the keywords no-drop to match only the forwarded packets.

</tr>
<tr>
<td>6.5.10</td>
<td>Expanded to include the optional QoS order priority for the ACL entry.</td>
</tr>
</tbody>
</table>

**Usage Information**

The `monitor` option is relevant in the context of flow-based monitoring only. For more information, refer to Port Monitoring.

The `order` option is relevant in the context of the Policy QoS feature only. The following applies:

- The `seq sequence-number` command is applicable only in an ACL group.
- The `order` option works across ACL groups that are applied on an interface via the QoS policy framework.
- The `order` option takes precedence over `seq sequence-number`.
- If you do not configure `sequence-number`, the rules with the same order value are ordered according to their configuration order.
- If you configure `sequence-number`, the sequence-number is used as a tie breaker for rules with the same order.

When you use the `log` option, the CP processor logs details about the packets that match. Depending on how many packets match the log entry and at what rate, the CP may become busy as it has to log these packets’ details.

If you configure the `sequence-number`, the `sequence-number` is used as a tie breaker for rules with the same order.

**NOTE:** When you configure ACL logging and byte counters simultaneously, byte counters may display an incorrect value. Configure packet counters with logging instead.

**Related Commands**

- `deny` — configure a filter to drop packets.
- `permit` — configure a filter to forward packets.
Common MAC Access List Commands

The following commands are available within both MAC ACL modes (Standard and Extended) and do not have mode-specific options. These commands allow you to clear, display, and assign MAC ACL configurations.

The platform supports both Ingress and Egress MAC ACLs.

The MAC ACL can be applied on Physical, Port-channel and VLAN interfaces. As per the specified rules in the ACL, the traffic on the interface/ VLAN members or Port-channel members will be permitted or denied.

clear counters mac access-group

Clear counters for all or a specific MAC ACL.

Syntax

clear counters mac access-group [mac-list-name]

Parameters

mac-list-name (OPTIONAL) Enter the name of a configured MAC access list.

Command Modes

EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</table>
mac access-group

Apply a MAC ACL to traffic entering or exiting an interface. You can apply a MAC ACL on a physical, port-channel, or VLAN interface.

Syntax

mac access-group access-list-name {in [vlan vlan-range] | out}

To delete a MAC access-group, use the no mac access-group mac-list-name command.

Parameters

access-list-name

Enter the name of a configured MAC access list, up to 140 characters.

NOTE: This option is available only with the keyword in option.

vlan vlan-range

(OPTIONAL) Enter the keyword vlan and then enter a range of VLANs. The range is from 1 to 4094 (you can use IDs 1 to 4094).

NOTE: This option is available only with the keyword in option.

optimized

Enter the keyword optimized to enable ACL optimization.

in

Enter the keyword in to configure the ACL to filter incoming traffic.

out

Enter the keyword out to configure the ACL to filter outgoing traffic.

NOTE:
1. If the MAC ACL is applied on VLAN, none of the VLAN members should have an access list applied for that VLAN.
2. If the MAC ACL is applied on a Physical or Port Channel interface, the VLAN in which this port is associated should not have an access list applied.
3. If the MAC ACL is applied on a VLAN, then that VLAN should not belong to VLAN ACL group.
4. If the MAC ACL is applied on a VLAN ACL group, then none of the VLANs in that group should have an access list applied on it.

Defaults

none

</tbody>
</table>

**Usage Information**

You can assign one ingress ACL and one egress ACL (standard or extended) to an interface.

**Related Commands**

- `mac access-list standard` — configure a standard MAC ACL.
- `mac access-list extended` — configure an extended MAC ACL.

### show mac access-lists

Display all of the Layer 2 ACLs configured in the system, whether or not they are applied to an interface, and the count of matches/mismatches against each ACL entry displayed.

**Syntax**

```
show mac access-lists [access-list-name] [interface interface] [in | out]
```

**Parameters**

- `access-list-name`  
  Enter the name of a configured MAC ACL, up to 140 characters.
- `interface interface`  
  Enter the keyword `interface` then the one of the following keywords and the interface information:
  - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.
  - For a port-channel interface, enter the keywords `port-channel` then the port-channel ID.

- `in | out`  
  Identify whether ACL is applied on ingress or egress side.

**Command Modes**  

EXEC Privilege

**Command History**  

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version**

- 9.10(0.0)  
  Introduced on the S3148.
- 9.8(2.0)  
  Introduced on the S3100 series.
### show mac accounting access-list

Display MAC access list configurations and counters (if configured).

**Syntax**

```
show mac accounting access-list access-list-name interface interface in | out
```

**Parameters**

- `access-list-name`: Enter the name of a configured MAC ACL, up to 140 characters.
- `interface interface`: Enter the keyword `interface` then the one of the following keywords and the interface information:
  - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a port channel interface, enter the keywords `port-channel` then a number.
  - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.
- `in | out`: Identify whether ACL is applied on ingress or egress side.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</table>
### Version Description

- **9.8(0.0P5)** Introduced on the S4048-ON.
- **9.8(0.0P2)** Introduced on the S3048-ON.
- **9.7(0.0)** Introduced on the S6000-ON.
- **9.2(1.0)** Introduced on the Z9500.
- **9.0.2.0** Introduced on the S6000.
- **8.3.19.0** Introduced on the S4820T.
- **8.3.11.1** Introduced on the Z9000.
- **8.3.7.0** Introduced on the S4810.
- **8.5.1.0** Added support for 4-port 40G line cards on the E-Series.
- **8.1.1.0** Introduced on the E-Series.
- **7.8.1.0** Increased the name string to accept up to 140 characters. Prior to 7.8.1.0, names are up to 16 characters long.
- **7.6.1.0** Introduced on the S-Series.
- **7.5.1.0** Introduced on the C-Series.
- **6.1.1.0** Introduced on the E-Series.

### Usage Information

The ACL hit counters increment the counters for each matching rule, not just the first matching rule.

### Example

```plaintext
Dell# show mac accounting access-list TestMac interface gigabitethernet 1/8 in
Ingress Standard mac access-list TestMac on GigabitEthernet 1/89
Total cam count 2
  seq 5 permit aa:aa:aa:aa:00:00 00:00:00:ff:ff count (0 packets)
  seq 10 deny any count (20072594 packets)
Dell#
```

### Standard MAC ACL Commands

When you create an access control list without any rule and then apply it to an interface, the ACL behavior reflects implicit permit. These commands configure standard MAC ACLs and support both Ingress and Egress MAC ACLs.

**NOTE:** For more information, also refer to the [Commands Common to all ACL Types](#) and [Common MAC Access List Commands](#) sections.

#### deny

To drop packets with the MAC address specified, configure a filter.

**Syntax**

```plaintext
deny [any | mac-source-address [mac-source-address-mask]] [count [byte]] [log] [monitor]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no deny [any | mac-source-address mac-source-address-mask]` command.
Parameters

any
Enter the keyword any to specify that all routes are subject to the filter.

mac-source-address

mac-source-address-mask
(OPTIONAL) Specify which bits in the MAC address must match. If no mask is specified, a mask of 00:00:00:00:00:00 is applied (in other words, the filter allows only MAC addresses that match).

count
(OPTIONAL) Enter the keyword count to count packets processed by the filter.

byte
(OPTIONAL) Enter the keyword byte to count bytes processed by the filter.

log
(OPTIONAL, E-Series only) Enter the keyword log to log the packets.

monitor
(OPTIONAL) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface. For more information, see the “Flow-based Monitoring” in the Port Monitoring section in the Dell Networking OS Configuration Guide.

Defaults
Not enabled.

Command Modes
CONFIGURATION-MAC ACCESS LIST-STANDARD

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100–ON.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000–ON.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
8.3.7.0 Introduced on the S4810.
8.11.0 Introduced on the E-Series.
7.6.1.0 Introduced on the S-Series.
7.5.1.0 Introduced on the C-Series.
7.4.1.0 Added the monitor option.

Usage Information
When you use the log option, the CP processor logs detail the packets that match. Depending on how many packets match the log entry and at what rate, the CP may become busy as it has to log these packets’ details.

NOTE: When you configure ACL logging and byte counters simultaneously, byte counters may display an incorrect value. Configure packet counters with logging instead.
mac access-list standard

To configure a standard MAC ACL, name a new or existing MAC access control list (MAC ACL) and enter MAC ACCESS LIST mode. Also refer to the Commands Common to all ACL Types section and the Common MAC Access List Commands section.

Syntax

```
mac access-list standard mac-list-name
To delete a MAC access list, use the no mac access-list standard mac-list-name command.
```

Parameters

- `mac-list-name` Enter a text string as the name of the standard MAC access list (140 character maximum).

Defaults

Not configured.

Command Modes

- CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>

Usage Information

Dell Networking OS supports one ingress and one egress MAC ACL per interface.

The number of entries allowed per ACL is hardware-dependent. For detailed specifications about entries allowed per ACL, see your line card documentation.
NOTE: Ingress ACLs are supported on C-Series and S-Series platforms only.

Example

```console
Dell(conf)# mac-access-list access-list standard TestMAC
Dell(config-std-macl)# permit 00:00:00:00:00:00 00:00:00:00:ff:ff count
Dell(config-std-macl)# deny any count
Dell(config-std-macl)#
```

**permit**

To forward packets from a specific source MAC address, configure a filter.

```
permit {any | mac-source-address [mac-source-address-mask]} [count [byte]] | [log [interval minutes] [threshold-in-msgs [count]]] [monitor]
```

To remove this filter, you have two choices:
- Use the `no seq sequence-number` command if you know the filter's sequence number.
- Use the `no permit {any | mac-source-address mac-source-address-mask}` command.

**Parameters**

- `any` Enter the keyword `any` to forward all packets received with a MAC address.
- `mac-source-address-mask` (OPTIONAL) Specify which bits in the MAC address must match. If no mask is specified, a mask of 00:00:00:00:00:00 is applied (in other words, the filter allows only MAC addresses that match).
- `count` (OPTIONAL) Enter the keyword `count` to count packets processed by the filter.
- `byte` (OPTIONAL) Enter the keyword `byte` to count bytes processed by the filter.
- `log` (OPTIONAL) Enter the keyword `log` to include ACL messages in the log.
- `threshold-in-msgs count` (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the `seq`, `permit`, or `deny` commands. The threshold range is from 1 to 100.
- `interval minutes` (OPTIONAL) Enter the keyword `interval` followed by the time period in minutes at which ACL logs must be generated. The threshold range is from 1 to 10 minutes.
- `monitor` (OPTIONAL) Enter the keyword `monitor` when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface. For more information, see “Flow-based Monitoring” in the Port Monitoring section of the Dell Networking OS Configuration Guide.

**Defaults**

Not configured.

**Command Modes**

- CONFIGURATION-MAC ACCESS LIST-STANDARD

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version**

- 9.10(0.0) Introduced on the S3148.

---

**NOTE:** Ingress ACLs are supported on C-Series and S-Series platforms only.

**Example**

```
Dell(conf)# mac-access-list access-list standard TestMAC
Dell(config-std-macl)# permit 00:00:00:00:00:00 00:00:00:00:ff:ff count
Dell(config-std-macl)# deny any count
Dell(config-std-macl)#
```

**permit**

To forward packets from a specific source MAC address, configure a filter.

```
permit {any | mac-source-address [mac-source-address-mask]} [count [byte]] | [log [interval minutes] [threshold-in-msgs [count]]] [monitor]
```

To remove this filter, you have two choices:
- Use the `no seq sequence-number` command if you know the filter's sequence number.
- Use the `no permit {any | mac-source-address mac-source-address-mask}` command.

**Parameters**

- `any` Enter the keyword `any` to forward all packets received with a MAC address.
- `mac-source-address-mask` (OPTIONAL) Specify which bits in the MAC address must match. If no mask is specified, a mask of 00:00:00:00:00:00 is applied (in other words, the filter allows only MAC addresses that match).
- `count` (OPTIONAL) Enter the keyword `count` to count packets processed by the filter.
- `byte` (OPTIONAL) Enter the keyword `byte` to count bytes processed by the filter.
- `log` (OPTIONAL) Enter the keyword `log` to include ACL messages in the log.
- `threshold-in-msgs count` (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the `seq`, `permit`, or `deny` commands. The threshold range is from 1 to 100.
- `interval minutes` (OPTIONAL) Enter the keyword `interval` followed by the time period in minutes at which ACL logs must be generated. The threshold range is from 1 to 10 minutes.
- `monitor` (OPTIONAL) Enter the keyword `monitor` when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface. For more information, see “Flow-based Monitoring” in the Port Monitoring section of the Dell Networking OS Configuration Guide.

**Defaults**

- CONFIGURATION-MAC ACCESS LIST-STANDARD

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version**

- 9.10(0.0) Introduced on the S3148.
### Version Description
- **9.8(2.0)** Introduced on the S3100 series.
- **9.8(0.0P5)** Introduced on the S4048-ON.
- **9.8(0.0P2)** Introduced on the S3048-ON.
- **9.7(0.0)** Introduced on the S6000-ON.
- **9.2(1.0)** Introduced on the Z9500.
- **9.0.2.0** Introduced on the S6000.
- **8.3.19.0** Introduced on the S4820T.
- **8.3.11.1** Introduced on the Z9000.
- **8.3.7.0** Introduced on the S4810.
- **8.1.1.0** Introduced on the E-Series.
- **7.5.1.0** Introduced on the C-Series.
- **6.1.1.0** Introduced on the E-Series.

### Usage Information
When you use the `log` option, the CP processor logs details about the packets that match. Depending on how many packets match the log entry and at what rate, the CP may become busy as it has to log these packets’ details.

**NOTE:** When you configure the ACL logging and byte counters simultaneously, byte counters may display an incorrect value. Configure packet counters with logging instead.

### Related Commands
- `deny` — configure a MAC ACL filter to drop packets.
- `seq` — configure a MAC ACL filter with a specified sequence number.

### seq
To deny or permit filter in a MAC access list while creating the filter, assign a sequence number.

**Syntax**
```
deny {any | mac-source-address [mac-source-address-mask]} [count [byte]] [log [interval minutes] [threshold-in-msgs [count]] [monitor]
```

To remove this filter, you have two choices:
- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no deny {any | mac-source-address mac-source-address-mask}` command.

**Parameters**
- `any` Enter the keyword `any` to specify that all routes are subject to the filter.
- `mac-source-address-mask` (OPTIONAL) Specify which bits in the MAC address must match. If no mask is specified, a mask of `00:00:00:00:00:00` is applied (in other words, the filter allows only MAC addresses that match).
**count** *(OPTIONAL)* Enter the keyword `count` to count packets processed by the filter.

**byte** *(OPTIONAL)* Enter the keyword `byte` to count bytes processed by the filter.

**log** *(OPTIONAL)* Enter the keyword `log` to include ACL messages in the log.

**threshold-in msgs count** *(OPTIONAL)* Enter the `threshold-in-msgs count` keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the `seq`, `permit`, or `deny` commands. The threshold range is from 1 to 100.

**interval minutes** *(OPTIONAL)* Enter the keyword `interval` followed by the time period in minutes at which ACL logs must be generated. The threshold range is from 1 to 10 minutes.

**monitor** *(OPTIONAL)* Enter the keyword `monitor` when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface. For more information, see “Flow-based Monitoring” in the Port Monitoring section in the *Dell Networking OS Configuration Guide*.

**Usage Information** When you use the `log` option, the CP processor logs details about the packets that match. Depending on how many packets match the log entry and at what rate, the CP may become busy as it has to log these packets’ details.
NOTE: When you configure the ACL logging and byte counters simultaneously, byte counters may display an incorrect value. Configure packet counters with logging instead.

Related Commands

- **deny** — configure a filter to drop packets.
- **permit** — configure a filter to forward packets.

Extended MAC ACL Commands

When an access-list is created without any rule and then applied to an interface, ACL behavior reflects implicit permit. The following commands configure Extended MAC ACLs.

The platform supports both Ingress and Egress MAC ACLs.

NOTE: For more information, also refer to the Commands Common to all ACL Types and Common MAC Access List Commands sections.

**deny**

To drop packets that match the filter criteria, configure a filter.

**Syntax**

```
deny {any | host mac-address | mac-source-address mac-source-address-mask} {any | host mac-address | mac-destination-address mac-destination-address-mask} [ethertype-operator] [count [byte]] [log [interval minutes] [threshold-in-msgs [count]]] [monitor]
```

To remove this filter, you have two choices:

- Use the no seq sequence-number command if you know the filter’s sequence number.
- Use the no deny {any | host mac-address | mac-source-address mac-source-address-mask} {any | host mac-address | mac-destination-address mac-destination-address-mask} command.

**Parameters**

- **any**
  - Enter the keyword any to drop all packets.
- **host mac-address**
  - Enter the keyword host and then enter a MAC address to drop packets with that host address.
- **mac-source-address**
- **mac-source-address-mask**
  - Specify which bits in the MAC address must match.
  - The MAC ACL supports an inverse mask; therefore, a mask of ff:ff:ff:ff:ff:ff allows entries that do not match and a mask of 00:00:00:00:00:00 only allows entries that match exactly.
- **mac-destination-address**
  - Enter the destination MAC address and mask in nn:nn:nn:nn:nn:nn format.
- **mac-destination-address-mask**
  - Specify which bits in the MAC address must match.
The MAC ACL supports an inverse mask; therefore, a mask of ff:ff:ff:ff:ff:ff allows entries that do not match and a mask of 00:00:00:00:00:00 only allows entries that match exactly.

**ethertype operator** (OPTIONAL) To filter based on protocol type, enter one of the following Ethertypes:

- `ev2` - is the Ethernet II frame format
- `llc` - is the IEEE 802.3 frame format
- `snap` - is the IEEE 802.3 SNAP frame format

**count** (OPTIONAL) Enter the keyword count to count packets processed by the filter.

**byte** (OPTIONAL) Enter the keyword byte to count bytes processed by the filter.

**log** (OPTIONAL) Enter the keyword log to include ACL messages in the log.

**threshold-in-msgs** (OPTIONAL) Enter the `threshold-in-msgs` keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the `seq`, `permit`, or `deny` commands. The threshold range is from 1 to 100.

**interval minutes** (OPTIONAL) Enter the `interval` keyword followed by the time period in minutes at which ACL logs must be generated. The threshold range is from 1 to 10 minutes.

**monitor** (OPTIONAL) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface. For more information, see “Flow-based Monitoring” in the Port Monitoring section of the Dell Networking OS Configuration Guide.

### Related Commands
- `permit` — configure a MAC address filter to pass packets.
- `seq` — configure a MAC address filter with a specified sequence number.

### mac access-list extended

Name a new or existing extended MAC access control list (extended MAC ACL).

**Syntax**

```
mac access-list extended access-list-name [cpu-qos]
```

To delete a MAC access list, use the `no mac access-list extended access-list-name` command.

**Parameters**

- `access-list-name` Enter a text string as the MAC access list name, up to 140 characters.
- `cpu-qos` Enter the keywords `cpu-qos` to assign this ACL to control plane traffic only (CoPP).

**Defaults**

None

</tr>
</tbody>
</table>

Usage Information

The number of entries allowed per ACL is hardware-dependent. For detailed specifications about entries allowed per ACL, refer to your line card documentation.

Prior to 7.8.1.0, names are up to 16 characters long.

Example

Dell(conf)# mac-access-list access-list extended TestMATExt
Dell(config-ext-macl)# seq 10 permit any ev2 eq 800 count bytes
Dell(config-ext-macl)# seq 20 permit any ev2 eq 806 count bytes
Dell(config-ext-macl)# seq 30 permit any ev2 eq 86dd count bytes
Dell(config-ext-macl)# seq 40 permit any count bytes
Dell(config-ext-macl)# exit
Dell(conf)# do show mac accounting access-list snickers interface gig 1/17 in
Extended mac access-list snickers on GigabitEthernet 1/17
seq 10 permit any ev2 eq 800 count bytes (559851886 packets 191402152148 bytes)
seq 20 permit any ev2 eq 806 count bytes (74481486 packets 5031686754 bytes)
seq 30 permit any ev2 eq 86dd count bytes (775159 packets 797843521 bytes)

Related Commands

- `mac access-list standard` — configure a standard MAC access list.
- `show mac accounting access-list` — display MAC access list configurations and counters (if configured).

permit

To pass packets matching the criteria specified, configure a filter.

Syntax

```
permit {any | host mac-address | mac-source-address mac-source-address-mask} 
(any | host mac-address | mac-destination-address mac-destination-address-mask) 
[ethertype operator] [count [byte]] | [log] [monitor]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no permit {any | host mac-address | mac-source-address mac-source-address-mask} 
(any | mac-destination-address mac-destination-address-mask)` command.

Parameters

- any
  - Enter the keyword any to forward all packets.
- host
  - Enter the keyword host then a MAC address to forward packets with that host address.
mac-source-address

mac-source-address-mask

(OPTIONAL) Specify which bits in the MAC address must match. The MAC ACL supports an inverse mask; therefore, a mask of ff:ff:ff:ff:ff:ff allows entries that do not match and a mask of 00:00:00:00:00:00 only allows entries that match exactly.

mac-destination-address

Enter the destination MAC address and mask in nn:nn:nn:nn:nn:nn format.

mac-destination-address-mask

Specify which bits in the MAC address must be matched. The MAC ACL supports an inverse mask; therefore, a mask of ff:ff:ff:ff:ff:ff allows entries that do not match and a mask of 00:00:00:00:00:00 only allows entries that match exactly.

ethertype operator

(OPTIONAL) To filter based on protocol type, enter one of the following Ethertypes:

- ev2 - is the Ethernet II frame format
- llc - is the IEEE 802.3 frame format
- snap - is the IEEE 802.3 SNAP frame format

count

(Optional) Enter the keyword count to count packets the filter processes.

byte

(Optional) Enter the keyword byte to count bytes the filter processes.

log

(Optional, E-Series only) Enter the keyword log to log the packets.

monitor

(Optional) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

NOTE: For more information, see Flow-based Monitoring in the "Port Monitoring" section of the Dell Networking OS Configuration Guide.

Defaults

Not configured.

### Usage Information

When you use the log option, the CP processor logs details about the packets that match. Depending on how many packets match the log entry and at what rate, the CP may become busy as it has to log these packets' details.

**NOTE:** When you configure the ACL logging and byte counters simultaneously, byte counters may display an incorrect value. Configure packet counters with logging instead.

### Related Commands

- `deny` — configure a MAC ACL filter to drop packets.
- `seq` — configure a MAC ACL filter with a specified sequence number.

### IP Prefix List Commands

When you create an access-list without any rule and then apply it to an interface, the ACL behavior reflects implicit permit. To configure or enable IP prefix lists, use these commands.

#### clear ip prefix-list

Reset the number of times traffic meets the conditions ("hit" counters) of the configured prefix lists.

**Syntax**

```
clear ip prefix-list [prefix-name]
```

**Parameters**

- `prefix-name` (OPTIONAL) Enter the name of the configured prefix list to clear only counters for that prefix list, up to 140 characters long.

**Defaults**

Clears "hit" counters for all prefix lists unless a prefix list is specified.

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</table>
deny

To drop packets meeting the criteria specified, configure a filter.

Syntax
deny ip-prefix [ge min-prefix-length] [le max-prefix-length]

To delete a drop filter, use the no deny ip-prefix command.

Parameters

- **ip-prefix** Specify an IP prefix in the network/length format. For example, 35.0.0.0/8 means match the first 8 bits of address 35.0.0.0.
- **ge min-prefix-length** (OPTIONAL) Enter the keyword ge and then enter the minimum prefix length, which is a number from zero (0) to 32.
- **le max-prefix-length** (OPTIONAL) Enter the keyword le and then enter the maximum prefix length, which is a number from zero (0) to 32.

Defaults

- Not configured.

Command Modes

- PREFIX-LIST

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking
OS Command Line Reference Guide.

</tbody>
</table>
### ip prefix-list

Enter the PREFIX-LIST mode and configure a prefix list.

**Syntax**

```
ip prefix-list prefix-name
```

To delete a prefix list, use the `no ip prefix-list prefix-name` command.

**Parameters**

- `prefix-name`: Enter a string up to 16 characters long as the name of the prefix list, up to 140 characters long.

**Command Modes**

CONFIGURATION

**Command History**

<td>Introduced on the S3048-ON.</td>
</tr>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
</tbody>
</table>

**Usage Information**

Sequence numbers for this filter are automatically assigned starting at sequence number 5.

If you do not use the `ge` or `le` options, only packets with an exact match to the prefix are filtered.
Usage Information
Prefix lists redistribute OSPF and RIP routes meeting specific criteria.

Related Commands
- `show ip route list` — display IP routes in an IP prefix list.
- `show ip prefix-list summary` — display a summary of the configured prefix lists.

**seq**

To a deny or permit filter in a prefix list while configuring the filter, assign a sequence number.

**Syntax**
```
seq sequence-number {deny | permit} {any} | [ip-prefix /nn {ge min-prefix-length} {le max-prefix-length}] | [bitmask number]
```

To delete a specific filter, use the `no seq sequence-number {deny | permit} {any} | [ip-prefix /nn {ge min-prefix-length} {le max-prefix-length}] | [bitmask number].`

**Parameters**
- `sequence-number` Enter a number. The range is from 1 to 4294967294.
- `deny` Enter the keyword `deny` to configure a filter to drop packets meeting this condition.
- `permit` Enter the keyword `permit` to configure a filter to forward packets meeting this condition.
- `any` (OPTIONAL) Enter the keyword `any` to match any packets.
- `ip-prefix /nn` (OPTIONAL) Specify an IP prefix in the network/length format. For example, 35.0.0.0/8 means match the first 8 bits of address 35.0.0.0.
- `ge min-prefix-length` (OPTIONAL) Enter the keyword `ge` and then enter the minimum prefix length, which is a number from zero (0) to 32.
- `le max-prefix-length` (OPTIONAL) Enter the keyword `le` and then enter the maximum prefix length, which is a number from zero (0) to 32.
- `bitmask number` Enter the keyword `bitmask` then enter a bit mask number in dotted decimal format.

**Defaults**
Not configured.

Route Map Commands

When you create an access-list without any rule and then applied to an interface, the ACL behavior reflects implicit permit. To configure route maps and their redistribution criteria, use the following commands.

**continue**

To a route-map entry with a higher sequence number, configure a route-map.

**Syntax**

```
continue [sequence-number]
```

**Parameters**

- `sequence-number` (OPTIONAL) Enter the route map sequence number. The range is from 1 to 65535.

**Defaults**

Not configured.

**Command Modes**

ROUTE-MAP

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</table>
**Version** | **Description**
---|---
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
8.1.1.0 | Introduced on the E-Series.
7.6.1.0 | Introduced on the S-Series.
7.5.1.0 | Introduced on the C-Series.
7.4.1.0 | Introduced on the E-Series.

**Usage Information**
The `continue` feature allows movement from one route-map entry to a specific route-map entry (the sequence number). If you do not specify the sequence number, the `continue` feature simply moves to the next sequence number (also known as an implied continue). If a match clause exists, the `continue` feature executes only after a successful match occurs. If there are no successful matches, the `continue` feature is ignored.

**Match clause with Continue clause**
The `continue` feature can exist without a match clause. A continue clause without a match clause executes and jumps to the specified route-map entry.

With a match clause and a continue clause, the match clause executes first and the continue clause next in a specified route map entry. The continue clause launches only after a successful match. The behavior is:

- A successful match with a continue clause, the route map executes the set clauses and then goes to the specified route map entry upon execution of the continue clause.
- If the next route map entry contains a continue clause, the route map executes the continue clause if a successful match occurs.
- If the next route map entry does not contain a continue clause, the route map evaluates normally. If a match does not occur, the route map does not continue and falls through to the next sequence number, if one exists.

**Set Clause with Continue Clause**
If the route-map entry contains sets with the continue clause, set actions are performed first then the continue clause jumps to the specified route map entry.

- If a set action occurs in the first route map entry and then the same set action occurs with a different value in a subsequent route map entry, the last set of actions overrides the previous set of actions with the same set command.
- If `set community additive` and `set as-path prepend` are configure, the communities and AS numbers are prepended.

**Related Commands**
- `set community` — specify a COMMUNITY attribute.
- `set as-path` — configure a filter to modify the AS path.

**description**
Add a description to this route map.

**Syntax**
```
description {description}
```
To remove the description, use the `no description {description}` command.
Parameters

description

Enter a description to identify the route map (80 characters maximum).

Defaults

None

match as-path

To match routes that have a certain AS number in their BGP path, configure a filter.

Syntax

match as-path as-path-name

To delete a match AS path filter, use the no match as-path as-path-name command.

Parameters

as-path-name

Enter the name of an established AS-PATH ACL, up to 140 characters.

Defaults

Not configured.

**Related Commands**

- **set as-path** — add information to the BGP AS_PATH attribute.

**match community**

To match routes that have a certain COMMUNITY attribute in their BGP path, configure a filter.

**Syntax**

```
match community community-list-name [exact]
```

To delete a community match filter, use the no match community command.

**Parameters**

- `community-list-name`  
  Enter the name of a configured community list.
- `exact`  
  (OPTIONAL) Enter the keywords exact to process only those routes with this community list name.

**Defaults**

Not configured.

Related Commands
- `set community` — specify a COMMUNITY attribute.

**match interface**

To match routes whose next hop is on the interface specified, configure a filter.

**Syntax**

```
match interface interface
```

To remove a match, use the `no match interface interface` command.

**Parameters**

`interface` Enter the following keywords and the interface information:

- For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
- For a port channel interface, enter the keywords `port-channel` then a number.
- For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

- `match route-type` — redistribute routes that match a route type.
- `match tag` — redistribute routes that match a specific tag.

**match metric**

To match on a specified value, configure a filter.

**Syntax**

```
match metric metric-value
```

To delete a value, use the `no match metric [metric-value]` command.

**Parameters**

- `metric-value` Enter a value to match. The range is from zero (0) to 4294967295.

**Defaults**

Not configured.

**Related Commands**

- **match interface** — redistribute routes that match the next-hop interface.
- **match ip address** — redistribute routes that match an IP address.
- **match ip next-hop** — redistribute routes that match the next-hop IP address.
- **match ip route-source** — redistribute routes that match routes advertised by other routers.
- **match route-type** — redistribute routes that match a route type.
- **match tag** — redistribute routes that match a specific tag.

**match origin**

To match routes based on the value found in the BGP path ORIGIN attribute, configure a filter.

**Syntax**

```
mach origin {egp | igp | incomplete}
```

To disable matching filter, use the `no match origin {igp | egp | incomplete}` command.

**Parameters**

- **egp**
  - Enter the keyword `egp` to match routes originating outside the AS.
- **igp**
  - Enter the keyword `igp` to match routes originating within the same AS.
- **incomplete**
  - Enter the keyword `incomplete` to match routes with incomplete routing information.

**Defaults**

- Not configured.
match route-type

To match routes based on how the route is defined, configure a filter.

Syntax

```
match route-type {external [type-1 | type-2] | internal | level-1 | level-2 | local}
To delete a match, use the no match route-type {local | internal | external [type-1 | type-2] | level-1 | level-2} command.
```

Parameters

- **external [type-1 | type-2]**: Enter the keyword `external` then either `type-1` or `type-2` to match only on OSPF Type 1 routes or OSPF Type 2 routes.
- **internal**: Enter the keyword `internal` to match only on routes generated within OSPF areas.
- **level-1**: Enter the keyword `level-1` to match IS-IS Level 1 routes.
- **level-2**: Enter the keyword `level-2` to match IS-IS Level 2 routes.
- **local**: Enter the keyword `local` to match only on routes generated within the switch.

Defaults

Not configured.

- `match metric` — redistribute routes that match a specific metric.
- `match tag` — redistribute routes that match a specific tag.

**match tag**

To redistribute only routes that match a specified tag value, configure a filter.

**Syntax**

```
match tag tag-value
```

To remove a match, use the `no match tag` command.

**Parameters**

- `tag-value`  
  Enter a value as the tag on which to match. The range is from zero (0) to 4294967295.

**Defaults**

Not configured.

**Related Commands**
- `match interface` — redistribute routes that match the next-hop interface.
- `match ip address` — redistribute routes that match an IP address.
- `match ip next-hop` — redistribute routes that match the next-hop IP address.
- `match ip route-source` — redistribute routes that match routes advertised by other routers.
- `match metric` — redistribute routes that match a specific metric.
- `match route-type` — redistribute routes that match a route type.

**route-map**

Enable a route map statement and configure its action and sequence number. This command also places you in ROUTE-MAP mode.

**Syntax**
```
route-map map-name [permit | deny] [sequence-number]
```

To delete a route map, use the `no route-map map-name [permit | deny] [sequence-number]` command.

**Parameters**
- `map-name` (OPTIONAL) Enter a text string of up to 140 characters to name the route map for easy identification.
- `permit` (OPTIONAL) Enter the keyword `permit` to set the route map default as permit. If you do not specify a keyword, the default is `permit`.
- `deny` (OPTIONAL) Enter the keyword `deny` to set the route map default as deny.
- `sequence-number` (OPTIONAL) Enter a number to identify the route map for editing and sequencing with other route maps. You are prompted for a sequence number if there are multiple instances of the route map. The range is from 1 to 65535.

**Defaults**
Not configured.
If you do not define a keyword (permit or deny) for the route map, the permit action is the default.

Command Modes

CONFIGURATION

<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>pre-6.1.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information

Use caution when you delete route maps because if you do not specify a sequence number, all route maps with the same map-name are deleted when you use the no route-map map-name command.

Example

```
Dell(conf)# route-map dempsey
Dell(config-route-map)#
```

Related Commands

- **show config** — display the current configuration.

set as-path

To modify the AS path for border gateway protocol (BGP) routes, configure a filter.

**Syntax**

```
set as-path prepend as-number [... as-number]
```

To remove an AS-Path setting, use the **no set as-path {prepend as-number | tag}** command.
Parameters

prepend as-number  Enter the keyword prepend and then enter up to eight AS numbers to be inserted into the BGP path information. The range is from 1 to 65535.

Defaults

Not configured.

</tr>
<tr>
<td>pre-6.1.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information

You can prepend up to eight AS numbers to a BGP route.

This command influences best path selection in BGP by inserting a tag or AS number into the AS_PATH attribute.

Related Commands

- match as-path — redistribute routes that match an AS-PATH attribute.

set automatic-tag

To automatically compute the tag value of the route, configure a filter.

Syntax

set automatic-tag

To return to the default, enter no set automatic-tag.

Defaults

Not configured.

Command Modes

ROUTE-MAP
set comm-list delete

To remove the specified community list from the BGP route's COMMUNITY attribute, configure a filter.

Syntax

```
set comm-list community-list-name delete
```

To insert the community list into the COMMUNITY attribute, use the `no set comm-list community-list-name delete` command.

Parameters

- **community-list-name**
  
Enter the name of an established Community list, up to 140 characters.

Defaults

Not configured.

Related Commands

- `set level` — specify the OSPF area for route redistribution. 
- `set metric` — specify the metric value assigned to redistributed routes. 
- `set metric-type` — specify the metric type assigned to redistributed routes. 
- `set tag` — specify the tag assigned to redistributed routes.
## set comm-list delete

Allows you to delete the COMMUNITY attribute from the route map sequence.

### Syntax

```
set comm-list delete
```

### Parameters

- `community-number` Enter the community number in AA:NN format where AA is the AS number (2 bytes) and NN is a value specific to that autonomous system.

### Usage Information

The community list used in the `set comm-list delete` command must be configured so that each filter contains only one community. For example, the filter `deny 100:12` is acceptable, but the filter `deny 120:13 140:33` results in an error.

If the `set comm-list delete` command and the `set community` command are configured in the same route map sequence, the deletion command (`set comm-list delete`) is processed before the insertion command (`set community`).

### Related Commands

- `match community` — redistribute routes that match the COMMUNITY attribute.
- `set community` — specify a COMMUNITY attribute.

## set community

Allows you to assign a BGP COMMUNITY attribute.

### Syntax

```
set community {community-number | local-as | no-advertise | no-export | none} [additive]
```

To delete a BGP COMMUNITY attribute assignment, use the `no set community {community-number | local-as | no-advertise | no-export | none}` command.

### Parameters

- `community-number` Enter the community number in AA:NN format where AA is the AS number (2 bytes) and NN is a value specific to that autonomous system.
local-AS Enter the keywords local-AS to drop all routes with the COMMUNITY attribute of NO_EXPORT_SUBCONFED.
All routes with the NO_EXPORT_SUBCONFED (0xFFFFFF03) community attribute must not be advertised to external BGP peers.

no-advertise Enter the keywords no-advertise to drop all routes containing the well-known community attribute of NO_ADVERTISE.
All routes with the NO_ADVERTISE (0xFFFFFF02) community attribute must not be advertised to other BGP peers.

no-export Enter the keywords no-export to drop all routes containing the well-known community attribute of NO_EXPORT.
All routes with the NO_EXPORT (0xFFFFFF01) community attribute must not be advertised outside a BGP confederation boundary.

none Enter the keyword none to remove the community attribute from routes meeting the route map criteria.

additive (OPTIONAL) Enter the keyword additive to add the communities to already existing communities.

Defaults Not configured.

set level

To specify the IS-IS level or OSPF area to which matched routes are redistributed, configure a filter.

Syntax

```
set level {backbone | level-1 | level-1-2 | level-2 | stub-area}
```

To remove a set level condition, use the `no set level {backbone | level-1 | level-1-2 | level-2 | stub-area}` command.

Parameters

- **backbone**: Enter the keyword `backbone` to redistribute matched routes to the OSPF backbone area (area 0.0.0.0).
- **level-1**: Enter the keyword `level-1` to redistribute matched routes to IS-IS Level 1.
- **level-1-2**: Enter the keyword `level-1-2` to redistribute matched routes to IS-IS Level 1 and Level 2.
- **level-2**: Enter the keyword `level-2` to redistribute matched routes to IS-IS Level 2.
- **stub-area**: Enter the keyword `stub` to redistribute matched routes to OSPF stub areas.

Defaults

Not configured.

</tbody>
</table>
Usage Information
The `set local-preference` command changes the LOCAL_PREF attribute for routes meeting the route map criteria. To change the LOCAL_PREF for all routes, use the `bgp default local-preference` command.

Related Commands

- `bgp default local-preference` — change the default LOCAL_PREF attribute for all routes.

**set metric**

To assign a new metric to redistributed routes, configure a filter.

Syntax

```
set metric [+ | -] metric-value
```

To delete a setting, enter `no set metric`.

Parameters

- **+** (OPTIONAL) Enter + to add a metric-value to the redistributed routes.
- **-** (OPTIONAL) Enter - to subtract a metric-value from the redistributed routes.
- **metric-value** Enter a number as the new metric value. The range is from zero (0) to 4294967295.

Defaults
Not configured.

Related Commands

- `set automatic-tag` — compute the tag value of the route.
- `set level` — specify the OSPF area for route redistribution.
set metric-type

To assign a new route type for routes redistributed to OSPF, configure a filter.

**Syntax**
```
set metric-type {internal | external | type-1 | type-2}
```

To delete a setting, use the `no set metric-type` command.

**Parameters**
- **internal**
  - Enter the keyword `internal` to assign the Interior Gateway Protocol metric of the next hop as the route’s BGP MULTI_EXIT_DES (MED) value.
- **external**
  - Enter the keyword `external` to assign the IS-IS external metric.
- **type-1**
  - Enter the keyword `type-1` to assign the OSPF Type 1 metric.
- **type-2**
  - Enter the keyword `type-2` to assign the OSPF Type 2 metric.

**Defaults**
Not configured.

- `set metric` — specify the metric value assigned to redistributed routes.
- `set tag` — specify the tag assigned to redistributed routes.

**set next-hop**

To specify an IP address as the next hop, configure a filter.

**Syntax**
```
set next-hop ip-address
```
To delete the setting, use the `no set next-hop ip-address` command.

**Parameters**
- `ip-address` Specify an IP address in dotted decimal format.

**Defaults**
Not configured.

**Command Modes**
ROUTE-MAP

<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**
If you configure the `set next-hop` command, its configuration takes precedence over the `neighbor next-hop-self` command in the ROUTER BGP mode.
If you configure the `set next-hop` command with the interface’s IP address (either Loopback or physical), the software declares the route unreachable.

**Related Commands**
- `match ip next-hop` — redistribute routes that match the next-hop IP address.

## set origin

To manipulate the BGP ORIGIN attribute, configure a filter.

**Syntax**

```
set origin {igp | egp | incomplete}
```

To delete an ORIGIN attribute setting, use the `no set origin` command.

**Parameters**

- `egp` Enter the keyword `egp` to set routes originating from outside the local AS.
- `igp` Enter the keyword `igp` to set routes originating within the same AS.
- `incomplete` Enter the keyword `incomplete` to set routes with incomplete routing information.

**Defaults**

Not configured.

**Command Modes**

ROUTE-MAP

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Related Commands**

- `set automatic-tag` — compute the tag value of the route.
- `set level` — specify the OSPF area for route redistribution.
- `set metric` — specify the metric value assigned to redistributed routes.
- `set metric-type` — specify the route type assigned to redistributed routes.
To add a non-RFC compliant attribute to the BGP route to assist with route selection, configure a filter.

Syntax

```
set weight weight
```

To delete a weight specification, use the `no set weight weight` command.

Parameters

- **weight**
  Enter a number as the weight used by the route meeting the route map specification. The range is from 0 to 65535. The default is router-originated = 32768 and all other routes = 0.
  When there are multiple routes to the same destination, the routes with a higher weight are preferred.

Defaults

- router-originated = 32768; all other routes = 0

Defaults

Not configured.

Command Modes

- ROUTE-MAP

Command History

Example

```
Dell# show route-map
route-map firpo, permit, sequence 10
Match clauses:
Set clauses:
tag 34
Dell#
```

Related Commands

- route-map — configure a route map.

AS-Path Commands

The following commands configure AS-Path ACLs.
**ip as-path access-list**

Enter AS-PATH ACL mode and configure an access control list based on the BGP AS_PATH attribute.

**Syntax**

```
ip as-path access-list as-path-name
```

**Parameters**

- `as-path-name` Enter the access-list name, up to 140 characters.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Command History**

</table>

**Usage Information**

To apply the AS-PATH ACL to BGP routes, use the `match as-path` or `neighbor filter-list` commands.

**Example**

```
Dell(conf)# ip as-path access-list TestPath
Dell(config-as-path)#
```

**Related Commands**

- `match as-path` — match on routes contain a specific AS-PATH.

**show ip as-path-access-lists**

Display the all AS-PATH access lists configured on the E-Series.

**Syntax**

```
show ip as-path-access-lists
```

**Command Modes**

- EXEC
- EXEC Privilege

IP Community List Commands

IP community list commands are supported on the Dell Networking OS.

ip community-list

Enter COMMUNITY-LIST mode and create an IP community-list for BGP.

Syntax

```
ip community-list comm-list-name
```

To delete a community-list, use the no ip community-list comm-list-name command.

Parameters

- **comm-list-name**: Enter a text string as the name of the community-list, up to 140 characters.

Command Modes

- **CONFIGURATION**

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</table>
### show ip community-lists

Display configured IP community lists in alphabetic order.

**Syntax**

```plaintext
show ip community-lists [name]
```

**Parameters**

- `name`
  
  (OPTIONAL) Enter the name of the standard or extended IP community list, up to 140 characters.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

#### Version Description

- **9.10(0.0)**
  - Introduced on the S3148.

- **9.8(2.0)**
  - Introduced on the S3100 series.

- **9.8(0.0P5)**
  - Introduced on the S4048-ON.

- **9.8(0.0P2)**
  - Introduced on the S3048-ON.

- **9.2(1.0)**
  - Introduced on the Z9500.

- **8.3.19.0**
  - Introduced on the S4820T.

- **8.3.7.0**
  - Introduced on the S4810.

- **8.1.1.0**
  - Introduced on the E-Series.

- **7.8.1.0**
  - Increased the name string to accept up to 140 characters. Prior to 7.8.1.0, names are up to 16 characters long.

- **pre-Version 6.1.1.0**
  - Introduced on the E-Series.
deny (for Standard IP ACLs)

To drop packets with a certain IP address, configure a filter.

Syntax
deny {source | any | host {ip-address}}[count [byte]] [dscp value] [order] [fragments] [log [interval minutes] [threshold-in-msgs [count]]] [monitor]

To remove this filter, you have two choices:

- Use the no seq sequence-number command if you know the filter’s sequence number.
- Use the no deny {source [mask] | any | host ip-address} command.

Parameters

- **log** (OPTIONAL) Enter the keyword log to enable the triggering of ACL log messages.
- **threshold-in-msgs** (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated, with the seq, permit, or deny commands. The threshold range is from 1 to 100.
- **interval minutes** (OPTIONAL) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. The time interval range is from 1 to 10 minutes.
- **monitor** (OPTIONAL) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Defaults

By default, 10 ACL logs are generated if you do not specify the threshold explicitly.

The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

</tbody>
</table>
Version | Description
--- | ---
9.4(0.0) | Added support for flow-based monitoring on the S4810, S4820T, S6000, and Z9000 platforms.

Usage Information

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the `flow-based enable` command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

Related Commands

- `ip access-list standard` — configure a standard ACL.
- `permit` — configure a permit filter.

**deny (for Extended IP ACLs)**

Configure a filter that drops IP packets meeting the filter criteria.

**Syntax**

```plaintext
deny {ip | ip-protocol-number} {source mask | any | host ip-address} 
      (destination mask | any | host ip-address) [count [byte]] [dscp value] [order] 
      [monitor] [fragments] [log [interval minutes] [threshold-in-msgs [count]] 
      [monitor]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no deny {ip | ip-protocol-number} {source mask | any | host ip-address} 
      {destination mask | any | host ip-address}` command.

**Parameters**

- `log` (OPTIONAL) Enter the keyword `log` to enable the triggering of ACL log messages.
- `threshold-in-msgs count` (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated. with the `seq`, `permit`, or `deny` commands. The threshold range is from 1 to 100.
- `interval minutes` (OPTIONAL) Enter the keyword `interval` followed by the time period in minutes at which ACL logs must be generated. The time interval range is from 1 to 10 minutes.
monitor (OPTIONAL) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Defaults

By default, 10 ACL logs are generated if you do not specify the threshold explicitly.

The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the flow-based enable command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

Related Commands

- deny tcp — assign a filter to deny TCP packets.
- deny udp — assign a filter to deny UDP packets.
- ip access-list extended — create an extended ACL.
seq (for Standard IPv4 ACLs)

Assign a sequence number to a deny or permit filter in an IP access list while creating the filter.

**Syntax**

```
seq sequence-number {deny | permit} {source [mask] | any | host ip-address}
[count [bytes]] [dscp value] [order] [fragments] [log [interval minutes]
[threshold-in-msgs [count]] [monitor]
```

To delete a filter, use the no seq sequence-number command.

**Parameters**

- `log` (OPTIONAL) Enter the keyword log to enable the triggering of ACL log messages.
- `threshold-in msgs count` (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the seq, permit, or deny commands. The threshold range is from 1 to 100.
- `interval minutes` (OPTIONAL) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. The interval range is from 1 to 10 minutes.
- `monitor` (OPTIONAL) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

**Defaults**

By default, 10 ACL logs are generated if you do not specify the threshold explicitly.

The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

**Version** | **Description**
--- | ---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100-ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.7(0.0) | Introduced on the S6000-ON.
9.4(0.0) | Added support for flow-based monitoring on the S4810, S4820T, S6000, and Z9000 platforms.
9.3(0.0) | Added support for logging of ACLs on the S4810, S4820T, and Z9000 platforms.

**Usage Information**

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet counts for the previous interval are cleared.

When the ACL log message threshold is reached for a particular ACL, additional messages are logged only if the ACL monitor is enabled. To disable additional logging, enter the no logging monitor command in the CLI.

For ACEs that match packets, the ACL logging is done at the egress point of the packet. For ACL logging to work, the logging and monitoring features on the ACLs must be enabled from the CLI.

For flow-based monitoring, ACL logs are generated for the traffic in the trusted interface.

The packets count in the ACL logs include both incoming and outgoing traffic.
count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the `flow-based enable` command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

**Related Commands**

- `deny` — configure a filter to drop packets.
- `permit` — configure a filter to forward packets.

**deny tcp (for Extended IP ACLs)**

Configure a filter that drops transmission control protocol (TCP) packets meeting the filter criteria.

**Syntax**

```
deny tcp {source mask | any | host ip-address} [bit] [operator port [port]]
{destination mask | any | host ip-address} [dscp] [bit] [operator port [port]]
[count [byte]] [order] [fragments] [log [interval minutes] [threshold-in-msgs [count]] [monitor]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no deny tcp {source mask | any | host ip-address} {destination mask | any | host ip-address}` command.

**Parameters**

- `log` *(OPTIONAL)* Enter the keyword `log` to enable the triggering of ACL log messages.
- `threshold-in-msgs count` *(OPTIONAL)* Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated. with the seq, permit, or deny commands. The threshold range is from 1 to 100.
- `interval minutes` *(OPTIONAL)* Enter the keyword `interval` followed by the time period in minutes at which ACL logs must be generated. The interval range is from 1 to 10 minutes.
- `monitor` *(OPTIONAL)* Enter the keyword `monitor` when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

**Defaults**

By default, 10 ACL logs are generated if you do not specify the threshold explicitly.

The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

**Related Commands**

- deny — assign a filter to deny IP traffic.
- deny udp — assign a filter to deny UDP traffic.

### deny udp (for Extended IP ACLs)

To drop user datagram protocol (UDP) packets meeting the filter criteria, configure a filter.

**Syntax**

deny udp {source mask | any | host ip-address} [operator port [port]]
{destination mask | any | host ip-address} [dscp] [operator port [port]] [count [byte]] [order] [fragments] [log [interval minutes] [threshold-in-msgs [count]]]
To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no deny udp {source mask | any | host ip-address} {destination mask | any | host ip-address}` command.

**Parameters**

- **log** (OPTIONAL) Enter the keyword `log` to enable the triggering of ACL log messages.
- **threshold-in msgs** count (OPTIONAL) Enter the `threshold-in-msgs` keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated. The threshold range is from 1 to 100.
- **interval minutes** (OPTIONAL) Enter the keyword `interval` followed by the time period in minutes at which ACL logs must be generated. The time interval range is from 1 to 10 minutes.

**Defaults**

By default, 10 ACL logs are generated if you do not specify the threshold explicitly. The default frequency at which ACL logs are generated is five minutes.

**Related Commands**

- `deny` — assign a filter to deny IP traffic.
- `deny tcp` — assign a filter to deny TCP traffic.
**deny arp (for Extended MAC ACLs)**

Configure an egress filter that drops ARP packets on egress ACL supported line cards. (For more information, refer to your line card documentation).

**Syntax**

```plaintext
deny arp {destination-mac-address mac-address-mask | any} vlan vlan-id {ip-address | any | opcode code-number} [count [byte]] [order] [log [interval minutes] [threshold-in-msgs [count]]] [monitor]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter's sequence number.
- Use the `no deny arp {destination-mac-address mac-address-mask | any} vlan vlan-id {ip-address | any | opcode code-number}` command.

**Parameters**

- `log` (OPTIONAL) Enter the keyword `log` to enable the triggering of ACL log messages.
- `threshold-in msgs count` (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the `seq`, `permit`, or `deny` commands. The threshold range is from 1 to 100.

If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the flow-based enable command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead of all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

deny icmp (for Extended IP ACLs)

To drop all or specific internet control message protocol (ICMP) messages, configure a filter.

| NOTE: Only the options that have been newly introduced in Release 9.3(0.0) and Release 9.4(0.0) are described here. For a complete description on all of the keywords and variables that are available with this command, refer the topic of this command discussed earlier in this guide. |

Syntax

```
deny icmp {source mask | any | host ip-address} {destination mask | any | host ip-address} [dscp] [message-type] [count [byte]] [order] [fragments] [log [interval minutes] [threshold-in-msgs [count]] [monitor]]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no deny icmp {source mask | any | host ip-address} {destination mask | any | host ip-address}` command.

Parameters

- **log** (OPTIONAL) Enter the keyword log to enable the triggering of ACL log messages.
- **threshold-in-msgs** (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the seq, permit, or deny commands. The threshold range is from 1 to 100.
- **interval minutes** (OPTIONAL) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. The time interval range is from 1 to 10 minutes.
- **monitor** (OPTIONAL) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Defaults

By default, 10 ACL logs are generated if you do not specify the threshold explicitly.
The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

Usage Information

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the flow-based enable command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

deny ether-type (for Extended MAC ACLs)

Configure an egress filter that drops specified types of Ethernet packets on egress ACL supported line cards. (For more information, refer to your line card documentation).

Syntax
deny ether-type protocol-type-number {destination-mac-address mac-address-mask | any} vlan vlan-id {source-mac-address mac-address-mask | any} [count [byte]] [order] [log [interval minutes] [threshold-in-msgs [count]] [monitor]

To remove this filter, you have two choices:
- Use the no seq sequence-number command if you know the filter’s sequence number.
Use the `no deny ether-type protocol-type-number {destination-mac-address mac-address-mask | any} vlan vlan-id {source-mac-address mac-address-mask | any}` command.

**Parameters**

- **log** (OPTIONAL) Enter the keyword `log` to enable the triggering of ACL log messages.
- **threshold-in-msgs** (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the `seq`, `permit`, or `deny` commands. The threshold range is from 1 to 100.
- **interval minutes** (OPTIONAL) Enter the keyword `interval` followed by the time period in minutes at which ACL logs must be generated. The time interval range is from 1 to 10 minutes.
- **monitor** (OPTIONAL) Enter the keyword `monitor` when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

**Defaults**

By default, 10 ACL logs are generated if you do not specify the threshold explicitly.

The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

**Command Modes**

- CONFIGURATION-EXTENDED-ACCESS-LIST

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
---|---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.7(0.0) | Introduced on the S6000-ON.
9.4(0.0) | Added support for flow-based monitoring on the S4810, S4820T, S6000, and Z9000 platforms.
9.3(0.0) | Added support for logging of ACLs on the S4810, S4820T, and Z9000 platforms.

**Usage Information**

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging was stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the `flow-based enable` command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress paths.
egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead of all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

deny (for Standard MAC ACLs)

To drop packets with a the MAC address specified, configure a filter.

Syntax

deny {any | mac-source-address [mac-source-address-mask]} [count [byte]] [log [interval minutes] [threshold-in-msgs [count]]][monitor]

To remove this filter, you have two choices:

- Use the no seq sequence-number command if you know the filter’s sequence number.
- Use the no deny {any | mac-source-address mac-source-address-mask} command.

Parameters

- **log** (OPTIONAL) Enter the keyword log to enable the triggering of ACL log messages.
- **threshold-in msgs** count (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated, with the seq, permit, or deny commands. The threshold range is from 1 to 100.
- **interval minutes** (OPTIONAL) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. The threshold range is from 1 to 10 minutes.
- **monitor** (OPTIONAL) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Defaults

By default, 10 ACL logs are generated if you do not specify the threshold explicitly.

The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

### Usage Information

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the `flow-based enable` command in Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

### Related Commands

- `permit` — configure a MAC address filter to pass packets.
- `seq` — configure a MAC address filter with a specified sequence number.

### deny (for Extended MAC ACLs)

To drop packets that match the filter criteria, configure a filter.

**Syntax**

```plaintext
deny {any | host mac-address | mac-source-address mac-source-address-mask} {any | host mac-address | mac-destination-address mac-destination-address-mask} [ethertype-operator] [count [byte]] [log [interval minutes] [threshold-in-msgs [count]] [monitor]
```

**Parameters**

- `log` (OPTIONAL) Enter the keyword log to enable the triggering of ACL log messages.
- `threshold-in-msgs` (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated, with the seq, permit, or deny commands. The threshold range is from 1 to 100.
interval minutes  (OPTIONAL) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. The time interval range is from 1 to 10 minutes.

monitor  (OPTIONAL) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Defaults

By default, 10 ACL logs are generated if you do not specify the threshold explicitly.

The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

9.4(0.0)    Added support for flow-based monitoring on the S4810, S4820T, S6000, and Z9000 platforms.
9.3(0.0)    Added support for logging of ACLs on the S4810, S4820T, and Z9000 platforms.

Usage Information

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the flow-based enable command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

Related Commands

-  permit  — configure a MAC address filter to pass packets.
-  seq  — configure a MAC address filter with a specified sequence number.
**permit (for Standard IP ACLs)**

To permit packets from a specific source IP address to leave the switch, configure a filter.

**Syntax**

```plaintext
permit {source [mask] | any | host ip-address} [count [byte]] [dscp value] [order] [fragments] [log [interval minutes] [threshold-in-msgs [count]] [monitor]
```

To remove this filter, you have two choices:

- Use the no seq sequence-number command if you know the filter's sequence number.
- Use the no permit {source [mask] | any | host ip-address} command.

**Parameters**

- `log` (OPTIONAL) Enter the keyword log to enable the triggering of ACL log messages.
- `threshold-in-msgs count` (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the seq, permit, or deny commands. The threshold range is from 1 to 100.
- `interval minutes` (OPTIONAL) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. The threshold range is from 1 to 10 minutes.
- `monitor` (OPTIONAL) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

**Defaults**

By default, 10 ACL logs are generated if you do not specify the threshold explicitly.

The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

### Related Commands

- `deny` — assign a IP ACL filter to deny IP packets.
- `ip access-list standard` — create a standard ACL.
- `permit arp` (for Extended MAC ACLs)

Configure a filter that forwards ARP packets meeting this criteria. This command is supported only on 12-port GE line cards with SFP optics; refer to your line card documentation for specifications.

#### Syntax

```
permit arp {destination-mac-address mac-address-mask | any} vlan vlan-id {ip-address | any | opcode code-number} [count [byte]] [order] [fragments] [log [interval minutes] [threshold-in-msgs [count]] [monitor]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `{destination-mac-address mac-address-mask | any} vlan vlan-id {ip-address | any | opcode code-number}` command.

#### Parameters

- **log** (OPTIONAL) Enter the keyword `log` to enable the triggering of ACL log messages.
- **threshold-in msgs count** (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated, exceeding which the generation of ACL logs is terminated with the `seq`, `permit`, or `deny` commands. The threshold range is from 1 to 100.
- **interval minutes** (OPTIONAL) Enter the keyword `interval` followed by the time period in minutes at which ACL logs must be generated. The interval range is from 1 to 10 minutes.
- **monitor** (OPTIONAL) Enter the keyword `monitor` when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

#### Defaults

By default, 10 ACL logs are generated if you do not specify the threshold explicitly.
The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

permit icmp (for Extended IP ACLs)

Configure a filter to allow all or specific ICMP messages.

Syntax

```
permit icmp {source mask | any | host ip-address} {destination mask | any | host ip-address} [dscp] [count [byte]] [order] [fragments] [log [interval minutes] [threshold-in-msgs [count]] [monitor]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no permit icmp {source mask | any | host ip-address} {destination mask | any | host ip-address}` command.

Parameters

- **log** (OPTIONAL) Enter the keyword `log` to enable the triggering of ACL log messages.
- **threshold-in-msgs count** (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the `seq`, `permit`, or `deny` commands. The threshold range is from 1 to 100.
- **interval minutes** (OPTIONAL) Enter the keyword `interval` followed by the time period in minutes at which ACL logs must be generated. The interval range is from 1 to 10 minutes.
- **monitor** (OPTIONAL) Enter the keyword `monitor` when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Defaults

By default, 10 ACL logs are generated if you do not specify the threshold explicitly.

The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

### Usage Information

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the `flow-based enable` command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

---

### permit udp (for Extended IP ACLs)

To pass UDP packets meeting the filter criteria, configure a filter.

**Syntax**

```
permit udp {source mask | any | host ip-address} {destination mask | any | host ip-address} [operator port [port]] [dscp] [operator port [port]] [count [byte]] [order] [fragments] [log [interval minutes] [threshold-in-msgs [count]] [monitor]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no permit udp {source mask | any | host ip-address} {destination mask | any | host ip-address} [operator port [port]] [dscp] [operator port [port]] [count [byte]] [order] [fragments] [log [interval minutes] [threshold-in-msgs [count]] [monitor]` command.

**Parameters**

- `log` *(OPTIONAL)* Enter the keyword log to enable the triggering of ACL log messages.
- `threshold-in-msgs count` *(OPTIONAL)* Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the seq, permit, or deny commands. The threshold range is from 1 to 100.
- `interval minutes` *(OPTIONAL)* Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. The interval range is from 1 to 10 minutes.
- `monitor` *(OPTIONAL)* Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.
By default, 10 ACL logs are generated if you do not specify the threshold explicitly.
The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the flow-based enable command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

- **ip access-list extended** — create an extended ACL.
- **permit** — assign a permit filter for IP packets.
- **permit tcp** — assign a permit filter for TCP packets.
permit (for Extended IP ACLs)

To pass IP packets meeting the filter criteria, configure a filter.

Syntax

```
permit {source mask | any | host ip-address} {destination mask | any | host ip-address} [count [bytes]] [dscp value] [order] [fragments] [log [interval minutes] [threshold-in-msgs [count]]] [monitor]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no deny {source mask | any | host ip-address} {destination mask | any | host ip-address}` command.

Parameters

- `log` (OPTIONAL) Enter the keyword log to enable the triggering of ACL log messages.
- `threshold-in msgs count` (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the `seq, permit, or deny` commands. The threshold range is from 1 to 100.
- `interval minutes` (OPTIONAL) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. The interval range is from 1 to 10 minutes.
- `monitor` (OPTIONAL) Enter the keyword `monitor` when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Defaults

By default, 10 ACL logs are generated if you do not specify the threshold explicitly.
The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

Usage Information

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, standard and extended IPv6 ACLs, and standard and extended MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the `flow-based enable` command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

Related Commands

- `ip access-list extended` — create an extended ACL.
- `permit tcp` — assign a permit filter for TCP packets.
- `permit udp` — assign a permit filter for UDP packets.

`permit (for Standard MAC ACLs)`

To forward packets from a specific source MAC address, configure a filter.

```
Syntax
permit {any | mac-source-address [mac-source-address-mask]} [count [byte]] | [log [interval minutes] [threshold-in-msgs [count]]] [monitor]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no permit {any | mac-source-address mac-source-address-mask}` command.

**Parameters**

- `log` (OPTIONAL) Enter the keyword `log` to enable the triggering of ACL log messages.
- `threshold-in-msgs count` (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the `seq`, `permit`, or `deny` commands. The threshold range is from 1 to 100.
- `interval minutes` (OPTIONAL) Enter the keyword `interval` followed by the time period in minutes at which ACL logs must be generated. The interval range is from 1 to 10 minutes.
- `monitor` (OPTIONAL) Enter the keyword `monitor` when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

**Defaults**

By default, 10 ACL logs are generated if you do not specify the threshold explicitly.
The default frequency at which ACL logs are generated is 5 minutes. By default, flow-based monitoring is not enabled.

This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

Related Commands

- `deny` — configure a MAC ACL filter to drop packets.
- `seq` — configure a MAC ACL filter with a specified sequence number.

**seq (for Standard MAC ACLs)**

To a deny or permit filter in a MAC access list while creating the filter, assign a sequence number.

**Syntax**

```
seq sequence-number {deny | permit} {any | mac-source-address [mac-source-address-mask]} [count [byte]] [log [interval minutes] [threshold-in-msgs [count]] [monitor]
```
To remove this filter, use the `no seq sequence-number` command.

### Parameters

**log** *(OPTIONAL)* Enter the keyword `log` to enable the triggering of ACL log messages.

**threshold-in msgs** *(OPTIONAL)* Enter the `threshold-in-msgs` keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the `seq`, `permit`, or `deny` commands. The threshold range is from 1 to 100.

**interval minutes** *(OPTIONAL)* Enter the keyword `interval` followed by the time period in minutes at which ACL logs must be generated. The interval range is from 1 to 10 minutes.

**monitor** *(OPTIONAL)* Enter the keyword `monitor` when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

### Defaults

By default, 10 ACL logs are generated if you do not specify the threshold explicitly.

The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

### Usage Information

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the `flow-based enable` command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both
the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead of all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

Related Commands
- deny — configure a filter to drop packets.
- permit — configure a filter to forward packets.

**permit tcp (for Extended IP ACLs)**

To pass TCP packets meeting the filter criteria, configure a filter.

**Syntax**
```
permit tcp {source mask | any | host ip-address} [bit] [operator port [port]]
{destination mask | any | host ip-address} [bit] [dscp] [operator port [port]]
[count [byte]] [order] [fragments] [log [interval minutes] [threshold-in-msgs
[count]] [monitor]
```

To remove this filter, you have two choices:
- Use the no seq sequence-number command if you know the filter’s sequence number.
- Use the no permit tcp {source mask | any | host ip-address} {destination mask | any | host ip-address} command.

**Parameters**

- **log**
  (OPTIONAL) Enter the keyword log to enable the triggering of ACL log messages.

- **threshold-in-msgs count**
  (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the seq, permit, or deny commands. The threshold range is from 1 to 100.

- **interval minutes**
  (OPTIONAL) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. The interval range is from 1 to 10 minutes.

- `permit udp` — assign a permit filter for UDP packets.

### seq arp (for Extended MAC ACLs)

Configure an egress filter with a sequence number that filters ARP packets meeting this criteria. This command is supported only on 12-port GE line cards with SFP optics. For specifications, refer to your line card documentation.

#### NOTE:

Only the options that have been newly introduced in Release 9.3(0.0) and Release 9.4(0.0) are described here. For a complete description on all of the keywords and variables that are available with this command, refer the topic of this command discussed earlier in this guide.

#### Syntax

```
seq sequence-number {deny | permit} arp {destination-mac-address mac-address-mask | any} vlan vlan-id {ip-address | any | opcode code-number} [count [byte]] [order] [log [interval minutes] [threshold-in-msgs [count]] [monitor]
```

To remove this filter, use the `no seq sequence-number` command.

#### Parameters

- `log`  
  (OPTIONAL) Enter the keyword `log` to enable the triggering of ACL log messages.
threshold-in msgs count

(Optional) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated, with the seq, permit, or deny commands. You can enter a threshold in the range of 1-100.

interval minutes

(Optional) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. You can enter an interval in the range of 1-10 minutes.

monitor

(Optional) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Defaults

By default, 10 ACL logs are generated if you do not specify the threshold explicitly.

The default frequency at which ACL logs are generated is 5 minutes. By default, flow-based monitoring is not enabled.

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description

9.10(0.0) Introduced on the S3148.

9.8(2.0) Introduced on the S3100 series.

9.8(0.0P5) Introduced on the S4048-ON.

9.8(0.0P2) Introduced on the S3048-ON.

9.7(z) Introduced on the S6000--ON.

9.4(0.0) Added support for flow-based monitoring on the S4810, S4820T, S6000, Z9000, and MXL 10/40GbE Switch IO Module platforms.

9.3.0.0 Added support for logging of ACLs on the S4810, S4820T, Z9000, and MXL 10/40GbE Switch IO Module platforms.

Usage Information

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is reenabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is reenabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, standard and extended IPv6 ACLs, and standard and extended MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the flow-based enable command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).
seq ether-type (for Extended MAC ACLs)

Configure an egress filter with a specific sequence number that filters traffic with specified types of Ethernet packets. This command is supported only on 12-port GE line cards with SFP optics. For specifications, refer to your line card documentation.

**NOTE:** Only the options that have been newly introduced in Release 9.3(0.0) and Release 9.4(0.0) are described here. For a complete description on all of the keywords and variables that are available with this command, refer the topic of this command discussed earlier in this guide.

**Syntax**

```plaintext
seq sequence-number {deny | permit} ether-type protocol-type-number {destination-mac-address mac-address-mask | any} vlan vlan-id {source-mac-address mac-address-mask | any} [count [byte]] [order] [log [interval minutes] [threshold-in msgs [count]] [monitor]
```

To remove this filter, use the no seq sequence-number command.

**Parameters**

- **log**  
  (OPTIONAL) Enter the keyword log to enable the triggering of ACL log messages.

- **threshold-in msgs**  
  (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated. with the seq, permit, or deny commands. You can enter a threshold in the range of 1-100.

- **count**  
  (OPTIONAL) Enter the keyword count followed by a value in the range of 1-100.

- **interval minutes**  
  (OPTIONAL) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. You can enter an interval in the range of 1-10 minutes.

- **monitor**  
  (OPTIONAL) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

**Defaults**

By default, 10 ACL logs are generated if you do not specify the threshold explicitly.

The default frequency at which ACL logs are generated is 5 minutes. By default, flow-based monitoring is not enabled.

It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

seq (for IP ACLs)

Assign a sequence number to a deny or permit filter in an extended IP access list while creating the filter.

Syntax

```
seq sequence-number {deny | permit} {ip-protocol-number | icmp | ip | tcp | udp} {source mask | any | host ip-address} {destination mask | any | host ip-address} [operator port [port]] [count [byte]] [dscp value] [order] [fragments] [log [interval minutes] [threshold-in-msgs [count]] [monitor]
```

Parameters

- `log` (OPTIONAL) Enter the keyword log to enable the triggering of ACL log messages.
- `threshold-in msgs count` (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the seq, permit, or deny commands. The threshold range is from 1 to 100..
- `interval minutes` (OPTIONAL) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. The interval range is from 1 to 10 minutes.
- `monitor` (OPTIONAL) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Defaults

By default, 10 ACL logs are generated if you do not specify the threshold explicitly.

The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

<td>Added support for logging of ACLs on the S4810, S4820T, and Z9000 platforms.</td>
</tr>
</tbody>
</table>

### Usage Information

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the `flow-based enable` command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

### Related Commands

- **deny** — configure a filter to drop packets.
- **permit** — configure a filter to forward packets.

### seq (for IPv6 ACLs)

Assign a sequence number to a deny or permit the filter in an IPv6 access list while creating the filter.

#### Syntax

```plaintext
seq sequence-number {deny | permit} {ipv6-protocol-number | icmp | ip | tcp | udp} {source address mask | any | host ipv6-address} {destination address | any | host ipv6-address} [operator port [portnumber]] [count [byte]] [log [interval minutes] [threshold-in-msgs [count]] [monitor]
```

To delete a filter, use the `no seq sequence-number` command.

#### Parameters

- **sequence-number** 
  Enter a number from 0 to 4294967290.
- **deny** 
  Enter the keyword `deny` to configure a filter to drop packets meeting this condition.
permit Enter the keyword permit to configure a filter to forward packets meeting this criteria.

ipv6-protocol-number Enter a number to filter based on the protocol identified in the IPv6 protocol header.

icmp Enter the keyword icmp to configure an ICMP access list filter.

ip Enter the keyword ip to configure a generic IP access list. The keyword ip specifies that the access list permits all IP protocols.

tcp Enter the keyword tcp to configure a TCP access list filter.

udp Enter the keyword udp to configure a UDP access list filter.

source Enter an IP address in dotted decimal format of the network from which the packet was received.

mask (OPTIONAL) Enter a network mask in /prefix format (/x).

any Enter the keyword any to specify that all routes are subject to the filter.

host ipv6-address Enter the keyword host and then enter the IPv6 address to specify a host IP address or hostname.

operator (OPTIONAL) Enter one of the following logical operands:

- eq = equal to
- neq = not equal to
- gt = greater than
- lt = less than
- range = inclusive range of ports (you must specify two ports for the port parameter.)

portnumber (OPTIONAL) Enter the application layer port number. Enter two port numbers if you are using the range logical operand. The range is from 0 to 65535.

The following list includes some common TCP port numbers:

- 23 = Telnet
- 20 and 21 = FTP-DATA and FTP
- 25 = SMTP
- 169 = SNMP

destination Enter the IP address of the network or host to which the packets are sent.

count (OPTIONAL) Enter the keyword count to count the packets.

bytes (OPTIONAL) Enter the keyword bytes to count the bytes.

log (OPTIONAL) Enter the keyword log to enable the triggering of ACL log messages.

threshold-in msgs count (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminate with the seq, permit, or deny commands. The threshold range is from 1 to 100.

interval minutes (OPTIONAL) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. The interval range is from 1 to 10 minutes.
monitor

(Optional) Enter the keyword **monitor** when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

**Defaults**

By default, 10 ACL logs are generated if you do not specify the threshold explicitly.

The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the `flow-based enable` command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

**Related Commands**

- `permit` — configure a filter to forward packets.
permit udp (for IPv6 ACLs)

Configure a filter to pass UDP packets meeting the filter criteria.

Syntax
permit udp {source address mask | any | host ipv6-address} {destination address | any | host ipv6-address} {operator port [port]} [count [byte]] [log [interval minutes] [threshold-in-msgs [count]] [monitor]

To remove this filter, you have two choices:

- Use the no seq sequence-number command if you know the filter’s sequence number.
- Use the no permit udp {source address mask | any | host ipv6-address} {destination address | any | host ipv6-address} command.

Parameters

- log
  (OPTIONAL) Enter the keyword log to enable the triggering of ACL log messages.

- threshold-in msgs count
  (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the seq, permit, or deny commands. The threshold range is from 1 to 100.

- interval minutes
  (OPTIONAL) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. The interval range is from 1 to 10 minutes.

- monitor
  (OPTIONAL) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Defaults

By default, 10 ACL logs are generated if you do not specify the threshold explicitly.

The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

**permit tcp (for IPv6 ACLs)**

Configure a filter to pass TCP packets that match the filter criteria.

**Syntax**

```
permit tcp {source address mask | any | host ipv6-address} [operator port [port]] {destination address | any | host ipv6-address} [bit] [operator port [port]] [count [byte]] [log [interval minutes] [threshold-in-msgs [count]]] [monitor]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no permit tcp {source address mask | any | host ipv6-address} [operator port [port]] {destination address | any | host ipv6-address} [bit] [operator port [port]] [count [byte]] [log [interval minutes] [threshold-in-msgs [count]]] [monitor]` command.

**Parameters**

- **source address mask**
  - Enter a network mask in /prefix format (/x).
- **any**
  - Enter the keyword any to specify that all routes are subject to the filter.
- **host ipv6-address**
  - Enter the keyword host then the IP address to specify a host IP address.
- **destination address**
  - Enter the IPv6 address of the network or host to which the packets are sent.
- **bit**
  - Enter a flag or combination of bits:
    - `ack`: acknowledgement field
    - `fin`: finish (no more data from the user)
    - `psh`: push function
    - `rst`: reset the connection
    - `syn`: synchronize sequence numbers
    - `urg`: urgent field
- **operator**
  - (OPTIONAL) Enter one of the following logical operand:
• `eq` = equal to
• `neq` = not equal to
• `gt` = greater than
• `lt` = less than
• `range` = inclusive range of ports (you must specify two ports for the port parameter)

`port port` Enter the application layer port number. Enter two port numbers if you are using the range logical operand. The range is from 0 to 65535.

The following list includes some common TCP port numbers:
• 23 = Telnet
• 20 and 21 = FTP
• 25 = SMTP
• 169 = SNMP

`count` (OPTIONAL) Enter the keyword `count` to count packets the filter processes.

`byte` (OPTIONAL) Enter the keyword `byte` to count bytes the filter processes.

`log` (OPTIONAL) Enter the keyword `log` to enable the triggering of ACL log messages.

`threshold-in msgs count` (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated. with the `seq`, `permit`, or `deny` commands. The threshold range is from 1 to 100.

`interval minutes` (OPTIONAL) Enter the keyword `interval` followed by the time period in minutes at which ACL logs must be generated. The interval range is from 1 to 10 minutes.

`monitor` (OPTIONAL) Enter the keyword `monitor` when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

**Defaults**
By default, 10 ACL logs are generated if you do not specify the threshold explicitly.

The default frequency at which ACL logs are generated is 5 minutes. By default, flow-based monitoring is not enabled.

This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

### Related Commands

- `permit` - assign a permit filter for IP packets.

### permit icmp (for IPv6 ACLs)

To allow all or specific internet control message protocol (ICMP) messages, configure a filter.

#### Syntax

```
permit icmp (source address mask | any | host ipv6-address) (destination address | any | host ipv6-address) [message-type] [count [byte]] [log [interval minutes] [threshold-in-msgs [count]] [monitor]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no permit icmp {source address mask | any | host ipv6-address} {destination address | any | host ipv6-address}` command.

#### Parameters

- **source address**
  - Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.
- **mask**
  - Enter the keyword `any` to specify that all routes are subject to the filter.
- **host ipv6-address**
  - Enter the keyword `host` then the IPv6 address to specify a host IPv6 address.
- **destination address**
  - Enter the IP address of the network or host to which the packets are sent.
- **count**
  - (OPTIONAL) Enter the keyword `count` to count packets processed by the filter.
- **byte**
  - (OPTIONAL) Enter the keyword `byte` to count bytes processed by the filter.
log

(Optional) Enter the keyword log to enable the triggering of ACL log messages.

threshold-in msgs count

(Optional) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the seq, permit, or deny commands. The threshold range is from 1 to 100.

interval minutes

(Optional) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. The interval range is from 1 to 10 minutes.

monitor

(Optional) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Defaults

By default, 10 ACL logs are generated if you do not specify the threshold explicitly. The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

9.3(0.0)  Added support for logging of ACLs on the S4810, S4820T, and Z9000 platforms.

Usage Information

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the flow-based enable command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all
traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

**permit (for IPv6 ACLs)**

To configure a filter that matches the filter criteria, select an IPv6 protocol number, ICMP, IPv6, TCP, or UDP.

**Syntax**

```plaintext
permit {ipv6-protocol-number | icmp | ipv6 | tcp | udp} \[count \[byte\]] \[dscp value\] \[order\] \[fragments\] \[log \[interval minutes\] \[threshold-in-msgs [count]\]\] \[monitor\] \[no-drop\]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command syntax if you know the filter’s sequence number
- Use the `no permit {ipv6-protocol-number | icmp | ipv6 | tcp | udp}` command

**Parameters**

- `log` (OPTIONAL) Enter the keyword log to enable the triggering of ACL log messages.
- `threshold-in msgs count` (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the seq, permit, or deny commands. The threshold range is from 1 to 100.
- `interval minutes` (OPTIONAL) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. The interval range is from 1 to 10 minutes.
- `monitor` (OPTIONAL) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.
- `no-drop` Enter the keywords no-drop to match only the forwarded packets.

**Defaults**

By default, 10 ACL logs are generated if you do not specify the threshold explicitly.

The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

## deny udp (for IPv6 ACLs)

Configure a filter to drop user datagram protocol (UDP) packets meeting the filter criteria.

### Syntax

```
deny udp {source address mask | any | host ipv6-address} [operator port [port]]
{destination address | any | host ipv6-address} [operator port [port]] [count
[byte]] [log [interval minutes] [threshold-in-msgs [count]] [monitor]
```

To remove this filter, you have two choices:
- Use the `no seq sequence-number` command syntax if you know the filter's sequence number
- Use the `no deny udp {source address mask | any | host ipv6-address}
{destination address | any | host ipv6-address} command`

### Parameters

- **log** *(OPTIONAL)*: Enter the keyword `log` to enable the triggering of ACL log messages.
- **threshold-in-msgs count** *(OPTIONAL)*: Enter the `threshold-in-msgs` keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated. The threshold range is from 1 to 100.
- **interval minutes** *(OPTIONAL)*: Enter the `interval` keyword followed by the time period in minutes at which ACL logs must be generated. The threshold range is from 1 to 10 minutes.
monitor

(Optional) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Defaults

By default, 10 ACL logs are generated if you do not specify the threshold explicitly.

The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

Usage Information

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs.

You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the flow-based enable command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).
deny tcp (for IPv6 ACLs)

Configure a filter that drops TCP packets that match the filter criteria.

Syntax

```
deny tcp {source address mask | any | host ipv6-address} [operator port [port]]
{destination address | any | host ipv6-address} {bit} [operator port [port]]
[count [byte]] [log [interval minutes] [threshold-in-msgs [count]] [monitor]
```

To remove this filter, you have two choices:

- Use the no seq sequence-number command syntax if you know the filter's sequence number
- Use the no deny tcp {source address mask | any | host ipv6-address}

```
{destination address | any | host ipv6-address} command
```

Parameters

- **source address**
  - mask
    - Enter a network mask in /prefix format (/x).
- **any**
  - Enter the keyword any to specify that all routes are subject to the filter.
- **host ipv6-address**
  - Enter the keyword host then the IP address to specify a host IP address.
- **destination address**
  - Enter the IPv6 address of the network or host to which the packets are sent.
- **bit**
  - Enter a flag or combination of bits:
    - ack: acknowledgement field
    - fin: finish (no more data from the user)
    - psh: push function
    - rst: reset the connection
    - syn: synchronize sequence numbers
    - urg: urgent field
- **operator**
  - (OPTIONAL) Enter one of the following logical operand:
    - eq = equal to
    - neq = not equal to
    - gt = greater than
    - lt = less than
    - range = inclusive range of ports (you must specify two ports for the port parameter)
- **port port**
  - Enter the application layer port number. Enter two port numbers if you are using the range logical operand. The range is from 0 to 65535.
  - The following list includes some common TCP port numbers:
    - 23 = Telnet
    - 20 and 21 = FTP
    - 25 = SMTP
    - 169 = SNMP
- **count**
  - (OPTIONAL) Enter the keyword count to count packets the filter processes.
- **byte**
  - (OPTIONAL) Enter the keyword byte to count bytes the filter processes.
log

(threshold-in-msgs) Enter the keyword log to enable the triggering of ACL log messages.

(Optional) (threshold-in-msgs) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated. with the seq, permit, or deny commands. The threshold range is from 1 to 100.

interval minutes

(Optional) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. The interval range is from 1 to 10 minutes.

monitor

(Optional) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Defaults

By default, 10 ACL logs are generated if you do not specify the threshold explicitly.

The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

Command Modes

ACCESS-LIST

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100-ON.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.5(0.1) Introduced on the Z9500.
9.4(0.0) Added support for flow-based monitoring on the S4810, S4820T, S6000, and Z9000 platforms.
9.3(0.0) Added support for logging of ACLs on the S4810, S4820T, and Z9000 platforms.

Usage Information

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the flow-based enable command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic.
on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

deny icmp (for Extended IPv6 ACLs)

Configure a filter to drop all or specific ICMP messages.

NOTE: Only the options that have been newly introduced in Release 9.3(0.0) and Release 9.4(0.0) are described here. For a complete description on all of the keywords and variables that are available with this command, refer the topic of this command discussed earlier in this guide.

Syntax

```
deny icmp {source address mask | any | host ipv6-address} {destination address | any | host ipv6-address} [message-type] [count [byte]] | [log [interval minutes] [threshold-in-msgs [count]]] [monitor]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command syntax if you know the filter’s sequence number
- Use the `no deny icmp {source address mask | any | host ipv6-address} {destination address | any | host ipv6-address}` command

Parameters

- `source address` Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.
- `any` Enter the keyword any to specify that all routes are subject to the filter.
- `host ipv6-address` Enter the keyword host then the IPv6 address to specify a host IP address.
- `destination` Enter the IP address of the network or host to which the packets are sent.
- `log` (OPTIONAL) Enter the keyword log to enable the triggering of ACL log messages.
- `threshold-in msgs count` (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated, with the seq, permit, or deny commands. You can enter a threshold in the range of 1-100.
- `interval minutes` (OPTIONAL) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. You can enter an interval in the range of 1-10 minutes.
- `monitor` (OPTIONAL) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and theACL in which you are creating the rule is applied to the monitored interface.

Defaults

By default, 10 ACL logs are generated if you do not specify the threshold explicitly.

The default frequency at which ACL logs are generated is 5 minutes. By default, flow-based monitoring is not enabled.

### Version Description

- **9.10(0.1)** Introduced on the S6010-ON and S4048T-ON.
- **9.10(0.0)** Introduced on the S3148.
- **9.10(0.0)** Introduced on the S6100.
- **9.8(2.0)** Introduced on the S3100 series.
- **9.8(1.0)** Introduced on the Z9100–ON.
- **9.8(0.0P5)** Introduced on the S4048-ON.
- **9.8(0.0P2)** Introduced on the S3048-ON.
- **9.7(0.0)** Introduced on the S6000–ON.
- **9.4(0.0)** Added support for flow-based monitoring on the S4810, S4820T, S6000, and Z9000 platforms.
- **9.5(0.1)** Introduced on the Z9500.
- **9.3.0.0** Added support for logging of ACLs on the S4810, S4820T, and Z9000 platforms.

**Usage Information**

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the flow-based enable command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

### deny (for IPv6 ACLs)

Configure a filter that drops IPv6 packets that match the filter criteria.

**Syntax**

```
deny {ipv6-protocol-number | icmp | ipv6 | tcp | udp} [count [byte]] [dscp value] [order] [fragments] [log [interval minutes] [threshold-in-msgs [count]]] [monitor] [no-drop]
```

**Parameters**

- `log` (OPTIONAL) Enter the keyword `log` to enable the triggering of ACL log messages.
threshold-in msgs count

(Optional) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated, with the seq, permit, or deny commands. The threshold range is from 1 to 100.

interval minutes

(Optional) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. The time interval range is from 1 to 10 minutes.

monitor

(Optional) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

no-drop

Enter the keywords no-drop to match only the forwarded packets.

Defaults

By default, 10 ACL logs are generated if you do not specify the threshold explicitly.

The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

Version Description

9.10(0.0) Introduced on the S3148.

9.8(2.0) Introduced on the S3100 series.

9.8(1.0) Introduced on the Z9100-ON.

9.8(0.0P5) Introduced on the S4048-ON.

9.8(0.0P2) Introduced on the S3048-ON.

9.8(0.0) Added the no-drop parameter.

9.7(0.0) Introduced on the S6000-ON.

9.5(0.1) Introduced on the Z9500.

9.4(0.0) Added support for flow-based monitoring on the S4810, S4820T, S6000, and Z9000 platforms.

9.3(0.0) Added support for logging of ACLs on the S4810, S4820T, and Z9000 platforms.

Usage Information

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the flow-based enable command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and
egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).
Access Control List (ACL) VLAN Groups and Content Addressable Memory (CAM)

This section describes the access control list (ACL) virtual local area network (VLAN) group, and content addressable memory (CAM) enhancements.

member vlan

Add VLAN members to an ACL VLAN group.

Syntax

`member vlan {VLAN-range}`

Parameters

- **VLAN-range**: Enter the member VLANs using comma-separated VLAN IDs, a range of VLAN IDs, a single VLAN ID, or a combination. For example:
  - Comma-separated: 3, 4, 6
  - Range: 5-10
  - Combination: 3, 4, 5-10, 8

Default

None

Command Modes

- CONFIGURATION (conf-acl-vl-grp)

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>

<td>Introduced on the S3048-ON.</td>
</tr>
<tr>
<td>9.3.(0.0)</td>
<td>Introduced on the S4810, S4820T, and Z9000 platforms.</td>
</tr>
</tbody>
</table>

Usage Information

At a maximum, there can be only 32 VLAN members in all ACL VLAN groups. A VLAN can belong to only one group at any given time.

You can create an ACL VLAN group and attach the ACL with the VLAN members. The optimization is applicable only when you create an ACL VLAN group. If you apply an ACL separately on the VLAN interface, each ACL has a mapping with the VLAN and increased CAM space utilization occurs.
Attaching an ACL individually to VLAN interfaces is similar to the behavior of ACL-VLAN mapping storage in CAM prior to the implementation of the ACL VLAN group functionality.

**ip access-group**

Apply an egress IP ACL to the ACL VLAN group.

**Syntax**

```
ip access-group {group name} out implicit-permit
```

**Parameters**

- **group-name**
  - Enter the name of the ACL VLAN group where you want the egress IP ACLs applied, up to 140 characters.
- **out**
  - Enter the keyword `out` to apply the ACL to outgoing traffic.
- **implicit-permit**
  - Enter the keyword `implicit-permit` to change the default action of the ACL from implicit-deny to implicit-permit (that is, if the traffic does not match the filters in the ACL, the traffic is permitted instead of dropped).

**Default**

None

**Command Modes**

CONFIGURATION (conf-acl-vl-grp)

**Command History**

</tr>
</tbody>
</table>

**Usage Information**

You can apply only an egress IP ACL on an ACL VLAN group.

**show acl-vlan-group**

Display all the ACL VLAN groups or display a specific ACL VLAN group, identified by name.

**Syntax**

```
show acl-vlan-group {group-name | detail}
```

**Parameters**

- **group-name**
  - (Optional) Display only the ACL VLAN group that is specified, up to 140 characters.
- **detail**
  - Display information in a line-by-line format to display the names in their entirety.

Without the detail option, the output displays in a table style and information may be truncated.

**Default**

No default behavior or values

EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.3.(0.0) Introduced on the S4810, S4820T, Z9000 and MXL platforms

Usage Information

When an ACL-VLAN-Group name or the Access List Group Name contains more than 30 characters, the name is truncated in the show acl-vlan-group command output.

Examples

The following sample illustrates the output of the show acl-vlan-group command.

NOTE: Some group names and some access list names are truncated.

Dell# show running-config acl-vlan-group
  acl-vlan-group Test
  member vlan 1-100
  ip access-group test in
Dell#show acl-vlan-group
Group Name   Egress IP Acl     Ingress IP Acl     Ingress V6 Acl     Vlan
Members      Members
Test          -                 test              -                 1-100

The following sample output is displayed when using the show acl-vlan-group group-name option.

NOTE: The access list name is truncated.

Dell# show acl-vlan-group TestGroupSeventeenTwenty
Group Name     Egress IP Acl     Ingress IP Acl     Ingress IPV6 Acl
Vlan Members   Members
Test           -                 test              test
-              1-100

The following sample output shows the line-by-line style display when using the show acl-vlan-group detail option.

NOTE: No group or access list names are truncated.

Dell# show acl-vlan-group detail
Group Name :
  Test
Egress IP Acl :
  -
Ingress IP Acl :
  test
Ingress IPV6 Acl :
  -
Vlan Members :
  1-100
show cam-acl-vlan

Display the number of flow processor (FP) blocks that is allocated for the different VLAN services.

**Syntax**

```
show cam-acl-vlan
```

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
<tr>
<td>9.3.(0.0)</td>
<td>Introduced on the S4810, S4820T, Z9000 and MXL platforms</td>
</tr>
</tbody>
</table>

**Usage Information**

After CAM configuration for ACL VLAN groups is performed, you must reboot the system to enable the settings to be stored in nonvolatile storage. During the initialization of CAM, the chassis manager reads the NVRAM and allocates the dynamic VCAP regions.

The following table describes the output fields of this `show` command:

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Chassis Vlan Cam ACL</td>
<td>Details about the CAM blocks allocated for ACLs for various VLAN operations at a system-wide, global level.</td>
</tr>
<tr>
<td>Stack Unit &lt;number&gt;</td>
<td>Details about the CAM blocks allocated for ACLs for various VLAN operations for a particular stack unit.</td>
</tr>
<tr>
<td>Current Settings(in block sizes)</td>
<td>Information about the number of FP blocks that are currently in use or allocated.</td>
</tr>
<tr>
<td>VlanOpenFlow</td>
<td>Number of FP blocks for VLAN open flow operations.</td>
</tr>
<tr>
<td>VlanIscsi</td>
<td>Number of FP blocks for VLAN internet small computer system interface (iSCSI) counters.</td>
</tr>
<tr>
<td>VlanHp</td>
<td>Number of FP blocks for VLAN high performance processes.</td>
</tr>
<tr>
<td>VlanFcoe</td>
<td>Number of FP blocks for VLAN Fiber Channel over Ethernet (FCoE) operations.</td>
</tr>
<tr>
<td>VlanAclOpt</td>
<td>Number of FP blocks for ACL VLAN optimzation feature.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell# show cam-acl-vlan
-- Chassis Vlan Cam ACL --
Current Settings(in block sizes)
VlanOpenFlow : 0
VlanIscsi : 0
VlanAclOpt : 2
VlanHp : 1
VlanFcoe : 1
Dell#
```
cam-acl-vlan

Allocate the number of flow processor (FP) blocks or entries for VLAN services and processes.

**Syntax**

```
cam-acl-vlan { default | vlanopenflow <0-2> | vlaniscsi <0-2> | vlanaclopt <0-2>
```

**Parameters**

- **default**
  - Reset the number of FP blocks to default. By default, 0 groups are allocated for the ACL in VCAP. ACL VLAN groups or CAM optimization is not enabled by default, and you need to allocate the slices for CAM optimization.

- **vlanopenflow <0-2>**
  - Allocate the number of FP blocks for VLAN open flow operations.

- **vlaniscsi <0-2>**
  - Allocate the number of FP blocks for VLAN iSCSI counters.

- **vlanaclopt <0-2>**
  - Allocate the number of FP blocks for the ACL VLAN optimization feature.

**Default**

If you use the `default` keyword with the `cam-acl-vlan` command, the FP blocks allocated for VLAN processes are restored to their default values. No FP blocks or dynamic VLAN Content Aware Processor (VCAP) groups are allocated for VLAN operations by default.

**Command Modes**

`CONFIGURATION`

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>

<td>Introduced on the Z9500.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the S4810 and Z9000 platforms.</td>
</tr>
</tbody>
</table>

**Usage Information**

The VLAN ContentAware Processor (VCAP) application is a pre-ingress CAP that modifies the VLAN settings before packets are forwarded. To support the ACL CAM optimization functionality, the CAM carving feature is enhanced. A total of four VACP groups are present, of which two are for fixed groups and the other two are for dynamic groups. Out of the total of two dynamic groups, you can allocate zero, one, or two flow processor (FP) blocks to iSCSI Counters, OpenFlow and ACL Optimization. You can configure only two of these features at a point in time.

show cam-usage

View the amount of CAM space available, used, and remaining in each partition (including IPv4 Flow and Layer 2 ACL sub-partitions).

**Syntax**

```
show cam-usage [acl | router | switch]
```

**Parameters**

- **acl**
  - (OPTIONAL) Enter the keyword acl to display Layer 2 and Layer 3 ACL CAM usage.
**router**

(Optional) Enter the keyword `router` to display Layer 3 CAM usage.

**switch**

(Optional) Enter the keyword `switch` to display Layer 2 CAM usage.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version**

- **9.10(0.0)**: Introduced on the S3148.
- **9.8(2.0)**: Introduced on the S3100 series.
- **9.8(0.0P5)**: Introduced on the S4048-ON.
- **9.8(0.0P2)**: Introduced on the S3048-ON.
- **9.3.(0.0)**: Introduced on the S4810, S4820T, Z9000 and MXL platforms.

**Usage Information**

The following regions must be provided in the `show cam-usage` output:

- L3AclCam
- L2AclCam
- V6AclCam

The following table describes the output fields of this `show` command:

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>StackUnit</td>
<td>The Stack unit number</td>
</tr>
<tr>
<td>Portpipe</td>
<td>The hardware path that packets follow through a system for ACL optimization</td>

Codes: * - cam usage is above 90%.
show running config acl-vlan-group

Display the running configuration of all or a given ACL VLAN group.

Syntax: `show running config acl-vlan-group group name`

Parameters:
- **group-name**: Display only the ACL VLAN group that is specified. The maximum group name is 140 characters.

Default: None

Command Modes:
- EXEC
- EXEC Privilege

Command History:
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version | Description
--- | ---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.3.(0.0) | Introduced on the S4810, S4820T, Z9000 and MXL platforms

Examples:
The following sample output shows the line-by-line style display when using the `show running-config acl-vlan-group` option. Note that no group or access list names are truncated:

```
Dell #show running-config acl-vlan-group

acl-vlan-group Test
  member vlan 1-100
  ip access-group test in

Dell#show running-config acl-vlan-group Test

acl-vlan-group Test
  member vlan 1-100
  ip access-group test in

Dell#
```

acl-vlan-group

Create an ACL VLAN group.

Syntax: `acl-vlan-group {group name}`
To remove an ACL VLAN group, use the no acl-vlan-group {group name} command.

Parameters

- **group-name**: Specify the name of the ACL VLAN group. The name can contain a maximum 140 characters.

Default
No default behavior or values

Command Modes
CONFIGURATION

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>

Usage Information
You can have up to eight different ACL VLAN groups at any given time. When you configure an ACL VLAN group, you enter the ACL VLAN Group Configuration mode.

To avoid the problem of excessive consumption of CAM area, you can configure ACL VLAN groups that combines all the VLANs that are applied with the same ACL in a single group. A unique identifier for each of ACL attached to the VLAN is used as a handle or locator in the CAM area instead of the VLAN id. This method of processing significantly reduces the number of entries in the CAM area and saves memory space in CAM.

You can create an ACL VLAN group and attach the ACL with the VLAN members. Optimization is applicable only when you create an ACL VLAN group. If you apply an ACL separately on the VLAN interface, each ACL maps with the VLAN and increased CAM space utilization occurs.

Attaching an ACL individually to VLAN interfaces is similar to the behavior of ACL-VLAN mapping storage in CAM prior to the implementation of the ACL VLAN group functionality.

**show acl-vlan-group detail**

Display all the ACL VLAN Groups or display a specific ACL VLAN Group by name. To display the names in their entirety, the output displays in a line-by-line format.

**Syntax**
show acl-vlan-group detail

**Parameters**
- **detail**: Display information in a line-by-line format to display the names in their entirety.

Without the detail option, the output is displayed in a table style and information may be truncated.

Default
No default behavior or values
**Command Modes**

EXEC

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>

**Usage Information**

The output for this command displays in a line-by-line format. This allows the ACL-VLAN-Group names (or the Access List Group Names) to display in their entirety.

**Examples**

The following sample output shows the line-by-line style display when using the `show acl-vlan-group detail` option. Note that no group or access list names are truncated.

```
Dell# show acl-vlan-group detail
Group Name : Test
  Egress IP Acl : -
  Ingress IP Acl : test
  Ingress IPV6 Acl :
  Vlan Members : 1-100
Dell#
```

### description (ACL VLAN Group)

Add a description to the ACL VLAN group.

**Syntax**

description description

**Parameters**

- **description**
  
  Enter a description to identify the ACL VLAN group (80 characters maximum).

**Default**

No default behavior or values

**Command Modes**

CONFIGURATION (conf-acl-vl-grp)

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Usage Information**

Enter a description for each ACL VLAN group that you create for effective and streamlined administrative and logging purposes.
Bidirectional Forwarding Detection (BFD)

Bidirectional forwarding detection (BFD) is a detection protocol that provides fast forwarding path failure detection.

The Dell Networking OS implementation is based on the standards specified in the IETF Draft draft-ietf-bfd-base-03, and supports BFD on all Layer 3 physical interfaces including VLAN interfaces and port-channels.

Topics:
- bfd all-neighbors
- bfd disable
- bfd enable (Configuration)
- bfd enable (Interface)
- bfd interval
- bfd neighbor
- bfd protocol-liveness
- ip route bfd
- ip ospf bfd all-neighbors
- ipv6 ospf bfd all-neighbors
- isis bfd all-neighbors
- neighbor bfd
- neighbor bfd disable
- show bfd neighbors
- vrrp bfd neighbor

### bfd all-neighbors

Enable BFD sessions with all neighbors discovered by Layer 3 protocols virtual router redundancy protocol (VRRP), intermediate system to intermediate system (IS-IS), open shortest path first (OSPF), OSPFv3, or border gateway protocol (BGP) on router interfaces, and (optionally) reconfigure the default timer values.

**Syntax**

```
bfd all-neighbors [interval interval min_rx min_rx multiplier value role {active | passive}]
```

**Parameters**

- `interval milliseconds` (Optional) Enter the keyword interval to specify non-default BFD session parameters beginning with the transmission interval. The range is from 50 to 1000. The default is 200.
- `min_rx milliseconds` Enter the keyword min_rx to specify the minimum rate at which the local system would like to receive control packets from the remote system. The range is from 50 to 1000. The default is 200.
- `multiplier value` Enter the keyword multiplier to specify the number of packets that must be missed in order to declare a session down. The range is from 3 to 50. The default is 3.
Enter the role that the local system assumes:

- **Active** — The active system initiates the BFD session. Both systems can be active for the same session.
- **Passive** — The passive system does not initiate a session. It only responds to a request for session initialization from the active system.

The default is **active**.
Version | Description
--- | ---
8.2.1.0 | Introduced BFD for OSPF and ISIS on the E-Series.
7.6.1.0 | Introduced BFD for OSPF on the C-Series.
7.5.1.0 | Introduced BFD for ISIS on the E-Series.
7.4.1.0 | Introduced BFD for OSPF on the E-Series.

Usage Information

All neighbors inherit the timer values configured with the `bfd neighbor` command except in the following cases:

- Timer values configured with the `isis bfd all-neighbors` or `ip ospf bfd all-neighbors` commands in INTERFACE mode override timer values configured with the `bfd neighbor` command. Likewise, using the `no bfd neighbor` command does not disable BFD on an interface if you explicitly enable BFD using the `isis bfd all-neighbors` command.
- Neighbors that have been explicitly enabled or disabled for a BFD session with the `bfd neighbor` or `neighbor bfd disable` commands in ROUTER BGP mode do not inherit the global BFD enable/disable values configured with the `bfd neighbor` command or configured for the peer group to which a neighbor belongs. The neighbors inherit only the global timer values (configured with the `bfd neighbor` command).

You can only enable BFD for VRRP in INTERFACE command mode (`vrrp bfd all-neighbors`).

You can enable BFD on a nondefault VRF for OSPFv2.

## bfd disable

Disable BFD on an interface.

### Syntax

```plaintext
bfd disable
```

Re-enable BFD using the `no bfd disable` command.

### Defaults

BFD is disabled by default.

### Command Modes

VRRP

### bfd interval

Specify non-default BFD session parameters beginning with the transmission interval.

**Syntax**

```
bfd interval interval min_rx min_rx multiplier value role {active | passive}
```

**Parameters**

- **interval milliseconds**
  - Enter the keywords `interval` to specify non-default BFD session parameters beginning with the transmission interval. The range is from 50 to 1000. The default is **200**.

- **min_rx milliseconds**
  - Enter the keywords `min_rx` to specify the minimum rate at which the local system would like to receive control packets from the remote system. The range is from 50 to 1000. The default is **200**.

- **multiplier value**
  - Enter the keywords `multiplier` to specify the number of packets that must be missed in order to declare a session down. The range is from 3 to 50. The default is **3**.

- **role [active | passive]**
  - Enter the role that the local system assumes:
    - **Active** — The active system initiates the BFD session. Both systems can be active for the same session.
    - **Passive** — The passive system does not initiate a session. It only responds to a request for session initialization from the active system.

  The default is **Active**.

**Defaults**

Refer to Parameters.

</table>
BFD Neighbor

Establish a BFD session with a neighbor.

Syntax

```
bfd neighbor ip-address
```

To remove the BFD session with the neighbor, use the no bfd neighbor ip-address command.

Parameters

- **ip-address**: Enter the IP address of the neighbor in dotted decimal format (A.B.C.D).

Defaults

None

</tbody>
</table>

**Usage Information**

Protocol Liveness is a feature that notifies the BFD Manager when a client protocol (for example, OSPF and ISIS) is disabled. When a client is disabled, all BFD sessions for that protocol are torn down. Neighbors on the remote system receive an Admin Down control packet and are placed in the Down state. Peer routers might take corrective action by choosing alternative paths for the routes that originally pointed to this router.

## ip route bfd

Enable BFD for all neighbors configured through static routes.

**Syntax**

```
ip route bfd [prefix-list prefix-list-name] [interval interval min_rx min_rx multiplier value role {active | passive}]
```

To disable BFD for all neighbors configured through static routes, use the `no ip route bfd [prefix-list prefix-list-name] [interval interval min_rx min_rx multiplier value role {active | passive}]` command.

**Parameters**

- `prefix-list prefix-list-name` (Optional) Enter the keyword `prefix-list` followed by the name of the prefix list to enable or disable BFD on specific neighbors.
interval milliseconds (OPTIONAL) Enter the keywords interval to specify non-default BFD session parameters beginning with the transmission interval. The range is from 50 to 1000. The default is 200.

min_rx milliseconds Enter the keywords min_rx to specify the minimum rate at which the local system receives control packets from the remote system. The range is from 50 to 1000. The default is 200.

multiplier value Enter the keywords multiplier to specify the number of packets that must be missed in order to declare a session down. The range is from 3 to 50. The default is 3.

role [active | passive] Enter the role that the local system assumes:

- **Active** — active system initiates the BFD session. Both systems can be active for the same session.
- **Passive** — passive system does not initiate a session. It only responds to a request for session initialization from the active system.

The default is **Active**.

**Defaults**

See Parameters.

Usage Information

This command provides the flexibility to fine-tune the timer values based on individual interface needs when you configure ip ospf bfd in CONFIGURATION mode. Any timer values specified with this command overrides timers set using the bfd all-neighbors command. Using the no form of this command does not disable BFD if you configure BFD in CONFIGURATION mode.

To disable BFD on a specific interface while you configure BFD in CONFIGURATION mode, use the keyword disable.
**ipv6 ospf bfd all-neighbors**

Establish BFD sessions with all OSPFv3 neighbors on a single interface or use non-default BFD session parameters.

**Syntax**

```
ipv6 ospf bfd all-neighbors [disable | [interval interval min_rx min_rx multiplier value role {active | passive}]]
```

To disable all BFD sessions on an OSPFv3 interface implicitly, use the `no ipv6 ospf bfd all-neighbors disable` command in interface mode.

**Parameters**

- `disable` *(OPTIONAL)* Enter the keyword `disable` to disable BFD on this interface.
- `interval milliseconds` *(OPTIONAL)* Enter the keyword `interval` to specify non-default BFD session parameters beginning with the transmission interval. The range is from 50 to 1000. The default is 200.
- `min_rx milliseconds` Enter the keywords `min_rx` to specify the minimum rate at which the local system receives control packets from the remote system. The range is from 50 to 1000. The default is 200.
- `multiplier value` Enter the keyword `multiplier` to specify the number of packets that must be missed in order to declare a session down. The range is from 3 to 50. The default is 3.
- `role [active | passive]` Enter the role that the local system assumes:
  - `Active` — active system initiates the BFD session. Both systems can be active for the same session.
  - `Passive` — passive system does not initiate a session. It only responds to a request for session initialization from the active system.

The default is `Active`.

**Defaults**

See Parameters.

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version**

- 9.10(0.0)
- 9.8(2.0)
- 9.8(0.0P6)
- 9.8(0.0P2)
- 9.2.0.0

**Description**

- Introduced on the S3148.
- Introduced on the S3100 series.
- Introduced on the S4048-ON.
- Introduced on the S3048-ON.
- Introduced on the Z9000, S4820T, and S4810.

**Usage Information**

This command provides the flexibility to fine-tune the timer values based on individual interface needs when you configure ipv6 ospf BFD in CONFIGURATION mode. Any timer values specified with this command overrides timers set using the bfd all-neighbors command. Using the `no` form of this command does not disable BFD if you configure BFD in CONFIGURATION mode.
To disable BFD on a specific interface while you configure BFD in CONFIGURATION mode, use the keyword disable.

**isis bfd all-neighbors**

Enable BFD on all IS-IS neighbors discovered on an interface.

**Syntax**

```
isis bfd all-neighbors [disable | [interval interval min_rx min_rx multiplier value role {active | passive}]]
```

To remove all BFD sessions with IS-IS neighbors discovered on this interface, use the `no isis bfd all-neighbors [disable | [interval interval min_rx min_rx multiplier value role {active | passive}]]` command.

**Parameters**

- `disable` (OPTIONAL) Enter the keyword disable to disable BFD on this interface.
- `interval milliseconds` (OPTIONAL) Enter the keywords interval to specify non-default BFD session parameters beginning with the transmission interval. The range is from 50 to 1000. The default is 200.
- `min_rx milliseconds` Enter the keywords min_rx to specify the minimum rate at which the local system would like to receive control packets from the remote system. The range is from 50 to 1000. The default is 200.
- `multiplier value` Enter the keywords multiplier to specify the number of packets that must be missed in order to declare a session down. The range is from 3 to 50. The default is 3.
- `role [active | passive]` Enter the role that the local system assumes:
  - `Active` — active system initiates the BFD session. Both systems can be active for the same session.
  - `Passive` — passive system does not initiate a session. It only responds to a request for session initialization from the active system.

The default is Active.

**Defaults**

See Parameters.

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Usage Information

This command provides the flexibility to fine-tune the timer values based on individual interface needs when ISIS BFD is configured in CONFIGURATION mode. Any timer values specified with this command overrides timers set using the bfd all-neighbors command. Using the no form of this command does not disable BFD if BFD is configured in CONFIGURATION mode.

To disable BFD on a specific interface while BFD is configured in CONFIGURATION mode, use the keyword disable.

neighbor bfd

Explicitly enable a BFD session with a BGP neighbor or a BGP peer group.

Syntax

neighbor {ip-address | peer-group-name} bfd

Parameters

- **ip-address**: Enter the IP address of the BGP neighbor that you want to explicitly enable for BFD sessions in dotted decimal format (A.B.C.D).
- **peer-group-name**: Enter the name of the peer group that you want to explicitly enable for BFD sessions.

Defaults

None

Command Modes

ROUTER BGP

</table>
When you enable a BFD session with a specified BGP neighbor or peer group using the `bfd neighbor` command, the default BFD session parameters are used (interval: 200 milliseconds, min_rx: 200 milliseconds, multiplier: 3 packets, and role: active) if you have not specified parameters with the `bfd neighbor` command.

When you explicitly enable a BGP neighbor for a BFD session with the `bfd neighbor` command:

- The neighbor does not inherit the global BFD enable values configured with the `bfd neighbor` command or configured for the peer group to which the neighbor belongs.
- The neighbor only inherits the global timer values configured with the `bfd neighbor` command: interval, min_rx, and multiplier.

## Related Commands
- `neighbor bfd disable` — disable a BFD session explicitly with a BGP neighbor or a BGP peer group.

## neighbor bfd disable

Explicitly disable a BFD session with a BGP neighbor or a BGP peer group.

### Syntax
```
neighbor {ip-address | peer-group-name} bfd disable
```

### Parameters
- **ip-address**
  - Enter the IP address of the BGP neighbor that you want to explicitly disable for BFD sessions in dotted decimal format (A.B.C.D).
- **peer-group-name**
  - Enter the name of the peer group that you want to explicitly disable for BFD sessions.

### Defaults
None

### Command Modes
- ROUTER BGP

### Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>

### Usage Information
When you explicitly disable a BGP neighbor for a BFD session with the `neighbor bfd disable` command:
• The neighbor does not inherit the global BFD disable values configured with the `bfd neighbor` command or configured for the peer group to which the neighbor belongs.

• The neighbor only inherits the global timer values configured with the `bfd neighbor` command: interval, min_rx, and multiplier.

When you remove the Disabled state of a BFD for a BGP session with a specified neighbor by entering the `no neighbor bfd disable` command, the BGP link with the neighbor returns to normal operation and uses the BFD session parameters globally configured with the `bfd neighbor` command or configured for the peer group to which the neighbor belongs.

Related Commands

• `neighbor bfd` — enable a BFD session explicitly with a BGP neighbor or a BGP peer group.

**show bfd neighbors**

Display BFD neighbor information on all interfaces or a specified interface.

**Syntax**

```
show bfd [vrf vrf name] neighbors [interface] [detail]
```

**Parameters**

- `vrf vrf name` (Optional) Enter the keyword `vrf` and then the name of the VRF to display the BFD sessions with all neighbors within the VRF.

- `interface` (OPTIONAL) Enter one of the following keywords and slot/port or number information:
  - For a 1-Gigabit Ethernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a port channel interface, enter the keywords `port-channel` then a number.
  - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

- `detail` (OPTIONAL) Enter the keyword `detail` to view detailed information about BFD neighbors.

**Defaults**

None

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
--- | ---
9.11(2.1P1) | Introduced the `vrf` keyword on all the remaining Dell Networking OS platforms.
9.10(0.2) | Introduced the `vrf` keyword on the S3048–ON, S4048–ON, S4048T-ON, S6010–ON, Z9100–ON, and S6100–ON.
9.10(0.1) | Introduced on the S6010-ON and S4048T-ON.
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
### Example

The following example shows the `show bfd vrf neighbors` command output.

```
Dell# show bfd neighbors
*       - Active session role
Ad Dn   - Admin Down
B       - BGP
C       - CLI
I       - ISIS
O       - OSPF
O3      - OSPFv3
R       - Static Route (RTM)

<td>3</td>
<td>C</td>
</tr>
</tbody>
</table>
```

### Example (Detail)

```
Dell# show bfd neighbors detail

Session Discriminator: 1
Neighbor Discriminator: 1
Local Addr: 10.1.3.2
Local MAC Addr: 00:01:e8:02:15:0e
Remote Addr: 10.1.3.1
Remote MAC Addr: 00:01:e8:27:2b:f1
Int: GigabitEthernet 1/3
State: Up
Configured parameters:
  TX: 100ms, RX: 100ms, Multiplier: 3
Neighbor parameters:
  TX: 250ms, RX: 300ms, Multiplier: 4
Actual parameters:
  TX: 300ms, RX: 250ms, Multiplier: 3
Role: Active
Delete session on Down: False
Client Registered: CLI
Uptime: 00:02:04
Statistics:
  Number of packets received from neighbor: 376
  Number of packets sent to neighbor: 314
  Number of state changes: 2
  Number of messages from IFA about port state change: 0
  Number of messages communicated b/w Manager and Agent: 6
```

Dell#
vrrp bfd neighbor

Establish a BFD for VRRP session with a neighbor.

Syntax

```
vrrp bfd neighbor ip-address
```

To remove the BFD session with the neighbor, use the `no vrrp bfd neighbor ip-address` command.

Parameters

- **ip-address**
  
Enter the IP address of the neighbor in dotted decimal format (A.B.C.D).

Defaults

None

Related Commands

- `show bfd neighbors` — display the BFD neighbor information on all interfaces or a specified interface.
Border Gateway Protocol

BGP is an external gateway protocol that transmits interdomain routing information within and between autonomous systems (AS). BGP version 4 (BGPv4) supports classless inter-domain routing (CIDR) and the aggregation of routes and AS paths. Basically, two routers (called neighbors or peers) exchange information including full routing tables and periodically sent messages to update those routing tables.

NOTE: For more information about configuring the border gateway protocol (BGP), see the BGP section in the Dell Networking OS Configuration Guide.

Topics:
- BGP IPv4 Commands
- MBGP Commands
- BGP Extended Communities (RFC 4360)
- IPv6 BGP Commands
- IPv6 MBGP Commands

BGP IPv4 Commands

Border Gateway Protocol (BGP) is an external gateway protocol that transmits interdomain routing information within and between Autonomous Systems (AS). BGP supports classless interdomain routing (CIDR) and the aggregation of routes and AS paths. Basically, two routers (called neighbors or peers) exchange information including full routing tables and periodically send messages to update those routing tables.

NOTE: Dell Networking OS supports 2-byte (16-bit) and 4-byte (32-bit) format for autonomous system numbers (ASNs), where the 2-byte format is 1 to 65535 and the 4-byte format is 1 to 4294967295.

NOTE: Dell Networking OS supports dotted format as well as the traditional plain format for AS numbers. The dot format is displayed when using the show ip bgp commands. To determine the comparable dot format for an ASN from a traditional format, use ASN/65536. ASN%65536. For more information about using the 2– or 4-byte format, refer to the Dell Networking OS Configuration Guide.

address-family

Enable the IPv4 multicast or the IPv6 address family.

Syntax

```
address-family [ipv4 {multicast | vrf vrf-name} | ipv6 unicast [vrf vrf-name]]
```

Parameters

- **ipv4 multicast**
  - Enter the keyword ipv4 followed by the keyword multicast to enable BGPv4 multicast mode.
- **ipv4 vrf vrf-name**
  - Enter the keyword ipv4 followed by the keyword vrf and then the name of the VRF to enable VRF mode.
NOTE: Use this attribute to start a BGP instance corresponding to either a specific address family in a default VRF or an IPv4 address family in a non-default VRF.

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ipv6 unicast</td>
<td>Enter the keyword ipv6 followed by the keyword unicast to enable BGPv6 mode.</td>
</tr>
<tr>
<td>vrf vrf-name</td>
<td>(Optional) Enter the keyword vrf followed by the name of the VRF to install the IPv6 route in that VRF.</td>
</tr>
</tbody>
</table>

NOTE: It will not be possible to enable VRF mode for IPv6 unicast without configuring the corresponding IPv4 unicast mode for the same VRF. While deletion, whenever the IPv4 VRF mode is deleted for the VRF, it will automatically delete the IPv6 VRF configurations as well.

Defaults
Not configured.

Command Modes
ROUTER BGP

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Added support for IPv6 VRF.
9.2(1.0) Introduced on the Z9500.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
8.3.7.0 Introduced on the S4810.
6.5.1.0 Introduced

aggregate-address

To minimize the number of entries in the routing table, summarize a range of prefixes.

Syntax

```
aggregate-address ip-address mask [advertise-map map-name] [as-set] [attribute-map map-name] [summary-only] [suppress-map map-name]
```

Parameters

- **ip-address mask** Enter the IP address and mask of the route to be the aggregate address. Enter the IP address in dotted decimal format (A.B.C.D) and mask in /prefix format (/x).
advertise-map
map-name

(OPTIONAL) Enter the keywords advertise-map then the name of a configured route map to set filters for advertising an aggregate route.

as-set

(OPTIONAL) Enter the keyword as-set to generate path attribute information and include it in the aggregate.

AS_SET includes AS_PATH and community information from the routes included in the aggregated route.

attribute-map map-name

(OPTIONAL) Enter the keywords attribute-map then the name of a configured route map to modify attributes of the aggregate, excluding AS_PATH and NEXT_HOP attributes.

summary-only

(OPTIONAL) Enter the keyword summary-only to advertise only the aggregate address. Specific routes are not advertised.

suppress-map map-name

(OPTIONAL) Enter the keywords suppress-map then the name of a configured route map to identify which more-specific routes in the aggregate are suppressed.

Defaults
Not configured.

Command Modes
• ROUTER BGP ADDRESS FAMILY
• ROUTER BGP ADDRESS FAMILY IPv6

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.2(1.0) Introduced on the Z9500.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
8.3.7.0 Introduced on the S4810.
7.8.1.0 Introduced on the S-Series.
7.7.1.0 Introduced on the C-Series.

Usage Information
At least one of the routes included in the aggregate address must be in the BGP routing table for the configured aggregate to become active.

If routes within the aggregate are constantly changing, do not add the as-set parameter to the aggregate as the aggregate flaps to keep track of the changes in the AS_PATH.
In route maps used in the `suppress-map` parameter, routes meeting the `deny` clause are not suppress; in other words, they are allowed. The opposite is also true: routes meeting the `permit` clause are suppressed.

If the route is injected via the `network` command, that route still appears in the routing table if the `summary-only` parameter is configured in the `aggregate-address` command.

The `summary-only` parameter suppresses all advertisements. If you want to suppress advertisements to only specific neighbors, use the `neighbor distribute-list` command.

In the `show ip bgp` command, aggregates contain an ‘a’ in the first column and routes suppressed by the aggregate contain an ‘s’ in the first column.

When an aggregate address is denied using a peer’s outbound route-map, individual routes suppressed by the aggregate address are advertised to that peer.

The attribute-map corresponding to an aggregate address is applied during the outbound update creation time; the value set in that attribute-map will not be shown in the output of the `show ip bgp aggregate route` command.

**bgp add-path**

Allow the advertisement of multiple paths for the same address prefix without the new paths replacing any previous ones.

**Syntax**

```
bgp add-path [send | receive | both] path-count
```

**Parameters**

- `send`: Enter the keyword `send` to indicate that the system sends multiple paths to peers.
- `receive`: Enter the keyword `receive` to indicate that the system accepts multiple paths from peers.
- `both`: Enter the keyword `both` to indicate that the system sends and accepts multiple paths from peers.
- `path-count`: Enter the number paths supported. The range is from 2 to 64.

**Defaults**

Disabled

**Command Modes**

- ROUTER BGP
- ROUTER BGP-address-family

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</table>

**Usage Information**

Any update without a MED attribute is the least preferred route.

If you enable this command, use the `clear ip bgp *` command to recompute the best path.
bgp asnotation

Allows you to implement a method for AS number representation in the command line interface (CLI).

**Syntax**

```
bgp asnotation \[asplain | asdot+ | asdot\]
```

To disable a dot or dot+ representation and return to ASPLAIN, enter the `no bgp asnotation` command.

**Defaults**
asplain

**Command Modes**
ROUTER BGP

<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.1.0</td>
<td>Introduced the dynamic application of AS notation changes.</td>
</tr>
<tr>
<td>8.2.1.0</td>
<td>Introduced.</td>
</tr>
</tbody>
</table>

**Usage Information**
Before enabling this feature, enable the `enable bgp four-octet-as-support` command. If you disable the `four-octect-support` command after using dot or dot+ format, the AS numbers revert to asplain text.

When you apply an asnotation, it is reflected in the running-configuration. If you change the notation type, the running-config updates dynamically and the new notation shows.

**Example**

```
Dell(conf)# router bgp 1
Dell(conf-router_bgp)# bgp asnotation asdot
Dell(conf-router_bgp)# ex
Dell(conf)#do show run | grep bgp
```

```
router bgp 1
  bgp four-octet-as-support
  bgp asnotation asdot
```

```
Dell(conf)# router bgp 1
Dell(conf-router_bgp)# bgp asnotation asdot+
Dell(conf-router_bgp)# ex
Dell(conf)# do show run | grep bgp
```

```
router bgp 1
  bgp four-octet-as-support
  bgp asnotation asdot+
```
bgp four-octet-as-support
bgp asnotation asdot+

Dell(conf)#router bgp 1
Dell(conf-router_bgp)# bgp asnotation asplain
Dell(conf-router_bgp)# ex
Dell(conf)#do show run |grep bgp
router bgp 1
  bgp four-octet-as-support
Dell(conf)#

Related Commands
  • bgp four-octet-as-support — enable 4-byte support for the BGP process.

bgp bestpath as-path ignore

Ignore the AS PATH in BGP best path calculations.

Syntax
  bgp bestpath as-path ignore

To return to the default, enter the no bgp bestpath as-path ignore command.

Defaults
Disabled (that is, the software considers the AS_PATH when choosing a route as best).

Command Modes
  ROUTER BGP

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.10(0.0)  Introduced on the S3148.
9.8(2.0)  Introduced on the S3100 series.
9.8(1.0)  Introduced on the Z9100–ON.
9.8(0.0P5)  Introduced on the S4048-ON.
9.8(0.0P2)  Introduced on the S3048-ON.
9.7(0.0)  Introduced on the S6000–ON.
9.2(1.0)  Introduced on the Z9500.
9.0.2.0  Introduced on the S6000.
8.3.19.0  Introduced on the S4820T.
8.3.11.1  Introduced on the Z9000.
8.3.7.0  Introduced on the S4810.
7.8.1.0  Introduced on the S-Series.
7.7.1.0  Introduced on the C-Series.

Usage Information
If you enable this command, use the clear ip bgp * command to recompute the best path.
**bgp bestpath as-path multipath-relax**

Include prefixes received from different AS paths during multipath calculation.

**Syntax**  
```
bgp bestpath as-path multipath-relax
```

To return to the default BGP routing process, use the `no bgp bestpath as-path multipath-relax` command.

**Defaults**  
Disabled

**Command Modes**  
ROUTER BGP

**Command History**  
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

**Usage Information**  
The `bestpath router bgp` configuration mode command changes the default bestpath selection algorithm. The `multipath-relax` option allows load-sharing across providers with different (but equal-length) autonomous system paths. Without this option, ECMP expects the AS paths to be identical for load-sharing.

**bgp bestpath med confed**

Enable MULTI_EXIT_DISC (MED) attribute comparison on paths learned from BGP confederations.

**Syntax**  
```
bgp bestpath med confed
```

To disable MED comparison on BGP confederation paths, enter the `no bgp bestpath med confed` command.

**Defaults**  
Disabled

**Command Modes**  
ROUTER BGP

**Command History**  
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.
Version | Description
---|---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.7(0.0) | Introduced on the S6000-ON.
9.2(1.0) | Introduced on the Z9500.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
7.8.1.0 | Introduced on the S-Series.
7.7.1.0 | Introduced on the C-Series.

Usage Information
The software compares the MEDs only if the path contains no external autonomous system numbers. If you enable this command, use the `clear ip bgp *` command to recompute the best path.

**bgp bestpath med missing-as-best**

During path selection, indicate preference to paths with missing MED (MULTI_EXIT_DISC) over paths with an advertised MED attribute.

**Syntax**
```
bgp bestpath med missing-as-best
```

To return to the default selection, use the `no bgp bestpath med missing-as-best` command.

**Defaults**
Disabled

**Command Modes**
ROUTER BGP

**Command History**

bgp bestpath router-id ignore

Do not compare router-id information for external paths during best path selection.

Syntax

bgp bestpath router-id ignore

To return to the default selection, use the no bgp bestpath router-id ignore command.

Defaults

Disabled

Command Modes

ROUTER BGP

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Usage Information

Configuring this option retains the current best-path. When sessions are then reset, the oldest received path is chosen as the best-path.
b gp client-to-client reflection

Allows you to enable route reflection between clients in a cluster.

Syntax

```
bgp client-to-client reflection
```

To disable client-to-client reflection, use the `no bgp client-to-client reflection` command.

Defaults

Enabled when a route reflector is configured.

Command Modes

ROUTER BGP

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

Usage Information

Route reflection to clients is not necessary if all client routers are fully meshed.

Related Commands

- `bgp cluster-id` — assign an ID to a BGP cluster with two or more route reflectors.
- `neighbor route-reflector-client` — configure a route reflector and clients.

b gp cluster-id

Assign a cluster ID to a BGP cluster with more than one route reflector.

Syntax

```
bgp cluster-id {ip-address | number}
```

To delete a cluster ID, use the `no bgp cluster-id {ip-address | number}` command.

Parameters

- `ip-address` Enter an IP address as the route reflector cluster ID.
Enter a route reflector cluster ID as a number from 1 to 4294967295.

**Defaults**
Not configured.

**Command Modes**
ROUTER BGP

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**
When a BGP cluster contains only one route reflector, the cluster ID is the route reflector’s router ID. For redundancy, a BGP cluster may contain two or more route reflectors. Assign a cluster ID with the bgp cluster-id command. Without a cluster ID, the route reflector cannot recognize route updates from the other route reflectors within the cluster.

The default format for displaying the cluster-id is dotted decimal, but if you enter the cluster-id as an integer, it is displayed as an integer.

This command automatically restarts the BGP instance for the configuration to take effect.

**Related Commands**
- `bgp client-to-client reflection` — enable route reflection between the route reflector and clients.
- `neighbor route-reflector-client` — configure a route reflector and clients.
- `show ip bgp cluster-list` — view paths with a cluster ID.

### bgp confederation identifier

Configure an identifier for a BGP confederation.

**Syntax**
```
bgp confederation identifier as-number
```

To delete a BGP confederation identifier, use the `no bgp confederation identifier as-number` command.
Parameters

as-number

Enter the AS number. The range is from 0 to 65535 (2 byte), from 1 to 4294967295 (4 byte), or from 0.1 to 65535.65535 (dotted format).

Defaults

Not configured.

Command Modes

ROUTER BGP

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.2(1.0) Introduced on the Z9500.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
8.3.7.0 Introduced on the S4810.
7.8.1.0 Introduced on the S-Series.
7.7.1.0 Introduced on the C-Series. Added support for the 4-byte format

Usage Information

To accept 4-byte formats before entering a 4-byte AS number, configure your system. All the routers in the Confederation must be 4 byte or 2 byte identified routers. You cannot mix them.

The autonomous systems configured in this command are visible to the EBGP neighbors. Each autonomous system is fully meshed and contains a few connections to other autonomous systems. The next hop, MED, and local preference information is preserved throughout the confederation.

Dell Networking OS accepts confederation EBGP peers without a LOCAL_PREF attribute. The software sends AS_CONFED_SET and accepts AS_CONFED_SET and AS_CONF_SEQ.

If a local-as is configured, BGP does not allow for the configuration of BGP confederation. Similarly, if BGP confederation is configured, then BGP does not allow the configuration of local-as.

If the neighbor is an eBGP neighbor, then BGP performs a check on the first AS number. In this scenario, it is mandatory that the first sequence in the AS path is of type AS_SEQUENCE or AS_CONFED_SEQUENCE (in the case of confederations). If the first entry appears as an AS_CONFED_SET and the neighbor is not in the local AS, then this is strictly a problem with the neighbor node.

This command automatically restarts the BGP instance for the configuration to take effect.

Related Commands

• bgp four-octet-as-support — enable 4-byte support for the BGP process.
**bgp confederation peers**

Specify the autonomous systems (ASs) that belong to the BGP confederation.

**Syntax**

```
bgp confederation peers as-number [...as-number]
```

To return to the default, use the no bgp confederation peers command.

**Parameters**

- `as-number` Enter the AS number. The range is from 0 to 65535 (2 byte), from 1 to 4294967295 (4 byte), or from 0.1 to 65535.65535 (dotted format).
- `...as-number` (OPTIONAL) Enter up to 16 confederation numbers. The range is from 0 to 65535 (2 byte), from 1 to 4294967295 (4 byte), or from 0.1 to 65535.65535 (dotted format).

**Defaults**

Not configured.

**Command Modes**

ROUTER BGP

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>

**Usage Information**

All the routers in the Confederation must be 4 byte or 2 byte identified routers. You cannot mix them.

The autonomous systems configured in this command are visible to the EBGP neighbors. Each autonomous system is fully meshed and contains a few connections to other autonomous systems.

After specifying autonomous systems numbers for the BGP confederation, recycle the peers to update their configuration.

**Related Commands**

- `bgp confederation identifier` — configure a confederation ID.
- `bgp four-octet-as-support` — enable 4-byte support for the BGP process.
**bgp connection-retry-timer**

Configures the BGP connection retry timer.

**Syntax**

```
bgp connection-retry-timer retry-timer-value
```

To return to the default configuration, enter the `no connection-retry-timer retry-timer-value` command.

**Parameters**

- `retry-timer-value` Enter a value that denotes the time interval after which the session retries the connection. The valid range is from 10 to 65535.

**Defaults**

60 seconds.

**Command Modes**

ROUTER BGP

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>

**bgp dampening**

Enable BGP route dampening and configure the dampening parameters.

**Syntax**

```
bgp dampening [half-life reuse suppress max-suppress-time] [route-map map-name]
```

To disable route dampening, use the `no bgp dampening [half-life reuse suppress max-suppress-time] [route-map map-name]` command.

**Parameters**

- `half-life` (OPTIONAL) Enter the number of minutes after which the Penalty is decreased. After the router assigns a Penalty of 1024 to a route, the Penalty is decreased by half after the half-life period expires. The range is from 1 to 45. The default is 15 minutes.

- `reuse` (OPTIONAL) Enter a number as the reuse value, which is compared to the flapping route’s Penalty value. If the Penalty value is less than the reuse value, the flapping route is once again advertised (or no longer suppressed). The range is from 1 to 20000. The default is 750.

- `suppress` (OPTIONAL) Enter a number as the suppress value, which is compared to the flapping route’s Penalty value. If the Penalty value is greater than the suppress value, the flapping route is no longer advertised (that is, it is suppressed). The range is from 1 to 20000. The default is 2000.
**(max-suppress-time)** (OPTIONAL) Enter the maximum number of minutes a route can be suppressed. The default is four times the half-life value. The range is from 1 to 255. The default is **60 minutes**.

**(route-map map-name)** (OPTIONAL) Enter the keyword `route-map` then the name of a configured route map. Only match commands in the configured route map are supported.

**Defaults**

Disabled.

**Command Modes**

- ROUTER BGP
- ROUTER BGP-address-family

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

If you enter the `bgp dampening` command, the default values for `half-life`, `reuse`, `suppress`, and `max-suppress-time` are applied. The parameters are position-dependent; therefore, if you configure one parameter, configure the parameters in the order they appear in the CLI.

Route refresh is sent when you enable BGP dampening.

**Related Commands**

- `show ip bgp dampened-paths` — view the BGP paths.

**bgp default local-preference**

Change the default local preference value for routes exchanged between internal BGP peers.

**Syntax**

```
bgp default local-preference value
```
To return to the default value, use the `no bgp default local-preference` command.

**Parameters**

**value**
Enter a number to assign to routes as the degree of preference for those routes. When routes are compared, the higher the degree of preference or local preference value, the more the route is preferred. The range is from 0 to 4294967295. The default is **100**.

**Defaults**

**100**

**Command Modes**

**ROUTER BGP**

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

**Usage Information**

All routers apply the `bgp default local-preference` command setting within the AS. To set the local preference for a specific route, use the `set local-preference` command in **ROUTE-MAP** mode.

**Related Commands**

- `set local-preference` — assign a local preference value for a specific route.

---

**bgp dmzlink-bw**

Enables BGP Link Bandwidth.

**Syntax**

`bgp dmzlink-bw`

To disable BGP Link Bandwidth, enter the `no bgp dmzlink-bw` command.
Parameters

**dmzlink-bw**
Enter the keyword `dmzlink-bw` to enable BGP Link Bandwidth in BGP multipath.

Defaults

N/A

</table>

Usage Information

Configuring or un-configuring the command brings down and brings up the BGP Route Manager, this results in tear down and re-establishment of all active sessions.

Link Bandwidth has to be configured on the router to tell it to associate Link Bandwidth with prefixes (paths) and/or to use Link Bandwidth in BGP Multipath route selection.

This is done under BGP configuration and is supported per address family – for IPv4 and IPv6 address families.

The configuration for a particular address family applies across all VRFs configured.

This command must be performed on the router which is attaching link bandwidth to prefixes (typically a border router) as well as the router which is expected to load share traffic proportional to the bandwidth of the external links.

---

**bgp enforce-first-as**

Disable (or enable) enforce-first-as check for updates received from EBGP peers.

Syntax

```bash
bgp enforce-first-as
```

To turn off the default, use the `no bgp enforce-first-as` command.

Defaults

Enabled

Command Modes

ROUTER BGP

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.10(0.0)</td>
<td>Introduced on the S3148.</td>
</tr>
<tr>
<td>9.8(2.0)</td>
<td>Introduced on the S3100 series.</td>
</tr>
</tbody>
</table>
Usage Information

This command is enabled by default, that is for all updates received from EBGP peers, BGP ensures that the first AS of the first AS segment is always the AS of the peer. If not, the update is dropped and a counter is increments. Use the `show ip bgp neighbors` command to view the “failed enforce-first-as check” counter.

If you disable the `enforce-first-as` command, it can be viewed using the `show ip protocols` command.

In the event of an enforce-first-as check failure, the existing BGP session is flapped.

Related Commands

- `show ip bgp neighbors` — view the information the BGP neighbors exchange.
- `show ip protocols` — view information on routing protocols.

**bgp fast-external-fallover**

Enable the fast external fallover feature, which immediately resets the BGP session if a link to a directly connected external peer fails.

Syntax

```
bgp fast-external-fallover
```

To disable fast external fallover, use the `no bgp fast-external-fallover` command.

Defaults

Enabled

Command Modes

- ROUTER BGP

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

<td>Introduced on the S3100 series.</td>
</tr>
<tr>
<td>9.8(1.0)</td>
<td>Introduced on the Z9100-ON.</td>
</tr>
</tbody>
</table>
Usage Information

The `bgp fast-external-fallover` command appears in the `show config` command output.

The fast external fallover configuration is applied only after you manually reset all the existing BGP sessions. As a result, after you execute this command, you must also manually execute the `clear ip bgp` command in order for the configuration to take effect.

### bgp four-octet-as-support

Enable 4-byte support for the BGP process.

**Syntax**

```
bgp four-octet-as-support
```

To disable fast external failover, use the `no bgp four-octet-as-support` command.

**Defaults**

Disabled (supports 2-byte format)

**Command Modes**

ROUTER BGP

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>
Routers supporting 4-byte ASNs advertise that function in the OPEN message. The behavior of a 4-byte router is slightly different depending on whether it is speaking to a 2-byte router or a 4-byte router.

When creating Confederations, all the routers in the Confederation must be 4 byte or 2 byte identified routers. You cannot mix them.

Where the 2-byte format is from 1 to 65535, the 4-byte format is from 1 to 4294967295. Both formats are accepted and the advertisements reflect the entered format.

For more information about using the 2 byte or 4 byte format, refer to the Dell Networking OS Configuration Guide.

This command automatically restarts the BGP instance for the configuration to take effect.

**bgp graceful-restart**

To support graceful restart as a receiver only, enable graceful restart on a BGP neighbor, a BGP node, or designate a local router.

**Syntax**

```
bgp graceful-restart [restart-time seconds] [stale-path-time seconds] [role receiver-only]
```

To return to the default, use the no bgp graceful-restart command.

**Parameters**

- `restart-time seconds` Enter the keyword restart-time then the maximum number of seconds to restart and bring-up all the peers. The range is from 1 to 3600 seconds. The default is 120 seconds.
- `stale-path-time seconds` Enter the keyword stale-path-time then the maximum number of seconds to wait before restarting a peer’s stale paths. The default is 360 seconds.
- `role receiver-only` Enter the keyword role receiver-only to designate the local router to support graceful restart as a receiver only.

**Defaults**

as above

**Command Modes**

ROUTER BGP

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>

<td>Introduced on the Z9100-ON.</td>
</tr>
<tr>
<td>9.8(0.0P5)</td>
<td>Introduced on the S4048-ON.</td>
</tr>
</tbody>
</table>
Usage Information

This feature is advertised to BGP neighbors through a capability advertisement. In Receiver Only mode, BGP saves the advertised routes of peers that support this capability when they restart.

BGP graceful restart is active only when the neighbor becomes established. Otherwise it is disabled. Graceful-restart applies to all neighbors with established adjacency.

This command automatically restarts the BGP instance for the configuration to take effect.

**bgp non-deterministic-med**

Compare MEDs of paths from different autonomous systems.

**Syntax**

```
bgp non-deterministic-med
```

To return to the default, use the `no bgp non-deterministic-med` command.

**Defaults**

Disabled (that is, paths/routes for the same destination but from different ASs do not have their MEDs compared).

**Command Modes**

- ROUTER BGP

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
--- | ---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100-ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.7(0.0) | Introduced on the S6000-ON.
9.2(1.0) | Introduced on the Z9500.
8.3.19.0 | Introduced on the S4820T.

8.3.7.0 | Introduced on the S4810.
7.8.1.0 | Introduced on the S-Series.
7.7.1.0 | Introduced on the C-Series.
### bgp outbound-optimization

Enables outbound optimization for IBGP peer-group members.

**Syntax**

```
bgp outbound-optimization
```

To disable outbound optimization, enter the `no bgp outbound-optimization` command.

**Defaults**

Enabled.

**Command Modes**

ROUTER BGP

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

**Version** | **Description**
---|---
9.4.(0.0) | Introduced on the S4810.
9.2(1.0) | Introduced on the Z9500.

**Usage Information**

The updates are sent to all the neighbors in the peer-group and all the neighbors have the same attributes including next-hop.

Enabling or disabling outbound optimization dynamically resets all neighbor sessions.

When you enable outbound optimization, all peers receive the same update packets. Also, the next-hop address, which is chosen as one of the addresses of the neighbor's reachable interface, is the same for all peers.
**bgp outbound-optimization**

Enables outbound optimization for IBGP peer-group members.

**Syntax**

```bgp outbound-optimization```

To disable outbound optimization, enter the `no bgp outbound-optimization` command.

**Defaults**

Enabled.

**Command Modes**

ROUTER BGP

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>

</tr>
</tbody>
</table>

**Usage Information**

The updates are sent to all the neighbors in the peer-group and all the neighbors have the same attributes including next-hop.

Enabling or disabling outbound optimization dynamically resets all neighbor sessions.

When you enable outbound optimization, all peers receive the same update packets. Also, the next-hop address, which is chosen as one of the addresses of the neighbor’s reachable interface, is the same for all peers.

---

**bgp recursive-bgp-next-hop**

Enables next-hop resolution through other routes learned by BGP.

**Syntax**

```bgp recursive-bgp-next-hop```

To disable next-hop resolution, use the `no bgp recursive-bgp-next-hop` command.

**Defaults**

Enabled

**Command Modes**

ROUTER BGP

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.10(0.0)</td>
<td>Introduced on the S3148.</td>
</tr>
<tr>
<td>9.8(2.0)</td>
<td>Introduced on the S3100 series.</td>

<tr>
<td>9.8(1.0)</td>
<td>Introduced on the Z9100-ON.</td>
</tr>
<tr>
<td>9.8(0.0P5)</td>
<td>Introduced on the S4048-ON.</td>
</tr>
</tbody>
</table>
Usage Information

This command is a knob to disable BGP next-hop resolution using BGP learned routes. During the next-hop resolution, only the first route that the next-hop resolves through is verified for the route’s protocol source and is checked if the route is learned from BGP or not.

The `clear ip bgp` command is required for this command to take effect and to keep the BGP database consistent. Execute the `clear ip bgp` command right after executing this command.

Related Commands

- `clear ip bgp` — clear the ip bgp.

**bgp regex-eval-optz-disable**

Disables the Regex Performance engine that optimizes complex regular expression with BGP.

**Syntax**

```plaintext
bgp regex-eval-optz-disable
```

To re-enable optimization engine, use the `no bgp regex-eval-optz-disable` command.

**Defaults**

Enabled

**Command Modes**

ROUTER BGP (conf-router_bgp)

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
--- | ---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100-ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.7(0.0) | Introduced on the S6000-ON.
9.2(1.0) | Introduced on the Z9500.

Usage Information

BGP uses regular expressions (regex) to filter route information. In particular, the use of regular expressions to filter routes based on AS-PATHs and communities is common. In a large-scale configuration, filtering millions of routes based on regular expressions can be quite CPU intensive, as a regular expression evaluation involves generation and evaluation of complex finite state machines.

BGP policies, containing regular expressions to match as-path and communities, tend to use much CPU processing time, which in turn affects the BGP routing convergence. Additionally, the `show bgp` commands, which are filtered through regular expressions, use up CPU cycles particularly with large databases. The Regex Engine Performance Enhancement feature optimizes the CPU usage by caching and reusing regular expression evaluation results. This caching and reuse may be at the expensive of RP1 processor memory.

Examples

Dell(conf-router_bgp)# no bgp regex-eval-optz-disable
Dell(conf-router_bgp)# do show ip protocols
Routing Protocol is "ospf 22222"
   Router ID is 2.2.2.2
   Area                  Routing for Networks
      51          10.10.10.0/00
Routing Protocol is "bgp 1"
   Cluster Id is set to 10.10.10.0
   Router Id is set to 10.10.10.0
   Fast-external-failover enabled
   Regular expression evaluation optimization enabled
   Capable of ROUTE_REFRESH
   For Address Family IPv4 Unicast
      BGP table version is 0, main routing table version 0
      Distance: external 20 internal 200 local 200
Dell(conf-router_bgp)#

Related Commands

- `show ip protocols` — view information on all routing protocols enabled and active on the E-Series.

**bgp router-id**

Assign a user-given ID to a BGP router.

**Syntax**

```
bgp router-id ip-address
```

To delete a user-assigned IP address, use the `no bgp router-id` command.

**Parameters**

- `ip-address` Enter an IP address in dotted decimal format to reset only that BGP neighbor.
The router ID is the highest IP address of the Loopback interface or, if no Loopback interfaces are configured, the highest IP address of a physical interface on the router.

**Command Modes**
- ROUTER BGP

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>

**Usage Information**
Peering sessions are reset when you change the router ID of a BGP router.

This command automatically restarts the BGP instance for the configuration to take effect.

clear ip bgp

Reset BGP sessions. The soft parameter (BGP Soft Reconfiguration) clears the policies without resetting the TCP connection.

**Syntax**
clear ip bgp [vrf vrf-name] [* | <1-4294967295> | <0.1-65535.65535> | A.B.C.D (soft (in | out)) | X:X:X:X::X (soft (in | out)) | dampening | flap-statistics | ipv4 | ipv6 | peer-group]

**Parameters**
- **vrf vrf-name**
  - Enter the keyword vrf and then the name of the VRF to clear all BGP sessions corresponding to that VRF.

  **NOTE:** Use this attribute to clear a BGP instance corresponding to either a specific address family in a default VRF or an IPv4 address family in a non-default VRF.

- **[*]**
  - Enter an asterisk ( * ) to reset all BGP sessions.
Enter <1-4294967295> to clear peers with the AS number.

Enter <0.1-65535.65535> to clear peers with the AS number in dot format.

A.B.C.D
Enter the BGP neighbor address in the A.B.C.D format to clear.

X:XX:XX::X
Enter the BGP neighbor address in the X:XX:XX::X format to clear.

soft
(Optional) Enter the keyword soft to configure and activate policies without resetting the BGP TCP session, that is, BGP Soft Reconfiguration.

NOTE: If you enter the clear ip bgp ip-address soft command, both inbound and outbound policies are reset.

in
(Optional) Enter the keyword in to activate only inbound policies.

out
(Optional) Enter the keyword out to activate only outbound policies.

NOTE: You must execute the clear ip bgp soft out command whenever there is a change in the local policy. If you do not run this command after a local policy change, then these policy changes are not reflected in the responses to the peer’s route refresh messages.

dampening
Enter the keyword dampening to clear the flap dampening information.

flap-statistics
Enter the keywords flap-statistics to clear the flap statistics information.

ipv4
Enter the ipv4 address family to clear.

ipv6
Enter the ipv6 address family to clear.

peer-group
Enter the peer-group to clear all members of the peer-group.
clear ip bgp dampening

Clear information on route dampening and return the suppressed route to the Active state.

Syntax

```
clear ip bgp [vrf vrf-name] [ipv4 [multicast | unicast] | ipv6 unicast] [dampening [ipv4-address mask | ipv6-address mask]]
```

Parameters

- **vrf vrf-name**  
  (OPTIONAL) Enter the keyword `vrf` and then the name of the VRF to clear information on route dampening corresponding to that VRF.

  **NOTE:** You can use this attribute on a specific VRF to remove history routes corresponding to that VRF. You can also use this attribute to return the suppressed routes corresponding to a specific VRF to an active state.

- **ipv4 multicast**  
  (OPTIONAL) Enter the keyword `ipv4` followed by the keyword `multicast` to clear the ipv4 multicast routes.

- **ipv4 unicast**  
  (OPTIONAL) Enter the keyword `ipv4` followed by the keyword `unicast` to clear the ipv4 unicast routes.

- **ipv6 unicast**  
  (OPTIONAL) Enter the keyword `ipv6` followed by the keyword `unicast` to clear the ipv6 unicast routes.

- **ipv4-address mask**  
  (OPTIONAL) Enter an IPv4 address in dotted decimal format and the prefix mask in slash format (/x) to clear dampening information only that BGP neighbor.

- **ipv6-address mask**  
  (OPTIONAL) Enter the IPv6 address and the network mask to clear information on IPv6 route dampening.

--- | ---
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
7.8.1.0 | Introduced on the S-Series.
7.7.1.0 | Introduced on the C-Series.

Usage Information
After you enter this command, the software deletes the history routes and returns the suppressed routes to the Active state.
The `clear ip bgp dampening` command does not clear the history paths.

clear ip bgp flap-statistics

Clear BGP flap statistics, which includes number of flaps and the time of the last flap.

Syntax
```
clear ip bgp [vrf vrf-name] [ipv4 [multicast | unicast] | ipv6 unicast] [flap-statistics [ipv4-address mask | ipv6-address mask] | filter-list as-path-name | regexp regular-expression]
```

Parameters
- `vrf vrf-name` (OPTIONAL) Enter the keyword `vrf` and then the name of the VRF to clear BGP flap statistics corresponding to that VRF.
  
  **NOTE:** You can use this attribute on a specific VRF to remove history routes corresponding to that VRF. You can also use this attribute to return the suppressed routes corresponding to a specific VRF to an active state.
- `ipv4 multicast` (OPTIONAL) Enter the keyword `ipv4` followed by the keyword `multicast` to clear information related only to ipv4 multicast routes.
- `ipv4 unicast` (OPTIONAL) Enter the keyword `ipv4` followed by the keyword `unicast` to clear information related only to ipv4 unicast routes.
- `ipv6 unicast` (OPTIONAL) Enter the keyword `ipv6` followed by the keyword `unicast` to clear information related only to ipv6 unicast routes.
- `ipv4-address mask` (OPTIONAL) Enter an IPv4 address in dotted decimal format and the prefix mask in slash format (/x) to reset only that prefix.
- `ipv6-address mask` (OPTIONAL) Enter the IPv6 address followed by the network mask to reset only that prefix.
- `filter-list as-path-name` (OPTIONAL) Enter the keywords `filter-list` then the name of a configured AS-PATH list.
- `regexp regular-expression` (OPTIONAL) Enter the keyword `regexp` then regular expressions. Use one or a combination of the following:
  - . = (period) any single character (including a white space).
  - * = (asterisk) the sequences in a pattern (0 or more sequences).
  - + = (plus) the sequences in a pattern (1 or more sequences).
• ? = (question mark) sequences in a pattern (either 0 or 1 sequences).

  NOTE: Enter an escape sequence (CTRL+v) prior to entering the ?
regular expression.

• [ ] = (brackets) a range of single-character patterns.
• ( ) = (parenthesis) groups a series of pattern elements to a single element.
• { } = (braces) minimum and the maximum match count.
• ^ = (caret) the beginning of the input string. If you use the caret at the beginning of a
sequence or range, it matches on everything BUT the characters specified.
• $ = (dollar sign) the end of the output string.

</tbody>
</table>
deny bandwidth

Enables you to specify link bandwidth extended-community attribute as the matching criteria to deny incoming or outgoing traffic.

Syntax

```
deny bandwidth
```

To disable this setting, enter the `no deny bandwidth` command.

Parameters

- `bandwidth` Enter the keyword `bandwidth` to specify extended-community attribute as the matching criteria for denying traffic. The range is from 0 to 102400.

Defaults

N/A

Command Modes

EXTENDED COMMUNITY LIST

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

```
Version Description
9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100-ON.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S-Series and Z9500.
```

Related Commands

- `permit bandwidth` – specify link bandwidth extended-community attribute as the matching criteria to permitting incoming or outgoing traffic.

debug ip bgp

Display all information on BGP, including BGP events, keepalives, notifications, and updates.

Syntax

```
debug ip bgp [vrf vrf-name | A.B.C.D | X:X:X::X | peer-group peer-group-name] [in | out]
```

To disable all BGP debugging, use the `no debug ip bgp` command.
**Parameters**

- **vrf vrf-name**
  Enter the keyword `vrf` and then the name of the VRF to debug BGP information corresponding to that VRF.

  **NOTE:** Use this attribute to debug BGP protocol operations corresponding to either a default or non-default VRF.

- **A.B.C.D**
  Enter the IPv4 address of the neighbor in dotted decimal format.

- **X:XX:XX::X**
  (OPTIONAL) Enter an IPv6 address.

- **peer-group peer-group-name**
  Enter the keywords `peer-group` then the name of the peer group to debug.

- **in**
  (OPTIONAL) Enter the keyword `in` to view only information on inbound BGP routes.

- **out**
  (OPTIONAL) Enter the keyword `out` to view only information on outbound BGP routes.

- **A.B.C.D**
  Enter the IP address of peer in the A.B.C.D format.

- **X:XX:XX::X**
  Enter the IPv6 IP address of peer in the X:XX::X format.

- **dampening**
  Enter the keyword `dampening` to view BGP dampening.

- **events**
  Enter the keyword `events` to view BGP protocol events.

- **ipv4**
  Enter the ipv4 IP address to view the IPV4 route information.

- **ipv6**
  Enter the ipv6 IP address to view the IPV6 route information.

- **keepalives**
  Enter the keyword `keepalives` to view BGP keepalives.

- **notifications**
  Enter the keyword `notifications` to view BGP notifications.

- **soft-reconfiguration**
  Enter the keywords `soft-reconfiguration` to view only information on inbound BGP soft reconfiguration.

- **updates**
  Enter the keyword `updates` to view BGP updates.

**Command Modes**

- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>
Usage Information

To view information on both incoming and outgoing routes, do not include the in and out parameters in the debugging command. The in and out parameters cancel each other; for example, if you enter the debug ip bgp in command and then enter the debug ip bgp out command, you do not see information on the incoming routes.

Entering a no debug ip bgp command removes all configured debug commands for BGP.

Related Commands

- debug ip bgp events — view information about BGP events.
- debug ip bgp keepalives — view information about BGP keepalives.
- debug ip bgp notifications — view information about BGP notifications.
- debug ip bgp updates — view information about BGP updates.
- show debugging — view enabled debugging operations.

**debug ip bgp dampening**

View information on routes being dampened.

**Syntax**

```
debug ip bgp [vrf vrf-name] [ipv4 {unicast | multicast} | ipv6 unicast] dampening
```

To disable debugging, use the no debug ip bgp dampening command.

**Parameters**

- **vrf vrf-name**
  
Enter the keyword vrf followed by the name of the VRF to view information on dampened routes corresponding to that VRF.

- **ipv4 multicast**
  
  (OPTIONAL) Enter the keyword ipv4 followed by the keyword multicast to view dampened-route information related only to ipv4 multicast routes.

- **ipv4 unicast**
  
  (OPTIONAL) Enter the keyword ipv4 followed by the keyword unicast to view dampened-route information related only to ipv4 unicast routes.

- **ipv6 unicast**
  
  (OPTIONAL) Enter the keyword ipv6 followed by the keyword unicast to view dampened-route information related only to ipv6 unicast routes.

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
--- | ---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100–ON.
9.8(0.0P6) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
debug ip bgp events

Display information on local BGP state changes and other BGP events.

Syntax
debg ip bgp [vrf vrf-name] [A.B.C.D | X:X:X:X::X | peer-group peer-group-name] events [in | out]

To disable debugging, use the no debug ip bgp [vrf vrf-name] [A.B.C.D | X:X:X:X::X | peer-group peer-group-name] events [in | out] command.

Parameters
- **vrf vrf-name** (OPTIONAL) Enter the keyword vrf followed by the name of the VRF to display BGP state changes corresponding to that VRF.
- **A.B.C.D** (OPTIONAL) Enter the IPv4 address of the neighbor.
- **X:X:X:X::X** (OPTIONAL) Enter an IPv6 address.
- **peer-group peer-group-name** (OPTIONAL) Enter the keyword peer-group then the name of the peer group.
- **in** (OPTIONAL) Enter the keyword in to view only events on inbound BGP messages.
- **out** (OPTIONAL) Enter the keyword out to view only events on outbound BGP messages.

Command Modes
- EXEC Privilege

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100-ON.
### Usage Information

To remove all configured debug commands for BGP, enter the `no debug ip bgp` command.

### debug ip bgp keepalives

Display information about BGP keepalive messages.

**Syntax**

```
debug ip bgp [vrf vrf-name] [A.B.C.D | X:X:X::X | peer-group peer-group-name] keepalives [in | out]
```

To disable debugging, use the `no debug ip bgp [vrf vrf-name] [A.B.C.D | X:X:X::X | peer-group peer-group-name] keepalives [in | out]` command.

**Parameters**

- **vrf vrf-name** (OPTIONAL) Enter the keyword `vrf` followed by the name of the VRF to display BGP keepalive information corresponding to that VRF.
- **A.B.C.D** (OPTIONAL) Enter the IPv4 address of the neighbor.
- **X:X:X::X** (OPTIONAL) Enter an IPv6 address.
- **peer-group peer-group-name** (OPTIONAL) Enter the keyword `peer-group` then the name of the peer group.
- **in** (OPTIONAL) Enter the keyword `in` to view only inbound keepalive messages.
- **out** (OPTIONAL) Enter the keyword `out` to view only outbound keepalive messages.

**Command Modes**

- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version**

- 9.10(0.0) Introduced on the S3148.

**Description**

- Introduced on the S4048-ON.
- Introduced on the S3048-ON.
- Introduced on the S6000–ON.
- Introduced on the Z9500.
- Introduced on the S6000.
- Introduced on the S4820T.
- Introduced on the Z9000.
- Introduced on the S4810.
- Introduced on the S-Series.
- Introduced on the C-Series.

---

**Version**

- 9.10(0.0)
- 9.8(0.0P5)
- 9.8(0.0P2)
- 9.7(0.0)
- 9.2(1.0)
- 9.0.2.0
- 8.3(19.0)
- 8.3(11.1)
- 8.3(7.0)
- 7.8.1.0
- 7.7.1.0

**Description**

- Introduced on the S4048-ON.
- Introduced on the S3048-ON.
- Introduced on the S6000–ON.
- Introduced on the Z9500.
- Introduced on the S6000.
- Introduced on the S4820T.
- Introduced on the Z9000.
- Introduced on the S4810.
- Introduced on the S-Series.
- Introduced on the C-Series.
### debug ip bgp notifications

Allows you to view information about BGP notifications received from neighbors.

**Syntax**

debug ip bgp [vrf vrf-name] [A.B.C.D | X:X:X::X | peer-group peer-group-name] notifications [in | out]

To disable debugging, use the `no debug ip bgp [vrf vrf-name] [A.B.C.D | X:X:X::X | peer-group peer-group-name] notifications [in | out]` command.

**Parameters**

- **vrf vrf-name** (OPTIONAL) Enter the keyword `vrf` followed by the name of the VRF to view neighbor BGP notification information corresponding to that VRF.
- **A.B.C.D** (OPTIONAL) Enter the IPv4 address of the neighbor.
- **X:X:X::X** (OPTIONAL) Enter an IPv6 address.
- **peer-group peer-group-name** (OPTIONAL) Enter the keyword `peer-group` then the name of the peer group.
- **in** (OPTIONAL) Enter the keyword `in` to view BGP notifications received from neighbors.
- **out** (OPTIONAL) Enter the keyword `out` to view BGP notifications sent to neighbors.

**Command Modes**

EXEC Privilege

**Command History**

8.3.11.1                                         Introduced on the Z9000.
8.3.7.0                                          Introduced on the S4810.
7.8.1.0                                          Introduced on the S-Series.
7.7.1.0                                          Introduced on the C-Series.

Usage Information
To remove all configured debug commands for BGP, enter the no debug ip bgp command.

dbg ip bgp soft-reconfiguration

Enable soft-reconfiguration debug.

Syntax
debug ip bgp [vrf vrf-name] [A.B.C.D | X:X:X::X | peer-group-name] soft-reconfiguration
To disable, use the debug ip bgp [vrf vrf-name] [A.B.C.D | X:X:X::X | peer-group-name] soft-reconfiguration command.

Parameters
vrf vrf-name                                (OPTIONAL) Enter the keyword vrf followed by the name of the VRF to enable soft-reconfiguration debugging on that VRF.
A.B.C.D                                      (OPTIONAL) Enter the IPv4 address of the neighbor in dotted decimal format.
X·X·X·X:·X                                    (OPTIONAL) Enter an IPv6 address.
peer-group-name                              (OPTIONAL) Enter the name of the peer group to disable or enable all routers within the peer group.

Defaults
Disabled

Command Modes
EXEC Privilege

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version                          Description
9.10(0.0)                        Introduced on the S3148.
9.8(2.0)                         Introduced on the S3100 series.
Version | Description
--- | ---
9.8(1.0) | Introduced on the Z9100-ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.2(1.0) | Introduced on the Z9500.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
7.8.1.0 | Introduced on the S-Series.
7.7.1.0 | Introduced on the C-Series.
7.2.1.0 | Introduced.

Usage Information
This command turns on BGP soft-reconfiguration inbound debugging. If no neighbor is specified, debug turns on for all neighbors.

**debug ip bgp updates**

Allows you to view information about BGP updates.

**Syntax**
```
ddebug ip bgp [vrf vrf-name] [A.B.C.D | X:X:X::X | peer-group peer-group-name] updates [in | out | prefix-list prefix-list-name]
```
To disable debugging, use the no debug ip bgp [vrf vrf-name] [A.B.C.D | X:X:X::X | peer-group peer-group-name] updates [in | out | prefix-list prefix-list-name] command.

**Parameters**
- **vrf vrf-name** (OPTIONAL) Enter the keyword vrf followed by the name of the VRF to view BGP updates information corresponding to that VRF.
- **A.B.C.D** (OPTIONAL) Enter an IPv4 address of the neighbor.
- **X:X:X::X** (OPTIONAL) Enter an IPv6 address.
- **peer-group peer-group-name** (OPTIONAL) Enter the keyword peer-group followed by the name of the peer group.
- **in** (OPTIONAL) Enter the keyword in to view only BGP updates received from neighbors.
- **out** (OPTIONAL) Enter the keyword out to view only BGP updates sent to neighbors.
- **prefix-list prefix-list-name** (OPTIONAL) Enter the keyword prefix-list then the name of an established prefix list. If the prefix list is not configured, the default is permit (to allow all routes).
- **ip-address** (OPTIONAL) Enter the IP address of the neighbor in dotted decimal format.
**peer-group-name**  
(OPTIONAL) Enter the name of the peer group to disable or enable all routers within the peer group.

**Command Modes**  
EXEC Privilege

**Command History**  
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>

**Usage Information**  
To remove all configured debug commands for BGP, enter the `no debug ip bgp` command.

### default-metric

Allows you to change the metric of redistributed routes to locally originated routes. Use this command with the `redistribute` command.

**Syntax**  
default-metric number

To return to the default setting, use the `no default-metric` command.

**Parameters**  

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>number</td>
<td>Enter a number as the metric to be assigned to routes from other protocols. The range is from 1 to 4294967295.</td>

</tbody>
</table>

**Defaults**  

0

**Command Modes**  
ROUTER BGP

**Command History**  
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.
### description

Enter a description of the BGP routing protocol.

**Syntax**

```
description {description}
```

To remove the description, use the `no description {description}` command.

**Parameters**

- **description**: Enter a description to identify the BGP protocol (80 characters maximum).

**Defaults**

`none`

**Command Modes**

`ROUTER BGP`

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

The `default-metric` command in BGP sets the value of the BGP MULTI_EXIT_DISC (MED) attribute for redistributed routes only.

**Related Commands**

- `bgp always-compare-med` — enable comparison of all BGP MED attributes.
- `redistribute` — redistribute routes from other routing protocols into BGP.

**Related Commands**

- **router bgp** — enter ROUTER mode on the switch.

### maximum-paths

Configure the maximum number of parallel routes (multipath support) BGP supports.

**Syntax**

```plaintext
maximum-paths {ebgp | ibgp} number
```

To return to the default values, enter the `no maximum-paths` command.

**Parameters**

- **ebgp**
  - Enter the keyword `ebgp` to enable multipath support for External BGP routes.

- **ibgp**
  - Enter the keyword `ibgp` to enable multipath support for Internal BGP routes.

- **number**
  - Enter a number as the maximum number of parallel paths. The range is from 2 to 64.

**Defaults**

none

**Command Modes**

ROUTER BGP

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>

**Usage Information**
If you enable this command, use the `clear ip bgp *` command to recompute the best path.

**neighbor activate**

This command allows the specified neighbor/peer group to be enabled for the current AFI/SAFI (Address Family Identifier/Subsequent Address Family Identifier).

**Syntax**

```
neighbor [ip-address | peer-group-name] activate
```

To disable, use the `no neighbor [ip-address | peer-group-name] activate` command.

**Parameters**

- `ip-address` (OPTIONAL) Enter the IP address of the neighbor in dotted decimal format.
- `peer-group-name` (OPTIONAL) Enter the name of the peer group.
- `activate` Enter the keyword `activate` to enable the neighbor/peer group in the new AFI/SAFI.

**Defaults**

Disabled

**Command Modes**

CONFIGURATION-ROUTER-BGP-ADDRESS FAMILY

**Command History**

Version | Description
---|---
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
7.8.1.0 | Introduced on the S-Series.
7.7.1.0 | Introduced on the C-Series.

Usage Information
By default, when you create a neighbor/peer group configuration in the Router BGP context, this enables IPv4/Unicast AFI/SAFI. When you use activate in the new context, the neighbor/peer group enables for AFI/SAFI. It is not possible to de-activate a peer from the IPv4 unicast address family.

neighbor add-path

This command allows the specified neighbor/peer group to send/receive multiple path advertisements.

Syntax
neighbor \[ip-address | peer-group-name\] add-path [send | receive | both] path-count

Parameters
- ip-address: (OPTIONAL) Enter the IP address of the neighbor in dotted decimal format.
- peer-group-name: (OPTIONAL) Enter the name of the peer group.
- send: Enter the keyword send to indicate that the system sends multiple paths to peers.
- receive: Enter the keyword receive to indicate that the system accepts multiple paths from peers.
- both: Enter the keyword both to indicate that the system sends and accepts multiple paths from peers.
- path-count: Enter the number paths supported. The range is from 2 to 64.

Defaults
none

Command Modes
CONFIGURATION-ROUTER-BGP-ADDRESS FAMILY

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version | Description
---|---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100-ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.7(0.0) | Introduced on the S6000-ON.
9.2(1.0) | Introduced on the Z9500.
9.0.2.0 | Introduced on the S6000.
neighbor advertisement-interval

Set the advertisement interval between BGP neighbors or within a BGP peer group.

Syntax

```
neighbor {ip-address | peer-group-name} advertisement-interval seconds
```

To return to the default value, use the `no neighbor {ip-address | peer-group-name} advertisement-interval` command.

Parameters

- **ip-address** (OPTIONAL) Enter the IP address of the neighbor in dotted decimal format.
- **peer-group-name** Enter the name of the peer group to set the advertisement interval for all routers in the peer group.
- **seconds** Enter a number as the time interval, in seconds, between BGP advertisements. The range is from 0 to 600 seconds. The default is **5 seconds** for internal BGP peers and **30 seconds** for external BGP peers.

Defaults

- seconds = **5 seconds** (internal peers)
- seconds = **30 seconds** (external peers)

Command Modes

- ROUTER BGP

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description

9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100–ON.
9.8(0.0P6) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.2(1.0) Introduced on the Z9500.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.

Related Commands

- bgp add-path — allow the advertisement of multiple paths for the same address prefix without the new paths implicitly replacing any previous ones.
neighbor advertisement-start

To send BGP routing updates, set the minimum interval before starting.

Syntax
neighbor {ip-address} advertisement-start seconds

Parameters
- **ip-address** (OPTIONAL) Enter the IP address of the neighbor in dotted decimal format.
- **seconds** Enter a number as the time interval, in seconds, before BGP route updates are sent. The range is from 0 to 3600 seconds.

Defaults
none

Command Modes
- ROUTER BGP

neighbor allowas-in

Set the number of times an AS number can occur in the AS path.

**Syntax**

```
neighbor {ip-address | peer-group-name} allowas-in number
```

To return to the default value, use the `no neighbor {ip-address | peer-group-name} allowas-in` command.

**Parameters**

- **ip-address** (OPTIONAL) Enter the IP address of the neighbor in dotted decimal format.
- **peer-group-name** Enter the name of the peer group to set the advertisement interval for all routers in the peer group.
- **number** Enter a number of times to allow this neighbor ID to use the AS path. The range is from 1 to 10.

**Defaults**

Not configured.

**Command Modes**

- ROUTER BGP

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Usage Information**

You cannot set this configuration for a peer that is associated with a peer group. Similarly, you cannot associate a peer to a peer group if that peer is already configured with these settings.

**Related Commands**

- `bgp four-octet-as-support` — enable 4-byte support for the BGP process.
neighbor default-originate

Inject the default route to a BGP peer or neighbor.

Syntax

    neighbor {ip-address | peer-group-name} default-originate [route-map map-name]

To remove a default route, use the no neighbor {ip-address | peer-group-name} default-originate command.

Parameters

- **ip-address** (OPTIONAL) Enter the IP address of the neighbor in dotted decimal format.
- **peer-group-name** Enter the name of the peer group to set the default route of all routers in that peer group.
- **route-map map-name** (OPTIONAL) Enter the keyword route-map then the name of a configured route map.

Defaults

Not configured.

Command Modes

ROUTER BGP

Command History

</tbody>
</table>

Usage Information

If you apply a route map to a BGP peer or neighbor with the neighbor default-originate command configured, the software does not apply the set filters in the route map to that BGP peer or neighbor.

When you configure a route-map for a BGP peer or peer group with the neighbor default-originate command, the command checks for the existence of the route in BGP RIB.

Route-map configuration on a BGP peer or peer group works only when the LOC-RIB contains at least one route.
When you apply a default route to a BGP peer or peer group using the `neighbor default-originate` command, changes to the configured default route-map are applied to the BGP peer or peer group only after a delay of 15 seconds. As a result, you must wait for a period of 15 seconds before manually resetting BGP using the `clear ip bgp` command.

In case of eBGP, the `neighbor default-originate` command does not support `extended-community` as a non-transitive route-map attribute.

You cannot set this configuration for a peer that is associated with a peer group. Similarly, you cannot associate a peer to a peer group if that peer is already configured with these settings.

In order that settings corresponding to the `neighbor default-originate` command take effect, you must execute the `clear ip bgp` command immediately after you execute the `neighbor default-originate` command.

### neighbor description

Assign a character string describing the neighbor or group of neighbors (peer group).

**Syntax**
```
neighbor {ip-address | peer-group-name} description text
```

To delete a description, use the `no neighbor {ip-address | peer-group-name} description` command.

**Parameters**
- `ip-address` Enter the IP address of the neighbor in dotted decimal format.
- `peer-group-name` Enter the name of the peer group.
- `text` Enter a continuous text string up to 80 characters.

**Defaults**
Not configured.

**Command Modes**
ROUTER BGP

**Command History**

</table>
**neighbor distribute-list**

Distribute BGP information via an established prefix list.

```
Syntax
neighbor \{ip-address | peer-group-name\} distribute-list prefix-list-name \{in | out\}
```

To delete a neighbor distribution list, use the `no neighbor \{ip-address | peer-group-name\} distribute-list prefix-list-name \{in | out\}` command.

**Parameters**

- `ip-address`: Enter the IP address of the neighbor in dotted decimal format.
- `peer-group-name`: Enter the name of the peer group to apply the distribute list filter to all routers in the peer group.
- `prefix-list-name`: Enter the name of an established prefix list.

If the prefix list is not configured, the default is `permit` (to allow all routes).

- `in`: Enter the keyword `in` to distribute only inbound traffic.
- `out`: Enter the keyword `out` to distribute only outbound traffic.

**Defaults**

Not configured.

**Command Modes**

ROUTER BGP

**Command History**

</tbody>
</table>
neighbor ebgp-multihop

Attempt and accept BGP connections to external peers on networks that are not directly connected.

Syntax

```
neighbor {ip-address | peer-group-name} ebgp-multihop [ttl]  
```

To disallow and disconnect connections, use the no neighbor {ip-address | peer-group-name} ebgp-multihop command.

Parameters

- **ip-address**: Enter the IP address of the neighbor in dotted decimal format.
- **peer-group-name**: Enter the name of the peer group.
- **ttl** (OPTIONAL): Enter the number of hops as the Time to Live (ttl) value. The range is from 1 to 255. The default is 255.

Defaults

Disabled.

Command Modes

- ROUTER BGP

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.10(0.0)</td>
<td>Introduced on the S3148.</td>
</tr>
<tr>

<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>
To prevent loops, the `neighbor ebgp-multihop` command does not install the default routes of the multihop peer. Networks not directly connected are not considered valid for best-path selection.

### neighbor fall-over

Enable or disable fast fall-over for BGP neighbors.

**Syntax**

```
neighbor {ipv4-address | peer-group-name} fall-over
```

To disable, use the `no neighbor {ipv4-address | peer-group-name} fall-over` command.

**Parameters**

- `ipv4-address` Enter the IP address of the neighbor in dotted decimal format.
- `peer-group-name` Enter the name of the peer group.

**Defaults**

Disabled.

**Command Modes**

ROUTER BGP

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.10(0.0)</td>
<td>Introduced on the S3148.</td>

</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>7.4.1.0</td>
<td>Introduced</td>
</tr>
</tbody>
</table>

**Usage Information**

When you enable failover, BGP keeps track of IP or IPv6 ability to reach the peer remote address and the peer local address. Whenever either address becomes unreachable (for example, no active route exists in the routing table for the peer IP or IPv6 destination/local address), BGP brings down the session with the peer.

**Related Commands**

- `show ip bgp neighbors` — display information on the BGP neighbors.
**neighbor local-as**

To accept external routes from neighbors with a local AS number in the AS number path, configure Internal BGP (iBGP) routers.

**Syntax**

```
neighbor {ip-address | peer-group-name} local-as as-number [no-prepend]
```

To return to the default value, use the `no neighbor {ip-address | peer-group-name} local-as` command.

**Parameters**

- **ip-address**
  - Enter the IP address of the neighbor in dotted decimal format.

- **peer-group-name**
  - Enter the name of the peer group to set the advertisement interval for all routers in the peer group.

- **as-number**
  - Enter the AS number to reset all neighbors belonging to that AS. The range is from 0 to 65535 (2 byte), from 1 to 4294967295 (4 byte) or from 0.1 to 65535.65535 (dotted format).

- **no prepend**
  - Specifies that local AS values do not prepend to announcements from the neighbor.

**Defaults**

Not configured.

**Command Modes**

- ROUTER BGP

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>

<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

If a local-as is configured, BGP does not allow for the configuration of BGP confederation. Similarly, if BGP confederation is configured, then BGP does not allow the configuration of local-as.

This command automatically restarts the neighbor session for the configuration to take effect.
Related Commands

- `bgp four-octet-as-support` — enable 4-byte support for the BGP process.

## neighbor maximum-prefix

Control the number of network prefixes received.

### Syntax

```
neighbor {ip-address | peer-group-name} maximum-prefix maximum [threshold] [warning-only]

To return to the default values, use the no neighbor {ip-address | peer-group-name} maximum-prefix maximum command.
```

### Parameters

- **ip-address**
  - Enter the IP address of the neighbor in dotted decimal format.
- **peer-group-name**
  - Enter the name of the peer group.
- **maximum**
  - Enter a number as the maximum number of prefixes allowed for this BGP router. The range is from 1 to 4294967295.
- **threshold**
  - (OPTIONAL) Enter a number to be used as a percentage of the maximum value. When the number of prefixes reaches this percentage of the maximum value, the E-Series software sends a message. The range is from 1 to 100 percent. The default is 75.
- **warning-only**
  - (OPTIONAL) Enter the keyword `warning-only` to set the router to send a log message when the maximum value is reached. If this parameter is not set, the router stops peering when the maximum number of prefixes is reached.

```
NOTE: When you set this option, the router accepts BGP prefixes only until the maximum configured value. After the maximum number is reached, the router drops any additional prefixes that it receives.
```

### Defaults

```
threshold = 75
```

### Command Modes

```
ROUTER BGP
```

### Command History

### neighbor next-hop-self

Allows you to configure the router as the next hop for a BGP neighbor.

**Syntax**

```
neighbor {ip-address | peer-group-name} next-hop-self [all]
```

To return to the default setting, use the `no neighbor {ip-address | peer-group-name} next-hop-self [all]` command.

**Parameters**

- `ip-address`: Enter the IP address of the neighbor in dotted decimal format.
- `peer-group-name`: Enter the name of the peer group.
- `all`: Specifies that the route reflector is the next hop for both iBGP and eBGP-learned routes.

**Defaults**

Disabled.

**Command Modes**

ROUTER BGP

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.10(0.0)</td>
<td>Introduced on the S3148.</td>
</tr>
<tr>
<td>9.10(0.0)</td>
<td>Introduced the all keyword on the S4810, S4820, S4048–ON, S3048–ON, S3100 series, S6010–ON, S4040T-ON, S5000, S6000, S6000–ON, S6100–ON, Z9100–ON, and Z9500.</td>
</tr>
<tr>
<td>9.2(1.0)</td>
<td>Introduced on the Z9500.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>

<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

If you configure the `set next-hop` command in ROUTE-MAP mode, the configuration takes precedence over the `neighbor next-hop-self` command.
If you do not use the `all` keyword, the next hop of only eBGP-learned routes is updated by the route reflector. If you use the `all` keyword, the next hop of both eBGP- and iBGP-learned routes are updated by the route reflector.

**neighbor password**

Enable message digest 5 (MD5) authentication on the TCP connection between two neighbors.

**Syntax**

```
neighbor {ip-address | peer-group-name} password [encryption-type] password
```

To delete a password, use the `no neighbor {ip-address | peer-group-name} password` command.

**Parameters**

- **ip-address**
  - Enter the IP address of the router to be included in the peer group.

- **peer-group-name**
  - Enter the name of a configured peer group.

- **encryption-type**
  - (OPTIONAL) Enter 7 as the encryption type for the password entered. 7 means that the password is encrypted and hidden.

- **password**
  - Enter a text string up to 80 characters long. The first character of the password must be a letter.

  You cannot use spaces in the password.

**Defaults**

Not configured.

**Command Modes**

ROUTER BGP

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version**

- 9.10(0.0)
  - Introduced on the S3148.

- 9.8(2.0)
  - Introduced on the S3100 series.

- 9.8(1.0)
  - Introduced on the Z9100–ON.

- 9.8(0.0P5)
  - Introduced on the S4048-ON.

- 9.8(0.0P2)
  - Introduced on the S3048-ON.

- 9.7(0.0)
  - Introduced on the S6000–ON.

- 9.2(1.0)
  - Introduced on the Z9500.

- 9.0.2.0
  - Introduced on the S6000.

- 8.3.19.0
  - Introduced on the S4820T.

- 8.3.11.1
  - Introduced on the Z9000.

- 8.3.7.0
  - Introduced on the S4810.

- 7.8.1.0
  - Introduced on the S-Series.

- 7.7.1.0
  - Introduced on the C-Series.

**Usage Information**

This command automatically restarts the neighbor session for the configuration to take effect.
Configure the same password on both BGP peers or a connection does not occur. When you configure MD5 authentication between two BGP peers, each segment of the TCP connection between them is verified and the MD5 digest is checked on every segment sent on the TCP connection.

Configuring a password for a neighbor causes an existing session to be torn down and a new one established.

If you specify a BGP peer group by using the peer-group-name parameter, all the members of the peer group inherit the characteristic configured with this command.

If you configure a password on one neighbor, but you have not configured a password for the neighboring router, the following message appears on the console while the routers attempt to establish a BGP session between them:

%RPM0-P:RP1 %KERN-6-INT: No BGP MD5 from [peer's IP address]:179 to [local router's IP address]:65524

Also, if you configure different passwords on the two routers, the following message appears on the console:

%RPM0-P:RP1 %KERN-6-INT: BGP MD5 password mismatch from [peer's IP address] : 11502 to [local router's IP address] :179

**neighbor peer-group (assigning peers)**

Allows you to assign one peer to an existing peer group.

**Syntax**

```
neighbor {ip-address | peer-group peer-group-name} dmzlink-bw
```

To delete a peer from a peer group, use the `no neighbor {ip-address | peer-group peer-group-name}` command.

To disable dmzlink-dw for the peer group, use the `no neighbor ip-address dmzlink-dw` command.

**Parameters**

- `ip-address`: Enter the IP address of the router to be included in the peer group.
- `peer-group-name`: Enter the name of a configured peer group.
- `dmzlink-bw`: Enter the keyword dmzlink-bw to attach a link bandwidth to received routes.

**Defaults**

Not configured.

**Command Modes**

- `ROUTER BGP`

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>

<td>Introduced on the S4048-ON.</td>
</tr>
</tbody>
</table>
### Version Description
- **9.8(0.0P2)** Introduced on the S3048-ON.
- **9.7(0.0)** Added the dmzlink-bw parameter.
- **9.2(1.0)** Introduced on the Z9500.
- **9.0.2.0** Introduced on the S6000.
- **8.3.19.0** Introduced on the S4820T.
- **8.3.11.1** Introduced on the Z9000.
- **8.3.7.0** Introduced on the S4810.
- **7.8.1.0** Introduced on the S-Series.
- **7.7.1.0** Introduced on the C-Series.

### Usage Information
You can assign up to 256 peers to one peer group.

When you add a peer to a peer group, it inherits all the peer group’s configured parameters. A peer cannot become part of a peer group if any of the following commands are configured on the peer:

- `neighbor advertisement-interval`
- `neighbor distribute-list`
- `neighbor route-map`
- `neighbor route-reflector-client`

If a neighbor’s configuration is more specific than its peer group’s configuration, the neighbor may retain its configuration after it is added to the peer group. The neighbor’s configuration does not affect outgoing updates.

A peer group must exist (be enabled) before you add a peer to it. If the peer group is disabled (shutdown), the peers within that group are also disabled (shutdown).

In BGP, you cannot associate a peer to a peer-group without configuring the remote-as for Internal BGP (IBGP) or External BGP (EBGP).

This command automatically restarts the neighbor session for the configuration to take effect.

