Notes, cautions, and warnings

NOTE: A NOTE indicates important information that helps you make better use of your product.

CAUTION: A CAUTION indicates either potential damage to hardware or loss of data and tells you how to avoid the problem.

WARNING: A WARNING indicates a potential for property damage, personal injury, or death.

About this Guide

This book provides information about the Dell Networking OS command line interface (CLI) on the Dell PowerEdge FN I/O Module. This book also includes information about the protocols and features found in the Dell Networking OS and on the Dell Networking systems supported by the Dell Networking OS.

References

For more information about your system, refer to the following documents:

- Dell PowerEdge FN I/O Module Configuration Guide
- Dell PowerEdge FN I/O Module Getting Started Guide
- Release Notes for the Dell System PowerEdge FN I/O Module

Topics:

- Objectives
- Audience
- Conventions
- Information Icons

Objectives

This book is intended as a reference guide for the FN I/O Module CLI commands, with detailed syntax statements, along with usage information and sample output.

This guide contains an Appendix with a list of the request for comment (RFCs) and management information base files (MIBs) supported.

**NOTE:** For more information about when to use the CLI commands, refer to the *Dell PowerEdge FN I/O Module Configuration Guide* for your system.

Audience

This book is intended for system administrators who are responsible for configuring or maintaining networks. This guide assumes that you are knowledgeable in Layer 2 and Layer 3 networking technologies.

Conventions

This book uses the following conventions to describe command syntax.

- **Keyword**
  - Keywords are in Courier font and must be entered in the CLI as listed.

- **parameter**
  - Parameters are in italics and require a number or word to be entered in the CLI.

- **(X)**
  - Keywords and parameters within braces must be entered in the CLI.
Keywords and parameters within brackets are optional.

Keywords and parameters separated by a bar require you to choose one option.

Keywords and parameters separated by a double bar allow you to choose any or all of the options.

**Information Icons**

This book uses the following information symbols:

- **NOTE:** The Note icon signals important operational information.

- **CAUTION:** The Caution icon signals information about situations that could result in equipment damage or loss of data.

- **WARNING:** The Warning icon signals information about hardware handling that could result in injury.
By following the instructions in the Dell PowerEdge FN I/O Module Getting Started Guide that is shipped with the product, you install the FN I/O Module in a Dell PowerEdge FX2 server chassis. The Aggregator installs with zero-touch configuration. After you power it on, an Aggregator boots up with default settings and auto-configures with software features enabled. This chapter describes the default settings and software features that are automatically configured at startup. Use the tasks described in the other chapters to reconfigure the Aggregator for customized network operation.

Topics:
- Operational Modes
- Default Settings
- Other Auto-Configured Settings
- DCB Support
- FCoE Connectivity
- iSCSI Operation
- Link Aggregation
- Uplink Failure Detection
- VLANs
- Where to Go From Here

Operational Modes

The FN I/O Module supports four operational modes. Select the operational mode that meets your deployment needs. To enable a new operational mode, reload the switch.

- **Standalone mode** — `stack-unit unit iom-mode standalone`. This is the default mode for IOA. It is fully automated zero-touch mode that allows you to configure VLAN memberships. (Manageable through CMC also)
- **Programmable MUX mode (PMUX)** — `stack-unit unit iom-mode programmable-mux`. Select this mode to configure PMUX mode CLI commands.
- **Stacking mode** — `stack-unit unit iom-mode stacking`. Select this mode to stack up to six IOA stack units as a single logical switch. The stack units can be in the same or on different chassis. This is a low-touch mode where all configuration except VLAN membership is automated. To enable VLAN, you must configure it. In this operational mode, ports 9 and 10 are dedicated to stacking.
- **Virtual Link Trunking mode (VLT)** — `stack-unit unit iom-mode vlt`. Select this mode to multi-home server interfaces to different IOA modules. This is a low-touch mode where all configuration except VLAN membership is automated. To enable VLAN, you must configure it. In this mode, ports 9 is configured as VLT interconnect.
- **Full Switch mode** — `stack-unit unit iom-mode full-switch`. The full switch mode provides Layer 2 / Layer 3 functionalities on the Dell FX2 chassis. All the commands and configurations supported on the MXL is available in full-switch mode.

For more information, see the FN IOM Configuration Guide.
Default Settings

The I/O Aggregator provides zero-touch configuration with the following default configuration settings:

- Default user name (root)
- Password (calvin)
- VLAN (vlan1) and IP address for in-band management (DHCP-assigned)
- IP address for out-of-band (OOB) management (DHCP-assigned)
- Read-only SNMP community name (public)
- Broadcast storm control (enabled)
- Unregistered Multicast Packets flooding (enabled)
- IGMP snooping in all VLANs except the default VLAN (enabled)
- VLAN configuration (all ports belong to all VLANs)

You can change any of these default settings using the CLI. Refer to the appropriate chapter for details.

Other Auto-Configured Settings

After the Aggregator powers on, it auto-configures and is operational with software features enabled, including:

- VLANs: All ports are configured as members of all (4094) VLANs. All VLANs are up and can send or receive layer 2 traffic. For more information, refer to VLANs.
- Data Center Bridging Capability Exchange Protocol (DCBX)
- Fibre Channel over Ethernet (FCoE) connectivity
- FCoE Initiation Protocol (FIP) snooping
- Hybrid ports: Ports are administratively up and auto-configured to operate as hybrid ports to transmit tagged and untagged VLAN traffic.
- iSCSI optimization
- IGMP snooping
- Jumbo frames: Ports are set to a maximum MTU of 12,000 bytes by default.
- Link aggregation: All uplink ports are configured in a single LAG (LAG 128).
- Link Layer Discovery Protocol (LLDP): Enabled on all ports.
- Link tracking: Enables server-facing links to be brought up only if the uplink port-channel (LAG 128) is up.

DCB Support

DCB enhancements for data center networks are supported to eliminate packet loss and provision links with required bandwidth. The Aggregator provides zero-touch configuration for DCB. The Aggregator auto-configures DCBX port roles to match the DCBX configuration in the ToR switches to which it connects through its uplink ports.

The Aggregator supports DCB only in standalone mode and not in the stacking mode.
**FCoE Connectivity**

Many data centers use Fibre Channel (FC) in storage area networks (SANs). Fibre Channel over Ethernet (FCoE) encapsulates Fibre Channel frames over Ethernet networks.

On an Aggregator, the internal ports support FCoE connectivity and connect to the converged network adapter (CNA) in blade servers. FCoE allows Fibre Channel to use 10-Gigabit Ethernet networks while preserving the Fibre Channel protocol.

The Aggregator also provides zero-touch configuration for FCoE configuration. The Aggregator auto-configures to match the FCoE settings used in the ToR switches to which it connects through its uplink ports.

**iSCSI Operation**

Support for iSCSI traffic is turned on by default when the Aggregator powers up. No configuration is required.

When the Aggregator powers up, it monitors known TCP ports for iSCSI storage devices on all interfaces. When a session is detected, an entry is created and monitored as long as the session is active.

The Aggregator also detects iSCSI storage devices on all interfaces and auto-configures to optimize performance. Performance optimization operations, such as Jumbo frame size support, and disabling storm control on interfaces connected to an iSCSI Equallogic (EQL) storage device, are applied automatically.

CLI configuration is necessary only when the configuration includes iSCSI storage devices that cannot be automatically detected and when non-default QoS handling is required.

**Link Aggregation**

In Standalone, Stacking, and VLT modes, all uplink ports (except port 9 in VLT mode) are configured in a single LAG (LAG 128). There can be multiple uplink LAGs in programmable-mux mode. Server-facing ports are auto-configured as part of link aggregation groups if the corresponding server is configured for LACP-based NIC teaming. Static LAGs are supported only in PMUX and Full-Switch modes.

**NOTE:** The default LACP timeout is Long-Timeout. The same timeout is recommended to be configured in peer devices.

**Uplink Failure Detection**

By default, all server-facing ports are tracked by the operational status of the uplink LAG. If the uplink LAG goes down, the Aggregator loses its connectivity and is no longer operational; all server-facing ports are brought down.

**NOTE:** If installed servers do not have connectivity to a ToR switch, check the Link Status LED of uplink ports on the Aggregator. If all LEDs are ON, check the LACP configuration on the ToR switch that is connected to the Aggregator to ensure the LACP is correctly configured.

**VLANs**

By default, all Aggregator ports belong to all 4094 VLANs and are members of untagged VLAN 1. You can use the CLI or CMC interface to configure only the required VLANs on a port.
When you configure VLANs on server-facing interfaces (ports 1 to 8), you can assign VLANs to a port or a range of ports by entering the `vlan tagged` or `vlan untagged` commands in interface configuration mode; for example:

```
Dell(conf)# interface tengigabitethernet 0/2 - 4
Dell(conf-if-range-te-0/2-4)# vlan tagged 5,7,10-12
Dell(conf-if-range-te-0/2-4)# vlan untagged 3
```

1. **NOTE:** You can also use the CMC interface to configure VLANs.

**Uplink LAG**

The tagged VLAN membership of the uplink LAG is automatically configured based on the tagged and untagged VLAN configuration of all server-facing ports (ports 1 to 8).

The untagged VLAN used for the uplink LAG is always the default VLAN.

**Server-Facing LAGs**

The tagged VLAN membership of a server-facing LAG is automatically configured based on the server-facing ports that are members of the LAG.

The untagged VLAN of a server-facing LAG is configured based on the untagged VLAN to which the lowest numbered server-facing port in the LAG belongs.

1. **NOTE:** Dell Networking recommends that you configure the same VLAN membership on all LAG member ports.

**Stacking Mode**

When you configure an Aggregator to operate in stacking mode (See “Configuring and Bringing Up a Stack” in the Dell Networking Configuration Guide for the M I/O Aggregator), VLANs are reconfigured as follows:

If an Aggregator port belonged to all 4094 VLANs in standalone mode (default), all VLAN membership is removed and the port is assigned only to default VLAN 1. You must configure additional VLAN membership as necessary.

If you had manually configured an Aggregator port to belong to one or more VLANs (non-default) in standalone mode, the VLAN configuration is retained in stacking mode only on the master switch.

When you reconfigure an Aggregator from stacking to standalone mode:

Aggregator ports that you manually configured for VLAN membership in stacking mode retain their VLAN configuration in standalone mode.

To restore the default auto-VLAN mode of operation (in which all ports are members of all 4094 VLANs) on a port, enter the `auto vlan` command:

```
Dell(conf)# interface tengigabitethernet 0/2
Dell(conf-if-te-0/2)# auto vlan
```

The `auto vlan` command is applicable only in Standalone mode.

To get the default standalone mode configurations:

- Restore to factory default settings.
Where to Go From Here

You can customize the Aggregator for use in your data center network as necessary. To perform additional switch configuration, do one of the following:

• For remote out-of-band management, enter the OOB management interface IP address into a Telnet or SSH client and log in to the switch using the user ID and password to access the CLI.
• For local management using the CLI, use the attached console connection.
• For remote in-band management from a network management station, enter the VLAN IP address of the management port and log in to the switch to access the CLI.

If you installed the Aggregator in a stack, you can configure additional settings for switch stacking

In case of a Dell Networking OS upgrade, you can check to see that an Aggregator is running the latest Dell Networking OS version by entering the show version command. To download a Dell Networking OS version, go to http://support.dell.com.

Refer to the appropriate chapter for detailed information on how to configure specific software settings.
This chapter describes the command line interface (CLI) structure and command modes. The Dell operating system commands are in a text-based interface that allows you to use the launch commands, change command modes, and configure interfaces and protocols.

Topics:
- Accessing the Command Line
- Multiple Configuration Users
- Navigating the CLI
- Obtaining Help
- Using the Keyword no Command
- Filtering show Commands
- Command Modes
- Track Login Activity
- Limit Concurrent Login Sessions

### Accessing the Command Line

When the system boots successfully, you are positioned on the command line in EXEC mode and not prompted to log in. You can access the commands through a serial console port or a Telnet session. When you Telnet into the switch, you are prompted to enter a login name and password.

```
Example

telnet 172.31.1.53
Trying 172.31.1.53...
Connected to 172.31.1.53.
Escape character is '^]'.
Login: username
Password: Dell>
```

After you log in to the switch, the prompt provides you with the current command-level information. For example:

<table>
<thead>
<tr>
<th>Prompt</th>
<th>CLI Command Mode</th>
</tr>
</thead>
<tbody>
<tr>
<td>Dell&gt;</td>
<td>EXEC</td>
</tr>
<tr>
<td>Dell#</td>
<td>EXEC Privilege</td>
</tr>
<tr>
<td>Dell(conf)#</td>
<td>CONFIGURATION</td>
</tr>
</tbody>
</table>

**NOTE:** For a list of all the command mode prompts, refer to the Command Modes Modes section.

### Multiple Configuration Users

When a user enters CONFIGURATION mode and another user is already in CONFIGURATION mode, the Dell operating system generates an alert warning message similar to the following:

```
Dell#conf
```
% Warning: The following users are currently configuring the system:

User "" on line console0
User "admin" on line vty0 (123.12.1.123)
User "admin" on line vty1 (123.12.1.123)
User "Irene" on line vty3 (123.12.1.321)
Dell#conf

When another user enters CONFIGURATION mode, the Dell Networking OS sends a message similar to the following:

% Warning: User "admin" on line vty2 "172.16.1.210" is in configuration

In this case, the user is "admin" on vty2.

# Navigating the CLI

The Dell Networking OS displays a CLI prompt comprised of the host name and CLI mode.

- Host name is the initial part of the prompt and is “Dell” by default. You can change the host name with the hostname command.
- CLI mode is the second part of the prompt and reflects the current CLI mode. For a list of the Dell Networking OS command modes, refer to the command mode list in the Accessing the Command Line section.

The CLI prompt changes as you move up and down the levels of the command structure. Starting with CONFIGURATION mode, the command prompt adds modifiers to further identify the mode. For more information about command modes, refer to the Command Modes section.

<table>
<thead>
<tr>
<th>Prompt</th>
<th>CLI Command Mode</th>
</tr>
</thead>
<tbody>
<tr>
<td>Dell&gt;</td>
<td>EXEC</td>
</tr>
<tr>
<td>Dell#</td>
<td>EXEC Privilege</td>
</tr>
<tr>
<td>Dell(conf)#</td>
<td>CONFIGURATION</td>
</tr>
<tr>
<td>Dell(conf-if-te-0/1)#</td>
<td>INTERFACE</td>
</tr>
<tr>
<td>Dell(conf-if-vl-1)#</td>
<td></td>
</tr>
<tr>
<td>Dell(conf-if-ma-0/0)#</td>
<td></td>
</tr>
<tr>
<td>Dell(conf-if-range)#</td>

</tr>
<tr>
<td>Dell(conf-mon-sess)#</td>
<td>MONITOR SESSION</td>
</tr>
</tbody>
</table>

# Obtaining Help

As soon as you are in a command mode there are several ways to access help.

To obtain a list of keywords at any command mode:
Type a ? at the prompt or after a keyword. There must always be a space before the ?.