### Related Commands
- `clear ip bgp` — reset BGP sessions.
- `neighbor peer-group (creating group)` — create a peer group.
- `show ip bgp peer-group` — view BGP peers.
- `show ip bgp neighbors` — view BGP neighbors configurations.

### neighbor peer-group (creating group)

Allows you to create a peer group and assign it a name.

#### Syntax

```
neighbor peer-group-name peer-group
```

To delete a peer group, use the `no neighbor peer-group-name peer-group` command.

#### Parameters

- `peer-group-name` Enter a text string up to 16 characters long as the name of the peer group.
When you create a peer group, it is disabled (Shut mode).

Related Commands

- `neighbor peer-group (assigning peers)` — assign routers to a peer group.
- `neighbor remote-as` — assign a indirectly connected AS to a neighbor or peer group.
- `neighbor shutdown` — disable a peer or peer group.

### neighbor peer-group passive

Enable passive peering on a BGP peer group, that is, the peer group does not send an OPEN message, but responds to one.

**Syntax**

```
neighbor peer-group-name peer-group passive [limit sessions]
```

**Parameters**

- `peer-group-name` Enter a text string up to 16 characters long as the name of the peer group.
- `limit` (Optional) Enter the keyword `limit` to constrain the numbers of sessions for this peer-group. The range is from 2 to 256. The default is `256`.

**Defaults**

Not configured.

**Command Modes**

ROUTER BGP
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>

Usage Information
After you configure a peer group as passive, assign it a subnet using the neighbor soft-reconfiguration inbound command.

For passive eBGP limits, the Remote AS must be different from the AS for this neighbor.

Related Commands
- `neighbor soft-reconfiguration inbound` — assign a subnet to a dynamically configured BGP neighbor.
- `neighbor remote-as` — assign an indirectly connected AS to a neighbor or peer group.

**neighbor remote-as**

Create and specify the remote peer to the BGP neighbor.

**Syntax**

```
neighbor {ip-address | peer-group-name} remote-as number
```

To delete a remote AS entry, use the `no neighbor {ip-address | peer-group-name} remote-as number` command.

**Parameters**

- `ip-address` Enter the IP address of the neighbor to enter the remote AS in its routing table.
- `peer-group-name` Enter the name of the peer group to enter the remote AS into routing tables of all routers within the peer group.
- `number` Enter a number of the AS. The range is from 0 to 65535 (2 byte) or from 1 to 4294967295 (4 byte).
Defaults
Not configured.

Command Modes
ROUTER BGP

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.10(0.0)</td>
<td>Introduced on the S3148.</td>
</tr>
<tr>
<td>9.8(2.0)</td>
<td>Introduced on the S3100 series.</td>
</tr>
<tr>
<td>9.8(1.0)</td>
<td>Introduced on the Z9100–ON.</td>
</tr>
<tr>
<td>9.8(0.0P5)</td>
<td>Introduced on the S4048-ON.</td>
</tr>
<tr>
<td>9.8(0.0P2)</td>
<td>Introduced on the S3048-ON.</td>
</tr>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
<tr>

<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series. Added 4-byte support.</td>
</tr>
</tbody>
</table>

Usage Information
To accept 4-byte formats before entering a 4 byte AS Number, configure your system. If the number parameter is the same as the AS number used in the router bgp command, the remote AS entry in the neighbor is considered an internal BGP peer entry.

This command creates a peer and the newly created peer is disabled (Shutdown).

This command automatically restarts the neighbor session for the configuration to take effect.

Related Commands
- `router bgp` — enter ROUTER BGP mode and configures routes in an AS.
- `bgp four-octet-as-support` — enable 4-byte support for the BGP process.

**neighbor remove-private-as**

Remove private AS numbers from the AS-PATH of outgoing updates.

**Syntax**

```
neighbor {ip-address | peer-group-name} remove-private-as
```

To return to the default, use the

```
no neighbor {ip-address | peer-group-name} remove-private-as
```

**Parameters**

- `ip-address` Enter the IP address of the neighbor to remove the private AS numbers.
- `peer-group-name` Enter the name of the peer group to remove the private AS numbers.

**Defaults**

Disabled (that is, private AS number are not removed).
Command Modes: ROUTER BGP

Command History: This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>

<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

Usage Information: Applies to EBGP neighbors only.

Configure your system to accept 4-byte formats before entering a 4 byte AS Number.

If the AS-PATH contains both public and private AS number or contains AS numbers of an EBGP neighbor, the private AS numbers are not removed.

If a confederation contains private AS numbers in its AS-PATH, the software removes the private AS numbers only if they follow the confederation numbers in the AS path.

Private AS numbers are from 64512 to 65535 (2 byte).

**neighbor route-map**

Apply an established route map to either incoming or outbound routes of a BGP neighbor or peer group.

**Syntax**

```
neighbor {ip-address | peer-group-name} route-map map-name {in | out}
```

To remove the route map, use the **no neighbor {ip-address | peer-group-name} route-map map-name {in | out}** command.

**Parameters**

- **ip-address**: Enter the IP address of the neighbor in dotted decimal format.
- **peer-group-name**: Enter the name of the peer group.
- **map-name**: Enter the name of an established route map.
If the Route map is not configured, the default is **deny** (to drop all routes).

- **in**: Enter the keyword `in` to filter inbound routes.
- **out**: Enter the keyword `out` to filter outbound routes.

**NOTE**: This command sends routes to peers only if an outbound policy is configured and if there is a change in the existing outbound policy.

**Defaults**
Not configured.

**Command Modes**
ROUTER BGP

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>

<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**
When you apply a route map to outbound routes, only routes that match at least one section of the route map are permitted.

If you identify a peer group by name, the peers in that peer group inherit the characteristics in the Route map used in this command. If you identify a peer by IP address, the Route map overwrites either the inbound or outbound policies on that peer.

**neighbor route-reflector-client**

Configure the router as a route reflector and the specified neighbors as members of the cluster.

**Syntax**
```
neighbor {ip-address | peer-group-name} route-reflector-client
```
To remove one or more neighbors from a cluster, use the `no neighbor {ip-address | peer-group-name} route-reflector-client` command. If you delete all members of a cluster, you also delete the route-reflector configuration on the router.

### Parameters
- **ip-address**: Enter the IP address of the neighbor in dotted decimal format.
- **peer-group-name**: Enter the name of the peer group.
  - All routers in the peer group receive routes from a route reflector.

### Defaults
Not configured.

### Command Modes
- ROUTER BGP

### Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

### Usage Information
A route reflector reflects routes to the neighbors assigned to the cluster. Neighbors in the cluster do not need not to be fully meshed. By default, when you use `no route reflector`, the internal BGP (IBGP) speakers in the network must be fully meshed.

The first time you enter this command, the router configures as a route reflector and the specified BGP neighbors configure as clients in the route-reflector cluster.

When you remove all clients of a route reflector using the `no neighbor route-reflector-client` command, the router no longer functions as a route reflector.

If the clients of a route reflector are fully meshed, you can configure the route reflector to not reflect routes to specified clients by using the `no bgp client-to-client reflection` command.

This command automatically restarts the neighbor session for the configuration to take effect.
neighbor sender-side-loopdetect

Enables sender-side loop detection for BGP.

Syntax

neighbor {ip-address | peer-group-name} sender-side-loopdetect

To disable sender-side loop detection, use the no neighbor {ip-address | peer-group-name} sender-side-loopdetect command.

Parameters

- **ip-address**: Enter the IP address of the neighbor in dotted decimal format.
- **peer-group-name**: Enter the name of the peer group to enable or disable all routers with in the peer group. All routers in the peer group receive routes from a route reflector.

Defaults

Enabled.

Command Modes

ROUTER BGP

Command History

</tbody>
</table>

Usage Information

This command enables sender-side-loopdetect for a specified BGP neighbor. BGP does not advertise a route to a peer if the AS-Path of the route already contains the peer’s AS.

**NOTE:** If you configure a neighbor to accept such routes using the neighbor allowas-in command, you must disable sender-side loop detection for that neighbor.

Related Commands

- **bgp client-to-client reflection** — enable route reflection between the route reflector and the clients.
**neighbor send-community**

Send a COMMUNITY attribute to a BGP neighbor or peer group. A COMMUNITY attribute indicates that all routes with that attribute belong to the same community grouping.

**Syntax**

```
neighbor {ip-address | peer-group-name} send-community [extended | standard]
```

To disable sending a COMMUNITY attribute, use the `no neighbor {ip-address | peer-group-name} send-community` command.

**Parameters**

- **ip-address**
  - Enter the IP address of the peer router in dotted decimal format.

- **peer-group-name**
  - Enter the name of the peer group to send a COMMUNITY attribute to all routers within the peer group.

- **extended**
  - (OPTIONAL) Enter the keyword `extended` to send extended community attribute.

- **standard**
  - (OPTIONAL) Enter the keyword `standard` to send standard community attribute.

**Defaults**

Not configured and COMMUNITY attributes are not sent to neighbors.

**Command Modes**

ROUTER BGP

</tbody>
</table>

**Usage Information**

To configure a COMMUNITY attribute, use the `set community` command in ROUTE-MAP mode.

In order that settings corresponding to the `neighbor send-community` command take effect, you must execute the `clear ip bgp` command immediately after you execute the `neighbor send-community` command.
If you do not set any of the optional parameters (standard or extended), then both standard as well as extended attributes are sent. If you set either the standard or extended parameter, only the attribute that is specified is sent.

**neighbor shutdown**

Disable a BGP neighbor or peer group.

**Syntax**

```plaintext
neighbor {ip-address | peer-group-name} shutdown
```

To enable a disabled neighbor or peer group, use the `neighbor {ip-address | peer-group-name} no shutdown` command.

**Parameters**

- **ip-address**: Enter the IP address of the neighbor in dotted decimal format.
- **peer-group-name**: Enter the name of the peer group to disable or enable all routers within the peer group.

**Defaults**

Enabled (that is, BGP neighbors and peer groups are disabled.)

**Command Modes**

ROUTER BGP

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

</tbody>
</table>

**Usage Information**

Peers that are enabled within a peer group are disabled when their peer group is disabled.

The `neighbor shutdown` command terminates all BGP sessions on the BGP neighbor or BGP peer group. Use this command with caution as it terminates the specified BGP sessions. When a neighbor or peer group is shut down, use the `show ip bgp summary` command to confirm its status.

**Related Commands**

- `show ip bgp summary` — display the current BGP configuration.
neighbor soft-reconfiguration inbound

Enable soft-reconfiguration for BGP.

Syntax

neighbor {ip-address | peer-group-name} soft-reconfiguration inbound

To disable, use the no neighbor {ip-address | peer-group-name} soft-reconfiguration inbound command.

Parameters

- **ip-address**: Enter the IP address of the neighbor in dotted decimal format.
- **peer-group-name**: Enter the name of the peer group to disable or enable all routers within the peer group.

Defaults

Disabled

Command Modes

ROUTER BGP

<td>Introduced.</td>
</tr>
</tbody>
</table>

Usage Information

This command enables soft-reconfiguration for the BGP neighbor specified. BGP stores all the updates the neighbor receives but does not reset the peer-session.

You cannot set this configuration for a peer that is associated with a peer group. Similarly, you cannot associate a peer to a peer group if that peer is already configured with these settings.

⚠️ **CAUTION**: Inbound update storage is a memory-intensive operation. The entire BGP update database from the neighbor is stored in memory regardless of the inbound policy results applied on the neighbor.
Related Commands

- show ip bgp neighbors — display routes received by a neighbor.

neighbor timers

Set keepalive and hold time timers for a BGP neighbor or a peer group.

Syntax

neighbor {ip-address | peer-group-name} timers keepalive holdtime

To return to the default values, use the no neighbor {ip-address | peer-group-name} timers command.

Parameters

- **ip-address**: Enter the IP address of the peer router in dotted decimal format.
- **peer-group-name**: Enter the name of the peer group to set the timers for all routers within the peer group.
- **keepalive**: Enter a number for the time interval, in seconds, between keepalive messages sent to the neighbor routers. The range is from 1 to 65535. The default is **60 seconds**.
- **holdtime**: Enter a number for the time interval, in seconds, between the last keepalive message and declaring the router dead. The range is from 3 to 65535. The default is **180 seconds**.

Defaults

- keepalive = **60 seconds**
- holdtime = **180 seconds**

Command Modes

- ROUTER BGP

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
</tbody>
</table>
Usage Information
Timer values configured with the neighbor timers command override the timer values configured with any other command.

When two neighbors, configured with different keepalive and holdtime values, negotiate for new values, the resulting values are as follows:

- the lower of the holdtime value is the new holdtime value, and
- whichever is the lower value: one-third of the new holdtime value, or the configured keepalive value, is the new keepalive value.

neighbor update-source

Enable the E-Series software to use Loopback interfaces for TCP connections for BGP sessions.

Syntax
neighbor {ip-address | peer-group-name} update-source interface
To use the closest interface, use the no neighbor {ip-address | peer-group-name} update-source interface command.

Parameters

- **ip-address**: Enter the IP address of the peer router in dotted decimal format.
- **peer-group-name**: Enter the name of the peer group to disable all routers within the peer group.
- **interface**: Enter the keyword loopback then a number of the Loopback interface. The range is from 0 to 16383.

Defaults
Not configured.

Command Modes
ROUTER BGP

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>
Version | Description
--- | ---
8.3.7.0 | Introduced on the S4810.
7.8.1.0 | Introduced on the S-Series.
7.7.1.0 | Introduced on the C-Series.

Usage Information
Loopback interfaces are up constantly and the BGP session may need one interface constantly up to stabilize the session. The `neighbor update-source` command is not necessary for directly connected internal BGP sessions.

Neighbors are sorted according to the source and destination IP addresses. If an `update-source` IP address exists, then the source IP address determines the order in which the neighbors are displayed.

```
neighbor weight
```

Assign a weight to the neighbor connection, which is used to determine the best path.

**Syntax**

```
neighbor {ip-address | peer-group-name} weight weight
```

To remove a weight value, use the `no neighbor {ip-address | peer-group-name} weight` command.

**Parameters**

- `ip-address` Enter the IP address of the peer router in dotted decimal format.
- `peer-group-name` Enter the name of the peer group to disable all routers within the peer group.
- `weight` Enter a number as the weight. The range is from 0 to 65535. The default is 0.

**Defaults**

0

**Command Modes**

ROUTER BGP

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

```
Version | Description
--- | ---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100-ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.7(0.0) | Introduced on the S6000-ON.
9.2(1.0) | Introduced on the Z9500.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
7.8.1.0 | Introduced on the S-Series.
```
Version | Description
--- | ---
7.7.1.0 | Introduced on the C-Series.

**Usage Information**

In the Dell Networking OS best path selection process, the path with the highest weight value is preferred.

**NOTE:** In the Dell Networking OS best-path selection process, the path with the highest weight value is preferred.

If you configure the `set weight` command in a route map applied to this neighbor, the weight set in that command overrides the weight set in the `neighbor weight` command.

**Related Commands**

- `set weight` — assign a weight to all paths meeting the route map criteria.

---

### network

Specify the networks for the BGP process and enter them in the BGP routing table.

**Syntax**

```
network ip-address mask [route-map map-name]
```

To remove a network, use the `no network ip-address mask [route-map map-name]` command.

**Parameters**

- `ip-address` | Enter an IP address in dotted decimal format of the network.
- `mask` | Enter the mask of the IP address in the slash prefix length format (for example, /24).
  - The mask appears in command outputs in dotted decimal format (A.B.C.D).
- `route-map map-name` | (OPTIONAL) Enter the keyword `route-map` then the name of an established route map.
  - Only the following ROUTE-MAP mode commands are supported:
    - `match ip address`
    - `set community`
    - `set local-preference`
    - `set metric`
    - `set next-hop`
    - `set origin`
    - `set weight`
  - If the route map is not configured, the default is `deny` (to drop all routes).

**Defaults**

- Not configured.

**Command Modes**

- `ROUTER BGP`
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>

Dell Networking OS software resolves the network address the network command configures with the routes in the main routing table to ensure that the networks are reachable using non-BGP routes and non-default routes. As BGP does not query next-hop information corresponding to locally originated routes, a local route with an unreachable next-hop is chosen as the best route.

When a combination of locally originated and peer originated routes occurs, both these routes will exist in the RTM. However, only the best route is kept active in the RTM and the remaining route is rendered inactive.

It is possible to keep only one locally originated route in the BGP database. Network command has preference over the re-distributed routes. When the locally originated route is no longer present in the database the other route is automatically installed.

In BGP, the next-hop for the route is calculated from the information that is acquired through IGP or static routes.

**Related Commands**

- `redistribute` — redistribute routes into BGP.

### network backdoor

Specify this IGP route as the preferred route.

**Syntax**

```
network ip-address mask backdoor
```

**Parameters**

- `ip-address`: Enter an IP address in dotted decimal format of the network.
mask

Enter the mask of the IP address in the slash prefix length format (for example, /24).

The mask appears in command outputs in dotted decimal format (A,B,C,D).

Defaults

Not configured.

Command Modes

ROUTER BGP

Command History

</tr>
</tbody>
</table>

Usage Information

Although Dell Networking OS does not generate a route due to the backdoor config, there is an option for injecting/sourcing a local route in the presence of network backdoor config on a learned route.

**permit bandwidth**

Enables you to specify link band width extended-community attribute as the matching criteria to permit incoming or outgoing traffic.

**Syntax**

```
permit bandwidth
```

To disable this setting, enter the `no permit bandwidth` command.

**Parameters**

- **bandwidth**

  Enter the keyword bandwidth to specify extended-community attribute as the matching criteria for permitting traffic. The range is from 0 to 102400.

**Defaults**

N/A

**Command Modes**

EXTENDED COMMUNITY LIST

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.
<table>

<td>Introduced on the S-Series.</td>
</tr>
</tbody>
</table>

**Related Commands**
- `deny bandwidth`—link bandwidth extended-community attribute as the matching criteria to deny incoming or outgoing traffic.

**redistribute**

Redistribute routes into BGP.

**Syntax**
```
redistribute {connected | static} [route-map map-name]
```

To disable redistribution, use the `no redistribute {connected | static} command.`

**Parameters**
- **connected**
  - Enter the keyword `connected` to redistribute routes from physically connected interfaces.
- **static**
  - Enter the keyword `static` to redistribute manually configured routes.
  - These routes are treated as incomplete routes.
- **route-map map-name**
  - (OPTIONAL) Enter the keyword `route-map` then the name of an established route map.
  - Only the following ROUTE-MAP mode commands are supported:
    - `match ip address`
    - `set community`
    - `set local-preference`
    - `set metric`
    - `set next-hop`
    - `set origin`
    - `set weight`
  - If the route map is not configured, the default is deny (to drop all routes).

**Defaults**
- Not configured.

**Command Modes**
- `ROUTER BGP`

<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

### Usage Information

You can use the `redistribute` command to advertise the IGP cost as the MED on redistributed routes. When you set the route-map with metric-type internal and applied outbound to an EBGP peer/peer-group, the advertised routes corresponding to those peer/peer-groups have the IGP cost set as **MED**.

If you do not configure the `default-metric` command, in addition to the `redistribute` command, or there is no route map to set the metric, the metric for redistributed static and connected is “0”.

To redistribute the default route (0.0.0.0/0), configure the `neighbor default-originate` command.

As BGP does not query next-hop information corresponding to locally originated routes, a local route with an unreachable next-hop is chosen as the best route.

When a combination of locally originated and peer originated routes occurs, both these routes will exist in the RTM. However, only the best route is kept active in the RTM and the remaining route is rendered in-active.

It is possible to keep only one locally originated route in the BGP database. Network command has preference over the re-distributed routes. When the locally originated route is no longer present in the database the other route is automatically installed.

### Related Commands

- `neighbor default-originate` — inject the default route.
**redistribute ospf**

Redistribute OSPF routes into BGP.

Syntax

```plaintext
redistribute ospf process-id [[match external {1 | 2}] [match internal]] [route-map map-name]
```

To stop redistribution of OSPF routes, use the `no redistribute ospf process-id` command.

Parameters

- **process-id**
  - Enter the number of the OSPF process. The range is from 1 to 65535.
- **match external {1 | 2}**
  - (OPTIONAL) Enter the keywords `match external` to redistribute OSPF external routes. You can specify 1 or 2 to redistribute those routes only.
- **match internal**
  - (OPTIONAL) Enter the keywords `match internal` to redistribute OSPF internal routes only.
- **route-map map-name**
  - (OPTIONAL) Enter the keywords `route-map` then the name of a configured route map.

Defaults

Not configured.

Command Modes

- ROUTER BGP

</tbody>
</table>
You can use the redistribute command to advertise the IGP cost as the MED on redistributed routes. When you set the route-map with metric-type internal and apply outbound to an EBGP peer/peer-group, the advertised routes corresponding to those peer/peer-groups have the IGP cost set as MED.

When you enter the redistribute isis process-id command without any other parameters, Dell Networking OS redistributes all OSPF internal routes, external type 1 routes, and external type 2 routes. RFC does not support this feature.

router bgp

To configure and enable BGP, enter ROUTER BGP mode.

Syntax

    router bgp as-number

To disable BGP, use the no router bgp as-number command.

Parameters

    as-number Enter the AS number. The range is from 1 to 65535 (2 byte), from 1 to 4294967295 (4 byte), or from 0.1 to 65535.65535 (dotted format).

Defaults

    Not enabled.

At least one interface must be in Layer 3 mode for the `router bgp` command to be accepted. If all interfaces are configured under VRF, at least one interface should be in the default VRF for the `router bgp` command to be accepted. If no interfaces are enabled for Layer 3, an error message appears:

```
% Error: No router id configured
```

BGP does not allow 23456 (AS-TRANS) as a configured AS number.

Dell(conf)# router bgp 3
Dell(conf-router_bgp)#

**shutdown all**

Disables all the BGP neighbors.

**Syntax**

```
shutdown all
```

Use the `no shutdown all` command to enable all the configured BGP neighbors.

**Command Modes**

ROUTER BGP

**Command History**

</table>

**Usage Information**

You can use this command to disable all the configured BGP neighbors.

This command is global for all VRFs.

**shutdown address-family-ipv4-multicast**

Disables all the BGP neighbors corresponding to the multicast IPv4 address families.

**Syntax**

```
shutdown address-family-ipv4-multicast
```

Use the `no shutdown address-family-ipv4-multicast` command to enable all the configured BGP neighbors corresponding to the multicast IPv4 address families.

**Command Modes**

ROUTER BGP

**Usage Information**

You can use this command to disable all the configured BGP neighbors corresponding to the unicast IPv6 address families.

This command is global for all VRFs.
**set extcommunity bandwidth**

Enables you to set extended community bandwidth.

**Syntax**

    set extcommunity bandwidth

To disable extended community bandwidth, enter the `no set extcommunity bandwidth` command.

**Parameters**

- `bandwidth`  
  Enter the keyword `bandwidth` to enable extended community bandwidth. The range is from 0 to 102400.

**Defaults**

N/A

**Command Modes**

ROUTER MAP

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>

<td>Introduced on the S3048-ON.</td>
</tr>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

A new policy command is introduced in order to attach the Link Bandwidth extended community only to the prefixes that are received from a neighbor that satisfy the desired conditions. This command is relevant for both inbound as well as outbound policy handling (for received prefixes). Also, there is no change to the set of supported conditions or filters.

During configuration, the bandwidth is specified in Mbps, not in bytes/second. While creating the actual LB extended community, the system will attach the AS number and encode the bandwidth in floating point format.

**show capture bgp-pdu neighbor**

Display BGP packet capture information for an IPv4 address on the system.

**Syntax**

    show capture bgp-pdu neighbor ipv4-address

**Parameters**

- `ipv4-address`  
  Enter the IPv4 address (in dotted decimal format) of the BGP address to display packet information for that address.

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Example**

```
Dell(conf-router_bgp)# show config
!
router bgp 100
    network 1.1.11.1/32
    network 1.1.12.1/32
    network 1.1.13.1/32
    neighbor 10.1.1.2 remote-as 200
    neighbor 10.1.1.2 no shutdown
Dell(conf-router_bgp)#
```

## show ip bgp

View the current BGP IPv4 routing table for the system.

**Syntax**

```
show ip bgp [vrf vrf-name] [ipv4 unicast] [network [network-mask] [longer-prefixes]]
```

**Parameters**

- **vrf vrf-name** (OPTIONAL) Enter the keyword vrf and then the name of the VRF to view ipv4–unicast route information corresponding to that VRF.
- **ipv4 unicast** (OPTIONAL) Enter the keywords ipv4 unicast to view information only related to ipv4 unicast routes.
- **network** (OPTIONAL) Enter the network address (in dotted decimal format) of the BGP network to view information only on that network.
network-mask

(Optional) Enter the network mask (in slash prefix format) of the BGP network address.

longer-prefixes

(Optional) Enter the keywords longer-prefixes to view all routes with a common prefix.

Command Modes

- EXEC
- EXEC Privilege

Command History

<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

Usage Information

When you enable the bgp non-deterministic-med command, the show ip bgp command output for a BGP route does not list the INACTIVE reason.

In BGP, this command displays the exact reason why the route is discarded.

The following describes the show ip bgp command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Network</td>
<td>Displays the destination network prefix of each BGP route.</td>
</tr>
<tr>
<td>Next Hop</td>
<td>Displays the next hop address of the BGP router. If 0.0.0.0 is listed in this column, then local routes exist in the routing table.</td>
</tr>
<tr>
<td>Metric</td>
<td>Displays the BGP route’s metric, if assigned.</td>
</tr>
<tr>
<td>LocPrf</td>
<td>Displays the BGP LOCAL_PREF attribute for the route.</td>
</tr>
<tr>
<td>Weight</td>
<td>Displays the route’s weight.</td>
</tr>
<tr>
<td>Path</td>
<td>Lists all the ASs the route passed through to reach the destination network.</td>
</tr>
</tbody>
</table>
The `show ip bgp` command displays the dmzlink-dw details only if dmzlink-bw is enabled using the `bgp dmzlink-dw` command.

**Example**

Dell# show ip bgp
BGP local RIB : Routes to be Added 0, Replaced 0, Withdrawn 0
BGP local router ID is 192.168.11.5
Status codes: s suppressed, S stale, d dampened, h history, * valid, > best
Path source: I - internal, a - aggregate, c - confed-external, r - redistributed
n - network, D - denied, S - stale
Origin codes: i - IGP, e - EGP, ? - incomplete

<table>
<thead>
<tr>
<th>Network</th>
<th>Next Hop</th>
<th>Metric</th>
<th>LocPrf</th>
<th>Weight</th>
<th>Path</th>
</tr>
</thead>
<tbody>
<tr>
<td>*&gt; 55.0.0.0/24</td>
<td>172.16.0.2</td>
<td>0</td>
<td>200</td>
<td>i</td>
<td></td>
</tr>
<tr>
<td>*&gt; 66.0.0.0/24</td>
<td>172.16.0.2</td>
<td>0</td>
<td>200</td>
<td>i</td>
<td></td>
</tr>
</tbody>
</table>

All the show and debugs commands display the link band width extended-community prefixed with DMZ-Link-bw along with other extended communities.

Dell# show ip bgp 3.3.3.0/24
BGP routing table entry for 3.3.3.0/24
Paths: (1 available, table Default-IP-Routing-Table.)
Not advertised to any peer
Received from :
  1.1.1.2 (3.3.3.1)  Best
AS_PATH :
  Next-Hop : 1.1.1.2, Cost : 0
Origin IGP, Metric 0, LocalPref 100, Weight 0, internal
Extended Communities :
  DMZ-Link Bw: 2000 kbytes

**Related Commands**

- `show ip bgp community` — view the BGP communities.
- `neighbor maximum-prefix` — control the number of network prefixes received.

**show ip bgp cluster-list**

View BGP neighbors in a specific cluster.

**Syntax**

```
show ip bgp [vrf vrf-name] [ipv4 {multicast | unicast} | ipv6 unicast] cluster-list [cluster-id]
```

**Parameters**

- `vrf vrf-name` (OPTIONAL) Enter the keyword `vrf` and then the name of the VRF to view cluster information of BGP neighbors corresponding to that VRF.
- `ipv4 multicast` (OPTIONAL) Enter the keywords `ipv4` followed by the keyword `multicast` to view information related only to ipv4 multicast routes.
- `ipv4 unicast` (OPTIONAL) Enter the keyword `ipv4` followed by the keyword `unicast` to view information related only to ipv4 unicast routes.
- `ipv6 unicast` (OPTIONAL) Enter the keyword `ipv6` followed by the keyword `unicast` to view information related only to the ipv6 unicast routes.
cluster-id  (OPTIONAL) Enter the cluster id in dotted decimal format. The range is 1 — 4294967295.

</tr>
</tbody>
</table>
```
**show ip bgp community**

View information on all routes with Community attributes or view specific BGP community groups.

**Syntax**

```
show ip bgp [vrf vrf-name] [ipv4 {multicast | unicast} | ipv6 unicast] community [community-number] [local-as] [no-export] [no-advertise]
```

**Parameters**

- **vrf vrf-name**: (OPTIONAL) Enter the keywords `vrf` and then the name of the VRF to view information either on all routes with community attributes or specific BGP community routes corresponding to that VRF.
- **ipv4 unicast**: (OPTIONAL) Enter the keywords `ipv4` followed by the keyword `unicast` to view information related only to ipv4 unicast routes.
- **ipv4 multicast**: (OPTIONAL) Enter the keyword `ipv4` followed by the keyword `multicast` to view information related only to ipv4 multicast routes.
- **ipv6 unicast**: (OPTIONAL) Enter the keyword `ipv6` followed by the keyword `unicast` to view information related only to ipv6 unicast routes.
- **community-number**: Enter the community number in AA:NN format where AA is the AS number (2 bytes) and NN is a value specific to that autonomous system.
  - You can specify up to eight community numbers to view information on those community groups.
- **local-AS**: Enter the keywords `local-AS` to view all routes with the COMMUNITY attribute of NO_EXPORT_SUBCONFED.
  - All routes with the NO_EXPORT_SUBCONFED (0xFFFFFF03) community attribute must not be advertised to external BGP peers.
- **no-advertise**: Enter the keywords `no-advertise` to view all routes containing the well-known community attribute of NO_ADVERTISE.
  - All routes with the NO_ADVERTISE (0xFFFFFF02) community attribute must not be advertised to other BGP peers.
Enter the keywords no-export to view all routes containing the well-known community attribute of NO_EXPORT.

All routes with the NO_EXPORT (0xFFFFFFFF01) community attribute must not be advertised outside a BGP confederation boundary.

Usage Information

To view the total number of COMMUNITY attributes found, use the show ip bgp summary command. The text line above the route table states the number of COMMUNITY attributes found.

The show ip bgp community command without any parameters lists BGP routes with at least one BGP community attribute and the output is the same as for the show ip bgp command output.

The following describes the show ip bgp community command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Network</td>
<td>Displays the destination network prefix of each BGP route.</td>
</tr>
<tr>
<td>Next Hop</td>
<td>Displays the next hop address of the BGP router. If 0.0.0.0 is listed in this column, then local routes exist in the routing table.</td>
</tr>
<tr>
<td>Metric</td>
<td>Displays the BGP route's metric, if assigned.</td>
</tr>
<tr>
<td>LocPrf</td>
<td>Displays the BGP LOCAL_PREF attribute for the route.</td>
</tr>
</tbody>
</table>
### Field Description

**Weight**
Displays the route's weight.

**Path**
Lists all the ASs the route passed through to reach the destination network.

### Example

```shell
Dell# show ip bgp community ?
local-AS                Do not export outside local AS (well-known community)
no-advertise            Do not advertise to any peer (well-known community)
no-export               Do not export to next AS (well-known community)
aa:nn                   Community number in aa:nn format
|                       Pipe through a command

Dell# show ip bgp community
BGP local RIB : Routes to be Added 0, Replaced 0, Withdrawn 0
BGP local router ID is 192.168.11.5
Status codes: s suppressed, S stale, d dampened, h history, * valid, > best
Path source: I - internal, a - aggregate, c - confed-external, r - redistributed
n - network, D - denied, S - stale
Origin codes: i - IGP, e - EGP, ? - incomplete

<table>
<thead>
<tr>
<th>Network</th>

<td></td>
</tr>
</tbody>
</table>
```

```
Dell#
```

### show ip bgp community-list

View routes that a specific community list affects.

#### Syntax

```
show ip [vrf vrf-name] {ipv4 {unicast | multicast} | ipv6 unicast] community-list community-list-name [exact-match]
```

#### Parameters

- **vrf vrf-name** (OPTIONAL) Enter the keywords vrf and then the name of the VRF to view routes affected by a specific community list corresponding to that VRF.
- **ipv4 unicast** (OPTIONAL) Enter the keywords ipv4 unicast to view information only related to ipv4 unicast routes.
- **ipv4 multicast** (OPTIONAL) Enter the keyword ipv4 followed by the keyword multicast to view information related only to ipv4 multicast routes.
- **ipv6 unicast** (OPTIONAL) Enter the keyword ipv6 followed by the keyword unicast to view information related only to ipv6 unicast routes.
- **community-list-name** Enter the name of a configured IP community list (maximum 140 characters).
- **exact-match** Enter the keyword for an exact match of the communities.

#### Command Modes

- EXEC
Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>

<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

Usage Information

The `show ip bgp community-list` command without any parameters lists BGP routes matching the Community List and the output is the same as for the `show ip bgp` command output.

The following describes the `show ip bgp community-list pass` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Network</td>
<td>Displays the destination network prefix of each BGP route.</td>
</tr>
<tr>
<td>Next Hop</td>
<td>Displays the next hop address of the BGP router. If 0.0.0.0 is listed in this column, then local routes exist in the routing table.</td>
</tr>
<tr>
<td>Metric</td>
<td>Displays the BGP route’s metric, if assigned.</td>
</tr>
<tr>
<td>LocPrf</td>
<td>Displays the BGP LOCAL_PREF attribute for the route.</td>
</tr>
<tr>
<td>Weight</td>
<td>Displays the route’s weight.</td>
</tr>
<tr>
<td>Path</td>
<td>Lists all the ASs the route passed through to reach the destination network.</td>
</tr>
</tbody>
</table>

Example

```
Dell(conf)# ip community-list c11
Dell(config-community-list)# permit 1000:1
Dell(config-community-list)# end
Dell# show ip bgp community-list c11
BGP local RIB : Routes to be Added 0, Replaced 0, Withdrawn 0
BGP local router ID is 192.168.11.5
Status codes: s suppressed, S stale, d dampened, h history, * valid, > best
Path source: I - internal, a - aggregate, c - confed-external, r - redistributed
n - network, D - denied, S - stale
Origin codes: i - IGP, e - EGP, ? - incomplete
```
show ip bgp dampened-paths

View BGP routes that are dampened (non-active).

Syntax

```
show ip bgp [vrf vrf-name] [ipv4 {multicast | unicast} | ipv6 unicast] dampened-paths
```

Parameters

- **vrf vrf-name** (OPTIONAL) Enter the keywords vrf and then the name of the VRF to view routes that are affected by a specific community list corresponding to that VRF.
- **ipv4 multicast** (OPTIONAL) Enter the keyword ipv4 followed by the keyword multicast to view information related only to ipv4 multicast routes.
- **ipv4 unicast** (OPTIONAL) Enter the keywords ipv4 followed by the keyword unicast to view information related only to ipv4 unicast routes.
- **ipv6 unicast** (OPTIONAL) Enter the keyword ipv6 followed by the keyword unicast to view information related only to ipv6 unicast routes.

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>

<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

To determine a BGP session flap, both a route-down event and a subsequent route-up event corresponding to a single route are considered. As a result, a flap event is penalized only one time during the route-down event. The subsequent route-up event corresponding to the same route is not considered as a flap and is not penalized.

The history paths that the `show ip bgp` command displays contain only the prefix and the next-hop information. The next-hop information shows the ip address of the neighbor. It does not show the actual next-hop details.

The following describes the `show ip bgp damp` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Network</td>
<td>Displays the network ID to which the route is dampened.</td>
</tr>
<tr>
<td>From</td>
<td>Displays the IP address of the neighbor advertising the dampened route.</td>
</tr>
<tr>
<td>Reuse</td>
<td>Displays the hour:minutes:seconds until the dampened route is available.</td>
</tr>
<tr>
<td>Path</td>
<td>Lists all the ASs the dampened route passed through to reach the destination network.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell# show ip bgp dampened-paths
BGP local RIB : Routes to be Added 0, Replaced 0, Withdrawn 0
BGP local router ID is 192.168.11.5
Status codes: s suppressed, S stale, d dampened, h history, * valid, > best
Path source: I - internal, a - aggregate, c - confed-external, r - redistributed
    n - network, D - denied, S - stale
Origin codes: i - IGP, e - EGP, ? - incomplete

       Network            From            Reuse     Path
      55.0.0.0/24      172.16.0.2             00:36:23      200

Dell#
```

**show ip bgp detail**

Display BGP internal information for the IPv4 Unicast address family.

**Syntax**

```
show ip bgp [ipv4 unicast] detail
```

**Defaults**

none

**Command Modes**

- EXEC
- EXEC Privilege
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Address Family specific Information
show ip bgp extcommunity-list

View information on all routes with Extended Community attributes.

Syntax

show ip bgp [vrf vrf-name] [ipv4 {multicast | unicast} | ipv6 unicast] extcommunity-list [list name]

Parameters

vrf vrf-name  (OPTIONAL) Enter the keywords vrf and then the name of the VRF to view information on all routes with extended community attributes corresponding to that VRF.
ipv4 multicast  (OPTIONAL) Enter the keyword ipv4 followed by the keyword multicast to view information related only to ipv4 multicast routes.
ipv4 unicast  (OPTIONAL) Enter the keywords ipv4 unicast to view information only related to ipv4 unicast routes.
ipv6 unicast  (OPTIONAL) Enter the keyword ipv6 unicast followed by the keyword multicast to view information related only to ipv6 unicast routes.
list name  Enter the extended community list name you wish to view. The range is 140 characters.

Command Modes

• EXEC
• EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version  Description
9.10(0.0)  Introduced on the S3148.
9.8(2.0)  Introduced on the S3100 series.
9.8(1.0)  Introduced on the Z9100–ON.
9.8(0.0P5)  Introduced on the S4048-ON.
9.8(0.0P2)  Introduced on the S3048-ON.
9.7(0.0)  Added the ipv4 multicast and ipv6 unicast parameters.
show ip bgp filter-list

View the routes that match the filter lists.

Syntax

```
show ip bgp [vrf vrf-name] {ipv4 {multicast | unicast} | ipv6 unicast} filter-list as-path-name
```

Parameters

- **vrf vrf-name**: (OPTIONAL) Enter the keyword `vrf` and then the name of the VRF to view route information that matches the filter lists corresponding to that VRF.
- **ipv4 multicast**: (OPTIONAL) Enter the keyword `ipv4` followed by the keyword `multicast` to view information related only to ipv4 multicast routes.
- **ipv4 unicast**: (OPTIONAL) Enter the keyword `ipv4` followed by the keyword `unicast` to view information related only to ipv4 unicast routes.
ipv6 unicast  (OPTIONAL) Enter the keyword ipv6 followed by the keyword unicast to view information related only to ipv6 unicast routes.

as-path-name  Enter an AS-PATH access list name. The range is 140 characters.

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>

</tbody>
</table>

Usage Information

The following describes the show ip bgp filter-list hello command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Path source codes</td>
<td>Lists the path sources shown to the right of the last AS number in the Path column:</td>
</tr>
<tr>
<td></td>
<td>• i = internal route entry</td>
</tr>
<tr>
<td></td>
<td>• a = aggregate route entry</td>
</tr>
<tr>
<td></td>
<td>• c = external confederation route entry</td>
</tr>
<tr>
<td></td>
<td>• n = network route entry</td>
</tr>
<tr>
<td></td>
<td>• r = redistributed route entry</td>
</tr>
</tbody>
</table>

Next Hop  Displays the next hop address of the BGP router. If 0.0.0.0 is listed in this column, then local routes exist in the routing table.

Metric  Displays the BGP route’s metric, if assigned.

LocPrf  Displays the BGP LOCAL_PREF attribute for the route.

Weight  Displays the route’s weight.
Field | Description
---|---
Path | Lists all the ASs the route passed through to reach the destination network.

Example

```
Dell# show run as-path a1
ip as-path access-list a1
  permit 500
Dell#
Dell# show ip bgp filter-list a1
BGP local RIB : Routes to be Added 0, Replaced 0, Withdrawn 0
BGP local router ID is 192.168.11.5
Status codes: s suppressed, S stale, d dampened, h history, * valid, > best
Path source: I - internal, a - aggregate, c - confed-external, r - redistributed
n - network, D - denied, S - stale
Origin codes: i - IGP, e - EGP, ? - incomplete

<table>

</tr>
<tr>
<td>*&gt; 66.0.0.0/24</td>
<td>172.16.0.2</td>
<td>0</td>
<td>200</td>
<td>500</td>
<td>i</td>
</tr>
</tbody>
</table>
Dell#
```

**show ip bgp flap-statistics**

View flap statistics on BGP routes.

**Syntax**

```
show ip bgp [vrf vrf-name] [ipv4 {multicast | unicast} | ipv6 unicast] flap-statistics [ip-address [mask]] [filter-list as-path-name] [regexp regular-expression]
```

**Parameters**

- **vrf vrf-name** (OPTIONAL) Enter the keywords vrf and then the name of the VRF to view flap statistics on BGP routes corresponding to that VRF.
- **ipv4 multicast** (OPTIONAL) Enter the keyword ipv4 followed by the keyword multicast to view information related only to ipv4 multicast routes.
- **ipv4 unicast** (OPTIONAL) Enter the keyword ipv4 followed by the keyword unicast to view information related only to ipv4 unicast routes.
- **ipv6 unicast** (OPTIONAL) Enter the keyword ipv6 followed by the keyword unicast to view information related only to ipv6 unicast routes.
- **ip-address** (OPTIONAL) Enter the IP address (in dotted decimal format) of the BGP network to view information related only to that network.
- **mask** (OPTIONAL) Enter the network mask (in slash prefix (/x) format) of the BGP network address.
- **filter-list as-path-name** (OPTIONAL) Enter the keyword filter-list then the name of a configured AS-PATH ACL. The range is 140 characters.
- **regexp regular-expression** Enter a regular expression then use one or a combination of the following characters to match. The range is 256 characters.
  - . = (period) any single character (including a white space).
  - * = (asterisk) the sequences in a pattern (zero or more sequences).
  - + = (plus) the sequences in a pattern (one or more sequences).
  - ? = (question mark) sequences in a pattern (either zero or one sequences).
Enter an escape sequence (CTRL+v) prior to entering the regular expression.

- \[ \] = (brackets) a range of single-character patterns.
- \( \) = (parenthesis) groups a series of pattern elements to a single element.
- \{ \} = (braces) minimum and the maximum match count.
- \^ = (caret) the beginning of the input string. If you use the caret at the beginning of a sequence or range, it matches on everything BUT the characters specified.
- \$ = (dollar sign) the end of the output string.

Command Modes

- EXEC
- EXEC Privilege

</table>

Usage Information

The following describes the show ip bgp flap command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Network</td>
<td>Displays the network ID to which the route is flapping.</td>
</tr>
<tr>
<td>From</td>
<td>Displays the IP address of the neighbor advertising the flapping route.</td>
</tr>
<tr>
<td>Flaps</td>
<td>Displays the number of times the route flapped.</td>
</tr>
<tr>
<td>Duration</td>
<td>Displays the hours:minutes:seconds since the route first flapped.</td>
</tr>
<tr>
<td>Reuse</td>
<td>Displays the hours:minutes:seconds until the flapped route is available.</td>
</tr>
<tr>
<td>Path</td>
<td>Lists all the ASs the flapping route passed through to reach the destination network.</td>
</tr>
</tbody>
</table>
show ip bgp inconsistent-as

View routes with inconsistent originating autonomous system (AS) numbers; that is, prefixes that are announced from the same neighbor AS but with a different AS-Path.

Syntax

```
show ip bgp [vrf vrf-name] [ipv4 unicast] inconsistent-as
```

Parameters

- **vrf vrf-name** (OPTIONAL) Enter the keyword vrf and then the name of the VRF to view routes corresponding to the VRF that contain inconsistent originating AS numbers.
- **ipv4 unicast** (OPTIONAL) Enter the keywords ipv4 unicast to view information only related to ipv4 unicast routes.

Command Modes

- EXEC
- EXEC Privilege

Command History

</table>
The following describes the `show ip bgp inconsistent-as` command shown in the following example.

### Field Description

**Network**
Displays the destination network prefix of each BGP route.

**Next Hop**
Displays the next hop address of the BGP router. If 0.0.0.0 is listed in this column, then local routes exist in the routing table.

**Metric**
Displays the BGP route’s metric, if assigned.

**LocPrf**
Displays the BGP LOCAL_PREF attribute for the route.

**Weight**
Displays the route’s weight.

**Path**
Lists all the ASs the route passed through to reach the destination network.

### Example

```
Dell# show ip bgp inconsistent-as
BGP table version is 280852, local router ID is 10.1.2.100
Status codes: s suppressed, d damped, h history, * valid, > best
Path source: I - internal, c - confed-external, r - redistributed, n - network
Origin codes: i - IGP, e - EGP, ? - incomplete

Dell#
```
show ip bgp neighbors

Allows you to view the information BGP neighbors exchange.

Syntax

show ip bgp [vrf vrf-name] [ipv4 {multicast | unicast} | ipv6 unicast] neighbors [ip-address] [advertised-routes | dampened-routes | detail | flap-statistics | routes | {received-routes [network [network-mask]]} | {denied-routes [network [network-mask]]}]

Parameters

**vrf vrf-name**
(Optional) Enter the keyword vrf and then the name of the VRF to view information exchanged by BGP neighbors corresponding to that VRF.

**ipv4 multicast**
(Optional) Enter the keyword ipv4 followed by the keyword multicast to view information related only to ipv4 multicast routes.

**ipv4 unicast**
(Optional) Enter the keyword ipv4 followed by the keyword unicast to view information related only to ipv4 unicast routes.

**ipv6 unicast**
(Optional) Enter the keyword ipv6 followed by the keyword unicast to view information related only to ipv6 unicast routes.

**ip-address**
(Optional) Enter the IP address of the neighbor to view only BGP information exchanged with that neighbor.

**advertised-routes**
(Optional) Enter the keywords advertised-routes to view only the routes the neighbor sent.

**dampened-routes**
(Optional) Enter the keywords dampened-routes to view information on dampened routes from the BGP neighbor.

**detail**
(Optional) Enter the keyword detail to view neighbor-specific internal information for the IPv4 Unicast address family.

**flap-statistics**
(Optional) Enter the keywords flap-statistics to view flap statistics on the neighbor’s routes.

**routes**
(Optional) Enter the keyword routes to view only the neighbor’s feasible routes.

**received-routes**
(Optional) Enter the keywords received-routes then either the network address (in dotted decimal format) or the network mask (in slash prefix format) to view all information received from neighbors.

**denied-routes**
(Optional) Enter the keywords denied-routes then either the network address (in dotted decimal format) or the network mask (in slash prefix format) to view all information on routes denied via neighbor inbound filters.

Command Modes

- EXEC
EXEC Privilege

</tr>
</tbody>
</table>

Usage Information
After a peer reset, the contents of the notification log messages is displayed in hex values for debugging.

The neighbor information that this command displays does not include counts corresponding to ignored prefixes and updates. However, the martian case is an exception where neighbor information corresponding to ignored updates is displayed.

BGP shows the exact information that is exchanged between the BGP peers. It also indicates whether or not this information is received by the BGP peer.

The following describes the show ip bgp neighbors command shown in the following examples.

The Lines Beginning with:          Description
BGP neighbor                      Displays the BGP neighbor address and its AS number. The last phrase in the line indicates whether the link between the BGP router and its neighbor is an external or internal one. If they are located in the same AS, the link is internal; otherwise the link is external.
BGP version                       Displays the BGP version (always version 4) and the remote router ID.
BGP state                         Displays the neighbor’s BGP state and the amount of time in hours:minutes:seconds it has been in that state.
Last read                         This line displays the following information:
The Lines
Beginning with:

- last read is the time (hours:minutes:seconds) the router read a message from its neighbor
- hold time is the number of seconds configured between messages from its neighbor
- keepalive interval is the number of seconds between keepalive messages to help ensure that the TCP session is still alive.

Received messages
This line displays the number of BGP messages received, the number of notifications (error messages), and the number of messages waiting in a queue for processing.

Sent messages
The line displays the number of BGP messages sent, the number of notifications (error messages), and the number of messages waiting in a queue for processing.

Received updates
This line displays the number of BGP updates received and sent.

Soft reconfiguration
This line indicates that soft reconfiguration inbound is configured.

Minimum time
Displays the minimum time, in seconds, between advertisements.

(list of inbound and outbound policies)
Displays the policy commands configured and the names of the Route map, AS-PATH ACL, or Prefix list configured for the policy.

For address family:
Displays the IPv4 Unicast as the address family.

BGP table version
Displays which version of the primary BGP routing table the router and the neighbor are using.

accepted prefixes
Displays the number of network prefixes the router accepts and the amount of memory used to process those prefixes.

Prefix advertised
Displays the number of network prefixes advertised, the number rejected, and the number withdrawn from the BGP routing table.

Connections established
Displays the number of TCP connections established and dropped between the two peers to exchange BGP information.

Last reset
Displays the amount of time since the peering session was last reset. Also states if the peer resets the peering session. If the peering session was never reset, the word never is displayed.

Local host:
Displays the peering address of the local router and the TCP port number.

Foreign host:
Displays the peering address of the neighbor and the TCP port number.

Example
Dell# show ip bgp neighbors 172.16.0.2
BGP neighbor is 172.16.0.2, remote AS 200, external link
Member of peer-group port0 for session parameters
BGP remote router ID 172.16.0.2
BGP state ESTABLISHED, in this state for 00:13:55
Last read 00:00:03, Last write 00:00:55
Hold time is 180, keepalive interval is 60 seconds
Received 50 messages, 0 in queue
  1 opens, 0 notifications, 34 updates
  15 keepalives, 0 route refresh requests
Sent 18 messages, 0 in queue
  1 opens, 0 notifications, 0 updates
  16 keepalives, 0 route refresh requests
Route refresh request: received 0, sent messages 1
Minimum time between advertisement runs is 30 seconds
Minimum time before advertisements start is 0 seconds
Capabilities received from neighbor for IPv4 Unicast:
MULTIPROTO_EXT(1)
ROUTE_REFRESH(2)

Capabilities advertised to neighbor for IPv4 Unicast :
MULTIPROTO_EXT(1)
ROUTE_REFRESH(2)
ADD_PATH(69)
CISCO_ROUTE_REFRESH(128)

For address family: IPv4 Unicast
BGP local RIB : Routes to be Added 0, Replaced 0, Withdrawn 0
InQ : Added 0, Replaced 0, Withdrawn 0
OutQ : Added 0, Withdrawn 0
Allow local AS number 0 times in AS-PATH attribute
Prefixes accepted 2, withdrawn 15 by peer, martian prefixes ignored 0
Prefixes advertised 0, denied 0, withdrawn 0 from peer

Connections established 1; dropped 0
Last reset never
Local host: 172.16.0.1, Local port: 58145
Foreign host: 172.16.0.2, Foreign port: 179

Dell#

Related Commands
• show ip bgp — view the current BGP routing table.

show ip bgp next-hop

View all next hops (using learned routes only) with current reachability and flap status. This command only displays one path, even if the next hop is reachable by multiple paths.

Syntax
show ip bgp [vrf vrf-name] next-hop

Command Modes
• EXEC
• EXEC Privilege

| 172.16.0.2     | YES              |
+----------------+------------------+
Dell#

**show ip bgp paths**

View all the BGP path attributes in the BGP database.

**Syntax**

```
show ip bgp [vrf vrf-name] paths [regexp regular-expression]
```

**Parameters**

- **vrf vrf-name** (OPTIONAL) Enter the keyword vrf to view all path attributes in the BGP database corresponding to that VRF.

  **NOTE:** You can use this attribute to view information on all path attributes in the BGP database that correspond to either a default or a non-default VRF.

- **regexp regular-expression** Enter a regular expression then use one or a combination of the following characters to match:
  - . = (period) any single character (including a white space).
  - * = (asterisk) the sequences in a pattern (zero or more sequences).
  - + = (plus) the sequences in a pattern (one or more sequences).
  - ? = (question mark) sequences in a pattern (either zero or one sequences).

  **NOTE:** Enter an escape sequence (CTRL+v) prior to entering the ? regular expression.
• [ ] = (brackets) a range of single-character patterns.
• ( ) = (parenthesis) groups a series of pattern elements to a single element.
• { } = (braces) minimum and the maximum match count.
• ^ = (caret) the beginning of the input string. If you use the caret at the beginning of a sequence or range, it matches on everything BUT the characters specified.
• $ = (dollar sign) the end of the output string.

Command Modes

• EXEC
• EXEC Privilege

### show ip bgp peer-group

Allows you to view information on the BGP peers in a peer group.

**Syntax**

```
show ip bgp [vrf vrf-name] [ipv4 {multicast | unicast} | ipv6 unicast] peer-group [peer-group-name [detail | summary]]
```

**Parameters**

- `vrf vrf-name` (OPTIONAL) Enter the keyword `vrf` to view information on BGP peers in a peer group corresponding to that VRF.

  **NOTE:** You can use this attribute to view information on BGP peers in a peer group that correspond to either a default or a non-default VRF.

- `ipv4 multicast` (OPTIONAL) Enter the keyword `ipv4` followed by the keyword `multicast` to view information related only to ipv4 multicast routes.

- `ipv4 unicast` (OPTIONAL) Enter the keyword `ipv4` followed by the keyword `unicast` to view information related only to ipv4 unicast routes.

- `ipv6 unicast` (OPTIONAL) Enter the keyword `ipv6` followed by the keyword `unicast` to view information related only to ipv6 unicast routes.

- `peer-group-name` (OPTIONAL) Enter the name of a peer group to view information about that peer group only.

- `detail` (OPTIONAL) Enter the keyword `detail` to view detailed status information of the peers in that peer group.

- `summary` (OPTIONAL) Enter the keyword `summary` to view status information of the peers in that peer group. The output is the same as that found in the `show ip bgp summary` command.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Usage Information**

The following describes the `show ip bgp peer-group` command shown in the following example.

**Line beginning**
**with:**

**Peer-group**
Displays the peer group’s name.

**Administratively**
**shut**
Displays the peer group’s status if the peer group is not enabled. If you enable the peer group, this line is not displayed.

**BGP version**
Displays the BGP version supported.

**Minimum time**
Displays the time interval between BGP advertisements.

**For address family**
Displays IPv4 Unicast as the address family.

**BGP neighbor**
Displays the name of the BGP neighbor.

**Number of peers**
Displays the number of peers currently configured for this peer group.

**Peer-group members:**
Lists the IP addresses of the peers in the peer group. If the address is outbound optimized, an * is displayed next to the IP address.

**Example**

```
Dell# show ip bgp peer-group
Peer-group port0, remote AS 200
BGP version 4
Minimum time between advertisement runs is 30 seconds
For address family: IPv4 Unicast
BGP neighbor is port0, peer-group external
Update packing has 4_OCTET_AS support enabled

Number of peers in this group 1
Maximum limit on the accepted connections 256

Peer-group members (* - outbound optimized):
172.16.0.2
Dell#
```
show ip bgp regexp

Display the subset of the BGP routing tables matching the regular expressions specified.

Syntax

```
show ip bgp [vrf vrf-name] regexp regular-expression [character]
```

Parameters

- `vrf vrf-name`: Enter the keyword `vrf` and then the name of the VRF to view the subset of BGP routing tables that match the regular expression specified on that VRF.

  
  
  NOTE: You can use this attribute to view the subset of BGP routing tables that match the regular expression that is specified on either a default or a non-default VRF.

- `regular-expression`: Enter a regular expression then use one or a combination of the following characters to match:

  - `.=` (period) any single character (including a white space).
  - `*=` (asterisk) the sequences in a pattern (zero or more sequences).
  - `+` = (plus) the sequences in a pattern (one or more sequences).
  - `?` = (question mark) sequences in a pattern (either zero or one sequences).

  
  
  NOTE: Enter an escape sequence (CTRL+v) prior to entering the regular expression.

  - `[ ]` = (brackets) a range of single-character patterns.
  - `( )` = (parenthesis) groups a series of pattern elements to a single element.
  - `{ }` = (braces) minimum and the maximum match count.
  - `^` = (caret) the beginning of the input string. If you use the caret at the beginning of a sequence or range, it matches on everything BUT the characters specified.
  - `$` = (dollar sign) the end of the output string.

Command Modes

- EXEC
- EXEC Privilege

Command History

### Version | Description
--- | ---
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.7(0.0) | Introduced on the S6000–ON.
9.4(0.0) | Added support for VRF.
9.2(1.0) | Introduced on the Z9500.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
7.8.1.0 | Introduced on the S-Series.
7.7.1.0 | Introduced on the C-Series.

#### Usage Information
The following describes the `show ip bgp regexp` command shown in the following example.

**Field** | **Description**
--- | ---
Network | Displays the destination network prefix of each BGP route.
Next Hop | Displays the next hop address of the BGP router. If 0.0.0.0 is listed in this column, then non-BGP routes exist in the router’s routing table.
Metric | Displays the BGP router’s metric, if assigned.
LocPrf | Displays the BGP LOCAL_PREF attribute for the route.
Weight | Displays the route’s weight.
Path | Lists all the AS paths the route passed through to reach the destination network.

#### Example
```
Dell# show ip bgp regexp ^200
BGP local RIB : Routes to be Added 0, Replaced 0, Withdrawn 0
BGP local router ID is 192.168.11.5
Status codes: s suppressed, S stale, d dampened, h history, * valid, > best
Path source: I - internal, a - aggregate, c - confed-external, r - redistributed
n - network, D - denied, S - stale
Origin codes: i - IGP, e - EGP, ? - incomplete
   Network           Next Hop             Metric LocPrf Weight Path
*>  55.0.0.0/24      172.16.0.2          0   200   i
*>  66.0.0.0/24      172.16.0.2          0   200   i
Dell#
```

### show ip bgp summary

Allows you to view the status of all BGP connections.

**Syntax**
```
show ip bgp [vrf vrf-name] [ipv4 {multicast | unicast} | ipv6 unicast] summary
```
Parameters

**vrf vrf-name** (OPTIONAL) Enter the keyword vrf and then the name of the VRF to view the status of all BGP connections corresponding to that VRF.

**ipv4 multicast** (OPTIONAL) Enter the keyword ipv4 followed by the keyword multicast to view information related only to ipv4 multicast routes.

**ipv4 unicast** (OPTIONAL) Enter the keyword ipv4 followed by the keyword unicast to view information related only to ipv4 unicast routes.

**ipv6 unicast** (OPTIONAL) Enter the keyword ipv6 followed by the keyword unicast to view information related only to ipv6 unicast routes.

Command Modes

- EXEC
- EXEC Privilege

</tr>
</tbody>
</table>

Usage Information

In BGP, route attributes are maintained at different locations. When attributes that correspond to multiple routes change, then attribute counts that the `show ip bgp summary` command displays are calculated as summations of attributes corresponding to all the associated routes. For example, if cluster_id is an attribute associated with thousand routes that contain exactly the same set of attributes, then the cluster_id count is 1. If these thousand routes are set with different attribute values with the same cluster_id, then the cluster_id count is 1000, since the same value is stored for thousand different attribute records.

The attribute next-hop is a part of the BGP attribute data structure.

If two peers send the same route that contains similar path attributes, then two entries are maintained in the back-end, as both these entries have different next-hops. If this same route is sent to a different peer, an entry for each peer is created, as the next-hop is different. As a result, the BGP attributes count in the summary output will differ accordingly.
The following describes the `show ip bgp summary` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>BGP router identifier</td>
<td>Displays the local router ID and the AS number.</td>
</tr>
<tr>
<td>BGP table version</td>
<td>Displays the BGP table version and the main routing table version.</td>
</tr>
<tr>
<td>network entries</td>
<td>Displays the number of network entries, route paths, and the amount of memory used to process those entries.</td>
</tr>
<tr>
<td>paths</td>
<td>Displays the number of paths and the amount of memory used.</td>
</tr>
<tr>
<td>denied paths</td>
<td>Displays the number of denied paths and the amount of memory used.</td>
</tr>
<tr>
<td>BGP path attribute entries</td>
<td>Displays the number of BGP path attributes and the amount of memory used to process them.</td>
</tr>
<tr>
<td>BGP AS-PATH entries</td>
<td>Displays the number of BGP AS_PATH attributes processed and the amount of memory used to process them.</td>
</tr>
<tr>
<td>BGP community entries</td>
<td>Displays the number of BGP COMMUNITY attributes processed and the amount of memory used to process them. The <code>show ip bgp community</code> command provides more details on the COMMUNITY attributes.</td>
</tr>
<tr>
<td>Dampening enabled</td>
<td>Displayed only when you enable dampening. Displays the number of paths designated as history, dampened, or penalized.</td>
</tr>
<tr>
<td>Neighbor</td>
<td>Displays the BGP neighbor address.</td>
</tr>
<tr>
<td>AS</td>
<td>Displays the AS number of the neighbor.</td>
</tr>
<tr>
<td>MsgRcvd</td>
<td>Displays the number of BGP messages that neighbor received.</td>
</tr>
<tr>
<td>MsgSent</td>
<td>Displays the number of BGP messages that neighbor sent.</td>
</tr>
<tr>
<td>TblVer</td>
<td>Displays the version of the BGP table that was sent to that neighbor.</td>
</tr>
<tr>
<td>InQ</td>
<td>Displays the number of messages from that neighbor waiting to be processed.</td>
</tr>
<tr>
<td>OutQ</td>
<td>Displays the number of messages waiting to be sent to that neighbor. If a number appears in parentheses, the number represents the number of messages waiting to be sent to the peer group.</td>
</tr>
<tr>
<td>Up/Down</td>
<td>Displays the amount of time that the neighbor is in the Established stage. If the neighbor has never moved into the Established stage, the word never is displayed.</td>
</tr>
</tbody>
</table>

The output format is:

<table>
<thead>
<tr>
<th>Time</th>
<th>Display Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>Established</td>
<td></td>
</tr>
<tr>
<td>&lt; 1 day</td>
<td>00:12:23 (hours:minutes:seconds)</td>
</tr>
<tr>
<td>&lt; 1 week</td>
<td>1d21h (DaysHours)</td>
</tr>
<tr>
<td>&gt; 1 week</td>
<td>11w2d (WeeksDays)</td>
</tr>
</tbody>
</table>

State/Pfxrcd

If the neighbor is in Established stage, the number of network prefixes received.

If a maximum limit was configured with the `neighbor maximum-prefix` command, (prfxd) appears in this column.
Field | Description
--- | ---
If the neighbor is not in Established stage, the current stage is displayed (Idle, Connect, Active, OpenSent, OpenConfirm). When the peer is transitioning between states and clearing the routes received, the phrase (Purging) may appear in this column.

If the neighbor is disabled, the phrase (Admin shut) appears in this column.

Example

```
Dell# show ip bgp summary
BGP router identifier 192.168.11.5, local AS number 100
BGP local RIB : Routes to be Added 0, Replaced 0, Withdrawn 0
2 network entry(s) using 152 bytes of memory
2 paths using 208 bytes of memory
BGP-RIB over all using 210 bytes of memory
2 BGP path attribute entry(s) using 144 bytes of memory
1 BGP AS-PATH entry(s) using 10 bytes of memory
2 neighbor(s) using 16384 bytes of memory
Neighbor        AS            MsgRcvd  MsgSent     TblVer  InQ  OutQ Up/Down  State/Pfx
172.16.0.2      200                10        8          0    0     0 00:05:34 2
192.168.10.2    100                 0       22          0    0     0 00:00:00 (shut)
Dell#
```

**show running-config bgp**

To display the current BGP configuration, use this feature.

**Syntax**

```
show running-config bgp
```

**Defaults**

none

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**

  neighbor 10.1.1.2 no shutdown
Dell#

**timers bgp**

Adjust the BGP Keep Alive and Hold Time timers.

**Syntax**

```
timers bgp keepalive holdtime
```

To return to the default, use the **no timers bgp** command.

**Parameters**

- **keepalive** Enter a number for the time interval, in seconds, between keepalive messages sent to the neighbor routers. The range is from 1 to 65535. The default is **60 seconds**.

- **holdtime** Enter a number for the time interval, in seconds, between the last keepalive message and declaring the router dead. The range is from 3 to 65535. The default is **180 seconds**.

**Defaults**

None

**Command Modes**

EXEC Privilege

**Command History**

</table>
**MBGP Commands**

Multiprotocol BGP (MBGP) is an enhanced BGP that enables multicast routing policy throughout the internet and connecting multicast topologies between BGP and autonomous systems (ASs).

Dell Networking OS MBGP is implemented as per IETF RFC 1858.

BGPv4 is supported in the following:

<table>
<thead>
<tr>
<th>Dell Networking OS Version</th>
<th>Platform Support</th>
</tr>
</thead>
<tbody>
<tr>
<td>7.8.1.0, MBGP for IPv4 Multicast Only</td>
<td>S-Series</td>
</tr>
</tbody>
</table>

`debug ip bgp dampening`

View information on routes being dampened.

**Syntax**

```
debug ip bgp [vrf vrf-name] [ipv4 {unicast | multicast} | ipv6 unicast] dampening
```

To disable debugging, use the `no debug ip bgp dampening` command.

**Parameters**

- `vrf vrf-name`: Enter the keyword `vrf` followed by the name of the VRF to view information on dampened routes corresponding to that VRF.
- `ipv4 multicast` (OPTIONAL): Enter the keyword `ipv4` followed by the keyword `multicast` to view dampened-route information related only to ipv4 multicast routes.
- `ipv4 unicast` (OPTIONAL): Enter the keyword `ipv4` followed by the keyword `unicast` to view dampened-route information related only to ipv4 unicast routes.
- `ipv6 unicast` (OPTIONAL): Enter the keyword `ipv4` followed by the keyword `unicast` to view dampened-route information related only to ipv6 unicast routes.

**Command Modes**

</tr>
</tbody>
</table>
distance bgp

Configure three administrative distances for routes.

Syntax
distance bgp external-distance internal-distance local-distance

To return to default values, use the no distance bgp command.

Parameters

- **external-distance**
Enter a number to assign to routes learned from a neighbor external to the AS. The range is from 1 to 255. The default is 20.

- **internal-distance**
Enter a number to assign to routes learned from a router within the AS. The range is from 1 to 255. The default is 200.

- **local-distance**
Enter a number to assign to routes learned from networks listed in the network command. The range is from 1 to 255. The default is 200.

Defaults

- external-distance = 20
- internal-distance = 200
- local-distance = 200

Command Modes

- ROUTER BGP

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>

**Usage Information**

⚠️ **CAUTION:** Dell Networking recommends not changing the administrative distance of internal routes. Changing the administrative distances may cause routing table inconsistencies.

The higher the administrative distance assigned to a route means that your confidence in that route is low. Routes assigned an administrative distance of 255 are not installed in the routing table. Routes from confederations are treated as internal BGP routes.

**Related Commands**

- `router bgp` — enter ROUTER mode on the switch.

**show ip bgp dampened-paths**

View BGP routes that are dampened (non-active).

**Syntax**

```
show ip bgp [vrf vrf-name] [ipv4 {multicast | unicast} | ipv6 unicast] dampened-paths
```  

**Parameters**

- `vrf vrf-name` *(OPTIONAL)* Enter the keywords `vrf` and then the name of the VRF to view routes that are affected by a specific community list corresponding to that VRF.
- `ipv4 multicast` *(OPTIONAL)* Enter the keyword `ipv4` followed by the keyword `multicast` to view information related only to ipv4 multicast routes.
- `ipv4 unicast` *(OPTIONAL)* Enter the keywords `ipv4` followed by the keyword `unicast` to view information related only to ipv4 unicast routes.
- `ipv6 unicast` *(OPTIONAL)* Enter the keyword `ipv6` followed by the keyword `unicast` to view information related only to ipv6 unicast routes.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.
### Version Description
- **9.10(0.0)**: Introduced on the S3148.
- **9.8(2.0)**: Introduced on the S3100 series.
- **9.8(1.0)**: Introduced on the Z9100–ON.
- **9.8(0.0P5)**: Introduced on the S4048-ON.
- **9.8(0.0P2)**: Introduced on the S3048-ON.
- **9.7(0.0)**: Added the ipv4 multicast and ipv6 unicast parameters.
- **9.4(0.0)**: Added support for VRF.
- **9.2(1.0)**: Introduced on the Z9500.
- **9.0.2.0**: Introduced on the S6000.
- **8.3.19.0**: Introduced on the S4820T.
- **8.3.11.1**: Introduced on the Z9000.
- **8.3.7.0**: Introduced on the S4810.
- **7.8.1.0**: Introduced on the S-Series.
- **7.7.1.0**: Introduced on the C-Series.

### Usage Information
To determine a BGP session flap, both a route-down event and a subsequent route-up event corresponding to a single route are considered. As a result, a flap event is penalized only one time during the route-down event. The subsequent route-up event corresponding to the same route is not considered as a flap and is not penalized.

The history paths that the `show ip bgp` command displays contain only the prefix and the next-hop information. The next-hop information shows the ip address of the neighbor. It does not show the actual next-hop details.

The following describes the `show ip bgp damp` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Network</td>
<td>Displays the network ID to which the route is dampened.</td>
</tr>
<tr>
<td>From</td>
<td>Displays the IP address of the neighbor advertising the dampened route.</td>
</tr>
<tr>
<td>Reuse</td>
<td>Displays the hour:minutes:seconds until the dampened route is available.</td>
</tr>
<tr>
<td>Path</td>
<td>Lists all the ASs the dampened route passed through to reach the destination network.</td>
</tr>
</tbody>
</table>

### Example
```
Dell# show ip bgp dampened-paths
BGP local RIB : Routes to be Added 0, Replaced 0, Withdrawn 0
BGP local router ID is 192.168.11.5
Status codes: s suppressed, S stale, d dampened, h history, * valid, > best
Path source: I - internal, a - aggregate, c - confed-external, r - redistributed
               n - network, D - denied, S - stale
Origin codes: i - IGP, e - EGP, ? - incomplete

<table>
<thead>
<tr>
<th>Network</th>
<th>From</th>
<th>Reuse</th>
<th>Path</th>
</tr>
</thead>
<tbody>
<tr>
<td>d 55.0.0.0/24</td>
<td>172.16.0.2</td>
<td>00:36:23</td>
<td>200</td>
</tr>
</tbody>
</table>
Dell#
```
BGP Extended Communities (RFC 4360)

BGP Extended Communities, as defined in RFC 4360, is an optional transitive BGP attribute. BGP Extended Communities provides two major advantages over Standard Communities:

- The range is extended from 4-octet (AA:NN) to 8-octet (Type:Value) to provide enough number communities.
- Communities are structured using a new “Type” field (1 or 2-octets), allowing you to provide granular control/filter routing information based on the type of extended communities.

set extcommunity rt

To set Route Origin community attributes in Route Map, use this feature.

Syntax

```plaintext
set extcommunity rt {as4 ASN4:NN [non-trans] | ASN:NNNN [non-trans] | IPADDR:NN [non-trans]} [additive]
```

To delete the Route Origin community, use the `no set extcommunity` command.

Parameters

- **as4 ASN4:NN**: Enter the keyword `as4` then the 4-octet AS specific extended community number in the format ASN4:NN (4-byte AS number:2-byte community value).
- **ASN:NNNN**: Enter the 2-octet AS specific extended community number in the format ASN:NNNN (2-byte AS number:4-byte community value).
- **IPADDR:NN**: Enter the IP address specific extended community in the format IPADDR:NN (4-byte IPv4 Unicast Address:2-byte community value).
- **additive**: (OPTIONAL) Enter the keyword `additive` to add to the existing extended community.
- **non-trans**: (OPTIONAL) Enter the keywords `non-trans` to indicate a non-transitive BGP extended community.

Defaults

none

Command Modes

ROUTE MAP (config-route-map)

Command History

</tr>
</tbody>
</table>

### Usage Information

If the set community `rt` and `soo` are in the same route-map entry, the behavior defines as:

- If the `rt` option comes before `soo`, with or without the additive option, `soo` overrides the communities `rt` sets.
- If the `rt` option comes after `soo`, without the additive option, `rt` overrides the communities `soo` sets.
- If the `rt` with the additive option comes after `soo`, `rt` adds the communities `soo` sets.

### Related Commands

- `set extcommunity soo` — set the extended community site-of-origin in the route-map.

## set extcommunity soo

To set extended community site-of-origin in Route Map, use this feature.

**Syntax**

```
set extcommunity soo {as4 ASN4:NN | ASN:NNNN | IPADDR:NN [non-trans]}
```

To delete the site-of-origin community, use the `no set extcommunity` command.

**Parameters**

- `as4 ASN4:NN` Enter the keyword `as4` then the 4-octet AS specific extended community number in the format `ASN4:NN` (4-byte AS number:2-byte community value).
- `ASN:NNNN` Enter the 2-octet AS specific extended community number in the format `ASN:NNNN` (2-byte AS number:4-byte community value).
- `IPADDR:NN` Enter the IP address specific extended community in the format `IPADDR:NN` (4-byte IPv4 Unicast Address:2-byte community value).
- `non-trans` (OPTIONAL) Enter the keywords `non-trans` to indicate a non-transitive BGP extended community.

**Defaults**

- `none`

**Command Modes**

- `ROUTE MAP (config-route-map)`

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

### Version Description

- **8.3.7.0**: Introduced on the S4810.
- **Version 7.8.1.0**: Introduced on the S-Series.
- **7.7.1.0**: Introduced on the C-Series.
- **7.6.1.0**: Introduced on the E-Series.

### Usage Information

The following describes the `show ip bgp paths extcommunity` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Address</td>
<td>Displays the internal address where the path attribute is stored.</td>
</tr>
<tr>
<td>Hash</td>
<td>Displays the hash bucket where the path attribute is stored.</td>
</tr>
<tr>
<td>Refcount</td>
<td>Displays the number of BGP routes using these extended communities.</td>
</tr>
<tr>
<td>Community</td>
<td>Displays the extended community attributes in this BGP path.</td>
</tr>
</tbody>
</table>

### Example

```
Dell# show ip bgp paths extcommunity
Total 1 Extended Communities

Address     Hash  Refcount Extended Community
0x41d57024  12272 1        RT:7:200 SoO:5:300 SoO:0.0.0.3:1285

Dell#
```

### show ip extcommunity-list

Display the IP extended community list.

**Syntax**

```plaintext
show ip extcommunity-list [word]
```

**Parameters**

- **word**: Enter the name of the extended community list you want to view.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

#### Version Description

- **9.10(0.0)**: Introduced on the S3148.
- **9.8(2.0)**: Introduced on the S3100 series.
- **9.8(0.0P5)**: Introduced on the S4048-ON.
- **9.8(0.0P2)**: Introduced on the S3048-ON.
IPv6 BGP Commands

IPv6 border gateway protocol (IPv6 BGP) is supported on the platform.

BGP is an external gateway protocol that transmits interdomain routing information within and between Autonomous Systems (AS). Basically, two routers (called neighbors or peers) exchange information including full routing tables and periodically send messages to update those routing tables.

**clear ip bgp ipv6 unicast soft**

Clear and reapply policies for IPv6 unicast routes without resetting the TCP connection; that is, perform BGP soft reconfiguration.

**Syntax**

```
clear ip bgp { * | as-number | ipv4-neighbor-addr | ipv6-neighbor-addr | peer-group name } ipv6 unicast soft [ in | out ]
```

**Parameters**

- *: Clear and reapply policies for all BGP sessions.
- **as-number**: Clear and reapply policies for all neighbors belonging to the AS. The range is from 0 to 65535 (2 Byte), from 1 to 4294967295 (4 Byte), or from 0.1 to 0.65535.65535 (Dotted format).
- **ipv4-neighbor-addr** | **ipv6-neighbor-addr**: Clear and reapply policies for a neighbor.
- **peer-group name**: Clear and reapply policies for all BGP routers in the specified peer group.
- **ipv6 unicast**: Clear and reapply policies for all IPv6 unicast routes.
- **in**: Reapply only inbound policies.

**Note**: If you enter soft, without an in or out option, both inbound and outbound policies are reset.
out

Reapply only outbound policies.

NOTE: If you enter soft, without an in or out option, both inbound and outbound policies are reset.

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

### debug ip bgp ipv6 unicast soft-reconfiguration

Enable soft-reconfiguration debugging for IPv6 unicast routes.

**Syntax**

```plaintext
debug ip bgp [ipv4-address | ipv6-address | peer-group-name] ipv6 unicast soft-reconfiguration
```

To disable debugging, use the `no debug ip bgp [ipv4-address | ipv6-address | peer-group-name] ipv6 unicast soft-reconfiguration` command.

**Parameters**

- `ipv4-address | ipv6-address`     Enter the IP address of the neighbor on which you want to enable soft-reconfiguration debugging.
- `peer-group-name`               Enter the name of the peer group on which you want to enable soft-reconfiguration debugging.
- `ipv6 unicast`                  Debug soft reconfiguration for IPv6 unicast routes.

**Defaults**

Disabled.

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.
### Version | Description
--- | ---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
8.3.19.0 | Introduced on the S4820T.
8.4.1.0 | Added support for IPv4 multicast and IPv6 unicast routes.
7.8.1.0 | Introduced on the S4810.
7.7.1.0 | Introduced on the C-Series.
7.2.1.0 | Introduced on the E-Series.

#### Usage Information
This command turns on BGP soft-reconfiguration inbound debugging for IPv6 unicast routes. If no neighbor is specified, debug is turned on for all neighbors.

### ipv6 prefix-list
Configure an IPv6 prefix list.

**Syntax**
```
ipv6 prefix-list prefix-list name
```

**Parameters**
- **prefix-list name**: Enter the name of the prefix list.

**Defaults**
none

**Command Modes**
CONFIGURATION

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

### Version | Description
--- | ---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.0.0.0 | Introduced on the Z9000.
8.3.19.0 | Introduced on the S4820T.
8.3.10.0 | Introduced on the S4810.
neighbor soft-reconfiguration inbound

Enable a BGP soft-reconfiguration and start storing updates for inbound IPv6 unicast routes.

Syntax
neighbor {ipv4-address | ipv6-address | peer-group-name} soft-reconfiguration inbound

Parameters
- **ipv4-address**
  - Enter the IP address of the neighbor for which you want to start storing inbound routing updates.
- **ipv6-address**
  - Enter the IP address of the neighbor for which you want to start storing inbound routing updates.
- **peer-group-name**
  - Enter the name of the peer group for which you want to start storing inbound routing updates.

Defaults
Disabled.

Command Modes
- ROUTER BGPv6 ADDRESS FAMILY (conf-router_bgpv6_af)

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.10(0.0)</td>
<td>Introduced on the S3148.</td>
</tr>
<tr>
<td>9.8(2.0)</td>
<td>Introduced on the S3100 series.</td>
</tr>
<tr>
<td>9.8(0.0P5)</td>
<td>Introduced on the S4048-ON.</td>
</tr>
<tr>
<td>9.8(0.0P2)</td>

</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>7.4.1.0</td>
<td>Introduced</td>
</tr>
</tbody>
</table>

Usage Information
This command enables soft-reconfiguration for the specified BGP neighbor. BGP stores all updates for inbound IPv6 unicast routes the neighbor receives but does not reset the peer-session.

⚠️ **CAUTION:** Inbound update storage is a memory-intensive operation. The entire BGP update database from the neighbor is stored in memory regardless of the inbound policy results applied on the neighbor.
show ipv6 prefix-list

Displays the specified IPv6 prefix list.

Syntax

```
show ipv6 prefix-list detail {prefix-list name} | summary
```

Parameters

detail

Display a detailed description of the selected IPv6 prefix list.

prefix-list name

Enter the name of the prefix list.

NOTE: There is a 140-character limit for prefix list names.

summary

Display a summary of RPF routes.

Command Modes

EXEC

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
--- | ---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.0.0.0 | Introduced on the Z9000.
8.3.10.0 | Introduced on the S4810.

Related Commands

- ipv6 prefix-list — configure an IPv6 prefix-list.

**IPv6 MBGP Commands**

Multiprotocol BGP (MBGP) is an enhanced BGP that enables the multicast routing policy throughout the internet and connecting multicast topologies between BGP and autonomous systems (AS). FTOS MBGP is implemented as per IETF RFC 1858.
show ipv6 mbgproutes

Display the selected IPv6 MBGP route or a summary of all MBGP routes in the table.

Syntax

show ipv6 mbgproutes ipv6-address prefix-length | summary

Parameters

ipv6-address prefix-length

(OPTIONAL) Enter the IPv6 address in the x:x:x:x::x format then the prefix length in the /x format. The range is from /0 to /128.

NOTE: The :: notation specifies successive hexadecimal fields of zeros.

summary

Display a summary of RPF routes.

Command Modes

EXEC

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.0.0.0 Introduced on the Z9000.
8.3.19.0 Introduced on the S4820T.
8.3.10.0 Introduced on the S4810.
Content Addressable Memory (CAM)

You can use content addressable memory (CAM) commands to configure the amount of memory allocated to CAM memory partitions.

**NOTE:** Not all CAM commands are supported on all platforms. Be sure to note the platform when looking for a command.

**WARNING:** If you are using these features for the first time, contact Dell Networking Technical Assistance Center (TAC) for guidance.

### CAM Profile Commands

The CAM profiling feature allows you to partition the CAM to best suit your application. For example:

- Configure more Layer 2 forwarding information base (FIB) entries when the system is deployed as a switch.
- Configure more Layer 3 FIB entries when the system is deployed as a router.
- Configure more access control lists (ACLs) (when IPv6 is not employed).
- Hash multi-protocol label switching (MPLS) packets based on source and destination IP addresses for link aggregation groups (LAGs).
- Hash based on bidirectional flow for LAGs.
- Optimize the virtual local area network (VLAN) ACL Group feature, which permits group VLANs for IP egress ACLs.

### Important Points to Remember

- Dell Networking OS supports CAM allocations on the C-Series and S-Series.
- All line cards within a single system must have the same CAM profile (including CAM sub-region configurations); this profile must match the system CAM profile (the profile on the primary route processor module [RPM]).
- Dell Networking OS automatically reconfigures the CAM profile on line cards and the secondary RPM to match the system CAM profile by saving the correct profile on the card and then rebooting it.
- The CAM configuration is applied to the entire system when you use the CONFIGURATION mode commands. Save the running-configuration to affect the change.
- When budgeting your CAM allocations for ACLs and quality of service (QoS) configurations, remember that ACL and QoS rules might consume more than one CAM entry depending on complexity. For example, transmission control protocol (TCP) and user datagram protocol (UDP) rules with port range options might require more than one CAM entry.
- After you install a secondary RPM, copy the running-configuration to the startup-configuration so that the new RPM has the correct CAM profile.
- You MUST save your changes and reboot the system for CAM profiling or allocations to take effect.

### CAM Profile Commands

The CAM profiling feature allows you to partition the CAM to best suit your application. For example:

- Configure more Layer 2 forwarding information base (FIB) entries when the system is deployed as a switch.
- Configure more Layer 3 FIB entries when the system is deployed as a router.
- Configure more access control lists (ACLs) (when IPv6 is not employed).
- Hash multi-protocol label switching (MPLS) packets based on source and destination IP addresses for link aggregation groups (LAGs).
- Hash based on bidirectional flow for LAGs.
- Optimize the virtual local area network (VLAN) ACL Group feature, which permits group VLANs for IP egress ACLs.

**Important Points to Remember**

- Dell Networking OS supports CAM allocations on the C-Series and S-Series.
- All line cards within a single system must have the same CAM profile (including CAM sub-region configurations); this profile must match the system CAM profile (the profile on the primary route processor module [RPM]).
- Dell Networking OS automatically reconfigures the CAM profile on line cards and the secondary RPM to match the system CAM profile by saving the correct profile on the card and then rebooting it.
- The CAM configuration is applied to the entire system when you use the CONFIGURATION mode commands. Save the running-configuration to affect the change.
- When budgeting your CAM allocations for ACLs and quality of service (QoS) configurations, remember that ACL and QoS rules might consume more than one CAM entry depending on complexity. For example, transmission control protocol (TCP) and user datagram protocol (UDP) rules with port range options might require more than one CAM entry.
- After you install a secondary RPM, copy the running-configuration to the startup-configuration so that the new RPM has the correct CAM profile.
- You MUST save your changes and reboot the system for CAM profiling or allocations to take effect.

**cam-acl (Configuration)**

Select the default CAM allocation settings or reconfigure a new CAM allocation for Layer 2, IPv4, and IPv6 ACLs, Layer 2 and Layer 3 (IPv4) QoS, Layer 2 Protocol Tunneling (L2PT), IP and MAC source address validation for DHCP, Ethernet Connectivity Fault Management (CFM) ACLs, OpenFlow, and Policy-based Routing (PBR).

**Syntax**

```
cam-acl {default | l2acl number ipv4acl number ipv6acl number ipv4qos number l2qos number l2pt number ipmacacl number [vman-qos | vman-dual-qos number] ecfmacl number [nlbclusteracl number] ipv4pbr number | openflow number | fcoe number] [iscsioptacl number] [vrfv4acl number]
```

**Parameters**

- **default**
  - Use the default CAM profile settings and set the CAM as follows:
    - L2Acl : 6
    - IP4Acl : 4
    - IP6Acl : 0
    - IP4Qos : 2
    - L2Qos : 1
    - L2PT : 0
    - IpMacAcl : 0
    - VmanQos : 0
    - VmanDualQos : 0
    - EcfmAcl : 0
    - nlbclusteracl : 0
    - FcoeAcl : 0
    - iscsiOptAcl : 0
    - ipv4pbr : 0
l2acl number
Enter the keyword l2acl and then the number of l2acl blocks. The range is from 1 to 8.

ipv4acl number
Enter the keyword ipv4acl and then the number of FP blocks for IPv4. The range is from 0 to 8.

ipv6acl number
Enter the keyword ipv6acl and then the number of FP blocks for IPv6. The range is from 0 to 4.

ipv4qos number
Enter the keyword ipv4qos and then the number of FP blocks for IPv4. The range is from 0 to 8.

l2qos number
Enter the keyword l2qos and then the number of FP blocks for l2 qos. The range is from 1 to 8.

l2pt number
Enter the keyword l2pt and then the number of FP blocks for l2 protocol tunnelling. The range is from 0 to 1.

ipmacacl number
Enter the keyword ipmacacl and then the number of FP blocks for IP and MAC ACL. The range is from 0 to 6.

ecfmacnumber
Enter the keyword ecfmacacl and then the number of FP blocks for ECFM ACL. The range is from 0 to 5.

nlbclusteracl number
Enter the keyword nlbclusteracl and then the number of FP blocks for nlbcluster ACL. The range is from 0 to 2. By default, the value is 0 and it supports 8 NLB arp entries reserved for internal functionality.

NOTE: When you reconfigure CAM allocation, use the nlbclusteracl number command to change the number of NLB ARP entries. The range is from 0 to 2. The default value is 0. At the default value of 0, eight NLB ARP entries are available for use. This platform supports up to 512 CAM entries. Select 1 to configure 256 entries. Select 2 to configure 512 entries. Even though you can perform CAM carving to allocate the maximum number of NLB entries, Dell Networking recommends that you use a maximum of 64 NLB ARP entries.

vman-qos
Enter the keyword vman-qos and then the number of FP blocks for VMAN QoS. The range is from 0 to 6.

vman-dual-qos number
Enter the keyword vman-dual-qos and then the number of FP blocks for VMAN dual QoS. The range is from 0 to 4.

ipv4pbr number
Enter the keyword ipv4pbr and then the number of FP blocks for ipv4pbr ACL. The range is from 0 to 8.

Openflow number
Enter the keyword openflow and then the number of FP blocks for open flow (multiples of 4). The range is from 0 to 8.

fcoeac1 number
Enter the keyword fcoeac1 and then the number of FP blocks for FCOE ACL. The range is from 0 to 6.

iscsioptacl number
Enter the keyword iscsioptacl and then the number of FP blocks for iSCSI optimization ACL. The range is from 0 to 2.

Allocate space to each CAM region.
ipv4qos number
l2qos number l2pt
number ipmacacl
number ecfmacl
number (nlbclusteracl]
[vman-qos | vman-
dual-qos number]
ipv4pbr
number openflow
(4|8) | fcoe
number
[iscsioptacl number]
[vrfv4acl number]
Enter 4 or 8 for the number of OpenFlow FP blocks.

• 4: Creates 242 entries for use by the OpenFlow controller (256 total entries minus the
14 entries reserved for internal functionality)
• 8: Creates 498 entries for use by the OpenFlow controller (512 total entries minus the
14 entries reserved for internal functionality)

The fcoe range is 0–6 groups. Each group has 128 entries; the value given must be an
even number. This information is stored in the NVRAM and is effective after rebooting the
switch.

Command Modes
CONFIGURATION

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking
OS Command Line Reference Guide.

Version Description
9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100-ON.
9.8(0.0P6) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Added the nlbcluster ACL keyword. Introduced on the S6000-ON.
9.4.(0.0) Added support for PBR and VRF.
9.2(1.0) Introduced on the Z9500.
9.2(0.2) Added support for fcoe.
9.1.(0.0) Added support for OpenFlow.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
8.3.10.2 Clarified block information for the S4810.
8.3.10.0 Introduced on the S4810.
8.3.1.0 Added the keywords ecfmacl, vman-qos, and vman-dual-qos.
8.2.1.0 Introduced on the S-Series.
7.8.1.0 Introduced on the C-Series.

Usage Information
Save the new CAM settings to the startup-config (write-mem or copy run start) then reload the system
for the new settings to take effect.

The total amount of space allowed is 16 FP Blocks. System flow requires three blocks; these blocks cannot be
reallocated. Only 13 number of blocks can be configured by the user.

The ipv6acl allocation must be a factor of 2.
If allocation values are not entered for the CAM regions, the value is 0.

If you enable BMP, to perform a reload on the chassis to upgrade any configuration changes that have changed the NVRAM content, use the command `reload conditional nvram-cfg-change`.

---

**cam-acl-egress**

Allocate CAM for egress ACLs.

**Syntax**

```
cam-acl-egress default | l2acl number ipv4acl number ipv6acl number
```

**Parameters**

- **default**
  - Reset egress CAM ACL entries to default settings.
- **l2acl number**
  - Allocate space to each CAM region. The total space allocated must equal 4. The ipv6acl range must be a factor of 2.

**Command Modes**

CONFIGURATION

</tbody>
</table>

Usage Information
When you enable this command, if a Policy Map containing classification rules (ACL and/or dscp/ ip-precedence rules) is applied to more than one physical interface on the same port pipe, only a single copy of the policy is written (only one FP entry is used).

**NOTE:** An ACL itself may still require more that a single FP entry, regardless of the number of interfaces. For more information, refer to the “IP Access Control Lists”, “Prefix Lists”, and “Route-map” sections in the Dell Networking OS Configuration Guide.

**show cam-acl**

Display the details of the CAM profiles on the chassis and all stack units.

Syntax

```
show cam-acl
```

Defaults
none

</tr>
</tbody>
</table>

Example

```
Dell#show cam-usage
Stackunit|Portpipe| CAM Partition      | Total CAM | Used CAM |Available CAM
==========|========|====================|===========|==========|==============
 0        |   0    |  IN-L2 ACL         |    1024   |     0    |   1024
        |        |  IN-L3 ACL         |    1024   |     1    |   1023
        |        |  IN-L3 FIB         |    163840 |     16   |   163824
        |        |  IN-L3 ECMP GRP    |    1024   |     0    |   1024
        |        |  IN-V6 ACL         |     0     |     0    |     0
        |        |  IN-NLB ACL        |     0     |     0    |     0
        |        |  IPMAC ACL         |     0     |     0    |     0
        |        |  OUT-L2 ACL        |     206   |     9    |    197
        |        |  OUT-L3 ACL        |     102   |     9    |    93
        |        |  OUT-V6 ACL        |     102   |     4    |    98
```

Example (show cam-usage router)

```
Dell#show cam-usage router
Stackunit|Portpipe| CAM Partition   | Total CAM   |  Used CAM   |Available CAM
==========|========|=================|=============|=============|==============
 0   |   0    | IN-L3 ACL       |       1024 |        1    |      1023
        |        | IN-L3 ECMP GRP  |       1024 |        0    |      1024
        |        | IN-V6 ACL       |        0    |        0    |        0
        |        | IN-NLB ACL      |        0    |        0    |        0
        |        | IN-L3-MIRR ACL  |        0    |        0    |        0
        |        | IN-L3 FIB       |     163840 |       15   |      163825
```

test cam-usage

Verify that enough CAM space is available for the IPv6 ACLs you have created.

Syntax

```
test cam-usage service-policy input input policy name stack-unit {number | all}
```

Parameters

- **policy-map name**
  Enter the name of the policy-map to verify. Maximum is 32 characters.
- **number**
  Enter all to get information for all the stack-units or enter the stack-unit number to get information for a specific stack-unit.

Defaults

```
none
```

</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command applies to both IPv4 and IPv6 CAM Profiles, but is best used when verifying QoS optimization for IPv6 ACLs.

QoS Optimization for IPv6 ACLs does not impact the CAM usage for applying a policy on a single (or the first of several) interfaces. It is most useful when a policy is applied across multiple interfaces; it can reduce the impact to CAM usage across subsequent interfaces.

The following describes the `test cam-usage` command shown in the following example.

<table>
<thead>
<tr>
<th>Term</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Stack-Unit</td>
<td>Lists the stack unit or units that are checked. Entering all shows the status for all stacks.</td>
</tr>
<tr>
<td>Portpipe</td>
<td>Lists the portpipe (port-set) or port pipes (port-sets) that are checked. Entering all shows the status for stack-units and port-pipes in the chassis. The port set value is from 0 to 0.</td>
</tr>
<tr>
<td>CAM Partition</td>
<td>Shows the CAM profile of the CAM.</td>
</tr>
<tr>
<td>Available CAM</td>
<td>Identifies the amount of CAM space remaining for that profile.</td>
</tr>
<tr>
<td>Estimated CAM per Port</td>
<td>Estimates the amount of CAM space the listed policy will require.</td>
</tr>
<tr>
<td>Status</td>
<td>Indicates whether or not the policy will be allowed in the CAM.</td>
</tr>
</tbody>
</table>

**Example**

```bash
Dell> test cam-usage service-policy input In stack-unit all
Stack-Unit|Portpipe|CAM Partition|Available CAM|Estimated CAM per Port|Status
------------------------------------------------------------------------------
1 | 0 | IPv4Flow | 102 | 0| Allowed
1 | 0 | IPv4Flow | 102 | 0| Allowed
Dell#
Dell> test cam-usage service-policy input In stack-unit 1 port-set 0
Stack-Unit|Portpipe|CAM Partition|Available CAM|Estimated CAM per Port|Status
----------------------------------------------------------------------------------
```

Content Addressable Memory (CAM)
| 1 | 0 | IPv4Flow | 102 | 0 | Allowed |

Dell#
Control Plane Policing (CoPP)

Control plane policing (CoPP) uses access control list (ACL) rules and quality of service (QoS) policies to create filters for a system's control plane. The CoPP filters prevent traffic that is not identified as legitimate from reaching the control plane, and rate-limit traffic to an acceptable level.

Topics:
- control-plane-cpuqos
- service-policy rate-limit-cpu-queues
- service-policy rate-limit-protocols
- ip unknown-unicast
- ipv6 unknown-unicast
- show cpu-queue rate cp
- show ip protocol-queue-mapping
- show ipv6 protocol-queue-mapping
- show mac protocol-queue-mapping

control-plane-cpuqos

To manage control-plane traffic, enter control-plane mode and configure the switch.

Syntax
control-plane-cpuqos

Defaults
Not configured.

Command Modes
CONFIGURATION

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>
service-policy rate-limit-cpu-queues

Apply a policy map for the system to rate limit control traffic on a per-queue basis.

Syntax

service-policy rate-limit-cpu-queues policy-name

Parameters

policy-name Enter the service-policy name, using a string up to 32 characters.

Defaults

Not configured.

Command Modes

CONTROL-PLANE-CPUQOS

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description

9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100-ON.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
8.3.8.0 Introduced on the S4810.

Usage Information

Create a policy-map by associating a queue number with the qos-policy.

Create QoS policies prior to enabling this command.

For CoPP, use the keyword cpu-qos when creating qos-policy-input.

Related Commands

• qos-policy-input — create a QoS input policy map.
• policy-map-input — create an input policy map.
**service-policy rate-limit-protocols**

Apply a policy for the system to rate limit control protocols on a per-protocol basis.

**Syntax**

```
service-policy rate-limit-protocols policy-name
```

**Parameters**

- `policy-name` Enter the service-policy name, using a string up to 32 characters.

**Defaults**

Not configured.

**Command Modes**

CONTROL-PLANE-CPUQOS

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>

<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.8.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command applies the service-policy based on the type of protocol defined in the ACL rules.

Create ACL and QoS policies prior to enabling this command.

For CoPP, use the keyword cpu-qos when creating qos-policy-input.

**Related Commands**

- `ip access-list extended` — creates an extended IP ACL.
- `mac access-list extended` — creates an extended MAC ACL.
- `qos-policy-input` — creates a QoS input policy map.
- `class-map` — creates a QoS class map.
- `policy-map-input` — creates an input policy map.
**ip unknown-unicast**

Enable IPv4 catch-all route.

Syntax

```
ip unknown-unicast [vrf vrf-name]
```

To remove the IPv4 catch-all route (0.0.0.0/0) from the LPM route forwarding table in hardware which gets added as a default configuration after the initialization of FIB Agent module, use the `no ip unknown-unicast` command.

Defaults

None

Parameters

vrf vrf-name (Optional) Enter the keyword `vrf` followed by the name of the VRF to enable catch-all routes corresponding to that VRF.

Command Modes

</tr>
</tbody>
</table>

Usage Information

Use this command to add the IPv4 catch-all route (0.0.0.0/0) in the LPM route forwarding table if it was deleted using the `no ip unknown-unicast` command previously. This will be the default configuration after reload.

**ipv6 unknown-unicast**

Disable soft forwarding of unknown IPv6 destination packets.

Syntax

```
[no] ipv6 unknown-unicast
```

Defaults

Soft forwarding is enabled.

Command Modes

CONFIGURATION

Control Plane Policing (CoPP)
show cpu-queue rate cp

Display the rates for each CPU queue.

Syntax

show cpu-queue rate cp

Defaults

Not configured.

Command Modes

EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description

9.10(0.0) Introduced on the S3148.
9.10(0.0) Introduced on the S6100-ON.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100-ON.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.4(0.0) Introduced on the S4810, S4820T, S6000, and Z9000.

Usage Information

All the default catch-all entries in the longest prefix match (LPM) table collect and transmit all unresolved IPv6 packets to the CPU, even if they are destined for unknown destinations.
show ip protocol-queue-mapping

Display the queue mapping for each configured protocol.

Syntax

show ip protocol-queue-mapping

Defaults

Not configured.

Command Modes

EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description

9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100-ON.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.2(1.0) Introduced on the Z9500.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
**Example**

Dell# show ip protocol-queue-mapping

Debugging and Diagnostics

The basic debugging and diagnostic commands are supported by the Dell Networking OS.

Topics:
- Diagnostics and Monitoring Commands
- Offline Diagnostic Commands
- Hardware Commands

Diagnostics and Monitoring Commands

The following section describes the diagnostics and monitoring commands.
For similar commands, refer to the Control and Monitoring chapter.

logging coredump stack-unit

Enable coredump on a stack.

Syntax

logging coredump stack-unit {stack-unit-number | all}

Parameters

Parameters

stack-unit-number

Enter the stack-unit id to enable coredump in a particular stack-unit.

all

Enable coredump on all stack-unit.

Defaults

Disabled by default on customer builds.

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
</tbody>
</table>
Version Description
8.3.11.1 Introduced on the Z9000.
8.3.7.0 Introduced on the S4810.

Usage Information
The Kernel core dump can be large and may take up to 5 to 30 minutes to upload. Dell Networking OS does not overwrite application core dumps so you should delete them as necessary to conserve space on the flash; if the flash is out of memory, the coredump is aborted. On the S-Series, if the FTP server is not reachable, the application coredump is aborted. Dell Networking OS completes the coredump process and wait until the upload is complete before rebooting the system.

Offline Diagnostic Commands
The offline diagnostics test suite is useful for isolating faults and debugging hardware. While tests are running, Dell Networking OS results are saved as a text file (TestReport-SU-X.txt) in the flash directory. This show file command is available only on master and standby.

Important Points to Remember
- Offline diagnostics can only be run when the unit is offline.
- You can only run offline diagnostics on a unit to which you are connected via the console. In other words, you cannot run diagnostics on a unit to which you are connected to via a stacking link.
- The system stores the diagnostic results in the flash directory (TestReport-SU-X.txt). The system displays the following message after the diagnostic test is over.

```
05:37:17 : Diagnostic test results are stored on file: flash:/TestReport-SU-1.txt
05:37:22 : %S3048-ON:1 %DIAGAGT-6-DA_DIAG_DONE: Diags finished on stack-unit 1
```
- Diagnostics only test connectivity, not the entire data path.

diag stack-unit
Run offline diagnostics on a stack unit.

```
Syntax
 diag stack-unit number [alllevels | level0 | level1 | level2] verbose [testname | no-reboot]
```

Parameters
- **number**: Enter the stack-unit id.
- **alllevels**: Enter the keyword alllevels to run the complete set of offline diagnostic tests.
- **level0**: Enter the keyword level0 to run Level 0 diagnostics. Level 0 diagnostics check for the presence of various components and perform essential path verifications. In addition, they verify the identification registers of the components on the board.
- **level1**: Enter the keyword level1 to run Level 1 diagnostics. Level 1 diagnostics is a smaller set of diagnostic tests with support for automatic partitioning. They perform status/self test for all the components on the board and test their registers for appropriate values. In addition, they perform extensive tests on memory devices (for example, SDRAM, flash, NVRAM, EEPROM, and CPLD) wherever possible. There are no tests on 10G links. At this level, stack ports are shut down automatically.
level2  Enter the keyword level2 to run Level 2 diagnostics. Level 2 diagnostics are a full set of diagnostic tests with no support for automatic partitioning. Level 2 diagnostics are used primarily for on-board loopback tests and more extensive component diagnostics. Various components on the board are put into Loopback mode and test packets are transmitted through those components. These diagnostics also perform snake tests using VLAN configurations. To test 10G links, physically remove the unit from the stack.

verbose  Enter the keyword verbose to run the diagnostic in Verbose mode. Verbose mode gives more information in the output than Standard mode.

testname  Enter the keyword testname to run a specific test case. Enclose the test case name in double quotes (" "). For example: diag stack-unit 1 level1 testname "first". You can use this option only for interactive tests.

no-reboot  Enter the keyword no-reboot to prevent the system from rebooting after the test. To bring the stack unit to online state, use the online stack-unit stack-unit-number command.

Defaults None

Command Modes EXEC Privilege

**Usage Information**

You cannot enter this command on a Master or Standby unit.

The system reboots when the off-line diagnostics complete. This reboot is an automatic process. A warning message appears when the `offline stack-unit` command is implemented.

Warning: Diagnostic execution will cause stack-unit to reboot after completion of diags.

Proceed with Offline-Diags [confirm yes/no]:y

**Hardware Commands**

These commands display information from a hardware sub-component or ASIC.

**clear hardware stack-unit**

Clear statistics from selected hardware components.

**Syntax**

```plaintext
clear hardware stack-unit id {counters | cpu (data-plane statistics | i2c statistics | management statistics | party-bus statistics | sata-interface statistics) | unit number counters | stack-port stack-port-number}
```

**Parameters**

- `stack-unit id` Enter the keywords `stack-unit` then a number to select a particular stack member and then enter one of the following command options to clear a specific collection of data. The range is from 1 to 12.

- `counters` Enter the keyword `counters` to clear the counters on the selected stack member.

- `cpu data-plane statistics` Enter the keywords `cpu data-plane statistics` to clear the data plane statistics.

- `cpu i2c statistics` Enter the keywords `cpu i2c statistics` to clear the i2c devices statistics.
Enter the keywords cpu party-bus statistics to clear the management statistics.

Enter the keywords cpu sata-interface statistics to clear the sata interface statistics.

Enter the keywords stack-port then the port number of the stacking port to clear the statistics of the particular stacking port. The range is from 1 to 52.

Defaults
None

Command Modes
EXEC Privilege

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.10(0.0) Introduced on the S3148.
9.10(0.0) Increased the stacking range to 12 units in S3100 series.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100-ON.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.11.0 Introduced on the Z9000.
8.3.7.0 Introduced on the S4810.
7.8.1.0 Introduced on the S-Series.

Related Commands
- show hardware stack-unit — display the data plane or management plane input and output statistics of the designated component of the designated stack member.

**clear hardware system-flow**

Clear system-flow statistics from selected hardware components.

**Syntax**
clear hardware system-flow layer2 stack-unit number port-set 0–0 counters

**Parameters**
- stack-unit number: Enter the keywords stack-unit then a number to select a particular stack member and then enter one of the following command options to clear a specific collection of data.
- port-set 0–0 counters: Enter the keywords port-set along with a port-pipe number, then the keyword counters to clear the system-flow counters on the selected port-pipe. The range is from 0 to 0.

**Defaults**
None
clear hardware vlan-counters

Clear VLAN statistics.

Syntax

```plaintext
clear hardware vlan-counters vlan-id
```

Parameters

- `vlan-id` Enter the interface VLAN number. The range is from 1 to 4094.

Defaults

None

Command Modes

EXEC Privilege

Usage Information

This command enables a hardware watchdog mechanism that automatically reboots an Dell Networking OS switch/ router with a single unresponsive unit. This behavior is a last-resort mechanism intended to prevent a manual power cycle.

show hardware mac

Display MAC ACL entries for the specified stack-unit, port-pipe and pipeline ID.

Syntax

show hardware mac {eg-acl | in-acl} stack-unit id port-set 0-0

Parameters

eg-acl | in-acl Enter either the keyword eg-acl or the keyword in-acl to select between ingress or egress ACL data.
stack-unit id Enter the keyword stack-unit to select the stack unit ID.
port-set 0-0 Enter the keywords port-set with a port-pipe number to display the MAC ACL entries for the specified port-pipe number. The range is from 0 to 0.

Defaults

None

Command Modes

EXEC Privilege
show hardware ip

Display ACL or GoS data for the selected stack member and stack member port-pipe.

Syntax

show hardware layer3 {acl | qos} stack-unit number port-set 0–0

Parameters

- acl | qos: Enter either the keyword acl or the keyword qos to select between ACL or GoS data.
- stack-unit number: Enter the keywords stack-unit then a number to select a stack ID.
- port-set 0–0: Enter the keyword port-set with a port-pipe number. The range is from 0 to 0.

Defaults

None

### show hardware stack-unit

Display the data plane or management plane input and output statistics of the designated component of the designated stack member.

**Syntax**

```
stack-unit stack-unit-number {cpu data-plane statistics | cpu management statistics | [ drops [unit number | fpga register | party-bus statistics | stack-port | ti-monitor | unit 0-1 {counters | details | port-stats [detail] | register}}
```

**Parameters**

- **stack-unit stack-unit-number** (command-option)
  - Enter the keywords `stack-unit` to select a particular stack member and then enter one of the following command options to display a collection of data based on the option entered. The range is from 1 to 12.

- **cpu data-plane statistics**
  - Enter the keywords `cpu data-plane statistics` then the keywords `stack port` and its number, from 1 to 52 to display the data plane statistics, which shows the High Gig (Higig) port raw input/output counter statistics to which the stacking module is connected.

- **cpu management statistics**
  - Enter the keywords `cpu management statistics` to display the counters of the management port.

- **cpu party-bus statistics**
  - Enter the keywords `cpu party-bus statistics` to display the Management plane input/output counter statistics of the pseudo party bus interface.

- **cpu sata-interface statistics**
  - Enter the keywords `cpu sata-interface statistics` to display the sata interface error counter statistics.

- **drops [unit unit-number]**
  - Enter the keyword `drops` to display internal drops on the selected stack member. Enter the optional keyword `unit unit-number` to display the internal drop counters of the specified port pipe.

- **fpga register**
  - Enter the keyword to display the register value of the fpga register.

- **unit unit-number (counters | details | port-stats [detail] | register)**
  - Enter the keyword `unit` then a number and then enter one of the keywords to troubleshoot errors on the selected port-pipe and to give status on why a port is not coming up to register level.

- **TI monitor**
  - Enter the unit keyword to show information regarding the TI register.

**Defaults**

None

**Command Modes**

- EXEC
- EXEC Privilege

**Example (Data-Plane)**

Dell# show hardware stack-unit 1 cpu data-plane statistics
Input Statistics:
  1856 packets, 338262 bytes
  141 64-byte pkts, 1248 over 64-byte pkts, 11 over 127-byte pkts
  222 over 255-byte pkts, 236 over 511-byte pkts, 0 over 1023-byte pkts
  919 Multicasts, 430 Broadcasts
  0 runts, 0 giants, 0 throttles
  0 CRC, 0 overrun, 0 discarded
Output Statistics:
  325 packets, 27629 bytes, 0 underruns
  9 64-byte pkts, 310 over 64-byte pkts, 1 over 127-byte pkts
  1 over 255-byte pkts, 2 over 511-byte pkts, 2 over 1023-byte pkts
  0 Multicasts, 3 Broadcasts, 322 Unicasts
  0 throttles, 0 discarded, 0 collisions
Rate info (interval 299 seconds):
  Input 00.00 Mbits/sec
  Output 00.00 Mbits/sec
Dell#

**Example (Party-Bus)**

Dell# show hardware stack-unit 1 cpu party-bus statistics
Input Statistics:
  0 packets, 0 bytes
  0 dropped, 0 errors
Output Statistics:
  0 packets, 0 bytes
  0 errors
Example (Drops Unit)

Dell# sh hard stack-unit 1 drops unit 0

Related Commands
• clear hardware system-flow — clear the statistics from selected hardware components.
show interfaces stack-unit — display information on all interfaces on a specific S-Series stack member.

show processes cpu (S-Series) — display the CPU usage information based on the processes running in an S-Series.

show system — display the current status of all the stack members or a specific member.

show hardware buffer interface

Display buffer statistics for a specific interface.

Syntax

show hardware buffer interface interface{priority-group { id | all } | queue { id | all }} buffer-info

Parameters

- **interface interface** Enter any of the keywords and slot/port or number information:
  - For a 1-Gigabit Ethernet interface, enter the keyword GigabitEthernet then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

- **priority-group** Enter the keyword priority-group followed by id for specific priority-group or keyword all.

- **queue** Enter the keyword queue followed by id for specific queue or keyword all.

- **buffer-info** To display total buffer information for the interface, enter the keywords buffer-info.

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version | Description
--- | ---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.8(0.0) | Introduced on the S4810, S4820T, S5000, S6000, S6000-ON, Z9000, and Z9500.

Example displaying total-buffer information for the interface

Dell# show hardware buffer interface gigabitethernet 1/1 buffer-info
----- Buffer Stats for Interface Gi 1/1 -----  
Maximum Shared Limit for the Interface: 38336  
Default Packet Buffer allocate for the Interface: 120  
Used Packet Buffer for the Interface: 0

Example displaying priority-group range

Dell# show hardware buffer interface gigabitethernet 1/1 priority-group 0 buffer-info
----- Buffer stats for unit: 0 port: 1 (interface Gi 1/1) -----  

Example displaying queue range

Dell# show hardware buffer interface gigabitethernet 1/1 queue all buffer-info

----- Buffer Stats for Interface Gi 1/1 Queue 0 -----  
Maximum Shared Limit: 29514
Default Packet Buffer allocate for the Queue: 8
Used Packet Buffer: 0

----- Buffer Stats for Interface Gi 1/1 Queue 1 -----  
Maximum Shared Limit: 29514
Default Packet Buffer allocate for the Queue: 8
Used Packet Buffer: 0

----- Buffer Stats for Interface Gi 1/1 Queue 2 -----  
Maximum Shared Limit: 29514
Default Packet Buffer allocate for the Queue: 8
Used Packet Buffer: 0

----- Buffer Stats for Interface Gi 1/1 Queue 3 -----  
Maximum Shared Limit: 29514
Default Packet Buffer allocate for the Queue: 8
Used Packet Buffer: 0

----- Buffer Stats for Interface Gi 1/1 Queue 4 -----  
Maximum Shared Limit: 29514
Default Packet Buffer allocate for the Queue: 8
Used Packet Buffer: 0

----- Buffer Stats for Interface Gi 1/1 Queue 5 -----  
Maximum Shared Limit: 29514
Default Packet Buffer allocate for the Queue: 8
Used Packet Buffer: 0

----- Buffer Stats for Interface Gi 1/1 Queue 6 -----  
Maximum Shared Limit: 29514
Default Packet Buffer allocate for the Queue: 8
Used Packet Buffer: 0

----- Buffer Stats for Interface Gi 1/1 Queue 7 -----  
Maximum Shared Limit: 29514
Default Packet Buffer allocate for the Queue: 8
Used Packet Buffer: 0

----- Buffer Stats for Interface Gi 1/1 Queue 8 -----  
Maximum Shared Limit: 29514
Default Packet Buffer allocate for the Queue: 8
Used Packet Buffer: 0

----- Buffer Stats for Interface Gi 1/1 Queue 9 -----  
Maximum Shared Limit: 29514
Default Packet Buffer allocate for the Queue: 8
Used Packet Buffer: 0

----- Buffer Stats for Interface Gi 1/1 Queue 10 -----  
Maximum Shared Limit: 29514
Default Packet Buffer allocate for the Queue: 8
Used Packet Buffer: 0

----- Buffer Stats for Interface Gi 1/1 Queue 11 -----  
Maximum Shared Limit: 29514
Default Packet Buffer allocate for the Queue: 8

<output truncated for brevity>

show hardware counters interface

Display the counter information for a specific interface.

Syntax

show hardware counters interface interface
Parameters

counters
Enter the keywords counters to display counter value for the specified stack-member
the port-pipe.

interface interface
Enter any of the following keywords and the interface information:

- For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the
  slot/port information.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then
  the slot/port information.

Defaults
None

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking
OS Command Line Reference Guide.

Version      Description
9.10(0.0)     Introduced on the S3148.
9.8(2.0)      Introduced on the S3100 series.
9.8(1.0)      Introduced on the Z9100–ON.
9.8(0.0P5)    Introduced on the S4048-ON.
9.8(0.0P2)    Introduced on the S3048-ON.
9.8(0.0)      Introduced on the S4810, S4820T, S5000, S6000, S6000–ON, and Z9500.

Example

Dell# show hardware counters interface gigabitethernet 5/1
unit: 0 port: 2 (interface Gi 5/1)
Description                  Value
RX - IPV4 L3 Unicast Frame Counter  0
RX - IPV4 L3 Routed Multicast Packets  0
RX - IPV6 L3 Unicast Frame Counter  0
RX - IPV6 L3 Routed Multicast Packets  0
RX - Unicast Packet Counter  0
RX - 64 Byte Frame Counter  0
RX - 65 to 127 Byte Frame Counter  0
RX - 128 to 255 Byte Frame Counter  0
RX - 256 to 511 Byte Frame Counter  0
RX - 512 to 1023 Byte Frame Counter  0
RX - 1024 to 1518 Byte Frame Counter  0
RX - 1519 to 1522 Byte Good VLAN Frame Counter  0
RX - 1519 to 2047 Byte Frame Counter  0
RX - 2048 to 4095 Byte Frame Counter  0
RX - 4096 to 9216 Byte Frame Counter  0
RX - Good Packet Counter  0
RX - Packet/Frame Counter  0
RX - Unicast Frame Counter  0
RX - Multicast Frame Counter  0
RX - Broadcast Frame Counter  0
RX - Byte Counter  0
RX - Control Frame Counter  0
RX - Pause Control Frame Counter  0
RX - Oversized Frame Counter  0
RX - Jabber Frame Counter  0
RX - VLAN Tag Frame Counter  0
show hardware buffer-stats-snapshot

Displays buffer statistics tracking resource information for a specific interface.

Syntax

show hardware buffer-stats-snapshot resource {headroom-pool [detail] | service-pool [detail] interface interface ({priority-group {id | all} | queue ucast {id | all} mcast {id | all} | all} [detail])

Parameters

headroom-pool
detail

Enter the keyword headroom-pool followed by the keyword detail to view detailed information about the headroom pool usage.

service-pool
detail

Enter the keyword service-pool followed by the keyword detail to view detailed information about the service pool usage.

interface

Enter any of the following keywords and the interface information:

- For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

queue

Enter the keyword queue followed by all for displaying details of all queues, ucast queue-id or all for displaying Unicast queue details, and mcast queue-id or all for displaying Multicast queue details.

priority-group

Enter the keyword priority-group followed by id for specific priority-group or keyword all.

Command Modes

EXEC

EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

### Usage Information

`<Interface><slot/port>-Queue ucast/mcast` — Displays the total unicast/multicast buffer usage on per-port per-queue basis. For CPU port, counters for queues 0 to 11 displays and there is no differentiation between unicast and multicast queues.

### show hardware stack-unit buffer-stats-snapshot (Total Buffer Information)

View the buffer statistics tracking resource information depending on the type of buffer information, such as device-level details, port-level counters, queue-based snapshots, or priority group-level snapshot in the egress and ingress direction of traffic.

#### Syntax

```
show hardware stack-unit <id> buffer-stats-snapshot unit <id> resource x
```

#### Parameters

- **stack-unit stack-unit-number**: Unique ID of the stack unit to select a particular stack member and then enter one of the following command options to display a collection of data based on the option entered.
- **buffer-stats-snapshot unit number**: Display the historical snapshot of buffer statistical values unit Enter the keyword `unit` along with a port-pipe number. The range is from 0 to 0.
- **buffer-info**: Buffer and traffic manager resources usage, where X can be one of the following:
  - **All**: Displays ingress and egress device, port, and queue snapshots
  - **Interface all queue {all}**: egress queue-level snapshot for both unicast and multicast packets
  - **Interface all queue ucast {id | all}**: egress queue-level snapshot for unicast packets only
  - **Interface all queue mcast {id | all}**: egress queue-level snapshot for multicast packets only
  - **Interface all prio-group {id | all}**: ingress priority-group level snapshot

#### Command Modes

- EXEC
- EXEC Privilege

#### Command History

</table>
show hardware system-flow

Display Layer 3 ACL or QoS data for the selected stack member and stack member port-pipe.

Syntax

```
show hardware system-flow stack-unit id port-set number [counters]
```

Parameters

- `stack-unit id` Enter the keywords stack-unit to select a stack member ID.
- `port-set number` Enter the keywords port-set with a port-pipe number.
- `[counters]`
(OPTIONAL) Enter the keyword counters for the specified port-pipe.

```

**Example**
```
param1=0(0x00)},{
  action={act=CosQCpuNew, param0=7(0x07), param1=0(0x00)},
```
show hardware vlan-counters

Display the hardware VLAN statistics.

Syntax

    show hardware vlan-counters vlan-id

Parameters

    vlan-id

        Enter the interface VLAN number. The range is from 1 to 4094.

Defaults

    None

Command Modes

    • EXEC
    • EXEC Privilege
Command History

Counters for vlanid: 1
------------------------
Total number of inpackets: 0
Total number of inbytes: 0
Total number of outpackets: 0
Total number of outbytes: 0
Dell#
```

Related Commands

- `clear hardware system-flow` — clear the statistics from selected hardware components.

**show hardware drops**

Displays internal drops on the specified interface or for a range of interface.

**Syntax**

```
show hardware drops interface interface
```

**Parameters**

- **drops**
  - Enter the keyword drops to display internal drops.
- **interface**
  - Enter any of the following keywords and the interface or interface range information:
    - For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
    - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

**Command Modes**

- EXEC
- EXEC Privilege

Dynamic Host Configuration Protocol (DHCP)

Dynamic host configuration protocol (DHCP) is an application layer protocol that dynamically assigns IP addresses and other configuration parameters to network end-stations (hosts) based on the configuration policies the network administrators determine.

Topics:
- Commands to Configure the System to be a DHCP Server
- Commands to Configure Secure DHCP
- Commands to Configure DNS

Commands to Configure the System to be a DHCP Server

To configure the system to be a DHCP server, use the following commands.

`clear ip dhcp`

Reset the DHCP counters.

**Syntax**

```
clear ip dhcp [binding {address} | conflict | server statistics]
```

**Parameters**

- **binding**
  - Enter the keyword `binding` to delete all entries in the binding table.
- **address**
  - Enter the IP address to clear the binding entry for a single IP address.
- **conflicts**
  - Enter the keyword `conflicts` to delete all of the log entries created for IP address conflicts.
- **server statistics**
  - Enter the keywords `server statistics` to clear all the server counter information.

**Defaults**

None

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>

</tr>
<tr>
<td>9.8(2.0)</td>
<td>Introduced on the S3100 series.</td>
</tr>
</tbody>
</table>
**debug ip dhcp server**

Display Dell OS debugging messages for DHCP.

**Syntax**

ddebug ip dhcp server [events | packets]

**Parameters**

- **events**
  - Enter the keyword `events` to display the DHCP state changes.

- **packet**
  - Enter the keyword `packet` to display packet transmission/reception.

**Defaults**

None

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

### debug ipv6 dhcp

To enable debug logs for DHCPv6 relay agent transactions.

**Syntax**

```
download ipv6 dhcp
```

To disable the debug logs for dhcpv6 relay agent transactions, use the `download ipv6 dhcp` command.

**Defaults**

None

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>

### default-router

Assign a default gateway to clients based on the address pool.

**Syntax**

```
default-router address [address2...address8]
```

**Parameters**

- `address` Enter a list of routers that may be the default gateway for clients on the subnet. You may specify up to eight routers. List them in order of preference.

**Defaults**

None

**Command Modes**

DHCP <POOL>

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.
### disable

Disable the DHCP server.

**Syntax**

`disable`

DHCP Server is disabled by default. To enable the system to be a DHCP server, use the `no disable` command.

**Defaults**

Disabled

**Command Modes**

- CONFIGURATION
- DHCP <POOL>

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>
dns-server

Assign a DNS server to clients based on address pool.

Syntax
dns-server address [address2...address8]

Parameters
address

Enter a list of DNS servers that may service clients on the subnet. You may list up to eight
servers, in order of preference.

Defaults
None

Command Modes
DHCP <POOL>

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking
OS Command Line Reference Guide.

Version Description
9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100-ON.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.2(1.0) Introduced on the Z9500.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
8.3.7.0 Introduced on the S4810.
8.2.1.0 Introduced on the C-Series and S-Series.

Version Description
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
8.3.7.0 Introduced on the S4810.
8.2.1.0 Introduced on the C-Series and S-Series.
**domain-name**

Assign a domain to clients based on the address pool.

**Syntax**

```
domain-name name
```

**Parameters**

- **name**
  
  Give a name to the group of addresses in a pool.

**Defaults**

None

**Command Modes**

DHCP <POOL>

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</table>

**excluded-address**

Prevent the server from leasing an address or range of addresses in the pool.

**Syntax**

```
excluded-address [address | low-address high-address]
```

**Parameters**

- **address**
  
  Enter a single address to be excluded from the pool.

- **low-address**
  
  Enter the lowest address in a range of addresses to be excluded from the pool.
**high-address**

Enter the highest address in a range of addresses to be excluded from the pool.

</table>
lease

Specify a lease time for the addresses in a pool.

Syntax

```
lease {days [hours] [minutes] | infinite}
```

Parameters

- **days**: Enter the number of days of the lease. The range is from 0 to 31.
- **hours**: Enter the number of hours of the lease. The range is from 0 to 23.
- **minutes**: Enter the number of minutes of the lease. The range is from 0 to 59.
- **infinite**: Specify that the lease never expires.

Defaults

24 hours

Command Modes

DHCP <POOL>

**network**

Specify the range of addresses in an address pool.

**Syntax**

```
network network /prefix-length
```

**Parameters**

- `network` Specify a range of addresses. Prefix-length range is from 17 to 31.

**Defaults**

None

**Command Modes**

DHCP <POOL>

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.
pool

Create an address pool.

Syntax

```
pool name
```

Parameters

- **name**
  
Enter the address pool's identifying name.

Defaults

None

Command Modes

DHCP

Command History

Commands to Configure Secure DHCP

DHCP, as defined by RFC 2131, provides no authentication or security mechanisms. Secure DHCP is a suite of features that protects networks that use dynamic address allocation from spoofing and attacks.

arp inspection

Enable dynamic arp inspection (DAI) on a VLAN.

Syntax
arp inspection

Defaults
Disabled

Command Modes
INTERFACE VLAN

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100–ON.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
8.3.7.0 Introduced on the S4810.
8.2.1.0 Introduced on the C-Series and S-Series.
Version | Description
---|---
8.2.1.0 | Introduced on the C-Series and S-Series.

Related Commands
• arp inspection-trust — specify a port as trusted so that ARP frames are not validated against the binding table.

**arp inspection-trust**

Specify a port as trusted so that ARP frames are not validated against the binding table.

**Syntax**

arp inspection-trust

**Defaults**

Disabled

**Command Modes**

• INTERFACE
• INTERFACE PORT-CHANNEL

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
--- | ---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100-ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.7(0.0) | Introduced on the S6000-ON.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
8.3.1.0 | Introduced on the E-Series.
8.2.1.0 | Introduced on the C-Series and S-Series.

**Related Commands**

• arp inspection — enable dynamic ARP inspection on a VLAN.
**clear ip dhcp snooping**

Clear the DHCP binding table.

**Syntax**

```
clear ip dhcp snooping {binding | source-address-validation discard-counters [interface interface]}
```

**Parameters**

- **binding**
  - Clears the binding table.

- **source-address-validation discard-counters**
  - Clears discard counters from all the interfaces configured with IP Source Guard.

- **interface interface**
  - (OPTIONAL) Specifies an interface to clear the discard counters.
  
  Enter any of the following keywords and the interface information:
  
  - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a port channel interface, enter the keywords `port-channel` then a number.

**Defaults**

None

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

### clear ip dhcp snooping source-address-validation discard-counters

The following example shows how to clear the discard counters globally:

Dell> clear ip dhcp snooping source-address-validation discard-counters

The following example shows how to clear the discard counters on an interface:

Dell> clear ip dhcp snooping source-address-validation discard-counters interface Gigabitethernet 1/10

The following example shows how to clear the discard counters on a port channel interface:

Dell> clear ip dhcp snooping source-address-validation discard-counters interface portchannel 1

### clear ipv6 dhcp snooping binding

Clear all the DHCPv6 snooping binding database entries.

**Syntax**

```
clear ipv6 dhcp snooping binding
```

**Defaults**

None

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Example**

```
Dell# clear ipv6 dhcp snooping binding
```

### ip dhcp relay

Enable Option 82.

**Syntax**

```
ip dhcp relay information-option [remote-id {port | hostname:port | mac} | circuit-d {port | hostname:port | mac} | trust-downstream]
```

Dynamic Host Configuration Protocol (DHCP) | 555
Parameters

remote-id
Enter the keyword remote-id to configure the system to enable the remote-id string in option-82.

remote-id port
Enter the keywords remote-id port to configure the port as the remote id in option-82.

remote-id hostname:port
Enter the keywords remote-id hostname:port to configure the format of the hostname and port attributes.

remote-id mac
Enter the keywords remote-id mac to configure the chassis MAC address as the remote-id in option-82.

circuit-id
Enter the keyword circuit-id to configure the system to enable the circuit-id string in option-82.

circuit-id port
Enter the keywords circuit-id port to configure the port as the circuit-id in option-82.

circuit-id hostname:port
Enter the keywords circuit-id hostname:port to configure the circuit-id format that is sent to the server.

circuit-id mac
Enter the keywords circuit-id mac to configure the chassis MAC address as the circuit-id in option-82.

trust-downstream
Configure the system to trust Option 82 when it is received from the previous-hop router.

Defaults
Disabled

CONFIGURATION

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100-ON.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.2(0.2) Introduced on the Z9000.
8.3.19.0 Introduced on the S4820T.
8.3.7.0 Introduced on the S4810.
8.3.1.0 Introduced on the E-Series.
7.8.1.0 Introduced on the C-Series and S-Series.
ip dhcp snooping

Enable DHCP snooping globally.

**Syntax**

```
[no] ip dhcp snooping
```

**Defaults**

Disabled

**Command Modes**

</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on the C-Series and S-Series on Layer 3 interfaces.</td>
</tr>
</tbody>
</table>

**Usage Information**

When enabled, no learning takes place until you enable snooping on a VLAN. After disabling DHCP snooping, the binding table deletes and Option 82, IP Source Guard, and Dynamic ARP Inspection are disabled.

Introduced in Dell Networking OS version 7.8.1.0, DHCP snooping was available for Layer 3 only and dependent on DHCP Relay Agent (ip helper-address). Dell Networking OS version 8.2.1.0 extends DHCP Snooping to Layer 2. You do not have to enable relay agent to snoop on Layer 2 interfaces.

ipv6 dhcp snooping

Enable DHCPv6 snooping globally for ipv6.

**Syntax**

```
[no] ipv6 dhcp snooping
```

Dynamic Host Configuration Protocol (DHCP) | 557
To disable the snooping globally, use the `no ipv6 dhcp snooping` command.

**Defaults**  
Disabled

**Command Modes**

### ipv6 dhcp snooping vlan

Enable ipv6 DHCP Snooping on VLAN or range of VLANs.

**Syntax**  
```
[no] ip dhcp snooping vlan vlan-id
```

To disable the ipv6 dhcp snooping on VLAN basis or range of VLAN, use the `no ipv6 dhcp snooping vlan <vlan-id>` command.

**Parameters**
- **vlan-id**: Enter the name of a VLAN id or list of the VLANs to enable DHCP Snooping.

**Defaults**  
Disabled

**Command Modes**  
CONFIGURATION

**Command History**

ip dhcp snooping binding

Create a static entry in the DHCP binding table.

Syntax

[no] ip dhcp snooping binding mac address vlan-id vlan-id ip ip-address
interface interface-type lease number

Parameters

mac address Enter the keyword mac then the MAC address of the host to which the server is leasing the IP address.

vlan-id vlan-id Enter the keywords vlan-id then the VLAN to which the host belongs. The range is from 2 to 4094.

ip ip-address Enter the keyword ip then the IP address that the server is leasing.

interface type Enter the keyword interface then the type of interface to which the host is connected:

- For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

lease time Enter the keyword lease then the amount of time the IP address are leased. The range is from 1 to 4294967295.

Defaults

None

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description

9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.2(1.0) Introduced on the Z9500.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
IPv6 DHCP Snooping Binding

Create a static DHCP snooping binding entry in the snooping database.

**Syntax**

```
[no] ipv6 dhcp snooping binding mac address vlan-id vlan-id ipv6 ipv6-address interface interface-type | interface-number lease value
```

To delete the DHCP snooping binding entry from DHCP snooping database, use the `[no] ipv6 dhcp
snooping binding mac address vlan-id vlan-id ipv6 ipv6-address interface interface-type | interface-number lease value` command.

**Parameters**

- `mac address` Enter the keyword `mac` then the MAC address of the host to which the server is leasing the IPv6 address.
- `vlan-id` Enter the keywords `vlan-id` then the VLAN to which the host belongs. The range is from 2 to 4094.
- `ipv6 ipv6-address` Enter the keyword `ipv6` then the IPv6 address that is leased to the client.
- `interface type` Enter the keyword `interface` then the type of interface to which the host is connected:
  - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- `interface number` Enter the number of the interface.
- `lease value` Enter the keyword `lease` then the amount of time the IPv6 address are leased. The range is from 1 to 4294967295.

**Defaults**

None

**Command Modes**

- EXEC Privilege

**Command History**

</tr>
</tbody>
</table>
### ipv6 dhcp snooping database write-delay

To set time interval for storing the snooping binding entries in a file.

**Syntax**

```
[no] ipv6 dhcp snooping database write-delay value
```

To disable the storing of snooping binding entries in a file, use the `no ipv6 dhcp snooping write-delay` command.

**Parameters**

- **value**
  - The range is from 5 to 21600. The value of the minutes range is from 5 min. to 15 days.

**Defaults**

None

**Command Modes**

CONFIGURATION

**Command History**

ipv6 dhcp snooping trust

Configure an interface as trusted for DHCP snooping.

Syntax

ipv6 dhcp snooping trust

To disable dhcp snooping trusted capability on this interface, use the no ipv6 dhcp snooping trust command.

Command Modes

INTERFACE

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.
ip dhcp source-address-validation

Enable the IP Source Guard.

Syntax

[no] ip dhcp source-address-validation [ipmac] [vlan vlan-id]

Parameters

- **ipmac**: Enable IP+MAC Source Address Validation.
- **vlan vlan-id**: (OPTIONAL) SAV validates the source IP address along with the source VLAN ID against the DHCP snooping binding table.

Defaults

Disabled

Command Modes

INTERFACE

INTERFACE PORTCHANNEL

Command History

### ip dhcp relay information-option

Enable Option 82.

**Syntax**

```
ip dhcp relay information-option [remote-id {hostname | mac | WORD}] [circuit-id {hostname:port}] [trust-downstream] [vpn]
```

**Parameters**

- `remote-id` Enter the keyword remote-id to configure the system to enable the remote-id string in option-82.
- `remote-id hostname` Enter the keywords remote-id hostname to configure the port as the remote id in option-82.
- `remote-id mac` Enter the keywords remote-id mac to configure the chassis MAC address as the remote-id in option-82.
- `remote-id WORD` Enter the remote-id WORD option to configure the system to enable the remote-id string in option 82.
- `circuit-id` Enter the keyword circuit-id to configure the system to enable the circuit-id string in option-82.
- `circuit-id hostname:port` Enter the keywords circuit-id hostname:port to configure the circuit-id format that is sent to the server.
- `trust-downstream` Configure the system to trust Option 82 when it is received from the previous-hop router.
- `vpn` Enter the keyword vpn to add VPN/VRF related sub-option to relay agent information Option 82.

**Default**

Disabled.

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
--- | ---
9.11(2.0P1) | Introduced the circuit-id attribute in the command.

**Usage Information**

Allocate at least one FP block to ipmacacl before you can enable IP+MAC Source Address Validation and SAV with VLAN option.

1. Use the `cam-acl 12acl` command from CONFIGURATION mode.
2. Save the running-config to the startup-config.
3. Reload the system.

### ip dhcp relay information-option

Enable Option 82.

**Syntax**

```
ip dhcp relay information-option [remote-id {hostname | mac | WORD}] [circuit-id {hostname:port}] [trust-downstream] [vpn]
```

**Parameters**

- `remote-id` Enter the keyword remote-id to configure the system to enable the remote-id string in option-82.
- `remote-id hostname` Enter the keywords remote-id hostname to configure the port as the remote id in option-82.
- `remote-id mac` Enter the keywords remote-id mac to configure the chassis MAC address as the remote-id in option-82.
- `remote-id WORD` Enter the remote-id WORD option to configure the system to enable the remote-id string in option 82.
- `circuit-id` Enter the keyword circuit-id to configure the system to enable the circuit-id string in option-82.
- `circuit-id hostname:port` Enter the keywords circuit-id hostname:port to configure the circuit-id format that is sent to the server.
- `trust-downstream` Configure the system to trust Option 82 when it is received from the previous-hop router.
- `vpn` Enter the keyword vpn to add VPN/VRF related sub-option to relay agent information Option 82.

**Default**

Disabled.

Example

```
Dell(conf)# ip dhcp relay information-option vpn
```

**ip dhcp snooping verify mac-address**

Validate a DHCP packet’s source hardware address against the client hardware address field (CHADDR) in the payload.

**Syntax**

```
[no] ip dhcp snooping verify mac-address
```

**Defaults**

Disabled

ip helper-address

Configures the destination broadcast address or the host address for DHCP server requests.

Syntax  
ip helper-address [vrf vrf-name] ip-address
To disable the destination broadcast address or the host address for DHCP server requests, use the ip helper-address [vrf vrf-name] ip-address command.

Parameters  
- **vrf vrf-name**  
  (Optional) Enter the keyword vrf and then the name of the VRF through which the host address can be reached.
**ip-address**

Enter an IP address through which the host address can be reached.

**Default**

Disabled.

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
--- | ---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100–ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.

**Usage Information**

Use this command on the interfaces where the DHCP clients are connected to forward the packets from clients to DHCP server and vice-versa.

**Example**

```
Dell(conf-if-gi-1/12)# ip helper-address vrf jay 10.0.0.2
```

**ipv6 helper-address**

Configures the ipv6 DHCP helper addresses without VRF.

**Syntax**

```
[no] ipv6 helper-address ipv6-address
```

To delete the ipv6 helper address, use the [no] ipv6 helper-address ipv6-address command.

**Parameters**

- **ipv6-address**
  
Enter the keyword `ipv6-address` through which the server address can be reached.

**Default**

Disabled.

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
--- | ---
9.10(0.0) | Introduced on the S3148.

9.8(1.0) | Introduced on the Z9100–ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
show ip dhcp snooping

Display the contents of the DHCP binding table or display the interfaces configured with IP Source Guard.

Syntax

show ip dhcp snooping [binding | source-address-validation [discard-counters [interface interface]]]

Parameters

<table>
<thead>
<tr>
<th>Parameters</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>binding</td>
<td>Display the binding table.</td>
</tr>
<tr>
<td>source-address-validation</td>
<td>Display the interfaces configured with IP Source Guard.</td>
</tr>
<tr>
<td>discard-counters</td>
<td>(OPTIONAL) Display the number of dropped packets.</td>
</tr>
<tr>
<td>interface interface</td>
<td>(OPTIONAL) Specifies an interface to show the discard counters.</td>
</tr>
</tbody>
</table>

Enter any of the following keywords and the interface information:

- For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a port channel interface, enter the keywords port-channel then a number.

Defaults

None

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version                  Description
9.10(0.0)                 Introduced on the S3148.
9.8(2.0)                  Introduced on the S3100 series.
<table>
<thead>
<tr>

</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on the C-Series and S-Series.</td>
</tr>
</tbody>
</table>

**Example**

The following example displays the interfaces configured with IP Source Guard:

```
Dell> show ip dhcp snooping source-address-validation
ip sav access-list on GigabitEthernet 1/1
Total cam count 3
permit host 0.0.0.0 count (0 packets)
permit host 10.1.1.252 count (0 packets)
permit host 10.1.1.253 count (0 packets)
ipmac-vlan sav access-list on GigabitEthernet 1/2
Total cam count 4
permit host 0.0.0.0 host 00:00:00:00:00:00 count (0 packets)
permit vlan 10 host 10.1.1.1 host 00:00:00:aa:00:01 count (0 packets)
permit vlan 10 host 10.1.1.2 host 00:00:00:aa:00:02 count (0 packets)
permit vlan 20 host 10.2.2.1 host 00:00:00:aa:00:03 count (0 packets)
permit vlan 20 host 10.2.2.2 host 00:00:00:aa:00:04 count (0 packets)
```

The following example displays the port channel interfaces configured with IP Source Guard:

```
Dell> show ip dhcp snooping source-address-validation interface portchannel 10
ipmac-vlan sav access-list on Port-channel 10 on stack-unit 1
Total cam count 5
permit host 0.0.0.0 host 00:00:00:00:00:00 count (0 packets)
permit vlan 10 host 1.1.1.1 host 00:00:00:00:01:01 count (0 packets)
permit vlan 10 host 1.1.1.2 host 00:00:00:00:01:02 count (0 packets)
permit vlan 10 host 1.1.1.3 host 00:00:00:00:01:03 count (0 packets)
ipmac-vlan sav access-list on Port-channel 10 on stack-unit 2
Total cam count 5
permit host 0.0.0.0 host 00:00:00:00:00:00 count (0 packets)
permit vlan 10 host 1.1.1.1 host 00:00:00:00:01:01 count (0 packets)
permit vlan 10 host 1.1.1.2 host 00:00:00:00:01:02 count (0 packets)
permit vlan 10 host 1.1.1.3 host 00:00:00:00:01:03 count (0 packets)
ipmac-vlan sav access-list on Port-channel 10 on stack-unit 3
Total cam count 5
permit host 0.0.0.0 host 00:00:00:00:00:00 count (0 packets)
permit vlan 10 host 1.1.1.1 host 00:00:00:00:01:01 count (0 packets)
permit vlan 10 host 1.1.1.2 host 00:00:00:00:01:02 count (0 packets)
permit vlan 10 host 1.1.1.3 host 00:00:00:00:01:03 count (0 packets)
```

**NOTE:** The output for port-channel interfaces does not display the physical interface.
The following example displays the SAV discard counters on all interfaces:

```
Dell> show ip dhcp snooping source-address-validation discard-counters
deny access-list on GigabitEthernet 1/1
  Total cam count 1
deny count (0 packets)
deny access-list on GigabitEthernet 1/2
  Total cam count 2
deny vlan 10 count (0 packets)
deny vlan 20 count (0 packets)
```

The following example displays the SAV discard counters on a particular interface:

```
Dell> show ip dhcp snooping source-address-validation discard-counters
interface GigabitEthernet 1/1
deny access-list on GigabitEthernet 1/1
  Total cam count 2
deny vlan 10 count (0 packets)
deny vlan 20 count (0 packets)
```

The following example displays the SAV discard counters on a port channel interface:

```
Dell> show ip dhcp snooping source-address-validation discard-counters
interface portchannel 10
deny access-list on Port-channel 10 on stack-unit 1
  Total cam count 1
deny vlan 10 count (0 packets)
deny access-list on Port-channel 10 on stack-unit 2
  Total cam count 1
deny vlan 10 count (0 packets)
deny access-list on Port-channel 10 on stack-unit 3
  Total cam count 1
deny vlan 10 count (0 packets)
```

**NOTE:** The output for port-channel interfaces does not display the physical interface. If the LAG member interfaces belong to different stack-units, the counters are displayed per stack-unit for that port channel.

### show ipv6 dhcp snooping

Display the DHCPv6 snooping binding database.

**Syntax**

```
show ipv6 dhcp snooping
```

**Defaults**

None

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

```

# Commands to Configure DNS

To configure the Domain Names Systems (DNS) on the system, use the following commands:

## ip name-server

Configures one or more name server (DNS) IP addresses. You can configure up to six IP addresses.

**Syntax**

```
ip name-server [vrf vrf-name] ip-address [ip-address2] [ip-address3] [ip-address4] [ip-address5] [ip-address6]
```

To undo the name server ip address configuration for VRF, use the `no ip name-server [vrf vrf-name] ip-address` command.

**Parameters**

- **vrf vrf-name**
  - (Optional) Enter the key word `vrf` and then the name of the VRF to configure the name server IP addresses for that VRF.
  - Enter the IP address of the name server in dotted decimal format.

- **ip-address [ip-address2] [ip-address3] [ip-address4] [ip-address5] [ip-address6]**

**Defaults**

None

**Command Modes**

- CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.
Usage Information

Use this command to associate the system with one or more DNS servers.

In a dual stack setup, the system sends both A (request for IPv4 — RFC 1035) and AAAA (request for IPv6 — RFC 3596) record requests to a DNS server even if only the ip name-server command is configured.

Example

- Dell(conf)#ip name-server vrf jay 2.2.2.2
- Dell(conf)#ip name-server vrf jay 2.2.2.2 3.3.3.3 4.4.4.4 5.5.5.5 6.6.6.6 7.7.7.7

**ip domain-name**

Configures the default domain corresponding to a specific VRF. This domain is appended to the incomplete DNS requests corresponding to the specified VRF.

Syntax

```
ip domain-name [vrf vrf-name] name
```

To undo the domain name configuration corresponding to a specific VRF, use the no ip domain-name [vrf vrf-name] name command.

Parameters

- **vrf vrf-name**
  - (Optional) Enter the key word vrf and then the name of the VRF to configure the domain corresponding to that VRF.
- **name**
  - Enter the name of the domain to be appended to the incomplete DNS requests corresponding to the specified VRF.

Defaults

None

Command Modes

EXEC

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>

</tr>
</tbody>
</table>
## ip domain-name

**Description**
Configure a domain name corresponding to a VRF. This domain is appended to the incomplete DNS requests corresponding to the specified VRF.

**Example**
```
Dell(conf)# ip domain-name vrf jay dell.com
```

## ip domain-list

**Description**
Adds a domain name to the DNS list. This domain name is appended to incomplete host names in DNS requests corresponding to a specific VRF.

**Syntax**
```
ip domain-list [vrf vrf-name] name
```

**Parameters**
- `vrf vrf-name` (Optional) Enter the key word `vrf` and then the name of the VRF to add a domain name to the DNS list corresponding to that VRF.
- `name` Enter the name of the domain to be appended to the DNS list corresponding to the VRF.

**Defaults**
None

**Command Modes**
EXEC

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

### Version Description
- **9.10(0.0)** Introduced on the S3148.
- **9.8(2.0)** Introduced on the S3100 series.
- **9.8(1.0)** Introduced on the Z9100–ON.
- **9.8(0.0P5)** Introduced on the S4048-ON.
- **9.8(0.0P2)** Introduced on the S3048-ON.
- **9.7(0.0)** Introduced on the S6000-ON.
- **9.4.(0.0)** Introduced on the S-Series and Z-Series.
Usage Information
Use this command to add domain names to the DNS lists corresponding to a specific VRF. You can add up to a maximum of six domain names to the DNS list corresponding to a VRF. This domain is used to complete the unqualified host names.

Example
Dell(conf)# ip domain-list vrf jay dell.com
Dell(conf)# ip domain-list vrf jay force10.com

ip host

Configures a mapping between the host name server and the IP address for a specific VRF. This mapping information is used by the name-to-IP address table to resolve host names.

Syntax
ip host [vrf vrf-name] name ip-address

To undo the host name server to IP address mapping for VRFs, use the no ip host [vrf vrf-name] name ip-address command.

Parameters
vrf vrf-name
(Optional) Enter the key word vrf and then the name of the VRF to configure the name server to IP address mapping for that VRF.

name
Enter the name of the host to be associated with an IP address.

ip-address
Enter the IP address of the name server in dotted decimal format.

Defaults
None

Command Modes
CONFIGURATION

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100–ON.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.4.(0.0) Introduced on the S-Series and Z-Series.

Usage Information
Use this command to create a mapping between a host name server and its IP addresses for a specific VRF.

Example
Dell(conf)# ip host vrf jay dell 1.1.1.1
clear host

Removes one or all dynamically learned host table entries for a specific VRF.

Syntax

```
clear host [vrf vrf-name] {* | host-name}
```

Parameters

- **vrf vrf-name** (Optional) Enter the key word `vrf` and then the name of the VRF to delete dynamically learned host table entries corresponding to that VRF.
- **host-name** Enter the name of the host corresponding to which you want to delete the dynamically learnt host table entries.
- **{* | host-name}** Enter * to delete all host table entries.

Defaults

None

Command Modes

EXEC

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>

Usage Information

Use this command to delete one or all dynamically learned host table entries corresponding to a specific VRF.

Example

```
Dell# clear host vrf jay dell
Dell# clear host vrf jay *
```
Equal Cost Multi-Path (ECMP)

Equal cost multi-path (ECMP) supports multiple "best paths" in next-hop packet forwarding to a destination device.

Topics:
- `ecmp-group`
- `hash-algorithm`
- `ip ecmp-group`
- `ip ecmp-weighted`
- `link-bundle-monitor enable`
- `link-bundle-distribution trigger-threshold`
- `show config`
- `show link-bundle distribution`

**ecmp-group**

Provides a mechanism to monitor traffic distribution on an ECMP link bundle. A system log is generated when the standard deviation of traffic distribution on a member link exceeds a defined threshold.

**Syntax**

```
ecmp-group {ecmp-group-id interface interface | link-bundle-monitor}
```

To remove the selected interface, use the `ecmp-group no interface` command.

To disable link bundle monitoring, use the `ecmp-group no link-bundle-monitor` command.

**Parameters**

- **ecmp-group ID**
  - Enter the identifier number for the ECMP group. The range is from 2 to 64.

- **interface**
  - Enter the following keywords and the interface information to add the interface to the ECMP group:
    - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
    - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
    - For a LAG interface, enter the keywords `port-channel` then the slot/port information.

**Defaults**

- Off
Command Modes

- CONFIGURATION
- CONFIGURATION ECMP-GROUP

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.10.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

Usage Information

Using CONFIGURATION mode, create an ECMP group ID. You can then assign interfaces to the ECMP group using CONFIGURATION ECMP-GROUP mode. You can also enable on the port-channel configuration using the CONFIGURATION ECMP-GROUP command mode.

**hash-algorithm**

Changes the hash algorithm used to distribute traffic flows across a Port Channel and ECMP. The ECMP and LAG options are supported on the S-Series and Z-Series.

**Syntax**

```
hash-algorithm {ecmp | lag | seed }
```

To return to the default hash algorithm, use the `no hash-algorithm` command.

To return to the default ECMP hash algorithm, use the `no hash-algorithm ecmp algorithm-value` command.

**Parameters**

- **ecmp**

  Enter the keyword `ecmp` then one of the following options:
  - `crc16`: Use CRC16_BISYNC — 16 bit CRC16-bisync polynomial (default)
  - `crc16cc`: Use CRC16_CCITT — 16 bit CRC16 using CRC16-CCITT polynomial
  - `crc32MSB`: Use CRC32_UPPER — MSB 16 bits of computed CRC32
  - `crc32LSB`: Use CRC32_LOWER — LSB 16 bits of computed CRC32
  - `crc-upper`: Uses the upper 32 bits of the key for the hash computation
- **dest-ip**: Uses the destination IP for ECMP hashing
- **lsb**: Returns the LSB of the key as the hash
- **xor1**: Use CRC16_BISYNC_AND_XOR1 — Upper 8 bits of CRC16-BISYNC and lower 8 bits of xor1
- **xor2**: Use CRC16_BISYNC_AND_XOR2 — Upper 8 bits of CRC16-BISYNC and lower 8 bits of xor2
- **xor4**: Use CRC16_BISYNC_AND_XOR4 — Upper 8 bits of CRC16-BISYNC and lower 8 bits of xor4
- **xor8**: Use CRC16_BISYNC_AND_XOR8 — Upper 8 bits of CRC16-BISYNC and lower 8 bits of xor8
- **xor16**: Use CR16 — 16 bit XOR

**lag**

Enter the keyword **lag** and then one of the following options:

- **crc16**: Use CRC16_BISYNC — 16 bit CRC16-bisync polynomial (default)
- **crc16cc**: Use CRC16_CCITT — 16 bit CRC16 using CRC16-CCITT polynomial
- **crc32MSB**: Use CRC32_UPPER — MSB 16 bits of computed CRC32
- **crc32LSB**: Use CRC32_LOWER — LSB 16 bits of computed CRC32
- **xor1**: Use CRC16_BISYNC_AND_XOR1 — Upper 8 bits of CRC16-BISYNC and lower 8 bits of xor1
- **xor2**: Use CRC16_BISYNC_AND_XOR2 — Upper 8 bits of CRC16-BISYNC and lower 8 bits of xor2
- **xor4**: Use CRC16_BISYNC_AND_XOR4 — Upper 8 bits of CRC16-BISYNC and lower 8 bits of xor4
- **xor8**: Use CRC16_BISYNC_AND_XOR8 — Upper 8 bits of CRC16-BISYNC and lower 8 bits of xor8
- **xor16**: Use CR16 — 16 bit XOR

**seed**

Enter the keyword **seed** and the seed value of the hash algorithm. The value ranges from 0 to 2147483646.

**Defaults**

IPSA and IPDA mask value is **FF** for the stack-unit.

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
--- | ---
9.10(0.0) | Introduced on the S3148.
9.9(0.0) | Added flow-based-hashing support for hashing on ECMP for S4820T, S6000, S4048 and Z9500.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100-ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.7(0.0) | Introduced on the S6000-ON.
9.2(1.0) | Introduced on the Z9500.
9.0.2.0 | Introduced on the S6000.
### Usage Information

To ensure that CRC is not used for LAG, set the default hash-algorithm method on E-Series systems. For example, `hash-algorithm ecmp xor lagchecksum nh-ecmp checksum`.

The hash value calculated with the `hash-algorithm` command is unique to the entire unit. The hash algorithm command with the stack-unit option changes the hash for a particular stack-unit by applying the mask specified in the IPSA and IPDA fields.

The stack-unit option is applicable with the `lag-hash-align` microcode only. Any other microcode returns an error message as follows:

- `Dell(conf)#hash-algorithm linecard 5 ip-sa-mask ff ip-da-mask ff`
- `% Error: This command is not supported in the current microcode configuration`

The different hash algorithms are based on the number of Port Channel members and packet values. The default hash algorithm (number 0) yields the most balanced results in various test scenarios, but if the default algorithm does not provide a satisfactory distribution of traffic, use the `hash-algorithm` command to designate another algorithm.

When a Port Channel member leaves or is added to the Port Channel, the hash algorithm is recalculated to balance traffic across the members.

### ip ecmp-group

Enable and specify the maximum number of ecmp that the L3 CAM hold for a route. By default, when maximum paths are not configured, the CAM can hold a maximum of 16 ecmp per route.

#### Syntax

```
ip ecmp-group {maximum-paths | {number} [path-fallback]}
```

To negate a command, use the `no ip ecmp-group maximum-paths {number} command`

#### Parameters

- **maximum-paths**: Specify the maximum number of ECMP for a route. The range is 2 to 64.
- **path-fallback**: Use the keywords `path-fallback` to enable this feature. If you enable the feature, re-enter this keyword to disable the feature.

#### Defaults

16

#### Command Modes

CONFIGURATION
ip ecmp weighted

Enables weighted ECMP calculations.

Syntax

```
ip ecmp weighted
```

To disable weighted ECMP calculations, enter the `no ip ecmp weighted` command.

Defaults

N/A

Command Modes

Usage Information

Enabling this CLI would inform the FIB to re-program the destination prefix paths with weights in the HW/CAM on the fly.
If disabled, the CLI would inform the FIB to re-program the destination prefix paths with no weights or regular ECMP.

Example

Dell(conf)# ip ecmp ?
weighted Enables Weighted ECMP
Dell(conf)# ip ecmp weighted
Dell(conf)# do show running-config | grep ecmp
ip ecmp weighted
Dell(conf)#
Dell(conf)# no ip ecmp ?
weighted Enables Weighted ECMP
Dell(conf)# no ip ecmp weighted
Dell(conf)# do show running-config | grep ecmp

link-bundle-monitor enable

Provides a mechanism to enable monitoring of traffic distribution on an ECMP link bundle.

Syntax

link-bundle-monitor enable

To exit from ECMP group mode, use the exit command.

Command Modes

- ECM-P-GROUP
- PORT-CHANNEL INTERFACE

Command History

**link-bundle-distribution trigger-threshold**

Provides a mechanism to set the threshold to trigger when traffic distribution begins being monitored on an ECMP link bundle.

**Syntax**

```
link-bundle-distribution trigger-threshold [percent]
```

To exit from ecmp group mode, use the `exit` command.

**Parameters**

`percent`  
Indicate the threshold value when traffic distribution starts being monitored on an ECMP link bundle. The range is from 1 to 90%. The default is 60%.

**Command Modes**

EXEC Privilege

**Command History**

**show config**

Display the ECMP configuration.

**Syntax**

```
show config
```

**Command Modes**

CONFIGURATION-ECMP-GROUP

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.
**show link-bundle distribution**

Display the link-bundle distribution for the interfaces in the bundle, type of bundle (LAG or ECMP), and the most recently calculated interface utilization (either bytes per second rate or maximum rate) for each interface.

**Syntax**

```
show link-bundle-distribution
```

**Command Modes**

EXEC Privilege

Dell#
To configure federal information processing standards (FIPS) cryptography, use the following commands:

Topics:
- fips mode enable
- show fips status
- show ip ssh
- ssh

fips mode enable

Enable the FIPS cryptography mode on the platform.

Syntax

```
[no] fips mode enable
```

To disable the FIPS cryptography mode, use the `no fips mode enable` command.

Default

Disabled

</table>
ssh

Open an SSH connection specifying the hostname, username, port number, and version of the SSH client.

Syntax

```
ssh {hostname|ipv4 address|ipv6 address} 
[-c encryption cipher|-l username|-m HMAC algorithm|-p port-number|-v {1|2}]
```  

Parameters

- **hostname**: (OPTIONAL) Enter the IP address or the hostname of the remote device.
- **ipv4 address**: (OPTIONAL) Enter the IP address in dotted decimal format A.B.C.D.
- **ipv6 address**: (OPTIONAL) Enter the IPv6 address in the x:x:x:x format then the prefix length in the /x format. The range is from /0 to /128.

**NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

- **-c encryption cipher**: Enter the following encryption cipher to use. (For v2 clients only.)
  - 3des-cbc: Force ssh to use 3des-cbc encryption cipher.
  - FIPS mode is enabled or disabled:
    - aes256-ctr: Force ssh to use the aes256–ctr encryption cipher.
    - aes256-cbc: Force ssh to use the aes128–cbc encryption cipher.
    - aes192-ctr: Force ssh to use the aes128–cbc encryption cipher.
    - aes192-cbc: Force ssh to use the aes256–cbc encryption cipher.
    - aes128-ctr: Force ssh to use the aes256–cbc encryption cipher.
    - aes128-cbc: Force ssh to use the aes256–cbc encryption cipher.
    - 3des-cbc: Force ssh to use 3des-cbc encryption cipher.

- **-l username**: (OPTIONAL) Enter the keyword –l then the user name used in this SSH session. The default is the user name of the user associated with the terminal.

- **-m HMAC algorithm**: Enter one of the following HMAC algorithms to use. (For v2 clients only.)
  - Without the FIPS mode enabled:
    - hmac-sha1-96: Force ssh to use the hmac-sha1–96 HMAC algorithm.
    - hmac-sha1: Force ssh to use the hmac-sha1 HMAC algorithm.
    - hmac-md5-96: Force ssh to use the hmac-md5–96 HMAC algorithm.
    - hmac-md5: Force ssh to use the hmac-md5 HMAC algorithm.
  - With the FIPS mode enabled:
    - hmac-sha2-256: Force ssh to use the hmac-sha2-256 HMAC algorithm.
    - hmac-sha1-96: Force ssh to use the hmac-sha1–96 HMAC algorithm.
    - hmac-sha1: Force ssh to use the hmac-sha1 HMAC algorithm.
    - hmac-md5-96: Force ssh to use the hmac-md5–96 HMAC algorithm.
    - hmac-md5: Force ssh to use the hmac-md5 HMAC algorithm.

- **-p port-number**: (OPTIONAL) Enter the keyword –p then the port number.
  The range is 1 to 65535.
-v (1|2) (OPTIONAL) Enter the keyword -v then the SSH version 1 or 2.
The default: The version from the protocol negotiation.

NOTE: If the FIPS mode is enabled, this option does not display in the output.

Defaults
See Parameters.

Related Commands
ip ssh server Configure an SSH server.
show ip ssh client-pub-keys Display the client-public keys.

Usage Information
Dell Networking OS supports both inbound and outbound SSH sessions using IPv4 or IPv6 addressing. Inbound SSH supports accessing the system through the management interface as well as through a physical Layer 3 interface.

NOTE: Some of the parameters in this command require licensing to access. For more information, contact your Dell Networking representative.

Example
If FIPS mode is not enabled:

Dell# ssh 10.10.10.10 ?
-c Encryption cipher to use (for v2 clients only)
-l User name option
-m HMAC algorithm to use (for v2 clients only)
-p SSH server port option (default 22)
-v SSH protocol version
<cr>
Dell# ssh 10.10.10.10 -c ?
3des-cbc Force ssh to use 3des-cbc encryption cipher
aes128-cbc Force ssh to use aes128-cbc encryption cipher

hmac-sha2-256     Force ssh to use hmac-sha2-256 HMAC algorithm
```
Force10 Resilient Ring Protocol (FRRP)

FRRP is a proprietary protocol for that offers fast convergence in a Layer 2 network without having to run the spanning tree protocol (STP). The resilient ring protocol is an efficient protocol that transmits a high-speed token across a ring to verify the link status. All the intelligence is contained in the master node with practically no intelligence required of the transit mode.

Important Points to Remember

- FRRP is media- and speed-independent.
- FRRP is a Dell Networking proprietary protocol that does not interoperate with any other vendor.
- Spanning Tree must be disabled on both primary and secondary interfaces before Resilient Ring protocol is enabled.
- A VLAN configured as the control VLAN for a ring cannot be configured as a control or member VLAN for any other ring.
- Member VLANs across multiple rings are not supported in Master nodes.
- If multiple rings share one or more member VLANs, they cannot share any links between them.
- Each ring can have only one Master node; all others are Transit nodes.

- protocol frrp
- show frrp
- timer

clear frrp

Clear the FRRP statistics counters.

Syntax

```
clear frrp [ring-id]
```

Parameters

- **ring-id**
  
  (Optional) Enter the ring identification number. The range is from 1 to 255.

Defaults

None
Command Modes

EXEC

</tr>
</tbody>
</table>

Usage Information

Executing this command without the optional ring-id command clears the statistics counters on all the available rings. Dell Networking OS requires a command line confirmation before the command executes. This command clears the following counters:

- hello Rx and Tx counters
- Topology change Rx and Tx counters
- The number of state change counters

Example

```
Dell# clear frrp
Clear frrp statistics counter on all ring [confirm] yes
Dell#clear frrp 4
Clear frrp statistics counter for ring 4 [confirm] yes
Dell#
```

Related Commands

- **show frrp** — display the Resilient Ring Protocol configuration.
debug frrp

Clear the FRRP statistics counters.

Syntax

debug frrp {event | packet | detail} [ring-id] [count number]

To disable debugging, use the no debug frrp {event | packet | detail} {ring-id} [count number] command.

Parameters

- **event**: Enter the keyword event to display debug information related to ring protocol transitions.
- **packet**: Enter the keyword packet to display brief debug information related to control packets.
- **detail**: Enter the keyword detail to display detailed debug information related to the entire ring protocol packets.
- **ring-id**: (Optional) Enter the ring identification number. The range is from 1 to 255.
- **count number**: Enter the keyword count then the number of debug outputs. The range is from 1 to 65534.

Defaults

Disabled.

Command Modes

- **CONFIGURATION (conf-frrp)**

Command History

- **Version**
- 9.10(0.0) Introduced on the S3148.
- 9.10(0.0) Introduced on the S6100–ON.
- 9.8(2.0) Introduced on the S3100 series.
- 9.8(1.0) Introduced on the Z9100–ON.
- 9.8(0.0P5) Introduced on the S4048-ON.
- 9.8(0.0P2) Introduced on the S3048-ON.
- 9.7(0.0) Introduced on the S6000–ON.
- 9.5(0.1) Introduced on the Z9500.
- 9.0.2.0 Introduced on the S6000.
- 8.3.19.0 Introduced on the S4820T.
- 8.3.11.1 Introduced on the Z9000.
- 8.3.7.0 Introduced on the S4810.
- 8.2.1.0 Introduced on the C-Series.
- 7.4.1.0 Introduced.

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.
**Usage Information**
Because the resilient ring protocol can potentially transmit 20 packets per interface, restrict debug information.

**description**

Enter an identifying description of the ring.

**Syntax**

description Word

To remove the ring description, use the no description [Word] command.

**Parameters**

- **Word**: Enter a description of the ring. Maximum: 255 characters.

**Defaults**
None

### interface

Configure the primary, secondary, and control-vlan interfaces.

**Syntax**

interface {primary interface secondary interface control-vlan vlan-id}
To return to the default, use the no interface {primary interface secondary interface control-vlan vlan-id} command.

**Parameters**

- **primary interface**
  Enter the keyword primary to configure the primary interface then one of the following interfaces and the interface information:
  - For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a port channel interface, enter the keywords port-channel then a number.

- **secondary interface**
  Enter the keyword secondary to configure the secondary interface then one of the following interfaces and the interface information:
  - For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a port channel interface, enter the keywords port-channel then a number.

- **control-vlan vlan-id**
  Enter the keyword control-vlan then the VLAN ID. The range is from 1 to 4094.

**Defaults**

None

**Command Modes**

CONFIGURATION (conf-frrp)

</tbody>
</table>
Usage Information

This command causes the Ring Manager to take ownership of the two ports after IFM validates the configuration. Ownership is relinquished for a port only when the interface does not play a part in any control VLAN, that is, the interface does not belong to any ring.

Related Commands

- show frrp — display the Resilient Ring Protocol configuration information.

member-vlan

Specify the member VLAN identification numbers.

Syntax

member-vlan {vlan-range}

To return to the default, use the no member-vlan [vlan-range] command.

Parameters

- vlan-range

  Enter the member VLANs using VLAN IDs (separated by commas), a range of VLAN IDs (separated by a hyphen), a single VLAN ID, or a combination. For example: VLAN IDs (comma-separated): 3, 4, 6. Range (hyphen-separated): 5-10. Combination: 3, 4, 5-10, 8.

Defaults

None

</table>
mode

Set the Master or Transit mode of the ring.

Syntax

```
mode {master | transit}
```

To reset the mode, use the `no mode {master | transit}` command.

Parameters

- **master**: Enter the keyword `master` to set the Ring node to Master mode.
- **transit**: Enter the keyword `transit` to set the Ring node to Transit mode.

Defaults

- **Mode None**

</tbody>
</table>

Related Commands

- protocol frrp — enter the resilient ring protocol and designate a ring identification.

**timer**

Set the hello interval or dead interval for the Ring control packets.

**Syntax**

```
timer {hello-interval milliseconds} | {dead-interval milliseconds}
```

To remove the timer, use the no timer {hello-interval [milliseconds]} | {dead-interval milliseconds} command.

**Parameters**

- **hello-interval milliseconds**
  
Enter the keyword hello-interval then the time, in milliseconds, to set the hello interval of the control packets. The milliseconds must be entered in increments of 50
millisecond; for example, 50, 100, 150, and so on. If an invalid value is entered, an error message is generated. The range is from 50 to 2000 ms. Default: 500 ms.

```
dead-interval milliseconds
```
Enter the keyword `dead-interval` then the time, in milliseconds, to set the dead interval of the control packets. The range is from 50 to 6000 ms. Default: 1500 ms.

**NOTE:** The configured dead interval must be at least three times the hello interval.

**Defaults**
- 500 ms for `hello-interval milliseconds`
- 1500 ms for `dead-interval milliseconds`

**Command Modes**

**Usage Information**
The `hello interval` command is the interval at which ring frames are generated from the primary interface of the master node. The `dead interval` command is the time that elapses before a time-out occurs.
The Dell Networking operating system supports the basic GVRP commands on the Dell Networking OS.

The generic attribute registration protocol (GARP) mechanism allows the configuration of a GARP participant to propagate through a network quickly. A GARP participant registers or de-registers its attributes with other participants by making or withdrawing declarations of attributes. At the same time, based on received declarations or withdrawals, GARP handles attributes of other participants.

GVRP enables a device to propagate local VLAN registration information to other participant devices and dynamically update the VLAN registration information from other devices. The registration information updates local databases regarding active VLAN members and through which port the VLANs can be reached.

GVRP ensures that all participants on a bridged LAN maintain the same VLAN registration information. The VLAN registration information propagated by GVRP includes both manually configured local static entries and dynamic entries from other devices.

GVRP participants have the following components:

- The GVRP application
- GARP information propagation (GIP)
- GARP information declaration (GID)

### Important Points to Remember

- GVRP is supported on Layer 2 ports only.
- All VLAN ports added by GVRP are tagged.
- GVRP is supported on untagged ports belonging to a default VLAN and tagged ports.
- GVRP cannot be enabled on untagged ports belonging to a non-default VLAN unless native VLAN is turned on.
- GVRP requires end stations with dynamic access NICs.
- Based on updates from GVRP-enabled devices, GVRP allows the system to dynamically create a port-based VLAN (unspecified) with a specific VLAN ID and a specific port.
- On a port-by-port basis, GVRP allows the system to learn about GVRP updates to an existing port-based VLAN with that VLAN ID and IEEE 802.1Q tagging.
- GVRP allows the system to send dynamic GVRP updates about your existing port-based VLAN.
- GVRP updates are not sent to any blocked spanning tree protocol (STP) ports. GVRP operates only on ports that are in the forwarding state.
- GVRP operates only on ports that are in the STP forwarding state. If you enable GVRP, a port that changes to the STP Forwarding state automatically begin to participate in GVRP. A port that changes to an STP state other than forwarding no longer participates in GVRP.
- VLANs created dynamically with GVRP exist only as long as a GVRP-enabled device is sending updates. If the devices no longer send updates, or GVRP is disabled, or the system is rebooted, all dynamic VLANs are removed.
- GVRP manages the active topology, not non-topological data such as VLAN protocols. If a local bridge must classify and analyze packets by VLAN protocols, manually configure protocol-based VLANs, and simply rely on GVRP for VLAN updates. But if the local bridge must know only how to reach a given VLAN, then GVRP provides all necessary information.
- The VLAN topologies that GVRP learns are treated differently from VLANs that are statically configured. The GVRP dynamic updates are not saved in NVRAM, while static updates are saved in NVRAM. When GVRP is disabled, the system deletes all VLAN interfaces that were learned through GVRP and leaves unchanged all VLANs that were manually configured.
Topics:

- clear gvrp statistics
- debug gvrp
- disable
- garp timers
- gvrp enable
- gvrp registration
- protocol gvrp
- show config
- show garp timers
- show gvrp
- show gvrp statistics

**clear gvrp statistics**

Clear GVRP statistics on an interface.

**Syntax**

```
clear gvrp statistics interface interface
```

**Parameters**

- `interface interface` Enter the following keywords and the interface information:
  - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a port channel interface, enter the keywords `port-channel` then a number.

**Defaults**

None

**Command Modes**

EXEC

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Related Commands

- `show gvrp statistics` — display the GVRP statistics.

**debug gvrp**

Enable debugging on GVRP.

**Syntax**

```
debug gvrp {config | events | pdu}
```

To disable debugging, use the `no debug gvrp {config | events | pdu}` command.

**Parameters**

- `config` Enter the keyword `config` to enable debugging on the GVRP configuration.
- `event` Enter the keyword `event` to enable debugging on the JOIN/LEAVE events.
- `pdu` Enter the keyword `pdu` then one of the following Interface keywords and the interface information:
  - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a port channel interface, enter the keywords `port-channel` then a number.

**Defaults**

Disabled.

**Command Modes**

EXEC

Related Commands

- `gvrp enable` — enable GVRP on physical interfaces and LAGs.
- `protocol gvrp` — access GVRP protocol.

**garp timers**

Set the intervals (in milliseconds) for sending GARP messages.

**Syntax**

```
garp timers {join | leave | leave-all}
```

To return to the previous setting, use the `no garp timers {join | leave | leave-all}` command.

**Parameters**

- `join`
  - Enter the keyword `join` then the number of milliseconds to configure the join time. The range is from 100 to 147483647 milliseconds. The default is **200 milliseconds**.
  - **NOTE:** Designate the milliseconds in multiples of 100.

- `leave`
  - Enter the keyword `leave` then the number of milliseconds to configure the leave time. The range is from 100 to 2147483647 milliseconds. The default is **600 milliseconds**.
  - **NOTE:** Designate the milliseconds in multiples of 100.

- `leave-all`
  - Enter the keywords `leave-all` then the number of milliseconds to configure the leave-all time. The range is from 100 to 2147483647 milliseconds. The default is **1000 milliseconds**.
  - **NOTE:** Designate the milliseconds in multiples of 100.

**Defaults**

As above.

</tr>
</tbody>
</table>

**Usage Information**

- **Join Timer** — Join messages announce the willingness to register some attributes with other participants. For reliability, each GARP application entity sends a Join message twice and uses a join timer to set the sending interval.
- **Leave Timer** — Leave announces the willingness to de-register with other participants. Together with Join, Leave messages help GARP participants complete attribute reregistration and de-registration. The leave timer starts after receipt of a leave message sent for de-registering some attribute information. If a Join message is not received before the Leave time expires, the GARP application entity removes the attribute information as requested.
- **Leave All Timer** — The Leave All timer starts when a GARP application entity starts. When this timer expires, the entity sends a Leave-all message so that other entities can reregister their attribute information. Then the Leave-all time begins again.

**Related Commands**

- `show garp timers` — display the current GARP times.

### gvrp enable

Enable GVRP on physical interfaces and LAGs.

**Syntax**

```
gvrp enable
```

To disable GVRP on the interface, use the `no gvrp enable` command.

**Defaults**

Disabled.

**Command Modes**

CONFIGURATION-INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Related Commands
- `disable` — globally disable GVRP.

**gvrp registration**

Configure the GVRP register type.

**Syntax**
```
gvrp registration {fixed | normal | forbidden}
```

To return to the default, use the `gvrp register normal` command.

**Parameters**
- **fixed**
  - Enter the keyword `fixed` then the VLAN range in a comma-separated VLAN ID set.
- **normal**
  - Enter the keyword `normal` then the VLAN range in a comma-separated VLAN ID set. This setting is the default.
- **forbidden**
  - Enter the keyword `forbidden` then the VLAN range in a comma-separated VLAN ID set.

**Defaults**
`normal`

**Version** | **Description**
---|---
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
7.6.1.0 | Introduced on C-Series, E-Series, and S-Series

**Usage Information**

Fixed registration prevents an interface, configured using the command line, to belong to a VLAN (static configuration) from being unconfigured when it receives a Leave message. Therefore, Registration mode on that interface is fixed.

Normal registration is the default registration. The port’s membership in the VLAN depends on GVRP. The interface becomes a member of a VLAN after learning about the VLAN through GVRP. If the VLAN is removed from the port that sends GVRP advertisements to this device, the port stops being a member of the VLAN.

To advertise or learn about VLANs through GVRP, use the forbidden command when you do not want the interface.

**Related Commands**

- `show gvrp` — display the GVRP configuration including the registration.

**protocol gvrp**

Access GVRP protocol — (config-gvrp)#.

**Syntax**

```
protocol gvrp
```

**Defaults**

Disabled.

**Command Modes**

- CONFIGURATION

<td>Introduced on C-Series, E-Series, and S-Series</td>
</tr>
</tbody>
</table>

**Usage Information**

Invalid messages/attributes skipped can occur in the following cases:

- The incoming GVRP PDU has an incorrect length.
- "End of PDU" was reached before the complete attribute could be parsed.
- The Attribute Type of the attribute that was being parsed was not the GVRP VID Attribute Type (0x01).
- The attribute that was being parsed had an invalid attribute length.
- The attribute that was being parsed had an invalid GARP event.
- The attribute that was being parsed had an invalid VLAN ID. The valid range is from 1 to 4095.

A failed registration can occur for the following reasons:

- Join requests were received on a port that was blocked from learning dynamic VLANs (GVRP Blocking state).
- An entry for a new GVRP VLAN could not be created in the GVRP database.

**Example**

```
Dell# show gvrp statistics int gi 1/1
Join Empty Received: 0
Join In Received: 0
Empty Received: 0
LeaveIn Received: 0
Leave Empty Received: 0

Dell#
```

**Related Commands**

- `show gvrp` — display the GVRP configuration.
High Availability (HA) in the Dell Networking OS is the configuration synchronization to minimize recovery time in the event of a route processor module (RPM) failure.

In general, a protocol is defined as “hitless” in the context of an RPM failure/failover and not failures of a line card, SFM, or power module. A protocol is defined as hitless if an RPM failover has no impact on the protocol.

You must specifically enable some protocols for HA. Some protocols are only hitless if related protocols are also enabled as hitless (for example, using the redundancy protocol command).

Topics:
- patch flash://RUNTIME_PATCH_DIR
- redundancy disable-auto-reboot
- redundancy force-failover
- redundancy primary
- redundancy protocol
- redundancy reset-counter
- redundancy synchronize
- show patch
- show redundancy

patch flash://RUNTIME_PATCH_DIR

Insert an In-Service Modular Hot-Fix patch.

Syntax
patch flash://RUNTIME_PATCH_DIR/patch-filename
To remove the patch, use the no patch flash://RUNTIME_PATCH_DIR/patch-filename command.

Defaults
None

Command Modes
CONFIGURATION

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.10(0.0)</td>
<td>Introduced on the S3148.</td>
</tr>
<tr>
<td>9.8(2.0)</td>
<td>Introduced on the S3100 series.</td>
</tr>
<tr>
<td>9.8(0.0P5)</td>
<td>Introduced on the S4048-ON.</td>
</tr>
</tbody>
</table>
The patch filename includes the Dell Networking OS version, the platform, the CPU, and the process it affects (FTOS-platform-cpu-process-patchversion.rtp). For example, a patch labeled “7.8.1.0-EH-rp2-l2mgr-1.rtp” identifies that this patch applies to Dell Networking OS version 7.8.1.0 — E-Series platform, for RP2, addressing the layer 2 management process, and this patch is the first version of this patch.

There is no need to reload or reboot the system when you insert the patch. The In-Service Modular patch replaces the existing process code. After installation is complete, the system executes the patch code as though it was always there.

Related Commands

- `show patch` — display the system patches loaded with the `in-service modular hot fix` command.

**redundancy disable-auto-reboot**

Prevent the system from auto-rebooting the failed module.

**Syntax**

```
redundancy disable-auto-reboot stack-unit [stack-unit ID| members] [rpm| card number | all]
```

To return to the default, use the `no redundancy disable-auto-reboot stack-unit rpm` command.

**Parameters**

- `rpm` Enter the keyword `rpm` to disable auto-reboot of the failed RPM.
- `stack-unit` Enter the keyword `stack-unit` then the stack-unit ID number.

**Default**

Disabled — the failed module is automatically rebooted.

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.10(0.0)</td>
<td>Introduced on the S3148.</td>

</tr>
<tr>
<td>9.8(0.0P2)</td>
<td>Introduced on the S3048-ON.</td>
</tr>
</tbody>
</table>
Version | Description
---|---
9.2(0.0) | Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
8.3.1.0 | Added the **all** option.
8.1.1.0 | Introduced on the E-Series.
7.6.1.0 | Introduced on the E-Series

**Usage Information**
Enabling this command keeps the failed RPM in the failed state. If there are two RPMs in the system, enabling this command prevents the failed RPM from becoming a working Standby RPM. If there is only one RPM in the system, the failed RPM does not recover and affects the system.

**redundancy force-failover**
Force the secondary stack unit to become the primary stack unit. You can also use this command to upgrade the software on one stack unit from the other when the other has been loaded with the upgraded software.

**Syntax**
```
redundancy force-failover stack-unit
```

**Parameters**
- **stack-unit**
  Enter the keyword `stack-unit` then the stack-unit ID number.

**Default**
Not configured.

**Command Modes**
EXEC Privilege

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<tr>
<td>8.1.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>
**Usage Information**

To provide a hitless or warm upgrade, use this command. A hitless upgrade means that a software upgrade does not require a reboot of the line cards. A warm upgrade means that a software upgrade requires a reset of the line cards. A warm upgrade is possible for major releases and lower, while a hitless upgrade can only support patch releases.

**redundancy primary**

Set an RPM as the primary RPM.

**Syntax**

```plaintext
redundancy primary [rpm0 | rpm1]
```

To delete a configuration, use the `no redundancy primary` command.

**Parameters**

- `rpm0`  
  Enter the keyword `rpm0` to set the RPM in slot R0 as the primary RPM.
- `rpm1`  
  Enter the keyword `rpm1` to set the RPM in slot R1 as the primary RPM.

**Default**

The RPM in slot R0 is the Primary RPM.

**Command Modes**

CONFIGURATION

**Command History**

**redundancy protocol**

Enable hitless protocols.

**Syntax**

```
redundancy protocol {lacp | xstp}
```

To disable a hitless protocol, use the `no redundancy protocol {lacp | xstp}` command.

**Parameters**

- **lacp**
  - Enter the keyword `lacp` to make LACP hitless.

- **xstp**
  - Enter the keyword `xstp` to invoke hitless STP (all STP modes — MSTP, PVST+, RSTP, and STP).