To obtain a list of keywords with a
Type help at the prompt.
**brief functional description:**

**To obtain a list of available options:**
Type a keyword and then type a space and a `?`.

**To obtain a list of partial keywords using a partial keyword:**
Type a partial keyword and then type a `?`.

**Example**

The following is an example of typing `ip ?` at the prompt:

```bash
Dell(conf)#ip ?
igmp     Internet Group Management Protocol
route    Establish static routes
telnet   Specify telnet options
```

When entering commands, you can take advantage of the following timesaving features:

- The commands are not case-sensitive.
- You can enter partial (truncated) command keywords. For example, you can enter `int teng ig int` for the `interface tengigabitethernet` command.
- To complete keywords in commands, use the TAB key.
- To display the last enabled command, use the up Arrow key.
- To erase the previous character, use either the Backspace key or Delete key.
- To navigate left or right in the Dell Networking OS command line, use the left and right Arrow keys.

The shortcut key combinations at the Dell Networking OS command line are as follows:

<table>
<thead>
<tr>
<th>Key Combination</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>CNTL-A</td>
<td>Moves the cursor to the beginning of the command line.</td>
</tr>
<tr>
<td>CNTL-B</td>
<td>Moves the cursor back one character.</td>
</tr>
<tr>
<td>CNTL-D</td>
<td>Deletes the character at the cursor.</td>
</tr>
<tr>
<td>CNTL-E</td>
<td>Moves the cursor to the end of the line.</td>
</tr>
<tr>
<td>CNTL-F</td>
<td>Moves the cursor forward one character.</td>
</tr>
<tr>
<td>CNTL-I</td>
<td>Completes a keyword.</td>
</tr>
<tr>
<td>CNTL-K</td>
<td>Deletes all the characters from the cursor to the end of the command line.</td>
</tr>
<tr>
<td>CNTL-L</td>
<td>Re-enters the previous command.</td>
</tr>
<tr>
<td>CNTL-N</td>
<td>Returns to the more recent commands in the history buffer after recalling commands with Ctrl-P or the up Arrow key.</td>
</tr>
<tr>
<td>CNTL-P</td>
<td>Recalls commands, beginning with the last command.</td>
</tr>
<tr>
<td>CNTL-U</td>
<td>Deletes the line.</td>
</tr>
<tr>
<td>CNTL-W</td>
<td>Deletes the previous word.</td>
</tr>
<tr>
<td>CNTL-X</td>
<td>Deletes the line.</td>
</tr>
<tr>
<td>CNTL-Z</td>
<td>Comes back to EXEC mode from any CONFIGURATION mode.</td>
</tr>
<tr>
<td>Esc B</td>
<td>Moves the cursor back one word.</td>
</tr>
<tr>
<td>Esc F</td>
<td>Moves the cursor forward one word.</td>
</tr>
<tr>
<td>Esc D</td>
<td>Deletes all the characters from the cursor to the end of the word.</td>
</tr>
</tbody>
</table>
Using the Keyword no Command

To disable, delete or return to default values, use the no form of the commands.

For most commands, if you type the keyword no in front of the command, you disable that command or delete it from the running configuration. In this guide, the no form of the command is described in the Syntax portion of the command description. For example:

**Syntax**
```
no {boot | default | enable | ftp-server | hardware | hostname | ip | line | logging | monitor | service | io-aggregator broadcast storm-control | snmp-server | username}
```

**Defaults**
None

**Command Modes**
CONFIGURATION

**Supported Modes**
All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Filtering show Commands

To find specific information, display certain information only or begin the command output at the first instance of a regular expression or phrase, you can filter the display output of a show command.

When you execute a show command, and then enter a pipe ( | ), one of the following parameters, and a regular expression, the resulting output either excludes or includes those parameters.

1. **NOTE:** The Dell Networking OS accepts a space before or after the pipe, no space before or after the pipe, or any combination. For example: Dell#command | grep TenGi | except regular-expression | find regular-expression.
2. **except** displays only the text that does not match the pattern (or regular expression)
3. **find** searches for the first occurrence of a pattern
4. **grep** displays text that matches a pattern.
5. **no-more** does not paginate the display output
6. **save** copies the output to a file for future use

The grep command option has an ignore-case sub-option that makes the search case-insensitive. For example, the commands:

- show run | grep Ethernet returns a search result with instances containing a capitalized “Ethernet,” such as interface TenGigabitEthernet 0/1.
- show run | grep ethernet does not return the search result above because it only searches for instances containing a non-capitalized “ethernet”.
- show run | grep Ethernet ignore-case returns instances containing both “Ethernet” and “ethernet”.

Displaying All Output

To display the output all at once (not one screen at a time), use the no-more option after the pipe. This operation is similar to the terminal length screen-length command except that the no-more option affects the output of just the specified command. For example:
Filtering the Command Output Multiple Times

You can filter a single command output multiple times. To filter a command output multiple times, place the \texttt{save} option as the last filter. For example:

\begin{verbatim}
Dell\# command | grep regular-expression | except regular-expression | grep other-regular-expression | find regular-expression | no-more | save
\end{verbatim}

Command Modes

To navigate and launch various CLI modes, use specific commands. Navigation to these modes is described in the following sections.

\textbf{EXEC Mode}

When you initially log in to the switch, by default, you are logged in to EXEC mode. This mode allows you to view settings and enter EXEC Privilege mode, which is used to configure the device.

When you are in EXEC mode, the > prompt is displayed following the host name prompt, which is “Dell” by default. You can change the host name prompt using the \texttt{hostname} command.

\textbf{EXEC Privilege Mode}

The \texttt{enable} command accesses EXEC Privilege mode. If an administrator has configured an “Enable” password, you are prompted to enter it.

EXEC Privilege mode allows you to access all the commands accessible in EXEC mode, plus other commands, such as to clear address resolution protocol (ARP) entries and IP addresses. In addition, you can access CONFIGURATION mode to configure interfaces, routes and protocols on the switch. While you are logged in to EXEC Privilege mode, the # prompt displays.

\textbf{CONFIGURATION Mode}

In EXEC Privilege mode, use the \texttt{configure} command to enter CONFIGURATION mode and configure routing protocols and access interfaces.

To enter CONFIGURATION mode:

1. Verify that you are logged in to EXEC Privilege mode.
2. Enter the \texttt{configure} command. The prompt changes to include (conf).

From this mode, you can enter INTERFACE mode by using the \texttt{interface} command.

\textbf{INTERFACE Mode}

To configure interfaces or IP services on those interfaces, use INTERFACE mode. An interface can be physical (for example, a TenGigabit Ethernet port) or virtual (for example, the VLAN interface).
To enter INTERFACE mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `interface` command and then enter an interface type and interface number that is available on the switch.

The prompt changes to include the designated interface and slot/port number. For example:

<table>
<thead>
<tr>
<th>Prompt</th>
<th>Interface Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Dell(conf-if-te-0/1)#</td>
<td>Ten-Gigabit Ethernet interface then slot/port information</td>
</tr>
<tr>
<td>Dell(conf-if-vl-1)#</td>
<td>VLAN Interface then VLAN number (range 1–4094)</td>
</tr>
<tr>
<td>Dell(conf-if-ma-0/0)#</td>
<td>Management Ethernet interface then slot/port information</td>
</tr>
<tr>
<td>Dell(conf-if-range)#</td>
<td>Designated interface range (used for bulk configuration)</td>
</tr>
</tbody>
</table>

**LINE Mode**

To configure the console or virtual terminal parameters, use LINE mode.

To enter LINE mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `line` command. Include the keywords `console` or `vty` and their line number available on the switch. The prompt changes to include `(config-line-console)` or `(config-line-vty)`.

You can exit this mode by using the `exit` command.

**MONITOR SESSION Mode**

In CONFIGURATION mode, use the `monitor session` command to enter MONITOR SESSION mode and configure port monitoring.

To enter MONITOR SESSION mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Use the `monitor session` command. Include the monitor session ID. The prompt changes to include `(conf-mon-sess)`.

You can return to CONFIGURATION mode by using the `exit` command.

**PROTOCOL LLDP Mode**

In CONFIGURATION mode, use the `protocol lldp` command to enter PROTOCOL LLDP mode and configure the LLDP protocol.

To enter PROTOCOL LLDP mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `protocol lldp` command. The prompt changes to include `Dell(config-lldp)`.

You can return to CONFIGURATION mode by using the `exit` command.
Track Login Activity

Dell Networking OS enables you to track the login activity of users and view the successful and unsuccessful login events. When you log in using the console or VTY line, the system displays the last successful login details of the current user and the number of unsuccessful login attempts since your last successful login to the system. The system stores the number of unsuccessful login attempts that have occurred in the last 30 days by default. You can change the default value to any number of days from 1 to 30. By default, login activity tracking is disabled. You can enable it using the `login statistics enable` command from the configuration mode.

Restrictions for Tracking Login Activity

These restrictions apply for tracking login activity:

- Only the system and security administrators can configure login activity tracking and view the login activity details of other users.
- Login statistics is not applicable for login sessions that do not use user names for authentication. For example, the system does not report login activity for a telnet session that prompts only a password.

Configuring Login Activity Tracking

To enable and configure login activity tracking, follow these steps:

1. Enable login activity tracking.
   CONFIGURATION mode
   ```
   login statistics enable
   ```
   After enabling login statistics, the system stores the login activity details for the last 30 days.

2. (Optional) Configure the number of days for which the system stores the user login statistics. The range is from 1 to 30.
   CONFIGURATION mode
   ```
   login statistics time-period days
   ```

Example of Configuring Login Activity Tracking

The following example enables login activity tracking. The system stores the login activity details for the last 30 days.

```
Dell(config)#login statistics enable
```

The following example enables login activity tracking and configures the system to store the login activity details for 12 days.

```
Dell(config)#login statistics enable
Dell(config)#login statistics time-period 12
```

Display Login Statistics

To view the login statistics, use the `show login statistics` command.

Example of the `show login statistics` Command

The `show login statistics` command displays the successful and failed login details of the current user in the last 30 days or the custom defined time period.

```
Dell#show login statistics
```
Example of the `show login statistics all` command

The `show login statistics all` command displays the successful and failed login details of all users in the last 30 days or the custom defined time period.

Dell#show login statistics all

```
User: admin
Last login time: Mon Feb 16 04:40:00 2015
Last login location: Line vty0 ( 10.14.1.97 )
Unsuccessful login attempt(s) since the last successful login: 0
Unsuccessful login attempt(s) in last 7 day(s): 3
```

```---
User: secadm
Last login time: Mon Feb 16 04:45:29 2015
Last login location: Line vty0 ( 10.14.1.97 )
Unsuccessful login attempt(s) since the last successful login: 0
Unsuccessful login attempt(s) in last 7 day(s): 0
```

Example of the `show login statistics user user-id` command

The `show login statistics user user-id` command displays the successful and failed login details of a specific user in the last 30 days or the custom defined time period.

Dell#show login statistics user admin

```
User: admin
Last login time: Mon Feb 16 04:40:00 2015
Last login location: Line vty0 ( 10.14.1.97 )
Unsuccessful login attempt(s) since the last successful login: 0
Unsuccessful login attempt(s) in last 11 day(s): 3
```

Limit Concurrent Login Sessions

Dell Networking OS enables you to limit the number of concurrent login sessions of users on VTY, Aux, and console lines. You can also clear any of your existing sessions when you reach the maximum permitted number of concurrent sessions.

By default, you can use all 10 VTY lines, one console line, and one Aux line. You can limit the number of available sessions using the `login concurrent-session limit` command and so restrict users to that specific number of sessions. You can optionally configure the system to provide an option to the users to clear any of their existing sessions.

Restrictions for Limiting the Number of Concurrent Sessions

These restrictions apply for limiting the number of concurrent sessions:

- Only the system and security administrators can limit the number of concurrent sessions and enable the clear-line option.
- Users can clear their existing sessions only if the system is configured with the `login concurrent-session clear-line enable` command.
Configuring Concurrent Session Limit

To configure concurrent session limit, follow this procedure:

- Limit the number of concurrent sessions for all users.

  CONFIGURATION mode

  ```
  login concurrent-session limit number-of-sessions
  ```

**Example of Configuring Concurrent Session Limit**

The following example limits the permitted number of concurrent login sessions to 4.

Dell(config)#login concurrent-session limit 4

Enabling the System to Clear Existing Sessions

To enable the system to clear existing login sessions, follow this procedure:

- Use the following command.

  CONFIGURATION mode

  ```
  login concurrent-session clear-line enable
  ```

**Example of Enabling the System to Clear Existing Sessions**

The following example enables you to clear your existing login sessions.

Dell(config)#login concurrent-session clear-line enable

**Example of Clearing Existing Sessions**

When you try to login, the following message appears with all your existing concurrent sessions, providing an option to close any one of the existing sessions:

```bash
$ telnet 10.11.178.14
Trying 10.11.178.14...
Connected to 10.11.178.14.
Escape character is '^]'.
Login: admin
Password:
Current sessions for user admin:
Line             Location
2  vty 0         10.14.1.97
3  vty 1         10.14.1.97
Clear existing session? [line number/Enter to cancel]:
```

When you try to create more than the permitted number of sessions, the following message appears, prompting you to close one of the existing sessions. If you close any of the existing sessions, you are allowed to login.

```bash
$ telnet 10.11.178.17
Trying 10.11.178.17...
Connected to 10.11.178.17.
Escape character is '^]'.
Login: admin
Password:
Maximum concurrent sessions for the user reached.
Current VTY sessions for user admin:
Line             Location
2  vty 0         10.14.1.97
```
<table>
<thead>
<tr>
<th>vty 1</th>
<th>10.14.1.97</th>
</tr>
</thead>
<tbody>
<tr>
<td>vty 2</td>
<td>10.14.1.97</td>

</tbody>
</table>

Kill existing session? [line number/Enter to cancel]: 
This chapter contains commands needed to manage the configuration files and includes other file management commands.

**boot system gateway**

Specify the IP address of the default next-hop gateway for the management subnet.

**Syntax**

```
boot system gateway ip-address
```

**Parameters**

- `ip-address` Enter an IP address in dotted decimal format.

**Command Modes**

- CONFIGURATION

**Supported Modes**

- All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

Saving the address to the startup configuration file preserves the address in NVRAM in case the startup configuration file is deleted.

**boot system stack-unit**

Specify the location of the Dell Networking OS image to be used to boot the system.

**Syntax**

```
boot system stack-unit <0-5 | all> {default | primary | secondary}
```

**Parameters**

- `0-5` Enter the stack member unit identifier of the stack member.
- `all` Enter the keyword all to set the primary, secondary, and default images for the system.
- `default` Enter the keyword default to set the default image path for the system.
- `primary` Enter the keyword primary to set the primary image path for the system.
- `secondary` Enter the keyword secondary to set the secondary image path for the system.

**cd**

Change to a different working directory.

**Syntax**

```
cd directory
```

**Parameters**

- `directory` (OPTIONAL) Enter one of the following:
  - `flash:` (internal Flash) or any sub-directory
  - `usbflash:` (external Flash) or any sub-directory

**Command Modes**

- EXEC Privilege

**Supported Modes**

</tbody>
</table>

**copy**

Copy one file to another location. The Dell Networking OS supports IPv4 addressing for FTP, TFTP, and SCP (in the `hostip` field).

**Syntax**

```
copy source-file-url destination-file-url
```

**Parameters**

- `file-url` Enter the following location keywords and information:
  - To copy a file from the internal FLASH, enter `flash://` then the filename.
  - To copy the running configuration, enter the keywords `running-config`.
  - To copy the startup configuration, enter the keywords `startup-config`.
  - To copy a file on the external FLASH, enter `usbflash://` then the filename.

**Command Modes**

- EXEC Privilege

**Supported Modes**

- All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
</tbody>
</table>
Version | Description
--- | ---
9.4(0.0) | Supported on the FN I/O Aggregator.
8.3.17.0 | Supported on the M I/O Aggregator.

**Usage Information**

The Dell Networking OS supports a maximum of 100 files, at the root directory level, on both the internal and external Flash.

The `usbflash` commands are supported. For a list of approved USB vendors, refer to the Dell Networking OS Release Notes.

When copying a file to a remote location (for example, using Secure Copy [SCP]), enter only the keywords and Dell Networking OS prompts you for the rest of the information.

**NOTE:** Dell Networking OS imposes a length limit on the password you create for performing the secure copy operation. Your password can be no longer than 32 characters.

For example, when using SCP, you can enter the `copy running-config scp:` command. The running-config is the source and the target is specified in the ensuing prompts. Dell Networking OS prompts you to enter any required information, as needed for the named destination — remote destination, destination filename, user ID and password, and so forth.

When you use the `copy running-config startup-config` command to copy the running configuration to the startup configuration file, Dell Networking OS creates a backup file on the internal flash of the startup configuration.

When you load the startup configuration or a configuration file from a network server such as TFTP to the running configuration, the configuration is added to the running configuration. This does not replace the existing running configuration. Commands in the configuration file has precedence over commands in the running configuration.

The Dell Networking OS supports copying the running-configuration to a TFTP server or to an FTP server:

- `copy running-config tftp:
- copy running-config ftp:

**NOTE:** Dell Networking OS imposes a length limit on the password you create for accessing the FTP server. Your password can be no longer than 32 characters.

In the `copy scp: flash:` example, specifying SCP in the first position indicates that the target to specify in the ensuing prompts. Entering `flash:` in the second position means that the target is the internal Flash. In this example, the source is on a secure server running SSH, so you are prompted for the UDP port of the SSH server on the remote host.

Example (running-config scp):

```
Dell#copy running-config scp:
Address or name of remote host []: 10.10.10.1
Port number of the server [22]: 99
Destination file name [startup-config]: old_running
User name to login remote host: sburgess
Password to login remote host:
Password to login remote host? dilling
```

Example (copy scp):

```
Dell#copy scp: flash:
Address or name of remote host []: 10.11.199.134
Port number of the server [22]: 99
Source file name []: test.cfg
User name to login remote host: admin
```
Password to login remote host: 
Destination file name [test.cfg]: test1.cfg

Related Commands:
- **cd** — Changes the working directory.

### copy running-config startup-config

Copy running configuration to the startup configuration.

**Syntax:**
```
copy running-config startup-config {duplicate}
```

**Command Modes:**
- EXEC Privilege

**Supported Modes:**
- All Modes

**Command History:**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information:**
This command is useful for quickly making a change configuration on one chassis available on external flash to move it to another chassis.

### delete

Delete a file from the flash. After deletion, files cannot be restored.

**Syntax:**
```
delete flash: ([flash://]filepath) usbflash ([usbflash://]filepath)
```

**Parameters:**
- **flash-url**
  - Enter the following location and keywords:
    - For a file or directory on the internal Flash, enter `flash://` then the filename or directory name.
    - For a file or directory on an external USB drive, enter `usbflash://` then the filename or directory name.
- **no-confirm**
  - (OPTIONAL) Enter the keywords `no-confirm` to specify that the Dell Networking OS does not require user input for each file prior to deletion.

**Command Modes:**
- EXEC Privilege

**Supported Modes:**
- All Modes

**Command History:**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>
**dir**

Displays the files in a file system. The default is the current directory.

**Syntax**

```
dir [filename | directory name:]
```

**Parameters**

- **filename | directory name:** (OPTIONAL) Enter one of the following:
  - For a file or directory on the internal Flash, enter `flash://` then the filename or directory name.
  - For a file or directory on an external USB drive, enter `usbflash://` then the filename or directory name.

**Command Modes**

- EXEC Privilege

**Supported Modes**

- All Modes

**Command History**

- **Version**
  - 9.9(0.0) Introduced on the FN IOM.
  - 9.4(0.0) Supported on the FN I/O Aggregator.
  - 8.3.17.0 Supported on the M I/O Aggregator.

**Example**

```
Dell#dir
Directory of flash:

1  drwx  4096  Jan 01 1980 00:00:00 +00:00  .
2  drwx  2048  Mar 06 2010 00:36:21 +00:00  ..
3  drwx  4096  Feb 25 2010 23:32:50 +00:00 TRACE_LOG_DIR
4  drwx  4096  Feb 25 2010 23:32:50 +00:00 CORE_DUMP_DIR
5  d---  4096  Feb 25 2010 23:32:50 +00:00 ADMIN_DIR
6  -rwx  720969768  Mar 05 2010 03:25:40 +00:00 6gb

9  -rwx  3951  Mar 06 2010 00:36:18 +00:00 startup-config
flash: 2143281152 bytes total (1389801472 bytes free)
Dell#
```

**Related Commands**

- `cd` — Changes the working directory.

**format flash**

Erase all existing files and reformat the filesystem in the internal flash memory. After the filesystem is formatted, files cannot be restored.

**Syntax**

```
format {flash: | usbflash:}
```

**Defaults**

- `flash memory`

**Command Modes**

- EXEC Privilege

**Supported Modes**

- All Modes

</tbody>
</table>

Usage Information

You must include the colon (:) when entering this command.

⚠️ CAUTION: This command deletes all files, including the startup configuration file. So, after executing this command, consider saving the running config as the startup config (use the write memory command or copy run start command).

Related Commands

copy — copies the current configuration to either the startup-configuration file or the terminal.

show file — displays the contents of a text file in the local filesystem.

show file-systems — displays information about the file systems on the system.

HTTP Copy via CLI

Copy one file to another location. Dell Networking OS supports IPv4 and IPv6 addressing for FTP, TFTP, and SCP (in the hostip field).

Syntax

```plaintext
copy http://[hostip][[:port]]/ [source file] [destination file]
```

You can copy from the server to the switch and vice-versa.

Parameters

- `hostip` Address or name of remote host [default: 10.16.206.77]
- `port` Port number of the server [default: 80]
- `source file` Source file name [default: any]
- `username` User name to login remote host: `x`
- `password` Password to login remote host:
- `destination file` Destination file name [default: any]

Defaults

None.

```
Usage Information

Because flash space may be limited, using this command ensures your entire crash kernel files are uploaded successfully and completely. Only a single coredump server can be configured. Configuration of a new coredump server over-writes any previously configured server.

NOTE: You must disable logging coredump before you designate a new server destination for your core dumps.

Related Commands

logging coredump – disables the kernel coredump

pwd

Display the current working directory.

Syntax

    pwd

Command Modes

    EXEC Privilege

    8.3.17.0                    Supported on the M I/O Aggregator.

Example

    Dell#pwd
    flash:
    Dell#

Related Commands

    cd – changes the directory.

rename

Rename a file in the local file system.

Syntax

    rename url url

Parameters

    url

        Enter the following keywords and a filename:

        • For a file on the internal Flash, enter flash:// then the filename.
        • For a file on an external USB drive, enter usbflash:// then the filename.

    8.3.17.0                    Supported on the M I/O Aggregator.
**restore factory-defaults**

Restore factory defaults.

**Syntax**

```bash
restore factory-defaults stack-unit id {clear-all | nvram}
```

**Parameters**

- `factory-defaults` Return the system to its factory default mode.
- `id` Enter the stack member unit identifier to restore the mentioned stack-unit. The range is from 0 to 6. Enter the keyword all to restore all units in the stack.
- `clear-all` Enter the keywords clear-all to reset the NvRAM and the system startup configuration.
- `nvram` Enter the keyword nvram to reset the NvRAM only.

</tr>
</tbody>
</table>

**Usage Information**

Restoring factory defaults deletes the existing startup configuration and all persistent settings (stacking, fanout, and so forth).

When restoring all units in a stack, all the units in the stack are placed into stand-alone mode.

When restoring a single unit in a stack, that unit placed in stand-alone mode. No other units in the stack are affected.

When restoring units in stand-alone mode, the units remain in stand-alone mode after the restoration. After the restore is complete, the units power cycle immediately.

⚠️ **CAUTION:** There is no undo for this command.

**Example**

```bash
Dell#restore factory-defaults stack-unit 0 clear-all

********************************************
*Warning - Restoring factory defaults will delete the existing*
*startup-config and resets all persistent settings (stacking,*
*fanout, etc.) and boot environment variables (boot config, console*#

</table>

**Related Commands**

format flash – erases all the existing files and reformats the filesystem in the internal flash memory.

show file – displays the contents of a text file in the local filesystem.

show os-version

Displays the release and software image version information of the image file specified.

**Syntax**

```
show os-version [file-url]
```
show running-config

Displays the current configuration and display changes from the default values.

Syntax

show running-config [entity] [configured] [status]

Parameters

dellEMC#show running-config

Example

Dell#show running-config

RELEASE IMAGE INFORMATION :
--------------------------------------------------------------
Platform          Version        Size       ReleaseTime

</tr>
</tbody>
</table>
upgrade boot

Upgrade the bootflash image or bootselector image.

**Syntax**

```
upgrade boot {all | bootflash-image | bootselector-image} stack-unit {0-5 | all} {booted | flash: | ftp: | tftp: | usbflash:} {A: | B:}
```

**Parameters**

- **all**
  - Enter the keyword all to change both the bootflash and bootselector images.
- **bootflash-image**
  - Enter the keywords bootflash-image to change the bootflash image.
- **bootselector-image**
  - Enter the keywords bootselector-image to change the bootselector image.
upgrade system

Upgrade the bootflash image or system image.

Syntax

```
upgrade system {flash: | ftp: | scp: | tftp: | usbflash: | stack-unit {0-5 | all} {A: | B:}}
```

Parameters

- **0–5**: Enter the keyword 0–5 to upgrade only the mentioned stack-unit.
- **all**: Enter the keyword all to upgrade all the member units of the stack.
ftp
After entering the keyword `ftp` you can either follow it with the location of the source file in this form: `//userid:password@hostip/filepath`, or press Enter to launch a prompt sequence.

scp
After entering the keyword `scp` you can either follow it with the location of the source file in this form: `//userid:password@hostip/filepath`, or press Enter to launch a prompt sequence.

tftp
After entering the keyword `tftp` you can either follow it with the location of the source file in this form: `//hostlocation/filepath`, or press Enter to launch a prompt sequence.

flash
After entering the keyword `flash` you can either follow it with the location of the source file in this form: `//filepath`, or press Enter to launch a prompt sequence.

usbflash
After entering the keyword `usbflash` you can either follow it with the location of the source file in this form: `//filepath`, or press Enter to launch a prompt sequence.

A:
Enter this keyword to upgrade the bootflash partition A.

B:
Enter this keyword to upgrade the bootflash partition B.

All Modes

command history
Version Description
9.9(0.0) Introduced on the FN IOM.
9.4(0.0) Supported on the FN I/O Aggregator.
8.3.17.0 Supported on the M I/O Aggregator.

Usage Information
You must reload Dell Networking OS after executing this command. Use the command `upgrade system stack-unit` to copy Dell Networking OS from the management unit to one or more stack members.

Example
Dell#upgrade system ?
flash: Copy from flash file system (flash://filepath)
ftp: Copy from remote file system, IPv4 or IPv6, (ftp://
userid:password@hostip/filepath)
scp: Copy from remote file system, IPv4 or IPv6, (scp://
userid:password@hostip/filepath)
stack-unit Sync image to the stack-unit
tftp: Copy from remote file system, IPv4 or IPv6, (tftp://
/hostip/filepath)
usbflash: Copy from usbflash file system (usbflash://
/filepath)
Dell#

verify
Validate the software image on the flash drive after the image has been transferred to the system, but before the image has been installed.

Syntax
`verify [ md5 | sha256 ] [ flash:// ] img-file [ hash-value ]`

Parameters
- `md5`: Enter the `md5` keyword to use the MD5 message-digest algorithm.
**sha256**
Enter the *sha256* keyword to use the SHA256 Secure Hash Algorithm.

**flash://**
(Optional). Enter the *flash://* keyword. The default is to use the flash drive. You can just enter the image file name.

**img-file**
Enter the name the Dell Networking software image file to validate.

**hash-value**
(Optional). Enter the relevant hash published on i-Support.

**Defaults**
flash drive

**Command Modes**
EXEC mode

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.5(0.0)</td>
<td>Introduced on the Z9000, S6000, S4820T, S4810, and MXL.</td>
</tr>
</tbody>
</table>

**Usage Information**

You can enter this command in the following ways:

- `verify md5 flash://img-file`
- `verify md5 flash://img-file <hash-value>`
- `verify sha256 flash://img-file`
- `verify sha256 flash://img-file <hash-value>`

**Example**

**Without Entering the Hash Value for Verification using SHA256**

Dell# verify sha256 flash://FTOS-SE-9.5.0.0.bin
SHA256 hash for FTOS-SE-9.5.0.0.bin:
e6328c06faf814e6899ceeae219afbf9360e986d692988023b749e6b2093e933

**Entering the Hash Value for Verification using SHA256**

Dell# verify sha256 flash://FTOS-SE-9.5.0.0.bin
e6328c06faf814e6899ceeae219afbf9360e986d692988023b749e6b2093e933
SHA256 hash VERIFIED for FTOS-SE-9.5.0.0.bin
This chapter describes control and monitoring for the I/O Aggregator.

**asf-mode**

Enable alternate store and forward (ASF) mode and forward packets as soon as a threshold is reached.

**Syntax**

```
asf-mode stack-unit {unit-id | all} queue size
```

To return to standard Store and Forward mode, use the `no asf-mode stack unit` command.

**Parameters**

- **unit-id**
  - Enter the stack member unit identifier of the stack member to reset. The range is from 0 to 5 or **all**.

- **queue size**
  - Enter the queue size of the stack member. The range is from 0 to 5.

**Defaults**

Not configured

**Command Modes**

- CONFIGURATION

**Supported Modes**

- Full-Switch

**Command History**

- **Version**
  - **9.9(0.0)**
    - Introduced on the FN IOM.
  - **8.3.16.1**
    - Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

You must save the configuration and reload the system to implement ASF. When you enter the command, the system sends a message stating that the new mode is enabled when the system reloads.