**Default**

Disabled

Usage Information

The following describes the `show redundancy` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>RPM Status</td>
<td>Displays the following information:</td>
</tr>
<tr>
<td></td>
<td>- Slot number of the RPM.</td>
</tr>
<tr>
<td></td>
<td>- Whether the RPM is Primary or Standby.</td>
</tr>
<tr>
<td></td>
<td>- The state of the RPM: Active, Standby, Booting, or Offline.</td>
</tr>
<tr>
<td></td>
<td>- Whether the link to the second RPM is up or down.</td>
</tr>
<tr>
<td>PEER RPM Status</td>
<td>Displays the state of the second RPM, if present</td>
</tr>
<tr>
<td>RPM Redundancy</td>
<td>Displays the following information:</td>
</tr>
<tr>
<td>Configuration</td>
<td>- which RPM is the preferred Primary on next boot (the <code>redundancy primary</code> command)</td>
</tr>
</tbody>
</table>
### Field	Description
- the data sync method configured (the `redundancy synchronize` command)
- the failover type (you cannot change this type; it is software-dependent). **Hot Failover** means that the running configuration and routing table are applied on secondary RPM. **Fast Failover** means that the running configuration is not applied on the secondary RPM until failover occurs, and the routing table on line cards is cleared during failover.
- the status of auto booting the RPM (the `redundancy disable-auto-reboot` command)
- the parameter for auto failover limit control (the `redundancy auto-failover-limit` command)

### RPM Failover Record
Displays the following information:
- RPM failover counter (to reset the counter, use the `redundancy reset-counter` command)
- the time and date of the last RPM failover
- the reason for the last RPM failover

### Last Data Sync Record
Displays the data sync information and the timestamp for the data sync:
- Start-up Config is the contents of the `startup-config` file.
- Line Card Config is the line card types configured and interfaces on those line cards.
- Runtime Event Log is the contents of the Event log.
- Running Config is the current `running-config`.

This field only appears when you enter the command from the Primary RPM.

**Example**

```bash
Dell# show redundancy
-- RPM Status --
-------------------------------------------------------------------------------
RPM Slot ID:         1
RPM Redundancy Role: Primary
RPM State:           Active
RPM SW Version:      7.5.1.0
Link to Peer:        Up
-- PEER RPM Status --
-------------------------------------------------------------------------------
RPM State:       Standby
RPM SW Version:  7.5.1.0
-- RPM Redundancy Configuration --
-------------------------------------------------------------------------------
Primary RPM:         rpm0
Auto Data Sync:      Full
Failover Type:       Hot Failover
Auto reboot RPM:     Enabled
Auto failover limit: 3 times in 60 minutes
-- RPM Failover Record --
-------------------------------------------------------------------------------
Failover Count:           1
Last failover timestamp: Jul 13 2007 21:25:32
Last failover Reason:     User request
-- Last Data Block Sync Record: --
```

Internet Group Management Protocol (IGMP)

The IGMP commands are supported on the Dell Networking OS.

Topics:
- IGMP Commands
- IGMP Snooping Commands

IGMP Commands

Dell Networking OS supports IGMPv1/v2/v3 and is compliant with RFC-3376.

Important Points to Remember

- Dell Networking OS supports protocol-independent multicast-sparse (PIM-SM) and protocol-independent source-specific multicast (PIM-SSM) include and exclude modes.
- IGMPv2 is the default version of IGMP on interfaces. You can configure IGMPv3 on interfaces. It is backward compatible with IGMPv2.
- The maximum number of interfaces supported 95.
- There is no hard limit on the maximum number of groups supported.
- IGMPv3 router interoperability with IGMPv2 and IGMPv1 routers on the same subnet is not supported.
- An administrative command (ip igmp version) is added to manually set the IGMP version.
- All commands previously used for IGMPv2 are compatible with IGMPv3.

clear ip igmp groups

Clear entries from the group cache table.

**Syntax**

```
clear ip igmp [vrf vrf-name] groups [group-address | interface]
```

**Parameters**

- **vrf vrf-name**
  - (OPTIONAL) Enter the keyword `vrf` followed by the name of the VRF to configure this setting on that VRF.
  - **NOTE:** Applies to specific VRF if input is provided, else applies to default VRF.

- **group-address**
  - (OPTIONAL) Enter the IP multicast group address in dotted decimal format.

- **interface interface**
  - Enter the following keywords and the interface information:
For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.

For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

For a port channel interface, enter the keywords port-channel then a number.

For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

**Command Modes**

EXEC

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**E-Series legacy command**

---

**debug ip igmp**

Enable debugging of IGMP packets.

**Syntax**

depth ip igmp [vrf vrf-name] [group address | interface]

- To disable IGMP debugging, use the no debug ip igmp [vrf vrf-name] [group address | interface] command.
- To disable all debugging, use the undebug all command.
Parameters

vrf vrf-name

(Optional) Enter the keyword vrf followed by the name of the VRF to enable debugging of IGMP packets corresponding to that VRF.

NOTE: Applies to specific VRF if input is provided, else applies to Default VRF.

group-address

(Optional) Enter the IP multicast group address in dotted decimal format.

interface interface

Enter the following keywords and the interface information:

- For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a port channel interface, enter the keywords port-channel then a number.

Defaults

Disabled.

Command Modes

EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description

9.10(0.0) Introduced on the S3148.

9.10(0.0) Introduced on the S6100–ON.

9.8(2.0) Introduced on the S3100 series.

9.8(1.0) Introduced on the Z9100–ON.

9.8(0.0P5) Introduced on the S4048-ON.

9.8(0.0P2) Introduced on the S3048-ON.

9.7(0.0) Added support for VRF. Introduced on the S6000-ON.

9.5(0.1) Introduced on the Z9500.

9.0.2.0 Introduced on the S6000.

8.3.19.0 Introduced on the S4820T.

8.3.11.1 Introduced on the Z9000.

8.3.7.0 Introduced on the S4810.

7.6.1.0 Introduced on the S-Series.

7.5.1.0 Introduced on the C-Series.

E-Series legacy command

Usage Information

IGMP commands accept only non-VLAN interfaces — specifying VLAN does not yield results. This command displays packets for IGMP and IGMP snooping.
**ip igmp access-group**

To specify access control for packets, use this feature.

**Syntax**

```
ip igmp access-group access-list
```

To remove the feature, use the `no ip igmp access-group access-list` command.

**Parameters**

- `access-list` Enter the name of the extended ACL (16 characters maximum).

**Defaults**

Not configured

**Command Modes**

INTERFACE (conf-if-
interface-slot/port)

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>

**Usage Information**

The access list accepted is an extended ACL. To block IGMP reports from hosts, on a per-interface basis based on the group address and source address that you specify in the access list, use this feature.
ip igmp immediate-leave

Enable IGMP immediate leave.

Syntax

ip igmp immediate-leave [group-list prefix-list-name]

To disable ip igmp immediate leave, use the no ip igmp immediate-leave command.

Parameters

group-list prefix-list-name

Enter the keywords group-list then a string up to 16 characters long of the prefix-list-name.

Defaults

Not configured.

</table>

Usage Information

Querier normally sends some group-specific queries when a leave message is received for a group prior to deleting a group from the membership database. There may be situations when you require immediate deletion of a group from the membership database. This command provides a way to achieve the immediate deletion. In addition, this command provides a way to enable immediate-leave processing for specified groups.
**ip igmp last-member-query-interval**

Change the last member query interval, which is the Max Response Time inserted into Group-Specific Queries sent in response to Leave Group messages. This interval is also the interval between Group-Specific Query messages.

**Syntax**

```
ip igmp last-member-query-interval milliseconds
```

To return to the default value, use the `no ip igmp last-member-query-interval` command.

**Parameters**

- `milliseconds`: Enter the number of milliseconds as the interval. For IGMP version 2, the range is from 100 to 25599. For IGMP version 3, the range is from 100 to 65535. The default value is **1000 milliseconds**.

**Defaults**

**1000 milliseconds**

**E-Series legacy command**
ip igmp query-interval

Change the transmission frequency of IGMP general queries the Querier sends.

Syntax

```
ip igmp query-interval seconds
```

To return to the default values, use the no ip igmp query-interval command.

Parameters

- **seconds**: Enter the number of seconds between queries sent out. The range is from 1 to 18000. The default is **60 seconds**.

Defaults

**60 seconds**

</tr>
</tbody>
</table>
Version Description
E-Series legacy command.

Usage Information If you have configured the hello interval value to be greater than 18000, you must first reset that value to be less than or equal to 18000 before upload. Otherwise, the command execution fails during bootup and the hello interval value is set to the default value.

ip igmp query-max-resp-time

Set the maximum query response time advertised in general queries.

**NOTE:** The IGMP query-max-resp-time value must be less than the IGMP query-interval value.

**Syntax**
```
ip igmp query-max-resp-time seconds
```
To return to the default values, use the `no ip igmp query-max-resp-time` command.

**Parameters**
- `seconds` Enter the number of seconds for the maximum response time. The range is from 1 to 25. The default is 10 seconds.

**Defaults**
10 seconds

**Version** | **Description**
---|---
7.6.1.0 | Introduced on the S-Series in Interface VLAN mode only to enable the system to act as an IGMP Proxy Querier.
7.5.1.0 | Introduced on the C-Series in Interface VLAN mode only to enable the system to act as an IGMP Proxy Querier.
E-Series legacy command.

**ip igmp ssm-map**

To translate (*,G) memberships to (S,G) memberships, use a statically configured list.

**Syntax**

`ip igmp [vrf vrf-name] ssm-map std-access-list source-address`

**Parameters**

- `vrf vrf-name` (OPTIONAL) Enter the keyword `vrf` followed by the name of the VRF to configure this setting on that VRF.
  
  **NOTE:** Applies to specific VRF if input is provided, else applies to Default VRF.

- `std-access-list` Specify the standard IP access list that contains the mapping rules for multicast groups.

- `source-address` Specify the multicast source address to which the groups are mapped.

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
---|---
9.10(0.0) | Introduced on the S3148.
9.10(0.0) | Introduced on the S6100–ON.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100–ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.7(0.0) | Added support for VRF and Introduced on the S6000-ON.
9.5(0.0) | Introduced on the Z9500.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
### Version Description
- **8.3.11.1** Introduced on the Z9000.
- **8.3.7.0** Introduced on the S4810.
- **7.8.1.0** Introduced on the C-Series and S-Series.
- **7.7.1.0** Introduced on the E-Series.

**Usage Information**
Mapping applies to both v1 and v2 IGMP joins; any updates to the ACL are reflected in the IGMP groups. You may not use extended access lists with this command. When you configure a static SSM map and the router cannot find any matching access lists, the router continues to accept (*,G) groups.

**Related Commands**
- `ip access-list standard` — create a standard access list to filter based on IP address.

### ip igmp version

Manually set the version of the router to IGMPv2 or IGMPv3.

**Syntax**
```
ip igmp version {2 | 3}
```

**Parameters**
- **2**
  - Enter the number 2 to set the IGMP version number to IGMPv2.
- **3**
  - Enter the number 3 to set the IGMP version number to IGMPv3.

**Defaults**
2 (IGMPv2)

**Command Modes**
INTERFACE

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
--- | ---
9.10(0.0) | Introduced on the S3148.
9.10(0.0) | Introduced on the S6100–ON.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100–ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.7(0.0) | Changed the default IGMP from version 2 to version 3. Introduced on the S6000-ON
9.5(0.0) | Introduced on the Z9500.
9.0.2.0 | Introduced on the S6000.
9.2(0.0) | Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
8.3.19.0 | Introduced on the S4820T.
show ip igmp groups

View the IGMP groups.

Syntax

show ip igmp [vrf vrf-name] groups [group-address [detail] | detail | interface [group-address [detail]]]

Parameters

vrf vrf-name (OPTIONAL) Enter the keyword vrf followed by the name of the VRF to configure this setting on that VRF.

group-address (OPTIONAL) Enter the group address in dotted decimal format to view information on that group only.

interface (OPTIONAL) Enter the interface type and the interface information:

- For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a Loopback interface, enter the keyword loopback then a number from 0 to 16383.
- For a port channel interface, enter the keywords port-channel then a number.
- For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

detail (OPTIONAL) Enter the keyword detail to display the IGMPv3 source information.

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description

9.10(0.0) Introduced on the S3148.
9.10(0.0) Introduced on the S6100–ON.
9.8(2.0) Introduced on the S3100 series.
### Version Description

- **9.8(1.0)**
  - Introduced on the Z9100-ON.
- **9.8(0.0P5)**
  - Introduced on the S4048-ON.
- **9.8(0.0P2)**
  - Introduced on the S3048-ON.
- **9.7(0.0)**
  - Added support for VRF. Introduced on the S6000-ON.
- **9.5(0.1)**
  - Introduced on the Z9500.
- **9.0.2.0**
  - Introduced on the S6000.
- **8.3.19.0**
  - Introduced on the S4820T.
- **8.3.11.1**
  - Introduced on the Z9000.
- **8.3.7.0**
  - Introduced on the S4810.
- **7.6.1.0**
  - Introduced on the S-Series and C-Series.
- **7.5.1.0**
  - Expanded to support the `detail` option.

### E-Series legacy command.

#### Usage Information
This command displays the IGMP database, including configured entries for either all groups on all interfaces, all groups on specific interfaces, or specific groups on specific interfaces.

The following describes the `show ip igmp groups` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Group Address</strong></td>
<td>Lists the multicast address for the IGMP group.</td>
</tr>
<tr>
<td><strong>Interface</strong></td>
<td>Lists the interface type, slot and port number.</td>
</tr>
<tr>
<td><strong>Mode</strong></td>
<td>Displays the IGMP version used.</td>
</tr>
<tr>
<td><strong>Uptime</strong></td>
<td>Displays the amount of time the group has been operational.</td>
</tr>
<tr>
<td><strong>Expires</strong></td>
<td>Displays the amount of time until the entry expires.</td>
</tr>
<tr>
<td><strong>Last Reporter</strong></td>
<td>Displays the IP address of the last host to be a member of the IGMP group.</td>
</tr>
</tbody>
</table>

#### Example
```
Dell# show ip igmp groups
Total Number of Groups: 5
IGMP Connected Group Membership
Group Address Interface Uptime Expires
225.0.0.0  Vlan 100   00:00:05 00:02:04
225.0.0.1  Vlan 100   00:00:05 00:02:04
225.0.0.2  Vlan 100   00:00:05 00:02:04
225.0.0.3  Vlan 100   00:00:05 00:02:04
225.0.0.4  Vlan 100   00:00:05 00:02:04
```

#### Example (VLT)
```
NOTE: The asterisk (*) after the port channel number (Po 2) highlighted in the following example indicates the port channel is VLT, that the local VLT port channel is down and the remote VLT port is up.
```
```
Dell# show ip igmp groups
Total Number of Groups: 5
IGMP Connected Group Membership
```
show ip igmp group details

Example (Details)

Dell# show ip igmp group details
Interface                  Vlan 20
Group                         232.1.1.5
Uptime                      00:11:22
Expires                       Never
Router mode           INCLUDE
Last reporter            35.0.0.2
Group source list
Source address          Expires
  65.0.0.1                         00:01:22
  65.0.0.2                         00:01:22
  65.0.0.3                         00:01:22
  65.0.0.4                         00:01:22
  65.0.0.5                         00:01:22

show ip igmp interface

View information on the interfaces participating in IGMP.

Syntax
show ip igmp [vrf vrf-name] interface [interface]

Parameters

vrf vrf-name  (OPTIONAL) Enter the keyword vrf followed by the name of the VRF to view IGMP interfaces associated with that VRF.

interface   (OPTIONAL) Enter the interface type and the interface information:

- For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a Loopback interface, enter the keyword loopback then a number from 0 to 16383.
- For a port channel interface, enter the keywords port-channel then a number.
- For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

Command Modes
- EXEC
- EXEC Privilege

**E-Series legacy command.**

IGMP commands accept only non-VLAN interfaces — specifying VLAN does not yield results. The `show ip igmp interface` command does not display information corresponding to the loop-back interfaces.

**Example**

```bash
Dell# show ip igmp interface
GigabitEthernet 1/1 is down, line protocol is down
Internet protocol processing disabled
GigabitEthernet 1/5 is down, line protocol is down
Internet protocol processing disabled
GigabitEthernet 1/6 is down, line protocol is down
Internet protocol processing disabled
GigabitEthernet 1/7 is up, line protocol is down
Internet protocol processing disabled
Vlan 20
  Inbound IGMP access group is not set
  Internet address is 35.0.0.1/24
  IGMP is enabled on interface
  IGMP query interval is 60 seconds
  IGMP querier timeout is 125 seconds
  IGMP max query response time is 10 seconds
  IGMP last member query response interval is 1000 ms
  IGMP immediate-leave is enabled for all groups
  IGMP activity: 0 joins
  IGMP querying router is 35.0.0.1 (this system)
  IGMP version is 2
```

**Example (VRF)**

```bash
Dell# show ip igmp vrf BLUE interface
GigabitEthernet 1/20
  Inbound IGMP access group is not set
  Internet address is 50.10.4.1/24
```
IGMP is up on the interface
IGMP query interval is 60 seconds
IGMP querier timeout is 0 seconds
IGMP max query response time is 10 seconds
IGMP last member query response interval is 1000 ms
IGMP immediate-leave is disabled
IGMP activity: 0 joins
IGMP querying router is 50.10.4.1 (this system)
IGMP version is 3
Vlan 4007
Inbound IGMP access group is not set
Internet address is 50.30.124.4/24
IGMP is up on the interface
IGMP query interval is 60 seconds
IGMP querier timeout is 83 seconds
IGMP max query response time is 10 seconds
IGMP last member query response interval is 1000 ms
IGMP immediate-leave is disabled
IGMP activity: 0 joins
IGMP querying router is 50.30.124.1
IGMP version is 3
Dell#

show ip igmp ssm-map

Display is a list of groups that are currently in the IGMP group table and contain SSM mapped sources.

Syntax

```
show ip igmp [vrf vrf-name] ssm-map [group]
```

Parameters

- `vrf vrf-name` (OPTIONAL) Enter the keyword `vrf` followed by the name of the VRF to configure this setting on that VRF.

  1. **NOTE:** Applies to specific VRF if input is provided, else applies to Default VRF.

- `group` (OPTIONAL) Enter the multicast group address in the form A.B.C.D to display the list of sources to which this group is mapped.

Command Modes

- EXEC
- EXEC Privilege

Command History

65.0.0.5                         00:01:22
```

**Related Commands**

- `ip igmp ssm-map` — use a statically configured list to translate (*,G) memberships to (S,G) memberships.

**IGMP Snooping Commands**

Dell Networking OS supports IGMP Snooping version 2 and 3 on all Dell Networking systems.

**Important Points to Remember for IGMP Snooping**

- Dell Networking OS supports version 1, version 2, and version 3 hosts.
- Dell Networking OS IGMP snooping implementation is based on IP multicast address (not based on Layer 2 multicast mac address) and the IGMP snooping entries are in Layer 3 flow table not in Layer 2 forwarding information base (FIB).
- Dell Networking OS IGMP snooping implementation is based on draft-ietf-magma-snoop-10.
- Dell Networking OS supports IGMP snooping on JUMBO-enabled cards.
- IGMP snooping is not enabled by default on the switch.
- A maximum of 1800 groups and 600 VLAN are supported.
- IGMP snooping is not supported on a default VLAN interface.
- IGMP snooping is not supported over VLAN-Stack-enabled VLAN interfaces (you must disable IGMP snooping on a VLAN interface before configuring VLAN-Stack-related commands).
- IGMP snooping does not react to Layer 2 topology changes triggered by spanning tree protocol (STP).
- IGMP snooping reacts to Layer 2 topology changes multiple spanning tree protocol (MSTP) triggers by sending a general query on the interface that comes in the FWD state.
Important Points to Remember for IGMP Querier

- The IGMP snooping Querier supports version 2.
- You must configure an IP address to the VLAN interface for IGMP snooping Querier to begin. The IGMP snooping Querier disables itself when a VLAN IP address is cleared, and then it restarts itself when an IP address is reassigned to the VLAN interface.
- When enabled, IGMP snooping Querier does not start if there is a statically configured multicast router interface in the VLAN.
- When enabled, IGMP snooping Querier starts after one query interval in case no IGMP general query (with IP SA lower than its VLAN IP address) is received on any of its VLAN members.
- When enabled, IGMP snooping Querier periodically sends general queries with an IP source address of the VLAN interface. If it receives a general query on any of its VLAN member, it checks the IP source address of the incoming frame. If the IP SA in the incoming IGMP general query frame is lower than the IP address of the VLAN interface, the switch disables its IGMP snooping Querier functionality.
- If the IP SA of the incoming IGMP general query is higher than the VLAN IP address, the switch continues to work as an IGMP snooping Querier.

clear ip igmp snooping groups

Clear snooping entries from the group cache table.

**Syntax**

```
clear ip igmp snooping groups [group-address interface | interface]
```

**Parameters**

- `group-address` (OPTIONAL) Enter the IP multicast group address in dotted decimal format.
- `interface` Enter the following keywords and the interface information:
  - For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a port channel interface, enter the keywords port-channel then a number.

**Command Modes**

- EXEC

debug ip igmp snooping

Enable debugging of IGMP snooping packets on interfaces and groups.

Syntax
debug ip igmp snooping [group address | interface]

Parameters
- snooping: Enter the keyword snooping to enable debugging of IGMP snooping.
- group-address: (OPTIONAL) Enter the IP multicast group address in dotted decimal format.
- interface: Enter the following keywords and the interface information:
  - For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a port channel interface, enter the keywords port-channel then a number.

Defaults
Disabled.

Command Modes
EXEC Privilege

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.10(0.0) Introduced on the S3148.
9.10(0.0) Introduced on the S6100–ON.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100–ON.
9.8(0.0P6) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S4810, S4820T, S5000, S6000, S6000–ON, Z9000, and Z9500.

Usage Information
IGMP commands accept only non-VLAN interfaces — specifying VLAN does not yield results. This command displays packets for IGMP and IGMP snooping.
ip igmp snooping enable

Enable IGMP snooping on all or a single VLAN. This command is the master on/off switch to enable IGMP snooping.

Syntax

```
ip igmp snooping enable
```

To disable IGMP snooping, use the `no ip igmp snooping enable` command.

Defaults

Disabled.

Command Modes

- CONFIGURATION
- INTERFACE VLAN

</table>

Usage Information

To enable IGMP snooping, enter this command. When you enable this command from CONFIGURATION mode, IGMP snooping enables on all VLAN interfaces (except the default VLAN).

**NOTE:** Execute the `no shutdown` command on the VLAN interface for IGMP Snooping to function.
**ip igmp snooping fast-leave**

Enable IGMP snooping fast-leave for this VLAN.

**Syntax**

```
ip igmp snooping fast-leave
```

To disable IGMP snooping fast leave, use the `no igmp snooping fast-leave` command.

**Defaults**

Not configured.

**Command Modes**

INTERFACE VLAN — (conf-if-vl-

</tr>
</tbody>
</table>

**E-Series legacy command.**

**Usage Information**

Queriers normally send some queries when a leave message is received prior to deleting a group from the membership database. There may be situations when you require a fast deletion of a group. When you enable IGMP fast leave processing, the switch removes an interface from the multicast group as soon as it detects an IGMP version 2 leave message on the interface.
ip igmp snooping flood

This command controls the flooding behavior of unregistered multicast data packets.

Syntax  
```
ip igmp snooping flood
```

To undo this configuration, use the `no ip igmp snooping flood` command.

Defaults  
Enabled.

Command Modes  
CONFIGURATION

Command History  
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<tr>
<td>7.7.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information  
On the C-Series and S-Series, unregistered multicast data traffic drops when you disable flooding; they do not forward the packets to multicast router ports. On the C-Series and S-Series, in order to disable Layer 2 multicast flooding, disable Layer 3 multicast (no ip multicast-routing).

ip igmp snooping last-member-query-interval

The last member query interval is the maximum response time inserted into Group-Specific queries sent in response to Group-Leave messages.

Syntax  
```
ip igmp snooping last-member-query-interval milliseconds
```

Usage Information  
On the C-Series and S-Series, unregistered multicast data traffic drops when you disable flooding; they do not forward the packets to multicast router ports. On the C-Series and S-Series, in order to disable Layer 2 multicast flooding, disable Layer 3 multicast (no ip multicast-routing).
To return to the default value, use the `no ip igmp snooping last-member-query-interval` command.

**Parameters**

- `milliseconds` Enter the interval in milliseconds. The range is from 100 to 65535. The default is **1000 milliseconds**.

**Defaults**

- **1000 milliseconds**

**Command Modes**

- INTERFACE VLAN

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>

**Usage Information**

This last-member-query-interval is also the interval between successive Group-Specific Query messages. To change the last-member-query interval, use this command.

### ip igmp snooping mrouter

Statically configure a VLAN member port as a multicast router interface.

**Syntax**

```
ip igmp snooping mrouter interface interface
```
To delete a specific multicast router interface, use the `no igmp snooping mrouter interface` command.

**Parameters**

- **interface interface** Enter the following keywords and the interface information:
  - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a port channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.

**Defaults**

Not configured.

**Command Modes**

- INTERFACE VLAN — (conf-if-vl-n)

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
--- | ---
9.10(0.0) | Introduced on the S3148.
9.10(0.0) | Introduced on the S6100–ON.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100–ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.7(0.0) | Introduced on the S6000-ON.
9.5(0.1) | Introduced on the Z9500.
9.2(0.0) | Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
7.6.1.0 | Introduced on the S-Series.
7.5.1.0 | Introduced on the C-Series.

**Usage Information**

The Dell Networking OS provides the capability of statically configuring the interface to which a multicast router is attached. To configure a static connection to the multicast router, enter the `ip igmp snooping mrouter interface` command in the VLAN context. The interface to the router must be a part of the VLAN where you are entering the command.
ip igmp snooping querier

Enable IGMP querier processing for the VLAN interface.

Syntax

ip igmp snooping querier

To disable IGMP querier processing for the VLAN interface, use the no ip igmp snooping querier command.

Defaults

Not configured.

Command Modes

INTERFACE VLAN — (conf-if-vl-

E-Series legacy command

Usage Information

This command enables the IGMP switch to send General Queries periodically. This behavior is useful when there is no multicast router present in the VLAN because the multicast traffic is not routed. Assign an IP address to the VLAN interface for the switch to act as a querier for this VLAN.
show ip igmp snooping groups

Display snooping related information for all the IGMP groups, interface or one group of one interface.

Syntax

```
show ip igmp snooping groups [group-address [detail] | detail | interface [group-address [detail]]]
```

Parameters

- **snooping** Enter the keyword snooping to display snooping related information.
- **group-address** (OPTIONAL) Enter the group address in dotted decimal format to view information on that group only.
- **interface** (OPTIONAL) Enter the interface type and the interface information:
  - For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a Loopback interface, enter the keyword loopback then a number from 0 to 16383.
  - For a port channel interface, enter the keywords port-channel then a number.
  - For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.
- **detail** (OPTIONAL) Enter the keyword detail to display the IGMPv3 source information.

Command Modes

- EXEC
- EXEC Privilege

<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S4810, S4820T, S5000, S6000, Z9000, and Z9500.</td>
</tr>
</tbody>
</table>

Usage Information

This command displays the IGMP database, including configured entries for either all groups on all interfaces, all groups on specific interfaces, or specific groups on specific interfaces.

The following describes the show ip igmp groups command shown in the following example.
### Field Description
- **Group Address**: Lists the multicast address for the IGMP group.
- **Interface**: Lists the interface type, slot and port number.
- **Mode**: Displays the IGMP version used.
- **Uptime**: Displays the amount of time the group has been operational.
- **Expires**: Displays the amount of time until the entry expires.
- **Last Reporter**: Displays the IP address of the last host to be a member of the IGMP group.
- **Member Ports**: Indicates the port channel. If the port channel is VLT, an asterisk (*) after the port channel number indicates the port channel is locally down and that a remote VLT port is up.

### Example
```
Dell# show ip igmp snooping groups
Total Number of Groups: 1
IGMP Connected Group Membership
  Group Address   Interface   Mode          Uptime    Expires   Last Reporter
  225.1.1.1       Vlan 10     IGMPv2-Compat 00:00:07  00:02:09  1.1.1.2
Member Ports: Gi 1/17
Dell#
```

### show ip igmp snooping mrouter

Display multicast router interfaces.

#### Syntax
```
show ip igmp snooping mrouter [vlan number]
```

#### Parameters
- **vlan number**: Enter the keyword `vlan` then the vlan number. The range is from 1 to 4094.

#### Command Modes
- EXEC
- EXEC Privilege

#### Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

#### Version
- **9.10(0.0)**: Introduced on the S3148.
- **9.10(0.0)**: Introduced on the S6100–ON.
- **9.8(2.0)**: Introduced on the S3100 series.
- **9.8(1.0)**: Introduced on the Z9100–ON.
- **9.8(0.0P5)**: Introduced on the S4048-ON.
- **9.8(0.0P2)**: Introduced on the S3048-ON.
- **9.7(0.0)**: Introduced on the S6000-ON.

</tbody>
</table>

E-Series legacy command.

### Usage Information

If the port channel is a VLT port channel, an asterisk (*) after the port channel number (Po 100*) indicates the port channel is locally down and that a remote VLT port is up.

### Example

```
Dell# show ip igmp snooping mrouter
Interface Router Ports
Vlan 2 Gi 1/3, Po 1
Dell#
```

### Related Commands

- `ip igmp snooping mrouter` — configure a static connection to the multicast router.
- `show ip igmp groups` — view groups.
Interfaces

To configure egress, port channel, time domain, and UDP, use these interface commands.

Topics:
- Basic Interface Commands
- Egress Interface Selection (EIS) Commands
- Port Channel Commands
- Time Domain Reflectometer (TDR) Commands
- UDP Broadcast Commands

Basic Interface Commands

The following commands are for Physical, Loopback, and Null interfaces.

clear counters

Clear the counters displayed in the show interfaces commands for all virtual router redundancy protocol (VRRP) groups, virtual local area networks (VLANs), and physical interfaces, or selected ones.

Syntax

```
clear counters [interface | vrrp {vr-id | ipv6 vr-id} | learning-limit | vlan vlan-id]
```

Parameters

- `interface` (OPTIONAL) Enter any of the following keywords and the interface information to clear counters from a specified interface:
  - For IPv4 access-group counters, enter the keyword `ip`.
  - For IPv6 access-group counters, enter the keyword `ipv6`.
  - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
  - For MAC access-group counters, enter the keyword `mac`.
  - For a Port Channel interface, enter the keywords `port-channel` then a number.
  - For the management interface, enter the keyword `ManagementEthernet` then slot/port information.
  - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a tunnel interface, enter the keyword `tunnel`. The range is from 1 to 16383.
NOTE: This command also enables you to clear the port configurations corresponding to a range of ports. However, for Open Networking (ON) platforms the notation for specifying port range in the command is different from how you specify in non-ON platforms.

- For non-ON platforms, you can specify multiple ports as slot/port-range. For example, if you want to clear the port configurations corresponding to all ports between 1 and 4, specify the port range as `show interfaces interface-type 1/1 - 4`.

- For ON platforms, you can specify multiple ports as slot/port/[subport] - slot/port/[subport]. For example, if you want to clear the port configurations corresponding to all ports between 1 and 4, specify the port range as `show interfaces interface-type 1/1/1 - 1/1/4`.

```
vrrp [ipv6 (vr-id) | vr-id] (OPTIONAL) Enter the keyword vrrp to clear the counters of all VRRP groups. To clear the counters of VRRP groups on all IPv6 interfaces, enter `ipv6`. To clear the counters of a specified group, enter a VRID number from 1 to 255.

learning-limit (OPTIONAL) Enter the keywords learning-limit to clear unknown source address (SA) drop counters when MAC learning limit is configured on the interface.

vlan vlan-id Enter the keyword vlan followed by the interface VLAN number. The range is from 1 to 4094.
```

Defaults
Without an interface specified, the command clears all interface counters.

Command Modes
EXEC Privilege

Command History

Example

```
Dell# clear counters
clear counters on all interfaces [confirm]
Dell#
```

Related Commands

- `mac learning-limit` — allow aging of MACs even though a learning-limit is configured or disallow station move on learned MACs.

### clear counters eee

Clear the counters for EEE on all copper ports or specific ports.

**Syntax**

```
clear counters [interface-type [slot/port | slot/port-range]] eee
```

**Parameters**

- `interface-type` Enter the interface information as GigabitEthernet or TenGigabitEthernet followed by the slot and the port number or range of port numbers.

**Command Modes**

- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant **Dell Networking OS Command Line Reference Guide**.

**Version**

- 9.10(0.1) Introduced on the S3100 series, S4820T, and S5000.

**Usage Information**

Use the `clear counters eee` command to clear counters for EEE on all the copper ports.

Use the `clear counters interface-type slot/port eee` command to clear the counters for EEE on the specified port.

Use the `clear counters interface-type slot/port-range eee` to clear the counters for EEE on the specified range of ports.

**Example**

```
Dell# clear counters eee
clear eee counters on all Copper Ports [confirm] y
Dell#
Dell# clear counters gigabitethernet 1/1 eee
clear eee counters on Gi 1/1 [confirm] y
Dell#
Dell# clear counters gigabitethernet 1/1-10 eee
```
clear dampening

Clear the dampening counters on all the interfaces or just the specified interface.

Syntax

`clear dampening [interface]`

Parameters

- `interface` (OPTIONAL) Enter any of the following keywords and the interface information to clear counters from a specified interface:
  - For a Port Channel interface, enter the keywords `port-channel` then a number.
  - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

Defaults

Without an interface specified, the command clears all interface dampening counters.

Command Modes

- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>
Example

```
Dell# clear dampening gigabitethernet 1/10
Clear dampening counters on TeGi 1/10 [confirm] y
Dell#
```

Related Commands

- `show interfaces dampening` — display interface dampening information.
- `dampening` — configure dampening on an interface.

**combo-port-type**

You can pre-provision the medium of combo ports as copper or fiber.

**Syntax**

`combo-port-type {copper | fiber}`

**Parameters**

- `copper` Enter the keyword `copper` to provision the combo port as a copper port.
- `fiber` Enter the keyword `fiber` to provision the combo port as a fiber port.

**Defaults**

None

**Command Modes**

`INTERFACE`

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.11(0.0)</td>
<td>Introduced on the N20xx and N30xx series port extenders.</td>
</tr>
<tr>
<td>9.10(0.0)</td>
<td>Introduced on the S3100 series.</td>
</tr>
</tbody>
</table>

**Usage Information**

By default, a combo port is in Hybrid mode. Use the `combo-port-type` command to provision the combo port as either copper or fiber. Use the `no combo-port-type` command to change the combo port to Hybrid mode.

The `negotiation auto` command is not available on the combo ports in the hybrid mode. You need to provision the combo port as copper or fiber medium using the `combo-port-type` command.

**Example**

```
Dell(conf-if-gi-1/23)# combo-port-type copper
Dell(conf-if-gi-1/23)# combo-port-type fiber
```

**dampening**

Configure dampening on an interface.

**Syntax**

`dampening [half-life] [reuse-threshold] [suppress-threshold] [max-suppress-time]`

**Parameters**

- `half-life` Enter the number of seconds after which the penalty is decreased. The penalty decreases half after the half-life period expires. The range is from 1 to 30 seconds. The default is 5 seconds.
- `reuse-threshold` Enter a number as the reuse threshold, the penalty value below which the interface state is changed to "up". The range is from 1 to 20000. The default is 750.
**suppress-threshold**  Enter a number as the suppress threshold, the penalty value above which the interface state is changed to “error disabled”. The range is from 1 to 20000. The default is 2500.

**max-suppress-time**  Enter the maximum number for which a route can be suppressed. The default is four times the half-life value. The range is from 1 to 86400. The default is 20 seconds.

**Defaults**  Disabled.

**Command Modes**  INTERFACE (conf-if-)

**Command History**  This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>7.4.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**  With each flap, Dell Networking OS penalizes the interface by assigning a penalty (1024) that decays exponentially depending on the configured half-life. After the accumulated penalty exceeds the suppress threshold value, the interface moves to the Error-Disabled state. This interface state is deemed as “down” by all static/dynamic Layer 2 and Layer 3 protocols. The penalty is exponentially decayed based on the half-life timer. After the penalty decays below the reuse threshold, the interface enables. The configured parameters are as follows:

- suppress-threshold should be greater than reuse-threshold
- max-suppress-time should be at least 4 times half-life

**NOTE:** You cannot apply dampening on an interface that is monitoring traffic for other interfaces.

**Example**

```
Dell(conf-if-gi-1/10)# dampening 20 800 45000 120
Dell(conf-if-gi-1/10)#
```

**Related Commands**

- `clear dampening` — clear the dampening counters on all the interfaces or just the specified interface.
default interface

Reset a physical interface to its factory default settings.

Syntax

default interface interface-type slot/port - range

Parameters

- **interface-type slot/port**
  - Enter the interface type and slot/port information:
    - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

- **range**
  - For non-ON platforms, you can specify multiple ports as slot/port-range. For example, if you want to display information corresponding to all ports between 1 and 4, specify the port range as `show interfaces interface-type 1/1 - 4`.
  - For ON platforms, you can specify multiple ports as `slot/port/[subport] - slot/port/[subport]`. For example, if you want to display information corresponding to all ports between 1 and 4, specify the port range as `show interfaces interface-type 1/1/1 - 1/1/4`.

Defaults

None

Command Modes

CONFIGURATION

Command History

</tr>
</tbody>
</table>

Usage Information

Use the `default interface` command to set a Gigabit Ethernet, 10-Gigabit Ethernet, or 40-Gigabit Ethernet interface to its factory-default state. By default, a physical interface is disabled (shutdown) with no assigned IP address or switchport (no ip address). This command removes all software settings and all L3, VLAN, VXLAN, and port-channel configurations on a physical interface.

Example

```
Dell(conf-if-gi-1/5)# show config
!
interface GigabitEthernet 1/5
  description testconfig
  no ip address
  portmode hybrid
  switchport
  rate-interval 8
  mac learning-limit 10 no-station-move
  no shutdown
Dell(conf-if-gi-1/5)#
Dell(conf)# default interface gigabitethernet 1/5
```
Dell(conf-if-gi-1/5)# show config
!
interface GigabitEthernet 1/5
  no ip address
  shutdown

Related Commands
  • show running-config — display the current configuration.

description

Assign a descriptive text string to the interface.

Syntax
  description desc_text

To delete a description, use the no description command.

Parameters
  desc_text
    Enter a text string up to 240 characters long.

Defaults
  None

Command Modes
  INTERFACE

Command History

<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>7.4.1.0</td>
<td>Modified for E-Series: Revised from 78 to 240 characters.</td>
</tr>
</tbody>
</table>
Usage Information

Important Points to Remember:

- To use special characters as a part of the description string, you must enclose the whole string in double quotes.
- Spaces between characters are not preserved after entering this command unless you enclose the entire description in quotation marks ("desc_text").
- Entering a text string after the description command overwrites any previous text string that you previously configured as the description.
- The shutdown and description commands are the only commands that you can configure on an interface that is a member of a port-channel.
- Use the show interfaces description command to display descriptions configured for each interface.

EEE

Enable Energy-Efficient Ethernet (EEE) on native or optional module copper ports.

Syntax

```
eee
```

To disable EEE, use the `no eee` command.

Defaults

None.

Command Modes

INTERFACE

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.11(0.)</td>
<td>Introduced on the S3048-ON.</td>
</tr>
<tr>
<td>9.10(0.1)</td>
<td>Introduced on the S4820T and S5000.</td>
</tr>
<tr>
<td>9.10(0.0)</td>
<td>Introduced on the S3100 series.</td>
</tr>
</tbody>
</table>

Usage Information

EEE is an IEEE 802.3 az standard that reduces power consumptions on Ethernet ports. When EEE is enabled, transmission is stopped when there is no data to be transmitted and is resumed on arrival of new packets. You can enable EEE only on one Gigabit and ten Gigabit native or optional module copper ports.

Example

To enable EEE:

```
Dell(conf)# interface gigabitethernet 1/1
Dell(conf-if-gi-1/1)# eee
```

To disable EEE:

```
Dell(conf)# interface gigabitethernet 1/1
Dell(conf-if-gi-1/1)# no eee
```

flowcontrol

Control how the system responds to and generates 802.3x pause flow control frames.

Syntax

```
flowcontrol {rx {off | on} tx {off | on} [negotiate | pause-threshold value | resume-offset value] | [monitor session-ID]}
```

Example

```
To return to the default, use the no form of this command.

**Parameters**

- `rx on` Enter the keywords `rx on` to process the received flow control frames on this port.

  **NOTE:** Flow-control packets are mirrored only when flow-control `rx` is enabled on an interface.

- `rx off` Enter the keywords `rx off` to ignore the received flow control frames on this port.

- `tx on` Enter the keywords `tx on` to send control frames from this port to the connected device when a higher rate of traffic is received.

- `tx off` Enter the keywords `tx off` so that flow control frames are not sent from this port to the connected device when a higher rate of traffic is received.

- `pause-threshold` Enter the buffer threshold limit for generating PAUSE frames.

- `resume-offset` Enter the offset value for generating PAUSE frames to resume traffic.

- `negotiate` (Optional) Enter the keyword `negotiate` to enable the pause-negotiation with the egress port of the peer device. If the `negotiate` command is not used, pause-negotiation is disabled. 40-gigabit Ethernet interfaces do not support pause-negotiation.

- `monitor` Enter the keyword `monitor` then the session-ID to enable mirror flow control frames on the interface. The range is from 0 to 65535.

**Defaults**

- `rx on tx off`

**Command Modes**

- INTERFACE

### Version Description

**6.5.1.9 and 74.1.0**
Introduced on the E-Series.

**7.8.1.0**
Introduced on the C-Series and S-Series with the thresholds option.

### Usage Information

The globally assigned 48-bit multicast address 01-80-C2-00-00-01 is used to send and receive pause frames. To allow full-duplex flow control, stations implementing the pause operation instruct the MAC to enable the reception of frames with a destination address equal to this multicast address.

When a port receives traffic at a higher rate than it can process, the frames are stored in the port buffer. As a result, buffer usage increases. When the buffer usage reaches the value specified in the “pause-threshold” argument, the port sends PAUSE frame to the connected link partner to stop sending the traffic. Eventually this reduces the buffer usage. When the buffer usage drops by the value specified in the “resume-threshold”, the port again sends a PAUSE frame with 0 as wait-time. This results in resume of the paused traffic flow.

### Important Points to Remember

- Do not enable tx pause when buffer carving is enabled. For information and assistance, consult Dell Networking TAC.

- Speeds less than one Gig cannot be configured when the asymmetric flow control configuration is on. The following error is returned:
  
  Can’t configure speed <1G when Asymmetric flowcontrol is on, config ignored

- Dell Networking OS only supports rx on tx on and rx off tx off for speeds less than one Gig (Symmetric).

\[ \text{NOTE: If you use the disable rx flow control command, Dell Networking recommends rebooting the system.} \]

\[ \text{NOTE: Dell Networking OS does not support mirroring of tx pause frames.} \]

### Example

Dell(conf-if-Gi-1/1)# show config

```
! interface GigabitEthernet 1/1
no ip address
switchport
no negotiation auto
flowcontrol rx off tx on
no shutdown
...
```

### Example (Values)

This Example shows how Dell Networking OS negotiates the flow control values between two Dell Networking chassis connected back-to-back using 1G copper ports.

interface

Configure a physical or virtual interface on the switch.

Syntax

interface interface

Parameters

interface

Enter one of the following keywords and the interface information:

- For a null interface, enter the keyword null then the slot/port information. The Null interface number is 0.
- For the Management interface on the stack-unit, enter the keyword ManagementEthernet then the slot/port information.
- For a Loopback interface, enter the keyword loopback then a number from 0 to 16383.
- For a 1-Gigabit Ethernet interface, enter the keyword GigabitEthernet then the slot/port information.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a Tunnel interface, enter the keyword tunnel then the tunnel ID. The range is from 1 to 16383.
- For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.
- For a port channel interface, enter the keywords port-channel then a number.

Defaults

Not configured.

</tr>
</tbody>
</table>

**Usage Information**

You cannot delete a physical interface.

By default, physical interfaces are disabled (shutdown) and are not assigned to an IP address or switchport. To place an interface in Layer 2 mode, ensure that the interface’s configuration does not contain an IP address and enter the switchport command.

You can create up to 64 tunnel interfaces. The tunnel is added as a logical interface with no default configuration. To delete a tunnel interface, use the `no interface tunnel tunnel-id` command.

The tunnel interface operates as an ECMP (equal cost multi path) only when the next hop to the tunnel destination is over a physical interface. If you select any other interface as the next hop to the tunnel destination, the tunnel interface does not operate as an ECMP.

**Example**

```
Dell(conf)# int tengigabitethernet 1/10
Dell(conf-if-gi-1/10)# exit
Dell(conf)#
```

**Related Commands**

- `interface loopback` — configure a Loopback interface.
- `interface null` — configure a Null interface.
- `interface port-channel` — configure a port channel.
- `interface vlan` — configure a VLAN.
**interface group**

Create or delete group of VLANs with a single command. You can also use this command to apply a set of configurations on a group of interfaces.

**Syntax**

```
interface group [interface | vlan vlanid {- vlanid }] 
```

To delete a range of VLANs, use the following command:

```
no interface group vlan vlanid {- vlanid}
```

**Parameters**

- `interface, interface,...`
  
Enter the keywords `interface group` and one of the interfaces — slot/port or VLAN number. Select the range of interfaces for bulk configuration. Spaces are not required between the commas. Comma-separated ranges can include VLANs and physical interfaces.

- `vlanvlanid{-vlanid}`
  
Enter the member VLANs using VLAN IDs (separated by commas), a range of VLAN IDs (separated by a hyphen), a single VLAN ID, or a combination. For example: VLAN IDs (comma-separated): 3, 4, 6. Range (hyphen-separated): 5-10.

  Slot/Port information need not contain a space before and after the dash. For example, both of the following commands are valid: `interface group gigabitethernet 1/1 - 1/5; interface group gigabitethernet 1/1-1/5`.

- `GigabitEthernet`
  
  For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.

- `TenGigabitEthernet`
  
  For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

- `vlan`
  
  For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Command Modes**

- `CONFIGURATION`

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
<tr>
<td>9.4(0.0)</td>
<td>Introduced on the S4810, S4820T, S6000, Z9000, and MXL Switch.</td>
</tr>
</tbody>
</table>

**Usage Information**

The `interface group` command will create all the non-existent VLANs specified in the range. On successful command execution, the CLI switches to the interface group context.

The configuration commands inside the group context will be the similar to that of the existing range command.
Note: For release 9.4(0.0), the group command is supported only for VLANs and physical interfaces.

Example

Dell(conf)# interface group ?
gigabitethernet GigabitEthernet interface IEEE 802.3z
tengigabitethernet TenGigabit Ethernet interface
vlan VLAN keyword

Dell(conf)# interface group vlan 1 - 2, tengigabitethernet 1/10
Dell(conf-if-group-vl-1-2,gi-1/10)# no shutdown
Dell(conf-if-group-vl-1-2,gi-1/10)# end

Related Commands
- interface range — configure a range of interfaces.
- interface vlan — configures a VLAN.

interface loopback

Configure a Loopback interface.

Syntax

interface loopback number

To remove a loopback interface, use the no interface loopback number command.

Parameters

number Enter a number as the interface number. The range is from 0 to 16383.

Defaults
Not configured.

Command Modes
CONFIGURATION

### interface managementethernet

Configure a Management port.

**Syntax**

```
interface managementethernet number
```

**Parameters**

- `number` Enter the Ethernet interface number.

**Defaults**

Not configured; `number = 0`

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version**

- 9.10(0.0) Introduced on the S3148.
- 9.10(0.0) Introduced on the S6100-ON.
- 9.8(2.0) Introduced on the S3100 series.
- 9.8(1.0) Introduced on the Z9100-ON.
- 9.8(0.0P5) Introduced on the S4048-ON.
- 9.8(0.0P2) Introduced on the S3048-ON.
- 9.7(0.0) Introduced on the S6000-ON.
- 9.2(1.0) Introduced on the Z9500.
- 9.0.2.0 Introduced on the S6000.
- 8.3.19.0 Introduced on the S4820T.
- 8.3.11.1 Introduced on the Z9000.
- 8.3.7.0 Introduced on the S4810.
- 8.11.0 Introduced on the E-Series.
- 7.6.1.0 Introduced on the S-Series.

**Related Commands**

- `ip address` — Configure an IP address and subnet mask for an interface.

### Example

```
Dell(conf)# interface managementethernet 1/1
Dell(conf-if-ma-1/1)#
```
Version | Description
--- | ---
7.5.1.0 | Introduced on the C-Series.
6.4.1.0 | Introduced

Usage Information: You cannot delete the Null interface. The only configuration command possible in a Null interface is `ip unreachables`.

Example:
```
Dell(conf)# interface null 0
Dell(conf-if-nu-0)#
```

Related Commands:
- `interface` — configure a physical interface.
- `interface loopback` — configure a Loopback interface.
- `interface port-channel` — configure a port channel.
- `interface vlan` — configure a VLAN.
- `ip unreachables` — enable generation of internet control message protocol (ICMP) unreachable messages.

**interface range**

This command permits configuration of a range of interfaces to which subsequent commands are applied (bulk configuration). Using the `interface range` command, you can enter identical commands for a range of interface.

**Syntax**
```
interface range interface {slot/port | port} - {slot/port | port}, interface
{slot/port | port} - {slot/port | port},...
```

**Parameters**
- Enter `interface range` and one of the interfaces and then the interface information. Select the range of interfaces for bulk configuration. You can enter up to six comma-separated ranges. Spaces are not required between the commas. The ranges can include VLANs, port-channels, and physical interfaces.
  - For a port channel interface, enter the keywords `port-channel` then a number.
  - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.
  - For a Tunnel interface, enter the keyword `Tunnel` then a number from 1 to 16383.

**Defaults**
None

**Command Modes**
- CONFIGURATION

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
--- | ---
9.10(0.0) | Introduced on the S3148.
9.10(0.0) | Introduced on the S6100-ON.
9.8(2.0) | Introduced on the S3100 series.
### Version Description
- **9.8(1.0)** Introduced on the Z9100-ON.
- **9.8(0.0P2)** Introduced on the S4038-ON.
- **9.8(0.0P5)** Introduced on the S3048-ON.
- **9.7(0.0)** Introduced on the S6000-ON.
- **9.2(1.0)** Introduced on the Z9500.
- **9.0.2.0** Introduced on the S6000.
- **8.3(19.0)** Introduced on the S4820T.
- **8.3.11.1** Introduced on the Z9000.
- **8.3.7.0** Introduced on the S4810.
- **8.5.1.0** Added support for 4-port 40G line cards on the E-Series.
- **8.2.1.0** Added support for 4093 VLANs on E-Series. Prior releases supported 2094.
- **8.1.1.0** Introduced on the E-Series.
- **7.6.1.0** Introduced on the S-Series.
- **7.5.1.0** Introduced on the C-Series.
- **6.1.1.0** Introduced on the E-Series.

### Usage Information
When creating an interface range, interfaces appear in the order they are entered; they are not sorted. The command verifies that interfaces are present (physical) or configured (logical).

**Important Points to Remember:**
- Bulk configuration is created if at least one interface is valid.
- Non-existing interfaces are excluded from the bulk configuration with a warning message.
- The interface range prompt includes interface types with slot/port information for valid interfaces. The prompt allows for a maximum of 32 characters. If the bulk configuration exceeds 32 characters, it is represented by an ellipsis ( ... ).
- When the interface range prompt has multiple port ranges, the smaller port range is excluded from the prompt.
- If overlapping port ranges are specified, the port range is extended to the smallest start port and the biggest end port.

**Example (Bulk)**
```
Dell(conf)# interface range gigabitethernet 1/1 - 1/11, tengigabitethernet 3/3, gigabitethernet 3/10
% Warning: Non-existing ports (not configured) are ignored by interface-range
```

**Example (Multiple Ports)**
```
Dell(conf)# interface range gigabitethernet 2/10 - 2/23, gigabitethernet 2/12 - 2/17
Dell(conf-if-range-gi-2/10-2/23)#
```

**Example (Overlapping Ports)**
```
Dell(conf)# interface range gigabitethernet 2/3 - 2/11, gigabitethernet 2/3 - 2/23
Dell(conf-if-range-gi-2/3-2/23)#
```

**Usage Information** Only VLAN and port-channel interfaces created using the interface vlan and interface port-channel commands can be used in the interface range command.
Use the show running-config command to display the VLAN and port-channel interfaces. VLAN or port-channel interfaces that are not displayed in the show running-config command cannot be used with the bulk configuration feature of the interface range command. You cannot create virtual interfaces (VLAN, Port-channel) using the interface range command.

**NOTE:** If a range has VLAN, physical and port-channel interfaces, only commands related to physical interfaces can be bulk configured. To configure commands specific to VLAN and port-channel only those respective interfaces should be configured in a particular range.

### Example (Single Range)

This example shows a single range bulk configuration.

```
Dell(config)# interface range gigabitethernet 5/3 - 23
Dell(config-if-range-gi-5/3-5/23)# no shutdown
Dell(config-if-range-gi-5/3-5/23)#
```

### Example (Multiple Range)

This example shows how to use commas to add different interface types to a range of interfaces.

```
Dell(config-if)# interface range gigabitethernet 5/1 - 5/23, gigabitethernet 1/1 - 1/2
Dell(config-if-range-gi-1/1-1/2,gi-5/1-5/23)# no shutdown
Dell(config-if-range-gi-1/1-1/2,gi-5/1-5/23)#
```

### Example (Multiple Range)

This example shows how to use commas to add VLAN and port-channel interfaces to the range.

```
Dell(config-if)# interface range gigabitethernet 5/1 - 5/23, gigabitethernet 1/1 - 1/2,
Vlan 2-100, Port 1-25
Dell(config-if-range-gi-1/1-1/2,gi-5/1-5/23,vl-2-100,po-1-25)# no shutdown
Dell(config-if-range-gi-1/1-1/2,gi-5/1-5/23,vl-2-100,po-1-25)#
```

### Related Commands

- interface port-channel — configure a port channel group.
- interface vlan — configure a VLAN interface.
- show config (from INTERFACE RANGE mode) — display the bulk configuration interfaces.
- show range — display the bulk configuration ranges.
- interface range macro (define) — define a macro for an interface-range.

### interface range macro (define)

Defines a macro for an interface range and then saves the macro in the running configuration.

**Syntax**

```
define interface range macro name interface , interface , ...
```

**Parameters**

- **name**
  - Enter up to 16 characters for the macro name.

- **interface, interface,...**
  - Enter the keywords interface range and the interface information. Select the range of interfaces for bulk configuration. You can enter up to six comma-separated ranges. Spaces are not required between the commas. Comma-separated ranges can include VLANs, port-channels, and physical interfaces.
    - For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
    - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
For a Tunnel interface, enter the keyword tunnel then the tunnel ID. The range is from 1 to 16383.
- For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

**Defaults**

None

**Example (Single Range)**

This example shows how to define an interface range macro named test. Execute the show running-config command to display the macro definition.

```
Dell(config)# define interface-range test gigabitethernet 1/1 - 1/3,
gigabitethernet 5/1 - 5/22, gigabitethernet 3/1 - 3/8
Dell# show running-config | grep define
define interface-range test gigabitethernet 1/1 - 1/3, gigabitethernet 5/1 - 5/22,
gigabitethernet 3/1 - 3/8
Dell(config)# interface range macro test
Dell(config-if-range-gi-1/1-1/3,te-5/1-5/22,te-3/1-3/8)#
```

**Related Commands**

- `interface range` — configure a range of command (bulk configuration).
interface range macro name

Run the interface-range macro to automatically configure the pre-defined range of interfaces.

Syntax
interface range macro name

Parameters
name
Enter the name of an existing macro.

Defaults
None

9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100–ON.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.2(1.0) Introduced on the Z9500.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
8.3.7.0 Introduced on the S4810.
8.1.1.0 Introduced on the E-Series.
7.6.1.0 Introduced on the S-Series.
7.5.1.0 Introduced on the C-Series.
6.2.1.0 Introduced

Example (Single Range)
This example shows the macro named test that was defined earlier.

Dell(config)# interface range macro test
Dell(config-if-range-gi-1/1-3,gi-5/1-47,gi-2/1-89)#
Dell

Related Commands
- interface range — configure a range of command (bulk configuration).
- interface range macro (define) — define a macro for an interface range (bulk configuration).
interface vlan

Configure a VLAN. You can configure up to 4094 VLANs.

Syntax

interface vlan vlan-id [of-instance[of-id]]

Parameters

- **vlan-id**: Enter a number as the VLAN Identifier. The range is from 1 to 4094.
- **of-instance[of-id]**: Enter the keyword of-instance then the OpenFlow instance ID to add the VLAN to the specified OpenFlow instance. The range is from 1 to 8.

**NOTE:** Associate the OpenFlow instance with the VLAN when the VLAN is created. An existing VLAN cannot be associated with an OpenFlow instance.

Defaults

Not configured, except for the Default VLAN, which is configured as VLAN 1.

Command Modes

- **CONFIGURATION**

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>

Usage Information

For more information about VLANs and the commands to configure them, see Virtual LAN (VLAN) Commands.

FTP, TFTP, and SNMP operations are not supported on a VLAN. MAC ACLs and IP ACLs are supported. For more information, see Access Control Lists (ACL).

The following features are not supported on VLANs associated with an OpenFlow instance:

- IPv4
- IPv6
- MTU

If OpenFlow VLANs are configured on the switch, spanning-tree protocols cannot be enabled simultaneously.
Example (Single Range)

Dell(conf)# int vlan 3
Dell(conf-if-vl-3)#

Related Commands

- interface — configure a physical interface.
- interface loopback — configure a loopback interface.
- interface null — configure a null interface.
- interface port-channel — configure a port channel group.
- show vlan — display the current VLAN configuration on the switch.
- shutdown — disable/enable the VLAN.
- tagged — add a Layer 2 interface to a VLAN as a tagged interface.
- untagged — add a Layer 2 interface to a VLAN as an untagged interface.

**keepalive**

Send keepalive packets periodically to keep an interface alive when it is not transmitting data.

**Syntax**

```
keepalive
```

To stop sending keepalive packets, use the `no keepalive` command.

**Defaults**

Enabled.

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>
Usage Information

When you configure keepalive, the system sends a self-addressed packet out of the configured interface to verify that the far end of a WAN link is up. When you configure no keepalive, the system does not send keepalive packets and so the local end of a WAN link remains up even if the remote end is down.

**negotiation auto**

Enable auto-negotiation on an interface.

**Syntax**

```markdown
negotiation auto
```

To disable auto-negotiation, use the `no negotiation auto` command.

**Defaults**

Enabled.

**Command Modes**

INTERFACE

**Command History**

</tr>
</tbody>
</table>

**Usage Information**

This command is supported on 10/100/1000 Base-T Ethernet interfaces.

The `no negotiation auto` command is only available if you first manually set the speed of a port to 10Mbits or 100Mbits.

The `negotiation auto` command provides a `mode` option for configuring an individual port to forced-master/forced slave after you enable auto-negotiation.

**NOTE:** The `mode` option is not available on non-10/100/1000 Base-T systems.
If you do not use the `mode` option, the default setting is `slave`. If you do not configure `forced-master` or `forced-slave` on a port, the port negotiates to either a master or a slave state. Port status is one of the following:

- Forced-master
- Force-slave
- Master
- Slave
- Auto-neg Error — typically indicates that both ends of the node are configured with `forced-master` or `forced-slave`.

⚠️ **CAUTION:** Ensure that one end of your node is configured as `forced-master` and one is configured as `forced-slave`. If both are configured the same (that is, `forced-master` or `forced-slave`), the `show interfaces` command flaps between an `auto-neg-error` and `forced-master/slave` states.

**NOTE:** In S3100 series, the `negotiation auto` command is not available on the combo ports in the hybrid mode. You need to provision the combo port as copper or fiber medium using the `combo-port-type` command. See `combo-port-type`.

You can display master/slave settings with the `show interfaces` command.

**Example (Master/Slave)**

Dell(conf)# interface gigabitethernet 1/1
Dell(conf-if)# neg auto
Dell(conf-if-autoneg)# ?

- end Exit from configuration mode
- exit Exit from autoneg configuration mode
- mode Specify autoneg mode
- no Negate a command or set its defaults
- show Show autoneg configuration information

Dell(conf-if-autoneg)# mode ?

- forced-master Force port to master mode
- forced-slave Force port to slave mode

Dell(conf-if-autoneg)#

**Example (Configured)**

Dell# show interfaces configured
GigabitEthernet 1/18 is up, line protocol is up
Hardware is Force10Eth, address is 00:01:e8:05:f7:fc
  Current address is 00:01:e8:05:f7:fc
  Interface index is 474791997
  Internet address is 1.1.1.1/24
  MTU 1554 bytes, IP MTU 1500 bytes
  LineSpeed 1000 Mbit, Mode full duplex, Master
  ARP type: ARPA, ARP Timeout 04:00:00
  Last clearing of "show interfaces" counters 00:12:42
  Queueing strategy: fifo
  Input Statistics: ...

**User Information**

Both sides of the link must have auto-negotiation enabled or disabled for the link to come up.

The following details the possible speed and auto-negotiation combinations for a line between two 10/100/1000 Base-T Ethernet interfaces.

**Port 0**

- auto-negotiation enabled* speed 1000 or auto
- auto-negotiation enabled speed 100
- auto-negotiation disabled speed 100
- auto-negotiation disabled speed 100
- auto-negotiation enabled* speed 1000 or auto

**Port 1**
- auto-negotiation enabled* speed 1000 or auto
- auto-negotiation enabled speed 100
- auto-negotiation disabled speed 100
- auto-negotiation enabled speed 100
- auto-negotiation disabled speed 100

**Link Status Between Port 1 and Port 2**
- Up at 1000 Mb/s
- Up at 100 Mb/s
- Up at 100 Mb/s
- Down
- Down

* You cannot disable auto-negotiation when the speed is set to 1000 or auto.

**monitor interface**

Monitor counters on a single interface or all interfaces. The screen is refreshed every five seconds and the CLI prompt disappears.

**Syntax**

```
monitor interface [interface]
```

To disable monitoring and return to the CLI prompt, press the `q` key.

**Parameters**

- **interface** (OPTIONAL) Enter the following keywords and the interface information:
  - For the Management interface on the stack-unit, enter the keyword `managementEthernet` then the slot/port information.
  - For a port channel interface, enter the keyword `port-channel` and then a number.
  - For a Tunnel interface, enter the keyword `tunnel` then the slot/port. The range is from 1 to 16383.
  - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

**mtu**

Set the link maximum transmission unit (MTU) (frame size) for an Ethernet interface.

**Syntax**

```
mtu value
```

To return to the default MTU value, use the `no mtu` command.

**Parameters**

- `value` Enter a maximum frame size in bytes. The range is from 594 to 12000.

**Defaults**

1554

</tbody>
</table>

**Usage Information**

If the packet includes a Layer 2 header, the difference between the link MTU and IP MTU (ip mtu command) must be enough bytes to include the Layer 2 header.

When you enter the `no mtu` command, Dell Networking OS reduces the IP MTU value to 1536 bytes.

Link MTU and IP MTU considerations for port channels and VLANs are as follows.

**port channels:**

- All members must have the same link MTU value and the same IP MTU value.
The port channel link MTU and IP MTU must be less than or equal to the link MTU and IP MTU values configured on the channel members. For example, if the members have a link MTU of 2100 and an IP MTU 2000, the port channel’s MTU values cannot be higher than 2100 for link MTU or 2000 bytes for IP MTU.

**VLANs:**

- All members of a VLAN must have same IP MTU value.
- Members can have different Link MTU values. Tagged members must have a link MTU 4 bytes higher than untagged members to account for the packet tag.
- The VLAN link MTU and IP MTU must be less than or equal to the link MTU and IP MTU values configured on the VLAN members. For example, the VLAN contains tagged members with Link MTU of 1522 and IP MTU of 1500 and untagged members with Link MTU of 1518 and IP MTU of 1500. The VLAN’s Link MTU cannot be higher than 1518 bytes and its IP MTU cannot be higher than 1500 bytes.

The following shows the difference between Link MTU and IP MTU.

<table>
<thead>
<tr>
<th>Layer 2 Overhead</th>
<th>Link MTU and IP MTU Delta</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ethernet (untagged)</td>
<td>18 bytes</td>
</tr>
<tr>
<td>VLAN Tag</td>
<td>22 bytes</td>
</tr>
<tr>
<td>Untagged Packet with VLAN-Stack Header</td>
<td>22 bytes</td>
</tr>
<tr>
<td>Tagged Packet with VLAN-Stack Header</td>
<td>26 bytes</td>
</tr>
</tbody>
</table>

`portmode hybrid`

To accept both tagged and untagged frames, set a physical port or port-channel. A port configured this way is identified as a hybrid port in report displays.

**Syntax**

```
portmode hybrid
```

To return a port to accept either tagged or untagged frames (non-hybrid), use the `no portmode hybrid` command.

**Defaults**

Non-hybrid

**Command Modes**

Interface

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>

**Usage Information**

The following describes the `interface` command shown in the following example. This example sets a port as hybrid, makes the port a tagged member of VLAN 20, and an untagged member of VLAN 10, which becomes the native VLAN of the port. The port now accepts:

- untagged frames and classify them as VLAN 10 frames
- VLAN 20 tagged frames

The following describes the `do show interfaces` command shown in the following example. This example shows output with “Hybrid” as the newly added value for 802.1QTagged. The options for this field are:

- True — port is tagged
- False — port is untagged
- Hybrid — port accepts both tagged and untagged frames

The following describes the `interface vlan` command shown in the following example. This example shows unconfiguration of the hybrid port using the `no portmode hybrid` command.

**Example**

```
Dell(conf)# interface gigabitethernet 1/1
Dell(conf-if-gi-1/1)# portmode hybrid
Dell(conf-if-gi-1/1)# interface vlan 10
Dell(conf-if-vl-10)# untagged gigabitethernet 1/1
Dell(conf-if-vl-10)# interface vlan 20
Dell(conf-if-vl-20)# tagged gigabitethernet 1/1
Dell(conf-if-vl-20)#
```

**Example**

```
Dell(conf-if-vl-20)# do show interfaces switchport
Name: GigabitEthernet 1/1
802.1QTagged: Hybrid
Vlan membership:
 Vlan  10,   Vlan 20
Native VlanId: 10
Dell(conf-if-vl-20)#
```

**Example (Vlan)**

```
Dell(conf-if-vl-20)# interface vlan 10
Dell(conf-if-vl-10)# no untagged gigabitethernet 1/1
Dell(conf-if-vl-10)# interface vlan 20
Dell(conf-if-vl-20)# no tagged gigabitethernet 1/1
Dell(conf-if-vl-20)# interface gigabitethernet 1/1
Dell(conf-if-gi-1/1)# no portmode hybrid
Dell(conf-if-vl-20)#
```
rate-interval

Configure the traffic sampling interval on the selected interface.

Syntax

rate-interval seconds

Parameters

seconds  Enter the number of seconds for which to collect traffic data. The range is from 5 to 299 seconds.

*NOTE:* Because polling occurs every 15 seconds, the number of seconds designated here rounds to the multiple of 15 seconds lower than the entered value. For example, if 44 seconds is designated, it rounds to 30; 45 to 59 seconds rounds to 45.

Defaults

299 seconds

<tr>
<td>6.1.1.0</td>
<td>Introduced</td>
</tr>
</tbody>
</table>

Usage Information

The output of the show interfaces command displays the configured rate interval, along with the collected traffic data.
rate-interval (Configuration Mode)

Configure the traffic sampling interval for all physical and logical port-channel interfaces globally. The support to configure rate-interval globally enables you to modify the default interval rate for all physical and logical interfaces at one time.

**Syntax**

```
rate-interval seconds
```

Use the `no rate-interval` command to remove the sampling interval configuration.

**Parameters**

- **seconds**
  - Enter the number of seconds for which to collect traffic data. The range is from 5 to 299 seconds.

  **NOTE:** Because polling occurs every 15 seconds, the number of seconds designated here round to the multiple of 15 seconds lower than the entered value. For example, if 44 seconds is designated, it rounds to 30; 45 to 59 seconds rounds to 45. If you configure this value to be less than 5, then the entire buffer is cleared; the `show int stats` command shows the rate information to be 0 as the polling interval is less than 5.

**Defaults**

299 seconds

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.11.0.0</td>
<td>Introduced on all Dell Networking OS platforms.</td>
</tr>
</tbody>
</table>

**Usage Information**

The output of the `show interfaces` command displays the configured rate interval, along with the collected traffic data.

When rate-interval is not configured in the global configuration mode or interface mode, the default value of 299 seconds is applied.

When rate-interval is configured only in the global configuration mode and not in the interface mode, the global rate-interval value is applied at the interface level also.

When rate-interval is configured at the interface level and not in the global configuration mode, the interface level rate-interval value is applied for an interface.

When rate interval is configured in both global configuration mode as well as interface mode, then the rate-interval value configured at interface level is applied as it takes precedence over the global value.

**show config**

Display the interface configuration.

**Syntax**

```
show config
```

**Command Modes**

INTERFACE
**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

## show hardware

Display the hardware counters on a specified interface or on a specified stack unit.

**Syntax**

```
show hardware {counters interface interface-type slot/port | stack-unit stack-unit-number unit unit-number counters}
```

**Parameters**

- **counters**
  - Enter the keyword **counters** to display the counters on a specified interface.
- **interface**
  - Enter the keyword **interface** followed by the interface information and the slot/port number.
- **stack-unit**
  - Enter the keyword **stack-unit** followed by a stack unit-number to display the counters on a specified stack unit.
- **unit**
  - Enter the keyword **unit** followed by a unit-number.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.11(0.0)</td>
<td>Introduced on the S3048-ON.</td>
</tr>
</tbody>
</table>
Version Description
9.10(0.1) Introduced on the S3100 series, S4820T, and S5000.

Usage Information
Use the show hardware counters interface interface-type slot/port to view the hardware counters on the specified interface.

Use the show hardware stack-unit stack-unit-number unit unit-number counters to view the hardware counters on the specified stack unit.

Example
Dell#show hardware counters interface gigabitethernet 10/1
unit: 0 port: 1 (interface Gi 10/1)

Related Commands

• show interfaces — display information on a specific physical interface or virtual interface.

show interfaces

Display information on a specific physical interface or virtual interface.

Syntax

show interfaces interface-type[-range]

Parameters

- interface
  - Enter one of the following keywords and the interface information:
    - For a Loopback interface, enter the keyword loopback then a number from 0 to 16383.
    - For stack-units, enter the keywords stack-unit then the slot/port information.
    - For a Null interface, enter the keyword null then the Null interface number.
    - For a port channel interface, enter the keywords port-channel then a number.
    - For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
    - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
    - For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.
    - For a tunnel interface, enter the keyword tunnel then the tunnel ID. The range is from 1 to 16383.

- range
  - (Optional) Enter the range of interfaces for which you want to view the information. The format is interface-type slot/port-slot/port

Command Modes

• EXEC
• EXEC Privilege

Command History

</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>9.2(0.2)</td>
<td>Added support for the tunnel interface type.</td>
</tr>
<tr>
<td>9.1(0.0)</td>
<td>Updated Management Ethernet output to include two global IPv6 addresses on S4810 and Z9000 and added output example showing OpenFlow instance ID.</td>
</tr>
<tr>
<td>8.3.12.1</td>
<td>Updated command output to support multiple IPv6 addresses on S4810.</td>
</tr>
<tr>
<td>8.3.11.4</td>
<td>Output expanded to support eSR4 optics in Z9000.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.5.1.0</td>
<td>Added support for 4-port 40G line cards on the E-Series.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.2.1.2</td>
<td>Included SFP and SFP+ optics power detail in the E-Series and C-Series output.</td>
</tr>
<tr>
<td>8.2.1.0</td>
<td>Added support for 4093 VLANs on the E-Series. Prior releases supported 2094.</td>
</tr>
<tr>
<td>8.1.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Output expanded to include SFP+ media on the C-Series.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>6.4.1.0</td>
<td>Changed the organization of the display output.</td>
</tr>
<tr>
<td>6.3.1.0</td>
<td>Added the Pluggable Media Type field in the E-Series output.</td>
</tr>
</tbody>
</table>

Usage Information

Use the `show interfaces` command for details on a specific interface.
NOTE: In the CLI output, the power value is rounded to a 3-digit value. For receive/transmit power that is less than 0.000, an `snmp query` returns the corresponding dbm value even though the CLI displays as 0.000.

NOTE: After the counters are cleared, the line-rate continues to increase until it reaches the maximum line rate. When the maximum line rate is reached, there is no change in the line-rate.

The following table describes the `show interfaces` command shown in the 10G example.

<table>
<thead>
<tr>
<th>Line</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>TenGigabitEthernet 1/1</td>
<td>Interface type and administrative and line protocol status.</td>
</tr>
<tr>
<td>Hardware is...</td>
<td>Interface hardware information, assigned MAC address, and current address.</td>
</tr>
<tr>
<td>Pluggable media present...</td>
<td>Present pluggable media wavelength, type, and rate. The error scenarios are:</td>
</tr>
<tr>
<td></td>
<td>• Wavelength, Non-qualified — Dell ID is not present, but wavelength information is available from XFP or SFP serial data</td>
</tr>
<tr>
<td></td>
<td>• Wavelength, F10 unknown — Dell ID is present, but not able to determine the optics type</td>
</tr>
<tr>
<td></td>
<td>• Unknown, Non-qualified — if wavelength is reading error, and F10 ID is not present</td>
</tr>
</tbody>
</table>

Dell Networking allows unsupported SFP and XFP transceivers to be used, but Dell Networking OS might not be able to retrieve some data about them. In that case, typically when the output of this field is "Pluggable media present, Media type is unknown", the Medium and the XFP/SFP receive power reading data might not be present in the output.

<table>
<thead>
<tr>
<th>Interface index...</th>
<th>Displays the interface index number the SNMP uses to identify the interface.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Internet address...</td>
<td>States whether an IP address is assigned to the interface. If an IP address is assigned, that address is displayed.</td>
</tr>
<tr>
<td>MTU 1554...</td>
<td>Displays link and IP MTU information.</td>
</tr>
<tr>
<td>LineSpeed</td>
<td>Displays the interface’s line speed, duplex mode, and negotiation mode.</td>
</tr>
<tr>
<td>Energy Efficient Ethernet</td>
<td>Displays whether Energy Efficient Ethernet has been enabled or not.</td>
</tr>
<tr>
<td>ARP type...</td>
<td>Displays the ARP type and the ARP timeout value for the interface.</td>
</tr>
<tr>
<td>Last clearing...</td>
<td>Displays the time when the <code>show interfaces</code> counters where cleared.</td>
</tr>
<tr>
<td>Queuing strategy...</td>
<td>States the packet queuing strategy. FIFO means first in first out.</td>
</tr>
<tr>
<td>Input Statistics:</td>
<td>Displays all the input statistics including:</td>
</tr>
<tr>
<td></td>
<td>• Number of packets and bytes into the interface</td>
</tr>
<tr>
<td></td>
<td>• Number of packets with VLAN tagged headers</td>
</tr>
<tr>
<td></td>
<td>• Packet size and the number of those packets inbound to the interface</td>
</tr>
<tr>
<td></td>
<td>• Number of Multicast and Broadcast packets:</td>
</tr>
<tr>
<td></td>
<td>• Multicasts = number of MAC multicast packets</td>
</tr>
<tr>
<td></td>
<td>• Broadcasts = number of MAC broadcast packets</td>
</tr>
<tr>
<td></td>
<td>• Number of runts, giants, and throttles packets:</td>
</tr>
<tr>
<td></td>
<td>• runts = number of packets that are less than 64B</td>
</tr>
<tr>
<td></td>
<td>• giants = packets that are greater than the MTU size</td>
</tr>
<tr>
<td></td>
<td>• throttles = packets containing PAUSE frames</td>
</tr>
<tr>
<td></td>
<td>• Number of CRC, overrun, and discarded packets:</td>
</tr>
<tr>
<td>Line</td>
<td>Description</td>
</tr>
<tr>
<td>-----------------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td></td>
<td>• CRC = packets with CRC/FCS errors</td>
</tr>
<tr>
<td></td>
<td>• overrun = number of packets discarded due to FIFO overrun conditions</td>
</tr>
<tr>
<td></td>
<td>• discarded = the sum of runts, giants, CRC, and overrun packets discarded without any processing</td>
</tr>
</tbody>
</table>

**Output Statistics:** Displays output statistics sent out of the interface including:

- Number of packets, bytes, and underruns out of the interface
- Packet size and the number of the packets outbound to the interface
- Number of Multicast, Broadcast, and Unicast packets:
  - Multicasts = number of MAC multicast packets
  - Broadcasts = number of MAC broadcast packets
  - Unicasts = number of MAC unicast packets
- Number of VLANs, throttles, discards, and collisions:
  - Vlans = number of VLAN tagged packets
  - throttles = packets containing PAUSE frames
  - discarded = number of packets discarded without any processing
  - collisions = number of packet collisions
  - wred=count both packets discarded in the MAC and in the hardware-based queues

**Rate information...** Estimate of the input and output traffic rate over a designated interval (30 to 299 seconds). Traffic rate is displayed in bits, packets per second, and percent of line rate.

**Time since...** Elapsed time since the last interface status change (hh:mm:ss format).

**Example**

```
Dell# show interfaces
GigabitEthernet 2/1 is down, line protocol is down
Hardware is DellForce10Eth, address is 00:01:e8:8b:3d:e7
Current address is 00:01:e8:8b:3d:e7
Pluggable media present, Media type is unknown
Wavelength unknown
Interface index is 100992002
Internet address is not set
MTU 1554 bytes, IP MTU 1500 bytes
LineSpeed auto
Flowcontrol rx on tx off
ARP type: ARPA, ARP Timeout 04:00:00
Energy Efficient Ethernet : Yes
Last clearing of "show interface" counters 3d17h53m
Queueing strategy: fifo
Input Statistics:
  0 packets, 0 bytes
  0 64-byte pkts, 0 over 64-byte pkts, 0 over 127-byte pkts
  0 over 255-byte pkts, 0 over 511-byte pkts, 0 over 1023-byte pkts
  0 Multicasts, 0 Broadcasts
  0 runts, 0 giants, 0 throttles
  0 CRC, 0 overrun, 0 discarded
Output Statistics:
  0 packets, 0 bytes, 0 underruns
  0 64-byte pkts, 0 over 64-byte pkts, 0 over 127-byte pkts
  0 over 255-byte pkts, 0 over 511-byte pkts, 0 over 1023-byte pkts
  0 Multicasts, 0 Broadcasts, 0 Unicasts
  0 throttles, 0 discarded, 0 collisions, 0 wreddrops
Rate info (interval 299 seconds):
  Input 00.00 Mbits/sec, 0 packets/sec, 0.00% of line-rate
```
Usage Information

The Management port is enabled by default (no shutdown). If necessary, use the ip address command to assign an IP address to the Management port. If two RPMs are installed in your system, use the show redundancy command to display which RPM is the Primary RPM.

Example

Dell# show interfaces gigabitethernet 1/1
GigabitEthernet 1/1 is up, line protocol is down
Hardware is Force10Eth, address is 00:01:e8:41:77:95
  Current address is 00:01:e8:41:77:95
  Pluggable media present, SFP type is 1000BASE-SX
  Wavelength is 850nm
Interface index is 100974648
Port will not be disabled on partial SFM failure
Internet address is not set
MTU 1554 bytes, IP MTU 1500 bytes
LineSpeed 1000 Mbit
Flowcontrol rx on tx on
Energy Efficient Ethernet : Yes
ARP type: ARPA, ARP Timeout 04:00:00
Last clearing of "show interface" counters 1w0d5h
Queueing strategy: fifo
Input Statistics:
  0 packets, 0 bytes
  0 Vlans
  0 64-byte pkts, 0 over 64-byte pkts, 0 over 127-byte pkts
  0 over 255-byte pkts, 0 over 511-byte pkts, 0 over 1023-byte pkts
  0 Multicasts, 0 Broadcasts
  0 runts, 0 giants, 0 throttles
  0 CRC, 0 overrun, 0 discarded
Output Statistics:
  0 packets, 0 bytes, 0 underruns
  0 64-byte pkts, 0 over 64-byte pkts, 0 over 127-byte pkts
  0 over 255-byte pkts, 0 over 511-byte pkts, 0 over 1023-byte pkts
  0 Multicasts, 0 Broadcasts, 0 Unicasts
  0 Vlans, 0 throttles, 0 discarded, 0 collisions, 0 wreddrops
Rate info (interval 299 seconds):
  Input 00.00 Mbits/sec, 0 packets/sec, 0.00% of line-rate
  Output 00.00 Mbits/sec, 0 packets/sec, 0.00% of line-rate
Time since last interface status change: 1w0d5h
Dell#

Example (Management Ethernet)

Dell# show interfaces managementethernet 1/1
ManagementEthernet 1/1 is up, line protocol is up
Hardware is Force10Eth, address is 00:01:e8:0b:a9:4c
  Current address is 00:01:e8:0b:a9:4c
Pluggable media not present
Interface index is 503595208
Internet address is 10.11.201.5/16
Link local IPv6 address: fe80::201:e8ff:fe0b:a94c/64
Global IPv6 address: 2222::5/64
Virtual-IP is not set
Virtual-IP IPv6 address is not set
MTU 1554 bytes, IP MTU 1500 bytes
LineSpeed 10 Mbit, Mode full duplex
ARP type: ARPA, ARP Timeout 04:00:00
Last clearing of "show interface" counters 04:01:08
Queueing strategy: fifo
  Input 943 packets, 78347 bytes, 190 multicast
  Received 0 errors, 0 discarded
  Output 459 packets, 102388 bytes, 15 multicast
  Output 0 errors, 0 invalid protocol
Time since last interface status change: 00:03:09
Example (Management Ethernet, two IPv6 addresses)

Dell# show interfaces managementethernet 1/1

ManagementEthernet 1/1 is up, line protocol is up

Hardware is DellForce10Eth, address is 00:01:e8:a0:bf:f3
Current address is 00:01:e8:a0:bf:f3
Pluggable media not present

Interface index is 302006472
Internet address is 10.16.130.5/16
Link local IPv6 address: fe80::201:e8ff:fea0:bff3/64
Global IPv6 address: 1::1/
Global IPv6 address: 2::1/64
Virtual-IP is not set
Virtual-IP IPv6 address is not set

MTU 1554 bytes, IP MTU 1500 bytes
LineSpeed 1000 Mbit, Mode full duplex
ARP type: ARPA, ARP Timeout 04:00:00
Last clearing of "show interface" counters 00:06:14

Queueing strategy: fifo
Input 791 packets, 62913 bytes, 775 multicast
Received 0 errors, 0 discarded
Output 21 packets, 3300 bytes, 20 multicast
Output 0 errors, 0 invalid protocol
Time since last interface status change: 00:06:03

Example (OpenFlow instance)

Dell# show interfaces vlan 6

Vlan 6 is down, line protocol is down
Address is 00:01:e8:8a:e1:8c, Current address is 00:01:e8:8a:e1:8c
Interface index is 1107525638
of-instance: 2
Internet address is not set
MTU 1554 bytes, IP MTU 1500 bytes
LineSpeed auto

ARP type: ARPA, ARP Timeout 04:00:00

Last clearing of "show interface" counters 00:05:12

Queueing strategy: fifo

Time since last interface status change: 00:05:12

Related Commands

• show interfaces configured – display any interface with a non-default configuration.

• show ip interface – display Layer 3 information about the interfaces.

• show range – display all interfaces configured using the interface range command.

show interfaces configured

Display any interface with a non-default configuration.

Syntax

show interfaces configured

Command Modes

• EXEC

• EXEC Privilege

   Output 00.00 Mbits/sec, 0 packets/sec, 0.00% of line-rate
   Time since last interface status change: 00:04:59
Dell#

**show interfaces dampening**

Display interface dampening information.

**Syntax**

```plaintext
show interfaces dampening [[interface] [summary] [detail]]
```

**Parameters**

- `interface` (Optional) Enter one of the following keywords and the interface information:
  - For a port channel interface, enter the keywords `port-channel` then a number.
  - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

**NOTE:** This command also enables you to view information corresponding to a range of ports. However, for Open Networking (ON) platforms the notation for specifying port range in the command is different from how you specify in non-ON platforms.

- For non-ON platforms, you can specify multiple ports as `slot/port-range`. For example, if you want to display information corresponding to all ports between 1 and 4, specify the port range as `show interfaces interface-type 1/1 - 4`.
- For ON platforms, you can specify multiple ports as `slot/port/[subport] - slot/port/[subport]`. For example, if you want to display information...
corresponding to all ports between 1 and 4, specify the port range as `show interfaces interface-type 1/1/1 - 1/1/4`.

**summary**

(Optional) Enter the keyword **summary** to display the current summary of dampening data, including the number of interfaces configured and the number of interfaces suppressed, if any.

**detail**

(Optional) Enter the keyword **detail** to display detailed interface dampening data.

**Defaults**

None

**Command Modes**

EXEC

**Command History**

**Related Commands**

- `dampening` — configure dampening on an interface.
- `show interfaces configured` — display any interface with a non-default configuration.
**show interfaces eee**

Display whether EEE is enabled on interfaces.

**Syntax**

```
show interfaces [interface-type [slot/port | slot/port-range]] eee
```

**Parameters**

- `interface-type` Enter the interface information as GigabitEthernet or TenGigabitEthernet followed by the slot and the port number or range of port numbers.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.11(0.0)</td>
<td>Introduced on the S3048-ON.</td>
</tr>
<tr>
<td>9.10(0.1)</td>
<td>Introduced on the S3100 series, S4820T, and S5000.</td>
</tr>
</tbody>
</table>

**Usage Information**

The `show interfaces eee` command displays whether EEE has been enabled and shows the status of all the interfaces.

Use the `show interfaces interface-type slot/port eee` command to view the status of EEE on the specified port.

Use the `show interfaces interface-type slot/port-range eee` command to view the status of EEE on the specified range of ports.

**Example**

Example for all the interfaces:

**S3100 Series**

```
Dell#show interfaces eee
Interface       EEE Status  Speed  Duplex
GigabitEthernet 1/1  Yes down  Auto   Auto
GigabitEthernet 1/2  Yes down  Auto   Auto
GigabitEthernet 1/3  Yes down  Auto   Auto
GigabitEthernet 1/4  Yes down  Auto   Auto
GigabitEthernet 1/5   Yes down  Auto   Auto
GigabitEthernet 1/6   Yes down  Auto   Auto
GigabitEthernet 1/7   Yes down  Auto   Auto
GigabitEthernet 1/8   Yes down  Auto   Auto
GigabitEthernet 1/9   Yes down  Auto   Auto
GigabitEthernet 1/10  Yes down  Auto   Auto
GigabitEthernet 1/11  Yes down  Auto   Auto
GigabitEthernet 1/12  Yes down  Auto   Auto
GigabitEthernet 1/13  Yes down  Auto   Auto
GigabitEthernet 1/14  Yes down  Auto   Auto
GigabitEthernet 1/15  Yes down  Auto   Auto
GigabitEthernet 1/16  Yes down  Auto   Auto
GigabitEthernet 1/17  Yes down  Auto   Auto
GigabitEthernet 1/18  Yes down  Auto   Auto
GigabitEthernet 1/19  Yes down  Auto   Auto
GigabitEthernet 1/20  Yes down  Auto   Auto
GigabitEthernet 1/21  Yes down  Auto   Auto
```
Example for a specific interface:

**S3100 Series**

Dell#show interfaces gigabitethernet 1/1 eee

<table>
<thead>
<tr>
<th>Interface</th>
<th>EEE Status</th>
<th>Speed</th>
<th>Duplex</th>
</tr>
</thead>
<tbody>
<tr>
<td>GigabitEthernet 1/1</td>
<td>Yes down</td>
<td>Auto</td>
<td>Auto</td>
</tr>
</tbody>
</table>

Related Commands

- show interfaces — display information on a specific physical interface or virtual interface.

**show interfaces eee statistics**

Display the statistical details of Energy Efficient Ethernet (EEE).

**Syntax**

```
show interfaces [interface-type [slot/port | slot/port-range]] eee statistics
```

**Parameters**

- `interface-type` Enter the interface information as GigabitEthernet or TenGigabitEthernet followed by the slot and the port number or range of port numbers.

**Defaults**

None

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version**

- 9.11(0.0) Introduced on the S3048–ON.
- 9.10(0.1) Introduced on the S3100 series, S4820T, and S5000.

**Usage Information**

The `show interfaces eee statistics` command displays the statistics of Energy Efficient Ethernet (EEE) on all interfaces.

Use the `show interfaces interface-type slot/port eee statistics` command to view the statistics of EEE on the specified port.

Use the `show interfaces interface-type slot/port-range eee statistics` command to view the statistics of EEE on the specified range of ports.

**Example**

**S3100 Series**

Dell#show interfaces eee statistics

<table>
<thead>
<tr>
<th>Port</th>
<th>EEE</th>
<th>LPI</th>
<th>TxLPIEventCount</th>
<th>TxLPIDuration</th>
<th>RxLPIEventCount</th>
</tr>
</thead>
</table>
### Example for a specific interface

#### S3100 Series

Dell#show interfaces gigabitethernet 1/1 eee statistics

<table>
<thead>
<tr>
<th>Port</th>
<th>EEE</th>
<th>LPI</th>
<th>TxEELPIEventCount</th>
<th>TxEELPDuration</th>
<th>RxLPIEventCount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Gi 1/1</td>
<td>Yes</td>
<td>Yes</td>
<td>0</td>
<td>0</td>
<td>0</td>
</tr>
</tbody>
</table>

**Related Commands**
- **show interfaces** — display information on a specific physical interface or virtual interface.

### show interfaces phy

Display auto-negotiation and link partner information.

**Syntax**

```
show interfaces gigabitethernet slot/port phy
```

**Parameters**

- `gigabitethernet` Enter the keyword `gigabitethernet` then the slot/port information.
- `tengigabitethernet` Enter the keyword `tengigabitethernet` then the slot or port information.

**NOTE:** This command also enables you to view information corresponding to a range of ports. However, for Open Networking (ON) platforms the notation for specifying port range in the command is different from how you specify in non-ON platforms.

- For non-ON platforms, you can specify multiple ports as `slot/port-range`. For example, if you want to display information corresponding to all ports between 1 and 4, specify the port range as `show interfaces interface-type 1/1 - 4`.
- For ON platforms, you can specify multiple ports as `slot/port/([subport]) - slot/port/[subport]`. For example, if you want to display information
corresponding to all ports between 1 and 4, specify the port range as `show interfaces interface-type 1/1/1 - 1/1/4`.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<tr>
<td>8.1.1.0</td>
<td>Introduced on the C-Series and S-Series.</td>
</tr>
<tr>
<td>6.5.4.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

The following describes the `show interfaces gigabitethernet` command following example.

- **Mode Control**: Indicates if auto negotiation is enabled. If so, indicates the selected speed and duplex.
- **Mode Status**: Displays auto negotiation fault information. When the interface completes auto negotiation successfully, the `autoNegComplete` field and the `linkstatus` field read “True.”
- **AutoNegotiation Advertise**: Displays the control words the local interface advertises during negotiation. Duplex is either half or full. Asym- and Sym Pause is the types of flow control the local interface supports.
- **AutoNegotiation Remote Partner's Ability**: Displays the control words the remote interface advertises during negotiation. Duplex is either half or full. Asym- and Sym Pause is the types of flow control the remote interface supports.
- **AutoNegotiation Expansion**: ParallelDetectionFault is the handshaking scheme in which the link partner continuously transmit an “idle” data packet using the Fast Ethernet MLT-3 waveform. Equipment that does not support auto-negotiation must be configured to exactly match the mode of operation as the link partner or else no link can be established.
- **1000Base-T Control**: 1000Base-T requires auto-negotiation. The IEEE Ethernet standard does not support setting a speed to 1000 Mbps with the `speed` command without auto-negotiation. E-Series line cards support both full-duplex and half-duplex 1000BaseT.
### Phy Specific Control  Values are:
- 0 - Manual MDI
- 1 - Manual MDIX
- 2 - N/A
- 3 - Auto MDI/MDIX

### Phy Specific Status  Displays PHY-specific status information. Cable length represents a rough estimate in meters:
- 0 - < 50 meters
- 1 - 50 - 80 meters
- 2 - 80 - 110 meters
- 3 - 110 - 140 meters
- 4 - 140 meters

Link Status: Up or Down

Speed:
- Auto
- 1000MB
- 100MB
- 10MB

### Example

Dell# show interfaces gigabitethernet 1/1 phy

Mode Control:
- SpeedSelection: 10b
- AutoNeg: ON
- Loopback: False
- PowerDown: False
- Isolate: False
- DuplexMode: Full

Mode Status:
- AutoNegComplete: False
- RemoteFault: False
- LinkStatus: False
- JabberDetect: False

AutoNegotiation Advertise:
- 100MegFullDpdx: True
- 100MegHalfDpdx: True
- 10MegFullDpdx: False
- 10MegHalfDpdx: True
- Asym Pause: False
- Sym Pause: False

AutoNegotiation Remote Partner’s Ability:
- 100MegFullDpdx: False
- 100MegHalfDpdx: False
- 10MegFullDpdx: False
- 10MegHalfDpdx: False
- Asym Pause: False
- Sym Pause: False

AutoNegotiation Expansion:
- ParallelDetectionFault: False
...
show interfaces stack-unit

Display information on all interfaces on a specific S-Series or Z-Series stack member.

Syntax

show interfaces stack-unit unit-number

Parameters

  unit-number Enter the stack member number.

Command Modes

  • EXEC
  • EXEC Privilege

Command History

Example

Dell# show interfaces stack-unit 1
GigabitEthernet 1/1 is down, line protocol is down
Hardware is Force10Eth, address is 00:01:e8:4c:f2:82
  Current address is 00:01:e8:4c:f2:82
Pluggable media not present
Interface index is 34129154
Internet address is not set
MTU 1554 bytes, IP MTU 1500 bytes
LineSpeed auto, Mode auto
ARP type: ARPA, ARP Timeout 04:00:00
Last clearing of "show interface" counters 3w0d17h
Queueing strategy: fifo
Input Statistics:
  0 packets, 0 bytes
  5144 64-byte pkts, 0 over 64-byte pkts, 0 over 127-byte pkts
  0 over 255-byte pkts, 0 over 511-byte pkts, 0 over 1023-byte pkts
  0 Multicasts, 0 Broadcasts
  0 runts, 0 giants, 0 throttles
  0 CRC, 0 overrun, 0 discarded
Output Statistics:
- 0 packets, 0 bytes, 0 underruns
- 0 64-byte pkts, 0 over 64-byte pkts, 0 over 127-byte pkts
- 0 over 255-byte pkts, 0 over 511-byte pkts, 0 over 1023-byte pkts
- 0 Multicasts, 0 Broadcasts, 0 Unicasts
- 0 throttles, 0 discarded, 0 collisions

Rate info (interval 299 seconds):
- Input 00.00 Mbits/sec, 0 packets/sec, 0.00% of line-rate
- Output 00.00 Mbits/sec, 0 packets/sec, 0.00% of line-rate

Time since last interface status change: 3w0d17h
GigabitEthernet 1/2 is down, line protocol is down
Hardware is Force10Eth, address is 00:01:e8:4c:f2:83
Current address is 00:01:e8:4c:f2:83

Related Commands
- show hardware stack-unit — display data plane and management plane input/output statistics.

show interfaces status

To display status information on a specific interface only, display a summary of interface information or specify a stack-unit slot and interface.

Syntax

Parameters

- interface (OPTIONAL) Enter one of the following keywords the interface information:
  - For a port channel interface, enter the keywords port-channel then a number.
  - For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

- stack-unit slot-number (OPTIONAL) Enter the keyword stack-unit then the slot number. The range is from 0 to 5.

Defaults

None

Command Modes

- EXEC
- EXEC Privilege

NOTE: This command also enables you to view information corresponding to a range of ports. However, for Open Networking (ON) platforms the notation for specifying port range in the command is different from how you specify in non-ON platforms.

- For non-ON platforms, you can specify multiple ports as slot/port-range. For example, if you want to display information corresponding to all ports between 1 and 4, specify the port range as show interfaces interface-type 1/1 - 4.
- For ON platforms, you can specify multiple ports as slot/port/[subport] - slot/port/[subport]. For example, if you want to display information corresponding to all ports between 1 and 4, specify the port range as show interfaces interface-type 1/1/1 - 1/1/4.

Gi 1/16 Down       Auto     Auto  --
Dell#  
```
show interfaces switchport

Display only virtual and physical interfaces in Layer 2 mode. This command displays the Layer 2 mode interfaces’ IEEE 802.1Q tag status and VLAN membership.

Syntax

```
show interfaces switchport [interface-type | stack-unit unit-id ]
```

Parameters

- **interface-type** (OPTIONAL) Enter one of the following keywords and the interface information:
  - For a port channel interface, enter the keywords `port-channel` then a number.
  - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a backup interface for this interface, enter the keyword `backup`.

  **NOTE:** This command also enables you to view information corresponding to a range of ports.
  - For physical interfaces, you can specify multiple ports as `slot/port-range`. For example, if you want to display information corresponding to all ports between 1 and 4, specify the port range as `show interfaces interface-type 1/1 - 4`.
  - For port-channel interfaces, you can specify multiple ports as `port-range`. For example, if you want to display information corresponding to all ports between 1 and 4, specify the port range as `show interfaces port-channel 1 - 4`.

- **stack-unit unit-id** (OPTIONAL) Enter the keywords `stack-unit` then the stack member number.

Command Modes

- EXEC
- EXEC Privilege

</tbody>
</table>
### Version Description

- **8.3.19.0**
  Introduced on the S4820T.
- **8.3.11.1**
  Introduced on the Z9000.
- **8.3.7.0**
  Introduced on the S4810.
- **8.5.1.0**
  Added support for 4-port 40G line cards on the E-Series.
- **8.2.1.0**
  Added support for 4093 VLANs on E-Series.
- **8.1.1.0**
  Introduced on the E-Series.
- **7.6.1.0**
  Support added for hybrid port/native VLAN, introduced on the S-Series.
- **7.5.1.0**
  Introduced on the C-Series.

### E-Series legacy command

#### Usage Information

The following describes the `show interfaces switchport` command for the following example.

<table>
<thead>
<tr>
<th>Items</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Name</td>
<td>Displays the interface's type, slot/port number.</td>
</tr>
<tr>
<td>802.1QTagged</td>
<td>Displays whether if the VLAN tagged (“True”), untagged (“False”), or hybrid (“Hybrid”), which supports both untagged and tagged VLANs by the port.</td>
</tr>
<tr>
<td>Vlan membership</td>
<td>Lists the VLANs to which the interface is a member. Starting with Dell Networking OS version 7.6.1, this field can display native VLAN membership by the port.</td>
</tr>
</tbody>
</table>

#### Example

```
Dell# show interfaces switchport
Name: GigabitEthernet 1/1
802.1QTagged: Hybrid
Vlan membership:
Vlan  2, Vlan 20
Native VlanId: 20

Name: GigabitEthernet 1/2
802.1QTagged: True
Vlan membership:
Vlan  2

Name: GigabitEthernet 1/3
802.1QTagged: True
Vlan membership:
Vlan  2

Name: GigabitEthernet 1/4
802.1QTagged: True
Vlan membership:
Vlan  2
```

#### Related Commands

- `interface` — configure a physical interface on the switch.
- `show ip interface` — display Layer 3 information about the interfaces.
- `show interfaces transceiver` — display the physical status and operational status of an installed transceiver. The output also displays the transceiver’s serial number.
show interfaces transceiver

Display the details of an installed transceiver.

Syntax

show interfaces [interface number] transceiver

Parameters

- interfaces interface number

(OPTIONAL) Enter one of the following keywords and then the interface information:
  - For a port channel interface, enter the keywords port-channel then a number.
  - For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

**NOTE:** This command also enables you to view information corresponding to a range of ports. However, for Open Networking (ON) platforms the notation for specifying port range in the command is different from how you specify in non-ON platforms.

- For non-ON platforms, you can specify multiple ports as slot/port-range. For example, if you want to display information corresponding to all ports between 1 and 4, specify the port range as show interfaces interface-type 1/1 - 4.
- For ON platforms, you can specify multiple ports as slot/port/[subport] - slot/port/[subport]. For example, if you want to display information corresponding to all ports between 1 and 4, specify the port range as show interfaces interface-type 1/1/1 - 1/1/4.

Command Modes

- EXEC
- EXEC Privilege

8.1.1.0           Introduced on the E-Series.
7.8.1.0           Output augmented with diagnostic data for pluggable media.
7.7.1.0           Removed three fields in the output: Vendor Name, Vendor OUI, and Vendor PN.
7.6.1.0           Introduced on the C-Series and S-Series.
6.5.4.0           Introduced on the E-Series.

Usage Information
The following describes the columns displayed in the output of the show interfaces transceiver command:

<table>
<thead>
<tr>
<th>Line</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Rx Power measurement type</td>
<td>Output depends on the vendor, typically either “Average” or “OMA” (Receiver optical modulation amplitude).</td>
</tr>
<tr>
<td>Tx Power measurement type</td>
<td>Output depends on the vendor, typically either “Supported” or “Not supported”.</td>
</tr>
<tr>
<td>Temp High Alarm threshold</td>
<td>Factory-defined setting, typically in Centigrade. Value differs between SFPs and SFP+.</td>
</tr>
<tr>
<td>Voltage High Alarm threshold</td>
<td>Displays the interface index number used by SNMP to identify the interface.</td>
</tr>
<tr>
<td>Bias High Alarm threshold</td>
<td>Factory-defined setting. Value can differ between SFP and SFP+.</td>
</tr>
<tr>
<td>TX Power High Alarm threshold</td>
<td>Factory-defined setting. Value can differ between SFP and SFP+.</td>
</tr>
<tr>
<td>RX Power High Alarm threshold</td>
<td>Factory-defined setting. Value can differ between SFP and SFP+.</td>
</tr>
<tr>
<td>Temp Low Alarm threshold</td>
<td>Factory-defined setting. Value can differ between SFP and SFP+.</td>
</tr>
<tr>
<td>Voltage Low Alarm threshold</td>
<td>Factory-defined setting. Value can differ between SFP and SFP+.</td>
</tr>
<tr>
<td>Bias Low Alarm threshold</td>
<td>Factory-defined setting. Value can differ between SFP and SFP+.</td>
</tr>
<tr>
<td>TX Power Low Alarm threshold</td>
<td>Factory-defined setting. Value can differ between SFP and SFP+.</td>
</tr>
<tr>
<td>RX Power Low Alarm threshold</td>
<td>Factory-defined setting. Value can differ between SFP and SFP+.</td>
</tr>
<tr>
<td>Temp High Warning threshold</td>
<td>Factory-defined setting. Value can differ between SFP and SFP+.</td>
</tr>
<tr>
<td>Line</td>
<td>Description</td>
</tr>
<tr>
<td>----------------------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Voltage High Warning threshold</td>
<td>Factory-defined setting. Value can differ between SFP and SFP+.</td>
</tr>
<tr>
<td>Bias High Warning threshold</td>
<td>Factory-defined setting. Value can differ between SFP and SFP+.</td>
</tr>
<tr>
<td>TX Power High Warning threshold</td>
<td>Factory-defined setting. Value can differ between SFP and SFP+.</td>
</tr>
<tr>
<td>RX Power High Warning threshold</td>
<td>Factory-defined setting. Value can differ between SFP and SFP+.</td>
</tr>
<tr>
<td>Temp Low Warning threshold</td>
<td>Factory-defined setting. Value can differ between SFP and SFP+.</td>
</tr>
<tr>
<td>Voltage Low Warning threshold</td>
<td>Factory-defined setting. Value can differ between SFP and SFP+.</td>
</tr>
<tr>
<td>Bias Low Warning threshold</td>
<td>Factory-defined setting. Value can differ between SFP and SFP+.</td>
</tr>
<tr>
<td>TX Power Low Warning threshold</td>
<td>Factory-defined setting. Value can differ between SFP and SFP+.</td>
</tr>
<tr>
<td>Power Low Warning threshold</td>
<td>Factory-defined setting. Value can differ between SFP and SFP+.</td>
</tr>
<tr>
<td>Temperature</td>
<td>Current temperature of the SFPs. If this temperature crosses Temp High alarm/warning thresholds, the temperature high alarm/warning flag is set to true.</td>
</tr>
<tr>
<td>Voltage</td>
<td>Current voltage of the SFPs. If this voltage crosses voltage high alarm/warning thresholds, the voltage high alarm/warning flag is set to true.</td>
</tr>
<tr>
<td>Tx Bias Current</td>
<td>Present transmission (Tx) bias current of the SFP. If this crosses bias high alarm/warning thresholds, the TX bias high alarm/warning flag is set to true. If it falls below the low alarm/warning thresholds, the TX bias low alarm/warning flag is set to true.</td>
</tr>
<tr>
<td>Tx Power</td>
<td>Present Tx power of the SFP. If this crosses Tx power alarm/warning thresholds, the Tx power high alarm/warning flag is set to true. If it falls below the low alarm/warning thresholds, the Tx power low alarm/ warning flag is set to true.</td>
</tr>
<tr>
<td>Rx Power</td>
<td>Present receiving (Rx) power of the SFP. This value is either average Rx power or OMA. This depends on the Rx Power measurement type displayed above. If this crosses Rx power alarm/warning thresholds, the Rx power high alarm/warning flag is set to true. If it falls below the low alarm/warning thresholds, the Rx power low alarm/warning flag is set to true.</td>
</tr>
<tr>
<td>Data Ready state Bar</td>
<td>This field indicates that the transceiver has achieved power up and data is ready. This is set to true if data is ready to be sent and set to false if data is being transmitted.</td>
</tr>
<tr>
<td>Rx LOS state</td>
<td>This is the digital state of the Rx_LOS output pin. This is set to true if the operating status is down.</td>
</tr>
<tr>
<td>Tx Fault state</td>
<td>This is the digital state of the Rx Fault output pin.</td>
</tr>
<tr>
<td>Rate Select state</td>
<td>This is the digital state of the SFP rate_select input pin.</td>
</tr>
<tr>
<td>RS state</td>
<td>This is the reserved digital state of the pin AS(1) per SFF-8079 and RS(1) per SFF-8431.</td>
</tr>
<tr>
<td>Tx Disable state</td>
<td>If the admin status of the port is down then this flag is set to true.</td>
</tr>
<tr>
<td>Temperature High Alarm Flag</td>
<td>This can be either true or false, depending on the Current voltage value displayed above.</td>
</tr>
<tr>
<td>Line</td>
<td>Description</td>
</tr>

show interfaces vlan

Display VLAN statistics.

Syntax

show interfaces vlan {vlan-id} [LINE] [description]

Parameters

- **vlan-id**: Enter the interface VLAN number. The range is from 1 to 4094.
- **LINE** (OPTIONAL): Enter the name of the VLAN.
- **description**: Displays the VLAN interface information with description.

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.10(0.1)</td>
<td>Introduced on the S6100-ON and S4048T-ON.</td>
</tr>
<tr>

<td>Introduced on the S3048-ON.</td>
</tr>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S-Series and Z-Series.</td>
</tr>
</tbody>
</table>

Usage Information

**NOTE:** This command also enables you to view information corresponding to a range of ports.

- You can specify multiple ports as port-range. For example, if you want to display information corresponding to all ports between 1 and 4, specify the port range as `show interfaces interface-type 1 - 4`.

Example

```
Dell# show interfaces vlan 10
Vlan 10 is up, line protocol is down
Address is 90:b1:1c:f4:99:ce, Current address is 90:b1:1c:f4:99:ce
Interface index is 1107787786
Internet address is not set
Mode of IPv4 Address Assignment: NONE
DHCP Client-ID: 90b11cf499ce
```
show range

Display all interfaces configured using the interface range command.

Syntax

show range

Command Modes

INTERFACE RANGE (config-if-range)

Example

Dell(conf-if-range-gi-2/2,fo-2/56)# show range
2/2 - 0
2/56 - 0
Dell(conf-if-range-gi-2/2,fo-2/56)#
show running-config ecmp-group

Display interfaces, LAG, or LAG link bundles being monitored for uneven traffic distribution using the ecmp-group monitoring enable command. The ECMP group could have a LAG or a list of interfaces (not just LAG link-bundles).

Syntax

    show running-config ecmp-group

Defaults

Disabled.

Command Modes

    CONFIGURATION

Command History

Related Commands

- ecmp-group — configure a mechanism to monitor traffic distribution.

shutdown

Disable an interface.

Syntax

    shutdown

To activate an interface, use the no shutdown command.

Defaults

The interface is disabled.

Command Modes

    INTERFACE

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.
The `shutdown` command marks a physical interface as unavailable for traffic. To discover if an interface is disabled, use the `show ip interface brief` command. Disabled interfaces are listed as down.

Disabling a VLAN or a port channel causes different behavior. When a VLAN is disabled, the Layer 3 functions within that VLAN are disabled. Layer 2 traffic continues to flow. Entering the `shutdown` command on a port channel disables all traffic on the port channel and the individual interfaces within the port channel. To enable a port channel, enter `no shutdown` on the port channel interface and at least one interface within that port channel.

The `shutdown` and `description` commands are the only commands that you can configure on an interface that is a member of a port channel.

**Related Commands**

- `interface port-channel` — create a port channel interface.
- `interface vlan` — create a VLAN.
- `show ip interface` — display the interface routing status. Add the keyword `brief` to display a table of interfaces and their status.

**speed (for 10/100/1000/10000 interfaces)**

Set the speed for 10/100/1000/10000 interfaces. Set both sides of a link to the same speed (10/100/1000/10000) or to auto or the link may not come up.

**Syntax**

```markdown
speed {10 | 100 | 1000 | 10000 | auto}
```

To return to the default setting, use the `no speed {10 | 100 | 1000 | 10000}` command.

**Parameters**

- `10` Enter the keyword `10` to set the interface’s speed to 10 Mb/s.
NOTE: This interface speed is not supported on the LC-EH-GE-50P or the LC-EJ-GE-50P card. If the command is entered for these interfaces, an error message appears.

100

Enter the keyword 100 to set the interface's speed to 10/100 Mb/s.

NOTE: When this setting is enabled, only 100Base-FX optics are supported on the LC-EH-GE-50P or the LC-EJ-GE-50P card.

1000

Enter the keyword 1000 to set the interface's speed to 1000 Mb/s. Auto-negotiation is enabled. For more information, refer to negotiation auto.

NOTE: When this setting is enabled, only 1000Base-FX optics are supported on the LC-EH-GE-50P or the LC-EJ-GE-50P card.

10000

Enter the keyword 10000 to set the interface's speed to 10000 Mb/s. Auto-negotiation is enabled. For more information, refer to negotiation auto.

auto

Enter the keyword auto to set the interface to auto-negotiate its speed. Auto-negotiation is enabled. For more information, refer to negotiation auto.

Defaults

auto

Command Modes

INTERFACE

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description

9.10(0.1) Introduced on the S6010-ON and S4048T-ON.
9.10(0.0) Introduced on the S3148.
9.10(0.0) Added support for fanned-out 1 Gigabit SFP port.
9.8(2.0) Introduced on the S3100 series.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.2(1.0) Introduced on the Z9500.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
8.3.7.0 Introduced on the S4810.
8.3.1.0 Supported on LC-EH-GE-50P or the LC-EJ-GE-50P cards.
8.11.0 Introduced on the E-Series.
7.6.1.0 Introduced on the S-Series.
7.5.1.0 Introduced on the C-Series.

E-Series legacy command

Usage Information

This command is found on the 10/100/1000/10000 Base-T Ethernet interfaces.
When you enable `auto`, the system performs an automatic discovery to determine the optics installed and configure the appropriate speed.

When you configure a speed for the 10/100/1000/10000 interface, confirm the negotiation auto command setting. Both sides of the link must have auto-negotiation either enabled or disabled. For speed settings of 1000 or auto, the software sets the link to auto-negotiation and you cannot change that setting.

**NOTE:** Starting with Dell Networking OS version 7.8.1.0, when you use a copper SFP2 module with catalog number GP-SFP2-1T in the S25P model of the S-Series, you can manually set its speed with the `speed` command. When you set the speed to 10 or 100 Mbps, you can also use the `duplex` command.

**NOTE:** In S3100 series, the `speed` command is not available on the combo ports in the hybrid mode. You need to provision the combo port as copper or fiber medium using the `combo-port-type` command. See `combo-port-type`.

If you use an active optical cable (AOC), you can convert the QSFP+ port to a 10 Gigabit SFP+ port or 1 Gigabit SFP port. Use the `speed` command to enable the required speed.

Related Commands
- `negotiation auto` — enable or disable auto-negotiation on an interface.

### speed (Management interface)

Set the speed for the Management interface.

**Syntax**

```
speed {10 | 100 | 1000 | auto}
```

To return to the default setting, use the `no speed` command.

**Parameters**

- **10**
  - Enter the keyword `10` to set the interface’s speed to 10 Mb/s.
- **100**
  - Enter the keyword `100` to set the interface’s speed to 100 Mb/s.
- **1000**
  - Enter the keyword `1000` to set the interface’s speed to 1000 Mb/s.
- **auto**
  - Enter the keyword `auto` to set the interface to auto-negotiate its speed.

**Defaults**

`auto`

**Command Modes**

`INTERFACE`

**Command History**

Version Description
9.7(0.0) Introduced on the S6000-ON.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
8.3.11.1 Introduced on the S55, S60, and S4810.
8.1.1.0 Introduced on the E-Series.
7.5.1.0 Introduced on the C-Series.
pre-Version 6.2.1.0 Introduced on the E-Series.

Usage Information
This command is found on the Management interface only.

Related Commands
• interface ManagementEthernet — configure the Management port on the system (either the Primary or Standby RPM).
• management route — configure a static route that points to the Management interface or a forwarding router.

switchport
Place an interface in Layer 2 mode.

Syntax
switchport [[backup interface {interface | port-channel number}] | mode private-vlan {host | promiscuous | trunk}]

To remove an interface from Layer 2 mode and place it in Layer 3 mode, enter the no switchport command. If a switchport backup interface is configured, first remove the backup configuration. To remove a switchport backup interface, enter the no switchport backup interface command.

Parameters
backup (OPTIONAL) Use this option to configure a redundant Layer 2 link without using Spanning Tree. The keyword backup configures a backup port so that if the primary port fails, the backup port changes to the up state. If the primary later comes up, it becomes the backup.

interface interface (OPTIONAL) Enter any of the following keywords and the interface information:
• For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
• For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

port-channel (OPTIONAL) Enter the keywords port-channel if the backup port is a static or dynamic port channel.

mode (OPTIONAL) Enter the keyword mode to set the interface mode.

private-vlan (OPTIONAL) Enter the keywords private-vlan to set the interface mode to private VLAN mode.

host (OPTIONAL) Enter the keyword host to set the private VLAN interface to host mode.
promiscuous (OPTIONAL) Enter the keyword promiscuous to set the private VLAN interface to promiscuous mode.

trunk (OPTIONAL) Enter the keyword trunk to set the private VLAN interface to trunk mode.

Defaults
Disabled — interface is in Layer 3 mode.

</tbody>
</table>

Usage Information
If an IP address or VRRP group is assigned to the interface, you cannot use the switchport command on the interface. To use the switchport command on an interface, only the no ip address and no shutdown statements must be listed in the show config output.

When you enter the switchport command, the interface is automatically added to the default VLAN.

To use the switchport backup interface command on a port, first enter the switchport command. For more information, see “Configuring Redundant Links” in the Layer 2 section in the Dell Networking OS Configuration Guide.
wavelength

Set the wavelength for tunable 10–Gigabit SFP+ optics.

Syntax

```
set wavelength
```

To retain the existing wavelength, use the `no wavelength` command.

Defaults

none

INTERFACE

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description

9.10(0.0) Introduced on the S6000, S6000–ON, S5000, S4810, S4820T, S3048–ON, S4048–ON, M I/O Aggregator, FN I/O Module, MXL, C9010, S3100 series, and Z9100-ON.

Usage Information

The wavelength can be configured only on a tunable 10–Gigabit SFP+ optic. The wavelength range is from 1528.3 nm to 1568.77nm.

If you configure the wavelength on a non-tunable optic, there is no change to the existing wavelength. The configured wavelength is saved in the running configuration and is applicable, when a tunable optic is used.

If you do not configure the wavelength on an inserted tunable optic, the existing wavelength is used.

Example

The following example shows the wavelength set for a tunable 10–Gigabit SFP+ optic:

```
Dell(conf-if-gi-1/1)# wavelength 1528.30
```

Related Commands

- `show config` — displays the interface configuration.

Egress Interface Selection (EIS) Commands

The following commands are Egress Interface Selection (EIS) commands.

application

Configure the management egress interface selection.

Syntax

```
application {all | application-type}
```

To remove a management application configuration, use the `no application {all | application-type}` command.

Parameters

- `application-type` Enter any of the following keywords:
  - For DNS, enter the keyword `dns`.
application (for HTTP and ICMP)

Configure the management egress interface selection for HTTP and ICMP.

NOTE: Only the options that have been newly introduced are described here. For a complete description on all of the keywords and variables that are available with this command, refer the respective Command Reference Guide of the applicable platform of the Release 9.2(0.0) documentation set.

Syntax

```
application {all | application-type}
```

To remove a management application configuration, use the no application {all | application-type} command.

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>application-type</td>

</tr>
</tbody>
</table>

#### Example

```
Dell# show management application pkt-cntr
dns      :   2
ftp      :   0
ntp      :   0
radius   :   0
sflow-collector :   0
snmp     :   0
ssh      :   0
syslog   :   0
tacacs   :   0
```
show management application pkt-fallback-cntr

Display the number of packets for each application type that have been rerouted to the default routing table due to management port or route lookup failure.

**Syntax**

```
show management application pkt-fallback-cntr
```

**Defaults**

None.

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

telnet           :   0
tftp             :   0
```

---

Port Channel Commands

A Link Aggregation Group (LAG) is a group of links that appear to a MAC client as if they were a single link according to IEEE 802.3ad. In Dell Networking OS, a LAG is referred to as a Port Channel.

- The platform supports 128 port channels and 16 members per port channel.

As each port can be assigned to only one Port Channel, and each Port Channel must have at least one port, some of those nominally available Port Channels might have no function because they could have no members if there are not enough ports installed. But stack members can provide those ports.

**NOTE:** The Dell Networking OS implementation of LAG or Port Channel requires that you configure a LAG on both switches manually. For information about Dell Networking OS link aggregation control protocol (LACP) for dynamic LAGs, refer to the Link Aggregation Control Protocol (LACP) chapter. For more information about configuring and using Port Channels, refer to the Dell Networking OS Configuration Guide.
channel-member

Add an interface to the Port Channel, while in INTERFACE PORTCHANNEL mode.

**Syntax**

```
channel-member interface
```

To delete an interface from a Port Channel, use the `no channel-member interface` command.

**Parameters**

- `interface` *(OPTIONAL) Enter any of the following keywords and the interface information:
  - For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

**Defaults**

Not configured.

**Command Modes**

INTERFACE PORTCHANNEL

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
--- | ---
9.10(0.0) | Introduced on the S3148.
9.10(0.0) | Introduced on the S6100–ON.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100–ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.7(0.0) | Introduced on the S6000-ON.
9.2(1.0) | Introduced on the Z9500.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.5.1.0 | Added support for 4-port 40G line cards on the E-Series.
8.3.7.0 | Introduced on the S4810.
8.1.1.0 | Introduced on the E-Series.
7.6.1.0 | Introduced on the S-Series.
7.5.1.0 | Introduced on the C-Series.
pre-Version 6.2.1.0 | Introduced on the E-Series.

**Usage Information**

Use the `interface port-channel` command to access this command.
You cannot add an interface to a Port Channel if the interface contains an IP address in its configuration. Only the `shutdown`, `description`, `mtu`, and `ip mtu` commands can be configured on an interface if it is added to a Port Channel. The `mtu` and `ip mtu` commands are only available when the chassis is in Jumbo mode.

Link MTU and IP MTU considerations for Port Channels are:

- All members must have the same link MTU value and the same IP MTU value.
- The Port Channel link MTU and IP MTU must be less than or equal to the link MTU and IP MTU values configured on the channel members. For example, if the members have a link MTU of 2100 and an IP MTU of 2000, the Port Channel's MTU values cannot be higher than 2100 for link MTU or 2000 bytes for IP MTU.

When an interface is removed from a Port Channel with the `no channel-member` command, the interface reverts to its configuration prior to joining the Port Channel.

An interface can belong to only one Port Channel.

You can have 16 interfaces per Port Channel. The interfaces can be located on different line cards but must be the same physical type and speed (for example, all 10-Gigabit Ethernet interfaces).

For more information about Port Channels, refer to the *Dell Networking OS Configuration Guide*.

**Related Commands**

- `description` — assign a descriptive text string to the interface.
- `interface port-channel` — create a Port Channel interface.
- `shutdown` — disable/enable the port channel.

**group**

Group two LAGs in a supergroup ("fate-sharing group" or "failover group").

**Syntax**

```
group group_number port-channel number port-channel number
```

To remove an existing LAG supergroup, use the `no group group_number` command.

**Parameters**

- `group_number` Enter an integer from 1 to 32 that uniquely identifies this LAG fate-sharing group.
- `port-channel number` Enter the keywords `port-channel` then an existing LAG number. Enter this keyword/variable combination twice, identifying the two paired LAGs.

**Defaults**

None

**Command Modes**

PORT-CHANNEL FAILOVER-GROUP (conf-po-failover-grp)

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>
## interface port-channel

Create a Port Channel interface, which is a link aggregation group (LAG) containing 16 physical interfaces on the S-Series.

**Syntax**

```plaintext
interface port-channel channel-number
```

To delete a Port Channel, use the `no interface port-channel channel-number` command.

**Parameters**

- `channel-number` For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>

**Related Commands**

- `port-channel failover-group` — access PORT-CHANNEL FAILOVER-GROUP mode to configure a LAG failover group.
- `show interfaces port-channel` — display information on configured Port Channel groups.
### minimum-links

Configure the minimum number of links in a LAG (Port Channel) that must be in “oper up” status for the LAG to be also in “oper up” status.

#### Syntax

```
minimum-links number
```
Enter the number of links in a LAG that must be in “oper up” status. The range is from 1 to 16. The default is 1.

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>

</tr>
</tbody>
</table>

If you use this command to configure the minimum number of links in a LAG that must be in “oper up” status, the LAG must have at least that number of “oper up” links before it can be declared as up. For example, if the required minimum is four, and only three are up, the LAG is considered down.

**port-channel failover-group**

To configure a LAG failover group, access PORT-CHANNEL FAILOVER-GROUP mode.

**Syntax**

```
port-channel failover-group
```

To remove all LAG failover groups, use the `no port-channel failover-group` command.

**Defaults**

None

**Command Modes**

CONFIGURATION
This feature groups two LAGs to work in tandem as a supergroup. For example, if one LAG goes down, the other LAG is taken down automatically, providing an alternate path to reroute traffic, avoiding oversubscription on the other LAG. You can use both static and dynamic (LACP) LAGs to configure failover groups. For more information, see the “Port Channel” section in the Dell Networking OS Configuration Guide.

Related Command
- group — group two LAGs in a supergroup (“fate-sharing group”).
- show interfaces port-channel — display information on configured Port Channel groups.

show config

Display the current configuration of the selected LAG.

Syntax

show config

Command Modes

INTERFACE PORTCHANNEL

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

### Version Description
- **9.8(1.0)** Introduced on the Z9100-ON.
- **9.8(0.0P5)** Introduced on the S4048-ON.
- **9.8(0.0P2)** Introduced on the S3048-ON.
- **9.7(0.0)** Introduced on the S6000-ON.
- **9.2(1.0)** Introduced on the Z9500.
- **8.3.19.0** Introduced on the S4820T.
- **8.3.11.1** Introduced on the Z9000.
- **8.3.7.0** Introduced on the S4810.
- **7.6.1.0** Introduced on the S-Series.
- **7.5.1.0** Introduced on the C-Series.
- **pre-Version 6.2.1.0** Introduced on the E-Series.

### Example
```plaintext
dell(conf-if-po-1)# show config
!
interface Port-channel 1
  no ip address
  shutdown

dell(conf-if-po-1)#
```

### show interfaces port-channel

Display information on configured Port Channel groups.

**Syntax**
```
show interfaces port-channel [channel-number] [brief] [description]
```

**Parameters**
- **channel-number** For a Port Channel interface, enter the keyword `port-channel` then a number. The range is from 1 to 128.

  **NOTE:** This command also enables you to view information corresponding to a range of ports.
  - For port-channel interfaces, you can specify multiple ports as `port-range`. For example, if you want to display information corresponding to all ports between 1 and 4, specify the port range as `show interfaces port-channel 1 - 4`.

  **brief** (OPTIONAL) Enter the keyword `brief` to display only the port channel number, the state of the port channel, and the number of interfaces in the port channel.

  **description** (OPTIONAL) Displays the port-channel information with description.

**Command Modes**
- EXEC
- EXEC Privilege

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.
### Version Description

- **9.10(0.0)**
  Introduced on the S3148.

- **9.9(0.0)**
  Added support to display the interface configurations corresponding to a range of ports.

- **9.8(2.0)**
  Introduced on the S3100 series.

- **9.8(1.0)**
  Introduced on the Z9100-ON.

- **9.8(0.0P5)**
  Introduced on the S4048-ON.

- **9.8(0.0P2)**
  Introduced on the S3048-ON.

- **9.7(0.0)**
  Introduced on the S6000-ON.

- **9.2(1.0)**
  Introduced on the Z9500.

- **9.0.2.0**
  Introduced on the S6000.

- **8.3.19.0**
  Introduced on the S4820T.

- **8.3.11.1**
  Introduced on the Z9000.

- **8.3.7.0**
  Introduced on the S4810.

- **8.1.1.0**
  Introduced on the E-Series.

- **7.6.1.0**
  Introduced on the S-Series.

  **Modified** to display the LAG failover group status.

- **7.5.1.0**
  Introduced on the C-Series.

  **E-Series legacy command**

### Usage Information

The following describes the `show interfaces port-channel` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Port-Channel 1...</td>
<td>Displays the LAG’s status. In the Example, the status of the LAG’s LAG fate-sharing group (“Failover-group”) is listed.</td>
</tr>
<tr>
<td>Hardware is...</td>
<td>Displays the interface’s hardware information and its assigned MAC address.</td>
</tr>
<tr>
<td>Port-channel is part...</td>
<td>Indicates whether the LAG is part of a LAG fate-sharing group (“Failover-group”).</td>
</tr>
<tr>
<td>Internet address...</td>
<td>States whether an IP address is assigned to the interface. If an IP address is assigned, that address is displayed.</td>
</tr>
<tr>
<td>MTU 1554...</td>
<td>Displays link and IP MTU.</td>
</tr>
<tr>
<td>LineSpeed</td>
<td>Displays the interface’s line speed. For a port channel interface, it is the line speed of the interfaces in the port channel.</td>
</tr>
<tr>
<td>Members in this...</td>
<td>Displays the interfaces belonging to this port channel.</td>
</tr>
<tr>
<td>ARP type...</td>
<td>Displays the ARP type and the ARP timeout value for the interface.</td>
</tr>
<tr>
<td>Last clearing...</td>
<td>Displays the time when the <code>show interfaces</code> counters were cleared.</td>
</tr>
<tr>
<td>Queueing strategy</td>
<td>States the packet queuing strategy. FIFO means first in first out.</td>
</tr>
<tr>
<td>packets input...</td>
<td>Displays the number of packets and bytes into the interface.</td>
</tr>
<tr>
<td>Input 0 IP packets...</td>
<td>Displays the number of packets with IP headers, VLAN tagged headers, and MPLS headers. The number of packets may not add correctly because a VLAN tagged IP packet counts as both a VLAN packet and an IP packet.</td>
</tr>
</tbody>
</table>
### Field Description

**0 64-byte...**
Displays the size of packets and the number of those packets entering that interface. This information is displayed over two lines.

**Received 0...**
Displays the type and number of errors or other specific packets received. This information is displayed over three lines.

**Output 0...**
Displays the type and number of packets sent out the interface. This information is displayed over three lines.

**Rate information...**
Displays the traffic rate information into and out of the interface. Traffic rate is displayed in bits and packets per second.

**Time since...**
Displays the time since the last change in the configuration of this interface.

### Example

```
Dell# show interfaces port-channel 20
Port-channel 20 is up, line protocol is up (Failover-group 1 is down)
Hardware address is 00:01:e8:01:46:fa
Port-channel is part of failover-group 1
Internet address is 1.1.120.1/24
MTU 1554 bytes, IP MTU 1500 bytes
LineSpeed 2000 Mbit
Members in this channel: Gi 2/5 Gi 2/18
ARP type: ARPA, ARP timeout 04:00:00
Last clearing of "show interfaces" counters 00:00:00
Queueing strategy: fifo
  44507301 packets input, 3563070343 bytes
  Input 44506754 IP Packets, 0 Vlans 0 MPLS
  41 64-byte pkts, 44502871 over 64-byte pkts, 249 over 127-byte pkts
  407 over 255-byte pkts, 3127 over 511-byte pkts, 606 over 1023-byte pkts
  Received 0 input symbol errors, 0 runts, 0 giants, 0 throttles
  0 CRC, 0 IP Checksum, 0 overrun, 0 discarded
  1218120 packets output, 100745130 bytes, 0 underruns
  Output 5428 Multicasts, 4 Broadcasts, 1212688 Unicasts
  1216142 IP Packets, 0 Vlans, 0 MPLS
  0 throttles, 0 discarded
Rate info (interval 299 sec):
  Input 01.50Mbits/sec, 2433 packets/sec
  Output 00.02Mbits/sec,4 packets/sec
Time since last interface status change: 00:22:34
Dell#
```

### User Information

The following describes the `show interfaces port-channel brief` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>LAG</td>
<td>Lists the port channel number.</td>
</tr>
<tr>
<td>Mode</td>
<td>Lists the mode:</td>
</tr>
<tr>
<td></td>
<td>• L3 — for Layer 3</td>
</tr>
<tr>
<td></td>
<td>• L2 — for Layer 2</td>
</tr>
<tr>
<td>Status</td>
<td>Displays the status of the port channel.</td>
</tr>
<tr>
<td></td>
<td>• down — if the port channel is disabled (shutdown)</td>
</tr>
<tr>
<td></td>
<td>• up — if the port channel is enabled (no shutdown)</td>
</tr>
<tr>
<td>Uptime</td>
<td>Displays the age of the port channel in hours:minutes:seconds.</td>
</tr>
<tr>
<td>Ports</td>
<td>Lists the interfaces assigned to this port channel.</td>
</tr>
</tbody>
</table>
Field | Description
---|---
(untitled) | Displays the status of the physical interfaces (up or down).

- In Layer 2 port channels, an * (asterisk) indicates which interface is the primary port of the port channel. The primary port sends out interface PDU.
- In Layer 3 port channels, the primary port is not indicated.

**Example**

```
Dell# show interfaces port-channel 1 brief
LAG Mode Status Uptime    Ports
1   L2   up     00:00:08  Gi 3/1  (Up) *
     Gi 3/2 (Down)
     Gi 3/3 (Up)
Dell#
```

**Related Commands**
- `show lacp` — display the LACP matrix.

## show port-channel-flow

Display an egress port in a given port-channel flow.

**Syntax**

```
show port-channel-flow outgoing-port-channel number incoming-interface interface {source-ip address destination-ip address} | {source-port number destination-port number} | {source-mac address destination-mac address {vlan vlanid | ether-type}}
```

**Parameters**

- **outgoing-port-channel number**
  - Enter the keywords outgoing-port-channel then the number of the port channel to display flow information.
  - For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.

- **incoming-interface interface**
  - Enter the keywords incoming-interface then the interface type and the interface information:
    - For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
    - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

- **source-ip address**
  - Enter the keywords source-ip then the IP source address in IP address format.

- **destination-ip address**
  - Enter the keywords destination-ip then the IP destination address in IP address format.

- **source-port number**
  - Enter the keywords source-port then the source port number. The range is from 1 to 65536. The default is **None**.

- **destination-port number**
  - Enter the keywords destination-port then the destination port number. The range is from 1 to 65536. The default is **None**.

- **source-mac address**
  - Enter the keywords source-mac then the MAC source address in the nn:nn:nn:nn:nn:nn format.
**destination-mac address** Enter the keywords `destination-mac` then the MAC destination address in the `nn:nn:nn:nn:nn:nn` format.

**vlan vlan-id** Enter the keywords `vlan` then the VLAN-id. The range is from 0 to 4094.

**ether-type** Enter the keywords `ether-type` in the `XX:XX` format.

**Command Modes** EXEC

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
---|---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100-ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.2(1.0) | Introduced on the Z9500.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.10.0 | Introduced on the S4810.

**Usage Information**

Because this command calculates based on a Layer 2 hash algorithm, use this command to display flows for switched Layer 2 packets, not for routed packets (use the `show ip flow` command to display routed packets).

The `show port-channel-flow` command returns the egress port identification in a given port-channel if a valid flow is entered. A mismatched flow error occurs if MAC-based hashing is configured for a Layer 2 interface and you are trying to display a Layer 3 flow.

The output displays three entries:

- Egress port for unfragmented packets.
- In the event of fragmented packets, the egress port of the first fragment.
- In the event of fragmented packets, the egress port of the subsequent fragments.

**NOTE:** In the `show port channel flow` command output, the egress port for an unknown unicast, multicast, or broadcast traffic is not displayed.

The following example shows the `show port-channel-flow outgoing-port-channel ` number incoming-interface interface source-mac address destination-mac address

- Load-balance is configured for MAC
- Load-balance is configured for IP 4-tuple/2-tuple
- A non-IP payload is going out of Layer 2 LAG interface that is a member of VLAN with an IP address

**Example**

```
Dell# show port-channel-flow outgoing-port-channel 1 incoming-interface gi 3/3 source-mac 00:00:50:00:00:00 destination-mac 00:00:a0:00:00:00
```
Egress Port for port-channel 1, for the given flow, is Gi 13/2

Time Domain Reflectometer (TDR) Commands

TDR is useful for troubleshooting an interface that is not establishing a link; either it is flapping or not coming up at all. TDR detects open or short conditions of copper cables on 100/1000 Base-T modules.

Important Points to Remember

- The interface and port must be enabled (configured—refer to the interface command) before running TDR. An error message is generated if you have not enabled the interface.
- The interface on the far-end device must be shut down before running TDR.
- Because TDR is an intrusive test on an interface that is not establishing a link, do not run TDR on an interface that is passing traffic.
- When testing between two devices, do not run the test on both ends of the cable.

**tdr-cable-test**

Test the condition of copper cables on 100/1000 Base-T modules.

**Syntax**

```plaintext
tdr-cable-test interface
```

**Parameters**

- **interface**
  - Enter the keyword `GigabitEthernet` then the slot/port information for the 100/1000 Ethernet interface.

**Defaults**

None

**Command Modes**

EXEC

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.10(0.1)</td>
<td>Introduced on the S4048T-ON.</td>
</tr>
<tr>
<td>9.10(0.0)</td>

<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.2.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>
Usage Information The interface must be enabled to run the test or an error message is generated:

```
Dell# tdr-cable-test gigabitethernet 5/2
%Error: Interface is disabled GI 5/2
```

Syslog messages are generated when the link flaps during TDR tests.

Related Commands

- `show tdr` — display the results of the TDR test.

### show tdr

Display the TDR test results.

**Syntax**

```
show tdr interface
```

**Parameters**

- `interface` Enter the keyword GigabitEthernet then the slot/port information for the 100/1000 Ethernet interface.

**Defaults**

None

**Command Modes**

EXEC

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant **Dell Networking OS Command Line Reference Guide**.

**Version** | **Description**
--- | ---
9.10(0.1) | Introduced on the S4048T-ON.
9.10(0.0) | Introduced on the S3148.

7.7.1.0 | Introduced on the S-Series.
7.6.1.0 | Introduced on the C-Series.
Version | Description
---|---
6.1.1.0 | Introduced.

Usage Information
If the TDR test has not been run, an error message is generated:
%Error: Please run the TDR test first

The following describes the TDR test status.

<table>
<thead>
<tr>
<th>Status</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>OK Status: Terminated</td>
<td>TDR test is complete, no fault is detected on the cable, and the test is terminated.</td>
</tr>
<tr>
<td>Length: 92 (+/- 1) meters, Status: Shorted</td>
<td>A short is detected on the cable. The location, in this Example is 92 meters. The short is accurate to plus or minus one meter.</td>
</tr>
<tr>
<td>Length: 93 (+/- 1) meters, Status: Open</td>
<td>An opening is detected on the cable. The location, in this Example is 93 meters. The open is accurate to plus or minus one meter.</td>
</tr>
<tr>
<td>Status: Impedance Mismatch</td>
<td>There is an impedance mismatch in the cables.</td>
</tr>
</tbody>
</table>

Example
Dell# show tdr gigabitethernet 10/47
Time since last test: 00:00:02
Pair A, Length: OK Status: Terminated
Pair B, Length: 92 (+/- 1) meters, Status: Short
Pair C, Length: 93 (+/- 1) meters, Status: Open
Pair D, Length: 0 (+/- 1) meters, Status: Impedance Mismatch

Related Commands
- tdr-cable-test — run the TDR test.

UDP Broadcast Commands
The user datagram protocol (UDP) broadcast feature is a software-based method to forward low throughput (not to exceed 200 pps) IP/UDP broadcast traffic arriving on a physical or VLAN interface.

Important Points to Remember
- This feature is available only on the S4810, S4820T, S3048–ON, S4048–ON, Z9000 platforms.
- Routing information protocol (RIP) is not supported with the UDP Broadcast feature.
- If you configure this feature on an interface using the ip udp-helper udp-port command, the ip directed-broadcast command becomes ineffective on that interface.
- The existing show interface command has been modified to display the configured broadcast address.

debug ip udp-helper
Enable UDP debug and display the debug information on a console.

Syntax
debug ip udp-helper
To disable debug information, use the no debug ip udp-helper command.

Defaults
Debug disabled.

Command Modes
- EXEC
- EXEC Privilege

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</table>

Example

Related Commands
- ip udp-helper udp-port — enable the UDP broadcast feature on an interface.
- show ip udp-helper — display the configured UDP helper(s) on all interfaces.

ip udp-broadcast-address

Configure an IP UDP address for broadcast.

Syntax
ip udp-broadcast-address address

To delete the configuration, use the no ip udp-broadcast-address address command.

Parameters
- address
  Enter an IP broadcast address in dotted decimal format (A.B.C.D).

Defaults
Not configured.

Command Modes
INTERFACE (conf-if)

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.
### Version | Description
---|---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
8.3.19.0 | Introduced on the S4820T.
8.3.7.0 | Introduced on the S4810.
Pre-version 8.3.7.0 | Introduced on the E-Series ExaScale.

### Usage Information
When a UDP broadcast packet is flooded out of an interface, and the outgoing interface is configured using this command, the outgoing packet’s IP destination address is replaced with the configured broadcast address.

### Related Commands
- `debug ip udp-helper` — enables debug and displays the debug information on a console.
- `show ip udp-helper` — displays the configured UDP helpers on all interfaces.

### ip udp-helper udp-port
Enable the UDP broadcast feature on an interface either for all UDP ports or a specified list of UDP ports.

**Syntax**
```
ip udp-helper udp-port [udp-port-list]
```

To disable the UDP broadcast on a port, use the `no ip udp-helper udp-port [udp-port-list]` command.

**Parameters**
- `udp-port-list` *(OPTIONAL)* Enter up to 16 comma-separated UDP port numbers.

**Defaults**
None

**Command Modes**
INTERFACE (config-if)

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

### Version | Description
---|---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.2(1.0) | Introduced on the Z9500.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
Version  Description
Pre-version 8.3.7.0 Introduced on the E-Series.

Usage Information
If you configure the `ip helper-address` command and `ip udp-helper udp-port` command, the behavior is that the UDP broadcast traffic with port numbers 67/68 is unicast relayed to the DHCP server per the `ip helper-address` configuration. This occurs regardless if the `ip udp-helper udp-port` command contains port numbers 67/68 or not.

If you only configure the `ip udp-helper udp-port` command, all the UDP broadcast traffic is flooded, including ports 67/68 traffic if those ports are part of the `udp-port-list`.

Related Commands
- `ip helper-address` — configure the destination broadcast or host address for the DHCP server.
- `debug ip udp-helper` — enable debug and displays the debug information on a console.
- `show ip udp-helper` — display the configured UDP helpers on all interfaces.

show ip udp-helper

Display the configured UDP helpers on all interfaces.

Syntax
```
show ip udp-helper
```

Defaults
None

Command Modes
EXEC

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version  Description
9.10(0.0)  Introduced on the S3148.
9.8(2.0)   Introduced on the S3100 series.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.2(1.0)   Introduced on the Z9500.
8.3(19.0)  Introduced on the S4820T.
8.3(11.1)  Introduced on the Z9000.
8.3.7.0    Introduced on the S4810.
Pre-version 8.3.7.0 Introduced on the E-Series.

Example
```
Dell# show ip udp-helper
--------------------------------------------------
Port     UDP  port  list
--------------------------------------------------
Gi 10/2  656, 658
Gi 10/3  All

Related Commands
- `debug ip udp-helper` — enable debug and displays the debug information on a console.
• `ip udp-helper udp-port` — enable the UDP broadcast feature on an interface either for all UDP ports or a specified list of UDP ports.
Internet Protocol Security (IPSec)

Internet protocol security (IPSec) is an end-to-end security scheme for securing IP communications by authenticating and encrypting all packets in a session. Use IPSec between hosts, gateways, or hosts and gateways.

IPSec uses a series of protocol functions to achieve information security:

- **Authentication Headers (AH)** — Connectionless integrity and origin authentication for IP packets.
- **Encapsulating Security Payloads (ESP)** — Confidentiality, authentication, and data integrity for IP packets.
- **Security Associations (SA)** — Algorithm-provided parameters required for AH and ESP protocols.

IPSec capability is available on control (protocol) and management traffic; end-node support is required.

IPSec supports two operational modes: Transport and Tunnel.

- Transport is the default mode for IPSec and encrypts only the payload of the packet. Routing information is unchanged.
- Tunnel mode is used to encrypt the entire packet, including the routing information in the IP header. Tunnel mode is typically used in creating virtual private networks (VPNs).

Transport mode provides IP packet payload protection using ESP. You can use ESP alone or in combination with AH to provide additional authentication. AH protects data from modification but does not provide confidentiality.

SA is the configuration information that specifies the type of security provided to the IPSec flow. The SA is a set of algorithms and keys used to authenticate and encrypt the traffic flow. The AH and ESP use SA to provide traffic protection for the IPSec flow.

**NOTE:**
Due to performance limitations on the control processor, you cannot enable IPSec on all packets in a communication session.

Topics:

- crypto ipsec transform-set
- crypto ipsec policy
- management crypto-policy
- match
- session-key
- show crypto ipsec transform-set
- show crypto ipsec policy
- transform-set
crypto ipsec transform-set

Create a transform set, or combination of security algorithms and protocols, of cryptos.

Syntax

```
crypto ipsec transform-set name \{ah-authentication \{md5|sha1|null\} \| esp-authentication \{md5|sha1|null\} \| esp-encryption \{3des|cbc|des|null\}\}
```

To delete a transform set, use the `no crypto ipsec transform-set name \{ah-authentication \{md5|sha1|null\} \| esp-authentication \{md5|sha1|null\} \| esp-encryption \{3des|cbc|des|null\}\}` command.

Parameters

- **name**: Enter the name for the transform set.
- **ah-authentication**: Enter the keywords `ah-authentication` then the transform type of operation to apply to traffic. The transform type represents the encryption or authentication applied to traffic.
  - `md5`: Use Message Digest 5 (MD5) authentication.
  - `sha1`: Use Secure Hash Algorithm 1 (SHA-1) authentication.
  - `null`: Causes an encryption policy configured for the area to not be inherited on the interface.
- **esp-authentication**: Enter the keywords `esp-authentication` then the transform type of operation to apply to traffic. The transform type represents the encryption or authentication applied to traffic.
  - `md5`: Use Message Digest 5 (MD5) authentication.
  - `sha1`: Use Secure Hash Algorithm 1 (SHA-1) authentication.
  - `null`: Causes an encryption policy configured for the area to not be inherited on the interface.
- **esp-encryption**: Enter the keywords `esp-encryption` then the transform type of operation to apply to traffic. The transform type represents the encryption or authentication applied to traffic.
  - 3des: Use 3DES encryption.
  - cbc: Use CDC encryption.
  - des: Use DES encryption.
  - `null`: Causes an encryption policy configured for the area to not be inherited on the interface.

Defaults

None

ESP Encry Transform   :
Dell(conf)#
```

### crypto ipsec policy
Create a crypto policy used by ipsec.

#### Syntax
```
crypto ipsec policy name seq-num ipsec-manual
```

To delete a crypto policy entry, use the `no crypto ipsec policy name seq-num ipsec-manual` command.

#### Parameters
- **name**: Enter the name for the crypto policy set.
- **seq-num**: Enter the sequence number assigned to the crypto policy entry.

#### Defaults
None

#### Command Modes
- CONFIGURATION

#### Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>

management crypto-policy

Apply the crypto policy to management traffic.

Syntax

management crypto-policy name

To remove the management traffic crypto policy, use the no management crypto-policy name command.

Parameters

name Enter the name for the crypto policy.

Defaults

None

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description

9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.2(0.2) Introduced on the Z9000, S4810, and S4820T.
9.2(1.0) Introduced on the Z9500.
match

Apply an match filter to the crypto policy.

Syntax

```
match seq-num tcp [source ip address | ipv6 address {mask} {source-port number}] [destination ip address | ipv6 address {mask} {destination-port number}]
```

To remove the match filter for the crypto map, use the no match seq-num tcp [source ip address | ipv6 address {mask} {source-port number}] [destination ip address | ipv6 address {mask} {destination-port number}] command.

Parameters

- **seq-num**: Enter the match command sequence number.
- **source ip-address | ipv6 address**: Enter the keyword source then the IPv4 or IPv6 address for the source.
- **mask**: Enter the mask prefix length in /nn format.
- **source-port number**: Enter the source port number.
- **destination-port number**: Enter the destination port number.

Defaults

None

Command Modes

CONFIG-CRYPTO-POLICY

Command History

</tr>
<tr>
<td>9.2(1.0)</td>
<td>Introduced on the Z9500.</td>
</tr>
</tbody>
</table>

Usage Information

- IPv4 addresses support only /32 mask types.
- IPv6 addresses support only /128 mask types.
- Configure match for bi-directional traffic for optimal routing.
- Only TCP is supported.

Example

```
match 0 tcp a::1 /128 0 a::2 /128 23
match 1 tcp a::1 /128 23 a::2 /128 0
match 2 tcp a::1 /128 0 a::2 /128 21
match 3 tcp a::1 /128 21 a::2 /128 0
```
**session-key**

Specify the session keys used in the crypto policy entry.

**Syntax**

```
session-key {inbound | outbound} {ah spi hex-key-string | esp spi encrypt hex-key-string auth hex-key-string}
```

To delete the session key information from the crypto policy, use the no session-key {inbound | outbound} {ah | esp} command.

**Parameters**

- **name**
  - Enter the name for the transform set.

- **inbound**
  - Specify the inbound session key for IPSec.

- **outbound**
  - Specify the outbound session key for IPSec.

- **ah**
  - Use the AH protocol when you select the AH transform set in the crypto policy.

- **esp**
  - Use the ESP protocol when you select the ESP transform set in the crypto policy.

- **spi**
  - Enter the security parameter index number.

- **hex-key-string**
  - Enter the session key in hex format (a string of 8, 16, or 20 bytes). For DES algorithms, specify at least 16 bytes per key. For SHA algorithms, specify at least 20 bytes per key.

- **encrypt**
  - Indicates the ESP encryption transform set key string.

- **auth**
  - Indicates the ESP authentication transform set key string.

**Defaults**

None

**Command Modes**

CONF-CRYPTO-POLICY

**Command History**

</tbody>
</table>
The basic IPv4 commands are supported by Dell Networking OS on the platform.

Topics:
- `arp`
- `arp backoff-time`
- `arp learn-enable`
- `arp max-entries`
- `arp retries`
- `arp timeout`
- `clear arp-cache`
- `clear host`
- `clear ip fib stack-unit`
- `clear ip route`
- `clear tcp statistics`
- `debug arp`
- `debug ip dhcp`
- `debug ip icmp`
- `debug ip packet`
- `ip address`
- `ip directed-broadcast`
- `ip domain-list`
- `ip domain-lookup`
- `ip domain-name`
- `ip helper-address`
- `ip helper-address hop-count disable`
- `ip host`
- `ip icmp source-interface`
- `ipv6 icmp source-interface`
- `ip max-frag-count`
- `ip max-routes`
- `ip mtu`
- `ip name-server`
- `ip proxy-arp`
- `ip route`
- `ip source-route`
- `ip unreachable`
- `load-balance`
- `load-balance hg`
- `management route`
arp

To associate an IP address with a MAC address in the switch, use address resolution protocol (ARP).

Syntax

```
arp [vrf vrf-name] ip-address mac-address interface
```

To remove an ARP address, use the `no arp ip-address` command.

Parameters

- **vrf vrf-name**
  - Enter a VRF name to configure an ARP entry for that VRF. Use the VRF option after the keyword `arp` to configure a static arp on that particular VRF.

- **ip-address**
  - Enter an IP address in dotted decimal format.

- **mac-address**
  - Enter a MAC address in `nnnn.nnnn.nnnn` format.

- **interface**
  - (OPTIONAL) Enter any of the following keywords and slot/port or number information:
    - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
    - For the Management interface on the stack-unit, enter the keyword `ManagementEthernet` then the slot/port information.
    - For a port channel interface, enter the keywords `port-channel` then a number.

Defaults

Not configured.

Command Modes

- **CONFIGURATION**

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>

</tr>
</thead>
<tbody>
<tr>
<td>9.10(0.1)</td>
<td>Introduced on the S6010-ON and S4048T-ON.</td>
</tr>
<tr>
<td>9.10(0.0)</td>
<td>Introduced on the S3148.</td>
</tr>
</tbody>
</table>
### Version Description

9.10(0.0)  Introduced on the S6100-ON.
9.8(2.0)  Introduced on the S3100 series.
9.8(1.0)  Introduced on the Z9100-ON.
9.8(0.0P5)  Introduced on the S4048-ON.
9.8(0.0P2)  Introduced on the S3048-ON.
9.7(0.0)  Introduced on the S6000-ON.
9.4(0.0)  Added support for VRF.
9.2(1.0)  Introduced on the Z9500.
9.0.2.0  Introduced on the S6000.
8.3.19.0  Introduced on the S4820T.
8.3.11.1  Introduced on the Z9000.
8.5.1.0  Added support for 4-port 40G line cards on the E-Series.
8.3.7.0  Introduced on the S4810.
8.1.1.0  Introduced on the E-Series.
7.6.1.0  Introduced on the S-Series.
7.5.1.0  Introduced on the C-Series.
pre-6.2.1.0  Introduced on the E-Series.

### Usage Information
You cannot use Class D or Class E IP addresses or zero IP address (0.0.0.0) when creating a static ARP. Zero MAC addresses (00:00:00:00:00:00) are also invalid.

You can use the `vrf` attribute of this command to create a static ARP entry on either a default or a non-default VRF. You cannot use this parameter to create any static ARPs corresponding to management VRFs. When a VRF is deleted using the `no ip vrf` command, all the static ARP configurations that belong to that VRF are removed automatically.

Although static ARP entries take precedence over dynamically-learnt ARP entries, a static ARP entry that points to a wrong port is not included in the FIB or ARP entries.

### Related Commands
- `clear arp-cache` — clear dynamic ARP entries from the ARP table.
- `show arp` — display the ARP table.

### arp backoff-time
Set the exponential timer for resending unresolved ARPs.

#### Syntax
```
arp backoff-time seconds
```
Parameters

**seconds** Enter the number of seconds an ARP entry is black-holed. The range is from 1 to 3600. The default is 30.

**Defaults** 30

**Command Mode** CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.10(0.0)</td>
<td>Introduced on the S3148.</td>
</tr>
<tr>
<td>9.8(2.0)</td>
<td>Introduced on the S3100 series.</td>
</tr>
<tr>
<td>9.8(1.0)</td>
<td>Introduced on the Z9100–ON.</td>
</tr>
<tr>
<td>9.8(0.0P5)</td>
<td>Introduced on the S4048-ON.</td>

<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.8.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

**Usage Information**

This timer is an exponential backoff timer. Over the specified period, the time between ARP requests increases. This behavior reduces the potential for the system to slow down while waiting for a multitude of ARP responses.

**Related Commands**

- `show arp retries` — display the configured number of ARP retries.

### arp learn-enable

Enable ARP learning using gratuitous ARP.

**Syntax**

`arp learn-enable`

**Defaults** Disabled

**Command Modes** CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.1.0</td>
<td>Introduced.</td>
</tr>
</tbody>
</table>

**Usage Information**

In Dell Networking OS versions prior to 8.3.1.0, if a gratuitous ARP is received some time after an ARP request is sent, only RP2 installs the ARP information. For example:

1. At time t=0, Dell Networking OS sends an ARP request for IP A.B.C.D.
2. At time t=1, Dell Networking OS receives an ARP request for IP A.B.C.D.
3. At time t=2, Dell Networking OS installs an ARP entry for A.B.C.D only on RP2.

Beginning with Dell Networking OS version 8.3.1.0, when a gratuitous ARP is received, Dell Networking OS installs an ARP entry on all three CPUs.

**arp max-entries**

Enables you to configure the maximum number of ARP entries per VRF that are allowed for IPv4.

**Syntax**

```
arp max-entries [vrf vrf-name] max-number
```

**Parameters**

- `vrf vrf-name`: Enter the name of a specific VRF for which you want to configure maximum number of ARP entries that IPv4 allows.
- `max-number`: Enter the maximum number of ARP entries that a VRF RTM can hold. The range is from 0 to 65535.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.
Use this command to specify the maximum number of ARP entries that the Route Table Manager can hold for a specific VRF. This command does not apply to the management VRFs.

**arp retries**

Set the number of ARP retries in case the system does not receive an ARP reply in response to an ARP request.

**Syntax**

```
arp retries number
```

**Parameters**

- `number`: Enter the number of retries. The range is from 1 to 20. The default is 5.

**Defaults**

5

**Command Modes**

CONFIGURATION

**Command History**

</table>
Version Description
8.3.1.0 Introduced.

Usage Information
Retries are 20 seconds apart.

Related Commands
- show arp retries — display the configured number of ARP retries.

arp timeout

Set the time interval for an ARP entry to remain in the ARP cache.

Syntax
arp timeout minutes

Parameters
minutes Enter the number of minutes. The range is from 0 to 35790. The default is 240 minutes.

Defaults
240 minutes (4 hours)

Command Modes
INTERFACE

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.10(0.1) Introduced on the S6010-ON and S4048T-ON.
9.10(0.0) Introduced on the S3148.
9.10(0.0) Introduced on the S6100–ON.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100–ON.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.2(1.0) Introduced on the Z9500.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
8.3.7.0 Introduced on the S4810.
8.1.1.0 Introduced on the E-Series.
7.6.1.0 Introduced on the S-Series.
7.5.1.0 Introduced on the C-Series.
clear arp-cache

Clear the dynamic ARP entries from a specific interface or optionally delete (no-refresh) ARP entries from the content addressable memory (CAM).

**Syntax**

```
clear arp-cache [vrf vrf-name | interface | ip ip-address] [no-refresh]
```

**Parameters**

- `vrf vrf-name` (OPTIONAL) Enter the keyword vrf and then the name of the VRF to clear the ARP cache corresponding to that VRF.
- `interface` (OPTIONAL) Enter the following keywords and the interface information:
  - For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For the Management interface on the stack-unit, enter the keyword ManagementEthernet then the slot/port information.
  - For a port channel interface, enter the keywords port-channel then a number.
  - For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.
- `ip ip-address` (OPTIONAL) Enter the keyword ip then the IP address of the ARP entry you wish to clear.
- `no-refresh` (OPTIONAL) Enter the keywords no-refresh to delete the ARP entry from CAM. Or use this option with interface or ip ip-address to specify which dynamic ARP entries you want to delete.

**Command Modes**

- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
--- | ---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100-ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.

**NOTE:** Transit traffic may not be forwarded during the period when deleted ARP entries are resolved again and re-installed in CAM. Use this option with extreme caution.
clear host

Remove one or all dynamically learned host table entries.

Syntax

```
clear host name
```

Parameters

- **name**: Enter the name of the host to delete. Enter * to delete all host table entries.

Command Modes

EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.2(1.0) Introduced on the Z9500.
clear ip fib stack-unit

Clear all FIB entries in the specified stack unit (use this command with caution, refer to Usage Information.)

Syntax

```
clear ip fib stack-unit unit-number vrf vrf-name
```

Parameters

- **unit-number**: Enter the number of the stack unit.
- **vrf vrf-name**: Enter the keyword vrf followed by the name of the VRF to clear all FIB entries corresponding to that VRF.

Command Modes

EXEC Privilege

Usage Information

To clear Layer 3 CAM inconsistencies, use this command.

⚠️ CAUTION: Executing this command causes traffic disruption.

Related Commands

- `show ip fib stack-unit` — Show FIB entries on a specified stack-unit.
clear ip route

Clear one or all routes in the routing table.

Syntax

```
clear ip route [vrf vrf-name] {* | ip-address mask}
```

Parameters

- **vrf vrf-name** (Optional) Enter the keyword `vrf` and then the name of the VRF to clear the routes corresponding to that VRF.
- **{* | ip-address mask** Enter an asterisk (*) to clear all learned IP routes.
  - `ip-address mask` Enter a specific IP address and mask in dotted decimal format to clear that IP address from the routing table.

Command Modes

- **EXEC Privilege**

Command History

Usage Information

Use the `vrf vrf-name` attribute of this command to clear routes corresponding to either a specific VRF or the default VRF.
You cannot use this attribute to clear routes corresponding to a management VRF.

Related Commands

- `ip route` — assign an IP route to the switch.
- `show ip route` — view the routing table.
- `show ip route summary` — view a summary of the routing table.

### clear tcp statistics

Clear TCP counters.

**Syntax**

clear tcp statistics [all | cp]

**Parameters**

- `all`  
  Enter the keyword `all` to clear all TCP statistics maintained on all switch processors.
- `cp`  
  (OPTIONAL) Enter the `cp` to clear only statistics from the Control Processor.
- `rp`  
  (OPTIONAL) Enter the keyword `rp` to clear only the statistics from Route Processor.

debug arp

View information on ARP transactions.

Syntax

```
debug arp [interface] [count value]
```

To stop debugging ARP transactions, use the `no debug arp` command.

Parameters

- `interface` (OPTIONAL) Enter the following keywords and the interface information:
  - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For the Management interface on the stack-unit, enter the keyword `ManagementEthernet` then the slot/port information.
  - For a port channel interface, enter the keywords `port-channel` then a number.
  - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

- `count value` (OPTIONAL) Enter the keyword `count` then the count value. The range is from 1 to 65534.

Defaults

None

Command Modes

debug ip dhcp

Enable debug information for dynamic host configuration protocol (DHCP) relay transactions and display the information on the console.

Syntax
depag ip dhcp
To disable debug, use the no debug ip dhcp command.

Defaults Debug disabled

Command Modes EXEC Privilege

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking
OS Command Line Reference Guide.

Version Description
9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100-ON.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.2(1.0) Introduced on the Z9500.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
8.5.1.0 Added support for 4-port 40G line cards on the E-Series.
8.3.7.0 Introduced on the S4810.
8.1.1.0 Introduced on the E-Series.
7.6.1.0 Introduced on the S-Series.
7.5.1.0 Introduced on the C-Series.
6.3.1.0 Added the count option.

Usage Information
To stop packets from flooding the user terminal when debugging is turned on, use the count option.
Example

Dell# debug ip dhcp
00:12:21 : %RELAY-I-PACKET: BOOTP REQUEST (Unicast) received at interface 113.3.3.17 BOOTP Request, hops = 0, XID = 0xbf05140f, secs = 0, hwaddr = 00:60:CF:20:7B:8C, giaddr = 0.0.0.0

Dell#

Related Commands

- `ip helper-address` – specify the destination broadcast or host address for the DHCP server request.
- `ip helper-address hop-count disable` – disable the hop-count increment for the DHCP relay agent.

### debug ip icmp

View information on the internal control message protocol (ICMP).

**Syntax**

```
depbug ip icmp [interface] [count value]
```

To disable debugging, use the `no debug ip icmp` command.

**Parameters**

- `interface` (OPTIONAL) Enter the following keywords and the interface information:
• For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
• For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
• For the Management interface on the stack-unit, enter the keyword ManagementEthernet then the slot/port information.
• For a port channel interface, enter the keywords port-channel then a number.
• For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

**count value** (OPTIONAL) Enter the keyword count then the count value. The range is from 1 to 65534. The default is infinity.

ICMP: echo request sent to dst 40.40.40.40
```

**Usage Information**
To stop packets from flooding the user terminal when debugging is turned on, use the count option.
debug ip packet

View a log of IP packets sent and received.

Syntax
deb ug ip packet [access-group name] [count value] [interface]
To disable debugging, use the no debug ip packet [access-group name] [count value] [interface] command.

Parameters
access-group name Enter the keyword access-group then the access list name (maximum 16 characters) to limit the debug output based on the defined rules in the ACL.
count value (OPTIONAL) Enter the keyword count then the count value. The range is from 1 to 65534. The default is Infinity.
interface (OPTIONAL) Enter the following keywords and the interface information:
  • For the Management interface on the stack-unit, enter the keyword ManagementEthernet then the slot/port information.
  • For a port channel interface, enter the keywords port-channel then a number.
  • For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

Command Modes EXEC Privilege

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100–ON.
9.8(0.0P6) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.2(1.0) Introduced on the Z9500.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
8.5.1.0 Added support for 4-port 40G line cards on the E-Series.
8.3.7.0 Introduced on the S4810.
8.2.1.0 Added support for 4094 VLANs on the E-Series (the prior limit was 2094).
### Version Description

- **8.1.1.0** Introduced on the E-Series.
- **7.6.1.0** Added the `access-group` option.
- **7.6.1.0** Introduced on the S-Series.
- **7.5.1.0** Introduced on the C-Series.
- **6.3.1.0** Added the `count` option.

### Usage Information

The following describes the `debug ip packet` command in the following example.

**Field** | **Description**
--- | ---
`s=` | Lists the source address of the packet and the name of the interface (in parentheses) that received the packet.

- **d=** | Lists the destination address of the packet and the name of the interface (in parentheses) through which the packet is being sent out on the network.

- **len** | Displays the packet's length.

- **sending, rcvd, fragment, sending broad/multicast proto, unroutable** | The last part of each line lists the status of the packet.

**TCP src=** | Displays the source and destination ports, the sequence number, the acknowledgement number, and the window size of the packets in that TCP packets.

**UDP src=** | Displays the source and destination ports for the UDP packets.

**ICMP type=** | Displays the ICMP type and code.

**IP Fragment** | States that it is a fragment and displays the unique number identifying the fragment (Ident) and the offset (in 8-byte units) of this fragment (fragment offset) from the beginning of the original datagram.

### Example

```
IP: s=10.1.2.62 (local), d=10.1.2.206 (Ma 1/1), len 54, sending
   TCP src=23, dst=40869, seq=2112994894, ack=606901739, win=8191 ACK PUSH
IP: s=10.1.2.206 (Ma 1/1), d=10.1.2.62, len 40, rcvd
   TCP src=0, dst=0, seq=0, ack=0, win=0
IP: s=10.1.2.62 (local), d=10.1.2.206 (Ma 1/1), len 226, sending
   TCP src=23, dst=40869, seq=2112994896, ack=606901739, win=8192 ACK PUSH
IP: s=10.1.2.216 (Ma 1/1), d=10.1.2.255, len 78, rcvd
   UDP src=0, dst=0
IP: s=10.1.2.62 (local), d=10.1.2.3 (Ma 1/1), len 1500, sending fragment
   IP Fragment, Ident = 4741, fragment offset = 0
   ICMP type=0, code=0
IP: s=10.1.2.62 (local), d=10.1.2.3 (Ma 1/1), len 1500, sending fragment
   IP Fragment, Ident = 4741, fragment offset = 1480
IP: s=40.40.40.40 (local), d=224.0.0.5 (Gi 4/11), len 64, sending broad/multicast
   proto=89
IP: s=40.40.40.40 (local), d=224.0.0.6 (Gi 4/11), len 28, sending broad/multicast
   proto=2
IP: s=0.0.0.0, d=30.30.30.30, len 100, unroutable
   ICMP type=8, code=0
IP: s=0.0.0.0, d=30.30.30.30, len 100, unroutable
   ICMP type=8, code=0
```
Usage Information

To stop packets from flooding the user terminal when debugging is turned on, use the `count` option.

The `access-group` option supports only the equal to (eq) operator in TCP ACL rules. Port operators not equal to (neq), greater than (gt), less than (lt), or range are not supported in access-group option (refer to the following example). ARP packets (arp) and Ether-type (ether-type) are also not supported in the access-group option. The entire rule is skipped to compose the filter.

The `access-group` option pertains to:

- IP protocol number: from 0 to 255
- Internet control message protocol (icmp) but not the ICMP message type (from 0 to 255)
- Any internet protocol (ip)
- Transmission Control Protocol (tcp) but not on the rst, syn, or urg bits
- User Datagram Protocol (udp)

In the case of ambiguous access control list rules, the debug ip packet access-control command is disabled. A message appears identifying the error (refer to the Example below).

Example (Error Messages)

```
Dell# debug ip packet access-group test
%Error: port operator GT not supported in access-list debug
%Error: port operator LT not supported in access-list debug
%Error: port operator RANGE not supported in access-list debug
%Error: port operator NEQ not supported in access-list debug
Dell#00:10:45: %RPM0-P:CP
%IPMGR-3-DEBUG_IP_PACKET_ACL_AMBIGUOUS_EXP: Ambiguous rules not supported in access-list debug, access-list debugging is turned off
Dell#
```

ip address

Assign a primary and secondary IP address to the interface.

Syntax

```
ip address ip-address mask [secondary]
```

Parameters

- **ip-address**: Enter an IP address in dotted decimal format.
- **mask**: Enter the mask of the IP address in slash prefix format (for example, /24).
- **secondary**: (OPTIONAL) Enter the keyword `secondary` to designate the IP address as the secondary address.

Defaults

Not configured.

</table>

**Usage Information**
You must be in INTERFACE mode before you add an IP address to an interface. Assign an IP address to an interface prior to entering ROUTER OSPF mode.

### ip directed-broadcast

Enables the interface to receive directed broadcast packets.

**Syntax**

```plaintext
ip directed-broadcast
```

To disable the interface from receiving directed broadcast packets, use the `no ip directed-broadcast` command.

**Defaults**

Disabled (that is, the interface does not receive directed broadcast packets)

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

ip domain-list

Configure names to complete unqualified host names.

Syntax

ip domain-list name

To remove the name, use the no ip domain-list name command.

Parameters

name Enter a domain name to be used to complete unqualified names (that is, incomplete domain names that cannot be resolved).

Defaults

Disabled.

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description

9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100-ON.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.2(1.0) Introduced on the Z9500.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
Version | Description
--- | ---
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
8.1.1.0 | Introduced on the E-Series.
7.6.1.0 | Introduced on the S-Series.
7.5.1.0 | Introduced on the C-Series.

**Usage Information**

To configure a list of possible domain names, configure the `ip domain-list` command up to six times. If you configure both the `ip domain-name` and `ip domain-list` commands, the software tries to resolve the name using the `ip domain-name` command. If the name is not resolved, the software goes through the list of names configured with the `ip domain-list` command to find a match.

To enable dynamic resolution of hosts, use the following steps:

- specify a domain name server with the `ip name-server` command
- enable DNS with the `ip domain-lookup` command

To view current bindings, use the `show hosts` command. To view a DNS-related configuration, use the `show running-config resolve` command.

**Related Commands**

- `ip domain-name` — specify a DNS server.

### ip domain-lookup

To address resolution (that is, DNS), enable dynamic host-name.

**Syntax**

```
ip domain-lookup
```

To disable DNS lookup, use the `no ip domain-lookup` command.

**Defaults**

Disabled.

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant [Dell Networking OS Command Line Reference Guide](https://www.dell.com/support/manuals).

**Version** | **Description**

<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

Usage Information
To fully enable DNS, also specify one or more domain name servers with the `ip name-server` command.

Dell Networking OS does not support sending DNS queries over a VLAN. DNS queries are sent out all other interfaces, including the Management port.

To view current bindings, use the `show hosts` command.

Related Commands
- `ip name-server` — specify a DNS server.
- `show hosts` — view the current bindings.

**ip domain-name**

Configure one domain name for the switch.

**Syntax**

```
ip domain-name name
```

To remove the domain name, use the `no ip domain-name` command.

**Parameters**

`name`  
Enter one domain name to be used to complete unqualified names (that is, incomplete domain names that cannot be resolved).

**Defaults**
Not configured.

**Command Modes**

### ip helper-address

Specify the address of a DHCP server so that DHCP broadcast messages can be forwarded when the DHCP server is not on the same subnet as the client.

**Syntax**

```
ip helper-address ip-address
```

To remove a DHCP server address, use the `no ip helper-address` command.

**Parameters**

* `ip-address` Enter an IP address in dotted decimal format (A.B.C.D).

**Defaults**

Not configured.

**Command Modes**

</tr>
</tbody>
</table>

Usage Information

You can add multiple DHCP servers by entering the `ip helper-address` command multiple times. If multiple servers are defined, an incoming request is sent simultaneously to all configured servers and the reply is forwarded to the DHCP client.

Dell Networking OS uses standard DHCP ports, that is UDP ports 67 (server) and 68 (client) for DHCP relay services. It listens on port 67 and if it receives a broadcast, the software converts it to unicast, and forwards to it to the DHCP-server with source port=68 and destination port=67.

The server replies with source port=67, destination port=67 and Dell Networking OS forwards to the client with source port=67, destination port=68.

**ip helper-address hop-count disable**

Disable the hop-count increment for the DHCP relay agent.

Syntax

```
ip helper-address hop-count disable
```
To re-enable the hop-count increment, use the `no ip helper-address hop-count disable` command.

**Defaults**

Enabled; the hops field in the DHCP message header is incremented by default.

**Command Modes**

CONFIGURATION

**Command History**

<td>7.5(1.0)</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>6.3(1.0)</td>
<td>Introduced for the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command disables the incrementing of the hops field when boot requests are relayed to a DHCP server through Dell Networking OS. If the incoming boot request already has a non-zero hops field, the message is relayed with the same value for hops. However, the message is discarded if the hops field exceeds 16, to comply with the relay agent behavior specified in RFC 1542.

**Related Commands**

- `ip helper-address` — specify the destination broadcast or host address for DHCP server requests.
- `show running-config` — display the current configuration and changes from the default values.

**ip host**

Assign a name and an IP address to the host-to-IP address mapping table.

**Syntax**

```
ip host name ip-address
```

To remove an IP host, use the `no ip host name [ip-address]` command.
Parameters

- **name**: Enter a text string to associate with one IP address.
- **ip address**: Enter an IP address, in dotted decimal format, to be mapped to the name.

Defaults
Not configured.

**ip icmp source-interface**

Enable the ICMP error and unreachable messages to be sent with the source interface IP address, such as the loopback address, instead of the hops of the preceding devices along the network path to be used for easy debugging and diagnosis of network disconnections and reachability problems with IPv4 packets.

**Syntax**

```
ip icmp source-interface interface
```

**Parameters**

- **interface**: Enter one of the following keywords and slot/port or number information:
  - For a Management Ethernet interface, enter the keyword `managementethernet`.  

---

IPv4 Routing  |  787
### NOTE:
- When you configure the capability to enable the loopback IP address to be sent for easy debugging and diagnosis (IP addresses of the devices for which the ICMP source interface is configured), the source IP address of the outgoing ICMP error message is modified, although the packets are not sent out using the configured interface. Because the management interface is configured without any parameters such as the IP address, it is treated to the management interface of the primary unit or the existing unit.
- For ICMP, a user can specify one source-interface for each VRF and let it be the default, management or any other VRF created. For other protocols (Telnet, SSH, FTP, TFTP), where the source interface can be specified, only one interface can be chosen. This is for all VRFs combined.

  - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
  - For a port channel interface, enter the keywords `port-channel` then a number.
  - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

</tr>
</tbody>
</table>

#### Usage Information
You can enable the mechanism to configure the source or the originating interface from which the packet (the device that generates the ICMP error messages) is received by the switch to send the loopback address instead of its source IP address to be used in the ICMP unreachable messages and in the `traceroute` command output. The loopback address must be unique in a particular domain.

In network environments that contain a large number of devices, ranging up to thousands of systems, and with each device configured for equal-cost multipath (ECMP) links, you cannot effectively and optimally use the `traceroute` and `ping` applications to examine the network reachability and identify any broken links for diagnostic purposes. In such cases, if the reply that is obtained from each hop on the network path contains the IP address of the adjacent, neighboring interface from which the packet is received, it is difficult to employ the ping and
traceroute utilities. You can enable the ICMP unreachable messages to contain the loopback address of the source device instead of the previous hop's IP address to be able to easily and quickly identify the device and devices along the path because the DNS server maps the loopback IP address to the hostname and does not translate the IP address of every interface of the switch to the hostname.

Example

```bash
Dell(conf)# ip icmp source-interface gigabitethernet 1/1
Dell(conf)#
```

**ipv6 icmp source-interface**

Enable the ICMP error and unreachable messages to be sent with the source interface IP address, such as the loopback address, instead of the hops of the preceding devices along the network path to be used for easy debugging and diagnosis of network disconnections and reachability problems with IPv6 packets.

**Syntax**

```
ipv6 icmp source-interface interface
```

**Parameters**

- `interface` Enter one of the following keywords and slot/port or number information:
  - For a Management Ethernet interface, enter the keyword `managementethernet`.
  - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet then the slot/port information.`
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet then the slot/port information.`
  - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
  - For a port channel interface, enter the keywords `port-channel` then a number.
  - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

### Description

Introduced on the S4810, S4820T, S6000, and Z9000 platforms.

### Usage Information

You can enable the mechanism to configure the source or the originating interface from which the packet (the device that generates the ICMP error messages) is received by the switch to send the loopback address instead of its source IP address to be used in the ICMP unreachable messages and in the `traceroute` command output. The loopback address must be unique in a particular domain.

In network environments that contain a large number of devices, ranging up to thousands of systems, and with each device configured for equal-cost multipath (ECMP) links, you cannot effectively and optimally use the `traceroute` and `ping` applications to examine the network reachability and identify any broken links for diagnostic purposes. In such cases, if the reply that is obtained from each hop on the network path contains the IP address of the adjacent, neighboring interface from which the packet is received, it is difficult to employ the `ping` and `traceroute` utilities. You can enable the ICMP unreachable messages to contain the loopback address of the source device instead of the previous hop's IP address to be able to easily and quickly identify the device and devices along the path because the DNS server maps the loopback IP address to the hostname and does not translate the IP address of every interface of the switch to the hostname.

### Example

```
Dell(conf)# ipv6 icmp source-interface gigabitethernet 1/1
Dell(conf)#
```

---

### ip max-frag-count

Set the maximum number of fragments allowed in one packet for packet re-assembly.

#### Syntax

```
ip max-frag-count count
```

To place no limit on the number of fragments allowed, use the `no ip max-frag-count` command.

#### Parameters

- **count**: Enter a number for the number of fragments allowed for re-assembly. The range is from 2 to 256.

#### Defaults

No limit is set on number of fragments allowed.

#### Command Modes

`CONFIGURATION`

#### Command History

This guide is platform-specific. For command information about other platforms, see the relevant `Dell Networking OS Command Line Reference Guide`.

#### Version

- **9.10(0.0)**: Introduced on the S3148.
- **9.8(2.0)**: Introduced on the S3100 series.
- **9.8(1.0)**: Introduced on the Z9100-ON.
- **9.8(0.0P6)**: Introduced on the S4048-ON.
- **9.8(0.0P2)**: Introduced on the S3048-ON.
ip max-routes

Enables you to configure the maximum number of protocol routes per VRF that are allowed for IPv4.

Syntax

```
ip max-routes [vrf vrf-name] max-number
```

Parameters

- **vrf vrf-name**
  - Enter the keyword `vrf` and then the name of the VRF for which you want to configure maximum number of protocol routes that IPv4 allows.

- **max-number**
  - Enter the maximum number of protocol routes that a VRF RTM can hold. The range is from 0 to 7500.

Default

Not configured.

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description

9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.4(0.0) Introduced on the S4810 and S4820T.

Usage Information

Use this command to specify the maximum number of protocol routes that the Route Table Manager can hold for a specific VRF. This command does not apply to the management VRFs.

Related Commands

- `show ip route` — view the switch routing table.
• show ipv6 route — display the IPv6 routes.

**ip mtu**

Set the IP MTU (frame size) of the packet the RPM transmits for the line card interface. If the packet must be fragmented, Dell Networking OS sets the size of the fragmented packets to the size specified in this command.

**Syntax**

```
ip mtu value
```

To return to the default IP MTU value, use the **no ip mtu** command.

**Parameters**

- **value**
  
  Enter the maximum MTU size if the IP packet is fragmented. The range is from 576 to 9234. The default is 1500 bytes.

**Defaults**

1500 bytes

**Command Modes**

INTERFACE (Gigabit Ethernet and 10-Gigabit Ethernet interfaces)

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>

**Usage Information**

When you enter the **no mtu** command, Dell Networking OS reduces the ip mtu value to 1536 bytes. To return the IP MTU value to the default, use the **no ip mtu** command.

Starting with Dell Networking OS Release 9.2(0.2), the **ip mtu** command is not supported to configure the IP MTU value that is used when the IP packet is fragmented. Instead of having to configure the IP MTU value, this value is automatically computed by the software when you configure an interface. As a result, the ip mtu command is not available for configuration. However, you can continue to specify the link MTU value by using the **mtu** command.

Compensate for Layer 2 header when configuring link MTU on an Ethernet interface or Dell Networking OS may not fragment packets. If the packet includes a Layer 2 header, the difference between the link MTU and IP MTU (the **ip mtu** command) must be enough bytes to include for the Layer 2 header.
Link MTU and IP MTU considerations for Port Channels and VLANs are as follows

**Port Channels:**
- All members must have the same link MTU value and the same IP MTU value.
- The Port Channel link MTU and IP MTU must be less than or equal to the link MTU and IP MTU values configured on the channel members. For example, if the members have a link MTU of 2100 and an IP MTU of 2000, the Port Channel's MTU values cannot be higher than 2100 for link MTU or 2000 bytes for IP MTU.

**VLANs:**
- All members of a VLAN must have the same IP MTU value.
- Members can have different Link MTU values. Tagged members must have a link MTU 4 bytes higher than untagged members to account for the packet tag.
- The VLAN link MTU and IP MTU must be less than or equal to the link MTU and IP MTU values configured on the VLAN members. For example, the VLAN contains tagged members with Link MTU of 1522 and IP MTU of 1500 and untagged members with Link MTU of 1518 and IP MTU of 1500. The VLAN's Link MTU cannot be higher than 1518 bytes and its IP MTU cannot be higher than 1500 bytes.

The following describes the difference between Link MTU and IP MTU.

<table>
<thead>
<tr>
<th>Layer 2 Overhead</th>

**Related Commands**
- `mtu` — set the link MTU for an Ethernet interface.

**ip name-server**

Enter up to six IPv4 addresses of name servers. The order you enter the addresses determines the order of their use.

**Syntax**

```
ip name-server ipv4-address [ipv4-address2...ipv4-address6]
```

To remove a name server, use the `no ip name-server ip-address` command.

**Parameters**

- `ipv4-address`  
  Enter the IPv4 address, in dotted decimal format, of the name server to be used.

- `ipv4-address2...ipv4-address6`  
  (OPTIONAL) Enter up to five more IPv4 addresses, in dotted decimal format, of name servers to be used. Separate the addresses with a space.
Defaults

No name servers are configured.

Usage Information

Dell Networking OS does not support sending DNS queries over a VLAN. DNS queries are sent out on all other interfaces, including the Management port.

You can separately configure both IPv4 and IPv6 domain name servers.

In a dual stack setup, the system sends both A (request for IPv4 — RFC 1035) and AAAA (request for IPv6 — RFC 3596) record requests to a DNS server even if only the ip name-server command is configured.

ip proxy-arp

Enable proxy ARP on an interface.

Syntax

```
ip proxy-arp
```

To disable proxy ARP, use the no ip proxy-arp command.

Defaults

Enabled.

Related Commands

- `show ip interface` — display the interface routing status and configuration.

**ip route**

Assign a static route to the switch.

**Syntax**

```
ip route [vrf vrf-name] ip-address mask {ip-address | interface [ip-address]} [distance] [permanent] [tag tag-value] [vrf vrf-name] [weight weight-value]
```

To delete a specific static route, use the `no ip route destination mask` command.

To delete all routes matching a certain route, use the `no ip route destination mask command`.

**Parameters**

- `vrf vrf-name`: (Optional) Enter the keyword `vrf` and then the name of the VRF to configure a static route corresponding to that VRF. Use this VRF option after the `ip route` keyword to configure a static route on that particular VRF.

- `destination`: Enter the IP address in dotted decimal format of the destination device.
mask

Enter the mask in the slash prefix format (/x) of the destination IP address.

ip-address

Enter the IP address of the forwarding router in dotted decimal format.

interface

Enter one of the following keyword followed by the interface information:

- For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a Loopback interface, enter the keyword loopback then a number from 0 to 16383.
- For the Management interface on the stack-unit, enter the keyword ManagementEthernet then the slot/port information.
- For a port channel interface, enter the keywords port-channel then a number.
- For a Null interface, enter the keyword null then the Null interface number.
- For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.
- For a tunnel interface, enter the keyword tunnel then the tunnel interface number. The range is from 1 to 16383.

If you configure a static IPv6 route using an egress interface and enter the ping command to reach the destination IPv6 address, the ping operation may not work. Configure the IPv6 route using a next-hop IPv6 address in order for the ping command to detect the destination address.

interface ip-address

Enter the keyword interface then the IP address.

distance

(OPTIONAL) Enter the value of the distance metric assigned to the route. The range is from 1 to 255.

permanent

(OPTIONAL) Enter the keyword permanent to specify that the route must not be removed even if the interface assigned to that route goes down. The route must be currently active to be installed in the routing table. If you disable the interface, the route is removed from the routing table.

tag tag-value

(OPTIONAL) Enter the keyword tag then a number to assign to the route. The range is from 1 to 4294967295.

vrf vrf-name

Enter the keyword vrf followed by the name of the VRF. Use this VRF option after the next hop to specify which VRF the next hop belongs to. This setting is used in route leaking cases. See “R”oute Leaking VRFs” in the Virtual Routing and Forwarding (VRF) section of the Configuration guide.

weight weight-value

Enter the keyword weight followed by a weight value. The range is from 0 to 255.

**NOTE:** Weight for a static route can be added only for the destination address and not for the route pointing to destination a interface.

Defaults

Not configured.

</tbody>
</table>

**Usage Information**

Using the following example of a static route: `ip route 33.33.33.0 /24 tengigabitethernet 1/1 172.31.5.43`

- The software installs a next hop that is not on the directly connected subnet but which recursively resolves to a next hop on the interface's configured subnet. In the example, if tengig 1/1 has an ip address on subnet 2.2.2.0 and if 172.31.5.43 recursively resolves to 2.2.2.0, Dell Networking OS installs the static route.
- When the interface goes down, Dell Networking OS withdraws the route.
- When the interface comes up, Dell Networking OS re-installs the route.
- When recursive resolution is “broken,” Dell Networking OS withdraws the route.
- When recursive resolution is satisfied, Dell Networking OS re-installs the route.

You can specify a weight for an IPv4 or IPv6 static route. If the weight value of a path is 0, then that path is not used for forwarding when weighted ECMP is in effect. Also, if a path corresponding to a static route (destination) has a non-zero weight assigned to it and other paths do not have any weight configured, then regular ECMP is used for forwarding.

You can specify the weight value only to destination address and not on the egress port.

A route is considered for weighted ECMP calculations only if each paths corresponding to that route is configured with a weight.

You cannot use the VRF attribute of this command to configure routes in a management VRF. When a specific VRF is deleted, all the configured static routes corresponding to that VRF are automatically removed.

**Example**

```
Dell(conf)# ip route 1.1.1.0/24 4.4.4.2 weight 100
Dell(conf)# ip route 1.1.1.0/24 6.6.6.2 weight 200
```
Dell(conf)# do show running-config | grep route ip route 1.1.1.0/24 4.4.4.2 weight 100 ip route 1.1.1.0/24 6.6.6.2 weight 200
Dell(conf)# ip route vrf test 1.1.1.0/24 4.4.4.2 weight 100
Dell(conf)# ip route vrf test 1.1.1.0/24 6.6.6.2 weight 200
Dell(conf)# do show running-config | grep route ip route vrf test 1.1.1.0/24 4.4.4.2 weight 100 ip route vrf test 1.1.1.0/24 6.6.6.2 weight 200

Related Commands

- show ip route — view the switch routing table.

**ip source-route**

Enable Dell Networking OS to forward IP packets with source route information in the header.

**Syntax**

```plaintext
ip source-route
```

To drop packets with source route information, use the `no ip route-source` command.

**Defaults**

Enabled.

load-balance

By default, for C-Series and S-Series, Dell Networking OS uses an IP 4-tuple (IP SA, IP DA, Source Port, and Destination Port) to distribute IP traffic over members of a Port Channel as well as equal-cost paths. To designate another method to balance traffic over Port Channel members, use the load-balance command.

Syntax

load-balance {ip-selection [dest-ip | source-ip]} | {mac [dest-mac | source-dest-mac | source-mac]} | {tcp-udp | ingress-port [enable]}

To return to the default setting (IP 4-tuple), use the no load-balance {ip-selection [dest-ip | source-ip]} | {mac [dest-mac | source-dest-mac | source-mac]} | {tcp-udp | ingress-port [enable]} command.

Parameters

ip-selection (dest-ip | source-ip)

Enter the keywords to distribute IP traffic based on the following criteria:

- dest-ip — Uses destination IP address and destination port fields to hash. The hashing mechanism returns a 3-bit index indicating which port the packet should be forwarded.
- source-ip — Uses source IP address and source port fields to hash. The hashing mechanism returns a 3-bit index indicating which port the packet should be forwarded.

mac (dest-mac | source-dest-mac | source-mac)

Enter the keywords to distribute MAC traffic based on the following criteria:

- dest-mac — Uses the destination MAC address, VLAN, Ethertype, source module ID and source port ID fields to hash. The hashing mechanism returns a 3-bit index indicating which port the packet should be forwarded.
- source-dest-mac — Uses the destination and source MAC address, VLAN, Ethertype, source module ID and source port ID fields to hash. The hashing mechanism returns a 3-bit index indicating which port the packet should be forwarded.
- source-mac — Uses the source MAC address, VLAN, Ethertype, source module ID and source port ID fields to hash. The hashing mechanism returns a 3-bit index indicating which port the packet should be forwarded.

tcp-udp enable

Enter the keywords to distribute traffic based on the following:

- enable — Takes the TCP/UDP source and destination ports into consideration when doing hash computations. This option is enabled by default.

ingress-port enable

Enter the keywords to distribute traffic based on the following:

- enable — Takes the source port into consideration when doing hash computations. This option is disabled by default.

Defaults

IP 4-tuple (IP SA, IP DA, Source Port, Destination Port)

Usage Information

By default, Dell Networking OS distributes incoming traffic based on a hash algorithm using the following criteria:

- IP source address
- IP destination address
- TCP/UDP source port
- TCP/UDP destination port

load-balance hg

Choose the traffic flow parameters the hash calculation uses while distributing the traffic across internal higig links.

Syntax

```
```

Parameters

- **((ip-selection| ipv6-selection [source-ip | source-ipv6 | source-port-id | source-module-id | dest-ip | dest-ipv6 | dest-port-id | dest-module-id | protocol**

  To use IPv4 key fields in hash computation, enter the keyword ip-selection then one of the parameters. To use IPv6 key fields in hash computation, enter the keyword ipv6-selection then one of the parameters.

  - source-ip — Use IPv4 src-ip field in hash calculation.
  - source-ipv6 — Use IPv6 src-ip field in hash calculation
  - source-port-id — Use src-port-id field in hash calculation.
  - source-module-id — Use src-module-id field in hash calculation.
  - dest-ip — Use IPv4 dest-ip field in hash calculation.
  - dest-ipv6 — Use IPv6 dest-ip field in hash calculation.
To use MAC key fields in hash computation, enter the keyword `mac` then one of the parameters:

- `source-mac` — Use source-mac field in hash calculation.
- `source-port-id` — Use src-port-id field in hash calculation.
- `source-module-id` — Use src-module-id field in hash calculation.
- `dest-mac` — Use dest-mac field in hash calculation.
- `dest-port-id` — Use dest-port-id field in hash calculation.
- `dest-module-id` — Use dest-module-id field in hash calculation.
- `ethertype` — Use Ethertype field in hash calculation.
- `source-dest-mac` — Use SMAC and DMAC fields in hash calculation.

To use tunnel key fields in hash computation, enter the keyword `tunnel` then one of the parameters:

- `ipv4-over-ipv4` — Use ipv4-over-ipv4 field in hash calculation.
- `ipv4-over-gre-ipv4` — Use ipv4-over-gre-ipv4 field in hash calculation.
- `mac-in-mac` — Use mac-in-mac field in hash calculation.

**Defaults**
IP selection 5-tuples (source-ip dest-ip vlan protocol L4-source-port L4-dest-port).

**Command Modes**
CONFIGURATION

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
--- | ---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100–ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.7(0.0) | Introduced on the S6000-ON.
9.0.2.0 | Introduced on the S6000.
9.0.0.0 | Added support for IPv6.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
management route

Configure a static route that points to the Management interface or a forwarding router.

Syntax

management route {ip-address mask | ipv6-address 1.1.1.1prefix-length} (forwarding-router-address | managementethernet| vlan | gigabitethernet | tengigabitethernet)

To remove a static route, use the no management route command.

Parameters

- **ip-address mask**: Enter an IP address (dotted decimal format) and mask (/prefix format) of the destination subnet.
- **ipv6-address prefix-length**: Enter an IPv6 address (x:x:x::x format) and mask (/prefix format) of the destination subnet. Enter the IPv6 address in the x:x:x:x format followed by the prefix length in the /x format. The range is from /0 to /128.

**NOTE**: The :: notation specifies successive hexadecimal fields of zeros.

- **forwarding-router-address**: Enter an IP address (dotted decimal format) or an IPv6 address (x:x:x::x format) of a forwarding router.
- **managementethernet**: Enter the keyword managementethernet for the Management interface on the Primary RPM.
- **vlan**: Enter the keyword vlan to specify a vlan interface.
- **gigabitethernet**: Enter the keyword gigabitethernet to specify a one Gigabit Ethernet interface.
- **tengigabitethernet**: Enter the keyword tengigabitethernet to specify a ten Gigabit Ethernet interface.

Defaults

Not configured.

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description

9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100-ON.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
### Version Description

- **9.7(0.0)**: Added support for forty gigabit, vlan, and tengigabit ethernet interfaces. Introduced on the S6000-ON.
- **9.0.2.0**: Introduced on the S6000.
- **9.0.0.0**: Introduced on the Z9000 and added support for IPv6.
- **8.3.19.0**: Introduced on the S4820T.
- **8.3.11.1**: Introduced on the S4810.
- **8.1.1.0**: Introduced on the E-Series.
- **7.5.1.0**: Introduced on the C-Series.
- **pre-6.1.1.0**: Introduced on the E-Series.

### Usage Information

When a static route (or a protocol route) overlaps with Management static route, the static route (or a protocol route) is preferred over the Management Static route. Also, Management static routes and the Management Connected prefix are not reflected in the hardware routing tables. Separate routing tables are maintained for IPv4 and IPv6 management routes. This command manages both tables.

### Related Commands

- `interface ManagementEthernet` — configure the Management port on the system (either the Primary or Standby RPM).
- `speed (Management interface)` — set the speed for the Management interface.

### show arp

Display the ARP table.

#### Syntax

```
show arp [vrf vrf-name] [interface interface | ip ip-address [mask] | macaddress mac-address [mac-address mask]] [retries] [static | dynamic] [inspection {database | statistics}][summary]
```

#### Parameters

- **vrf vrf-name**: (OPTIONAL) Enter the keyword vrf and then the name of the VRF.

  **NOTE:** Use this attribute to start a BGP instance for either a specific address family corresponding to the default VRF or an IPv4 address family corresponding to a non-default VRF.

- **interface interface**: (OPTIONAL) Enter the following keywords and the interface information:
  - For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For the Management interface on the stack-unit, enter the keyword ManagementEthernet then the slot/port information.
  - For a port channel interface, enter the keywords port-channel then a number.
  - For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.
**ip ip-address mask**  
(Optional) Enter the keyword `ip` then an IP address in the dotted decimal format. Enter the optional IP address mask in the slash prefix format (/ x).

**inspection**  
Enter the keyword `inspection` with one of the following keywords to view ARP entries:
- `database` — view a list of ARP entries learned using DAI
- `statistics` — view DAI statistics

**mac-address mac-address mask**  
(Optional) Enter the keyword `mac-address` then a MAC address in nn:nn:nn:nn:nn:nn format. Enter the optional MAC address mask in nn:nn:nn:nn:nn format also.

**static**  
(Optional) Enter the keyword `static` to view entries entered manually.

**retries**  
(Optional) Enter the keyword `retries` to show the number of ARP retries before a 20-second backoff.

**dynamic**  
(Optional) Enter the keyword `dynamic` to view dynamic entries.

**summary**  
(Optional) Enter the keyword `summary` to view a summary of ARP entries.

</tbody>
</table>
**Version** | **Description**
---|---
pre-6.1.0 | Introduced on the E-Series.

**Usage Information**

The following example shows two VLANs that are associated with a private VLAN (PVLAN) (refer to **Private VLAN (PVLAN)**).

If you have entered the `clear arp-cache` command to remove a large number of ARP entries and the command is still being processed in the background, an error message display if you attempt to enter the `show arp` command:

Clear arp in-progress. Please try after sometime!

The following describes the `show arp` command shown in the following example.

**Description**

- **Protocol**
  Displays the protocol type.
- **Address**
  Displays the IP address of the ARP entry.
- **Age(min)**
  Displays the age (in minutes) of the ARP entry.
- **Hardware Address**
  Displays the MAC address associated with the ARP entry.
- **Interface**
  Displays the first two letters of the interfaces type and the slot/port associated with the ARP entry.
- **VLAN**
  Displays the VLAN ID, if any, associated with the ARP entry.
- **CPU**
  Lists which CPU the entries are stored on.

**Example**

```
Dell> show arp
Protocol  Address  Age(min) Hardware Address Interface VLAN CPU
-------------------------------------------------------------
Internet  192.2.1.254  1  00:00:c0:02:01:02  Gi 2/13  -    CP
Internet  192.2.1.253  1  00:00:c0:02:01:02  Gi 2/13  -    CP
Internet  192.2.1.252  1  00:00:c0:02:01:02  Gi 2/13  -    CP
Internet  192.2.1.251  1  00:00:c0:02:01:02  Gi 2/13  -    CP
Internet  192.2.1.250  1  00:00:c0:02:01:02  Gi 2/13  -    CP
Internet  192.2.1.249  1  00:00:c0:02:01:02  Gi 2/13  -    CP
Internet  192.2.1.248  1  00:00:c0:02:01:02  Gi 2/13  -    CP
Internet  192.2.1.247  1  00:00:c0:02:01:02  Gi 2/13  -    CP
Internet  192.2.1.246  1  00:00:c0:02:01:02  Gi 2/13  -    CP
```

**Example (Private VLAN)**

**NOTE:** In this example, Line 1 shows community VLAN 200 (in primary VLAN 10) in a PVLAN. Line 2 shows primary VLAN 10.