**asset-tag**

Assign and store a unique asset-tag to the stack member.

**Syntax**

```
asset-tag stack-unit unit-id Asset-tag ID
```

To remove the asset tag, use the `no stack-unit unit-id Asset-tag ID` command.

**Parameters**

- **stack-unit unit-id**
  - Enter the keywords stack-unit then the unit-id to assign a tag to the specific member. The range is from 0 to 5.

- **Asset-tag ID**
  - Enter a unique asset-tag ID to assign to the stack member. This option accepts a maximum of 10 characters, including all special characters except double quotes. To include a space in the asset-tag, enter a space within double quotes.

**Defaults**

No asset-tag is assigned.
banner exec

Configure a message that is displayed when you enter EXEC mode.

Syntax

banner exec c line c

Parameters

- **c**: Enter the keywords `banner exec`, then enter a character delineator, represented here by the letter c. Press ENTER.
- **line**: Enter a text string for your banner message ending the message with your delineator. In the following example, the delineator is a percent character (%); the banner message is “testing, testing”.

Defaults

No banner is displayed.

Command Modes

CONFIGURATION

Supported Modes

Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>

<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

Optionally, use the `banner exec` command to create a text string that displays when you access EXEC mode. The `exec-banner` command toggles that display.

Example

```
Dell(conf)#banner exec ?
LINE c banner-text(max length 255) c, where 'c' is a delimiting character

Dell(conf)#banner exec %
Enter TEXT message. End with the character '%'.
This is the banner%
Dell(conf)#end
Dell#exit
4d21h5m: %STKUNIT0-M P:CP %SEC-5-LOGOUT: Exec session is terminated for user on line console
This is the banner
Dell Force10 con0 now available
Press RETURN to get started.
```
Related Commands

- `banner login` — sets a banner for login connections to the system.
- `banner motd` — sets a Message of the Day banner.
- `exec-banner` — Enables the display of a text string when you enter EXEC mode.
- `line` — enables and configures the console and virtual terminal lines to the system.

**banner login**

Set a banner to display when logging on to the system.

**Syntax**

```
banner login {acknowledgement | keyboard-interactive | c line c}
```

Enter `no banner login` to delete the banner text. Enter `no banner login keyboard-interactive` to automatically go to the banner message prompt (does not require a carriage return).

**Parameters**

- **keyboard-interactive**
  - Enter the keyword `keyboard-interactive` to require a carriage return (CR) to get the message banner prompt.

- **acknowledgement**
  - Enter the `acknowledgement` keyword to require a positive acknowledgement from the user while logging in to the system.

- **c**
  - Enter a delineator character to specify the limits of the text banner. The delineator is a percent character (%).

- **line**
  - Enter a text string for your text banner message ending the message with your delineator. The delineator is a percent character (%). Range: maximum of 50 lines, up to 255 characters per line.

**Defaults**

No banner is configured and the CR is required when creating a banner.

**Command Modes**

- `CONFIGURATION`

**Supported Modes**

- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.10(0.0)</td>
<td>Introduced the <code>acknowledgement</code> keyword.</td>
</tr>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

A login banner message displays only in EXEC Privilege mode after entering the `enable` command then the password. These banners do not display to users in EXEC mode.

**Example**

```
Dell(conf)#banner login ?
acknowledgement       Require positive acknowledgment after login prompt
keyboard-interactive  Press enter key to get prompt
LINE                  c banner-text (max length 255) c, where 'c' is a delimiting character
Dell(conf)#no banner login ?
acknowledgement       Disable positive acknowledgment required after login
```
prompt
keyboard-interactive Prompt will be displayed by default

If you configure the acknowledgement keyword, the system requires a positive acknowledgement from the user while logging in to the system.

Related Commands

**banner motd** — sets a Message of the Day banner.

**exec-banner** — enables the display of a text string when you enter EXEC mode.

---

### banner motd

Set a message of the day (MOTD) banner.

**Syntax**

```
banner motd c line c
```

**Parameters**

- `c`:
  - Enter a delineator character to specify the limits of the text banner. The delineator is a percent character (%).
- `line`:
  - Enter a text string for your message of the day banner message ending the message with your delineator. The delineator is a percent character (%).

**Defaults**

No banner is configured.

**Command Modes**

CONFIGURATION

**Supported Modes**

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

A MOTD banner message displays only in EXEC Privilege mode after entering the `enable` command then the password. These banners do not display to users in EXEC (non-privilege) mode.

**Related Commands**

- **banner exec** — enables the display of a text string when you enter EXEC mode.
- **banner login** — sets a banner to display after successful login to the system.

---

### clear alarms

Clear the alarms on the system.

**Syntax**

```
clear alarms
```
This command clears alarms that are no longer active. If an alarm situation is still active, it is seen in the system output.

**clear command history**

Clear the command history log.

**Syntax**
clear command history

**Command Modes**
EXEC Privilege

**Supported Modes**
All Modes

**Command History**

<table>

<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Related Commands**
show command-history — displays a buffered log of all the commands all users enter along with a time stamp.

**clear line**

Reset a terminal line.

**Syntax**
clear line {line-number | console 0 | vty number}

**Parameters**
- **line-number**: Enter a number for one of the 12 terminal lines on the system. The range is from 0 to 11.
- **console 0**: Enter the keywords console 0 to reset the console port.
- **vty number**: Enter the keyword vty then a number to clear a terminal line. The range is from 0 to 9.

**Command Modes**
EXEC Privilege

**Supported Modes**
Full-Switch

**Command History**

</tbody>
</table>
**configure**

Enter CONFIGURATION mode from EXEC Privilege mode.

**Syntax**

`configure [terminal]`

**Parameters**

- **terminal**  
  (OPTIONAL) Enter the keyword `terminal` to specify that you are configuring from the terminal.

**Command Modes**

- EXEC Privilege

**Supported Modes**

- All Modes

**Command History**

**Version** | **Description**
--- | ---
9.9(0.0) | Introduced on the IOM.
9.4(0.0) | Supported on the FN I/O Aggregator.
8.3.17.0 | Supported on the M I/O Aggregator.

**Example**

```
Dell#configure
Dell(conf)#
```

---

**debug cpu-traffic-stats**

Enable the collection of computer processor unit (CPU) traffic statistics.

**Syntax**

`debug cpu-traffic-stats`

**Defaults**

Disabled

**Command Modes**

- EXEC Privilege

**Supported Modes**

- All Modes

**Command History**

**Version** | **Description**
--- | ---
9.9(0.0) | Introduced on the FN IOM.
9.4(0.0) | Supported on the FN I/O Aggregator.
8.3.17.0 | Supported on the M I/O Aggregator.

**Usage Information**

This command enables (and disables) the collection of CPU traffic statistics from the time this command is executed (not from system boot). However, excessive traffic a CPU receives automatically triggers (turn on) the collection of CPU traffic statics.

To view the traffic statistics, use the `show cpu-traffic-stats` command.

If the CPU receives excessive traffic, traffic is rate controlled.

**NOTE:** You must enable this command before the `show cpu-traffic-stats` command displays traffic statistics. Dell Networking recommends disabling debugging (`no debug cpu-traffic-stats`) after troubleshooting is complete.
Related Commands: `show cpu-traffic-stats` — displays the CPU traffic statistics.

### debug ifm trace-flags

Turn on the IFM internal trace-flags.

**Syntax**
```
debug ifm trace-flags trace-flags
```

To disable this command, use the `no debug ifm trace-flags` command.

**Parameters**
- `trace-flags` Enter a hexadecimal number representing the trace-flag.

**Defaults**
None

**Command Modes**
- EXEC Privilege

**Supported Modes**
All Modes

**Command History**

<table>
<thead>

</tbody>
</table>

### disable

Return to EXEC mode.

**Syntax**
```
disable [level]
```

1. **Related Commands**
   - `show cpu-traffic-stats` — displays the CPU traffic statistics.

2. **debug ifm trace-flags**
   - **Syntax**: `debug ifm trace-flags trace-flags`
   - **Parameters**: `trace-flags` (Enter a hexadecimal number representing the trace-flag).
   - **Defaults**: None
   - **Command Modes**: EXEC Privilege
   - **Supported Modes**: All Modes
   - **Command History**
     - **Version 9.9(0.0)**: Introduced on the FN IOM.
     - **Version 9.4(0.0)**: Supported on the FN I/O Aggregator.
     - **Version 8.3.17.0**: Supported on the M I/O Aggregator.
     - **NOTE**: Use this command only when you are working directly with a technical support representative to troubleshoot a problem. Do not use this command unless a technical support representative instructs you to do so.

3. **debug ftpserver**
   - **Syntax**: `debug ftpserver`
   - **Command Modes**: EXEC Privilege
   - **Supported Modes**: Full-Switch
   - **Command History**
     - **Version 9.9(0.0)**: Introduced on the FN IOM.
     - **Version 8.3.16.1**: Introduced on the MXL 10/40GbE Switch IO Module.

4. **disable**
   - **Syntax**: `disable [level]`

---

Related Commands: `show cpu-traffic-stats` — displays the CPU traffic statistics.
Parameters

level (OPTIONAL) Enter a number for a privilege level of the Dell Networking OS. The range is from 0 to 15. The default is 1.

Defaults

1

</table>

Usage Information

Users entering EXEC Privilege mode or any other configured privilege level can access configuration commands. To protect against unauthorized access, use the `enable password` command to configure a password for the `enable` command at a specific privilege level. If no privilege level is specified, the default is privilege level 15.

Related Commands

- `enable password` — configures a password for the `enable` command and to access a privilege level.

exec-banner

Enable the display of a text string when the user enters EXEC mode.

Syntax

```
exec-banner
```

Defaults

Enabled on all lines (if configured, the banner appears).

Command Modes

LINE

Supported Modes

Full–Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

Optionally, use the `banner exec` command to create a text string that is displayed when you access EXEC mode. This command toggles that display.

Related Commands

- `banner exec` — configures a banner to display when entering EXEC mode.
- `line` — enables and configures console and virtual terminal lines to the system.
enable optic-info-update interval

Enable polling intervals of optical information updates for simple network management protocol (SNMP).

Syntax

```
enable optic-info-update interval seconds
```

To disable optical power information updates, use the `no enable optic-info-update interval` command.

Parameters

- **interval seconds**: Enter the keyword `interval` then the polling interval in seconds. The range is from 120 to 6000 seconds. The default is **300 seconds** (5 minutes).

Defaults

Disabled

Command Modes

CONFIGURATION

Supported Modes

Full-Switch

Command History

- **Version 9.9(0.0)**: Introduced on the FN IOM.
- **Version 8.3.16.1**: Replaces the `enable xfp-power-updates` command.

Usage Information

To enable polling and to configure the polling frequency, use this command.

enable secure

Creates configurable Full-Switch mode where Chassis Management Controller (CMC) access to FN IOM is bypassed for the elements critical to the security certifications.

Syntax

```
enable secure
```

To disable the secure mode, use `no enable secure` command.

Parameters

None

Supported Modes

Full-Switch

Command History

- **Version 9.9(0.0)**: Introduced on the FN IOM.
- **Version 9.7(0.0)**: Introduced on the MXL.

end

Return to EXEC Privilege mode from other command modes (for example, CONFIGURATION mode).

Syntax

```
end
```

Command Modes

- CONFIGURATION
- LINE
Supported Modes

Command History

Version Description
9.9(0.0) Introduced on the FN IOM.
9.4(0.0) Supported on the FN I/O Aggregator.
8.3.17.0 Supported on the M I/O Aggregator.

Related Commands

**exit**— returns to the lower command mode.

### exec-timeout

Set a time interval that the system waits for input on a line before disconnecting the session.

**Syntax**

```
eexec-timeout minutes [seconds]
```

To return to default settings, use the `no exec-timeout` command.

**Parameters**

- `minutes` Enter the number of minutes of inactivity on the system before disconnecting the current session. The range is from 0 to 35791. The default is **10 minutes** for the console line and **30 minutes** for the VTY line.

- `seconds` (OPTIONAL) Enter the number of seconds. The range is from 0 to 2147483. The default is **0 seconds**.

**Defaults**

- **10 minutes** for console line; **30 minutes** for VTY lines; **0 seconds**

**Command Modes**

LINE

</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

To remove the time interval, use the `exec-timeout 0 0` command.

**Example**

```
Dell con0 is now available
Press RETURN to get started.
Dell>
```

### exit

Return to the lower command mode.

**Syntax**

```
exit
```
**feature unique-name**

Set a unique host name for the system.

**Syntax**

```
feature unique-name
```

**Defaults**

None

**Command Modes**

CONFIGURATION

**Supported Modes**

- Standalone
- VLT
- Stacking
- PMUX
- STOMP Full Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.10(0.0)</td>
<td>Introduced on the M I/O Aggregator, the FN IOM and MXL.</td>
</tr>
</tbody>
</table>

**Usage Information**

If you use the `feature unique-name` command, the system generates a host name using the platform type and system serial number. It overwrites any existing host name configured on the system using the `hostname` command. The `feature unique-name` command is also added to the running configuration.

If you disable the feature using the `no feature unique-name` command, the system reverts to the default host name of Dell.

If you use the `hostname` or the `no hostname` command after enabling the `feature unique-name` command, the system displays an error message stating that the `feature unique-name` is already enabled and provides an option to disable it.

**Related Commands**

- `hostname`
ftp-server enable

Enable FTP server functions on the system.

Syntax: `ftp-server enable`

Defaults: Disabled

Command Modes: CONFIGURATION

Supported Modes: All Modes

Command History:

<table>

Related Commands

- `ftp-server topdir` — sets the directory to be used for incoming FTP connections.
- `ftp-server username` — sets a username and password for incoming FTP connections.

ftp-server topdir

Specify the top-level directory to be accessed when an incoming FTP connection request is made.

Syntax: `ftp-server topdir directory`

Parameters:

- `directory` — Enter the directory path.

Defaults: The internal flash is the default directory.

Command Modes: CONFIGURATION
Supported Modes

<table>
<thead>
<tr>
<th>Command History</th>
</tr>
</thead>
<tbody>
<tr>

<tr>
<td>8.3.17.0</td>
</tr>
</tbody>
</table>

Usage Information

After you enable FTP server functions with the `ftp-server enable` command, Dell Networking recommends specifying a top-level directory path. Without a top-level directory path specified, the Dell Networking OS directs users to the `flash` directory when logging in to the FTP server.

Related Commands

- `ftp-server enable` — enables FTP server functions on the M I/O Aggregator.
- `ftp-server username` — sets a username and password for incoming FTP connections to the M I/O Aggregator.

**ftp-server username**

Create a user name and associated password for incoming FTP server sessions.

**Syntax**

```
ftp-server username username password [encryption-type] password
```

**Parameters**

- `username` Enter a text string up to 40 characters long as the user name.
- `password` Enter the keyword `password` then a string up to 40 characters long as the password. Without specifying an encryption type, the password is unencrypted.
- `encryption-type` (OPTIONAL) After the keyword `password`, enter one of the following numbers:
  - 0 (zero) for an unencrypted (clear text) password
  - 7 (seven) for a hidden text password

**Defaults**

Not enabled.

Usage Information

The host name is used in the prompt.

Related Commands

feature unique-name

http-server

Disable / Enable the Blade I/O Manager Software.

Syntax

http-server blademgr

Parameters

blademgr

Enter the keyword blademgr and specify the port for HTTP.

Defaults

ENABLED

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.11(0.0)</td>
<td>Introduced on the Stomp IOA and MXL-IOA</td>
</tr>
</tbody>
</table>

Usage Information

By default, the Blade I/O Manager is enabled and there is no entry in the running configuration. Using the command no http-server blademgr, disables the Blade I/O Manager and also a “no http-server” entry is made in the running configuration. To re-enable the Blade I/O Manager, use the command http-server blademgr which enables the feature and also removes the entry from the running configuration. On reload, if the system detects a “no http-server” entry in the start-config, the feature will be disabled.

NOTE: Please ensure to save and reload the configuration for the changes to take effect.

ip ftp password

Specify a password for outgoing FTP connections.

Syntax

ip ftp password [encryption-type] password

Parameters

encryption-type

(Optional) Enter one of the following numbers:
password

Enter a string up to 40 characters as the password.

Syntax

ip ftp source-interface interface

Parameters

interface

Enter the following keywords and slot/port or number information:

- For Loopback interfaces, enter the keyword loopback then a number from zero (0) to 16383.
- For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

Defaults

The IP address on the system that is closest to the Telnet address is used in the outgoing packets.

</table>

**ip telnet source-interface**

Set an interface's IP address as the source address in outgoing packets for Telnet sessions.

**Syntax**

```
ip telnet source-interface interface
```

**Parameters**

- `interface`
  
  Enter the following keyword and slot/port or number information:
  
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` followed by the slot/port information.
  - For VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults**

The IP address on the system that is closest to the Telnet address is used in the outgoing packets.

</tbody>
</table>

**Usage Information**

Configure a password with the `ip ftp password` command.

**Related Commands**

- `ip ftp password` — sets the password for FTP connections.

### line

Enable and configure console and virtual terminal lines to the system. This command accesses LINE mode, where you can set the access conditions for the designated line.

**Syntax**

```
line {console 0 | vty number [end-number]}
```

**Parameters**

- **console 0**
  
Enter the keyword `console 0` to configure the console port.
  
The console option is <0-0>.

- **vty number**
  
Enter the keyword `vty` followed by a number from 0 to 9 to configure a virtual terminal line for Telnet sessions.
  
The system supports 10 Telnet sessions.

- **end-number**
  
(Optional) Enter a number from 1 to 9 as the last virtual terminal line to configure.

**Defaults**

Not configured

</tbody>
</table>
**login concurrent-session**

Configures the limit of concurrent sessions for all users on console and virtual terminal lines.

```
Syntax
login concurrent-session {limit number-of-sessions | clear-line enable}

no login concurrent session {limit number-of-sessions | clear-line enable}
```

**Parameters**

- **limit number-of-sessions**
  
  Sets the number of concurrent sessions that any user can have on console and virtual terminal lines. The range is from 1 to 12 (10 VTY lines, one console, and one AUX line).

- **clear-line enable**
  
  Enables you to clear your existing sessions.

**Defaults**

Not configured. You can use all the available sessions.

**Command Modes**

CONFIGURATION

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.8(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

You must have either the System Administrator or Security Administrator privileges to configure login concurrent-session limit or to enable clear-line.

Use the `login concurrent-session limit number-of-sessions` command to limit the number of concurrent sessions that any user can have on console, aux, and virtual terminal lines.

If the `login concurrent-session clear-line enable` command is configured, you are provided with an option to clear any of your existing sessions after a successful login authentication. When you reach the maximum concurrent session limit, you can still login by clearing any of your existing sessions.

**Example**

The following example shows how to limit the number of concurrent sessions that any user can have to four:

```
Dell(conf)#login concurrent-session limit 4
```

The following example shows how to use the `login concurrent-session clear-line enable` command.

```
Dell(conf)#login concurrent-session clear-line enable
```
When you try to login, the following message appears with all your existing concurrent sessions, providing an option to close any one of the existing sessions:

```
$ telnet 10.11.178.14
Trying 10.11.178.14...
Connected to 10.11.178.14.
Escape character is '^]'.
Login: admin
Password:
Current sessions for user admin:
Line  Location
 2  vty 0  10.14.1.97
 3  vty 1  10.14.1.97
Clear existing session? [line number/Enter to cancel]:
```

When you try to create more than the permitted number of sessions, the following message appears, prompting you to close one of your existing sessions. You must close any of your existing sessions to login to the system:

```
$ telnet 10.11.178.14
Trying 10.11.178.14...
Connected to 10.11.178.14.
Escape character is '^]'.
Login: admin
Password:
Maximum concurrent sessions for the user reached.
Current sessions for user admin:
Line  Location
 2  vty 0  10.14.1.97
 3  vty 1  10.14.1.97
 4  vty 2  10.14.1.97
 5  vty 3  10.14.1.97
Clear existing session? [line number/Enter to cancel]:
```

**Related Commands**
- **login statistics** — Enable and configure user login statistics on console and virtual terminal lines.
- **show login statistics** — Displays login statistics of users who have used the console or virtual terminal lines to log in to the system.

## login statistics

Enable and configure user login statistics on console and virtual terminal lines.

**Syntax**

```
login statistics {enable | time-period days}
no login statistics {enable | time-period days}
```

**Parameters**

- **enable**
  - Enables user login statistics. By default, the system displays the login statistics for the last 30 days.

- **time-period days**
  - Sets the number of days for which the system stores the user login statistics. The range is from 1 to 30.

**Defaults**

```
Not configured
```

**Command Modes**

```
CONFIGURATION
```

**Supported Modes**

```
Full-Switch
```

Control and Monitoring | 101
Command History

Version            Description
9.9(0.0)            Introduced on the FN IOM.
9.8(0.0)            Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

Only the system and security administrators can configure login activity tracking and view the login activity details of other users.

If you enable user login statistics, the system displays the last successful login details of the current user and the details of any failed login attempts by others.

If you use the login statistics time-period days command to set a custom time period, the system only reports the login statistics during that interval.

NOTE: Login statistics is not applicable for login sessions that do not use user names for authentication. For example, the system does not report login activity for a telnet session that prompts only a password field.

Example

When you login to the system, it displays a message similar to the following:

```
$ telnet 10.11.178.14
Trying 10.11.178.14...
Connected to 10.11.178.14.
Escape character is '^]'.
Login: admin
Password:
There were 2 unsuccessful login attempt(s) since the last successful login.
There were 3 unsuccessful login attempt(s) for user admin in last 30 day(s).
```

The preceding message shows that the user had previously logged in to the system using the VTY line from 10.14.1.97. It also displays the number of unsuccessful login attempts since the last login and the number of unsuccessful login attempts in the last 30 days.

```
$ telnet 10.11.178.14
Trying 10.11.178.14...
Connected to 10.11.178.14.
Escape character is '^]'.
Login: admin
Password:
Last successful login: Wed Feb 5 14:05:28 IST 2015 on console
There were 2 unsuccessful login attempt(s) since the last successful login.
There were 3 unsuccessful login attempt(s) for user admin in last 12 day(s).
```

The preceding message shows that the user had previously logged in to the system using the console line. It also displays the number of unsuccessful login attempts since the last login and the number of unsuccessful login attempts during a custom time period.

Related Commands

login concurrent-session — Configures the limit of concurrent sessions for all users on console and virtual terminal lines.

show login statistics — Displays login statistics of users who have used the console or virtual terminal lines to log in to the system.
motd-banner

Enable a message of the day (MOTD) banner to appear when you log in to the system.

Syntax

motd-banner

Defaults

Enabled on all lines.

<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

To view the successful and failed login details of the current user in the last 30 days or the custom defined period, use the `show login statistics` command.

To view the successful and failed login details of all users in the last 30 days or the custom defined period, use the `show login statistics all` command. You can use this command only if you have system or security administrator rights.

To view the successful and failed login details of a specific user in the last 30 days or the custom defined time period, use the `show login statistics user user-id` command. If you have system or security administrator rights, you can view the login statistics of other users. If you do not have system or security administrator rights, you can view your login statistics but not the login statistics of others.

**NOTE:** By default, these commands display the details for the last 30 days. If you set a custom-defined time period for login statistics using the `login statistics time-period days` command, these commands display details only for that period.

**Example**

The following is sample output of the `show login statistics` command.

```
Dell#show login statistics
------------------------------------------------------------------
User: admin
Last login time: 12:52:01 UTC Tue Mar 22 2016
Last login location: Line vty0 ( 10.16.127.143 )

Unsuccessful login attempt(s) since the last successful login: 0
Unsuccessful login attempt(s) in last 30 day(s): 3
Successful login attempt(s) in last 30 day(s): 2
```
The following is sample output of the `show login statistics user user-id` command.

```
Dell# show login statistics user admin
User: admin
Last login time: 12:52:01 UTC Tue Mar 22 2016
Last login location: Line vty0 ( 10.16.127.143 )
Unsuccessful login attempt(s) since the last successful login: 0
Unsuccessful login attempt(s) in last 30 day(s): 0
Successful login attempt(s) in last 30 day(s): 1
```

The following is sample output of the `show login statistics unsuccessful-attempts` command.

```
Dell#show login statistics unsuccessful-attempts
There were 3 unsuccessful login attempt(s) for user admin in last 30 day(s).
```

The following is sample output of the `show login statistics unsuccessful-attempts time-period days` command.

```
Dell# show login statistics unsuccessful-attempts time-period 15
There were 0 unsuccessful login attempt(s) for user admin in last 15 day(s).
```

The following is sample output of the `show login statistics unsuccessful-attempts user login-id` command.

```
Dell# show login statistics unsuccessful-attempts user admin
There were 3 unsuccessful login attempt(s) for user admin in last 12 day(s).
```

The following is sample output of the `show login statistics successful-attempts` command.

```
Dell#show login statistics successful-attempts
There were 4 successful login attempt(s) for user admin in last 30 day(s).
```

### show software ifm

Display interface management (IFM) data.

**Syntax**

```
show software ifm {clients [summary] | ifagt number | ifcb interface | stack-unit unit-ID | trace-flags}
```

**Parameters**

- `clients` Enter the keyword `clients` to display IFM client information.
- `summary` (OPTIONAL) Enter the keyword `summary` to display brief information about IFM clients.
ifagt number  Enter the keyword ifagt then the number of an interface agent to display software pipe and IPC statistics.

ifcb interface Enter the keyword ifcb then one of the following interface IDs then the slot/port information to display interface control block information for that interface:

- For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
- For a 10G Ethernet interface, enter the keyword TenGigabitEthernet.

stack-unit unit-ID Enter the keywords stack-unit then the stack member number to display IFM information for that unit. The range is from 0 to 5.

trace-flags Enter the keyword trace-flags to display IFM information for internal trace flags.

Defaults
none

Command Modes
- EXEC
- EXEC Privilege

Supported Modes
Full-Switch

--More--
ping

Test connectivity between the system and another device by sending echo requests and waiting for replies.

Syntax

```plaintext
ping host
```

Parameters

- `host`: Enter the host name or the destination IP address of the device to which you are testing connectivity.

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

All Modes

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

When you enter the `ping` command without specifying an IP address (Extended Ping), you are prompted for a target IP address, a repeat count, a datagram size (up to 1500 bytes), a timeout (in seconds), and for Extended Commands. For information on the ICMP message codes that return from a `ping` command, refer to [Internet Control Message Protocol (ICMP) Message Types](#).

Example (IPv4)

```plaintext
Dell#ping 172.31.1.255
Type Ctrl-C to abort.

Sending 5, 100-byte ICMP Echos to 172.31.1.255, timeout is 2 seconds:
Reply to request 1 from 172.31.1.208 0 ms
Reply to request 1 from 172.31.1.216 0 ms
Reply to request 1 from 172.31.1.205 16 ms
::
Reply to request 5 from 172.31.1.209 0 ms
Reply to request 5 from 172.31.1.66 0 ms
Reply to request 5 from 172.31.1.87 0 ms
Dell#
```

reload

Reboot the Dell Networking OS.

Syntax

```plaintext
reload
```

</tbody>
</table>
**service timestamps**

Add time stamps to debug and log messages. This command adds either the uptime or the current time and date.

**Syntax**

```
service timestamps [debug | log] [datetime [localtime] [msec] [show-timezone] | uptime]
```

**Parameters**

- `debug`  
  (OPTIONAL) Enter the keyword `debug` to add timestamps to debug messages.
- `log`  
  (OPTIONAL) Enter the keyword `log` to add timestamps to log messages with severity from 0 to 6.
- `datetime`  
  (OPTIONAL) Enter the keyword `datetime` to have the current time and date added to the message.
- `localtime`  
  (OPTIONAL) Enter the keyword `localtime` to include the localtime in the timestamp.
- `msec`  
  (OPTIONAL) Enter the keyword `msec` to include milliseconds in the timestamp.
- `show-timezone`  
  (OPTIONAL) Enter the keyword `show-timezone` to include the time zone information in the timestamp.
- `uptime`  
  (OPTIONAL) Enter the keyword `uptime` to have the timestamp based on time elapsed since system reboot.

**Defaults**

Not configured.

**Command Modes**

- Configuration

**Supported Modes**

<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

- If you do not specify parameters and enter `service timestamps`, it appears as `service timestamps debug uptime` in the running-configuration.
- To view the current options set for the `service timestamps` command, use the `show running-config` command.
show alarms

Display the active major and minor alarms on the system.

**Syntax**

```
show alarms [threshold]
```

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

## show cpu-traffic-stats

Display the CPU traffic statistics.

### Syntax

```
show cpu-traffic-stats [port number | all]
```

### Parameters

- **port number** *(OPTIONAL)* Enter the port number to display traffic statistics on that port only. The range is from 1 to 1568.
- **all** *(OPTIONAL)* Enter the keyword all to display traffic statistics on all the interfaces receiving traffic, sorted based on the traffic.

### Defaults

```
all
```

### Command Modes

```
EXEC
```

### Supported Modes

```
All Modes
```

### Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

### Usage Information

Traffic statistics are sorted on a per-interface basis; the interface receiving the most traffic is displayed first. All CPU and port information is displayed unless a specific port or CPU is specified. Traffic information is displayed for router ports only; not for management interfaces. The traffic statistics are collected only after the `debug cpu-traffic-stats` command is executed; not from the system bootup.

**NOTE:** After debugging is complete, use the `no debug cpu-traffic-stats` command to shut off traffic statistics collection.

### Example

```
Dell#show cpu-traffic-stats
Processor : CP
---
Control and Monitoring 111
```
show debug

View a list of all enabled debugging processes.

Syntax
show debug

Command Modes
EXEC Privilege

  OSPF packet debugging is on
DHCP:
  DHCP debugging is on
Dell#

show diag

Display the diagnostics information.