```
Dell# show arp
Protocol  Address  Age(min) Hardware Address Interface VLAN CPU
-------------------------------------------------------------
Internet  5.5.5.1       -  00:01:e8:43:96:5e  -      Vl 10 pv 200 CP
Internet  5.5.5.10      -  00:01:e8:44:99:55  -      Vl 10        CP
Internet  10.1.2.4      1  00:01:e8:d5:9e:e2  Ma 1/1 -            CP
Internet  10.10.10.4    1  00:01:e8:d5:9e:e2  Ma 1/1 -            CP
Internet  10.16.127.53  1  00:01:e8:d5:9e:e2  Ma 1/1 -            CP
Internet  10.16.134.254 20 00:01:e8:d5:9e:e2  Ma 1/1 -            CP
Internet  133.33.33.4   1  00:01:e8:d5:9e:e2  Ma 1/1 -            CP
```

**Usage Information**

The following describes the `show arp summary` command shown in the following example.
Description

Total Entries Lists the total number of ARP entries in the ARP table.
Static Entries Lists the total number of configured or static ARP entries.
Dynamic Entries Lists the total number of learned or dynamic ARP entries.
CPU Lists which CPU the entries are stored on.

Example (Summary) Dell# show arp summary

<table>
<thead>
<tr>
<th>Total Entries</th>
<th>Static Entries</th>
<th>Dynamic Entries</th>
<th>CPU</th>
</tr>
</thead>
<tbody>
<tr>
<td>83</td>
<td>0</td>
<td>83</td>
<td>CP</td>
</tr>
</tbody>
</table>

Related Commands

- ip local-proxy-arp — enable/disable Layer 3 communication in secondary VLANs.
- switchport mode private-vlan — set PVLAN mode of the selected port.

show arp retries

Display the configured number of ARP retries.

Syntax

show arp retries

Command Modes

- EXEC
- EXEC Privilege

Usage Information

The following describes the show hosts command in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Default domain...</td>
<td>Displays the domain name (if configured).</td>
</tr>
</tbody>
</table>
### Field Description

**Name/address lookup...**

States if DNS is enabled on the system.

- If DNS is enabled, the Name/Address lookup is domain service.
- If DNS is not enabled, the Name/Address lookup is static mapping.

**Name servers are...**

Lists the name servers, if configured.

**Host**

Displays the host name assigned to the IP address.

**Flags**

Classifies the entry as one of the following:

- perm — the entry was manually configured and will not time out
- temp — the entry was learned and will time out after 72 hours of inactivity

Also included in the flag is an indication of the validity of the route:

- ok — the entry is valid.
- ex — the entry expired.
- ?? — the entry is suspect.

**TTL**

Displays the amount of time until the entry ages out of the cache. For dynamically learned entries only.

**Type**

Displays IP as the type of entry.

**Address**

Displays the IP addresses assigned to the host.

### Example

```
Dell# show hosts
Default domain is not set
Name/address lookup uses static mappings
Name servers are not set
Host    Flags     TTL   Type   Address
------- -----     ----  ----   -------
ks      (perm, OK) -     IP     2.2.2.2
4200-1  (perm, OK) -     IP     192.68.69.2
1230-3  (perm, OK) -     IP     192.68.99.2
22r     (perm, OK) -     IP     192.71.18.2
210-3   (perm, OK) -     IP     192.71.23.1
Dell#
```

### Related Commands

- traceroute — view the DNS resolution.
- ip host — configure a host.

### show ip cam stack-unit

Display CAM entries for a port-pipe of a stack-unit on a S-Series or Z-Series switch.

**Syntax**

```
show ip cam stack-unit {stack-unit-number} {port-set {pipe-number} | vrf vrf-name {ip-address mask [longer-prefixes [ecmp-group detail]]}} | ecmp-group {detail | member-info [detail [group-index index-number]]} | summary
```

**Parameters**

- **stack-unit-number**
  
  Enter the stack-unit ID. The range is from 1 to 12.

- **port-set pipe-number**
  
  Enter the keyword port-set then the number of the stack unit’s port-pipe. The unit ID range is from 0 to 0.
vrf vrf-name

Enter the keyword vrf followed by the name of the VRF to display CAM entries corresponding to that VRF.

network mask

(OPTIONAL) Enter the IP address and mask of a route to CAM entries for that route only. You can enter one of the following keywords to filter results.

- Enter the keyword longer-prefixes to view routes with a common prefix.
- Enter the keyword ecmp-group detail to view the ECMP group index.

ecmp-group (detail | member-info [detail [group-index index-number]])

(OPTIONAL) Enter the keyword ecmp-group then one of the following keywords to filter results.

- Enter the keyword detail to view the ECMP group index.
- Enter the keyword member-info to view the member information for the ECMP group.
- Enter the keyword member-info detail to view detailed ECMP membership and n-hop information.
- Enter the keyword group-index then the index number to show ECMP membership per group. The range is from 0 to 1022.

summary

(OPTIONAL) Enter the keyword summary to view a table listing route prefixes and the total number routes which can be entered in to CAM.

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>

</tbody>
</table>

Usage Information

The following describes the show ip cam command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Destination</td>
<td>Displays the destination route of the index.</td>
</tr>
</tbody>
</table>
Field | Description
--- | ---
EC | Displays 1 if the route is an ECMP route. Else, displays 0.
C | This is the CPU bit. If it displays 1, then it indicates that a packet hitting this entry will be forwarded to the CPU.
V Id | Displays the VLAN ID. If the entry is 0, the entry is not part of a VLAN.
Mac Addr | Displays the next-hop router’s MAC address.
Port | Displays the egress interface.

- CP = control processor
- Gi = Gigabit Ethernet interface
- Te = 10–Gigabit Ethernet interface

**Example**

```
Dell# show ip cam stack-unit 3 po 0 1.1.1.0/24 longer-prefixes
```

**Example (ECMP-Group)**

**Example (Member-Info)**

**show ip fib stack-unit**

View all Forwarding Information Base (FIB) entries of a specific stack-unit.

**Syntax**

```
show ip fib stack-unit stack-unit-number vrf vrf-name [ip-address [mask] [longer-prefixes] | summary]
```

**Parameters**

- **stack-unit-number** Enter the stack unit ID.
vrf vrf-name  
Enter the keyword vrf followed by the name of the VRF to view FIB entries corresponding to that VRF.

ip-address mask 
(OPTIONAL) Enter the IP address of the network destination to view only information on that destination. Enter the IP address in dotted decimal format (A.B.C.D). Enter the mask in slash prefix format (/X).

longer-prefixes 
(OPTIONAL) Enter the keywords longer-prefixes to view all routes with a common prefix.

summary 
(OPTIONAL) Enter the keyword summary to view the total number of prefixes in the FIB.

Command Modes
  • EXEC
  • EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version  
Description
9.10(0.0)  
Introduced on the S3148.
9.8(2.0)  
Introduced on the S3100 series.
9.8(1.0)  
Introduced on the Z9100–ON.
9.8(0.0P5)  
Introduced on the S4048-ON.
9.8(0.0P2)  
Introduced on the S3048-ON.
9.7(0.0)  
Introduced on the S6000-ON.
9.4(0.0)  
Added support for VRF.
9.2(1.0)  
Introduced on the Z9500.
9.0.2.0  
Introduced on the S6000.
8.3.19.0  
Introduced on the S4820T.
8.3.11.1  
Introduced on the Z9000.
8.3.7.0  
Introduced on the S4810.
7.7.1.0  
Added support for up to seven stack members.
7.6.1.0  
Introduced on the S-Series.

Usage Information

The following describes the show ip fib stack-unit command shown in the following example.

Field  
Description
Destination  
Lists the destination IP address.
Gateway  
Displays either the word “direct” and an interface for a directly connected route or the remote IP address used to forward the traffic.
First-Hop  
Displays the first hop IP address.
Mac-Addr  
Displays the MAC address.
Port  
Displays the egress-port information.
Vid  
Displays the VLAN ID. If no VLAN is assigned, zero (0) is listed.
### Field Description

**EC**
Displays the number of ECMP paths.

If weighted ECMP is enabled, then the `show ip fib stack-unit` command display a new column named W-EC (Weighted ECMP). This column displays either a value of 1 or 0 depending on whether or not a route is assigned with a weight.

#### Example

**Example**

```
Dell# show ip fib stack-unit 1
Destination  Gateway               First-Hop  Mac-Addr           Port      VId    EC

```

**Example (Show command output with Weighted ECMP Enabled)**

```
The RC and W columns in the show output appear only if the weighted ECMP is enabled using the `ip ecmp weighted` command.

**Related Commands**

- `clear ip fib stack-unit` — clear FIB entries on a specified stack-unit.
- `ip ecmp weighted` — enable weighted ECMP calculations.

### show ip flow

Show how a Layer 3 packet is forwarded when it arrives at a particular interface.

**Syntax**

```
show ip flow interface {source-ip address destination-ip address} {protocol number [tcp | udp]} {src-port number destination-port number}
```

**Parameters**

- **interface**
  Enter the keyword `interface` then one of the following interface keywords.
  - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

- **source-ip address**
  Enter the keywords `source-ip` then the IP source address in IP address format.

- **destination-ip address**
  Enter the keywords `destination-ip` then the IP destination address in IP address format.

- **protocol number**
  Enter the keyword `protocol` then one of the protocol type keywords: tcp, udp, or protocol number. The protocol number range is from 0 to 255.
src-port number        Enter the keywords src-port then the source port number.
destination-port number Enter the keywords destination-port then the destination port number.

Usage Information

This command provides egress port information for a given IP flow. This information is useful in identifying which interface the packet follows in the case of Port-channel and Equal Cost Multi Paths. Use this command for routed packed only. For switched packets, use the show port-channel-flow command.

The show ip flow command does not compute the egress port information when load-balance mac hashing is also configured due to insufficient information (the egress MAC is not available).

S-Series produces the following error message: %Error: Unable to read IP route table.

Example

```
Dell# show ip flow interface Gi 2/42 20.1.1.1 100.1.1.2 protocol tcp
Flow: 20.1.1.1 100.1.1.2 6
Ingress interface: Gi 2/42
Egress Interface: Gi 2/43
Dell#
```
show ip interface

View IP-related information on all interfaces.

Syntax

```
show ip interface [interface | brief] [configured]
```

Parameters

- **interface**  
  (OPTIONAL) Enter the following keywords and the interface information:
  - For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a Loopback interface, enter the keyword loopback then a number from 0 to 16383.
  - For the Management interface on the stack-unit, enter the keyword ManagementEthernet then the slot/port information.
  - For a port channel interface, enter the keywords port-channel then a number.
  - For a Null interface, enter the keyword null then the Null interface number.
  - For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.
  - For a stack-unit interface, enter the keyword stack-unit then the stack unit number.
  - For a tunnel interface, enter the keyword tunnel then the tunnel interface number. The range is from 1 to 16383.

- **brief**  
  (OPTIONAL) Enter the keyword brief to view a brief summary of the interfaces and whether an IP address is assigned.

- **configured**  
  (OPTIONAL) Enter the keyword configured to display the physical interfaces with non-default configurations only.

Command Modes

- EXEC
- EXEC Privilege

### Usage Information

The following describes the `show ip interface` command shown in the following example.

#### Lines Description

<table>
<thead>
<tr>
<th>Lines</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>TenGigabitEthernet 1/1...</td>
<td>Displays the interface’s type, physical and line protocol status.</td>
</tr>
<tr>
<td>Internet address...</td>
<td>States whether an IP address is assigned to the interface. If an IP address is assigned, that address is displayed.</td>
</tr>
<tr>
<td>IP MTU is...</td>
<td>Displays IP MTU value.</td>
</tr>
<tr>
<td>Inbound access...</td>
<td>Displays the name of the configured incoming access list. If none is configured, the phrase “not set” is displayed.</td>
</tr>
<tr>
<td>Proxy ARP...</td>
<td>States whether proxy ARP is enabled on the interface.</td>
</tr>
<tr>
<td>Split horizon...</td>
<td>States whether split horizon for RIP is enabled on the interface.</td>
</tr>
<tr>
<td>Poison Reverse...</td>
<td>States whether poison for RIP is enabled on the interface.</td>
</tr>
<tr>
<td>ICMP redirects...</td>
<td>States if ICMP redirects are sent.</td>
</tr>
<tr>
<td>ICMP unreachables...</td>
<td>States if ICMP unreachable messages are sent.</td>
</tr>
</tbody>
</table>

### Example

```
Dell# show ip interface gigabitethernet 1/1
GigabitEthernet 1/1 is down, line protocol is down
Internet address is not set
IP MTU is 1500 bytes
Directed broadcast forwarding is disabled
Proxy ARP is enabled
Split Horizon is enabled
Poison Reverse is disabled
ICMP redirects are not sent
ICMP unreachables are not sent
IP unicast RPF check is not supported
Dell#

Dell# show ip interface port-channel 128
Port-channel 128 is down, line protocol is down
```
Internet address is 10.1.1.1/16
Broadcast address is 10.1.255.255
Address determined by user input
IP MTU is 1500 bytes
Directed broadcast forwarding is disabled
Proxy ARP is enabled
Split Horizon is enabled
Poison Reverse is disabled
ICMP redirects are not sent
ICMP unreachables are not sent
IP unicast RPF check is not supported
Dell#

Dell#show ip interface vlan 1
Vlan 1 is down, line protocol is down
Internet address is not set
IP MTU is 1500 bytes
Directed broadcast forwarding is disabled
Proxy ARP is enabled
Split Horizon is enabled
Poison Reverse is disabled
ICMP redirects are not sent
ICMP unreachables are not sent
IP unicast RPF check is not supported
Dell#

Usage Information
The following describes the show ip interface brief command shown in the following example.

<table>
<thead>
<tr>
<th>Fields</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Interface</td>
<td>Displays type of interface and the associated slot and port number.</td>
</tr>
<tr>
<td>IP-Address</td>
<td>Displays the IP address for the interface, if configured.</td>
</tr>
<tr>
<td>Ok?</td>
<td>Indicates if the hardware is functioning properly.</td>
</tr>
<tr>
<td>Method</td>
<td>Displays &quot;Manual&quot; if the configuration is read from the saved configuration.</td>
</tr>
<tr>
<td>Status</td>
<td>States whether the interface is enabled (up) or disabled (administratively down).</td>
</tr>
<tr>
<td>Protocol</td>
<td>States whether IP is enabled (up) or disabled (down) on the interface.</td>
</tr>
</tbody>
</table>

Example (Brief)

Dell# show ip interface brief

</tr>
</tbody>
</table>

**show ip management-route**

View the IP addresses assigned to the Management interface.

Syntax

show ip management-route [all | connected | summary | static]
Parameters

- **all**  
  (OPTIONAL) Enter the keyword `all` to view all IP addresses assigned to all Management interfaces on the switch.

- **connected**  
  (OPTIONAL) Enter the keyword `connected` to view only routes directly connected to the Management interface.

- **summary**  
  (OPTIONAL) Enter the keyword `summary` to view a table listing the number of active and non-active routes and their sources.

- **static**  
  (OPTIONAL) Enter the keyword `static` to view non-active routes also.

Command Modes

- EXEC
- EXEC Privilege

Example

```
Dell# show ip protocols
Routing Protocol is "bgp 1"
  Cluster Id is set to 20.20.20.3
  Router Id is set to 20.20.20.3
  Fast-external-fallover enabled
  Regular expression evaluation optimization enabled
  Capable of ROUTE_REFRESH
  For Address Family IPv4 Unicast
    BGP table version is 0, main routing table version 0
    Distance: external 20 internal 200 local 200
    Neighbor(s):
      Address : 20.20.20.2
```
**show ip route**

View information, including how they were learned, about the IP routes on the switch.

**Syntax**

```
show ip route [vrf vrf-name] hostname | ip-address [mask] [longer-prefixes] | list prefix-list | protocol [process-id | routing-tag] | all | connected | static | summary
```

**Parameters**

- **vrf vrf-name** (OPTIONAL) Enter the keyword vrf and then the VRF name to list the routes in the route table of a specific VRF.
- **ip-address** (OPTIONAL) Specify a name of a device or the IP address of the device to view more detailed information about the route.
- **mask** (OPTIONAL) Specify the network mask of the route. Use this parameter with the IP address parameter.
- **longer-prefixes** (OPTIONAL) Enter the keywords longer-prefixes to view all routes with a common prefix.
- **list prefix-list** (OPTIONAL) Enter the keyword list and the name of a configured prefix list. For more information, refer to the `show ip route list` command.
- **protocol** (OPTIONAL) Enter the name of a routing protocol (bgp, isis, ospf, rip) or the keywords connected or static.

```markdown
<table>
<thead>
<tr>
<th>NOTE: bgp, isis, ospf, and rip.</th>
</tr>
</thead>
<tbody>
<tr>
<td>• If you enter bgp, you can include the BGP as-number.</td>
</tr>
<tr>
<td>• If you enter isis, you can include the ISIS routing-tag.</td>
</tr>
<tr>
<td>• If you enter ospf, you can include the OSPF process-id.</td>
</tr>
</tbody>
</table>
```

- **process-id** (OPTIONAL) Specify that only OSPF routes with a certain process ID must be displayed.
- **routing-tag** (OPTIONAL) Specify that only ISIS routes with a certain routing tag must be displayed.
- **connected** (OPTIONAL) Enter the keyword connected to view only the directly connected routes.
- **all** (OPTIONAL) Enter the keyword all to view both active and non-active routes.
- **static** (OPTIONAL) Enter the keyword static to view only routes the `ip route` command configures.
- **summary** (OPTIONAL) Enter the keyword summary. For more information, refer to the `show ip route summary` command.

**Command Modes**

- EXEC

</tbody>
</table>
Field | Description
--- | ---
L1 | IS-IS level-1
L2 | IS-IS level-2
IA | IS-IS inter-area
* | candidate default
> | non-active route
+ | summary routes

The weight for weighted ECMP route calculations is displayed for each path in the route in the `show ip route` command. The ECMP weight is displayed only if weighted ECMP is enabled using the `ip ecmp weighted` command.

If weighted ECMP is disabled, the `show ip route` command does not show the weighted ECMP route information.

**Destination**
Identifies the route’s destination IP address.

**Gateway**
Identifies whether the route is directly connected and on which interface the route is configured.

**Dist/Metric**
Identifies if the route has a specified distance or metric.

**Last Change**
Identifies when the route was last changed or configured.

### Example
```
Dell# show ip route all
Codes:C- connected, S - static, R - RIP
    B- BGP, IN - internal BGP, EX - external BGP, LO - Locally Originated
    O- OSPF, IA - OSPF inter area N1 - OSPF NSSA external type 1
    N2- OSPF NSSA external type 2, E1 - OSPF external type 1
    E2- OSPF external type 2, i - IS-IS, L1 - IS-IS level-1
    L2- IS-IS level-2, IA - IS-IS inter area, * - candidate default
    >- non-active route + - summary route

Gateway of last resort is not set

Dell(conf)# do show ip route 1.1.1.0/24

Routing entry for 1.1.1.0/24

Known via "static", distance 1, metric 0
Last update 00:05:01 ago
Routing Descriptor Blocks:
* 4.4.4.2, via GigabitEthernet 1/4 weight 100
  6.6.6.2, via GigabitEthernet 1/16 weight 200

Dell(conf)#

IPv4 Routing
show ip route list

Display IP routes in an IP prefix list.

Syntax

```
show ip route [vrf vrf-name] list prefix-list
```

Parameters

- **prefix-list**: Enter the name of a configured prefix list.
- **vrf vrf-name**: Enter the keyword vrf followed by the name of the VRF to display IP routes in an IP prefix list corresponding to that VRF.

Command Modes

- EXEC
- EXEC Privilege

Command History

Related Commands

- `ip prefix-list` — enter CONFIGURATION-IP PREFIX-LIST mode and configures a prefix list.
- `show ip prefix-list summary` — display a summary of the configured prefix lists.

**show ip route summary**

View a table summarizing the IP routes in the switch.

**Syntax**

`show ip route [vrf vrf-name] [summary]`

**Parameters**

- `vrf vrf-name` Enter the keyword `vrf` followed by the name of the VRF to view information on the IP routes corresponding to that VRF.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>
**Version** | **Description**
--- | ---
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
8.1.1.0 | Introduced on the E-Series.
7.6.1.0 | Introduced on the S-Series.
7.5.1.0 | Introduced on the C-Series.
pre-6.1.1.0 | Introduced on the E-Series.

**Usage Information**
The following describes the show ip route summary shown in the following example.

**Column Heading** | **Description**
--- | ---
Route Source | Identifies how the route is configured in Dell Networking OS.
Active Routes | Identifies the best route if a route is learned from two protocol sources.
Non-active Routes | Identifies the back-up routes when a route is learned by two different protocols. If the best route or active route goes down, the non-active route becomes the best route.
osf 100 | If routing protocols (OSPF, RIP) are configured and routes are advertised, then information on those routes is displayed.
Total 1388 active... | Displays the number of active and non-active routes and the memory usage of those routes. If there are no routes configured in the Dell Networking OS, this line does not appear.

**Example**
Dell> show ip route summary

```
Route Source   Active Routes   Non-active Routes
connected      17              0
static         3               0
ospf 100       1368            2
 Intra-area: 762 Inter-area: 1 External-1: 600 External-2: 5
Total          1388            2
Total 1388 active route(s) using 222440 bytes
Total 2 non-active route(s) using 128 bytes
Dell>
```

**Related Commands**
- `show ip route` — display information about the routes found in the switch.

---

**show ip traffic**

View IP, ICMP, UDP, TCP and ARP traffic statistics.

**Syntax**
```
show ip traffic [all | cp | rp1 | rp2]
```

**NOTE:** These options are supported only on the E-Series.
Parameters

all (OPTIONAL) Enter the keyword all to view statistics from all processors. If you do not enter a keyword, you also view all statistics from all processors.

`cp` (OPTIONAL) Enter the keyword `cp` to view only statistics from the Control Processor.

`rp1` (OPTIONAL) Enter the keyword `rp1` to view only the statistics from Route Processor 1.

`rp2` (OPTIONAL) Enter the keyword `rp2` to view only the statistics from Route Processor 2.

Command Modes

EXEC Privilege

Command History

</table>
```

Usage Information

The following describes the `show ip traffic summary` shown in the following example.

```
Keyword                  Definition
unknown protocol...     No receiver for these packets. Counts packets whose protocol type field is not recognized by Dell Networking OS.
not a gateway...        Packets can not be routed; the host/network is unreachable.
security failures...    Counts the number of received unicast/multicast packets that could not be forwarded due to:
                        • route not found for unicast/multicast; ingress interfaces do not belong to the destination multicast group
                        • destination IP address belongs to reserved prefixes; the host/network is unreachable
bad options...          Unrecognized IP option on a received packet.
```
### Keyword | Definition
---|---
Frags: | IP fragments received.
... reassembled | Number of IP fragments that were reassembled.
... timeouts | Number of times a timer expired on a reassembled queue.
... too big | Number of invalid IP fragments received.
... couldn't fragment | Number of packets that could not be fragmented and forwarded.
... encapsulation failed | Counts packets which could not be forwarded due to ARP resolution failure. Dell Networking OS sends an arp request prior to forwarding an IP packet. If a reply is not received, Dell Networking OS repeats the request three times. These packets are counted in encapsulation failed.

#### Rcvd:

... short packets | The number of bytes in the packet are too small.
... bad length | The length of the packet was not correct.
... no port broadcasts | The incoming broadcast/multicast packet did not have any listener.
... socket full | The application buffer is full and the incoming packet are dropped.

The Dell Monitoring MIB provides access to the following statistics:

- **IP Statistics: Bcast: Received**: Object = f10BcastPktRecv, OIDs = 1.3.6.1.4.1.6027.3.3.5.1.1
- **IP Statistics: Bcast: Sent**: Object = f10BcastPktSent, OIDs = 1.3.6.1.4.1.6027.3.3.5.1.2
- **IP Statistics: Mcast: Received**: Object = f10McastPktRecv, OIDs = 1.3.6.1.4.1.6027.3.3.5.1.3
- **IP Statistics: Mcast: Sent**: Object = f10McastPktSent, OIDs = 1.3.6.1.4.1.6027.3.3.5.1.4
- **ARP Statistics: Rcvd: Request**: Object = f10ArpReqRecv, OIDs = 1.3.6.1.4.1.6027.3.3.5.2.1
- **ARP Statistics: Rcvd: Replies**: Object = f10ArpReplyRecv, OIDs = 1.3.6.1.4.1.6027.3.3.5.2.3
- **ARP Statistics: Sent: Request**: Object = f10ArpReqSent, OIDs = 1.3.6.1.4.1.6027.3.3.5.2.2
- **ARP Statistics: Sent: Replies**: Object = f10ArpReplySent, OIDs = 1.3.6.1.4.1.6027.3.3.5.2.4
- **ARP Statistics: Sent: Proxy**: Object = f10ArpProxySent, OIDs = 1.3.6.1.4.1.6027.3.3.5.2.5

**Example**

Dell# show ip traffic
Control Processor IP Traffic:

**IP statistics:**
Rcvd: 23857 total, 23829 local destination
0 format errors, 0 checksum errors, 0 bad hop count
0 unknown protocol, 0 not a gateway
0 security failures, 0 bad options
Frags: 0 reassembled, 0 timeouts, 0 too big
0 fragmented, 0 couldn't fragment
Bcast: 28 received, 0 sent; Mcast: 0 received, 0 sent
Sent: 16048 generated, 0 forwarded
21 encapsulation failed, 0 no route

**ICMP statistics:**
Rcvd: 0 format errors, 0 checksum errors, 0 redirects, 0 unreachable
0 echo, 0 echo reply, 0 mask requests, 0 mask replies, 0 quench
0 parameter, 0 timestamp, 0 info request, 0 other
Sent: 0 redirects, 0 unreachable, 0 echo, 0 echo reply
0 mask requests, 0 mask replies, 0 quench, 0 timestamp
0 info reply, 0 time exceeded, 0 parameter problem

**UDP statistics:**
Rcvd: 0 total, 0 checksum errors, 0 no port
0 short packets, 0 bad length, 0 no port broadcasts, 0 socket full
Sent: 0 total, 0 forwarded broadcasts

---

**IPv4 Routing**

---
show tcp statistics

View information on TCP traffic through the switch.

Syntax

show tcp statistics \{all | cp\}

Parameters

- **all**: Enter the keyword all to view all TCP information.
- **cp**: Enter the keyword cp to view only TCP information from the Control Processor.

Command Modes

- EXEC Privilege

Command History

IPv6 Access Control Lists (IPv6 ACLs)

IPv6 ACLs and IPv6 Route Map commands are supported on Dell Networking OS.

NOTE: For IPv4 ACL commands, see Access Control Lists (ACL).

Important Points to Remember

- Certain platforms require manual CAM usage space allotment. For more information, see cam-acl.
- Egress IPv6 ACL and IPv6 ACL on the Loopback interface is not supported.
- Reference to an empty ACL permits any traffic.
- ACLs are not applied to self-originated traffic (for example, Control Protocol traffic not affected by IPv6 ACL because the routed bit is not set for Control Protocol traffic and for egress ACLs the routed bit must be set).
- You can use the same access list name for both IPv4 and IPv6 ACLs.
- You can apply both IPv4 and IPv6 ACLs on an interface at the same time.
- You can apply IPv6 ACLs on physical interfaces and a logical interfaces (Port-channel/VLAN).
- Non-contiguous masks are not supported in source or destination addresses in IPv6 ACL entries.
- Because the prefix mask is specified in /x format in IPv6 ACLs, inverse mask is not supported.

Topics:
- show cam-acl-egress
- show cam-acl
- permit icmp
- permit
- ipv6 control-plane egress-filter
- ipv6 access-list
- cam-acl-egress
- cam-acl

show cam-acl-egress

Show information on FP groups allocated for egress ACLs.

Syntax

```
show cam-acl-egress
```

Command Modes

- EXEC
- EXEC Privilege
Command History

L2Qos   :         3

Dell#
```

Related Commands

- `cam-acl` — configure CAM profiles to support IPv6 ACLs.

**permit icmp**

To allow all or specific internet control message protocol (ICMP) messages, configure a filter.

**Syntax**

```
permit icmp {source address mask | any | host ipv6-address} {destination address | any | host ipv6-address} [message-type] [count [byte]] | [log] [monitor]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no permit icmp {source address mask | any | host ipv6-address} {destination address | any | host ipv6-address}` command.

**Parameters**

- `source address mask | any | host ipv6-address`
- `destination address | any | host ipv6-address`
- `message-type`
- `count [byte]`
- `log`
- `monitor`

**Defaults**

Not configured.

**Command Modes**

ACCESS-LIST

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.
To configure a filter that matches the filter criteria, select an IPv6 protocol number, ICMP, IPv6, TCP, or UDP.

**Syntax**

```
permit {ipv6-protocol-number | icmp | ipv6 | tcp | udp}
```

**Parameters**

- `ip-protocol-number` 
Enter an IPv6 protocol number. The range is from 0 to 255.
- `icmp` 
Enter the keyword `icmp` to filter internet Control Message Protocol version 6.
- `ipv6` 
Enter the keyword `ipv6` to filter any internet Protocol version 6.
- `tcp` 
Enter the keyword `tcp` to filter the Transmission Control protocol.
- `udp` 
Enter the keyword `udp` to filter the User Datagram Protocol.

**Defaults**

Not configured.

**Command Modes**

ACCESS-LIST

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version**

- 9.10(0.0) 
  Introduced on the S3148.

</table>
ipv6 access-list

Configure an access list based on IPv6 addresses or protocols.

Syntax

```
ipv6 access-list access-list-name cpu-qos
```

To delete an access list, use the `no ipv6 access-list access-list-name` command.

Parameters

- **access-list-name**: Enter the access list name as a string, up to 140 characters.
- **cpu-qos**: Enter the keyword `cpu-qos` to assign this ACL to control plane traffic only (CoPP).
- **permit**: Enter the keyword `permit` to configure a filter to forward packets meeting this condition.
- **deny**: Enter the keyword `deny` to configure a filter to drop packets meeting this condition.
- **ospfv3**: Specify that this ACL is for OSPFv3 control plane traffic.

Defaults

All access lists contain an implicit "deny any"; that is, if no match occurs, the packet is dropped.

Command Modes

- **CONFIGURATION**

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<tr>
<td>8.4.2.1</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>8.2.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>
Version Description
7.8.1.0 Introduced on the C-Series. Increased the name string to accept up to 140 characters. Prior to version 7.8.1.0, names are up to 16 characters long.
7.4.1.0 Introduced on the E-Series.

Usage Information
The number of entries allowed per ACL is hardware-dependent. For detailed specification on entries allowed per ACL, refer to your line card documentation. You can create an IPv6 ACL for control-plane traffic policing for OSPFv3, in addition to the CoPP support for VRRP, BGP, and ICMP.

cam-acl-egress

Allocate space for IPv6 egress ACLs.

Syntax

```
cam-acl-egress {default | l2acl 1-4 ipv4acl 1-4 ipv6acl 0-4}
```

Parameters

- **default**: Use the default CAM profile settings, and set the CAM as follows:
  - L2 ACL (l2acl): 1
  - L3 ACL (ipv4acl): 1
  - IPv6 L3 ACL (ipv6acl): 2
- **l2acl 1-4 ipv4acl 1-4 ipv6acl 0-4**: Allocate space to support IPv6 ACLs. Enter all of the profiles and a range. Enter the CAM profile name then the amount to be allotted. The total space allocated must equal 4. The ipv6acl range must be a factor of 2.

Command Modes

- **CONFIGURATION**

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100-ON.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.2(1.0) Introduced on the Z9500.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
8.3.7.0 Introduced on the S4810.
### cam-acl

Allocate space for IPv6 ACLs.

#### Syntax

```
cam-acl {default | l2acl 1-10 ipv4acl 1-10 ipv6acl 0-10 ipv4qos 1-10 l2qos 1-10}
```

#### Parameters

- **default**: Use the default CAM profile settings, and set the CAM as follows:
  - L3 ACL (ipv4acl): 6
  - L2 ACL (l2acl): 5
  - IPv6 L3 ACL (ipv6acl): 0
  - L3 QoS (ipv4qos): 1
  - L2 QoS (l2qos): 1

- **l2acl 1-10 ipv4acl 1-10 ipv6acl 0-10 ipv4qos 1-10 l2qos 1-10**: Allocate space to support IPv6 ACLs. Enter all of the profiles and a range. Enter the CAM profile name then the amount to be allotted. The total space allocated must equal 13. The ipv6acl range must be a factor of 2 (2, 4, 6, 8, 10).

#### Command Modes

- **CONFIGURATION**
This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

</tr>
</tbody>
</table>

### Usage Information

For the new settings to take effect, save the new CAM settings to the startup-config *(write-mem or copy run start)* then reload the system.

The total amount of space allowed is 16 FP Blocks. System flow requires three blocks and these blocks cannot be reallocated. The ipv4acl profile range is from 1 to 4.

When configuring space for IPv6 ACLs, the total number of Blocks must equal 13.

Ranges for the CAM profiles are from 1 to 10, except for the ipv6acl profile which is from 0 to 10. The ipv6acl allocation must be a factor of 2 (2, 4, 6, 8, 10).
IPv6 Basics

IPv6 basic commands are supported on the Dell Networking OS.

**NOTE:** For information about the Dell Networking OS version and platform that supports IPv6 in each software feature, see the IPv6 Addressing section in the *Dell Networking OS Configuration Guide*.

Topics:
- cam-ipv6 extended-prefix
- clear ipv6 fib
- clear ipv6 route
- clear ipv6 mld_host

- show ipv6 mld_host
- show ipv6 route
- trust ipv6-diffserv
**cam-ipv6 extended-prefix**

Enable LPM partitioning to support IPv6 /65 to /128 route prefixes to be stored in Partition 1.

**Syntax**

cam-ipv6 extended-prefix <Max-IPv6-prefixes>

To remove LPM partitioning configuration, use no cam-ipv6 extended-prefix.

**Parameters**

- `Max-IPv6-Prefix` Max-IPv6-Prefix: Maximum number of IPv6 prefixes in the mask length of /65 to /128. The possible values are 1024, 2048, and 3072.

**Defaults**

LPM is not partitioned with Partition 1 and therefore /65 to /128 prefixes are not converted to /64 prefixes and are installed and saved in LPM. All the packets for those routes traverse through the default route path.

</tr>
</tbody>
</table>

**Usage Information**

You can partition the LPM table to store IPv6 prefixes greater than /64 mask length. Requires reboot of the switch to take effect as the SDK handles this only during its initialization.

**clear ipv6 fib**

Clear (refresh) all forwarding information base (FIB) entries on a stack unit.

**Syntax**

clear ipv6 fib [vrf vrf-name]| stack-unit unit-number

**Parameters**

- `vrf vrf-name` (Optional) Enter the keyword vrf followed by the name of the VRF to clear the neighbor corresponding to that VRF.
NOTE: If you do not specify this option, neighbors corresponding to the default VRF are cleared.

**slot**
Enter the slot number to clear the FIB.

**unit-number**
Enter the stack member number. The range is from 1 to 6

**clear ipv6 route**
Clear (refresh) all or a specific route from the IPv6 routing table.

**Syntax**
clear ipv6 route [vrf vrf-name] {* | ipv6-address prefix-length}

**Parameters**
- **vrf vrf-name** (Optional) Enter the keyword vrf followed by the name of the VRF to clear the IPv6 routes corresponding to that VRF.
- ***** Enter the * to clear (refresh) all routes from the IPv6 routing table.
- **ipv6-address prefix-length** Enter the IPv6 address in the x:x:x:x::x format then the prefix length in the /x format. The range is from /0 to /128.

**NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

**Command Modes**
- EXEC Privilege

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

maximum dynamic-routes-ipv6

Specify the maximum number of dynamic (protocol) IPv6 routes a VRF can have.

Syntax

```
maximum dynamic-routes-ipv6 limit {warn-threshold threshold-value | warning-only}
```

To remove the limit on the maximum number of IPv6 routes used, use the `no maximum dynamic-routes-ipv6` command.

Parameters

- `limit`: Maximum number of IPv6 routes allowed in a VRF. Valid range is from 1 to 8000 (or maximum allowable for that platform if smaller value).
- `warn-threshold`: Warning threshold value is expressed as a percentage of the limit value. When the number of IPv6 routes reaches the specified percentage of the limit, a warning message is generated. Valid range is 1 to 100. When warn-threshold is used, once the limit is reached, additional routes will not be allowed into the RTM (route table manager) itself.
- `warning-only`: When the warning-only option is used, a syslog message will be thrown when maximum number of dynamic IPv6 routes reaches the limit. Additional dynamic IPv6 routes will still be allowed.

Defaults

No limit is set on the maximum number of dynamic IPv6 routes for a VRF.

Command Modes

`CONFIGURATION-VRF`

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>

<td>Introduced on the S4810, S4820T, S5000, S6000, S6000-ON, and Z9500.</td>
</tr>
</tbody>
</table>

Usage Information

If the maximum IPv6 route limit is not specified for a VRF (valid range is from 1 to 8000), then it has unlimited space that extends to the maximum number of entries allowed for the system. This command is not applicable to the default and management VRFs.
ipv6 address autoconfig

Configure IPv6 address auto-configuration for the management interface.

Syntax

ipv6 address autoconfig

To disable the address autoconfig operation on the management interface, use the no ipv6 address autoconfig command.

Default
Disabled

Command Modes
INTERFACE (management interface only)

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

Usage Information
- SAA can configure up to two addresses. If any preferred prefix or valid timers time out, the corresponding address are deprecated or removed. If an address is removed due to a time-out, an address from the current unused prefix is used to create a new address. If there are no remaining prefixes, the software waits to receive a new prefix from the RA.
- If auto-configuration is enabled, all IPv6 addresses on that management interface are auto-configured. Manual and auto-configurations are not supported on a single management interface.
- Removing auto-configuration removes all auto-configured IPv6 addresses and the link-local IPv6 address from that management interface.
- IPv6 addresses on a single management interface cannot be members of the same subnet.
- IPv6 secondary addresses on management interfaces across a platform must be members of the same subnet.
- IPv6 secondary addresses on management interfaces should not match the virtual IP address and should not be in the same subnet as the virtual IP.
ipv6 address

Configure an IPv6 address to an interface.

Syntax

ipv6 address {ipv6-address prefix-length}

To remove the IPv6 address, use the no ipv6 address {ipv6-address prefix-length} command.

Parameters

ipv6-address prefix-length

Enter the IPv6 address in the x:x:x::x format then the prefix length in the /x format. The range is from /0 to /128.

NOTE: The :: notation specifies successive hexadecimal fields of zeros.

Defaults

None

Command Modes

INTERFACE

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description

9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.2(1.0) Introduced on the Z9500.
9.1(0.0) Updated Usage Information.
9.0.0.0 Introduced on the Z9000.
8.3.19.0 Introduced on the S4820T.
8.3.7.0 Introduced on the S4810.
8.4.1.0 Added support on the management Ethernet port.
8.2.1.0 Introduced on the E-Series.
7.8.1.0 Introduced on the C-Series and S-Series.
7.4.1.0 Introduced on the E-Series.

Usage Information

• If two addresses are configured, delete an existing address before configuring a new address.
• If the last manually-configured global IPv6 address is removed using the "no" form of the command, the link-local IPv6 address is removed automatically.
• IPv6 addresses on a single management interface cannot be members of the same subnet.
• IPv6 secondary addresses on management interfaces across platform must be members of the same subnet.
• IPv6 secondary addresses on management interfaces should not match the virtual IP address and should not be in the same subnet as the virtual IP.
NOTE: Do not use the /128 prefix length on physical or port channel interfaces. You can use the /128 prefix length on loopback interfaces.

Example

Dell(conf)# interface gigabitethernet 1/2
Dell(conf-if-gi-1/2)# ipv6 address ?
X:X:X::X IPv6 address
Dell(conf-if-gi-1/2)# ipv6 address 2002:1:2::3 ?
<0-128> Prefix length in bits
Dell(conf-if-gi-1/2)# ipv6 address 2002:1:2::3 /96 ?
<cr>
Dell(conf-if-gi-1/2)# ipv6 address 2002:1:2::3 /96
Dell(conf-if-gi-1/2)# show config
!
interface GigabitEthernet 1/2
  no ip address
  ipv6 address 2002:1:2::3 /96
  no shutdown

ipv6 address eui64

Configure IPv6 EUI64 address configuration on the interface.

Syntax

ipv6 address {ipv6-address prefix-length} eui64

To disable IPv6 EUI64 address autoconfiguration, use the no ipv6 address {ipv6-address prefix-length} eui64 command.

Parameters

ipv6-address prefix-length

Enter the IPv6 prefix in the x:x:x:x format then the prefix length in the /x format. The range is from /0 to /128.

NOTE: The :: notation specifies successive hexadecimal fields of zeros.

Defaults

None

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description

9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.2(1.0) Introduced on the Z9500.
9.2(0.2) Introduced.
This command allows you to create an EUI64 address based on the specified prefix and MAC address only. Prefixes may be configured on the interface using the ipv6 nd prefix command without creating an EUI64 address.

Example

```
Dell(conf)# int gig 1/4
Dell(conf-if-gi-1/4)# ipv6 address 200:1::/64 eui64
Dell(conf)# int gig 1/6
Dell(conf-if-gi-1/6)# ipv6 address 801:10::/64 eui64
```

**ipv6 control-plane icmp error-rate-limit**

Configure the maximum number of ICMP error packets per second that can be sent per second.

**Syntax**

```
ipv6 control-plane icmp error-rate-limit {1-200}
```

To restore the default value, use the `no ipv6 control-plane icmp error-rate-limit` command.

**Parameters**

- **pps**
  
Enter the maximum number of error packets generated per second. The range is from 1 to 200, where 0 disables the rate-limiting.

**Default**

100 pps

**Command Modes**

<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3(7.0)</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

**Usage Information**
If the flowlabel value is already set for BGP or SSH, the system defaults to the already configured value. All packets on the same connection are considered part of the same flow by the system. For new connections, set the new flowlabel to zero.

**ipv6 host**

Assign a name and IPv6 address the host-to-IPv6 address mapping table uses.

**Syntax**
ipv6 host name ipv6-address

To remove an IP host, use the no ipv6 host name {ipv6-address}.

**Parameters**

<table>
<thead>
<tr>
<th>name</th>
</tr>
</thead>
<tbody>
<tr>
<td>Enter a text string to associate with one IP address.</td>
</tr>
</tbody>
</table>
ipv6-address

Enter the IPv6 address (X:X:X::X) to be mapped to the name.

Defaults
Not configured.

ipv6 name-server

Enter up to six IPv6 addresses of name servers. The order you enter the addresses determines the order of their use.

Syntax ipv6 name-server ipv6-address [ipv6-address2... ipv6-address6]

To remove a name server, use the no ipv6 name-server ipv6-address command.

Parameters
ipv6-address
Enter the IPv6 address (X:X:X::X) of the name server to be used.
Note: The :: notation specifics successive hexadecimal fields of zeros.

ipv6-address2...
(ipv6-address6)
(Optional) Enter up to five more IPv6 addresses, in the x:x:x:x format, of name servers to be used. Separate the IPv6 addresses with a space.

Defaults
None

ipv6 nd dad attempts

To perform duplicate address detection (DAD) on an interface, configure the number of neighbor solicitation messages that are sent.

Syntax

ipv6 nd dad attempts {number of attempts}

To restore the default value, use the no ipv6 nd dad attempts command.

Parameters

number of attempts Enter the number of attempts to be made to detect a duplicate address. The range is from 0 to 15. Setting the value to 0 disables DAD on the interface.

Default

3 attempts

Command Modes

INTERFACE (management interface only)

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description

9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.2(1.0) Introduced on the Z9500.
8.3.19.0 Introduced on the S4820T.
8.3.7.0 Introduced on the S4810.
8.4.2.1 Introduced on the C-Series and S-Series.
8.4.1.0 Introduced on the E-Series.
ipv6 nd disable-reachable-timer

Keep the learnt neighbor discovery entries stateless so that the entries do not time out.

**Syntax**

```
ipv6 nd disable-reachable-timer
```

To restore to default, use the `no ipv6 nd disable-reachable-timer` command.

**Default**

Disabled

| 9.11.0.1 | Introduced on the S3100 series, S3048-ON, S4048-ON, S4048T-ON, S4810, S4820, S5000, S6000, S6010-ON, S6000-ON, S6100-ON, Z9100-ON, C9010, Z9500, MXL, and FN IOM.

ipv6 nd dns-server

Configures Recursive DNS Server (RDNSS) addresses to be distributed via IPv6 router advertisements to an IPv6 device.

**Syntax**

```
ipv6 nd dns-server {ipv6-RDNSS-address} {lifetime | infinite}
```

To remove the IPv6 RDNSS configuration, use `no ipv6 nd dns-server {ipv6-RDNSS-address} {lifetime | infinite}`

**Parameters**

- `ipv6-RDNSS-address`
  - Enter the IPv6 Recursive DNS Server’s (RDNSS) address. You can specify up to 4 IPv6 RDNSS server addresses.

- `lifetime`
  - Enter the lifetime in seconds. The amount of time the IPv6 host can use the IPv6 RDNSS address for name resolution. The range is 0 to 4294967295 seconds. When you specify the maximum lifetime value of 4294967295 or `infinite`, the lifetime does not expire. A value of 0 indicates to the host that the RDNSS address should not be used. You must specify a lifetime using the `lifetime` or `infinite` parameter.

- `infinite`
  - Enter the keyword `infinite` to specify that the RDNSS lifetime does not expire.

**Defaults**

Not Configured

**Command Modes**

INTERFACE CONFIG

</tr>
<tr>
<td>9.5(0.0)</td>
<td>Introduced on the Z9000, S6000, S4810, S4820T, and MXL..</td>
</tr>
</tbody>
</table>

**Usage Information**
Use this command to add, edit, or delete an IPv6 RDNSS address and lifetime value. You can configure up to four IPv6 RDNSS addresses. You must specify a lifetime using the lifetime or `infinite` parameter.

**Example**
```
Dell(config-if-gi-1/1)# ipv6 nd dns-server 1000::1 1
```

### `ipv6 nd prefix`

Specify which IPv6 prefixes are included in Neighbor Advertisements.

**Syntax**
```
ipv6 nd prefix {ipv6-prefix | prefix-length | default} [no-advertise] [no-autoconfig] [no-rtr-address] [off-link] [lifetime {valid | infinite} {preferred | infinite}]
```

**Parameters**
- `ipv6-prefix`: Enter an IPv6 prefix.
- `prefix-length`: Enter the prefix then the prefix length. The length range is from 0 to 128.
- `default`: Enter the keyword `default` to set default parameters for all prefixes.
- `no-advertise`: Enter the keyword `no-advertise` to prevent the specified prefix from being advertised.
- `no-autoconfig`: Enter the keywords `no-autoconfig` to disable Stateless Address Autoconfiguration.
- `no-rtr-address`: Enter the keyword `no-rtr-address` to exclude the full router address from router advertisements (the R bit is not set).
- `off-link`: Enter the keywords `off-link` to advertise the prefix without stating to recipients that the prefix is either on-link or off-link.
- `valid-lifetime`: Enter the amount of time that the prefix is advertised, or enter `infinite` for an unlimited amount of time. The range is from 0 to 4294967295. The default is 2592000. The maximum value means that the preferred lifetime does not expire for the valid-life time parameter.
- `preferred-lifetime`: Enter the amount of time that the prefix is preferred, or enter `infinite` for an unlimited amount of time. The range is from 0 to 4294967295. The default is 604800. The maximum value means that the preferred lifetime and does not expire.

</tr>
</tbody>
</table>

Usage Information

By default, all prefixes configured as addresses on the interface are advertised. This command allows control over the individual parameters per prefix; you can use the default keyword to use the default parameters for all prefixes. If a prefix has been configured with lifetime parameter values, the default values cannot be applied using the ipv6 nd prefix default no-autoconfig command.

ipv6 route

Establish a static IPv6 route.

Syntax

ipv6 route [vrf vrf-name] ipv6-address prefix-length {ipv6-address | interface | interface ipv6-address} [distance] [tag value] [permanent] [weight weight-value]

To remove the IPv6 route, use the no ipv6 route command.

Parameters

vrf vrf-name

(Optional) Enter the keyword vrf followed by the name of the VRF to install IPv6 routes in that VRF.

ipv6-address prefix-length

Enter the IPv6 address in the x:x:x:x::x format then the prefix length in the /x format. The range is from /0 to /128.

NOTE: The :: notation specifies successive hexadecimal fields of zeros.

interface

(Optional) Enter the following keywords and slot/port or number information:

- For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a Loopback interface, enter the keyword loopback then a number from 0 to 16383.
- For a port channel interface, enter the keywords `port-channel` then a number.
- For a Null interface, enter the keyword `null` then the Null interface number.
- For a tunnel interface, enter the keyword `tunnel` then the tunnel interface number. The range is from 1 to 16383.
- For a VLAN interface, enter the keyword `VLAN` then the vlan number. The range is from 1 to 4094.

If you configure a static IPv6 route using an egress interface and enter the `ping` command to reach the destination IPv6 address, the ping operation may not work. Configure the IPv6 route using a next-hop IPv6 address in order for the `ping` command to detect the destination address.

</table>
### Version Description
- **8.3.7.0**: Introduced on the S4810.
- **8.5.1.0**: Added support for 4-port 40G line cards on the E-Series.
- **8.2.1.0**: Introduced on the E-Series.
- **7.8.1.0**: Introduced on the C-Series and S-Series.
- **7.4.1.0**: Introduced on the E-Series.

### Usage Information
When the interface goes down, Dell Networking OS withdraws the route. The route is re-installed, by Dell Networking OS, when the interface comes back up. When a recursive resolution is “broken,” Dell Networking OS withdraws the route. The route is re-installed, by Dell Networking OS, when the recursive resolution is satisfied.

After an IPv6 static route interface is created, if an IP address is not assigned to a peer interface, the peer must be manually pinged to resolve the neighbor information.

You can specify a weight for an IPv4 or IPv6 static route. If the weight value of a path is 0, then that path is not used for forwarding when weighted ECMP is in effect. Also, if a path corresponding to a static route (destination) has a non-zero weight assigned to it and other paths do not have any weight configured, then regular ECMP is used for forwarding.

You can specify the weight value only to destination address and not on the egress port.

A route is considered for weighted ECMP calculations only if each paths corresponding to that route is configured with a weight.

### Example

```
Dell(conf)# ipv6 route 44::/64 33::1 weight 100
Dell(conf)# ipv6 route 44::/64 33::2 weight 200
Dell(conf)# do show running-config | grep ipv6 route
Dell(conf)# ipv6 route vrf vrf_test 44::/64 33::1 weight 100
Dell(conf)# ipv6 route vrf vrf_test 44::/64 33::2 weight 200
Dell(conf)# do show running-config | grep ipv6 route vrf
```

### Related Commands
- `show ipv6 route` — view the IPv6 configured routes.

---

**ipv6 unicast-routing**

Enable IPv6 unicast routing on the device.

### Syntax

```
ipv6 unicast-routing
```

To disable unicast routing, use the `no ipv6 unicast-routing` command.

### Defaults

Enabled

### Command Modes

- **CONFIGURATION**

### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.
version Description
9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.5(0.1) Introduced on the Z9500.
9.0.0.0 Introduced on the Z9000.
8.3.19.0 Introduced on the S4820T.
8.3.7.0 Introduced on the S4810.
8.4.2.1 Introduced on the S-Series.
8.2.1.0 Introduced on the E-Series.
7.8.1.0 Introduced on the C-Series.
7.4.1.0 Introduced on the E-Series.

Usage Information
Because this command is enabled by default, it does not appear in the running configuration. When you disable
unicast routing, the no ipv6 unicast-routing command is included in the running configuration. Whenever
unicast routing is disabled or re-enabled, Dell Networking OS generates a syslog message indicating the action.
Disabling unicast routing on an E-Series chassis causes the following behavior:

- static and protocol learned routes are removed from RTM and from the CAM; packet forwarding to these
routes is terminated
- connected routes and resolved neighbors remain in the CAM and new IPv6 neighbors are still discoverable
- additional protocol adjacencies (OSPFV3 and BGP4) are brought down and no new adjacencies are formed
- the IPv6 address family configuration (under router bgp) is deleted
- IPv6 Multicast traffic continues to flow unhindered

show ipv6 cam stack-unit
Displays the IPv6 CAM entries for the specified stack-unit.

Syntax
show ipv6 cam [vrf vrf-name] stack-unit unit-number port-set {0-1} [summary | index | ipv6 address]

Parameters
vrf vrf-name (Optional) Enter the keyword vrf followed by the name of the VRF to display IPv6 CAM
entries corresponding to that VRF.

NOTE: If you do not specify this option, IPv6 CAM entries corresponding to the default VRF are displayed.

unit-number Enter the stack unit’s ID number.
port-set Enter the keyword Port Set.
**summary**  
(Optionalal) Enter the keyword `summary` to display a table listing network prefixes and the total number prefixes which can be entered into the IPv6 CAM.

**index**  
(Optionalal) Enter the index in the IPv6 CAM.

**ipv6-address**  
Enter the IPv6 address in the x:x:x:x/x/n format to display networks that have more specific prefixes. The range is from /0 to /128.

| NOTE: | The :: notation specifies successive hexadecimal fields of zeros.

**Defaults**  
None

**Command Modes**  
- EXEC
- EXEC Privilege

**Command History**  
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>

**Usage Information**  
- **NOTE:** If a route has a mask greater than 64, no output is displayed and no output is displayed for `show ipv6 cam stack-unit unit-number port-set {0-1} ipv6-address`, but an equivalent /64 entry would be listed in the `show ipv6 cam stack-unit unit-number port-set {0-1}` output. Similarly, if there is more than one ECMP object with a destination route that has a mask greater than 64, if the first 64 bits in the destination routes of the ECMP objects are the same, only one route is installed in CAM even though multiple ECMP path entries exist.

- **NOTE:** The self address is displayed in the neighbor portion for the `show ipv6 cam stack-unit unit-number port-set command`.

**show ipv6 control-plane icmp**

Displays the status of the icmp control-plane setting for the error eate limit setting.

**Syntax**  
`show ipv6 control-plane icmp`
show ipv6 fib stack-unit

View all FIB entries.

Syntax

```
show ipv6 fib [vrf vrf-name] stack-unit unit-number [summary | ipv6-address]
```

Parameters

- **vrf vrf-name** (Optional) Enter the keyword vrf followed by the name of the VRF to display neighbors corresponding to that VRF.
- **slot-number** Enter the number of the stack unit.
- **summary** (OPTIONAL) Enter the keyword summary to view a summary of entries in IPv6 cam.
- **ipv6-address** Enter the IPv6 address in the x:x:x::x/n format to display networks that have more specific prefixes. The range is from /0 to /128.

**NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.
Usage Information

Host tables are not stored in CAM tables on S-Series platforms. Entries for camIndex displays as zero (0) on the show ipv6 fib stack-unit output for neighbor entries, such as address resolution protocol (ARP) entries.

show ipv6 flowlabel-zero

Display the flow label zero setting.

Syntax

show ipv6 flowlabel-zero

Default

Disabled

Command Modes

EXEC

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description

9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Added support for VRF.
9.0.0.0 Introduced on the Z9000.
8.3.19.0 Introduced on the S4820T.
8.3.7.0 Introduced on the S4810.
8.4.2.1 Introduced on the S-Series.

Related Commands

- ipv6 nd dad attempts — configure system to set the flow label field in the packets to zero.
show ipv6 interface

Display the status of interfaces configured for IPv6.

Syntax
show ipv6 interface interface {slot | slot/port} [brief] [configured] [stack-unit id]

Parameters

- interface (OPTIONAL) Enter the following keywords and slot/port or number information:
  - For a 1-Gigabit Ethernet interface, enter the keyword GigabitEthernet then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a Loopback interface, enter the keyword loopback then a number from 0 to 16383.
  - For a port channel interface, enter the keywords port-channel then a number.
  - For a Null interface, enter the keyword null then the Null interface number.
  - For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.
  - For stacking, enter the keywords stack-unit then the stack-unit ID.
  - For a tunnel interface, enter the keyword tunnel then the tunnel ID.

- brief (OPTIONAL) View a summary of IPv6 interfaces.
- configured (OPTIONAL) View information on all IPv6 configured interfaces.
- gigabitethernet (OPTIONAL) View information for an IPv6 gigabitethernet interface.
- managementethernet slot/port (OPTIONAL) View information on an IPv6 Management port. Enter the slot number (0-1) and port number zero (0).
- loopback (OPTIONAL) View information for IPv6 Loopback interfaces.
- port-channel (OPTIONAL) View information for IPv6 port channels.
- tengigabitethernet (OPTIONAL) View information for an IPv6 tengigabitethernet interface.
- stack-unit id (OPTIONAL) View information for stacking.
- tunnel tunnel-id (OPTIONAL) View information for a tunnel interface.
- vlan (OPTIONAL) View information for IPv6 VLANs.

Defaults
None

Command Modes
- EXEC
- EXEC Privilege

**show ipv6 route**

Displays the IPv6 routes.

Syntax

```
show ipv6 route [ipv6-address prefix-length] [vrf vrf-name] [hostname] [all] [bgp as number] [connected] [isis tag] [list prefix-list name] [ospf process-id] [rip] [static] [summary]
```

Parameters

- `ipv6-address prefix-length` (OPTIONAL) Enter the IPv6 address in the x:x:x:x format then the prefix length in the /x format. The range is from /0 to /128.

**NOTE:** The :: notation specifies successive hexadecimal fields of zeros.
vrf vrf-name  (Optional) Enter the keyword vrf followed by the name of the VRF to display IPv6 routes corresponding to that VRF.

**NOTE:** If you do not specify this option, routes corresponding to the default VRF are displayed.

hostname  (OPTIONAL) View information for this IPv6 routes with Host Name.

all  (OPTIONAL) View information for all IPv6 routes.

bgp  (OPTIONAL) View information for all IPv6 BGP routes.

connected  (OPTIONAL) View only the directly connected IPv6 routes.

isis  (OPTIONAL) View information for all IPv6 IS-IS routes.

list  (OPTIONAL) View the IPv6 prefix list.

ospf  (OPTIONAL) View information for all IPv6 OSPF routes.

rip  (OPTIONAL for E-Series only) View information for all IPv6 RIP routes.

static  (OPTIONAL) View only routes configured by the ipv6 route command.

summary  (OPTIONAL) View a brief list of the configured IPv6 routes.

**Defaults**

```
none
```

**Command Modes**

```
• EXEC
• EXEC Privilege
```

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>

Destination | Identifies the route’s destination IPv6 address.

Gateway | Identifies whether the route is directly connected and on which interface the route is configured.

Dist/Metric | Identifies if the route has a specified distance or metric.

Last Change | Identifies when the route was last changed or configured.

**Example (S-Series)**

```
Dell# show ipv6 route

Codes: C - connected, L - local, S - static, R - RIP, B - BGP, IN - internal BGP, EX - external BGP, LO - Locally Originated, O - OSPF, IA - OSPF inter area, N1 - OSPF NSSA external type 1, N2 - OSPF NSSA external type 2, E1 - OSPF external type 1, E2 - OSPF external type 2, i - IS-IS, L1 - IS-IS level-1, L2 - IS-IS level-2, IA - IS-IS inter area, * - candidate default, Gateway of last resort is not set

Dell#
```
Example (Summary)

```
Dell# show ipv6 route summary
Route Source       Active Routes   Non-active Routes
connected          3               0
static             1               0
Total              4               0
Total 4 active route(s) using 928 bytes
Dell#
```

trust ipv6-diffserv

Allows the dynamic classification of IPv6 DSCP.

**Syntax**

```
trust ipv6-diffserv
```

To remove the definition, use the `no trust ipv6-diffserv` command.

**Defaults**

None

**Command Modes**

CONFIGURATION-POLICY-MAP-IN

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

</tr>
</tbody>
</table>

**Usage Information**

When you configure trust IPv6 diffserv, matched bytes/packets counters are not incremented in the `show qos statistics` command.

Trust diffserv (IPv4) can co-exist with trust ipv6-diffserv in an Input Policy Map. Dynamic classification happens based on the mapping as shown:
<table>

</tbody>
</table>
Internet small computer system interface (iSCSI) optimization enables quality-of-service (QoS) treatment for iSCSI storage traffic on an S3100 series system.

To configure and verify the iSCSI optimization feature, use the following Dell Networking OS commands.

**Topics:**
- iscsi aging time
- iscsi cos
- iscsi enable
- iscsi priority-bits
- iscsi profile-compellant
- iscsi target port
- show iscsi
- show iscsi session
- show iscsi session detailed
- show run iscsi

### iscsi aging time

Set the aging time for iSCSI sessions.

**Syntax**

```plaintext
iscsi aging time time
```

To remove the iSCSI session aging time, use the `no iscsi aging time` command.

**Parameters**

- `time`  
  Enter the aging time for the iSCSI session. The range is from 5 to 43,200 minutes.

**Defaults**

10 minutes

**Command Modes**

CONFIGURATION

**Command History**

- This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>
**iscsi cos**

Set the QoS policy that is applied to the iSCSI flows.

**Syntax**

```
iscsi cos {enable | disable | dot1p vlan-priority-value [remark] | dscp dscp-value [remark]}
```

To disable the QoS policy, use the `no iscsi cos` command.

**Parameters**

- **enable**
  - Enter the keyword `enable` to allow the application of preferential QoS treatment to iSCSI traffic so that the iSCSI packets are scheduled in the switch with a dot1p priority 4 regardless of the VLAN priority tag in the packet. The default is: the iSCSI packets are handled with dot1p priority 4 without remark.

- **disable**
  - Enter the keyword `disable` to disable the application of preferential QoS treatment to iSCSI frames.

- **dot1p vlan-priority-value**
  - Enter the dot1p value of the VLAN priority tag assigned to the incoming packets in an iSCSI session. The range is from 0 to 7. The default is the dot1p value in ingress iSCSI frames is not changed and is the same priority is used in iSCSI TLV advertisements if you did not enter the `iscsi priority-bits` command.

- **dscp dscp-value**
  - Enter the DSCP value assigned to the incoming packets in an iSCSI session. The valid range is from 0 to 63. The default is: the DSCP value in ingress packets is not changed.

- **remark**
  - Marks the incoming iSCSI packets with the configured dot1p or DSCP value when they egress to the switch. The default is: the dot1and DSCP values in egress packets are not changed.

**Defaults**

Disabled.

**Command Modes**

- **CONFIGURATION**

**Command History**

<tr>
<td>8.3.16.0</td>
<td>Introduced on MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

By default, iSCSI flows are assigned to dot1p priority 4.
iscsi enable

Globally enable iSCSI optimization.

Syntax

```
iscsi enable
```

To disable iSCSI optimization, use the `no iscsi enable` command.

Parameters

- `enable` Enter the keyword `enable` to enable the iSCSI optimization feature.

Defaults

Disabled.

Command Modes

- `CONFIGURATION`

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>

iscsi priority-bits

Configure the priority bitmap that advertises in the iSCSI application TLVs.

Syntax

```
iscsi priority-bits
```

To remove the configured priority bitmap, use the `no iscsi priority-bits` command.

Defaults

`4` (0x10 in the bitmap)

Command Modes

- `PROTOCOL LLDP` (only on the global, not on the interface)

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>

**iscsi target port**

Configure the iSCSI target ports and optionally, the IP addresses on which iSCSI communication is monitored.

**Syntax**

```plaintext
iscsi target port [tcp-port-2...tcp-port-16]ip-address [ip-address]
```

To remove the configured iSCSI target ports or IP addresses, use the `no iscsi target port` command.

**Parameters**

- `tcp-port-2...tcp-port-16` Enter the tcp-port number of the iSCSI target ports. The `tcp-port-n` is the TCP port number or a list of TCP port numbers on which the iSCSI target listens to requests. Separate port numbers with a comma. The default is 860, 3260.
- `ip-address` (Optional) Enter the ip-address that the iSCSI monitors. The ip-address specifies the IP address of the iSCSI target.

**Defaults**

860, 3260

**Command Modes**

CONFIGURATION

<td>Introduced on MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

You can configure up to 16 target TCP ports on the switch in one command or multiple commands.

When you use the no iscsi target port command and the TCP port you wish to delete is one bound to a specific IP address, the IP address value must be included in the command.

show iscsi

Display the currently configured iSCSI settings.

Syntax

show iscsi

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>

</tr>
</tbody>
</table>

Example

Dell# show iscsi
iSCSI is enabled
iSCSI session monitoring is disabled
iSCSI COS : dot1p is 4 no-remark
Session aging time: 10
Maximum number of connections is 256
-----------------------------------------------
iSCSI Targets and TCP Ports:
show iscsi session

Display information about active iSCSI sessions on the switch.

Syntax

show iscsi session

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description

9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0)Introduced on the Z9100–ON.
9.8(0.0P5)Introduced on the S4048-ON.
8.3.19.0 Introduced on the S4820T.
8.3.12.0 Introduced on the S4810.
8.3.16.0 Introduced on MXL 10/40GbE Switch IO Module.

Example

Dell# show iscsi session
Session 0:
--------------------
Target: iqn.2001-05.com.equallogic:0-8a0906-0e70c2002-10a0018426a48c94-iom010
Initiator: iqn.1991-05.com.microsoft:win-x9l8v27yajg
ISID: 400001370000

Session 1:
--------------------
Target: iqn.2001-05.com.equallogic:0-8a0906-0f60c2002-0360018428d48c94-iom011
Initiator: iqn.1991-05.com.microsoft:win-x9l8v27yajg
ISID: 400001370000.

Usage Information

Only sessions the switch observes are learned; sessions flowing through an adjacent switch are not learned.

After the switch is reloaded, any information exchanged during the initial handshake is not available. If the switch picks up the communication after reloading, it would detect a session was in progress but could not obtain complete information for it. Any incomplete information of this type would not be available in the show commands.
show iscsi session detailed

Display detailed information on active iSCSI sessions on the switch.

Syntax

```
show iscsi session detailed [session isid]
```

Parameters

- `isid` Enter the session’s iSCSI ID to display detailed information about the specified iSCSI session.

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version | Description
---|---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100-ON.
9.8(0.0P5) | Introduced on the S4048-ON.
8.3.19.0 | Introduced on the S4820T.
8.3.12.0 | Introduced on the S4810.

Example

```
Dell# show iscsi session detailed
Session 0 :
---------------------------------------------------
Up Time:00:00:01:28 (DD:HH:MM:SS)
Time for aging out:00:00:09:34 (DD:HH:MM:SS)

Initiator  Initiator Target      Target  Connection
           IP Address TCP Port  IP Address  TCPPort ID
10.10.0.44 33345     10.10.0.101 3260    0

Session 1 :
----------------------------------------------------
Up Time:00:00:01:22 (DD:HH:MM:SS)
Time for aging out:00:00:09:31 (DD:HH:MM:SS)
ISID:806978696102
Initiator  Initiator Target     Target  Connection
           IP Address TCP Port  IP Address TCPPort ID
10.10.0.53 33432     10.10.0.101 3260   0
```
• show iscsi session — display information about active iSCSI sessions on the switch.
• show run iscsi — show run iscsi.

**show run iscsi**

Display all globally configured non-default iSCSI settings in the current Dell Networking OS session.

**Syntax**

```
show run iscsi
```

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Related Commands**

- `show iscsi` — display the currently configured iSCSI settings.
- `show iscsi session` — display detailed information about active iSCSI sessions on the switch.
- `show iscsi session detailed` — display detailed information on active iSCSI sessions on the switch.
Intermediate System to Intermediate System (IS-IS)

IS-IS is an interior gateway protocol that uses shortest-path-first algorithm. IS-IS facilitates the communication between open systems, supporting routers passing through both IP and OSI traffic.

A router is considered as an intermediate system. Networks are partitioned into manageable routing domains called areas. Intermediate systems send, receive, and forward packets to other routers within their area (Level 1 and Level 1-2 devices). Only Level 1-2 and Level 2 devices communicate with other areas.

IS-IS protocol standards are listed in the Standard Compliance chapter in the Dell Networking OS Configuration Guide.

**NOTE:** The fundamental mechanisms of IS-IS are the same for IPv4 and IPv6. However some command modes might vary when applied to IPv4 and IPv6. These variations have been explicitly explained for such commands. If the variation is not mentioned, then the information applies to both the protocol versions.

**adjacency-check**

Verify that the “protocols supported” field of the IS-IS neighbor contains matching values to this router.

**Syntax**

```
adjacency-check
```
To disable adjacency check, use the no adjacency-check command.

Defaults
Enabled.

Command Modes
- ROUTER ISIS (for IPv4)
- CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>

Usage Information
To perform protocol-support consistency checks on hello packets, use this command. The adjacency-check is enabled by default.

If a BFD session goes down indicating that IPv4 or IPv6 connectivity to its neighbor is lost, it does not imply that the adjacency is lost altogether. The hello adjacency runs over Layer 2, and does not require IP connectivity. However, if IPv4 connectivity is lost to a neighbor, then when the next SPF calculation is performed, the system ensures that it does not calculate any IPv4 or IPv6 routes through that neighbor.

advertise

Leak routes between levels (distribute IP prefixes between Level 1 and Level 2 and vice versa).

Syntax
advertise {level1-into-level2 | level2-into-level1} prefix-list-name

Parameters
- level1-into-level2: Enter the keywords level1-into-level2 to advertise Level 1 routes into Level 2 LSPs. This setting is the default.
- level2-into-level1: Enter the keywords level2-into-level1 to advertise Level 2 inter-area routes into Level 1 LSPs. This behavior is described in RFC 2966.
**prefix-list-name**
Enter the name of a configured IP prefix list. Routes meeting the criteria of the IP Prefix list are leaked.

**Defaults**
- **level1-into-level2** (Level 1 to Level 2 leaking is enabled.)
- **level2-into-level1** (Level 2 to Level 1) leaking is disabled.

**Command Modes**
- ROUTER ISIS (for IPv4)
- CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>

<td>7.5.1.0</td>
<td>Added IPv6 ISIS support.</td>
</tr>
<tr>
<td>6.3.1.0</td>
<td>Version 6.3.1.0 Introduced</td>
</tr>
</tbody>
</table>

**Usage Information**
You cannot disable leaking from Level 1 to Level 2. Also, you cannot enable leaking from Level 2 to Level 1. However, you can regulate the rate flow from one level to another using an IP Prefix list. If you do not configure the IP Prefix list, all Level 1 routes are leaked.

You can find more information in IETF RFC 2966, *Domain-wide Prefix Distribution with Two-Level IS-IS*.

---

**area-password**

Configure a hash message authentication code (HMAC) password for an area.

**Syntax**
```
area-password [hmac-md5 | encryption-type] password
```

To delete a password, use the `no area-password` command.

**Parameters**
- **hmac-md5** (OPTIONAL) Enter the keywords `hmac-md5` to encrypt the password.
- **encryption-type** (OPTIONAL) Enter `7` to encrypt the password using DES.
Enter a 1 to 16-character length alphanumeric string to prevent unauthorized access or incorrect routing information corrupting the link state database. The password is processed as plain text, which only provides limited security.

Defaults
Not configured.

Command Modes
ROUTER ISIS

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

Usage Information
To prevent the link state database from receiving incorrect routing information from unauthorized routers, use the area-password command on routers within an area.

The configured password injects into Level 1 LSPs, CSNPs, and PSNPs.

Related Commands
- domain-password — set the authentication password for a routing domain.
- isis password — configure an authentication password for an interface.

Clear IS-IS configurations that display under the router isis heading of the show running-config command output.

Syntax
```
clear config
```

Command Modes
ROUTER ISIS

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>

<td>8.3.7.1</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

**Usage Information**

⚠️ **CAUTION:** Use caution when you enter this command. Back up your configuration prior to using this command or your IS-IS configuration will be erased.

### clear isis

Restart the IS-IS process. All IS-IS data is cleared.

**Syntax**

```plaintext
clear isis [vrf vrf-name] [tag] {* | database | traffic}
```

**Parameters**

- `vrf vrf-name`  
  - (Optional) Enter the keyword vrf followed by the name of the VRF to restart the IS-IS process corresponding to that VRF.
- `tag`  
  - (Optional) Enter an alphanumeric string to specify the IS-IS routing tag area.
- `*`  
  - Enter the keyword * to clear all IS-IS information and restart the IS-IS process. This command removes IS-IS neighbor information and IS-IS LSP database information and the full SPF calculation is done.
- `database`  
  - Clears IS-IS LSP database information.
- `traffic`  
  - Clears IS-IS counters.

**Command Modes**

- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>

</tr>
<tr>
<td>9.8(1.0)</td>
<td>Introduced on the Z9100–ON.</td>
</tr>
<tr>
<td>9.8(0.0P5)</td>
<td>Introduced on the S4048-ON.</td>
</tr>
</tbody>
</table>
## clns host

Define a name-to-network service mapping point (NSAP) that you use with commands that require NSAPs and system IDs.

**Syntax**
```
clns host name nsap
```

**Parameters**
- **name**
Enter an alphanumeric string to identify the name-to-NSAP mapping.
- **nsap**
Enter a specific NSAP address that is associated with the name parameter.

**Defaults**
Not configured.

**Command Modes**
- ROUTER ISIS

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.10(0.0)</td>
<td>Introduced on the S3148.</td>
</tr>
<tr>
<td>9.8(2.0)</td>
<td>Introduced on the S3100 series.</td>
</tr>
<tr>
<td>9.8(1.0)</td>
<td>Introduced on the Z9100–ON.</td>
</tr>
<tr>
<td>9.8(0.0P5)</td>
<td>Introduced on the S4048-ON.</td>
</tr>
<tr>
<td>9.8(0.0P2)</td>
<td>Introduced on the S3048-ON.</td>
</tr>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.5(0.1)</td>
<td>Introduced on the Z9500.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
</tbody>
</table>

**Usage Information**
To configure a shortcut name that you can use instead of entering a long string of numbers associated with an NSAP address, use this command.

**Related Commands**
- `hostname dynamic` — enable dynamic learning of host names from routers in the domain and allows the routers to advertise the host names in LSPs.
**debug isis**

Enable debugging for all IS-IS operations.

**Syntax**

```
debug isis
```

To disable debugging of IS-IS, use the `no debug isis` command.

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>

**Usage Information**

Entering `debug isis` enables all debugging parameters.

To display all debugging information in one output, use this command. To turn off debugging, you normally enter separate `no` forms of each command. To disable all debug messages for IS-IS at once, enter the `no debug isis` command.

**debug isis adj-packets**

Enable debugging on adjacency-related activity such as hello packets that are sent and received on IS-IS adjacencies.

**Syntax**

```
debug isis [vrf vrf-name] adj-packets [interface]
```

To turn off debugging, use the `no debug isis [vrf vrf-name]adj-packets [interface]` command.
**Parameters**

- **vrf vrf-name** (Optional) Enter the keyword vrf followed by the name of the VRF to enable the debug information on IS-IS for an adjacency tied to that VRF. This command displays the IIH related debug details.

- **interface** (OPTIONAL) Identifies the interface type and the interface information:
  - For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a port channel interface, enter the keywords port-channel then a number.
  - For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

**Command Modes**

- **EXEC Privilege**

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

---

**debug isis local-updates**

To debug IS-IS local update packets, enable debugging on a specific interface and provides diagnostic information.

**Syntax**

ddebug isis [vrf vrf-name] local-updates [interface]

To turn off debugging, use the no debug isis [vrf vrf-name] updates [interface] command.

**Parameters**

- **vrf vrf-name** (OPTIONAL) Enter the keyword vrf followed by the name of the VRF to enable the debugging information on IS-IS corresponding to that VRF. This information contains local
updates tied to the VRF that you specify. This command displays the local LSP debugging details of the current unit.

`interface` (OPTIONAL) Identifies the interface type as one of the following:

- For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a port channel interface, enter the keywords `port-channel` then a number.
- For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Command Modes**

- EXEC Privilege

**Command History**

### debug isis snp-packets

To debug IS-IS complete sequence number PDU (CSNP) and partial sequence number PDU (PSNP) packets, enable debugging on a specific interface and provides diagnostic information.

**Syntax**

ddebug isis [vrf vrf-name] snp-packets [interface]

To turn off debugging, use the no debug isis [vrf vrf-name] snp-packets [interface] command.
**Parameters**

- **vrf vrf-name**: (Optional) Enter the keyword vrf followed by the name of the VRF to enable debugging information on ISIS for CSNP/PSNP packets tied to that VRF. The command displays the SNP (CSNP/PSNP) related debugging information.

- **interface**: (OPTIONAL) Identifies the interface type as one of the following:
  - For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a port channel interface, enter the keywords port-channel then a number.
  - For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

**debug isis spf-triggers**

Enable debugging on the events that triggered IS-IS shortest path first (SPF) events for debugging purposes.

**Syntax**

d debug isis [vrf vrf-name] spf-triggers

To turn off debugging, use the no debug isis [vrf vrf-name] spf-triggers command.

**Parameters**

- **vrf vrf-name**: (OPTIONAL) Enter the keyword vrf followed by the name of the VRF to enable debugging information on IS-IS corresponding to that VRF. This information contains SPF...
trigger detail tied to the VRF that you specify. When SPF is triggered, this debugging information is displayed.

### debug isis update-packets

Enable debugging on link state PDUs (LSPs) that a router detects.

**Syntax**

d debug isis [vrf vrf-name] update-packets [interface]

To turn off debugging, use the no debug isis update-packets [interface] command.

**Parameters**

- **vrf vrf-name**
  
  (OPTIONAL) Enter the keyword vrf followed by the name of the VRF to enable the debugging information on IS-IS. This information contains updates from neighbors tied to the VRF that you specify. This command displays the debugging details of the received LSPs from the neighbors.

- **interface**
  
  (OPTIONAL) Identifies the interface type and the interface information:
  
  - For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a port channel interface, enter the keywords port-channel then a number.
• For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

**default-information originate**

Generates a default route into an IS-IS routing domain and controls the distribution of default information.

**Syntax**

default-information originate [always] [metric metric] [route-map map-name]

To disable the generation of a default route into the specified IS-IS routing domain, use the no default-information originate [always] [metric metric] [route-map map-name] command.

**Parameters**

- **always** (OPTIONAL) Enter the keyword always to have the default route always advertised.
- **metric metric** (OPTIONAL) Enter the keyword metric then a number to assign to the route. The range is from 0 to 16777215.
- **route-map map-name** (OPTIONAL) A default route the routing process generates if the route map is satisfied.

**Defaults**

Not configured.

**Command Modes**

- ROUTER ISIS (for IPv4)
- CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.
When you use this command to redistribute routes into a routing domain, the router becomes an autonomous system (AS) boundary router. An AS boundary router does not always generate a default route into a routing domain. The router still requires its own default route before it can generate one.

How a metric value assigned to a default route advertises depends on the `metric-style` command configuration. If the `metric-style` command is set for Narrow mode and the metric value in the `default-information originate` command is set to a number higher than 63, the metric value advertised in the LSPs is 63. If the `metric-style` command is set for Wide mode, the metric value in the `default-information originate` command is advertised.

**Related Commands**
- `redistribute` — redistribute routes from one routing domain to another routing domain.

### description

Enter a description of the IS-IS routing protocol.

**Syntax**
```
description {description}
```

To remove the description, use the `no description {description}` command.

**Parameters**
- `description` Enter a description to identify the IS-IS protocol (80 characters maximum).

**Defaults**
None

**Command Modes**
- `ROUTER ISIS`

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.
### distance

Define the administrative distance for learned routes.

**Syntax**

```
distance weight [ip-address mask [prefix-list]]
```

To return to the default values, use the `no distance weight` command.

**Parameters**

- **weight**
  - The administrative distance value indicates the reliability of a routing information source. The range is from 1 to 255. (A higher relative value indicates lower reliability. Routes with smaller values are given preference.) The default is 115.

- **ip-address mask** (OPTIONAL) Enter the next-hop address in dotted decimal format and enter a mask in either dotted decimal or /prefix format.

- **prefix-list** (OPTIONAL) Enter the name of a prefix list name.

**Defaults**

- **weight** = 115

**Command Modes**

- ROUTER ISIS (for IPv4)
- CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

- 9.8(0.0P2)  
  Introduced on the S3048-ON.

- 9.7(0.0)  
  Introduced on the S6000-ON.

- 9.5(0.1)  
  Introduced on the Z9500.

- 9.0.2.0  
  Introduced on the S6000.

- 8.3.19.0  
  Introduced on the S4820T.

- 8.3.12.0  
  Introduced on the S4810.

- 8.3.11.1  
  Introduced on the Z9000.

- pre-7.7.1.0  
  Introduced.

**Related Commands**

- `router isis` — enter ROUTER mode on the switch.

**Usage Information**

The administrative distance indicates the trust value of incoming packets. A low administrative distance indicates a high trust rate. A high value indicates a lower trust rate. For example, a weight of 255 is interpreted that the routing information source is not trustworthy and should be ignored.

**distribute-list in**

Filter network prefixes received in updates.

**Syntax**

distribute-list prefix-list-name in [interface]

To return to the default values, use the no distribute-list prefix-list-name in [interface] command.

**Parameters**

- **prefix-list-name**
  - Specify the prefix list to filter prefixes in routing updates.
- **interface**
  - (OPTIONAL) Identifies the interface type and the interface following:
    - For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
    - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
    - For a port channel interface, enter the keywords port-channel then a number.
    - For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

**Defaults**

Not configured.

**Command Modes**

- ROUTER ISIS (for IPv4)
- CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Related Commands

- **distribute-list out** — suppress networks from being advertised in updates.
- **redistribute** — redistribute routes from one routing domain to another routing domain.

**distribute-list out**

Suppress network prefixes from being advertised in outbound updates.

**Syntax**

```plaintext
distribute-list prefix-list-name out [connected | bgp as number | ospf process-id | rip | static]
```

To return to the default values, use the `no distribute-list prefix-list-name out [bgp as number connected | ospf process-id | rip | static]` command.

**Parameters**

- **prefix-list-name**
  - Specify the prefix list to filter prefixes in routing updates.
- **connected**
  - (OPTIONAL) Enter the keyword `connected` for directly connected routing process.
- **ospf process-id**
  - (OPTIONAL) Enter the keyword `ospf` then the OSPF process-ID number. The range is from 1 to 65535.
- **bgp as number**
  - (OPTIONAL) Enter the BGP then the AS Number. The range is from 1 to 65535.
- **rip**
  - (OPTIONAL) Enter the keyword `rip` for RIP routes.
- **static**
  - (OPTIONAL) Enter the keyword `static` for user-configured routing process.

**Defaults**

Not configured.

**Command Modes**

- ROUTER ISIS (for IPv4)
• CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Usage Information**

You can assign a name to a routing process so a prefix list IS applied to only the routes derived from the specified routing process.

**Related Commands**

- `distribute-list in` — filter the networks received in updates.
- `redistribute` — redistribute routes from one routing domain to another routing domain.

### distribute-list redistributed-override

Suppress flapping of routes when the same route is redistributed into IS-IS from multiple routers in the network.

**Syntax**

distribute-list redistributed-override in

To return to the default, use the `no distribute-list redistributed-override in` command.

**Defaults**

none

**Command Modes**

- ROUTER ISIS (for IPv4)
- CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>

## Usage Information

When you execute this command, IS-IS does not download the route to the routing table if the same route was redistributed into IS-IS routing protocol on the same router.

### domain-password

Set the authentication password for a routing domain.

**Syntax**

```
domain-password [hmac-md5 | encryption-type] password
```

To disable the password, use the `no domain-password` command.

**Parameters**

- **hmac-md5**
  - (OPTIONAL) Enter the keywords `hmac-md5` to encrypt the password using MD5.

- **encryption-type**
  - (OPTIONAL) Enter `7` to encrypt the password using DES.

- **password**
  - Enter an alphanumeric string up to 16 characters long. If you do not specify an encryption type or `hmac-md5` keywords, the password is processed as plain text which provides limited security.

**Defaults**

No default password.

**Command Modes**

ROUTER ISIS

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>

</tbody>
</table>
The domain password is inserted in Level 2 link state PDUs (LSPs), complete sequence number PDUs (CSNPs), and partial sequence number PDUs (PSNPs).

Related Commands

- `area-password` — configure an IS-IS area authentication password.
- `isis priority` — configure the authentication password for an interface.

**graceful-restart ietf**

Enable graceful restart on an IS-IS router.

**Syntax**

```
graceful-restart ietf
```

To return to the default, use the `no graceful-restart ietf` command.

**Parameters**

- `ietf` Enter `ietf` to enable graceful restart on the IS-IS router.

**Defaults**

Graceful restart disabled.

**Command Modes**

- `ROUTER ISIS`

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>
### graceful-restart interval

Set the graceful restart grace period, the time during that all graceful restart attempts are prevented.

**Syntax**

```
graceful-restart interval minutes
```

To return to the default, use the `no graceful-restart interval` command.

**Parameters**

- `minutes`  
  Enter the graceful-restart interval minutes. The range is from 1 to 20 minutes. The default is **5 minutes**.

**Defaults**

5 minutes

**Command Modes**

ROUTER ISIS

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version**

- 9.10(0.0)  
  Introduced on the S3148.
- 9.8(2.0)  
  Introduced on the S3100 series.

  Introduced on the S4820T.
- 8.3.12.0  
  Introduced on the S4810.
- 8.3.11.1  
  Introduced on the Z9000.
- 8.3.1.0  
  Introduced on the E-Series.
graceful-restart restart-wait

Enable the graceful restart maximum wait time before a restarting peer comes up.

**Syntax**

```
NOTE: Set the t3 timer to adjacency on the restarting router when implementing this command.

graceful-restart restart-wait seconds
```

To return to the default, use the `no graceful-restart restart-wait` command.

**Parameters**

- `seconds` Enter the graceful restart time in seconds. The range is from 5 to 300 seconds. The default is 30 seconds.

**Defaults**

30 seconds

**Command Modes**

ROUTER ISIS

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>

**Related Commands**

- `graceful-restart t3` — configure the overall wait time before graceful restart completes.

graceful-restart t1

Set the graceful restart wait time before unacknowledged restart requests are generated. This wait time is the interval before the system sends a restart request (an IIH with RR bit set in Restart TLV) until the CSNP is received from the helping router.

**Syntax**

```
graceful-restart t1 {interval seconds | retry-times value}
```

To return to the default, use the `no graceful-restart t1` command.
### Parameters

<table>
<thead>
<tr>
<th></th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>interval</td>
<td>Enter the keyword <strong>interval</strong> to set the wait time. The range is from 5 to 120 seconds. The default is <strong>5 seconds</strong>.</td>
</tr>
<tr>
<td>retry-times</td>
<td>Enter the keywords <strong>retry-times</strong> to set the number of times the request interval is extended until a CSNP is received from the helping router. The range is from 1 to 10 attempts. The default is <strong>1</strong>.</td>
</tr>
</tbody>
</table>

### Defaults

**See Parameters.**

### Command Modes

**ROUTER ISIS**

</tbody>
</table>

### graceful-restart t2

Configure the wait time for the graceful restart timer T2 that a restarting router uses as the wait time for each database to synchronize.

#### Syntax

```
graceful-restart t2 {level-1 | level-2} seconds
```

To return to the default, use the `no graceful-restart t2` command.

#### Parameters

<table>
<thead>
<tr>
<th></th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>level-1, level-2</td>
<td>Enter the keywords <strong>level-1</strong> or <strong>level-2</strong> to identify the database instance type to which the wait interval applies.</td>
</tr>
<tr>
<td>seconds</td>
<td>Enter the <strong>graceful-restart t2</strong> time in seconds. The range is from 5 to 120 seconds. The default is <strong>30 seconds</strong>.</td>
</tr>
</tbody>
</table>

#### Defaults

**30 seconds**

#### Command Modes

**ROUTER ISIS**
graceful-restart t3

Configure the overall wait time before graceful restart completes.

Syntax

```
graceful-restart t3 {adjacency | manual} seconds
```

To return to the default, use the `no graceful-restart t3` command.

Parameters

- `adjacency`
  Enter the keyword adjacency so that the restarting router receives the remaining time value from its peer and adjusts its T3 value so if you have configured this option.
- `manual`
  Enter the keyword manual to specify a time value that the restarting router uses. The range is from 50 to 120 seconds. The default is 30 seconds.

Defaults

manual, 30 seconds

Command Modes

- ROUTER ISIS

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>
## Usage Information

The running router sets the remaining time value to the current adjacency hold time. You can override this setting by implementing this command.

Override the default restart-wait time by entering the `no graceful-restart restart-wait` command.

When you disable `restart-wait`, the current adjacency hold time is used.

Set the t3 timer to `adjacency` on the restarting router when implementing this command. The restarting router gets the remaining time value from its peer and adjusts its T3 value so only when you have configured `graceful-restart t3 adjacency`.

### Related Commands

- `graceful-restart restart-wait` — enable the graceful restart maximum wait time before a restarting peer comes up.

## hello padding

Use to turn ON or OFF padding for LAN and point-to-point hello PDUs or to selectively turn padding ON or OFF for LAN or point-to-point hello PDUs.

**Syntax**

```
hello padding [multi-point | point-to-point]
```

To return to the default, use the `no hello padding [multi-point | point-to-point]` command.

**Parameters**

- **multi-point** (OPTIONAL) Enter the keywords `multi-point` to pad only LAN hello PDUs.
- **point-to-point** (OPTIONAL) Enter the keywords `point-to-point` to pad only point-to-point PDUs.

**Defaults**

Both LAN and point-to-point hello PDUs are padded.

**Command Modes**

- `ROUTER ISIS`

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>

<tr>
<td>9.8(0.0P5)</td>
<td>Introduced on the S4048-ON.</td>
</tr>
</tbody>
</table>

---

**Intermediate System to Intermediate System (IS-IS)**

---
Usage Information
IS-IS hellos are padded to the full maximum transmission unit (MTU) size. Padding IS-IS Hellos (IIHS) to the full MTU provides early error detection of large frame transmission problems or mismatched MTUs on adjacent interfaces.

Related Commands
- `isis hello padding` — turn ON or OFF hello padding on an interface basis.

hostname dynamic

Enables dynamic learning of hostnames from routers in the domain and allows the routers to advertise the hostname in LSPs.

Syntax

```
hostname dynamic
```

To disable this command, use the `no hostname dynamic` command.

Defaults

Enabled.

Command Modes

ROUTER ISIS

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

```
Version Description
9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100–ON.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.5(0.1) Introduced on the Z9500.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.12.0 Introduced on the S4810.
8.3.11.1 Introduced on the Z9000.
```

Intermediate System to Intermediate System (IS-IS)
To build name-to-systemID mapping tables through the protocol, use this command. All show commands that display systems also display the hostname.

Related Commands
- `clns host` — define a name-to-NSAP mapping.

**ignore-lsp-errors**

Ignore LSPs with bad checksums instead of purging those LSPs.

**Syntax**
```
ignore-lsp-errors
```
To return to the default values, use the `no ignore-lsp-errors` command.

**Defaults**
In IS-IS, the default deletes LSPs with internal checksum errors (no ignore-lsp-errors).

**Command Modes**
`ROUTER ISIS`

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
</tbody>
</table>

**Usage Information**
IS-IS normally purges LSPs with an incorrect data link checksum causing the LSP source to regenerate the message. A cycle of purging and regenerating LSPs can occur when a network link continues to deliver accurate LSPs even though there is a link causing data corruption. This process could cause disruption to your system operation.

**ip router isis**

Configure IS-IS routing processes on an interface and attach an area tag name to the routing process.

**Syntax**
```
ip router isis [tag]
```
To disable IS-IS on an interface, use the `no ip router isis [tag]` command.
Parameters

| tag | (OPTIONAL) The tag you specify identifies a specific area routing process. If you do not specify a tag, a null tag is assigned. |

Defaults

No processes are configured.

Command Modes

INTERFACE

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced.</td>
</tr>
</tbody>
</table>

Usage Information

To assign a network entity title to enable IS-IS, use the net command.

This command accepts even if an IP address is not configured. This command is cached in the L3 Manager till the IP address is configured. When the IP address configuration reaches the L3Manager, the circuit add message is sent to IS-IS.

NOTE: IP address is not mandatory for forming IS-IS adjacency.

Related Commands

- net — configure an IS-IS network entity title (NET) for the routing process.
- router isis — enable the IS-IS routing protocol.

ipv6 router isis

Enable the IPv6 IS-IS routing protocol and specify an IPv6 IS-IS process.

Syntax

ipv6 router isis [tag]

To disable IS-IS routing, use the no router isis [tag] command.
Parameters

**tag**

(Optional) This parameter is a unique name for a routing process. A null tag is assumed if the tag option is not specified. The tag name must be unique for all IP router processes for a given router.

Defaults

Not configured.

Command Modes

ROUTER ISIS

</tr>
</tbody>
</table>

Usage Information

Configure a network entity title (the `net` command) to specify the area address and the router system ID. To establish adjacencies and establish dynamic routing, enable routing on one or more interfaces. You can configure only one IS-IS routing process to perform Level 2 routing. A `level-1-2` designation performs Level 1 and Level 2 routing at the same time.

Related Commands

- `net` — configure an IS-IS network entity title (NET) for the routing process.
- `is-type` — assign a type for a given area.

### isis circuit-type

Configure the adjacency type on interfaces.

**Syntax**

```
isis circuit-type {level-1 | level-1-2 | level-2-only}
```

To return to the default values, use the `no isis circuit-type` command.

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>level-1</code></td>
<td>You can form a Level 1 adjacency if there is at least one common area address between this system and neighbors. You cannot form Level 2 adjacencies on this interface.</td>
</tr>
</tbody>
</table>
You can form a Level 1 and Level 2 adjacencies when the neighbor is also configured as Level-1-2 and there is at least one common area, if not, a Level 2 adjacency is established. This setting is the default.

You can form a Level 2 adjacencies when other Level 2 or Level 1-2 routers and their interfaces are configured for Level 1-2 or Level 2. Level 1 adjacencies cannot be established on this interface.

**Defaults**

**level-1-2**

**Command Modes**

**INTERFACE**

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version**

- **9.10(0.0)** Introduced on the S3148.
- **9.8(2.0)** Introduced on the S3100 series.
- **9.8(1.0)** Introduced on the Z9100–ON.
- **9.8(0.0P5)** Introduced on the S4048-ON.
- **9.8(0.0P2)** Introduced on the S3048-ON.
- **9.7(0.0)** Introduced on the S6000-ON.
- **9.5(0.1)** Introduced on the Z9500.
- **9.0.2.0** Introduced on the S6000.
- **8.3.19.0** Introduced on the S4820T.
- **8.3.12.0** Introduced on the S4810.
- **8.3.11.1** Introduced on the Z9000.

**Usage Information**

Because the default establishes Level 1 and Level 2 adjacencies, you do not need to configure this command. Routers in an IS-IS system must be configured as a Level 1-only, Level 1-2, or Level 2-only system.

Only configure interfaces as Level 1 or Level 2 on routers that are between areas (for example, a Level 1-2 router) to prevent the software from sending unused hello packets and wasting bandwidth.

### isis csnp-interval

Configure the IS-IS complete sequence number PDU (CSNP) interval on an interface.

**Syntax**

```
isis csnp-interval seconds [level-1 | level-2]
```

To return to the default values, use the `no isis csnp-interval [seconds] [level-1 | level-2]` command.

**Parameters**

- **seconds**
  
  Interval of transmission time between CSNPs on multi-access networks for the designated intermediate system. The range is from 0 to 65535. The default is 10.

- **level-1**
  
  (OPTIONAL) Independently configures the interval of time between transmission of CSNPs for Level 1.
level-2 (OPTIONAL) Independently configures the interval of time between transmission of CSNPs for Level 2.

Defaults
seconds = 10; level-1 (if not otherwise specified)

Command Modes
INTERFACE

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
</tbody>
</table>

Usage Information
The default values of this command are typically satisfactory transmission times for a specific interface on a designated intermediate system. To maintain database synchronization, the designated routers send CSNPs.

You can configure Level 1 and Level 2 CSNP intervals independently.

### isis hello-interval

Specify the length of time between hello packets sent.

**Syntax**

```plaintext
isis hello-interval seconds [level-1 | level-2]
```

To return to the default values, use the `no isis hello-interval [seconds] [level-1 | level-2]` command.

**Parameters**

- **seconds**: Allows you to set the length of time between hello packet transmissions. The range is from 1 to 65535. The default is 10.
- **level-1** (OPTIONAL) Select this value to configure the hello interval for Level 1. This value is the default.
- **level-2** (OPTIONAL) Select this value to configure the hello interval for Level 2.

**Defaults**

- seconds = 10; level-1 (if not otherwise specified)

**Command Modes**

- INTERFACE
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
</tbody>
</table>

### Usage Information

Hello packets are held for a length of three times the value of the hello interval. To conserve bandwidth and CPU usage, use a high hello interval seconds. Use a low hello interval seconds for faster convergence (but uses more bandwidth and CPU resources).

### Related Commands
- `isis hello-multiplier` — specify the number of IS-IS hello packets a neighbor must miss before the router declares the adjacency as down.

## isis hello-multiplier

Specify the number of IS-IS hello packets a neighbor must miss before the router declares the adjacency down.

### Syntax

```plaintext
isis hello-multiplier multiplier [level-1 | level-2]
```

To return to the default values, use the `no isis hello-multiplier [multiplier] [level-1 | level-2]` command.

### Parameters

- `multiplier` Specifies an integer that sets the multiplier for the hello holding time. Never configure a hello-multiplier lower than the default (3). The range is from 3 to 1000. The default is 3.
- `level-1` (OPTIONAL) Select this value to configure the hello multiplier independently for Level 1 adjacencies. This value is the default.
- `level-2` (OPTIONAL) Select this value to configure the hello multiplier independently for Level 2 adjacencies.

### Defaults

- `multiplier = 3, level-1` (if not otherwise specified)

### Command Modes

- `INTERFACE`
Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>

<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
</tbody>
</table>

Usage Information

The holdtime (the product of the hello-multiplier multiplied by the hello-interval) determines how long a neighbor waits for a hello packet before declaring the neighbor is down so routes can be recalculated.

Related Commands

- `isis hello-interval` — specify the length of time between hello packets.

**isis hello padding**

Turn ON or OFF padding of hello PDUs from INTERFACE mode.

**Syntax**

```
isis hello padding
```

To return to the default, use the `no isis hello padding` command.

**Defaults**

Padding of hello PDUs is enabled (ON).

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.10(0.0)</td>
<td>Introduced on the S3148.</td>
</tr>
<tr>
<td>9.8(2.0)</td>
<td>Introduced on the S3100 series.</td>
</tr>
<tr>
<td>9.8(1.0)</td>
<td>Introduced on the Z9100-ON.</td>
</tr>
<tr>
<td>9.8(0.0P5)</td>
<td>Introduced on the S4048-ON.</td>

<td>Introduced on the S3048-ON.</td>
</tr>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
</tbody>
</table>
### Usage Information
Hello PDUs are “padded” only when both the global and interface padding options are ON. Turning either one OFF disables padding for the corresponding interface.

### Related Commands
- `hello padding` — turn ON or OFF padding for LAN and point-to-point hello PDUs.

### isis ipv6 metric
Assign metric to an interface for use with IPv6 information.

#### Syntax
```
isis ipv6 metric default-metric [level-1 | level-2]
```
To return to the default values, use the `no ipv6 isis metric [default-metric] [level-1 | level-2]` command.

#### Parameters
- `default-metric` Metric assigned to the link and used to calculate the cost from each other router via the links in the network to other destinations. You can configure this metric for Level 1 or Level 2 routing. The range is from 0 to 16777215. The default is **10**.
- `level-1` (OPTIONAL) Enter the keywords `level-1` to configure the shortest path first (SPF) calculation for Level 1 (intra-area) routing. This value is the default.
- `level-2` (OPTIONAL) Enter the keywords `level-2` to configure the SPF calculation for Level 2 (inter-area) routing.

#### Defaults
default-metric = **10**: `level-1` (if not otherwise specified)

#### Command Modes
- `INTERFACE`

#### Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

#### Version Description
- **9.10(0.0)** Introduced on the S3148.
- **9.8(2.0)** Introduced on the S3100 series.
- **9.8(1.0)** Introduced on the Z9100-ON.
- **9.8(0.0P6)** Introduced on the S4048-ON.
- **9.8(0.0P2)** Introduced on the S3048-ON.
- **9.7(0.0)** Introduced on the S6000-ON.
- **9.5(0.1)** Introduced on the Z9500.

</tr>
</tbody>
</table>

### Usage Information

Dell Networking recommends configuring metrics on all interfaces. Without configuring this command, the IS-IS metrics are similar to hop-count metrics.

### isis metric

Assign a metric to an interface.

**Syntax**

```
isis metric default-metric [level-1 | level-2]
```

To return to the default values, use the `no isis metric [default-metric] [level-1 | level-2]` command.

**Parameters**

- **default-metric**
  
  Metric assigned to the link and used to calculate the cost from each other router via the links in the network to other destinations. You can configure this metric for Level 1 or Level 2 routing. The range is from 0 to 16777215 irrespective of the metric style. The default is 10.

  - If metric value is configured to more than 63, system throughs the following warning: `Warning: for metrics greater than 63, 'metric-style wide' should be configured on level-1-2, or it will be capped at 63.`

    - If the metric style is WIDE, the metric values that are greater than 63 are only effective.

- **level-1**
  
  (OPTIONAL) Enter the keywords `level-1` to configure the shortest path first (SPF) calculation for Level 1 (intra-area) routing. This setting is the default.

- **level-2**
  
  (OPTIONAL) Enter the keywords `level-2` to configure the SPF calculation for Level 2 (inter-area) routing.

**Defaults**

```
default-metric = 10; level-1 (if not otherwise specified)
```

</table>
**isis password**

Configure an authentication password for an interface.

**Syntax**

```
isis password [hmac-md5] password [level-1 | level-2]
```

To delete a password, use the `no isis password [password] [level-1 | level-2]` command.

**Parameters**

- `encryption-type` (OPTIONAL) Enter 7 to encrypt the password using DES.
- `hmac-md5` (OPTIONAL) Enter the keywords `hmac-md5` to encrypt the password using MD5.
- `password` Assign the interface authentication password.
- `level-1` (OPTIONAL) Independently configures the authentication password for Level 1. The router acts as a station router for Level 1 routing. This setting is the default.
- `level-2` (OPTIONAL) Independently configures the authentication password for Level 2. The router acts as an area router for Level 2 routing.

**Defaults**

No default password. **level-1** (if not otherwise specified).

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
</tbody>
</table>

**Usage Information**

To protect your network from unauthorized access, use this command to prevent unauthorized routers from forming adjacencies.

You can assign different passwords for different routing levels by using the keywords `level-1` and `level-2`.

The `no` form of this command disables the password for Level 1 or Level 2 routing, using the respective keywords `level-1` or `level-2`.

This password provides limited security as it is processed as plain text.
**isis priority**

Set the priority of the designated router you select.

**Syntax**

```
isis priority value [level-1 | level-2]
```

To return to the default values, use the `no isis priority [value] [level-1 | level-2]` command.

**Parameters**

- **value**: This value sets the router priority. The higher the value, the higher the priority. The range is from 0 to 127. The default is 64.
- **level-1**: (OPTIONAL) Specify the priority for Level 1. This setting is the default.
- **level-2**: (OPTIONAL) Specify the priority for Level 2.

**Defaults**

- `value = 64; level-1` (if not otherwise specified).

**Command Modes**

- `INTERFACE`

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
</tbody>
</table>

**Usage Information**

You can configure priorities independently for Level 1 and Level 2. Priorities determine which router on a LAN is the designated router. Priorities are advertised within hellos. The router with the highest priority becomes the designated intermediate system (DIS).

**NOTE:** Routers with a priority of 0 cannot be a designated router.

Setting the priority to 0 lowers the chance of this system becoming the DIS, but does not prevent it. If all the routers have priority 0, one with highest MAC address becomes DIS even though its priority is 0.
**is-type**

Configure IS-IS operating level for a router.

**Syntax**

```
is-type {level-1 | level-1-2 | level-2-only}
```

To return to the default values, use the `no is-type` command.

**Parameters**

- **level-1**
  Allows a router to act as a Level 1 router.

- **level-1-2**
  Allows a router to act as both a Level 1 and Level 2 router. This setting is the default.

- **level-2-only**
  Allows a router to act as a Level 2 router.

**Defaults**

`level-1-2`

**Command Modes**

`ROUTER ISIS`

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
</tbody>
</table>

**Usage Information**

The IS-IS protocol automatically determines area boundaries and are able to keep Level 1 and Level 2 routing separate. Poorly planned use of this feature may cause configuration errors, such as accidental area partitioning.

If you are configuring only one area in your network, you do not need to run both Level 1 and Level 2 routing algorithms. You can configure the IS type as Level 1.

**log-adjacency-changes**

Generate a log messages for adjacency state changes.

**Syntax**

```
log-adjacency-changes
```

---

Intermediate System to Intermediate System (IS-IS) | 919
To disable this function, use the `no log-adjacency-changes` command.

### Defaults
Adjacency changes are not logged.

### Command Modes
- ROUTER ISIS

### Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
</tbody>
</table>

### Usage Information
This command allows you to monitor adjacency state changes, which are useful when you monitor large networks. Messages are logged in the system’s error message facility.

### lsp-gen-interval
Set the minimum interval between successive generations of link-state packets (LSPs).

#### Syntax
```
lsp-gen-interval [level-1 | level-2] interval seconds [initial_wait_interval seconds [second_wait_interval seconds]]
```
To restore default values, use the `no lsp-gen-interval [level-1 | level-2] interval seconds [initial_wait_interval seconds [second_wait_interval seconds]]` command.

#### Parameters
- **level-1** (OPTIONAL) Enter the keywords `level-1` to apply the configuration to generation of Level-1 LSPs.
- **level-2** (OPTIONAL) Enter the keywords `level-2` to apply the configuration to generation of Level-2 LSPs.
- **interval seconds** Enter the maximum number of seconds between LSP generations. The range is from 0 to 120 seconds. The default is 5 seconds.
- **initial_wait_interval seconds** (OPTIONAL) Enter the initial wait time, in seconds, before running the first LSP generation. The range is from 0 to 120 seconds. The default is 1 second.
- **second_wait_interval seconds** (OPTIONAL) Enter the wait interval, in seconds, between the first and second LSP generation. The range is from 0 to 120 seconds. The default is 5 seconds.
lsp-mtu

Set the maximum transmission unit (MTU) of IS-IS link-state packets (LSPs). This command only limits the size of LSPs this router generates.

Syntax

```
lsp-mtu size
```

To return to the default values, use the `no lsp-mtu` command.

Parameters

```
size
```

The maximum LSP size, in bytes. The range is from 512 to 16000 for Non-Jumbo mode and from 128 to 9195 for Jumbo mode. The default is 1497.

NOTE: The appropriate interface circuit is brought down and removed.

Defaults

1497 bytes.
Command Modes
- ROUTER ISIS

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Added support for LSP Throttling Enhancement.</td>
</tr>
</tbody>
</table>

Usage Information
The link MTU and the LSP MTU size must be the same.
Because each device can generate a maximum of 255 LSPs, consider carefully whether you use the `lsp-mtu` command.

**lsp-refresh-interval**

Set the link state PDU (LSP) refresh interval. LSPs must be refreshed before they expire. When the LSPs are not refreshed after a refresh interval, they are kept in a database until their `max-lsp-lifetime` reaches zero and then LSPs is purged.

Syntax
```
lsp-refresh-interval seconds
```
To restore the default refresh interval, use the `no lsp-refresh-interval` command.

Parameters
- **seconds**
  - The LSP refresh interval, in seconds. This value must be 300 seconds less than the value specified in the `max-lsp-lifetime` command. The range is from 1 to 65535 seconds. The default is 900.

Defaults
- **900 seconds**

Command Modes
- ROUTER ISIS

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>
## max-area-addresses

Configure manual area addresses.

**Syntax**

```
max-area-addresses number
```

To return to the default values, use the `no max-area-addresses` command.

**Parameters**

- `number` 
  Set the maximum number of manual area addresses. The range is from 3 to 6. The default is 3.

**Defaults**

3 addresses

**Command Modes**

`ROUTER ISIS`

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

### Version Description

- **9.10(0.0)**: Introduced on the S3148.
- **9.8(2.0)**: Introduced on the S3100 series.
- **9.8(1.0)**: Introduced on the Z9100-ON.
- **9.8(0.0P5)**: Introduced on the S4048-ON.
- **9.8(0.0P2)**: Introduced on the S3048-ON.
- **9.7(0.0)**: Introduced on the S6000-ON.
- **9.5(0.1)**: Introduced on the Z9500.
- **9.0.2.0**: Introduced on the S6000.
- **8.3.19.0**: Introduced on the S4820T.
- **8.3.12.0**: Introduced on the S4810.
- **8.3.11.1**: Introduced on the Z9000.
- **7.5.1.0**: Added support for LSP Throttling Enhancement.

### Related Commands

- `max-lsp-lifetime` — set the maximum interval that LSPs persist without being refreshed.

### Usage Information

The refresh interval determines the rate at which route topology information is transmitted preventing the information from becoming obsolete.

The refresh interval must be less than the LSP lifetime specified with the `max-lsp-lifetime` command. A low value reduces the amount of time that undetected link state database corruption can persist at the cost of increased link utilization. A higher value reduces the link utilization the flooding of refreshed packets causes.

<tr>
<td>7.5.1.0</td>
<td>Added support for LSP Throttling Enhancement.</td>
</tr>
</tbody>
</table>

**Usage Information**

To configure the number of area addresses on router, use this command. This value must be consistent with routers in the same area, otherwise the router forms only Level 2 adjacencies. The value must be same among all the routers to form Level 1 adjacencies.

**max-lsp-lifetime**

Set the maximum time that link-state packets (LSPs) exist without being refreshed.

**Syntax**

```plaintext
max-lsp-lifetime seconds
```

To restore the default time, use the `no max-lsp-lifetime` command.

**Parameters**

- `seconds` The maximum lifetime of LSP in seconds. This value must be greater than the `lsp-refresh-interval` command. The higher the value the longer the LSPs are kept. The range is from 1 to 65535. The default is 1200.

**Defaults**

1200 seconds

**Command Modes**

ROUTER ISIS

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>
Version | Description
--- | ---
8.3.12.0 | Introduced on the S4810.
8.3.11.1 | Introduced on the Z9000.

Usage Information
Change the maximum LSP lifetime with this command. The maximum LSP lifetime must always be greater than the LSP refresh interval.

The `seconds` parameter enables the router to keep LSPs for the specified length of time. If the value is higher, the overhead is reduced on slower-speed links.

Related Commands
- `lsp-refresh-interval` — set the link-state packet (LSP) refresh interval.

**maximum-paths**

Allows you to configure the maximum number of equal cost paths allowed in a routing table.

**NOTE:** Enables you to configure a single system wide value that is common for both IPv4 and IPv6 addresses.

**Syntax**
```
maximum-paths number
```

To return to the default values, use the `no maximum-paths` command.

**Parameters**
- `number` Enter a number as the maximum number of parallel paths an IP routing installs in a routing table. The range is from 1 to 64. The default is 4.

**Defaults**
4

**Command Modes**
- `ROUTER ISIS (for IPv4)`
- `CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)`

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
--- | ---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100-ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.7(0.0) | Introduced on the S6000-ON.
9.5(0.1) | Introduced on the Z9500.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.12.0 | Introduced on the S4810.
To generate and accept old-style, new-style, or both styles of type, length, and values (TLV), configure a router.

**Syntax**

```
metric-style {narrow [transition] | transition | wide [transition]} [level-1 | level-2]
```

To return to the default values, use the `no metric-style {narrow [transition] | transition | wide [transition]} [level-1 | level-2]` command.

**Parameters**

- **narrow**
  - Allows you to generate and accept old-style TLVs. The metric range is from 0 to 63.

- **transition**
  - Allows you to generate both old-style and new-style TLVs. The metric range is from 0 to 63.

- **wide**
  - Allows you to generate and accept only new-style TLVs. The metric range is from 0 to 16777215.

- **level-1**
  - Enables the metric style on Level 1.

- **level-2**
  - Enables the metric style on Level 2.

**Defaults**

```
narrow; if no Level is specified, Level-1 and Level-2 are configured.
```

**Command Modes**

```
ROUTERS ISIS
```

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>

<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>
If you enter the `metric-style wide` command, the Dell Networking OS generates and accepts only new-style TLVs. The router uses less memory and other resources rather than generating both old-style and new-style TLVs.

The new-style TLVs have wider metric fields than old-style TLVs.

When wide transition is configured, narrow metric is sent for the narrow metric TLV and the actual wide metric is sent in wide metric TLV. The receiver can choose to use the metric that is requires.

**Related Commands**

- `isis metric` — configure a metric for an interface.

### multi-topology

Enables multi-topology IS-IS. It also allows enabling/disabling of old and new style TLVs for IP prefix information in the LSPs.

**Syntax**

```
multi-topology [transition]
```

To return to a single topology configuration, use the `no multi-topology [transition]` command.

**Parameters**

- `transition`

**Defaults**

Disabled

**Command Modes**

`CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6`

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>
**net**

To configure an IS-IS network entity title (NET) for a routing process, use this mandatory command. If you did not configure a NET, the IS-IS process does not start.

Syntax

`net network-entity-title`

To remove a net, use the `no net network-entity-title` command.

Parameters

`network-entity-title` Specify the area address and system ID for an IS-IS routing process. The first 1 to 13 bytes identify the area address. The next 6 bytes identify the system ID. The last 1 byte is the selector byte, always identified as zero zero (00). This argument can be applied to an address or a name.

Defaults

Not configured.

Command Modes

ROUTER ISIS

</tbody>
</table>

**passive-interface**

Suppress routing updates on an interface. This command stops the router from sending updates on that interface.

Syntax

`passive-interface interface`

To delete a passive interface configuration, use the `no passive-interface interface` command.

Parameters

`interface` Enter the following keywords and the interface information:

- For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

For a Loopback interface, enter the keyword loopback then a number from 0 to 16383.

For a port channel interface, enter the keywords port-channel then a number.

For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

Defaults
Not configured.

Command Modes
ROUTER ISIS

<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
</tbody>
</table>

Usage Information
Although the passive interface does not send nor receive routing updates, the network on that interface is still included in the IS-IS updates sent using other interfaces.

redistribute

Redistribute routes from one routing domain to another routing domain.

Syntax
redistribute {static | connected | rip} [level-1 | level-1-2 | level-2] [metric metric-value] [metric-type {external | internal}] [route-map map-name]

Parameters
- **connected**: Enter the keyword connected to redistribute active routes into IS-IS.
- **rip**: Enter the keyword rip to redistribute RIP routes into IS-IS.
- **static**: Enter the keyword static to redistribute user-configured routes into IS-IS.

To end redistribution or disable any of the specified keywords, use the no redistribute {static | connected | rip} [level-1 | level-1-2 | level-2] [metric metric-value] [metric-type {external | internal}] [route-map map-name] command.
**metric** metric-value  (OPTIONAL) Assign a value to the redistributed route. The range is from 0 to 16777215. The default is 0. Use a value that is consistent with the destination protocol.

**metric-type**  (OPTIONAL) The external link type associated with the default route advertised into a routing domain. Specify one of the following:

- external
- internal

**level-1**  (OPTIONAL) Routes are independently redistributed into IS-IS as Level 1 routes.

**level-1-2**  (OPTIONAL) Routes are independently redistributed into IS-IS as Level-1-2 routes.

**level-2**  (OPTIONAL) Routes are independently redistributed into IS-IS as Level 2 routes. This setting is the default.

**route-map map-name**  (OPTIONAL) If you do not enter the route-map argument, all routes are redistributed. If a map-name value is not specified, no routes are imported.

**Defaults**

- metric metric-value = 0
- metric-type= internal; level-2

**Command Modes**

- ROUTER ISIS (for IPv4)
- CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>

**Usage Information**

To redistribute a default route (0.0.0.0/0), configure the default-information originate command. Changing or disabling a keyword in this command does not affect the state of the other command keywords.
When an LSP with an internal metric is received, the Dell Networking OS considers the route cost while considering the advertised cost to reach the destination.

Redistributed routing information is filtered with the distribute-list out command to ensure that the routes are properly passed to the receiving routing protocol.

How a metric value assigned to a redistributed route is advertised depends on how on the configuration of the metric-style command. If the metric-style command is set for Narrow or Transition mode and the metric value in the redistribute command is set to a number higher than 63, the metric value advertised in LSPs is 63. If the metric-style command is set for Wide mode, the metric value in the redistribute command is advertised.

Related Commands
- default-information originate — generate a default route for the IS-IS domain.
- distribute-list out — suppress networks from being advertised in updates. This command filters redistributed routing information.

redistribute bgp

Redistribute routing information from a BGP process.

Syntax
redistribute bgp AS number [level-1 | level-1-2 | level-2] [metric metric-value] [metric-type {external | internal}] [route-map map-name]

To return to the default values, use the no redistribute bgp command with the appropriate parameters.

Parameters
- **AS number**
  Enter a number that corresponds to the autonomous system number. The range is from 1 to 65535.
- **level-1**
  (OPTIONAL) Routes are independently redistributed into IS-IS Level 1 routes only.
- **level-1-2**
  (OPTIONAL) Routes are independently redistributed into IS-IS Level 1 and Level 2 routes.
- **level-2**
  (OPTIONAL) Routes are independently redistributed into IS-IS as Level 2 routes only. This setting is the default.
- **metric metric-value**
  (OPTIONAL) The value used for the redistributed route. Use a metric value that is consistent with the destination protocol. The range is from 0 to 16777215. The default is 0.
- **metric-type**
  (OPTIONAL) The external link type associated with the default route advertised into a routing domain. The two options are:
  - **external**
  - **internal**
- **route-map map-name**
  map-name is an identifier for a configured route map. The route map filters imported routes from the source routing protocol to the current routing protocol.
  If you do not specify a map-name, all routes are redistributed. If you specify a keyword, but fail to list route map tags, no routes are imported.

Defaults
- **IS-IS Level 2 routes only**

Command Modes
- **ROUTER ISIS (for IPv4)**
redistribute ospf

Redistribute routing information from an OSPF process.

Syntax

```
redistribute ospf process-id [level-1 | level-1-2 | level-2] [match {internal | external}] [metric metric-value] [metric-type {external | internal}] [route-map map-name]
```

To return to the default values, use the `no redistribute ospf process-id [level-1 | level-1-2 | level-2] [match {internal | external}] [metric metric-value] [metric-type {external | internal}] [route-map map-name]` command.

Parameters

- **process-id**
  Enter a number that corresponds to the OSPF process ID to be redistributed. The range is from 1 to 65535.
metric metric-value  (OPTIONAL) The value used for the redistributed route. Use a metric value that is consistent with the destination protocol. The range is from 0 to 16777215. The default is 0.

metric-type (OPTIONAL) The external link type associated with the default route advertised into a routing domain. The two options are:

- external
- internal

level-1 (OPTIONAL) Routes are independently redistributed into IS-IS as Level 1 routes.

level-1-2 (OPTIONAL) Routes are independently redistributed into IS-IS as Level-1-2 routes.

level-2 (OPTIONAL) Routes are independently redistributed into IS-IS as Level 2 routes. This setting is the default.

match (external | internal) (OPTIONAL) The command used for OSPF to route and redistribute into other routing domains. The values are

- internal
- external

route-map map-name map-name is an identifier for a configured route map. The route map should filter imported routes from the source routing protocol to the current routing protocol. If you do not specify a map-name, all routes are redistributed. If you specify a keyword, but fail to list route map tags, no routes are imported.

Defaults
See Parameters.

Command Modes
- ROUTER ISIS (for IPv4)
- CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>

### Usage Information

How a metric value assigned to a redistributed route is advertised depends on how on the configuration of the `metric-style` command. If the `metric-style` command is set for Narrow mode and the metric value in the `redistribute ospf` command is set to a number higher than 63, the metric value advertised in LSPs is 63. If the `metric-style` command is set for wide mode, the metric value in the `redistribute ospf` command is advertised.

### router isis

Allows you to enable the IS-IS routing protocol and to specify an IP IS-IS process.

#### Syntax

```
router isis [vrf vrf-name] [tag]
```

To disable IS-IS routing, use the `no router isis [tag]` command.

#### Parameters

- **vrf vrf-name**
  - Enter the keyword `vrf` followed by the name of the VRF to enable the IS-IS routing protocol and to specify an IP IS-IS process on that VRF.
- **tag**
  - (OPTIONAL) This is a unique name for a routing process. A null tag is assumed if the `tag` option is not specified. The tag name must be unique for all IP router processes for a given router.

#### Defaults

Not configured.

#### Command Modes

- **CONFIGURATION**

#### Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>
**Version**  | **Description**  
--- | ---  
8.3.11.1 | Introduced on the Z9000.  

**Usage Information**  
Configure a network entity title (the `net` command) to specify the area address and the router system ID. Enable routing on one or more interfaces to establish adjacencies and establish dynamic routing. You can configure only one IS-IS routing process to perform Level 2 routing. A `level-1-2` designation performs Level 1 and Level 2 routing at the same time.

**Related Commands**  
- `ip router isis` — configure IS-IS routing processes for IP on interfaces and attaches an area designator to the routing process.  
- `net` — configure an IS-IS network entity title (NET) for a routing process.  
- `is-type` — assign a type for a given area.

**set-overload-bit**

To set the overload bit in zeroth fragment of non-pseudonode LSPs on the router, configure the router. This setting prevents other routers from using it as an intermediate hop in their shortest path first (SPF) calculations.

**Syntax**

```
set-overload-bit
```

To return to the default values, use the `no set-overload-bit` command.

**Defaults**  
Not set.

**Command Modes**  
- `ROUTER ISIS (for IPv4)`  
- `CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)`

**Command History**  
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Example (Router-Isis)**

The bold section identifies that Multi-Topology IS-IS is enabled in Transition mode.

```
Dell(conf-router_isis)# show config
!
router isis
clns host ISIS 49.0000.0001.F100.E120.0013.00
log-adjacency-changes
net 49.0000.0001.F100.E120.0013.00
! address-family ipv6 unicast
maximum-paths 16
multi-topology transition
set-overload-bit
spf-interval level-1 100 15 20
```
show isis database

Display the IS-IS link state database.

Syntax

show isis [vrf vrf-name] database [level-1 | level-2] [local] [detail | summary] [system-id] [lspid]

Parameters

- **vrf vrf-name** (Optional) Enter the keyword vrf followed by the name of the VRF to display IS-IS link state database corresponding to that VRF.
  
  **NOTE:** If you do not specify this option, the IS-IS link state database corresponding to the default VRF are displayed.

- **level-1** (OPTIONAL) Displays the Level 1 IS-IS link-state database.
- **level-2** (OPTIONAL) Displays the Level 2 IS-IS link-state database.
- **local** (OPTIONAL) Displays local link-state database information.
- **detail** (OPTIONAL) Displays the detailed link-state database information of each LSP when specified. If not specified, a summary displays.
- **summary** (OPTIONAL) Displays the summary of link-state database information when specified.
- **lspid** (OPTIONAL) Display only the specified LSP.
- **system-id** (OPTIONAL) Displays the link-state database for system-id.

Command Modes

- EXEC
- EXEC Privilege

Command History

</tbody>
</table>

**Usage Information**

The following describes the `show isis database` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>IS-IS Level-1/Level-2 Link State Database</td>
<td>Displays the IS-IS link state database for Level 1 or Level 2.</td>
</tr>
<tr>
<td>LSPID</td>
<td>Displays the LSP identifier.</td>
</tr>
<tr>
<td>The first six octets are the System ID of the originating router.</td>
<td></td>
</tr>
<tr>
<td>The first six octets are the System ID of the originating router. The next octet is the pseudonode ID. If this byte is not zero, the LSP describes system links. If this byte is zero (0), the LSP describes the state of the originating router.</td>
<td></td>
</tr>
<tr>
<td>The designated router for a LAN creates and floods a pseudonode LSP and describes the attached systems.</td>
<td></td>
</tr>
<tr>
<td>The last octet is the LSP number. An LSP is divided into multiple LSP fragments if there is more data than cannot fit in a single LSP. Each fragment has a unique LSP number.</td>
<td></td>
</tr>
<tr>
<td>An * after the LSPID indicates that the system originates an LSP where this command was issued.</td>
<td></td>
</tr>
<tr>
<td>LSP Seq Num</td>
<td>This value is the sequence number for the LSP that allows other systems to determine if they have received the latest information from the source.</td>
</tr>
<tr>
<td>LSP Checksum</td>
<td>This is the checksum of the entire LSP packet.</td>
</tr>
<tr>
<td>LSP Holdtime</td>
<td>This value is the amount of time, in seconds, that the LSP remains valid. A zero holdtime indicates that this is a purged LSP and is being removed from the link state database. A value between brackets indicates the duration that the purged LSP stays in the database before being removed.</td>
</tr>
<tr>
<td>ATT</td>
<td>This value represents the Attach bit. This value indicates that the router is a Level 1-2 router and can reach other areas. Level 1-only routers and Level 1-2 routers that have lost connection to other Level 1-2 routers use the Attach bit to find the closest Level 1-2 router. They install a default route to the closest Level 1-2 router.</td>
</tr>
<tr>
<td>P</td>
<td>This value represents the P bit. This bit is always set to zero as Dell Networking does not support area partition repair.</td>
</tr>
</tbody>
</table>
The bold sections identify that MultiTopology IS-IS is enabled.
show isis graceful-restart detail

Display detailed IS-IS graceful restart related settings.

Syntax

show isis [vrf vrf-name] graceful-restart detail

Command Modes

• EXEC
• EXEC Privilege

Parameters

vrf vrf-name
(Optional) Enter the keyword vrf followed by the name if the VRf to display IS-IS graceful restart details corresponding to that VRF.

NOTE: If you do not specify this option, the IS-IS graceful restart details corresponding to the default VRF are displayed.

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100-ON.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Added support for VRF. Introduced on the S6000-ON.
9.5(0.1) Introduced on the Z9500.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.12.0 Introduced on the S4810.
8.3.11.1 Introduced on the Z9000.
8.3.1.0 Introduced on the E-Series.

Example

Dell# show isis graceful-restart detail
Configured Timer Value
======================
Graceful Restart : Enabled
T3 Timer : Manual
T3 Timeout Value : 30
T2 Timeout Value : 30 (level-1), 30 (level-2)
T1 Timeout Value : 5, retry count: 1
Adjacency wait time : 30

Operational Timer Value
show isis hostname

Display IS-IS host names configured or learned on the switch.

Syntax

show isis [vrf vrf-name] hostname

Parameters

vrf vrf-name

Enter the keyword vrf followed by the name of the VRF to display IS-IS host names corresponding to that VRF.

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description

9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100-ON.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Added support for VRF. Introduced on the S6000-ON.
9.5(0.1) Introduced on the Z9500.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.12.0 Introduced on the S4810.
8.3.11.1 Introduced on the Z9000.

Example

Dell# show isis hostname
System Id  Dynamic Name  Static Name
*F100.E120.0013  Force10  ISIS
Dell#
show isis interface

Display detailed IS-IS interface status and configuration information.

Syntax

```
show isis [vrf vrf-name] interface [interface]
```

Parameters

- `vrf vrf-name` (OPTIONAL) Enter the keyword vrf followed by the name of the VRF to display IS-IS interface status information corresponding to that VRF.
- `interface` (OPTIONAL) Enter the following keywords and the interface information:
  - For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a Loopback interface, enter the keyword loopback then a number from 0 to 16383.
  - For a port channel interface, enter the keywords port-channel then a number.
  - For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

--More--

show isis neighbors

Display information about neighboring (adjacent) routers.

Syntax

show isis [vrf vrf-name] neighbors [level-1 | level-2] [detail] [interface]

Parameters

vrf vrf-name  
(Optional) Enter the keyword vrf followed by the name of the VRF to display adjacent router information corresponding to that VRF.

level-1  
(Optional) Displays information about Level 1 IS-IS neighbors.

level-2  
(Optional) Displays information about Level 2 IS-IS neighbors.

detail  
(Optional) Displays detailed information about neighbors.

interface  
(Optional) Enter the following keywords and the interface information:

- For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a port channel interface, enter the keywords port-channel then a number.
- For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.
Use this command to confirm that the neighbor adjacencies are operating correctly. If you suspect that they are not, you can verify the specified area addresses of the routers by using the `show isis neighbors` command.

The following describes the `show isis neighbors` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>System Id</td>
<td>The value that identifies a system in an area.</td>
</tr>
<tr>
<td>Interface</td>
<td>The interface, slot, and port in which the router was discovered.</td>
</tr>
<tr>
<td>State</td>
<td>The value providing status about the adjacency state. The range is Up and Init.</td>
</tr>
<tr>
<td>Type</td>
<td>This value displays the adjacency type (Layer 2, Layer 2 or both).</td>
</tr>
<tr>
<td>Priority</td>
<td>IS-IS priority the neighbor advertises. The neighbor with highest priority becomes the designated router for the interface.</td>
</tr>
<tr>
<td>Uptime</td>
<td>Displays the interfaces uptime.</td>
</tr>
<tr>
<td>Circuit Id</td>
<td>The neighbor’s interpretation of the designated router for the interface.</td>
</tr>
</tbody>
</table>

Example

The bold sections below identify that Multi-Topology IS-IS is enabled. This command displays only one IP address per line.

```
Dell# show isis neighbors
System Id Interface State Type Priority Uptime Circuit Id
TEST Gi 7/1 Up L1L2 (M) 127 09:28:01 TEST.02
!
Dell# show isis neighbors detail
System Id Interface State Type Priority Uptime Circuit Id
TEST Gi 7/1 Up L1L2 (M) 127 09:28:04 TEST.02 Area Address(es):
49.0000.0001
  IP Address(es): 25.1.1.3*
  MAC Address: 0000.0000.0000
  Hold Time: 28
  Link Local Address: fe80::201:e8ff:fe00:492c
  Topology: IPv4 IPv6 , Common (IPv4 IPv6 )
  Adjacency being used for MTs: IPv4 IPv6
Dell#
```
show isis protocol

Display IS-IS routing information.

Syntax

```
show isis [vrf vrf-name] protocol
```

Parameters

- `vrf vrf-name` (OPTIONAL) Enter the keyword `vrf` followed by the name of the VRF to display IS-IS routing information corresponding to that VRF.

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>

Example

The bold section identifies that Multi-Topology IS-IS is enabled.

```
Dell# show isis protocol
IS-IS Router: <Null Tag>
  System Id: F100.E120.0013 IS-Type: level-1-2
  Manual area address(es):
    49.0000.0001
  Routing for area address(es):
    49.0000.0001
  Interfaces supported by IS-IS:
    GigabitEthernet 1/1 - IP - IPv6
    GigabitEthernet 1/2 - IP - IPv6
    GigabitEthernet 1/10 - IP - IPv6
    Loopback 0 - IP - IPv6
  Redistributing:
  Distance: 115
  Generate narrow metrics: level-1-2
```
show isis traffic

This command allows you to display IS-IS traffic interface information.

Syntax

    show isis [vrf vrf-name] traffic [interface]

Parameters

  vrf vrf-name  (OPTIONAL) Enter the keyword vrf followed by the name of the VRF to display IS-IS traffic interface information corresponding to that VRF.

  interface    (OPTIONAL) Identifies the interface type and the interface following:

        • For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
        • For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
        • For a port channel interface, enter the keywords port-channel then a number.
        • For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

Command Modes

    • EXEC
    • EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version    Description

9.10(0.0)  Introduced on the S3148.
9.8(2.0)   Introduced on the S3100 series.
9.8(1.0)   Introduced on the Z9100-ON.
9.8(0.0P6) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0)   Added support for VRF. Introduced on the S6000-ON.
9.5(0.1)   Introduced on the Z9500.
9.2(0.2)   Introduced on the Z9000.
9.0.2.0     Introduced on the S6000.
8.3.19.0    Introduced on the S4820T.
8.3.12.0    Introduced on the S4810.
### Usage Information

The following describes the `show isis traffic` command shown in the following example.

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Level-1/Level-2 Hellos (sent/rcvd)</td>
<td>Displays the number of Hello packets sent and received.</td>
</tr>
<tr>
<td>PTP Hellos (sent/rcvd)</td>
<td>Displays the number of point-to-point Hellos sent and received.</td>
</tr>
<tr>
<td>Level-1/Level-2 LSPs sourced (new/refresh)</td>
<td>Displays the number of new and refreshed LSPs.</td>
</tr>
<tr>
<td>Level-1/Level-2 LSPs flooded (sent/rcvd)</td>
<td>Displays the number of flooded LSPs sent and received.</td>
</tr>
<tr>
<td>Level-1/Level-2 LSPs CSNPs (sent/rcvd)</td>
<td>Displays the number of CSNP LSPs sent and received.</td>
</tr>
<tr>
<td>Level-1/Level-2 LSPs PSNPs (sent/rcvd)</td>
<td>Displays the number of PSNP LSPs sent and received.</td>
</tr>
<tr>
<td>Level-1/Level-2 DR Elections</td>
<td>Displays the number of times designated router elections ran.</td>
</tr>
<tr>
<td>Level-1/Level-2 SPF Calculations</td>
<td>Displays the number of shortest path first calculations.</td>
</tr>
<tr>
<td>LSP checksum errors received</td>
<td>Displays the number of checksum errors LSPs received.</td>
</tr>
<tr>
<td>LSP authentication failures</td>
<td>Displays the number of LSP authentication failures.</td>
</tr>
</tbody>
</table>

### Example

```
Dell# show isis traffic
  IS-IS: Level-1 Hellos (sent/rcvd) : 0/721
  IS-IS: Level-2 Hellos (sent/rcvd) : 900/943
  IS-IS: PTP Hellos (sent/rcvd) : 0/0
  IS-IS: Level-1 LSPs sourced (new/refresh) : 0/0
  IS-IS: Level-2 LSPs sourced (new/refresh) : 1/3
  IS-IS: Level-1 LSPs flooded (sent/rcvd) : 0/0
  IS-IS: Level-2 LSPs flooded (sent/rcvd) : 5934/5217
  IS-IS: Level-1 LSPs CSNPs (sent/rcvd) : 0/0
  IS-IS: Level-2 LSPs CSNPs (sent/rcvd) : 472/238
  IS-IS: Level-1 LSPs PSNPs (sent/rcvd) : 0/0
  IS-IS: Level-2 LSPs PSNPs (sent/rcvd) : 10/337
  IS-IS: Level-1 DR Elections : 4
  IS-IS: Level-2 DR Elections : 4
  IS-IS: Level-1 SPF Calculations : 0
  IS-IS: Level-2 SPF Calculations : 389
  IS-IS: LSP checksum errors received : 0
  IS-IS: LSP authentication failures : 0
Dell#
```
**spf-interval**

Specify the minimum interval between shortest path first (SPF) calculations.

**Syntax**

```
spf-interval [level-1 | level-2] interval seconds [initial_wait_interval seconds [second_wait_interval seconds]]
```

To restore default values, use the no spf-interval [level-1 | level-2] interval seconds [initial_wait_interval seconds [second_wait_interval seconds]] command.

**Parameters**

- **level-1** (OPTIONAL) Enter the keyword level-1 to apply the configuration to Level-1 SPF calculations.
- **level-2** (OPTIONAL) Enter the keyword level-2 to apply the configuration to Level-2 SPF calculations.
- **interval seconds** Enter the maximum number of seconds between SPF calculations. The range is from 0 to 120 seconds. The default is 10 seconds.
- **initial_wait_interval seconds** (OPTIONAL) Enter the initial wait time, in seconds, before running the first SPF calculations. The range is from 0 to 120 seconds. The default is 5 seconds.
- **second_wait_interval seconds** (OPTIONAL) Enter the wait interval, in seconds, between the first and second SPF calculations. The range is from 0 to 120 seconds. The default is 5 seconds.

**Defaults**

See Parameters.

**Command Modes**

- ROUTER ISIS (for IPv4)
- CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<td>Description</td>
</tr>
<tr>
<td>---------</td>
<td>-------------</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Added support for SPF Throttling Enhancement.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command `spf-interval` in `CONFIG-ROUTER-ISIS-AF-IPV6` mode is used for IPv6 Multi-Topology route computation only. If using Single Topology mode, use the `spf-interval` command in `CONFIG-ROUTER-ISIS` mode for both IPv4 and IPv6 route computations.

SPF throttling slows down the frequency at which route calculations are performed during network instability. Even though throttling route calculations slows down network convergence, not throttling can result in a network not functioning as expected. If network topology is unstable, throttling slows down the scheduling of route calculations until the topology regains its stability.

The first route calculation is controlled by the initial wait interval and the second calculation is controlled by the second wait interval. Each subsequent wait interval is twice as long as the previous one until the wait interval reaches the maximum wait time specified `(interval seconds)`. After the network calms down and there are no triggers for two times the maximum interval, fast behavior is restored (the initial wait time).
Link Aggregation Control Protocol (LACP)

This section contains commands for Dell Networks’ implementation of the link aggregation control protocol (LACP) for creating dynamic link aggregation groups (LAGs) — known as “port-channels” in the Dell Networking OS.

NOTE: For static LAG commands based on the standards specified in the IEEE 802.3 Carrier sense multiple access with collision detection (CSMA/CD) access method and physical layer specifications, see Port Channel Commands.

Topics:
- clear lacp counters
- debug lacp
- lacp long-timeout
- lacp port-priority
- lacp system-priority
- port-channel-protocol lacp
- show lacp

clear lacp counters

Clear port channel counters.

Syntax

```
clear lacp port-channel-number counters
```

Parameters

- `port-channel-number`  
Enter a port-channel number. The range is from 1 to 128.

Defaults

Without a Port Channel specified, the command clears all Port Channel counters.

Command Modes

- EXEC
- EXEC Privilege

Command History

Related Commands

- `show lacp` — display the LACP configuration.

**debug lacp**

Debug LACP (configuration, events, and so on).

**Syntax**

debug lacp [config | events | pdu [interface-type [in | out]]]

To disable LACP debugging, use the no [config | events | pdu [interface-type [in | out]]] command.

**Parameters**

- **config**
  (OPTIONAL) Enter the keyword config to debug the LACP configuration.

- **events**
  (OPTIONAL) Enter the keyword events to debug the LACP event information.

- **pdu**
  (OPTIONAL) Enter the keyword pdu to debug the LACP Protocol Data Unit information.

- **interface-type in | out**
  (OPTIONAL) Enter the following keywords and the interface information:

  - For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

  Optionally, enter an in or out parameter:

  - Receive enter in
  - Transmit enter out

**Defaults**

None
Command Modes

- EXEC
- EXEC Privilege

</table>

**lacp long-timeout**

Configure a long timeout period (30 seconds) for an LACP session.

Syntax

```
lacp long-timeout
```

To reset the timeout period to a short timeout (1 second), use the no lacp long-timeout command.

Defaults

1 second

Related Commands

- `show lacp` — display the LACP information.
- `show interfaces port-channel` — display information on configured Port Channel groups.
show lacp

Display the LACP matrix.

Syntax

```
show lacp port-channel-number [sys-id | counters]
```

Parameters

- `port-channel-number` Enter a port-channel number. The range is from 1 to 128.
- `sys-id` (OPTIONAL) Enter the keywords `sys-id` and the value that identifies a system.
- `counters` (OPTIONAL) Enter the keyword `counters` to display the LACP counters.

Defaults

Without a Port Channel specified, the command clears all Port Channel counters.

Command Modes

- EXEC
- EXEC Privilege

## MAC Addressing Commands

The following commands are related to configuring, managing, and viewing MAC addresses.

### clear mac-address-table

Clear the MAC address table of all MAC address learned dynamically.

**Syntax**
```
clear mac-address-table {dynamic | sticky }{address mac-address | all | interface interface | vlan vlan-id}
```

**Parameters**
- **dynamic**
  - Enter the keyword *dynamic* to specify dynamically-learned MAC addresses.
- **sticky**
  - Enter the keyword *sticky* to specify sticky MAC addresses.
- **address mac-address**
  - Enter the keyword *address* then a MAC address in nn:nn:nn:nn:nn:nn format.
- **all**
  - Enter the keyword *all* to delete all MAC address entries in the MAC address table.
- **interface interface**
  - Enter the following keywords and slot/port or number information:
    - For a Port Channel interface, enter the keywords *port-channel* then a number.
    - For a 10-Gigabit Ethernet interface, enter the keyword *TenGigabitEthernet* then the slot/port information.
- **vlan vlan-id**
  - Enter the keyword *vlan* then a VLAN ID number from 1 to 4094.

**Command Modes**
- EXEC Privilege

**Command History**
- This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</table>
mac-address-table aging-time

Specify an aging time for MAC addresses to remove from the MAC address table.

Syntax

mac-address-table aging-time seconds

Parameters

seconds

Enter either zero (0) or a number as the number of seconds before MAC addresses are relearned. To disable aging of the MAC address table, enter 0. The range is from 10 to 1000000. The default is 1800 seconds.

Defaults

1800 seconds

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description

9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100-ON.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.2(1.0) Introduced on the Z9500.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
8.3.7.0 Introduced on the S4810.
7.6.1.0 Introduced on the S-Series.
7.5.1.0 Introduced on the C-Series.
6.1.1.1 Introduced on the E-Series.
### Version

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>8.3.1.0</td>
<td>On the E-Series, available in INTERFACE VLAN context, reduced the minimum aging time in the INTERFACE VLAN context from 10 seconds to 1 second.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>pre-6.2.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

### Related Commands

- `mac learning-limit` — set the MAC address learning limits for a selected interface.
- `show mac-address-table aging-time` — display the MAC aging time.

### mac-address-table disable-learning

Disable MAC address learning from LACP or LLDP BPDUs.

#### Syntax

```
mac-address-table disable-learning [lacp | lldp]
```

#### Parameters

- `lacp` Enter `lacp` to disable MAC address learning from LACP BPDUs.
- `lldp` Enter `lldp` to disable MAC address learning from LLDP BPDUs.

#### Defaults

Disabled

#### Command Modes

CONFIGURATION

#### Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.10(0.0)</td>
<td>Introduced on the S3048–ON, S3100 series, S4048–ON, S4810, S4820T, S5000, S6000, S6000–ON, Z9100–ON, and Z9500.</td>
</tr>
</tbody>
</table>

#### Usage Information

If you use the `mac-address-table disable-learning` command without specifying any option, the system does not learn source MAC addresses from LACP or LLDP BPDUs.

### mac-address-table static

Associate specific MAC or hardware addresses to an interface and VLANs.

#### Syntax

```
mac-address-table static mac-address {multicast vlan vlan-id output-range interface}{output interface vlan vlan-id}
```

To remove a MAC address, use the `no mac-address-table static mac-address output interface vlan vlan-id` command.
Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>mac-address</td>
<td>Enter the 48-bit hexadecimal address in nn:nn:nn:nn:nn:nn format.</td>
</tr>
<tr>
<td>multicast</td>
<td>Enter a vlan port to where L2 multicast MAC traffic is forwarded.</td>
</tr>
</tbody>
</table>

**NOTE:** Use this option if you want multicast functionality in an L2 VLAN without IGMP protocols.

**output interface**

For a unicast MAC address, enter the keyword output then one of the following interfaces for which traffic is forwarded:

- For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a port channel interface, enter the keywords port-channel then a number.

**output-range interface**

For a multicast MAC address, enter the keyword output-range then one of the following interfaces to indicate a range of ports for which traffic is forwarded:

- For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a port channel interface, enter the keywords port-channel then a number.

**Usage Information**

For more information about using this command, see NIC Teaming in the Layer 2 section of the Dell Networking OS Configuration Guide.

---

**mac learning-limit**

Limit the maximum number of MAC addresses (static + dynamic) learned on a selected interface.

**Syntax**

```
mac learning-limit address_limit [vlan vlan-id] [station-move-violation [dynamic]] [dynamic [no-station-move| station-move]]
```

**Parameters**

- `address_limit` Enter the maximum number of MAC addresses that can be learned on the interface. The range is from 1 to 1000000.
- `vlan vlan-id` Enter the keyword then the VLAN ID. The range is from 1 to 4094.
- `dynamic` (OPTIONAL) Enter the keyword dynamic to allow aging of MACs even though a learning limit is configured.
- `station-move-violation` (OPTIONAL) Enter the keywords station-move to allow a station move on learned MAC addresses.

**Defaults**

- On S-Series, the default behavior is dynamic.

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version**

<table>

<tr>
<td>8.3.12.0</td>
<td>Deprecated the no-station-move command (replaced by the mac-learning-limit mac-address-sticky command).</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>
Usage Information

This command and its options are supported on physical interfaces, static LAGs, LACP LAGs, and VLANs.

If you do not specify the `vlan` option, the MAC address counters are not VLAN-based. That is, the sum of the addresses learned on all VLANs (not having any learning limit configuration) is counted against the MAC learning limit.

MAC Learning Limit violation logs and actions are not available on a per-VLAN basis.

With the keyword `no-station-move` option, MAC addresses learned through this feature on the selected interface persist on a per-VLAN basis, even if received on another interface. Enabling or disabling this option has no effect on already learned MAC addresses.

After the MAC address learning limit is reached, the MAC addresses do not age out unless you add the `dynamic` option. To clear statistics on MAC address learning, use the `clear counters` command with the `learning-limit` parameter.

**NOTE:** If you configure this command on an interface in a routed VLAN, and after the MAC addresses learned reaches the limit set in the `mac learning-limit` command, IP protocols are affected. For example, VRRP sets multiple VRRP Masters and OSPF may not come up.

When a channel member is added to a port-channel and there is not enough ACL CAM space, the MAC limit functionality on that port-channel is undefined. When this occurs, un-configure the existing configuration first and then reapply the limit with a lower value.

Related Commands

- `mac learning-limit mac-address-sticky` — replace deprecated `no-station-move` parameter.
- `show mac learning-limit` — display MAC learning-limit configuration.

**mac learning-limit learn-limit-violation**

Configure an action for a MAC address learning-limit violation.

**Syntax**

```
mac learning-limit learn-limit-violation {log | shutdown}
```

To return to the default, use the `no mac learning-limit learn-limit-violation {log | shutdown}` command.

**Parameters**

- `log` Enter the keyword `log` to generate a syslog message on a learning-limit violation.
- `shutdown` Enter the keyword `shutdown` to shut down the port on a learning-limit violation.
Defaults
None

</tbody>
</table>

Usage Information
This command is supported on physical interfaces, static LAGs, and LACP LAGs.

Related Commands
- `show mac learning-limit` — display details of the mac learning-limit.

mac learning-limit mac-address-sticky

Maintain the dynamically learned mac addresses as sticky MAC addresses on the selected port.

Syntax
mac learning-limit mac-address-sticky

To convert the sticky MAC addresses to dynamic MAC addresses, use the `no mac learning-limit` command.

Parameters
- `mac-address-sticky` Configures the dynamic MAC addresses as sticky on an interface.

Defaults
None

Command Modes
INTERFACE
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

### Usage Information

If you configure `mac-learn-limit` and the sticky MAC feature is enabled, dynamically learned MAC addresses are converted to sticky for that port. Any new MAC address that is learned also becomes sticky for that port.

### Related Commands

- `show mac learning-limit` — display the details of the mac learning-limit.

### Command

**mac learning-limit station-move-violation**

Specify the actions for a station move violation.

**Syntax**

```
mac learning-limit station-move-violation {log | shutdown-both | shutdown-offending | shutdown-original}
```

To disable a configuration, use the `no` `mac learning-limit station-move-violation` command, then the configured keyword.

**Parameters**

- **log**
  - Enter the keyword `log` to generate a syslog message on a station move violation.

- **shutdown-both**
  - Enter the keyword `shutdown` to shut down both the original and offending interface and generate a syslog message.

- **shutdown-offending**
  - Enter the keywords `shutdown-offending` to shut down the offending interface and generate a syslog message.

- **shutdown-original**
  - Enter the keywords `shutdown-original` to shut down the original interface and generate a syslog message.

**Defaults**

None

show cam mac stack-unit

Display the content addressable memory (CAM) size and the portions allocated for MAC addresses and for MAC ACLs.

Syntax

show cam mac stack-unit unit_number port-set port-pipe count [vlan vlan-id] [interface interface]

Parameters

stack-unit (REQUIRED) Enter the keyword stack-unit followed by a stack member number to select the stack unit. The range is from 1 to 12.
unit_number

port-set port-pipe (REQUIRED) Enter the keywords port-set followed by a Port-Pipe number to select the Port-Pipe.

port-pipe

address mac-addr (OPTIONAL) Enter the keyword address followed by a MAC address in the nn:nn:nn:nn:nn:nn format to display information on that MAC address.

mac-addr
dynamic (OPTIONAL) Enter the keyword dynamic to display only those MAC addresses learned dynamically by the switch.

static (OPTIONAL) Enter the keyword static to display only those MAC address specifically configured on the switch.

interface interface (OPTIONAL) Enter the keyword interface followed by the interface type, slot and port information:

- For a 1-Gigabit Ethernet interface, enter the keyword GigabitEthernet followed by the slot/port information.
- For a Port Channel interface, enter the keywords port-channel followed by a number. For the S-Series, the range is 1 to 128.
For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

```
vlan vlan-id
```

(Optional) Enter the keyword `vlan` followed by the VLAN ID to display the MAC address assigned to the VLAN. The range is 1 to 4094.

**show mac-address-table**

Display the MAC address table.

**Syntax**

```
show mac-address-table [address mac-address | interface interface | vlan vlan-id] [aging-time] [dynamic | static] [count [vlan vlan-id] [interface interface-type [slot [/port]]]]
```

**Parameters**

- **address mac-address**
  (OPTIONAL) Enter the keyword `address` then a MAC address in the nn:nn:nn:nn:nn:nn format to display information on that MAC address.

- **dynamic**
  (OPTIONAL) Enter the keyword `dynamic` to display only those MAC addresses the switch dynamically learns. Optionally, you can also add one of these combinations: `address/mac-address, interface/interface, or vlan vlan-id`.

- **static**
  (OPTIONAL) Enter the keyword `static` to display only those MAC addresses specifically configured on the switch. Optionally, you can also add one of these combinations: `address/mac-address, interface/interface, or vlan vlan-id`.

- **aging-time**
  Enter the keyword `aging-time` to display only aging-time information.

- **interface interface**
  (OPTIONAL) Enter the keyword `interface` and the interface information:
    - For a port channel interface, enter the keywords `port-channel` then a number.
• For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
• For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

interface interface-type (OPTIONAL) Instead of entering the keyword interface then the interface type, slot/port information, as above, you can enter the interface type, then just a slot number.

vlan vlan-id (OPTIONAL) Enter the keyword vlan then the VLAN ID to display the MAC address assigned to the VLAN. The range is 1 to 4094.

count (OPTIONAL) Enter the keyword count, then optionally, by an interface or VLAN ID, to display total or interface-specific static addresses, dynamic addresses, and MAC addresses in use.

Command Modes
• EXEC
• EXEC Privilege

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100-ON.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.2(1.0) Introduced on the Z9500.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
8.3.12.0 Updated the output.
8.5.1.0 Added support for 4-port 40G line cards on the E-Series.
8.3.7.0 Introduced on the S4810.
7.6.1.0 Introduced on the S-Series.
7.5.1.0 Introduced on the C-Series.
pre-6.2.1.1 Introduced on the E-Series.

Usage Information
The following describes the show mac-address-table command shown in the following example.

Column Heading Description
VlanId Displays the VLAN ID number.
Mac Address Displays the MAC address in nn:nn:nn:nn:nn format.
### show mac-address-table

#### Description

Display the aging times assigned to the MAC addresses on the switch.

#### Syntax

```
show mac-address-table aging-time [vlan vlan-id]
```
Parameters

**vlan vlan-id**

(Optional) Enter the keyword `vlan` then the VLAN ID to display the MAC address assigned to the VLAN. The range is from 1 to 4094.

Command Modes

- EXEC
- EXEC Privilege

Command History

</tbody>
</table>

Example

```
Dell# show mac-address-table aging-time
  Mac-address-table aging time: 1800
Dell#
```

Related Commands

- `show mac-address-table` — display the current MAC address configuration.

**show mac accounting destination**

Display destination counters for Layer 2 traffic (available on physical interfaces only).

**Syntax**

```
show mac accounting destination [mac-address vlan vlan-id] [interface interface [mac-address vlan vlan-id] [vlan vlan-id]] [vlan vlan-id]
```
Parameters

**mac-address**  (OPTIONAL) Enter the MAC address in the nn:nn:nn:nn:nn:nn format to display information on that MAC address.

**interface interface**  (OPTIONAL) Enter the keyword interface then the interface type, slot and port information:

- For a 1-Gigabit Ethernet interface, enter the keyword GigabitEthernet then the slot/port information.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

**vlan vlan-id**  (OPTIONAL) Enter the keyword vlan then the VLAN ID to display the MAC address assigned to the VLAN. The range is from 1 to 4094.

Command Modes

- EXEC
- EXEC Privilege

Command History

<td>Introducted on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information

MAC Accounting information can be accessed using SNMP via the Force10 Monitor MIB. For more information about enabling SNMP, refer to the Dell Networking OS Configuration Guide.

**NOTE:** Currently, the Force10 MONITOR MIB does not return the MAC addresses in an increasing order using SNMP. As a workaround, you can use the -C c option in snmpwalk or snmpbulkwalk to access the Force10 MONITOR MIB. For example: % snmpwalk -C c -v 2c -c public 133.33.33.131 enterprise.6027.3.3.3

Example

Dell-1# show mac accounting destination interface gigabitethernet 2/1

Dell-1#
Related Commands

- `show mac accounting access-list` — display the MAC access list configurations and counters (if configured).

**show mac learning-limit**

Display MAC address learning limits set for various interfaces.

**Syntax**

```
show mac learning-limit [violate-action] [detail] [interface interface]
```

**Parameters**

- **violate-action** (OPTIONAL) Enter the keywords `violate-action` to display the MAC learning limit violation status.
- **detail** (OPTIONAL) Enter the keyword `detail` to display the MAC learning limit in detail.
- **interface interface** (OPTIONAL) Enter the keyword `interface` with the following keywords and the interface information:
  - For a port channel interface, enter the keywords `port-channel` then a number.
  - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Virtual LAN (VLAN) Commands

The following commands configure and monitor virtual LANs (VLANs). VLANs are a virtual interface and use many of the same commands as physical interfaces.

You can configure an IP address and Layer 3 protocols on a VLAN called Inter-VLAN routing. FTP, TFTP, ACLs and SNMP are not supported on a VLAN.

Occasionally, while sending broadcast traffic over multiple Layer 3 VLANs, the VRRP state of a VLAN interface may continually switch between Master and Backup.

NOTE: For more information, refer to VLAN Stacking and VLAN-related commands, such as portmode hybrid in the Interfaces chapter.

default vlan-id

Specify a VLAN as the Default VLAN.

Syntax

default vlan-id vlan-id

To remove the default VLAN status from a VLAN and VLAN 1 does not exist, use the no default vlan-id vlan-id syntax.

Parameters

vlan-id Enter the VLAN ID number of the VLAN to become the new Default VLAN. The range is from 1 to 4094. The default is 1.

Defaults

Default VLAN is VLAN 1.

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.
**Version** | **Description**  
---|---  
9.10(0.0) | Introduced on the S3148.  
9.8(2.0) | Introduced on the S3100 series.  
9.8(1.0) | Introduced on the Z9100-ON.  
9.8(0.0P5) | Introduced on the S4048-ON.  
9.8(0.0P2) | Introduced on the S3048-ON.  
9.7(0.0) | Introduced on the S6000-ON.  
9.2(1.0) | Introduced on the Z9500.  
9.0.2.0 | Introduced on the S6000.  
8.3.19.0 | Introduced on the S4820T.  
8.3.11.1 | Introduced on the Z9000.  
8.3.7.0 | Introduced on the S4810.  
7.6.1.0 | Introduced on the S-Series.  
7.5.1.0 | Introduced on the C-Series.  
pre-6.2.1.1 | Introduced on the E-Series.  

**Usage Information**  
To return VLAN 1 as the Default VLAN, use this command syntax (`default-vlan-id 1`).  
The Default VLAN contains only untagged interfaces.

**Related Commands**  
- `interface vlan` — configure a VLAN.

**default-vlan disable**

Disable the default VLAN so that all switchports are placed in the Null VLAN until they are explicitly configured as a member of another VLAN.

**Defaults**  
Enabled.

**Usage Information**
The `no default vlan disable` command is not listed in the running-configuration, but when the default VLAN is disabled, `default-vlan disable` is listed in the running-configuration.

### name

Assign a name to the VLAN.

**Syntax**

```plaintext
name vlan-name
```

To remove the name from the VLAN, use the `no name` command.

**Parameters**

- `vlan-name` Enter up to 32 characters as the name of the VLAN.

**Defaults**

Not configured.

**Command Modes**

INTERFACE VLAN

**Command History**

### show config

Display the current configuration of the selected VLAN.

#### Syntax

```
show config
```

#### Command Modes

- INTERFACE VLAN

#### Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

#### Version Description

- **9.10(0.0)** Introduced on the S3148.
- **9.8(2.0)** Introduced on the S3100 series.
- **9.8(1.0)** Introduced on the Z9100-ON.
- **9.8(0.0P5)** Introduced on the S4048-ON.
- **9.8(0.0P2)** Introduced on the S3048-ON.
- **9.7(0.0)** Introduced on the S6000-ON.
- **9.2(1.0)** Introduced on the Z9500.
- **9.0.2.0** Introduced on the S6000.
- **8.3.19.0** Introduced on the S4820T.
- **8.3.11.1** Introduced on the Z9000.
- **8.3.7.0** Introduced on the S4810.
- **7.6.1.0** Introduced on the S-Series.
- **7.5.1.0** Introduced on the C-Series.
- **pre-6.2.1.1** Introduced on the E-Series.
Example

Dell(conf-if-vl-100)# show config
!
interface Vlan 100
  no ip address
  no shutdown
Dell(conf-if-vl-100)#

show vlan

Display the current VLAN configurations on the switch.

Syntax

show vlan [brief | id vlan-id | name vlan-name]

Parameters

brief (OPTIONAL) Enter the keyword brief to display the following information:
  • VLAN ID
  • VLAN name (left blank if none is configured)
  • Spanning Tree Group ID
  • MAC address aging time
  • IP address

id vlan-id (OPTIONAL) Enter the keyword id then a number from 1 to 4094. Only information on the VLAN specified is displayed.

name vlan-name (OPTIONAL) Enter the keyword name then the name configured for the VLAN. Only information on the VLAN named is displayed.

Command Modes

• EXEC
• EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

 12     Inactive                     O Gi 1/10
```

Related Commands

- `vlan-stack compatible` — enable the Stackable VLAN feature on the selected VLAN.
- `interface vlan` — configure a VLAN.

**tagged**

Add a Layer 2 interface to a VLAN as a tagged interface.

**Syntax**

`tagged interface`

To remove a tagged interface from a VLAN, use the `no tagged interface` command.

**Parameters**

- `interface`
  
  Enter the following keywords and the interface information:
  
  - For a port channel interface, enter the keywords `port-channel` then a number.
  - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

**Defaults**

All interfaces in Layer 2 mode are untagged.

**Command Modes**

- `INTERFACE VLAN`

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>pre-6.2.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

When you use the no tagged command, the interface is automatically placed in the Default VLAN as an untagged interface unless the interface is a member of another VLAN. If the interface belongs to several VLANs, remove it from all VLANs to change it to an untagged interface.

Tagged interfaces can belong to multiple VLANs, while untagged interfaces can only belong to one VLAN at a time.

**Related Commands**

- `interface vlan` — configure a VLAN.
- `untagged` — specify which interfaces in a VLAN are untagged.

**track ip**

Track the Layer 3 operational state of a Layer 3 VLAN, using a subset of the VLAN member interfaces.

**Syntax**

```
track ip interface
```

To remove the tracking feature from the VLAN, use the `no track ip interface` command.

**Parameters**

- `interface`
  
Enter the following keywords and the interface information:
  
  - For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
For a port channel interface, enter the keywords `port-channel` then a number.

**Defaults**
Not configured.

**Command Modes**
`INTERFACE VLAN`

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>pre-6.2.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**
When this command is configured, the VLAN is operationally UP if any of the interfaces specified in the `track ip` command are operationally UP, and the VLAN is operationally DOWN if none of the tracking interfaces are operationally UP.

If the `track ip` command is not configured, the VLAN's Layer 3 operational state depends on all the members of the VLAN.

The Layer 2 state of the VLAN, and the Layer 2 traffic, is not affected by the `track ip` command configuration.

**Related Commands**
- `interface vlan` — configure a VLAN.
- `tagged` — specify which interfaces in a VLAN are tagged.
untagged

Add a Layer 2 interface to a VLAN as an untagged interface.

**Syntax**

```plaintext
untagged interface
```

To remove an untagged interface from a VLAN, use the `no untagged interface` command.

**Parameters**

- `interface`  
  Enter the following keywords and the interface information:
  - For a port channel interface, enter the keywords `port-channel` then a number.
  - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

**Defaults**

All interfaces in Layer 2 mode are untagged.

**Command Modes**

INTERFACE VLAN

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>
Usage Information

Untagged interfaces can only belong to one VLAN.

In the Default VLAN, you cannot use the `no untagged interface` command. To remove an untagged interface from all VLANs, including the Default VLAN, enter INTERFACE mode and use the `no switchport` command.

Related Commands

- `interface vlan` — configure a VLAN.
- `tagged` — specify which interfaces in a VLAN are tagged.

Far-End Failure Detection (FEFD)

The Dell Networking operating software supports far-end failure detection (FEFD) on the Ethernet interfaces of the platform. The FEFD feature detects and reports far-end link failures.

- FEFD is not supported on the Management interface.
- During an RPM failover, FEFD is operationally disabled for approximately 8 to 10 seconds.
- By default, FEFD is disabled.

debug fefd

Enable debugging of FEFD.

Syntax

```
debug fefd {events | packets} [interface]
```

To disable debugging of FEFD, use the `no debug fefd {events | packets} [interface]` command.

Parameters

- `events` Enter the keyword `events` to enable debugging of FEFD state changes.
- `packets` Enter the keyword `packets` to enable debugging of FEFD to view information on packets sent and received.
- `interface` (OPTIONAL) Enter the following keywords and the interface information:
  - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

Command Modes

EXEC Privilege

Command History

<tr>
<td>9.8(0.0P5)</td>
<td>Introduced on the S4048-ON.</td>
</tr>
</tbody>
</table>
Enable Far-End Failure Detection on an interface, set the FEFD interval, or select the FEFD mode.

**Syntax**
```
fefd {disable|interval|mode {aggressive|normal}}
```

**Parameters**
- **disable**: Enter the keyword `disable` to disable FEFD for the specified interface.
- **interval**: Enter the keyword `interval`, followed by a value to specify the FEFD interval in seconds. Range is from 3 to 300. Default is 15.
- **mode**: Enter the keyword `mode` followed by the mode type to specify the FEFD mode.
  - **normal**: Change the link state to “unknown” when a far-end failure is detected by the software on that interface. When the interface is placed in an “unknown” state, the software brings down the line protocol.
  - **aggressive**: Change the link state to “error-disabled” when a far-end failure is detected by the software on that interface. When an interface is placed in an “error-disabled” state, you must enter the `fefd reset` command to reset the interface state. Range is normal or aggressive. Default is normal.

**Defaults**
Disabled.

**Command Modes**
INTERFACE

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

### Version Description
- **9.10(0.0)**:Introduced on the S3148.
- **9.8(2.0)**:Introduced on the S3100 series.
- **9.8(1.0)**:Introduced on the Z9100-ON.
- **9.8(0.0P5)**:Introduced on the S4048-ON.

**Legacy E-Series command.**

**Related Commands**
- `fefd` — enable far-end failure detection on an interface.
- `fefd reset` — enable FEFD globally on the system.
Version Description
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.2(1.0) Introduced on the Z9500.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
8.3.12.0 Introduced on the S4810.

Usage Information
When you enter no fefd for an interface and fefd-global, FEFD is enabled on the interface because the no fefd command is not retained in the configuration file. To keep the interface FEFD disabled when the global configuration changes, use the fefd reset command.

Related Commands
- fefd disable — disable far-end failure detection on an interface.
- fefd reset — enable FEFD globally on the system.
- fefd mode — change FEFD mode on an interface.

**fefd disable**
Disable FEFD on an interface only. This command overrides the fefd reset command for the interface.

**Syntax**
fefd disable
To re-enable FEFD on an interface, use the no fefd disable command.

**Defaults**
Not configured.

**Command Modes**
INTERFACE

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** Description
9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100–ON.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.2(1.0) Introduced on the Z9500.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
8.3.7.0 Introduced on the S4810.
**fefd interval**

Set an interval between control packets.

**Syntax**

fefd interval seconds

To return to the default value, use the no fefd interval command.

**Parameters**

- **seconds**
  
  Enter a number as the time between FEFD control packets. The range is from 3 to 255 seconds. The default is 15 seconds.

**Defaults**

15 seconds

**Command Modes**

INTERFACE

**Command History**

**Usage Information**

You can set up the interval between control packets using the fefd interval command.

**Related Commands**

- fefd — enable far-end failure detection.
**fefd mode**

Change the FEFD mode on an interface.

Syntax  
`fefd mode {normal | aggressive}]`

To return the FEFD mode to the default of normal, use the `no fefd mode` command.

Parameters

- **normal** (OPTIONAL) Enter the keyword `normal` to change the link state to “unknown” when a far-end failure the software detects on that interface. When the interface is placed in “unknown” state, the software brings down the line protocol.

- **aggressive** (OPTIONAL) Enter the keyword `aggressive` to change the link state to “error-disabled” when a far-end failure the software detects on that interface. When an interface is placed in “error-disabled” state, enter the `fefd reset` command to reset the interface state.

Defaults  
Normal

**Legacy E-Series command.**

**Related Commands**

- `fefd` — enable far-end failure detection.
- `fefd-global` — enable FEFD globally on the system.

---

**fefd-global**

Enable FEFD globally on the system.

**Syntax**

```
feffd-global [interval seconds][mode {normal | aggressive}]
```

To disable FEFD globally, use the `no fefd-global [mode {normal | aggressive}]` command.

**Parameters**

- `interval seconds` Enter the keyword `interval` followed by the number of seconds to wait between FEFD control packets. Range is from 3 to 300 seconds. Default is 15 seconds.
- `normal` (OPTIONAL) Enter the keywords `mode normal` to change the link state to “unknown” when a far-end failure the software detects on that interface. When the interface is placed in “unknown” state, the software brings down the line protocol. The default is Normal mode.
- `aggressive` (OPTIONAL) Enter the keywords `mode aggressive` to change the link state to “error-disabled” when a far-end failure the software detects on that interface. When an interface is placed in “error-disabled” state, t enter the `feffd reset` command to reset the interface state.

**Defaults**

Disabled.

**Command Modes**

Legacy E-Series command.

### Usage Information

If you enter only the `fefd-global` syntax, the mode is normal and the default interval is 15 seconds.

If you disable FEFD globally (`no fefd-global`), the system does not remove the FEFD interface configuration.

### Related Commands

- `fefd` — enable far-end failure detection.
- `fefd-global interval` — configure an interval between FEFD control packets.
- `show fefd` — display the FEFD command output.

### show fefd

View FEFD status globally or on a specific interface.

**Syntax**

```
show fefd [interface]
```

**Parameters**

- **interface** (OPTIONAL) Enter the following keywords and the interface information:
  - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

**Command Modes**

- EXEC
- EXEC Privilege

**Example**

```plaintext

## Version

- **9.10(0.0)**
  - Introduced on the S3148.
- **9.8(2.0)**
  - Introduced on the S3100 series.
- **9.8(1.0)**
  - Introduced on the Z9100-ON.
- **9.8(0.0P5)**
  - Introduced on the S4048-ON.
- **9.8(0.0P2)**
  - Introduced on the S3048-ON.
- **9.7(0.0)**
  - Introduced on the S6000-ON.
- **9.2(1.0)**
  - Introduced on the Z9500.
- **9.0.2.0**
  - Introduced on the S6000.
- **8.3.19.0**
  - Introduced on the S4820T.
- **8.3.11.1**
  - Introduced on the Z9000.
- **8.3.12.0**
  - Introduced on the S4810.
- **Legacy E-Series command.**

## Usage Information

The following describes the `show fefd` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Interface</td>
<td>Displays the interfaces type and number.</td>
</tr>
<tr>
<td>Mode</td>
<td>Displays the mode (aggressive or normal) or NA if the interface contains fefd reset in its configuration.</td>
</tr>
<tr>
<td>Interval</td>
<td>Displays the interval between FEFD packets.</td>
</tr>
<tr>
<td>State</td>
<td>Displays the state of the interface and can be one of the following:</td>
</tr>
<tr>
<td></td>
<td>• bi-directional (interface is up, connected and hearing neighbor’s echoes).</td>
</tr>
<tr>
<td></td>
<td>• err-disabled (only found when FEFD mode is aggressive and when the interface has not hearing its neighbor’s echoes for three times the message interval. To reset an interface in this state, use the fefd reset command.)</td>
</tr>
<tr>
<td></td>
<td>• unknown (only found when FEFD mode is normal.</td>
</tr>
<tr>
<td></td>
<td>• locally disabled (interface contains the fefd reset command in its configuration).</td>
</tr>
<tr>
<td></td>
<td>• Admin Shutdown (interface is disabled with the shutdown command).</td>
</tr>
</tbody>
</table>

## Example

```
Dell# show fefd
FEFD is globally 'ON', interval is 10 seconds, mode is 'Aggressive'.

+----------------+-----------+----------+----------+
<table>
<thead>
<tr>
<th>INTERFACE</th>
<th>MODE</th>
<th>INTERVAL</th>
<th>STATE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Gi 5/1</td>
<td>Aggressive</td>
<td>10</td>
<td>Admin Shutdown</td>
</tr>
<tr>
<td>Gi 5/2</td>
<td>Aggressive</td>
<td>10</td>
<td>Admin Shutdown</td>
</tr>
<tr>
<td>Gi 5/3</td>
<td>Aggressive</td>
<td>10</td>
<td>Admin Shutdown</td>
</tr>
<tr>
<td>Gi 5/4</td>
<td>Aggressive</td>
<td>10</td>
<td>Admin Shutdown</td>
</tr>
<tr>
<td>Gi 5/5</td>
<td>Aggressive</td>
<td>10</td>
<td>Admin Shutdown</td>
</tr>
<tr>
<td>Gi 5/6</td>
<td>Aggressive</td>
<td>10</td>
<td>Admin Shutdown</td>
</tr>
<tr>
<td>Gi 5/7</td>
<td>Aggressive</td>
<td>10</td>
<td>Admin Shutdown</td>
</tr>
<tr>
<td>Gi 5/8</td>
<td>Aggressive</td>
<td>10</td>
<td>Admin Shutdown</td>
</tr>
</tbody>
</table>
+----------------+-----------+----------+----------+
```
Gi 5/9  Aggressive  10         Admin Shutdown
Gi 5/10  NA          NA         Locally disabled
Gi 5/11  Aggressive  10         Err-disabled
Dell#

Related Commands

- `fefd` — enable far-end failure detection.
- `fefd disable` — disable FEFD on an interface only.
- `fefd-global` — enable FEFD globally on the system.
- `fefd reset` — reset all interfaces or a single interface that was in “error-disabled” mode.
The link layer discovery protocol (LLDP) advertises connectivity and management from the local station to the adjacent stations on an IEEE 802 LAN.
LLDP facilitates multi-vendor interoperability by using standard management tools to discover and make available a physical topology for network management. The Dell Networking operating software implementation of LLDP is based on IEEE standard 801.1ab.

The Dell Networking OS supports the basic LLDP commands on platform.

The starting point for using LLDP is invoking LLDP with the protocol lldp command in either CONFIGURATION or INTERFACE mode.

The information LLDP distributes is stored by its recipients in a standard management information base (MIB). You can access the information by a network management system through a management protocol such as simple network management protocol (SNMP).

**Topics:**
- LLDP Commands
- LLDP-MED Commands

### LLDP Commands

The following are LLDP commands.

#### advertise dot1-tlv

Advertise dot1 TLVs (Type, Length, Value).

**Syntax**
```
advertise dot1-tlv {port-protocol-vlan-id | port-vlan-id | vlan-name}
```

To remove advertised dot1-tlv, use the `no advertise dot1-tlv {port-protocol-vlan-id | port-vlan-id | vlan-name}` command.

**Parameters**
- `port-protocol-vlan-id` Enter the keywords `port-protocol-vlan-id` to advertise the port protocol VLAN identification TLV.
- `port-vlan-id` Enter the keywords `port-vlan-id` to advertise the port VLAN identification TLV.
- `vlan-name` Enter the keywords `vlan-name` to advertise the vlan-name TLV. This keyword is only supported on the C-Series and S-Series.

**Defaults**
- Disabled.
Command Modes

CONFIGURATION (conf-lldp) and INTERFACE (conf-if-interface-lldp)

Command History

</table>

Related Commands

- `protocol lldp (Configuration)` — enable LLDP globally.
- `debug lldp interface` — debug LLDP.
- `show lldp neighbors` — display the LLDP neighbors.

advertise dot3-tlv

Advertise dot3 TLVs (Type, Length, Value).

S3100 series

Syntax

```
advertise dot3-tlv {max-frame-size | power-via-mdi}
```

To remove advertised dot3-tlv, use the `no advertise dot3-tlv {max-frame-size | power-via-mdi}` command.

Parameters

- `max-frame-size` Enter the keywords `max-frame-size` to advertise the dot3 maximum frame size TLV.
- `power-via-mdi` Enter the keyword `power-via-mdi` to advertise IEEE 802.3 at power-via-mdi TLV.

Defaults

- None

<td>7.6.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>7.4.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information

The `advertise dot3-tlv power-via-mdi` command enables the system to advertise IEEE 802.3 at power-via-mdi TLV to advertise its power negotiation capabilities with the powered devices via Link Layer Discovery Protocol (LLDP). You can configure this command either on a specific interface or globally.

Example

```plaintext
Dell(conf)# int gigabitethernet 1/1
Dell(conf-if-gi-1/1)#protocol lldp
Dell(conf-if-gi-1/1-lldp)#advertise dot3-tlv power-via-mdi
Dell(conf-if-gi-1/1-lldp)#show config
!
protocol lldp
  advertise dot3-tlv power-via-mdi
Dell(conf-if-gi-1/1-lldp)#
```

advertise interface-port-desc

Advertise port descriptor.

Syntax

```plaintext
advertise interface-port-desc {description | port-id}
```

To remove the advertised port descriptor, use the `no advertise interface-port-desc {description | port-id}` command.

Parameters

- **description**: Enter the keyword `description` then the interface description.
- **port-id**: Enter the keyword `port-id` then the port-id. The range is from 0 to 7.

Defaults

None
Command Modes

CONFIGURATION (conf-lldp)

INTERFACE (conf-if-lldp)

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking
OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.11(2.0P2)</td>
<td>Introduced the description and port-id options.</td>
</tr>
</tbody>
</table>

Usage Information

If you do not specify the option, by default the port-id takes higher precedence and sends the port-id in the LLDP packets.

advertise management-tlv

Advertise management TLVs (Type, Length, Value).

Syntax

advertise management-tlv {management-address | system-capabilities | system-description | system-name}

To remove advertised management TLVs, use the no advertise management-tlv {management-address | system-capabilities | system-description | system-name} command.

Parameters

management-address Enter the keyword management-address to advertise the management IP address TLVs to the LLDP peer.

system-capabilities Enter the keywords system-capabilities to advertise the system capabilities TLVs to the LLDP peer.

system-description Enter the keywords system-description to advertise the system description TLVs to the LLDP peer.

system-name Enter the keywords system-name to advertise the system name TLVs to the LLDP peer.

Defaults

None

---

### advertise management-tlv (Interface)

Advertise management type, length, values (TLVs) to the specified interface.

#### Syntax

```
advertise management-tlv {management-address | system-capabilities | system-description | system-name}
```

To remove advertised management TLVs, use the `no advertise management-tlv {management-address | system-capabilities | system-description | system-name}` command.

#### Parameters

- **management-address**
  - Enter the keywords `management-address` to advertise the management IP address TLVs to the specified interface.

- **system-capabilities**
  - Enter the keywords `system-capabilities` to advertise the system capabilities TLVs to the specified interface.

- **system-description**
  - Enter the keywords `system-description` to advertise the system description TLVs to the specified interface.

- **system-name**
  - Enter the keywords `system-name` to advertise the system name TLVs to the specified interface.

#### Defaults

None

#### Command Modes

- INTERFACE (conf-interface-lldp)

#### Command Information

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.
clear lldp counters

Clear LLDP transmitting and receiving counters for all physical interfaces or a specific physical interface.

Syntax

```
clear lldp counters [interface interface]
```

Parameters

- `interface` (OPTIONAL) Enter the following keywords and the interface information:
  - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

Defaults

None

Command Modes

EXEC Privilege

Command History

Version | Description
------- | -------
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100-ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.7(0.0) | Introduced on the S6000-ON.
9.2(1.0) | Introduced on the Z9500.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.5.1.0 | Added support for 4-port 40G line cards on the E-Series.
8.3.7.0 | Introduced on the S4810.
### clear lldp neighbors

Clear LLDP neighbor information for all interfaces or a specific interface.

#### Syntax
```
clear lldp neighbors [interface interface]
```

#### Parameters
- **interface interface** *(OPTIONAL)* Enter the following keywords and the interface information:
  - For a 1-GigabitEthernet interface, enter the keyword **GigabitEthernet** then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword **TenGigabitEthernet** then the slot/port information.

#### Defaults
None

**debug lldp interface**

To display timer events, neighbor additions or deletions, and other information about incoming and outgoing packets, enable LLDP debugging.

**Syntax**

```
deploy lldp interface {interface | all}{events | packet {brief | detail} {tx | rx | both}}
```

To disable debugging, use the `no debug lldp [interface | all]{events} {packet {brief | detail} {tx | rx | both}}` command.

**Parameters**

- **interface**
  - Enter the following keywords and slot/port or number information:
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - `all`
    - Enter the keyword `all` to display information on all interfaces.
  - `events`
    - Enter the keyword `events` to display major events such as timer events.
  - `packet`
    - Enter the keyword `packet` to display information regarding packets coming in or going out.
  - `brief`
    - Enter the keyword `brief` to display brief packet information.
  - `detail`
    - Enter the keyword `detail` to display detailed packet information.
  - `tx`
    - Enter the keyword `tx` to display transmit-only packet information.
  - `rx`
    - Enter the keyword `rx` to display receive-only packet information.
  - `both`
    - Enter the keyword `both` to display both receive and transmit packet information.

**hello**

Configure the rate at which the LLDP control packets are sent to its peer.

**Syntax**

`hello seconds`

To revert to the default, use the `no hello seconds` command.

**Parameters**

- `seconds` Enter the rate, in seconds, at which the control packets are sent to its peer. The rate is from 5 to 180 seconds. The default is **30 seconds**.

**Defaults**

- **30 seconds**

**Command Modes**

- **CONFIGURATION (conf-lldp)** and **INTERFACE (conf-if-interface-lldp)**

**Usage Information**

To enable LLDP on the management interface, use the no disable command in LLDP-MANAGEMENT-INTERFACE mode (conf-lldp-mgmtif).

**mode**

To receive or transmit, set LLDP.

**Syntax**

mode \{tx \| rx\}

To return to the default, use the no mode command.

**Parameters**

- **tx**
  - Enter the keyword tx to set the mode to transmit.

- **rx**
  - Enter the keyword rx to set the mode to receive.
Defaults
Both transmit and receive.

Related Commands
- protocol lldp (Configuration) — enable LLDP globally.
- show lldp neighbors — display the LLDP neighbors.

**multiplier**

Set the multiple of the hello timer before LLDP declares the interface dead.

**Syntax**

```
multiplier number
```

To return to the default, use the no multiplier command.

**Parameters**

- `integer`  
Enter the number of consecutive misses before the LLDP declares the interface dead. The range is from 2 to 10.

**Defaults**

4

**Command Modes**

CONFIGURATION (conf-lldp) and INTERFACE (conf-if-interface-lldp)
**protocol lldp (Configuration)**

Enable the LLDP globally on the switch.

**Syntax**

```
protocol lldp
```

To disable LLDP globally on the chassis, use the `no protocol lldp` command.

**Defaults**

Enabled.

**Command Modes**

CONFIGURATION (conf-lldp)

7.7.1.0 | Introduced on the S-Series.
show lldp neighbors

Display LLDP neighbor information for all interfaces or a specified interface.

Syntax

```plaintext
show lldp neighbors [interface interface] [detail]
```

Parameters

- `interface interface` (OPTIONAL) Enter the following keywords and the interface information:
  - For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

- `detail` (OPTIONAL) Enter the keyword detail to display all the TLV information, remote management IP addresses, timers, and LLDP tx and rx counters.

Defaults

None

Command Modes

EXEC Privilege

Command History

  advertise management-tlv system-capabilities system-description
  hello 15
  multiplier 3
  no disable
Dell#
```

**LLDP-MED Commands**

The following are the LLDP-MED (Media Endpoint Discovery) commands.

Dell Networking OS LLDP-MED commands are an extension of the set of LLDP TLV advertisement commands.

As defined by ANSI/TIA-1057, LLDP-MED provides organizationally specific TLVs (Type Length Value), so that endpoint devices and network connectivity devices can advertise their characteristics and configuration information. The Organizational Unique Identifier (OUI) for the Telecommunications Industry Association (TIA) is 00-12-BB.

- LLDP-MED Endpoint Device — any device that is on an IEEE 802 LAN network edge, can communicate using IP, and uses the LLDP-MED framework.
- LLDP-MED Network Connectivity Device — any device that provides access to an IEEE 802 LAN to an LLDP-MED endpoint device, and supports IEEE 802.1AB (LLDP) and TIA-1057 (LLDP-MED). The Dell Networking system is an LLDP-MED network connectivity device.

Regarding connected endpoint devices, LLDP-MED provides network connectivity devices with the ability to:

- manage inventory
- identify physical location
To advertise a separate limited voice service for a guest user with their own IP telephony handset or other appliances that support interactive voice services, configure the system.

Syntax

advertise med guest-voice {vlan-id layer2_priority DSCP_value} | {priority-tagged number}

To return to the default, use the no advertise med guest-voice {vlan-id layer2_priority DSCP_value} | {priority-tagged number} command.

Parameters

- **vlan-id**: Enter the VLAN ID. The range is from 1 to 4094.
- **layer2_priority**: Enter the Layer 2 priority. The range is from 0 to 7.
- **DSCP_value**: Enter the DSCP value. The range is from 0 to 63.
- **priority-tagged number**: Enter the keywords priority-tagged, the Layer 2 priority, and then the DSCP value.

Defaults

Unconfigured.

Command Modes

CONFIGURATION (conf-lldp)

Related Commands

- protocol lldp (Configuration) — enable LLDP globally.
advertise med guest-voice-signaling

To advertise a separate limited voice service for a guest user when the guest voice control packets use a separate network policy than the voice data, configure the system.

Syntax

```
advertise med guest-voice-signaling {vlan-id layer2_priority DSCP_value} | {priority-tagged number}
```

To return to the default, use the `no advertise med guest-voice-signaling {vlan-id layer2_priority DSCP_value} | {priority-tagged number}` command.

Parameters

- `vlan-id` Enter the VLAN ID. The range is from 1 to 4094.
- `layer2_priority` Enter the Layer 2 priority. The range is from 0 to 7.
- `DSCP_value` Enter the DSCP value. The range is from 0 to 63.
- `priority-tagged number` Enter the keywords `priority-tagged`, the Layer 2 priority, and then the DSCP value.

Defaults

Unconfigured.

advertise med location-identification

To advertise a location identifier, configure the system.

Syntax
advertise med location-identification {coordinate-based value | civic-based value | ecs-elin value}

To return to the default, use the no advertise med location-identification {coordinate-based value | civic-based value | ecs-elin value} command.

Parameters
- **coordinate-based value**: Enter the keywords coordinate-based then the coordinated based location in hexadecimal value of 16 bytes.
- **civic-based value**: Enter the keywords civic-based then the civic based location in hexadecimal format. The range is from 6 to 255 bytes.
- **ecs-elin value**: Enter the keywords ecs-elin then the Emergency Call Service (ecs) Emergency Location Identification Number (elin) numeric location string. The range is from 10 to 25 characters.

Defaults
Unconfigured.

Related Commands
• debug lldp interface — debug LLDP.
• show lldp neighbors — display the LLDP neighbors.

advertise med streaming-video

To advertise streaming video services for broadcast or multicast-based video, configure the system. This command does not include video applications that rely on TCP buffering.

Syntax
advertise med streaming-video {vlan-id layer2_priority DSCP_value} | {priority-tagged number}

To return to the default, use the no advertise med streaming-video {vlan-id layer2_priority DSCP_value} | {priority-tagged number} command.

Parameters
- **vlan-id**
  - Enter the VLAN ID. The range is from 1 to 4094.
- **layer2_priority**
  - Enter the Layer 2 priority. The range is from 0 to 7.
- **DSCP_value**
  - Enter the DSCP value. The range is from 0 to 63.
- **priority-tagged number**
  - Enter the keywords priority-tagged, the Layer 2 priority, and then the DSCP value.

Defaults
Unconfigured.

**advertise med video-conferencing**

To advertise dedicated video conferencing and other similar appliances that support real-time interactive video, configure the system.

**Syntax**

```
advertise med video-conferencing {vlan-id layer2_priority DSCP_value} | {priority-tagged number}
```

To return to the default, use the `no advertise med video-conferencing {vlan-id layer2_priority DSCP_value} | {priority-tagged number}` command.

**Parameters**

- **vlan-id**: Enter the VLAN ID. The range is from 1 to 4094.
- **layer2_priority**: Enter the Layer 2 priority. The range is from 0 to 7.
- **DSCP_value**: Enter the DSCP value. The range is from 0 to 63.
- **priority-tagged number**: Enter the keywords `priority-tagged`, the Layer 2 priority, and then the DSCP value.

**Defaults**

Unconfigured.

### Related Commands
- `debug lldp interface` — debug LLDP.
- `show lldp neighbors` — display the LLDP neighbors.

### advertise med video-signaling

To advertise video control packets that use a separate network policy than video data, configure the system.

**Syntax**

```
advertise med video-signaling {vlan-id layer2_priority DSCP_value} | {priority-tagged number}
```

To return to the default, use the `no advertise med video-signaling {vlan-id layer2_priority DSCP_value} | {priority-tagged number}` command.

**Parameters**

- **vlan-id**
  - Enter the VLAN ID. The range is from 1 to 4094.
- **layer2_priority**
  - Enter the Layer 2 priority. The range is from 0 to 7.
- **DSCP_value**
  - Enter the DSCP value. The range is from 0 to 63.
- **priority-tagged number**
  - Enter the keywords `priority-tagged`, the Layer 2 priority, and then the DSCP value.

**Defaults**

Unconfigured.

7.6(1.0) | Introduced on the C-Series and E-Series.
advertise med voice

To advertise a dedicated IP telephony handset or other appliances supporting interactive voice services, configure the system.

Syntax

advertise med voice {vlan-id layer2_priority DSCP_value} | {priority-tagged number}
To return to the default, use the no advertise med voice {vlan-id layer2_priority DSCP_value} | {priority-tagged number} command.

Parameters

- **vlan-id**
  - Enter the VLAN ID. The range is from 1 to 4094.
- **layer2_priority**
  - Enter the Layer 2 priority. The range is from 0 to 7.
- **DSCP_value**
  - Enter the DSCP value. The range is from 0 to 63.
- **priority-tagged number**
  - Enter the keywords priority-tagged, the Layer 2 priority, and then the DSCP value.

Defaults

Unconfigured.

## Related Commands

- `debug lldp interface` — de bug LLDP.
- `show lldp neighbors` — display the LLDP neighbors.

### advertise med voice-signaling

To advertise when voice control packets use a separate network policy than voice data, configure the system.

#### Syntax

```plaintext
advertise med voice-signaling {vlan-id layer2_priority DSCP_value} | {priority-tagged number}
```

To return to the default, use the `no advertise med voice-signaling {vlan-id layer2_priority DSCP_value} | {priority-tagged number} command.`

#### Parameters

- `vlan-id` Enter the VLAN ID. The range is from 1 to 4094.
- `layer2_priority` Enter the Layer 2 priority. The range is from 0 to 7.
- `DSCP_value` Enter the DSCP value. The range is from 0 to 63.
- `priority-tagged number` Enter the keywords `priority-tagged`, the Layer 2 priority, and then the DSCP value.

#### Defaults

Unconfigured.

**Related Commands**

- `debug lldp interface` — debug LLDP.
- `show lldp neighbors` — display the LLDP neighbors.
Microsoft Network Load Balancing

Network load balancing (NLB) is a clustering functionality that is implemented by Microsoft on Windows 2000 Server and Windows Server 2003 operating systems. Microsoft NLB clustering allows multiple servers running Microsoft Windows to be represented by one MAC and one IP address to provide transparent failover and load-balancing. The Dell Networking OS does not recognize server clusters by default; you must configure NLB functionality on a switch to support server clusters. The maximum NLB entry limit from 8 to 11 is increased and support for more CAM-ACL to increase.

Topics:
- `mac-address-table static` (for Multicast MAC Address)
- `ip vlan-flooding`

mac-address-table static (for Multicast MAC Address)

For multicast mode of network load balancing (NLB), configure a static multicast MAC address, associate the multicast MAC address with the VLAN used to switch Layer 2 multicast traffic, and add output ports that will receive multicast streams on the VLAN. To delete a configured static multicast MAC address from the MAC address table on the router, enter the `no mac-address-table static multicast-mac-address` command.

Syntax
```
mac-address-table static multicast-mac-address multicast vlan vlan-id range-output {single-interface | interface-list | interface-range}
```

To remove a MAC address, use the `no mac-address-table static multicast-mac-address output interface vlan vlan-id` command.

Parameters
- `multicast` Enter a vlan port to where L2 multicast MAC traffic is forwarded.
- `output` For a multicast MAC address, enter the keyword `output` then one of the following interfaces for which traffic is forwarded:
  - For a Port Channel interface, enter the keywords `port-channel` then a number.
  - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- `output-range` For a multicast MAC address, enter the keyword `output-range` then one of the following interfaces to indicate a range of ports for which traffic is forwarded:
For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.

For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

For a Management interface, enter the keyword managementethernet followed by slot/port numbers.

For a Port Channel interface, enter the keywords port-channel followed by a number.

For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

```
vlan vlan-id
```
Enter the keyword `vlan` then a VLAN ID number from 1 to 4094.

**Defaults**
Not configured.

**Command Modes**
CONFIGURATION

**Command History**

</tr>
</tbody>
</table>

**Default**  
Disabled

**Usage Information**  
By default this command is disabled. There might be some ARP table entries which are resolved through ARP packets which had Ethernet MAC SA different from MAC information inside the ARP packet. This unicast data traffic flooding occurs only for those packets which use these ARP entries.
Multicast Source Discovery Protocol (MSDP)

Multicast source discovery protocol (MSDP) connects multiple PIM sparse-mode (PIM-SM) domains together. MSDP peers connect using TCP port 639. Peers send keepalives every 60 seconds. A peer connection is reset after 75 seconds if no MSDP packets are received. MSDP connections are parallel with MBGP connections.

The Dell Networking OS supports MSDP commands on the platform.

Topics:
- clear ip msdp peer
- clear ip msdp sa-cache
- clear ip msdp statistic
- debug ip msdp
- ip msdp cache-rejected-sa
- ip msdp default-peer
- ip msdp log-adjacency-changes
- ip msdp mesh-group
- ip msdp originator-id
- ip msdp peer
- ip msdp redistribute
- ip msdp sa-filter
- ip msdp sa-limit
- ip msdp shutdown
- ip multicast-msdp
- show ip msdp
- show ip msdp sa-cache rejected-sa

**clear ip msdp peer**

Reset the TCP connection to the peer and clear all the peer statistics.

**Syntax**
```
clear ip msdp peer {peer address}
```

**Parameters**
- **peer address**  
  Enter the peer address in a dotted decimal format (A.B.C.D.)

**Defaults**  
Not configured.

**Command Modes**  
EXEC Privilege
clear ip msdp sa-cache

Clears the entire source-active cache, the source-active entries of a particular multicast group, rejected, or local source-active entries.

Syntax

```
clear ip msdp sa-cache [group-address | rejected-sa | local]
```

Parameters

- `group-address`: Enter the group IP address in dotted decimal format (A.B.C.D.).
- `rejected-sa`: Enter the keywords `rejected-sa` to clear the cache source-active entries that are rejected because the RPF check failed, an SA filter or limit is configured, the RP or MSDP peer is unreachable, or because of a format error.
- `local`: Enter the keyword `local` to clear out local PIM advertised entries. It applies the redistribute filter (if present) while adding the local PIM SA entries to the SA cache.

Defaults

Without any options, this command clears the entire source-active cache.

Command Modes

- EXEC Privilege

Command History

### clear ip msdp statistic

Clears the entire source-active cache, the source-active entries of a particular multicast group, rejected, or local source-active entries.

**Syntax**
```
clear ip msdp statistic peer peer-address
```

**Parameters**
- **peer**
  - Enter the keyword `peer` to clear the MSDP peer entries.
- **peer-address**
  - Enter the IP address of the MSDP peer.

**Defaults**
Without any options, this command clears the entire source-active cache.

**Command Modes**
EXEC Privilege

### clear ip msdp statistic peer peer-address

Clears the entire source-active cache, the source-active entries of a particular multicast group, rejected, or local source-active entries.

**Syntax**
```
clear ip msdp statistic peer peer-address
```

**Parameters**
- **peer**
  - Enter the keyword `peer` to clear the MSDP peer entries.
- **peer-address**
  - Enter the IP address of the MSDP peer.

**Defaults**
Without any options, this command clears the entire source-active cache.

**Command Modes**
EXEC Privilege

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>
debug ip msdp

Turn on MSDP debugging.

Syntax
debug ip msdp {event peer address | packet peer address | pim}
To turn debugging off, use the no debug ip msdp {event peer address | packet peer address | pim} command.

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>event peer address</td>
<td>Enter the keyword event then the peer address in a dotted decimal format (A.B.C.D).</td>

9.7(0.0)         Introduced on the S6000-ON.
9.5(0.1)         Introduced on the Z9500.
9.0.2.0          Introduced on the Z9000.
8.3.19.0         Introduced on the S4820T.
8.3.11.1         Introduced on the S4810.
7.8.1.0          Added the local option.
7.7.1.0          Added the rejected-sa option.
ip msdp cache-rejected-sa

Enable an MSDP cache for the rejected source-active entries.

Syntax
ip msdp cache-rejected-sa {number}
To clear the MSDP rejected source-active entries, use the no ip msdp cache-rejected-sa {number} command then the ip msdp cache-rejected-sa {number} command.

Parameters

- **number**: Enter the number of rejected SA entries to cache. The range is from 0 to 32766.

Defaults
None

Command Modes
CONFIGURATION

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100-ON.
9.8(0.0P5) Introduced on the S4048-ON.

8.3.11.1 Introduced on the Z9000.
8.3.7.0 Introduced on the S4810.
7.4.1.0 Introduced

Related Commands
- show ip msdp sa-cache rejected-sa — display the rejected SAs in the SA cache.
ip msdp default-peer

Define a default peer from which to accept all source-active (SA) messages.

Syntax

ip msdp default-peer peer address [list name]

To remove the default peer, use the no ip msdp default-peer {peer address} list name command.

Parameters

peer address
Enter the peer address in a dotted decimal format (A.B.C.D.)

list name
Enter the keywords list name and specify a standard access list that contains the RP address that should be treated as the default peer. If no access list is specified, then all SAs from the peer are accepted.

Defaults

Not configured.

</tbody>
</table>

Usage Information
An MSDP mesh group is a mechanism for reducing SA flooding, typically in an intra-domain setting. When some subset of a domain's MSDP speakers are fully meshed, they can be configured into a mesh-group. If member X of a mesh-group receives a SA message from an MSDP peer that is also a member of the mesh-group, member X accepts the SA message and forwards it to all of its peers that are not part of the mesh-group. However, member X cannot forward the SA message to other members of the mesh-group.

**ip msdp originator-id**

Configure the MSDP Originator ID.

Syntax

```
ip msdp originator-id {interface}
```

To remove the originator-id, use the `no ip msdp originator-id {interface}` command.

Parameters

- **interface**: Enter the following keywords and slot/port or number information:
  - For a 1-GigabitEthernet interface, enter the keyword **GigabitEthernet** then the slot/port information.
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
- For a port channel interface, enter the keywords `port-channel` then a number.
- For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults**
Not configured.

**ip msdp peer**

Configure an MSDP peer.

**Syntax**
```
ip msdp peer peer address [connect-source] [description] [sa-limit number]
```

To remove the MSDP peer, use the `no ip msdp peer peer address [connect-source interface] [description name] [sa-limit number]` command.

**Parameters**
- `peer address`: Enter the peer address in a dotted decimal format (A.B.C.D.).
- `connect-source interface`: Enter the keywords `connect-source` then one of the interfaces and slot/port or number information:
For a 1-GigabitEthernet interface, enter the keyword **GigabitEthernet** then the slot/port information.

- For a 10-Gigabit Ethernet interface, enter the keyword **TenGigabitEthernet** then the slot/port information.
- For a Loopback interface, enter the keyword **loopback** then a number from 0 to 16383.
- For a port channel interface, enter the keywords **port-channel** then a number.
- For a VLAN interface, enter the keyword **vlan** then a number from 1 to 4094.

**description name** *(OPTIONAL)* Enter the keyword **description** then a description name (maximum 80 characters) to designate a description for the MSDP peer.

**sa-limit number** *(OPTIONAL)* Enter the maximum number of SA entries in SA-cache. The range is from 1 to 100000.

**Defaults**

See **Parameters**.

**Command Modes**

**CONFIGURATION**

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version**

- 9.10(0.0) Introduced on the S3148.
- 9.8(2.0) Introduced on the S3100 series.
- 9.8(1.0) Introduced on the Z9100-ON.
- 9.8(0.0P5) Introduced on the S4048-ON.
- 9.8(0.0P2) Introduced on the S3048-ON.
- 9.7(0.0) Introduced on the S6000-ON.
- 9.5(0.1) Introduced on the Z9500.
- 9.0.2.0 Introduced on the S6000.
- 8.3.19.0 Introduced on the S4820T.
- 8.3.11.1 Introduced on the Z9000.
- 8.3.7.0 Introduced on the S4810.
- 8.5.1.0 Added support for 4-port 40G line cards on the E-Series.
- 7.5.1.0 Added option for SA upper limit and the **description** option.
- 6.2.1.1 Introduced

**Usage Information**

The **connect-source** option is used to supply a source IP address for the TCP connection. When an interface is specified using the **connect-source** option, the primary configured address on the interface is used.

If the total number of SA messages received from the peer is already larger than the limit when this command is applied, those SA messages continue to be accepted. To enforce the limit in such situation, use the **clear ip msdp peer** command to reset the peer.

**Related Commands**

- `ip msdp sa-limit` — configure the MSDP SA Limit.
- `clear ip msdp peer` — clear the MSDP peer.
• show ip msdp — display the MSDP information.

**ip msdp redistribute**

Filter local PIM SA entries in the SA cache. SAs which the ACL denies time out and are not refreshed. Until they time out, they continue to reside in the MSDP SA cache.

**Syntax**

```
ip msdp redistribute [list acl-name]
```

**Parameters**

- **list acl-name**
  
  Enter the name of an extended ACL that contains permitted SAs. If you do not use this option, all local entries are blocked.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced</td>
</tr>
</tbody>
</table>

**Usage Information**

Modifications to the ACL do not have an immediate effect on the sa-cache.

To apply the redistribute filter to entries already present in the SA cache, use the `clear ip msdp sa-cache local` command.
ip msdp sa-filter

Permit or deny MSDP source active (SA) messages based on multicast source and/or group from the specified peer.

Syntax

```plaintext
ip msdp sa-filter {in | out} peer-address list [access-list name]
```

Remove this configuration using the `no ip msdp sa-filter {in | out} peer-address list [access-list name]` command.

Parameters

- `in`  
  Enter the keyword `in` to enable incoming SA filtering.

- `out`  
  Enter the keyword `out` to enable outgoing SA filtering.

- `peer-address`  
  Enter the peer address of the MSDP peer in a dotted decimal format (A.B.C.D.).

- `access-list name`  
  Enter the name of an extended ACL that contains permitted SAs. If you do not use this option, all local entries are blocked.

Defaults

Not configured.

ip msdp sa-limit

Configure the upper limit of source-active (SA) entries in SA-cache.

Syntax

ip msdp sa-limit number

To return to the default, use the no ip msdp sa-limit number command.

Parameters

number

Enter the maximum number of SA entries in SA-cache. The range is from 1 to 500000.

Defaults

50000

<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information

Dell Networking OS counts the SA messages originated by itself and those messages received from the MSDP peers. When the total SA messages reach this limit, the subsequent SA messages are dropped (even if they pass RPF checking and policy checking).

If the total number of SA messages is already larger than the limit when this command is applied, those SA messages that are already in Dell Networking OS continue to be accepted. To enforce the limit in such situation, use the clear ip msdp sa-cache command.

Related Commands

- ip msdp peer — configure the MSDP peer.
- clear ip msdp peer — clear the MSDP peer.
- show ip msdp — display the MSDP information.
ip msdp shutdown

Administratively shut down a configured MSDP peer.

Syntax

    ip msdp shutdown {peer address}

Parameters

peer address

Enter the peer address in a dotted decimal format (A.B.C.D.).

Defaults

Not configured.

Command Modes

ip multicast-msdp

Enable MSDP.

Syntax

    ip multicast-msdp

To exit MSDP, use the no ip multicast-msdp command.

Defaults

Not configured.
**show ip msdp**

Display the MSDP peer status, SA cache, or peer summary.

**Syntax**

```plaintext
show ip msdp {peer peer address | sa-cache | summary}
```

**Parameters**

- `peer peer address`: Enter the keyword `peer` then the peer address in a dotted decimal format (A.B.C.D.).
- `sa-cache`: Enter the keywords `sa-cache` to display the Source-Active cache.
- `summary`: Enter the keyword `summary` to display an MSDP peer summary.

Multiple Spanning Tree Protocol (MSTP)

Multiple spanning tree protocol (MSTP), as implemented by the Dell Networking OS, conforms to IEEE 802.1s. This command supports the Dell Networking platform.

Topics:
- debug spanning-tree mstp
- disable
- forward-delay
- hello-time
- max-age
- msti
- name
- protocol spanning-tree mstp
- revision
- show config
- show spanning-tree mst configuration
- show spanning-tree msti
- spanning-tree
- spanning-tree msti
- tc-flush-standard

debug spanning-tree mstp

Enable debugging of the multiple spanning tree protocol and view information on the protocol.

**Syntax**
```
debug spanning-tree mstp [all | bpdu interface {in | out} | events]
```
To disable debugging, enter `no debug spanning-tree mstp`

**Parameters**
- `all` (OPTIONAL) Enter the keyword all to debug all spanning tree operations.
- `bpdu interface {in | out}` (OPTIONAL) Enter the keyword bpdu to debug bridge protocol data units (BPDU).
- `events` (OPTIONAL) Enter the interface keyword along with the type slot/port of the interface you want displayed. Type slot/port options are the following:
  - For a port channel interface, enter the keywords `port-channel` then a number.
  - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

Optionally, enter an in or out parameter with the optional interface:

- For Receive, enter the keyword in.
- For Transmit, enter the keyword out.

(events) (OPTIONAL) Enter the keyword events to debug MSTP events.

**Command Modes**
EXEC Privilege

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Example**
```
Dell# debug spanning-tree mstp bpdu gigabitethernet 2/1?
in Receive (in)
out Transmit (out)
```

**disable**

Globally disable the multiple spanning tree protocol on the switch.

**Syntax**
disable

---

For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

Optionally, enter an in or out parameter with the optional interface:

- For Receive, enter the keyword in.
- For Transmit, enter the keyword out.

(events) (OPTIONAL) Enter the keyword events to debug MSTP events.

Related Commands

- `protocol spanning-tree mstp` — enter MULTIPLE SPANNING TREE mode.

**forward-delay**

The amount of time the interface waits in the Blocking State and the Learning State before transitioning to the Forwarding State.

**Syntax**

`forward-delay seconds`

To return to the default setting, use the `no forward-delay` command.

**Parameters**

- `seconds` Enter the number of seconds the interface waits in the Blocking State and the Learning State before transitioning to the Forwarding State. The range is from 4 to 30. The default is 15 seconds.

**Defaults**

15 seconds

Related Commands

- `max-age` — change the wait time before MSTP refreshes protocol configuration information.
- `hello-time` — change the time interval between bridge protocol data units (BPDUs).

**hello-time**

Set the time interval between generation of MSTB bridge protocol data units (BPDUs).

Syntax

```
hello-time seconds
```

To return to the default value, use the `no hello-time` command.

Parameters

- `seconds` Enter a number as the time interval between transmission of BPDUs. The range is from 1 to 10. The default is `2 seconds`.

Defaults

- `2 seconds`

**Related Commands**

- **forward-delay** — amount of time the interface waits in the Blocking State and the Learning State before transitioning to the Forwarding State.
- **max-age** — change the wait time before MSTP refreshes protocol configuration information.

## max-age

To maintain configuration information before refreshing that information, set the time interval for the MSTB.

**Syntax**

```
max-age seconds
```

To return to the default values, use the **no max-age** command.

**Parameters**

- **max-age**
  
  Enter a number of seconds the Dell Networking OS waits before refreshing configuration information. The range is from 6 to 40. The default is **20 seconds**.

**Defaults**

- **20 seconds**

**Related Commands**

- `forward-delay` — amount of time the interface waits in the Blocking State and the Learning State before transitioning to the Forwarding State.
- `hello-time` — change the time interval between BPDUs.

**msti**

Configure multiple spanning tree instance, bridge priority, and one or multiple VLANs mapped to the MST instance.

**Syntax**

```plaintext
msti instance {vlan range | bridge-priority priority}
```

To disable mapping or bridge priority, use the `no msti instance {vlan range | bridge-priority priority}` command.

**Parameters**

- `msti instance` Enter the MSTP instance. The range is from zero (0) to 63.
- `vlan range` Enter the keyword `vlan` then the identifier range value. The range is from 1 to 4094.
- `bridge-priority priority` Enter the keywords `bridge-priority` then a value in increments of 4096 as the bridge priority. The range is from zero (0) to 61440. Valid priority values are: 0, 4096, 8192, 12288, 16384, 20480, 24576, 28672, 32768, 36864, 40960, 45056, 49152, 53248, 57344, and 61440. All other values are rejected.

**Defaults**

default bridge-priority is 32768.

**Command Modes**

- INTERFACE

Usage Information

By default, all VLANs are mapped to MST instance zero (0) unless you use the `vlan range` command to map it to a non-zero instance.

name

The name you assign to the multiple spanning tree region.

Syntax

```
name region-name
```

To remove the region name, use the `no name` command.

Parameters

- `region-name`  
  Enter the MST region name. The range is 32 character limit.

Defaults

No default name.

Command Modes

MULTIPLE SPANNING TREE

Usage Information
For two MSTP switches to be within the same MSTP region, the switches must share the same region name (including matching case).

Related Commands
- `msti` — map the VLAN(s) to an MST instance.
- `revision` — assign the revision number to the MST configuration.

**protocol spanning-tree mstp**

To enable and configure the multiple spanning tree group, enter MULTIPLE SPANNING TREE mode.

**Syntax**

```
protocol spanning-tree mstp
```

To disable the multiple spanning tree group, use the `no protocol spanning-tree mstp` command.

**Defaults**
Not configured.

**Command Modes**
CONFIGURATION

**Command History**

7.6.1.0 | Introduced on the S-Series.
7.5.1.0 | Introduced on the C-Series.
pre-6.2.1.1 | Introduced on the E-Series.

**Usage Information**

MSTP is not enabled when you enter MULTIPLE SPANNING TREE mode. To enable MSTP globally on the switch, enter the `no disable` command while in MULTIPLE SPANNING TREE mode.

For more information about the multiple spanning tree protocol, refer to the *Dell Networking OS Configuration Guide*.

**Example**

```
Dell(conf)# protocol spanning-tree mstp
Dell(config-mstp)# no disable
```

**Related Commands**

- `disable` — disable multiple spanning tree.

---

**revision**

The revision number for the multiple spanning tree configuration.

**Syntax**

```
revision range
```

To return to the default values, use the `no revision` command.

**Parameters**

- `range` Enter the revision number for the MST configuration. The range is from 0 to 65535. The default is 0.

**Defaults**

- 0

**Command Modes**

MUTLIPLE SPANNING TREE

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*. 

---

**Dell EMC**

**Multiple Spanning Tree Protocol (MSTP) | 1053**
### Usage Information
For two MSTP switches to be within the same MST region, the switches must share the same revision number.

### Related Commands
- `msti` — map the VLAN(s) to an MST instance.
- `name` — assign the region name to the MST region.

## show config

View the current configuration for the mode. Only non-default values are shown.

### Syntax
```
show config
```

### Command Modes
- MULTIPLE SPANNING TREE

### Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

### Version Description
- **9.10(0.0)** Introduced on the S3148.
- **9.8(2.0)** Introduced on the S3100 series.
- **9.8(1.0)** Introduced on the Z9100–ON.
- **9.8(0.0P5)** Introduced on the S4048-ON.
- **9.8(0.0P2)** Introduced on the S3048-ON.
- **9.7(0.0)** Introduced on the S6000-ON.
- **9.2(1.0)** Introduced on the Z9500.
- **9.0.2.0** Introduced on the S6000.
- **8.3.19.0** Introduced on the S4820T.
- **8.3.11.1** Introduced on the S4810.
- **7.6.1.0** Introduced on the S-Series.
- **7.5.1.0** Introduced on the C-Series.
- **pre-6.2.1.1** Introduced on the E-Series.
show spanning-tree mst configuration

View the multiple spanning tree configuration.

Syntax

show spanning-tree mst configuration

Command Modes

- EXEC
- EXEC Privilege

Usage Information

Enable the multiple spanning tree protocol prior to using this command.
**Usage Information**

Enable the multiple spanning tree protocol prior to using this command.

**Example**

```
Dell# show spanning-tree msti 10
MSTI 10 VLANs mapped 101-105
Bridge Identifier has priority 32768, Address 0001.e802.3506
Configured hello time 2, max age 20, forward delay 15, max hops 5
Current root has priority 16384, Address 0001.e800.0a5c
Number of topology changes 0, last change occurred 3058087

Port 82 (GigabitEthernet 2/1) is designated Forwarding
Port path cost 0, Port priority 128, Port Identifier 128.82
Designated root has priority 16384, address 0001.e800.0a:5c
Designated bridge has priority 32768, address 0001.e802.35:06
Designated port id is 128.82, designated path cost
Number of transitions to forwarding state 1
BPDU (Mrecords): sent 1109, received 0
The port is not in the portfast mode

Port 88 (GigabitEthernet 2/6) is root Forwarding
Port path cost 0, Port priority 128, Port Identifier 128.88
Designated root has priority 16384, address 0001.e800.0a:5c
Designated bridge has priority 32768, address 0001.e802.35:06
Designated port id is 128.88, designated path cost
Number of transitions to forwarding state 4
BPDU (Mrecords): sent 19, received 1103
The port is not in the portfast mode

Port 89 (GigabitEthernet 2/7) is alternate Discarding
Port path cost 0, Port priority 128, Port Identifier 128.89
Designated root has priority 16384, address 0001.e800.0a:5c
Designated bridge has priority 32768, address 0001.e802.35:06
Designated port id is 128.89, designated path cost
Number of transitions to forwarding state 3
BPDU (Mrecords): sent 7, received 1103
The port is not in the portfast mode
```

**Example (EDS and LBK)**

The bold line shows the loopback BPDU inconsistency (LBK_INC).

```
Dell# show spanning-tree msti 0 brief
MSTI 0 VLANs mapped 1-4094

Executing IEEE compatible Spanning Tree Protocol
Root ID Priority 32768, Address 0001.e801.6aa8
Root Bridge hello time 2, max age 20, forward delay 15, max hops 20
Bridge ID Priority 32768, Address 0001.e801.6aa8
We are the root of MSTI 0 (CIST)
```
Configured hello time 2, max age 20, forward delay 15, max hops 20

CIST external path cost 0
Number of topology changes 1, last change occurred 00:00:15 ago on Gi 1/1

Port 257 (GigabitEthernet 1/1) is LBK INC Discarding
Port path cost 20000, Port priority 128, Port Identifier 128.257
Designated root has priority 32768, address 0001.e801.6aa8
Designated bridge has priority 32768, address 0001.e801.6aa8
Designated port id is 128.257, designated path cost 0
Number of transitions to forwarding state 1
BPDU (MRecords): sent 21, received 9
The port is not in the Edge port mode

Usage Information
The following describes the show spanning-tree msti 5 guard command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Interface Name</td>
<td>MSTP interface.</td>
</tr>
<tr>
<td>Instance</td>
<td>MSTP instance.</td>
</tr>
<tr>
<td>Sts</td>
<td>Port state: root-inconsistent (INCON Root), forwarding (FWD), listening (LIS), blocking (BLK), or shut down (EDS Shut).</td>
</tr>
<tr>
<td>Guard Type</td>
<td>Type of STP guard configured (Root, Loop, or BPDU guard).</td>
</tr>
</tbody>
</table>

Example (Guard)
Dell# show spanning-tree msti 5 guard
Interface
Name Instance Sts Guard type
---------------------------------
Gi 1/1  5         INCON(Root) Rootguard
Gi 1/2  5         FWD          Loopguard
Gi 1/3  5         EDS(Shut)  Bpduguard
spanning-tree

Enable the multiple spanning tree protocol on the interface.

Syntax

```
spanning-tree
```

To disable the multiple spanning tree protocol on the interface, use the `no spanning-tree` command.

Parameters

- `spanning-tree` Enter the keywords `spanning-tree` to enable the MSTP on the interface.

Defaults

Enable.

Command Modes

`INTERFACE`

spanning-tree msti

Configure multiple spanning tree instance cost and priority for an interface.

Syntax

spanning-tree msti instance {cost cost | priority priority}

Parameters

- **msti instance**: Enter the keyword msti and the MST instance number. The range is from zero (0) to 63.
- **cost cost**: (OPTIONAL) Enter the keyword cost then the port cost value. The range is from 1 to 200000. The defaults are:
  - 100 Mb/s Ethernet interface = 200000
  - 1-Gigabit Ethernet interface = 20000
  - 10-Gigabit Ethernet interface = 2000
  - Port Channel interface with one 100 Mb/s Ethernet = 200000
  - Port Channel interface with one 1 Gigabit Ethernet = 20000
  - Port Channel interface with one 10 Gigabit Ethernet = 2000
  - Port Channel with two 1 Gigabit Ethernet = 18000
  - Port Channel with two 10 Gigabit Ethernet = 1800
  - Port Channel with two 100 Mbps Ethernet = 180000
- **priority priority**: Enter keyword priority then a value in increments of 16 as the priority. The range is from 0 to 240. The default is 128.

Defaults

- cost = depends on the interface type
- priority = 128

Usage Information

By default, Dell Networking OS implements an optimized flush mechanism for MSTP. This mechanism helps in flushing the MAC addresses only when necessary (and less often) allowing for faster convergence during topology changes.
changes. However, if a standards-based flush mechanism is needed, this knob command can be turned on to enable flushing MAC addresses after receiving every topology change notification.
The multicast commands are supported by Dell Networking OS on all S3100 series platform.

IPv4 Multicast Commands

The following section contains the IPv4 multicast commands.

**clear ip mroute**

Clear learned multicast routes on the multicast forwarding table. To clear the protocol-independent multicast (PIM) tree information base, use the `clear ip pim tib` command.

**Syntax**

```
clear ip mroute [vrf vrf-name] {group-address [source-address] | * | snooping}
```

**Parameters**

- `vrf vrf-name` (OPTIONAL) Enter the keyword `vrf` followed by the name of the VRF to configure this setting on that VRF.

  **NOTE:** Applies to specific VRF if input is provided, else applies to Default VRF.

- `group-address [source-address]`
- `*`
- `snooping`

- `group-address` Enter the multicast group address and source address (if desired), in dotted decimal format, to clear information on a specific group.
- `*` Enter `*` to clear all multicast routes.
- `snooping` Enter the keyword `snooping` to delete multicast snooping route table entries.

**Command Modes**

EXEC Privilege

**Command History**

</tr>
<tr>
<td>9.2(1.0)</td>
<td>Introduced on the Z9500.</td>
</tr>
</tbody>
</table>
### ip mroute

Assign a static mroute.

**Syntax**

```plaintext
ip mroute [vrf vrf-name] destination mask {ip-address | null 0} {{bgp | ospf} process-id | isis | rip | static} {ip-address | tag | null 0} \[distance\]
```

To delete a specific static mroute, use the `no ip mroute [vrf vrf-name] destination mask {ip-address | null 0} {{bgp | ospf} process-id | isis | rip | static} {ip-address | tag | null 0} \[distance\]` command.

To delete all mroutes matching a certain mroute, use the `no ip mroute [vrf vrf-name]destination mask` command.

**Parameters**

- **vrf vrf-name**
  - (OPTIONAL) Enter the keyword `vrf` followed by the name of the VRF to assign a static mroute to that VRF.

  **NOTE:** Applies to specific VRF if input is provided, else applies to Default VRF.

- **destination**
  - Enter the IP address in dotted decimal format of the destination device.

- **mask**
  - Enter the mask in slash prefix formation (/x) or in dotted decimal format.

- **null 0**
  - (OPTIONAL) Enter the keyword `null` then zero (0).

- **[protocol [process-id | tag] ip-address]**
  - (OPTIONAL) Enter one of the routing protocols:
    - Enter the BGP as-number then the IP address in dotted decimal format of the reverse path forwarding (RPF) neighbor. The range is from 1 to 65535.
    - Enter the OSPF process identification number then the IP address in dotted decimal format of the RPF neighbor. The range is from 1 to 65535.
    - Enter the IS-IS alphanumeric tag string then the IP address in dotted decimal format of the RPF neighbor.
    - Enter the RIP IP address in dotted decimal format of the RPF neighbor.
(OPTIONAL) Enter the Static IP address in dotted decimal format of the RPF neighbor.

(OPTIONAL) Enter the IP address in dotted decimal format of the RPF neighbor.

(OPTIONAL) Enter a number as the distance metric assigned to the mroute. The range is from 0 to 255.

Defaults
Not configured.

Related Commands
- `show ip mroute` — display the routing table.

**ip multicast-limit**

To limit the number of multicast entries on the system, use this feature.

Syntax
```
ip multicast-limit [vrf vrf-name] limit
```

Parameters
- `vrf vrf-name` (OPTIONAL) Enter the keyword vrf followed by the name of the VRF to limit the number of multicast on the VRF.
- `limit` Enter the desired maximum number of multicast entries on the system. The range is from 1 to 16000.

Defaults
The default is 4000.

<tr>
<td>7.8.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information

This feature allows you to limit the number of multicast entries on the system. This number is the total of all the multicast entries on all line cards in the system. On each line card, the multicast module only installs the maximum number of entries, depending on the configured CAM profile.

To store multicast routes, use the IN-L3-McastFib CAM partition. It is a separate hardware limit that exists per port-pipe. This hardware space limitation can supersede any software-configured limit. The opposite is also true, the CAM partition might not be exhausted at the time the system-wide route limit set by the ip multicast-limit command is reached.

Related Commands

- show ip igmp groups — display the IGMP groups.

ip multicast-routing

Enable IP multicast forwarding.

Syntax

ip multicast-routing [vrf vrf-name]

To disable multicast forwarding, use the no ip multicast-routing [vrf vrf-name] command.

Defaults

Disabled.
Parameters

vrf vrf-name

(Optional) Enter the keyword `vrf` followed by the name of the VRF to enable IP multicast forwarding on that VRF.

Command Modes

CONFIGURATION

</table>

Usage Information

After you enable multicast, you can enable IGMP and PIM on an interface. In INTERFACE mode, enter the `ip pim sparse-mode` command to enable IGMP and PIM on the interface.

Related Commands

- `ip pim sparse-mode` — enable IGMP and PIM on an interface.

mtrace

Trace a multicast route from the source to the receiver.

Syntax

mtrace [vrf vrf-name] {source-address/hostname} [destination-address/hostname] [group-address/hostname]

Parameters

- **vrf vrf-name**
  - Enter the keyword `vrf` followed by the name of the VRF. If VRF name is not mentioned, the default VRF will be used. Mtrace is not supported for management VRF.
- **source-address/hostname**
  - Enter the source IP address in dotted decimal format (A.B.C.D). This is a unicast address of the beginning of the path to be traced.
- **destination-address/hostname**
  - Enter the destination (receiver) IP address in dotted decimal format (A.B.C.D). If omitted, the mtrace starts from the system at which the command is typed.
- **group-address/hostname**
  - Enter the multicast group address in dotted decimal format (A.B.C.D). If group address is not given then software shall invokes a weak mtrace. A weak mtrace is one that follows...
the RPF path to the source, regardless of whether any router along the path has multicast routing table state

<td>7.5.1.0</td>
<td>Expanded to support originator.</td>
</tr>
<tr>
<td>7.4.1.0</td>
<td>Expanded to support the intermediate (transit) router.</td>
</tr>
</tbody>
</table>

Usage Information

Mtrace is an IGMP based protocol that provides a multicast trace route facility and is implemented according to the IETF draft “A trace route facility for IP Multicast” (draft-fenner-traceroute-ipm-01.txt). Dell Networking OS supports the Mtrace client and transit functionality.

As an Mtrace client, Dell Networking OS transmits Mtrace queries, receives, parses, and prints out the details in the response packet received.

A transit or intermediate router, forwards mtrace requests to the RPF neighbor after appending its response block to the packet. In case it is the first hop router, it sends a response.

As an Mtrace transit or intermediate router, Dell Networking OS returns the response to Mtrace queries. After receiving the Mtrace request, Dell Networking OS computes the RPF neighbor for the source, fills in the request and forwards the request to the RPF neighbor.

Example

```
R1>mtrace 103.103.103.3 1.1.1.1 226.0.0.3
Type Ctrl-C to abort.
Querying reverse path for source 103.103.103.3 to destination 1.1.1.1 via group 226.0.0.3
From source (?) to destination (?)

<table>
<thead>
<tr>
<th>Hop</th>

</tr>
<tr>
<td>-4</td>
<td>103.103.103.3</td>
<td>--&gt;</td>
<td>Source</td>
<td></td>
</tr>
</tbody>
</table>
```

The mtrace command traverses the path of the response data block in the reverse direction of the multicast data traffic. The mtrace command traverses the reverse path to the source from the destination. As a result, the tabular output of the mtrace command displays the destination details in the first row, followed by the RPF router details along the path in the consequent rows, and finally the source details in the last row. The tabular output contains the following columns:

- Hop — a hop number (counted negatively to indicate reverse-path)
- OIF IP — outgoing interface address
- Proto — multicast routing protocol
- Forwarding code — error code as present in the response blocks
- Source Network/Mask — source mask
show ip mroute

View the multicast routing table.

Syntax

show ip mroute [vrf vrf-name] [static | group-address [source-address] | count | snooping [vlan vlan-id] [group-address [source-address]] | summary | vlt [group-address [source-address] | count]

Parameters

vrf vrf-name

(Optional) Enter the keyword vrf followed by the name of the VRF to configure this setting on that VRF.

NOTE: Applies to specific VRF if input is provided, else applies to Default VRF.

static

(Optional) Enter the keyword static to view static multicast routes.

group-address

(Optional) Enter the multicast group-address to view only routes associated with that group. Enter the source-address to view routes with that group-address and source-address.

count

(Optional) Enter the keyword count to view the number of multicast routes and packets.

snooping [vlan vlan-id] [group-address [source-address]]

Enter the keyword snooping to display information on the multicast routes PIM-SM snooping discovers.

Enter a VLAN ID to limit the information displayed to the multicast routes PIM-SM snooping discovers on a specified VLAN. The VLAN ID range is from 1 to 4094.

Enter a multicast group address and, optionally, a source multicast address in dotted decimal format (A.B.C.D) to limit the information displayed to the multicast routes PIM-SM snooping discovers for a specified multicast group and source.

summary

(Optional) Enter the keyword summary to view a summary of all routes.

vlt

(Optional) Enter the keyword vlt to view multicast routes with a spanned incoming interface. Enter a multicast group address in dotted decimal format (A.B.C.D) to limit the information displayed to the multicast routes for a specified multicast group and optionally a source multicast address in dotted decimal format (A.B.C.D) to limit the information displayed for a specified multicast source. Enter the keyword count to display the total number of multicast routes with the spanned IIF.

Flags: S - Synced
(*) 225.1.1.1), uptime 00:39:33 flags: S
Incoming interface: Vlan 10
  Spanned outgoing interface list:
    Vlan 20 (S)
    Vlan 30

(50.1.1.2, 225.1.1.1), uptime 00:39:33 flags: S
Incoming interface: Vlan 10
```
Usage Information

The following describes the show ip mroute command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>(S, G)</td>
<td>Displays the forwarding entry in the multicast route table.</td>
</tr>
<tr>
<td>uptime</td>
<td>Displays the amount of time the entry has been in the multicast forwarding table.</td>
</tr>
<tr>
<td>Incoming interface</td>
<td>Displays the reverse path forwarding (RPF) information towards the source for (S,G) entries and the RP for (*,G) entries.</td>
</tr>
<tr>
<td>Outgoing interface list:</td>
<td>Lists the interfaces that meet one of the following:</td>
</tr>
<tr>
<td></td>
<td>• a directly connected member of the Group</td>
</tr>
<tr>
<td></td>
<td>• statically configured member of the Group</td>
</tr>
<tr>
<td></td>
<td>• received a (*,G) or (S,G) Join message</td>
</tr>
</tbody>
</table>

Example

Dell# show ip mroute
IP Multicast Routing Table
(*, 224.10.10.1), uptime 00:05:12
  Incoming interface: GigabitEthernet 3/12
  Outgoing interface list:
    GigabitEthernet 3/13
(1.13.1.100, 224.10.10.1), uptime 00:04:03
  Incoming interface: GigabitEthernet 3/4
  Outgoing interface list:
    GigabitEthernet 3/12
    GigabitEthernet 3/13
(*, 224.20.20.1), uptime 00:05:12
  Incoming interface: GigabitEthernet 3/12
  Outgoing interface list:
    GigabitEthernet 3/4

show ip rpf

View reverse path forwarding.

Syntax

show ip rpf

Command Modes

- EXEC
- EXEC Privilege

</tr>
</tbody>
</table>

**E-Series legacy command**

**Usage Information**

Network administrators use static mroutes to control the reach-ability of the multicast sources. If a PIM-registered multicast source is reachable using static mroute as well as unicast route, the distance of each route is examined and the route with shorter distance is the one the PIM selects for reach-ability.

**Example**

```
Dell# show ip rpf
RPF information for 10.10.10.9
  RPF interface: Gi 3/4
  RPF neighbor: 165.87.31.4
  RPF route/mask: 10.10.10.9/255.255.255.255
  RPF type: unicast
```
Neighbor Discovery Protocol (NDP)

The neighbor discovery protocol for IPv6 is defined in RFC 2461 as part of the Stateless Address Autoconfiguration protocol. It replaces the Address Resolution Protocol used with IPv4. NDP defines mechanisms for solving the following problems:

- Router discovery — hosts can locate routers residing on a link
- Prefix discovery — hosts can discover address prefixes for the link
- Parameter discovery
- Address autoconfiguration — configuration of addresses for an interface
- Address resolution — mapping from IP address to link-layer address
- Next-hop determination
- Neighbor unreachability detection (NUD) — determine that a neighbor is no longer reachable on the link.
- Duplicate address detection (DAD) — allow a node to check whether a proposed address is already in use.
- Redirect — the router can inform a node about a better first-hop.

NDP uses the following five ICMPv6 packet types in its implementation:

- Router Solicitation
- Router Advertisement
- Neighbor Solicitation
- Neighbor Advertisement
- Redirect

Topics:

- clear ipv6 neighbors
- ipv6 neighbor
- show ipv6 neighbors
- IPv6 Router Advertisement (RA) Guard

**clear ipv6 neighbors**

Delete all entries in the IPv6 neighbor discovery cache or neighbors of a specific interface. Static entries are not removed using this command.

**Syntax**

```
clear ipv6 neighbors [vrf vrf-name] [ipv6-address | interface]
```

**Parameters**

- `vrf vrf-name` (OPTIONAL) Enter the keyword vrf followed by the name of the VRF to clear the neighbor corresponding to that VRF.
NOTE: If you do not specify this option, the neighbors in the default VRF are cleared.

`ipv6-address` Enter the IPv6 address of the neighbor in the x:x:x::x format to remove a specific IPv6 neighbor.

NOTE: The :: notation specifies successive hexadecimal fields of zero.

`interface interface` To remove all neighbor entries learned on a specific interface, enter the keyword interface then the interface type and slot/port or number information of the interface:

- For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a port channel interface, enter the keywords port-channel then a number.
- For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

Command Modes

- EXEC
- EXEC Privilege

Command History

</tbody>
</table>

ipv6 neighbor

Configure a static entry in the IPv6 neighbor discovery.

Syntax

```
ipv6 neighbor [vrf vrf-name] {ipv6-address} {interface interface} (hardware_address)
```
To remove a static IPv6 entry from the IPv6 neighbor discovery, use the `no ipv6 neighbor [vrf vrf-name] {ipv6-address} {interface interface}` command.

**Parameters**

- **vrf vrf-name**
  
  (Optional) Enter the keyword `vrf` followed by the name of the VRF to install IPv6 routes in that VRF.

- **ipv6-address**
  
  Enter the IPv6 address of the neighbor in the `x:x:x::x` format.

  **NOTE:** The `::` notation specifies successive hexadecimal fields of zero.

- **interface interface**
  
  Enter the keyword `interface` then the interface type and slot/port or number information:
  - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
  - For a port channel interface, enter the keywords `port-channel` then a number.
  - For a Null interface, enter the keyword `null` then the Null interface number.
  - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.
  - For a tunnel interface, enter the keyword `tunnel` then the tunnel interface number. The range is from 1 to 16383.

- **hardware_address**

**Usage Information**

Neighbor Discovery Protocol for IPv6 is defined in RFC 2461 as part of the Stateless Address Autoconfiguration protocol. It replaces the Address Resolution Protocol used with IPv4. It defines mechanisms for solving problems, such as:

- Router discovery: Hosts can locate routers residing on a link.
• Prefix discovery: Hosts can discover address prefixes for the link.
• Parameter discovery.
• Address autoconfiguration — configuration of addresses for an interface.
• Address resolution — mapping from IP address to link-layer address.
• Next-hop determination.
• Neighbor Unreachability Detection (NUD): Determine that a neighbor is no longer reachable on the link.
• Duplicate Address Detection (DAD): Allow a node to check whether a proposed address is already in use.
• Redirect: The router can inform a node about a better first-hop.

Use the ipv6 neighbor command to manually configure the IPv6 address of a neighbor to be discovered by the switch.

show ipv6 neighbors

Display IPv6 discovery information. Entering the command without options shows all IPv6 neighbor addresses stored on the control processor (CP).

Syntax
show ipv6 neighbors [vrf vrf-name] [ipv6-address| interface interface]

Parameters
vrf vrf-name (OPTIONAL) Enter the keyword vrf and the name of the VRF to display the neighbors corresponding to that VRF.

NOTE: If you do not specify this option, neighbors corresponding to the default VRF are displayed.

ipv6-address Enter the IPv6 address of the neighbor in the x:x:x:x::x format.

NOTE: The :: notation specifies successive hexadecimal fields of zero.

interface interface Enter the keyword interface then the interface type and slot/port or number information:

• For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
• For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
• For a Management interface, enter the keyword managementethernet followed by slot/port numbers.
• For a Port Channel interface, enter the keywords port-channel followed by a number.
• For a port channel interface, enter the keywords port-channel then a number.
• For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

Defaults
None

IPv6 Router Advertisement (RA) Guard

The IPv6 RA guard provides support to perform conditional forwarding or blocking of the router advertisement messages that are received at the network device platform. This functionality analyzes and filters the RAs sent by the devices and compares the configuration information on the layer 2 device with the RA frame. Once the layer 2 device validates the content of the RA frame against the configuration, it forwards the RA to its unicast or multicast destination. On failure to validate the RA frame content, the RA frame is dropped.

The IPv6 RA guard supports two different modes:

- Host mode — When a policy with device role as host is applied on an interface, all the RA packets are dropped without validation. You can also configure the host mode policy with VLAN option to drop the RA packets on that specific VLAN and port.
- Router mode — When a policy with device role as router is applied on an interface, all the RA packets are validated based on the configuration information in the policy. Similarly, you can also apply this mode over any specific VLAN and the validation is performed only for that particular VLAN RA packets.

To configure the IPv6 RA guard, use the following Dell Networking OS commands.

**debug ipv6 nd ra-guard**

Enable debugging for IPv6 RA guard snooping information.

**Syntax**

debug ipv6 nd ra-guard [interface_type slot/port | count value]
Parameters

interface_type slot/port

Enter the one of the following interfaces and slot/port information:

- For a port channel interface, enter the keywords port-channel then a number.
- For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

count value

Enter the keyword count then the number of debug outputs. The range is from 1 to 65534. The default is infinity.

Defaults
None

EXEC Privilege

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.11(0.0) Introduced on the C9010.
9.10(0.0) Introduced on the S3148.
9.9(0.0) Introduced on the Z9500.
9.8(2.0) Introduced on the S4048-ON.
9.8(1.0) Introduced on the Z9100-ON.
9.8(0.0P5) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S4810, S4820T, S5000, S6000, S6000-ON, and Z9000 switches.

device-role

Specify the role of the device attached to the port.

Syntax
device-role {host | router}

To reset the device role, use the no device-role {host | router} command.

Parameters

host
Enter the keyword host to set the device-role as host.

router
Enter the keyword router to set the device-role as router.

Defaults
None

Version Description
9.11(0.0) Introduced on the C9010.
9.10(0.0) Introduced on the S3148.
### Version Description

- **9.9(0.0)** Introduced on the Z9500.
- **9.8(2.0)** Introduced on the S3100 series.
- **9.8(1.0)** Introduced on the Z9100-ON.
- **9.8(0.0P5)** Introduced on the S4048-ON.
- **9.8(0.0P2)** Introduced on the S3048-ON.
- **9.7(0.0)** Introduced on the S4810, S4820T, S5000, S6000, S6000-ON, and Z9000 switches.

### Related Commands

- `ipv6 nd raguard policy policy-name` — define the RA guard policy name and enter the RA guard policy configuration mode.
- `ipv6 nd ra-guard enable` — configure the RA guard related commands.

### hop-limit

Enable the verification of the advertised hop count limit. If this command is not configured, the verification process is bypassed.

**Syntax**

```
-hop-limit {maximum | minimum limit}
```

To reset the hop count limit, use the `no hop-limit {maximum | minimum limit}` command.

**Parameters**

- `maximum limit` Enter the keyword `maximum` then the hop limit value. The range is from 0 to 254.
- `minimum limit` Enter the keyword `minimum` then the hop limit value. The range is from 0 to 254.

other-config-flag

Enable the verification of the advertised other configuration parameter. If this command is not configured, the verification process is bypassed.

Syntax

other-config-flag {on | off}

To reset the other configuration parameter, use the no other-config-flag {on | off} command.

Parameters

- **on**: Enter the keyword on to set the other-config-flag value as ON.
- **off**: Enter the keyword off to set the other-config-flag value as OFF.

Defaults

None

**reachable-time**

Enable the verification of the configured reachability time in the received RA packets.

**Syntax**

```
reachable-time value
```

To reset the advertised reachability time, use the `no reachable-time value` command.

**Parameters**

- **value**
  - Enter the advertised reachability time in milliseconds. The range is from 0 to 3,600,000 milliseconds.

**Defaults**

None

**retrans-time**

Enable the verification of the configured retransmission timer value in the received RA packets.

**Syntax**

```
retrans-timer value
```

To reset the advertised retransmission interval, use the `no retrans-timervalue` command.

**Parameters**

- **value**
  - Enter the advertised retransmission time interval in milliseconds. The range is from 100 to 4,294,967,295 milliseconds.

**Defaults**

None

Related Commands
- `ipv6 nd ra-guard enable` — configure the RA guard related commands.
router-preference maximum

Enable the verification of the advertised default router preference (DRP) value. The preference value is lower than or equal to the specified limit. If this command is not configured, the verification process is bypassed.

Syntax

```
routing-preference maximum {high | low | medium}
```

To reset the default router preference value, use the `no router-preference maximum {high | low | medium}` command.

Parameters

- **high**: Enter the keyword `high` to set the DRP value as high.
- **low**: Enter the keyword `low` to set the DRP value as low.
- **medium**: Enter the keyword `medium` to set the DRP value as medium.

Defaults

None

**Example**

```shell
Dell(conf)# ipv6 nd ra-guard policy test
Dell(conf-ra.guard_policy_list)#show config
!
ipv6 nd ra-guard policy test
device-role router
  hop-limit maximum 251
  mtu 1350
  other-config-flag on
  reachable-time 540
  retrans-timer 101
  router-preference maximum medium
  trusted-port
Dell(conf-ra.guard_policy_list)#
```

**Related Commands**

- `ipv6 nd ra-guard enable` — configure the RA guard related commands.
- `ipv6 nd ra-guard policy` — define the RA guard policy name and enter the RA guard policy list configuration mode.
- `device-role` — specify the role of the device attached to the port.
- `hop-limit` — enable the verification of the advertised hop count limit.
- `mtu` — set the maximum transmission unit (MTU) value.
- `other-config-flag` — enable the verification of the advertised other configuration parameter.
- `reachable-time` — set the advertised reachability time.
- `retrans-timer` — set the advertised retransmission time.
- `router-preference maximum` — enable the verification of the advertised default router preference (DRP) value.
- `trusted-port` — apply the policy to trusted ports.

**show ipv6 nd ra-guard policy**

Display the configurations applied on all the RA guard policies or a specific RA guard policy.

**Syntax**

```
show ipv6 nd ra-guard policy policy-name
```

**Example**

```
Dell(conf)# show ipv6 nd ra-guard policy test
Dell(conf-ra.guard_policy_list)#
```
**Parameter**

| policy policy-name | Enter the keyword `policy` then the policy name. The policy name allows a maximum of 140 characters. |

**Command Modes**

- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Dell# show ipv6 nd ra-guard policy test
ipv6 nd ra-guard policy test
  device-role router
  hop-limit maximum 1
  match ra ipv6-access-list access
  other-config-flag on
  router-preference maximum medium
  trusted-port
  Interfaces:
    Gi 1/1
Dell#
```

**Related Commands**

- `ipv6 nd ra-guard enable` — configure the RA guard related commands.
- `ipv6 nd ra-guard policy` — define the RA guard policy name and enter the RA guard policy list configuration mode.
- `device-role` — specify the role of the device attached to the port.
- `hop-limit` — enable the verification of the advertised hop count limit.
- `mtu` — set the maximum transmission unit (MTU) value.
- `other-config-flag` — enable the verification of the advertised other configuration parameter.
- `reachable-time` — set the advertised reachability time.
- `retrans-timer` — set the advertised retransmission time.
- `router-preference maximum` — enable the verification of the advertised default router preference (DRP) value.
- `trusted-port` — apply the policy to trusted ports.
- `ipv6 nd raguard attach-policy` — apply the IPv6 RA guard to a specific interface.
trusted-port

Allow bypassing the configured RA guard validation and forwards the RA packets received on the interface, which has the trusted port policy attached.

**Syntax**

trusted-port

To reset the policy applied to the trusted port, use the `no trusted-port` command.

**Defaults**

None

**Command Modes**

POLICY LIST CONFIGURATION

**Command History**

</tbody>
</table>

**Usage Information**

Use this command to disable all the RA guard policies.

**Related Commands**

- `ipv6 nd ra-guard enable` — configure the RA guard related commands.
- `ipv6 nd raguard policy policy-name` — define the router advertisement (RA) guard policy name and enter the RA guard policy configuration mode.
Object Tracking

Object Tracking supports IPv4 and IPv6, and is available on the Dell Networking platforms.
Object tracking allows you to define objects of interest, monitor their state, and report to a client when a change in an object’s state occurs. The following tracked objects are supported:

- Link status of Layer 2 interfaces
- Routing status of Layer 3 interfaces (IPv4 and IPv6)
- Reachability of IPv4 and IPv6 routes
- Metric thresholds of IPv4 and IPv6 routes

You can configure client applications, such as virtual router redundancy protocol (VRRP), to receive a notification when the state of a tracked object changes.

Topics:
- IPv4 Object Tracking Commands
- IPv6 Object Tracking Commands

IPv4 Object Tracking Commands

The following section describes the IPv4 VRRP commands.

debug track

Enables debugging for tracked objects.

Syntax

debug track [all | notifications | object-id]

Parameters

- all: Enables debugging on the state and notifications of all tracked objects.
- notifications: Enables debugging on the notifications of all tracked objects.
- object-id: Enables debugging on the state and notifications of the specified tracked object. The range is 1 to 500.

Defaults
Enable debugging on the state and notifications of all tracked objects (debug track all).

Command Modes
- EXEC
- EXEC Privilege

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.
**Version** | **Description**
---|---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) |Introduced on the S3100 series.
9.8(1.0) |Introduced on the Z9100-ON.
9.8(0.0P5) |Introduced on the S4048-ON.
9.8(0.0P2) |Introduced on the S3048-ON.
9.7(0.0) |Introduced on the S6000-ON.
9.5(0.1) |Introduced on the Z9500.
8.3.12.0 |Introduced on the S4810.
8.4.1.0 |Introduced.

**Example**

Dell# debug track all

```
04:35:04: %RPM0-P:RP2 %OTM-5-STATE: track 6 - Interface GigabitEthernet 1/2 line-protocol DOWN
```

```
04:35:04: %RPM0-P:RP2 %OTM-5-NOTIF: VRRP notification: resource ID 6 DOWN
```

delay

Configure the time delay used before communicating a change in the status of a tracked object to clients.

**Syntax**

```
delay { [up seconds] [down seconds] }
```

To return to the default setting, use the `no delay` command.

**Parameters**

- **seconds**

  Enter the number of seconds the object tracker waits before sending a notification about the change in the UP and/or DOWN state of a tracked object to clients. The range is 0 to 180. The default is 0 seconds.

**Defaults**

0 seconds

**Command Modes**

OBJECT TRACKING (conf_track_object-id)

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
---|---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100-ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.7(0.0) | Introduced on the S6000-ON.
8.3.12.0 | Introduced on the S4810.
You can configure an UP and/or DOWN timer for each tracked object to set the time delay before a change in the state of a tracked object is communicated to clients. The configured time delay starts when the state changes from UP to DOWN or vice-versa.

If the state of an object changes back to its former UP/DOWN state before the timer expires, the timer is cancelled and the client is not notified. For example, if the DOWN timer is running when an interface goes down and comes back up, the DOWN timer is cancelled and the client is not notified of the event.

If the timer expires and an object’s state has changed, a notification is sent to the client. If no delay is configured, a notification is sent immediately after a change in the state of a tracked object is detected. The time delay in communicating a state change is specified in seconds.

Related Commands

- track interface ip routing – configure object tracking on the routing status of an IPv4 Layer 3 interface.
- track interface line-protocol – configure object tracking on the line-protocol state of a Layer 2 interface.
- track ip route metric threshold – configure object tracking on the threshold of an IPv4 route metric.
- track ip route reachability – configure object tracking on the reachability of an IPv4 route.

description

Enter a description of a tracked object.

Syntax
description {text}

Parameters

text

Enter a description to identify a tracked object (80 characters maximum).

Defaults

None

Command Modes

OBJECT TRACKING (conf_track_object-id)

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

track 5 ip route 192.168.0.0/24 reachability vrf red
track resolution ip route isis 20
track resolution ip route ospf 10
```

**Example (Object-id)**

```
Dell# show running-config track 300
track 300 ip route 10.0.0.0/8 metric threshold
delay down 3
```
Related Commands

- `show track` – display information about tracked objects, including configuration, current state, and clients which track the object.
- `track interface ip routing` – configure object tracking on the routing status of an IPv4 Layer 3 interface.
- `track interface line-protocol` – configure object tracking on the line-protocol state of a Layer 2 interface.
- `track ip route metric threshold` – configure object tracking on the threshold of an IPv4 route metric.
- `track ip route reachability` – configure object tracking on the reachability of an IPv4 route.

show track

Display information about tracked objects, including configuration, current tracked state (UP or DOWN), and the clients which are tracking an object.

**Syntax**

```
show track [object-id [brief] | interface [brief] [vrf vrf-name] | ip route [brief] [vrf vrf-name] | resolution | vrf vrf-name [brief] | brief]
```

**Parameters**

- `object-id` (OPTIONAL) Display information on the specified tracked object. The range is 1 to 500.
- `interface` (OPTIONAL) Display information on all tracked interfaces (Layer 2 and IPv4 Layer 3).
- `ip route` (OPTIONAL) Display information on all tracked IPv4 routes.
- `resolution` (OPTIONAL) Display information on the configured resolution values used to scale protocol-specific route metrics. The range is 0 to 255.
- `brief` (OPTIONAL) Display a single line summary of the tracking information for a specified object, object type, or all tracked objects.
- `vrf vrf-name` (OPTIONAL) E-Series only: Display information on only the tracked objects that are members of the specified VRF instance. The maximum is 32 characters. If you do not enter a VRF name, information on the tracked objects from all VRFs displays.

**Usage Information**

The following describes the `show track` command shown in the Example below.
Output | Description
--- | ---
Track object-id | Displays the number of the tracked object.
Interface type slot/ port, IP route ip-address, IPv6 route ipv6-address | Displays the interface type and slot/port number or address of the IPv4/IPv6 route that is being tracked.
object is Up/Down | Up/Down state of tracked object; for example, IPv4 interface, reachability or metric threshold of an IP route.
number changes, last change time | Number of times that the state of the tracked object has changed and the time since the last change in hours:minutes:seconds.
First hop interface | Displays the type and slot/port number of the first-hop interface of the tracked route.
Tracked by | Client that is tracking an object’s state; for example, VRRP.

Example

Dell# show track
Track 1
  IP route 23.0.0.0/8 reachability
  Reachability is Down (route not in route table)
    2 changes, last change 00:16:08
  Tracked by:
Track 2
  IPv6 route 2040::/64 metric threshold
  Metric threshold is Up (STATIC/0/0)
    5 changes, last change 00:02:16
    Metric threshold down 255 up 254
    First-hop interface is GigabitEthernet 1/2
    Tracked by:
      VRRP GigabitEthernet 2/3 IPv6 VRID 1
Track 3
  IPv6 route 2050::/64 reachability
  Reachability is Up (STATIC)
    5 changes, last change 00:02:16
    First-hop interface is GigabitEthernet 1/2
    Tracked by:
      VRRP GigabitEthernet 2/3 IPv6 VRID 1

Usage Information

The following describes the show track brief command shown in the Example below.

Output | Description
--- | ---
ResID | Number of the tracked object.
Resource | Type of tracked object.
Parameter | Detailed description of the tracked object.
State | Up or Down state of the tracked object.
Last Change | Time since the last change in the state of the tracked object.

Example (Brief)

Dell> show track brief
ResID | Resource | Parameter | State | LastChange
--- | --- | --- | --- | ---
1 | IP route reachability | 10.16.0.0/16 | Up | 00:01:08
2 | Interface line-protocol | Ethernet0/2 | Down | 00:05:00
3 | Interface ip routing | VLAN100 | Up | 01:10:05
Related Commands

- `show running-config track` – display configuration information about tracked objects.
- `track interface ip routing` – configure object tracking on the routing status of an IPv4 Layer 3 interface.
- `track interface line-protocol` – configure object tracking on the line-protocol state of a Layer 2 interface.
- `track ip route metric threshold` – configure object tracking on the threshold of an IPv4 route metric.
- `track ip route reachability` – configure object tracking on the reachability of an IPv4 route.

### threshold metric

Configure the metric threshold used to determine the UP and/or DOWN state of a tracked IPv4 or IPv6 route.

**Syntax**

```
threshold metric { up number | down number }
```

To return to the default setting, use the `no threshold metric { up number | down number }` command.

**Parameters**

- **up number**
  - Enter a number for the UP threshold to be applied to the scaled metric of an IPv4 or IPv6 route. The default UP threshold is 254. The routing state is UP if the scaled route metric is less than or equal to the UP threshold.

- **down number**
  - Enter a number for the DOWN threshold to be applied to the scaled metric of an IPv4 or IPv6 route. The default DOWN threshold is 255. The routing state is DOWN if the scaled route metric is greater than or equal to the DOWN threshold.

**Defaults**

None

**Command Modes**

OBJECT TRACKING (conf_track_object-id)

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version**

- 9.10(0.0)
- 9.8(2.0)
- 9.8(1.0)
- 9.8(0.0P5)
- 9.8(0.0P2)
- 9.7(0.0)
- 8.3.12.0
- 8.4.1.0

**Description**

- Introduced on the S3148.
- Introduced on the S3100 series.
- Introduced on the Z9100-ON.
- Introduced on the S4048-ON.
- Introduced on the S3048-ON.
- Introduced on the S6000-ON.
- Introduced on the S4810.
- Introduced.

**Usage Information**

Use this command to configure the UP and/or DOWN threshold for the scaled metric of a tracked IPv4 or IPv6 route.

Determine the UP/DOWN state of a tracked route by the threshold for the current value of the route metric in the routing table. To provide a common tracking interface for different clients, route metrics are scaled in the range 0 to 255, where 0 is connected and 255 is inaccessible. The scaled metric value communicated to a client always considers a lower value to have priority over a higher value.
The resulting scaled value is compared against the configured threshold values to determine the state of a tracked route as follows:

- If the scaled metric for a route entry is less than or equal to the UP threshold, the state of a route is UP.
- If the scaled metric for a route is greater than or equal to the DOWN threshold or the route is not entered in the routing table, the state of a route is DOWN.

Configure the UP and DOWN thresholds for each tracked route with the `threshold metric` command. The default UP threshold is 254; the default DOWN threshold is 255. The notification of a change in the state of a tracked object is sent when a metric value crosses a configured threshold.

The tracking process uses a protocol-specific resolution value to convert the actual metric in the routing table to a scaled metric in the range 0 to 255. You can configure the resolution value used to scale route metrics for supported protocols with the `track resolution ip route` and `track resolution ipv6 route` commands.

**Related Commands**

- `track ip route metric threshold` — configure object tracking on the threshold of an IPv4 route metric.
- `track resolution ip route` — configure the protocol-specific resolution value used to scale an IPv4 route metric.

### track interface ip routing

Configure object tracking on the routing status of an IPv4 Layer 3 interface.

**Syntax**

```
track object-id interface interface ip routing
```

To return to the default setting, use the `no track object-id` command.

**Parameters**

- `object-id` Enter the ID number of the tracked object. The range is 1 to 500.
- `interface` Enter one of the following values:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
  - For a port channel interface, enter the keywords `port-channel` then a number.
  - For a tunnel interface, enter the keyword `tunnel`.
  - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults**

None

track interface line-protocol

Configure object tracking on the line-protocol state of a Layer 2 interface.

Syntax

track object-id interface interface line-protocol

To return to the default setting, use the no track object-id command.

Parameters

- **object-id**: Enter the ID number of the tracked object. The range is 1 to 500.
- **interface**: Enter one of the following values:
  - For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a Loopback interface, enter the keyword loopback then a number from 0 to 16383.
  - For a port channel interface, enter the keywords port-channel then a number.
  - For a tunnel interface, enter the keyword tunnel.
  - For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

Use this command to create an object that tracks the line-protocol state of a Layer 2 interface by monitoring its operational status (UP or DOWN).

When the link-level status goes down, the tracked object status is considered to be DOWN; if the link-level status is up, the tracked object status is considered to be UP.

Related Commands

- show track – display information about tracked objects, including configuration, current state, and clients which track the object.
- track interface ip routing – configure object tracking on the routing status of an IPv4 Layer 3 interface.

track ip host reachability

Configure object tracking on the reachability of an IPv4 host.

Syntax

```plaintext
track object-id ip host host-ip-address/prefix-len reachability [vrf vrf-name]
```

To return to the default setting, use the `no track object-id` command.

Parameters

- **object-id**
  
Enter the ID number of the tracked object. The range is 1 to 500.

- **ip-address/prefix-len**
  
Enter an IPv4 address in dotted decimal format. The valid IPv4 prefix lengths are from /0 to /32.

- **vrf vrf-name**
  
(Optional) You can configure a VPN routing and forwarding (VRF) instance to specify the virtual routing table to which the tracked route belongs.

Defaults

None

track ip route metric threshold

Configure object tracking on the threshold of an IPv4 route metric.

**Syntax**

```
track object-id ip route ip-address/prefix-len metric threshold [vrf vrf-name]
```

To return to the default setting, use the `no track object-id` command.

**Parameters**

- `object-id`: Enter the ID number of the tracked object. The range is 1 to 500.
- `ip-address/prefix-len`: Enter an IPv4 address in dotted decimal format. The valid IPv4 prefix lengths are from /0 to /32.
- `vrf vrf-name`: (Optional) E-Series only: You can configure a VPN routing and forwarding (VRF) instance to specify the virtual routing table to which the tracked route belongs.

  - Introduced on the S6000-ON.
- 8.312.0
  - Introduced on the S4810.
- 8.4.1.0
  - Introduced.

**Usage Information**

Use this command to create an object that tracks the UP and/or DOWN threshold of an IPv4 route metric. In order for a route's metric to be tracked, the route must appear as an entry in the routing table.

A tracked IPv4 route is considered to match an entry in the routing table only if the exact IPv4 address and prefix length match a table entry. For example, when configured as a tracked route, 10.0.0.0/24 does not match the routing table entry 10.0.0.0/8. If no route-table entry has the exact IPv4 address and prefix length, the status of the tracked route is considered to be DOWN.

When you configure the threshold of an IPv4 route metric as a tracked object, the UP/DOWN state of the tracked route is also determined by the current metric for the route in the routing table.

To provide a common tracking interface for different clients, route metrics are scaled in the range 0 to 255, where 0 is connected and 255 is inaccessible. The scaled metric value communicated to a client always considers a lower
value to have priority over a higher value. The resulting scaled value is compared against the configured threshold values to determine the state of a tracked route as follows:

- If the scaled metric for a route entry is less than or equal to the UP threshold, the state of a route is UP.
- If the scaled metric for a route is greater than or equal to the DOWN threshold or the route is not entered in the routing table, the state of a route is DOWN.

You configure the UP and DOWN thresholds for each tracked route by using the `threshold metric` command. The default UP threshold is 254, the default DOWN threshold is 255. The notification of a change in the state of a tracked object is sent when a metric value crosses a configured threshold.

Related Commands

- `show track` — display information about tracked objects, including configuration, current state, and clients which track the object.
- `threshold metric` — configure the metric threshold used to determine the UP and/or DOWN state of a tracked route.
- `track resolution ip route` — configure the protocol-specific resolution value used to scale an IPv4 route metric.

## track ip route reachability

Configure object tracking on the reachability of an IPv4 route.

### Syntax

```
track object-id ip route ip-address/prefix-len reachability [vrf vrf-name]
```

To return to the default setting, use the `no track object-id` command.

### Parameters

- **object-id**
  - Enter the ID number of the tracked object. The range is 1 to 500.
- **ip-address/prefix-len**
  - Enter an IPv4 address in dotted decimal format. The valid IPv4 prefix lengths are from /0 to /32.
- **vrf vrf-name**
  - (Optional) E-Series only: You can configure a VPN routing and forwarding (VRF) instance to specify the virtual routing table to which the tracked route belongs.

Usage Information

Use this command to create an object that tracks the reachability of an IPv4 route. In order for a route’s reachability to be tracked, the route must appear as an entry in the routing table.

A tracked IPv4 route is considered to match an entry in the routing table only if the exact IPv4 address and prefix length match a table entry. For example, when configured as a tracked route, 10.0.0.0/24 does not match the routing table entry 10.0.0.0/8. If no route-table entry has the exact IPv4 address and prefix length, the status of the tracked route is considered to be DOWN.

When you configure IPv4 route reachability as a tracked object, the UP/DOWN state of the tracked route is also determined by the entry of the next-hop address in the ARP cache. A tracked route is considered to be reachable if there is an ARP cache entry for the route’s next-hop address.

If the next-hop address in the ARP cache ages out for a route tracked for its reachability, an attempt is made to regenerate the ARP cache entry to if the next-hop address appears before considering the route DOWN.

Related Commands

- **show track** – display information about tracked objects, including configuration, current state, and clients which track the object.
- **track ip route metric threshold** – configure object tracking on the threshold of an IPv4 route metric.

**track resolution ip route**

Configure the protocol-specific resolution value used to scale an IPv4 route metric.

**Syntax**

```
track resolution ip route {isis resolution-value | ospf resolution-value}
```

To return to the default setting, use the **no track object-id** command.

**Parameters**

- **object-id**
  Enter the ID number of the tracked object. The range is 1 to 500.
- **isis resolution-value**
  Enter the resolution used to convert the metric in the routing table for ISIS routes to a scaled metric.
- **ospf resolution-value**
  Enter the resolution used to convert the metric in the routing table for OSPF routes to a scaled metric.

**Defaults**

None

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version**

- 9.10(0.0)
- 9.8(2.0)
- 9.8(1.0)
- 9.8(0.0P6)
- 9.8(0.0P2)
- 9.7(0.0)

**Description**

- Introduced on the S3148.
- Introduced on the S3100 series.
- Introduced on the Z9100-ON.
- Introduced on the S4048-ON.
- Introduced on the S3048-ON.
- Introduced on the S6000-ON.
Use this command to configure the protocol-specific resolution value that converts the actual metric of an IPv4 route in the routing table to a scaled metric in the range 0 to 255.

The UP/DOWN state of a tracked IPv4 route is determined by a user-configurable threshold (the threshold metric command) for the route's metric in the routing table. To provide a common tracking interface for different clients, route metrics are scaled in the range 0 to 255, where 0 is connected and 255 is inaccessible.

The protocol-specific resolution value calculates the scaled metric by dividing a route's cost by the resolution value set for the route protocol:

- For ISIS, you can set the resolution in the range 1 to 1000, where the default is 10.
- For OSPF, you can set the resolution in the range 1 to 1592, where the default is 1.
- The resolution value used to map static routes is not configurable. By default, Dell Networking OS assigns a metric of 0 to static routes.
- The resolution value used to map RIP routes is not configurable. The RIP hop-count is automatically multiplied by 16 to scale it. For example, a RIP metric of 16 (unreachable) scales to 256, which considers the route to be DOWN.

Related Commands

- `threshold metric` – configure the metric threshold used to determine the UP and/or DOWN state of a tracked route.
- `track ip route metric threshold` – configure object tracking on the threshold of an IPv4 route metric.

### IPv6 Object Tracking Commands

The following section describes the IPv6 object tracking commands.

The following object tracking commands apply to IPv4 and IPv6:

- `debug track`
- `delay`
- `description`
- `show running-config track`
- `threshold metric`
- `track interface line-protocol`

### show track ipv6 route

Display information about all tracked IPv6 routes, including configuration, current tracked state (UP or DOWN), and the clients which are tracking an object.

**Syntax**

```
show track ipv6 route [brief]
```

**Parameters**

- `brief` (OPTIONAL) Display a single line summary of information for tracked IPv6 routes.

**Command Modes**

- EXEC
**EXEC Privilege**

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Related Commands

- `show running-config track` – display configuration information about tracked objects.
- `show track` – display information about tracked objects, including configuration, current state, and clients which track the object.
- `track interface ipv6 routing` – configure object tracking on the routing status of an IPv6 Layer 3 interface.
- `track ipv6 route metric threshold` – configure object tracking on the threshold of an IPv6 route metric.
- `track ipv6 route reachability` – configure object tracking on the reachability of an IPv6 route.

**track interface ipv6 routing**

Configure object tracking on the routing status of an IPv6 Layer 3 interface.

**Syntax**

```
track object-id interface interface ipv6 routing
```

To return to the default setting, use the `no track object-id` command.

**Parameters**

- **object-id**
  - Enter the ID number of the tracked object. The range is 1 to 500.
- **interface**
  - Enter one of the following values:
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
    - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
    - For a port channel interface, enter the keywords `port-channel` then a number.
    - For a tunnel interface, enter the keyword `tunnel`.
    - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
--- | ---
9.10(0.0) | Introduced on the S3148.
Usage Information

Use this command to create an object that tracks the routing state of an IPv6 Layer 3 interface:

- The status of the IPv6 interface is UP only if the Layer 2 status of the interface is UP and the interface has a valid IP address.
- The Layer 3 status of an IPv6 interface goes DOWN when its Layer 2 status goes down (for a Layer 3 VLAN, all VLAN ports must be down) or the IP address is removed from the routing table.

Related Commands

- `show track ipv6 route` – display information about tracked IPv6 routes, including configuration, current state, and clients which track the route.
- `track interface ip routing` – configure object tracking on the routing status of an IPv4 Layer 3 interface.

**track ipv6 route metric threshold**

Configure object tracking on the threshold of an IPv4 route metric.

Syntax

```
track object-id ipv6 route ipv6-address/prefix-len metric threshold
```

To return to the default setting, use the `no track object-id` command.

Parameters

- **object-id**
  - Enter the ID number of the tracked object. The range is 1 to 500.
- **ipv6-address/prefix-len**
  - Enter an IPv6 address in X:X::X format. The valid IPv6 prefix lengths are from /0 to /128.

Defaults

None

### track ipv6 route reachability

Configure object tracking on the reachability of an IPv6 route.

**Syntax**

```
track object-id ipv6 route ip-address/prefix-len reachability
```

To return to the default setting, use the `no track object-id` command.

**Parameters**

- **object-id**
  - Enter the ID number of the tracked object. The range is 1 to 500.
- **ipv6-address/prefix-len**
  - Enter an IPv6 address in X:XX:XX::X format. The valid IPv6 prefix lengths are from /0 to /128.

**Defaults**

None

**Command Modes**

CONFIGURATION
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Usage Information

Use this command to create an object that tracks the reachability of an IPv6 route. In order for a route’s reachability to be tracked, the route must appear as an entry in the routing table.

A tracked route is considered to match an entry in the routing table only if the exact IPv6 address and prefix length match a table entry. For example, when configured as a tracked route, 3333:100:200:300:400::/80 does not match routing table entry 3333:100:200:300::/64. If no route-table entry has the exact IPv6 address and prefix length, the tracked route is considered to be DOWN.

When you configure IPv6 route reachability as a tracked object, the UP/DOWN state of the tracked route is also determined by the entry of the next-hop address in the ARP cache. A tracked route is considered to be reachable if there is an ARP cache entry for the route’s next-hop address.

If the next-hop address in the ARP cache ages out for a route tracked for its reachability, an attempt is made to regenerate the ARP cache entry to if the next-hop address appears before considering the route DOWN.

Related Commands

- `show track ipv6 route` – display information about tracked IPv6 routes, including configuration, current state, and clients which track the route.
- `track ipv6 route reachability` – configure object tracking on the reachability of an IPv4 route.

**track resolution ipv6 route**

Configure the protocol-specific resolution value used to scale an IPv6 route metric.

**Syntax**

```
track resolution ipv6 route {isis resolution-value | ospf resolution-value}
```

To return to the default setting, use the `no track object-id` command.

**Parameters**

- `object-id` Enter the ID number of the tracked object. Use the range to 1 to 500.
- `isis resolution-value` Enter the resolution used to convert the metric in the routing table for ISIS routes to a scaled metric.
- `ospf resolution-value` Enter the resolution used to convert the metric in the routing table for OSPF routes to a scaled metric.
### Command Modes
- **CONFIGURATION**

### Command History
This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

#### Version Description
- **9.10(0.0)**
  Introduced on the S3148.
- **9.8(2.0)**
  Introduced on the S3100 series.
- **9.8(1.0)**
  Introduced on the Z9100-ON.
- **9.8(0.0P6)**
  Introduced on the S4048-ON.
- **9.8(0.0P2)**
  Introduced on the S3048-ON.
- **9.7(0.0)**
  Introduced on the S6000-ON.
- **8.3.12.0**
  Introduced on the S4810.
- **8.4.1.0**
  Introduced.

### Usage Information
Use this command to configure the protocol-specific resolution value that converts the actual metric of an IPv6 route in the routing table to a scaled metric in the range 0 to 255.

The UP/DOWN state of a tracked IPv6 route is determined by the user-configurable threshold (the `threshold metric` command) for a route’s metric in the routing table. To provide a common tracking interface for different clients, route metrics are scaled in the range 0 to 255, where 0 is connected and 255 is inaccessible.

The protocol-specific resolution value calculates the scaled metric by dividing a route's cost by the resolution value set for the route protocol:

- For ISIS, you can set the resolution in the range 1 to 1000, where the default is 10.
- For OSPF, you can set the resolution in the range 1 to 1592, where the default is 1.
- The resolution value used to map static routes is not configurable. By default, Dell Networking OS assigns a metric of 0 to static routes.
- The resolution value used to map RIP routes is not configurable. The RIP hop-count is automatically multiplied by 16 to scale it. For example, a RIP metric of 16 (unreachable) scales to 256, which considers the route to be DOWN.

### Related Commands
- `threshold metric` – configure the metric threshold used to determine the UP and/or DOWN state of a tracked route.
- `track ipv6 route metric threshold` – configure object tracking on the threshold of an IPv6 route metric.
Open Shortest Path First (OSPFv2 and OSPFv3)

Open Shortest Path First version 2 for IPv4 is supported on platform.
OSPF is an interior gateway protocol (IGP), which means that it distributes routing information between routers in a single autonomous system (AS). OSPF is also a link-state protocol in which all routers contain forwarding tables derived from information about their links to their neighbors.

The fundamental mechanisms of OSPF (flooding, DR election, area support, SPF calculations, and so on) are the same for OSPFv2 and OSPFv3. OSPFv3 runs on a per-link basis instead of on a per-IP-subnet basis.

The Dell Networking OS versions 9.4(0.0) and 9.7(0.0) introduce support for VRF on OSPFv2 and OSPFv3 respectively. The multi-process OSPF feature supported on Dell Networking OS version 7.8.1.0 is modified. In earlier versions, multiple OSPF processes were created without VRF (prior to 9.4(0.0)). In the Dell Networking OS versions 9.4(0.0) and 9.7(0.0) (for OSPFv3), multiple OSPF processes can be created on a router, but with only one OSPF process per VRF. However, there can be one OSPFv2 and one OSPFv3 on the same VRF.

This section is divided into two sections. There is no overlap between the two sets of commands. You cannot use an OSPFv2 command in the IPv6 OSPFv3 mode. OSPFv2 is supported on IPv4 tunnels only and OSPFv3 is supported on IPv6 tunnels only.

Topics:
- OSPFv2 Commands
- OSPFv3 Commands

OSPFv2 Commands

The Dell Networking implementation of OSPFv2 is based on IETF RFC 2328.

area default-cost

Set the metric for the summary default route the area border router (ABR) generates into the stub area. Use this command on the border routers at the edge of a stub area.

Syntax

```
area area-id default-cost cost
```

To return default values, use the `no area area-id default-cost` command.

Parameters

- `area-id` Specify the OSPF area in dotted decimal format (A.B.C.D.) or enter a number from zero (0) to 65535.
- `cost` Specifies the stub area's advertised external route metric. The range is from zero (0) to 65535.
Defaults

**cost = 1; no areas are configured.**

Command Modes

**ROUTER OSPF**

Command History

Usage Information

In the Dell Networking operating software (OS), **cost** is defined as reference bandwidth/bandwidth.

Related Commands

- **area stub** — create a stub area.

area nssa

Specify an area as a not so stubby area (NSSA).

**Syntax**

```
area area-id nssa [default-information-originate] [no-redistribution] [no-summary]
```

To delete an NSSA, use the no area area-id nssa command.

**Parameters**

- **area-id**  
  Specify the OSPF area in dotted decimal format (A.B.C.D.) or enter a number from zero (0) to 65535.

- **no-redistribution**  
  (OPTIONAL) Specify that the redistribute command does not distribute routes into the NSSA. Only use this command in an NSSA area border router (ABR).
**default-information-originate**

(Optional) Allows external routing information to be imported into the NSSA by using Type 7 default.

**no-summary**

(Optional) Specify that no summary LSAs should be sent into the NSSA.

**Defaults**

Not configured.

**Command Modes**

ROUTER OSPF

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**area range**

Summarize routes matching an address/mask at an area border router (ABR).

**Syntax**

```
area area-id range ip-address mask [not-advertise]
```

To disable route summarization, use the `no area area-id range ip-address mask` command.

**Parameters**

- **area-id**
  
  Specify the OSPF area in dotted decimal format (A.B.C.D.) or enter a number from zero (0) to 65535.

- **ip-address**
  
  Specify an IP address in dotted decimal format.
**mask**

Specify a mask for the destination prefix. Enter the full mask (for example, 255.255.255.0).

**not-advertise**

(OPTIONAL) Enter the keywords `not-advertise` to set the status to DoNotAdvertise (that is, the Type 3 summary-LSA is suppressed and the component networks remain hidden from other areas.)

**Defaults**

Not configured.

**Command Modes**

ROUTER OSPF

**Command History**

</table>

**Usage Information**

Only the routes within an area are summarized, and that summary is advertised to other areas by the ABR. External routes are not summarized.

**Related Commands**

- `area stub` — create a stub area.
- `router ospf` — enter ROUTER OSPF mode to configure an OSPF instance.

---

**area stub**

Configure a stub area, which is an area not connected to other areas.

**Syntax**

```
area area-id stub [no-summary]
```
To delete a stub area, use the `no area area-id stub` command.

**Parameters**

- `area-id`
  - Specify the OSPF area in dotted decimal format (A.B.C.D.) or enter a number from zero (0) to 65535.

- `no-summary`
  - (OPTIONAL) Enter the keywords `no-summary` to prevent the ABR from sending summary Link State Advertisements (LSAs) into the stub area.

**Defaults**

Disabled.

**Command Modes**

ROUTER OSPF

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Usage Information**

To configure all routers and access servers within a stub, use this command.

**Related Commands**

- `router ospf` — enter ROUTER OSPF mode to configure an OSPF instance.

---

**auto-cost**

Specify how the OSPF interface cost is calculated based on the reference bandwidth method.

**Syntax**

```
auto-cost [reference-bandwidth ref-bw]
```

**Usage Information**

To configure all routers and access servers within a stub, use this command.
To return to the default bandwidth or to assign cost based on the interface type, use the `no auto-cost [reference-bandwidth]` command.

**Parameters**

`ref-bw` *(OPTIONAL)* Specify a reference bandwidth in megabits per second. The range is from 1 to 4294967. The default is **100 megabits per second**.

**Defaults**

**100 megabits per second**

**Command Modes**

ROUTER OSPF

### clear ip ospf

Clear all OSPF routing tables.

**Syntax**

`clear ip ospf [vrf vrf-name] {process-id | process}`

**Parameters**

`process-id` Enter the OSPF Process ID to clear a specific process. If no Process ID is entered, all OSPF processes are cleared.

`vrf vrf-name` Enter the keyword `vrf` and then the name of the VRF to clear all OSPF routing tables corresponding to that VRF.
process

(OPTIONAL) Enter the keyword process to reset the OSPF process.

Command Modes

EXEC Privilege

Command History

9.2(1.0) Introduced on the Z9500.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the S4810.
7.8.1.0 Added support for the Multi-Process OSPF.
7.6.1.0 Introduced on the S-Series.
7.5.1.0 Introduced on the C-Series.
pre- 6.1.1.1 Introduced on the E-Series.

clear ip ospf statistics

Clear the packet statistics in interfaces and neighbors.

Syntax

clear ip ospf [process-id] [vrf vrf-name] statistics [interface name [neighbor router-id]]

Parameters

process-id Enter the OSPF Process ID to clear a specific process. If no Process ID is entered, all OSPF processes are cleared.

vrf vrf-name Enter the keyword vrf followed by the name of the VRF to clear all OSPF routing tables corresponding to that VRF.

statistics Enter the keyword statistics to clear the packet statistics in interfaces and neighbors.

interface name (OPTIONAL) Enter the keyword interface then one of the following interface keywords and slot/port or number information:

• For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
• For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
• For a VLAN, enter the keyword vlan then a number from 1 to 4094.
• For Port Channel groups, enter the keywords port-channel then a number.

neighbor router-id (OPTIONAL) Enter the keyword neighbor then the neighbor’s router-id in dotted decimal format (A.B.C.D).

Defaults
None

7.5.1.0 Introduced on the C-Series.
pre- 6.1.1.1 Introduced on the E-Series.

Related Commands
• show ip ospf statistics — display the OSPF statistics.
**debug ip ospf**

Display debug information on OSPF. Entering the `debug ip ospf` commands enables OSPF debugging for the first OSPF process.

**Syntax**

```
debug ip ospf [process-id] [vrf vrf-name] [bfd |event | packet | spf | database-timer rate-limit]
```

To cancel the debug command, use the `no debug ip ospf` command.

**Parameters**

- `process-id` Enter the OSPF Process ID to clear a specific process. If no Process ID is entered, all OSPF processes are cleared.
- `vrf vrf-name` Enter the keyword `vrf` to view debugging information on OSPF corresponding to that VRF.
- `bfd` (OPTIONAL) Enter the keyword `bfd` to debug only OSPF BFD information.
- `event` (OPTIONAL) Enter the keyword `event` to debug only OSPF event information.
- `packet` (OPTIONAL) Enter the keyword `packet` to debug only OSPF packet information.
- `spf` (OPTIONAL) Enter the keyword `spf` to display the Shortest Path First information.
- `database-timer rate-limit` (OPTIONAL) Enter the keywords `database-timer rate-limit` to display the LSA throttling timer information. This applies to the S4810 platform only.

**Command Modes**

`EXEC Privilege`

**Command History**

</tbody>
</table>
| t:    | Displays the type of packet sent:  
|       | • 1 - Hello packet  
|       | • 2 - database description  
|       | • 3 - link state request  
|       | • 4 - link state update  
|       | • 5 - link state acknowledgement |
| l:    | Displays the packet length. |
| rid:  | Displays the OSPF router ID. |
| aid:  | Displays the Autonomous System ID. |
| chk:  | Displays the OSPF checksum. |
| aut:  | States if OSPF authentication is configured. One of the following is listed:  
|       | • 0 - no authentication configured  
|       | • 1 - simple authentication configured using the `ip ospf authentication-key` command  
|       | • 2 - MD5 authentication configured using the `ip ospf message-digest-key` command |
| auk:  | If the `ip ospf authentication-key` command is configured, this field displays the key used. |
| keyid:| If the `ip ospf message-digest-key` command is configured, this field displays the MD5 key |
| to:   | Displays the interface to which the packet is intended. |
| dst:  | Displays the destination IP address. |
| netmask: | Displays the destination IP address mask. |
| pri:  | Displays the OSPF priority |
| N, MC, E, T | Displays information available in the Options field of the HELLO packet:  
|       | • N + (N-bit is set)  
|       | • N - (N-bit is not set)  
|       | • MC+ (bit used by MOSPF is set and router is able to forward IP multicast packets)  
|       | • MC- (bit used by MOSPF is not set and router cannot forward IP multicast packets)  
|       | • E + (router is able to accept AS External LSAs) |
Field | Description
--- | ---
• E - (router cannot accept AS External LSAs)  
• T + (router can support TOS)  
• T - (router cannot support TOS)

hi: | Displays the amount of time configured for the HELLO interval.
di: | Displays the amount of time configured for the DEAD interval.
dr: | Displays the IP address of the designated router.
bdr: | Displays the IP address of the Border Area Router.

**Example**

```bash
dell# debug ip ospf 1 packet
OSPF process 90, packet debugging is on

dell#
08:14:24 : OSPF(100:00):
  Xmt. v:2 t:1(HELLO) 1:44 rid:192.1.1.1

    netmask:255.255.255.0 pri:1 N-, MC-, E+, T-, hi:10 di:40 dr:90.1.1.1 bdr:0.0.0.0
```

default-information originate

To generate a default external route into an OSPF routing domain, configure Dell Networking Operating System (OS).

**Syntax**

default-information originate [always] [metric metric-value] [metric-type type-value] [route-map map-name]

To return to the default values, use the `no default-information originate` command.

**Parameters**

- **always**  
  (OPTIONAL) Enter the keyword `always` to specify that default route information must always be advertised.

- **metric metric-value**  
  (OPTIONAL) Enter the keyword `metric` then a number to configure a metric value for the route. The range is from 1 to 16777214.

- **metric-type type-value**  
  (OPTIONAL) Enter the keywords `metric-type` then an OSPF link state type of 1 or 2 for default routes. The values are:
    - 1 = Type 1 external route
    - 2 = Type 2 external route

- **route-map map-name**  
  (OPTIONAL) Enter the keywords `route-map` then the name of an established route map.

**Defaults**  
Disabled.

**Command Modes**  
ROUTER OSPF

**Command History**

**Related Commands**

- redistribute — redistributes routes from other routing protocols into OSPF.

## default-metric

Change the metrics of redistributed routes to a value useful to OSPF. Use this command with the redistribute command.

**Syntax**

```
default-metric number
```

To return to the default values, use the **no default-metric [number]** command.

**Parameters**

- **number**
  - Enter a number as the metric. The range is from 1 to 16777214.

**Defaults**

Disabled.

**Command Modes**

ROUTER OSPF

**Command History**

7.5.1.0 | Introduced on the C-Series.
pre- 6.1.1.1 | Introduced on the E-Series.

Related Commands
- `show ip ospf asbr` — display the VLAN configuration.

**distance**

Define an administrative distance for particular routes to a specific IP address.

**Syntax**

distance weight [ip-address mask access-list-name]

To delete the settings, use the `no distance weight [ip-address mask access-list-name]` command.

**Parameters**

- **weight**
  Specify an administrative distance. The range is from 1 to 255. The default is 110.

- **ip-address**
  (OPTIONAL) Enter a router ID in the dotted decimal format. If you enter a router ID, include the mask for that router address.

- **mask**
  (OPTIONAL) Enter a mask in dotted decimal format or /n format.

- **access-list-name**
  (OPTIONAL) Enter the name of an IP standard access list, up to 140 characters.

**Defaults**

110

**Command Modes**

- ROUTER OSPF

**Command History**

9.8(0.0P5) | Introduced on the S4048-ON.
distance ospf

Configure an OSPF distance metric for different types of routes.

Syntax

```
distance ospf [external dist3] [inter-area dist2] [intra-area dist1]
```

To delete these settings, use the `no distance ospf` command.

Parameters

- **external dist3** (OPTIONAL) Enter the keyword `external` then a number to specify a distance for external type 5 and 7 routes. The range is from 1 to 255. The default is **110**.
- **inter-area dist2** (OPTIONAL) Enter the keywords `inter-area` then a number to specify a distance metric for routes between areas. The range is from 1 to 255. The default is **110**.
- **intra-area dist1** (OPTIONAL) Enter the keywords `intra-area` then a number to specify a distance metric for all routes within an area. The range is from 1 to 255. The default is **110**.

Defaults

- `external dist3 = 110`
- `inter-area dist2 = 110`
- `intra-area dist1 = 110`

Command Modes

- **ROUTER OSPF**

</table>

**Usage Information**
To specify a distance for routes learned from other routing domains, use the `redistribute` command.

### distribute-list in

Apply a filter to incoming routing updates from OSPF to the routing table.

**Syntax**
```
distribute-list prefix-list-name in [interface]
```

To delete a filter, use the `no distribute-list prefix-list-name in [interface]` command.

**Parameters**
- **prefix-list-name**
  - Enter the name of a configured prefix list.
- **interface**
  - (OPTIONAL) Enter one of the following keywords and slot/port or number information:
    - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
    - For Port Channel groups, enter the keywords `port-channel` then a number.
    - For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults**
Not configured.

**Command Modes**
- ROUTER OSPF

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.
### distribute-list out

To restrict certain routes destined for the local routing table after the SPF calculation, apply a filter.

**Syntax**
```
distribute-list prefix-list-name out [bgp | connected | isis | rip | static]
```

To remove a filter, use the **no distribute-list prefix-list-name out [bgp | connected | isis | rip | static]** command.

**Parameters**
- `prefix-list-name` Enter the name of a configured prefix list.
- `bgp` (OPTIONAL) Enter the keyword `bgp` to specify that BGP routes are distributed.
  
  **NOTE:** BGP and ISIS routes are not available on the C-Series. BGP, ISIS, and RIP routes are not available on the S-Series.

- `connected` (OPTIONAL) Enter the keyword `connected` to specify that connected routes are distributed.

- `isis` (OPTIONAL) Enter the keyword `isis` to specify that IS-IS routes are distributed.
  
  **NOTE:** BGP and ISIS routes are not available on the C-Series. BGP, ISIS, and RIP routes are not available on the S-Series.

- `rip` (OPTIONAL) Enter the keyword `rip` to specify that RIP routes are distributed.
NOTE: BGP and ISIS routes are not available on the C-Series. BGP, ISIS, and RIP routes are not available on the S-Series.

static

(OPTIONAL) Enter the keyword static to specify that only manually configured routes are distributed.

Defaults

Not configured.

Command Modes

ROUTER OSPF

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>

Usage Information

The distribute-list out command applies to routes autonomous system boundary routers (ASBRs) redistributes into OSPF. It can be applied to external type 2 and external type 1 routes, but not to intra-area and inter-area routes.

fast-convergence

This command sets the minimum LSA origination and arrival times to zero (0), allowing more rapid route computation so that convergence takes less time.

Syntax

fast-convergence {number}

To cancel fast-convergence, use the no fast convergence command.

1128 Open Shortest Path First (OSPFv2 and OSPFv3)
Parameters  

number  
Enter the convergence level desired. The higher this parameter is set, the faster OSPF converge takes place. The range is from 1 to 4.

Defaults  

None.

Command Modes  

ROUTER OSPF

Command History  

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>

<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on all platforms.</td>
</tr>
</tbody>
</table>

Usage Information  
The higher this parameter is set, the faster OSPF converge takes place.

**NOTE:** The faster the convergence, the more frequent the route calculations and updates. This behavior impacts CPU utilization and may impact adjacency stability in larger topologies.

Generally, convergence level 1 meets most convergence requirements. Higher convergence levels should only be selected following consultation with Dell Networking technical support.

graceful-restart grace-period

Specifies the time duration, in seconds, that the router's neighbors continue to advertise the router as fully adjacent regardless of the synchronization state during a graceful restart.

**NOTE:** This command enables OSPFv2 graceful restart globally by setting the grace period (in seconds) that an OSPFv2 router's neighbors continues to advertise the router as adjacent during a graceful restart.

Syntax  
graceful-restart grace-period seconds
To disable the grace period, use the no graceful-restart grace-period command.
Parameters

seconds

Time duration, in seconds, that specifies the duration of the restart process before OSPF terminates the process. The range is from 40 to 1800 seconds.

Defaults

Not Configured

Command Modes

ROUTER OSPF

Command History

</tbody>
</table>

Usage Information

The Helper mode is enabled by default on the device. To enable the restart mode also on the device, you must configure the grace period using this command. After you enable restart mode the router advertises the neighbor as fully adjacent during a restart.

graceful-restart helper-reject

Specify the OSPF router to not act as a helper during graceful restart.

Syntax

graceful-restart helper-reject ip-address

To return to default value, use the no graceful-restart helper-reject command.

Parameters

ip-address

Enter the OSPF router-id, in IP address format, of the restart router that will not act as a helper during graceful restart.
graceful-restart mode

Enable the graceful restart mode.

Syntax

```
graceful-restart mode [planned-only | unplanned-only]
```

To disable graceful restart mode, use the `no graceful-restart mode` command.

Parameters

- `planned-only` (OPTIONAL) Enter the keywords `planned-only` to indicate graceful restart is supported in a planned restart condition only.
- `unplanned-only` (OPTIONAL) Enter the keywords `unplanned-only` to indicate graceful restart is supported in an unplanned restart condition only.

Defaults

Support for both planned and unplanned failures.

Command Modes

- ROUTER OSPF
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

### graceful-restart role

Specify the role for your OSPF router during graceful restart.

**Syntax**

```
graceful-restart role [helper-only | restart-only]
```

To disable graceful restart role, use the no graceful-restart role command.

**Parameters**

- `role helper-only`  
  (OPTIONAL) Enter the keywords helper-only to specify the OSPF router is a helper only during graceful restart.

- `role restart-only`  
  (OPTIONAL) Enter the keywords restart-only to specify the OSPF router is a restart only during graceful-restart.

**Defaults**

By default, OSPF routers are both helper and restart routers during a graceful restart.

**Command Modes**

ROUTER OSPF

**Command History**

ip ospf auth-change-wait-time

OSPF provides a grace period while OSPF changes its interface authentication type. During the grace period, OSPF sends out packets with new and old authentication scheme until the grace period expires.

**Syntax**

```
ip ospf auth-change-wait-time seconds
```

To return to the default, use the `no ip ospf auth-change-wait-time` command.

**Parameters**

- **seconds**
  
  Enter the seconds. The range is from 0 to 300.

**Defaults**

Zero (0) seconds.

9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
7.6.1.0 | Introduced on the S-Series.
7.5.1.0 | Introduced on the C-Series.
pre-6.1.1.1 | Introduced on the E-Series.

**ip ospf authentication-key**

Enable authentication and set an authentication key on OSPF traffic on an interface.

**Syntax**

```
ip ospf authentication-key [encryption-type] key
```

To delete an authentication key, use the no ip ospf authentication-key command.

**Parameters**

- **encryption-type** (OPTIONAL) Enter 7 to encrypt the key.
- **key**
  
Enter an eight-character string. Strings longer than eight characters are truncated.

**Defaults**

Not configured.

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
--- | ---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100-ON.
9.8(0.0P6) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.7(0.0) | Introduced on the S6000-ON.
9.2(1.0) | Introduced on the Z9500.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
Usage Information

All neighboring routers in the same network must use the same password to exchange OSPF information.

ip ospf cost

Change the cost associated with the OSPF traffic on an interface.

Syntax

```
ip ospf cost cost
To return to default value, use the no ip ospf cost command.
```

Parameters

- **cost**
  
  Enter a number as the cost. The range is from 1 to 65535.

Defaults

The default cost is based on the reference bandwidth.

Command Modes

```
INTERFACE
```

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>
Usage Information

If this command is not configured, cost is based on the auto-cost command. When you configure OSPF over multiple vendors, to ensure that all routers use the same cost, use the ip ospf cost command. Otherwise, OSPF routes improperly.

Related Commands

- auto-cost — control how the OSPF interface cost is calculated.

ip ospf dead-interval

Set the time interval since the last hello-packet was received from a router. After the interval elapses, the neighboring routers declare the router dead.

Syntax

ip ospf dead-interval seconds

to return to the default values, use the no ip ospf dead-interval command.

Parameters

seconds Enter the number of seconds for the interval. The range is from 1 to 65535. The default is 40 seconds.

Defaults

40 seconds

Command Modes

INTERFACE

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description

9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100-ON.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.2(1.0) Introduced on the Z9500.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
8.3.7.0 Introduced on the S4810.
7.6.1.0 Introduced on the S-Series.
7.5.1.0 Introduced on the C-Series.
By default, the dead interval is four times the default hello-interval.

**ip ospf hello-interval**

Specify the time interval between the hello packets sent on the interface.

**Syntax**

```
ip ospf hello-interval seconds
```

To return to the default value, use the `no ip ospf hello-interval` command.

**Parameters**

- **seconds**
  - Enter the number of seconds for the interval. The range is from 1 to 65535. The default is 10 seconds.

**Defaults**

10 seconds

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version**

- 9.10(0.0)  Introduced on the S3148.
- 9.8(2.0)  Introduced on the S3100 series.
- 9.8(1.0)  Introduced on the Z9100-ON.
- 9.8(0.0P5) Introduced on the S4048-ON.
- 9.8(0.0P2)  Introduced on the S3048-ON.
- 9.7(0.0)  Introduced on the S6000-ON.
- 9.2(1.0)  Introduced on the Z9500.
- 9.0.2.0  Introduced on the S6000.
- 8.3.19.0  Introduced on the S4820T.
- 8.3.11.1  Introduced on the Z9000.
- 8.3.7.0  Introduced on the S4810.
- 7.6.1.0  Introduced on the S-Series.
- 7.5.1.0  Introduced on the C-Series.
- pre- 6.1.1.1  Introduced on the E-Series.
The time interval between the hello packets must be the same for routers in a network.

- `ip ospf dead-interval` — set the time interval before a router is declared dead.

**ip ospf message-digest-key**

Enable OSPF MD5 authentication and send an OSPF message digest key on the interface.

**Syntax**

```
ip ospf message-digest-key keyid md5 key
```

To delete a key, use the `no ip ospf message-digest-key keyid` command.

**Parameters**

- `keyid` Enter a number as the key ID. The range is from 1 to 255.
- `key` Enter a continuous character string as the password.

**Defaults**

No MD5 authentication is configured.

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>
### Usage Information

You can configure a maximum of six digest keys on an interface. Of the available six digest keys, the switches select the MD5 key that is common. The remaining MD5 keys are unused.

To change to a different key on the interface, enable the new key while the old key is still enabled. Dell Networking OS sends two packets: the first packet authenticated with the old key and the second packet authenticated with the new key. This process ensures that the neighbors learn the new key and communication is not disrupted by keeping the old key enabled.

After the reply is received and the new key is authenticated, delete the old key. Dell recommends keeping only one key per interface.

**NOTE:** The MD5 secret is stored as plain text in the configuration file with service password encryption. Write down or otherwise record the key. You cannot learn the key once it is configured. Use caution when changing the key.

### ip ospf mtu-ignore

Disable OSPF MTU mismatch detection upon receipt of database description (DBD) packets.

**Syntax**

```
ip ospf mtu-ignore
```

To return to the default, use the `no ip ospf mtu-ignore` command.

**Defaults**

Enabled.

**Command Modes**

INTERFACE

**Command History**

</table>
ip ospf network

Set the network type for the interface.

Syntax

    ip ospf network {broadcast | point-to-point}

To return to the default, use the no ip ospf network command.

Parameters

- **broadcast**: Enter the keyword broadcast to designate the interface as part of a broadcast network.
- **point-to-point**: Enter the keywords point-to-point to designate the interface as part of a point-to-point network.

Defaults

Broadcast.

Command Modes

- **ROUTER OSPF**

Command History

</tr>
</tbody>
</table>

Usage Information

Setting a priority of 0 makes the router ineligible for election as a designated router or backup designated router.

Use this command for interfaces connected to multi-access networks, not point-to-point networks.
**ip ospf retransmit-interval**

Set the retransmission time between lost link state advertisements (LSAs) for adjacencies belonging to the interface.

**Syntax**

```
ip ospf retransmit-interval seconds
```

To return to the default values, use the `no ip ospf retransmit-interval` command.

**Parameters**

- **seconds**
  
Enter the number of seconds as the interval between retransmission. The range is from 1 to 3600. The default is **5 seconds**.
  
  This interval must be greater than the expected round-trip time for a packet to travel between two routers.

**Defaults**

- **5 seconds**

**Command Modes**

- **INTERFACE**

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
<tr>
<td>pre- 6.1.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

Set the time interval to a number large enough to prevent unnecessary retransmissions.
ip ospf transmit-delay

To send a link state update packet on the interface, set the estimated time elapsed.

Syntax

```
ip ospf transmit-delay seconds
```

To return to the default value, use the `no ip ospf transmit-delay` command.

Parameters

- **seconds**: Enter the number of seconds as the interval between retransmission. The range is from 1 to 3600. The default is **1 second**.
  This value must be greater than the transmission and propagation delays for the interface.

Defaults

- **1 second**

Command Modes

**maximum-paths**

Enable the software to forward packets over multiple paths.

**Syntax**

```markdown
maximum-paths number
```
To disable packet forwarding over multiple paths, use the `no maximum-paths` command.

### Parameters

**number**

Specify the number of paths. The range for OSPFv2 is from 1 to 64. The default for OSPFv2 is **4 paths**. The range for OSPFv3 is from 1 to 64. The default for OSPFv3 is **8 paths**.

### Defaults

**4**

---

**network area**

Define which interfaces run OSPF and the OSPF area for those interfaces.

### Syntax

```
network ip-address mask area area-id
```

To disable an OSPF area, use the `no network ip-address mask area area-id` command.
**Parameters**

- **ip-address**
  Specify a primary or secondary address in dotted decimal format. The primary address is required before adding the secondary address.

- **mask**
  Enter a network mask in /prefix format. (/x)

- **area-id**
  Enter the OSPF area ID as either a decimal value or in a valid IP address. Decimal value range is from 0 to 65535. IP address format is dotted decimal format A.B.C.D.

  **NOTE:** If the area ID is smaller than 65535, it is converted to a decimal value. For example, if you use an area ID of 0.0.0.1, it is converted to 1.

**Command Modes**

- **ROUTER OSPF**

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</table>

**Usage Information**

To enable OSPF on an interface, the network area command must include, in its range of addresses, the primary IP address of an interface.

**NOTE:** An interface can be attached only to a single OSPF area.

If you delete all the network area commands for Area 0, the show ip ospf command output does not list Area 0.
**passive-interface**

Suppress both receiving and sending routing updates on an interface.

**Syntax**

```
passive-interface {default | interface}
```

To enable both the receiving and sending routing, use the `no passive-interface interface` command.

To return all OSPF interfaces (current and future) to active, use the `no passive-interface default` command.

**Parameters**

- **default**
  - Enter the keyword `default` to make all OSPF interfaces (current and future) passive.

- **interface**
  - Enter the following keywords and slot/port or number information:
    - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
    - For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

**Command Modes**

- ROUTER OSPF

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>
Usage Information

Although the passive interface does not send or receive routing updates, the network on that interface is still included in OSPF updates sent using other interfaces.

The `default` keyword sets all interfaces as passive. You can then configure individual interfaces, where adjacencies are desired, using the `no passive-interface interface` command. The `no` form of this command is inserted into the configuration for individual interfaces when the `no passive-interface interface` command is issued while `passive-interface default` is configured.

This command behavior has changed as follows:

- **passive-interface interface**
  - The previous `no passive-interface interface` is removed from the running configuration.
  - The ABR status for the router is updated.
  - Save `passive-interface interface` into the running configuration.

- **passive-interface default**
  - All present and future OSPF interfaces are marked as `passive`.
  - Any adjacency is explicitly terminated from all OSPF interfaces.
  - All previous `passive-interface interface` commands are removed from the running configuration.
  - All previous `no passive-interface interface` commands are removed from the running configuration.

- **no passive-interface interface**
  - Remove the interface from the passive list.
  - The ABR status for the router is updated.
  - If `passive-interface default` is specified, then save `no passive-interface interface` into the running configuration.

- **no passive-interface default**
  - Clear everything and revert to the default behavior.
  - All previously marked passive interfaces are removed.
  - May update ABR status.

On configuring suppression using the `passive-interface command`, the state of the OSPF neighbor does not change to INIT; instead, the state of the OSPF neighbor changes to DOWN after the dead-timer expires.
**redistribute**

Redistribute information from another routing protocol throughout the OSPF process.

Syntax

```
redistribute {connected | isis | ospf | rip | static} [metric metric-value | metric-type type-value] [route-map map-name] [tag tag-value]
```

To disable redistribution, use the `no redistribute {connected | isis | rip | static}` command.

Parameters

- **connected**: Enter the keyword `connected` to specify that information from active routes on interfaces is redistributed.
- **isis**: Enter the keyword `isis` to specify that ISO IS-IS information is redistributed.
- **ospf**: Enter the keyword `ospf` to specify that information corresponding to OSPF is redistributed.
- **rip**: Enter the keyword `rip` to specify that RIP routing information is redistributed.
- **static**: Enter the keyword `static` to specify that information from static routes is redistributed.
- **metric metric-value**: (OPTIONAL) Enter the keyword `metric` then a number. The range is from 0 (zero) to 16777214.
- **metric-type type-value**: (OPTIONAL) Enter the keywords `metric-type` then one of the following:
  - 1 = OSPF External type 1
  - 2 = OSPF External type 2
- **route-map map-name**: (OPTIONAL) Enter the keywords `route-map` then the name of the route map.
- **tag tag-value**: (OPTIONAL) Enter the keyword `tag` then a number. The range is from 0 to 4294967295.

Defaults

Not configured.

Command Modes

- **ROUTER OSPF**

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking \*OS Command Line Reference Guide.

</tr>
</tbody>
</table>
Usage Information

To redistribute the default route (0.0.0.0/0), configure the `default-information originate` command. Despite removing an OSPF process globally, the OSPF process is not completely removed from the BGP configuration.

Related Commands

- `default-information originate` — generate a default route into the OSPF routing domain.

redistribute bgp

Redistribute BGP routing information throughout the OSPF instance.

Syntax

```
redistribute bgp as number [metric metric-value] | [metric-type type-value] | [tag tag-value]
```

To disable redistribution, use the `no redistribute bgp as number [metric metric-value] | [metric-type type-value] | [route-map map-name] | [tag tag-value]` command.

Parameters

- **as number**
  
  Enter the autonomous system number. The range is from 1 to 65535.

- **metric metric-value**
  
  (OPTIONAL) Enter the keyword `metric` then the metric-value number. The range is from 0 to 16777214.

- **metric-type type-value**
  
  (OPTIONAL) Enter the keywords `metric-type` then one of the following:
  - 1 = for OSPF External type 1
  - 2 = for OSPF External type 2

- **route-map map-name**
  
  (OPTIONAL) Enter the keywords `route-map` then the name of the route map.

- **tag tag-value**
  
  (OPTIONAL) Enter the keyword `tag` to set the tag for routes redistributed into OSPF. The range is from 0 to 4294967295.

Defaults

None

Command Modes

- ROUTER OSPF
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>

**redistribute isis**

Redistribute IS-IS routing information throughout the OSPF instance.

**Syntax**

```
redistribute isis [tag] [level-1 | level-1-2 | level-2] [metric metric-value | metric-type type-value] [route-map map-name] [tag tag-value]
```

To disable redistribution, use the `no redistribute isis [tag] [level-1 | level-1-2 | level-2] [metric metric-value | metric-type type-value] [route-map map-name] [tag tag-value]` command.

**Parameters**

- **tag** (OPTIONAL) Enter the name of the IS-IS routing process.
- **level-1** (OPTIONAL) Enter the keywords level-1 to redistribute only IS-IS Level-1 routes.
- **level-1-2** (OPTIONAL) Enter the keywords level-1-2 to redistribute both IS-IS Level-1 and Level-2 routes.
- **level-2** (OPTIONAL) Enter the keywords level-2 to redistribute only IS-IS Level-2 routes.
**metric** metric-value  
(OPTIONAL) Enter the keyword `metric` then a number. The range is from 0 (zero) to 4294967295.

**metric-type** type-value  
(OPTIONAL) Enter the keywords `metric-type` then one of the following:
- 1 = for OSPF External type 1
- 2 = for OSPF External type 2

**route-map** map-name  
(OPTIONAL) Enter the keywords `route-map` then the name of the route map.

**tag** tag-value  
(OPTIONAL) Enter the keyword `tag` to set the tag for routes redistributed into OSPF. The range is from 0 to 4294967295.

**Defaults**  
Not configured.

**Command Modes**  
`ROUTER OSPF`

**Command History**  
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</table>

**router-id**

To configure a fixed router ID, use this command.

**Syntax**  
`router-id ip-address`

1152 | Open Shortest Path First (OSPFv2 and OSPFv3)
To remove the fixed router ID, use the `no router-id ip-address` command.

**Parameters**

- **ip-address**
  
Enter the router ID in the IP address format.

**Defaults**

None.

**Command Modes**

ROUTER OSPF

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>pre-6.1.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

You can configure an arbitrary value in the IP address format for each router. However, each router ID must be unique. If you use this command on an OSPF router process, which is already active (that is, has neighbors), a prompt reminding you that changing the router-id brings down the existing OSPF adjacency. The new router ID is effective at the next reload.

**Example**

```
Dell(conf)# router ospf 100
Dell(conf-router_ospf)# router-id 1.1.1.1
Changing router-id will bring down existing OSPF adjacency [y/n]:

Dell(conf-router_ospf)# show config
!
router ospf 100
router-id 1.1.1.1
Dell(conf-router_ospf)# no router-id
Changing router-id will bring down existing OSPF adjacency [y/n]:

Dell#
```
To configure an OSPF instance, enter ROUTER OSPF mode.

```
routing ospf process-id [vrf {vrf name}]
```

To clear an OSPF instance, use the `no router ospf process-id` command.

**Parameters**
- **process-id**
  - Enter a number for the OSPF instance. The range is from 1 to 65535.
- **vrf name**
  - (Optional) Enter the VRF process identifier to tie the OSPF instance to the VRF. All network commands under this OSPF instance are then tied to the VRF instance.

**Defaults**
Not configured.

**Command Modes**
CONFIGURATION

Example

Dell(conf-router_ospf)# show config
!
router ospf 3
passive-interface 0 GigabitEthernet 1/1
Dell(conf-router_ospf)#
show ip ospf

Display information on the OSPF process configured on the switch.

Syntax

```
show ip ospf [process-id | vrf vrf-name]
```

Parameters

- `process-id` Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.
- `vrf vrf-name` Show only the OSPF information tied to the VRF process.

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>

Usage Information

If you delete all the network area commands for Area 0, the `show ip ospf` command output does not list Area 0.
The following describes the `show ip ospf` command shown in the following example.

<table>
<thead>
<tr>
<th>Line Beginning with</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>“Routing Process...”</td>
<td>Displays the OSPF process ID and the IP address associated with the process ID.</td>
</tr>
<tr>
<td>“Supports only...”</td>
<td>Displays the number of Type of Service (TOS) rouse supported.</td>
</tr>
<tr>
<td>“SPF schedule...”</td>
<td>Displays the delay and hold time configured for this process ID.</td>
</tr>
<tr>
<td>“Convergence Level”</td>
<td>Displays the intervals set for LSA transmission and acceptance.</td>
</tr>
<tr>
<td>“Number of...”</td>
<td>Displays the number and type of areas configured for this process ID.</td>
</tr>
</tbody>
</table>

**Example**

```plaintext
Dell# show ip ospf 10
Routing Process ospf 10 with ID 1.1.1.1 Virtual router default-vrf
Supports only single TOS (TOS0) routes
SPF schedule delay 5 secs, Hold time between two SPFs 10 secs
Convergence Level 0
Min LSA origination 0 msec, Min LSA arrival 1000 msec
Min LSA hold time 5000 msec, Max LSA wait time 5000 msec
Number of area in this router is 1, normal 1 stub 0 nssa 0
  Area BACKBONE (0)
     Number of interface in this area is 1
     SPF algorithm executed 205 times
     Area ranges are
Dell#
```

**Related Commands**

- `show ip ospf database` — display information about the OSPF routes configured.
- `show ip ospf interface` — display the OSPF interfaces configured.
- `show ip ospf neighbor` — display the OSPF neighbors configured.

### show ip ospf asbr

Display all autonomous system boundary router (ASBR) routers visible to OSPF.

**Syntax**

```
show ip ospf [process-id | vrf vrf-name] asbr
```

**Parameters**

- **process-id**
  
Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.

**Defaults**

None

**Command Modes**

- EXEC
- EXEC Privilege
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the C-Series and E-Series.</td>
</tr>
</tbody>
</table>

### Usage Information

To isolate problems with external routes, use this command. In OSPF, external routes are calculated by adding the LSA cost to the cost of reaching the ASBR router. If an external route does not have the correct cost, use this command to determine if the path to the originating router is correct. The display output is not sorted in any order.

**NOTE:** ASBRs that are not in directly connected areas are also displayed.

You can determine if an ASBR is in a directly connected area (or not) by the flags. For ASBRs in a directly connected area, E flags are set. In the following example, router 1.1.1.1 is in a directly connected area since the Flag is E/-/-/. For remote ASBRs, the E flag is clear (-/-/-).

### Example

```plaintext
Dell# show ip ospf 1 asbr
RouterID  Flags   Cost  Nexthop   Interface Area
3.3.3.3    -/-/-/  2   10.0.0.2  Gi 1/1    1
1.1.1.1    E/-/-/  0   0.0.0.0   -         0
Dell#
```

### show ip ospf database

Display all LSA information. If you do not enable OSPF on the switch, no output is generated.

**Syntax**

```
show ip ospf process-id [vrf vrf-name] database [database-summary]
```
Parameters

- **process-id**
  Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.

- **vrf vrf-name**
  Enter the keyword vrf and then the name of the VRF to view LSA information on OSPF processes corresponding to that VRF.

- **database-summary**
  (OPTIONAL) Enter the keywords database-summary to the display the number of LSA types in each area and the total number of LSAs.

Command Modes

- EXEC
- EXEC Privilege

**Related Commands**

- `show ip ospf database asbr-summary` — display only ASBR summary LSA information.

---

**show ip ospf database asbr-summary**

Display information about autonomous system (AS) boundary LSAs.

**Syntax**

`show ip ospf [process-id | vrf vrf-name] database asbr-summary [link-state-id] [adv-router ip-address]`

**Parameters**

- `process-id` Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.
- `link-state-id` (OPTIONAL) Specify LSA ID in dotted decimal format. The LSA ID value depends on the LSA type, and it can be one of the following:
  - the network’s IP address for Type 3 LSAs or Type 5 LSAs
  - the router’s OSPF router ID for Type 1 LSAs or Type 4 LSAs
  - the default destination (0.0.0.0) for Type 5 LSAs
- `adv-router ip-address`
**adv-router ip-address**  (OPTIONAL) Enter the keywords adv-router and the ip-address to display only the LSA information about that router.

**Command Modes**
- EXEC
- EXEC Privilege

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
--- | ---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100-ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.7(0.0) | Introduced on the S6000-ON.
9.2(1.0) | Introduced on the Z9500.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
7.8.1.0 | Added support for Multi-Process OSPF.
7.6.1.0 | Introduced on the S-Series.
7.5.1.0 | Introduced on the C-Series.
pre- 6.1.1.1 | Introduced on the E-Series.

**Usage Information**
The following describes the `show ip ospf database asbr-summary` command shown in the following example.

**Field** | **Description**
--- | ---
LS Age | Displays the LSA's age.
Options | Displays the optional capabilities available on router. The following options can be found in this item:
- TOS-capability or No TOS-capability is displayed depending on whether the router can support Type of Service.
- DC or No DC is displayed depending on whether the originating router can support OSPF over demand circuits.
- E or No E is displayed on whether the originating router can accept AS External LSAs.
LS Type | Displays the LSA's type.
Link State ID | Displays the Link State ID.
Advertising Router | Identifies the advertising router's ID.
### Field Description

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Checksum</td>
<td>Displays the Fletcher checksum of the LSA's complete contents.</td>
</tr>
<tr>
<td>Length</td>

<tr>
<td>Network Mask</td>
<td>Displays the network mask implemented on the area.</td>
</tr>
<tr>
<td>TOS</td>
<td>Displays the Type of Service (TOS) options. Option 0 is the only option.</td>
</tr>
<tr>
<td>Metric</td>
<td>Displays the LSA metric.</td>
</tr>
</tbody>
</table>

### Example

```
Dell# show ip ospf 100 database asbr-summary

OSPF Router with ID (1.1.1.10) (Process ID 100)
  Summary Asbr (Area 0.0.0.0)
  LS age: 1437
  Options: (No TOS-capability, No DC, E)
  LS type: Summary Asbr
  Link State ID: 103.1.50.1
  Advertising Router: 1.1.1.10
  LS Seq Number: 0x8000000f
  Checksum: 0x8221
  Length: 28
  Network Mask: /0
    TOS: 0 Metric: 2

LS age: 473
Options: (No TOS-capability, No DC, E)
LS type: Summary Asbr
Link State ID: 104.1.50.1
Advertising Router: 1.1.1.10
LS Seq Number: 0x80000010
Checksum: 0x4198
Length: 28
--More--
```

### Related Commands

- `show ip ospf database` — display OSPF database information.

### show ip ospf database external

Display information on the AS external (type 5) LSAs.

#### Syntax

```
show ip ospf [process-id | vrf vrf-name] database external [link-state-id] [adv-router ip-address]
```

#### Parameters

- `process-id`  
Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.

- `vrf vrf-name`  
Enter the keyword vrf followed by the name of the VRF to view information on AS external LSAs corresponding to the OSPF processes that are tied to a specific VRF.

- `link-state-id`  
  (OPTIONAL) Specify LSA ID in dotted decimal format. The LSA ID value depends on the LSA type, and it can be one of the following:
adv-router ip-address  (OPTIONAL) Enter the keywords adv-router and the ip-address to display only the LSA information about that router.

Command Modes

- EXEC
- EXEC Privilege

        Metrics: 1
        Forward Address: 0.0.0.0
        External Route Tag: 701

Dell#
```
show ip ospf database network

Display the network (type 2) LSA information.

Syntax

```
show ip ospf [process-id] database network [link-state-id] [adv-router ip-address]
```

Parameters

- **process-id**
  - Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.

- **link-state-id**
  - (OPTIONAL) Specify LSA ID in dotted decimal format. The LSA ID value depends on the LSA type, and it can be one of the following:
    - the network's IP address for Type 3 LSAs or Type 5 LSAs
    - the router's OSPF router ID for Type 1 LSAs or Type 4 LSAs
    - the default destination (0.0.0.0) for Type 5 LSAs

- **adv-router ip-address**
  - (OPTIONAL) Enter the keywords adv-router and the ip-address to display only the LSA information about that router.

</tr>
<tr>
<td>Attached Router</td>
<td>Identifies the IP address of routers attached to the network.</td>
</tr>
</tbody>
</table>

Example

```
Dell# show ip ospf 1 data network

OSPF Router with ID (20.20.20.5) (Process ID 1)

Network (Area 0.0.0.0)
  LS age: 1372
  Options: (No TOS-capability, DC, E)
  LS type: Network
  Link State ID: 202.10.10.2
  Advertising Router: 20.20.20.8
  LS Seq Number: 0x80000006
  Checksum: 0xa35
  Length: 36
  Network Mask: /24
    Attached Router: 20.20.20.8
    Attached Router: 20.20.20.9
    Attached Router: 20.20.20.7

Network (Area 0.0.0.1)
  LS age: 252
  Options: (TOS-capability, No DC, E)
  LS type: Network
  Link State ID: 192.10.10.2
  Advertising Router: 192.10.10.2
  LS Seq Number: 0x80000007
```
show ip ospf database nssa-external

Display NSSA-External (type 7) LSA information.

Syntax

```
show ip ospf [process-id | vrf vrf-name] database nssa-external [link-state-id] [adv-router ip-address]
```

Parameters

- **process-id**: Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.
- **vrf vrf-name**: Enter the keyword vrf followed by the name of the VRF to view NSSA-External LSA information corresponding to the OSPF process that is tied to a specific VRF.
- **link-state-id**: (OPTIONAL) Specify LSA ID in dotted decimal format. The LSA ID value depends on the LSA type, and it can be one of the following:
  - the network's IP address for Type 3 LSAs or Type 5 LSAs
  - the router's OSPF router ID for Type 1 LSAs or Type 4 LSAs
  - the default destination (0.0.0.0) for Type 5 LSAs
- **adv-router ip-address**: (OPTIONAL) Enter the keywords adv-router and the ip-address to display only the LSA information about that router.

Command Modes

- EXEC
- EXEC Privilege

**Related Commands**

- show ip ospf database — display OSPF database information.

### show ip ospf database opaque-area

Display the opaque-area (type 10) LSA information.

**Syntax**

```
show ip ospf [process-id | vrf vrf-name] database opaque-area [link-state-id] [adv-router ip-address]
```

**Parameters**

- **process-id**
  - Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.

- **vrf vrf-name**
  - Enter the keyword vrf followed by the name of the VRF to view opaque-area LSA information corresponding to the OSPF process that is tied to a specific VRF.

- **link-state-id** (OPTIONAL)
  - Specify LSA ID in dotted decimal format. The LSA ID value depends on the LSA type, and it can be one of the following:
    - the network’s IP address for Type 3 LSAs or Type 5 LSAs
    - the router’s OSPF router ID for Type 1 LSAs or Type 4 LSAs
    - the default destination (0.0.0.0) for Type 5 LSAs

- **adv-router ip-address** (OPTIONAL)
  - Enter the keywords adv-router and the ip-address to display only the LSA information about that router.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

</tbody>
</table>

**Example**

```
Dell> show ip ospf 1 database opaque-area
OSPF Router with ID (3.3.3.3) (Process ID 1)
  Type-10 Opaque Link Area (Area 0)
```
show ip ospf database opaque-as

Display the opaque-as (type 11) LSA information.

Syntax

```
show ip ospf process-id database opaque-as [link-state-id] [adv-router ip-address]
```

Parameters

- **process-id**
  - Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.

- **link-state-id**
  - (OPTIONAL) Specify LSA ID in dotted decimal format. The LSA ID value depends on the LSA type, and it can be one of the following:
    - the network’s IP address for Type 3 LSAs or Type 5 LSAs
    - the router’s OSPF router ID for Type 1 LSAs or Type 4 LSAs
    - the default destination (0.0.0.0) for Type 5 LSAs

- **adv-router ip-address**
  - (OPTIONAL) Enter the keywords adv-router and the ip-address to display only the LSA information about that router.

Command Modes

- EXEC
- EXEC Privilege

Related Commands
- show ip ospf database — display OSPF database information.

**show ip ospf database opaque-link**

Display the opaque-link (type 9) LSA information.

**Syntax**

```
show ip ospf [process-id | vrf vrf-name] database opaque-link [link-state-id] [adv-router ip-address]
```

**Parameters**

- `process-id` Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.
- `vrf vrf-name` Enter the keyword vrf followed by the name of the VRF to view opaque-link LSA information corresponding to the OSPF process that is tied to a specific VRF.
- `link-state-id` (OPTIONAL) Specify LSA ID in dotted decimal format. The LSA ID value depends on the LSA type, and it can be one of the following:
  - the network’s IP address for Type 3 LSAs or Type 5 LSAs
  - the router’s OSPF router ID for Type 1 LSAs or Type 4 LSAs
  - the default destination (0.0.0.0) for Type 5 LSAs
- `adv-router ip-address` (OPTIONAL) Enter the keywords adv-router then the IP address of an Advertising Router to display only the LSA information about that router.

**Example**

Dell# show ip ospf 100 database summary

```
OSPF Router with ID (1.1.1.10) (Process ID 100)
  Summary Network (Area 0.0.0.0)

  LS age: 1551
  Options: (No TOS-capability, DC, E)
  LS type: Summary Network
  Link State ID: 192.68.16.0
  Advertising Router: 192.168.17.1
```
show ip ospf interface

Display the OSPF interfaces configured. If OSPF is not enabled on the switch, no output is generated.

Syntax

```
show ip ospf [process-id | vrf vrf-name] interface [interface]
```

Parameters

- **process-id**
  
Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.

- **vrf vrf-name**
  
Enter the keyword vrf followed by the name of the VRF to show the OSPF processes that are tied to a specific VRF.

- **interface**
  
  (OPTIONAL) Enter the following keywords and slot/port or number information:
  
  - For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a Loopback interface, enter the keyword loopback then a number from 0 to 16383.
  - For a port channel interface, enter the keywords port-channel then a number.
  - For a Null interface, enter the keyword null then the Null interface number.
• For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Command Modes**

- EXEC
- EXEC Privilege

</tr>
<tr>
<td>Backup Designated...</td>
<td>This line displays the ID of the Backup Designated Router and its interface address.</td>
</tr>
</tbody>
</table>
## show ip ospf neighbor

Display the OSPF neighbors connected to the local router.

### Syntax

```
show ip ospf [process-id | vrf vrf-name] neighbor
```

### Parameters

- **process-id**
  - Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.

- **vrf vrf-name**
  - Enter the keyword vrf followed by the name of the VRF to show information corresponding to the OSPF neighbors that are tied to a specific VRF.

### Command Modes

- EXEC Privilege

---

**Example**

```
Dell> show ip ospf int

GigabitEthernet 1/7 is up, line protocol is up
  Internet Address 192.168.1.2/30, Area 0.0.0.1
  Process ID 1, Router ID 192.168.253.2, Network Type BROADCAST, Cost: 1
  Transmit Delay is 1 sec, State DR, Priority 1
  Designated Router (ID) 192.168.253.2, Interface address 192.168.1.2
  Backup Designated Router (ID) 192.168.253.1, Interface address 192.168.1.1
  Timer intervals configured, Hello 10, Dead 40, Wait 40, Retransmit 5
  Hello due in 00:00:02
  Neighbor Count is 1, Adjacent neighbor count is 1
  Adjacent with neighbor 192.168.253.1 (Backup Designated Router)

GigabitEthernet 1/8 is up, line protocol is up
  Internet Address 192.168.0.1/24, Area 0.0.0.1
  Process ID 1, Router ID 192.168.253.2, Network Type BROADCAST, Cost: 1
  Transmit Delay is 1 sec, State DROTHER, Priority 1
  Designated Router (ID) 192.168.253.5, Interface address 192.168.0.4
  Backup Designated Router (ID) 192.168.253.3, Interface address 192.168.0.2
  Timer intervals configured, Hello 10, Dead 40, Wait 40, Retransmit 5
  Hello due in 00:00:08
  Neighbor Count is 3, Adjacent neighbor count is 2
  Adjacent with neighbor 192.168.253.5 (Designated Router)
  Adjacent with neighbor 192.168.253.3 (Backup Designated Router)

Loopback 0 is up, line protocol is up
  Internet Address 192.168.253.2/32, Area 0.0.0.1
  Process ID 1, Router ID 192.168.253.2, Network Type LOOPBACK, Cost: 1
  Loopback interface is treated as a stub Host.
Dell>

### Usage Information

The following describes the `show ip ospf process-id neighbor` command shown in the following example.

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Neighbor ID</td>
<td>Displays the neighbor router ID.</td>
</tr>
<tr>
<td>Pri</td>
<td>Displays the priority assigned neighbor.</td>
</tr>
<tr>
<td>State</td>
<td>Displays the OSPF state of the neighbor.</td>
</tr>
<tr>
<td>Dead Time</td>
<td>Displays the expected time until the Dell OS declares the neighbor dead.</td>
</tr>
<tr>
<td>Address</td>
<td>Displays the IP address of the neighbor.</td>
</tr>
<tr>
<td>Interface</td>
<td>Displays the interface type slot/port information.</td>
</tr>
<tr>
<td>Area</td>
<td>Displays the neighbor’s area (process ID).</td>
</tr>
</tbody>
</table>

### Example

```
Dell# show ip ospf 34 neighbor

 Neighbor ID Pri State   Dead Time Address  Interface Area
 20.20.20.7  1 FULL/DR   00:00:32 182.10.10.3 Gi 1/1 0.0.0.2
192.10.10.2  1 FULL/DR   00:00:37 192.10.10.2 Gi 1/2 0.0.0.1
20.20.20.1  1 FULL/DROTHER00:00:36 192.10.10.4 Gi 1/3 0.0.0.1
Dell#
```
show ip ospf routes

Display routes OSPF calculates and stores in OSPF RIB.

Syntax

show ip ospf [process-id | vrf vrf-name] routes

Parameters

- **process-id**
  - Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.

- **vrf vrf-name**
  - Enter the keyword vrf followed by the name of the VRF to show the OSPF RIB information corresponding to the OSPF processes that are tied to a specific VRF.

Defaults

None

Command Modes

- EXEC
- EXEC Privilege

Command History

<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series and E-Series.</td>
</tr>
</tbody>
</table>

Usage Information

This command is useful in isolating routing problems between the OSPF and the RTM. For example, if a route is missing from the RTM/FIB but is visible from the display output of this command, the problem is with downloading the route to the RTM.

This command has the following limitations:
- The display output is sorted by prefixes; intra-area ECMP routes are not displayed together.
- For Type 2 external routes, Type 1 cost is not displayed.

**NOTE:** Starting with Version 9.4(0.0), the loopback IP address advertised to the neighbor is not displayed in the output because they are not accounted as inactive OSPF routes, whereas the loopback IP address is displayed until Dell Networking OS Version 9.3(0.0). Starting with Version 9.4(0.0), the show ip ospf routes command displays the interface and area ID information of connected networks in addition to the other settings, whereas these details are not displayed until Dell Networking OS Version 9.3(0.0). Starting with Version 9.4(0.0), the metric of E2 routes in the output is displayed as an external metric, whereas until Dell Networking OS Version 9.3(0.0), the number of hops to the ASBR for E2 routes are displayed in the output.

### Example

Dell# show ip ospf 100 route

<table>
<thead>
<tr>
<th>Prefix</th>
<th>Cost</th>
<th>Nexthop</th>
<th>Interface</th>
<th>Area</th>
<th>Type</th>
</tr>
</thead>
<tbody>

</tbody>
</table>

Dell#

### show ip ospf statistics

Display OSPF statistics.

**Syntax**

```
show ip ospf [process-id | vrf vrf-name] statistics global | [interface name {neighbor router-id}]
```

**Parameters**

- **process-id**
  - Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.

- **vrf vrf-name**
  - Enter the keyword vrf followed by the name of the VRF to display statistics corresponding to the OSPF process that is tied to a specific VRF.

- **global**
  - Enter the keyword global to display the packet counts received on all running OSPF interfaces and packet counts OSPF neighbors receive and transmit.

- **interface name**
  - (OPTIONAL) Enter the keyword interface then one of the following interface keywords and slot/port or number information:
    - For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
    - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
    - For a port channel interface, enter the keywords port-channel then a number.
    - For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

- **neighbor router-id**
  - (OPTIONAL) Enter the keyword neighbor then the neighbor’s router-id in dotted decimal format (A.B.C.D.).

**Defaults**

None
Command Modes

- EXEC
- EXEC Privilege

Command History

</tr>
<tr>
<td>7.4.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information

The following describes the `show ip ospf statistics process-id global` command shown in the following example.

<table>
<thead>
<tr>
<th>Row Heading</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Total</td>
<td>Displays the total number of packets the OSPF process receives/transmits.</td>
</tr>
<tr>
<td>Error</td>
<td>Displays the error count while receiving and transmitting packets by the OSPF process.</td>
</tr>
<tr>
<td>Hello</td>
<td>Number of OSPF Hello packets.</td>
</tr>
<tr>
<td>DDiscr</td>
<td>Number of database description packets.</td>
</tr>
<tr>
<td>LSReq</td>
<td>Number of link state request packets.</td>
</tr>
<tr>
<td>LSUpd</td>
<td>Number of link state update packets.</td>
</tr>
<tr>
<td>LSAck</td>
<td>Number of link state acknowledgement packets.</td>
</tr>
<tr>
<td>TxQ-Len</td>
<td>The transmission queue length.</td>
</tr>
<tr>
<td>RxQ-Len</td>
<td>The reception queue length.</td>
</tr>
<tr>
<td>Tx-Mark</td>
<td>The highest number mark in the transmission queue.</td>
</tr>
<tr>
<td>Rx-Mark</td>
<td>The highest number mark in the reception queue.</td>
</tr>
</tbody>
</table>
**Row Heading** | **Description**
--- | ---
Hello-Q | The queue, for transmission or reception, for the hello packets.
LSR-Q | The queue, for transmission or reception, for the link state request packets.
Other-Q | The queue, for transmission or reception, for the link state acknowledgement, database description, and update packets.

The following describes the error definitions for the `show ip ospf statistics process-id global` command.

**Error Type** | **Description**
--- | ---
Intf_Down | Received packets on an interface that is either down or OSPF is not enabled.
Non-Dr | Received packets with a destination address of ALL DRS even though SELF is not a designated router.
Self-Org | Receive the self originated packet.
Wrong_Len | The received packet length is different to what was indicated in the OSPF header.
Invid-Nbr | LSA, LSR, LSU, and DDB are received from a peer which is not a neighbor peer.
Nbr-State | LSA, LSR, and LSU are received from a neighbor with stats less than the loading state.
Auth-Error | Simple authentication error.
MD5-Error | MD5 error
Cksum-Err | Checksum Error
Version | Version mismatch
AreaMismatch | Area mismatch
Conf-Issue | The received hello packet has a different hello or dead interval than the configuration.
No-Buffer | Buffer allocation failure.
Seq-no | A sequence no errors occurred during the database exchange process.
Socket | Socket Read/Write operation error.
Q-overflow | Packets dropped due to queue overflow.
Unknown-Pkt | Received packet is not an OSPF packet.

**Example**

```
Dell# show ip ospf 1 statistics global

OSPF Packet Count
  Total Error Hello DDiscr LSReq LSUpd LSAck
RX 10 0 8 2 0 0 0
TX 10 0 10 0 0 0 0

OSPF Global Queue Length
  TxQ-Len RxQ-Len Tx-Mark Rx-Mark
Hello-Q 0 0 0 2
LSR-Q 0 0 0 0
Other-Q 0 0 0 0

Error packets (Only for RX)
  Intf-Down 0  Non-Dr 0  Self-Org 0
  Wrong_Len 0  Invid-Nbr 0  Nbr-State 0
  Auth-Error 0  MD5-Err 0  Cksum 0
  Version 0  AreaMis 0  Conf-Issues 0
```
Usage Information

The `show ip ospf process-id statistics` command displays the error packet count received on each interface as:

- The hello-timer remaining value for each interface
- The wait-timer remaining value for each interface
- The grace-timer remaining value for each interface
- The packet count received and transmitted for each neighbor
- Dead timer remaining value for each neighbor
- Transmit timer remaining value for each neighbor
- The LSU Q length and its highest mark for each neighbor
- The LSR Q length and its highest mark for each neighbor

Example (Statistics)

```bash
Dell(conf-if-gi-1/6)# do show ip ospf statistics
Interface GigabitEthernet 1/6
   Error packets (Receive statistics)
      Intf-Down 0 Non-Dr 0 Self-Org 0
      Wrong-Len 0 Invid-Nbr 0 Nbr-State 0
      Auth-Error 0 MD5-Error 0 Cksum-Err 0
      Version 0 AreaMisMatch 0 Conf-Issue 0
      SeqNo-Err 0 Unknown-Pkt 0 Bad-LsReq 0
      RtidZero 0
      Neighbor ID 4.4.4.4
   Packet Statistics
      Hello DDiscr LSReq LSUpd LSAck
      RX 5 2 1 3 2
      TX 6 5 1 3 3
   Timers
      Hello 0 Wait 0 Grace 0
      Dead 39 Transmit 4
   Queue Statistics
      LSU-Q-Len 0 LSU-Q-Wmark 1
      LSR-Q-Len 0 LSR-Q-Wmark 1

Dell(conf-if-gi-1/6)#
```

Related Commands

- `clear ip ospf statistics` — clear the packet statistics in all interfaces and neighbors.

**show ip ospf timers rate-limit**

Show the LSA currently in the queue waiting for timers to expire.

**Syntax**

```
show ip ospf [process-id] timers rate-limit
```
show ip ospf topology

Display routers in directly connected areas.

Syntax

```
show ip ospf [process-id] topology
```

Parameters

```
process-id
```

Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.

Defaults

None

Command Modes

- EXEC
- EXEC Privilege

</tr>
</tbody>
</table>

Usage Information

To isolate problems with inter-area and external routes, use this command. In OSPF inter-area and external routes are calculated by adding LSA cost to the cost of reaching the router. If an inter-area or external route is not of correct cost, the display can determine if the path to the originating router is correct or not.

Example

```
Dell# show ip ospf 1 topology
         Router ID  Flags Cost  Nexthop   Interface Area
           3.3.3.3    E/B/-/ 1    20.0.0.3  Gi 13/1   0
           1.1.1.1    E/-/-/ 1    10.0.0.1  Gi 7/1    1
Dell#
```

**summary-address**

To advertise one external route, set the OSPF ASBR.

Syntax

```
summary-address ip-address mask [not-advertise] [tag tag-value]
```

To disable summary address, use the `no summary-address ip-address mask` command.

Parameters

- `ip-address`: Specify the IP address in dotted decimal format of the address to summarize.
mask Specify the mask in dotted decimal format of the address to summarize.

not-advertise (OPTIONAL) Enter the keywords not-advertise to suppress that match the network prefix/mask pair.

tag tag-value (OPTIONAL) Enter the keyword tag then a value to match on routes redistributed through a route map. The range is from 0 to 4294967295.

Defaults Not configured.

Command Modes ROUTER OSPF

</tbody>
</table>

Usage Information The area range command summarizes routes for the different areas.

With the not-advertise parameter configured, you can use this command to filter out some external routes. For example, if you want to redistribute static routes to OSPF, but you don’t want OSPF to advertise routes with prefix 11.0.0, you can configure the summary-address 11.0.0 255.255.0.0 not-advertise to filter out all the routes fall in range 11.0.0/16.

Related Commands:

- **area range** — summarize routes within an area.
**timers spf**

Set the time interval between when the switch receives a topology change and starts a shortest path first (SPF) calculation.

**Syntax**
```
timers spf delay holdtime msec
```
To return to the default, use the `no timers spf` command.

**Parameters**
- **delay**
  Enter a number as the delay. The range is from 0 to 2147483647. The default is 5 seconds.
- **holdtime**
  Enter a number as the hold time. The range is from 0 to 2147483647. The default is 10 seconds.
- **msec**
  Enter the keyword `msec` to specify the time interval value in milli seconds.

**NOTE:** If you do not specify the `msec` option, the timer values are considered as seconds.

**Defaults**
- delay = 5 seconds
- holdtime = 10 seconds

**Command Modes**
- ROUTER OSPFv2

**Command History**

### timers throttle lsa all

Configure LSA transmit intervals.

**Syntax**

```
timers throttle lsa all {start-interval | hold-interval | max-interval}
```

To return to the default, use the `no timers throttle lsa` command.

**Parameters**

- **start-interval**
  
  Set the minimum interval between initial sending and resending the same LSA. The range is from 0 to 600,000 milliseconds.

- **hold-interval**
  
  Set the next interval to send the same LSA. This interval is the time between sending the same LSA after the start-interval has been attempted. The range is from 1 to 600,000 milliseconds.

- **max-interval**
  
  Set the maximum amount of time the system waits before sending the LSA. The range is from 1 to 600,000 milliseconds.

**Defaults**

- start-interval: 0 msec
- hold-interval: 5000 msec
- max-interval: 5000 msec

**Command Modes**

- ROUTER OSPF

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.10(0.0)</td>

<td>Introduced on the S3100 series.</td>
</tr>
<tr>
<td>9.8(1.0)</td>
<td>Introduced on the Z9100-ON.</td>
</tr>
</tbody>
</table>
LSAs are sent after the start-interval and then after hold-interval until the maximum interval is reached. In throttling, exponential backoff is used when sending the same LSA, so that the interval is multiplied until the maximum time is reached. For example, if the start-interval 5000 and hold-interval 1000 and max-interval 100,000, the LSA is sent at 5000 msec, then 1000 msec, then 2000 msec, then 4000 until 100,000 msec is reached.

**timers throttle lsa arrival**

Configure the LSA acceptance intervals.

**Syntax**

```
timers throttle lsa arrival arrival-time
```

To return to the default, use the `no timers throttle lsa` command.

**Parameters**

- `arrival-time`: Set the interval between receiving the same LSA repeatedly, to allow sufficient time for the system to accept the LSA. The range is from 0 to 600,000 milliseconds.

**Defaults**

1000 msec

**Command Modes**

ROUTER OSPF

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

OSPFv3 Commands

Open shortest path first version 3 (OSPFv3) for IPv6 is supported on the platform. The fundamental mechanisms of OSPF (flooding, DR election, area support, SPF calculations, and so on) remain unchanged. However, OSPFv3 runs on a per-link basis instead of on a per-IP-subnet basis. Most changes were necessary to handle the increased address size of IPv6.

The Dell Networking implementation of OSPFv3 is based on IETF RFC 2740.

area authentication

Configure an IPsec authentication policy for OSPFv3 packets in an OFSPFv3 area.

Syntax

```
area area-id authentication ipsec spi number {MD5 | SHA1} [key-encryption-type] key
```

Parameters

```
area area-id
```

Area for which OSPFv3 traffic is to be authenticated. For area-id, you can enter a number. The range is from 0 to 4294967295.

```
ipsec spi number
```

Security Policy index (SPI) value that identifies an IPsec security policy. The range is from 256 to 4294967295.

```
MD5 | SHA1
```

Authentication type: Message Digest 5 (MD5) or Secure Hash Algorithm 1 (SHA-1).

```
key-encryption-type
```

(OPTIONAL) Specifies if the key is encrypted. The values are 0 (key is not encrypted) or 7 (key is encrypted).

```
key
```

Text string used in authentication. For MD5 authentication, the key must be 32 hex digits (non-encrypted) or 64 hex digits (encrypted).
For SHA-1 authentication, the key must be 40 hex digits (non-encrypted) or 80 hex digits (encrypted).

Defaults

Not configured.

Command Modes

ROUTER OSPFv3

</tbody>
</table>

Usage Information

Before you enable IPsec authentication on an OSPFv3 area, you must first enable OSPFv3 globally on the router. Configure the same authentication policy (same SPI and key) on each interface in an OSPFv3 link. An SPI number must be unique to one IPsec security policy (authentication or encryption) on the router.

If you have enabled IPsec encryption in an OSPFv3 area with the area encryption command, you cannot use the area authentication command in the area at the same time.

The configuration of IPsec authentication on an interface-level takes precedence over an area-level configuration. If you remove an interface configuration, an area authentication policy that has been configured is applied to the interface.

To remove an IPsec authentication policy from an OSPFv3 area, enter the no area area-id authentication spi number command.

Related Commands

- `ipv6 ospf authentication` — configure an IPsec authentication policy on an OSPFV3 interface.
- `show crypto ipsec policy` — display the configuration of IPsec authentication policies.
## area encryption

Configure an IPsec encryption policy for OSPFv3 packets in an OSPFv3 area.

### Syntax

```
area area-id encryption ipsec spi number esp encryption-algorithm [key-encryption-type] key authentication-algorithm [key-encryption-type] key
```

### Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>

<td>Introduced on the E-Series.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
</tbody>
</table>

**Usage Information**
Before you enable IPsec encryption on an OSPFv3 interface, first enable OSPFv3 globally on the router. Configure the same encryption policy (same SPI and keys) on each interface in an OSPFv3 link.

An SPI value must be unique to one IPsec security policy (authentication or encryption) on the router.

When you configure encryption for an OSPFv3 area with the `area encryption` command, you enable both IPsec encryption and authentication. However, when you enable authentication on an area with the `area authentication` command, you do not enable encryption at the same time.

If you have enabled IPsec authentication in an OSPFv3 area with the `area authentication` command, you cannot use the `area encryption` command in the area at the same time.

The configuration of IPsec encryption on an interface-level takes precedence over an area-level configuration. If you remove an interface configuration, an area encryption policy that has been configured is applied to the interface.

To remove an IPsec encryption policy from an interface, enter the `no area area-id encryption spi number` command.

**Related Commands**
- `ipv6 ospf encryption` — configure an IPsec encryption policy on an OSPFv3 interface.
- `show crypto ipsec policy` — display the configuration of IPsec encryption policies.
clear ipv6 ospf process

Reset an OSPFv3 router process without removing or re-configuring the process.

Syntax

```
clear ipv6 ospf [vrf vrf-name] process
```

Parameters

- `vrf vrf-name` (Optional) Enter the keyword vrf followed by the name of the VRF to clear IPv6 routes corresponding to that VRF.

Command Modes

- EXEC
- EXEC Privilege

debug ipv6 ospf bfd

Display debug information and interface types for bidirectional forwarding detection (BFD) on OSPF IPv6 packets.

Syntax

```
[no] debug ipv6 ospf bfd [interface] [vrf vrf-name]
```

Parameters

- `interface` (Optional) Enter one of the following keywords and slot/port or number information:
  - For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

For a port channel interface, enter the keywords port-channel then a number.

For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

```
vrf vrf-name
```
Enter the keyword vrf to view debugging information on OSPF corresponding to that VRF.

**Command Modes**

EXEC Privilege

**Command History**

**debug ipv6 ospf spf**

Display debug information for SPF timers on OSPF IPv6 packets.

**Syntax**

```
[no] debug ipv6 ospf spf [vrf vrf-name]
```

**Parameters**

- **interface** (OPTIONAL) Enter one of the following keywords and slot/port or number information:
  - For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a port channel interface, enter the keywords port-channel then a number.
For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

```
vrf vrf-name
```
Enter the keyword `vrf` to view debugging information on OSPF corresponding to that VRF.

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Aug 25 11:20:00: %STKUNIT0-M:CP %BFDMGR-1-BFD_STATE_CHANGE: Changed session state to Up for neighbor fe80::201:e8ff:fe8b:7720 on interface Gi 1/2 (diag: NO_DIAG)
00:59:45 : OSPFv3INFO: OSPFV3 got BFD msg
00:59:45 : OSPFv3INFO: Bfd Msg Type Up for interface Gi 1/2
00:59:45 : OSPFv3INFO: OSPFV3 updating NBR state

1200 | Open Shortest Path First (OSPFv2 and OSPFv3)
**default-information originate**

Configure the Dell Networking OS to generate a default external route into an OSPFv3 routing domain.

**Syntax**

```
default-information originate [always] [metric metric-value] [metric-type type-value] [route-map map-name]
```

To return to the default values, use the `no default-information originate` command.

**Parameters**

- `always` (OPTIONAL) Enter the keyword `always` to specify that default route information must always be advertised.
- `metric metric-value` (OPTIONAL) Enter the keyword `metric` then a number to configure a metric value for the route. The range is from 1 to 16777214.
- `metric-type type-value` (OPTIONAL) Enter the keywords `metric-type` then an OSPFv3 link state type of 1 or 2 for default routes. The values are:
  - `1` = Type 1 external route
  - `2` = Type 2 external route
- `route-map map-name` (OPTIONAL) Enter the keywords `route-map` then the name of an established route map.

**Defaults**

Disabled.

**Command Modes**

ROUTER OSPFv3

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
---|---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100-ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.2(1.0) | Introduced on the Z9500.
91.(0.0) | Introduced on the S4810 and Z9000.
8.3.19.0 | Introduced on the S4820T.
7.8.1.0 | Added support for C-Series.
7.4.1.0 | Introduced on the E-Series.

**Related Commands**

- `redistribute` — redistribute routes from other routing protocols into OSPFv3.
**graceful-restart grace-period**

Enable OSPFv3 graceful restart globally by setting the grace period (in seconds) that an OSPFv3 router's neighbors continues to advertise the router as adjacent during a graceful restart.

**Syntax**
```
graceful-restart grace-period seconds
```
To disable OSPFv3 graceful restart, enter `no graceful-restart grace-period`.

**Parameters**
- `seconds`: Time duration, in seconds, that specifies the duration of the restart process before OSPFv3 terminates the process. The range is from 40 to 1800 seconds.

**Defaults**
OSPFv3 graceful restart is disabled and functions in a helper-only role.

**Command Modes**
- `ROUTER OSPFv3`

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
</tbody>
</table>

**Usage Information**
By default, OSPFv3 graceful restart is disabled and functions only in a helper role to help restarting neighbor routers in their graceful restarts when it receives a Grace LSA.

To enable OSPFv3 graceful restart, enter the `ipv6 router ospf` command to enter OSPFv3 configuration mode and then configure a grace period using the `graceful-restart grace-period` command. The grace period is the length of time that OSPFv3 neighbors continue to advertise the restarting router as though it is fully adjacent. When graceful restart is enabled (restarting role), an OSPFv3 restarting expects its OSPFv3 neighbors to help when it restarts by not advertising the broken link.

When you enable the helper-reject role on an interface with the `ipv6 ospf graceful-restart helper-reject` command, you reconfigure OSPFv3 graceful restart to function in a “restarting-only” role. In a “restarting-only” role, OSPFv3 does not participate in the graceful restart of a neighbor.
graceful-restart mode

Specify the type of events that trigger an OSPFv3 graceful restart.

Syntax

```
graceful-restart mode {planned-only | unplanned-only}
```

To disable graceful restart mode, enter `no graceful-restart mode`.

Parameters

- **planned-only** (OPTIONAL) Enter the keywords `planned-only` to indicate graceful restart is supported in a planned restart condition only.
- **unplanned-only** (OPTIONAL) Enter the keywords `unplanned-only` to indicate graceful restart is supported in an unplanned restart condition only.

Defaults

OSPFv3 graceful restart supports both planned and unplanned failures.

Command Modes

- **ROUTER OSPFv3**

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
</tbody>
</table>

Usage Information

OSPFv3 graceful restart supports planned-only and/or unplanned-only restarts. The default is support for both planned and unplanned restarts.

- A planned restart occurs when you enter the `redundancy force-failover rpm` command to force the primary RPM to switch to the backup RPM. During a planned restart, OSPF sends out a Type-11 Grace LSA before the system switches over to the backup RPM.
- An unplanned restart occurs when an unplanned event causes the active RPM to switch to the backup RPM, such as when an active process crashes, the active RPM is removed, or a power failure happens. During an unplanned restart, OSPF sends out a Grace LSA when the backup RPM comes online.

By default, both planned and unplanned restarts trigger an OSPFv3 graceful restart. Selecting one or the other mode restricts OSPFv3 to the single selected mode.
ipv6 ospf area

Enable IPv6 OSPF on an interface.

Syntax

ipv6 ospf process-id area area-id

To disable OSPFv6 routing for an interface, use the no ipv6 ospf process-id area area-id command.

Parameters

- **process-id**: Enter the process identification number.
- **area area-id**: Specify the OSPF area. The range is from 0 to 65535.

Defaults

None

ipv6 ospf authentication

Configure an IPsec authentication policy for OSPFv3 packets on an IPv6 interface.

Syntax

ipv6 ospf authentication {null | ipsec spi number (MD5 | SHA1) [key-encryption-type] key}

Parameters

- **null**: Causes an authentication policy configured for the area to not be inherited on the interface.
**ipsec spi number**  
Security Policy index (SPI) value that identifies an IPsec security policy. The range is from 256 to 4294967295.

**MD5 | SHA1**  
Authentication type: Message Digest 5 (MD5) or Secure Hash Algorithm 1 (SHA-1).

**key-encryption-type**  
(OPTIONAL) Specifies if the key is encrypted.

Valid values: 0 (key is not encrypted) or 7 (key is encrypted).

**key**  
Text string used in authentication.

For MD5 authentication, the key must be 32 hex digits (non-encrypted) or 64 hex digits (encrypted).

For SHA-1 authentication, the key must be 40 hex digits (non-encrypted) or 80 hex digits (encrypted).

**Defaults**  
Not configured.

**Command Modes**  
INTERFACE

**Command History**

<td>8.4.2.0</td>
<td>Introduced on the E-Series.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
</tbody>
</table>

**Usage Information**  
Before you enable IPsec authentication on an OSPFv3 interface, first enable IPv6 unicast routing globally, configure an IPv6 address and enable OSPFv3 on the interface, and assign the interface to an area.

An SPI value must be unique to one IPsec security policy (authentication or encryption) on the router. Configure the same authentication policy (same SPI and key) on each OSPFV3 interface in a link.

To remove an IPsec authentication policy from an interface, enter the no ipv6 ospf authentication spi number command. To remove null authentication on an interface to allow the interface to inherit the authentication policy configured for the OSPFV3 area, enter the no ipv6 ospf authentication null command.

**Related Commands**  
- area authentication — configure an IPsec authentication policy for an OSPFV3 area.
- show crypto ipsec policy — display the configuration of IPsec authentication policies.
- `show crypto ipsec sa ipv6` – display the security associations set up for OSPFv3 interfaces in authentication policies.

## ipv6 ospf cost

Explicitly specify the cost of sending a packet on an interface.

### Syntax

```
ipv6 ospf interface-cost
```

### Parameters

- `interface-cost`  
  Enter a unsigned integer value expressed as the link-state metric. The range is from 1 to 65535.

### Defaults

Default cost based on the bandwidth.

### Command Modes

- **INTERFACE**

### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
</tbody>
</table>

### Usage Information

In general, the path cost is calculated as:

\[
10^8 / \text{bandwidth}
\]

Using this formula, the default path cost is calculated as:

- GigabitEthernet — Default cost is 1
- TenGigabitEthernet — Default cost is 1
- Ethernet — Default cost is 10
**ipv6 ospf dead-interval**

Set the time interval since the last hello-packet was received from a router. After the time interval elapses, the neighboring routers declare the router down.

**Syntax**

```
ipv6 ospf dead-interval seconds
```

To return to the default time interval, use the `no ipv6 ospf dead-interval` command.

**Parameters**

- `seconds` Enter the time interval in seconds. The range is from 1 to 65535 seconds.

**Defaults**

40 seconds (Ethernet).

**Command Modes**

INTERFACE

**Command History**

</tr>
</tbody>
</table>

**Usage Information**

By default, the dead interval is four times longer than the default hello-interval.

**Related Commands**

- `ipv6 ospf hello-interval` – specify the time interval between hello packets.
ipv6 ospf encryption

Configure an IPsec encryption policy for OSPFv3 packets on an IPv6 interface.