Syntax
show diag {information | stack-unit number [detail | summary]} | testcase

Parameters

- **information**: Enter the keyword information to view current diagnostics information in the system.
- **stack-unit unit-id** (OPTIONAL): Enter the keywords stack-unit then the unit-id to display information on a specific stack member. The range is from 0 to 5.
- **detail** (OPTIONAL): Enter the keyword detail to view detailed diagnostics information.
- **summary** (OPTIONAL): Enter the keyword summary to view a summary of the diagnostics information.
- **testcase**: Enter the keyword testcase to view current diagnostics testcases available in the system.

Defaults

Summary

Command Modes
EXEC Privilege
**show environment**

Displays the system component status (for example, temperature or voltage).

**Syntax**

```
show environment [all | stack-unit unit-id]
```

**Parameters**

- `all`: Enter the keyword `all` to view all components.
- `stack-unit unit-id`: Enter the keywords `stack-unit` then the `unit-id` to display information on a specific stack member. The range is from 0 to 5.
- `thermal sensor`: Enter the keywords `thermal-sensor` to view all components.

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

```
show inventory

Display the switch type, components (including media), and Dell Networking OS version including hardware identification numbers and configured protocols.

Syntax

```
show inventory [media slot]
```

Parameters

- `media slot` (OPTIONAL) Enter the keyword `media` then the stack ID of the stack member you want to display pluggable media inventory.

Defaults

none

Command Modes

EXEC

Supported Modes

All Modes

Command History

- **Version 9.9(0.0)**
  - Introduced on the FN IOM.
- **Version 9.4(0.0)**
  - Supported on the FN I/O Aggregator.

Usage Information

If there are no fiber ports in the unit, just the header under `show inventory media` displays. If there are fiber ports but no optics inserted, the output displays "Media not present or accessible".

Example

```
Dell#show inventory
System Type : PE-FN-410S-IOA
System Mode : 1.0
Software Version : 1-0(0-1859)
Unit Type  Serial Number  Part Number  Rev  Piece Part ID  Rev

-----------------------------------------------------------------
1    51      51       64      61       61      61     67     61
64     66
Dell#
```
show memory

Display current memory usage on the M I/O Aggregator.

Syntax
show memory [stack-unit 0–5]

Parameters
- stack-unit 0–5 (OPTIONAL) Enter the keywords stack-unit then the stack unit ID of the stack member to display memory information on the designated stack member.

Command Modes
- EXEC
- EXEC Privilege

Supported Modes
All Modes

Command History
Version Description
9.9(0.0) Introduced on the FN IOM.
9.4(0.0) Supported on the FN I/O Aggregator.
8.3.17.0 Supported on the M I/O Aggregator.

Usage Information
The output for show memory command displays the memory usage of LP part (sysdlp) of the system. The sysdlp is an aggregate task that handles all the tasks running on the CPU.

Example
Dell#show memory
Statistics On Unit 0 Processor
===========================
Total(b)   Used(b)  Free(b)   Lowest(b)   Largest(b)
268435456  4010354  264425102  264375410   264425102

show processes cpu

Displays CPU usage information based on processes running.

Syntax
show processes cpu [management-unit 1-99 [details] | stack-unit 0-5 | summary ]

Parameters
- management-unit 1-99 [details] (OPTIONAL) Display processes running in the control processor. The 1-99 variable sets the number of tasks to display in order of the highest CPU usage in the past five (5) seconds. Add the keyword details to display all running processes (except sysdlp). Refer to Example (management-unit).
- stack-unit 0–5 (OPTIONAL) Enter the keywords stack-unit then the stack member ID. The range is from 0 to 5.

As an option of the show processes cpu command, this option displays CPU usage for the designated stack member. Or, as an option of memory, this option limits the
output of memory statistics to the designated stack member. Refer to Example (stack-unit).

**summary** *(OPTIONAL)* Enter the keyword `summary` to view a summary view CPU utilization of processes related to line card processing. Refer to Example (summary).

**Command Modes**
- EXEC
- EXEC Privilege

**Supported Modes**

**Related Commands**
- `show diag` — displays the data plane or management plane input and output statistics of the designated component of the designated stack member.
- `show hardware system-flow` — displays Layer 3 ACL or QoS data for the selected stack member and stack member port-pipe.
- `show interfaces stack-unit` — displays information on all interfaces on a specific stack member.
show processes memory — displays CPU usage information based on running processes.

show processes ipc flow-control

Displays the single window protocol queue (SWPQ) statistics.

Syntax

```
show processes ipc flow-control [cp]
```

Parameters

`cp`  
(Optionalal) Enter the keyword `cp` to view the control processor’s SWPQ statistics.

Defaults

none

</tbody>
</table>

Important Points:

- The SWP provides flow control-based reliable communication between the sending and receiving software tasks.
- A sending task enqueues messages into the SWP queue for a receiving task and waits for an acknowledgement.
• If no response is received within a defined period of time, the SWP timeout mechanism resubmits the message at the head of the FIFO queue.
• After retrying a defined number of times, the SWP-2-NOMORETIMEOUT timeout message is generated.
• In the example, a retry (Retries) value of zero indicates that the SWP mechanism reached the maximum number of retransmissions without an acknowledgement.

Example

Dell#show processes ipc flow-control

Dell#

show processes memory

Display memory usage information based on processes running in the system.

Syntax

show processes memory {management-unit | stack unit {0–5 | all | summary}}

Parameters

management-unit Enter the keywords management-unit for CPU memory usage of the stack management unit.

stack unit 0–5 Enter the keywords stack unit then a stack unit ID of the member unit for which to display memory usage on the forwarding processor.

all Enter the keyword all for detailed memory usage on all stack members.

summary Enter the keyword summary for a brief summary of memory availability and usage on all stack members.

Command Modes

• EXEC

• EXEC Privilege

Supported Modes

All Modes

Command History

Version Description
9.9(0.0) Introduced on the FN IOM.
9.4(0.0) Supported on the FN I/O Aggregator.
8.3(17) Supported on the M I/O Aggregator.
show processes memory output

Field                  Description
Total:                 Total system memory available
MaxUsed:               Total maximum memory used ever (history indicated with time stamp)
CurrentUsed:           Total memory currently in use
CurrentFree:           Total system memory available
SharedUsed:            Total used shared memory
SharedFree:            Total free shared memory
PID                    Process ID
Process                Process Name
ResSize                Actual resident size of the process in memory
Size                   Process test, stack, and data size
Allocs                 Total dynamic memory allocated
Frees                  Total dynamic memory freed
Max                    Maximum dynamic memory allocated
Current                Current dynamic memory in use

The output for the `show process memory` command displays the memory usage statistics running on CP part (sysd) of the system. The sysd is an aggregate task that handles all the tasks running on the M I/O Aggregator's CP.

The output of the `show memory` command and this command differ based on which the Dell Networking OS processes are counted.

- In the `show memory` output, the memory size is equal to the size of the application processes.
- In the output of this command, the memory size is equal to the size of the application processes plus the size of the system processes.

Example

```
Dell#show processes memory stack-unit 1

```
show reset-reason

Display the reason for the last system reboot.

Syntax

```
show reset-reason [stack-unit {stack-unit-number | all}]
```

Parameters

- **stack-unit unit-number** (OPTIONAL) Enter the keyword stack-unit and the stack unit number to view the reason for the last system reboot for that stack unit.
- **all** (OPTIONAL) Enter the keyword stack-unit and the keyword all to view the reason for the last system reboot of all stack units in the stack.

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell EMC Networking OS Command Line Reference Guide.

Version | Description
---|---
9.13(0.0) | Introduced on the S3048-ON, S3100 series, S4048-ON, S4048T-ON, S5000, S6000, S6000-ON, S6010-ON, S6100-ON, Z9100-ON, C9010, MXL, M-I/OA, and FN-IOM.

Usage Information

You can use the show reset-reason without the stack-unit option to view the reason for the last system reboot of the local system.

Example — User-initiated reboot with the reload command

```
DellEMC# show reset-reason
Cause: Reset by User through CLI command
Reset Time: 11/05/2017-08:36
```

Example — System reboot due to the upgrade command

```
DellEMC# show reset-reason
Cause: Reboot by Software upgrade Module.
Reset Time: 8/9/2017 1:39 PM.
```
Example — System reboot for unknown reasons

DellEMC# show reset-reason
Cause: N/A
Reload Time: N/A

Example — System reboot due to power loss or pressing the power button off and on.

DellEMC# show reset-reason
Cause: N/A.
Reset Time: N/A

Example — System reboot due to watchdog timeout

DellEMC# show reset-reason
Cause: N/A.
Reset Time: N/A

Example — System reboot due to thermal shutdown

The example shows the reason for the last reboot as N/A for thermal shutdown.

DellEMC# show reset-reason
Cause: N/A.
Reload Time: N/A

Example — System reboot due to BIOS boot fail

The example shows the reason for the last reboot as N/A for BIOS boot fail.

DellEMC# show reset-reason
Cause: NA.
Reset Time: N/A

Example — Unknown reason

If the reason for the last system reboot is not available, the system displays the reason as N/A.

DellEMC# show reload-reason
Cause: N/A.
Time: N/A

Example — Reset reason of a single stack unit

DellEMC# show reset-reason stack-unit 1
Cause: Reset by User through CLI command
Reset Time: 11/05/2017-08:36

Example — Reset reason of all stack units

DellEMC# show reset-reason stack-unit all

<table>
<thead>
<tr>

Current address is 00:1e:c9:f1:00:99
Server Port AdminState is N/A
Pluggable media not present
```
show system

Displays the current status of all stack members or a specific stack member.

Syntax

show system [brief | stack-unit unit-id]

Parameters

brief (OPTIONAL) Enter the keyword brief to view an abbreviated list of system information.

stack unit unit-id (OPTIONAL) Enter the keywords stack unit then the stack member ID for information on the stack member. The range is from 0 to 5.

Command Modes

Related Commands

- asset-tag — Assign and store unique asset-tag to the stack member.
- show version — Displays the Dell version.
- show processes memory — Displays the memory usage based on the running processes.
- show diag — Displays the data plane and management plane input and output statistics of a particular stack member.

show tech-support

Displays a collection of data from other show commands, necessary for Dell Networking technical support to perform troubleshooting on Aggregators.

Syntax

```
show tech-support [stack-unit unit-id | page]
```

Parameters

- **stack-unit**  
  (OPTIONAL) Enter the keyword stack-unit to view CPU memory usage for the stack member designated by unit-id. The range is 0 to 5.
- **page**  
  (OPTIONAL) Enter the keyword page to view 24 lines of text at a time. Press the SPACE BAR to view the next 24 lines. Press the ENTER key to view the next line of text. When using the pipe command ( | ), enter one of these keywords to filter command output. Refer to CLI Basics for details on filtering commands.
- **save**  
  Enter the keyword save to save the command output.
  flash: Save to local flash drive (flash://filename (max 20 chars))

Command Modes

- EXEC Privilege

Supported Modes

All Modes

Command History

Version Description
9.9(0.0) Introduced on the FN IOM.
9.4(0.0) Supported on the FN I/O Aggregator.
8.3.17.0 Supported on the M I/O Aggregator.

Usage Information

Without the page or stack-unit option, the command output is continuous, use Ctrl-z to interrupt the command output.

The save option works with other filtering commands. This allows you to save specific information of a show command. The save entry must always be the last option.

For example:

```
Dell#show tech-support | grep regular-expression | except regular-expression | find regular-expression | save flash://result
```
This display output is an accumulation of the same information that is displayed when you execute one of the following show commands:

- show cam
- show clock
- show environment
- show file
- show interfaces
- show inventory
- show processes cpu
- show processes memory
- show running-conf
- show version

Example (save)

Dell#show tech-support ?

show util-threshold cpu

Displays the set CPU utilization threshold values.

Syntax

show util-threshold cpu

Command Modes

- EXEC Privilege
**show util-threshold memory**

Displays the set memory utilization threshold values.

**Syntax**

```
show util-threshold memory
```

**Command Modes**

- EXEC Privilege

**Supported Modes**

All Modes

**Command History**

- **Version**
  - **9.9(0.0)**: Introduced on the FN IOM.
  - **9.4(0.0)**: Supported on the FN I/O Aggregator.
  - **8.3.17.0**: Supported on the M I/O Aggregator.

**Usage Information**

This command displays all memory utilization thresholds of the management, standby, and stack-units.

**ssh-peer-stack-unit**

Open an SSH connection to the peer stack-unit.

**Syntax**

```
ssh-peer-stack-unit [-| username]
```

**Parameters**

- **-| username**: (OPTIONAL) Enter the keyword - followed by your username. 
  Default: The username associated with the terminal.

**Defaults**

Not configured.

**Command Modes**

- EXEC Privilege

**Supported Modes**

All Modes

**Command History**

- **Version**
  - **9.9(0.0)**: Introduced on the FN IOM.
Connect through Telnet to a server. The Telnet client and server in Dell Networking OS support IPv4 connections. You can establish a Telnet session directly to the router or a connection can be initiated from the router.

**Syntax**

```
telnet {host | ip-address [source-interface]}
```

**Parameters**

- **host**
  - Enter the name of a server.
- **ip-address**
  - Enter the IPv4 address in dotted decimal format of the server.
- **source-interface**
  - (OPTIONAL) Enter the keywords `source-interface` then the interface information to include the source interface. Enter the following keywords and slot/port or number information:
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
    - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults**

Not configured.

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

All Modes

**Command History**

</tr>
</tbody>
</table>

**Usage Information**

Telnet to link-local addresses is not supported.

### telnet-peer-stack-unit

Open a telnet connection to the peer stack-unit.

**Syntax**

```
telnet-peer-stack-unit
```

**Defaults**

Not configured.

**Command Modes**

- EXEC Privilege

**Supported Modes**

All Modes
terminal length

Configure the number of lines displayed on the terminal screen.

Syntax  
```plaintext
terminal length screen-length
```

To return to the default values, use the `no terminal length` command.

Parameters  
- **screen-length**: Enter a number of lines. Entering zero will cause the terminal to display without pausing. The range is from 0 to 512.
  
  Default: 24 lines

Defaults  
24 lines

Command Modes

<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

This command enables XML input mode where you can either cut and paste XML requests or enter the XML requests line-by-line.

trace route

View the packet path to a specific device.

Syntax

```
traceroute { host | ip-address }
```

Parameters

- **host**
  - Enter the name of device.

- **ip-address**
  - Enter the IP address of the device in dotted decimal format.

Defaults

Timeout = 5 seconds; Probe count = 3; 30 hops max; 40 byte packet size; UDP port = 33434

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

All Modes
**Command History**

<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

When you enter the `traceroute` command without specifying an IP address (Extended Traceroute), you are prompted for a target and source IP address, timeout in seconds (default is 5), a probe count (default is 3), minimum TTL (default is 1), maximum TTL (default is 30), and port number (default is 33434). To keep the default setting for those parameters, press the ENTER key.