Syntax

```
ipv6 ospf encryption {null | ipsec spi number esp encryption-algorithm [key-encryption-type] key authentication-algorithm [key-encryption-type] key}
```

Parameters

- **null**
  - Causes an encryption policy configured for the area to not be inherited on the interface.

- **ipsec spi number**
  - Security Policy index (SPI) value that identifies an IPsec security policy. The range is from 256 to 4294967295.

- **esp encryption-algorithm**
  - Encryption algorithm used with ESP.
  - Valid values are: 3DES, DES, AES-CBC, and NULL.
  - For AES-CBC, only the AES-128 and AES-192 ciphers are supported.

- **key-encryption-type**
  - (OPTIONAL) Specifies if the key is encrypted.
  - Valid values: 0 (key is not encrypted) or 7 (key is encrypted).

- **key**
  - Text string used in authentication.
  - The required lengths of a non-encrypted or encrypted key are:
    - 3DES - 48 or 96 hex digits; DES - 16 or 32 hex digits; AES-CBC - 32 or 64 hex digits for AES-128 and 48 or 96 hex digits for AES-192.

- **authentication-algorithm**
  - Specifies the authentication algorithm to use for encryption. Valid values are MD5 or SHA1.

- **key-encryption-type**
  - (OPTIONAL) Specifies if the authentication key is encrypted.
  - Valid values: 0 (key is not encrypted) or 7 (key is encrypted).

- **key**
  - Text string used in authentication.
  - For MD5 authentication, the key must be 32 hex digits (non-encrypted) or 64 hex digits (encrypted).
  - For SHA-1 authentication, the key must be 40 hex digits (non-encrypted) or 80 hex digits (encrypted).

Defaults

- Not configured.

</tr>
</tbody>
</table>

Before you enable IPsec encryption on an OSPFv3 interface, first enable IPv6 unicast routing globally, configure an IPv6 address and enable OSPFv3 on the interface, and assign the interface to an area.

An SPI value must be unique to one IPsec security policy (authentication or encryption) on the router. Configure the same encryption policy (same SPI and key) on each OSPFv3 interface in a link.

To remove an IPsec encryption policy from an interface, enter the no ipv6 ospf encryption spi number command. To remove null authentication on an interface to allow the interface to inherit the authentication policy configured for the OSPFv3 area, enter the no ipv6 ospf no ipv6 ospf encryption null command.

**Related Commands**
- `area encryption` — configure an IPsec encryption policy for an OSPFv3 area.
- `show crypto ipsec policy` — display the configuration of IPsec encryption policies.
- `show crypto ipsec sa ipv6` — display the security associations set up for OSPFv3 interfaces in encryption policies.

### ipv6 ospf graceful-restart helper-reject

Configure an OSPFv3 interface to not act upon the Grace LSAs that it receives from a restarting OSPFv3 neighbor.

**Syntax**

```
ipv6 ospf graceful-restart helper-reject
```

To disable the helper-reject role, enter `no ipv6 ospf graceful-restart helper-reject`.

**Defaults**

The helper-reject role is not configured.

**Command Modes**

`INTERFACE`

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.
<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.10(0.0)</td>
<td>Introduced on the S3148.</td>

<td>8.4.2.2</td>
<td>Introduced on E-Series.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
</tbody>
</table>

**Usage Information**

By default, OSPFv3 graceful restart is disabled and functions only in a helper role to help restarting neighbor routers in their graceful restarts when it receives a Grace LSA.

When configured in a helper-reject role, an OSPFv3 router ignores the Grace LSAs that it receives from a restarting OSPFv3 neighbor.

The graceful-restart role command is not supported in OSPFv3. When you enable the helper-reject role on an interface, you reconfigure an OSPFv3 router to function in a “restarting-only” role.

**ipv6 ospf hello-interval**

Specify the time interval between the hello packets sent on the interface.

**Syntax**

```
ipv6 ospf hello-interval seconds
```

To return to the default time interval, enter `no ipv6 ospf hello-interval`.

**Parameters**

- `seconds`
  
Enter the time interval in seconds as the time between hello packets. The range is from 1 to 65525 seconds.

**Defaults**

10 seconds (Ethernet).

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
<tr>
<td>9.8(1.0)</td>
<td>Introduced on the Z9100-ON.</td>
</tr>
</tbody>
</table>
### Usage Information

The time interval between hello packets must be the same for routers in a network.

### Related Commands

- `ipv6 ospf dead-interval` — specify the time interval between hello packets was received from a router.

### ipv6 ospf priority

To determine the Designated Router for the OSPFv3 network, set the priority of the interface.

**Syntax**

```
ipv6 ospf priority number
```

To return to the default time interval, use the `no ipv6 ospf priority` command.

**Parameters**

- `number` Enter the number as the priority. The range is from 1 to 255.

**Defaults**

1

### ipv6 router ospf

Enable OSPF for IPv6 router configuration.

#### Syntax

```
ipv6 router ospf process-id [vrf vrf-name]
```

To exit OSPF for IPv6, use the `no ipv6 router ospf process-id` command.

#### Parameters

- **process-id**
  - Enter the process identification number. The range is from 1 to 65535.

- **vrf vrf-name**
  - (Optional) Enter the keyword `vrf` followed by the name of the VRF to install IPv6 routes in that VRF.

#### Defaults

None

#### Command Modes

- **CONFIGURATION**

#### Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<tr>
<td>7.4.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

#### Usage Information

Setting a priority of 0 makes the router ineligible for election as a Designated Router or Backup Designated Router.

Use this command for interfaces connected to multi-access networks, not point-to-point networks.
**maximum-paths**

Enable the software to forward packets over multiple paths.

Syntax

```
maximum-paths number
```

To disable packet forwarding over multiple paths, use the `no maximum-paths` command.

Parameters

- **number**
  - Specify the number of paths. The range is from 1 to 64. The default is 8 paths.

Defaults

8

Command Modes

- ROUTER OSPF

Command History

</tr>
</tbody>
</table>

**passive-interface**

Disable (suppress) sending routing updates on an interface.

Syntax

```
passive-interface interface
```

Example

```
R3(config-if)#passive-interface GigabitEthernet 1/2
```
To enable sending routing updates on an interface, use the `no passive-interface interface` command.

**Parameters**

- **interface**
  
  Enter the following keywords and slot/port or number information:
  
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a port channel interface, enter the keywords `port-channel` then a number.
  - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults**

Enabled, that is sending of routing updates are enabled by default.

**Command Modes**

- ROUTER OSPF for OSPFv2
- ROUTER OSPFv3 for OSPFv3

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.10(0.0)</td>
<td>Introduced on the S3148.</td>
</tr>
<tr>
<td>9.8(2.0)</td>
<td>Introduced on the S3100 series.</td>
</tr>
<tr>
<td>9.8(1.0)</td>
<td>Introduced on the Z9100-ON.</td>

<tr>
<td>9.8(0.0P5)</td>
<td>Introduced on the S4048-ON.</td>
</tr>
<tr>
<td>9.8(0.0P2)</td>
<td>Introduced on the S3048-ON.</td>
</tr>
<tr>
<td>9.2(1.0)</td>
<td>Introduced on the Z9500.</td>
</tr>
<tr>
<td>9.1(0.0)</td>
<td>Introduced support for OSPFv3 on the S4810 and Z9000.</td>
</tr>
<tr>
<td>8.3(19.0)</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Added support for the C-Series.</td>
</tr>
<tr>
<td>7.4.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

By default, no interfaces are passive. Routing updates are sent to all interfaces on which the routing protocol is enabled.

If you disable the sending of routing updates on an interface, the particular address prefix continues to be advertised to other interfaces, and updates from other routers on that interface continue to be received and processed.

OSPFv3 for IPv6 routing information is not sent or received through the specified router interface. The specified interface address appears as a stub network in the OSPFv3 for IPv6 domain.

On configuring suppression using the `passive-interface` command, the state of the OSPF neighbor does not change to INIT; instead, the state of the OSPF neighbor changes to DOWN after the dead-timer expires.
**redistribute**

Redistribute into OSPFv3.

### Syntax

```plaintext
redistribute {bgp as number}{connected | static}[metric metric-value | metric-type type-value] [route-map map-name] [tag tag-value]
```

To disable redistribution, use the `no redistribute {connected | static}` command.

### Parameters

- **bgp as number**
  - Enter the keyword `bgp` then the autonomous system number.
  - The range is from 1 to 65535.

- **connected**
  - Enter the keyword `connected` to redistribute routes from physically connected interfaces.

- **static**
  - Enter the keyword `static` to redistribute manually configured routes.

- **metric metric-value**
  - Enter the keyword `metric` then the metric value.
  - The range is from 0 to 16777214.
  - The default is 20.

- **metric-type type-value**
  - (OPTIONAL) Enter the keywords `metric-type` then the OSPFv3 link state type of 1 or 2 for default routes. The values are:
    - 1 for a type 1 external route
    - 2 for a type 2 external route
  - The default is 2.

- **route-map map-name**
  - (OPTIONAL) Enter the keywords `route-map` then the name of an established route map. If the route map is not configured, the default is `deny` (to drop all routes).

- **tag tag-value**
  - (OPTIONAL) Enter the keyword `tag` to set the tag for routes redistributed into OSPFv3.
  - The range is from 0 to 4294967295.
  - The default is 0.

### Defaults

Not configured.

### Command Modes

- ROUTER OSPF for OSPFv2
- ROUTER OSPFv3 for OSPFv3
Command History

</tr>
</tbody>
</table>

Usage Information

To redistribute the default route (x:x:x:x::x), use the default-information originate command.

Related Commands

- `default-information originate` – configure default external route into OSPFv3.

**router-id**

Designate a fixed router ID.

**Syntax**

```
router-id ip-address
```

To return to the previous router ID, use the `no router-id ip-address` command.

**Parameters**

- `ip-address` Enter the router ID in the dotted decimal format.

**Defaults**

The router ID is selected automatically from the set of IPv4 addresses configured on a router.

**Command Modes**

- ROUTER OSPF for OSPFv2
- ROUTER OSPFv3 for OSPFv3

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</thead>
<tbody>
<tr>
<td>9.10(0.0)</td>
<td>Introduced on the S3148.</td>
</tr>
<tr>
<td>9.8(2.0)</td>
<td>Introduced on the S3100 series.</td>
</tr>
<tr>
<td>9.8(1.0)</td>
<td>Introduced on the Z9100-ON.</td>
</tr>
<tr>
<td>9.8(0.0P5)</td>
<td>Introduced on the S4048-ON.</td>
</tr>
</tbody>
</table>

Usage Information

You can configure an arbitrary value in the IP address for each router. However, each router ID must be unique.

If this command is used on an OSPFv3 process that is already active (has neighbors), all the neighbor adjacencies are brought down immediately and new sessions are initiated with the new router ID.

Related Commands

- clear ipv6 ospf process — reset an OSPFv3 router process.
show crypto ipsec policy

Usage Information

The `show crypto ipsec policy` command output displays the AH and ESP parameters configured in IPsec security policies, including the SPI number, keys, and algorithms used.

When configured in a helper-reject role, an OSPFv3 router ignores the Grace LSAs that it receives from a restarting OSPFv3 neighbor.

Related Commands

- `show crypto ipsec sa ipv6` – displays the IPsec security associations used on OSPFv3 interfaces.

Example

```
Dell# show crypto ipsec policy

Crypto IPSec client security policy data
Policy name : OSPFv3-1-502

### show crypto ipsec sa ipv6

Display the IPsec security associations (SAs) used on OSPFv3 interfaces.

**Syntax**

```
show crypto ipsec sa ipv6 [interface interface]
```

**Parameters**

- `interface interface` (OPTIONAL) Displays information about the SAs used on a specified OSPFv3 interface, where `interface` is one of the following values:
  - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a port channel interface, enter the keywords `port-channel` then a number.
  - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults**

No default behavior or values.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.10(0.0)</td>
<td>Introduced on the S3148.</td>
</tr>
<tr>
<td>9.8(2.0)</td>
<td>Introduced on the S3100 series.</td>
</tr>
</tbody>
</table>
### Version Description

- **9.8(1.0)**  Introduced on the Z9100-ON.
- **9.8(0.0P5)**  Introduced on the S4048-ON.
- **9.8(0.0P2)**  Introduced on the S3048-ON.
- **9.2(1.0)**  Introduced on the Z9500.
- **9.1.(0.0)**  Introduced on the S4810 and Z9000.
- **8.4.2.0**  Introduced on the E-Series.
- **8.3.19.0**  Introduced on the S4820T.

### Usage Information

The `show crypto ipsec sa ipv6` command output displays security associations set up for OSPFv3 links in IPsec authentication and encryption policies on the router.

### Related Commands

- `show crypto ipsec policy` – displays the configuration of IPsec authentication and encryption policies.

### Example

```plaintext
Dell# show crypto ipsec policy
Dell# show crypto ipsec sa ipv6

Interface: GigabitEthernet 1/1
Link Local address: fe80::201:e8ff:fe40:4d10

STATUS: ACTIVE: The authentication or encryption policy is enabled on the interface.

show ipv6 ospf database

Display information in the OSPFv3 database, including link-state advertisements (LSAs).

Syntax

```
show ipv6 ospf [process-number] [vrf vrf-name] database [database-summary | grace-lsa]
```

Parameters

- `process-number` - Enter the OSPF process number.
- `vrf vrf-name` - (Optional) Enter the keyword `vrf` followed by the name of the VRF to display neighbors corresponding to that VRF.

NOTE: If you do not specify this option, neighbors corresponding to the default VRF are displayed.

- `database-summary` - (OPTIONAL) Enter the keywords `database-summary` to view a summary of database LSA information.
**grace-lsa**

(Optional): Enter the keywords `grace-lsa` to display the Type-11 Grace LSAs sent and received on an OSPFv3 router.

**Defaults**

None

**Command Modes**

EXEC

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
--- | ---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100-ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.2(1.0) | Introduced on the Z9500.
9.1.(0.0) | Added support for OSPFv3 on the S4810 and Z9000.
8.4.2.2 | Added support for the display of graceful restart parameters and Type-11 Grace LSAs on E-Series routers.
8.3.19.0 | Introduced on the S4820T.
7.8.1.0 | Added support for C-Series.

**Usage Information**

The `show crypto ipsec sa ipv6` command output displays security associations set up for OSPFv3 links in IPsec authentication and encryption policies on the router.

**Related Commands**

`show crypto ipsec policy` — displays the configuration of IPsec authentication and encryption policies.

**Example (grace-lsa)**

```
Dell# show ipv6 ospf 3 database grace-lsa
! Type-11 Grace LSA (Area 0)

  LS Age : 10
  Link State ID : 6.16.192.66

show ipv6 ospf interface
View OSPFv3 interface information.

Syntax
show ipv6 ospf [process-number] [vrf vrf-name] [interface]

Parameters
process-number Enter the OSPF process number.
vrf vrf-name (OPTIONAL) Enter the keyword vrf followed by the name of the VRF to display neighbors corresponding to that VRF.

NOTE: If you do not specify this option, neighbors corresponding to the default VRF are displayed.
(OPTIONAL) Enter one of the following keywords and slot/port or number information:

- For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a port channel interface, enter the keywords port-channel then a number.
- For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

Dell#
show ipv6 ospf neighbor

Display the OSPF neighbor information on a per-interface basis.

Syntax

```
show ipv6 ospf [process-number] [vrf vrf-name] neighbor [interface]
```

Parameters

- `process-number` Enter the OSPF process number.
- `vrf vrf-name` (OPTIONAL) Enter the keyword vrf followed by the name of the VRF to display OSPF neighbors corresponding to that VRF.
  
  **NOTE:** If you do not specify this option, neighbors corresponding to the default VRF are displayed.

- `interface` (OPTIONAL) Enter the following keywords and the interface information:
  
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a port channel interface, enter the keywords port-channel then a number.
  - For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

Defaults

None

Command Modes

</tbody>
</table>

Example

```
Dell# show ipv6 ospf 3 neighbor gi 1/2
```
timers spf

Set the time interval between when the switch receives a topology change and starts a shortest path first (SPF) calculation.

Syntax

```
timers spf delay holdtime msec
```

To return to the default, use the `no timers spf` command.

Parameters

- **delay**
  - Enter a number as the delay. The range is from 0 to 2147483647. The default is 5 seconds. When configured in milli seconds, 100 is the least value that is allowed to be configured.

- **holdtime**
  - Enter a number as the hold time. The range is from 0 to 2147483647. The default is 10 seconds. When configured in milli seconds, 200 is the least value that is allowed to be configured.

- **msec**
  - Enter the keyword `msec` to specify the time interval value in milli seconds.

**NOTE:** If you do not specify the `msec` option, the timer values are considered as seconds.

Defaults

- delay = 5 seconds
- holdtime = 10 seconds

Command Modes

- ROUTER OSPFv3 for OSPFv3 and ROUTER OSPFv2 for OSPFv2

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>

Policy-based Routing (PBR)

Policy-based routing (PBR) allows you to apply routing policies to specific interfaces. To enable PBR, create a redirect list and apply it to the interface. After the redirect list is applied to the interface, all traffic passing through the interface is subject to the rules defined in the redirect list. PBR is supported by the Dell Networking OS.

You can apply PBR to physical interfaces and logical interfaces (such as a link aggregation group [LAG] or virtual local area network [VLAN]). Trace lists and redirect lists do not function correctly when you configure both in the same configuration.

**NOTE:** Apply PBR to Layer 3 interfaces only.

**NOTE:** For more information, see Content Addressable Memory (CAM).

Topics:

- `description`
- `ip redirect-group`
- `ip redirect-list`
- `permit`
- `redirect`
- `seq`
- `show cam pbr`
- `show ip redirect-list`

### description

Add a description to this redirect list.

#### Syntax

```
description {description}
```

To remove the description, use the `no description {description}` command.

#### Parameters

- `description`: Enter a description to identify the IP redirect list (16 characters maximum).

#### Defaults

None

#### Command Modes

REDIRECT-LIST

#### Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</table>
### Related Commands

- `ip redirect-list` — enable an IP Redirect List.

### ip redirect-group

Apply a redirect list (policy-based routing) on an interface. You can apply multiple redirect lists to an interface by entering this command multiple times.

#### Syntax

```
 ip redirect-group redirect-list-name test [l2-switch]
```

To remove a redirect list from an interface, use the `no ip redirect-group name` command.

#### Parameters

- **redirect-list-name**
  
Enter the name of a configured redirect list.

- **l2-switch**
  
Enter the keyword `l2-switch` to enable PBR on Layer2 (switched) traffic.

#### Defaults

None

#### Command Modes

INTERFACE (conf-if-vl-)

Version | Description
---|---
9.7(0.0) | Introduced on the S6000-ON.
9.4(0.0) | Introduced on the S4810, S4820T, S6000, and Z9000.
8.4.2.1 | Introduced on the C-Series and S-Series.
8.4.2.0 | Introduced on the E-Series.
7.7.1.0 | Introduced on the E-Series.

**Usage Information**

You can apply any number of redirect-groups to an interface. A redirect list can contain any number of configured rules. These rules includes the next-hop IP address where the incoming traffic is to be redirected.

If the next hop address is reachable, traffic is forwarded to the specified next hop. Otherwise, the normal routing table is used to forward traffic. When a redirect-group is applied to an interface and the next-hop is reachable, the rules are added into the PBR CAM region. When incoming traffic hits an entry in the CAM, the traffic is redirected to the corresponding next-hop IP address specified in the rule.

**NOTE:** Apply the redirect list to physical, VLAN, or LAG interfaces only.

The Layer2 PBR option matches the layer2 traffic flow. If you un-configure this option, then the Layer2 traffic is not matched. You can apply the `l2-switch` option to redirect Layer2 traffic only on a VLAN interface. This VLAN interface must be configured with an IP address for ARP resolution.

**NOTE:** The `l2-switch` option that redirects Layer2 traffic is applicable only on VLAN interfaces.

The Layer3 routing is not affected on the same interface on which Layer2 PBR is applied. The port from which Layer2 packets egress and the destination MAC are re-written from static ARP. Layer 2 packets with the re-written destination MAC are forwarded through the outgoing port on the same incoming VLAN interface. The `l2-switch` option ensures that the outgoing VLAN and MAC-SA are changed and TTL is not decremented.

**Related Commands**

- `show cam pbr` — display the content of the PBR CAM.
- `show ip redirect-list` — display the redirect-list configuration.

### ip redirect-list

Configure a redirect list and enter REDIRECT-LIST mode.

**Syntax**

```
ip redirect-list redirect-list-name
```

To remove a redirect list, use the `no ip redirect-list` command.

**Parameters**

- `redirect-list-name` | Enter the name of a redirect list.

**Defaults**

None

**Command Modes**

- `CONFIGURATION`
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

## permit

Configure a permit rule. A permit rule excludes the matching packets from PBR classification and routes them using conventional routing.

### Syntax

```
permit {ip-protocol-number | protocol-type} {source mask | any | host ip-address} {destination mask | any | host ip-address} [bit] [operators]
```

To remove the rule, use one of the following:

- If you know the filter sequence number, use the `no seq sequence-number` syntax command.
- You can also use the `no permit {ip-protocol-number | protocol-type} {source mask | any | host ip-address} {destination mask | any | host ip-address} [bit] [operators]` command.

### Parameters

- **ip-protocol-number**
  - Enter a number from 0 to 255 for the protocol identified in the IP protocol header.
- **protocol-type**
  - Enter one of the following keywords as the protocol type:
    - icmp for internet control message protocol
    - ip for any internet protocol
    - tcp for transmission control protocol
    - udp for user datagram protocol
- **source**
  - Enter the IP address of the network or host from which the packets were sent.
- **mask**
  - Enter a network mask in /prefix format (/x).
- **any**
  - Enter the keyword any to specify that all traffic is subject to the filter.
**host ip-address**  Enter the keyword `host` then the IP address to specify a host IP address.

**destination**  Enter the IP address of the network or host to which the packets are sent.

**bit**  (OPTIONAL) For the TCP protocol type only, enter one or a combination of the following TCP flags:

- `ack` = acknowledgement
- `fin` = finish (no more data from the user)
- `psh` = push function
- `rst` = reset the connection
- `syn` = synchronize sequence number
- `urg` = urgent field

**operator**  (OPTIONAL) For TCP and UDP parameters only. Enter one of the following logical operands:

- `eq` = equal to
- `neq` = not equal to
- `gt` = greater than
- `lt` = less than
- `range` = inclusive range of ports (you must specify two ports for the `port` command parameter)

redirect

Configure a rule for the redirect list.

Syntax

```
redirect {ip-address | slot/port} | tunnel tunnel-id}{track <obj-id>} {ip-protocol-number | protocol-type [bit]} {source mask | any | host ip-address} {destination mask | any | host ip-address} [operator]
```

To remove this filter, use one of the following:

- Use the no seq sequence-number command if you know the filter's sequence number.
- You can also use the no redirect {ip-address | slot/port} | tunnel tunnel-id}{track <obj-id>} {ip-protocol-number [bit] | protocol-type} {source mask | any | host ip-address} {destination mask | any | host ip-address} [operator] command.

Parameters

- **redirect** Enter the keyword redirect to assign the sequence to the redirect list.
- **ip-address** Enter the IP address of the forwarding router.
- **slot/port** Enter the keyword slot / port followed by the slot/port information.
- **tunnel** Enter the keyword tunnel to configure the tunnel setting.
- **tunnel-id** Enter the keyword tunnel-id to redirect the traffic.
- **track** Enter the keyword track to enable the tracking.
- **track <obj-id>** Enter the keyword track <obj-id> to track object-id.
- **ip-protocol-number** Enter a number from 0 to 255 for the protocol identified in the IP protocol header.
- **protocol-type** Enter one of the following keywords as the protocol type:
  - icmp for internet control message protocol
  - ip for any internet protocol
  - tcp for transmission control protocol
  - udp for user datagram protocol
- **bit** (OPTIONAL) For the TCP protocol type only, enter one or a combination of the following TCP flags:
  - ack = acknowledgement
  - fin = finish (no more data from the user)
  - psh = push function
  - rst = reset the connection
  - syn = synchronize sequence number
  - urg = urgent field
- **source** Enter the IP address of the network or host from which the packets were sent.
- **mask** Enter a network mask in /prefix format (/x).
any

Enter the keyword any to specify that all traffic is subject to the filter.

host ip-address

Enter the keyword host then the IP address to specify a host IP address.

destination

Enter the IP address of the network or host to which the packets are sent.

operator

(Optional) For TCP and UDP parameters only. Enter one of the following logical operands:

- eq = equal to
- neq = not equal to
- gt = greater than
- lt = less than
- range = inclusive range of ports (you must specify two ports for the port command parameter.)

Defaults

None

REDIRECT-LIST

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description

9.10(0.0) Introduced on the S3148.

9.8(2.0) Introduced on the S3100 series.

9.8(1.0) Introduced on the Z9100-ON.

9.8(0.0P5) Introduced on the S4048-ON.

9.8(0.0P2) Introduced on the S3048-ON.

9.7(0.0) Introduced on the S6000-ON.

9.7(0.0) Added support for the track-id on the S4810, S4820T, S6000, and Z9000.

9.5(0.1) Introduced on the Z9500.

9.4(0.0) Introduced on the S4810, S4820T, S6000, and Z9000.

8.4.2.1 Introduced on the C-Series and S-Series.

8.4.2.0 Introduced on the E-Series.

7.7.1.0 Introduced on the E-Series.

seq

Configure a filter with an assigned sequence number for the redirect list.

Syntax

seq sequence-number {permit | redirect {ip-address | tunnel tunnel-id}[track <obj-id>] } {ip-protocol-number | protocol-type} {source mask | any | host ip-address} {destination mask | any | host ip-address} [bit] [operator]{source-
port source-port | source-port-range start-port - end-port} {destination-port
destination-port | destination-port-range start-port - end-port}

To delete a filter, use the no seq sequence-number command.

Parameters

- **sequence-number**: Enter a number from 1 to 65535.
- **permit**: Enter the keyword permit assign the sequence to the permit list.
- **redirect**: Enter the keyword redirect to assign the sequence to the redirect list.
- **ip-address**: Enter the keyword IP address of the forwarding router.
- **tunnel**: Enter the keyword tunnel to configure the tunnel setting.
- **tunnel-id**: Enter the keyword tunnel-id to redirect the traffic.
- **track**: Enter the keyword track to enable the tracking.
- **track <obj-id>**: Enter the keyword track <obj-id> to track object-id.
- **ip-protocol-number**: Enter the keyword ip-protocol-number then the number from 0 to 255 for the protocol identified in the IP protocol header.
- **protocol-type**: Enter one of the following keywords as the protocol type:
  - icmp for internet control message protocol
  - ip for any internet protocol
  - tcp for transmission control protocol
  - udp for user datagram protocol
- **source**: Enter the IP address of the network or host from which the packets were sent.
- **mask**: Enter a network mask in /prefix format (/x).
- **any**: Enter the keyword any to specify that all traffic is subject to the filter.
- **host ip-address**: Enter the keyword host then the IP address to specify a host IP address.
- **destination**: Enter the IP address of the network or host to which the packets are sent.
- **bit**: (OPTIONAL) For the TCP protocol type only, enter one or a combination of the following TCP flags:
  - ack = acknowledgement
  - fin = finish (no more data from the user)
  - psh = push function
  - rst = reset the connection
  - syn = synchronize sequence number
  - urg = urgent field
- **operator**: (OPTIONAL) For the TCP and UDP parameters only. Enter one of the following logical operand:
  - eq = equal to
  - neq = not equal to
  - gt = greater than
  - lt = less than
show cam pbr

Display the PBR CAM content.

Syntax

    show cam pbr {interface interface | stack-unit slot-number port-set number [pipeline number]} [summary]

Parameters

    interface interface     Enter the keyword interface then the name of the interface.
    stack-unit number       Enter the keyword stack-unit then the slot number.
    port-set number         Enter the keywords port-set then the port-pipe number.
    summary                 Enter the keyword summary to view only the total number of CAM entries.

Defaults

    none

show cam pbr

Display the PBR CAM content.

Syntax

    show cam pbr {interface interface | stack-unit slot-number port-set number [pipeline number]} [summary]

Parameters

    interface interface     Enter the keyword interface then the name of the interface.
    stack-unit number       Enter the keyword stack-unit then the slot number.
    port-set number         Enter the keywords port-set then the port-pipe number.
    summary                 Enter the keyword summary to view only the total number of CAM entries.

Defaults

    none

Dell#
PIM-Sparse Mode (PIM-SM)

The protocol-independent multicast (PIM) commands are supported by the Dell Networking operating software on the platform. The following describes the IPv4 PIM-SIM commands.

IPv4 PIM-Sparse Mode Commands

The following describes the IPv4 PIM-sparse mode (PIM-SM) commands.

clear ip pim rp-mapping

The bootstrap router (BSR) feature uses this command to remove all or particular rendezvous point (RP) advertisement.

Syntax

clear ip pim [vrf vrf-name] rp-mapping [rp-address]

Parameters

- **vrf vrf-name**: (OPTIONAL) Enter the keyword vrf followed by the name of the VRF to configure this setting on that VRF.
  
  **NOTE**: Applies to specific VRF if input is provided, else applies to Default VRF.

- **rp-address**: (OPTIONAL) Enter the RP address in dotted decimal format (A.B.C.D).

Command Modes

EXEC Privilege

Command History

**clear ip pim tib**

Clear PIM tree information from the PIM database.

**Syntax**

```
clear ip pim [vrf vrf-name] tib [group]
```

**Parameters**

- **vrf vrf-name** (OPTIONAL) Enter the keyword `vrf` followed by the name of the VRF to configure this setting on that VRF.

  **NOTE:** Applies to specific VRF if input is provided, else applies to Default VRF.

- **group** (OPTIONAL) Enter the multicast group address in dotted decimal format (A.B.C.D).

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
--- | ---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100-ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.5(0.1) | Introduced on the Z9500.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
8.1.1.0 | Introduced on the E-Series.
Version Description
7.8.1.0 Introduced on the S-Series.

Usage Information
If you use this command on a local VLT node, all multicast routes from the local PIM TIB, the entire multicast route table, and all the entries in the data plane are deleted. The local VLT node sends a request to the peer VLT node to download multicast routes learned by the peer. Both local and synced routes are removed from the local VLT node multicast route table. The peer VLT node clears synced routes from the node.

If you use this command on a peer VLT node, only the synced routes are deleted from the multicast route table.

debug ip pim

View IP PIM debugging messages.

Syntax
debug ip pim [vrf vrf-name] [bsr | events | group | packet [in | out] | register | state | timer [assert | hello | joinprune | register]]

To disable PIM debugging, use the no debug ip pim [vrf vrf-name] command or use the undebug all to disable all debugging command.

Parameters

vrf vrf-name (OPTIONAL) Enter the keyword vrf followed by the name of the VRF to view IP PIM debugging messages corresponding to that VRF.

NOTE: Applies to specific VRF if input is provided, else applies to Default VRF.

bsr (OPTIONAL) Enter the keyword bsr to view PIM Candidate RP/BSR activities.

events (OPTIONAL) Enter the keyword group to view PIM messages for a specific group.

group (OPTIONAL) Enter the keyword group to view PIM messages for a specific group.

packet [in | out] (OPTIONAL) Enter the keyword packet to view PIM packets. Enter one of the optional parameters:

• in: to view incoming packets
• out: to view outgoing packets

register (OPTIONAL) Enter the keyword register to view PIM register address in dotted decimal format (A.B.C.D).

state (OPTIONAL) Enter the keyword state to view PIM state changes.

timer [assert | hello | joinprune | register] (OPTIONAL) Enter the keyword timer to view PIM timers. Enter one of the optional parameters:

• assert: to view the assertion timer
• hello: to view the PIM neighbor keepalive timer
• joinprune: to view the expiry timer (join/prune timer)
- register: to view the register suppression timer

**ip pim bsr-border**

Define the border of PIM domain by filtering inbound and outbound PIM-BSR messages per interface.

**Syntax**

```plaintext
ip pim bsr-border
```

To return to the default value, use the **no ip pim bsr-border** command.

**Defaults**

Disabled.

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

1242  | PIM-Sparse Mode (PIM-SM)  | DELL EMC
Version Description
9.5(0.1) Introduced on the Z9500.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
8.3.7.0 Introduced on the S4810.
8.1.1.0 Introduced on the E-Series.
7.8.1.0 Introduced on the S-Series.

Usage Information
This command is applied to the subsequent PIM-BSR. Existing BSR advertisements are cleaned up by time-out. To clean the candidate RP advertisements, use the `clear ip pim rp-mapping` command.

**ip pim bsr-candidate**

To join the Bootstrap election process, configure the PIM router.

**Syntax**

```
ip pim [vrf vrf-name] bsr-candidate interface [hash-mask-length] [priority]
```

To return to the default value, use the `no ip pim bsr-candidate [vrf vrf-name]` command.

**Parameters**

- `vrf vrf-name` (OPTIONAL) Enter the keyword `vrf` followed by the name of the VRF to configure the PIM router on a VRF.
- `interface` Enter the following keywords and slot/port or number information:
  - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
  - For a Port Channel interface, enter the keywords `port-channel` then a number.
  - For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.
  - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- `hash-mask-length` (OPTIONAL) Enter the hash mask length. The range is from zero (0) to 32. The default is 30.
- `priority` (OPTIONAL) Enter the priority used in Bootstrap election process. The range is from zero (0) to 255. The default is zero (0).

**Defaults**
Not configured.

**Command Modes**
CONFIGURATION

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.
ip pim dr-priority

Change the designated router (DR) priority for the interface.

Syntax
ip pim dr-priority priority-value

To remove the DR priority value assigned, use the no ip pim dr-priority command.

Parameters

priority-value

Enter a number. Preference is given to larger/higher number. The range is from 0 to 4294967294. The default is 1.

Defaults
1

Command Modes
INTERFACE

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100-ON.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.5(0.1) Introduced on the Z9500.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
8.3.7.0 Introduced on the S4810.
8.1.1.0 Introduced on the E-Series.
6.1.1.0 Added support for the VLAN interface.
Version | Description
--- | ---
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
8.1.1.0 | Introduced on the E-Series.
7.8.1.0 | Introduced on the C-Series on port-channels and the S-Series.

Usage Information
The router with the largest value assigned to an interface becomes the designated router. If two interfaces contain the same designated router priority value, the interface with the largest interface IP address becomes the designated router.

**ip pim join-filter**

Permit or deny PIM Join/Prune messages on an interface using an extended IP access list. This command prevents the PIM-SM router from creating state based on multicast source and/or group.

**Syntax**

```
ip pim [vrf vrf-name] join-filter ext-access-list [in | out]
```

To remove the access list, use the `no ip pim [vrf vrf-name] join-filter ext-access-list` command.

**Parameters**

- `vrf vrf-name` (OPTIONAL) Enter the keyword `vrf` followed by the name of the VRF to permit or deny PIM join or prune messages on an interface associated with that VRF.

- `ext-access-list` Enter the name of an extended access list.

**Defaults**

none

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
--- | ---
9.10(0.1) | Introduced on the S6010-ON and S4048T-ON.
9.10(0.0) | Introduced on the S3148.
9.10(0.0) | Introduced on the S6100-ON.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100-ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.7(0.0) | Removed the in and out parameters. Introduced on the S6000-ON.
9.5(0.1) | Introduced on the Z9500.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
**Version** | **Description**
--- | ---
8.3.7.0 | Introduced on the S4810.
8.1.1.0 | Introduced on the E-Series.
7.8.1.0 | Introduced on the C-Series for the port-channels and the S-Series.
7.7.1.0 | Introduced on the E-Series.

**Usage Information**

When you configure a join filter, it is applicable for both ingress and egress flows. There is no option to specify in or out parameters while configuring a join filter.

**Example**

```
Dell(conf)# ip access-list extended iptv-channels
Dell(config-ext-nacl)# permit ip 10.1.2.3/24 225.1.1.0/24
Dell(config-ext-nacl)# permit ip any 232.1.1.0/24
Dell(config-ext-nacl)# permit ip 100.1.1.0/16 any
Dell(config-if-te-1/1)# ip pim join-filter iptv-channels
Dell(config-if-te-1/1)# ip pim join-filter iptv-channels
```

**Related Commands**

- `ip access-list extended` — configure an access list based on IP addresses or protocols.

---

**ip pim ingress-interface-map**

When the Dell Networking system is the RP, statically map potential incoming interfaces to (*,G) entries to create a lossless multicast forwarding environment.

**Syntax**

```
ip pim ingress-interface-map std-access-list
```

**Parameters**

- `std-access-list` Enter the name of a standard access list.

**Defaults**

- none

Dell(config-if-gi-1/1)#

ip pim neighbor-filter

To prevent a router from participating in protocol independent multicast (PIM), configure this feature.

Syntax

ip pim [vrf vrf-name] neighbor-filter {access-list}

To remove the restriction, use the no ip pim [vrf vrf-name] neighbor-filter {access-list} command.

Parameters

vrf vrf-name (OPTIONAL) Enter the keyword vrf followed by the name of the VRF to prevent that VRF from participating in PIM.

NOTE: Applies to specific VRF if input is provided, else applies to default VRF.

access-list Enter the name of a standard access list. Maximum 16 characters.

Defaults

none

8.3.7.0 Introduced on the S4810.
8.11.0 Introduced on the E-Series.
7.8.1.0 Introduced on the C-Series and S-Series.
**ip pim query-interval**

Change the frequency of PIM Router-Query messages.

```
Syntax           ip pim query-interval seconds
                To return to the default value, use the no ip pim query-interval seconds command.

Parameters

seconds          Enter a number as the number of seconds between router query messages. The range is
                 from 0 to 65535. The default is **30 seconds**.

Defaults

30 seconds

ip pim register-filter

To prevent a PIM source DR from sending register packets to an RP for the specified multicast source and group, use this feature.

Syntax

```
ip pim [vrf vrf-name] register-filter access-list
```

To return to the default, use the
```
no ip pim [vrf vrf-name] register-filter access-list
```

command.

Parameters

- **vrf vrf-name**: (OPTIONAL) Enter the keyword `vrf` followed by the name of the VRF.
  
  **NOTE**: Applies to specific VRF if input is provided, else applies to Default VRF.

- **access-list**: Enter the name of an extended access list. Maximum 16 characters.

Defaults

Not configured.

</tr>
</tbody>
</table>

Usage Information

The access name is an extended IP access list that denies PIM register packets to RP at the source DR based on the multicast and group addresses. Do not enter this command before creating the access-list.
**ip pim rp-address**

Configure a static PIM rendezvous point (RP) address for a group or access-list.

**Syntax**

```plaintext
ip pim [vrf vrf-name] rp-address address {group-address group-address mask} [override]
```

To remove an RP address, use the `no ip pim [vrf vrf-name] rp-address address {group-address group-address mask} [override]` command.

**Parameters**

- `vrf vrf-name` (OPTIONAL) Enter the keyword `vrf` followed by the name of the VRF.
  - **NOTE:** Applies to specific VRF if input is provided, else applies to Default VRF.
- `address` Enter the RP address in dotted decimal format (A.B.C.D).
- `group-address` Enter the keywords `group-address` then a group-address mask, in dotted decimal format (/xx), to assign that group address to the RP.
- `override` Enter the keyword `override` to override the BSR updates with static RP. The override takes effect immediately during enable/disable.
  - **NOTE:** This option is applicable to multicast group range.

**Defaults**

Not configured.

**Command Modes**

- CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
--- | ---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100-ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.5(0.1) | Introduced on the Z9500.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
8.1.1.0 | Introduced on the E-Series.
Usage Information
First-hop routers use this address by to send register packets on behalf of source multicast hosts. The RP addresses are stored in the order in which they are entered. The RP is chosen based on a longer prefix match for a group. The RP selection does not depend on dynamic or static RP assignments.

**ip pim rp-candidate**

Configure a PIM router to send out a Candidate-RP-Advertisement message to the bootstrap (BS) router or define group prefixes that are defined with the RP address to PIM BSR.

**Syntax**

```
ip pim [vrf vrf-name] rp-candidate {interface [priority] [acl-name]}
```

To return to the default value, use the `no ip pim [vrf vrf-name] rp-candidate {interface [priority]}` command.

**Parameters**

- `vrf vrf-name` (OPTIONAL) Enter the keyword `vrf` followed by the name of the VRF.

  **NOTE:** Applies to specific VRF if input is provided, else applies to Default VRF.

- `interface` Enter the following keywords and slot/port or number information:
  - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
  - For a port-channel interface, enter the keywords `port-channel` then the port-channel ID.
  - For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

- `priority` (OPTIONAL) Enter the priority used in Bootstrap election process. The range is zero (0) to 255. The default is 192.

- `acl-name` (OPTIONAL) Enter the name of an ACL to configure a PIM router to act as an RP for a specific set of multicast group addresses that are defined in the ACL.

**Defaults**

Not configured.

**Command Modes**

### ip pim sparse-mode

Enable PIM sparse mode and IGMP on the interface.

**Syntax**
```
ip pim sparse-mode
```
To disable PIM sparse mode and IGMP, use the **no ip pim sparse-mode** command.

**Defaults**
Disabled.

**Command Modes**
INTERFACE

**Command History**

</tr>
</tbody>
</table>

**Usage Information**
Priority is stored at BSR router when receiving a Candidate-RP-Advertisement.
The interface must be enabled (the `no shutdown` command) and not have the `switchport` command configured. Multicast must also be enabled globally (using the `ip multicast-lag-hashing` command). PIM is supported on the port-channel interface.

**ip pim sparse-mode sg-expiry-timer**

Enable expiry timers globally for all sources.

**Syntax**

```
ip pim [vrf vrf-name] sparse-mode sg-expiry-timer seconds [access-list-name]
```

To disable configured timers and return to default mode, use the `no ip pim [vrf vrf-name] sparse-mode sg-expiry-timer` command.

**Parameters**

- **vrf vrf-name** (OPTIONAL) Enter the keyword `vrf` followed by the name of the VRF to enable expiry timer for all sources on that VRF.
  
  **NOTE:** Applies to specific VRF if input is provided, else applies to Default VRF.

- **seconds**
  
  Enter the number of seconds the S, G entries are retained. The range is from 211 to 65535.

- **access-list-name** (OPTIONAL) Enter the name of a previously configured Extended ACL to enable the expiry time to specified S,G entries.

**Defaults**

Disabled. The default expiry timer (with no times configured) is 210 sec.

### ip pim ssm-range

Specify the SSM group range using an access list.

**Syntax**

```bash
ip pim [vrf vrf-name] ssm-range {access_list_name}
```

**Parameters**

- **vrf vrf-name**  
  (OPTIONAL) Enter the keyword vrf followed by the name of the VRF to specify the SSM group range for that VRF.

  **NOTE:** Applies to specific VRF if input is provided, else applies to Default VRF.

- **access_list_name**  
  Enter the name of the access list.

**Defaults**

Default SSM range is 232/8 and ff3x/32

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>
### Usage Information

Dell Networking OS supports standard access lists for the SSM range. You cannot use extended ACLs for configuring the SSM range. If you configure an extended ACL and then used in the `ip pim ssm-range {access list name}` configuration, an error is reported. However, if you configure `ip pim ssm-range {access list name}` first and then configure the ACL as an Extended ACL, an error is not reported and the ACL is not applied to the SSM range.

Dell Networking OS-recommended best-practices are to configure the standard ACL, and then apply the ACL to the SSM range. After the SSM range is applied, the changes are applied internally without requiring clearing of the tree information base (TIB).

When the ACL rules change, the ACL and protocol-independent multicast (PIM) modules apply the new rules automatically.

When you configure the SSM range, Dell Networking OS supports SSM for configured group range as well as the default SSM range.

When you remove the SSM ACL, PIM SSM is supported for the default SSM range only.

### ip pim spt-threshold

To switch to the shortest path tree when the traffic reaches the specified threshold value, configure the PIM router.

**Syntax**

```text
ip pim [vrf vrf-name] spt-threshold [value | infinity]
```

To return to the default value, use the `no ip pim [vrf vrf-name] spt-threshold [infinity]` command.

**Parameters**

- `value` (OPTIONAL) Enter the traffic value in kilobits per second. The default is 10 packets per second. A value of zero (0) causes a switchover on the first packet.
- `vrf vrf-name` (OPTIONAL) Enter the keyword `vrf` followed by the name of the VRF to configure the PIM router on that VRF.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.
### no ip pim snooping dr-flood

Disable the flooding of multicast packets to the PIM designated router.

**Syntax**

```
no ip pim snooping dr-flood
```

To re-enable the flooding of multicast packets to the PIM designated router, use the `ip pim snooping dr-flood` command.

**Defaults**

Enabled.

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>

**Usage Information**

By default, when you enable PIM-SM snooping, a switch floods all multicast traffic to the PIM designated router (DR), including unnecessary multicast packets. To minimize the traffic sent over the network to the designated router, you can disable designated-router flooding.
When designated-router flooding is disabled, PIM-SM snooping only forwards the multicast traffic, which belongs to a multicast group for which the switch receives a join request, on the port connected towards the designated router.

If the PIM DR flood is not disabled (default setting):
- Multicast traffic is transmitted on the egress port towards the PIM DR if the port is not the incoming interface.
- Multicast traffic for an unknown group is sent on the port towards the PIM DR. When DR flooding is disabled, multicast traffic for an unknown group is dropped.

**show ip pim bsr-router**

View information on the Bootstrap router.

**Syntax**

```
show ip pim [vrf vrf-name] bsr-router
```

**Parameters**

- **vrf vrf-name** (OPTIONAL) Enter the keyword vrf followed by the name of the VRF to configure this setting on VRF.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
--- | ---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100-ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.

7.8.1.0 | Introduced on the S-Series.
Example

```
Dell# show ip pim bsr-router
PIMv2 Bootstrap information
This system is the Bootstrap Router (v2)
  BSR address: 7.7.7.7 (?)
  BSR Priority: 0, Hash mask length: 30
  Next bootstrap message in 00:00:08

This system is a candidate BSR
  Candidate BSR address: 7.7.7.7, priority: 0, hash mask length: 30
Dell#
```

```
show ip pim interface
```

View information on the interfaces with IP PIM enabled.

Syntax

```
show ip pim [vrf vrf-name] interface
```

Parameters

- **vrf vrf-name** (OPTIONAL) Enter the keyword vrf followed by the name of the VRF to configure this setting on this VRF.

**NOTE:** Applies to specific VRF if input is provided, else applies to Default VRF.

Command Modes

- EXEC
- EXEC Privilege

Command History

</table>
The following describes the `show ip pim interface` command shown in the following example.

**Field** | **Description**
---|---
**Address** | Lists the IP addresses of the interfaces participating in PIM.
**Interface** | List the interface type, with either slot/port information or ID (VLAN or Port Channel), of the interfaces participating in PIM.
**Ver/Mode** | Displays the PIM version number and mode for each interface participating in PIM:
  - **v2** = PIM version 2
  - **S** = PIM Sparse mode
**Nbr Count** | Displays the number of PIM neighbors discovered over this interface.
**Query Intvl** | Displays the query interval for Router Query messages on that interface (configured with `ip pim query-interval` command).
**DR Prio** | Displays the Designated Router priority value configured on the interface (use the `ip pim dr-priority` command).
**DR** | Displays the IP address of the Designated Router for that interface.

The `show ip pim interface` command does not display information corresponding to the loop-back interfaces.

**Example**

```
Dell# show ip pim interface
Address          Interface Ver/Mode Nbr Count Query Intvl DR Prio
165.87.34.5      Gi 1/10   v2/S   0     30     1        165.87.34.5
10.1.1.2         Vl 10     v2/S   1     30     1        10.1.1.2
20.1.1.5         Vl 20     v2/S   1     30     1        20.1.1.5
165.87.31.200    Vl 30     v2/S   1     30     1        165.87.31.201
Dell#
```

### show ip pim neighbor

View PIM neighbors.

**Syntax**

```
show ip pim [vrf vrf-name] neighbor
```

**Parameters**

- **vrf vrf-name** (OPTIONAL) Enter the keyword `vrf` followed by the name of the VRF to configure this setting on that VRF.

**NOTE:** Applies to specific VRF if input is provided, else applies to Default VRF.

**Command Modes**

</tr>
</tbody>
</table>

Example

```
Dell# show ip pim snooping neighbor
Neighbor Address    Interface  Uptime/Expires    Ver  DR Prio
165.87.32.2         Vl 2 [Gi 1/13] 00:04:03/00:01:42 v2  1
165.87.32.10        Vl 2 [Gi 1/11] 00:00:46/00:01:29 v2  0
165.87.32.12        Vl 2 [Gi 2/20] 00:00:51/00:01:24 v2  0
```

show ip pim snooping tib

Display information from the tree information base (TIB) PIM-SM snooping discovered about multicast group members and states.

Syntax

```
show ip pim snooping tib [vlan vlan-id] [group-address [source-address]]
```

Parameters

- **vlan vlan-id** (OPTIONAL) Enter a VLAN ID to display TIB information PIM-SM snooping discovered on a specified VLAN. The valid VLAN IDs range is from 1 to 4094.
- **group-address** (OPTIONAL) Enter the group address in dotted decimal format (A.B.C.D) to display TIB information PIM-SM snooping discovered for a specified multicast group.
- **source-address** (OPTIONAL) Enter the source address in dotted decimal format (A.B.C.D) to display TIB information PIM-SM snooping discovered for a specified multicast source.

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version     | Description                      |
------------|----------------------------------|
9.10(0.0)   | Introduced on the S3148.         |
9.8(2.0)    | Introduced on the S3100 series.  |
9.8(0.0P5)  | Introduced on the S4048-ON.      |
Version Description
9.8(0.0P2) Introduced on the S3048-ON.
9.5(0.1) Introduced on the Z9500.
8.3.19.0 Introduced on the S4820T.
8.3.12.0 Introduced on the S4810.
8.4.1.1 Introduced on the E-Series.

Usage Information
The following describes the `show ip pim snooping tib` commands shown in the following example.

Field | Description
--- | ---
(S, G) | Displays the entry in the PIM multicast snooping database.
uptime | Displays the amount of time the entry has been in the PIM multicast route table.
expires | Displays the amount of time until the entry expires and is removed from the database.
RP | Displays the IP address of the RP/source for this entry.
flags | List the flags to define the entries:
  - S = PIM Sparse Mode
  - C = directly connected
  - L = local to the multicast group
  - P = route was pruned
  - R = the forwarding entry is pointing toward the RP
  - F = Dell Networking OS is registering this entry for a multicast source
  - T = packets were received via Shortest Tree Path
  - J = first packet from the last hop router is received and the entry is ready to switch to SPT
  - K = acknowledge pending state

Incoming interface | Displays the reverse path forwarding (RPF) interface towards the RP/source.
RPF neighbor | Displays the next hop from this interface towards the RP/source.
Outgoing interface list: | Lists the interfaces that meet one of the following criteria:
  - a directly connect member of the Group
  - statically configured member of the Group
  - received a (*,G) Join message

Example
```
Dell# show ip pim snooping tib

PIM Multicast Snooping Table
Flags: J/P - (*,G) Join/Prune, j/p - (S,G) Join/Prune
  SGR-P - (S,G,R) Prune
Timers: Uptime/Expires
  * : Inherited port
(*, 225.1.2.1), uptime 00:00:01, expires 00:02:59, RP 165.87.70.1, flags: J
  Incoming interface: Vlan 2, RPF neighbor 0.0.0.0
  Outgoing interface list:
    GigabitEthernet 2/11 RPF 165.87.32.2 00:00:01/00:02:59
    GigabitEthernet 2/13 Upstream Port -/-

Dell# show ip pim snooping tib vlan 2 225.1.2.1 165.87.1.7
```
**show ip pim ssm-range**

Display the non-default groups added using the SSM range feature.

### Syntax

show ip pim [vrf vrf-name] ssm-range

### Parameters

- **vrf vrf-name**  
  (OPTIONAL) Enter the keyword vrf followed by the name of the VRF to configure this setting on that VRF.

### Defaults

none

### Command Modes

- EXEC
- EXEC Privilege

### Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Dell# show running-config pim
ip pim snooping enable
Dell#
```
Power over Ethernet (PoE)

Dell Networking OS supports Power over Ethernet (PoE) and Power over Ethernet Plus (PoE+) on S3100 series systems. Use the commands in this chapter to configure the Power over Ethernet (PoE) on the S3100 platforms.

Topics:
- advertise dot3-tlv
- advertise med power-via-mdi
- power budget global-threshold
- power inline
- power inline legacy
- power inline mode
- power inline restore
- power inline suspend
- show power detail
- show power inline

advertise dot3-tlv

Advertise dot3 TLVs (Type, Length, Value).

S3100 series

Syntax

advertise dot3-tlv {max-frame-size | power-via-mdi}

To remove advertised dot3-tlv, use the no advertise dot3-tlv {max-frame-size | power-via-mdi} command.

Parameters

- **max-frame-size**: Enter the keywords max-frame-size to advertise the dot3 maximum frame size TLV.
- **power-via-mdi**: Enter the keyword power-via-mdi to advertise IEEE 802.3 at power-via-mdi TLV.

Defaults

None

Command Modes

CONFIGURATION (conf-lldp) and INTERFACE (conf-if-interface-lldp)

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

The `advertise dot3-tlv power-via-mdi` command enables the system to advertise IEEE 802.3 at power-via-mdi TLV to advertise its power negotiation capabilities with the powered devices via Link Layer Discovery Protocol (LLDP). You can configure this command either on a specific interface or globally.

**Example**

```
Dell(conf)# int gigabitethernet 1/1
Dell(conf-if-gi-1/1)#protocol lldp
Dell(conf-if-gi-1/1-lldp)#advertise dot3-tlv power-via-mdi
Dell(conf-if-gi-1/1-lldp)#show config
!
protocol lldp
advertise dot3-tlv power-via-mdi
Dell(conf-if-gi-1/1-lldp)#
```

**advertise med power-via-mdi**

To advertise the Extended Power via MDI TLV, configure the system.

**S3100 Series**

**Syntax**

```
advertise med power-via-mdi
```

To return to the default, use the `no advertise med power-via-mdi` command.

**Defaults**

unconfigured.

**Command Modes**

CONFIGURATION (conf-lldp)

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

Advertise the Extended Power via MDI on all ports that are connected to an 802.3af powered, LLDP-MED endpoint device.

**Related Commands**

- `debug lldp interface` — debugs LLDP.
- `show lldp neighbors` — displays the LLDP neighbors.

**Example**

```bash
Dell(conf)#int gigabitethernet 1/1
Dell(conf-if-gi-1/1)#protocol lldp
Dell(conf-if-gi-1/1-lldp)#advertise med power-via-mdi
Dell(conf-if-gi-1/1-lldp)#show config
!
protocol lldp
advertise med power-via-mdi
Dell(conf-if-gi-1/1-lldp)#
```

---

**power budget global-threshold**

If the switch has an external power supply, this command allows the external power supply of the specified stack member to be used for powering PoE ports. Use this command to set a global threshold limit for the PoE power budget on a specified stack unit.

**Syntax**

`power budget global-threshold stack-unit stack-unit-number threshold-value`

**Parameters**

- `stack-unit stack-unit-number` Enter the keyword `stack-unit` and the stack unit number. Range is from 1 to 12.
- `threshold-value` Enter the power threshold limit value in percentage. Range is from 10 to 99. Default value is 99.

**Default**

None

</tr>
<tr>
<td>9.8(2.0)</td>
<td>Introduced on the S3100 series.</td>
</tr>
</tbody>
</table>

**Usage Information**

Configure a global threshold limit for the Power over Ethernet (PoE) power budget for a specified stack unit. A default power threshold value of 99% is configured when there is no threshold value configured.

**Example**

```
Dell(conf)#power budget global-threshold stack-unit 1 10
Dell(conf)#exit
Dell#show power detail stack-unit 1
```

Dell#

**power inline**

Use this command to enable inline power and configure maximum power allocation with priority for the powered device connected to an interface.

**Syntax**

```
power inline {max_milliwatts | priority {critical | high | low}}
```

To disable a device that has been enabled for PoE power supply, use the `no power inline` command.

**Parameters**

- **max_milliwatts** (OPTIONAL) Specify the maximum amount of inline power allocation to a powered device connected to the interface. Range is 440–30000 milliwatts (mWs). The default value is 30000 mWs.

  **NOTE:** The `max_milliwatt` configuration is effective only in Static mode.

- **priority**
  - Enter the keyword `priority` to specify the PoE priority for the powered device connected to the interface. Default priority value is low.
  - `critical` Enter the keyword `critical` to set the PoE priority level as critical.
  - `high` Enter the keyword `high` to set the PoE priority level as high.
  - `low` Enter the keyword `low` to set the PoE priority as low.
The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.10(0.0)</td>
<td>Introduced on the S3148.</td>
</tr>
<tr>
<td>9.8(2.0)</td>
<td>Introduced on the S3100 series.</td>
</tr>
</tbody>
</table>

### Usage Information

The `power inline [max_milliwatts]` command enables inline power supply to an interface. You can specify the maximum amount of power allocation to a device in max-milliwatts from 440 to 30000 mW. If a specific power supply value is not configured, the default value 30,000 mW is configured as the maximum power for allocation to powered devices. You can disable the inline power supply to a port using the `no power inline` command.

The `power inline priority` command allows you to specify the power inline priority for an interface when a power shortage occurs. PoE is removed from ports configured with low priority first, then ports configured with high priority are disabled. The ports configured with critical priority are the last ports disabled during a power shortage. When two or more ports are configured with the same priority level, the ports with higher interface numbers are disabled first. For example, if ports 1, 2, 47, and 48 are all configured with a low priority and there is a shortage of inline power supply, PoE is first disabled on port 48, followed by port 47 and, then port 2. Port 1 (with the lowest interface number) takes precedence over all other ports and is disabled after all other ports are disabled.

### Example

Dell(config)#interface gigabitethernet 1/1
Dell(config-if-gi-1/1)#power inline 30000
Dell(config-if-gi-1/1)#show power inline stack-unit 1
Dell#show power inline stack-unit 1
Global inline power Threshold : 10
Power Reserved for inline Power: 95W
Total Inline Power Consumed: 0W
Remaining inline power Available: 95W
Power Management Mode: Static
Interface Max / Alloc Inline Power Inline Power Class Device PoE Port LLDP
          Max / Alloc Consumed Type Priority Support
--------- ----------- ------------ --- ------- ------- ------- -------
Gi 1/1     30.00/0.00 0.00     NO_DEVICE -
high       -           -          -
Dell#

### power inline legacy

Use this command to allocate inline power to the legacy devices on the specified stack unit.

**Syntax**

```
power inline legacy stack-unit unit number
```

To disable the detection of legacy powered devices in a stack unit, use the `no power inline legacy stack-unit unit number` command.

**Parameters**

- `stack-unit unit number`
  - Enter the keyword `stack-unit` and the unit number. Range is 1 to 12.

**Defaults**

Enabled

**Command Modes**

CONFIGURATION
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.10(0.0)</td>
<td>Introduced on the S3148.</td>
</tr>
<tr>
<td>9.10(0.0)</td>
<td>Increased the stacking range to 12 units in S3100 series.</td>
</tr>
<tr>
<td>9.8(2.0)</td>
<td>Introduced on the S3100 series.</td>
</tr>
</tbody>
</table>

The `power inline legacy` command allows the system to detect and allocate inline power to the legacy devices on a stack unit.

```
Dell(conf)#power inline legacy stack-unit 1
```

**power inline mode**

Use this command to configure PoE power management mode for a specified stack member.

**Syntax**

```
power inline mode stack-unit unit number { class | static }
```

**Parameters**

- `stack-unit unit number` Enter the keyword `stack-unit` and the unit number. Range is 1 to 12.
- `class` Enter the keyword `class` to configure the class mode for the specified stack unit.
- `static` Enter the keyword `static` to configure the static mode for the specified stack unit.

**Defaults**

Static

**Command Modes**

CONFIGURATION

**Command History**

</tr>
<tr>
<td>9.8(2.0)</td>
<td>Introduced on the S3100 series.</td>
</tr>
</tbody>
</table>

The `power inline mode` command allows you to manage inline power supply on the stack unit. You can configure class or static mode to manage inline power in a stack unit.

When class mode is configured, maximum power for the particular class of device is allocated. Class mode supports power allocation via Layer 2 classification and power negotiation by Link Layer Discovery Protocol (LLDP) 802.3at standard. When static mode is configured, the inline power is allocated based on the actual power consumption by the powered device. Power negotiation via LLDP is not supported in static mode.
Example for static mode:

Dell(conf)#power inline mode stack-unit 1 static
Dell#show power inline stack-unit 1

Global inline power Threshold : 10
Power Reserved for inline Power: 95W
Total Inline Power Consumed: 0W
Remaining inline power Available: 95W
Power Management Mode: Static

Interface   Inline Power   Inline Power    Class   Device  PoE Port    LLDP

Dell#

clear power inline

You can clear the PoE power consumption values for all the ports.

Syntax

  power inline clear stack-unit unit number

Parameters

  stack-unit unit

    Enter the keyword stack-unit and the stack-unit number. Range is from 1 to 12.

Defaults

  None

Command Modes

  EXEC

Command History

  This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

  The following is a list of the Dell Networking OS version history for this command.

  Version  Description
  9.10(0.0)  Introduced on the S3148.
  9.10(0.0)  Increased the stacking range to 12 units in S3100 series.

power inline restore

You can use this command to enable the temporarily suspended PoE power supply to all the ports in a stack unit.

Syntax

  power inline restore stack-unit unit number

Parameters

  stack-unit unit

    Enter the keyword stack-unit and the stack-unit number. Range is from 1 to 12.

Defaults

  None

Command Modes

  EXEC

Command History

  This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

  The following is a list of the Dell Networking OS version history for this command.

  Version  Description
  9.10(0.0)  Introduced on the S3148.
  9.10(0.0)  Increased the stacking range to 12 units in S3100 series.
### power inline restore

The `power inline restore` command enables or restores the temporarily suspended PoE power supply to all the ports on a stack unit.

**Usage Information**

Example:

```
Dell#power inline restore stack-unit 1
```

### power inline suspend

You can use this command to disable PoE power supply to all the ports in a stack unit temporarily.

**Syntax**

```
power inline suspend stack-unit unit number
```

**Parameters**

- `stack-unit unit number`
  
  Enter the keyword `stack-unit` and the stack unit number. Range is 1 to 12.

**Defaults**

None

**Command Modes**

EXEC

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.10(0.0)</td>
<td>Introduced on the S3148.</td>
</tr>
<tr>
<td>9.10(0.0)</td>
<td>Increased the stacking range to 12 units in S3100 series.</td>
</tr>
<tr>
<td>9.8(2.0)</td>
<td>Introduced on the S3100 series.</td>
</tr>
</tbody>
</table>

**Usage Information**

The `power inline suspend` command temporarily disables PoE power supply to all the ports in the specified stack unit. You can use the `power inline restore` command to restore or enable the PoE power supply to the stack unit.

**Example**

```
Dell#power inline suspend stack-unit 1
Dell#show power inline stack-unit 1
% Error: Power to stack-unit 1 is in suspended state.
Dell#
```

### show power detail

You can use this command to display the inline power consumption details for a specified stack unit.

**Syntax**

```
show power detail {stack-unit unit number}
```

**Parameters**

- `stack-unit unit number`
  
  Enter the stack-unit keyword and the unit number. Range is 1 to 12.
show power inline

You can use this command to display the PoE power allocation on a specified stack unit or on an interface.

Syntax

show power inline {stack-unit unit number | interface interface SLOT/PORT [/SUBPORT]} }

Parameters

stack-unit unit number

Enter the keyword stack-unit and the stack unit number. Range is from 1 to 12.

interface interface SLOT/PORT [/SUBPORT]

Enter the interface keyword, and specify the interface type followed by the SLOT/PORT [/SUBPORT] numbers.

Defaults

None

Command Modes

• EXEC
• EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.10(0.0)</td>
<td>Introduced on the S3148.</td>
</tr>
<tr>

<td>Increased the stacking range to 12 units in S3100 series.</td>
</tr>
<tr>
<td>9.8(2.0)</td>
<td>Introduced on the S3100 series.</td>
</tr>
</tbody>
</table>
The following table describes the output fields of the `show power inline` command:

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Interface</strong></td>
<td>Displays the line card or the interface slot and port number.</td>
</tr>
<tr>
<td><strong>Inline Power Allocated</strong></td>
<td>Displays the amount of power allocated to the port.</td>
</tr>
<tr>
<td><strong>Inline Power Consumed</strong></td>
<td>Displays the amount of power consumed by the connected device.</td>
</tr>
<tr>
<td><strong>Class</strong></td>
<td>Displays the power classification of the connected device. If the device is powered up properly, it displays Class 0, 1, 2, 3, or 4. Displays the following under different conditions:</td>
</tr>
<tr>
<td></td>
<td>• NO DEVICE if no device is present.</td>
</tr>
<tr>
<td></td>
<td>• LEGACY if a legacy device is connected.</td>
</tr>
<tr>
<td></td>
<td>• PD_S/C if a short-circuit condition is detected.</td>
</tr>
<tr>
<td></td>
<td>• PD_OVRLD if overload condition is detected.</td>
</tr>
<tr>
<td><strong>Device Type</strong></td>
<td>Displays whether the device is Type 1 or Type 2.</td>
</tr>
<tr>
<td><strong>PoE Port Priority</strong></td>
<td>Displays the power configured for the port (default is low). See <code>power inline priority</code>.</td>
</tr>
<tr>
<td><strong>LLDP Support</strong></td>
<td>Displays the power requested is via LLDP-MED extended power-via-mdi TLV or IEEE 802.3at power-via-mdi TLV.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell# show power inline stack-unit 1

<td>high</td>
<td></td>
</tr>
</tbody>
</table>
Dell#     
```
Port Monitoring

The port monitoring feature allows you to monitor network traffic by forwarding a copy of each incoming or outgoing packet from one port to another port.

Important Points to Remember

- Port monitoring is supported on physical ports and logical interfaces, such as port channels and virtual local area networks (VLANs).
- The monitoring (destination, “MG”) and monitored (source, “MD”) ports must be on the same switch.
- In general, a monitoring port should have no ip address and no shutdown as the only configuration; Dell Networking OS permits a limited set of commands for monitoring ports; display them using the ? command. A monitoring port also may not be a member of a VLAN.
- A total of 4 MG may be configured in a single port-pipe.
- MG and MD ports can be reside anywhere across a port-pipe.
- The Dell Networking OS supports multiple source ports to be monitored by a single destination port in one monitor session.
- One monitor session can have only one MG port.

NOTE: The monitoring port should not be a part of any other configuration.

Topics:
- description
- erpm
- monitor multicast-queue
- monitor session
- rate-limit
- show config
- show monitor session
- show running-config monitor session
- source (port monitoring)

description

Enter a description of this monitoring session.

Syntax

```
description {description}
```

To remove the description, use the no description {description} command.

Parameters

- description

Enter a description regarding this session (80 characters maximum).

Defaults

none

**Related Commands**

- **monitor session** — enables a monitoring session.

---

**erpm**

Configure the source and destination IP address for ERPM traffic.

**Syntax**

```plaintext
erpm source-ip ip-address dest-ip ip-address [gre-protocol value]
```

To remove the configuration, use the `no erpm source-ip IP-address dest-ip IP-address [gre-protocol value]` command.

**Parameters**

- `source-ip ip-address`
  - Enter the keywords `source-ip` then the source IP address in dotted decimal format.

- `destination-ip ip-address`
  - Enter the keywords `destination-ip` then the destination IP address in dotted decimal format.

- `gre-protocol value`
  - (OPTIONAL) Enter the keywords `gre-protocol` then the protocol type value for ERPM type monitor session. The range is from 1 to 65535.

**Command Modes**

MONITOR SESSION (conf-mon-sess-session-ID)
Example

Dell(conf-mon-sess-10)#erpm source-ip 10.10.10.1 dest-ip 5.1.1.2 gre-protocol 1111

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.11(0.0)</td>
<td>Introduced GRE protocol support.</td>
</tr>
</tbody>
</table>

**monitor multicast-queue**

Configure monitor QoS multicast queue ID.

**Syntax**

```
monitor multicast-queue queue-id
```

To remove the configuration, use the `no monitor multicast-queue` command.

**Parameters**

- `queue-id`  
  Enter the QoS multicast queue ID. The range is from 0 to 9.

**Defaults**

`queue-id`: 0

Enable status: Disabled

**Command Modes**

CONFIGURATION

**Example**

Dell(conf)#monitor multicast-queue 7

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

**Related Commands**

- `show running-config monitor session` — displays information about monitor configurations.
**monitor session**

Create a session for monitoring traffic with port monitoring.

**Syntax**

```plaintext
monitor session session-ID [type { rpm | erpm [set ip dscp dscp_value | set ip ttl ttl_value]]} [drop]
```

To delete a session, use the `no monitor session session-ID` command.

To delete all monitor sessions, use the `no monitor session all` command.

**Parameters**

- **session-ID**
  - Enter a session identification number. The range is from 0 to 65535.

- **type**
  - Specifies one of the following type:
    - `rpm`
    - `erpm`

- **rpm**
  - Creates a remote port monitoring (rpm) session.

- **erpm**
  - Creates an encapsulated remote port monitoring (erpm) session.

- **set ip dscp**
  - Configures the Differentiated Services Code Point (DSCP) value of the packets in the Encapsulated Remote Switched Port Analyzer (ERSPAN) traffic. To revert to the default value, use the no form of this command.

- **dscp_value**
  - DSCP value of the packets in the ERSPAN traffic. The range is from 0 to 63. The default value is 0.

- **set ip ttl**
  - Configures the IP time-to-live (TTL) value of the Encapsulated Remote Switched Port Analyzer (ERSPAN) traffic. To revert to the default configuration, use the no form of this command.

- **ttl_value**
  - IP TTL value of the ERSPAN traffic. The range is from 1 to 255. The default value is 255.

- **drop**
  - Monitors only the dropped packets in the Ingress.

**Defaults**

- `none`

**Command Modes**

- `CONFIGURATION`

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version**

- 9.10(0.0)
  - Introduced on the S3148.
- 9.8(2.0)
  - Introduced on the S3100 series.
- 9.8(1.0)
  - Introduced on the Z9100-ON.
- 9.8(0.0P6)
  - Introduced on the S4048-ON.
- 9.8(0.0P2)
  - Introduced on the S3048-ON.
- 9.8(0.0)
  - Added the drop parameter.
- 9.7(0.0)
  - Introduced on the S6000-ON. Introduced the `set ip dscp` and `set ip ttl` parameters.
### Version | Description
--- | ---
9.5(0.1) | Introduced on the Z9500.
9.4(0.0) | Introduced on the S4810, S4820T, S6000, and Z9000.
9.0.2.0 | Introduced on the S6000.
9.0.2.0 | Introduced on the MXL.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.

### Usage Information
The `monitor` command is saved in the running configuration at Monitor Session mode level and can be restored after a chassis reload.

### Example
```
Dell# show monitor session
SessID  Source         Destination         Dir  Mode  Source IP      Dest IP         DSCP  TTL
------  ------         -----------         ---  ----  ---------      --------        ----  ---
0   Gi 1/12           remote-ip         rx   Flow 1.1.1.1         7.1.1.2         0     255
0   Po 1              remote-ip         tx   Flow 1.1.1.1         7.1.1.2         0     255
1   Vl 11             remote-ip         rx   Flow 5.1.1.1         3.1.1.2         0     255
```

### Related Commands
- `show monitor session` — displays the monitor session.
- `show running-config monitor session` — displays the running configuration of a monitor session.

### rate-limit
Configure the rate-limit to limit the mirrored packets.

#### Syntax
```
rate-limit limit
```

To remove the limit, use the `no rate-limit limit` command.

#### Parameters
- **limit**
  
Enter the rate-limit value. The range is from 0 to 40000 Megabits per second.

#### Defaults
60

#### Command Modes
- CONFIGURATION

#### Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

show monitor session

Display information about monitoring sessions.

Syntax

show monitor session {session-ID}

To display monitoring information for all sessions, use the show monitor session command.
Parameters

- **session-ID**
  
  (OPTIONAL) Enter a session identification number. The range is from 0 to 65535.

Defaults

- none

Command Modes

- EXEC
- EXEC Privilege

```
show running-config monitor session

Display the running configuration of all monitor sessions or a specific session.

Syntax
show running-config monitor session {session-ID}

To display the running configuration for all monitor sessions, use the show running-config monitor session command.

Parameters
session-ID (OPTIONAL) Enter a session identification number. The range from 0 to 65535.

Defaults
none

Command Modes
- EXEC
- EXEC Privilege

</table>
Usage Information

The `monitoring` command is saved in the running configuration at the Monitor Session mode level and can be restored after a chassis reload.

Example

```
Dell# show running-config monitor session
! 
monitor session 1
source GigabitEthernet 1/1 destination GigabitEthernet 1/2 direction rx
!
monitor multicast-queue 7
Dell#
```

Related Commands

- `monitor session` — creates a monitoring session.
- `show monitor session` — displays a monitoring session.

source (port monitoring)

Configure a port monitor source.

```
Syntax

source {interface | range | any} destination interface direction {rx | tx | both}

To disable a monitor source, use the no source interface destination interface direction {rx | tx | both} command.
```

Parameters

- **source interface**
  - Enter one of the following keywords and slot/port information:
    - For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
    - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
    - For a VLAN interface, enter the keyword VLAN then a number from 1 to 4094.
    - For a port channel interface, enter the keywords port-channel then a number.

- **range**
  - Enter the keyword range to specify the list of interfaces.

- **any**
  - Enter the keyword any to specify all interfaces.

  **NOTE:** This option is applicable only with drop monitor session.

- **destination**
  - Enter the keyword destination to specify the destination interface.

  - For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a port channel interface, enter the keywords port-channel then a number.

- **interface**
  - Enter one of the following keywords and slot/port information:
    - For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
    - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
    - For a VLAN interface, enter the keyword VLAN then a number from 1 to 4094.
For a port channel interface, enter the keywords port-channel then a number.

direction (rx | tx | both) Enter the keyword direction then one of the packet directional indicators.

- rx: to monitor receiving packets only.
- tx: to monitor transmitting packets only.
- both: to monitor both transmitting and receiving packets.

Defaults none

Command Modes MONITOR SESSION (conf-mon-sess-session-ID)

Dell#
The private VLAN (PVLAN) feature of the Dell Networking OS is supported on the platforms. Private VLANs extend the Dell Networking OS security suite by providing Layer 2 isolation between ports within the same private VLAN. A private VLAN partitions a traditional VLAN into subdomains identified by a primary and secondary VLAN pair. The Dell Networking OS private VLAN implementation is based on RFC 3069.

For more information, see the following commands. The command output is augmented in Dell Networking OS version 7.8.1.0 at later to provide PVLAN data:

- `show arp`
- `show vlan`

### Private VLAN Concepts

#### Primary VLAN:

The primary VLAN is the base VLAN and can have multiple secondary VLANs. There are two types of secondary VLAN — community VLAN and isolated VLAN:

- A primary VLAN can have any number of community VLANs and isolated VLANs.
- Private VLANs block all traffic to isolated ports except traffic from promiscuous ports. Traffic received from an isolated port is forwarded only to promiscuous ports or trunk ports.

#### Community VLAN:

A community VLAN is a secondary VLAN of the primary VLAN:

- Ports in a community VLAN can talk to each other. Also, all ports in a community VLAN can talk to all promiscuous ports in the primary VLAN and vice versa.
- Devices on a community VLAN can communicate with each other using member ports, while devices in an isolated VLAN cannot.

#### Isolated VLAN:

An isolated VLAN is a secondary VLAN of the primary VLAN:

- Ports in an isolated VLAN cannot talk to each other. Servers would be mostly connected to isolated VLAN ports.
- Isolated ports can talk to promiscuous ports in the primary VLAN, and vice versa.

#### Port Types:

- **Community port** — a community port is a port that belongs to a community VLAN and is allowed to communicate with other ports in the same community VLAN and with promiscuous ports.
- **Isolated port** — an isolated port is a port that, in Layer 2, can only communicate with promiscuous ports that are in the same PVLAN.
- **Promiscuous port** — a promiscuous port is a port that is allowed to communicate with any other port type.
- **Trunk port** — a trunk port carries VLAN traffic across switches:
  - A trunk port in a PVLAN is always tagged.
  - A trunk port in Tagged mode carries primary or secondary VLAN traffic. The tag on the packet helps identify the VLAN to which the packet belongs.
A trunk port can also belong to a regular VLAN (non-private VLAN).

Topics:

- ip local-proxy-arp
- private-vlan mode
- private-vlan mapping secondary-vlan
- switchport mode private-vlan

**ip local-proxy-arp**

Enable/disable Layer 3 communication between secondary VLANs in a private VLAN.

Syntax

```plaintext
[no] ip local-proxy-arp
```

To disable Layer 3 communication between secondary VLANs in a private VLAN, use the `no ip local-proxy-arp` command in INTERFACE VLAN mode for the primary VLAN.

To disable Layer 3 communication in a particular secondary VLAN, use the `no ip local-proxy-arp` command in INTERFACE VLAN mode for the selected secondary VLAN.

**NOTE:** Even after you disable `ip-local-proxy-arp` (use `no ip-local-proxy-arp`) in a secondary VLAN, Layer 3 communication may happen between some secondary VLAN hosts, until the address resolution protocol (ARP) timeout happens on those secondary VLAN hosts.

Defaults

Layer 3 communication is disabled between secondary VLANs in a private VLAN.

Command Modes

INTERFACE VLAN

</table>
private-vlan mode

Set PVLAN mode of the selected VLAN to community, isolated, or primary.

**Syntax**

```
[no] private-vlan mode {community | isolated | primary}
```

To remove the PVLAN configuration, use the **no private-vlan mode {community | isolated | primary}** command syntax.

**Parameters**

- `community` Enter the keyword `community` to set the VLAN as a community VLAN.
- `isolated` Enter the keyword `isolated` to configure the VLAN as an isolated VLAN.
- `primary` Enter the keyword `primary` to configure the VLAN as a primary VLAN.

**Defaults**

```
none
```

**Command Modes**

```
INTERFACE VLAN
```

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
--- | ---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100-ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.7(0.0) | Introduced on the S6000-ON.
9.2(1.0) | Introduced on the Z9500.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
**Version** | **Description**  
---|---  
7.8.1.0 | Introduced on the C-Series and S-Series.  

**Usage Information**

The VLAN:

- can be in only one mode, either community, isolated, or primary.
- mode to community or isolated even before associating it to a primary VLAN. This secondary VLAN continues to work normally as a normal VLAN even though it is not associated to a primary VLAN. (A syslog message indicates this.)
- must not have a port in it when VLAN mode is being set.

Only ports (and port channels) configured as promiscuous, host, or PVLAN trunk ports (as previously described) can be added to the PVLAN. No other regular ports can be added to the PVLAN.

After using this command to configure a VLAN as a primary VLAN, use the `private-vlan mapping secondary-vlan` command to map secondary VLANs to this VLAN.

**Related Commands**

- `private-vlan mapping secondary-vlan` — maps secondary VLANs to the selected primary VLAN.
- `switchport mode private-vlan` — sets PVLAN mode of the selected port.

---

# `private-vlan mapping secondary-vlan`

Map secondary VLANs to the selected primary VLAN.

**Syntax**

```
[no] private-vlan mapping secondary-vlan vlan-list
```

To remove specific secondary VLANs from the configuration, use the `no private-vlan mapping secondary-vlan vlan-list` command syntax.

**Parameters**

- `vlan-list` Enter the list of secondary VLANs to associate with the selected primary VLAN. The list can be in comma-delimited or hyphenated-range format, following the convention for the range input.

**Defaults**

none

**Command Modes**

INTERFACE VLAN

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**  
---|---  
9.10(0.0) | Introduced on the S3148.  
9.8(2.0) |Introduced on the S3100 series.  
9.8(10) | Introduced on the Z9100-ON.  
9.8(0.0P5) | Introduced on the S4048-ON.
### switchport mode private-vlan

Set PVLAN mode of the selected port.

**Syntax**

```
[no] switchport mode private-vlan {host | promiscuous | trunk}
```

To remove PVLAN mode from the selected port, use the `no switchport mode private-vlan` command.

**Parameters**

- **host**: Enter the keyword `host` to configure the selected port or port channel as an isolated interface in a PVLAN.
- **promiscuous**: Enter the keyword `promiscuous` to configure the selected port or port channel as a promiscuous interface.
- **trunk**: Enter the keyword `trunk` to configure the selected port or port channel as a trunk port in a PVLAN.

**Defaults**

```
Disabled.
```

**Command Modes**

```
INTERFACE
```

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>

**Usage Information**

The assignment of the various PVLAN port types to port and port channel (LAG) interfaces is shown in the following example.

**Example**

Dell# conf
Dell(conf)# interface GigabitEthernet 2/1
Dell(conf-if-gi-2/1)# switchport mode private-vlan promiscuous
Dell(conf)# interface GigabitEthernet 2/2
Dell(conf-if-gi-2/2)# switchport mode private-vlan host
Dell(conf)# interface GigabitEthernet 2/3
Dell(conf-if-gi-2/3)# switchport mode private-vlan trunk
Dell(conf)# interface port-channel 10
Dell(conf-if-gi-2/3)# switchport mode private-vlan promiscuous
Dell(conf-if-gi-2/3)#

**Related Commands**

- `private-vlan mode` — sets the mode of the selected VLAN to community, isolated, or primary.
- `private-vlan mapping secondary-vlan` — sets the mode of the selected VLAN to primary and then associates the secondary VLANs to it.
Per-VLAN Spanning Tree Plus (PVST+)

The Dell Networking OS implementation of per-VLAN spanning tree plus (PVST+) is based on the IEEE 802.1w standard spanning tree protocol. Dell Networking OS supports PVST+ on the platform.

NOTE: For easier command line entry, the plus (+) sign is not used at the command line.

Topics:
- description
- disable
- extend system-id
- protocol spanning-tree pvst
- show spanning-tree pvst
- spanning-tree pvst
- spanning-tree pvst err-disable
- tc-flush-standard
- vlan bridge-priority
- vlan forward-delay
- vlan hello-time
- vlan max-age

description

Enter a description of the PVST+.

Syntax
description {description}

To remove the description, use the no description {description} command.

Parameters

- description
  
Enter a description to identify the spanning tree (80 characters maximum).

Defaults

none

Command Modes

- SPANNING TREE PVST+ (The prompt is “config-pvst”)

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.
Related Commands

- `protocol spanning-tree pvst` — enter SPANNING TREE mode on the switch.

**disable**

Disable PVST+ globally.

**Syntax**

```
disable
```

To enable PVST+, use the `no disable` command.

**Defaults**

Disabled.

**Command Modes**

CONFIGURATION (conf-pvst)

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

### Per-VLAN Spanning Tree Plus (PVST+)

**extend system-id**

To augment the Bridge ID with a VLAN ID so that PVST+ differentiate between BPDUs for each VLAN, use extend system ID. If the VLAN receives a BPDU meant for another VLAN, PVST+ does not detect a loop, and both ports can remain in Forwarding state.

**Syntax**

```
extend system-id
```

**Defaults**

Disabled

**Command Modes**

PROTOCOL PVST

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>

**Example**

```
Dell# conf
Dell(conf)# protocol spanning-tree pvst
Dell(conf-pvst)# no disable
Dell(conf-pvst)# vlan 2 bridge-priority 4096
Dell(conf-pvst)# vlan 3 bridge-priority 16384
Dell(conf-pvst)#
Dell(conf-pvst)# show config
!
protocol spanning-tree pvst
   no disable
   vlan 2 bridge-priority 4096
   vlan 3 bridge-priority 16384
Dell#
```

**Usage Information**

After you enable PVST+, the device runs an STP instance for each VLAN it supports.

**Related Commands**

- `disable` — disables PVST+.
- `show spanning-tree pvst` — displays the PVST+ configuration.

**show spanning-tree pvst**

View the Per-VLAN spanning tree configuration.

**Syntax**

```
show spanning-tree pvst [vlan vlan-id] [brief] [guard]
```

**Parameters**

- `vlan vlan-id` (OPTIONAL) Enter the keyword `vlan` then the VLAN ID. The range is 1 to 4094.
- `brief` (OPTIONAL) Enter the keyword `brief` to view a synopsis of the PVST+ configuration information.
- `interface` (OPTIONAL) Enter one of the interface keywords along with the slot/port information:
  - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a Port Channel interface, enter the keyword `port-channel` then a number.
guard  (OPTIONAL) Enter the keyword `guard` to display the type of guard enabled on a PVST interface and the current port state.

**Defaults**  
none

**Command Modes**  
- EXEC
- EXEC Privilege

**Command History**

Example

Dell# show spanning-tree pvst vlan 2
VLAN 2
Root Identifier has priority 4096, Address 0001.e805.e306
Root Bridge hello time 2, max age 20, forward delay 15
Bridge Identifier has priority 4096, Address 0001.e805.e306
Configured hello time 2, max age 20, forward delay 15
We are the root of VLAN 2
Current root has priority 4096, Address 0001.e805.e306
Number of topology changes 3, last change occurred 00:57:00

Port 130 (GigabitEthernet 1/0) is designated Forwarding
Port path cost 20000, Port priority 128, Port Identifier 128.130
Designated root has priority 4096, address 0001.e805.e3:06
Designated bridge has priority 4096, address 0001.e805.e3:06
Designated port id is 128.130, designated path cost 0
Number of transitions to forwarding state 1
BPDU sent 1567, received 3
The port is not in the Edge port mode

Port 131 (GigabitEthernet 1/1) is designated Forwarding
Port path cost 20000, Port priority 128, Port Identifier 128.131
Designated root has priority 4096, address 0001.e805.e3:06
Designated bridge has priority 4096, address 0001.e805.e3:06
Designated port id is 128.131, designated path cost 0
Number of transitions to forwarding state 1
BPDU sent 1567, received 0
The port is not in the Edge port mode

Port 146 (GigabitEthernet 1/16) is designated Forwarding
Port path cost 20000, Port priority 128, Port Identifier 128.146
Designated root has priority 4096, address 0001.e805.e3:06
Designated bridge has priority 4096, address 0001.e805.e3:06
Designated port id is 128.146, designated path cost 0
Number of transitions to forwarding state 1
BPDU sent 1578, received 0
The port is in the Edge port mode

Port 147 (GigabitEthernet 1/17) is designated Forwarding
Port path cost 20000, Port priority 128, Port Identifier 128.147
Designated root has priority 4096, address 0001.e805.e3:06
Designated bridge has priority 4096, address 0001.e805.e3:06
Designated port id is 128.147, designated path cost 0
Number of transitions to forwarding state 1
BPDU sent 1579, received 0
The port is in the Edge port mode
Dell# show spanning-tree pvst vlan 2 interface gigabitethernet 1/1

**GigabitEthernet 1/1 of VLAN 2 is LBK_INC discarding**

Edge port:no (default) port guard :none (default)
Link type: point-to-point (auto) bpdu filter:disable (default)

Example (Guard)

Dell# show spanning-tree pvst vlan 5 guard

**Interface**

Name       Instance Sts        Guard type
-------------
Gi 1/1 5    INCON(Root) Rootguard
Gi 1/2 5    FWD  Loopguard
Gi 1/3 5    EDS(Shut) Bpduguard

Related Commands

- spanning-tree pvst — configure PVST+ on an interface.

**spanning-tree pvst**

Configure a PVST+ interface with one of these settings: edge port with optional bridge port data unit (BPDU) guard, port disablement if an error condition occurs, port priority or cost for a VLAN range, loop guard, or root guard.

**Syntax**

```
spanning-tree pvst {edge-port [bpduguard [shutdown-on-violation]]} | err-disable | vlan vlan-range {cost number | priority value} | loopguard | rootguard}
```

**Parameters**

- **edge-port**
  - Enter the keywords edge-port to configure the interface as a PVST+ edge port.

- **bpduguard**
  - Enter the keyword portfast to enable Portfast to move the interface into Forwarding mode immediately after the root fails.

  Enter the keyword bpduguard to disable the port when it receives a BPDU.
shutdown-on-violation  (OPTIONAL) Enter the keywords shutdown-on-violation to hardware disable an interface when a BPDU is received and the port is disabled.

err-disable  Enter the keywords err-disable to enable the port to be put into the error-disable state (EDS) if an error condition occurs.

vlan vlan-range  Enter the keyword vlan then the VLAN numbers. The range is from 1 to 4094.

cost number  Enter the keyword cost then the port cost value. The range is from 1 to 200000.

Defaults:

- 100 Mb/s Ethernet interface = 200000.
- 1-Gigabit Ethernet interface = 20000.
- 10-Gigabit Ethernet interface = 2000.
- Port Channel interface with one 100 Mb/s Ethernet = 200000.
- Port Channel interface with one 1 Gigabit Ethernet = 20000.
- Port Channel interface with one 10 Gigabit Ethernet = 2000.
- Port Channel with two 1 Gigabit Ethernet = 18000.
- Port Channel with two 10 Gigabit Ethernet = 1800.
- Port Channel with two 100 Mbps Ethernet = 180000.

priority value  Enter the keyword priority then the Port priority value in increments of 16. The range is from 0 to 240. The default is 128.

loopguard  (C-, S-, and E-Series only) Enter the keyword loopguard to enable loop guard on a PVST+ port or port-channel interface.

rootguard  (C-, S-, and E-Series only) Enter the keyword rootguard to enable root guard on a PVST+ port or port-channel interface.

Defaults  Not configured.

Command Modes  INTERFACE

</tr>
</tbody>
</table>
Usage Information

The BPDU guard option prevents the port from participating in an active STP topology in case a BPDU appears on a port unintentionally, or is misconfigured, or is subject to a DOS attack. This option places the port into the Error Disable state if a BPDU appears, and a message is logged so that the administrator can take corrective action.

NOTE: A port configured as an edge port, on a PVST switch, immediately transitions to the forwarding state. Only ports connected to end-hosts should be configured as an edge port. Consider an edge port similar to a port with a spanning-tree portfast enabled.

If you do not enable shutdown-on-violation, BPDUs are still sent to the route process module (RPM) CPU.

You cannot enable root guard and loop guard at the same time on a port. For example, if you configure loop guard on a port on which root guard is already configured, the following error message is displayed:

% Error: RootGuard is configured. Cannot configure LoopGuard.

When used in a PVST+ network, loop guard is performed per-port or per-port channel at a VLAN level. If no BPDUs are received on a VLAN interface, the port or port-channel transitions to a Loop-Inconsistent (blocking) state only for this VLAN.

Enabling Portfast BPDU guard and loop guard at the same time on a port results in a port that remains in a Blocking state and prevents traffic from flowing through it. For example, when Portfast BPDU guard and loop guard are both configured:

- If a BPDU is received from a remote device, BPDU guard places the port in an Err-Disabled Blocking state and no traffic is forwarded on the port.
- If no BPDU is received from a remote device, loop guard places the port in a Loop-Inconsistent Blocking state and no traffic is forwarded on the port.

Example

Dell(conf-if-gi-1/1)# spanning-tree pvst vlan 3 cost 18000
Dell(conf-if-gi-1/1)# end
Dell(conf-if-gi-1/1)# show config

! interface GigabitEthernet 1/1
  no ip address
  switchport
  spanning-tree pvst vlan 3 cost 18000
  no shutdown
Dell(conf-if-gi-1/1)#end

Related Commands

- **show spanning-tree pvst** — views the PVST+ configuration.
spanning-tree pvst err-disable

Place ports in an Err-Disabled state if they receive a PVST+ BPDU when they are members an untagged VLAN.

Syntax

    spanning-tree pvst err-disable cause invalid-pvst-bpdu

Defaults

   Enabled; ports are placed in the Err-Disabled state if they receive a PVST+ BPDU when they are members of an untagged VLAN.

Command Modes

   INTERFACE

</tr>
</tbody>
</table>

Usage Information

   Some non-Dell Networking systems which have hybrid ports participating in PVST+ transmit two kinds of BPDUs:
an 802.1D BPDU and an untagged PVST+ BPDU. Dell Networking systems do not expect PVST+ BPDU on an untagged port. If this happens, Dell Networking OS places the port in the Error-Disable state. This behavior might result in the network not converging. To prevent Dell Networking OS from executing this action, use the no spanning-tree pvst err-disable command.

Related Commands

   -  `show spanning-tree pvst` — views the PVST+ configuration.
**tc-flush-standard**

Enable the MAC address flushing after receiving every topology change notification.

**Syntax**

```
tc-flush-standard
```

To disable, use the `no tc-flush-standard` command.

**Defaults**

Disabled.

</table>

**Usage Information**

By default, Dell Networking OS implements an optimized flush mechanism for PVST+. This implementation helps in flushing the MAC addresses only when necessary (and less often) allowing for faster convergence during topology changes. However, if a standards-based flush mechanism is needed, you can turn this knob command on to enable flushing MAC addresses after receiving every topology change notification.

**vlan bridge-priority**

Set the PVST+ bridge-priority for a VLAN or a set of VLANs.

**Syntax**

```
vlan vlan-range bridge-priority value
```

**Usage Information**

By default, Dell Networking OS implements an optimized flush mechanism for PVST+. This implementation helps in flushing the MAC addresses only when necessary (and less often) allowing for faster convergence during topology changes. However, if a standards-based flush mechanism is needed, you can turn this knob command on to enable flushing MAC addresses after receiving every topology change notification.
To return to the default value, use the `no vlan bridge-priority` command.

**Parameters**

- **vlan vlan-range**  
Enter the keyword `vlan` then the VLAN numbers. The range is from 1 to 4094.

- **bridge-priority value**  
Enter the keywords `bridge-priority` then the bridge priority value in increments of 4096. The range is from 0 to 61440. The default is **32768**.

**Defaults**

**32768**

**Related Commands**

- `vlan forward-delay` — changes the time interval before Dell Networking OS transitions to the Forwarding state.
- `vlan hello-time` — change the time interval between BPDUs.
- `vlan max-age` — changes the time interval before PVST+ refreshes.
- `show spanning-tree pvst` — displays the PVST+ configuration.

### vlan forward-delay

Set the amount of time the interface waits in the Listening state and the Learning state before transitioning to the Forwarding state.

**Syntax**

```
vlan vlan-range forward-delay seconds
```
To return to the default setting, use the `no vlan forward-delay` command.

### Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>vlan vlan-range</code></td>
<td>Enter the keyword <code>vlan</code> then the VLAN numbers. The range is from 1 to 4094.</td>
</tr>
<tr>
<td><code>forward-delay</code></td>
<td>Enter the keywords <code>forward-delay</code> then the time interval, in seconds, that Dell Networking OS waits before transitioning PVST+ to the forwarding state. The range is from 4 to 30 seconds. The default is <strong>15 seconds</strong>.</td>
</tr>
</tbody>
</table>

### Defaults

**15 seconds**

- `vlan max-age` — changes the time interval before PVST+ refreshes.
- `show spanning-tree pvst` — displays the PVST+ configuration.
**vlan hello-time**

Set the time interval between generation of PVST+ BPDUs.

**Syntax**

```
vlan vlan-range hello-time seconds
```

To return to the default value, use the `no vlan hello-time` command.

**Parameters**

- **vlan vlan-range**
  - Enter the keyword `vlan` then the VLAN numbers. The range is from 1 to 4094.

- **hello-time seconds**
  - Enter the keywords `hello-time` then the time interval, in seconds, between transmission of BPDUs. The range is from 1 to 10 seconds. The default is **2 seconds**.

**Defaults**

**2 seconds**

**Command Modes**

CONFIGURATION (conf-pvst)

**Command History**

**Related Commands**

- `vlan bridge-priority` — sets the bridge-priority value.
- `vlan forward-delay` — changes the time interval before Dell Networking OS transitions to the forwarding state.
- `vlan max-age` — changes the time interval before PVST+ refreshes.
- `show spanning-tree pvst` — displays the PVST+ configuration.
**vlan max-age**

To maintain configuration information before refreshing that information, set the time interval for the PVST+ bridge.

### Syntax

```
vlan vlan-range max-age seconds
```

To return to the default, use the `no vlan max-age` command.

### Parameters

- `vlan vlan-range` Enter the keyword `vlan` then the VLAN numbers. The range is from 1 to 4094.
- `max-age seconds` Enter the keywords `max-age` then the time interval, in seconds, that Dell Networking OS waits before refreshing configuration information. The range is from 6 to 40 seconds. The default is **20 seconds**.

### Defaults

**20 seconds**

### Related Commands

- `vlan bridge-priority` — sets the bridge-priority value.
- `vlan forward-delay` — changes the time interval before Dell Networking OS transitions to the forwarding state.
- `vlan hello-time` — changes the time interval between BPDUs.
- `show spanning-tree pvst` — displays the PVST+ configuration.
The Dell Networking OS commands for quality of service (QoS) include traffic conditioning and congestion control. QoS commands are not universally supported on all Dell Networking products, platform.

Topics:
- Global Configuration Commands
- Per-Port QoS Commands
- Policy-Based QoS Commands
- DSCP Color Map Commands

Global Configuration Commands

There is only one global configuration QoS command.

qos-rate-adjust

By default, while rate limiting, policing, and shaping, Dell Networking OS does not include the Preamble, SFD, or the IFG fields. These fields are overhead; only the fields from MAC destination address to the CRC are used for forwarding and are included in these rate metering calculations. You can optionally include overhead fields in rate metering calculations by enabling QoS Rate Adjustment.

Syntax

```
qos-rate-adjustment overhead-bytes
```

Parameters

- **overhead-bytes**: Include a specified number of bytes of packet overhead to include in rate limiting, policing, and shaping calculations. The range is from 1 to 31.

Defaults

QoS rate adjustment is disabled by default.

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Usage Information**

By default, when rate policing and shaping, the system does not include the Preamble, SFD, or the IFG fields. These fields are overhead; only the fields from MAC destination address to the CRC are used for forwarding and are included in these rate metering calculations.

### Per-Port QoS Commands

Per-port QoS (port-based QoS) allows you to define the QoS configuration on a per-physical-port basis.

#### dot1p-priority

Assign a value to the IEEE 802.1p bits on the traffic this interface receives.

**Syntax**

```plaintext
dot1p-priority priority-value
```

To delete the IEEE 802.1p configuration on the interface, use the `no dot1p-priority` command.

**Defaults**

none

**Command Modes**

INTERFACE

**Command History**

</tr>
</tbody>
</table>
Usage Information

The `dot1p-priority` command changes the priority of incoming traffic on the interface. The system places traffic marked with a priority in the correct queue and processes that traffic according to its queue.

When you set the priority for a port channel, the physical interfaces assigned to the port channel are configured with the same value. You cannot assign the `dot1p-priority` command to individual interfaces in a port channel.

rate police

Police the incoming traffic rate on the selected interface.

Syntax

```plaintext
rate police [kbps] committed-rate [burst-KB] [peak [kbps] peak-rate [burst-KB]] [vlan vlan-id]
```

Parameters

- **kbps**: Enter the keyword kbps to specify the rate limit in Kilobits per second (Kbps). The range is from 0 to 40000000. The default granularity is Megabits per second (Mbps).
- **committed-rate**: Enter the bandwidth in Mbps. The range is from 0 to 40000.
- **burst-KB**: (OPTIONAL) Enter the burst size in KB. The range is from 16 to 200000. The default is 50.
- **peak peak-rate**: (OPTIONAL) Enter the keyword peak then a number to specify the peak rate in Mbps. The range is from 0 to 40000.
- **vlan vlan-id**: (OPTIONAL) Enter the keyword vlan then a VLAN ID to police traffic to those specific VLANs. The range is from 1 to 4094.

Defaults

Granularity for `committed-rate` and `peak-rate` is Mbps unless you use the `kbps` option.

Command Modes

```
INTERFACE
```

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description

9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100-ON.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
Version | Description
---|---
9.7(0.0) | Introduced on the S6000-ON.
9.2(1.0) | Introduced on the Z9500.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
8.2.1.0 | Added the kbps option on the C-Series, E-Series, and S-Series.
7.6.1.0 | Introduced on the S-Series.
7.5.1.0 | Introduced on the C-Series.
6.1.1.1 | Introduced on the E-Series.

Usage Information

**NOTE:** Per Port rate police is supported for Layer 2 tagged and untagged switched traffic and for Layer 3 traffic. Per VLAN rate police is supported on only tagged ports with Layer 2 switched traffic.

**S-Series**

On one interface, you can configure the rate police command for a VLAN or you can configure the rate police command for an interface.

**rate-shape**

Shape the traffic output on the selected interface.

**Syntax**

```
rate shape [kbps] rate [burst-KB]
```

**Parameters**

- **kbps**
  - Enter the keyword kbps to specify the rate limit in Kilobits per second (Kbps). Enter the value in multiples of 64. The range is from 0 to 40000000. The default granularity is Megabits per second (Mbps).
- **rate**
  - The range is from 10 to 40000.
- **burst-KB**
  - (OPTIONAL) Enter the burst size in KB. The range is from 0 to 10000. The default is 50.

**Defaults**

Granularity for rate is Mbps unless you use the kbps option.

**Command Modes**

<tr>
<td>6.1.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

#### Usage Information

If traffic is shaped between 64 and 1000 Kbs, for some values, the shaped rate is much less than the value configured.

On 40-port 10G stack-unit if the traffic is shaped between 64 and 1000 Kbs, for some values, the shaped rate is much less than the value configured.

**NOTE:** When packets of size greater than 7000 bytes are expected to be received from the network, Dell Networking recommends that you configure the burst value to be more than 175 KB if you configured the rate shape. Such a setting ensures proper bandwidth sharing across queues.

#### Related Commands

- `rate-shape` — shapes traffic output as part of the designated policy.

## service-class dot1p-mapping

Configure a service-class criterion based on a dot1p value.

### Syntax

```
service-class dot1p-mapping {dot1p0 queue | dot1p1 queue | dot1p2 queue | dot1p3 queue | dot1p4 queue | dot1p5 queue | dot1p6 queue | dot1p7 queue}
```

### Parameters

- **queue**
  
  Enter a value from 0 to 7.

### Defaults

For each dot1p Priority, the default CoS queue value is:

- Dot1p Priority: 0 1 2 3 4 5 6 7

### Command Modes

CONFIGURATION
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.10(0.0)</td>
<td>Introduced on the S3148.</td>
</tr>
<tr>
<td>9.8(2.0)</td>
<td>Introduced on the S3100 series.</td>
</tr>
<tr>
<td>9.8(1.0)</td>
<td>Introduced on the Z9100-ON.</td>
</tr>
<tr>
<td>9.8(0.0P5)</td>
<td>Introduced on the S4048-ON.</td>
</tr>
<tr>
<td>9.8(0.0P2)</td>
<td>Introduced on the S3048-ON.</td>
</tr>

<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

Usage Information

To apply dot1p-queue-mapping, use the `service-class dynamic dot1p` command.

Related Commands

- `show qos dot1p-queue-mapping` — displays the dot1p priority to queue mapping on the switch.

**service-class dynamic dot1p**

Honor all 802.1p markings on incoming switched traffic on an interface (from INTERFACE mode) or on all interfaces (from CONFIGURATION mode). A CONFIGURATION mode entry supersedes an INTERFACE mode entry.

**Syntax**

```
service-class dynamic dot1p
```

To return to the default setting, use the `no service-class dynamic dot1p` command.

**Defaults**

All dot1p traffic is mapped to Queue 0 unless you enable the `service-class dynamic dot1p` command. The default mapping is as follows:

<table>
<thead>
<tr>
<th>dot1p</th>
<th>Queue ID</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>0</td>
</tr>
<tr>
<td>1</td>
<td>0</td>
</tr>
<tr>
<td>2</td>
<td>0</td>
</tr>
<tr>
<td>3</td>
<td>1</td>
</tr>
<tr>

<td>6.5.1.0</td>
<td>Expanded the command to permit configuration on port channels.</td>
</tr>
<tr>
<td>6.1.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information

To honor all incoming 802.1p markings on incoming switched traffic on the interface, enter this command. By default, this facility is not enabled (that is, the 802.1p markings on incoming traffic are not honored).

You can apply this command on both physical interfaces and port channels. When you set the service-class dynamic for a port channel, the physical interfaces assigned to the port channel are automatically configured; you cannot assign the service-class dynamic command to individual interfaces in a port channel.

- All dot1p traffic is mapped to Queue 0 unless you enable the service-class dynamic dot1p command on an interface or globally.
- Layer 2 or Layer 3 service policies supersede dot1p service classes.
**strict-priority queue**

Configure a unicast queue as a strict-priority (SP) queue.

**Syntax**

```
strict-priority queue unicast number
```

**Parameters**

- **unicast number**: Enter the keyword unicast then the queue number. The range is from 1 to 3.

**Defaults**

none

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>

</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>6.1.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

After you configure a unicast queue as strict-priority, that particular queue, on the entire chassis, is treated as a **strict-priority queue**. Traffic for a strict priority is scheduled before any other queues are serviced. For example, if you send 100% line rate traffic over the SP queue, it starves all other queues on the ports on which this traffic is flowing.

**Policy-Based QoS Commands**

Policy-based traffic classification is handled with class maps. These maps classify data traffic into one of eight classes. Dell Networking OS enables you to match multiple class maps and specify multiple match criteria. Policy-based QoS is not supported on logical interfaces, such as port-channels, VLANS, or loopbacks.
**bandwidth-percentage**

Assign a percentage of weight to the class/queue.

Syntax

```
bandwidth-percentage percentage
```

To remove the bandwidth percentage, use the `no bandwidth-percentage` command.

Parameters

- **percentage**
  
Enter the percentage assignment of bandwidth to the class/queue. The range is from 1 to 100% (granularity 1%).

Defaults

none

Command Modes

- CONFIGURATION (conf-qos-policy-out)

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>

<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>6.2.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information

The unit of bandwidth percentage is 1%. If the sum of the bandwidth percentages given to all eight classes exceeds 100%, the bandwidth percentage automatically scales down to 100%.

Related Commands

- `qos-policy-output` — creates a QoS output policy.
Create/access a class map. Class maps differentiate traffic so that you can apply separate quality-of-service policies to each class.

**Syntax**
```
class-map {match-all | match-any} class-map-name [cpu-qos] [layer2]
```

**Parameters**
- **match-all**: Determines how packets are evaluated when multiple match criteria exist. Enter the keywords `match-all` to determine that the packets must meet all the match criteria in order to be a member of the class.
- **match-any**: Determines how packets are evaluated when multiple match criteria exist. Enter the keywords `match-any` to determine that the packets must meet at least one of the match criteria in order to be a member of the class.
- **class-map-name**: Enter a name of the class for the class map in a character format (32 character maximum).
- **cpu-qos**: Enter the keyword `cpu-qos` to assign this Class Map to control plane traffic only (CoPP).
- **layer2**: Enter the keyword `layer2` to specify a Layer 2 Class Map. The default is Layer 3.

**Defaults**
Layer 3

**Command Modes**
```

Version Description
7.4.1.0 E-Series Only: Expanded to add support for Layer 2.

Usage Information

Packets arriving at the input interface are checked against the match criteria and configured using this command to determine if the packet belongs to that class. This command accesses CLASS-MAP mode, where the configuration commands include the match ip and match mac options.

When you create a class map to filter protocol traffic for CoPP, you must enter the keyword cpu-qos.

Related Commands

- ip access-list extended — configures an extended IP ACL.
- ip access-list standard — configures a standard IP ACL.
- match ip access-group — configures the match criteria based on the access control list (ACL).
- match ip precedence — identifies the IP precedence values as match criteria.
- match ip dscp — configures the match criteria based on the DSCP value.
- match mac access-group — configures a match criterion for a class map based on the contents of the designated MAC ACL.
- match mac dot1p — configures a match criterion for a class map based on a dot1p value.
- match mac vlan — configures a match criterion for a class map based on VLAN ID.
- service-queue — assigns a class map and QoS policy to different queues.
- show qos class-map — views the current class map information.

clear qos statistics

Clear qos statistics clears statistics from show qos statistics.

Syntax

```
clear qos statistics interface-name
```

Parameters

- **interface-name**: Enter one of the following keywords:
  - For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

Defaults

none

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

### Related Commands

- `show qos statistics` — displays the QoS statistics.

---

**description**

Add a description to the selected policy map or QoS policy.

**Syntax**

description {description}  
To remove the description, use the no description {description} command.

**Parameters**

- `description`  
  Enter a description to identify the policies (80 characters maximum).

**Defaults**

none

**Command Modes**

CONFIGURATION (policy-map-input and policy-map-output; conf-qos-policy-in and conf-qos-policy-out; wred)

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</table>
### Version Description

- **9.8(0.0P2)** Introduced on the S3048-ON.
- **9.7(0.0)** Introduced on the S6000-ON.
- **9.2(1.0)** Introduced on the Z9500.
- **9.0.2.0** Introduced on the S6000.
- **8.3.19.0** Introduced on the S4820T.
- **8.3.11.1** Introduced on the Z9000.
- **8.3.7.0** Introduced on the S4810.
- **pre- 7.7.1.0** Introduced.

### Related Commands

- `policy-map-input` — creates an input policy map.
- `policy-map-output` — creates an output policy map.
- `qos-policy-input` — creates an input QoS-policy on the router.
- `qos-policy-output` — creates an output QoS-policy on the router.
- `wred-profile` — creates a WRED profile.

### match ip access-group

Configure match criteria for a class map, based on the access control list (ACL).

#### NOTE:
IPv6 class-maps and IP-any class-maps do not match. This condition is true for IPv6 and IP-any class-maps on both ACLs as well as VLANs.

### Syntax

```
mismatch ip access-group access-group-name [set-ip-dscp value | set-color value]
```

To remove ACL match criteria from a class map, use the `no match ip access-group access-group-name [set-ip-dscp value | set-color value]` command.

### Parameters

- **access-group-name**  
Enter the ACL name whose contents are used as the match criteria in determining if packets belong to the class the class-map specifies.
- **set-ip-dscp value**  
(Optional) Enter the keywords `set-ip-dscp` then the IP DSCP value. The matched traffic is marked with the DSCP value. The range is from 0 to 63.
- **set-color value**  
(Optional) Enter the keyword `set-color` followed by a color value. Traffic that fulfills the match criteria is marked with the color value that you specify. The default value is Yellow.

### Defaults

- none

### Command Modes

- CLASS-MAP CONFIGURATION (config-class-map)

### Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the C-Series; added support for the DSCP Marking option.</td>
</tr>
<tr>
<td>6.1.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

To access this command, enter the `class-map` command. After the class map is identified, you can configure the match criteria. For `class-map match-any`, a maximum of five ACL match criteria are allowed. For `class-map match-all`, only one ACL match criteria is allowed.

**Related Commands**

- `class-map` — identifies the class map.

**match ip dscp**

Use a differentiated services code point (DSCP) value as a match criteria.

**Syntax**

```
match {ip | ipv6 | ip-any} dscp dscp-list [set-ip-dscp value]
```

To remove a DSCP value as a match criteria, use the `no match {ip | ipv6 | ip-any} dscp dscp-list [set-ip-dscp value]` command.

**Parameters**

- `ip` Enter the keyword `ip` to support IPv4 traffic.
- `ipv6` Enter the keyword `ipv6` to support IPv6 traffic.
- `ip-any` Enter the keyword `ip-any` to support IPv4 and IPv6 traffic.
**dscp-list**  
Enter the IP DSCP values that is to be the match criteria. Separate values by commas — no spaces (1,2,3) or indicate a list of values separated by a hyphen (1-3). The range is from 0 to 63.

**set-ip-dscp value**  
(Optional) Enter the keywords set-ip-dscp then the IP DSCP value. The matched traffic is marked with the DSCP value. The range is from 0 to 63.

**Defaults**  
none

<td>Introduced on the C-Series; added support for the DSCP Marking option.</td>
</tr>
<tr>
<td>6.2.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**  
To access this command, enter the class-map command. After the class map is identified, you can configure the match criteria.

The match ip dscp and match ip precedence commands are mutually exclusive.

Up to 64 IP DSCP values can be matched in one match statement. For example, to indicate IP DCSP values 0 1 2 3 4 5 6 7, enter either the match ip dscp 0,1,2,3,4,5,6,7 or match ip dscp 0-7 command.

**NOTE:** Only one of the IP DSCP values must be a successful match criterion, not all of the specified IP DSCP values must match.

**Related Commands**
- **class-map** — identifies the class map.
match ip precedence

Use IP precedence values as a match criteria.

Syntax

match {ip | ipv6 | ip-any} precedence ip-precedence-list [set-ip-dscp value]

To remove IP precedence as a match criteria, use the no match {ip | ipv6 | ip-any} precedence ip-precedence-list [[multicast] set-ip-dscp value] command.

Parameters

- ip
  - Enter the keyword ip to support IPv4 traffic.
- ipv6
  - Enter the keyword ipv6 to support IPv6 traffic.
- ip-any
  - Enter the keyword ip-any to support IPv4 and IPv6 traffic.
- ip-precedence-list
  - Enter the IP precedence value(s) as the match criteria. Separate values by commas — no spaces (1,2,3) or indicate a list of values separated by a hyphen (1-3). The range is from 0 to 7.
- set-ip-dscp value
  - (OPTIONAL) Enter the keywords set-ip-dscp then the IP DSCP value. The matched traffic is marked with the DSCP value. The range is from 0 to 63.

Defaults

none

Command Modes

Version | Description
--- | ---
7.7.1.0 | Added the keyword multicast. Added support for the DSCP Marking option for the S-Series.
7.6.1.0 | Introduced on the S-Series.
7.5.1.0 | Introduced on the C-Series. Added support for the DSCP Marking option.
6.1.1.1 | Introduced on the E-Series.

Usage Information

To access this command, enter the `class-map` command. After the class map is identified, you can configure the match criteria.

The `match ip precedence` command and the `match ip dscp` command are mutually exclusive.

Up to eight precedence values can be matched in one match statement. For example, to indicate the IP precedence values 0 1 2 3, enter either the `match ip precedence 0-3` or `match ip precedence 0,1,2,3` command.

**NOTE:** Only one of the IP precedence values must be a successful match criterion, not all of the specified IP precedence values must match.

Related Commands

- `class-map` — identifies the class map.

**match ip vlan**

Uses a VLAN as the match criterion for an L3 class map.

**Syntax**

```
match ip vlan vlan-id
```

To remove VLAN as the match criterion, use the `no match ip vlan vlan-id` command.

**Parameters**

- `vlan vlan-id` Enter the keyword vlan and then the ID of the VLAN. The range is from 1 to 4094.

**Defaults**

None.

match ip vrf

Uses a VRF as the match criterion for an L3 class map.

Syntax

match ip vrf vrf-id

To remove VRF as the match criterion, use the no match ip vrf vrf-id command.

Parameters

vrf vlan-id

Enter the keyword vrf and then the ID of the VRF. The range is from 1 to 63.

Defaults

none

Command Modes

Version Description

9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.5(0.1) Introduced on the Z9500.
9.4(0.0) Introduced on the S-Series and Z-Series.

Usage Information

To access this command, enter the class-map command. After the class map is identified, you can configure the match criteria.

Use this command to match an IP class-map against a single VRF ID.

Related Commands

• class-map — identifies the class map.
**match mac access-group**

Configure a match criterion for a class map, based on the contents of the designated MAC ACL.

**Syntax**

```plaintext
match mac access-group {mac-acl-name}
```

**Parameters**

- **mac-acl-name**
  
  Enter a MAC ACL name. Its contents is used as the match criteria in the class map.

**Defaults**
none

**Usage Information**

To access this command, enter the `class-map` command. You can match against only one VLAN ID.

**Related Commands**

- `class-map` — identifies the class map.
**policy-aggregate**

Allow an aggregate method of configuring per-port QoS via policy maps. An aggregate QoS policy is part of the policy map (output) applied on an interface.

**Syntax**

```
policy-aggregate qos-policy-name
```

To remove a policy aggregate configuration, use the `no policy-aggregate qos-policy-name` command.

**Parameters**

- `qos-policy-name`: Enter the name of the policy map in character format (32 characters maximum).

**Defaults**

none

**Command Modes**

CONFIGURATION (policy-map-input and policy-map-output)

**Command History**

</tbody>
</table>

**Usage Information**

An aggregate output QoS policy applies to all outbound port traffic. An aggregate output QoS policy can coexist with per-queue output QoS policies. If the rate shape exists in both aggregate and per-queue qos-policy, minimum of 2 take effect. Some of all Queue-rate will not exceed aggregate.

**Related Commands**

- `policy-map-input` — creates an input policy map.
- `policy-map-output` — creates an output policy map.
policy-map-input

Create an input policy map.

Syntax

policy-map-input policy-map-name cpu-qos | [layer2] [cpu-qos]

To remove an input policy map, use the no policy-map-input policy-map-name cpu-qos | [layer2] [cpu-qos] command.

Parameters

- **policy-map-name**: Enter the name of the policy map in character format (32 characters maximum).
- **cpu-qos**: Enter the cpu-qos keyword to assign this ACL to control plane traffic only.
- **layer2**: (OPTIONAL) Enter the keyword layer2 to specify a Layer 2 Class Map. The default is Layer 3.
- **cpu-qos**: (OPTIONAL) Enter the keyword cpu-qos to create an input policy to be used to rate-limit control-plane traffic (CoPP).

Defaults

Layer 3

</table>
The input policy map is used to classify incoming traffic to different flows using class-map, QoS policy, or incoming packets DSCP. This command enables Policy-Map-Input Configuration mode (conf-policy-map-in). When you configure an input policy map for CoPP, you must enter the keyword cpu-qos.

Related Commands

- service-queue — assigns a class map and QoS policy to different queues.
- service-policy input — applies an input policy map to the selected interface.

**policy-map-output**

Create an output policy map.

**Syntax**

```
policy-map-output policy-map-name
```

To remove a policy map, use the no policy-map-output policy-map-name command.

**Parameters**

- `policy-map-name` Enter the name for the policy map in character format (32 characters maximum).

**Defaults**

none

</tbody>
</table>
Version | Description
--- | ---
6.1.1 | Introduced on the E-Series.

**Usage Information**
To assign traffic to different flows using QoS policy, use the Output Policy map. This command enables Policy-Map-Output Configuration mode (conf-policy-map-out).

**Related Commands**
- `service-queue` — assigns a class map and QoS policy to different queues.
- `policy-aggregate` — allows an aggregate method of configuring per-port QoS using policy maps.
- `service-policy output` — applies an output policy map to the selected interface.

### qos-policy-input

Create a QoS input policy on the router.

**Syntax**
```
qos-policy-input qos-policy-name cpu-qos | layer2
```

To remove an existing input QoS policy from the router, use the `no qos-policy-input qos-policy-name cpu-qos | layer2` command.

**Parameters**
- `qos-policy-name` Enter the name for the policy map in character format (32 characters maximum).
- `cpu-qos` (OPTIONAL) Enter the keyword `cpu-qos` keyword to assign this ACL to control plane traffic only.
- `layer2` (OPTIONAL) Enter the keyword `layer2` to specify a Layer 2 Class Map. The default is Layer 3.

**Defaults**
Layer 3

Version | Description
---|---
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
8.2.1.0 | Policy name character limit increased from 16 to 32.
7.6.1.0 | Introduced on the C-Series and S-Series.
7.5.1.0 | Introduced on the C-Series.
6.1.1.1 | Introduced on the E-Series.

Usage Information
Use this command to specify the name of the input QoS policy. Once input policy is specified, rate-police can be defined. This command enables the qos-policy-input configuration mode— (conf-qos-policy-in).

When changing a Service-Queue configuration in a QoS policy map, all QoS rules are deleted and re-added automatically to ensure that the order of the rules is maintained. As a result, the Matched Packets value shown in the show qos statistics command is reset.

If you create a QoS input policy to be used for CoPP, you must enter the keyword cpu-qos.

Related Commands
- rate police — incoming traffic policing function.

qos-policy-output
Create a QoS output policy.

Syntax
qos-policy-output qos-policy-name
To remove an existing output QoS policy, use the no qos-policy-output qos-policy-name command.

Parameters
qos-policy-name Enter your output QoS policy name in character format (32 characters maximum).

Defaults
none

</tbody>
</table>

Usage Information

Use this command to specify the name of the output QoS policy. Once output policy is specified, rate-shape, scheduler strict, bandwidth-percentage, and WRED can be defined. This command enables the qos-policy-output configuration mode—(conf-qos-policy-out).

Related Commands

- `bandwidth-percentage` — assigns percentage of bandwidth to the class/queue.
- `wred` — assigns yellow or green drop precedence.

rate-police

Specify the policing functionality on incoming traffic.

Syntax

```
rate-police [kbps] committed-rate [burst-KB] [peak [kbps] peak-rate [burst-KB]]
```

Parameters

- `kbps` Enter the keyword `kbps` to specify the rate limit in Kilobits per second (Kbps). Make the following value a multiple of 64. The range is from 0 to 40000000. The default granularity is Megabits per second (Mbps).
- `committed-rate` Enter the bandwidth in Mbps. The range is from 0 to 40000.
- `burst-KB` (OPTIONAL) Enter the burst size in KB. The range is from 16 to 200000. The default is 100.
- `peak peak-rate` (OPTIONAL) Enter the keyword `peak` then a number to specify the peak rate in Mbps. The range is from 0 to 40000. The default is the same as designated for `committed-rate`.

Defaults

Burst size is 100KB. `peak-rate` is by default the same as `committed-rate`. Granularity for `committed-rate` and `peak-rate` is Mbps unless you use the `kbps` option.

Command Modes

- `QOS-POLICY-IN` (QoS)

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.
Version | Description
--- | ---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100-ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.7(0.0) | Introduced on the S6000-ON.
9.2(1.0) | Introduced on the Z9500.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
8.2.1.0 | Added the kbps option on the C-Series, E-Series, and S-Series.
7.6.1.0 | Introduced on the S-Series.
7.5.1.0 | Introduced on the C-Series.
6.1.1.1 | Introduced on the E-Series.

Usage Information
The default burst size is 100Kb. If a different value is required, you must configure the burst size to the required value.

Related Commands
- `rate police` — specifies traffic policing on the selected interface.
- `qos-policy-input` — creates a QoS output policy.

rate-shape

Shape traffic output as part of the designated policy.

**Syntax**
```
```

**Parameters**
- **pps**
  - Enter the keyword `pps` to specify the rate limit in packets per second (pps).
- **kbps**
  - Enter the keyword `kbps` to specify the rate limit in Kilobits per second (Kbps). Make the following value a multiple of 64. The range is from 0 to 40000000. The default granularity is Megabits per second (Mbps).
- **burst-kbps**
  - (OPTIONAL) Enter the burst size in KB. The range is from 0 to 40000. The default is 100.
- **burst-packets**
  - Enter the peak rate or committed rate burst size in packets per seconds.

**Defaults**
- Burst size is 10KB. Granularity for rate is Mbps unless you use the `kbps` option.
Command Modes

QOS-POLICY-OUT

</tbody>
</table>

Usage Information

On 40-port 10G stack-unit if the traffic is shaped between 64 and 1000 Kbs, for some values, the shaped rate is much less than the value configured. You must configure the peak rate and peak burst size using the same value: kilobits or packets per second. Similarly, you must configure the committed rate and committed burst size with the same measurement. Peak rate refers to the maximum rate for traffic arriving or exiting an interface under normal traffic conditions. Peak burst size indicates the maximum size of unused peak bandwidth that is aggregated. This aggregated bandwidth enables brief durations of burst traffic that exceeds the peak rate and committed burst. Committed rate refers to the guaranteed bandwidth for traffic entering or leaving the interface under normal network conditions. When traffic propagates at an average rate that is less than or equal to the committed rate, it is considered to be green-colored or coded. When the transmitted traffic falls below the committed rate, the bandwidth, which is not used by any traffic that is traversing the network, is aggregated to form the committed burst size. Traffic is considered to be green-colored up to the point at which the unused bandwidth does not exceed the committed burst size.

Related Commands

- `rate shape` — shapes traffic output as part of the designated policy.
- `qos-policy-output` — creates a QoS output policy.
service-policy input

Apply an input policy map to the selected interface.

Syntax

service-policy input policy-map-name [layer2]

To remove the input policy map from the interface, use the no service-policy input policy-map-name [layer2] command.

Parameters

- **policy-map-name**: Enter the name for the policy map in character format (32 characters maximum). You can identify an existing policy map or name one that does not yet exist.
- **layer2**: (OPTIONAL) Enter the keyword layer2 to specify a Layer 2 Class Map. The default is Layer 3.

Defaults

Layer 3

</tbody>
</table>

Usage Information

You can attach a single policy-map to one or more interfaces to specify the service-policy for those interfaces. A policy map attached to an interface can be modified.
NOTE: The `service-policy` commands are not allowed on a port channel. The `service-policy input policy-map-name` command and the `service-class dynamic dot1p` command are not allowed simultaneously on an interface. However, the `service-policy input` command (without the `policy-map-name` option) and the `service-class dynamic dot1p` command are allowed on an interface.

Related Commands

- `policy-map-input` — creates an input policy map.

## service-policy output

Apply an output policy map to the selected interface.

**Syntax**

```
service-policy output policy-map-name
```

To remove the output policy map from the interface, use the `no service-policy output policy-map-name` command.

**Parameters**

- `policy-map-name` Enter the name for the policy map in character format (32 characters maximum). You can identify an existing policy map or name one that does not yet exist.

**Defaults**

none

</table>
Usage Information

A single policy-map can be attached to one or more interfaces to specify the service-policy for those interfaces. A policy map attached to an interface can be modified.

Related Commands

- `policy-map-output` — creates an output policy map.

**service-queue**

Assign a class map and QoS policy to different queues.

**Syntax**

```
service-queue queue-id [class-map class-map-name] [qos-policy qos-policy-name]
```

To remove the queue assignment, use the `no service-queue queue-id [class-map class-map-name] [qos-policy qos-policy-name]` command.

**Parameters**

- `queue-id` Enter the value used to identify a queue. The range is from 0 to 7.
- `class-map class-map-name` (OPTIONAL) Enter the keyword `class-map` then the class map name assigned to the queue in character format (32 character maximum).

  **NOTE:** This option is available under `policy-map-input` only.

- `qos-policy qos-policy-name` (OPTIONAL) Enter the keywords `qos-policy` then the QoS policy name assigned to the queue in text format (32 characters maximum). This specifies the input QoS policy assigned to the queue under `policy-map-input` and output QoS policy under `policy-map-output` context.

**Defaults**

none

**Command Modes**

CONFIGURATION (conf-policy-map-in and conf-policy-map-out)

</tbody>
</table>
Usage Information

There are eight queues per interface on the S6000 and four queues on the S-Series. This command assigns a class map or GoS policy to different queues.

Related Commands

- `class-map` — identifies the class map.
- `service-policy input` — applies an input policy map to the selected interface.
- `service-policy output` — applies an output policy map to the selected interface.

set

Mark outgoing traffic with a differentiated service code point (DSCP) or dot1p value.

Syntax

```
set {ip-dscp value | mac-dot1p value}
```

Parameters

- `ip-dscp value`  
  (OPTIONAL) Enter the keywords `ip-dscp` then the IP DSCP value. The range is from 0 to 63.

- `mac-dot1p value`  
  Enter the keywords `mac-dot1p` then the dot1p value. The range is from 0 to 7.

Defaults

none

Command Modes

- `CONFIGURATION (conf-qos-policy-in)`

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version  
Description

9.10(0.0)  
Introduced on the S3148.

9.8(2.0)  
Introduced on the S3100 series.

9.8(1.0)  
 Introduced on the Z9100-ON.

9.8(0.0P5)  
 Introduced on the S4048-ON.

9.8(0.0P2)  
 Introduced on the S3048-ON.

9.7(0.0)  
 Introduced on the S6000-ON.

9.2(1.0)  
 Introduced on the Z9500.

9.0.2.0  
 Introduced on the S6000.

8.3.19.0  
 Introduced on the S4820T.

8.3.11.1  
 Introduced on the Z9000.
Usage Information

After the IP DSCP bit is set, other QoS services can then operate on the bit settings.

**show qos class-map**

View the current class map information.

**Syntax**

```
show qos class-map [class-name]
```

**Parameters**

- `class-name` (Optional) Enter the name of a configured class map.

**Defaults**

none

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

9.2(1.0) Introduced on the Z9500.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.12.0 Introduced on the S4810.

Usage Information

trust dot1p, dot1p-priority, service-class dynamic dot1; all these features work over the mapping in this command output.

Related Commands

- class-map — Identifies the class map.
- service-class dot1p-mapping — Identifies the class map.
# show qos policy-map

View the QoS policy map information.

## Syntax

```
show qos policy-map {summary [interface] | detail}
```

## Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.8(0.0P5)</td>

</tr>
</tbody>
</table>

**summary interface**

To view a policy map interface summary, enter the keyword `summary` and optionally one of the following keywords and slot/port or number information:

- For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

**detail**

To view a policy map interface in detail, enter the keyword `detail` and optionally one of the following keywords and slot/port or number information:

- For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

## Defaults

- none

## Command Modes

- EXEC
- EXEC Privilege

## Command History

Dell# show qos policy-map detail gigabitethernet 1/1

Interface GigabitEthernet 4/1
Policy-map-input policy
  Trust dffserv
  Queue# Class-map-name Qos-policy-name
  0 -                       q0
  1          CM1            q1
  2          CM2            q2
  3          CM3            q3
Dell#
```

**Example (IPv6)**

**Example (Summary IPv4)**

```markdown
Dell# show qos policy-map summary

Interface policy-map-input policy-map-output
Gi 4/1   PM1               -
Gi 4/2   PM2               PMOut
Dell#
```

### show qos policy-map-input

View the input QoS policy map details.

**Syntax**

```
show qos policy-map-input [policy-map-name] [class class-map-name] [qos-policy-input qos-policy-name]
```

**Parameters**

- **policy-map-name**
  - Enter the policy map name.
- **class class-map-name**
  - Enter the keyword class then the class map name.
- **qos-policy-input qos-policy-name**
  - Enter the keyword qos-policy-input then the QoS policy name.

**Defaults**

`none`

**Command Modes**

- EXEC
- EXEC Privilege

  Rate-limit 50 50 peak 50 50
  Wred yellow 1
  Wred green 1
Dell#
```
show qos statistics

View QoS statistics.

Syntax

show qos statistics {egress-queue [interface]} | {wred-profile [interface]} | [interface]

Parameters

- **egress-queue**
  - Enter the keyword egress-queue to display the egress-queue statistics and optionally one of the following keywords and slot/port or number information:
    - For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
    - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

- **wred-profile**
  - Enter the keywords wred-profile and optionally one of the following keywords and slot/port or number information:
    - For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
    - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

- **interface**
  - Enter one of the following keywords and slot/port or number information:
    - For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
    - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

Defaults

none

12    MCAST           0         0                0           0        0          0             0            0

Dell#
```

Usage Information

In a dual homing setup, you can use this command only from the primary VLT peer.

The following list describes output of the `show qos statistics` command in the example:

- **Queue #** — Queue Number.
- **Queued Bytes** — Snapshot of the byte count in that queue.
- **Queued Pkts** — Cumulative packet count in that queue.
- **Matched Pkts** — The number of packets that matched the class-map criteria.

![NOTE: When you configure trust, matched packet counters are not incremented in this field.](image)

- **Matched Bytes** — The number of bytes that matched the class-map criteria.

![NOTE: When you configure trust, matched byte counters are not incremented in this field.](image)

- **Dropped Pkts** — The total of the number of packets dropped for green, yellow and out-of-profile.
show qos wred-profile

View the WRED profile details.

Syntax

```
show qos wred-profile wred-profile-name
```

Parameters

- **wred-profile-name**
  
  Enter the WRED profile name to view the profile details.

Defaults

none

Command Modes

- EXEC
- EXEC Privilege

Command History

<tr>
<td>6.1.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Example

```
Dell# show qos wred-profile
Wred-profile-name   min-threshold max-threshold max-drop-rate
wred_drop            0             0              100
wred_gig_y           467           4671            100
wred_gig_g           467           4671            50
wred_teng_y          467           4671            50
wred_teng_g          467           4671            25
Dell#
```
test cam-usage

Check the Input Policy Map configuration for the CAM usage.

Syntax

test cam-usage service-policy input policy-map stack-unit \([\text{number} \text{ port-set} \text{ portpipe} \text{ number}] \mid \text{all}\)\

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>policy-map</td>
<td>Enter the policy map name.</td>
</tr>
<tr>
<td>stack-unitnumber</td>
<td>(OPTIONAL) Enter the keyword stack-unit then the stack-unit slot number.</td>
</tr>
<tr>
<td>port-set portpipe number</td>
<td>Enter the keywords port-set then the stack-unit port pipe number. The range is from 0 or 1.</td>
</tr>
<tr>
<td>stack-unit all</td>
<td>(OPTIONAL) Enter the keywords stack-unit all to indicate all stack-unit.</td>
</tr>
</tbody>
</table>

Usage Information

This feature allows you to determine if the CAM has enough space available before applying the configuration on an interface.

An input policy map with both Trust and Class-map configuration, the Class-map rules are ignored and only the Trust rule is programmed in the CAM. In such an instance, the Estimated CAM output column contains the size of the CAM space required for the Trust rule and not the Class-map rule.

The following describes the test cam-usage service-policy input policy-map stack-unit command shown in the following example.
Field | Description
---|---
stack-unit | Indicates the stack-unit slot number.
Portpipe | Indicates the portpipe number.
CAM Partition | The CAM space where the rules are added.
Available CAM | Indicates the free CAM space, in the partition, for the classification rules.

**NOTE:** The CAM entries reserved for the default rules are not included in the Available CAM column; free entries, from the default rules space, cannot be used as a policy map for the classification rules.

Estimated CAM per Port | Indicates the number of free CAM entries required (for the classification rules) to apply the input policy map on a single interface.

**NOTE:** The CAM entries for the default rule are not included in this column; a CAM entry for the default rule is always dedicated to a port and is always available for that interface.

Status (Allowed ports) | Indicates if the input policy map configuration on an interface belonging to a stack-unit/port-pipe is successful — Allowed (n) — or not successful — Exception. The allowed number (n) indicates the number of ports in that port-pipe on which the Policy Map can be applied successfully.

**NOTE:** In a Layer 2 Policy Map, IPv4/IPv6 rules are not allowed; therefore, the output contains only L2ACL CAM partition entries.

### Example

```bash
Dell# test cam-usage service-policy input pmap_l2 stack-unit all

For a L2 Input Policy Map pmap_l2, the output must be as follows,

<table>
<thead>
<tr>
<th>stack-unit</th>
<th>Portpipe</th>
<th>CAM Partition</th>
<th>Available CAM</th>
<th>Estimated CAM per Port</th>
<th>Status</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>

<td>Exception</td>
</tr>
<tr>
<td>13</td>
<td>1</td>
<td>L2ACL</td>
<td>400</td>
<td>200</td>
<td>Allowed (2)</td>
</tr>
</tbody>
</table>

Dell#
```

### threshold

Specify the minimum and maximum threshold values for the configured WRED profiles.

**Syntax**

```bash
threshold min number max number max-drop-drop
```
To remove the threshold values, use the `no threshold min number max number` command.

**Parameters**

- `min number`: Enter the keyword `min` then the minimum threshold number for the WRED profile. The range is from 1 to 9360.
- `max number`: Enter the keyword `max` then the maximum threshold number for the WRED profile. The range is from 1 to 9360 KB.
- `max-drop-drop number`: Enter the keyword `max-drop-drop` followed by the maximum number of packets for the WRED profile. The range is from 0 to 100 KB.

**Defaults**

none

**Command Modes**

CONFIGURATION (config-wred)

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version**

- 9.10(0.0) Introduced on the S3148.
- 9.8(2.0) Introduced on the S3100 series.
- 9.8(1.0) Introduced on the Z9100-ON.
- 9.8(0.0P5) Introduced on the S4048-ON.
- 9.8(0.0P2) Introduced on the S3048-ON.
- 9.7(0.0) Introduced on the S6000-ON.
- 9.2(1.0) Introduced on the Z9500.
- 9.0.0.2.0 Introduced on the S6000.
- 8.3.19.0 Introduced on the S4820T.
- 8.3.11.1 Introduced on the Z9000.
- 8.3.8.0 Introduced on the S4810.
- 6.1.1.1 Introduced on the E-Series.

**Usage Information**

To configure the minimum and maximum threshold values for user-defined profiles, use this command. Additionally, to modify the minimum and maximum threshold values for the pre-defined WRED profiles, use this command. If you delete the threshold values of the pre-defined WRED profiles, the profiles revert to their original default values.

**Table 3. Threshold Values for the Pre-defined WRED Profiles**

<table>
<thead>
<tr>
<th>Pre-Defined WRED Profile Name</th>
<th>Minimum Threshold</th>
<th>Maximum Threshold</th>
</tr>
</thead>
<tbody>
<tr>

<tr>
<td>wred_ten_g</td>
<td>467</td>
<td>4671</td>
</tr>
</tbody>
</table>

**Related Commands**

- `wred-profile` — creates a WRED profile.
trust

Specify dynamic classification (DSCP) or dot1p to trust.

Syntax

trust {diffserv [fallback] | dot1p [fallback]}

Parameters

- **diffserv**: Enter the keyword diffserv to specify trust of DSCP markings.
- **dot1p**: Enter the keyword dot1p to specify trust dot1p configuration.
- **fallback**: Enter the keyword fallback to classify packets according to their DSCP or dot1p value as a secondary option in case no match occurs against the configured class maps.

Defaults

none

Command Modes

- **CONFIGURATION (conf-policy-map-in)**

Command History

**wred**

Designate the WRED profile to yellow or green traffic.

**Syntax**

wred {yellow | green} profile-name

To remove the WRED drop precedence, use the no wred {yellow | green} [profile-name] command.

**Parameters**

- **yellow | green**
  - Enter the keyword yellow for yellow traffic. A DSCP value of xxx110 and xxx100, xxx101 maps to yellow.
  - Enter the keyword green for green traffic. A DSCP value of xxx0xx are green and DSCP 111111 are red packets.

- **profile-name**
  - Enter your WRED profile name in character format (32 character maximum). Or use one of the five pre-defined WRED profile names.
  - Pre-defined Profiles: wred_drop, wred_ge_y, wred_ge_g, wred_teng_y, wred_teng_g.

**Defaults**

When WRED green is applied, default WRED yellow profiles take effect and vice-versa.
**Command Modes**

CONFIGURATION (conf-qos-policy-out)

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3(7.0)</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

**Usage Information**

To assign drop precedence to green or yellow traffic, use this command. If there is no honoring enabled on the input, all the traffic defaults to green drop precedence.

**Related Commands**

- `wred-profile` — creates a WRED profile and name that profile.
- `trust` — defines the dynamic classification to trust DSCP.

**wred ecn**

To indicate network congestion, rather than dropping packets, use explicit congestion notification (ECN).

**Syntax**

```
wred ecn
```

To stop marking packets, use the `no wred ecn` command.

**Defaults**

none

**Command Modes**

CONFIGURATION (conf-qos-policy-out)

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<tr>
<td>9.8(1.0)</td>
<td>Introduced on the Z9100-ON.</td>
</tr>
</tbody>
</table>
**wred-profile**

Create a WRED profile and name the profile.

### Syntax

```
wred-profile wred-profile-name
```

To remove an existing WRED profile, use the `no wred-profile` command.

### Parameters

- **wred-profile-name**
  
  Enter your WRED profile name in character format (32 character maximum). Or use one of the pre-defined WRED profile names. You can configure up to 26 WRED profiles plus the five pre-defined profiles, for a total of 31 WRED profiles.

  Pre-defined Profiles: `wred_drop`, `wred-ge_y`, `wred_ge_g`, `wred_teng_y`, `wred_teng_g`.

---

**Version** | **Description**
---|---
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.7(0.0) | Introduced on the S6000-ON.
9.2(1.0) |Introduced on the Z9500.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820t.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.

**Usage Information**

When you enable `wred ecn`, and the number of packets in the queue is below the minimum threshold, packets are transmitted per the usual WRED treatment.

When you enable `wred ecn`, and the number of packets in the queue is between the minimum threshold and the maximum threshold, one of the following two scenarios can occur:

- If the transmission endpoints are ECN-capable and traffic is congested, and the WRED algorithm determines that the packet should have been dropped based on the drop probability, the packet is transmitted and marked so the routers know the system is congested and can slow transmission rates.
- If neither endpoint is ECN-capable, the packet may be dropped based on the WRED drop probability. This behavior is the identical treatment that a packet receives when WRED is enabled without ECN configured on the router.

When you enable `wred ecn`, and the number of packets in the queue is above the maximum threshold, packets are dropped based on the drop probability. This behavior is the identical treatment a packet receives when WRED is enabled without ECN configured on the router.

**Related Commands**

- `wred-profile` — creates a WRED profile and name that profile.
The five pre-defined WRED profiles. When you configure a new profile, the minimum and maximum threshold defaults to predefined wred_ge_g values.

If green profile is applied, default yellow also take effect and vice-versa.

**Command Modes**

**CONFIGURATION**

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>

**Usage Information**

Use the default pre-defined profiles or configure your own profile. You cannot delete the pre-defined profiles or their default values. This command enables WRED configuration mode — (conf-wred).

**Related Commands**

- `threshold` — specifies the minimum and maximum threshold values of the WRED profile.

**DSCP Color Map Commands**

The DSCP color map allows you to set the number of specific DSCP values to yellow or red. Traffic marked as yellow delivers traffic to the egress queue which will either transmit the packet if it has available bandwidth or drop the packet due to no ability to send. Traffic marked as red (high drop precedence) is dropped.

**dscp**

Sets the number of specific DSCP values for a color map profile to yellow or red.

**Syntax**

dscp {yellow | red} [list-dscp-values]

To remove a color policy map profile, use the no dscp {yellow | red} [dscp-list] command.
### Parameters

**Yellow**

Enter the yellow keyword. Traffic marked as yellow delivers traffic to the egress queue which either transmits the packet if it has available bandwidth or drops the packet due to no ability to send.

**Red**

Enter the red keyword. Traffic marked as red is dropped.

**dscp-list**

Enter a list of IP DSCP values. The `dscp-list` parameter specifies the full list of IP DSCP value(s) for the specified color. Each DSCP value in a list is separate values by commas – no spaces (1,2,3) or indicates a list of values separated by a hyphen (1-3). Range is 0 to 63.

### Defaults

None

</tr>
</tbody>
</table>

### Usage Information

If the specified color-map does not exist, the Diffserv Manager (DSM) creates a color map and sets all the DSCP values to green (low drop precedence).

The default setting for each DSCP value (0-63) is green (low drop precedence). This command allows setting the number of specific DSCP values to yellow or red.

### Important Points to Remember

- All DSCP values that are not specified as yellow or red are colored green.
- A DSCP value cannot be in both the yellow and red lists. Setting the red or yellow list with any DSCP value that is already in the other list results in an error and no update to that list is made.
- Each color map can only have one list of DSCP values for each color; any DSCP values previously listed for that color that are not in the new DSCP list are colored green.

### Example

```bash
Dell(conf-dscp-color-map)# dscp yellow 9,10,11,13,15,16
```

### Related Commands

- `qos dscp-color-map` — configures the DSCP color map.
- `qos dscp-color-policy` — configures a DSCP color policy.
**qos dscp-color-map**

Configure the DSCP color map.

**Syntax**

```
qos dscp-color-map map-name
```

To remove a color map, use the no qos dscp-color-map map-name command.

**Parameters**

- `map-name` Enter the name of the DSCP color map. The map name can have a maximum of 32 characters.

**Defaults**

None

**Command Modes**

CONFIGURATION

</tr>
</tbody>
</table>

**Usage Information**

A color map outlines the codepoint mappings to the appropriate color mapping (green, yellow, red) for the traffic. The system uses this information use to handle the traffic on the interface based on the traffic priority and places it into the appropriate shaping queue. You cannot delete a DSCP color map when it is configured on an interface. If you do, all the DSCP values are set to green (low drop precedence). To delete the DSCP color map that is being used by one or more interfaces, remove the DSCP map from each interface.

**Example**

```
Dell(conf)#qos dscp-color-map mymap
```

**Related Commands**

- `qos dscp-color-map` — associates the DSCP color map profile with an interface so that all IP packets received on it is given a color based on that color map.
- `dscp` — sets the number of specific DSCP values for color map profile to yellow or red.

**qos dscp-color-policy**

Associates the DSCP color map profile with an interface so that all IP packets received on it is given a color based on that color map.

**Syntax**

```
dscp-color-policy color-map-profile-name
```
To remove a color policy map profile, use the `no dscp-color-policy color-map-profile-name` command.

**Parameters**
- `color-map-profile-name` Enter the color map profile name. The name can have a maximum of 32 characters.

**Defaults**
None

**Command Modes**
CONFIG-INTERFACE

<tr>
<td>Version 9.5.0.0</td>
<td>Introduced on the Z9000, S6000, S4820T, S4810, and MXL.</td>
</tr>
</tbody>
</table>

**Usage Information**
If the specified color-map does not exist, the Diffserv Manager (DSM) creates a color map and sets all the DSCP values to green (low drop precedence).

**Example**
The following example assigns the color map, `bat-enclave-map`, to interface `gi 1/11`.
```
Dell(conf)# int gi 1/11
Dell(conf-if-gi-1/11)# qos dscp-color-policy bat-enclave-map
```

**Related Commands**
- `dscp` — sets the number of specific DSCP values for color map profile to yellow or red.
- `qos dscp-color-map` — configures the DSCP color map.

### show qos dscp-color-policy
Display DSCP color policy configuration for one or all interfaces.

**Syntax**
```
show qos dscp-color-policy {summary [interface] | detail [interface]}
```

**Parameters**
- `summary` Enter the `summary` keyword to display summary information about a color policy on one or more interfaces.
- `Detail` Enter the `detail` keyword to display detailed information about a color policy on one or more interfaces.
- `interface` Enter the name of the interface that has color policy configured.

**Defaults**
None
Command Modes

EXEC

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100-ON.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.5.0.0 Introduced on the Z9000, S6000, S4820T, S4810, and MXL.

Example

Display summary information about a color policy on one or more interfaces.

Dell# show qos dscp-color-policy summary

Interface dscp-color-map
GI 1/10 mapONE
GI 1/11 mapTWO

Display summary information about a color policy on a specific interface.

Dell# show qos dscp-color-policy summary te 1/10/1

Interface dscp-color-map
GI 1/10 mapONE

Displayed detailed color policy information on an interface.

Dell# show qos dscp-color-policy detail te 1/10

Interface GigabitEthernet 1/10
Dscp-color-map mapONE
  yellow 4,7
  red 20,30

Related Commands

• show qos dscp-color-policy — displays DSCP color maps.

show qos dscp-color-map

Display the DSCP color map for one or all interfaces.

Syntax

show qos dscp-color-map map-name

Parameters

map-name Enter the name of the color map.

Defaults

None

Command Modes

EXEC
This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

### Example

- Display all DSCP color maps.

  ```
  Dell# show qos dscp-color-map
  Dscp-color-map mapONE
  yellow 4,7
  red 20,30
  Dscp-color-map mapTWO
  yellow 16,55
  ```

- Display a specific DSCP color map.

  ```
  Dell# show qos dscp-color-map mapTWO
  Dscp-color-map mapTWO
  yellow 16,55
  ```
Routing Information Protocol (RIP)

Routing information protocol (RIP) is a distance vector routing protocol. The Dell Networking OS supports both RIP version 1 (RIPv1) and RIP version 2 (RIPv2) on the platform.

The Dell Networking OS implementation of RIP is based on IETF RFCs 2453 and RFC 1058. For more information about configuring RIP, see the Dell Networking OS Configuration Guide.

Topics:
- auto-summary
- clear ip rip
- debug ip rip
- default-information originate
- default-metric
- description
- distance
- distribute-list in
- distribute-list out
- ip poison-reverse
- ip rip receive version
- ip rip send version
- ip split-horizon
- maximum-paths
- neighbor
- network
- offset-list
- output-delay
- passive-interface
- redistribute
- redistribute isis
- redistribute ospf
- router rip
- show config
- show ip rip database
- show running-config rip
- timers basic
- version
auto-summary

Restore the default behavior of automatic summarization of subnet routes into network routes. This command applies only to RIP version 2.

**Syntax**

```plaintext
auto-summary

To send sub-prefix routing information, use the no auto-summary command.
```

**Defaults**

Enabled.

**Command Modes**

ROUTER RIP

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>

clear ip rip

Update all the RIP routes in the Dell Networking OS routing table.

**Syntax**

```plaintext
clear ip rip
```

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.
**Version** | **Description**
--- | ---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100-ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.7(0.0) | Introduced on the S6000-ON.
9.2(1.0) | Introduced on the Z9500.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the S4810.
7.8.1.0 | Introduced on the S-Series.
7.6.1.0 | Introduced on the C-Series.
pre- 6.2.1.1 | Introduced on the E-Series.

**Usage Information**
This command triggers updates of the main RIP routing tables.

**debug ip rip**

Examine RIP routing information for troubleshooting.

**Syntax**
```
debug ip rip [interface | database | events [interface] | trigger]
```

To turn off debugging output, use the `no debug ip rip` command.

**Parameters**

- **interface** *(OPTIONAL)* Enter the interface type and ID as one of the following:
  - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a Port Channel interface, enter the keywords `port-channel` then a number.
  - For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

- **database** *(OPTIONAL)* Enter the keyword `database` to display messages when there is a change to the RIP database.

- **events** *(OPTIONAL)* Enter the keyword `events` to debug only RIP protocol changes.

- **trigger** *(OPTIONAL)* Enter the keyword `trigger` to debug only RIP trigger extensions.
### default-information originate

Generate a default route for the RIP traffic.

**Syntax**

```plaintext
default-information originate [always] [metric metric-value] [route-map map-name]
```

To return to the default values, use the `no default-information originate` command.

**Parameters**

- **always**
  - (OPTIONAL) Enter the keyword `always` to enable the switch software to always advertise the default route.

- **metric metric-value**
  - (OPTIONAL) Enter the keyword `metric` then a number as the metric value. The range is from 1 to 16. The default is 1.

- **route-map map-name**
  - (OPTIONAL) Enter the keywords `route-map` then the name of a configured route-map.

**Defaults**

Command Modes

ROUTER RIP

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information

The default route must be present in the switch routing table for the default-information originate command to take effect.

default-metric

Change the default metric for routes. To ensure that all redistributed routes use the same metric value, use this command with the redistribute command.

Syntax
default-metric number

To return the default metric to the original values, use the no default-metric command.

Parameters

number Specify a number. The range is from 1 to 16. The default is 1.

Defaults

1

Command Modes

ROUTER RIP

</tr>
</tbody>
</table>

Usage Information
This command ensures that route information being redistributed is converted to the same metric value.

Related Commands
- `redistribute` — allows you to redistribute routes learned by other methods.

**description**

Enter a description of the RIP routing protocol.

**Syntax**

```
description {description}
```

To remove the description, use the `no description {description}` command.

**Parameters**

- `description` Enter a description to identify the RIP protocol (80 characters maximum).

**Defaults**

none

**Command Modes**

ROUTER RIP

**Command History**

</tr>
</tbody>
</table>
distance

Assign a weight (for prioritization) to all routes in the RIP routing table or to a specific route. Lower weights (“administrative distance”) are preferred.

Syntax
distance weight [ip-address mask [prefix-name]]

To return to the default values, use the no distance weight [ip-address mask] command.

Parameters
- **weight**: Enter a number from 1 to 255 for the weight (for prioritization). The default is **120**.
- **ip-address**: (OPTIONAL) Enter the IP address, in dotted decimal format (A.B.C.D), of the host or network to receive the new distance metric.
- **mask**: If you enter an IP address, also enter a mask for that IP address, in either dotted decimal format or /prefix format (/x).
- **prefix-name**: (OPTIONAL) Enter a configured prefix list name.

Defaults
- **weight = 120**

Command Modes
- ROUTER RIP

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100-ON.
### distribute-list in

Configure a filter for incoming routing updates.

**Syntax**

```plaintext
distribute-list prefix-list-name in [interface]
```

To delete the filter, use the **no distribute-list prefix-list-name in** command.

**Parameters**

- `prefix-list-name`  
Enter the name of a configured prefix list.
- `interface`  
  (OPTIONAL) Identifies the interface type slot/port as one of the following:
  - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a Port Channel interface, enter the keywords `port-channel` then a number.
  - For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults**

Not configured.

**Command Modes**

- **ROUTER RIP**

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.
### Version Description
- 9.10(0.0) Introduced on the S3148.
- 9.8(2.0) Introduced on the S3100 series.
- 9.8(1.0) Introduced on the Z9100-ON.
- 9.8(0.0P5) Introduced on the S4048-ON.
- 9.8(0.0P2) Introduced on the S3048-ON.
- 9.7(0.0) Introduced on the S6000-ON.
- 9.2(1.0) Introduced on the Z9500.
- 9.0.2.0 Introduced on the S6000.
- 8.3.29.0 Introduced on the S4820T.
- 8.3.11.1 Introduced on the Z9000.
- 8.5.1.0 Added support for 4-port 40G line cards.
- 8.3.7.0 Introduced on the S4810.
- 7.8.1.0 Introduced on the S-Series.
- 7.6.1.0 Introduced on the C-Series.
- pre-6.2.1.1 Introduced on the E-Series.

### Related Commands
- `ip prefix-list` — enters PREFIX-LIST mode and configures a prefix list.

### distribute-list out

Configure a filter for outgoing routing updates.

**Syntax**

```plaintext
distribute-list prefix-list-name out [interface | bgp | connected | isis | ospf | static]
```

To delete the filter, use the no `distribute-list prefix-list-name out` command.

**Parameters**

- `prefix-list-name` Enter the name of a configured prefix list.
- `interface` (OPTIONAL) Identifies the interface type slot/port as one of the following:
  - For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a Port Channel interface, enter the keywords port-channel then a number.
  - For a VLAN, enter the keyword vlan then a number from 1 to 4094.
- `connected` (OPTIONAL) Enter the keyword connected to filter only directly connected routes.
isis
(OPTIONAL) Enter the keyword isis to filter only IS-IS routes.

ospf
(OPTIONAL) Enter the keyword ospf to filter all OSPF routes.

static
(OPTIONAL) Enter the keyword static to filter manually configured routes.

Defaults
Not configured.

Command Modes
ROUTER RIP

**Related Commands**

- `ip split-horizon` — sets the RIP routing updates to exclude routing prefixes.

**ip rip receive version**

To receive specific versions of RIP, set the interface. The RIP version you set on the interface overrides the version command in ROUTER RIP mode.

**Syntax**

```
ip rip receive version [1] [2]
```

To return to the default, use the `no ip rip receive version` command.

**Parameters**

- `1` (OPTIONAL) Enter the number 1 for RIP version 1.
- `2` (OPTIONAL) Enter the number 2 for RIP version 2.

**Defaults**

RIPv1 and RIPv2

**Command Modes**

INTERFACE

</tr>
</tbody>
</table>

Usage Information
If you want the interface to receive both versions of RIP, use the `ip rip receive version 1 2` command.

Related Commands
- `ip rip send version` — sets the RIP version for sending RIP traffic on an interface.
- `version` — sets the RIP version the switch software uses.

### ip rip send version

To send a specific version of RIP, set the interface. The version you set on the interface overrides the version command in ROUTER RIP mode.

**Syntax**

```
ip rip send version [1] [2]
```

To return to the default value, use the `no ip rip send version` command.

**Parameters**

- `1`  
  (OPTIONAL) Enter the number 1 for RIP version 1. The default is RIP version 1.

- `2`  
  (OPTIONAL) Enter the number 2 for RIP version 2.

**Defaults**

RIPv1

</tbody>
</table>

**Usage Information**

To enable the interface to send both version of RIP packets, use the `ip rip send version 1 2` command.

**Related Commands**

- `ip rip receive version` — sets the RIP version for the interface to receive traffic.
- `version` — sets the RIP version for the switch software.

## ip split-horizon

Enable split-horizon for RIP data on the interface. As described in RFC 2453, the split-horizon scheme prevents any routes learned over a specific interface to be sent back out that interface.

### Syntax

```
ip split-horizon
```

To disable split-horizon, use the `no ip split-horizon` command.

### Defaults

Enabled

### Command Modes

`INTERFACE`

### Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the Z9100-ON.</td>
</tr>
</tbody>
</table>
### maximum-paths

Set RIP to forward packets over multiple paths.

**Syntax**

```
maximum-paths number
```

To return to the default values, use the `no maximum-paths` commands.

**Parameters**

- `number` Enter the number of paths. The range is from 1 to 16. The default is 4 paths.

**Defaults**

4

**Command Modes**

ROUTER RIP

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</table>

### Usage Information

RIP supports a maximum of 16 ECMP paths.

### neighbor

Define a neighbor router with which to exchange RIP information.

#### Syntax

```
neighbor ip-address
```

To delete a neighbor setting, use the `no neighbor ip-address` command.

#### Parameters

- **ip-address**: Enter the IP address, in dotted decimal format, of a router with which to exchange information.

#### Defaults

Not configured.

#### Command Modes

- ROUTER RIP

#### Command History

This guide is platform-specific. For command information about other platforms, see the relevant `Dell Networking OS Command Line Reference Guide`.

</tr>
</tbody>
</table>
Usage Information

When a neighbor router is identified, unicast data exchanges occur. Multiple neighbor routers are possible.

To ensure that only specific interfaces are receiving and sending data, use the passive-interface command with the neighbor command.

Related Commands

- passive-interface — sets the interface to only listen to RIP broadcasts.

network

Enable RIP for a specified network. To enable RIP on all networks connected to the switch, use this command.

Syntax

```
network ip-address
```

To disable RIP for a network, use the `no network ip-address` command.

Parameters

- **ip-address**
  
  Specify an IP network address in dotted decimal format. You cannot specify a subnet.

Defaults

No RIP network is configured.

Command Modes

- ROUTER RIP

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description

9.10(0.0) Introduced on the S3148.

9.8(2.0) Introduced on the S3100 series.

9.8(1.0) Introduced on the Z9100-ON.

9.7(0.0) Introduced on the S4048-ON.

9.8(0.0P2) Introduced on the S3048-ON.

9.2(1.0) Introduced on the Z9500.

9.0.2.0 Introduced on the S6000.

8.3.19.0 Introduced on the S4820T.
**offset-list**

Specify a number to add to the incoming or outgoing route metrics learned using RIP.

**Syntax**

```plaintext
offset-list prefix-list-name {in | out} offset [interface]
```

To delete an offset list, use the `no offset-list prefix-list-name {in | out} offset [interface]` command.

**Parameters**

- `prefix-list-name` Enter the name of an established Prefix list to determine which incoming routes are modified.
- `offset` Enter a number from zero (0) to 16 to be applied to the incoming route metric matching the access list specified. If you set an offset value to zero (0), no action is taken.
- `interface` (OPTIONAL) Enter the following keywords and slot/port or number information:
  - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults**

Not configured.

**Command Modes**

ROUTER RIP

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version**

- **9.10(0.0)**: Introduced on the S3148.
- **9.8(2.0)**: Introduced on the S3100 series.
- **9.8(1.0)**: Introduced on the Z9100-ON.

**Usage Information**

You can enable an unlimited number of RIP networks.

RIP operates over interfaces configured with any address the `network` command specifies.
Version | Description
--- | ---
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.7(0.0) | Introduced on the S6000-ON.
9.2(1.0) | Introduced on the Z9500.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.5.1.0 | Added support for 4-port 40G line cards.
8.3.7.0 | Introduced on the S4810.
7.8.1.0 | Introduced on the S-Series.
7.6.1.0 | Introduced on the C-Series.
pre-6.2.1.1 | Introduced on the E-Series.

Usage Information
When the offset metric is applied to an interface, that value takes precedence over an offset value that is not extended to an interface.

Related Commands
- `ip prefix-list` — enters PREFIX-LIST mode and configure a prefix list.

---

**output-delay**

Set the interpacket delay of successive packets to the same neighbor.

**Syntax**
```
output-delay delay
```

To return to the switch software defaults for interpacket delay, use the `no output-delay` command.

**Parameters**
- `delay` Specify a number of milliseconds as the delay interval. The range is from 8 to 50.

**Defaults**
Not configured.

**Command Modes**
- `ROUTER RIP`

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
--- | ---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100-ON.
9.8(0.0P5) | Introduced on the S4048-ON.
### passive-interface

Suppress routing updates on a specified interface.

#### Syntax

```plaintext
passive-interface interface
```

To delete a passive interface, use the `no passive-interface interface` command.

#### Parameters

- **interface**
  
Enter the following information:
  
  - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a Port Channel interface, enter the keywords `port-channel` then a number.
  - For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

#### Defaults

Not configured.

#### Command Modes

- **Router RIP**

#### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

#### Version Description

- **9.10(0.0)**
  
  Introduced on the S3148.

- **9.8(2.0)**
  
  Introduced on the S3100 series.

- **9.8(1.0)**
  
  Introduced on the Z9100-ON.

Usage Information

This command is intended for low-speed interfaces.

<td>7.6.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>pre-6.2.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information

Although the passive interface does not send or receive routing updates, the network on that interface still includes in RIP updates sent using other interfaces.

Related Commands

- neighbor — enables RIP for a specified network.
- network — defines a neighbor.

redistribute

Redistribute information from other routing instances.

Syntax

redistribute {connected | static}

To disable redistribution, use the no redistribute {connected | static} command.

Parameters

- **connected**: Enter the keyword connected to specify that information from active routes on interfaces is redistributed.
- **static**: Enter the keyword static to specify that information from static routes is redistributed.

Defaults

Not configured.

Command Modes

ROUTER RIP

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

### redistribute isis

Redistribute routing information from an IS-IS instance.

#### Syntax

```
redistribute isis [tag] [level-1 | level-1-2 | level-2] [metric metric-value] [route-map map-name]
```

To disable redistribution, use the `no redistribute isis [tag] [level-1 | level-1-2 | level-2] [metric metric-value] [route-map map-name]` command.

#### Parameters

- **tag**
  - (OPTIONAL) Enter the name of the IS-IS routing process.

- **level-1**
  - (OPTIONAL) Enter the keywords `level-1` to redistribute only IS-IS Level-1 routes.

- **level-1-2**
  - (OPTIONAL) Enter the keywords `level-1-2` to redistribute both IS-IS Level-1 and Level-2 routes.

- **level-2**
  - (OPTIONAL) Enter the keywords `level-2` to redistribute only IS-IS Level-2 routes.

- **metric metric-value**
  - (OPTIONAL) Enter the keyword `metric` then a number as the metric value. The range is from 0 to 16.

- **route-map map-name**
  - (OPTIONAL) Enter the keywords `route-map` then the name of a configured route map.
redistribute ospf

Redistribute routing information from an OSPF process.

Syntax

redistribute ospf process-id [match external {1 | 2} | match internal | metric metric-value] [route-map map-name]

To disable redistribution, use the no redistribute ospf process-id [match external {1 | 2} | match internal | metric metric-value] [route-map map-name] command.

Parameters

- **process-id**: Enter a number that corresponds to the OSPF process ID to redistribute. The range is from 1 to 65355.
- **match external {1 | 2}** (OPTIONAL): Enter the keywords match external then the numbers 1 or 2 to indicated that external 1 routes or external 2 routes should be redistributed.
- **match internal** (OPTIONAL): Enter the keywords match internal to indicate that internal routes should be redistributed.
- **metric metric-value** (OPTIONAL): Enter the keyword metric then a number as the metric value. The range is from 0 to 16.
- **route-map map-name** (OPTIONAL): Enter the keywords route-map then the name of a configured route map.

Defaults

Not configured.
router rip

To configure and enable RIP, enter ROUTER RIP mode.

Syntax

router rip

To disable RIP, use the no router rip command.

Defaults

Disabled.

**Usage Information**
To enable RIP, assign a network address using the `network` command.

**Example**
```
Dell(conf)# router rip
Dell(conf-router_rip)#
```

**Related Commands**
- `network` — enables RIP.
- `exit` — returns to CONFIGURATION mode.

## show config

Display the changes you made to the RIP configuration. The default values are not shown.

**Syntax**
```
show config
```

**Command Modes**
ROUTER RIP

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**show ip rip database**

Display the routes that RIP learns. If the switch learned no RIP routes, no output is generated.

**Syntax**

```
show ip rip database [ip-address mask]
```

**Parameters**

- `ip-address` (OPTIONAL) Specify an IP address in dotted decimal format to view RIP information on that network only. If you enter an IP address, also enter a mask for that IP address.
- `mask` (OPTIONAL) Specify a mask, in /network format, for the IP address.

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
---|---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100-ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.7(0.0) | Introduced on the S6000-ON.
9.2(1.0) | Introduced on the Z9500.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
show running-config rip

Display the current RIP configuration.

Syntax

show running-config rip

Defaults

none
timers basic

Manipulate the RIP timers for routing updates, invalid, holddown times, and flush time.

Syntax

```
timers basic update invalid holddown flush
```

To return to the default settings, use the `no timers basic` command.

Parameters

- `update` Enter the number of seconds to specify the rate at which RIP routing updates are sent. The range is from zero (0) to 4294967295. The default is 30 seconds.
**invalid** Enter the number of seconds to specify the time interval before routing updates are declared invalid or expired. The invalid value should be at least three times the update timer value. The range is from zero (0) to 4294967295. The default is **180 seconds**.

**holddown** Enter the number of seconds to specify a time interval during which the route is marked as unreachable but still sending RIP packets. The holddown value should be at least three times the update timer value. The range is from zero (0) to 4294967295. The default is **180 seconds**.

**flush** Enter the number of seconds to specify the time interval during which the route is advertised as unreachable. When this interval expires, the route is flushed from the routing table. The flush value should be greater than the update value. The range is from zero (0) to 4294967295. The default is **240 seconds**.

**Defaults**
- update = **30 seconds**
- invalid = **180 seconds**
- holddown = **180 seconds**
- flush = **240 seconds**

</tr>
</tbody>
</table>

**Usage Information** If you change the timers on one router, also synchronize the timers on all routers in the RIP domain.
**version**

Specify either RIP version 1 or RIP version 2.

**Syntax**

```plaintext
version {1 | 2}
```

To return to the default version setting, use the `no version` command.

**Parameters**

- **1**
  - Enter the keyword 1 to specify RIP version 1.
- **2**
  - Enter the keyword 2 to specify RIP version 2.

**Defaults**

The Dell Networking OS sends RIPv1 and receives RIPv1 and RIPv2.

**Command Modes**

ROUTER RIP

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Related Commands**

- `ip rip receive version` — sets the RIP version the interface receives.
- `ip rip send version` — sets the RIP version the interface sends.
Remote Monitoring (RMON)

The Dell Networking OS remote monitoring (RMON) is implemented on the platform.

Dell Networking OS RMON is based on IEEE standards, providing both 32-bit and 64-bit monitoring and long-term statistics collection. Dell Networking OS RMON supports the following RMON groups, as defined in RFC-2819, RFC-3273, RFC-3434, and RFC-4502:

- Ethernet Statistics Table; RFC-2819
- Ethernet Statistics High-Capacity Table; RFC-3273, 64bits
- Ethernet History Control Table; RFC-2819
- Ethernet History Table; RFC-2819
- Ethernet History High-Capacity Table; RFC-3273, 64bits
- Alarm Table; RFC-2819
- High-Capacity Alarm Table (64bits); RFC-3434, 64bits
- Event Table; RFC-2819
- Log Table; RFC-2819
- User History; RFC-4502
- Probe Configuration (Capabilities, SoftwareRev, HardwareRev, DateTime and ResetControl); RFC-4502

Dell Networking OS RMON does not support the following statistics:

- etherStatsCollisions
- etherHistoryCollisions
- etherHistoryUtilization

**NOTE:** Only SNMP GET/GETNEXT access is supported. Configure RMON using the RMON commands. Collected data is lost during a chassis reboot.

Topics:

- rmon alarm
- rmon collection history
- rmon collection statistics
- rmon event
- rmon hc-alarm
- show rmon
- show rmon alarms
- show rmon events
- show rmon hc-alarm
- show rmon history
- show rmon log
- show rmon statistics
rmon alarm

Set an alarm on any MIB object.

Syntax

```
rmon alarm number variable interval {delta | absolute} rising-threshold value event-number falling-threshold value event-number [owner string]
```

To disable the alarm, use the no rmon alarm number command.

Parameters

- **number**: Enter the alarm integer number from 1 to 65535. The value must be unique in the RMON alarm table.
- **variable**: Enter the MIB object to monitor. The variable must be in the SNMP OID format; for example, 1.3.6.1.2.1.1.3. The object type must be a 32-bit integer.
- **interval**: Time, in seconds, the alarm monitors the MIB variables; this is the alarmSampleType in the RMON alarm table. The range is from 5 to 3600 seconds.
- **delta**: Enter the keyword delta to test the change between MIB variables. This is the alarmSampleType in the RMON alarm table.
- **absolute**: Enter the keyword absolute to test each MIB variable directly. This is the alarmSampleType in the RMON alarm table.
- **rising-threshold value event-number**: Enter the keywords rising-threshold then the value (32 bit) the rising-threshold alarm is either triggered or reset. Then enter the event-number to trigger when the rising threshold exceeds its limit. This value is the same as the alarmRisingEventIndex or alarmTable of the RMON MIB. If there is no corresponding rising-threshold event, the value is zero.
- **falling-threshold value event-number**: Enter the keywords falling-threshold then the value (32 bit) the falling-threshold alarm is either triggered or reset. Then enter the event-number to trigger when the falling threshold exceeds its limit. This value is the same as the alarmFallingEventIndex or the alarmTable of the RMON MIB. If there is no corresponding falling-threshold event, the value is zero.
- **owner string**: (OPTIONAL) Enter the keyword owner then the owner name to specify an owner for the alarm. This is the alarmOwner object in the alarmTable of the RMON MIB.

Defaults

- **owner**

### rmon collection history

Enable the RMON MIB history group of statistics collection on an interface.

**Syntax**

```
rmon collection history {controlEntry integer} [owner name] [buckets number] [interval seconds]
```

To remove a specified RMON history group of statistics collection, use the `no rmon collection history {controlEntry integer}` command.

**Parameters**

- **controlEntry integer**
  - Enter the keyword `controlEntry` to specify the RMON group of statistics using a value. Then enter an integer value from 1 to 65535 that identifies the RMON group of statistics. The integer value must be a unique index in the RMON history table.

- **owner name**
  - (OPTIONAL) Enter the keyword `owner` then the owner name to record the owner of the RMON group of statistics.

- **buckets number**
  - (OPTIONAL) Enter the keyword `buckets` then the number of buckets for the RMON collection history group of statistics. The bucket range is from 1 to 1000. The default is 50.

- **interval seconds**
  - (OPTIONAL) Enter the keyword `interval` then the number of seconds in each polling cycle. The range is from 5 to 3600 seconds. The default is 1800 seconds.

**Defaults**

- none

## rmon collection statistics

Enable RMON MIB statistics collection on an interface.

### Syntax

```
rmon collection statistics {controlEntry integer} [owner name]
```

To remove RMON MIB statistics collection on an interface, use the `no rmon collection statistics {controlEntry integer}` command.

### Parameters

- **controlEntry integer**: Enter the keyword `controlEntry` to specify the RMON group of statistics using a value. Then enter an integer value from 1 to 65535 that identifies the RMON Statistic Table. The integer value must be a unique in the RMON statistic table.

- **owner name**: (OPTIONAL) Enter the keyword `owner` then the owner name to record the owner of the RMON group of statistics.

### Defaults

**none**

</table>
rmon event

Add an event in the RMON event table.

Syntax

rmon event number [log] [trap community] [description string]

To disable RMON on an interface, use the no rmon event number command.

Parameters

number

Assign an event number in integer format. The range is from 1 to 65535. You must ensure that the value you enter is unique in the RMON event table.

log

(OPTIONAL) Enter the keyword log to generate an RMON event log. This option sets the eventType to either log or log-and-snmptrap in the RMON event table. The default is None.

trap community

(OPTIONAL) Enter the keyword trap followed by the SNMP community string to generate SNMP traps for an RMON event entry. This option sets the eventType to either snmptrap or log-and-snmptrap in the RMON event table. In addition to the SNMP traps, this option also generates a syslog.

description string

(OPTIONAL) Enter the keyword description then a string describing the event.

owner name

(OPTIONAL) Enter the keyword owner then the name of the owner of this event.

Defaults

As noted in the Parameters section.

rmon hc-alarm

Set an alarm on any MIB object.

Syntax

```
rmon hc-alarm number variable interval {delta | absolute} rising-threshold value event-number falling-threshold value event-number [owner string]
```

To disable the alarm, use the `no rmon hc-alarm number` command.

Parameters

- **number**: Enter the alarm integer number from 1 to 65535. The value must be unique in the RMON alarm table.
- **variable**: The MIB object to monitor. The variable must be in the SNMP OID format; for example, `1.3.6.1.2.1.1.3`. The object type must be a 64-bit integer.
- **interval**: Time, in seconds, the alarm monitors the MIB variables; this is the alarmSampleType in the RMON alarm table. The range is from 5 to 3600 seconds.
- **delta**: Enter the keyword `delta` to test the change between MIB variables. This is the alarmSampleType in the RMON alarm table.
- **absolute**: Enter the keyword `absolute` to test each MIB variable directly. This is the alarmSampleType in the RMON alarm table.
**rising-threshold value event-number**
Enter the keywords `rising-threshold` then the value (64 bit) the rising-threshold alarm is either triggered or reset. Then enter the event-number to trigger when the rising threshold exceeds its limit. This value is the same as the `alarmRisingEventIndex` or `alarmTable` of the RMON MIB. If there is no corresponding rising-threshold event, the value is zero.

**falling-threshold value event-number**
Enter the keywords `falling-threshold` then the value (64 bit) the falling-threshold alarm is either triggered or reset. Then enter the event-number to trigger when the falling threshold exceeds its limit. This value is the same as the `alarmFallingEventIndex` or the `alarmTable` of the RMON MIB. If there is no corresponding falling-threshold event, the value is zero.

**owner string**
(Optional) Enter the keyword `owner` then the owner name to specify an owner for the alarm. This is the `alarmOwner` object in the `alarmTable` of the RMON MIB.

**Defaults**
```
owner
```

    rising threshold: 500, RMON event index: 3
    alarm falling threshold value: positive.
    falling threshold: 300, RMON event index: 4
```
alarm sampling failed 0 times.
alarm owner:
alarm storage type: non-volatile.
alarm status: OK
Dell#

Example (Brief)
Dell# show rmon hc-alarm brief
index SNMP OID
--------------------------
1 1.3.6.1.2.1.1.3
2 1.3.6.1.2.1.1.3
3 1.3.6.1.2.1.1.3
4 1.3.6.1.2.1.1.3
5 1.3.6.1.2.1.1.3
Dell#

show rmon history

Display the contents of the RMON Ethernet history table.

Syntax

show rmon history [index] [brief]

Parameters

index (OPTIONAL) Enter the table index number to display just that entry.
brief (OPTIONAL) Enter the keyword brief to display the RMON Ethernet history table in an easy-to-read format

Defaults
none

Command Modes
EXEC

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100-ON.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.2(1.0) Introduced on the Z9500.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
8.3.7.0 Introduced on the S4810.

Dell#
Rapid Spanning Tree Protocol (RSTP)

The Dell Networking OS implementation of rapid spanning tree protocol (RSTP) is based on the IEEE 802.1w standard spanning-tree protocol. The RSTP algorithm configures connectivity throughout a bridged local area network (LAN) that is comprised of LANs interconnected by bridges.

Dell Networking OS supports RSTP.

Topics:
- bridge-priority
- debug spanning-tree rstp
- description
- disable
- forward-delay
- hello-time
- max-age
- protocol spanning-tree rstp
- show config
- show spanning-tree rstp
- spanning-tree rstp
- tc-flush-standard

bridge-priority

Set the bridge priority for RSTP.

Syntax

bridge-priority priority-value

To return to the default value, use the no bridge-priority command.

Parameters

| priority-value | Enter a number as the bridge priority value in increments of 4096. The range is from 0 to 61440. The default is 32768. |

Defaults

32768

Command Modes

CONFIGURATION RSTP (conf-rstp)

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>
### Related Commands

- `protocol spanning-tree rstp` — enters rapid spanning tree mode.

### debug spanning-tree rstp

Enable debugging of RSTP and view information on the protocol.

**Syntax**

```
debug spanning-tree rstp [all | bpdu interface {in | out} | events]
```

To disable debugging, use the `no debug spanning-tree rstp` command.

**Parameters**

- `all`
  
  (OPTIONAL) Enter the keyword `all` to debug all spanning tree operations.

- `bpdu interface {in | out}`
  
  (OPTIONAL) Enter the keyword `bpdu` to debug the bridge protocol data units.

  (OPTIONAL) Enter the keyword `interface` along with the interface information:

  - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a port-channel interface, enter the keywords `port-channel` then the port-channel ID.

  Optionally, enter an in or out parameter with the optional interface:

  - For Receive, enter `in`.
  - For Transmit, enter `out`.

- `events`
  
  (OPTIONAL) Enter the keyword `events` to debug RSTP events.

**Command Modes**

- EXEC Privilege

Version Description
7.5.1.0 Introduced on the C-Series.
6.2.1.1 Introduced on the E-Series.

**Related Commands**
- **protocol spanning-tree rstp** — enters SPANNING TREE mode on the switch.

### forward-delay

Configure the amount of time the interface waits in the Listening State and the Learning State before transitioning to the Forwarding State.

**Syntax**

```
forward-delay seconds
```

To return to the default setting, use the `no forward-delay` command.

**Parameters**

- `seconds` Enter the number of seconds that Dell Networking OS waits before transitioning RSTP to the forwarding state. The range is from 4 to 30. The default is **15 seconds**.

**Defaults**

**15 seconds**

**Command Modes**

- CONFIGURATION RSTP (conf-rstp)

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
--- | ---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100-ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.7(0.0) | Introduced on the S6000-ON.
9.2(1.0) | Introduced on the Z9500.
9.0.2.0 | Introduced on the S6000.

8.3.7.0 | Introduced on the S4810.
7.6.1.0 | Introduced on the S-Series.
7.5.1.0 | Introduced on the C-Series.
6.2.1.1 | Introduced on the E-Series.

**Related Commands**

- **hello-time** — changes the time interval between BPDUs.
- **max-age** — changes the wait time before RSTP refreshes the protocol configuration information.
hello-time

Set the time interval between the generation of the RSTP bridge protocol data units (BPDUs).

Syntax

```
hello-time [milli-second] seconds
```

To return to the default value, use the `no hello-time` command.

Parameters

- **seconds**: Enter a number as the time interval between transmission of BPDUs. The range is from 1 to 10 seconds. The default is **2 seconds**.
- **milli-second**: Enter the keywords `milli-second` to configure a hello time on the order of milliseconds. The range is from 50 to 950 milliseconds.

Defaults

**2 seconds**

Command Modes

- **CONFIGURATION RSTP (conf-rstp)**

Command History

</tr>
</tbody>
</table>

Usage Information

The hello time is encoded in BPDUs in increments of 1/256ths of a second. The standard minimum hello time in seconds is 1 second, which is encoded as 256. Millisecond hello times are encoded using values less than 256; the millisecond hello time equals \((x/1000) \times 256\).

When you configure millisecond hellos, the default hello interval of 2 seconds is still used for edge ports; the millisecond hello interval is not used.
Related Commands

- `forward-delay` — changes the wait time before RSTP transitions to the Forwarding state.
- `max-age` — changes the wait time before RSTP refreshes the protocol configuration information.

max-age

To maintain configuration information before refreshing that information, set the time interval for the RSTP bridge.

Syntax

```
max-age seconds
```

To return to the default values, use the `no max-age` command.

Parameters

- `max-age` Enter a number of seconds the Dell Networking OS waits before refreshing configuration information. The range is from 6 to 40 seconds. The default is **20 seconds**.

Defaults

**20 seconds**

Command Modes

</table>

**Usage Information**
RSTP is not enabled when you enter RSTP mode. To enable RSTP globally on the system, use the `no disable` command from RSTP mode.

**Example**
```
Dell(conf)# protocol spanning-tree rstp
Dell(config-rstp)# no disable
```

**Related Commands**
- `disable` — disables RSTP globally on the system.

**show config**

View the current configuration for the mode. Only non-default values are displayed.

**Syntax**
```
show config
```
show spanning-tree rstp

Display the RSTP configuration.

Syntax

show spanning-tree rstp [brief] [guard]

Parameters

brief (OPTIONAL) Enter the keyword brief to view a synopsis of the RSTP configuration information.

guard (OPTIONAL) Enter the keyword guard to display the type of guard enabled on an RSTP interface and the current port state.