**Example (IPv4)**

```
Dell#traceroute www.force10networks.com
Translating "www.force10networks.com"...domain server (10.11.0.1)
[OK]
Type Ctrl-C to abort.
---------------------------------------------------
Tracing the route to www.force10networks.com (10.11.84.18),
30 hops max, 40 byte packets

000.000 ms 000.000 ms 000.000 ms
Dell#
```

**Related Commands**

`undebug all`

Disable all debug operations on the system.

**Syntax**

```
undebug all
```

**Defaults**

none

**Command Modes**

- EXEC Privilege

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**virtual-ip**

Configure a virtual IP address for the active management interface. You can configure virtual addresses both for IPv4 independently.

**Syntax**

```
virtual-ip {ipv4-address}
```

**Parameters**

- `ipv4-address` Enter the IP address of the active management interface in a dotted decimal format (A.B.C.D).
Defaults
none

Command Modes
CONFIGURATION

Supported Modes
Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information
Each time you issue this command, it replaces the previously configured address of the same family. The no virtual-ip command takes an address/prefix-length argument, so that the desired address only is removed. If you enter the no virtual-ip command without any specified address, the IPv4 virtual addresses are removed.

Example
Dell#virtual-ip 10.11.197.99/16

write

Copy the current configuration to either the startup-configuration file or the terminal.

Syntax
write {memory | terminal}

Parameters
memory
Enter the keyword memory to copy the current running configuration to the startup configuration file. This command is similar to the copy running-config startup-config command.

terminal
Enter the keyword terminal to copy the current running configuration to the terminal. This command is similar to the show running-config command.

Command Modes
• EXEC Privilege

Supported Modes
All Modes

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information
The write memory command saves the running-configuration to the file labeled startup-configuration. When using a LOCAL CONFIG FILE other than the startup-config not named “startup-configuration”, the running-config is not saved to that file; use the copy command to save any running-configuration changes to that local file.
An authentication server must authenticate a client connected to an 802.1X switch port. Until the authentication, only extensible authentication protocol over LAN (EAPOL) traffic is allowed through the port to which a client is connected. After authentication is successful, normal traffic passes through the port.

The Dell Networking operating software supports remote authentication dial-in service (RADIUS) and active directory environments using 802.1X Port Authentication.

**Important Points to Remember**

The system limits network access for certain users by using virtual local area network (VLAN) assignments. 802.1X with VLAN assignment has these characteristics when configured on the switch and the RADIUS server.

- If no VLAN is supplied by the RADIUS server or if you disable 802.1X authorization, the port configures in its access VLAN after successful authentication.
- If you enable 802.1X authorization but the VLAN information from the RADIUS server is not valid, the port returns to the Unauthorized state and remains in the configured access VLAN. This safeguard prevents ports from appearing unexpectedly in an inappropriate VLAN due to a configuration error. Configuration errors create an entry in Syslog.
- If you enable 802.1X authorization and all information from the RADIUS server is valid, the port is placed in the specified VLAN after authentication.
- If you enable port security on an 802.1X port with VLAN assignment, the port is placed in the RADIUS server assigned VLAN.
- If you disable 802.1X on the port, it returns to the configured access VLAN.
- When the port is in the Force Authorized, Force Unauthorized, or Shutdown state, it is placed in the configured access VLAN.
- If an 802.1X port is authenticated and put in the RADIUS server assigned VLAN, any change to the port access VLAN configuration does not take effect.
- The 802.1X with VLAN assignment feature is not supported on trunk ports, dynamic ports, or with dynamic-access port assignment through a VLAN membership.

**Topics:**

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

If the host responds to 802.1X with an incorrect login/password, the login fails. The switch attempts to authenticate again until the maximum attempts configured is reached. If the authentication fails after all allowed attempts, the interface moves to the authentication failed VLAN.

After the authentication VLAN is assigned, the port-state must be toggled to restart authentication. Authentication occurs at the next reauthentication interval (dot1x reauthentication).
Related Commands

- `dot1x port-control` — Enables port control on an interface.
- `dot1x guest-vlan` — Configures a guest VLAN for limited access users or for devices that are not 802.1X capable.
- `show dot1x interface` — Displays the 802.1X configuration of an interface.

dot1x auth-server

Configure the authentication server to RADIUS.

Syntax

```none
dot1x auth-server radius
```

Defaults

none

Command Modes

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

The prerequisites for enabling MAB-only authentication on a port are:

- Enable 802.1X authentication globally on the switch and on the port (the `dot1x authentication` command).
- Enable MAC authentication bypass on the port (the `dot1x mac-auth-bypass` command).

In MAB-only authentication mode, a port authenticates using the host MAC address even though 802.1X authentication is enabled. If the MAB-only authentication fails, the host is placed in the guest VLAN (if configured).

To disable MAB-only authentication on a port, enter the `no dot1x auth-type mab-only` command.

Related Commands

- `dot1x mac-auth-bypass` — Enables MAC authentication bypass.
dot1x guest-vlan

Configure a guest VLAN for limited access users or for devices that are not 802.1X capable.

**Syntax**

```
dot1x guest-vlan vlan-id
```

To disable the guest VLAN, use the `no dot1x guest-vlan vlan-id` command.

**Parameters**

- **vlan-id**
  Enter the VLAN Identifier. The range is from 1 to 4094.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION (conf-if-interface-slot/port)

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

1X authentication is enabled when an interface is connected to the switch. If the host fails to respond within a designated amount of time, the authenticator places the port in the guest VLAN.

If a device does not respond within 30 seconds, it is assumed that the device is not 802.1X capable. Therefore, a guest VLAN is allocated to the interface and authentication, for the device, occurs at the next reauthentication interval (dot1x reauthentication).

If the host fails authentication for the designated number of times, the authenticator places the port in authentication failed VLAN (dot1x auth-fail-vlan).

**NOTE:** You can create the Layer 3 portion of a guest VLAN and authentication fail VLANs regardless if the VLAN is assigned to an interface or not. After an interface is assigned a guest VLAN (which has an IP address), routing through the guest VLAN is the same as any other traffic. However, the interface may join/leave a VLAN dynamically.

**Related Commands**

- `dot1x auth-fail-vlan` — Configures an authentication failure VLAN.
- `dot1x reauthentication` — Enables periodic re-authentication of the client.
- `dot1x reauth-max` — Configure the maximum number of times to re-authenticate a port before it becomes unauthorized.

---

**dot1x host-mode**

Enable single-host or multi-host authentication.

**Syntax**

```
dot1x host-mode {single-host | multi-host | multi-auth}
```

**Parameters**

- **single-host**
  Enable single-host authentication.

- **multi-host**
  Enable multi-host authentication.
**multi-auth**

Enable multi-supplicant authentication.

<table>
<thead>
<tr>
<th>Defaults</th>
<th>single-host</th>
</tr>
</thead>
<tbody>
<tr>
<td>Command Modes</td>
<td>INTERFACE</td>
</tr>
<tr>
<td>Supported Modes</td>
<td>Full–Switch</td>

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

- Single-host mode authenticates only one host per authenticator port and drops all other traffic on the port.
- Multi-host mode authenticates the first host to respond to an Identity Request and then permits all other traffic on the port.
- Multi-supplicant mode authenticates every device attempting to connect to the network on the authenticator port.

---

**dot1x mac-auth-bypass**

Enable MAC authentication bypass. If 802.1X times out because the host did not respond to the Identity Request frame, the system attempts to authenticate the host based on its MAC address.

**Syntax**

```
dot1x mac-auth-bypass
```

To disable MAC authentication bypass on a port, use the `no dot1x mac-auth-bypass` command.

**Defaults**

Disabled

**Command Modes**

**Related Commands**

- `dot1x host-mode` — Enables single-host or multi-host authentication.

**dot1x port-control**

Enable port control on an interface.

**Syntax**

```plaintext
dot1x port-control {force-authorized | auto | force-unauthorized}
```

**Parameters**

- `force-authorized` - Enter the keywords `force-authorized` to forcibly authorize a port.
- `auto` - Enter the keyword `auto` to authorize a port based on the 802.1X operation result.
- `force-unauthorized` - Enter the keywords `force-unauthorized` to forcibly deauthorize a port.

**Defaults**

- none

**Command Modes**

- Auto

**Supported Modes**

- Full-Switch

dot1x quiet-period

Set the number of seconds that the authenticator remains quiet after a failed authentication with a client.

Syntax:
```
dot1x quiet-period seconds
```

Parameters:
- `seconds` (Enter the number of seconds. The range is from 1 to 65535. The default is 60.)

Defaults:
- 60 seconds

Command Modes:
- INTERFACE

Supported Modes:
- Full-Switch

Command History:
- Version 9.9(0.0) Introduced on the FN IOM.
- Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

dot1x reauthentication

Enable periodic reauthentication of the client.

Syntax:
```
dot1x reauthentication [interval seconds]
```

Parameters:
- `interval seconds` (Optional) Enter the keyword interval then the interval time, in seconds, after which reauthentication is initiated. The range is from 1 to 31536000 (one year). The default is 3600 (1 hour).

Defaults:
- 3600 seconds (1 hour)

Command Modes:
- INTERFACE

Supported Modes:
- Full-Switch

Command History:
- Version 9.9(0.0) Introduced on the FN IOM.
- Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
**dot1x reauth-max**

Configure the maximum number of times a port can reauthenticate before the port becomes unauthorized.

**Syntax**

```plaintext
dot1x reauth-max number
To return to the default, use the no dot1x reauth-max command.
```

**Parameters**

- `number` Enter the permitted number of reauthentications. The range is from 1 to 10. The default is 2.

**Defaults**

2

**dot1x server-timeout**

Configure the amount of time after which exchanges with the server time-out.

**Syntax**

```plaintext
dot1x server-timeout seconds
To return to the default, use the no dot1x server-timeout command.
```

**Parameters**

- `seconds` Enter a time-out value in seconds. The range is from 1 to 300, where 300 is implementation dependant. The default is 30.

**Defaults**

30 seconds

**Command Modes**

INTERFACE

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

**Usage Information**

When you configure the `dot1x server-timeout` value, take into account the communication medium used to communicate with an authentication server and the number of RADIUS servers configured. Ideally, the `dot1x server-timeout` value (in seconds) is based on the configured RADIUS-server timeout and retransmit values and calculated according to the following formula:

\[ \text{dot1x server-timeout seconds} > (\text{radius-server retransmit seconds} + 1) \times \text{radius-server timeout seconds} \]
Where the default values are as follows: dot1x server-timeout (30 seconds), radius-server retransmit (3 seconds), and radius-server timeout (5 seconds).

For example:

```
Dell(conf)#radius-server host 10.11.197.105 timeout 6
Dell(conf)#radius-server host 10.11.197.105 retransmit 4
Dell(conf)#interface tengigabitethernet 2/1
Dell(conf-if-te-2/1)#dot1x server-timeout 40
```

**dot1x supplicant-timeout**

Configure the amount of time after which exchanges with the supplicant time-out.

**Syntax**

```
dot1x supplicant-timeout seconds
```

To return to the default, use the `no dot1x supplicant-timeout` command.

**Parameters**

```
seconds
```

Enter a time-out value in seconds. The range is from 1 to 300, where 300 is implementation dependant. The default is 30.

**Defaults**

30 seconds

**Command Modes**

**dot1x tx-period**

Configure the intervals at which EAPOL PDUs the Authenticator PAE transmits.

**Syntax**

```
dot1x tx-period seconds
```

To return to the default, use the `no dot1x tx-period` command.

**Parameters**

```
seconds
```

Enter the interval time, in seconds, that EAPOL PDUs are transmitted. The range is from 1 to 65535. The default is 30.

**Defaults**

30 seconds

show dot1x cos-mapping interface

Display the CoS priority-mapping table the RADIUS server provides and applies to authenticated supplicants on an 802.1X-enabled system.

Syntax
show dot1x cos-mapping interface [mac-address mac-address]

Parameters

- **interface**: Enter one of the following keywords and slot/port or number information:
  - For a Ten-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

- **mac-address**: (Optional) MAC address of an 802.1X-authenticated supplicant.

Defaults
none

Command Modes
- EXEC
- EXEC privilege

Supported Modes

Command History

Version Description
9.9(0.0) Introduced on the FN IOM.
9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
To display CoS mapping information only for the specified supplicant, enter a supplicant’s MAC address using the mac-address option.

You can display the CoS mapping information applied to traffic from authenticated supplicants on 802.1X-enabled ports that are in Single-Hot, Multi-Host, and Multi-Supplicant authentication modes.

Example

```
Dell#show dot1x cos-mapping interface tengigabitethernet 0/1
802.1p CoS re-map table on Te 0/1:
-----------------------------
Dot1p | Remapped Dot1p
0     | 7
1     | 6
2     | 5
3     | 4
4     | 3
5     | 2
6     | 1
7     | 0
Dell#
```

```
Dell#show dot1x cos-mapping interface tengigabitethernet 0/1 mac-address 00:00:00:00:00:10
Supplicant Mac: 0 0 0 0 0 10 Lookup for Mac:
802.1p CoS re-map table on Te 0/1:

3     | 4
4     | 3
5     | 2
6     | 1
7     | 0
Dell#
```
show dot1x interface

Display the 802.1X configuration of an interface.

Syntax

show dot1x interface interface [mac-address mac-address]

Parameters

- **interface**
  - Enter one of the following keywords and slot/port or number information:
  - For a Ten-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- **mac-address**
  - (Optional) MAC address of a supplicant.

Defaults

none

Command Modes

- EXEC
- EXEC privilege

Supported Modes

Dell#
Access Control Lists (ACL)

Access control lists (ACLs) are supported by the Dell Networking Operating System (OS).

The Dell Networking OS supports the following types of ACL, IP prefix list, and route maps:

- Commands Common to all ACL Types
- Common IP ACL Commands
- Standard IP ACL Commands
- Extended IP ACL Commands
- Common MAC Access List Commands
- Standard MAC ACL Commands
- Extended MAC ACL Commands
- IP Prefix List Commands
- Route Map Commands

**NOTE:** For ACL commands that use the Trace function, refer to the Secure DHCP Commands section in the Security chapter.

Topics:

- Commands Common to all ACL Types
  - description
  - remark
  - resequence access-list
  - resequence prefix-list ipv4
  - show config
  - Common IP ACL Commands
  - access-class
  - clear counters ip access-group
  - ip access-group
  - show ip access-lists
  - show ip accounting access-list
  - Standard IP ACL Commands
  - ip access-list standard
  - permit (for Standard IP ACLs)
  - seq
  - Extended IP ACL Commands
  - deny (for Extended IP ACLs)
  - deny icmp
  - deny tcp
  - deny udp
  - ip access-list extended
  - permit (for Extended IP ACLs)
  - permit icmp
• permit tcp
• permit udp
• seq

Common MAC Access List Commands
• clear counters mac access-group
• mac access-group
• show mac access-lists
• show mac accounting access-list

Standard MAC ACL Commands
• deny
• deny
• mac access-list extended
• permit
• seq

Extended MAC ACL Commands
• mac access-list standard
• permit
• seq

IP Prefix List Commands
• clear ip prefix-list
• deny
• ip prefix-list
• permit
• seq
• show config
• show ip prefix-list detail
• show ip prefix-list summary

Route Map Commands
• continue
• description
• match interface
• match ip address
• match ip next-hop
• match ip route-source
• match metric
• match route-type
• match tag
• route-map
• set automatic-tag
• set metric
• set metric-type
• set tag
• show config
• show route-map
• deny (for Standard IP ACLs)
• deny
• seq
The following commands are available within each ACL mode and do not have mode-specific options. Some commands in this chapter may use similar names, but require different options to support the different ACL types (for example, the `deny` command).