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Example

Dell(conf-rstp)# show config
!
protocol spanning-tree rstp
  no disable
  bridge-priority 16384
## Usage Information

The following describes the `show spanning-tree rstp guard` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Interface Name</td>
<td>RSTP interface.</td>
</tr>
<tr>
<td>Instance</td>
<td>RSTP instance.</td>
</tr>
<tr>
<td>Sts</td>
<td>Port state: root-inconsistent (INCON Root), forwarding (FWD), listening (LIS), blocking (BLK), disabled (DIS), or shut down (EDS Shut).</td>
</tr>
<tr>

Dell# show spanning-tree rstp
Root Identifier has priority 32768, Address 0001.e801.6aa8
Root Bridge hello time 2, max age 20, forward delay 15, max hops 0
Bridge Identifier has priority 32768, Address 0001.e801.6aa8
Configured hello time 2, max age 20, forward delay 15, max hops 0
We are the root
Current root has priority 32768, Address 0001.e801.6aa8
Number of topology changes 1, last change occurred 00:00:31 ago on Gi 1/1
Port 257 (GigabitEthernet 1/1) is LBK INC Discarding
Port path cost 20000, Port priority 128, Port Identifier 128.257
Designated root has priority 32768, address 0001.e801.6aa8
Designated bridge has priority 32768, address 0001.e801.6aa8
Designated port id is 128.257, designated path cost 0
Number of transitions to forwarding state 1
BPDU : sent 27, received 9
The port is not in the Edge port mode

Example (Guard)

Dell# show spanning-tree rstp guard

Interface
Name   Instance Sts         Guard type
--------- -------- -------------------
Gi 0/1 0        INCON(Root) Rootguard
Gi 0/2 0        FWD         Loopguard
Gi 0/3 0        BLK         Bpduguard

spanning-tree rstp

Configure an RSTP interface with one of these settings: port cost, edge port with optional bridge port data unit (BPDU) guard, port priority, loop guard, or root guard.

Syntax

spanning-tree rstp {cost port-cost | edge-port [bpduguard [shutdown-on-violation]] | priority priority | {loopguard | rootguard}}

Parameters

cost port-cost

- Enter the keyword cost then the port cost value. The range is from 1 to 200000. The defaults are:
  - 100 Mb/s Ethernet interface = 200000
  - 1-Gigabit Ethernet interface = 20000
  - 10-Gigabit Ethernet interface = 2000
Port Channel interface with one 100 Mb/s Ethernet = 200000
Port Channel interface with one 1 Gigabit Ethernet = 20000
Port Channel interface with one 10 Gigabit Ethernet = 2000
Port Channel with two 1 Gigabit Ethernet = 18000
Port Channel with two 10 Gigabit Ethernet = 1800
Port Channel with two 100 Mbps Ethernet = 180000

edge-port

Enter the keywords edge-port to configure the interface as a rapid spanning tree edge port.

bpduguard

(Optional) Enter the keyword portfast to enable Portfast to move the interface into Forwarding mode immediately after the root fails.

Enter the keyword bpduguard to disable the port when it receives a BPDU.

shutdown-on-violation

(Optional) Enter the keywords shutdown-on-violation to hardware disable an interface when a BPDU is received and the port is disabled.

priority priority

Enter keyword priority then a value in increments of 16 as the priority. The range is from 0 to 240. The default is 128.

loopguard

Enter the keyword loopguard to enable loop guard on an RSTP port or port-channel interface.

rootguard

Enter the keyword rootguard to enable root guard on an RSTP port or port-channel interface.

Defaults

Not configured.

Command Modes

<td>Added the optional bridge port data unit (BPDU) guard.</td>
</tr>
<tr>
<td>6.2.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

The BPDU guard option prevents the port from participating in an active STP topology in case a BPDU appears on a port unintentionally, or is misconfigured, or is subject to a DOS attack. This option places the port into an Error Disable state if a BPDU appears and a message is logged so that the administrator can take corrective action.

**NOTE:** A port configured as an edge port, on an RSTP switch, immediately transitions to the Forwarding state. Only configure ports connected to end-hosts as edge ports. Consider an edge port similar to a port with a spanning-tree portfast enabled.

If you do not enable shutdown-on-violation, BPDUs are still sent to the RPM CPU.

You cannot enable STP root guard and loop guard at the same time on a port. For example, if you configure loop guard on a port on which root guard is already configured, the following error message displays: % Error: RootGuard is configured. Cannot configure LoopGuard.

Enabling Portfast BPDU guard and loop guard at the same time on a port results in a port that remains in a Blocking state and prevents traffic from flowing through it. For example, when Portfast BPDU guard and loop guard are both configured:

- If a BPDU is received from a remote device, BPDU guard places the port in an Err-Disabled Blocking state and no traffic is forwarded on the port.
- If no BPDU is received from a remote device, loop guard places the port in a Loop-Inconsistent Blocking state and no traffic is forwarded on the port.

**Example**

```
Dell(conf)# interface gigabitethernet 4/1
Dell(conf-if-gi-4/0)# spanning-tree rstp edge-port
Dell(conf-if-gi-4/0)# show config
!
interface GigabitEthernet 4/1
  no ip address
  switchport
  spanning-tree rstp edge-port
  no shutdown
Dell#
```

**tc-flush-standard**

Enable the MAC address flushing after receiving every topology change notification.

**Syntax**

```
tc-flush-standard
```

To disable, use the `no tc-flush-standard` command.

**Defaults**

Disabled

**Command Modes**

CONFIGURATION (conf-rstp)

**Usage Information**

By default, Dell Networking OS implements an optimized flush mechanism for RSTP. This implementation helps in flushing MAC addresses only when necessary (and less often), allowing for faster convergence during topology changes. However, if a standards-based flush mechanism is needed, you can turn on this knob command to enable flushing MAC addresses after receiving every topology change notification.
Software-Defined Networking (SDN)

The Dell Networking OS supports software-defined networking (SDN). For more information, see the SDN Deployment Guide.
The commands in this chapter are available on Dell Networking OS. For configuration details, see the Security section in the Dell Networking OS Configuration Guide.

NOTE: Dell Networking OS implements LEAP with MSCHAP v2 supplicant.

Topics:

- AAA Accounting Commands
- Authorization and Privilege Commands
- Obscure Password Commands
- Authentication and Password Commands
- RADIUS Commands
- TACACS+ Commands
- Port Authentication (802.1X) Commands
- SSH and SCP Commands
- Secure DHCP Commands
- Role-Based Access Control Commands
- ICMP Vulnerabilities

### AAA Accounting Commands

AAA Accounting enables tracking of services that users are accessing and the amount of network resources being consumed by those services. When you enable AAA Accounting, the network server reports user activity to the TACACS+ security server in the form of accounting records. Each accounting record is comprised of accounting AV pairs and is stored on the access control server. As with authentication and authorization, you must configure AAA Accounting by defining a named list of accounting methods, and then applying that list to various interfaces.

**aaa accounting**

Enable AAA Accounting and create a record for monitoring the accounting function.

**Syntax**

```
aaa accounting {system | exec | commands level | role role-name} {name | default}{start-stop | wait-start | stop-only} {tacacs+}
```

To disable AAA Accounting, use the no aaa accounting {system | exec | command level} {name | default}{start-stop | wait-start | stop-only} {tacacs+} command.
Enter the keyword `system` to send accounting information of any other AAA configuration.

Enter the keyword `exec` to send accounting information when a user has logged in to EXEC mode.

Enter the keyword `command` then a privilege level for accounting of commands executed at that privilege level or enter the keyword `role` then the role name for accounting of commands executed by a user with that user role.

Enter one of the following:

- For `name`, enter a user-defined name of a list of accounting methods.
- For `default`, the default accounting methods used.

Enter the keywords `start-stop` to send a "start accounting" notice at the beginning of the requested event and a "stop accounting" notice at the end of the event.

Enter the keywords `wait-start` to ensure that the TACACS+ security server acknowledges the start notice before granting the user's process request.

Enter the keywords `stop-only` to instruct the TACACS+ security server to send a "stop record accounting" notice at the end of the requested user process.

Enter the keyword `tacacs+` to use TACACS+ data for accounting. The Dell Networking OS currently only supports TACACS+ accounting.

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>
In the example above, TACACS+ accounting is used to track all usage of EXEC command and commands on privilege level 15.

Privilege level 15 is the default. If you want to track usage at privilege level 1 for example, use the `aaa accounting command 1` command.

Example

```
Dell(conf)# aaa accounting exec default start-stop tacacs+
Dell(conf)# aaa accounting command 15 default start-stop tacacs+
Dell(conf)# aaa accounting command role secaadmin default start-stop tacacs+
```

Related Commands

- `enable password` — changes the password for the `enable` command.
- `login authentication` — enables AAA login authentication on the terminal lines.
- `password` — creates a password.
- `tacacs-server host` — specifies a TACACS+ server host.

**accounting**

Apply an accounting method list to terminal lines.

**Syntax**

```
accounting {exec | commands {level | role role-name}} method-list
```

**Parameters**

- `exec` — Enter the keyword `exec` to apply an EXEC level accounting method list.
- `commands (level | role role-name)` — Enter the keywords `commands level` to apply an EXEC and CONFIGURATION level accounting method list or enter the keyword `role` and then the role name for accounting of commands executed by a user with that user role.
- `method-list` — Enter a method list that you defined using the `aaa accounting exec` or `aaa accounting commands` commands.

**Defaults**

none

**Related Commands**
- `aaa accounting` — enables AAA Accounting and creates a record for monitoring the accounting function.

**aaa accounting suppress**

Prevent the generation of accounting records of users with the user name value of NULL.

**Syntax**

```
aaa accounting suppress null-username
```

To permit accounting records to users with user name value of NULL, use the `no aaa accounting suppress null-username` command.

**Defaults**

Accounting records are recorded for all users.

**Command Modes**

CONFIGURATION

**Command History**

</tbody>
</table>
Dell Networking OS issues accounting records for all users on the system, including users whose username string, due to protocol translation, is NULL. For example, a user who comes on line with the `aaa authentication login method-list none` command is applied. To prevent the accounting records from being generated for sessions that do not have user names associated to them, use the `aaa accounting suppress` command.

### aaa radius group

Configure the RADIUS server group that is used for Authentication, Authorization and Accounting.

**Syntax**

```
aaa radius group group-name
```

To remove the RADIUS group configuration, use the `no aaa radius group group-name` command.

**Parameters**

- `group-name` Enter the name of the RADIUS server group.

**Defaults**

none

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>

**Usage Information**

You can use this command to configure the group of Radius servers used for Authentication, Authorization, and Accounting purposes.

If the RADIUS group is not configured for Authentication, Authorization, and Accounting, then globally configured Radius servers are used for the purposes.

When the RADIUS group is removed, the AAA configuration is also removed.
**show accounting**

Display the active accounting sessions for each online user.

**Syntax**

```
show accounting
```

**Defaults**

none

**Command Modes**

EXEC

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>

**Usage Information**

This command steps through all active sessions and then displays the accounting records for the active account functions.

**Example**

```
Dell# show accounting
Active accounted actions on tty2, User admin Priv 1 Role
   Task ID 2, EXEC Accounting record, 00:02:03 Elapsed, service=shell
Active accounted actions on tty3, User ad Priv 15 Role
   Task ID 7, EXEC Accounting record, 00:01:22 Elapsed, service=shell
Active accounted actions on tty4, User ad Priv 15 Role
```
Related Commands
  •   **aaa accounting** — enables AAA Accounting and creates a record for monitoring the accounting function.

### Authorization and Privilege Commands
To set command line authorization and privilege levels, use the following commands.

#### authorization
Apply an authorization method list to terminal lines.

**Syntax**

```
authorization {exec | commands {level | role role-name}} method-list
```

**Parameters**

- **exec**
  - Enter the keyword `exec` to apply an EXEC level authorization method list.

- **commands**
  - `level`
  - `role role-name`
  - Enter the keyword `commands` followed by either a privilege level for accounting of commands executed at that privilege level, or enter the keyword `role` then the role name for authorization of commands executed by a user with that user role.

- **method-list**
  - Enter a method list that you defined using the `aaa accounting exec` or `aaa accounting commands` commands.

**Defaults**

```
none
```

**Command Modes**

```
LINE
```

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant **Dell Networking OS Command Line Reference Guide**.

**Version** | **Description**
--- | ---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100-ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.7(0.0) | Introduced on the S6000–ON.
9.5(0.0) | Added support for roles on the Z9000, S6000, S4820T, S4810, and MXL.
9.2(1.0) | Introduced on the Z9500.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.

**Related Commands**
- `aaa authorization commands` — sets the parameters that restrict (or permit) a user’s access to EXEC and CONFIGURATION level commands.
- `aaa authorization exec` — sets the parameters that restrict (or permit) a user’s access to EXEC level commands.

### aaa authorization commands

Set parameters that restrict (or permit) a user’s access to EXEC and CONFIGURATION level commands.

**Syntax**

```
aaa authorization commands {level | role role-name}{name|default} {local | tacacs+ | none}
```

Undo a configuration with the `no aaa authorization commands {level | role role-name}{name|default} {local | tacacs+ | none}` command.

**Parameters**

- `commands level` Enter the keyword `commands` then the command privilege level for command level authorization.
- `role role-name` Enter the keyword `role` then the role name.
- `name` Define a name for the list of authorization methods.
- `default` Define the default list of authorization methods.
- `local` Use the authorization parameters on the system to perform authorization.
- `tacacs+` Use the TACACS+ protocol to perform authorization.
- `none` Enter the keyword `none` to apply no authorization.

**Defaults**

none

**Usage Information**

Certain TACACS+ servers do not authenticate the device if you use the `aaa authorization commands level default local tacacs+` command. To resolve the issue, use the `aaa authorization commands level default tacacs+ local` command.
aaa authorization exec

Set parameters that restrict (or permit) a user’s access to EXEC-level commands.

Syntax

```
aaa authorization exec {name | default} {local || tacacs+ || if-authenticated || none}
```

To disable authorization checking for EXEC level commands, use the `no aaa authorization exec` command.

Parameters

- **name**: Define a name for the list of authorization methods.
- **default**: Define the default list of authorization methods.
- **local**: Use the authorization parameters on the system to perform authorization.
- **tacacs+**: Use the TACACS+ protocol to perform authorization.
- **none**: Enter the keyword `none` to apply no authorization.

Defaults

```
none

privilege level (CONFIGURATION mode)

Change the access or privilege level of one or more commands.

Syntax

```
privilege mode {level level command | reset command}
```

To delete access to a level and command, use the `no privilege mode level level command` command.

Parameters

- **mode**: Enter one of the following keywords as the mode for which you are controlling access:
  - configure for CONFIGURATION mode
  - exec for EXEC mode
  - interface for INTERFACE modes
  - line for LINE mode
  - route-map for ROUTE-MAP mode
  - router for ROUTER OSPF, ROUTER RIP, ROUTER ISIS and ROUTER BGP modes

- **level**: Enter the keyword `level` then a number for the access level. The range is from 0 to 15. Level 1 is EXEC mode and Level 15 allows access to all CLI modes and commands.

- **reset**: Enter the keyword `reset` to return the security level to the default setting.

- **command**: Enter the command’s keywords to assign the command to a certain access level. You can enter one or all of the keywords.

Defaults

Not configured.

### Obscure Password Commands

To enable the obscure password, use the following commands.

#### service obscure-passwords

Enable the obscuring of passwords and keys.

**Syntax**

```
service obscure-passwords
```

Enable the obscuring of passwords and keys, including RADIUS, TACACS+ keys, router authentication strings, VRRP authentication, use the `service obscure-passwords` command.

**Defaults**

Disabled.

**Command Modes**

<td>Introduced on the S4810, S4820T, S5000, S6000, Z9000, Z9500, MXL</td>
</tr>
</tbody>
</table>

**Usage Information**

By default, the `service password-encryption` command stores encrypted passwords. For greater security, you can also use the `service obscure-passwords` command to prevent a user from reading the passwords and keys, including RADIUS, TACACS+ keys, router authentication strings, VRRP authentication by obscuring this information. Passwords and keys are stored encrypted in the configuration file and by default are displayed in the encrypted form when the configuration is displayed. Enabling the `service obscure-passwords` command displays asterisks instead of the encrypted passwords and keys. This command prevents a user from reading these passwords and keys by obscuring this information with asterisks.

Password obscuring masks the password and keys for display only but does not change the contents of the file. The string of asterisks is the same length as the encrypted string for that line of configuration. To verify that you have successfully obscured passwords and keys, use the `show running-config` command or `show startup-config` command.

If you are using role-based access control (RBAC), only the system administrator and security administrator roles can enable the `service obscure-password command`. 
**Authentication and Password Commands**

To manage access to the system, use the following the commands.

### aaa authentication enable

Configure AAA Authentication method lists for user access to EXEC privilege mode (the “Enable” access).

**Syntax**

```
aaa authentication enable {default | method-list-name} method [... method2]
```

To return to the default setting, use the `no aaa authentication enable {default | method-list-name} method [... method2]` command.

**Parameters**

- **default**
  - Enter the keyword default then the authentication methods to use as the default sequence of methods for the Enable login. The default is default enable.

- **method-list-name**
  - Enter a text string (up to 16 characters long) to name the list of enabled authentication methods activated at login.

- **method**
  - Enter one of the following methods:
    - `enable`: use the password the `enable password` command defines in CONFIGURATION mode.
    - `line`: use the password the `password` command defines in LINE mode.
    - `none`: no authentication.
    - `radius`: use the RADIUS servers configured with the `radius-server host` command.
    - `tacacs+`: use the TACACS+ server(s) configured with the `tacacs-server host` command.

- **... method2**
  - (OPTIONAL) In the event of a “no response” from the first method, Dell Networking OS applies the next configured method.

**Defaults**

Use the `enable password`.

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version**

<table>
<thead>

<td>Introduced on the S3048-ON.</td>
</tr>
</tbody>
</table>
Usage Information

By default, the Enable password is used. If you configure aaa authentication enable default, Dell Networking OS uses the methods defined for Enable access instead.

Methods configured with the aaa authentication enable command are evaluated in the order they are configured. If authentication fails using the primary method, Dell Networking OS employs the second method (or third method, if necessary) automatically. The fallback to the second method would happen only if the authentication failure is due to a non-reachable server or invalid TACACS server key. The fallback would not occur if the authentication failure is due to invalid credentials. For example, if the TACACS+ server is reachable, but the server key is invalid, Dell Networking OS proceeds to the next authentication method.

Related Commands

- enable password — changes the password for the enable command.
- login authentication — enables AAA login authentication on the terminal lines.
- password — creates a password.
- radius-server host — specifies a RADIUS server host.
- tacacs-server host — specifies a TACACS+ server host.

aaa authentication login

Configure AAA Authentication method lists for user access to EXEC mode (Enable log-in).

Syntax

aaa authentication login {method-list-name | default} method [... method4]

To return to the default setting, use the no aaa authentication login {method-list-name | default} command.

Parameters

method-list-name Enter a text string (up to 16 characters long) as the name of a user-configured method list that can be applied to different lines.

default Enter the keyword default to specify that the method list specified is the default method for all terminal lines.

method Enter one of the following methods:
- enable: use the password the `enable password` command defines in CONFIGURATION mode. Not available if role-only is in use.
- line: use the password the `password` command defines in LINE mode. Not available if role-only is in use.
- local: use the password for the userid contained in the local password database.
- none: no authentication. Not available if role-only is in use.
- radius: use the RADIUS servers configured with the `radius-server host` command.
- tacacs+: use the TACACS+ servers configured with the `tacacs-server host` command.

... method4 (OPTIONAL) Enter up to four additional methods. In the event of a “no response” from the first method, the system applies the next configured method (up to four configured methods).

Defaults
Not configured (that is, no authentication is performed).

</tr>
</tbody>
</table>
Usage Information

By default, the locally configured username password is used. If you configure `aaa authentication login default`, Dell Networking OS uses the methods this command defines for login instead.

Methods configured with the `aaa authentication login` command are evaluated in the order they are configured. If users encounter an error with the first method listed, Dell Networking OS applies the next method configured. If users fail the first method listed, no other methods are applied. The only exception is the local method. If the user’s name is not listed in the local database, the next method is applied. If the correct user name/password combination is not entered, the user is not allowed access to the switch.

NOTE: If authentication fails using the primary method, Dell Networking OS employs the second method (or third method, if necessary) automatically. For example, if the TACACS+ server is reachable, but the server key is invalid, Dell Networking OS proceeds to the next authentication method. The TACACS+ is incorrect, but the user is still authenticated by the secondary method.

After configuring the `aaa authentication login` command, configure the `login authentication` command to enable the authentication scheme on terminal lines.

Connections to the SSH server work with the following login mechanisms: local, radius, and tacacs.

Related Commands

- `login authentication` — enables AAA login authentication on the terminal lines.
- `password` — creates a password.
- `radius-server host` — specifies a RADIUS server host.
- `tacacs-server host` — specifies a TACACS+ server host.

access-class

Restrict incoming connections to a particular IP address in a defined IP access control list (ACL).

Syntax

```
access-class access-list-name
```

To delete a setting, use the `no access-class` command.

Parameters

- `access-list-name` Enter the name of an established IP Standard ACL.

Defaults

Not configured.

- `ip access-list standard` — names (or selects) a standard access list to filter based on the IP address.
- `ip access-list extended` — names (or selects) an extended access list based on the IP addresses or protocols.

**aaa reauthenticate enable**

Enable re-authentication of user whenever there is a change in the authenticators.

Syntax
```
aaa reauthenticate enable
```

To disable the re-authentication option, use the `no aaa reauthenticate enable` command.

Defaults Disabled

Command Modes CONFIGURATION

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.11(0.0)</td>
<td>Introduced this command.</td>
</tr>
</tbody>
</table>

Usage Information
When an operating system enables to change the user authenticators, the users might access resources and perform tasks that they do not have authorization.

Once re-authentication is enabled, Dell Networking OS prompts the users to re-authenticate whenever there is a change in authenticators.

The change in authentication happens when:

- Add or remove an authentication server (RADIUS/TACACS+)
- Modify an AAA authentication/authorization list
- Change to role-only (RBAC) mode

The re-authentication is also applicable for authenticated 802.1x devices. When there is a change in the authentication servers, the supplicants connected to all the ports are forced to re-authenticate.
**enable password**

Change the password for the enable command.

**Syntax**

```
enable password [level level] [encryption-type] password
```

To delete a password, use the `no enable password [encryption-type] password [level level]` command.

**Parameters**

- `level level` (OPTIONAL) Enter the keyword `level` then a number as the level of access. The range is from 1 to 15.
- `encryption-type` (OPTIONAL) Enter the number 7 or 0 as the encryption type.

Enter a 7 then a text string as the hidden password. The text string must be a password that was already encrypted by a Dell Networking router.

Use this parameter only with a password that you copied from the `show running-config` file of another Dell Networking router.

- `password` Enter a text string, up to 32 characters long, as the clear text password.

**Defaults**

No password is configured. `level = 15`.

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
--- | ---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100-ON.
9.8(0.0P6) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.7(0.0) | Introduced on the S6000-ON.
9.2(1.0) | Introduced on the Z9500.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
enable sha256-password

Configure SHA-256 based password for the enable command.

Syntax

enable sha256-password [level level] [encryption-type] password

To delete a password, use the no enable sha256-password [encryption-type] password [level level] command.

Parameters

- **sha256-password**: Enter the keyword sha256-password then the encryption-type or the password.
- **level level**: (OPTIONAL) Enter the keyword level then a number as the level of access. The range is from 1 to 15.
- **encryption-type**: (OPTIONAL) Enter the number 8 or 0 as the encryption type.
- **password**: Enter a text string, up to 32 characters long, as the clear text password.

Defaults

No password is configured. **level = 15**.

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version | Description
--- | ---
9.10(0.0) | Introduced on the S3148.
Related Commands

- `show running-config` — views the current configuration.
- `privilege level (CONFIGURATION mode)` — controls access to the command modes within the switch.

**enable restricted**

Allows Dell Networking technical support to access restricted commands.

**Syntax**

`enable restricted [encryption-type] password`

To disallow access to restricted commands, use the `no enable restricted` command.

**Parameters**

- `encryption-type` (OPTIONAL) Enter the number 7 as the encryption type.
  
  Enter 7 followed a text string as the hidden password. The text string must be a password that was already encrypted by a Dell Networking router.
  
  Use this parameter only with a password that you copied from the `show running-config` file of another Dell Networking router.

- `password` Enter a text string, up to 32 characters long, as the clear text password.

**Defaults**

Not configured.

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**enable secret**

Change the password for the `enable` command.

**Syntax**
```
enable secret [level level] [encryption-type] password
```
To delete a password, use the `no enable secret [encryption-type] password` command.

**Parameters**
- `level level` *(OPTIONAL)* Enter the keyword `level` then a number as the level of access. The range is from 1 to 15.
- `encryption-type` *(OPTIONAL)* Enter the number 5 or 0 as the encryption type.
- `password` Enter a text string, up to 32 characters long, as the clear text password.

**Defaults**
No password is configured. `level = 15`.

8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
7.6.1.0 | Introduced on the S-Series.
To control access to command modes, use this command to define a password for a level and use the `privilege level` (CONFIGURATION mode) command.

Passwords must meet the following criteria:

- Start with a letter, not a number.
- Passwords can have a regular expression as the password. To create a password with a regular expression in it, use `CNTL + v` prior to entering regular expression. For example, to create the password `abcd\]e`, you type `"abcd CNTL v \]e"`. When the password is created, you do not use the `CNTL + v` key combination and enter `"abcd\]e"`.

**NOTE:** The question mark (?) is not a supported character.

### Related Commands
- `show running-config` — views the current configuration.
- `privilege level (CONFIGURATION mode)` — controls access to the command modes within the switch.

## login authentication

To configure authentication for console or remote access, apply an authentication method list.

### Syntax

```
login authentication {method-list-name | default}
```

To use the local user/password database for login authentication, use the `no login authentication` command.

### Parameters

- **method-list-name**
  - Enter the keywords `method-list-name` to specify that method list, created in the `aaa authentication login` command, to be applied to the designated terminal line.

- **default**
  - Enter the keyword `default` to specify that the default method list, created in the `aaa authentication login` command, is applied to the terminal line.

### Defaults

No authentication is performed on the console lines. Local authentication is performed on the virtual terminal and auxiliary lines.

### Command Modes

LINE

### Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

### Version

<table>
<thead>
<tr>

<td>Introduced on the Z9100-ON.</td>
</tr>
<tr>
<td>9.8(0.0P5)</td>
<td>Introduced on the S4048-ON.</td>
</tr>
</tbody>
</table>
### Version Description
- **9.8(0.0P2)** Introduced on the S3048-ON.
- **9.7(0.0)** Introduced on the S6000–ON.
- **9.6.0.0** Revised introductory and usage guidelines description.
- **9.2(1.0)** Introduced on the Z9500.
- **9.0.2.0** Introduced on the S6000.
- **8.3.19.0** Introduced on the S4820T.
- **8.3.11.1** Introduced on the Z9000.
- **8.3.7.0** Introduced on the S4810.
- **7.6.1.0** Introduced on the S-Series.
- **7.5.1.0** Introduced on the C-Series.
- **pre-6.2.1.0** Introduced on the E-Series.

### Usage Information
If you configure the `aaa authentication login default` command, the `login authentication default` command automatically is applied to all terminal lines.

When configuring authentication, consider the following:

- If you configure the default authentication list using the `default` keyword, the list applies it to all the local and remote connections globally, unless you have specified some another authentication list for a specific connection.
- If you configure an authentication lists other than default, you must apply those authentication lists to each connection.
- If you configure the `aaa authentication login default` command, the `login authentication default` command automatically is applied to all terminal lines.

### Related Commands
- `aaa authentication login` — selects the login authentication methods.

### password
Specify a password for users on terminal lines.

**Syntax**

```
password [encryption-type] password
```

To delete a password, use the `no password password` command.

**Parameters**

- `encryption-type` *(OPTIONAL)* Enter either zero (0) or 7 as the encryption type for the password entered. The options are
  - 0 is the default and means the password is not encrypted and stored as clear text.
  - 7 means that the password is encrypted and hidden.

- `password` Enter a text string up to 32 characters long. The first character of the password must be a letter. You cannot use spaces in the password.
No password is configured.

LINE

</tbody>
</table>

Dell Networking OS prompts users for these passwords when the method for authentication or authorization used is "line".

Usage Information

- enable password — sets the password for the enable command.
- login authentication — configures an authentication method to log in to the switch.
- service password-encryption — encrypts all passwords configured in Dell Networking OS.
- radius-server key — configures a key for all RADIUS communications between the switch and the RADIUS host server.
- tacacs-server key — configures a key for communication between a TACACS+ server and client.
- username — establishes an authentication system based on user names.

**password-attributes**

Configure the password attributes (strong password).

**Syntax**

```
password-attributes [min-length number] [max-retry number] [lockout-period minutes] [character-restriction [upper number] [lower number] [numeric number] [special-char number]]
```

To return to the default, use the
```
no password-attributes [min-length number] [max-retry number] [lockout-period minutes] [character-restriction [upper number] [lower number] [numeric number] [special-char number]]
```

command.
Parameters

- **min-length number** (OPTIONAL) Enter the keywords `min-length` then the number of characters. The range is from 0 to 32 characters.

- **max-retry number** (OPTIONAL) Enter the keywords `max-retry` then the number of maximum password retries. The range is from 0 to 16.

- **lockout-period minutes** (OPTIONAL) Enter the keyword `lockout-period` then the number of minutes. The range is from 1 to 1440 minutes. The default is 0 minutes and the lockout-period is not enabled. This parameter enhances the security of the switch by locking out sessions on the Telnet or SSH sessions for which there has been a consecutive failed login attempts. The console is not locked out.

- **character-restriction** (OPTIONAL) Enter the keywords `character-restriction` to indicate a character restriction for the password.

- **upper number** (OPTIONAL) Enter the keyword `upper` then the upper number. The range is from 0 to 31.

- **lower number** (OPTIONAL) Enter the keyword `lower` then the lower number. The range is from 0 to 31.

- **numeric number** (OPTIONAL) Enter the keyword `numeric` then the numeric number. The range is from 0 to 31.

- **special-char number** (OPTIONAL) Enter the keywords `special-char` then the number of special characters permitted. The range is from 0 to 31.

  The following special characters are supported:

  `! " # % & ' ( ) ; : < = > ? [ \ ] ^ _ { | } ~ @ $`

Defaults

- none

### password-attributes

**Version**
- 7.6.1.0: Introduced on the S-Series.
- 7.5.1.0: Introduced on the C-Series.
- 6.3.1.0: Introduced on the E-Series.

**Example**

In the following example, after 5 un-successful login attempts, the session (SSH/TELNET) goes into a locked state for 5 minutes. If all the 10 sessions are locked out with 5 un-successful attempts in each session, no users can login during the lockout-period.

```
Dell(conf)# password-attributes max-retry 5 lockout-period 5
```

**Related Commands**

- `password` — specifies a password for users on terminal lines.

### secure-cli enable

Enable the secured CLI mode.

**Syntax**
```
secure-cli enable
```

**Command Modes**
- CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version**
- 9.11(0.0): Introduced this command.

**Usage Information**

The secured CLI mode prevents the users from enhancing the permissions or promoting the privilege levels. After entering the command, save the running-configuration.

Once you save the running-configuration, the secured CLI mode is enabled. If you do not want to enter the secured mode, do not save the running-configuration.

Once saved, to disable the secured CLI mode, you need to manually edit the startup-configuration file and reboot the system.

### service password-encryption

Encrypt all passwords configured in Dell Networking OS.

**Syntax**
```
service password-encryption
```

To store new passwords as clear text, use the `no service password-encryption` command.

**Defaults**
Enabled.

**Command Modes**
- CONFIGURATION
**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>pre-6.1.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

⚠️ **CAUTION:** Encrypting passwords with this command does not provide a high level of security. When the passwords are encrypted, you cannot return them to plain text unless you re-configure them. To remove an encrypted password, use the `no password password` command.

To keep unauthorized people from viewing passwords in the switch configuration file, use the `service password-encryption` command. This command encrypts the clear-text passwords created for user name passwords, authentication key passwords, the privileged command password, and console and virtual terminal line access passwords.

To view passwords, use the `show running-config` command.

**show privilege**

View your access level.

**Syntax**

```
show privilege
```

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Usage Information**

The following describes the `show user` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>(untitled)</td>
<td>Indicates with an asterisk (*) which terminal line you are using.</td>
</tr>
<tr>
<td>Line</td>
<td>Displays the terminal lines currently in use.</td>
</tr>
<tr>
<td>User</td>
<td>Displays the user name of all users logged in.</td>
</tr>
<tr>
<td>Host(s)</td>
<td>Displays the terminal line status.</td>
</tr>
<tr>
<td>Location</td>
<td>Displays the IP address of the user.</td>
</tr>
</tbody>
</table>

**Example**

```markdown
Dell# show users
Authorization Mode: role or privilege
Line | User | Role | Priv
--- | --- | --- | ---
Host(s) | Location |
* 0 | console 0 | unassigned | 1 idle
2 vty 0 | admin | unassigned | 1
3 vty 1 | ad | unassigned | 1
idle 10.16.127.35
4 vty 2 | adl | sysadmin | 1
idle 10.16.127.141
5 vty 3 | adl | sysadmin | 1
idle 10.16.127.141
6 vty 4 | admin | unassigned | 1
idle 10.16.127.141
7 vty 5 | ad | unassigned | 15
idle 10.16.127.141
Dell#```

**Related Commands**

- `username` — enables a user.
timeout login response

Specify how long the software waits for the login input (for example, the user name and password) before timing out.

Syntax

timeout login response seconds

To return to the default values, use the no timeout login response command.

Parameters

seconds

Enter a number of seconds the software waits before logging you out. The range is:

- VTY — range is from 1 to 30 seconds, the default is 30 seconds.
- Console — range is from 1 to 300 seconds, the default is 0 seconds (no timeout).
- AUX — range is from 1 to 300 seconds, the default is 0 seconds (no timeout).

Defaults

See Parameters.

Command Modes

LINE

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description

9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100-ON.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.2(1.0) Introduced on the Z9500.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
8.3.7.0 Introduced on the S4810.
7.6.1.0 Introduced on the S-Series.
7.5.1.0 Introduced on the C-Series.
pre-6.1.1.0 Introduced on the E-Series.

Usage Information

The software measures the period of inactivity defined in this command as the period between consecutive keystrokes. For example, if your password is “password” you can enter “p” and wait 29 seconds to enter the next letter.
username

Establish an authentication system based on user names.

Syntax

```
username name [access-class access-list-name] [nopassword | (password | secret | sha256-password) [encryption-type] password] [privilege level] [role role-name]
```

If you do not want a specific user to enter a password, use the nopassword option.

To delete authentication for a user, use the no username name command.

Parameters

- **name**: Enter a text string for the name of the user up to 63 characters.
- **access-class access-list-name**: Enter the keywords access-class then the name of a configured access control list (either an IP access control list or MAC access control list).
- **nopassword**: Enter the keyword nopassword to specify that the user should not enter a password.
- **password**: Enter the keyword password then the encryption-type or the password.
- **encryption-type**: Enter an encryption type for the password that you enter.
  - 0 directs the system to store the password as clear text. It is the default encryption type when using the password option.
  - 8 to indicate that a password encrypted using a sha256 hashing algorithm follows. This encryption type is available with the sha256-password option only, and is the default encryption type for this option.
  - 7 to indicate that a password encrypted using a DES hashing algorithm follows. This encryption type is available with the password option only.
  - 5 to indicate that a password encrypted using an MD5 hashing algorithm follows. This encryption type is available with the secret option only, and is the default encryption type for this option.
- **password**: Enter a string up to 32 characters long.
- **privilege level**: Enter the keyword privilege then a number from zero (0) to 15.
- **role role-name**: Enter the keyword role followed by the role name to associate with that user ID.
- **secret**: Enter the keyword secret then the encryption type.
- **sha256-password**: Enter the keyword sha256-password then the encryption-type or the password.

Defaults

The default encryption type for password option is 0. The default encryption type for secret option is 5. The default encryption type for sha256-password option is 8. The default value of privilege level is 1.

**Usage Information**
To view the defined user names, use the `show running-config user` command.

**Related Commands**
- `password` — specifies a password for users on terminal lines.
- `show running-config` — views the current configuration.

**RADIUS Commands**

The following RADIUS commands are supported by Dell Networking OS.

**aaa radius auth-method**

Configure the authentication method to use with RADIUS for user access.

**Syntax**
`aaa radius auth-method {pap | mschapv2}`

To undo the RADIUS authentication method configuration, use the `no aaa radius auth-method` command.

**Parameters**
- `pap`
  Enter the keyword `pap` to use the Password Authentication Protocol (PAP) for RADIUS authentication. This protocol uses the username and password attributes in the access-request message sent to the RADIUS server.

- `mschapv2`
  Enter the keyword `mschapv2` to use the Microsoft Challenge-Handshake Authentication Protocol (MS-CHAPv2) for RADIUS authentication. This protocol is considered to be more secure than PAP and uses mutual authentication based on a random challenge and challenge response.
Defaults: PAP

Command Modes: CONFIGURATION

Command History:
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Table: Version Description
9.11(2.0P2) Introduced the command on all Dell Networking OS platforms.

Usage Information:
If an authentication method is not configured using this command, then PAP is used for authentication with the RADIUS server.

You can configure the RADIUS authentication method to access the switch using the following applications: Console, Telnet, SSH, REST, and OMI.

**debug radius**

View RADIUS transactions to assist with troubleshooting.

Syntax:
```
debug radius
```

To disable debugging of RADIUS, use the `no debug radius` command.

Table: Version Description
9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100-ON.
9.8(0.0P6) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.2(1.0) Introduced on the Z9500.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
8.3.7.0 Introduced on the S4810.
7.6.1.0 Introduced on the S-Series.
7.5.1.0 Introduced on the C-Series.
pre-6.2.1.0 Introduced on the E-Series.
**ip radius source-interface**

Specify an interface's IP address as the source IP address for RADIUS connections.

**Syntax**

```
ip radius source-interface interface
```

To delete a source interface, use the `no ip radius source-interface` command.

**Parameters**

- **interface**
  
Enter the following keywords and the interface information:

  - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
  - For a port channel interface, enter the keywords `port-channel` then a number.
  - For a Null interface, enter the keyword `null` then the Null interface number.
  - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults**

Not configured.

**Command Modes**

radius-server deadtime

Configure a time interval during which non-responsive RADIUS servers to authentication requests are skipped.

Syntax

```
radius-server deadtime seconds
```

To disable this function or return to the default value, use the `no radius-server deadtime` command.

Parameters

- `seconds`
  
  Enter a number of seconds during which non-responsive RADIUS servers are skipped. The range is from 0 to 2147483647 seconds. The default is `0 seconds`.

Defaults

- `0 seconds`

Example

```
Dell(conf)# radius-server group group1
Dell(conf-radius-group)# radius-server host 1.1.1.1 key secret
Dell(conf-radius-group)# radius-server host 2.2.2.2 key secret
Dell(conf-radius-group)# radius-server vrf vrf1 source-interface gigabitethernet 1/36
Dell(conf-radius-group)# show config
!
radius-server group group1
radius-server vrf vrf1 source-interface gigabitEthernet 1/36
radius-server host 1.1.1.1 key 7 9a2f3ec0c65c6f41
radius-server host 2.2.2.2 key 7 9a2f3ec0c65c6f41
Dell(conf-radius-group)#
```

Related Commands

- `login authentication` — sets the database to be checked when a user logs in.
- `radius-server key` — sets an authentication key for RADIUS communications.
- `radius-server retransmit` — sets the number of times the RADIUS server attempts to send information.
- `radius-server timeout` — sets the time interval before the RADIUS server times out.

radius-server host

Configure a RADIUS server host.

```
Syntax

radius-server host {hostname | ipv4-address | ipv6-address} [auth-port port-number] [retransmit retries] [timeout seconds] [key [encryption-type] key]

Parameters

- `hostname` Enter the name of the RADIUS server host.
- `ipv4-address | ipv6-address` Enter the IPv4 address (A.B.C.D) or IPv6 address (X::X::X::X) of the RADIUS server host.
- `auth-port port-number` (OPTIONAL) Enter the keywords auth-port then a number as the port number. The range is from zero (0) to 65535. The default port-number is 1812.
- `retransmit retries` (OPTIONAL) Enter the keyword retransmit then a number as the number of attempts. This parameter overwrites the radius-server retransmit command. The range is from zero (0) to 100. The default is 3 attempts.
```

Security | 1469
timeout seconds

(Optional) Enter the keyword timeout then the seconds the time interval the switch waits for a reply from the RADIUS server. This parameter overwrites the radius-server timeout command. The range is from 0 to 1000. The default is 5 seconds.

key [encryption-type] key

(Optional) Enter the keyword key then an optional encryption-type and a string up to 42 characters long as the authentication key. The RADIUS host server uses this authentication key and the RADIUS daemon operating on this switch.

For the encryption-type, enter either zero (0) or 7 as the encryption type for the key entered. The options are:

- 0 is the default and means the password is not encrypted and stored as clear text.
- 7 means that the password is encrypted and hidden.

Configure this parameter last because leading spaces are ignored.

Defaults

Not configured.

<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>
Version Description
pre-6.2.1.0 Introduced on the E-Series.

Usage Information
To configure any number of RADIUS server hosts for each server host that is configured, use this command. Dell Networking OS searches for the RADIUS hosts in the order they are configured in the software.

The global default values for the timeout, retransmit, and key optional parameters are applied, unless those values are specified in the radius-server host or other commands. To return to the global default values, if you configure the timeout, retransmit, or key values, include those keywords when using the no radius-server host command syntax.

You can use duplicate host names or IP addresses among RADIUS groups. However, you cannot use duplicate host names or IP addresses within the same RADIUS group. If a VRF is not configured on the RADIUS group, then servers configured in the group are considered to be on the default VRF. RADIUS servers that are configured in the CONFIGURATION mode are also considered to be on the default VRF.

You must configure the RADIUS group explicitly with the aaa radius group command in order for the AAA servers to use the group of RADIUS servers. The 802.1x servers use the group of RADIUS servers based on the VRF where the 802.1x request is received. As a result, it is possible that both globally configured RADIUS servers as well as the group-configured RADIUS servers (without VRF or default VRF) are used for processing the 802.1x requests that are received at the default VRF. The order in which the RADIUS servers are tried depends on the order in which the RADIUS servers are configured.

Example
Dell(config)#radius-server host 192.100.0.12
Force all logged-in users to re-authenticate (y/n)?
Dell(config)#no radius-server host 192.100.0.12
Force all logged-in users to re-authenticate (y/n)?

Related Commands
- login authentication — sets the database to be checked when a user logs in.
- radius-server key — sets an authentication key for RADIUS communications.
- radius-server retransmit — sets the number of times the RADIUS server attempts to send information.
- radius-server timeout — sets the time interval before the RADIUS server times out.

radius-server vrf
Create an association between a RADIUS server group and a VRF and source interface.

Syntax
radius-server vrf vrf-name [source-interface interface]

To delete the association between a RADIUS server group and a VRF and source interface, use the no radius-server vrf vrf-name [source-interface interface] command.

Parameters
vrf vrf-name Enter the keyword vrf and then the name of the VRF to associate a RADIUS server group with that VRF.

interface Enter the following keywords and slot/port or number information:

- For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

- For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
- For a port channel interface, enter the keywords `port-channel` then a number.
- For a Null interface, enter the keyword `null` then the Null interface number.
- For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults**

Not configured.

**Command Modes**

RADIUS SERVER GROUP

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>

<td>Introduced on the Z9500.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Introduced on the S-Series and Z9000.</td>
</tr>
</tbody>
</table>

**Usage Information**

You can use this command to associate a group of RADIUS servers with a VRF and source interface. You can configure the source interface only with the VRF attribute and source interface is optional with the VRF attributes. If VRF is not configured on the RADIUS group, then the group is considered to be on the default VRF. It is possible to use the default VRF name; however, you cannot configure the source interface with the default VRF as such a configuration results in conflicts between the source interfaces corresponding to the 802.1x supplicants on that default VRF.

RADIUS groups and VRFs have one-to-one mapping. If a VRF is configured with one RADIUS group, then you cannot use the same VRF with another RADIUS group. When the VRF is removed, then the corresponding RADIUS group is also removed automatically.

**Example**

```bash
Dell(conf)#radius-server group group1
Dell(conf-radius-group)#radius-server vrf vrf1 source-interface gigabitethernet 1/42
Dell(conf)#radius-server group group2
Dell(conf-radius-group)#radius-server vrf default
```
radius-server key

Configure a key for all RADIUS communications between the switch and the RADIUS host server.

Syntax

radius-server key [encryption-type] key
To delete a password, use the no radius-server key command.

Parameters

encryption-type (OPTIONAL) Enter either zero (0) or 7 as the encryption type for the key entered. The options are:
- 0 is the default and means the key is not encrypted and stored as clear text.
- 7 means that the key is encrypted and hidden.

key Enter a string that is the key to be exchanged between the switch and RADIUS servers. It can be up to 42 characters long.

Defaults

Not configured.

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100-ON.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.2(1.0) Introduced on the Z9500.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
8.3.7.0 Introduced on the S4810.
7.7.1.0 Authentication key length increased to 42 characters.
7.6.1.0 Introduced on the S-Series.
7.5.1.0 Introduced on the C-Series.
pre-6.2.1.0 Introduced on the E-Series.

Usage Information

The key configured on the switch must match the key configured on the RADIUS server daemon.
If you configure the `key` parameter in the `radius-server host` command, the key configured with the `radius-server key` command is the default key for all RADIUS communications.

**Related Commands**
- `radius-server host` — configures a RADIUS host.

---

**radius-server retransmit**

Configure the number of times the switch attempts to connect with the configured RADIUS host server before declaring the RADIUS host server unreachable.

**Syntax**

```
radius-server retransmit retries
```

To configure zero retransmit attempts, use the `no radius-server retransmit` command.

To return to the default setting, use the `radius-server retransmit 3` command.

**Parameters**

- `retries`  
  Enter a number of attempts that the Dell OS tries to locate a RADIUS server. The range is from zero (0) to 100. The default is `3 retries`.

**Defaults**

`3 retries`

**Command Modes**

**Related Commands**

- `radius-server host` — configures a RADIUS host.
radius-server timeout

To reply to a request, configure the amount of time the RADIUS client (the switch) waits for a RADIUS host server.

Syntax

```
radius-server timeout seconds
```

To return to the default value, use the no radius-server timeout command.

Parameters

- **seconds**
  
Enter the number of seconds between an unsuccessful attempt and the Dell Networking OS times out. The range is from zero (0) to 1000 seconds. The default is 5 seconds.

Defaults

5 seconds

Related Commands

- `radius-server host` — configure a RADIUS host.
TACACS+ Commands

Dell Networking OS supports TACACS+ as an alternate method for login authentication.

**tacacs-server group**

Creates a group of TACACS servers to be used for Authentication, Authorization, and Accounting.

**Syntax**

```
aaa tacacsgroup group-name
```

To delete a group of TACACS servers, use the `no tacacs-server group group-name` command.

**Parameters**

- `group-name` Enter the name of the TACACS server group.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Command History**

</tbody>
</table>

**Usage Information**

If the TACACS group is not configured for Authentication, Authorization, and Accounting, then globally configured TACACS servers are used for the purposes. When the TACACS group is removed, the AAA configuration is also removed.

**Example**

```
Dell(conf)# tacacs-server group group1
Dell(conf-tacacs-group)# tacacs-server host 1.1.1.1 key secret
Dell(conf-tacacs-group)# tacacs-server host 2.2.2.2 key secret
Dell(conf-tacacs-group)# tacacs-server vrf vrf1 source-interface gigabitethernet 1/40
Dell(conf)# exit
Dell(conf)# aaa tacacsgroup group1
```

**Related Commands**

- `aaa authentication login` — specifies the login authentication method.
- `tacacs-server key` — configures a TACACS+ key for the TACACS server.
debug tacacs+

To assist with troubleshooting, view TACACS+ transactions.

Syntax

```
debug tacacs+
```

To disable debugging of TACACS+, use the `no debug tacacs+` command.

Defaults

Disabled.

Command Modes

EXEC Privilege

ip tacacs source-interface

Specify an interface’s IP address as the source IP address for TACACS+ connections.

Syntax

```
ip tacacs source-interface interface
```

To delete a source interface, use the `no ip tacacs source-interface` command.

Parameters

- **interface**

  Enter the following keywords and the interface information:

  - For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
• For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
• For a port channel interface, enter the keywords `port-channel` then a number.
• For a Null interface, enter the keyword `null` then the Null interface number.
• For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults**
Not configured.

## Usage Information

You can associate a TACACS server group with a VRF.

## Example

```plaintext
Dell(conf)# tacacs-server group group1
Dell(conf-tacacs-group)# tacacs-server host 1.1.1.1 key secret
Dell(conf-tacacs-group)# tacacs-server host 2.2.2.2 key secret
Dell(conf-tacacs-group)# tacacs-server vrf vrf1 source-interface gigabitethernet 1/40
Dell(conf-tacacs-group)# show config
!
tacacs-server group group1
tacacs-server vrf vrf1 source-interface GigabitEthernet 1/40
tacacs-server host 1.1.1.1 key 7 9a2f3ec0c65c6f41
tacacs-server host 2.2.2.2 key 7 9a2f3ec0c65c6f41
Dell(conf-tacacs-group)#
```

## Related Commands
- `aaa authentication login` — specifies the login authentication method.
- `tacacs-server key` — configures a TACACS+ key for the TACACS server.

## tacacs-server host

Specify a TACACS+ host.

### Syntax

```
tacacs-server host {hostname | ipv4-address | ipv6-address} [port number] [timeout seconds] [key key]
```

### Parameters

- `hostname` Enter the name of the TACACS+ server host.
- `ipv4-address | ipv6-address` Enter the IPv4 address (A.B.C.D) or IPv6 address (X::X::X::X) of the TACACS+ server host.
- `port number` (OPTIONAL) Enter the keyword `port` then a number as the port to be used by the TACACS+ server. The range is from 0 to 65535. The default is 49.
- `timeout seconds` (OPTIONAL) Enter the keyword `timeout` then the number of seconds the switch waits for a reply from the TACACS+ server. The range is from 0 to 1000. The default is 10.
(OPTIONAL) Enter the keyword `key` then a string up to 42 characters long as the authentication key. This authentication key must match the key specified in the `tacacs-server key` for the TACACS+ daemon.

**Defaults**
Not configured.

**Command Modes**
CONFIGURATION

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant **Dell Networking OS Command Line Reference Guide**.

**Version** | **Description**
--- | ---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100-ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.7(0.0) | Introduced on the S6000-ON.
9.2(1.0) | Introduced on the Z9500.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.4.1.0 | Added support for IPv6.
8.3.7.0 | Introduced on the S4810.
7.7.1.0 | Authentication key length increased to 42 characters.
7.6.1.0 | Introduced on the S-Series.
7.5.1.0 | Introduced on the C-Series.
pre-6.2.1.1 | Introduced on the E-Series.

**Usage Information**
To list multiple TACACS+ servers to be used by the `aaa authentication login` command, configure this command multiple times.

If you are not configuring the switch as a TACACS+ server, you do not need to configure the `port`, `timeout` and `key` optional parameters. If you do not configure a `key`, the key assigned in the `tacacs-server key` command is used.

You can use duplicate host names or IP addresses among TACACS groups. However, you cannot use duplicate host names or IP addresses within the same TACACS group.

If a VRF is not configured on the TACACS group, then servers configured in the group are considered to be on the default VRF. TACACS servers that are configured in the `CONFIGURATION` mode are also considered to be on the default VRF.
For AAA servers to use a group of TACACS servers, you must explicitly configure the group using the `aaa tacacs group group-name` command. The order in which the TACACS servers are tried depends on the order in which they are configured.

Example

```
Dell(conf)# tacacs-server group group1
Dell(conf-tacacs-group)# tacacs-server host 1.1.1.1 key secret
Dell(conf-tacacs-group)# no tacacs-server host 1.1.1.1
Dell(conf-tacacs-group)#
```

Related Commands
- `aaa authentication login` — specifies the login authentication method.
- `tacacs-server key` — configures a TACACS+ key for the TACACS server.

### tacacs-server key

Configure a key for communication between a TACACS+ server and a client.

#### Syntax

```
tacacs-server key [encryption-type] key
```

To delete a key, use the `no tacacs-server key key` command.

#### Parameters

- `encryption-type` (OPTIONAL) Enter either zero (0) or 7 as the encryption type for the key entered. The options are:
  - 0 is the default and means the key is not encrypted and stored as clear text.
  - 7 means that the key is encrypted and hidden.
- `key` Enter a text string, up to 42 characters long, as the clear text password. Leading spaces are ignored.

#### Defaults

Not configured.

#### Command Modes

CONFIGURATION

#### Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

#### Version

- 9.10(0.0) 
  Introduced on the S3148.
- 9.8(2.0) 
  Introduced on the S3100 series.
- 9.8(1.0) 
  Introduced on the Z9100-ON.
- 9.8(0.0P5) 
  Introduced on the S4048-ON.
- 9.8(0.0P2) 
  Introduced on the S3048-ON.
- 9.7(0.0) 
  Introduced on the S6000-ON.
- 9.2(1.0) 
  Introduced on the Z9500.
- 9.0.2.0 
  Introduced on the S6000.
- 8.3.19.0 
  Introduced on the S4820T.
- 8.3.11.1 
  Introduced on the Z9000.
Version | Description
---|---
8.3.7.0 | Introduced on the S4810.
7.7.1.0 | Authentication key length increased to 42 characters.
7.6.1.0 | Introduced on the S-Series.
7.5.1.0 | Introduced on the C-Series.
pre-6.2.1.1 | Introduced on the E-Series.

Usage Information: The key configured with this command must match the key configured on the TACACS+ daemon.

tacacs-server vrf

Create an association between a TACACS server group and a VRF and source interface.

Syntax:
```
tacacs-server vrf vrf-name [source-interface interface]
```

To delete the association between a TACACS server group and a VRF and source interface, use the no tacacs-server vrf vrf-name [source-interface interface] command.

Parameters:
- **vrf vrf-name**: Enter the keyword vrf and then the name of the VRF to associate a TACACS server group with that VRF.
- **interface**: Enter the following keywords and slot/port or number information:
  - For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a Loopback interface, enter the keyword loopback then a number from 0 to 16383.
  - For a port channel interface, enter the keywords port-channel then a number.
  - For a Null interface, enter the keyword null then the Null interface number.
  - For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

Defaults: Not configured.

Command Modes: TACACS SERVER GROUP

Command History:
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version | Description
---|---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100-ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.7(0.0) | Introduced on the S6000-ON.
### Version Description
9.4.(0.0) Introduced on the S-Series and Z-Series.

### Usage Information
You can use this command to associate a group of TACACS servers with a VRF and source interface. You can configure the source interface only with the VRF attribute and source interface is optional with the VRF attributes.

If VRF is not configured on the TACACS group, then the group is considered to be on the default VRF.

RADIUS groups and VRFs have one-to-one mapping. If a VRF is configured with one RADIUS group, then you cannot use the same VRF with another RADIUS group. When the VRF is removed, then the corresponding RADIUS group is also removed automatically.

### Example
```
Dell(conf)# tacacs-server group group1
Dell(conf-tacacs-group)# tacacs-server vrf vrf1 source-interface gigabitethernet 1/36
Dell(conf)# tacacs-server group group2
Dell(conf-tacacs-group)# tacacs-server vrf default
```

### Port Authentication (802.1X) Commands
An authentication server must authenticate a client connected to an 802.1X switch port. Until the authentication, only Extensible Authentication Protocol over LAN (EAPOL) traffic is allowed through the port to which a client is connected. After authentication is successful, normal traffic passes through the port.

Dell Networking OS supports RADIUS and Active Directory environments using 802.1X Port Authentication.

### Important Points to Remember
Dell Networking OS limits network access for certain users by using VLAN assignments. 802.1X with VLAN assignment has these characteristics when configured on the switch and the RADIUS server.

- **802.1X** is supported on Dell Networking OS.
- **802.1X** is not supported on the LAG or the channel members of a LAG.
- If no VLAN is supplied by the RADIUS server or if 802.1X authorization is disabled, the port is configured in its access VLAN after successful authentication.
- If 802.1X authorization is enabled but the VLAN information from the RADIUS server is not valid, the port returns to the Unauthorized state and remains in the configured access VLAN. This prevents ports from appearing unexpectedly in an inappropriate VLAN due to a configuration error. Configuration errors create an entry in Syslog.
- If 802.1X authorization is enabled and all information from the RADIUS server is valid, the port is placed in the specified VLAN after authentication.
- If port security is enabled on an 802.1X port with VLAN assignment, the port is placed in the RADIUS server assigned VLAN.
- If 802.1X is disabled on the port, it is returned to the configured access VLAN.
- When the port is in the Force Authorized, Force Unauthorized, or Shutdown state, it is placed in the configured access VLAN.
- If an 802.1X port is authenticated and put in the RADIUS server assigned VLAN, any change to the port access VLAN configuration does not take effect.
- The 802.1X with VLAN assignment feature is not supported on trunk ports, dynamic ports, or with dynamic-access port assignment through a VLAN membership.
dot1x authentication (Configuration)

Enable dot1x globally; dot1x must be enabled both globally and at the interface level.

Syntax

dot1x authentication

To disable dot1x on globally, use the no dot1x authentication command.

Defaults

Disabled.

Related Commands
- `dot1x authentication (Configuration)` — enable dot1x globally.

**dot1x auth-fail-vlan**

Configure an authentication failure VLAN for users and devices that fail 802.1X authentication.

**Syntax**

```
dot1x auth-fail-vlan vlan-id [max-attempts number]
```

**Parameters**

- **vlan-id**
  - Enter the VLAN Identifier. The range is from 1 to 4094.
- **max-attempts number**
  - (OPTIONAL) Enter the keywords `max-attempts` then number of attempts desired before authentication fails. The range is from 1 to 5. The default is 3.

**Defaults**

- 3 attempts

**Command Modes**

- CONFIGURATION (conf-if-interface-slot/port)

**Command History**

</tr>
</tbody>
</table>
Usage Information

If the host responds to 802.1X with an incorrect login/password, the login fails. The switch attempts to authenticate again until the maximum attempts configured is reached. If the authentication fails after all allowed attempts, the interface is moved to the authentication failed VLAN.

After the authentication VLAN is assigned, the port-state must be toggled to restart authentication. Authentication occurs at the next re-authentication interval (dot1x reauthentication).

Related Commands

- dot1x port-control — enables port-control on an interface.
- dot1x guest-vlan — configures a guest VLAN for non-dot1x devices.
- show dot1x interface — displays the 802.1X information on an interface.

dot1x auth-server

Configure the authentication server to RADIUS.

Syntax

dot1x auth-server radius

Defaults

none

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description

9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100-ON.
9.8(0.0P5) Introduced on the S4048-ON.

9.7(0.0) Introduced on the S6000-ON.
9.2(1.0) Introduced on the Z9500.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
**dot1x guest-vlan**

Configure a guest VLAN for limited access users or for devices that are not 802.1X capable.

**Syntax**

```text
dot1x guest-vlan vlan-id
```

To disable the guest VLAN, use the `no dot1x guest-vlan vlan-id` command.

**Parameters**

`vlan-id`  
Enter the VLAN Identifier. The range is from 1 to 4094.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION (conf-if-interface-slot/port)

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>

**Usage Information**

802.1X authentication is enabled when an interface is connected to the switch. If the host fails to respond within a designated amount of time, the authenticator places the port in the guest VLAN.

If a device does not respond within 30 seconds, it is assumed that the device is not 802.1X capable. Therefore, a guest VLAN is allocated to the interface and authentication for the device occurs at the next re-authentication interval (`dot1x reauthentication`).
If the host fails authentication for the designated number of times, the authenticator places the port in authentication failed VLAN (dot1x auth-fail-vlan).

**NOTE:** The layer 3 portion of guest VLAN and authentication fail VLANs can be created regardless if the VLAN is assigned to an interface or not. After an interface is assigned a guest VLAN (which has an IP address), routing through the guest VLAN is the same as any other traffic. However, the interface may join/leave a VLAN dynamically.

**Related Commands**
- `dot1x auth-fail-vlan` — configures a VLAN for authentication failures.
- `dot1x reauthentication` — enables periodic re-authentication.
- `show dot1x interface` — displays the 802.1X information on an interface.

### dot1x mac-auth-bypass

Enable MAC authentication bypass. If 802.1X times out because the host did not respond to the Identity Request frame, Dell Networking OS attempts to authenticate the host based on its MAC address.

**Syntax**
```
[no] dot1x mac-auth-bypass
```

**Defaults**
Disabled

**Usage Information**
To disable MAC authentication bypass on a port, enter the `no dot1x mac-auth-bypass` command.

1488 | Security
**dot1x max-eap-req**

Configure the maximum number of times an extensive authentication protocol (EAP) request is transmitted before the session times out.

**Syntax**

```plaintext
dot1x max-eap-req number
```

To return to the default, use the `no dot1x max-eap-req` command.

**Parameters**

- `number`  
  Enter the number of times an EAP request is transmitted before a session time-out. The range is from 1 to 10. The default is 2.

**Defaults**

2

**Related Commands**

- `interface range` — configure a range of interfaces.

---

**dot1x port-control**

Enable port control on an interface.

**Syntax**

```plaintext
dot1x port-control {force-authorized | auto | force-unauthorized}
```

**Parameters**

- `force-authorized`  
  Enter the keywords `force-authorized` to forcibly authorize a port.

- `auto`  
  Enter the keyword `auto` to authorize a port based on the 802.1X operation result.
force-unauthorized

Enter the keywords force-unauthorized to forcibly de-authorize a port.

Defaults
none

Usage Information
The authenticator performs authentication only when port-control is set to auto.

dot1x quiet-period

Set the number of seconds that the authenticator remains quiet after a failed authentication with a client.

Syntax
dot1x quiet-period seconds
To disable quiet time, use the no dot1x quiet-time command.

Parameters
seconds

Enter the number of seconds. The range is from 1 to 65535. The default is 30.

Defaults
30 seconds

### show dot1x interface

Display the 802.1X information on an interface.

**Syntax**

`show dot1x interface interface`

**Parameters**

- `interface`
  
  Enter one of the following keywords and slot/port or number information:

  - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.

**Defaults**

none

**Command Modes**

- EXEC
- EXEC privilege

SSH and SCP Commands

Dell Networking OS supports secure shell (SSH) protocol versions 1.5 and 2.0. SSH is a protocol for secure remote login over an insecure network. SSH sessions are encrypted and use authentication.

**crypto key generate**

Generate keys for the SSH server.

**Syntax**

```plaintext
crypto key generate {rsa | rsa1}
```

**Parameters**

- `rsa` Enter the keyword `rsa` then the key size to generate a SSHv2 RSA host keys. The range is from 1024 to 2048 if you did not enable FIPS mode; if you enabled FIPS mode, you can only generate a 2048-bit key. The default is 1024.

  **NOTE:** You must have a license to access the FIPS mode. For more information, contact your Dell Networking representative.

- `rsa1` Enter the keyword `rsa1` then the key size to generate a SSHv1 RSA host keys. The range is from 1024 to 2048. The default is 1024.

  **NOTE:** This option is not available in FIPS mode.

**Defaults**

Key size 1024: if you enable FIPS mode, the key size is 2048.

**Command Modes**

- `CONFIGURATION`

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
--- | ---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100-ON.

</tbody>
</table>

---

**Usage Information**

The host keys are required for key-exchange by the SSH server. If the keys are not found when you enable the server (`ip ssh server enable`), the keys are automatically generated.

This command requires user interaction and generates a prompt prior to overwriting any existing host keys.

**Example**

```
Dell(conf)# crypto key generate rsa
Enter key size <1024-2048>. Default<1024>  :
Host key already exists. Overwrite (y/n)?y
Generating 1024-bit SSHv2 RSA key.

Dell(conf)#
```

```
Dell(conf)# crypto key generate rsa1
Enter key size <1024-2048>. Default<1024>  :
Host key already exists. Overwrite (y/n)?y
Generating 1024-bit SSHv1 RSA key.

Dell(conf)#
```

**Related Commands**

- `ip ssh server` — enables the SSH server.
- `show crypto` — displays the SSH host public keys.
debug ip ssh

Enables collecting SSH debug information.

Syntax

```
debug ip ssh {client | server}
```

To disable debugging, use the `no debug ip ssh {client | server}` command.

Parameters

- **client**
  - Enter the keyword `client` to enable collecting debug information on the client.

- **server**
  - Enter the keyword `server` to enable collecting debug information on the server.

Defaults

Disabled on both client and server.

Usage Information

Debug information includes details for key-exchange, authentication, and established session for each connection.
**ip scp topdir**

Identify a location for files used in secure copy transfer.

**Syntax**

```
ip scp topdir directory
```

To return to the default setting, use the no ip scp topdir command.

**Parameters**

directory

Enter a directory name.

**Defaults**

The internal flash (flash:) is the default directory.

**Usage Information**

To configure the switch as an SCP server, use the **ip ssh server** command.

**Related Commands**

- **ip ssh server** — enables the SSH and SCP server on the switch.

**ip ssh authentication-retries**

Configure the maximum number of attempts that should be used to authenticate a user.

**Syntax**

```
ip ssh authentication-retries 1-10
```

**Usage Information**

To enable the SCP server, use the **ip ssh server** command.
Parameters

1-10

Enter the number of maximum retries to authenticate a user. The range is from 1 to 10. The default is 3.

Defaults

3

</tr>
</tbody>
</table>

Usage Information

This command specifies the maximum number of attempts to authenticate a user on an SSH connection with the remote host for password authentication. SSH disconnects when the number of password failures exceeds authentication-retries.

ip ssh challenge-response-authentication

Enable challenge response authentication for SSHv2.

Syntax

ip ssh challenge-response-authentication enable

To disable the challenge response authentication, use the no ip ssh challenge-response-authentication enable command.

Parameters

enable

Enter the keyword enable to enable the challenge response authentication for SSHv2.

Defaults

Disabled.

Command Modes

CONFIGURATION
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
--- | ---
9.11(0.0) | Introduced on the S4810, S4820T, S3048-ON, S3100 Series, S4048-ON, S5000, S6000, S6000-ON, Z9500, Z9100-ON, S6100-ON, S6010-ON, S4048T-ON, C9000, and MXL.

**Usage Information**

If both the challenge response authentication and password authentication methods are configured, the challenge response authentication takes priority.

**NOTE:**

SSHv1 does not support challenge response authentication.

**ip ssh cipher**

Configure the list of ciphers supported on both SSH client and SCP.

**Syntax**

```
ip ssh cipher cipher-list
```

**Parameters**

- **cipher cipher-list**
  
Enter the keyword `cipher` and then a space-delimited list of ciphers that the SSH client supports. The following ciphers are available:
  
  - `aes256-ctr`
  - `aes256-cbc`
  - `aes192-ctr`
  - `aes192-cbc`
  - `aes128-ctr`
  - `aes128-cbc`
  - `3des-cbc`

**Defaults**

The default list of ciphers is in the order as shown below:

  - `aes256-ctr`
  - `aes256-cbc`
  - `aes192-ctr`
  - `aes192-cbc`
  - `aes128-ctr`
  - `aes128-cbc`
  - `3des-cbc`

**Version** | **Description**
--- | ---
9.10(0.0) | Introduced on the S3148.
**ip ssh connection-rate-limit**

Configure the maximum number of incoming SSH connections per minute.

**Syntax**

```
ip ssh connection-rate-limit 1-60
```

**Parameters**

- `1-60` Enter the number of maximum numbers of incoming SSH connections allowed per minute. The range is from 1 to 60 per minute. The default is **10 per minute**.

**Defaults**

**10 per minute**

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version**

- **9.11(0.0)** Increased the SSH rate-limit range.
- **9.10(0.0)** Introduced on the S3148.
- **9.8(2.0)** Introduced on the S3100 series.
- **9.8(1.0)** Introduced on the Z9100-ON.
- **9.8(0.0P6)** Introduced on the S4048-ON.
- **9.8(0.0P2)** Introduced on the S3048-ON.
- **9.7(0.0)** Introduced on the S6000–ON.
- **9.2(1.0)** Introduced on the Z9500.
- **9.0.2.0** Introduced on the S6000.
- **8.3.19.0** Introduced on the S4820T.
- **8.3.11.1** Introduced on the Z9000.
- **8.3.7.0** Introduced on the S4810.
- **7.6.1.0** Introduced on the S-Series.
- **7.5.1.0** Introduced on the C-Series.
- **pre-6.1.1.0** Introduced on the E-Series.
ip ssh hostbased-authentication

Enable hostbased-authentication for the SSHv2 server.

Syntax

```
ip ssh hostbased-authentication enable
```

To disable hostbased-authentication for SSHv2 server, use the `no ip ssh hostbased-authentication enable` command.

Parameters

- `enable` Enter the keyword `enable` to enable hostbased-authentication for SSHv2 server.

Defaults

Disabled.

<tr>
<td>pre-6.1.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information

If you enable this command, clients can log in without a password prompt. This command provides two levels of authentication:

- rhost-authentication is done with the file specified in the `ip ssh rhostsfile` command.
- checking client host-keys is done with the file specified in the `ip ssh pub-key-file` command.

**NOTE:** Administrators must specify the two files (rhosts and pub-key-file) to configure hostbased authentication.

Related Commands

- `ip ssh pub-key-file` — public keys of trusted hosts from a file.
• `ip ssh rhostsfile` — trusted hosts and users for rhost authentication.

### ip ssh key-size

Configure the size of the server-generated RSA SSHv1 key.

**Syntax**

```
ip ssh key-size 512-869
```

**Parameters**

- **512-869**
  - Enter the key-size number for the server-generated RSA SSHv1 key. The range is from 512 to 869. The default is **768**.

**Defaults**

Key size **768**

**Command Modes**

CONFIGURATION

<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>pre-6.1.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

The server-generated key is used for SSHv1 key-exchange.

### ip ssh password-authentication

Enable password authentication for the SSH server.

**Syntax**

```
ip ssh password-authentication enable
```

To disable password-authentication, use the `no ip ssh password-authentication enable` command.
**Parameters**

| enable | Enter the keyword enable to enable password-authentication for the SSH server. |

**Defaults**

Enabled

**Command Modes**

<tr>
<td>pre-6.1.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

With password authentication enabled, you can authenticate using the local, RADIUS, or TACACS+ password fallback order as configured.

**ip ssh pub-key-file**

Specify the file used for host-based authentication.

**Syntax**

```
ip ssh pub-key-file (WORD)
```

**Parameters**

| WORD | Enter the file name for the host-based authentication. |

**Defaults**

none

</table>
### Version Description

- **9.8(2.0)**
  - Introduced on the S3100 series.
- **9.8(1.0)**
  - Introduced on the Z9100-ON.
- **9.8(0.0P5)**
  - Introduced on the S4048-ON.
- **9.8(0.0P2)**
  - Introduced on the S3048-ON.
- **9.7(0.0)**
  - Introduced on the S6000--ON.
- **9.2(1.0)**
  - Introduced on the Z9500.
- **9.0.2.0**
  - Introduced on the S6000.
- **8.3.19.0**
  - Introduced on the S4820T.
- **8.3.11.1**
  - Introduced on the Z9000.
- **8.3.7.0**
  - Introduced on the S4810.
- **7.6.1.0**
  - Introduced on the S-Series.
- **7.5.1.0**
  - Introduced on the C-Series.
- **pre-6.1.1.0**
  - Introduced on the E-Series.

### Usage Information

This command specifies the file used for the host-based authentication. The `create/` file overwrites the `flash://ADMIN_DIR/ssh/knownhosts` file and deletes the user-specified file. Even though this command is a global configuration command, it does not appear in the running configuration because you only need to run this command once.

The file contains the OpenSSH-compatible public keys of the host for which host-based authentication is allowed. An example known host file format:

```
poclab4,123.12.1.123 ssh-rsa AAAAB3NzaC1yc2EAAAABIAwAAAEAcx/QQp8xYhz0xn07yh4VGPAoUfgKoieTHO9G4sNV+ui+DWEc3cgYAc55lai1MU2ODrzhCwyDNp05tKBU3tReGlo8AxLi6+S4hyEMqHzkzBFNVqHzpQc+Rs4p2urzV0F4pRKaXh3Lk4d460H2RhhVrxqeNxPDpEn WIMPJi0ds= ashwani@poclab4
```

**NOTE:** For `rhostfile` and `pub-key-file`, the administrator must FTP the file to the chassis.

### Example

```
Dell# conf
Dell(conf)# ip ssh pub-key-file flash://knownhosts
Dell(conf)#
```

### Related Commands

- `show ip ssh client-pub-keys` — displays the client-public keys used for the host-based authentication.

### ip ssh mac

Configure the list of MAC algorithms supported on both SSH client and SCP.

#### Syntax

```
ip ssh mac mac-list
```
Parameters

mac mac-list

Enter the keyword **mac** then a space-delimited list of message authentication code (MAC) algorithms supported by the SSH client. The following MAC algorithms are available.

When FIPS mode is enabled:

- hmac-sha2-256
- hmac-shal
- hmac-shal-96

When FIPS mode is disabled:

- hmac-sha2-256
- hmac-shal
- hmac-shal-96
- hmac-md5
- hmac-md5-96

Defaults

The default list of MAC algorithm is in the order as shown below:

When FIPS mode is enabled:

- hmac-sha2-256
- hmac-shal
- hmac-shal-96

When FIPS mode is disabled:

- hmac-sha2-256
- hmac-shal
- hmac-shal-96
- hmac-md5
- hmac-md5-96

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>

<td>Introduced on the S6100–ON, S6000, S6000–ON, S5000, S4810, S4820T, S3048–ON, S4048–ON, MXL, C9010, S3100 series, and Z9100–ON.</td>
</tr>
</tbody>
</table>

Usage Information

- You can select one or more MAC algorithms from the list.
- Client-supported MAC list gets preference over the server-supported MAC list in selecting the MAC algorithm for the SSH session.
- When the **-m** option is used with the SSH CLI, it overrides the configured or default MAC list.
- When FIPS is enabled or disabled, the client MACs get default configuration.
ip ssh rekey

Configures the time rekey-interval or volume rekey-limit threshold at which to re-generate the SSH key during an SSH session.

Syntax

ip ssh rekey [time rekey-interval] [volume rekey-limit]

To reset to the default, use no ip ssh rekey [time rekey-interval] [volume rekey-limit] command.

Parameters

- **time minutes**: Enter the keywords `time` then the amount of time in minutes. The range is from 10 to 1440 minutes. The default is 60 minutes.
- **volume rekey-limit**: Enter the keywords `volume` then the amount of volume in megabytes. The range is from 1 to 4096 megabytes. The default is 1024 megabytes.

Defaults

The default time is 60 minutes. The default volume is 1024 megabytes.

### Version Description
- **9.10(0.0)** Introduced on the S3148.
- **9.8(2.0)** Introduced on the S3100 series.
- **9.8(1.0)** Introduced on the Z9100-ON.
- **9.8(0.0P5)** Introduced on the S4048-ON.
- **9.8(0.0P2)** Introduced on the S3048-ON.
- **9.7(0.0)** Introduced on the S6000–ON.
- **9.2(1.0)** Introduced on the Z9500.
- **9.0.2.0** Introduced on the S6000.
- **8.3.19.0** Introduced on the S4820T.
- **8.3.11.1** Introduced on the Z9000.
- **8.3.7.0** Introduced on the S4810.
- **7.6.1.0** Introduced on the S-Series.
- **7.5.1.0** Introduced on the C-Series.
- **pre-6.1.1.0** Introduced on the E-Series.

### Example
```
Dell#conf
Dell(conf)# ip ssh rhostsfile flash://shosts
Dell(conf)#
```

### Usage Information
This command specifies the rhost file used for host-based authentication. This creates/ file overwrites the flash:/ADMIN_DIR/ssh/shosts file and deletes the user-specified file. Even though this command is a global configuration command, it does not appear in the running configuration because you only need to run this command once.

This file contains hostnames and usernames, for which hosts and users, rhost-authentication can be allowed.

**NOTE:** For **rhostfile** and **pub-key-file**, the administrator must FTP the file to the switch.

### ip ssh rsa-authentication (Config)
Enable RSA authentication for the SSHv2 server.

**Syntax**
```
ip ssh rsa-authentication enable
```

**To disable RSA authentication, use the**
```
nop ip ssh rsa-authentication enable command.
```

**Parameters**
- **enable**

**Defaults**
Disabled.

**Command Modes**
CONFIGURATION

</table>

### Usage Information

Enabling RSA authentication allows the user to log in without being prompted for a password. In addition, the OpenSSH compatible SSHv2 RSA public key must be added to the list of authorized keys (ip ssh rsa-authentication my-authorized-keys device://filename command).

### ip ssh server

Configure an SSH server. SSH server is enabled by default.

**Syntax**

```
NOTE: Some of the parameters in this command require licensing to access. For more information, contact your Dell Networking representative.

ip ssh server {ciphers cipher-list} {enable | port port-number} [kex key-exchange-algorithm] [mac hmac-algorithm] [version {1 | 2}]
```

To disable SSH server functions, use the no ip ssh server {ciphers cipher-list} {enable | port port-number} [kex key-exchange-algorithm] [mac hmac-algorithm] [version {1 | 2}] command.

**Parameters**

- **enable**
  - Enter the key word enable to start the SSH server.

- **ciphers cipher-list**
  - Enter the keyword ciphers and then a space-delimited list of ciphers that the SSH server supports. The following ciphers are available:
    - 3des-cbc
    - aes128-cbc
• aes192-cbc
• aes256-cbc
• aes128-ctr
• aes192-ctr
• aes256-ctr

The default cipher list is used.
• 3des-cbc
• aes128-cbc
• aes192-cbc
• aes256-cbc
• aes128-ctr
• aes192-ctr
• aes256-ctr

mac hmac-algorithm

Enter the keyword mac then a space-delimited list of hash message authentication code (HMAC) algorithms supported by the SSH server for keying hashing for the message authentication.

The following HMAC algorithms are available:
• hmac-sha1
• hmac-sha1-96
• hmac-sha2-256

When FIPS is enabled, the default HMAC algorithm is hmac-sha1-96.

When FIPS is not enabled, the default HMAC algorithms are the following:
• hmac-md5
• hmac-md5-96
• hmac-sha1
• hmac-sha1-96
• hmac-sha2-256

kex key-exchange-algorithm

Enter the keyword kex and then a space-delimited list of key exchange algorithms supported by the SSH server.

The following key exchange algorithms are available:
• diffie-hellman-group-exchange-shal
• diffie-hellman-group1-shal
• diffie-hellman-group14-shal

When FIPS is enabled, the default key-exchange-algorithm is diffie-hellman-group14-shal.

When FIPS is not enabled, the default key-exchange-algorithms are the following:
**diffie-hellman-group-exchange-sha1**

**diffie-hellman-group1-sha1,**

**diffie-hellman-group14-sha1**

**port port-number** (OPTIONAL) Enter the keyword port then the port number of the listening port of the SSH server. The range is from 1 to 65535. The default is 22.

**[version {1 | 2}]** (OPTIONAL) Enter the keyword version then the SSH version 1 or 2 to specify only SSHv1 or SSHv2.

| NOTE: If you enable FIPS mode, you can only select version 2.

**Defaults**

- Default listening port is 22.
- Default cipher list is 3des-cbc,aes128-cbc,aes192-cbc,aes256-cbc,aes128-ctr,aes192-ctr,aes256-ctr.
- When FIPS is enabled, the default is hmac-sha1-96.
- When FIPS is not enabled, the default is hmac-md5,hmac-md5-96,hmac-sha1,hmac-sha1-96,hmac-sha2-256.
- When FIPS is enabled, the default is diffie-hellman-group14-sha1.
- When FIPS is not enabled, the default is diffie-hellman-group-exchange-sha1,diffie-hellman-group1-sha1,diffie-hellman-group14-sha1.

### ip ssh server vrf

Configure an SSH server on either a specific VRF or a management VRF.

**Syntax**

```
ip ssh server vrf {any | management | vrf-name}
```

To disable the SSH server configuration, use the `no ip ssh server vrf {management | vrf-name}` command.

**Parameters**

- **any**
  - Enter the keyword `any` to enable access to the server from any VRF.
- **vrf management**
  - Enter the keyword `vrf` followed by the keyword `management` to configure an SSH server on a management VRF.
- **vrf vrf-name**
  - Enter the keyword `vrf` followed by the VRF name to configure an SSH server on that VRF.

**Defaults**

None

**Command Modes**

</tr>
</tbody>
</table>
Version Description
9.4(0.0) Introduced on the S-Series and Z9000.

Usage Information
You can enable the SSH server on either a management VRF or a user defined VRF but not both. If no VRF is specified, then the SSH server is enabled on the default VRF.

If the SSH server is enabled on a VRF with name vrf1, then use the following command to restart the SSH server on a VRF with name vrf2: `ip ssh server vrf vrf2`. If the SSH server is enabled on a VRF with name vrf1, then use the following command to restart the SSH server on the default VRF: `ip ssh server vrf`.

Example

- Dell(conf)# ip ssh server vrf any
- Dell(conf)# no ip ssh server vrf
- Dell(conf)# ip ssh server vrf vrf1
- Dell(conf)# no ip ssh server vrf
- Dell(conf)# ip ssh server vrf management
- Dell(conf)# no ip ssh server vrf

Related Commands
- `show ip ssh` — displays the ssh information.

### ip ssh source-interface

Specifies an interface’s IP address as the source IP address for an outgoing SSH connections.

**Syntax**

```plaintext
ip ssh source-interface interface

To delete a source interface, use the `no ip ssh source-interface` command.
```

**Parameters**

- **interface**
  Enter the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
  - For a port channel interface, enter the keywords `port-channel` then a number.
  - For a Null interface, enter the keyword `null` then the Null interface number.
  - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults**

Not configured.

**Command Modes**

- `CONFIGURATION`

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>

</tr>
<tr>
<td>9.8(0.0P5)</td>
<td>Introduced on the S4048-ON.</td>
</tr>
</tbody>
</table>
### ip ssh source-interface

The `source-interface` attribute is applicable for both the SSH client as well as the COPY (SCP) commands. Using these attributes the client session tags an error to the user during run time, in case there is a mismatch between this command and the `ip ssh vrf` command.

**Example**

```
Dell(conf)#ip ssh source-interface gigabitethernet 1/47
Dell(conf)#do ssh 10.10.10.2 -l admin
Dell(conf)#no ip ssh source-interface
```

### Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version**

- 9.10(0.0)
- 9.8(2.0)
- 9.8(1.0)
- 9.8(0.0P5)
- 9.8(0.0P2)
- 9.7(0.0)
- 9.5(0.1)
- 9.4(0.0)

**Description**

- Introduced on the S3148.
- Introduced on the S3100 series.
- Introduced on the Z9100-ON.
- Introduced on the S4048-ON.
- Introduced on the S3048-ON.
- Introduced on the S6000-ON.
- Introduced on the Z9500.
- Introduced on the S-Series and Z9000.

### ip ssh vrf

Specify a VRF for an outgoing SSH connections.

**Syntax**

```
ip ssh vrf vrf-name
```

To delete a VRF for an outgoing SSH connection, use the `no ip ssh vrf vrf-name` command.

**Parameters**

`vrf vrf-name`  
Enter the keyword `vrf` and then the name of the VRF to configure that VRF for an outgoing SSH session.

**Defaults**

Not configured.

**Command Modes**

- CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version**

- 9.10(0.0)
- 9.8(2.0)
- 9.8(1.0)
- 9.8(0.0P5)
- 9.8(0.0P2)
- 9.7(0.0)
- 9.5(0.1)
- 9.4(0.0)

**Description**

- Introduced on the S3148.
- Introduced on the S3100 series.
- Introduced on the Z9100-ON.
- Introduced on the S4048-ON.
- Introduced on the S3048-ON.
- Introduced on the S6000-ON.
- Introduced on the Z9500.
- Introduced on the S-Series and Z9000.
If you configure a VRF for an SSH session, then you need not explicitly mention the same VRF for the SSH client sessions intended for that VRF. The `vrf` attribute in the `ip ssh vrf` command is applicable for both the SSH client as well as the COPY (SCP) commands.

Example

```
Dell(conf)#ip ssh vrf vrf1
Dell(conf)#do ssh 10.10.10.2 -l admin
Dell(conf)#no ip ssh vrf vrf1
```

**show crypto**

Display the public part of the SSH host-keys.

### Syntax

```
show crypto key mypubkey {rsa | rsa1}
```

### Parameters

- **Key**: Enter the keyword `key` to display the host public key.
- **mypubkey**: Enter the keyword `mypubkey` to display the host public key.
- **rsa**: Enter the keyword `rsa` to display the host SSHv2 RSA public key.
- **rsa1**: Enter the keyword `rsa1` to display the host SSHv1 RSA public key.

**NOTE**: Some of the parameters in this command require licensing to access. For more information, contact your Dell Networking representative.

**Defaults**: `none`

**Command Modes**: `EXEC`

**Command History**: This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

show ip ssh

Display information about established SSH sessions.

Syntax

show ip ssh

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description

9.11(0.0) Updated the output to include challenge-response-authentication option.
9.10(0.0) Introduced on the S3148.
9.10(0.0) Removed the support for hmac-sha2-256-96 algorithm.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100-ON.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.2(1.0) Introduced on the Z9500.

Usage Information

This command is useful if the remote SSH client implements Strict Host Key Checking. You can copy the host key to your list of known hosts.

Example

Dell# show crypto key mypubkey rsa1
1024 65537 15047757832969676203444203678896349387088507047999199481529

show ip ssh rsa-authentication

Display the authorized keys for the RSA authentication.

Syntax

show ip ssh rsa-authentication {my-authorized-keys}

Parameters

my-authorized-keys Specify the RSA authorized keys.

Defaults

none

Command Modes

EXEC

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description

9.10(0.0) Introduced on the S3148.

9.8(2.0) Introduced on the S3100 series.

Usage Information
This command displays the contents of the flash://ADMIN_DIR/ssh/knownhosts file.

Example

Dell# show ip ssh rsa-authentication

my-authorized-keys

Dell#
**Version** | **Description**  
---|---  
9.8(1.0) | Introduced on the Z9100-ON.  
9.8(0.0P5) | Introduced on the S4048-ON.  
9.8(0.0P2) | Introduced on the S3048-ON.  
9.7(0.0) | Introduced on the S6000--ON.  
9.2(1.0) | Introduced on the Z9500.  
9.0.2.0 | Introduced on the S6000.  
8.3.19.0 | Introduced on the S4820T.  
8.3.11.1 | Introduced on the Z9000.

7.6.1.0 | Introduced on the S-Series.  
7.5.1.0 | Introduced on the C-Series.  
pre-6.1.1.0 | Introduced on the E-Series.  

**Usage Information**  
This command displays the contents of the `flash:/ADMIN_DIR/ssh/authorized-keys.username` file.

**Example**  
```
Dell# show ip ssh rsa-authentication my-authorized-keys
ssh-rsa
AAAAB3NzaC1yc2EAAABIBiwAAAIEAyB17l4gFp4r2DRH1vMclVZ
dOsq5GQxRV1y1XIJOme06Nd0WuYyzyrQMM
4qJaOBwteOIXLBcHF3V2hcMIqa2fCfCnic/
zCM1nCf0+gVTd1oofsea5r09kS0x2p0CNfHXZ3NuGc90v33m9+
U9tMwh8Svy9AVxdH4xkm3c3t5Jvz=
freedom@poclab4
```

**Related Commands**  
- `ip ssh rsa-authentication (Config)` — configures the RSA authorized keys.

**ssh**  
Open an SSH connection specifying the hostname, username, encryption cipher, HMAC algorithm, port number, and version of the SSH client.

**Syntax**  
```
ssh [vrf vrf-name] {hostname | ipv4 address | ipv6 address} [-c encryption cipher | -l username | -m HMAC algorithm | -p port-number | -v {1 | 2}]  
```

**Parameters**  
- `vrf vrf-name`  
  (OPTIONAL) Enter the keyword `vrf` and then the name of the VRF to specify the VRF used with the SSH session.
 NOTE: The VRF configured using this command has a higher precedence than the VRF configured using the `ip ssh vrf vrf-name` command. If you do not configure a VRF using this command, then the SSH client uses the configured VRF (if any). If there is a mismatch between VRFs that are configured using the `ip ssh source-interface` command and the `ssh vrf vrf-name` command, then an error is reported.

**hostname**

(Optional) Enter the IP address or the host name of the remote device.

**vrf instance**

(Optional) E-Series Only: Enter the keyword `vrf` then the VRF Instance name to open an SSH connection to that instance.

**ipv4 address**

(Optional) Enter the IP address in dotted decimal format A.B.C.D.

**ipv6-address**

(Optional) Enter the IPv6 address in the x:x:x:x::x format then the prefix length in the /x format. The range is from /0 to /128.

**NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

**-c encryption cipher**

Enable the "FIPS mode enable", this mode will support only v2 client.

"no fips mode enable" (disable) will support v1 & v2 client. This comment is applicable for both ciphers & HMAC algorithms:

- 3des-cbc: Force ssh to use 3des-cbc encryption cipher.
- aes128-cbc: Force ssh to use aes128-cbc encryption cipher
- aes192-cbc: Force ssh to use aes192-cbc encryption cipher
- aes256-cbc: Force ssh to use aes256-cbc encryption cipher
- aes128-ctr: Force ssh to use aes128-ctr encryption cipher
- aes192-ctr: Force ssh to use aes192-ctr encryption cipher
- aes256-ctr: Force ssh to use aes256-ctr encryption cipher

**-l username**

(Optional) Enter the keyword `-l` then the user name used in this SSH session. The default is the user name of the user associated with the terminal.

**-m HMAC algorithm**

Enter one of the following HMAC algorithms to use. (For v2 clients only):

"no fips mode enable" (disable) will support v1 & v2 client.

- hmac-md5: Force ssh to use hmac-md5 HMAC algorithm.
- hmac-md5-96: Force ssh to use hmac-md5-96 HMAC algorithm.
- hmac-sha1: Force ssh to use hmac-sha1 HMAC algorithm.
- hmac-sha1-96: Force ssh to use hmac-sha1-96 HMAC algorithm.
- hmac-sha2-256: Force ssh to use hmac-sha2-256 HMAC algorithm.

**-p port-number**

(Optional) Enter the keyword `-p` then the port number. The range is from 1 to 65535. The default is 22.

**-v {1 | 2}**

(Optional) Enter the keyword `-v` then the SSH version 1 or 2. The default is the version from the protocol negotiation.

### Defaults

As shown in the Parameters section.

### Command Modes

EXEC Privilege
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

### Usage Information

Dell Networking OS supports both inbound and outbound SSH sessions using IPv4 or IPv6 addressing. Inbound SSH supports accessing the system through the management interface as well as through a physical Layer 3 interface.

### Example

```bash
Dell#ssh 10.16.151.48 -l anvltest
Trying 10.16.151.48...
01:18:16: %STKUNIT0-M:CP %SEC-5-SSH_USAGE: Initiated SSH Client v2 (FIPS Disabled) to anvltest@10.16.151.48 by default from console anvltest@10.16.151.48's password: Last login: Thu Jan 5 00:17:47 2012 from login-maa-101 [anvltest@dt-maa-linux-l ~]# exit
```
Secure DHCP Commands

DHCP as defined by RFC 2131 provides no authentication or security mechanisms. Secure DHCP is a suite of features that protects networks that use dynamic address allocation from spoofing and attacks.

clear ip dhcp snooping

Clear the DHCP binding table.

Syntax

```
clear ip dhcp snooping binding
```

Defaults

none

Command Modes

EXEC Privilege

Related Commands

- `show ip dhcp snooping` — display the contents of the DHCP binding table.

ip dhcp relay

Enable Option 82.

Syntax

```
ip dhcp relay information-option [trust-downstream | vrf]
```

Parameters

- `trust-downstream` — Configure the system to trust Option 82 when it is received from the previous-hop router.
vrf

Enter the keyword vrf to include VRF related information in the Option 82. This configuration enables the relay agent to include VRF related information when it forwards the broadcasts from client to DHCP server.

Defaults
Disabled.

Command Modes
CONFIGURATION

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100-ON.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.6(0.0) Added support for VRF.
9.2(1.0) Introduced on the Z9500.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
8.3.7.0 Introduced on the S4810.
7.8.1.0 Introduced on the C-Series and S-Series.

ip dhcp snooping

Enable DHCP Snooping globally.

Syntax
[no] ip dhcp snooping

Defaults
Disabled.

Command Modes
CONFIGURATION

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100-ON.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
Version                     Description
9.7(0.0)                    Introduced on the S6000-ON.
9.2(1.0)                    Introduced on the Z9500.
9.0.2.0                     Introduced on the S6000.
8.3.19.0                    Introduced on the S4820T.
8.3.11.1                    Introduced on the Z9000.
8.3.7.0                     Introduced on the S4810.
7.8.1.0                     Introduced on the C-Series and S-Series.

Usage Information          When enabled, no learning takes place until you enable snooping on a VLAN. After disabling DHCP Snooping, the binding table is deleted and Option 82, IP Source Guard, and Dynamic ARP Inspection are disabled.

Related Commands           - `ip dhcp snooping vlan` — enable DHCP Snooping on one or more VLANs.

ip dhcp snooping binding

Create a static entry in the DHCP binding table.

Syntax                     `[no] ip dhcp snooping binding mac address vlan-id vlan-id ip ip-address interface type slot/port lease number`

Parameters                 
  mac address                Enter the keyword mac then the MAC address of the host to which the server is leasing the IP address.
  vlan-id vlan-id            Enter the keywords vlan-id then the VLAN to which the host belongs. The range is from 2 to 4094.
  ip ip-address              Enter the keyword ip then the IP address that the server is leasing.
  interface type             Enter the keyword interface then the type of interface to which the host is connected.
  slot/port                  Enter the slot and port number of the interface.
  lease time                 Enter the keyword lease then the amount of time the IP address is leased. The range is from 1 to 4294967295.

Defaults                    none

Command Modes              - EXEC
- EXEC Privilege
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

### Command History

**Version** | **Description**
---|---
9.10(0.0) | Introduced on the S3148.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100-ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.7(0.0) | Introduced on the S6000-ON.
9.2(1.0) | Introduced on the Z9500.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 |Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.5.1.0 | Added support for 4-port 40G line cards.
8.3.7.0 | Introduced on the S4810.
7.8.1.0 | Introduced on the C-Series and S-Series.

### Related Commands
- `show ip dhcp snooping` — displays the contents of the DHCP binding table.

## ip dhcp snooping database

Delay writing the binding table for a specified time.

**Syntax**

```
ip dhcp snooping database write-delay minutes
```

**Parameters**

- `minutes` The range is from 5 to 21600.

**Defaults**

none

ip dhcp snooping vlan

Enable DHCP Snooping on one or more VLANs.

Syntax

[no] ip dhcp snooping vlan name

Parameters

name

Enter the name of a VLAN on which to enable DHCP Snooping.

Defaults

Disabled.

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version  Description
9.10(0.0)  Introduced on the S3148.
9.8(2.0)   Introduced on the S3100 series.
9.8(1.0)   Introduced on the Z9100-ON.
9.8(0.0P6) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0)   Introduced on the S6000-ON.
9.2(1.0)   Introduced on the Z9500.
9.0.2.0     Introduced on the S6000.
8.3.19.0    Introduced on the S4820T.
8.3.11.1    Introduced on the Z9000.
8.3.7.0     Introduced on the S4810.
7.8.1.0     Introduced on the C-Series and S-Series.

Usage Information

When enabled, the system begins creating entries in the binding table for the specified VLANs.

NOTE: Learning only happens if there is a trusted port in the VLAN.

Related Commands

- ip dhcp snooping trust — configure an interface as trusted.
show ip dhcp snooping

Display the contents of the DHCP binding table.

Syntax

    show ip dhcp snooping binding

Defaults

    none

Related Commands

    •  clear ip dhcp snooping — clear the contents of the DHCP binding table.

Role-Based Access Control Commands

With Role-Based Access Control (RBAC), access and authorization is controlled based on a user’s role. Users are granted permissions based on their user roles, not on their individual user ID. User roles are created for job functions and through those roles they acquire the permissions to perform their associated job function.

This section describes the syntax and usage of RBAC-specific commands. You can find information on other related security commands in this chapter:

    •  aaa accounting
    •  aaa authentication login
    •  aaa authorization commands
    •  authorization
    •  show accounting
aaa authorization role-only

Configure authentication to use the user’s role only when determining if access to commands is permitted.

Syntax

```
aaa authorization role-only
```

To return to the default setting, use the `no aaa authentication role-only` command.

Parameters

- `name` Enter a text string for the name of the user up to 63 characters. It cannot be one of the system defined roles (sysadmin, secadmin, netadmin, netoperator).
- `inherit existing-role-name` Enter the `inherit` keyword then specify the system defined role to inherit permissions from (sysadmin, secadmin, netadmin, netoperator).

Defaults

none

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<tr>
<td>9.5(0.0)</td>
<td>Introduced on the Z9000, S6000, S4820T, S4810, and MXL.</td>
</tr>
</tbody>
</table>

Usage Information

By default, access to commands are determined by the user’s role (if defined) or by the user’s privilege level. If the `aaa authorization role-only` command is enabled, then only the user’s role is used.

Before you enable role-based only AAA authorization:

1. Locally define a system administrator user role. This will give you access to login with full permissions even if network connectivity to remote authentication servers is not available.
2. Configure login authentication on the console. This ensures that all users are properly identified through authentication no matter the access point.
3. Specify an authentication method (RADIUS, TACACS+, or Local).
4. Specify authorization method (RADIUS, TACACS+ or Local).
5. Verify the configuration has been applied to the console or VTY line.

Related Commands

- `login authentication`, `password`, `radius-server host`, `tacacs-server host`
enable

Enter EXEC Privilege mode or any other privilege level configured. After entering this command, you may need to enter a password.

Syntax

```
enable [level]
```

Parameters

- **level**: (OPTIONAL) Enter a number for a privilege level of Dell Networking OS. The range is from 0 to 15.

Defaults

- **15**

Command Modes

- **EXEC**

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>

Usage Information

- Users entering EXEC Privilege mode or any other configured privilege level can access configuration commands. To protect against unauthorized access, use the enable password command to configure a password for the enable command at a specific privilege level. If no privilege level is specified, the default is privilege level **15**.

**NOTE**: If you are authorized for the EXEC Privilege mode by your role, you do not need to enter an enable password.

Related Commands

- **enable password** — configures a password for the enable command and to access a privilege level.
role

Changes command permissions for roles.

Syntax

```plaintext
role mode {{ addrole | deleterole } role-name } | reset } command
```

To delete access to a command, use the `no role mode role-name`

Parameters

- **mode**
  
Enter one of the following keywords as the mode for which you are controlling access:
  
  - `configure` for CONFIGURATION mode
  - `exec` for EXEC mode
  - `interface` for INTERFACE modes
  - `line` for LINE mode
  - `route-map` for Route-map mode
  - `router` for Router mode

- **addrole**
  
Enter the keyword `addrole` to add permission to the command. You cannot add or delete rights for the sysadmin role.

- **deleterole**
  
Enter the keyword `deleterole` to remove access to the command. You cannot add or delete rights for the sysadmin role.

- **role-name**
  
Enter a text string for the name of the user role up to 63 characters. These are 3 system defined roles you can modify: secadmin, netadmin, and netoperator.

- **reset**
  
Enter the keyword `reset` to reset all roles back to default for that command.

- **command**
  
Enter the command’s keywords to assign the command to a certain access level. You can enter one or more keywords.

Defaults

none

show role

Display information on permissions assigned to a command, including user role and/or permission level.

Syntax
show role mode {mode} {command}

Parameters

command
Enter the command’s keywords to assign the command to a certain access level. You can enter one or all of the keywords.

mode mode
Enter keyword then one of the following modes.

- configure
- exec
- interface
- line
- route-map
- router

Defaults
none

Command Modes
EXEC Privilege

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100-ON.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.5(1.0) Introduced on the Z9500.
9.5(0.0) Introduced on the Z9000, S6000, S4820T, S4810, MXL

Examples
Dell# show role mode configure username
Role access: sysadmin

Dell# show role mode configure management route
Role access: netadmin, sysadmin
show userroles

Display information on all defined user roles.

Syntax

    show userroles

Example

    Dell# show userroles

    Role          Inheritance  Modes
    netoperator                Exec
    netadmin                   Exec Config Interface Line Router IP
                                Route-map Protocol MAC
    secadmin                   Exec Config
    sysadmin                   Exec Config Interface Line Router IP
                                Route-map Protocol MAC
    netoperator
    testadmin     netadmin     Exec Config Interface Line Router IP
                                Route-map Protocol MAC

Command Modes

    EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking
OS Command Line Reference Guide.

Version     Description
9.10(0.0)    Introduced on the S3148.
9.8(2.0)     Introduced on the S3100 series.
9.8(1.0)     Introduced on the Z9100-ON.
9.8(0.0P5)   Introduced on the S4048-ON.
9.8(0.0P2)   Introduced on the S3048-ON.
9.7(0.0)     Introduced on the S6000-ON.
9.5(0.1)     Introduced on the Z9500.
9.5(0.0)     Introduced on the Z9000, S6000, S4820T, S4810, MXL.

Example

    Dell# show userroles

    Role          Inheritance  Modes
    netoperator                Exec
    netadmin                   Exec Config Interface Line Router IP
                                Route-map Protocol MAC
    secadmin                   Exec Config
    sysadmin                   Exec Config Interface Line Router IP
                                Route-map Protocol MAC
    netoperator
    testadmin     netadmin     Exec Config Interface Line Router IP
                                Route-map Protocol MAC
userrole

Create user roles for the role-based security model.

Syntax

```
userrole name inherit existing-role-name
```

To delete a role name, use the no userrole name command. Note that the reserved role names may not be deleted.

Parameters

- **name**: Enter a text string for the name of the user up to 63 characters. It cannot be one of the system defined roles (sysadmin, secadmin, netadmin, netoperator).
- **inherit existing-role-name**: Enter the inherit keyword then specify the system defined role to inherit permissions from (sysadmin, secadmin, netadmin, netoperator).

Defaults

none

</tr>
</tbody>
</table>

Usage Information

Instead of using the system defined user roles, you can create a new user role that best matches your organization. When you create a new user role, you first inherit permissions from one of the system defined roles. Otherwise you would have to create a user role from scratch. You then restrict commands or add commands to that role. For information about this topic, see Modifying Command Permissions for Roles.

**NOTE:** You can change user role permissions on system pre-defined user roles or user-defined user roles.

Important Points to Remember

Consider the following when creating a user role:

- Only the system administrator and user-defined roles inherited from the system administrator can create roles and usernames. Only the system administrator, security administrator, and roles inherited from these can use the role command to modify command permissions. The security administrator and roles inherited by security administrator can only modify permissions for commands they already have access to.
Make sure you select the correct role you want to inherit.

**NOTE:** If you inherit a user role, you cannot modify or delete the inheritance. If you want to change or remove the inheritance, delete the user role and create it again. If the user role is in use, you cannot delete the user role.

```
role mode { { { addrole | deleterole } role-name } | reset } command – Modifies (adds or deletes) command permissions for newly created user roles and system defined roles.
```

**Related Commands**

- `role mode { { addrole | deleterole } role-name } | reset` command — modifies (adds or deletes) command permissions for newly created user roles and system defined roles.

## ICMP Vulnerabilities

The internet control message protocol (ICMP) is a network-layer internet protocol that provides message packets to report errors and other information regarding IP packet processing back to the source. Dell Networking OS mainly addresses the following ICMP vulnerabilities:

- ICMP Mask Reply
- ICMP Timestamp Request
- ICMP Replies
- IP ID Values Randomness

You can configure the Dell Networking OS to drop ICMP reply messages. When you configure the `drop icmp` command, the system drops the ICMP reply messages from the front end and management interfaces. By default, the Dell Networking OS responds to all the ICMP messages. You can configure the Dell Networking OS to suppress the following ICMPv4 and ICMPv6 message types:

### Table 5. Suppressed ICMPv4 message types

**ICMPv4 Message Types**

<table>
<thead>
<tr>
<th>ICMPv4 Message Types</th>
</tr>
</thead>
<tbody>
<tr>
<td>Echo reply (0)</td>
</tr>
<tr>
<td>All sub types of destination unreachable (3)</td>
</tr>
<tr>
<td>Source quench (4)</td>
</tr>
<tr>
<td>Redirect (5)</td>
</tr>
<tr>
<td>Router advertisement (9)</td>
</tr>
<tr>
<td>Router solicitation (10)</td>
</tr>
<tr>
<td>Time exceeded (11)</td>
</tr>
<tr>
<td>IP header bad (12)</td>

<tr>
<td>Timestamp request (13)</td>
</tr>
<tr>
<td>Timestamp reply (14)</td>
</tr>
<tr>
<td>Information request (15)</td>
</tr>
<tr>
<td>Information reply (16)</td>
</tr>
<tr>
<td>Address mask request (17)</td>
</tr>
<tr>
<td>Address mask reply (18)</td>
</tr>
</tbody>
</table>
NOTE: The Dell Networking OS does not suppress the ICMPv4 message type Echo request (8).

Table 6. Suppressed ICMPv6 message types

<table>
<thead>
<tr>
<th>ICMPv6 Message Types</th>
</tr>
</thead>
<tbody>
<tr>
<td>Destination unreachable (1)</td>
</tr>
<tr>
<td>Time exceeded (3)</td>
</tr>
<tr>
<td>IPv6 header bad (4)</td>

</tr>
<tr>
<td>Who are you reply (140)</td>
</tr>
<tr>
<td>Mtrace response (200)</td>
</tr>
<tr>
<td>Mtrace messages (201)</td>
</tr>
</tbody>
</table>

NOTE: The Dell Networking OS does not suppress the following ICMPv6 message types:

- Packet too big (2)
- Echo request (128)
- Multicast listener query (130)
- Multicast listener report (131)
- Multicast listener done (132)
- Router solicitation (133)
- Router advertisement (134)
- Neighbor solicitation (135)
- Neighbor advertisement (136)
- Redirect (137)
- Router renumbering (138)
- MLD v2 listener report (143)
- Duplicate Address Request (157)
- Duplicate Address Confirmation (158)

**drop icmp**

Drops the ICMPv4 and ICMPv6 packets.

**Syntax**

`drop {icmp | icmp6}`

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other Platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.11.0.0</td>
<td>Introduced on the S4810, S4820T, S3048–ON, S3100 Series, S4048–ON, S5000, S6000, S6000–ON, Z9500, Z9100–ON, S6100–ON, S6010–ON, S4048T–ON, C9000, and MXL.</td>
</tr>
</tbody>
</table>
Usage Information

When the drop icmp feature is configured, the system drops the ICMP reply messages on the front end and management interfaces. By default, the Dell Networking OS responds to all the ICMP messages.

**NOTE:** There is no separate CLI to enable IP ID randomness. By default, the IP ID in the kernel is randomized.

For more information on the ICMP message types, see the [ICMP Commands](#) section.
Service Provider Bridging

Service provider bridging is composed of virtual local area network (VLAN) Stacking, Layer 2 Protocol Tunneling, and Provider Backbone Bridging as described in the Dell Networking OS Configuration Guide Service Provider Bridging section.

This section includes command line information (CLI) for the Dell Networking OS Layer 2 Protocol Tunneling (L2PT). L2PT enables protocols to tunnel through an 802.1q tunnel.

Dell Networking OS supports L2PT on Dell Networking OS.

For more information, see VLAN Stacking, Spanning Tree Protocol (STP), and GARP VLAN Registration (GVRP).

Important Points to Remember

- L2PT is enabled at the interface VLAN-Stack VLAN level. For more information about Stackable VLAN (VLAN-Stacking) commands, see VLAN Stacking.
- The default behavior is to disable protocol packet tunneling through the 802.1q tunnel.
- Rate-limiting is required to protect against bridge protocol data units (BPDU) attacks.
- A port channel (including through link aggregation control protocol [LACP]) can be configured as a VLAN-Stack access or trunk port.
- Address resolution protocol (ARP) packets work as expected across the tunnel.
- Far-end failure detection (FEFD) works the same as with Layer 2 links.
- Protocols that use Multicast MAC addresses (for example, open shortest path first [OSPF]) work as expected and carry over to the other end of the VLAN-Stack VLAN.

Topics:

- debug protocol-tunnel
- protocol-tunnel
- protocol-tunnel destination-mac
- protocol-tunnel enable
- protocol-tunnel rate-limit
- show protocol-tunnel

debug protocol-tunnel

Enable debugging to ensure incoming packets are received and rewritten to a new MAC address.

Syntax

```
debug protocol-tunnel interface {in | out | both} [vlan vlan-id] [count value]
```  

To disable debugging, use the

```
no debug protocol-tunnel interface {in | out | both} [vlan vlan-id] [count value] command.
```  

Parameters

- **interface**: Enter one of the following interfaces and the interface information:
For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.

For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.

For a port-channel interface, enter the keywords `port-channel` then the port-channel ID.

**in | out | both**

Enter the keyword `in`, `out`, or `both` to debug incoming interfaces, outgoing interfaces, or both incoming and outgoing interfaces.

**vlan vlan-id**

Enter the keyword `vlan` then the VLAN ID. The range is from 1 to 4094.

**count value**

Enter the keyword `count` then the number of debug outputs. The range is from 1 to 100.

**Defaults**

Debug disabled.

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>

**protocol-tunnel**

Enable protocol tunneling on a stacked (Q-in-Q) VLAN for specified protocol packets.

**Syntax**

```
protocol-tunnel (rate-limit rate| stp)
```

To disable protocol tunneling for a Layer 2 protocol, use the `no protocol-tunnel` command.
**Parameters**

- **rate-limit rate**
  Enter the keyword `rate-limit` followed by a number for the rate-limit for tunneled packets on the VMAN. The range is from 64 to 320.

- **stp**
  Enter the keyword `stp` to enable protocol tunneling on a spanning tree, including STP, MSTP, RSTP, and PVST.

**Defaults**

none

**Command Modes**

CONF-IF-VLAN

**Command History**

**Example**

Dell# conf
Dell(conf)# interface vlan 2
Dell(conf-if-vl-2)# vlan-stack compatible
Dell(conf-if-vl-2)#member Gi1/2-3
Dell(conf-if-vl-2)#protocol-tunnel stp
Dell(conf-if-vl-2)#protocol-tunnel enable

**Related Command**

- `show protocol-tunnel` — displays tunneling information for all VLANs.

---

**protocol-tunnel destination-mac**

Overwrite the BPDU destination MAC address with a specific value.

**Syntax**

`protocol-tunnel destination-mac xstp address`

**Parameters**

- **stp**
  Change the default destination MAC address used for L2PT to another value.

**Defaults**

The default destination MAC is 01:01:e8:00:00:00.

</tbody>
</table>
Dell Networking OS must have the default CAM profile with the default microcode before you enable L2PT.

**protocol-tunnel rate-limit**

Enable traffic rate limiting per box.

Syntax

```
protocol-tunnel rate-limit rate
```

To reset the rate limit to the default, use the `no protocol-tunnel rate-limit rate` command.

Parameters

- **rate**
  - Enter the rate in frames per second. The range is from 75 to 3000. The default is `75`.

Defaults

- `75` frames per second.

Command Modes

- CONF-IF-VLAN-STACK

Example

Dell(conf-if-vl-2)# vlan-stack compatible
Dell(conf-if-vl-2-stack)#protocol-tunnel rate-limit 100

Related Commands

- show protocol-tunnel — displays tunneling information for all VLANs.
- show running-config — displays the current configuration.

show protocol-tunnel

Display protocol tunnel information for all or a specified VLAN-Stack VLAN.

Syntax

```
show protocol-tunnel [vlan vlan-id]
```

Parameters

- `vlan vlan-id` (OPTIONAL) Enter the keyword `vlan` then the VLAN ID to display information for the one VLAN. The range is from 1 to 4094.

Defaults

`none`

Command Modes

`EXEC`

Gi1/2      2     STP, PVST
Dell#
```

**Related Commands**

- `show running-config` — displays the current configuration.
The Dell Networking OS supports sFlow commands.
The Dell Networking OS sFlow monitoring system includes an sFlow Agent and an sFlow Collector.

• The sFlow Agent combines the flow samples and interface counters into sFlow datagrams and forwards them to the sFlow Collector.
• The sFlow Collector analyses the sFlow Datagrams received from the different devices and produces a network-wide view of traffic flows.

Important Points to Remember

• Dell Networking recommends that the sFlow Collector be connected to the Dell Networking chassis through a line card port rather than the route processor module (RPM) Management Ethernet port.
• Dell Networking OS exports all sFlow packets to the sFlow Collector. A small sampling rate can equate to many exported packets. A backoff mechanism is automatically applied to reduce this amount. Some sampled packets may be dropped when the exported packet rate is high and the backoff mechanism is about to or is starting to take effect. The dropEvent counter, in the sFlow packet, is always zero.
• sFlow sampling is done on a per-port basis.
• Community list and local preference fields are not filled up in the extended gateway element in the sFlow datagram.
• The 802.1P source priority field is not filled up in the extended switch element in the sFlow datagram.
• Only Destination and Destination Peer AS numbers are packed in the dst-as-path field in the extended gateway element.
• If the packet being sampled is redirected using policy-based routing (PBR), the sFlow datagram may contain incorrect extended gateway/router information.
• sFlow does not support packing extended information for IPv6 packets. Only the first 128 bytes of the IPv6 packet is shipped in the datagram.
• The source virtual local area network (VLAN) field in the extended switch element is not packed if there is a routed packet.
• The destination VLAN field in the extended switch element is not packed if there is a multicast packet.
• The sFlow sampling functionality is supported only for egress traffic and not for ingress traffic.
• The maximum number of packets that can be sampled and processed per second is:
  • 7500 packets when no extended information packing is enabled.
  • 7500 packets when only extended-switch information packing is enabled (see `sflow extended-switch enable`).

Topics:

• `sflow collector`
• `sflow enable (Global)`
• `sflow ingress-enable`
• `sflow extended-switch enable`
• `sflow max-header-size extended`
• `sflow polling-interval (Global)`
• `sflow polling-interval (Interface)`
• `sflow sample-rate (Global)`
• `sflow sample-rate (Interface)`
• `show sflow`
sflow collector

Configure a collector device to which sFlow datagrams are forwarded.

```
sflow collector {ip-address | ipv6-address} agent-addr {ip-address | ipv6-address} [number [max-datagram-size number]] | [max-datagram-size number] [vrf management]
```

To delete a configured collector, use the `no sflow collector {ip-address | ipv6-address} agent-addr {ipv4-address | ipv6-address} [number [max-datagram-size number]] | [max-datagram-size number] [vrf management]` command.

**Parameters**

- `sflow collector ip-address | ipv6-address`
  - Enter the IP address of the collector in dotted decimal format for IPv4 or x:x:x::x format for IPv6.
  - **NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

- `agent-addr ip-address | ipv6-address`
  - Enter the keyword `agent-addr` followed by the sFlow agent IP address in dotted decimal format for IPv4 or x:x:x::x format for IPv6.
  - **NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

- `number`
  - (OPTIONAL) Enter the user datagram protocol (UDP) port number. The range is from 0 to 65535. The default is 6343.

- `max-datagram-size number`
  - (OPTIONAL) Enter the keyword `max-datagram-size` then the size number in bytes. The range is from 400 to 1500. The default is 1400.

- `vrf management`
  - (OPTIONAL) Enter the keyword `vrf` followed by the keyword `management` to configure the collector device corresponding to the default VRF and the management VRF respectively.

**Defaults**

Not configured.

**Command Modes**

- Configuration

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>

**Usage Information**

You can configure up to two sFlow collectors (IPv4 or IPv6). If two collectors are configured, traffic samples are sent to both.

The sFlow agent address is carried in a field in SFlow packets and is used by the collector to identify the sFlow agent.

In sFlow, the agent address is a single invariant IPv4 or IPv6 address used to identify the agent to the collector. It is usually assigned the address of a loopback interface on the agent, which provides invariance. The agent address is carried as a field in the payload of the sFlow packets.

As part of the sFlow-MIB, if the SNMP request originates from a configured collector, Dell Networking OS returns the corresponding configured agent IP in the MIB requests. Dell Networking OS checks to ensure that two entries are not configured for the same collector IP with a different agent IP. Should that happen, Dell Networking OS generates the following error: %Error: Different agent-addr attempted for an existing collector.

**Example**

```
Dell(conf)# sflow collector 10.1.1.25 agent-addr 10.1.1.10 vrf management
```

## sflow enable (Global)

Enable sFlow globally.

**Syntax**

```
sflow enable
```

To disable sFlow, use the `no sflow enable` command.

**Defaults**

Disabled.

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.
sFlow is disabled by default. In addition to this command, sFlow needs to be enable on individual interfaces where sFlow sampling is desired.

Related Commands

- `sflow ingress-enable` — enable sFlow on interfaces.

**sflow ingress-enable**

Enable sFlow ingress on interfaces.

**Syntax**

```
sflow ingress-enable
```

To disable sFlow, use the `no sflow ingress enable` command.

**Defaults**

Disabled.

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version**

- 9.10(0.0) Introduced on the S3148.
- 9.8(2.0) Introduced on the S3100 series.
- 9.8(1.0) Introduced on the Z9100-ON.
- 9.8(0.0P5) Introduced on the S4048-ON.
- 9.8(0.0P2) Introduced on the S3048-ON.
- 9.7(0.0) Introduced on the S6000-ON.
- 9.2(1.0) Introduced on the Z9500.
- 9.0.2.0 Introduced on the S6000.
- 8.3.19.0 Introduced on the S4820T.
- 8.3.11.1 Introduced on the S4810.
- 8.3.7.0 Introduced on the S4810.
- 8.2.1.0 Introduced S-Series Stacking.
- 8.1.1.0 Introduced on the E-Series.
- 7.7.1.0 Introduced on the S-Series.
- 7.6.1.0 Introduced on the C-Series.
- 6.2.1.1 Introduced on the E-Series.
Version | Description
---|---
9.8(0.0P2) | Introduced on the S3048-ON.
9.7(0.0) | Introduced on the S6000-ON.
9.7(0.0) | Introduced on the S-Series, Z-Series, and MXL switch.
9.2(1.0) | Introduced on the Z9500.

Usage Information

When you enable ingress sFlow on an interface, flow sampling is done on any incoming traffic.

**NOTE:** After a physical port is a member of a LAG, it inherits the sFlow configuration from the LAG port.

Related Commands

- `sflow enable (Global)` — turn sFlow globally.

`sflow extended-switch enable`  

Enable packing information on a switch only.

**Syntax**

```
sflow extended-switch enable
```

To disable packing information, use the `no sflow extended-switch [enable]` command.

**Parameters**

- `enable` Enter the keyword `enable` to enable global extended information.

**Defaults**

Disabled.

**Command Modes**

CONFIGURATION

**Command History**

</table>
### sFlow max-header-size extended

Set the maximum header size of a packet to 256 bytes.

**Syntax**

```
show sflow max-header-size extended
```

To reset the maximum header size of a packet, use the `no show sflow max-header-size extended` command.

**Parameters**

- `extended` Enter the keyword `extended` to copy 256 bytes from the sample packets to sFlow datagram.

**Defaults**

128 bytes

**Command Modes**

**Example**

```
Dell(conf)# show sflow max-header-size extended
```
sflow polling-interval (Global)

Set the sFlow polling interval at a global level.

Syntax

```
sflow polling-interval interval value
```

To return to the default, use the `no sflow polling-interval interval` command.

Parameters

```
interval value
```
Enter the interval value in seconds. The range is from 15 to 86400 seconds. The default is 20 seconds.

Defaults

20 seconds

Usage Information

The polling interval for an interface is the maximum number of seconds between successive samples of counters sent to the collector. This command changes the global default counter polling (20 seconds) interval. You can configure an interface to use a different polling interval.

Related Commands

-  `sflow polling-interval (Interface)`: sets the polling interval for an interface.
### sflow polling-interval (Interface)

Set the sFlow polling interval at an interface (overrides the global-level setting.)

**Syntax**

```
sflow polling-interval interval value
```

To return to the default, use the `no sflow polling-interval interval` command.

**Parameters**

- `interval value` Enter the interval value in seconds. The range is from 15 to 86400 seconds. The default is the global counter polling interval.

**Defaults**

The same value as the current global default counter polling interval.

**Command Modes**

INTERFACE

**Command History**

</tr>
</tbody>
</table>

**Usage Information**

This command sets the counter polling interval for an interface.

**Related Commands**

- `sflow polling-interval (Global)` — globally sets the polling interval.
sflow sample-rate (Global)

Change the global default sampling rate.

Syntax

sflow sample-rate value

To return to the default sampling rate, use the no sflow sample-rate command.

Parameters

value

Enter the sampling rate value. For the C-Series and S-Series, the range is from 256 to 8388608 packets. Enter values in powers of 2 only; for example, 4096, 8192, 16384, and so on. The default is 32768 packets.

Defaults

32768 packets

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description

9.10(0.0)  Introduced on the S3148.

9.8(2.0)  Introduced on the S3100 series.

9.8(1.0)  Introduced on the Z9100-ON.

9.8(0.0P5)  Introduced on the S4048-ON.

9.8(0.0P2)  Introduced on the S3048-ON.

9.7(0.0)  Introduced on the S6000-ON.

9.2(1.0)  Introduced on the Z9500.

9.0.2.0  Introduced on the S6000.

8.3.19.0  Introduced on the S4820T.

8.3.11.1  Introduced on the Z9000.

8.3.7.0  Introduced on the S4810.

8.2.1.0  Introduced on S-Series Stacking.

8.1.1.0  Introduced on the E-Series.

7.7.1.0  Introduced on the S-Series.

7.6.1.0  Introduced on the C-Series.

7.4.1.0  Introduced on the E-Series.

Usage Information

Sample-rate is the average number of packets skipped before the sample is taken. This command changes the global default sampling rate. You can configure an interface to use a different sampling rate than the global sampling rate. If the value entered is not a correct power of 2, the command generates an error message with the previous and next power of 2 value. Select one of these two packet numbers and re-enter the command.

Related Commands

- sflow sample-rate (Interface) — changes the interface sampling rate.
sflow sample-rate (Interface)

Change the interface default sampling rate.

Syntax

sflow sample-rate value

To return to the default sampling rate, use the no sflow sample-rate command.

Parameters

value

Enter the sampling rate value. For the C-Series and S-Series, the range is from 256 to 8388608 packets. Enter values in powers of 2 only; for example, 4096, 8192, 16384, etc. The default is 32768 packets.

Defaults

The Global default sampling.

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description

9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100-ON.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.2(1.0) Introduced on the Z9500.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
8.3.7.0 Introduced on the S4810.
8.2.1.0 Introduced on S-Series Stacking.
8.1.1.0 Introduced on the E-Series.
7.7.1.0 Introduced on the S-Series.
7.6.1.0 Introduced on the C-Series.
6.2.1.1 Introduced on the E-Series.

Usage Information

This command changes the sampling rate for an interface. By default, the sampling rate of an interface is set to the same value as the current global default sampling rate. If the value entered is not a correct power of 2, the command generates an error message with the previous and next power-of-2 value. Select one of these two number and re-enter the command.

Related Commands

- sflow sample-rate (Global) — changes the sampling rate globally.
show sflow

Display the current sFlow configuration.

Syntax

show sflow [interface]

Parameters

interface  (OPTIONAL) Enter the following keywords and slot/port or number information:

- For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a Loopback interface, enter the keyword loopback then a number from 0 to 16383.
- For the Management interface on the, enter the keyword ManagementEthernet then the slot/port information.
- For a port-channel interface, enter the keywords port-channel then the port-channel ID.

Command Modes

- EXEC
- EXEC Privilege

Command History

Usage Information

The dropEvent counter (sFlow samples dropped due to sub-sampling) shown in the following example always displays a value of zero.

Example

Dell#show sflow
sFlow services are enabled
Egress Management Interface sFlow services are disabled
Global default sampling rate: 32768
Global default counter polling interval: 20
Global default extended maximum header size: 128 bytes
Global extended information enabled: none
1 collectors configured
Collector IP addr: 100.1.1.1, Agent IP addr: 1.1.1.2, UDP port: 6343 VRF: Default
0 UDP packets exported
0 UDP packets dropped
0 sFlow samples collected

stack-unit 1 Port set 1
  Gi 1/1: configured rate 16384, actual rate 16384 <<< sampling rate based on line speed if global sampling rate is default
Dell#
Simple Network Management Protocol (SNMP) and Syslog

This section contains commands to configure and monitor the simple network management protocol (SNMP) v1/v2/v3 and Syslog. Both features are supported on Dell Networking OS.

Topics:

- SNMP Commands
- Syslog Commands

SNMP Commands

The following SNMP commands are available in the Dell Networking OS.

The simple network management protocol (SNMP) is used to communicate management information between the network management stations and the agents in the network elements. Dell Networking OS supports SNMP versions 1, 2c, and 3, supporting both read-only and read-write modes. Dell Networking OS sends SNMP traps, which are messages informing an SNMP management system about the network. Dell Networking OS supports up to 16 SNMP trap receivers.

Important Points to Remember

- Typically, 5-second timeout and 3-second retry values on an SNMP server are sufficient for both LAN and WAN applications. If you experience a timeout with these values, the recommended best practice on Dell Networking switches (to accommodate their high port density) is to increase the timeout and retry values on your SNMP server to the following:
  - SNMP Timeout — greater than 3 seconds.
  - SNMP Retry count — greater than 2 seconds.
- If you want to query an E-Series switch using SNMP v1/v2/v3 with an IPv6 address, configure the IPv6 address on a non-management port on the switch.
- If you want to send SNMP v1/v2/v3 traps from an E-Series using an IPv6 address, use a non-management port.
- SNMP v3 informs are not currently supported with IPv6 addresses.
- If you are using access control lists (ACLs) in an SNMP v3 configuration, group ACL overrides user ACL if the user is part of that group.
- SNMP operations are not supported on a virtual local area network (VLAN).

show snmp

Display the status of SNMP network elements.

Syntax

```
show snmp
```

Command Modes

- EXEC
- EXEC Privilege
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
--- | ---
9.10(0.0) | Introduced on the S3148.
9.10(0.0) | Introduced on the S6100-ON.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100-ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.7(0.0) | Introduced on the S6000-ON.
9.2(1.0) | Introduced on the Z9500.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
7.6.1.0 | Introduced on the S-Series.
7.5.1.0 | Introduced on the C-Series.

**E-Series legacy command**

**Example**

```
Dell# show snmp
 32685 SNMP packets input
   0 Bad SNMP version errors
   0 Unknown community name
   0 Illegal operation for community name supplied
   0 Encoding errors
 96988 Number of requested variables
   0 Number of altered variables
 31681 Get-request PDUs
  968 Get-next PDUs
   0 Set-request PDUs
 61727 SNMP packets output
   0 Too big errors (Maximum packet size 1500)
   9 No such name errors
   0 Bad values errors
   0 General errors
 32649 Response PDUs
 29078 Trap PDUs
Dell#
```

**Related Commands**

- `snmp-server community` — enables the SNMP and set community string.
**show snmp engineID**

Display the identification of the local SNMP engine and all remote engines that are configured on the router.

**Syntax**

```plaintext
show snmp engineID
```

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

E-Series legacy command

Usage Information

The following Example displays a group named ngroup. The ngroup has a security model of version 3 (v3) with authentication (auth), the read and notify name is nview with no write view name specified, and finally the row status is active.

Example

```
Dell# show snmp group
groupname: v1v2creadg     security model: v1
readview : v1v2cdefault   writeview: no write view specified
notifyview: v1v2cdefault  context: no context specified
row status: active
Dell#
```

Related Commands

- `snmp-server group` — configures an SNMP server group.

show snmp user

Display the information configured on each SNMP user name.

Syntax

```
show snmp user
```

Command Modes

- EXEC
snmp ifmib ifalias long

Display the entire description string through the Interface MIB, which would be truncated otherwise to 63 characters.

**Syntax**

```
snmp ifmib ifalias long
```

**Defaults**

Interface description truncated beyond 63 characters.

**Command Modes**

`CONFIGURATION`

**Command History**

E-Series legacy command
### snmp-server community

Configure a new community string access for SNMPv1 v2 and v3.

#### Syntax

```
snmp-server community community-name {ro | rw} [ipv6 ipv6-access-list-name [ipv6 ipv6-access-list-name | access-list-name | security-name name] | security-name name [ipv6 ipv6-access-list-name | access-list-name | security-name name] | access-list-name [ipv6 ipv6-access-list-name | access-list-name | security-name name]]
```

To remove access to a community, use the `no snmp-server community community-string {ro | rw} [security-name name [access-list-name | ipv6 access-list-name [access-list-name ipv6 access-list-name]]]` command.

#### Parameters

- **community-name**: Enter a text string (up to 20 characters long) to act as a password for SNMP.
Enter the keyword `ro` to specify read-only permission.

Enter the keyword `rw` to specify read-write permission.

**ipv6 access-list-name**

(Optional) Enter the keyword `ipv6` then an IPv6 ACL name (a string up to 16 characters long).

**security-name**

(Optional) Enter the keywords `security-name` then the security name as defined by the community MIB.

**access-list-name**

(Optional) Enter a standard IPv4 access list name (a string up to 16 characters long).

**Defaults**

none

</tr>
</tbody>
</table>

**Usage Information**

The following example configures a community named `public` that is mapped to the security named `guestuser` with Read Only (ro) permissions.

The `security-name` parameter maps the community string to an SNMPv3 user/security name as defined by the community MIB.

If a community string is configured without a `security-name` (for example, `snmp-server community public ro`), the community is mapped to a default `security-name/group`:

- `v1v2creadu` / `v1v2creadg` — maps to a community with ro (read-only) permissions.
- `v1v2cwriteu` / `v1v2cwriteg` — maps to a community with rw (read-write) permissions.

The `community-name` parameter indexes this command.
If you do not configure the `snmp-server community` command, you cannot query SNMP data. Only Standard IPv4 ACL and IPv6 ACL is supported in the optional `access-list-name`.

The command options `ipv6`, `security-name`, and `access-list-name` are recursive. In other words, each option can, in turn, accept any of the three options as a sub-option, and each of those sub-options can accept any of the three sub-options as a sub-option, and so forth. The second Example shows the creation of a standard IPv4 ACL called `snmp-ro-acl` and then assigning it to the SNMP community `guest`.

**NOTE:** For IPv6 ACLs, only IPv6 and UDP types are valid for SNMP; TCP and ICMP rules are not valid for SNMP. In IPv6 ACLs, port rules are not valid for SNMP.

**Example**
```
Dell# config
Dell(conf)# snmp-server community public ro
Dell(conf)# snmp-server community guest ro security-name guestuser
Dell(conf)#
```

**Example**
```
Dell(conf)# ip access-list standard snmp-ro-acl
Dell(config-std-nacl)#seq 5 permit host 10.10.10.224
Dell(config-std-nacl)#seq 10 deny any count
!
Dell(conf)# snmp-server community guest ro snmp-ro-acl
Dell(conf)#
```

**Related Commands**
- `ip access-list standard` — names (or selects) a standard access list to filter based on IP address.
- `ipv6 access-list` — configures an access list based on IPv6 addresses or protocols.
- `show running-config` — displays the current SNMP configuration and defaults.

---

**snmp-server contact**

Configure contact information for troubleshooting this SNMP node.

**Syntax**
```
snmp-server contact text
```

To delete the SNMP server contact information, use the `no snmp-server contact` command.

**Parameters**
- `text` Enter an alphanumeric text string, up to 55 characters long.

**Defaults**
none

**Command Modes**
CONFIGURATION

</tbody>
</table>
### snmp-server enable traps

Enable SNMP traps.

**Syntax**

```
snmp-server enable traps [notification-type] [notification-option]
```

To disable traps, use the `no snmp-server enable traps [notification-type] [notification-option]` command.

**Parameters**

- **notification-type**
  
  Enter the type of notification from the following list:
  
  - bgp — Notification of changes in the BGP process.
  - config — Notification of changes to the startup or running configuration.
  - ecfm — Notification of changes to ECFM.
  - ecmp — Enable an ECMP trap to notify of ECMP or link bundle traffic imbalances.
  - envmon — For Dell Networking device notifications when an environmental threshold is exceeded.
  - isis — Notification of intermediate service traps.
  - lacp — Notification of changes.
  - snmp — Notification of RFC 1157 traps.
  - stp — Notification of a state change in the spanning tree protocol (RFC 1493).
  - vlt — Notification of virtual link trunking.
  - vrrp — Notification of a state change in a VRRP group.
  - xstp — Notification of a state change in MSTP (802.1s), RSTP (802.1w), and PVST+

- **notification-option**
  
  For the `envmon` notification-type, enter one of the following optional parameters:
  
  - cam-utilization
  - fan
  - supply
• temperature
For the snmp notification-type, enter one of the following optional parameters:
• authentication
• coldstart
• linkdown
• linkup
• syslog-reachable
• syslog-unreachable

Defaults
Not enabled.

</tbody>
</table>

Usage Information
Dell Networking OS supports up to 16 SNMP trap receivers.
If you do not configure this command, traps that controlled by this command are not sent. If you do not specify a notification-type and notification-option, all traps are enabled.

Related Commands
- `snmp-server community` — enables SNMP and sets the community string.

### snmp-server engineID

Configure the name for both the local and remote SNMP engines on the router.

**Syntax**

```plaintext
snmp-server engineID [local engineID] [remote ip-address vrf vrf-name udp-port port-number engineID]
To return to the default, use the no snmp-server engineID [local engineID] [remote ip-address vrf vrf-name udp-port port-number engineID] command.
```

**Parameters**

- `local engineID` Enter the keyword `local` followed by the engine ID number that identifies the copy of the SNMP on the local device.
  
  Format (as specified in RFC 3411): 12 octets.
  
  - The first four octets are set to the private enterprise number.
  
  - The remaining eight octets are the MAC address of the chassis.

- `remote ip-address` Enter the keyword `remote` followed by the IP address that identifies the copy of the SNMP on the remote device.

- `vrf vrf-name` Enter the keyword `vrf` followed by the name of the VRF that is used to reach the device.

  **NOTE:** Use this attribute to specify the VRF that is used by the SNMP engine to reach the device. If no VRF is specified, then the default VRF is used.

- `udp-port port-number engineID` Enter the keywords `udp-port` followed by the user datagram protocol (UDP) port number on the remote device. The range is from 0 to 65535. The default is 162.

**Defaults**

As above.

**Command Modes**

CONFIGURATION

**Command History**

</table>
### Version Description

**9.4.(0.0)** Added support for VRF.

**9.2(1.0)** Introduced on the Z9500.

**9.0.2.0** Introduced on the S6000.

**8.3.19.0** Introduced on the S4820T.

**8.3.11.1** Introduced on the Z9000.

**8.3.7.0** Introduced on the S4810.

**7.6.1.0** Introduced on the S-Series.

**7.5.1.0** Introduced on the C-Series.

### E-Series legacy command

**Usage Information**

Changing the value of the SNMP Engine ID has important side effects. A user’s password (entered on the command line) is converted to a message digest algorithm (MD5) or secure hash algorithm (SHA) security digest. This digest is based on both the password and the local Engine ID. The command line password is then destroyed, as required by RFC 2274. Because of this deletion, if the local value of the Engine ID changes, the security digests of SNMPv3 users is invalid and the users will have to be reconfigured.

For the remote Engine ID, the host IP and UDP port are the indexes to the command that are matched to either overwrite or remove the configuration.

### Related Commands

- `show snmp engineID` — displays the SNMP engine and all the remote engines that are configured on the router.
- `show running-config snmp` — displays the SNMP running configuration.

### snmp-server group

Configure a new SNMP group or a table that maps SNMP users to SNMP views.

**Syntax**

```plaintext
snmp-server group {group_name {1 | 2c | 3 [auth | noauth | priv]}} [read name] [write name] [notify name] [access access-list-name | ipv6 access-list-name | access-list-name ipv6 access-list-name]
```

To remove a specified group, use the `no snmp-server group {group_name {v1 | v2c | v3 [auth | noauth | priv]}} [read name] [write name] [notify name] [access access-list-name | ipv6 access-list-name | access-list-name ipv6 access-list-name]` command.

**Parameters**

- `group_name` Enter a text string (up to 20 characters long) as the name of the group. The following groups are created for mapping to read/write community/security-names (defaults):
  - `v1v2creadg` — maps to a community/security-name with ro permissions.
  - `v1v2cwriteg` — maps to a community/security-name rw permissions.

- `1 | 2c | 3` (OPTIONAL) Enter the security model version number (1, 2c, or 3):
  - 1 is the least secure version.
• 3 is the most secure of the security modes.
• 2c allows transmission of informs and counter 64, which allows for integers twice the width of what is normally allowed.

The default is 1.

auth (OPTIONAL) Enter the keyword auth to specify authentication of a packet without encryption.

noauth (OPTIONAL) Enter the keyword noauth to specify no authentication of a packet.

priv (OPTIONAL) Enter the keyword priv to specify both authentication and then scrambling of the packet.

read name (OPTIONAL) Enter the keyword read then a name (a string of up to 20 characters long) as the read view name. The default is GlobalView and is assumed to be every object belonging to the internet (1.3.6.1) OID space.

write name (OPTIONAL) Enter the keyword write then a name (a string of up to 20 characters long) as the write view name.

notify name (OPTIONAL) Enter the keyword notify then a name (a string of up to 20 characters long) as the notify view name.

access access-list-name (Optional) Enter the standard IPv4 access list name (a string up to 16 characters long).

ipv6 access-list-name (Optional) Enter the keyword ipv6 then the IPv6 access list name (a string up to 16 characters long).

access-list-name ipv6 access-list-name (Optional) Enter both an IPv4 and IPv6 access list name.

Defaults
As above.

E-Series legacy command

### Usage Information

The following example specifies the group named `harig` as a version 3 user requiring both authentication and encryption and read access limited to the read named `rview`.

```
NOTE: The number of configurable groups is limited to 16 groups.
```

```
Example

Dell# conf
Dell(conf)# snmp-server group harig 3 priv read rview
Dell#
```

### Related Commands

- `show snmp group` — displays the group name, security model, view status, and storage type of each group.
- `show running-config` — displays the SNMP running configuration.

### snmp-server host

Configure the recipient of an SNMP trap operation.

**Syntax**

```
snmp-server host ip-address | ipv6-address [vrf vrf-name] traps | informs [version 1 | 2c | 3] [auth | no auth | priv] [community-string] [udp-port port-number] [notification-type]
```

To remove the SNMP host, use the `no snmp-server host ip-address | ipv6-address [vrf vrf-name] traps | informs [version 1 | 2c | 3] [auth | noauth | priv] [community-string] [udp-port number] [notification-type]` command.

**Parameters**

- `ip-address`  
Enter the keyword host then the IP address of the host (configurable hosts is limited to 16).

- `ipv6-address`  
Enter the keyword host then the IPv6 address of the host in the x:x:x:x::x format.

  **NOTE:** The :: notation specifies successive hexadecimal fields of zero.

- `vrf vrf-name`  
Enter the keyword vrf and then the name of the VRF that the SNMP server uses to connect to the host.

  **NOTE:** You can use this attribute to inform the SNMP engine about the vrf instance to be used to reach the corresponding remote host to send Trap or Inform message. If no VRF is specified, then the default VRF is used.

- `traps`  
(Optional) Enter the keyword `traps` to send trap notifications to the specified host. The default is `traps`. 
informs

(Optional) Enter the keyword informs to send inform notifications to the specified host. The default is traps.

version 1 | 2c | 3

(Optional) Enter the keyword version to specify the security model then the security model version number 1, 2c, or 3:

- Version 1 is the least secure version.
- Version 3 is the most secure of the security modes.
- Version 2c allows transmission of informs and counter 64, which allows for integers twice the width of what is normally allowed.

The default is version 1.

auth

(Optional) Enter the keyword auth to specify authentication of a packet without encryption.

noauth

(Optional) Enter the keyword noauth to specify no authentication of a packet.

priv

(Optional) Enter the keyword priv to specify both authentication and then scrambling of the packet.

community-string

Enter a text string (up to 20 characters long) as the name of the SNMP community.

NOTE: For version 1 and version 2c security models, this string represents the name of the SNMP community. The string can be set using this command; however, Dell Networking OS recommends setting the community string using the snmp-server community command before executing this command. For version 3 security model, this string is the USM user security name.

udp-port port-number

(Optional) Enter the keywords udp-port followed by the port number of the remote host to use. The range is from 0 to 65535. The default is 162.

notification-type

(Optional) Enter one of the following keywords for the type of trap to be sent to the host:

- bgp — Enable BGP state change traps.
- ecfm — Enable ECFM state change traps.
- entity — Enable entity change traps.
- envmon — Enable SNMP environmental monitor traps.
- eoam — Enable EOAM state change traps
- ets — Enable ets traps
- fips — Enable FIP Snooping state change traps
- lacp — Enable LACP state change traps.
- isis — Enable ISIS adjacency change traps
- pfc — Enable pfc traps
- snmp — Enable SNMP trap
- stp — Enable 802.1d state change traps
- vlt — Enable VLT traps
- vrrp — Enable VRRP state change traps
- xstp — Enable 802.1s, 802.1w, and PVST+ state change traps

The default is all trap types are sent to host.
Defaults
As above.

<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

Usage Information
To configure the router to send SNMP notifications, enter at least one snmp-server host command. If you enter the command with no keywords, all trap types are enabled for the host. If you do not enter an snmp-server host command, no notifications are sent.

In order to enable multiple hosts, issue a separate snmp-server host command for each host. You can specify multiple notification types in the command for each host.

When multiple snmp-server host commands are given for the same host and type of notification (trap or inform), each succeeding command overwrites the previous command. Only the last snmp-server host command will be in effect. For example, if you enter an snmp-server host inform command for a host and then enter another snmp-server host inform command for the same host, the second command replaces the first command.

The snmp-server host command is used with the snmp-server enable command. Use the snmp-server enable command to specify which SNMP notifications are sent globally. For a host to receive most notifications, at least one snmp-server enable command and the snmp-server host command for that host must be enabled.
NOTE: For v1 / v2c trap configuration, if the community-string is not defined using the `snmp-server community` command prior to using this command, the default form of the `snmp-server community` command automatically is configured with the community-name the same as specified in the `snmp-server host` command.

### Configuring Informs

To send an inform, use the following steps:

1. Configure a remote engine ID.
2. Configure a remote user.
3. Configure a group for this user with access rights.
4. Enable traps.
5. Configure a host to receive informs.

### Related Commands

- `snmp-server enable traps` — enables SNMP traps.
- `snmp-server community` — configures a new community SNMPv1 or SNMPv2c.

## snmp-server location

Configure the location of the SNMP server.

**Syntax**

```
snmp-server location text
```

To delete the SNMP location, use the `no snmp-server location` command.

**Parameters**

- `text`  
  Enter an alpha-numeric text string, up to 55 characters long.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Command History**

### snmp-server packetsize

Set the largest SNMP packet size permitted. When the SNMP server is receiving a request or generating a reply, use the `snmp-server packetsize` global configuration command.

#### Syntax

```
snmp-server packetsize byte-count
```

#### Parameters

- **byte-count**: Enter one of the following values 8, 16, 24 or 32. Packet sizes are 8000 bytes, 16000 bytes, 32000 bytes, and 64000 bytes.

#### Defaults

8

#### Command Modes

CONFIGURATION

#### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

#### Version Description

- **9.10(0.0)**
  - Introduced on the S3148.

- **9.10(0.0)**
  - Introduced on the S6100-ON.

- **9.8(2.0)**
  -Introduced on the S3100 series.

- **9.8(1.0)**
  - Introduced on the Z9100-ON.

- **9.8(0.0P5)**
  - Introduced on the S4048-ON.

- **9.8(0.0P2)**
  - Introduced on the S3048-ON.

- **9.7(0.0)**
  - Introduced on the S6000-ON.

- **9.2(1.0)**
  - Introduced on the Z9500.

- **9.0.2.0**
  - Introduced on the S6000.

- **8.3.19.0**
  - Introduced on the S4820T.

- **8.3.11.1**
  - Introduced on the Z9000.

- **8.3.7.0**
  - Introduced on the S4810.

- **7.6.1.0**
  - Introduced on the S-Series.

- **7.5.1.0**
  - Introduced on the C-Series.

**E-Series legacy command**
**snmp-server trap-source**

Configure a specific interface as the source for SNMP traffic.

**Syntax**

```
snmp-server trap-source interface
```

To disable sending traps out a specific interface, use the `no snmp trap-source` command.

**Parameters**

- `interface`  
  Enter the following keywords and slot/port or number information:
  
  - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
  - For a port channel interface, enter the keywords `port-channel` then a number.
  - For a Null interface, enter the keyword `null` then the Null interface number.
  - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults**

The IP address assigned to the management interface is the default.

**Command Modes**

`CONFIGURATION`

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant `Dell Networking OS Command Line Reference Guide`.

</tbody>
</table>
Version Description
E-Series legacy command

Usage Information
To enable this `snmp-server trap-source` command, configure an IP address on the interface and enable the interface configured as an SNMP trap source.

Related Commands
- `snmp-server community` — sets the community string.

**snmp-server user**

Configure a new user to an SNMP group.

Syntax

```
snmp-server user name {group_name remote ip-address vrf vrf-name udp-port port-number} [1 | 2c | 3] [encrypted] [auth {md5 | sha} auth-password] [priv {des56 | aes128} priv password] [access access-list-name | ipv6 access-list-name | access-list-name ipv6 access-list-name]
```

To remove a user from the SNMP group, use the `no snmp-server user name {group_name remote ip-address udp-port port-number} [1 | 2c | 3] [encrypted] [auth {md5 | sha} auth-password] [priv {des56 | aes128} priv password] [access access-list-name | ipv6 access-list-name | access-list-name ipv6 access-list-name]` command.

**Parameters**

- `name` Enter the name of the user (not to exceed 20 characters), on the host that connects to the agent.
- `group_name` Enter a text string (up to 20 characters long) as the name of the group. The following groups are created for mapping to read/write community/security-names (defaults):
  - `v1v2creadu` — maps to a community with `ro` permissions.
  - `v1v2cwriteu` — maps to a community `rw` permissions.
- `remote ip-address` Enter the keywords `udp-port` then the user datagram protocol (UDP) port number on the remote device. The range is from 0 to 65535. The default is 162.
- `vrf vrf-name` Enter the keywords `vrf` and then the name of the VRF this is used to connect to the SNMP server.
  
  1 | 2c | 3

  (OPTIONAL) Enter the security model version number (1, 2c, or 3):
  - 1 is the least secure version.
  - 3 is the most secure of the security modes.
  - 2c allows transmission of informs and counter 64, which allows for integers twice the width of what is normally allowed.

  The default is 1.
encrypted  (OPTIONAL) Enter the keyword encrypted to specify the password appear in encrypted format (a series of digits, masking the true characters of the string).

auth  (OPTIONAL) Enter the keyword auth to specify authentication of a packet without encryption.

md5 | sha  (OPTIONAL) Enter the keyword md5 or sha to designate the authentication level.
  - md5  —  Message Digest Algorithm
  - sha  —  Secure Hash Algorithm

auth-password  (OPTIONAL) Enter a text string (up to 20 characters long) password that enables the agent to receive packets from the host. Minimum: eight characters long.

priv  (OPTIONAL) Enter the keywords priv to initiate a privacy authentication level setting.

des56 | aes128  (OPTIONAL) Enter the keyword des56 or aes128 to specify the encryption mode.
  - aes128  —  Use 128 bit AES algorithm in CFB mode for encryption.
  - des56  —  Use 56 bit DES algorithm in CBC mode for encryption.

priv password  (OPTIONAL) Enter a text string (up to 20 characters long) password that enables the host to encrypt the contents of the message it sends to the agent. Minimum: eight characters long.

access access-list-name  (Optional) Enter the standard IPv4 access list name (a string up to 16 characters long).

ipv6 access-list-name  (Optional) Enter the keyword ipv6 then the IPv6 access list name (a string up to 16 characters long).

access-list-name  ipv6 access-list-name  (Optional) Enter both an IPv4 and IPv6 access list name.

</table>

9.6(0.0)  Added aes 128 encryption algorithm parameter.
9.4(0.0)  Added support for VRF.
Version | Description
---|---
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
7.6.1.0 | Introduced on the S-Series.

Usage Information

NOTE: For IPv6 ACLs, only IPv6 and UDP types are valid for SNMP. TCP and ICMP rules are not valid for SNMP. In IPv6 ACLs port rules are not valid for SNMP.

No default values exist for authentication or privacy algorithms and no default password exists. If you forget a password, you cannot recover it; the user must be reconfigured. You can specify either a plain-text password or an encrypted cypher-text password. In either case, the password is stored in the configuration in an encrypted form and displayed as encrypted in the show running-config command.

If you have an encrypted password, you can specify the encrypted string instead of the plain-text password. The following command is an Example of how to specify the command with an encrypted string.

NOTE: The number of configurable users is limited to 16.

Example

Dell# snmp-server user privuser v3group v3 encrypted auth md5 9fc53d9d908118b2804fe80e3ba8763d priv des56 d0452401a8c3ce42804fe80e3ba8763d

Usage Information

The following command is an example of how to enter a plain-text password as the string authpasswd for user authuser of group v3group.

Example

Dell# conf
Dell(conf)# snmp-server user authuser v3group v3 auth md5 authpasswd

Usage Information

The following command configures a remote user named n3user with a v3 security model and a security level of authNOPriv.

Example

Dell# conf
Dell(conf)# snmp-server user n3user ngroup remote 172.31.1.3 udp-port 5009 3 auth md5 authpasswd

Related Commands

- `show snmp user` — displays the information configured on each SNMP user name.

**snmp-server user (for AES128-CFB Encryption)**

Specify that AES128-CFB encryption algorithm needs to be used for transmission of SNMP information. The Advanced Encryption Standard (AES) Cipher Feedback (CFB) 128-bit encryption algorithm is in compliance with RFC 3826. RFCs for SNMPv3 define two authentication hash algorithms, namely, HMAC-MD5-96 and HMAC-SHA1-96. These are the full forms or editions of the truncated versions, namely, HMAC-MD5 and HMAC-SHA1 authentication algorithms.
**Syntax**

```
snmp-server user name {group_name remote ip-address udp-port port-number} [1 | 2c | 3] [encrypted] [auth {md5 | sha} auth-password] [priv {des56 | aes128-cfb} priv-password] [access access-list-name | ipv6 access-list-name] [ipv6 access-list-name]
```

To remove a user from the SNMP group, use the `no snmp-server user name {group_name remote ip-address udp-port port-number} [1 | 2c | 3] [encrypted] [auth {md5 | sha} auth-password] [priv {des56 | aes128-cfb} priv-password] [access access-list-name | ipv6 access-list-name] [ipv6 access-list-name]` command.

**Parameters**
- **auth-password** (OPTIONAL) Enter a text string (up to 20 characters long) password that enables the agent to receive packets from the host and to send packets to the host. Minimum: eight characters long.
- **aes128** (OPTIONAL) Enter the keyword `aes128` to initiate the AES128-CFB encryption algorithm for transmission of SNMP packets.
- **priv-password** (OPTIONAL) Enter a text string (up to 20 characters long) password that enables the host to encrypt the contents of the message it sends to the agent and to decrypt the contents of the message it receives from the agent. Minimum: eight characters long.

**Defaults**
If no authentication or privacy option is configured, then the messages are exchanged (attempted anyway) without any authentication or encryption.

**Command Modes**
CONFIGURATION

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.10(0.0)</td>

<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Added support for the AES128-CFB encryption algorithm on the S4820T, S4810, S6000 and Z-Series platforms</td>
</tr>
</tbody>
</table>

**Usage Information**
To enable robust, effective protection and security for SNMP packets transferred between the server and the client, you can use the `snmp-server user username groupname 3 auth` `authentication-type auth-password priv aes128 priv-password` to specify that AES128-CFB encryption algorithm needs to be used.

You cannot modify the FIPS mode if SNMPv3 users are already configured and present in the system. An error message is displayed if you attempt to change the FIPS mode by using the `fips mode enable` command in
Global Configuration mode. You can enable or disable FIPS mode only if SNMPv3 users are not previously set up. Otherwise, you must remove the previously configured users before you change the FIPS mode.

Example

```
Dell# snmp-server user privuser v3group v3 encrypted auth md5 9fc53d9d908118b2804fe80e3ba8763d priv aes128 d0452401a8c3ce42804fe80e3ba8763d
```

Related Commands

- `show snmp user` — Displays the information configured on each SNMP user name.

**snmp-server view**

Configure an SNMPv3 view.

**Syntax**

```
snmp-server view view-name oid-tree {included | excluded}
```

To remove an SNMPv3 view, use the `no snmp-server view view-name oid-tree {included | excluded}` command.

**Parameters**

- **view-name**
  - Enter the name of the view (not to exceed 20 characters).
- **oid-tree**
  - Enter the OID sub tree for the view (not to exceed 20 characters).
- **included**
  - (OPTIONAL) Enter the keyword `included` to include the MIB family in the view.
- **excluded**
  - (OPTIONAL) Enter the keyword `excluded` to exclude the MIB family in the view.

**Defaults**

none

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant [Dell Networking OS Command Line Reference Guide](https://www.force10networks.com/support/documentation/f10os-docs/).

**Version** | **Description**
--- | ---
9.10(0.0) | Introduced on the S3148.
9.10(0.0) | Introduced on the S6100–ON.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100–ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.7(0.0) | Introduced on the S6000-ON.
9.2(1.0) | Introduced on the Z9500.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
7.6.1.0 | Introduced on the S-Series.
Version Description
7.5.1.0 Introduced on the C-Series.

Usage Information
The oid-tree variable is a full sub-tree starting from 1.3.6 and cannot specify the name of a sub-tree or a MIB.
The following Example configures a view named rview that allows access to all objects under 1.3.6.1.

Example
Dell# conf
Dell#(conf) snmp-server view rview 1.3.6.1 included

Related Commands
- show running-config snmp — displays the SNMP running configuration.

snmp-server vrf

Configures an SNMP agent to bind to a specific VRF.

Syntax
snmp-server vrf vrf-name

To undo the SNMP agent configuration, use the no snmp-server vrf vrf-name command.

Parameters
vrf vrf-name

Enter the keyword vrf and then the name of the VRF to associate an SNMP agent with that VRF.

Defaults
Not Enabled.

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.10(0.0) Introduced on the S3148.
9.10(0.0) Introduced on the S6100-ON.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100-ON.
9.8(0.0P6) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.5(0.1) Introduced on the Z9500.
9.4(0.0) Introduced on the S-Series and Z9000.

Usage Information
Use this command to bind an SNMP agent to a VRF. The SNMP agent processes the requests from the interfaces that belong to the specified VRF. If no VRF is specified, then the default VRF is used.
Related Commands

- `show snmp user` — display the information configured on each SNMP user name.

### snmp trap link-status

Enable the interface to send SNMP link traps, which indicate whether the interface is up or down.

**Syntax**

```plaintext
snmp trap link-status
```

To disable sending link trap messages, use the `no snmp trap link-status` command.

**Defaults**

Enabled.

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

E-Series legacy command

Related Commands

- `logging trap` — limit messages logged to the Syslog servers based on severity.

**logging**

Configure an IP address or host name of a Syslog server where logging messages are sent. Multiple logging servers of both IPv4 and/or IPv6 can be configured.

**Syntax**

```
logging {ip-address | ipv6-address | hostname} {{udp {port}} | {tcp {port}}} [vrf vrf-name]
```

To disable logging, use the `no logging` command.

**Parameters**

- `ip-address` Enter the IPv4 address in dotted decimal format.
- `ipv6-address` Enter the IPv6 address in the x:x:x:x::X format.
- `hostname` Enter the name of a host already configured and recognized by the switch.
- `udp` Enter the keyword udp to enable transmission of log message over UDP followed by port number. The default port is 514.

</tbody>
</table>

**E-Series legacy command**

**Usage Information**
Multiple logging servers of both IPv4 and/or IPv6 can be configured.

**Related Commands**
- [logging on] — enables the logging asynchronously to logging buffer, console, Syslog server, and terminal lines.
- [logging trap] — enables logging to the Syslog server based on severity.
logging buffered

Enable logging and specify which messages are logged to an internal buffer. By default, all messages are logged to the internal buffer.

Syntax

```
logging buffered [level] [size]
```

To return to the default values, use the `default logging buffered` command.

To disable logging stored to an internal buffer, use the `no logging buffered` command.

Parameters

- **level**: (OPTIONAL) Indicate a value from 0 to 7 or enter one of the following equivalent words: emergencies, alerts, critical, errors, warnings, notifications, informational, or debugging. The default is 7 or `debugging`.

- **size**: (OPTIONAL) Indicate the size, in bytes, of the logging buffer. The number of messages buffered depends on the size of each message. The range is from 40960 to 524288. The default is 40960 bytes.

Defaults

```
level = 7; size = 40960 bytes
```

Command Modes

- **CONFIGURATION**

Command History

<tr>
<td>E-Series legacy command</td>
<td></td>
</tr>
</tbody>
</table>
Usage Information
When you decrease the buffer size, all messages stored in the buffer are lost. Increasing the buffer size does not affect messages stored in the buffer.

Related Commands
- clear logging — clears the logging buffer.
- default logging buffered — returns the logging buffered parameters to the default setting.
- show logging — displays the logging setting and system messages in the internal buffer.

logging console

Specify which messages are logged to the console.

Syntax
logging console [level]

Parameters
level (OPTIONAL) Indicate a value from 0 to 7 or enter one of the following parameters: emergencies, alerts, critical, errors, warnings, notifications, informational, or debugging. The default is 7 or debugging.

Defaults
level = 7; size = debugging

Command Modes
CONFIGURATION

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.10(0.0) Introduced on the S3148.
9.10(0.0) Introduced on the S6100–ON.
9.8(2.0) Introduced on the S3100 series.

7.6.1.0 Introduced on the S-Series.
7.5.1.0 Introduced on the C-Series.
logging extended

Logs security and audit events to a system log server.

Syntax

logging extended

Defaults

none

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description

9.10(0.0) Introduced on the S3148.
9.10(0.0) Introduced on the S6100-ON.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100-ON.
9.8(0.0P6) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.5(0.1) Introduced on the Z9500.
9.5(0.0) Introduced on the S4810, S4820T, S6000, Z9000, and MXL.

Usage Information

This command is available with or without RBAC enabled. When RBAC is enabled you can restrict access to audit and security logs based on the CLI sessions’ user roles. If extended logging is disabled, you can only view system events, regardless of RBAC user role.

When you enabled RBAC and extended logging:

• Only the system administrator role can execute this command.
• The system administrator and system security administrator roles can view security events and system events.
• The system administrator role can view audit, security, and system events.
• The network administrator and network operator roles can view system events.

Examples

Dell(conf)#logging extended
Related Commands

- show logging auditlog — display the audit log.
- clear logging auditlog — clear the audit log.

logging facility

Configure the Syslog facility used for error messages sent to Syslog servers.

Syntax

logging facility [facility-type]

To return to the default values, use the no logging facility command.

Parameters

facility-type (OPTIONAL) Enter one of the following parameters:

- auth (authorization system)
- cron (Cron/at facility)
- deamon (system deamons)
- kern (kernel)
- local0 (local use)
- local1 (local use)
- local2 (local use)
- local3 (local use)
- local4 (local use)
- local5 (local use)
- local6 (local use)
- local7 (local use)
- lpr (line printer system)
- mail (mail system)
- news (USENET news)
- sys9 (system use)
- sys10 (system use)
- sys11 (system use)
- sys12 (system use)
- sys13 (system use)
- sys14 (system use)
- syslog (Syslog process)
- user (user process)
- uucp (Unix to Unix copy process)

The default is local7.

Defaults

local7

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.
## logging history

Specify which messages are logged to the history table of the switch and the SNMP network management station (if configured).

**Syntax**

```
logging history level
```

To return to the default values, use the `no logging history` command.

**Parameters**

- `level`
  - Indicate a value from 0 to 7 or enter one of the following equivalent words: `emergencies`, `alerts`, `critical`, `errors`, `warnings`, `notifications`, `informational`, or `debugging`. The default is 4 or `warnings`.

**Defaults**

- `warnings` or 4

**Command Modes**

- `CONFIGURATION`

9.2(1.0) | Introduced on the Z9500.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
7.6.1.0 | Introduced on the S-Series.
7.5.1.0 | Introduced on the C-Series.

E-Series legacy command

Usage Information
When you configure the `snmp-server trap-source` command, the system messages logged to the history table are also sent to the SNMP network management station.

Related Commands
- `show logging` — displays information logged to the history buffer.

### logging history size

Specify the number of messages stored in the Dell Networking logging history table.

**Syntax**

```
logging history size size
```

To return to the default values, use the `no logging history size` command.

**Parameters**

- `size`

  Indicate a value as the number of messages to be stored. The range is from 0 to 500. The default is 1 message.

**Defaults**

1 message

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
---|---
9.10(0.0) |Introduced on the S3148.
9.10(0.0) |Introduced on the S6100-ON.
9.8(2.0) |Introduced on the S3100 series.
9.8(1.0) |Introduced on the Z9100-ON.
### Version Description
- **9.8(0.0P5)**: Introduced on the S4048-ON.
- **9.8(0.0P2)**: Introduced on the S3048-ON.
- **9.7(0.0)**: Introduced on the S6000-ON.
- **9.2(1.0)**: Introduced on the Z9500.
- **9.0.2.0**: Introduced on the S6000.
- **8.3.19.0**: Introduced on the S4820T.
- **8.3.11.1**: Introduced on the Z9000.
- **8.3.7.0**: Introduced on the S4810.
- **7.6.1.0**: Introduced on the S-Series.
- **7.5.1.0**: Introduced on the C-Series.

**E-Series legacy command**

### Usage Information
When the number of messages reach the limit you set with the `logging history size` command, older messages are deleted as newer ones are added to the table.

### Related Commands
- `show logging` — displays information logged to the history buffer.

---

## logging monitor

Specify which messages are logged to Telnet applications.

**Syntax**

```
logging monitor [level]
```

To disable logging to terminal connections, use the `no logging monitor` command.

**Parameters**

- **level**: Indicate a value from 0 to 7 or enter one of the following parameters: emergencies, alerts, critical, errors, warnings, notifications, informational, or debugging. The default is 7 or `debugging`.

**Defaults**

- 7 or `debugging`

**Command Modes**

- CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

### Version Description
- **9.10(0.0)**: Introduced on the S3148.
- **9.10(0.0)**: Introduced on the S6100-ON.
- **9.8(2.0)**: Introduced on the S3100 series.
- **9.8(1.0)**: Introduced on the Z9100-ON.
- **9.8(0.0P5)**: Introduced on the S4048-ON.

**E-Series legacy command**

**Related Commands**
- `default logging monitor` — returns the logging monitor parameters to the default setting.

### logging on

Specify that debug or error messages are asynchronously logged to multiple destinations, such as the logging buffer, Syslog server, or terminal lines.

**Syntax**

```
logging on
```

To disable logging to logging buffer, Syslog server and terminal lines, use the `no logging on` command.

**Defaults**

Enabled.

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

7.6.1.0 Introduced on the S-Series.
7.5.1.0 Introduced on the C-Series.

E-Series legacy command

Usage Information When you use the no logging on command, messages are logged only to the console.

Related Commands
- logging — enable logging to the Syslog server.
- logging buffered — set the logging buffered parameters.
- logging console — set the logging console parameters.
- logging monitor — set the logging parameters for the terminal connections.

logging source-interface

Specify that the IP address of an interface is the source IP address of Syslog packets sent to the Syslog server.

Syntax
logging source-interface interface

To disable this command and return to the default setting, use the no logging source-interface command.

Parameters
- interface

Enter the following keywords and slot/port or number information:

- For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a Loopback interface, enter the keyword loopback then a number from 0 to 16383.
- For the Management interface, enter the keyword ManagementEthernet then the slot/port information.
- For a port-channel interface, enter the keywords port-channel then the port-channel ID.
- For a Null interface, enter the keyword null then the Null interface number.
- For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

Defaults Not configured.

</table>

**Usage Information**

Syslog messages contain the IP address of the interface used to egress the router. By configuring the `logging source-interface` command, the Syslog packets contain the IP address of the interface configured.

**Related Commands**

- `logging` — enables logging to the Syslog server.

---

**logging synchronous**

Synchronize unsolicited messages and Dell Networking OS output.

```
logging synchronous [level level | all] [limit number-of-buffers]
```

To disable message synchronization, use the `no logging synchronous [level level | all] [limit number-of-buffers]` command.

**Parameters**

- `all` Enter the keyword all to ensure that all levels are printed asynchronously.
- `level level` Enter the keyword level then a number as the severity level. A high number indicates a low severity level and vice versa. The range is from 0 to 7. The default is `2`.
- `all` Enter the keyword all to turn off all.
- `limit number-of-buffers` Enter the keyword limit then the number of buffers to be queued for the terminal after which new messages are dropped. The range is from 20 to 300. The default is `20`.
Defaults
Disabled. If enabled without the level or number-of-buffers options specified, level = 2 and number-of-buffers = 20 are the defaults.

</table>

E-Series legacy command

Usage Information
When you enable logging synchronous, unsolicited messages appear between software prompts and outputs. Only the messages with a severity at or below the set level are sent to the console.

If the message queue limit is reached on a terminal line and messages are discarded, a system message appears on that terminal line. Messages may continue to appear on other terminal lines.

Related Commands
• logging on — enables logging.

logging trap

Specify which messages are logged to the Syslog server based the message severity.

Syntax
logging trap [level]

To return to the default values, use the default logging trap command.

To disable logging, use the no logging trap command.
Parameters

Indicate a value from 0 to 7 or enter one of the following parameters: emergencies, alerts, critical, errors, warnings, notifications, informational, or debugging. The default is 6 or informational.

Defaults

6 or informational

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.10(0.0) Introduced on the S3148.
9.10(0.0) Introduced on the S6100-ON.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100-ON.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.2(1.0) Introduced on the Z9500.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
8.3.7.0 Introduced on the S4810.
7.6.1.0 Introduced on the S-Series, S55.
7.5.1.0 Introduced on the C-Series.
E-Series legacy command

Usage Information

To block a type of message parameter, set the logging trap level to a lower number. For example, to block severity messages at level 6, set the level to 5.

Related Commands

- logging — enables the logging to another device.
- logging on — enables logging.

logging version

Displays syslog messages in a RFC 3164 or RFC 5424 format.

Syntax

logging version {0|1}

Defaults

0

Usage Information

To display syslog messages in a RFC 3164 or RFC 5424 format, use the `logging version` command in configuration mode. By default, the system log version is set to 0.

The following describes the two supported log messages formats:

- 0 – Displays syslog messages format as described in RFC 3164, The BSD syslog Protocol
- 1 – Displays SYSLOG message format as described in RFC 5424, The Syslog Protocol

Example

Dell(conf)#logging version ?
<0-1> Select syslog version (default = 0)
Dell(conf)#logging version 1

show logging

Display the logging settings and system messages logged to the internal buffer of the switch.

Syntax

`show logging [number | history [reverse][number] | reverse [number] | summary]`

Parameters

- `number` (OPTIONAL) Enter the number of messages displayed in the output. The range is from 1 to 65535.
- `history` (OPTIONAL) Enter the keyword `history` to view only information in the Syslog history table.
- `reverse` (OPTIONAL) Enter the keyword `reverse` to view the Syslog messages in FIFO (first in, first out) order.
- `summary` (OPTIONAL) Enter the keyword `summary` to view a table showing the number of messages per type and per slot. Slots *7* and *8* represent RPMs.

Command Modes

- EXEC
- EXEC Privilege

```
This command displays internal software driver information, which may be useful during troubleshooting switch initialization errors, such as a downed Port-Pipe.

**terminal monitor**

Configure the Dell Networking OS to display messages on the monitor/terminal.

**Syntax**

```
terminal monitor
```

To return to default settings, use the `terminal no monitor` command.

**defaults**

Disabled.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Spanning Tree Protocol (STP)

The commands in this section configure and monitor the IEEE 802.1d spanning tree protocol (STP) and are supported on the Dell Networking switch/routing platform.

Topics:
- bridge-priority
- bpdu-destination-mac-address
- debug spanning-tree
- description
- disable
- forward-delay
- hello-time
- max-age
- protocol spanning-tree
- show config
- show spanning-tree 0
- spanning-tree

bridge-priority

Set the bridge priority of the switch in an IEEE 802.1D spanning tree.

Syntax

\[ \text{bridge-priority } \{\text{priority-value | primary | secondary}\} \]

To return to the default value, use the `no bridge-priority` command.

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>priority-value</td>
<td>Enter a number as the bridge priority value. The range is from 0 to 65535. The default is 32768.</td>
</tr>
<tr>
<td>primary</td>
<td>Enter the keyword <code>primary</code> to designate the bridge as the root bridge.</td>
</tr>
<tr>
<td>secondary</td>
<td>Enter the keyword <code>secondary</code> to designate the bridge as a secondary root bridge.</td>
</tr>
</tbody>
</table>

Defaults

priority-value = 32768

Command Modes

SPANNING TREE (The prompt is “config-stp”.)

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>

</tbody>
</table>
### Version Description
- **9.8(2.0)** Introduced on the S3100 series.
- **9.8(1.0)** Introduced on the Z9100-ON.
- **9.8(0.0P5)** Introduced on the S4048-ON.
- **9.8(0.0P2)** Introduced on the S3048-ON.
- **9.7(0.0)** Introduced on the S6000-ON.
- **9.2(1.0)** Introduced on the Z9500.
- **9.0.2.0** Introduced on the S6000.
- **8.3.19.0** Introduced on the S4820T.
- **8.3.11.1** Introduced on the Z9000.
- **8.3.7.0** Introduced on the S4810.
- **7.7.1.0** Introduced on the S-Series.
- **7.5.1.0** Introduced on the C-Series.
- **6.2.1.1** Introduced on the E-Series.

### bpdu-destination-mac-address

Use the Provider Bridge Group address in Spanning Tree or GVRP PDUs.

**Syntax**

```plaintext
bpdu-destination-mac-address [stp | gvrp] provider-bridge-group
```

**Parameters**

- **xstp** Force STP, RSTP, and MSTP to use the Provider Bridge Group address as the destination MAC address in its BPDUs.
- **gvrp** Forces GVRP to use the Provider Bridge GVRP Address as the destination MAC address in its PDUs.

**Defaults**

The destination MAC address for BPDUs is the Bridge Group Address.

**Command Modes**

- **CONFIGURATION**

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>
debug spanning-tree

To enable debugging of the spanning tree protocol and view information on the protocol.

**Syntax**
```
debug spanning-tree {stp-id [all | bpdu | config | events | exceptions | general | root] | protocol}
```

To disable debugging, use the no debug spanning-tree command.

**Parameters**
- **stp-id**: Enter zero (0). The switch supports one spanning tree group with a group ID of 0.
- **protocol**: Enter the keyword for the type of STP to debug, either mstp, pvst, or rstp.
- **all**: (OPTIONAL) Enter the keyword all to debug all spanning tree operations.
- **bpdu**: (OPTIONAL) Enter the keyword bpdu to debug bridge protocol data units.
- **config**: (OPTIONAL) Enter the keyword config to debug configuration information.
- **events**: (OPTIONAL) Enter the keyword events to debug STP events.
- **general**: (OPTIONAL) Enter the keyword general to debug general STP operations.
- **root**: (OPTIONAL) Enter the keyword root to debug STP root transactions.

**Command Modes**
- EXEC Privilege

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version**
- 9.10(0.0)
- 9.10(0.0)
- 9.8(2.0)
- 9.8(1.0)
- 9.8(0.0P5)
- 9.8(0.0P2)
- 9.7(0.0)
- 9.2(1.0)
- 9.0.2.0
- 8.3.19.0
- 8.3.11.1

**Description**
- Introduced on the S3148.
- Introduced on the S6100–ON.
- Introduced on the S3100 series.
- Introduced on the Z9100–ON.
- Introduced on the S4048-ON.
- Introduced on the S3048-ON.
- Introduced on the S6000-ON.
- Introduced on the S6000-ON.
- Introduced on the Z9500.
- Introduced on the S6000.
Version Description
8.3.7.0 Introduced on the S4810.
7.7.1.0 Introduced on the S-Series.
7.5.1.0 Introduced on the C-Series.
6.2.1.1 Introduced on the E-Series.

Usage Information When you enable `debug spanning-tree bpdu` for multiple interfaces, the software only sends information on BPDUs for the last interface specified.

Related Commands
- `protocol spanning-tree` — enters SPANNING TREE mode on the switch.

**description**

Enter a description of the spanning tree.

**Syntax**
```
description {description}
```

To remove the description from the spanning tree, use the `no description {description}` command.

**Parameters**
- `description` Enter a description to identify the spanning tree (80 characters maximum).

**Defaults**
none

**Command Modes**
SPANNING TREE (The prompt is “config-stp”)

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>
disable

Disable the spanning tree protocol globally on the switch.

Syntax
disable

To enable Spanning Tree Protocol, use the no disable command.

Defaults
Enabled (that is, the spanning tree protocol is disabled.)

Command Modes
SPANNING TREE

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

9.7(0.0) Introduced on the S6000-ON.
9.2(1.0) Introduced on the Z9500.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
8.3.7.0 Introduced on the S4810.
7.7.1.0 Introduced on the S-Series.
7.5.1.0 Introduced on the C-Series.
6.2.1.1 Introduced on the E-Series.

Related Commands
• protocol spanning-tree — enter SPANNING TREE mode on the switch.

forward-delay

The amount of time the interface waits in the Listening state and the Learning state before transitioning to the Forwarding state.

Syntax
forward-delay seconds

To return to the default setting, use the no forward-delay command.
Enter the number of seconds the Dell Networking OS waits before transitioning STP to the Forwarding state. The range is from 4 to 30. The default is 15 seconds.

**Defaults**

15 seconds

**Command Modes**

SPANNING TREE

**Command History**

**Related Commands**

- `max-age` — changes the wait time before STP refreshes protocol configuration information.
- `hello-time` — changes the time interval between BPDUs.

---

**hello-time**

Set the time interval between generation of the spanning tree bridge protocol data units (BPDUs).

**Syntax**

```
hello-time seconds
```

To return to the default value, use the `no hello-time` command.

**Parameters**

- `seconds` Enter a number as the time interval between transmission of BPDUs. The range is from 1 to 10. The default is 2 seconds.

**Defaults**

2 seconds

**Command Modes**

SPANNING TREE

Related Commands

- `forward-delay` — changes the wait time before STP transitions to the Forwarding state.
- `max-age` — changes the wait time before STP refreshes protocol configuration information.

max-age

To maintain configuration information before refreshing that information, set the time interval for the spanning tree bridge.

Syntax

```
max-age seconds
```

To return to the default values, use the `no max-age` command.

Parameters

- `seconds` Enter a number of seconds the Dell Networking OS waits before refreshing configuration information. The range is from 6 to 40. The default is 20 seconds.

Defaults

- 20 seconds

Command Modes

- SPANNING TREE

Command History

**protocol spanning-tree**

To enable and configure the spanning tree group, enter SPANNING TREE mode.

**Syntax**

```
protocol spanning-tree stp-id
```

To disable the Spanning Tree group, use the `no protocol spanning-tree stp-id` command.

**Parameters**

- **stp-id**
  
  Enter zero (0). Dell Networking OS supports one spanning tree group, group 0.

**Defaults**

Not configured.

**Usage Information**

STP is not enabled when you enter SPANNING TREE mode. To enable STP globally on the switch, use the `no disable` command from SPANNING TREE mode.

**Example**

```plaintext```
Dell(conf)# protocol spanning-tree 0
Dell(config-stp)#
```

**Related Commands**

- `disable` — disables spanning tree group 0. To enable spanning tree group 0, use the `no disable` command.

### show config

Display the current configuration for the mode. Only non-default values display.

**Syntax**

`show config`

**Command Modes**

SPANNING TREE

**Command History**

### show spanning-tree 0

Display the spanning tree group configuration and status of interfaces in the spanning tree group.

**Syntax**

```
show spanning-tree 0 [active | brief | guard | interface interface | root | summary]
```

**Parameters**

- **0**
  
  Enter 0 (zero) to display information about that specific spanning tree group.

- **active**
  
  (OPTIONAL) Enter the keyword `active` to display only active interfaces in spanning tree group 0.

- **brief**
  
  (OPTIONAL) Enter the keyword `brief` to display a synopsis of the spanning tree group configuration information.

- **guard**
  
  (OPTIONAL) Enter the keyword `guard` to display the type of guard enabled on an STP interface and the current port state.

- **interface interface**
  
  (OPTIONAL) Enter the keyword `interface` and the type slot/port of the interface you want displayed. Type slot/port options are the following:

  - For a port-channel interface, enter the keywords `port-channel` then the port-channel ID.
  - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

- **root**
  
  (OPTIONAL) Enter the keyword `root` to display configuration information on the spanning tree group root.

- **summary**
  
  (OPTIONAL) Enter the keyword `summary` to only the number of ports in the spanning tree group and their state.

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.
**Usage Information**

Enable spanning tree group 0 prior to using this command.

The following describes the `show spanning-tree 0` command shown in the example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&quot;Bridge identifier...&quot;</td>
<td>Lists the bridge priority and the MAC address for this STP bridge.</td>

</tr>
<tr>
<td></td>
<td>• aging</td>
</tr>
<tr>
<td>&quot;Port 1...&quot;</td>
<td>Displays the Interface type slot/port information and the status of the interface (Disabled or Enabled).</td>
</tr>
</tbody>
</table>
### Field Description

**“Port path...”** Displays the path cost, priority, and identifier for the interface.

**“Designated root...”** Displays the priority and MAC address of the root bridge of the STG that the interface belongs.

**“Designated port...”** Displays the designated port ID.

### Example

```plaintext
Dell# show span 0

Executing IEEE compatible Spanning Tree Protocol
Bridge Identifier has priority 32768, Address 0001.e800.0a56
Configured hello time 2, max age 20, forward delay 15
We are the root of the spanning tree
Current root has priority 32768 address 0001.e800.0a56
Topology change flag set, detected flag set
Number of topology changes 1 last change occurred 0:00:05 ago from GigabitEthernet 1/3
Timers:hold 1, topology change 35
  hello 2, max age 20, forward_delay 15
Times:hello 1, topology change 1, notification 0, aging 2

Port 26 (GigabitEthernet 1/1) is Forwarding
  Port path cost 4, Port priority 8, Port Identifier 8.26
  Designated root has priority 32768, address 0001.e800.0a56
  Designated bridge has priority 32768, address 0001.e800.0a56
  Designated port id is 8.26, designated path cost 0
  Timers: message age 0, forward delay 0, hold 0
  Number of transitions to forwarding state 1
  BPDUs: sent:18, received 0
  The port is not in the portfast mode

Port 27 (GigabitEthernet 1/2) is Forwarding
  Port path cost 4, Port priority 8, Port Identifier 8.27
  Designated root has priority 32768, address 0001.e800.0a56
  Designated bridge has priority 32768, address 0001.e800.0a56
  Designated port id is 8.27, designated path cost 0
  Timers: message age 0, forward delay 0, hold 0
  Number of transitions to forwarding state 1
  BPDUs: sent:18, received 0
  The port is not in the portfast mode

Port 28 (GigabitEthernet 1/3) is Forwarding
  Port path cost 4, Port priority 8, Port Identifier 8.28
  Designated root has priority 32768, address 0001.e800.0a56
  Designated bridge has priority 32768, address 0001.e800.0a56
  Designated port id is 8.28, designated path cost 0
  Timers: message age 0, forward delay 0, hold 0
  Number of transitions to forwarding state 1
  BPDUs: sent:31, received 0
  The port is not in the portfast mode

Dell#
```

### Example (Brief)

```plaintext
Dell# show span 0 brief

Executing IEEE compatible Spanning Tree Protocol
  Root ID Priority 32768
    Address 0001.e800.0a56
  Root Bridge hello time 2, max age 20, forward delay 15
  Bridge ID Priority 32768,
    Address 0001.e800.0a56
  Configured hello time 2, max age 20, forward delay 15

<td>LIS</td>
<td>Loopguard</td>
</tr>
<tr>
<td>Gi 1/3</td>
<td></td>
<td>0</td>
<td>EDS (Shut)</td>
<td>Bpduguard</td>
</tr>
</tbody>
</table>
```

**spanning-tree**

Assigns a Layer 2 interface to STP instance 0 and configures a port cost or port priority, or enables loop guard, root guard, or the Portfast feature on the interface.

**Syntax**

```
spanning-tree stp-id {cost cost | {loopguard | rootguard} | portfast [bpduguard [shutdown-on-violation]] | priority priority}
```

To disable Spanning Tree group on an interface, use the no spanning-tree stp-id {cost cost | {loopguard | rootguard} | portfast [bpduguard [shutdown-on-violation]] | priority priority} command.

**Parameters**

- **stp-id**
  - Enter the STP instance ID. The range is 0.
- **cost cost**
  - Enter the keyword cost then a number as the cost. The range is from 1 to 65535. The defaults are:
    - 1-Gigabit Ethernet interface = 4.
    - 10-Gigabit Ethernet interface = 2.
    - Port Channel interface with 100 Mb/s Ethernet = 18.
    - Port Channel interface with 1 Gigabit Ethernet = 3.
    - Port Channel interface with 10 Gigabit Ethernet = 1.
- **loopguard**
  - Enter the keyword loopguard to enable STP loop guard on a port or port-channel interface.
- **rootguard**
  - Enter the keyword rootguard to enable STP root guard on a port or port-channel interface.
- **portfast [bpduguard [shutdown-on-violation]]**
  - Enter the keyword portfast to enable Portfast to move the interface into Forwarding mode immediately after the root fails.
Enter the optional keyword bpduguard to disable the port when it receives a BPDU.

Enter the optional keyword shutdown-on-violation to hardware disable an interface when a BPDU is received and the port is disabled.

```
priority priority
```
Enter keyword priority then a number as the priority. The range is from zero (0) to 15. The default is 8.

**Defaults**

cost = depends on the interface type; priority = 8

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
--- | ---
9.10(0.0) | Introduced on the S3148.
9.10(0.0) | Introduced on the S6100–ON.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100–ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.7(0.0) | Introduced on the S6000-ON.
9.2(1.0) | Introduced on the Z9500.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.10.1 | Introduced the loopguard and rootguard options on the S4810.
8.4.2.1 | Introduced the loopguard and rootguard options on the E-Series, C-Series, and S-Series.
8.3.7.0 | Introduced on the S4810.
8.2.1.0 | Introduced the shutdown-on-violation option.
7.7.1.0 | Introduced on the S-Series.
7.5.1.0 | Introduced on the C-Series.
6.2.1.1 | Introduced on the E-Series.

**Usage Information**

If you enable portfast bpduguard on an interface and the interface receives a BPDU, the software disables the interface and sends a message stating that fact. The port is in ERR_DISABLE mode, yet appears in the show interface commands as enabled. If you do not enable shutdown-on-violation, BPDUs are still sent to the RPM CPU.

STP loop guard and root guard are supported on a port or port-channel enabled in any Spanning Tree mode: Spanning Tree Protocol (STP), Rapid Spanning Tree Protocol (RSTP), Multiple Spanning Tree Protocol (MSTP), and Per-VLAN Spanning Tree Plus (PVST+).
Root guard is supported on any STP-enabled port or port-channel except when used as a stacking port. When enabled on a port, root guard applies to all VLANs configured on the port.

STP root guard and loop guard cannot be enabled at the same time on a port. For example, if you configure loop guard on a port on which root guard is already configured, the following error message is displayed: % Error: RootGuard is configured. Cannot configure LoopGuard.

Do not enable Portfast BPDU guard and loop guard at the same time on a port. Enabling both features may result in a port that remains in a blocking state and prevents traffic from flowing through it. For example, when Portfast BPDU guard and loop guard are both configured:

- If a BPDU is received from a remote device, BPDU guard places the port in an Err-Disabled Blocking state and no traffic is forwarded on the port.
- If no BPDU is received from a remote device, loop guard places the port in a Loop-Inconsistent Blocking state and no traffic is forwarded on the port.

To display the type of STP guard (Portfast BPDU, root, or loop guard) enabled on a port, enter the `show spanning-tree 0` command.
All commands in this chapter are specific to the Dell Networking OS.
You can use the commands to pre-configure a switch, so that the configuration settings are invoked when the switch is attached to other S-Series units.

For information about using the S-Series stacking feature, see the Stacking S-Series Switches section in the Dell Networking OS Configuration Guide.

Topics:
- redundancy disable-auto-reboot
- redundancy force-failover stack-unit
- redundancy protocol
- reset stack-unit
- show redundancy
- show system stack-ports
- stack-unit priority
- stack-unit provision
- upgrade system stack-unit

**redundancy disable-auto-reboot**

Prevent the S-Series stack management unit, stack member unit, and standby unit from rebooting if they fail.

**Syntax**
```
redundancy disable-auto-reboot stack-unit [1-6 | members]
```

To return to the default, use the `no redundancy disable-auto-reboot stack-unit` command.

**Parameters**
- `stack-unit` Enter the stack-unit number. The range is from 1 to 12.
- `members` Enter the keyword members for all stack-units.

**Defaults**
Disabled (the failed switch is automatically rebooted).

**Command Modes**
CONFIGURATION

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
--- | ---
9.10(0.0) | Introduced on the S3148.
9.10(0.0) | Increased the stacking range to 12 units in S3100 series.
9.10(0.0) | Introduced on the S6100-ON.
**Version** | **Description**  
--- | ---  
9.8(2.0) | Introduced on the S3100 series.  
9.8(0.0P5) | Introduced on the S4048-ON.  
9.8(0.0P2) | Introduced on the S3048-ON.  
9.7(0.0) | Introduced on the S6000.  
8.3.19.0 | Introduced on the S4820T.  
8.3.7.0 | Introduced on the S4810.  
8.3.11.1 | Introduced on the Z9000.  
8.3.1.0 | Added the members option.  

**Usage Information**  
Enabling this command keeps the failed switch in the Failed state. The switch does not reboot until it is manually rebooted. When enabled, it is not displayed in the running-config. When disabled, it is displayed in the running-config.  

**Related Commands**  
- `show redundancy` — displays the current redundancy status.

### redundancy force-failover stack-unit

Force the standby unit in the stack to become the management unit.  

**Syntax**  
`redundancy force-failover stack-unit`  

**Defaults**  
Not enabled.  

**Command Modes**  
EXEC Privilege  

**Command History**  
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.  

**Version** | **Description**  
--- | ---  
9.10(0.0) | Introduced on the S3148.

9.10(0.0) | Introduced on the S6100–ON.  
9.8(2.0) | Introduced on the S3100 series.  
9.8(0.0P5) | Introduced on the S4048-ON.  
9.8(0.0P2) | Introduced on the S3048-ON.  
9.7(0.0) | Introduced on the S6000.  
8.3.19.0 | Introduced on the S4820T.  
8.3.7.0 | Introduced on the S4810.  
8.3.11.1 | Introduced on the Z9000.  
8.3.1.0 | Added the members option.  

**Usage Information**  
Executing this command on the master unit reboots the master unit and the standby unit becomes the new master. A new standby unit is elected depending on the priority and MAC address.
**redundancy protocol**

Enable hitless failover for a protocol.

**Syntax**

```
redundancy protocol
```

**Protocols**

- `lacp` Enter the LACP protocol
- `xstp` Enter one of the following protocols: STP, RSTP, MSTP, PVST.

**Defaults**

Not enabled.

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

**reset stack-unit**

Reset any designated stack member except the management unit (master unit).

**Syntax**

```
reset stack-unit stack-unit-number hard
```

**Parameters**

- `stack-unit` Enter the stack-unit number. The range is from 1 to 12.
hard

Reset the stack unit if the unit is in a problem state.

Defaults

none

Command Modes

EXEC

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.1.0</td>
<td>Added the hard reset option.</td>
</tr>
</tbody>
</table>

Usage Information

Resetting the management unit is not allowed, and an error message displays if you try to do so. Resetting is a soft reboot, including flushing the forwarding tables.

Starting with Dell Networking OS version 7.8.1.0, you can run this command directly on the stack standby unit (standby master) to reset the standby. You cannot reset any other unit from the standby unit.

Example

```
Dell#reset stack-unit 4
Dell#00:15:00: %STKUNIT1-M:CP %CHMGR-5-STACKUNIT_RESET: stack-unit 4 being reset
00:15:01: %STKUNIT1-M:CP %CHMGR-2-STACKUNIT_DOWN: stack-unit 4 down - reset
00:15:01: %STKUNIT1-M:CP %IFMGR-1-DEL_PORT: Removed port: Gi 4/1-4/48, Te 4/51-4/52,
00:15:01: %STKUNIT2-S:CP %IFMGR-1-DEL_PORT: Removed port: Gi 4/1-4/48, Te 4/51-4/52,
Dell#00:15:08: %S3048-ON:1 %IFAGT-5-STACK_PORT_LINK_DOWN: Changed stack port state to down: 1/49
00:15:08: %STKUNIT1-M:CP %CHMGR-2-STACKUNIT_DOWN: stack-unit 4 down - card removed
Dell#
```

Related Commands

- `reload` – reboots Dell Networking OS.

show redundancy

Display the current redundancy configuration (status of automatic reboot configuration on stack management unit).

Syntax

```
show redundancy
```
Command Modes

• EXEC
• EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Usage Information

To modify your results, use the show redundancy [pipe] command, as follows:

• except — show only text that doesn not match a pattern.
• find — search for the first occurrence of a pattern.
• grep — show only text that matches a pattern.
• no-more — do not paginate the output.
• save — save the output to a file.

Example

Dell#show redundancy

-- Stack-unit Status --
Mgmt ID:                          1

Last failover timestamp:          None
show system stack-ports

Display information about the stacking ports on all switches in the stack.

Syntax

```
show system stack-ports [status | topology]
```

Parameters

- **status**  
  (OPTIONAL) Enter the keyword `status` to display the command output without the Connection field.

- **topology**  
  (OPTIONAL) Enter the keyword `topology` to limit the table to just the Interface and Connection fields.

Defaults

`none`

Command Modes

- EXEC
- EXEC Privilege

Usage Information

The following describes the `show system stack-ports` command shown in the following example.
### Field Description

**Topology**
Lists the topology of stack ports connected: Ring, Daisy chain, or Standalone.

**Interface**
The unit/port ID of the connected stack port on this unit.

**Link Speed**
Link Speed of the stack port (10 or 40) in Gb/s.

**Admin Status**
The only currently listed status is Up.

**Connection**
The stack port ID to which this unit’s stack port is connected.

### Example

Dell#show system stack-ports
Topology: Ring

Dell#

Related Commands

- reset stack-unit – resets the designated stack member.
- show hardware stack-unit – displays the data plane or management plane input and output statistics of the designated component of the designated stack member.
- show system – displays the current status of all stack members or a specific member.

stack-unit priority

Configure the ability of a switch to become the management unit of a stack.

Syntax

stack-unit stack-number priority priority-value

Parameters

stack-number
  Enter the stack member unit identifier.

priority-value
  This preference parameter allows you to specify the management priority of one backup switch over another, with 1 as the lowest priority and 14 being the highest. The switch with the highest priority value is chosen to become the management unit if the active management unit fails or on the next reload.

Defaults

1

Command Modes

## Related Commands
- `reload` — reboots Dell Networking OS.

---

### stack-unit provision

Preconfigure a logical stacking ID of a switch that joins the stack. This is an optional command that is executed on the management unit.

**Syntax**

```
stack-unit [stack-number] provision {model-identifier}
```

**Parameters**

- `stack-number`: Enter a stack member identifier of the switch that you want to add to the stack.
- `model-identifier`: Enter the model identifier of the switch to be added as a stack member. This identifier is also referred to as the provision type.

**Defaults**

When this value is not set, a switch joining the stack is given the next available sequential stack member identifier.

Version Description
8.3.11.1 Introduced on the Z9000.

Related Commands
• reload — reboot the Dell Networking OS.
• show system — display the status of all stack members or a specific member.

upgrade system stack-unit

Copy the boot image or Dell Networking OS from the management unit to one or more stack members.

Syntax
upgrade {boot | system} stack-unit {all | stack-unit-number | A | B}

Parameters
boot
Enter the keyword boot to copy the boot image from the management unit to the designated stack members.

system
Enter the keyword system to copy the Dell Networking OS image from the management unit to the designated stack members.

stack-unit
Enter the stack-unit number. The range is from 1 to 12.

all
Enter the keyword all to copy the designated image to all stack members.

A
Enter the keyword A to upgrade all stacked units in System A (only).

B
Enter the keyword B to upgrade all stacked units in System B (only).

Defaults
none

Command Modes
EXEC

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.10(0.0) Introduced on the S3148.
9.10(0.0) Increased the stacking range to 12 units in S3100 series.
9.8(2.0) Introduced on the S3100 series.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.7.0 Introduced on the S4810.
8.3.11.1 Introduced on the Z9000.

Usage Information
To reboot using the new image, use the upgrade boot system stack-unit command.

Related Commands
• reload — reboots Dell Networking OS.
• reset stack-unit — resets the designated stack member.
• show system — displays the status of all stack members or a specific member.
• **show version** — displays the current Dell Networking OS version information on the system.
The Dell Networking OS storm control feature allows you to limit or suppress traffic during a traffic storm (Broadcast/Unknown Unicast Rate Limiting or Multicast on the C-Series and S-Series).

Storm control is supported on Dell Networking OS.

**Important Points to Remember**

- Interface commands can only be applied on physical interfaces (virtual local area networks [VLANs] and link aggregation group [LAG] interfaces are not supported).
- An INTERFACE-level command only supports storm control configuration on ingress.
- An INTERFACE-level command overrides any CONFIGURATION-level ingress command for that physical interface, if both are configured.
- You can apply the CONFIGURATION-level storm control commands at ingress or egress and are supported on all physical interfaces.
- When storm control is applied on an interface, the percentage of storm control applied is calculated based on the advertised rate of the line card. It is not based on the speed setting for the line card.
- Do not apply per-VLAN quality of service (QoS) on an interface that has storm control enabled (either on an interface or globally).
- When you enable broadcast storm control on an interface or globally on ingress, and DSCP marking for a DSCP value 1 is configured for the data traffic, the traffic goes to queue 1 instead of queue 0.
- Similarly, if you enable unicast storm control on an interface or globally on ingress, and DSCP marking for a DSCP value 2 is configured for the data traffic, the traffic goes to queue 2 instead of queue 0.

**NOTE:** Bi-directional traffic (unknown unicast and broadcast) along with egress storm control causes the configured traffic rates split between the involved ports. The percentage of traffic that each port receives after the split is not predictable. These ports can be in the same/different port pipes or the same/different line cards.

**NOTE:** The policy discard drop counters are common across storm-control drops, ACL drops and QoS drops. If your configuration includes ACL and GoS, those drops are also computed and displayed in the policy discard drops counter field along with storm-control drops. The packets dropped by the storm control feature can be monitored by viewing the value of the Policy Discard Drops field of the output of the show hardware stack-unit stack-unit-number drops command.

**Topics:**

- show storm-control broadcast
- show storm-control multicast
- show storm-control unknown-unicast
- storm-control broadcast (Configuration)
- storm-control broadcast (Interface)
- storm-control multicast (Configuration)
- storm-control multicast (Interface)
- storm-control unknown-unicast (Configuration)
- storm-control unknown-unicast (Interface)
show storm-control broadcast

Display the storm control broadcast configuration.

Syntax

show storm-control broadcast [interface]

Parameters

interface (OPTIONAL) Enter one of the following interfaces to display the interface-specific storm control configuration:

- For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

Defaults

none

Command Modes

- EXEC
- EXEC Privilege

show storm-control multicast

Display the storm control multicast configuration.

Syntax

show storm-control multicast [interface]

Parameters

interface

(OPTIONAL) Enter one of the following interfaces to display the interface specific storm control configuration:

- For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a port channel interface, enter the keywords port-channel then a number.

Defaults

None

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description

9.10(0.0) Introduced on the S3148.
9.10(0.0) Introduced on the S6100–ON.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100–ON.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.2(1.0) Introduced on the Z9500.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
8.5.1.0 Added support for 4-port 40G line cards on the E-Series.
8.3.7.0 Introduced on the S4810.
7.6.1.0 Introduced on the C-Series and S-Series.

Example

Dell# show storm-control multicast gigabitethernet 1/1
Multicast storm control configuration

</tbody>
</table>
storm-control broadcast (Configuration)

Configure the percentage of broadcast traffic allowed in the network.

Syntax

storm-control broadcast [packets_per_second in]

To disable broadcast rate-limiting, use the no storm-control broadcast [packets_per_second in] command.

storm-control broadcast [percentage decimal_value in | out] [wred-profile name] [packets_per_second in]

To disable broadcast rate-limiting, use the storm-control broadcast [percentage decimal_value in | out] [wred-profile name] [packets_per_second in] command.

Parameters

- **percentage**: Enter the percentage of broadcast traffic allowed in or out of the network. Optionally, you can designate a decimal value percentage, for example, 55.5%. The decimal range is from .1 to .9.
- **decimal_value**: Enter the percentage of broadcast traffic allowed in or out of the network. Optionally, you can designate a decimal value percentage, for example, 55.5%. The decimal range is from .1 to .9.
- **wred-profile name**: Enter the keyword **wred-profile** followed by the profile name to designate a wred-profile.
- **packets_per_second**: Enter the packets per second of broadcast traffic allowed into the network. The range is from 0 to 33554368.

Defaults

- none

Command Modes

- CONFIGURATION (conf)

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description

- 9.10(0.0) Introduced on the S3148.
- 9.10(0.0) Introduced on the S6100–ON.
- 9.8(2.0) Introduced on the S3100 series.

- 9.7(0.0) Introduced on the S6000-ON.
- 9.2(1.0) Introduced on the Z9500.
- 9.2(0.0) Introduced on the M I/O Aggregator. This command is supported in Programmable-MUX (PMUX) mode only.
- 8.3.19.0 Introduced on the S4820T.
- 8.3.11.1 Introduced on the Z9000.
storm-control broadcast (Interface)

Configure the percentage of broadcast traffic allowed on an interface (ingress only).

Syntax

```
storm-control broadcast [packets_per_second in]
```

To disable broadcast storm control on the interface, use the `no storm-control broadcast [packets_per_second in]` command.

Parameters

```
packets_per_second in
```

Enter the packets per second of broadcast traffic allowed into the network. The range is from 0 to 33554368.

Defaults

none

**storm-control multicast (Configuration)**

Configure the packets per second (pps) of multicast traffic allowed into the C-Series and S-Series networks only.

**Syntax**

```
storm-control multicast packets_per_second in
```

To disable storm-control for multicast traffic into the network, use the `no storm-control multicast packets_per_second in` command.

**Parameters**

- `packets_per_second in`
  - Enter the packets per second of multicast traffic allowed into the network. The range is from 0 to 33554368.

**Defaults**

none

</tr>
</tbody>
</table>

**Usage Information**

Broadcast traffic (all 0xFs) should be counted against the broadcast storm control meter, not against the multicast storm control meter. It is possible, however, that some multicast control traffic may get dropped when storm control thresholds are exceeded.
storm-control multicast (Interface)

Configure the percentage of multicast traffic allowed on an C-Series or S-Series interface (ingress only) network only.

**Syntax**

```
storm-control multicast packets_per_second in
```

To disable multicast storm control on the interface, use the **no storm-control multicast packets_per_second in** command.

**Parameters**

- `packets_per_second` Enter the packets per second of broadcast traffic allowed into the network. The range is from 0 to 33554368.

**Defaults**

none

**Command Modes**

INTERFACE (conf-if-interface-slot/port)

**Command History**

</tbody>
</table>

storm-control unknown-unicast (Configuration)

Configure the percentage of unknown-unicast traffic allowed in or out of the network.

**Syntax**

```
storm-control unknown-unicast [packets_per_second in]
```

To disable storm control for unknown-unicast traffic, use the **no storm-control unknown-unicast [packets_per_second in]** command.
storm-control unknown-unicast (Interface)

Configure percentage of unknown-unicast traffic allowed on an interface (ingress only).

Syntax

```
storm-control unknown-unicast [percentage decimal_value in] | [wred-profile name]] [packets_per_second in]
```

To disable unknown-unicast storm control on the interface, use the `no storm-control unknown-unicast [percentage decimal_value in] | [wred-profile name]] [packets_per_second in]` command.

Parameters

- `percentage decimal_value [in | out]` E-Series Only: Enter the percentage of broadcast traffic allowed in or out of the network. Optionally, you can designate a decimal value percentage, for example, 55.5%. 

Usage Information

Unknown Unicast Storm-Control is valid for Layer 2 and Layer 2/Layer 3 interfaces.
The percentage is from 0 to 100:

- 0% blocks all related traffic.
- 100% allows all traffic into the interface.

The decimal range is from 0.1 to 0.9.

```
wred-profile name
```

E-Series Only: (Optionally) Enter the keywords `wred-profile` followed by the profile name to designate a wred-profile.

```
packets_per_second
```

C-Series and S-Series Only: Enter the packets per second of broadcast traffic allowed into the network. The range is from 0 to 33554431.

**Defaults**

```
one
```

**Command Modes**

```
INTERFACE (conf-if-interface-slot/port)

7.5.1.0 | Introduced on the C-Series.
7.4.1.0 | E-Series Only: Added the `percentage decimal value` option.
6.5.1.0 | Introduced on the E-Series.
SupportAssist

SupportAssist sends troubleshooting data securely to Dell. SupportAssist in this Dell Networking OS release does not support automated email notification at the time of hardware fault alert, automatic case creation, automatic part dispatch, or reports. SupportAssist requires Dell Networking OS 9.9(0.0) and SmartScripts 9.7 or later to be installed on the Dell Networking device. For more information on SmartScripts, see Dell Networking Open Automation guide.

**NOTE:** SupportAssist is enabled by default on the system. To disable SupportAssist, enter the `eula-consent support-assist reject` command in Global Configuration mode and save the configuration.

Topics:
- `eula-consent`
- `support-assist`
- `support-assist activate`
- `support-assist activity`
- `SupportAssist Commands`
- `SupportAssist Activity Commands`
- `SupportAssist Company Commands`
- `SupportAssist Person Commands`
- `SupportAssist Server Commands`
- `show eula-consent`
- `show running-config`
- `show support-assist status`

### eula-consent

Accept or reject the end user license agreement (EULA).

**Syntax**

```
eula-consent {support-assist} {accept | reject}
```

**Parameters**

- **support-assist**
  - Enter the keywords `support-assist` to either accept or reject the EULA for the specified service.
- **accept**
  - Enter the keyword `accept` to accept the EULA for the specified service.
- **reject**
  - Enter the keyword `reject` to reject the EULA for the specified service.

**Defaults**

None

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.
<table>

</tr>
</tbody>
</table>

**Usage Information**

- When you run the command, the system displays a message with the information directing to the URL for further information.
- Even before you accept or reject the EULA, the configuration data is sent to the default centrally deployed SupportAssist Server. If you reject the EULA, the configuration data is not transmitted to the SupportAssist server.
- If there is an existing SupportAssist configuration, the configuration is not removed and the feature is disabled.

**Example**

Accept the EULA:

```
Dell(conf)# eula-consent support-assist accept
I accept the terms of the license agreement. You can reject the license agreement by configuring this command 'eula-consent support-assist reject'.
```

By installing SupportAssist, you allow Dell to save your contact information (e.g. name, phone number and/or email address) which would be used to provide technical support for your Dell products and services. Dell may use the information for providing recommendations to improve your IT infrastructure.

Dell SupportAssist also collects and stores machine diagnostic information, which may include but is not limited to configuration information, user supplied contact information, names of data volumes, IP addresses, access control lists, diagnostics & performance information, network configuration information, host/server configuration & performance information and related data ("Collected Data") and transmits this information to Dell. By downloading SupportAssist and agreeing to be bound by these terms and the Dell end user license agreement, available at: www.dell.com/aeuila, you agree to allow Dell to provide remote monitoring services of your IT environment and you give Dell the right to collect the Collected Data in accordance with Dell’s Privacy Policy, available at: www.dell.com/privacypolicycountryspecific, in order to enable the performance of all of the various functions of SupportAssist during your entitlement to receive related repair services from Dell. You further agree to allow Dell to transmit and store the Collected Data from SupportAssist in accordance with these terms. You agree that the provision of SupportAssist may involve international transfers of data from you to Dell and/or to Dells affiliates, subcontractors or business partners. When making such transfers, Dell shall ensure appropriate protection is in place to safeguard the Collected Data being transferred in connection with SupportAssist. If you are downloading SupportAssist on behalf of a company or other legal entity, you are further certifying to Dell that you have appropriate authority to provide this consent on behalf of that entity. If you do not consent to the collection, transmission and/or use of the Collected Data, you may not download, install or otherwise use SupportAssist.
Reject the EULA:

Dell(conf)#eula-consent support-assist reject
Aug 24 22:35:38: %STKUNIT1-M:CP %SUPPORT_ASSIST-6-SUPASSIST_EVT: Event monitor service stopped
I do not accept the terms of the license agreement. The SupportAssist feature has been deactivated and can no longer be used.
To enable SupportAssist configurations, accept the terms of the license agreement by configuring this command 'eula-consent support-assist accept'.
Dell(conf)#
Dell(conf)#
Dell(conf)#

Related Commands

- support-assist — moves to the SupportAssist Configuration mode.

support-assist

Move to the SupportAssist configuration mode.

Syntax

support-assist

To remove all the configuration of the SupportAssist service, use the no support-assist command.

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.11(0.0) Introduced on the M I/O Aggregator and FN IOM.
9.10(0.0) Introduced on the S3148.
9.10(0.0) Introduced on the C9010, Z9100-ON, S6100-ON, and S3100 series.
9.9(0.0) Introduced on the S4810, S4820T, S3048-ON, S4048-ON, S5000, S6000, S6000-ON, Z9500, M4010.

Usage Information

If you reject the EULA, the data is not transmitted to the SupportAssist server.

Related Commands

- eula-consent — accept or reject the EULA.

support-assist activate

Launch the configuration wizard that enables SupportAssist service and guides through a series of commands to configure SupportAssist.

Syntax

support-assist activate

</tr>
</tbody>
</table>

### Usage Information

You are guided through a series of queries to configure SupportAssist. The generated commands are added to the running configuration, including the DNS resolve commands, if configured.

This command starts the configuration wizard for the SupportAssist. At any time, you can exit by entering Ctrl-C. If necessary, you can skip some data entry.

Once you exit the wizard, the Dell Networking OS starts a full transfer.

---

**support-assist activity**

Trigger an activity event immediately.

**Syntax**

```
support-assist activity {full-transfer | core-transfer} start now
```

**Parameters**

- `full-transfer` Enter the keyword full-transfer to specify transfer of configuration, inventory, logs, and other information.
- `core-transfer` Enter the keyword core-transfer to specify transfer of core files.

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>

**Usage Information**

Use the command to trigger the activity that enables transfer of information. You can choose a full transfer that includes all the details or core transfer that includes only the core files.

- **NOTE:** The full transfer includes the core files as well in the information sent. The core transfer does not send core files that are older than 30 days.
SupportAssist Commands

Dell Networking OS supports the following SupportAssist mode commands.

activity

Move to the SupportAssist Activity mode for an activity. Allow the user to configure customized details for a specific activity.

Syntax

activity {activity-name}

To remove all customized detail for a specific activity, use the no activity {activity-name} command.

Parameters

activity-name

Enter one of the following keywords:

- Enter the keyword full-transfer to enable or disable full transfer. You can create a custom file to transfer the outputs from a set of show commands. By default, the full transfer runs once in every 30 days.
- Enter the keyword core-transfer to enable or disable core transfer.
- Enter the keyword event-transfer to enable or disable event transfer. You can create a custom file to monitor a set of events.

Command Modes

SUPPORTASSIST

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.11(0.0) Introduced on the M I/O Aggregator and FN IOM.

Introduced the core-transfer and event-transfer parameters.

9.10(0.0) Introduced on the S3148.
9.10(0.0) Introduced on the C9010, Z9100–ON, S6100–ON, and S3100 series.
9.9(0.0) Introduced on the S4810, S4820T, S3048–ON, S4048–ON, S5000, S6000, S6000–ON, Z9500, MXL.

Usage Information

By default, each activity follows a set of default actions using a default schedule. Using this command, you can customize the set of actions and disable a certain activity.

contact-company

Configure the contact information for the company.

Syntax

calendar-company name {company-name}[company-next-name] ... [company-next-name]

To remove the contact company information, use the no contact-company command.
Parameters

**company-name**

Enter the name for the company. If there are multiple words in the name, use optional additional fields.

**company-next-name**

(Optional) Enter the next components of the company name, up to 5 components are allowed.

</tr>
</tbody>
</table>

Usage Information

You can configure only one contact-company.

It is not possible to remove the components of the company name. The no form of the command removes the entire contact-company entry.

This command is optional for SupportAssist service configuration.

**contact-person**

Configure the contact name for an individual.

**Syntax**

```plaintext
contact-person [first <first-name>] last <last-name>
```

To remove the contact person and all their details, use the no contact-person [first <first-name>] last <last-name> command.

**Parameters**

**first-name**

(Optional) Enter the first name for the contact person. This is optional provided each contact person name is unique. To include a space, enter a space within double quotes.

**last-name**

Enter the last name for the contact person. To include a space, enter a space within double quotes.

### enable

Enable all activities and servers for the SupportAssist service.

**Syntax**

```
enable all
```

To disable the SupportAssist activities temporarily, use the `no enable all` command.

**Parameters**

- `all`
  Enter the keyword `all` to enable all SupportAssist service activities.

**Defaults**

Enabled or All Enabled

**Command Modes**

</tr>
</tbody>
</table>

### server

Configure the name of the remote SupportAssist Server and move to SupportAssist Server mode.

**Syntax**

```
server {default | server-name}
```

To delete a server, use the `no server server-name` command.

**Parameters**

- `default`
  Enter the keyword default for the default server.
server-name

Enter the name of the custom server to which the logs would be transferred. To include a space, enter a space within double quotes.

Defaults

Default server has URL stor.g3.ph.dell.com

Command Modes

SUPPORTASSIST

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>

Usage Information

The server-name is used as a reference only and is not required to be used as part of a URL definition.

There is a reserved name of default for the default server at stor.g3.ph.dell.com. You can customize the defaults for this server by entering the server default command and use the custom commands.

You can configure one additional server.

SupportAssist Activity Commands

Dell Networking OS supports the following SupportAssist Activity mode commands.

action-manifest get

Copy an action-manifest file for an activity to the system.

Syntax

action-manifest get tftp | ftp | flash <file-specification> <local-file-name>

Parameters

file-specification

Enter the full file specification for the action-manifest file. For example:

- tftp://hostip/filepath
- ftp://userid:password@hostip/filepath
- scp://userid:password@hostip/filepath

local-file-name

Enter the name of the local action-manifest file, up to 32 characters long. Allowable characters are: a to z, A to Z, 0 to 9, -. _, and space.

Command Modes

SUPPORTASSIST ACTIVITY FULL-TRANSFER

SUPPORTASSIST ACTIVITY EVENT-TRANSFER
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

The remote file specification for full transfer includes the protocol that is used to copy the file from the remote system.

The default Manifest-file for full transfer includes records like alarms, logs, operational, and configuration data.

**Related Commands**

- `action-manifest install` — configure the action-manifest to use for a specific activity.
- `action-manifest show` — view the list of action-manifest for a specific activity.
- `action-manifest remove` — remove the action-manifest file for an activity.

### action-manifest install

Configure action-manifest to transfer a set of customized records for full transfer and to monitor a set of specified events for event transfer.

**Syntax**

```
action-manifest install {default | <local-file-name>}
```

To revert to the default action-manifest file, use the `action-manifest install default` command.

**Parameters**

- `default`:
  - Enter the keyword `default` to revert back to the default set of actions for an activity.

- `local-file-name`:
  - Enter the name of the local action-manifest file. Allowable characters are: a to z, A to Z, 0 to 9, -, _, and space.

**Defaults**

Default

**Command Modes**

- SUPPORTASSIST ACTIVITY FULL-TRANSFER
- SUPPORTASSIST ACTIVITY EVENT-TRANSFER

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

9.9(0.0) | Introduced on the S4810, S4820T, S3048–ON, S4048–ON, S5000, S6000, S6000–ON, Z9500, MXL.

Usage Information
To replace the default action-manifest with a customized one, copy the action-manifest file to the system using the `action-manifest get` command and then use the `action-manifest install` command. To revert to the default action-manifest file, use the `action-manifest install default` command.

Related Commands
- `action-manifest get` — copy an action-manifest file for an activity to the system.
- `action-manifest show` — view the list of action-manifest for a specific activity.
- `action-manifest remove` — remove the action-manifest file for an activity.

### action-manifest remove

Remove the action-manifest file from Dell Networking OS.

**Syntax**

```
action-manifest remove <local-file-name>
```

**Parameters**

- `local-file-name` Enter the name of the local action-manifest file. Allowable characters are: a to z, A to Z, 0 to 9, - , _ , and space.

**Command Modes**

- SUPPORTASSIST ACTIVITY FULL-TRANSFER
- SUPPORTASSIST ACTIVITY EVENT-TRANSFER

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>

</tr>
</tbody>
</table>

**Usage Information**

To revert to the default action-manifest file, use the `action-manifest install` command. If necessary, you can then remove the custom action-manifest file.

**Related Commands**

- `action-manifest get` — copy an action-manifest file for an activity to the system.
- `action-manifest install` — configure the action-manifest to use for a specific activity.
- `action-manifest show` — view the list of action-manifest for a specific activity.
action-manifest show

View the list of action-manifest for a specific activity.

Syntax

    action-manifest show {all}

Parameters

    all  Enter the keyword all to view the entire list of action-manifests that are available for an activity.

Command Modes

    SUPPORTASSIST ACTIVITY FULL-TRANSFER

    SUPPORTASSIST ACTIVITY EVENT-TRANSFER

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version  Description

9.11(0.0)  Introduced on the M I/O Aggregator and FN IOM.

9.10(0.0)  Introduced on the S3148.

9.10(0.0)  Introduced on the C9010, Z9100–ON, S6100–ON, and S3100 series.

9.9(0.0)   Introduced on the S4810, S4820T, S3048–ON, S4048–ON, S5000, S6000, S6000–ON, Z9500, MXL.

Related Commands

    •  action-manifest get — copy an action-manifest file for an activity to the system.
    •  action-manifest install — configure the action-manifest to use for a specific activity.
    •  action-manifest remove — remove the action-manifest file for an activity.

enable

Enable a specific SupportAssist activity.

Syntax

    enable

To disable a particular SupportAssist activity, use the no enable command.

Defaults

    Enabled

Command Modes

    SUPPORTASSIST ACTIVITY FULL-TRANSFER

    SUPPORTASSIST ACTIVITY CORE-TRANSFER

    SUPPORTASSIST ACTIVITY EVENT-TRANSFER

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.
Version Description
9.11(0.0) Introduced on the M I/O Aggregator and FN IOM.
9.10(0.0) Introduced on the S3148.
9.10(0.0) Introduced on the C9010, Z9100–ON, S6100–ON, and S3100 series.
9.9(0.0) Introduced on the S4810, S4820T, S3048–ON, S4048–ON, S5000, S6000, S6000–ON, Z9500, MXL.

Usage Information Enter the specific SupportAssist activity mode and then enable it.

NOTE: By default, the full transfer includes the core files. When you disable the core transfer activity, the full transfer excludes the core files.

Related Commands
- `activity` — move user to the SupportAssist Activity mode for that activity.

SupportAssist Company Commands

Dell Networking OS supports the following SupportAssist Company mode commands.

**address**

Configure the address information for the company.

**Syntax**

```
address [city company-city] [province | region | state] name | country company-country] [province | region | state] name | postalcode | zipcode company-code]
```

To remove a portion of the company address information, use the `no address [city | province | region | state | country | postalcode | zipcode] company-code]` command. For example, to remove the city alone, use the `no address city` command.

To remove the complete company contact information, use the `no address` command.

**Parameters**

- `city company-city` (OPTIONAL) Enter the keyword `city` then the city or town for the company site. To include a space, enter a space within double quotes.
- `province | region | state name` (OPTIONAL) Enter the keyword `province`, `region` or `state` then the name of province, region or state for the company site. To include a space, enter a space within double quotes.
- `country company-country` (OPTIONAL) Enter the keyword `country` then the country for the company site. To include a space, enter a space within double quotes.
- `postalcode | zipcode company-code` (OPTIONAL) Enter the keyword `postalcode` or `zipcode` then the postal code or zip code for the company site, as one string with no spaces.

**Command Modes** SUPPORTASSIST COMPANY

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.
street-address

Configure the street address information for the company.

Syntax

```
street-address {address1} {address2}...{address8}
```

To remove the street address, use the `no street-address` command.

Parameters

- `address1` Enter the street address for the company.
- `address2..address8` (OPTIONAL) Enter the street address of the company site. Up to 8 fields are allowed.

Command Modes

SUPPORTASSIST COMPANY

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Usage Information

This command is optional for SupportAssist service configuration.
**territory**

Configure the territory and set the coverage for the company site.

**Syntax**

```
territory company-territory
```

To remove the company territory information, use the `no territory` command.

**Parameters**

- `company-territory` Enter the territory name for the company. To include a space, enter a space within double quotes. Use three-letter country codes like USA, IND, FRA, GER and so on.

**Command Modes**

- SUPPORTASSIST COMPANY

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>

**Usage Information**

This command is optional for SupportAssist service configuration.

### SupportAssist Person Commands

Dell Networking OS supports the following SupportAssist Person mode commands.

**email-address**

Configure the email addresses to reach the contact person.

**Syntax**

```
email-address primary email-address [alternate email-address]
```

To remove an email address, use the `no email-address` command. To remove the primary and the alternate email addresses, use the `no email-address primary` and `no email-address alternate` commands respectively.

**Parameters**

- `primary email-address` Enter the keyword `primary` then the primary email address for the person.
- `alternate email-address` Enter the keyword `alternate` then the alternate email address for the person.

**Command Modes**

- SUPPORTASSIST PERSON
Command History

</tr>
</tbody>
</table>

Usage Information
The email addresses must have the standard form of <username>@<email system> to be considered valid.

This command is optional for SupportAssist service configuration.

Related Commands
- preferred-method — configure the preferred method for contacting the person.

phone

Configure phone numbers to reach the contact person.

Syntax
phone primary phone [alternate phone]

To remove a phone number, use the no phone command. To remove the primary and alternate phone numbers, use the no phone primary and no phone alternate commands respectively.

Parameters
- primary phone
- alternate phone

Command Modes
SUPPORTASSIST PERSON

Command History

**Related Commands**

- `email-address` — configure email addresses to reach the contact person.
- `phone` — configure phone numbers to reach the contact person.

time-zone

Configure the time zone for contacting the person.

**Syntax**

```
time-zone zone +HH:MM[start-time HH:MM][end-time HH:MM]
```

**Parameters**

- `zone +HH:MM`
  - Enter the keyword `zone` then a time difference from GMT expressed as HH:MM. This number may be preceded by either a + or – sign.

- `start-time HH:MM`
  - Enter the keywords `start-time` then a starting time expressed as HH:MM. Use the 24-hour clock format.

- `stop-time HH:MM`
  - Enter the keywords `stop-time` then a stopping time expressed as HH:MM. Use the 24-hour clock format.

To remove the time zone, use the `no time-zone [zone | start-time | end-time]` command.
SupportAssist Server Commands

Dell Networking OS supports the following SupportAssist Server mode commands.

proxy-ip-address

Configure a proxy for reaching the SupportAssist remote server.

Syntax

proxy-ip-address {ipv4-address | ipv6-address} port port-number [ username userid password [encryption-type] password ]

Parameters

- ipv4-address: Enter the IP address of the proxy server in a dotted decimal format (A.B.C.D).
- ipv6-address: Enter the IPv6 address of the proxy server in the x:x:x:x::x format.
  
  | NOTE: The :: notation specifies successive hexadecimal fields of zeros.

  | NOTE: To use the IPv6 address, the Open Automation package should also support IPv6 communications. For this purpose, SupportAssist requires Dell Networking Open Automation 9.10(0.0) package or later.

- port port-number: Enter the keyword port then the TCP/IP port number. The port number range is from 1024 to 65534.
- username userid: (OPTIONAL) Enter the keyword username then the user ID used for the proxy server.
- password: Enter the keyword password then the encryption-type or the user password.
- encryption-type: (OPTIONAL) Enter an encryption type for the password you enter.
  - 0 directs the system to interpret the password as clear text.
  - 7 indicates that the password is encrypted using a DES hashing algorithm.

- password: Enter a string up to 32 characters long.

Defaults

encryption-type for the password is 0.

---

**url**

Configure the URL to reach the SupportAssist remote server.

**Syntax**  
```plaintext
url uniform-resource-locator
```

To delete the URL for the server, use the `no url` command.
Parameters uniform-resource-locator Enter a text string for the URL using one of the following formats:
  • http://[username:password@]<hostip>:<portNum>/<filepath>
  • https://[username:password@]<hostip>:<portNum>/<filepath>

NOTE: The host IP for the server may be specified as an IPv4 address, an IPv6 address or as a DNS hostname. If using the DNS hostname, the DNS resolver will need to be configured and enabled.

Command Modes SUPPORTASSIST SERVER

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.11(0.0) Introduced on the M I/O Aggregator and FN IOM.
9.10(0.0) Introduced on the S3148.
9.10(0.0) Introduced on the C9010, Z9100–ON, S6100–ON, and S3100 series.
9.9(0.0) Introduced on the S4810, S4820T, S3048–ON, S4048–ON, S5000, S6000, S6000–ON, Z9500, MXL.

Usage Information The URL should be formatted to follow the ISO format.

show eula-consent

Display the EULA for the feature.

Syntax show eula-consent {support-assist | other feature}

Parameters support-assist | other feature Enter the keywords support-assist or the text corresponding to other feature.

Command Modes EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.11(0.0) Introduced on the M I/O Aggregator and FN IOM.
9.10(0.0) Introduced on the S3148.
9.10(0.0) Introduced on the C9010, Z9100–ON, S6100–ON, and S3100 series.
9.9(0.0) Introduced on the S4810, S4820T, S3048–ON, S4048–ON, S5000, S6000, S6000–ON, Z9500, MXL.

Example
Dell# show eula-consent support-assist
SupportAssist EULA has been: Accepted
Additional information about the SupportAssist EULA is as follows:
By installing SupportAssist, you allow Dell to save your contact information (e.g. name, phone number and/or email address) which would be used to provide technical support for your Dell products and services. Dell may use the information for providing recommendations to improve your IT infrastructure.

Dell SupportAssist also collects and stores machine diagnostic information, which may include but is not limited to configuration information, user supplied contact information, names of data volumes, IP addresses, access control lists, diagnostics & performance information, network configuration information, host/server configuration & performance information and related data (Collected Data) and transmits this information to Dell. By downloading SupportAssist and agreeing to be bound by these terms and the Dell end user license agreement, available at: www.dell.com/aeula, you agree to allow Dell to provide remote monitoring services of your IT environment and you give Dell the right to collect the Collected Data in accordance with Dells Privacy Policy, available at: www.dell.com/privacypolicycountryspecific, in order to enable the performance of all of the various functions of SupportAssist during your entitlement to receive related repair services from Dell,. You further agree to allow Dell to transmit and store the Collected Data in accordance with these terms. You agree that the provision of SupportAssist may involve international transfers of data from you to Dell and/or to Dells affiliates, subcontractors or business partners. When making such transfers, Dell shall ensure appropriate protection is in place to safeguard the Collected Data being transferred in connection with SupportAssist. If you are downloading SupportAssist on behalf of a company or other legal entity, you are further certifying to Dell that you have appropriate authority to provide this consent on behalf of that entity. If you do not consent to the collection, transmission and/or use of the Collected Data, you may not download, install or otherwise use SupportAssist.

show running-config

Display the current configuration and changes from the default values.

Syntax

    show running-config support-assist

Parameters

    support-assist  Enter the keyword support-assist to view the detailed configuration for the feature.

Command Modes

    EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version  Description

9.11(0.0)    Introduced on the M I/O Aggregator and FN IOM.
show support-assist status

Display information on SupportAssist feature status including any activities, status of communication, last time communication sent, and so on.

Syntax

show support-assist status

Command Modes

EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description

9.11(0.0) Introduced on the M I/O Aggregator and FN IOM.
9.10(0.0) Introduced on the S3148.
9.10(0.0) Introduced on the C9010, Z9100–ON, S6100–ON, and S3100 series.
9.10(0.0) Introduced on the C9010, Z9100–ON, S6100–ON, and S3100 series.
9.9(0.0) Introduced on the S4810, S4820T, S3048–ON, S4048–ON, S5000, S6000, S6000–ON, Z9500, MXL.

Example

Dell#
The commands in this section configure time values on the system, either using the Dell Networking OS, or the hardware, or using the network time protocol (NTP). With NTP, the switch can act only as a client to an NTP clock host.

For more information, see “Network Time Protocol” of the Management section in the Dell Networking OS Configuration Guide.

The commands in this chapter are generally supported on Dell Networking OS with some exceptions, as notes in the Command History fields.

Topics:
- clock summer-time date
- clock summer-time recurring
- clock timezone
- debug ntp
- ntp authenticate
- ntp authentication-key
- ntp broadcast client
- ntp disable
- ntp multicast client
- ntp master <stratum>
- ntp offset-threshold
- ntp server
- ntp source
- ntp trusted-key
- show clock
- show ntp associations
- show ntp vrf associations
- show ntp status

**clock summer-time date**

Set a date (and time zone) on which to convert the switch to daylight saving time on a one-time basis.

**Syntax**

```
clock summer-time time-zone date start-month start-day start-year start-time end-month end-day end-year end-time [offset]
```

To delete a daylight saving time zone configuration, use the `no clock summer-time` command.

**Parameters**

- **time-zone**
  - Enter the three-letter name for the time zone. This name is displayed in the show clock output.

- **start-month**
  - Enter the name of one of the 12 months in English. You can enter the name of a day to change the order of the display to time day month year.
**start-day** Enter the number of the day. The range is from 1 to 31. You can enter the name of a month to change the order of the display to time day month year.

**start-year** Enter a four-digit number as the year. The range is from 1993 to 2035.

**start-time** Enter the time in hours:minutes. For the hour variable, use the 24-hour format; example, 17:15 is 5:15 pm.

**end-day** Enter the number of the day. The range is from 1 to 31. You can enter the name of a month to change the order of the display to time day month year.

**end-month** Enter the name of one of the 12 months in English. You can enter the name of a day to change the order of the display to time day month year.

**end-time** Enter the time in hours:minutes. For the hour variable, use the 24-hour format; example, 17:15 is 5:15 pm.

**end-year** Enter a four-digit number as the year. The range is from 1993 to 2035.

**offset** (OPTIONAL) Enter the number of minutes to add during the summer-time period. The range is from 1 to 1440. The default is 60 minutes.

**Defaults** Not configured.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Related Commands**
- **clock summer-time recurring** — sets a date (and time zone) on which to convert the switch to daylight saving time each year.
- **show clock** — displays the current clock settings.
clock summer-time recurring

Set the software clock to convert to daylight saving time on a specific day each year.

**Syntax**

Set the software clock to convert to daylight saving time on a specific day each year.

```
clock summer-time time-zone recurring [start-week start-day start-month start-time end-week end-day end-month end-time [offset]]
```

To delete a daylight saving time zone configuration, use the `no clock summer-time` command.

**Parameters**

- **time-zone**: Enter the three-letter name for the time zone. This name is displayed in the show clock output. You can enter up to eight characters.

- **start-week**: (OPTIONAL) Enter one of the following as the week that daylight saving begins and then enter values for start-day through end-time:
  - `week-number`: Enter a number from 1 to 4 as the number of the week in the month to start daylight saving.
  - `first`: Enter this keyword to start daylight saving time in the first week of the month.
  - `last`: Enter this keyword to start daylight saving time in the last week of the month.

- **start-day**: Enter the name of the day that you want daylight saving time to begin. Use English three letter abbreviations; for example, Sun, Sat, Mon, and so on. The range is from Sun to Sat.

- **start-month**: Enter the name of one of the 12 months in English.

- **start-time**: Enter the time in hours:minutes. For the hour variable, use the 24-hour format; example, 17:15 is 5:15 pm.

- **end-week**: Enter the one of the following as the week that daylight saving ends:
  - `week-number`: enter a number from 1 to 4 as the number of the week to end daylight saving time.
  - `first`: enter the keyword `first` to end daylight saving time in the first week of the month.
  - `last`: enter the keyword `last` to end daylight saving time in the last week of the month.

- **end-day**: Enter the weekday name that you want daylight saving time to end. Enter the weekdays using the three letter abbreviations; for example Sun, Sat, Mon, and so on. The range is from Sun to Sat.

- **end-month**: Enter the name of one of the 12 months in English.

- **end-time**: Enter the time in hours:minutes:seconds. For the hour variable, use the 24-hour format; example, 17:15:00 is 5:15 pm.

- **offset**: (OPTIONAL) Enter the number of minutes to add during the summer-time period. The range is from 1 to 1440. The default is **60 minutes**.

Related Commands

- `ntp trusted-key` — configures a trusted key.
- `clock summer-time date` — sets a date (and time zone) on which to convert the switch to daylight saving time on a one-time basis.
- `show clock` — displays the current clock settings.

## clock timezone

Configure a timezone for the switch.

**Syntax**

```plaintext
clock timezone timezone-name offset
```

To delete a timezone configuration, use the `no clock timezone` command.

**Parameters**

- `timezone-name`: Enter the name of the timezone. You cannot use spaces.
- `offset`: Enter one of the following:
  - a number from 1 to 23 as the number of hours in addition to universal time coordinated (UTC) for the timezone.
  - a minus sign (-) then a number from 1 to 23 as the number of hours.

**Defaults**

Not configured.

**Command Modes**

### Usage Information

Coordinated universal time (UTC) is the time standard based on the International Atomic Time standard, commonly known as Greenwich Mean time. When determining system time, include the differentiator between UTC and your local timezone. For example, San Jose, CA is the Pacific Timezone with a UTC offset of -8.

### debug ntp

Display network time protocol (NTP) transactions and protocol messages for troubleshooting.

#### Syntax

debug ntp {adjust | all | authentication | events | loopfilter | packets | select | sync}

To disable debugging of NTP transactions, use the no debug ntp {adjust | all | authentication | events | loopfilter | packets | select | sync} command.

#### Parameters

- **adjust**
  - Enter the keyword `adjust` to display information on NTP clock adjustments.
- **all**
  - Enter the keyword `all` to display information on all NTP transactions.
- **authentication**
  - Enter the keyword `authentication` to display information on NTP authentication transactions.
- **events**
  - Enter the keyword `events` to display information on NTP events.
- **loopfilter**
  - Enter the keyword `loopfilter` to display information on NTP local clock frequency.
- **packets**
  - Enter the keyword `packets` to display information on NTP packets.
- **select**
  - Enter the keyword `select` to display information on the NTP clock selection.
Enter the keyword `sync` to display information on the NTP clock synchronization.

**Command Modes**
- EXEC Privilege

**Command History**

</tr>
</tbody>
</table>

### ntp authenticate

Enable authentication of NTP traffic between the switch and the NTP time serving hosts.

**Syntax**

```
ntp authenticate
```

To disable NTP authentication, use the `no ntp authentication` command.

**Defaults**
Not enabled.

**Command Modes**
- CONFIGURATION

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<tr>
<td>9.8(1.0)</td>
<td>Introduced on the Z9100–ON.</td>
</tr>
</tbody>
</table>
You also must configure an authentication key for NTP traffic using the `ntp authentication-key` command.

### ntp authentication-key

Specify a key for authenticating the NTP server.

**Syntax**

```
ntp authentication-key number md5 [0 | 7] key
```

**Parameters**

- **number**
  - Specify a number for the authentication key. The range is from 1 to 4294967295. This number must be the same as the `number` parameter configured in the `ntp trusted-key` command.

- **md5**
  - Specify that the authentication key is encrypted using MD5 encryption algorithm.

- **0**
  - Specify that authentication key is entered in an unencrypted format (default).

- **7**
  - Specify that the authentication key is entered in DES encrypted format.

- **key**
  - Enter the authentication key in the previously specified format.

**Defaults**

NTP authentication is not configured by default. If you do not specify the option [0 | 7], 0 is selected by default.

<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

After configuring the `ntp authentication-key` command, configure the `ntp trusted-key` command to complete NTP authentication.

Dell Networking OS versions 8.2.1.0 and later use an encryption algorithm to store the authentication key that is different from previous Dell Networking OS versions; beginning in version 8.2.1.0, Dell Networking OS uses DES encryption to store the key in the startup-config when you enter the `ntp authentication-key` command. Therefore, if your system boots with a startup-configuration from an Dell Networking OS versions prior to 8.2.1.0 in which you have configured `ntp authentication-key`, the system cannot correctly decrypt the key, and cannot authenticate NTP packets. In this case you must re-enter this command and save the running-config to the startup-config.

**Related Commands**

- `ntp authenticate` — enables NTP authentication.
- `ntp trusted-key` — configures a trusted key.

### ntp broadcast client

Set up the interface to receive NTP broadcasts from an NTP server.

**Syntax**

```
ntp broadcast client
```

To disable broadcast, use the `no ntp broadcast client` command.

**Defaults**

Disabled.

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**ntp disable**

Prevent an interface from receiving NTP packets.

**Syntax**

```
ntp disable
```

To re-enable NTP on an interface, use the `no ntp disable` command.

**Defaults**

Disabled (that is, if you configure an NTP host, all interfaces receive NTP packets)

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</table>
ntp multicast client

To receive NTP information from the network via multicast, configure the switch.

Syntax

```text
ntp multicast client [multicast-address]
```

To disable multicast reception, use the `no ntp multicast client [multicast-address]` command.

Parameters

- **multicast-address** (OPTIONAL) Enter a multicast address. Enter either an IPv4 address in dotted decimal format or an IPv6 address in X:XX:XX:XX:XX format. If you do not enter a multicast address, the address:
  - 224.0.1.1 is configured if the interface address is IPv4
  - ff00::101 is configured if the interface address is IPv6

Defaults

Not configured.

</tbody>
</table>
**ntp master <stratum>**

Configure the switch as NTP Server.

**Syntax**

```
ntp master <stratum>
```  

**Parameters**

- `ntp master <stratum>`
  
  Enter the `stratum` number to identify the NTP Server's hierarchy.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version**

- 9.10(0.0) Introduced on the S3148.
- 9.10(0.0) Introduced on the S6100–ON.
- 9.8(2.0) Introduced on the S3100 series.
- 9.8(1.0) Introduced on the Z9100–ON.
- 9.8(0.0P6) Introduced on the S4048-ON.
- 9.8(0.0P2) Introduced on the S3048-ON.
- 9.7(0.0) Introduced on the S6000-ON.
- 9.6(0.0) Introduced on the S4810, S4820T, S5000, S6000, Z9000, and Z9500.
- 9.2(1.0) Introduced on the Z9500.

**ntp offset-threshold**

Configure the threshold time interval before which the system generates an NTP audit log message if the time difference from the NTP server is greater than a threshold value (offset-threshold).

**Syntax**

```
ntp offset-threshold threshold-value
```

To disable the threshold value, use the `no ntp offset-threshold` command.

**Parameters**

- `offset-threshold threshold-value`
  
  (Optional) Enter the keyword `offset-threshold` and then the threshold value. The range is from 0 to 999.

**Defaults**

Not enabled.

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.
The `ntp offset-threshold` command does not time synchronization.

Example

```
Dell(config)# ntp offset-threshold 4
```

### `ntp server`

Configure an NTP time-serving host.

**Syntax**

```
ntp server [vrf vrf-name] {hostname | ipv4-address | ipv6-address} [key keyid] [prefer] [version number]
```

**Parameters**

- `vrf vrf-name` (Optional) Enter the keyword `vrf` and then the name of the VRF to configure an NTP time-serving host corresponding to that VRF.
- `ipv4-address | ipv6-address` Enter an IPv4 address (A.B.C.D) or IPv6 address (X:X:X:X::X) of NTP server.
- `hostname` Enter the host name of the server.
- `key keyid` (OPTIONAL) Enter the keyword `key` and a number as the NTP peer key. The range is from 1 to 4294967295.
- `prefer` (OPTIONAL) Enter the keyword `prefer` to indicate that this peer has priority over other servers.
- `version number` (OPTIONAL) Enter the keyword `version` and a number to correspond to the NTP version used on the server. The range is from 1 to 4.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>
### Usage Information

You can configure multiple time-serving hosts. From these time-serving hosts, the Dell Networking OS chooses one NTP host with which to synchronize. To determine which server is selected, use the `show ntp associations` command.

Because many polls to NTP hosts can affect network performance, Dell Networking recommends limiting the number of hosts configured.

By default, the system performs a time synchronization if the time difference from the time source is greater than one second.

### Related Commands

- `show ntp associations` — displays the NTP servers configured and their status.

### ntp source

Specify an interface's IP address to be included in the NTP packets.

**Syntax**

```plaintext
ntp source interface
```

To delete the configuration, use the `no ntp source` command.

**Parameters**

- `interface` Enter the following keywords and slot/port or number information:
  - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
  - For a port-channel interface, enter the keywords `port-channel` then the port-channel ID.
  - For VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults**

Not configured.

**Command Modes**

- CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>

**ntp trusted-key**

Set a key to authenticate the system to which NTP synchronizes.

**Syntax**

```
ntp trusted-key number
To delete the key, use the no ntp trusted-key number command.
```

**Parameters**

- `number`: Enter a number as the trusted key ID. The range is from 1 to 4294967295.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Command History**

</table>
The number parameter in the ntp trusted-key command must be the same number as the number parameter in the ntp authentication-key command. If you change the ntp authentication-key command, you must also change the ntp trusted-key command.

Related Commands

- ntp authentication-key — sets an authentication key for NTP.
- ntp authenticate — enables the NTP authentication parameters you set.

**show clock**

Display the current clock settings.

**Syntax**

```
show clock [detail]
```

**Parameters**

- `detail` (OPTIONAL) Enter the keyword `detail` to view the source information of the clock.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

Version Description
7.5.1.0 Introduced on the C-Series.
6.1.1.0 Introduced on the E-Series.

Usage Information The following describes the `show ntp associations` command shown in the Example below.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>remote</td>
<td>Displays the remote IP address of the NTP peer.</td>
</tr>
<tr>
<td>ref clock</td>
<td>Displays the IP address of the remote peer's reference clock.</td>
</tr>
<tr>
<td>st</td>
<td>Displays the peer's stratum, that is, the number of hops away from the external time source. A 16 in this column means the NTP peer cannot reach the time source.</td>
</tr>
<tr>
<td>when</td>
<td>Displays the last time the switch received an NTP packet.</td>
</tr>
<tr>
<td>poll</td>
<td>Displays the polling interval (in seconds).</td>
</tr>
<tr>
<td>reach</td>
<td>Displays the reachability to the peer (in octal bitstream).</td>
</tr>
<tr>
<td>delay</td>
<td>Displays the time interval or delay for a packet to complete a round-trip to the NTP time source (in milliseconds).</td>
</tr>
<tr>
<td>offset</td>
<td>Displays the relative time of the NTP peer's clock to the switch clock (in milliseconds).</td>
</tr>
<tr>
<td>disp</td>
<td>Displays the dispersion.</td>
</tr>
</tbody>
</table>

Example
```plaintext
Dell# show ntp associations

**Usage Information**

The following describes the `show ntp status` command shown in the Example below.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&quot;Clock is...&quot;</td>
<td>States whether or not the switch clock is synchronized, which NTP stratum the system is assigned and the IP address of the NTP peer.</td>
</tr>
<tr>
<td>&quot;frequency is...&quot;</td>
<td>Displays the frequency (in ppm), stability (in ppm) and precision (in Hertz) of the clock in this system.</td>
</tr>
<tr>
<td>&quot;reference time is...&quot;</td>
<td>Displays the reference time stamp.</td>
</tr>
<tr>
<td>&quot;clock offset is...&quot;</td>
<td>Displays the system offset to the synchronized peer and the time delay on the path to the NTP root clock.</td>
</tr>
<tr>
<td>&quot;root dispersion is...&quot;</td>
<td>Displays the root and path dispersion.</td>
</tr>
<tr>
<td>&quot;peer mode is...&quot;</td>
<td>State what NTP mode the switch is. This should be Client mode.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell# show ntp status
Clock is synchronized, stratum 2, reference is 100.10.10.10
frequency is -32.000 ppm, stability is 15.156 ppm, precision is 4294967290
reference time is BC242FD5.C7C5C000 (10:15:49.780 UTC Mon Jan 10 2000)
clock offset is clock offset msec, root delay is 0.01656 sec
root dispersion is 0.39694 sec, peer dispersion is peer dispersion msec
peer mode is client
Dell#
```

**Related Commands**

- `show ntp associations` — displays information on the NTP master and peer configurations.
Tunneling is supported on Dell Networking OS.

Topics:
- ip unnumbered
- ipv6 unnumbered
- tunnel allow-remote
- tunnel destination
- tunnel dscp
- tunnel flow-label
- tunnel hop-limit
- tunnel keepalive
- tunnel-mode
- tunnel source

### ip unnumbered

Configure a tunnel interface to operate without a unique IPv4 address and select the interface from which the tunnel borrows its address.

**Syntax**

```markdown
ip unnumbered interface-type
```

To set the tunnel back to default logical address use the `no ip unnumbered` command. If the tunnel was previously operational, the tunnel interface is operationally down unless you also configure the tunnel IPv6 address.

**Parameters**

- `interface-type` Enter the interface type, followed by a slot/port/subport number.

**Defaults**

None

**Command Modes**

INTERFACE TUNNEL

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>
Usage Information

The `ip unnumbered` command fails in two conditions:

- If the logical ip address is configured.
- If Tunnel mode is ipv6ip (where ip address over tunnel interface is not possible).

To ping the unnumbered tunnels, the logical address route information must be present at both the ends.

### NOTE:
The `ip unnumbered` command can specify an interface name that does not exist or does not have a configured IPv6 address. The tunnel interface is not changed to operationally up until the logical IP address is identified from one of the address family.

### ipv6 unnumbered

Configure a tunnel interface to operate without a unique IPv6 address and select the interface from which the tunnel borrows its address.

**Syntax**

```
ipv6 unnumbered {interface-type interface-number}
```

To set the tunnel back to default logical address use the `no ipv6 unnumbered` command. If the tunnel was previously operational, the tunnel interface is operationally down unless you also configure the tunnel IPv4 address.

**Parameters**

- `interface-type interface-number` Enter the interface type, followed by the type, and then the slot/port/subport information.

**Defaults**

None.

**Command Modes**

INTERFACE TUNNEL

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version**

- 9.10(0.0)
- 9.10(0.0)
- 9.8(2.0)
- 9.8(1.0)
- 9.8(0.0P5)
- 9.8(0.0P2)
- 9.7(0.0)
- 9.5(0.1)
- 9.4(0.0)

**Description**

- Introduced on the S3148.
- Introduced on the S6100-ON.
- Introduced on the S3100 series.
- Introduced on the Z9100-ON.
- Introduced on the S4048-ON.
- Introduced on the S3048-ON.
- Introduced on the S6000-ON.
- Introduced on the S6000-ON.
- Introduced on the Z9500.
- Introduced on the S4810, S4820T.
### Version Description

9.3(0.1) Introduced on the S6000 and Z9000.

#### Usage Information

The `ipv6 unnumbered` command fails in two conditions:

- If the logical IP address is configured.
- If Tunnel mode is ipv6ip (where ip address over tunnel interface is not possible).

To ping the unnumbered tunnels, the logical address route information must be present at both the ends.

**NOTE:** The `ipv6 unnumbered` command can specify an interface name that does not exist or does not have a configured IPv6 address. The tunnel interface is not changed to operationally up until the logical IP address is identified from one of the address family.

### tunnel allow-remote

Configure an IPv4 or IPv6 address or prefix whose tunneled packets are accepted for decapsulation. If you do not configure allow-remote entries, tunneled packets from any remote peer address is accepted.

This feature is supported on Dell Networking OS.

**Syntax**

```
tunnel allow-remote {ip-address | ipv6-address} [mask]
```

To delete a configured allow-remote entry use the `no tunnel allow-remote` command. Any specified address/mask values must match an existing entry for the delete to succeed. If the address and mask are not specified, this command deletes all allow-remote entries.

**Parameters**

- `ip-address`: Enter the source IPv4 address in A.B.C.D format.
- `ipv6-address`: Enter the source IPv6 address in X:X:X::X format.
- `mask`: (OPTIONAL) Enter a network mask in /prefix format (/x) or A.B.C.D to match a range of remote addresses. The default mask is /32 for IPv4 addresses and /128 for IPv6 addresses, which match only the specified address.

**Defaults**

If you do not configure `tunnel allow-remote`, all traffic which is destined to tunnel source address is decapsulated.

**Command Modes**

INTERFACE TUNNEL

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version**

- 9.10(0.0) Introduced on the S3148.
- 9.10(0.0) Introduced on the S6100-ON.
- 9.8(2.0) Introduced on the S3100 series.
- 9.8(1.0) Introduced on the Z9100-ON.
- 9.8(0.0P5) Introduced on the S4048-ON.
- 9.8(0.0P2) Introduced on the S3048-ON.
- 9.7(0.0) Introduced on the S6000-ON.
### tunnel destination

Set a destination endpoint for the tunnel.

**Syntax**

```
tunnel destination {ip-address | ipv6-address}
```

To delete a tunnel destination address, use the `no tunnel destination {ip-address | ipv6-address}` command.

**Parameters**

- `ip-address`: Enter the destination IPv4 address for the tunnel.
- `ipv6-address`: Enter the destination IPv6 address for the tunnel.

**Defaults**

none

**Command Modes**

INTERFACE TUNNEL (conf-if-tu)

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version**

- 9.10(0.0)
- 9.10(0.0)
- 9.8(2.0)
- 9.8(1.0)
- 9.8(0.0P5)
- 9.8(0.0P2)
- 9.7(0.0)
- 9.5(0.1)
- 9.3(0.0)

**Description**

- Introduced on the S3148.
- Introduced on the S6100-ON.
- Introduced on the S3100 series.
- Introduced on the Z9100-ON.
- Introduced on the S4048-ON.
- Introduced on the S3048-ON.
- Introduced on the S6000-ON.
- Introduced on the Z9500.
- Introduced on the S4810, S4820T, S6000 and Z9000.

**Usage Information**

The tunnel interface is inoperable without a valid tunnel destination address for the configured Tunnel mode.
To establish a logical tunnel to the particular destination address, use the destination address of the outer tunnel header. If you configure a tunnel interface or source address, the tunnel destination must be compatible.

**tunnel dscp**

Configure the method to set the DSCP in the outer tunnel header.

**C9000 Series**

```
Syntax
   tunnel dscp {mapped | value}

To use the default tunnel mapping behavior, use the no tunnel dscp value command.
```

**Parameters**

- `mapped`: Enter the keyword `mapped` to map the original packet DSCP (IPv4)/Traffic Class (IPv6) to the tunnel header DSCP (IPv4)/Traffic Class (IPv6) depending on the mode of tunnel.
- `value`: Enter a value to set the DSCP value in the tunnel header. The range is from 0 to 63. The default value of 0 denotes mapping of original packet DSCP (IPv4)/Traffic Class (IPv6) to the tunnel header DSCP (IPv4)/Traffic Class (IPv6) depending on the mode of tunnel.

**Defaults**

0 (Mapped)

**Command Modes**

INTERFACE TUNNEL (conf-if-tu)

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>

**Usage Information**

This command configures the method used to set the high 6 bits (the differentiated services codepoint) of the IPv4 TOS or the IPv6 traffic class in the outer IP header.

A value of 0 copies original packet DSCP (IPv4)/Traffic Class (IPv6) to the tunnel header DSCP (IPv4)/Traffic Class (IPv6) depending on the mode of tunnel.
tunnel flow-label

Configure the method to set the IPv6 flow label value in the outer tunnel header.

Syntax

```
tunnel flow-label value
```

To return to the default value of 0, use the `no tunnel flow-label value` command.

Parameters

- **value**: Enter a value to set the IPv6 flow label value in the tunnel header. The range is from 0 to 1048575. The default value is 0.

Defaults

0 (Mapped original packet flow-label value to tunnel header flow-label value)

Command Modes

INTERFACE TUNNEL (conf-if-tu)

Command History

</tr>
</tbody>
</table>

Usage Information

This command is only valid for tunnel interfaces with an IPv6 outer header.

tunnel hop-limit

Configure the method to set the IPv4 time-to-live or the IPv6 hop limit value in the outer tunnel header.

Syntax

```
tunnel hop-limit value
```

To restore the default tunnel hop-limit, use the `no tunnel hop-limit` command.

Parameters

- **value**: Enter the hop limit (ipv6) or time-to-live (ipv4) value to include in the tunnel header. The range is from 0 to 255. The default is 64.

Defaults

64 (Time-to-live for IPv4 outer tunnel header or hop limit for IPv6 outer tunnel header)

Command Modes

INTERFACE TUNNEL (conf-if-tu)
tunnel keepalive

Configure the tunnel keepalive target, interval and attempts.

Syntax
tunnel keepalive {ip-address | ipv6-address}[interval {seconds}] [attempts {count | unlimited}]

To disable the tunnel keepalive probes use the no tunnel keepalive command.

Parameters

- **ip-address ipv6 address**
  - Enter the IPv4 or IPv6 address of the peer to which the keepalive probes will be sent.

- **interval seconds**
  - Enter the keyword interval then the interval time, in seconds, after which the restart process to keepalive probe packets.
  - The range is from 5 to 255. The default is 5.

- **count**
  - (OPTIONAL) Enter the keyword count to count packets processed by the filter.
  - The range is from 3 to 10. The default is 3.

- **unlimited**
  - Enter the keyword unlimited to specify the unlimited number of keepalive probe packets.

Defaults

Tunnel keepalive is disabled.

Command Modes

INTERFACE TUNNEL
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>

Enabling tunnel keepalive causes ICMP echo packets to be sent to the keepalive target. The ICMP echo will be sourced from the tunnel interface logical IPv4 or IPv6 address and will be tunnel encapsulated. The response will be accepted whether it returns tunnel encapsulated or not.

When configuring tunnel keepalive at both end points of a tunnel interface it is recommended to set the tunnel keepalive target to the logical IPv4 or IPv6 address of the far end tunnel peer, rather than to the tunnel destination. This reduces the chance of both ends of the tunnel staying in keepalive down state. If both ends get into a keepalive down state that does not clear in a few seconds, then performing shutdown - no shutdown sequence on one end should bring both ends back to up.

### tunnel-mode

Enable a tunnel interface.

**Syntax**

```
tunnel mode {ipip | ipv6 | ipv6ip}[decapsulate-any]
```

To disable an active tunnel interface, use the `no tunnel mode` command.

**Parameters**

- **ipip**: Enable tunnel in RFC 2003 mode and encapsulate IPv4 and/or IPv6 datagrams inside an IPv4 tunnel.
- **ipv6**: Enable tunnel in RFC 2473 mode and encapsulate IPv4 and/or IPv6 datagrams inside an IPv6 tunnel.
- **ipv6ip**: Enable tunnel in RFC 4213 mode and encapsulate IPv6 datagrams inside an IPv4 tunnel.
- **decapsulate-any**: (Optional) Enable tunnel in multipoint receive-only mode.

**Defaults**

There is no default tunnel mode.

**Command Modes**

INTERFACE TUNNEL
Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<td>Added the decapsulate-any command.</td>
</tr>
<tr>
<td>9.3(0.1)</td>
<td>Introduced on the S6000 and Z9000.</td>
</tr>
</tbody>
</table>

Usage Information

To enable a tunnel interface, use this command. You must define a tunnel mode for the tunnel to function. If you previously defined the tunnel destination or source address, the tunnel mode must be compatible.

Including the decapsulate-any option causes the command to fail if any of the following tunnel transmit options are configured: tunnel destination, tunnel dscp, tunnel flow-label, tunnel hop-limit, or tunnel keepalive. Conversely, if you configure any tunnel allow-remote entries, the tunnel-mode command fails unless the decapsulate-any option is included.

Configuration of IPv6 commands over decapsulate-any tunnel causes an error.

tunnel source

Set a source address for the tunnel.

Syntax

```
tunnel source {ip-address | ipv6-address | interface-type-number | anylocal}
```

To delete the current tunnel source address, use the no tunnel source command.

Parameters

- **ip-address**: Enter the source IPv4 address in A.B.C.D format.
- **ipv6-address**: Enter the source IPv6 address in X::X::X::X format.
- **interface-type-number**: - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.
- For a port-channel interface, enter the keywords port-channel then the port-channel ID.
- **anylocal**: Enter the anylocal command to allow the multipoint receive-only tunnel to decapsulate tunnel packets destined to any local ip address.
**Defaults**

none

**Command Modes**

INTERFACE TUNNEL (conf-if-tu)

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>

<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.5(0.1)</td>
<td>Introduced on the Z9500.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Added the tunnel source anylocal command.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the S4810, S4820T, S6000 and Z9000.</td>
</tr>
</tbody>
</table>

**Usage Information**

Added an optional keyword “anylocal” to the tunnel source command. The anylocal argument can be used in place of the ip address or interface, but only with the multipoint receive-only mode tunnels. The tunnel source anylocal command allows the multipoint receive-only tunnel to decapsulate tunnel packets addressed to any IPv4 or IPv6 (depending on the tunnel mode) address configured on the switch that is operationally Up.
Uplink Failure Detection (UFD)

Uplink failure detection (UFD) provides detection of the loss of upstream connectivity and, if you use this with NIC teaming, automatic recovery from a failed link.

Topics:
- clear ufd-disable
- debug uplink-state-group
- description
- downstream
- downstream auto-recover
- downstream disable links
- enable
- show running-config uplink-state-group
- show uplink-state-group
- uplink-state-group
- upstream

**clear ufd-disable**

Re-enable one or more downstream interfaces on the switch/router that are in a UFD-Disabled Error state so that an interface can send and receive traffic.

**Syntax**

```
clear ufd-disable {interface interface | uplink-state-group group-id}
```

**Parameters**

- **interface interface**
  Specify one or more downstream interfaces. For interface, enter one of the following interface types:
  - 1 Gigabit Ethernet: gigabitethernet {slot/port | slot/port-range}
  - 10 Gigabit Ethernet: tengigabitethernet {slot/port | slot/port-range}
  - Port channel: port-channel {1-128 | port-channel-range}

  Where port-range and port-channel-range specify a range of ports separated by a dash (-) and/or individual ports/port channels in any order; for example: gigabitethernet 1/1-2,5,9,11-12 port-channel 1-3,5. A comma is required to separate each port and port-range entry.

- **uplink-state-group group-id**
  Re-enables all UFD-disabled downstream interfaces in the group. The valid group-id values are from 1 to 16.

**Defaults**

A downstream interface in a UFD-disabled uplink-state group is also disabled and is in a UFD-Disabled Error state.

Related Commands

- downstream — assigns a port or port-channel to the uplink-state group as a downstream interface.
- uplink-state-group — creates an uplink-state group and enables the tracking of upstream links.

debug uplink-state-group

Enable debug messages for events related to a specified uplink-state group or all groups.

Syntax
debug uplink-state-group [group-id]

To turn off debugging event messages, enter the no debug uplink-state-group [group-id] command.

Parameters

- **group-id**
  
  Enables debugging on the specified uplink-state group. The valid group-id values are from 1 to 16.

Defaults

none

```
Dell(conf-uplink-state-group-16)# description test
Dell(conf-uplink-state-group-16)#
```
Related Commands

- **uplink-state-group** — create an uplink-state group and enables the tracking of upstream links.

**downstream**

Assign a port or port-channel to the uplink-state group as a downstream interface.

**Syntax**

```plaintext
downstream interface
```

To delete an uplink-state group, enter the `no downstream interface` command.

**Parameters**

- **interface**

  Enter one of the following interface types:
  - 1 Gigabit Ethernet: `gigabitethernet {slot/port | slot/port-range}`
  - 10 Gigabit Ethernet: `tengigabitethernet {slot/port | slot/port-range}`
  - Port channel: `port-channel {1–128 | port-channel-range}`

  Where `port-range` and `port-channel-range` specify a range of ports separated by a dash (-) and/or individual ports/port channels in any order; for example: `gigabitethernet 1/1-2,5,9,11-12 port-channel 1-3,5`. A comma is required to separate each port and port-range entry.

<td>Introduced on the S-Series S50.</td>
</tr>
</tbody>
</table>

**Usage Information**

You can assign physical port or port-channel interfaces to an uplink-state group.

You can assign an interface to only one uplink-state group. Configure each interface assigned to an uplink-state group as either an upstream or downstream interface, but not both.
You can assign individual member ports of a port channel to the group. An uplink-state group can contain either the member ports of a port channel or the port channel itself, but not both.

Related Commands
- `upstream` — assigns a port or port-channel to the uplink-state group as an upstream interface.
- `uplink-state-group` — creates an uplink-state group and enables the tracking of upstream links.

**downstream auto-recover**

Enable auto-recovery so that UFD-disabled downstream ports in an uplink-state group automatically come up when a disabled upstream port in the group comes back up.

**Syntax**
```
downstream auto-recover
```
To disable auto-recovery on downstream links, use the `no downstream auto-recover` command.

**Defaults**
The auto-recovery of UFD-disabled downstream ports is enabled.

**Command Modes**
UPLINK-STATE-GROUP

**Command History**

**Related Commands**
- `downstream` — assign a port or port-channel to the uplink-state group as a downstream interface.
- `uplink-state-group` — create an uplink-state group and enables the tracking of upstream links.

**downstream disable links**

Configure the number of downstream links in the uplink-state group that are disabled if one upstream link in an uplink-state group goes down.

**Syntax**
```
downstream disable links {number | all}
```

To revert to the default setting, use the `no downstream disable links` command.

**Parameters**

- **number**
  - Enter the number of downstream links the UFD brings down. The range is from 1 to 1024.

- **all**
  - Brings down all downstream links in the group.

**Defaults**

No downstream links are disabled when an upstream link in an uplink-state group goes down.

**Command Modes**

UPLINK-STATE-GROUP

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>

**Usage Information**

When one upstream interface in an uplink-state group goes down, you can configure the number of downstream interfaces in an uplink-state group are put into a link-down state with an UFD-Disabled error message.

If all upstream interfaces in an uplink-state group go down, all downstream interfaces in the same uplink-state group are put into a link-down state.

**Related Commands**

- `downstream` — assigns a port or port-channel to the uplink-state group as a downstream interface.
- `uplink-state-group` — creates an uplink-state group and enables the tracking of upstream links.

### enable

Enable uplink state group tracking for a specific UFD group.

**Syntax**

```plaintext
enable
```

To disable upstream-link tracking without deleting the uplink-state group, use the `no enable` command.

**Defaults**

Upstream-link tracking is automatically enabled in an uplink-state group.

**Command Modes**

UPLINK-STATE-GROUP
Command History

**show uplink-state-group**

Display status information on a specified uplink-state group or all groups.

**Syntax**

```
show uplink-state-group [group-id] [detail]
```

**Parameters**

- `group-id` Displays status information on a specified uplink-state group or all groups. The valid group-id values are from 1 to 16.
- `detail` Displays additional status information on the upstream and downstream interfaces in each group

**Defaults**

none

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
--- | ---
9.10(0.2) | Introduced on the Z9100-ON.
9.8(2.0) | Introduced on the S3100 series.
9.10(0.0) | Introduced on the S3148.
9.8(0.0P6) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.

**Example**

```
Dell(config)# show running-config uplink-state-group
!
no enable
uplink state track 1
downstream GigabitEthernet 1/2,4,6,11-19
upstream TengigabitEthernet 1/49, 50
upstream PortChannel 1
!
uplink state track 2
downstream GigabitEthernet 1/1,3,5,7-10
upstream TengigabitEthernet 1/51,52
```

**Related Commands**

- `show uplink-state-group` — displays the status information on a specified uplink-state group or all groups.
- `uplink-state-group` — creates an uplink-state group and enables the tracking of upstream links.
### Version Description

**9.2(1.0)**
- Introduced on the Z9500.

**9.2(0.0)**
- Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.

**8.3.19.0**
- Introduced on the S4820T.

**8.3.12.0**
- Introduced on the S4810.

**8.4.2.3**
- Introduced on the S-Series S50.

### Example

```
Dell# show uplink-state-group
Uplink State Group: 1 Status: Enabled, Up
Uplink State Group: 3 Status: Enabled, Up
Uplink State Group: 5 Status: Enabled, Down
Uplink State Group: 6 Status: Enabled, Up
Uplink State Group: 7 Status: Enabled, Up
Uplink State Group: 16 Status: Disabled, Up

Dell# show uplink-state-group 16
Uplink State Group: 16 Status: Disabled, Up

Dell# show uplink-state-group detail
(Up): Interface up (Dwn): Interface down (Dis): Interface disabled
Uplink State Group : 1 Status: Enabled, Up
Upstream Interfaces :
Downstream Interfaces :

Downstream Interfaces : Gi 1/30(Dwn)
```

### Related Commands

- `show running-config uplink-state-group` — displays the current configuration of one or more uplink-state groups.
- `uplink-state-group` — creates an uplink-state group and enables the tracking of upstream links.

### uplink-state-group

Create an uplink-state group and enable the tracking of upstream links on a switch or router.

**Syntax**

```
uplink-state-group group-id
```

**Default Configuration**

No default configuration.

**Command Mode**

Global Configuration mode.

**Command History**

- Introduced in Dell EMC Networking OS 9.2(0.0).

**Example**

```
Dell(conf)#uplink-state-group 1
Dell(conf-uplink-state-group)#show uplink-state-group
Uplink State Group: 1 Status: Enabled, Up
```

**Usage Guidelines**

This feature allows you to define a group of one or more upstream interfaces, and define a tracking relationship between the upstream interfaces and the downstream interfaces. If the state (up or down) of all the upstream interfaces in the group is up, then the state of the downstream interfaces in the group is set to up. If the state of all upstream interfaces in the group is down, then the state of the downstream interfaces in the group is set to down. The state of the group is not affected if the state of an upstream interface is down but there are other upstream interfaces in the group that are up.

**Uplink Failure Detection (UFD)**

This feature allows you to define a group of one or more upstream interfaces, and define a tracking relationship between the upstream interfaces and the downstream interfaces. If the state (up or down) of all the upstream interfaces in the group is up, then the state of the downstream interfaces in the group is set to up. If the state of all upstream interfaces in the group is down, then the state of the downstream interfaces in the group is set to down. The state of the group is not affected if the state of an upstream interface is down but there are other upstream interfaces in the group that are up.

The UFD feature helps you to detect failures on the upstream links and react appropriately. For example, you can use this feature on a switch that acts as a_rate limiting the downstream traffic based on the traffic received from the upstream link. If the upstream link fails, the switch stops forwarding packets to the downstream link.
To delete an uplink-state group, enter the `no uplink-state-group group-id` command.

**Parameters**

- **group-id**
  - Enter the ID number of an uplink-state group. The range is from 1 to 16.

**Defaults**

- None

**Command Modes**

- CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>

**Usage Information**

- After you enter the command, to assign upstream and downstream interfaces to the group, enter Uplink-State-Group Configuration mode.

- An uplink-state group is considered operationally up if at least one upstream interface in the group is in the Link-Up state.

- An uplink-state group is considered operationally down if no upstream interfaces in the group are in the Link-Up state. No uplink-state tracking is performed when a group is disabled or in an operationally down state.

- To disable upstream-link tracking without deleting the uplink-state group, use the `no enable` command in uplink-state-group configuration mode.

**Example**

```
Dell(conf)# uplink-state-group 16
Dell(conf)#
02:23:17: %RPM0-P:CP %IFMGR-5-ASTATE_UP: Changed uplink state group Admin state to up: Group 16
Dell(conf)#
```

**Related Commands**

- `show running-config uplink-state-group` — displays the current configuration of one or more uplink-state groups.
- `show uplink-state-group` — displays the status information on a specified uplink-state group or all groups.
Assign a port or port-channel to the uplink-state group as an upstream interface.

Syntax

upstream interface

To delete an uplink-state group, use the no upstream interface command.

Parameters

**interface**

Enter one of the following interface types:

- 1 Gigabit Ethernet: `gigabitethernet {slot/port | slot/port-range}`
- 10 Gigabit Ethernet: `tengigabitethernet {slot/port | slot/port-range}`
- Port channel: `port-channel {1–128 | port-channel-range}`

Where `port-range` and `port-channel-range` specify a range of ports separated by a dash (-) and/or individual ports/port channels in any order; for example: `gigabitethernet 1/1-2,5,9,11-12 port-channel 1-3,5`. A comma is required to separate each port and port-range entry.

Defaults

none

Command Modes

UPLINK-STATE-GROUP

Usage Information

You can assign physical port or port-channel interfaces to an uplink-state group.

You can assign an interface to only one uplink-state group. Configure each interface assigned to an uplink-state group as either an upstream or downstream interface, but not both.

You can assign individual member ports of a port channel to the group. An uplink-state group can contain either the member ports of a port channel or the port channel itself, but not both.
### Example

Dell(conf-uplink-state-group-16)# upstream gigabitethernet 1/10-15
Dell(conf-uplink-state-group-16)#

### Related Commands

- **downstream** — assigns a port or port-channel to the uplink-state group as a downstream interface.
- **uplink-state-group** — creates an uplink-state group and enables the tracking of upstream links.
With the virtual local area network (VLAN)-stacking feature (also called stackable VLANs and QinQ), you can “stack” VLANs into one tunnel and switch them through the network transparently.

The Dell Networking OS supports this feature.

For more information about basic VLAN commands, see the Virtual LAN (VLAN) Commands section in Layer 2.

**Important Points to Remember**

- If you do not enable the spanning tree protocol (STP) across the stackable VLAN network, STP bridge protocol data units (BPDUs) from the customer’s networks are tunneled across the stackable VLAN network.
- If you do enable STP across the stackable VLAN network, STP BPDUs from the customer’s networks are consumed and not tunneled across the stackable VLAN network unless you enable protocol tunneling.

  **NOTE:** For more information about protocol tunneling on the E-Series, see Service Provider Bridging.

- Layer 3 protocols are not supported on a stackable VLAN network.
- Assigning an IP address to a stackable VLAN is supported when all the members are only stackable VLAN trunk ports. IP addresses on a stackable VLAN-enabled VLAN are not supported if the VLAN contains stackable VLAN access ports. This facility is provided for the simple network management protocol (SNMP) management over a stackable VLAN-enabled VLAN containing only stackable VLAN trunk interfaces. Layer 3 routing protocols on such a VLAN are not supported.
- Dell Networking recommends that you do not use the same MAC address, on different customer VLANs, on the same stackable VLAN.
- Interfaces configured using stackable VLAN access or stackable VLAN trunk commands do not switch traffic for the default VLAN. These interfaces are switch traffic only when they are added to a non-default VLAN.
- Starting with Dell Networking OS version 7.8.1 for C-Series and S-Series (Dell Networking OS version 7.7.1 for E-Series, 8.2.1.0 for E-Series ExaScale), a vlan-stack trunk port is also allowed to be configured as a tagged port and as an untagged port for single-tagged VLANs. When the vlan-stack trunk port is also a member of an untagged vlan, the port must be in Hybrid mode. For more information, see portmode hybrid.

- dei honor
- dei mark
- member
- stack-unit stack-group
- vlan-stack access
- vlan-stack compatible
- vlan-stack dot1p-mapping
- vlan-stack protocol-type
- vlan-stack trunk
**dei honor**

Honor the incoming DEI value by mapping it to a Dell Networking OS drop precedence. Enter the command once for 0 and once for 1.

**Syntax**

```
dei honor {0 | 1} {green | red | yellow}
```

**Parameters**

- **0 | 1**
  - Enter the bit value you want to map to a color.

- **green | red | yellow**
  - Choose a color:
    - **Green**: High priority packets that are the least preferred to be dropped.
    - **Yellow**: Lower priority packets that are treated as best-effort.
    - **Red**: Lowest priority packets that are always dropped (regardless of congestion status).

**Defaults**

Disabled; Packets with an unmapped DEI value are colored green.

**Usage Information**

Enable DEI before using this command.
**dei mark**

Set the DEI value on egress according to the color currently assigned to the packet.

**Syntax**

dei mark {green | yellow} {0 | 1}

**Parameters**

- **0 | 1** Enter the bit value you want to map to a color.
- **green | red | yellow** Choose a color:
  - Green: High priority packets that are the least preferred to be dropped.
  - Yellow: Lower priority packets that are treated as best-effort.

**Defaults**

All the packets on egress are marked with DEI 0.

**Usage Information**

Enable DEI before using this command.

---

**member**

Assign a stackable VLAN access or trunk port to a VLAN. The VLAN must contain the vlan-stack compatible command in its configuration.

**Syntax**

member interface
To remove an interface from a Stackable VLAN, use the `no member interface` command.

**Parameters**

- **interface**
  
  Enter the following keywords and the interface information:
  
  - For a Port Channel interface, enter the keywords `port-channel`, and then a number.
  - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

**Defaults**

Not configured.

**Command Modes**

`CONF-IF-VLAN`

**Command History**

</table>

**Usage Information**

Enable the stackable VLAN (using the `vlan-stack compatible` command) on the VLAN prior to adding a member to the VLAN.

**Related Commands**

- `vlan-stack compatible` — enables stackable VLAN on a VLAN.

---

### stack-unit stack-group

Configure a stacking group specified by an ID.

**Syntax**

```
[no] stack-unit unit-id stack-group stack-group-id
```

To remove the current stack group configuration, use the `no stack-unit unit-id stack-group stack-id` command.
Parameters

- **unit-id**: Enter the stack unit ID.
- **stack-group-id**: Enter the stack group ID. The range is from 0 to 16.

Command Modes

- **CONFIGURATION**

Command History

</table>

Usage Information

⚠️ **WARNING**: The following message displays to confirm the command: All non-default configurations on the related member ports ports (<ports listed here>) will be removed. Do you want to continue (y/n)? If you enter “y”, all non-default configurations on any member ports of the current stack group are removed when you reboot the unit.

**vlan-stack access**

Specify a Layer 2 port or port channel as an access port to the stackable VLAN network.

**Syntax**

```
vlan-stack access
```

**To remove access port designation, use the no vlan-stack access command.**

**Defaults**

Not configured.

**Command Modes**

- INTERFACE

**Command History**

</tr>
</tbody>
</table>

**Usage Information**

Prior to enabling this command, to place the interface in Layer 2 mode, enter the `switchport` command.

To remove the access port designation, remove the port (using the `no member interface` command) from all stackable VLAN-enabled VLANs.

### vlan-stack compatible

Enable the stackable VLAN feature on a VLAN.

**Syntax**

```
vlan-stack compatible
```

To disable the Stackable VLAN feature on a VLAN, use the `no vlan-stack compatible` command.

**Defaults**

Not configured.

**Command Modes**

`CONF-IF-VLAN`

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>

### Command Usage Information

Prior to disabling the stackable VLAN feature, remove the members.

To view the stackable VLANs, use the `show vlan` command in EXEC Privilege mode. Stackable VLANs contain members, designated by the M in the Q column of the command output.

If you enabled VRF, you cannot enable the stacked VLAN feature using this command.

If you enabled IGMP snooping, you cannot enable the stacked VLAN feature using this command.

### Example

```bash
dell# show vlan
Codes: * - Default VLAN, G - GVRP VLANs

<table>

</tr>
</tbody>
</table>

dell#
```

## vlan-stack dot1p-mapping

Map C-Tag dot1p values to an S-Tag dot1p value.

### Syntax

```plaintext
vlan-stack dot1p-mapping c-tag-dot1p values sp-tag-dot1p value
```

### Parameters

- **c-tag-dot1p**
  - Enter the keyword `c-tag-dot1p` then the customer dot1p value that is mapped to a service provider dot1p value. The range is from 0 to 7.

- **sp-tag-dot1p**
  - Enter the keyword `sp-tag-dot1p` then the service provider dot1p value. The range is from 0 to 7.

### Defaults

- none

### Command Modes

- INTERFACE
### Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3(1.0)</td>
<td>Introduced on the C-Series and S-Series.</td>
</tr>
</tbody>
</table>

### Usage Information

You can separate the C-Tag values by commas or dashed ranges. In the case of conflicts, dynamic mode CoS overrides any Layer 2 QoS configuration.

### vlan-stack protocol-type

Define the stackable VLAN tag protocol identifier (TPID) for the outer VLAN tag (also called the VMAN tag). If you do not configure this command, the Dell Networking OS assigns the value 0x9100.

**Syntax**

```
vlan-stack protocol-type number
```

**Parameters**

- `number` : Enter the hexadecimal number as the stackable VLAN tag.
  
  You may specify both bytes of the 2-byte S-Tag TPID. The range is from 0 to FFFF. The default is 9100.

**Defaults**

0x9100

**Command Modes**

</tbody>
</table>

Related Commands
- `portmode hybrid` — sets a port (physical ports only) to accept both tagged and untagged frames. A port configured this way is identified as a hybrid port in report displays.
- `vlan-stack trunk` — specifies a Layer 2 port or port channel as a trunk port to the Stackable VLAN network.

`vlan-stack trunk`

Specify a Layer 2 port or port channel as a trunk port to the stackable VLAN network.

Syntax

```
vlan-stack trunk
```

To remove a trunk port designation from the selected interface, use the `no vlan-stack trunk` command.

Defaults
Not configured.

</tr>
</tbody>
</table>

**E-Series original Command**

Prior to using this command, to place the interface in Layer 2 mode, use the `switchport` command.

To remove the trunk port designation, first remove the port (using the `no member interface` command) from all stackable VLAN-enabled VLANs.

In Example 1, a VLAN-Stack trunk port is configured and then made part of a single-tagged VLAN.

In Example 2, the tag protocol identifier (TPID) is set to 88A8. The Gi 3/10 port is configured to act as a VLAN-Stack access port; the Gi 5/1 port acts as a VLAN-Stack trunk port, switching stackable VLAN traffic for VLAN 10, while also switching untagged traffic for VLAN 30 and tagged traffic for VLAN 40. (To allow VLAN 30 traffic, you need the native VLAN feature. Use the `portmode hybrid` command. For more information, see the `portmode hybrid` command.

**Example 1**

```
Dell(conf-if-gi-1/42)# switchport
Dell(conf-if-gi-1/42)# vlan-stack trunk

Virtual Routing and Forwarding (VRF)

Virtual routing and forwarding (VRF) allows multiple instances of a routing table to coexist on the same router at the same time.

Topics:
- ip vrf
- description
- ip vrf forwarding
- ip route-export
- ip route-import
- ipv6 route-export
- ipv6 route-import
- match source-protocol
- redistribute
- interface management
- maximum dynamic-routes
- show ip vrf
- show run vrf

ip vrf

Create or delete a customer VRF.

Syntax

```
ip vrf {vrf-name | management} [vrf_id]
```

To delete a customer VRF, use the `no ip vrf {vrf-name | management} [vrf_id]` command.

Parameters

- **vrf-name**: Enter the name of the VRF that you create.
- **management**: Enter the keyword management to create the management VRF.
- **vrf_id**: (Optional) Enter the ID of the VRF that you create.

Defaults

Available by default for management VRF. For creating other customer VRFs, enable the `feature vrf` option in Configuration mode.

Command Modes

- **CONFIGURATION**

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>
### description

Specify a name for a customer VRF.

**Syntax**
```
description string
```

To delete the descriptive name for a customer VRF, use the `no description string` command.

**Parameters**
- `string` Enter a descriptive name for the VRF.

**Defaults**
None.

**Command Modes**
VRF MODE

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</table>

**Usage Information**
You cannot use the keyword `default` as a VRF name as this name indicates a special VRF.

To create a management VRF, use the keyword `management`.

The VRF ID is optional.
ip vrf forwarding

Attach an interface to a VRF.

Syntax

```
ip vrf forwarding {vrf-name | management}
```

To delete an interface associated with a configured VRF, use the `no ip vrf forwarding {vrf-name | management}` command.

Parameters

- **vrf-name**: Enter name of the VRF that you want to associate the interface to.
- **management**: Enter the keyword `management` to associate an interface to the management VRF.

Defaults

none

</tr>
<tr>
<td>9.4(0.0)</td>
<td>Introduced on the S-Series and Z9000.</td>
</tr>
</tbody>
</table>

Usage Information

You can attach an interface to either a nondefault VRF or a management VRF.

To assign a port-back to a default VRF, remove the VRF association from the interface. You can use this only if there is no IP address configured on the interface.

There must be no prior Layer 3 configuration on the interface when configuring VRF.

You must enable VRF before using this command.

You can configure an IP subnet or address on a physical or VLAN interface that overlaps the same IP subnet or address configured on another interface only if the interfaces are assigned to different VRFs. If you assign two interfaces to the same VRF, you cannot configure overlapping IP subnets or the same IP address to them.

Example

```
Dell(conf-vrf)# show config
!
ip vrf red 4
  description "Red Network"
Dell(conf-vrf)#
```
Dell(conf-if-gi-1/45)# int gi 1/46
Dell(conf-if-gi-1/46)# no shut
Dell(conf-if-gi-1/46)# ip vrf forwarding red
Dell(conf-if-gi-1/46)# ip add 100.1.1.1/24
Dell(conf-if-gi-1/46)#
Dell(conf-if-gi-1/46)#
Dell(conf-if-gi-1/46)#
Dell(conf-if-gi-1/46)# show config
!
interface GigabitEthernet 1/46
  ip vrf forwarding red
  ip address 100.1.1.1/24
  no shutdown
Dell(conf-if-gi-1/46)#

**ip route-export**

Enables route leaking between VRFs. This command exports or shares IPv4 routes corresponding to one VRF with other nondefault VRFs.

**Syntax**

```
ip route-export tag [route-map-name]
```

**Parameters**

- `route-export` Enter the keywords `route-export` to leak or share routes between VRFs.
- `tag` Enter a tag (export route target) to expose routes to other VRFs. This tag acts as an identifier for exported routes. Use this identifier while importing these routes into another nondefault VRF.
- `route-map-name` (Optional) Enter the name of the route-map to filter the exported routes.

You can leak global routes to VRFs. As the global RTM usually contains a large pool of routes, when the destination VRF imports global routes, these routes are duplicated into the VRF’s RTM. It is mandatory to use route-maps to filter out leaked routes while sharing global routes with VRFs.

**Command Modes**

- VRP mode
- CONFIGURATION mode

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>
Usage Information

To export all the routes corresponding to a source VRF, you can use the `ip route-export tag` command without specifying the route-map attribute. This action exposes source VRF routes to various other VRFs, which then import these routes using the `ip route-import tag` command.

In Dell Networking OS, you can configure one route-export per VRF as you can only expose one set of routes for leaking. However, you can configure multiple route-import targets because a VRF can accept routes from multiple VRFs.

You can expose a unique set of routes from the source VRF for leaking to other VRFs. When two VRFs leak or export routes, there is no option to discretely filter leaked routes from each source VRF. For example, you cannot import one set of routes from one VRF and another set of routes from another VRF.

Only active routes are eligible for leaking. For example, if one VRF has two routes corresponding to BGP and OSPF, in which the BGP route is not active, the OSPF route takes precedence over BGP. Even though the target VRF has specified filtering options to match BGP, the BGP route is not leaked as that route is not active in the Source VRF.

Related Commands

- `ip route-import` — imports routes from another VRF.

ip route-import

Imports IPv4 routes that another VRF leaks using the VRF tag during the export of these routes.

**Syntax**

```
ip route-import tag [route-map-name]
```

**Parameters**

- `route-import` Enter the keywords `route-import` to import routes into the VRF.
- `tag` Enter a tag (ASN number) to specify an import route target for importing routes from another VRF.
  
  To import leaked routes from another VRF, use the same ASN number that is specified as the export route target at the source VRF.
- `route-map-name` Enter the name of the route-map to filter the imported routes.

**NOTE:** Use the route-map attribute while importing routes from the global RTM. Route-maps allow you to filter routes at the import end based on the matching criteria that you define in the route-map.

**Command Modes**

- CONFIGURATION
- VRF mode

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
--- | ---
9.10(0.0) | Introduced on the S3148.
9.10(0.0) | Introduced on the S6100-ON.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100-ON.
<table>
<thead>
<tr>

<td>Introduced on the S4810, S4820T, S5000, S6000, S6000-ON, and Z9500.</td>
</tr>
</tbody>
</table>

**Usage Information**

It is possible to configure multiple import conditions per VRF depending on the exporting VRF. The export-target and import-target support only the match protocol and match prefix-list options. Other options that are configured in the route-maps are ignored.

**Related Commands**

- `ip route-export` — exports routes to another VRF.

---

**ipv6 route-export**

Enables route leaking between VRFs. This command exports or shares IPv6 routes corresponding to one VRF with other nondefault VRFs.

**Syntax**

```
ipv6 route-export tag [route-map-name]
```

**Parameters**

- `route-export` Enter the keywords route-export to leak or share routes between VRFs.
- `tag` Enter a tag (ASN number) as the export route target to expose routes to other VRFs. This tag acts as an identifier for exported routes. Use this identifier while importing these routes into another nondefault VRF.
- `route-map-name` (Optional) Enter the name of the route-map to filter the exported routes. You can leak global routes to be made available to VRFs. As the global RTM usually contains a large pool of routes, when the destination VRF imports global routes, these routes are duplicated into the VRF’s RTM. It is mandatory to use route-maps to filter out leaked routes while sharing global routes with VRFs.

**Defaults**

To export all the routes corresponding to a source VRF, use the `ip route-export tag` command without specifying the route-map attribute. This action exposes source VRF routes to other VRFs, which then import these routes using the `ip route-import tag` command.

In Dell Networking OS, you can configure one route-export per VRF as you can only expose one set of routes for leaking. However, you can configure multiple route-import targets because a VRF can accept routes from multiple VRFs.

You can expose a unique set of routes from the source VRF for leaking to other VRFs. When two VRFs leak or export routes, there is no option to discretely filter leaked routes from each source VRF. For example, you cannot import one set of routes from one VRF and another set of routes from another VRF.

Only active routes are eligible for leaking. For example, if one VRF has two routes corresponding to BGP and OSPF, in which the BGP route is not active, the OSPF route takes precedence over BGP. Even though the target VRF has specified filtering options to match BGP, the BGP route is not leaked as that route is not active in the source VRF.

**Related Commands**

- `ipv6 route-import` — imports IPv6 routes from another VRF.

**ipv6 route-import**

Imports IPv6 routes that another VRF leaks using the tag that VRF specifies during export of these routes.

**Syntax**

```
ipv6 route-import tag [route-map-name]
```

**Parameters**

- `route-import` Enter the keywords `route-import` to import IPv6 routes into the VRF.
- `tag` Enter a tag (ASN number) to specify an import route target for importing routes from another VRF. To import leaked routes from another VRF, use the same ASN number that is specified as the export route target at the source VRF.
- `route-map-name` Enter the name of the route-map to filter the imported routes.

</tbody>
</table>
match source-protocol

Specify matching source-protocol criteria while exporting or importing routes.

Syntax

```
match source-protocol {bgp | isis | ospf | connected | static}
```

Parameters

- **bgp**
  - Enter the keyword `bgp` to leak or share routes corresponding to the BGP protocol.

- **isis**
  - Enter the keyword `isis` to leak or share routes corresponding to the ISIS protocol.

- **ospf**
  - Enter the keyword `ospf` to leak or share routes corresponding to the OSPF protocol.

- **connected**
  - Enter the keyword `connected` to leak or share connected routes corresponding to the VRF.

- **static**
  - Enter the keyword `static` to leak or share static routes corresponding to the VRF.

Command Modes

ROUTE MAP MODE

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version | Description
--- | ---
9.10(0.0) | Introduced on the S3148.
9.10(0.0) | Introduced on the S6100-ON.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100-ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.7(0.0) | Introduced on the S4810, S4820T, S5000, S6000, S6000-ON, and Z9500.

Usage Information

Specify the matching criteria only after defining a route-map. Before using this command, you must enter Route Map mode using the `route-map route-map-name` command. The match criteria that you specify is associated with the route-map that you define.
The export-target and import-target options support only the match protocol and match prefix-list options. Other options that you configure in the route-maps are ignored.

Related Commands

-  ipv6 route-import — imports IPv6 routes from another VRF.

redistribute

Redistributes leaked or exported routes corresponding to specific protocols.

Syntax

redistribute {imported-bgp | import-ospf | import-isis}

Parameters

- imported-bgp: Enter the keywords imported-bgp to redistribute leaked routes that are learned using the BGP protocol.
- imported-ospf: Enter the keywords imported-ospf to redistribute leaked routes that are learned using the OSPF protocol.
- imported-isis: Enter the keywords imported-isis to redistribute leaked routes that are learned using the ISIS protocol.
- route-map: Enter the name of the route-map to specify the filtering criteria for imported routes.

</tr>
</tbody>
</table>

Usage Information

When you use this command, the management ports corresponding to both the active unit and the standby unit are associated with the management VRF.

maximum dynamic-routes

Specify the maximum number of dynamic (protocol) routes a VRF can have.

Syntax

maximum dynamic-routes limit {warn-threshold threshold-value | warning-only}

To remove the limit on the maximum number of routes used, use the no maximum dynamic-routes command.

Parameters

- **limit**: Maximum number of routes allowed in a VRF. The valid range is from 1 to 16,000 (or maximum allowable for that platform if a smaller value).
- **warn-threshold**: The warning threshold value is a percentage of the limit value. When the number of routes reaches the specified percentage of the limit, a warning message appears. The valid range is from 1 to 100.

  After the limit is reached, additional dynamic routes are not allowed.

- **warning-only**: When you use the warning-only option, when the maximum number of dynamic routes reaches the limit, a warning message appears.

  After the limit is reached, additional dynamic routes are still allowed.

Defaults

No limit is set on the maximum number of dynamic routes for a VRF.

Command Modes

CONFIGURATION-VRF
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking Command Line Reference Guide.

### Usage Information

If you do not specify the maximum route limit for a VRF, the VRF has unlimited space that extends to the maximum number of entries allowed for the system.

### show ip vrf

Displays information corresponding to the VRFs that you configure in the system.

**Syntax**

```
show ip [vrf vrf-name]
```

**Parameters**

- `vrf vrf-name`: Enter the keyword `vrf` then the name of the VRF to display information corresponding to that VRF.

**Command Modes**

- EXEC
- EXEC Privilege

</table>
The virtual link trucking (VLT) proxy gateway feature allows a VLT domain to locally terminate and route L3 packets that are destined to a Layer 3 (L3) end point in another VLT domain. Enable the VLT proxy gateway using the link layer discover protocol (LLDP) method or the static configuration. For more information, see the Dell Networking OS Command Line Reference Guide.

Topics:
- proxy-gateway lldp
- proxy-gateway static
- remote-mac-address exclude-vlan
- peer-domain-link port-channel exclude-vlan
- proxy-gateway peer-timeout
- vlt-peer-mac transmit
- show vlt-proxy-gateway

### proxy-gateway lldp

Enables the proxy-gateway feature using the LLDP protocol.

**Syntax**

```
[no] proxy-gateway lldp
```

**Command Modes**

VLT DOMAIN

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.10(0.0)</td>
<td>Introduced on the S3148.</td>
</tr>
<tr>
<td>9.10(0.0)</td>
<td>Introduced on the S6100–ON.</td>
</tr>
<tr>
<td>9.8(2.0)</td>
<td>Introduced on the S3100 series.</td>
</tr>
<tr>
<td>9.8(1.0)</td>
<td>Introduced on the Z9100–ON.</td>
</tr>
<tr>
<td>9.8(0.0P6)</td>
<td>Introduced on the S4048-ON.</td>
</tr>
<tr>
<td>9.8(0.0P2)</td>
<td>Introduced on the S3048-ON.</td>
</tr>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Introduced on the S4810, S4820T, S6000, and Z9000.</td>
</tr>
</tbody>
</table>

**Usage Information**

The configuration is cached and sent to LLDP only in one of the following conditions:
1. The port-channel connecting the two VLT domains, across the DC, is a VLT LAG.
2. The `protocol lldp` command is globally enabled.
3. The proxy-gateway LLDP configuration is applied.

**Example**

```
Dell(conf)# vlt-domain 1
Dell(conf-vlt-domain)# proxy-gateway lldp
Dell(conf-vlt-domain)#
```

## proxy-gateway static

Enables the proxy-gateway feature using static configurations.

**Syntax**

```
[no] proxy-gateway static
```

**Command Modes**

VLT DOMAIN

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
<tr>
<td>9.8(0.0P5)</td>
<td>Introduced on the S4048-ON.</td>
</tr>
<tr>
<td>9.8(0.0P2)</td>
<td>Introduced on the S3048-ON.</td>
</tr>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Introduced on the S4810, S4820T, S6000, Z9000.</td>
</tr>
</tbody>
</table>

**Usage Information**

When you add a proxy-gateway static configuration, the setting is saved in the Layer 2 module. When you remove the static proxy gateway configuration, each proxy-gateway static MAC configured is deleted from the Layer 2 module.

**Example**

```
Dell(conf)# vlt-domain 1
Dell(conf-vlt-domain)# proxy-gateway static
Dell(conf-vlt-domain)#
```
remote-mac-address exclude-vlan

Configure the proxy-gateway static entry and exclude a VLAN or a range of VLANs from proxy routing.

Syntax

```
[no] remote-mac-address mac-address [exclude-vlan vlan-range]
```

Parameters

- `remote-mac-address`
  - Specify the mac-addresses of the VLT peers which are in the remote VLT domain.

- `mac-address`
  - Enter the 48-bit hexadecimal address in `nn:nn:nn:nn:nn:nn` format.

- `vlan-range`
  - Enter the VLAN IDs in which proxy gateway is not needed. The VLANs are excluded from doing proxy gateway. The value can be a single VLAN ID, comma-separated VLAN IDs, a range of VLAN IDs, or a combination. For example:
    - Comma-separated: 3, 4, 6
    - Range: 5-10
    - Combination: 3, 4, 5-10, 8

Command Modes

- VLT DOMAIN PROXY GW STATIC

Command History

</tr>
<tr>
<td>9.4(0.0)</td>
<td>Introduced on the S4810, S4820T, S6000, and Z9000.</td>
</tr>
</tbody>
</table>

Usage Information

You can configure the MAC address of a VLT peer in a remote VLT domain to associate with the static VLT proxy gateway and exclude a VLAN, or a range of VLANs, from proxy routing.

Example

```
Dell(conf)# vlt-domain 1
Dell(conf-vlt-domain)#proxy-gateway static
Dell(conf-vlt-domain-proxy-gw-static)# remote-mac-address 00:01:e8:06:95:ac
Dell(conf-vlt-domain-proxy-gw-static)# exclude-vlan 3
Dell(conf-vlt-domain-proxy-gw-static)#
```
peer-domain-link port-channel exclude-vlan

Configure the VLT port channel, which is connected to the remote VLT domain, for the proxy gateway or configure the VLANs you want to exclude from VLT proxy gateway.

Syntax

[no] peer-domain-link port-channel interface-identifier exclude-vlan vlan-range

Parameters

- **port-channel**: Configure the proxy-gateway interface port-channel.
- **interface-identifier**: Enter the interface type.
- **vlan-range**: Enter the VLAN IDs that you want to exclude from the proxy gateway. The value can be a single VLAN ID, comma-separated VLAN IDs, a range of VLAN IDs, or a combination. For example:
  - Comma-separated: 3, 4, 6
  - Range: 5-10

</tr>
</tbody>
</table>

Usage Information

You must configure the VLT port channel interface which is connecting to the remote VLT domain as peer-domain-link. You can also configure the VLANs you want to exclude from the VLT proxy gateway.

Example

Dell(conf)#vlt-domain 1
Dell(conf-vlt-domain)#proxy-gateway lldp
Dell(conf-vlt-domain-proxy-gw-lldp)#peer-domain-link port-channel 20 exclude-vlan 3
**proxy-gateway peer-timeout**

Enables the VLT node to timeout the transmission of the peer MAC address when the VLT peer is down.

**Syntax**

```plaintext
[no] peer-timeout value
```

**Parameters**

- **value**: Enter the timeout value (in seconds). The range is from 1 to 65535. The default is `infinity`.

**Default**

- Infinity

**Command Modes**

- VLT DOMAIN PROXY GW LLDP

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
--- | ---
9.10(0.0) | Introduced on the S6100-ON.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100-ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.7(0.0) | Introduced on the S6000-ON.
9.7(0.0) | Removed the default value on the S-Series and Z-Series.
9.4(0.0) | Introduced on the S4810, S4820T, S6000, Z9000, and MXL Switch.

**Usage Information**

When a VLT peer goes down, the local VLT node stops sending its peer’s MAC address. If you configure this timeout, the local VLT node sends its peer’s MAC address until the timer expires.

Use this timer when you enable `vlt-peer-mac transmit`. A typical use example is a square VLT topology with a single link connecting to the remote peers.

**Example**

```
Dell(conf-vlt-domain-proxy-gw-lldp)# peer-timeout 5
```

---

**vlt-peer-mac transmit**

Enables the device to transmit the peer MAC address along with its own MAC address in LLDP TLV packets to the remote VLT domain.

**Syntax**

```plaintext
[no] vlt-peer-mac transmit
```

**Command Modes**

- VLT DOMAIN PROXY GW LLDP
Command History

</tr>
<tr>
<td>9.4(0.0)</td>
<td>Introduced on the S4810, S4820T, S6000, and Z9000.</td>
</tr>
</tbody>
</table>

Usage Information

This command enables the device to transmit its VLT peer MAC address along with its own MAC address to the remote VLT domain. By default, a node sends only its own MAC address to the remote VLT domain.

This configuration is applicable only for an LLDP proxy gateway. A typical use example is a square VLT topology with single link connecting to the remote peers.

Example

```
Dell(conf-vlt-domain-proxy-gw-lldp)# vlt-peer-mac transmit
```

show vlt-proxy-gateway

Displays the VLT proxy gateway configuration.

Syntax

```
show vlt-proxy-gateway [info] {lldp | static}
```

Parameters

- **lldp**
  - Enter the keyword lldp to display details about the LLDP VLT proxy gateway configuration.

- **static**
  - Enter the keyword static to display details about the static VLT proxy gateway configuration.

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the S6100–ON.</td>
</tr>
</tbody>
</table>
### Usage Information

The proxy-gateway feature may go operationally down for any of the following reasons:

- LLDP is globally disabled.
- LDP is disabled per port.
- VLT port-channel is down.
- LLDP neighbor is down.

If any of these conditions is true, the proxy-gateway feature could be operationally down. If so, it is shown in the `show` command output.

When more than one VLT port-channel terminates on the same ToR, the `show VLT proxy-gateway info lldp` command output may show the port-channel ID incorrectly.

### Example

```
Dell#show vlt proxy-gateway
VLT Proxy Gateway Brief
-------------------------
Config Mode:                LLDP
Global LLDP Config Status:  Enabled
peer-mac-transmit Status:   Disabled

Dell#show vlt proxy-gateway info static
Mac Address     Exclude Vlan
--------------- ------------
00:01:e8:8a:e8:f7   3,7-8
00:01:e8:8b:1c:c0   3,7-8

Dell#show vlt proxy-gateway info lldp
LagId Mac Address    Exclude Vlan
----- -----------    ------------
Po 55 00:01:e8:8a:e8:f7 3,7-8  <- Macs learnt via port-channel 55
Po 55 00:01:e8:8b:1c:c0 3,7-8
```
Virtual Link Trunking (VLT)

Virtual link trunking (VLT) allows physical links between two chassis to appear as a single virtual link to the network core. VLT eliminates the requirement for Spanning Tree protocols by allowing link aggregation group (LAG) terminations on two separate distribution or core switches, and by supporting a loop-free topology.

VLT provides Layer 2 multipathing, creating redundancy through increased bandwidth and enabling multiple parallel paths between nodes and load-balancing traffic where alternative paths exist.

**NOTE:** When you launch the VLT link, the VLT peer-ship is not established if any of the following is TRUE:

- The VLT System-MAC configured on both the VLT peers do not match.
- The VLT Unit-Id configured on both the VLT peers are identical.
- The VLT System-MAC or Unit-Id is configured only on one of the VLT peers.
- The VLT domain ID is not the same on both peers.

If the VLT peer-ship is already established, changing the System-MAC or Unit-Id does not cause VLT peer-ship to go down.

Also, if the VLT peer-ship is already established and the VLT Unit-Id or System-MAC are configured on both peers, then changing the CLI configurations on the VLT Unit-Id or System-MAC is rejected if any of the following become TRUE:

- After making the CLI configuration change, the VLT Unit-Id becomes identical on both peers.
- After making the CLI configuration change, the VLT System-MAC do not match on both peers.

When the VLT peer-ship is already established, you can remove the VLT Unit-Id or System-MAC configuration from either or both peers. However, removing configuration settings can cause the VLT ports to go down if you configure the Unit-Id or System-MAC on only one of the VLT peers.

back-up destination

Configure the IPv4 or IPv6 address of the management interface on the remote VLT peer used as the VLT backup link endpoint for sending out-of-band (OOB) hello messages.

Syntax
back-up destination {{{ipv4-address} | [ipv6 ipv6-address] [interval seconds]}}

Parameters

- ipv4-address
  - Enter the IPv4 address of the backup destination.
- ipv6
  - Enter the keyword ipv6 then an IPv6 address in the X::X::X format.
- interval seconds
  - Enter the keyword interval to specify the time interval to send hello messages. The range is from 1 to 5 seconds. The default is 1 second.

Defaults
1 second

clear vlt statistics

Clear the VLT operation statistics.

Syntax

```
clear vlt statistics [arp | domain | igmp-snoop | mac | multicast | ndp]
```

Parameters

- **domain**: Clear the VLT statistics for the domain.
- **multicast**: Clear the VLT statistics for multicast.
- **mac**: Clear the VLT statistics for the MAC address.
- **arp**: Clear the VLT statistics for ARP.
- **igmp-snoop**: Clear the VLT statistics for IGMP snooping.
- **ndp**: Clear the VLT statistics for NDP.

Command Modes

- EXEC

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description

- 9.10(0.0) Introduced on the S3148.
- 9.10(0.0) Introduced on the S6100–ON.
- 9.8(2.0) Introduced on the S3100 series.
- 9.8(1.0) Introduced on the Z9100–ON.
- 9.8(0.0P5) Introduced on the S4048-ON.
- 9.8(0.0P2) Introduced on the S3048-ON.
- 9.7(0.0) Introduced on the S6000-ON.
- 9.5(0.1) Introduced on the Z9500.
- 9.2(0.0) Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
- 9.2(0.2) Added multicast and ndp parameters.
- 9.0.2.0 Introduced on the S6000.
- 9.0.0.0 Introduced on the Z9000.
- 8.3.19.0 Introduced on the S4820T.
- 8.3.12.0 Introduced on the S4810.

Example

```
VLT ARP Statistics
-----------------
ARP Tunnel Pkts sent:0
ARP Tunnel Pkts Rcvd:0
ARP-sync Pkts Sent:0
ARP-sync Pkts Rcvd:0
ARP Reg Request sent:19
ARP Reg Request rcvd:10
```
Related Commands

- show vlt statistics — displays statistics on VLT operations.

**delay-restore**

Configure the delay in bringing up VLT ports after reload or peer-link restoration between the VLT peer switches.

**Syntax**

delay-restore

**Parameters**

delay-restore Enter the amount of time, in seconds, to delay bringing up the VLT ports after the VLT device reloads or after the peer-link restores between VLT peer switches. The range from 1 to 1200. The default is 90 seconds.

**Defaults**

Not configured.

**Command Modes**

VLT DOMAIN

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the S8420T.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

**Usage Information**

To delay the system from bringing up the VLT port for a brief period to allow IGMP snooping and Layer 3 routing protocols to converge, use the delay-restore command. Use this command:

- after a VLT device reloads.
- if the peer VLT device was up at the time the VLTi link failed.

**Related Commands**

- show vlt statistics — displays statistics on VLT operations.
**delay-restore abort-threshold**

Increase the boot up timer to a value greater than 60 seconds.

**Syntax**
```
delay-restore abort-threshold <interval>
```
To remove the boot up timer value, use the `no delay-restore abort-threshold` command.

**Parameters**
- `interval` Enter the interval value (in seconds) for the delay restore timer to abort. The range is from 1 to 1800 seconds. The default is 60 seconds.
- This delay restore timer applies only during reload/boot-up and not in other scenarios (for example, during ICL flap).

**Defaults**
60 seconds

**Command Modes**
VLT DOMAIN

**Command History**

</tr>
</tbody>
</table>

**Usage Information**
To abort the VLT delay restore timer value as the maximum threshold, during reload, apply the maximum time interval to the hold-down ICL peer-up in the start-up configurations.

**lacp ungroup member-independent**

Prevent possible loop during the VLT peer switch bootup or on a device that accesses the VLT domain.

**Syntax**
```
lacp ungroup member-independent {vlt | port-channel}
```

**Parameters**
- `vlt` Force all VLT LACP members to become switchports.
- `port-channel` Force all LACP port-channel members to become switchports.

**Defaults**
Not configured.

**Command Modes**

</tr>
</tbody>
</table>

**Usage Information**

LACP on the VLT ports (on a VLT switch or access device), which are members of the VLT, are not brought up until the VLT domain is recognized on the access device.

During boot-up in a stacking configuration, the system must be able to reach the DHCP server with the boot image and configuration image. To receive an offer on static LAGs between switches, only untagged DHCP requests are sent to the DHCP server. Configure the DHCP server to start in BMP mode.

If the switches are connected using LACP port-channels (for example, the VLT peer and top of rack [ToR]), use the `port-channel` option on the ToR-side configuration to allow member ports of an ungrouped LACP port-channel to inherit VLAN membership of that port channel. This ensures untagged VLT peer device packets reach the DHCP server on the ToR.

To ungroup the VLT and port-channel configurations, use the `no lacp ungroup member independent` command on a VLT port channel.

**Example**

```bash
dell(conf)#lacp ungroup member-independent ?
port-channel LACP port-channel members become switchports
vlt All VLT LACP members become switchports
```

**multicast peer-routing timeout**

To retain synced multicast routes or synced multicast outgoing interface (OIF) after a VLT peer node failure, configure the timeout value for a VLT node.

**Syntax**

```
multicast peer-routing timeout value
```

To restore the default value, use the `no multicast peer-routing timeout` command.
peer-link port-channel

Configure the specified port channel as the chassis interconnect trunk between VLT peers in the domain.

Syntax

peer-link port-channel port-channel-number {peer-down-vlan vlan id}

Parameters

- **port-channel-number**: Enter the port-channel number that acts as the interconnect trunk. The range is from 1 to 128.
- **peer-down-vlan**: Enter the keywords peer-down-vlan then a VLAN ID to configure the VLAN that the VLT peer link uses when the VLT peer is down.

Defaults

Not configured.

Command Modes

VLT DOMAIN

Version | Description
--- | ---
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.7(0.0) | Introduced on the S6000-ON.
9.5(0.1) | Introduced on the Z9500.
9.2(0.0) | Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.
9.0.2.0 | Introduced on the S6000.
9.0.0.0 | Introduced on the Z9000.
8.3.19.0 | Introduced on the S4820T.
8.3.12.0 | Added support for the peer-down-vlan option.
8.3.8.0 | Introduced on the S4810.

Usage Information
To configure the VLAN from where the VLT peer forwards packets received over the VLTi from an adjacent VLT peer that is down, use the peer-down-vlan option. When a VLT peer with bare metal provisioning (BMP) is booting up, it sends untagged DHCP discover packets to its peer over the VLTi. To ensure that the DHCP discover packets are forwarded to the VLAN that has the DHCP server, use this configuration.

**peer-routing**

Enable Layer 3 (L3) VLT peer-routing. This command is applicable for both IPv6 and IPv4 interfaces.

**Syntax**

```
peer-routing
```

To disable L3 VLT peer-routing, use the **no** peer-routing command.

**Defaults**

Disabled.

**Command Modes**

9.8(0.0P2) Introduced on the S3048-ON.

9.7(0.0) Introduced on the S6000-ON.

9.7(0.0) Added support for default value on the S-Series and Z-Series.

9.5(0.1) Introduced on the Z9500.

9.4(0.0) Added the support for IPV6 / IPV4.

9.2(0.2) Introduced on the Z9000, S4810, and S4820T.

9.0.2.0 Introduced on the S6000.

Usage Information

When the timer expires, the software checks to see if the VLT peer is available. If the VLT peer is not available, peer-routing disables on that peer.

If you do not configure this delay value, peer-routing is not disabled even when the peer is unavailable.
primary-priority

Assign the priority for master election among VLT peers.

**Syntax**

```
[no] primary-priority
```

**Parameters**

- **value**
  
  To configure the primary role on a VLT peer, enter a lower value than the priority value of the remote peer. The range is from 1 to 65535. The default value is **32768**.

**Default**

**32768**

**Command Modes**

VLT DOMAIN

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.8.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

**Usage Information**

After you configure a VLT domain on each peer switch and connect (cable) the two VLT peers on each side of the VLT interconnect, the system elects a primary and secondary VLT peer device. To configure the primary and secondary roles before the election process, use the `primary-priority` command. Enter a lower value on the primary peer and a higher value on the secondary peer.

If the primary peer fails, the secondary peer (with the higher priority) takes the primary role. If the primary peer (with the lower priority) later comes back online, it is assigned the secondary role (there is no preemption).

**show vlt brief**

Displays summarized status information about VLT domains configured on the switch.

**Syntax**

```
show vlt brief
```

**Default**

Not configured.
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version** | **Description**
--- | ---
9.10(0.0) | Introduced on the S3148.
9.10(0.0) |Introduced on the S6100-ON.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100-ON.
9.8(0.0P6) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.7(0.0) | Introduced on the S6000-ON.
9.5(0.1) | Introduced on the Z9500.
9.0.2.0 | Introduced on the S6000.
9.0.0.0 | Introduced on the Z9000.
8.3.19.0 | Introduced on the S4820T.
8.3.8.0 | Introduced on the S4810.

**Usage Information**

The version shown in the `show vlt brief` output command displays the VLT version number which is different from the Dell Networking OS version number. VLT version numbers begin with odd numbers.

**Example (Brief)**

```plaintext
Dell#show vlt brief
VLT Domain Brief
------------------
Domain ID                     : 1
Role                          : Secondary
Role Priority                 : 32768
ICL Link Status               : Up
HeartBeat Status              : Up
VLT Peer Status               : Up
Version                       : 6(3)
Local System MAC address      : 00:01:e8:8a:e9:91
Remote System MAC address     : 00:01:e8:8a:e9:76
Remote system version         : 6(3)
Delay-Restore timer           : 90 seconds
Delay-Restore Abort Threshold : 60 seconds
Peer-Routing                  : Disabled
Peer-Routing-Timeout timer    : 0 seconds
Multicast peer-routing timeout: 150 seconds
```

**show vlt backup-link**

Displays information about the backup link operation.

**Syntax**

```
show vlt backup-link
```
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

HeartBeat Messages Sent:     1026
HeartBeat Messages Received: 1025
```

show vlt counters

Displays counter information.

```
show vlt counters [arp| igmp-snoop | interface | mac | ndp]
```

Parameters

- **arp**: Enter the keyword `arp` to display the ARP counter information for the VLT.
- **igmp-snoop**: Enter the keywords `igmp-snoop` to display the igmp-snooping counter information for the VLT.
- **interface**: Enter the keyword `interface` to display the interface counter information for the VLT.
- **mac**: Enter the keyword `mac` to display the MAC address counter information for the VLT.
- **ndp**: Enter the keyword `ndp` to display the VLT counter information for NDP.

Default Not configured.

Command Modes EXEC
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>

### Usage Information

If you do not add a parameter such as `arp` or `mac`, the output displays all the counters.

#### Example

Dell# show vlt counter
Total VLT counters
-------------------------
L2 Total MAC-Address Count:
IGMP MRouter Vlans count:
IGMP Mcast Groups count:
ARP entries count:

#### Example (igmp-snoop)

Dell# show vlt counter igmp-snoop
Total IGMP VLT counters
----------------------
IGMP MRouter Vlans count: 1
IGMP Mcast Groups count: 5

#### Example (igmp-snoop interface port-channel)

Dell# show vlt counter igmp-snoop interface port-channel 2
VLT Port-ID: 2 IGMP Counter
----------------------
IGMP MRouter Vlans count: 0
IGMP Mcast Groups count: 5

Dell# show vlt counter igmp-snoop interface port-channel 100
VLT Port-ID: 100 IGMP Counter
----------------------
IGMP MRouter Vlans count: 1
IGMP Mcast Groups count: 0

#### Example (NDP and Non-VLT ARP)

Dell# show vlt counters
Total VLT Counters
-------------------
L2 Total MAC-Address Count: 2
Total Arp Entries Learnt: 0
Total Arp Entries Synced: 0
Total Non-VLT Arp entries Learnt: 0
Total Non-VLT Arp Entries Synced: 0
show vlt detail

Displays detailed status information about VLT domains configured on the switch.

**Syntax**

```
show vlt detail
```

**Default**

Not configured.

**Command Modes**

EXEC

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Example

Dell_VLTpeer1# show vlt role

VLT Role
-----------
VLT Role: Primary
System MAC address: 00:01:e8:8a:df:bc
System Role Priority: 32768
Local System MAC address: 00:01:e8:8a:df:bc
Local System Role Priority: 32768

Dell_VLTpeer2# show vlt role

VLT Role
-----------
VLT Role: Secondary
System MAC address: 00:01:e8:8a:df:bc
System Role Priority: 32768
show vlt statistics

Displays VLT operations statistics.

**Syntax**

```
show vlt statistics [arp | domain | igmp-snoop | mac | multicast | ndp]
```

**Parameters**

- **arp**
  - Enter the keyword `arp` to display the ARP VLT statistics.
- **domain**
  - Enter the keyword `domain` to display the domain VLT statistics.
- **igmp-snoop**
  - Enter the keywords `igmp-snoop` to display the IGMP snooping VLT statistics.
- **mac**
  - Enter the keyword `mac` to display the VLT MAC addresses VLT statistics.
- **multicast**
  - Enter the keyword `multicast` to display the multicast VLT statistics.
- **ndp**
  - Enter the keyword `ndp` to display the NDP VLT statistics.

**Default**

Not configured.

**Command Modes**

EXEC

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**Version**

- 9.10(0.0)  Introduced on the S3148.
- 9.10(0.0)  Introduced on the S6100–ON.
- 9.8(2.0)   Introduced on the S3100 series.
- 9.8(1.0)   Introduced on the Z9100–ON.
- 9.8(0.0P5) Introduced on the S4048-ON.
- 9.8(0.0P2) Introduced on the S3048-ON.
- 9.7(0.0)   Introduced on the S6000-ON.
- 9.5(0.1)   Introduced on the Z9500.
- 9.2(0.2)   Added parameters `multicast` and `ndp`
- 9.0.2.0     Introduced on the S6000.
- 9.0.0.0     Introduced on the Z9000.
- 8.3(19.0)  Introduced on the S4820T.
- 8.3(12.0)  Added support in the output for ARP, MAC, and IGMP snooping.
- 8.3(8.0)   Introduced on the S4810.

**Related Commands**

- `clear vlt statistics` — clears the statistics on VLT operations.
NOTE: The following example shows the statistics for all the VLT parameters. If you enter a specific keyword, such as mac, only the statistics for that VLT parameter displays.

```

**system-mac**

Reconfigure the default MAC address for the domain.

**Syntax**

```
system-mac mac-address
```

**Parameters**

- **mac-address**

  Enter the system MAC address for the VLT domain.

**Defaults**

Not configured.

**Command Modes**

VLT DOMAIN
Command History

</tr>
</tbody>
</table>

Usage Information

When you create a VLT domain on a switch, the Dell Networking OS automatically creates a VLT-system MAC address used for internal system operations.

To reconfigure the default MAC address for the domain, use the system-mac command. The MAC address must be in the nn:nn:nn:nn:nn:nn format. Also reconfigure the same MAC address on the VLT peer switch.

unit-id

Configure the default unit ID of a VLT peer switch.

Syntax

```
unit-id [0 | 1]
```

Parameters

- **0 | 1**: Configure the default unit ID of a VLT peer switch. Enter 0 for the first peer. Enter 1 for the second peer.

Defaults

Automatically assigned based on the MAC address of each VLT peer. The peer with the lower MAC address is assigned unit 0; the peer with the higher MAC address is assigned unit 1.

Command Modes

VLT DOMAIN

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.10(0.0)</td>

</tr>
</tbody>
</table>
When you create a VLT domain on a switch, the Dell Networking OS automatically assigns a unique unit ID (0 or 1) to each peer switch. The unit IDs are used for internal system operations. To explicitly configure the unit ID of a VLT peer, use the `unit-id` command. Configure a different unit ID (0 or 1) on each peer switch.

This command minimizes the time required for the VLT system to determine the unit ID assigned to each peer switch when one peer reboots.

### vlt domain

Enable VLT on a switch, configure a VLT domain, and enter VLT-Domain Configuration mode.

**Syntax**

```
vlt domain domain-id
```

**Parameters**

`domain-id`  
Enter the domain ID number. Configure the same domain ID on the peer switch. The range of domain IDs is from 1 to 1000.

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>

<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>
The VLT domain ID must be the same between the two VLT devices. If the domain ID is not the same, a syslog message generates and VLT does not launch.

**Related Commands**
- `show vlt brief` — display the delay-restore value.

### `vlt-peer-lag port-channel` Command

Associate the port channel to the corresponding VLT peer port channel for the VLT connection to an attached device.

**Syntax**
```
vlt-peer-lag port-channel id-number
```

**Parameters**
- `id-number` Enter the respective VLT port-channel number of the peer device. The range is from 1 to 128.

**Defaults**
Not configured.

**Command Modes**
- INTERFACE PORT-COMMUNITY

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>

### `show vlt private-vlan` Command

Display the private VLAN (PVLAN) associated with the VLT LAG for VLT peer nodes.

**Syntax**
```
show vlt private-vlan
```

**Command Modes**
- EXEC
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>

### Usage Information

If you add an ICL or VLTi link as a member of a primary VLAN, the ICL becomes a part of the primary VLAN and its associated secondary VLANs, similar to the behavior for normal trunk ports. VLAN symmetry is not validated if you associate an ICL to a PVLAN.

Similarly, if you dissociate an ICL from a PVLAN, although the PVLAN symmetry exists, ICL is removed from that PVLAN. The ICL Status field displays the type of VLAN port of the VLTi link configured in a PVLAN.

### Example

```
Dell#show vlt private-vlan vlan-id
Codes: C- Community, I - Isolated, V - Internally tagged, T - tagged, * - VLT
Pvlan Primary Secondary ICL Status
10                        V (*)
  20 (C)        V
  30 (I)        V
40                        T
  50 (C)        T
  60 (I)        T
```

Virtual Link Trunking (VLT)
Virtual Router Redundancy Protocol (VRRP)

Virtual router redundancy protocol (VRRP) is supported by the Dell Networking OS.

Topics:
- IPv4 VRRP Commands
- IPv6 VRRP Commands

IPv4 VRRP Commands

The following are IPv4 VRRP commands.

advertise-interval

Set the time interval between VRRP advertisements.

Syntax
advertise-interval {seconds | centisecs centisecs}

To return to the default settings, use the no advertise-interval command.

Parameters
- seconds
  - Enter the number of seconds. The range is from 1 to 255. The default is 1 second.
- centisecs centisecs
  - Enter the keyword centisecs then the number of centisecs in multiples of 25 centisecs. The range is 25 to 4075 centisecs in multiples of 25 centisecs.

Defaults
1 second or 100 centisecs.

Command Modes
INTERFACE-VRRP

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.10(0.0) Introduced on the S3148.
9.10(0.0) Introduced on the S6100–ON.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100–ON.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.7(0.0) Introduced on the S6000-ON.
9.5(0.0) Added support for centisecs on the Z9000, S6000, S4820T, S4810, and MXL.
Usage Information
Dell Networking recommends keeping the default setting for this command. If you do change the time interval between VRRP advertisements on one router, change it on all routers.

authentication-type

Enable authentication of VRRP data exchanges.

Syntax
authentication-type simple [encryption-type] password
To delete an authentication type and password, use the no authentication-type command.

Parameters
- **simple**
  - Enter the keyword `simple` to specify simple authentication.
- **encryption-type** (OPTIONAL)
  - Enter one of the following:
    - `0` (zero) specifies an unencrypted authentication data follows.
    - `7` (seven) specifies a hidden authentication data follows.
    - `LINE` is the unencrypted (cleartext) authentication data.
- **password**
  - Enter a character string up to eight characters long as a password. If you do not enter an encryption-type, the password is stored as clear text.

Defaults
Not configured.

Command Modes
VRRP

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version | Description
--- | ---
9.10(0.0) | Introduced on the S3148.
9.10(0.0) | Introduced on the S6100-ON.
9.8(2.0) | Introduced on the S3100 series.
9.8(1.0) | Introduced on the Z9100-ON.
9.8(0.0P5) | Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
clear counters vrrp

Clear the counters maintained on VRRP operations.

Syntax

```
clear counters vrrp [vrrp-id] [ipv6]
```

Parameters

- **vrrp-id** (OPTIONAL) Enter the number of the VRRP group ID to clear the group's counters. The range is from 1 to 255.
- **ipv6** (OPTIONAL) Enter the keyword ipv6 to clear counters from the IPv6 VRRP group.

Command Modes

EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>

<tr>
<td>9.4(0.0)</td>
<td>Added support for VRF.</td>
</tr>
<tr>
<td>9.2(1.0)</td>
<td>Introduced on the Z9500.</td>
</tr>
</tbody>
</table>

Usage Information

The system encrypts the password and the `show config` command displays the encrypted text string.
debug vrrp

Enable VRRP debugging.

Syntax

debug vrrp [vrrp-id] {all | bfd | database | interface | ipv6 | packets | state | timer}

To disable debugging, use the no debug vrrp [vrrp-id] {all | bfd | database | interface | ipv6 | packets | state | timer} command.

Parameters

**vrrp-id**

(Optional) Enter a number from 1 to 255 as the VRRP group ID.

**all**

Enter the keyword all to enable debugging of all VRRP groups.

**bfd**

Enter the keyword bfd to enable debugging of VRRP BFD interactions.

**database**

Enter the keyword database to enable debugging of configuration changes.

**interface**

Enter the following keywords and the interface information:

- For Port Channel interface types, enter the keywords port-channel then the number.
- For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a VLAN interface, enter the keyword vlan then the VLAN ID. The VLAN ID range is from 1 to 4094.

**interface**

Enter the keyword interface to enable debugging of interface state changes.
ipv6  Enter the keyword `ipv6` to enable debugging for IPv6.
packets Enter the keyword `packets` to enable debugging of VRRP control packets.
state  Enter the keyword `state` to enable debugging of VRRP state changes.
timer  Enter the keyword `timer` to enable debugging of the VRRP timer.

**Command Modes**
- EXEC Privilege

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**
If you do not specify an option, debug is active on all interfaces and all VRRP groups.

description

Configure a short text string describing the VRRP group.

**Syntax**
```
description text
```

To delete a VRRP group description, use the `no description` command.

**Parameters**
- `text` Enter a text string up to 80 characters long.

**Defaults**
Not enabled.

**Command Modes**
- VRRP

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.
disable

Disable a VRRP group.

Syntax

```
disable
```

To re-enable a disabled VRRP group, use the `no disable` command.

Command Modes

VRRP

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

### Description

To enable VRRP traffic, assign an IP address to the VRRP group using the `virtual-address` command and enter `no disable`.

**Related Commands**

- `virtual-address` — specify the IP address of the virtual router.

### hold-time

Specify a delay (in seconds) before a switch becomes the MASTER virtual router. By delaying the initialization of the VRRP MASTER, the new switch can stabilize its routing tables.

**Syntax**

```
hold-time {seconds | centiseconds centisecs}
```

To return to the default value, use the `no hold-time` command.

**Parameters**

- `seconds` Enter the number of seconds. The range is from 0 to 65535. The default is zero (0) seconds.
- `centiseconds` Enter the keyword `centiseconds` then the number of centiseconds in units of 25 centiseconds. The range is from 0 to 65525 in units of 25 centiseconds.

**Defaults**

- zero (0) seconds or (0) centiseconds

**Command Modes**

VRRP

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>

**Usage Information**

If a switch is a MASTER and you change the hold timer, disable and re-enable VRRP for the new hold timer value to take effect.

**Related Commands**

- `disable` — disables a VRRP group.

**preempt**

To preempt or become the MASTER router, configure a BACKUP router with a higher priority value.

**Syntax**

```plaintext
preempt
```

To prohibit preemption, use the `no preempt` command.

**Defaults**

Enabled (that is, a BACKUP router can preempt the MASTER router).

**Command Modes**

VRRP

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

**priority**

Specify a VRRP priority value for the VRRP group. The VRRP protocol uses this value during the MASTER election process.

**Syntax**

```
priority priority
```

To return to the default value, use the `no priority` command.

**Parameters**

- `priority`  
  Enter a number as the priority. Enter 255 only if the router’s virtual address is the same as the interface’s primary IP address (that is, the router is the OWNER). The range is from 1 to 255. The default is **100**.

**Defaults**

- **100**

**Command Modes**

- VRRP

**Command History**

</tbody>
</table>

**Usage Information**

To guarantee that a VRRP group becomes MASTER, configure the VRRP group’s virtual address with same IP address as the interface’s primary IP address and change the priority of the VRRP group to 255.
If you set the priority command to 255 and the virtual-address is not equal to the interface’s primary IP address, an error message appears.

**show config**

View the non-default VRRP configuration.

**Syntax**

```
show config [verbose]
```

**Parameters**

- **verbose** (OPTIONAL) Enter the keyword verbose to view all the VRRP group configuration information, including default information.

**Command Modes**

VRRP

**Command History**

**Example**

```
Dell(conf-if-vrid-4)# show config
  vrrp-group 4
    virtual-address 119.192.182.124
  !
Dell(conf-if-vrid-4)#
```
show vrrp

View the VRRP groups that are active. If no VRRP groups are active, the Dell Networking OS returns No Active VRRP group.

**Syntax**

```
show vrrp [vrrp-id][brief][interface type][ipv6][interface type][vrf vrf-name]
```

**Parameters**

- **vrrp-id** (OPTIONAL) Enter the virtual router identifier for the VRRP group to view only that group. The range is from 1 to 255.
- **brief** (OPTIONAL) Enter the keyword brief to view a table of information about the VRRP groups.
- **interface type** (OPTIONAL) Enter the following keywords and the interface information:
  - For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a VLAN interface, enter the keyword vlan, and then the VLAN ID. The VLAN ID range is from 1 to 4094.
- **ipv6** (OPTIONAL) Enter the keyword ipv6 to view only VRRP IPv6 groups.
- **vrf vrf-name** (OPTIONAL) Enter the keyword vrf and then the name of the VRF to view active VRRP groups corresponding to that VRF.

**Command Modes**

- EXEC
- EXEC Privilege

### Version Description

- **8.3.19.0**: Introduced on the S4820T.
- **8.3.11.1**: Introduced on the Z9000.
- **8.3.7.0**: Introduced on the S4810.
- **7.6.1.0**: Introduced on the S-Series.
- **7.5.1.0**: Introduced on the C-Series.
- **6.2.1.1**: Introduced on the E-Series.

### Usage Information

The following describes the `show vrrp brief` command.

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Interface</td>
<td>Lists the interface type, slot, and port of the configured VRRP group.</td>
</tr>
<tr>
<td>Grp</td>
<td>Displays the VRRP group ID.</td>
</tr>
<tr>
<td>Pri</td>
<td>Displays the priority value assigned to the interface. If you configured the track command to track that interface and you disable the interface, the cost is subtracted from the priority value assigned to the interface.</td>
</tr>
<tr>
<td>Pre</td>
<td>States whether preempt is enabled on the interface:</td>
</tr>
<tr>
<td></td>
<td>- Y = Preempt is enabled.</td>
</tr>
<tr>
<td></td>
<td>- N = Preempt is not enabled.</td>
</tr>
<tr>
<td>State</td>
<td>Displays the operational state of the interface using one of the following:</td>
</tr>
<tr>
<td></td>
<td>- NA/IF (the interface is not available).</td>
</tr>
<tr>
<td></td>
<td>- MASTER (the interface associated with the MASTER router).</td>
</tr>
<tr>
<td></td>
<td>- BACKUP (the interface associated with the BACKUP router).</td>
</tr>
<tr>
<td>Master addr</td>
<td>Displays the IP address of the MASTER router.</td>
</tr>
<tr>
<td>Virtual addr(s)</td>
<td>Displays the virtual IP addresses of the VRRP routers associated with the interface.</td>
</tr>
</tbody>
</table>

### Example (Brief)

```plaintext
Dell> Interface Grp Pri Pre State Master addr Virtual addr(s)
Description-----------------------------------------------
Gi 1/37 1 100 Y Master 200.200.200.200 200.200.200.201
Gi 1/37 3 100 Y Master 1.1.1.1 1.1.1.2
short desc
Dell>
```

### Usage Information

The following describes the `show vrrp` command.

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>GigabitEthernet 1/3...</td>
<td>Displays the interface, VRRP group ID, and network address. If the interface is not sending VRRP packets, 0.0.0.0 appears as the network address.</td>
</tr>
<tr>
<td>State: master...</td>
<td>Displays the interface's state:</td>
</tr>
<tr>
<td></td>
<td>- Na/If (not available)</td>
</tr>
<tr>
<td></td>
<td>- master (MASTER virtual router)</td>
</tr>
</tbody>
</table>
### Item | Description
--- | ---
backup (BACKUP virtual router) | Also displays the interface’s priority and IP address of the MASTER.

### Hold Down:
Displays additional VRRP configuration information:
- Hold Down displays the hold down timer interval in seconds.
- Preempt displays TRUE if preempt is configured and FALSE if preempt is not configured.
- AdvInt displays the Advertise Interval in seconds.

### Adv rcvd:
Displays counters for the following:
- Adv rcvd displays the number of VRRP advertisements received on the interface.
- Adv sent displays the number of VRRP advertisements sent on the interface.
- Gratuitous ARP sent displays the number of gratuitous ARPs sent.

### Virtual MAC address
Displays the virtual MAC address of the VRRP group.

### Virtual IP address
Displays the virtual IP address of the interface’s VRRP router.

### Authentication:
States whether authentication is configured for the VRRP group. If it is configured, this lists the authentication type and password.

### Tracking states:
Displays if the track command is configured on an interface. Also displays the following information about the tracked interface:
- Dn or Up states whether the interface is down or up.
- The interface type slot/port information.

---

### Example

Dell> show vrrp
------------------
GigabitEthernet 1/3, VRID: 1, Net: 10.1.1.253
VRF: 0 default
State: Master, Priority: 105, Master: 10.1.1.253 (local)
Hold Down: 0 sec, Preempt: TRUE, AdvInt: 1 sec
Adv rcvd: 0, Adv sent: 1862, Gratuitous ARP sent: 0
Virtual MAC address: 00:00:5e:00:01:01
Virtual IP address: 10.1.1.252
Authentication: (none)
Tracking states for 1 interfaces:
  Up GigabitEthernet 1/17 priority-cost 10
------------------
GigabitEthernet 1/4, VRID: 2, Net: 10.1.2.253
VRF: 0 default
State: Master, Priority: 110, Master: 10.1.2.253 (local)
Hold Down: 10 sec, Preempt: TRUE, AdvInt: 1 sec
Adv rcvd: 0, Adv sent: 1862, Gratuitous ARP sent: 0
Virtual MAC address: 00:00:5e:00:01:02
Virtual IP address: 10.1.2.252
Authentication: (none)
Tracking states for 2 interfaces:
  Up GigabitEthernet 2/1 priority-cost 10
Example (VRRP VRF)

track

Monitor an interface and lower the priority value of the VRRP group on that interface if it is disabled.

Syntax

$$\text{track interface [priority-cost cost]}$$

To disable monitoring, use the no track interface command.

Parameters

- **interface** (OPTIONAL) Enter the following keywords and the interface information:
  - For a 1-Gigabit Ethernet interface, enter the keyword GigabitEthernet then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a VLAN interface, enter the keyword vlan, and then the VLAN ID. The VLAN ID range is from 1 to 4094.

- **priority-cost** (OPTIONAL) Enter a number as the amount to subtract from the priority value. The range is from 1 to 254. The default is 10.

Defaults

priority cost = 10

Command Modes

VRRP

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>6.2.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>
Usage Information

If you disable the interface, the cost value is subtracted from the priority value and forces a new MASTER election if the priority value is lower than the priority value in the BACKUP virtual routers.

virtual-address

Configure up to 12 virtual router IP addresses in the VRRP group. To start sending VRRP packets, set at least one virtual IP address for the VRRP group.

**Syntax**

```
virtual-address ip-address1 [... ip-address12]
```

To delete one or more virtual IP addresses, use the `no virtual-address ip-address1 [... ip-address12]` command.

**Parameters**

- `ip-address1` Enter an IP address of the virtual router in dotted decimal format. The IP address must be on the same subnet as the interface’s primary IP address.
- `... ip-address12` (OPTIONAL) Enter up to 11 additional IP addresses of virtual routers in dotted decimal format. Separate the IP addresses with a space. The IP addresses must be on the same subnet as the interface’s primary IP address.

**Defaults**

Not configured.

**Command Modes**

VRRP

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant **Dell Networking OS Command Line Reference Guide**.

<td>Introduced support for telnetting to the VRRP group IP address assigned using this command.</td>
</tr>
<tr>
<td>6.2.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

The VRRP group only becomes active and sends VRRP packets when you configure a virtual IP address. When you delete the virtual address, the VRRP group stops sending VRRP packets.
A system message appears after you enter or delete the `virtual-address` command.

To guarantee that a VRRP group becomes MASTER, configure the VRRP group’s virtual IP address with the same address as the interface’s primary IP address and change the priority of the VRRP group to 255.

You can ping the virtual IP addresses configured in all VRRP groups.

**vrrp delay minimum**

Set the delay time for VRRP initialization after an interface comes up.

**Syntax**

```
vrrp delay minimum seconds
```

**Parameters**

```
seconds
```

Enter the number of seconds for the delay for VRRP initialization after an interface becomes operational. The range is from 0 to 900 (0 indicates no delay).

**Defaults**

0

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.10(0.0)</td>
<td>Introduced on the S3148.</td>
</tr>
<tr>
<td>9.8(0.0P5)</td>
<td>Introduced on the S4048-ON.</td>
</tr>
<tr>
<td>9.8(0.0P2)</td>
<td>Introduced on the S3048-ON.</td>
</tr>
<tr>
<td>9.7(0.0)</td>

<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.8.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command applies to a single interface. When you use this command with the `vrrp delay reload` command, the later timer rules VRRP enabling. For example, if `vrrp delay reload` is 600 and `vrrp delay minimum` is 300:

- When the system reloads, VRRP waits 600 seconds (10 minutes) to bring up VRRP on all interfaces that are up and configured for VRRP.
- When an interface comes up, whether as part of a system reload or an interface reload, the system waits 300 seconds (5 minutes) to bring up VRRP on that interface.

**Related Command**

- `vrrp delay reload` — sets the delay time for VRRP initialization after a system reboot.
**vrrp delay reload**

Set the delay time for VRRP initialization after a system reboot.

**Syntax**
```
 vrrp delay reload seconds
```

**Parameters**
- `seconds` Enter the number of seconds for the delay. The range is from 0 to 900 (0 indicates no delay).

**Defaults**
0

**Command Modes**
INTERFACE

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>

<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.8.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

**Usage Information**
This command applies to all the VRRP interfaces on a system. When you use this command with the `vrrp delay minimum` command, the later timer rules VRRP enabling. For example, if `vrrp delay reload` is 600 and `vrrp delay minimum` is 300:

- When the system reloads, VRRP waits 600 seconds (10 minutes) to bring up VRRP on all interfaces that are up and configured for VRRP.
- When an interface comes up, whether as part of a system reload or an interface reload, the system waits 300 seconds (5 minutes) to bring up VRRP on that interface.

For the delay timers to take effect, save the configuration and reload the system.

**Related Command**
- `vrrp delay minimum` — sets the delay time for VRRP initialization after a line card reboot.
**vrrp-group**

Assign a VRRP ID to an interface. You can configure up to 12 VRRP groups per interface.

**Syntax**

```
vrrp-group vrrp-id
```

**Parameters**

- `vrrp-id` Enter a number as the group ID. The range is from 1 to 255.

**Defaults**

Not configured.

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>

**Usage Information**

The VRRP group only becomes active and sends VRRP packets when you configure a virtual IP address. When you delete the virtual IP address, the VRRP group stops sending VRRP packets.

**Related Command**

- `virtual-address` — assigns up to 12 virtual IP addresses per VRRP group.

**version**

Set the VRRP protocol version for the IPv4 group.

**Syntax**

```
version {2 | 3 | both}
```
To return to the default setting, use the no version command.

**Parameters**

<table>
<thead>
<tr>
<th>Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>2</td>
<td>Enter the keyword 2 to specify VRRP version 2 as defined by RFC 3768, Virtual Router Redundancy Protocol.</td>
</tr>
<tr>
<td>3</td>
<td>Enter the keyword 3 to specify VRRP version 3 as defined by RFC 5798, Virtual Router Redundancy Protocol.</td>
</tr>
<tr>
<td>both</td>
<td>Enter the keyword both for in-service migration from VRRP version 2 to VRRP version 3.</td>
</tr>
</tbody>
</table>

**Defaults**

2

**Command Modes**

VRRP

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.10(0.0)</td>
<td>Introduced on the S3148.</td>
</tr>
<tr>
<td>9.10(0.0)</td>
<td>Introduced on the S6100–ON.</td>
</tr>
<tr>
<td>9.8(2.0)</td>
<td>Introduced on the S3100 series.</td>

<td>Introduced on the Z9500.</td>
</tr>
<tr>
<td>9.5(0.0)</td>
<td>Introduced on the Z9000, S6000, S4820T, S4810, and MXL.</td>
</tr>
</tbody>
</table>

**Usage Information**

You can use the both command to migrate from VRRPv2 to VRRPv3. When you set the VRRP protocol version to both, the switch sends only VRRPv3 advertisements but can receive either VRRPv2 or VRRPv3 packets. To migrate an IPv4 VRRP group from VRRPv2 to VRRPv3:

1. Set the switches with the lowest priority to both.
2. Set the switch with the highest priority to version 3.
3. Set all the switches from both to version 3.

**NOTE:** Do not run VRRP version 2 and version 3 in the same group for an extended period of time.

**Example**

```
Dell(conf-if-gi-1/1-vrid-100)# version ?
2       VRRPv2
3       VRRPv3
both    Interoperable, send VRRPv3 receive both

Dell(conf-if-gi-1/1-vrid-100)# version 3
```

**IPv6 VRRP Commands**

The following are IPv6 VRRP commands.

- clear counters vrrp ipv6
clear counters vrrp ipv6

Clear the counters recorded for IPv6 VRRP groups.

Syntax

```
clear counters vrrp ipv6 [vrid | vrf vrf-name]
```

Parameters

- **vrid** (OPTIONAL) Enter the number of an IPv6 VRRP group; range is from 1 to 255.
- **vrf vrf-name** (OPTIONAL) Enter the name of a VRF instance to clear the counters of all IPv6 VRRP groups in the specified VRF. The maximum is 32 characters.

Command Modes

- EXEC Privilege

Command History

<tr>
<td>8.3.2.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>
Usage Information

**NOTE:** You can also clear the port configurations corresponding to a range of ports. For Open Networking (ON) platforms, the notation for specifying the port range in the command is different from how you specify the port range in non-ON platforms.

- For non-ON platforms, you can specify multiple ports as slot/port-range. For example, if you want to clear the port configurations corresponding to all ports between 1 and 4, specify the port range as `clear counters interfaces interface-type 1/1 - 4`.
- For ON platforms, you can specify multiple ports as slot/port/[subport] - slot/port/[subport]. For example, if you want to clear the port configurations corresponding to all ports between 1 and 4, specify the port range as `clear counters interfaces interface-type 1/1/1 - 1/1/4`.

### debug vrrp ipv6

Enable VRRP debugging.

**Syntax**

```
debug vrrp ipv6 interface [vrid] {all | packets | state | timer}
```

**Parameters**

- **interface**
  - Enter the following keywords and the interface information:
    - For a 1-GigabitEthernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
    - For a Port Channel interface, enter the keywords `port-channel`, and then a number.
    - For a VLAN interface, enter the keyword `vlan`, and then the VLAN ID. The VLAN ID range is from 1 to 4094.
  - (OPTIONAL) Enter a number from 1 to 255 as the VRRP group ID.
  - Enter the keyword `all` to enable debugging of all VRRP groups.
  - Enter the keyword `bfd` to enable debugging of all VRRP BFD interactions.
  - Enter the keyword `database` to display changes related to group, prefix, and interface entries in the VRRP table.
  - Enter the keyword `packets` to enable debugging of VRRP control packets.
  - Enter the keyword `state` to enable debugging of VRRP state changes.
  - Enter the keyword `timer` to enable debugging of the VRRP timer.

**Command Modes**

EXEC Privilege

Version | Description
--- | ---
9.8(0.0P5) |Introduced on the S4048-ON.
9.8(0.0P2) | Introduced on the S3048-ON.
9.7(0.0) | Introduced on the S6000-ON.
9.2(1.0) | Introduced on the Z9500.
8.3.19.0 | Introduced on the S4820T.
8.3.10.0 | Introduced on the S4810.
8.4.1.0 | Introduced on E-Series, C-Series, and S-Series. Support was added for IPv6 VRRP groups in nondefault VRF instances.
8.3.2.0 | Introduced on the E-Series.

**Usage Information**
If you do not specify an option, debugging is active on all interfaces and all VRRP groups.

### show vrrp ipv6

View the active IPv6 VRRP groups. If no VRRP groups are active, the Dell Networking OS returns No Active VRRP group.

**Syntax**
```
show vrrp ipv6 [vrid] [interface] [brief] [vrf vrf-name]
```

**Parameters**
- **vrid**: (OPTIONAL) Enter the virtual router identifier for the VRRP group to view only that group. The range is from 1 to 255.
- **interface**: Enter the following keywords and the number information:
  - For a 1-GigabitEthernet interface, enter the keyword GigabitEthernet then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a port channel interface, enter the keywords port-channel, and then a number.
  - For a VLAN interface, enter the keyword vlan, and then a number from 1 to 4094.
- **brief**: (OPTIONAL) Enter the keyword brief to view a table of information on the VRRP groups.
- **vrf vrf-name**: Enter the keyword vrf then the name of the VRF to view IPv6 VRRP groups corresponding to that VRF.

**Command Modes**
- EXEC
- EXEC Privilege

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

### Version Description

- **9.8(2.0)** Introduced on the S3100 series.
- **9.8(1.0)** Introduced on the Z9100-ON.
- **9.8(0.0P5)** Introduced on the S4048-ON.
- **9.8(0.0P2)** Introduced on the S3048-ON.
- **9.2(1.0)** Introduced on the Z9500.
- **8.3.19.0** Introduced on the S4820T.
- **8.3.10.0** Introduced on the S4810.
- **8.3.2.0** Introduced on the E-Series.

### Usage Information

The following describes the `show vrrp ipv6` command.

<table>
<thead>
<tr>
<th>Line starting with</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>GigabitEthernet...</td>
<td>Displays the interface, VRRP group ID, and network address. If the interface is not sending VRRP packets, 0.0.0.0 appears as the network IP address.</td>
</tr>
<tr>
<td>VRF</td>
<td>VRF instance to which the VRRP group interface belongs.</td>
</tr>
<tr>
<td>State: master...</td>
<td>Displays the interface's state:</td>
</tr>
<tr>
<td></td>
<td>- Na/If (not available)</td>
</tr>
<tr>
<td></td>
<td>- master (MASTER virtual router)</td>
</tr>
<tr>
<td></td>
<td>- backup (BACKUP virtual router)</td>
</tr>
<tr>
<td></td>
<td>Also displays the interface’s priority and IP address of the MASTER.</td>
</tr>
<tr>
<td>Hold Down:...</td>
<td>Displays additional VRRP configuration information:</td>
</tr>
<tr>
<td></td>
<td>- Hold Down displays the hold down timer interval in seconds.</td>
</tr>
<tr>
<td></td>
<td>- Preempt displays TRUE if preempt is configured and FALSE if preempt is not configured.</td>
</tr>
<tr>
<td></td>
<td>- AdvInt displays the Advertise Interval in seconds.</td>
</tr>
<tr>
<td>Adv rcvd:...</td>
<td>Displays counters for the following:</td>
</tr>
<tr>
<td></td>
<td>- Adv rcvd displays the number of VRRP advertisements received on the interface.</td>
</tr>
<tr>
<td></td>
<td>- Adv sent displays the number of VRRP advertisements sent on the interface.</td>
</tr>
<tr>
<td></td>
<td>- Bad pkts rcvd displays the number of invalid packets received on the interface.</td>
</tr>
<tr>
<td>Virtual MAC address</td>
<td>Displays the virtual MAC address of the VRRP group.</td>
</tr>
<tr>
<td>Virtual IP address</td>
<td>Displays the virtual IP address of the VRRP router to which the interface is connected.</td>
</tr>
<tr>
<td>Tracking states...</td>
<td>Displays information on the tracked interfaces or objects configured for a VRRP group (track command), including:</td>
</tr>
<tr>
<td></td>
<td>- UP or DOWN state of the tracked interface or object (Up or Dn).</td>
</tr>
<tr>
<td></td>
<td>- Interface type and slot/port or object number, description, and time since the last change in the state of the tracked object.</td>
</tr>
</tbody>
</table>
Cost subtracted from the VRRP group priority if the state of the tracked interface/object goes DOWN.

Dell# show vrrp ipv6
-------------------
State: Master, Priority: 101, Master: fe80::201:e8ff:fe7a:6bb9 (local)
Hold Down: 0 centisec, Preempt: TRUE, AdvInt: 100 centisec
Accept Mode: FALSE, Master AdvInt: 100 centisec
Adv rcvd: 0, Bad pkts rcvd: 0, Adv sent: 64
Virtual MAC address: 00:00:5e:00:02:ff
Virtual IP address: 1::255 fe80::255

vrrp-ipv6-group
Assign an interface to a VRRP group.

Syntax
vrrp-ipv6-group vrid

Parameters
vrid
Enter the virtual-router ID number of the VRRP group. The VRID range is from 1 to 255.

Defaults
Not configured.

Command Modes
INTERFACE

Command History

<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>
### Version

**8.3.2.0**

Introduced on the E-Series.

### Usage Information

The VRRP group only becomes active and sends VRRP packets when you configure a link-local virtual IP address. When you delete the virtual address, the VRRP group stops sending VRRP packets.

- When you do not load the VRF microcode in the CAM, the VRID for a VRRP group is the same as the VRID number configured with the `vrrp-group` or `vrrp-ipv6-group` commands.
- When you load the VRF microcode in the CAM, the VRID for a VRRP group equals 16 times the `vrrp-group` or `vrrp-ipv6-group vrid` number, plus the `ip vrf vrf-id` number. For example, if you load the VRF microcode and you configure the VRRP group as 10 in VRF 2, the VRID for the VRRP group is \((16 \times 10) + 2\), or 162. This VRID value is used in the lowest byte of the virtual MAC address of the VRRP group and is also used for VRF routing.

**NOTE:** For all routers to interoperate, configure the same VRID on neighboring routers (Dell Networking or non-Dell Networking) in the same VRRP group.

### Related Commands

- `virtual-address` — assigns up to 12 virtual IP addresses per VRRP group.
X.509v3 is a standard for public key infrastructure (PKI) to manage digital certificates and public key encryption. This standard specifies a format for public-key certificates or digital certificates. Dell Networking OS supports X.509v3 standards.

- ocsp-server prefer
- show crypto ca-cert
- show crypto cert

**crypto ca-cert delete**

Deletes a CA certificate.

**Syntax**

```
crypto ca-cert delete [index]
```

**Parameters**

- `index` (Optional) Enter the keyword `index` to specify the index of the CA certificate. If `index` is not specified, the system deletes all of the installed CA certificates.

**Defaults**

NA.

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command:

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.11.0.0</td>
<td>Introduced the command.</td>
</tr>
</tbody>
</table>
**Usage Information**

The following RBAC roles are allowed to issue this command:

- sysadmin
- secadmin

Before deleting a CA certificate, the system checks whether that certificate is an issuer of other installed certificate on the system. If so, the system informs you to delete other installed certificates first.

**Related Commands**

crypto ca-cert install
crypto cert generate
crypto ca-cert install

crypto ca-cert install

**crypto ca-cert install**

Downloads and installs the certificate of a Certificate Authority (CA) on to the device.

**Syntax**

crypto ca-cert install path

**Parameters**

- **path**
  
Enter the path where the CA certificate is available for download. The format that you use to specify the location of the CA certificate also includes the protocol that is used to contact the CA. You can use the following options that you can use to download and install a certificate from the CA:

  - tftp — tftp://ca-ip-address/tftp/CAcert.pem
  - usbflash: — usbflash:/certs/CAcert.pem
  - ftp — ftp://userid:password@ca-ip-address/certs/CAcert.pem
  - scp — scp://userid:password@ca-ip-address/certs/CAcert.pem
  - http — http://192.168.1.100/certs/CAcert.pem
  - flash — flash://filepath/filename

**Defaults**

NA.

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.11.0.0</td>
<td>Introduced the command.</td>
</tr>
</tbody>
</table>

**Usage Information**

The following RBAC roles are allowed to issue this command:

- sysadmin
- secadmin

Upon successful installation, the system displays a notification on the device. If remote logging is configured, the notification is also sent to the syslog server. Contents of the CA certificate’s subject are displayed.

**Related Commands**

- crypto cert install
crypto cert delete

Deletes a trusted certificate.

**Syntax**
```
crypto cert delete
```

**Defaults**
NA.

**Command Modes**
EXEC Privilege

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.11.0.0</td>
<td>Introduced the command.</td>
</tr>
</tbody>
</table>

**Usage Information**

The following RBAC roles are allowed to issue this command:

- sysadmin
- secadmin

The certificate matching the current FIPS state is deleted. If the system is in FIPS mode, the FIPS certificate is deleted. If the system is in non-FIPS mode, the non-FIPS certificate is deleted.

Before deleting the system's trusted certificate, the system prompts you to specify whether to proceed with deletion. If you proceed, the system deletes the certificate and also the private key.

**Related Commands**
- crypto ca-cert install
- crypto cert generate

---

**crypto cert generate**

Generates a Certificate Signing Request (CSR) or a self-signed certificate.

**Syntax**
```
crypto cert generate {self-signed | request} [cert-file cert-path key-file {private | key-path}] [country 2-letter code] [state state] [locality city] [organization organization-name] [orgunit unit-name] [cname common-name] [email email-address] [validity days] [length length] [altname alt-name]
```

**Parameters**
- `self-signed`: Enter the keyword self-signed to create a self-signed certificate.
- `request`: Enter the keyword request to create a certificate signing request.
- `cert-file`: Enter the keyword cert-file to specify that the certificate needs to be created.

**NOTE:** If the cert-file option is not specified in the command, then the system interactively prompts you to fill in rest of the fields of the certificate signing request (CSR).
cert-path

Enter the path to locally store the self-signed certificate or CSR. The path can be a full path or a relative path. If the system accepts this path, a notification is sent indicating the location where the CSR file is stored. You can then export the CSR to a CA using the "copy" command. Following is an example of a path that you can specify: flash://certs/s4810-001-request.csr.

key-file

Enter the keyword key-file to specify the private key.

private

Enter the keyword private to specify that the key is stored in a hidden location in the NVRAM. Only one private key can exist in a hidden location at any given point in time.

key-path

Enter the absolute or relative location on the device where the key is stored.

country

2-letter-code

(Optional) Enter the keyword country followed by the two letter code that is used to identify the country name.

state

state

(Optional) Enter the keyword state followed by the name of the state.

locality

city

(Optional) Enter the keyword locality followed by the name of the city.

organization

organization-name

(Optional) Enter the keyword organization followed by the name of the organization.
/orgunit

unit-name

(Optional) Enter the keyword orgunit followed by the name of the unit.

cname

common-name

(Optional) Enter the keyword cname followed by the common name that you want to assign.

NOTE: Common Name is an important attribute while creating a CSR or a self-signed certificate. Common name is the main identity presented to connecting entities. By default, the device's host name acts as the common name. However, you can still configure a different common name for the device. For example, you can specify an IP address to act as a Common Name for the device. If the Common Name does not match the device's presented identity, then even a properly signed certificate does not validate correctly.

e-mail

email-address

(Optional) Enter the keyword email followed a valid email address used for communication with the organization.

validity

days

(Optional) Enter the keyword validity followed by the number of days for which the certificate is valid.

NOTE: For CSRs, validity has no effect. For self-signed certificates, if validity is not specified, it defaults to 3650 days, or 10 years.

length

length

(Optional) Enter the keyword length followed by a bit length value. The default key length for both FIPS and non-FIPS mode is 2048. Minimum key length value for FIPS mode is 2048. The range is from 2048 to 4096. Minimum key length value for non-FIPS mode is 1024. The range is from 1024 to 4096.

altname

altname

(Optional) Enter the keyword altname followed by the subject alternate name for the organization. For example, altname IP:192.168.1.100.

Defaults

NA.

Command Modes

EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command:
Usage Information

The following RBAC roles are allowed to issue this command:

- sysadmin
- secadmin

If the cert-file option is not specified in the command, then the system interactively prompts you to fill in various fields of the certificate signing request (CSR). You are prompted to fill out some metadata information for the certificate. The following example shows the fields that you are prompted to fill:

You are about to be asked to enter information that will be incorporated into your certificate request.
What you are about to enter is what is called a Distinguished Name or a DN. There are quite a few fields but you can leave some blank.
For some fields there will be a default value; if you enter '.', the field will be left blank.
-----
Country Name (2 letter code) [US]:
State or Province Name (full name) [Some-State]:California
Locality Name (eg, city) []:San Francisco
Organization Name (eg, company) []:Starfleet Command
Organizational Unit Name (eg, section) []:NCC-1701A
Common Name (eg, YOUR name) [S4810-001]:
Email Address []:scotty@starfleet.com

You can enter only 256 characters per command. If you have field values that are larger than 256 characters in length, use the interactive mode of the command.

Related Commands
- crypto ca-cert install

crypto cert install

Installs a trusted certificate on a device.

Syntax

crypto cert install cert-file cert-path key-file {key-path | private} [password passphrase]

Parameters

cert-file
Enter the keyword cert-file to specify that the certificate needs to be downloaded.

cert-path
Enter the path where the certificate is locally stored. The path can be a full path or a relative path. If the system accepts this path, a notification is sent indicating the location where the certificate file is stored. Following are example of a path that you can specify:
flash://certs/s4810-001-request.crt and usbflash://certs/s4810-001-cert.pem

NOTE: Before installing a trusted certificate, you first need to download it from a remote CA using the copy command.

key-file
Enter the keyword key-file to specify the private key.

private
Enter the keyword private to specify that the key is stored in a hidden location in the NVRAM. Only one private key can exist in a hidden location at any given point in time.

key-path
Enter the absolute or relative location on the device where the key is stored.
NOTE: After the certificate is successfully installed, the private key is deleted from the specified location and copied to the hidden location in NVRAM.

password passphrase

(Optional) Enter the keyword password followed by the password phrase used to decrypt the private key.

NOTE: You can generate the private key and certificate on another host. While doing so, you must keep the private key encrypted with a passphrase so that the private key is not compromised during transport. The password phrase acts a facility to decrypt the private key before installing it on the switch.

Defaults

NA.

Command Modes

EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.11.0.0</td>
<td>Introduced the command.</td>
</tr>
</tbody>
</table>

Usage Information

The following RBAC roles are allowed to issue this command:

- sysadmin
- secadmin

Certain parameters must be met in order for this command to succeed:

- The downloaded certificate should be formatted properly.
- In order for verification to work, the CA certificate must be installed on the system before running this command.
- The downloaded certificate’s public key must correspond to the private key.
- If the certificate is not self-signed, then the CA certificate (from the CA that has signed the certificate) must be installed on the system prior to running this command for verification to work.

NOTE: It is possible for the switch to store two types of certificates: one for the FIPS mode and one for the non-FIPS mode. If the system is in FIPS mode, the certificate is installed as the FIPS certificate. If the system is in non-FIPS mode, the certificate is installed as the non-FIPS certificate. When FIPS mode is enabled or disabled, the certificates (and keys) are switched by the system.

NOTE: For the switch, there are two possible certificates stored - one for FIPS mode, one for non-FIPS mode. If the system is in FIPS mode, the certificate will be installed as the FIPS certificate. If the system is in non-FIPS mode, the certificate will be installed as the non-FIPS certificate. When FIPS mode is enabled/disabled, the certificates (and keys) are switched by the system.

Related Commands

- crypto ca-cert install
crypto x509 ocsp

Configures the OCSP behavior.

Syntax

crypto x509 ocsp [nonce] [sign-requests]

Parameters

nonce
Enter the keyword nonce to use the nonce feature for the OCSP requests to OCSP responder communication. This is a one-time value that must be returned in the OCSP response. If the OCSP responder is using precomputed responses, then it does not reply with the nonce. The nonce feature is off by default. The no version of the command disables the nonce feature.

sign-requests
Enter the keyword sign-requests to sign the OCSP requests to OCSP responder communication with the system’s own certificate so that the OCSP responder may verify the requestor. The sign-requests feature is off by default. The no version of the command disables signing of requests.

Defaults
NA.

Related Commands

- crypto ca-cert install
- crypto cert generate
- crypto cert install

crypto x509 revocation

Configure the revocation check behavior for the certificate.

Syntax

crypto x509 revocation ocsp {accept | reject}

Parameters

ocsp
Enter the method used to check certificate revocation details. In this release, OCSP is the only option that is supported. So, you can specify OCSP as the method-list value.

accept
Enter the keyword accept to accept the presented certificate and log in if OCSP retrieval fails.
**reject**

Enter the keyword `reject` to reject the presented certificate and log in if OCSP retrieval fails.

**Defaults**
crypto x509 revocation ocsp accept

The following is a list of the Dell Networking OS version history for this command:

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.11.0.0</td>
<td>Introduced this command.</td>
</tr>
</tbody>
</table>

**Usage Information**
The following RBAC roles are allowed to issue this command:
- sysadmin
- secadmin

You can use this command to verify an X509 certificate outside of use with Syslog over TLS.

**Related Commands**
- crypto cert install
- crypto cert generate
- crypto ca-cert install
logging secure

Creates a log file for various events related to X.509v3 certificates.

Syntax

logging {hostname} {secure | tcp | udp} [vrf vrf-name] [sha1 fingerprint] [port port-number]

Parameters

hostname

Enter the name of the host or device for which you wish to record logs corresponding to the certificates.

NOTE: The hostname can be an IPV4 address, an IPV6 address, or a DNS hostname—with or without DNS suffix.

secure

Enter the keyword secure to enable the Syslog feature to communicate with a compatible Syslog server using the secure TLS protocol over the default port (6514). The range is from 1024 to 65535.

tcp

Enter the keyword tcp to enable TCP.

udp

Enter the keyword udp to enable UDP.

vrf vrf-name

Enter the keyword vrf followed by the name of the VRF.

sha1 fingerprint

Enter the keyword sha1 followed by the fingerprint. This option is only available when the secure option is configured. This new option enables the Syslog feature to compare the received certificate’s sha-1 fingerprint against this configured sha-1 fingerprint. If present, only the fingerprint is used for certificate revocation validation.

port port-number

Enter the keyword port followed by the port number. The default port number is 6514 for secure logging.

Defaults

None.

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command:

Version Description

9.11.0.0 Introduced this command.

Usage Information

The following RBAC roles are allowed to issue this command:

- sysadmin
- secadmin

Following are the pre-requisites to configure logging:

- The logging command must be configured to enable event logging.
- A certificate must be installed on the switch. This certificate is only used for secure logging.
- At least one CA certificate must be installed on the switch so that the logging server’s certificate can be verified. If a SHA1 fingerprint is present, only the fingerprint is used for certificate revocation validation.
**Related Commands**
- `crypto cert install`
- `crypto ca-cert install`
- `crypto cert generate`

**crypto x509 ca-keyid**

Creates a per-certificate configuration context using the specified subject key identifier.

**Syntax**
```
crypto x509 ca-keyid subject-key-identifier
```

Use the `no crypto x509 ca-keyid` command to remove this configuration.

**Parameters**
- `subject-key-identifier` Enter the content of the SubjectKeyIdentifier field from the CA certificate.

**Defaults**
None.

**Command Modes**
- CONFIGURATION Mode

**Command History**
This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command:

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.11.0.0</td>
<td>Introduced this command.</td>
</tr>
</tbody>
</table>

**Usage Information**

The following RBAC roles are allowed to issue this command:
- `sysadmin`
- `secadmin`

When you use this command, the device maps the current certificate context in the certificate store to a CA certificate through the subject key identifier field. The subject key identifier field contains the SHA-1 hash of the CA's public key. This configuration provides a way to uniquely identify a CA and associate it with any CA-specific settings.

This context is used to store certificate-specific settings such as alternate CRL and OCSP locations. Incoming X.509 certificates whose AuthorityKeyIdentifier extensions match the configured subject key identifier have these settings applied to them.

The `crypto x509 ca-keyid` command when used with the `ocsp-server` command in the global configuration mode creates a per-certificate configuration context under which the remaining commands are entered.

**Related Commands**
- `ocsp-server`
- `crypto x509 ocsp`
ocsp-server

Configures OCSP server on a CA.

Syntax

```
ocsp-server url [nonce] [sign-requests]
```

Parameters

- `url` Enter the URL for the OCSP responder using standard URI format. Either http or https protocol can be used. For example, http://[1100::101]:8888.
- `nonce` Enter the keyword `nonce` to use the nonce feature for the OCSP requests to OCSP responder communication. This number is a one-time value that must be returned in the OCSP response. If the OCSP responder is using precomputed responses, then it does not reply with the nonce. The nonce feature is off by default. The no version of the command disables the nonce feature.
- `sign-requests` Enter the keyword `sign-requests` to sign the OCSP requests to OCSP responder communication with the system's own certificate so that the OCSP responder may verify the requestor. The sign-requests feature is off by default. The no version of the command disables signing of requests.

Defaults

None.

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command:

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.11.0.0</td>
<td>Introduced this command.</td>
</tr>
</tbody>
</table>

Usage Information

The following RBAC roles are allowed to issue this command:

- sysadmin
- secadmin

Multiple OCSP responders may be configured per CA. The system tries each one until it gets a valid response. No priority may be specified or guaranteed; the system tries them in the order in which they were configured.

Related Commands

- `crypto x509 ocsp`

ocsp-server prefer

Configures OCSP responder preference. You can configure the preference or order that the CA or a device should follow while contacting multiple OCSP responders.

Syntax

```
ocsp-server prefer
```

Defaults

None.

Command Modes

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command:

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.11.0.0</td>
<td>Introduced this command.</td>
</tr>
</tbody>
</table>

Usage Information

The following RBAC roles are allowed to issue this command:

- sysadmin
- secadmin

When this command is specified, the system checks the configured OCSP URLs before checking the URL of the OCSP server in the authorityInfoAccess extension of the certificate. If this command is not specified, then the system checks the OCSP server in the authorityInfoAccess extension of the certificate before checking the configured OCSP servers.

Related Commands

- crypto x509 ocsp

show crypto ca-cert

Displays the certificate information corresponding to the root CA.

Syntax

show crypto ca-certs

Defaults

None.

Command Modes

EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Usage Information

The following RBAC roles are allowed to issue this command:

- sysadmin
- secadmin

This show command should display the index, the certificate’s subject field in plaintext, not-before and not-after dates, and the fingerprint in hexadecimal format. The index assigned to each CA certificate is used by the crypto cert delete certificate-authority command to allow the user to specify which certificate authority to remove.

Related Commands

- crypto ca-cert install
**show crypto cert**

Displays the certificate information that is specified.

**Syntax**

```
show crypto cert {path}
```

**Parameters**

- **path**
  
  (OPTIONAL) Enter the path to a local file where a certificate chain is stored in PEM format. If a path is not specified, display the certificate that is currently installed on the system.

**Defaults**

None.