**description**

Configure a short text string describing the ACL.

**Syntax**

description text

**Parameters**

- **text**
  
Enter a text string up to 80 characters long.

**Defaults**

Not enabled.

**Command Modes**

- CONFIGURATION-IP ACCESS-LIST-STANDARD
- CONFIGURATION-IP ACCESS-LIST-EXTENDED
- CONFIGURATION-MAC ACCESS LIST-STANDARD
The remark command is available in each ACL mode. You can configure up to 4294967290 remarks in a given ACL.

The following example shows the use of the remark command twice within CONFIGURATION-STANDARD-ACCESS-LIST mode. The same sequence number was used for the remark and for an associated ACL rule. The remark precedes the rule in the running-config because it is assumed that the remark is for the rule with the same sequence number, or the group of rules that follow the remark.

Example

Dell(conf-std-nacl)#remark 10 Deny rest of the traffic
Dell(conf-std-nacl)#remark 5 Permit traffic from XYZ Inc.
Dell(conf-std-nacl)#show config

    ip access-list standard test
    remark 5 Permit traffic from XYZ Inc.
    seq 5 permit 1.1.1.0/24
    remark 10 Deny rest of the traffic
seq 10 Deny any
Dell(conf-std-nacl)#

Related Commands

resequence access-list — Re-assigns sequence numbers to entries of an existing access-list.

resequence access-list

Re-assign sequence numbers to entries of an existing access-list.

Syntax

resequence access-list {ipv4 | mac} (access-list-name StartingSeqNum Step-to-Increment)

Parameters

ipv4 | mac Enter the keyword ipv4 or mac to identify the access list type to resequence.
access-list-name Enter the name of a configured IP access list.
StartingSeqNum Enter the starting sequence number to resequence. The range is from 0 to 4294967290.
Step-to-Increment Enter the step to increment the sequence number. The range is from 1 to 4294967290.

Defaults

none

Command Modes

• EXEC
• EXEC Privilege

Supported Modes

Full-Switch

Command History

Version Description
9.9(0.0) Introduced on the FN IOM.
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

When you have exhausted all the sequence numbers, this feature permits re-assigning a new sequence number to entries of an existing access-list.

Related Commands

resequence prefix-list ipv4 — resequences a prefix list.

resequence prefix-list ipv4

Re-assign sequence numbers to entries of an existing prefix list.

Syntax

resequence prefix-list ipv4 {prefix-list-name StartingSeqNum Step-to-increment}

Parameters

prefix-list-name Enter the name of the configured prefix list, up to 140 characters long.
StartingSeqNum Enter the starting sequence number to resequence. The range is from 0 to 65535.
Step-to-Increment Enter the step to increment the sequence number. The range is from 1 to 65535.

Defaults

none

Example

```bash
Dell(config-std-nacl)#show conf
!
ip access-list standard test
remark 5 Permit traffic from XYZ Inc.
seq 5 permit 1.1.1.0/24 count
remark 10 Deny traffic from ABC
seq 10 deny 2.1.1.0/24 count
Dell(config-std-nacl)#
```

Common IP ACL Commands

The following commands are available within both IP ACL modes (Standard and Extended) and do not have mode-specific options. When an ACL is created without a rule and then is applied to an interface, ACL behavior reflects an implicit permit.

The switch supports both Ingress and Egress IP ACLs.

**NOTE:** Also refer to the **Commands Common to all ACL Types** section.
**access-class**

Apply a standard ACL to a terminal line.

**Syntax**

```
access-class access-list-name [ipv4 | ipv6]
```

**Parameters**

- `access-list-name` Enter the name of a configured Standard ACL, up to 140 characters.
- `ipv4` Enter the keyword `ipv4` to configure an IPv4 access class.
- `ipv6` Enter the keyword `ipv6` to configure an IPv6 access class.

**Defaults**

Not configured.

**Command Modes**

LINE

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.8(0.0)</td>
<td>Added the <code>ipv4</code> and <code>ipv6</code> parameters to the command.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

When you use the `access-class access-list-name` command without specifying the `ipv4` or `ipv6` attribute, both IPv4 as well as IPv6 rules that are defined in that ACL are applied to the terminal. This is a generic way of configuring access restrictions.

To be able to filter access exclusively using either IPv4 or IPv6 rules, you must use either the `ipv4` or `ipv6` attribute along with the `access-class access-list-name` command. Depending on the attribute that you specify (ipv4 or ipv6), the ACL processes either IPv4 or IPv6 rules, but not both. Using this configuration, you can set up two different types of access classes with each class processing either IPv4 or IPv6 rules separately.

However, if you already have configured generic IP ACL on a terminal line, then you cannot further apply IPv4 or IPv6 specific filtering on top of this configuration. Because, both IPv4 and IPv6 access classes are already configured on this terminal line. Before applying either IPv4 or IPv6 filtering, you must first undo the generic configuration using the `no access-class access-list-name` command.

Similarly, if you have configured either IPv4 or IPv6 specific filtering on a terminal line, you cannot apply generic IP ACLs on top of this configuration. Before applying the generic ACL configuration, you must first undo the existing configuration using the `no access-class access-list-name [ipv4 | ipv6]` command.

---

**clear counters ip access-group**

Erase all counters maintained for access lists.

**Syntax**

```
clear counters ip access-group [access-list-name]
```

**Parameters**

- `access-list-name` (OPTIONAL) Enter the name of a configured access-list, up to 140 characters.

**Command Modes**

EXEC Privilege

**Supported Modes**

Full-Switch
ip access-group

Apply an egress IP ACL to an interface.

Syntax

```
ip access-group access-list-name {in | out} [implicit-permit] [vlan vlan-id] [layer3]
```

Parameters

- **access-list-name**: Enter the name of a configured access list, up to 140 characters.
- **in**: Enter the keyword in to apply the ACL to incoming traffic.
- **out**: Enter the keyword out to apply the ACL to the outgoing traffic.
- **implicit-permit**: (OPTIONAL) Enter the keyword implicit-permit to change the default action of the ACL from implicit-deny to implicit-permit (that is, if the traffic does not match the filters in the ACL, the traffic is permitted instead of dropped).
- **vlan vlan-id**: (OPTIONAL) Enter the keyword vlan then the ID numbers of the VLANs.
- **layer3**: (OPTIONAL) Enter the keyword layer3 to enable layer 3 mode. It ensures that all the ACL rules in the access-group are applied only for L3 router packets.

Defaults

Not enabled.

<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

You can assign one ACL (standard or extended ACL) to an interface.

- **NOTE**: This command is not supported on the FN IOM Switch Loopback interfaces.
- **NOTE**: If outbound(egress) IP ACL is applied on switch port, filter will be applied only for routed traffic egressing out of that port.

Related Commands

- `ip access-list standard` — configures a standard ACL.
- `ip access-list extended` — configures an extended ACL.
show ip access-lists

Display all of the IP ACLs configured in the system, whether or not they are applied to an interface, and the count of matches/mismatches against each ACL entry displayed.

**Syntax**

```
show ip access-lists [access-list-name] [interface interface] [in]
```

**Parameters**

- `access-list-name` Enter the name of a configured MAC ACL, up to 140 characters.
- `interface interface` Enter the keyword `interface` then the one of the following keywords and slot/port or number information:
  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- `in` Identify whether ACL is applied on the ingress or egress side.

<td>Introduced on the MXL 10/40Gbe Switch IO Module.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell#show ip access-lists test in
Standard Ingress IP access list test
seq 5 permit 1.1.1.0/24 count (0 packets)
seq 10 deny 2.1.1.0/24 count (0 packets)
```

show ip accounting access-list

Display the IP access-lists created on the switch and the sequence of filters.

**Syntax**

```
show ip accounting {access-list access-list-name | cam_count} interface interface
```

**Parameters**

- `access-list-name` Enter the name of the ACL to be displayed.
- `cam_count` List the count of the CAM rules for this ACL.
- `interface interface` Enter the keyword `interface` then the one of the following keywords and slot/port or number information:
  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

</tr>
</tbody>
</table>

Usage Information

show ip accounting access-lists

Field | Description
--- | ---
"Extended IP..." | Displays the name of the IP ACL.
"seq 5..." | Displays the filter. If the keywords count or byte were configured in the filter, the number of packets or bytes the filter processes is displayed at the end of the line.
"order 4" | Displays the QoS order of priority for the ACL entry.

Example

```
Dell#show ip accounting access-list
!
Standard Ingress IP access list test on TenGigabitEthernet 0/1
Total cam count 2
  seq 5 permit 1.1.1.0/24 count (0 packets)
  seq 10 deny 2.1.1.0/24 count (0 packets)
```

Standard IP ACL Commands

When you create an ACL without any rule and then apply it to an interface, the ACL behavior reflects an implicit permit.

The switch supports both Ingress and Egress IP ACLs.

**NOTE:** Also refer to the Commands Common to all ACL Types and Common IP ACL Commands sections.

**ip access-list standard**

Create a standard IP access list (IP ACL) to filter based on IP address.

**Syntax**

```
ip access-list standard access-list-name
```

**Parameters**

- `access-list-name`: Enter a string up to 140 characters long as the ACL name.

**Defaults**

All IP access lists contain an implicit `deny any`, that is, if no match occurs, the packet is dropped.

**Command Modes**

CONFIGURATION

**Supported Modes**

Full-Switch
permit (for Standard IP ACLs)

To permit packets from a specific source IP address to leave the switch, configure a filter.

**Syntax**

```
permit {source [mask] | any | host ip-address} [no-drop] [count [byte]] [dscp value] [order] [fragments] [log [interval minutes] [threshold-in-msgs [count]]] [monitor]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no permit {source [mask] | any | host ip-address}` command.

**Parameters**

- **source**
  Enter the IP address in dotted decimal format of the network from which the packet was sent.

- **mask**
  (OPTIONAL) Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.

- **any**
  Enter the keyword any to specify that all routes are subject to the filter.

- **host ip-address**
  Enter the keyword host then the IP address to specify a host IP address or hostname.

- **no-drop**
  Enter the keywords no-drop to match only the forwarded packets.

- **count**
  (OPTIONAL) Enter the keyword count to count packets processed by the filter.

- **bytes**
  (OPTIONAL) Enter the keyword bytes to count bytes processed by the filter.

- **dscp**
  (OPTIONAL) Enter the keyword dscp to match to the IP DCSCP values.

- **order**
  (OPTIONAL) Enter the keyword order to specify the QoS priority for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority). If you do not use the keyword order, the ACLs have the lowest order by default (255).

- **fragments**
  Enter the keyword fragments to use ACLs to control packet fragments.

- **log**
  (OPTIONAL) Enter the keyword log to enable the triggering of ACL log messages.
threshold-in msgs count

(OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the seq, permit, or deny commands. The threshold range is from 1 to 100.

interval minutes

(OPTIONAL) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. The interval range is from 1 to 10 minutes.

monitor

(OPTIONAL) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Defaults

By default, 10 ACL logs are generated if you do not specify the threshold explicitly. The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

Command History

Version Description

9.9(0.0) Introduced on the FN IOM.

9.4(0.0) Added support for flow-based monitoring on the MXL 10/40GbE Switch IO Module platforms.

9.3(0.0) Added support for logging of ACLs on the MXL 10/40GbE Switch IO Module platforms.

Usage Information

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the flow-based enable command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

Related Commands

deny — assigns an IP ACL filter to deny IP packets.

ip access-list standard — creates a standard ACL.
Assign a sequence number to a deny or permit filter in an extended IP access list while creating the filter.

**Syntax**
```
seq sequence-number {deny | permit} {source [mask] | any | host ip-address}}
[count [byte] [dscp value] [order] [fragments] [threshold-in-msgs [count]]
```

**Parameters**
- `sequence-number`: Enter a number from 0 to 4294967290. The range is from 0 to 65534.
- `deny`: Enter the keyword deny to configure a filter to drop packets meeting this condition.
- `permit`: Enter the keyword permit to configure a filter to forward packets meeting this criteria.
- `source`: Enter an IP address in dotted decimal format of the network from which the packet was received.
- `mask` *(OPTIONAL)*: Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.
- `any`: Enter the keyword any to specify that all routes are subject to the filter.
- `count` *(OPTIONAL)*: Enter the keyword count to count packets the filter processes.
- `byte` *(OPTIONAL)*: Enter the keyword byte to count bytes the filter processes.
- `dscp` *(OPTIONAL)*: Enter the keyword dscp to match to the IP DCSCP values.
- `order` *(OPTIONAL)*: Enter the keyword order to specify the QoS order for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority). If you do not use the keyword order, the ACLs have the lowest order by default (255).
- `fragments`: Enter the keyword fragments to use ACLs to control packet fragments.
- `threshold-in-msgs` *(OPTIONAL)*: Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the seq, permit, or deny commands. The threshold range is from 1 to 100.

**Defaults**
By default, 10 ACL logs are generated if you do not specify the threshold explicitly. The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

  - 8.3.16.1: Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**
The `order` option is relevant in the context of the Policy QoS feature only. The following applies:
• The `seq` `sequence-number` command is applicable only in an ACL group.
• The `order` option works across ACL groups that have been applied on an interface via the QoS policy framework.
• The `order` option takes precedence over `seq` `sequence-number`.
• If `sequence-number` is not configured, the rules with the same order value are ordered according to their configuration order.
• If `sequence-number` is configured, the sequence-number is used as a tie breaker for rules with the same order.

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the `flow-based enable` command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

**Related Commands**
- `deny` — configures a filter to drop packets.
- `permit` — configures a filter to forward packets.
- `seq` — assigns a sequence number to a deny or permit filter in an IP access list while creating the filter.

## Extended IP ACL Commands

When an ACL is created without any rule and then applied to an interface, ACL behavior reflects an implicit permit.

The following commands configure extended IP ACLs, which in addition to the IP address, also examine the packet’s protocol type.

The switch supports both Ingress and Egress IP ACLs.

**NOTE:** Also refer to the **Commands Common to all ACL Types** and **Common IP ACL Commands** sections.

### deny (for Extended IP ACLs)

Configure a filter that drops IP packets meeting the filter criteria.

**Syntax**
```
deny {ip | ip-protocol-number} {source mask | any | host ip-address} {destination mask | any | host ip-address} [count [byte]] [dscp value] [order] [monitor] [fragments] [log [interval minutes] [threshold-in msgs [count]] [monitor]
```
To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no deny {ip | ip-protocol-number} {source mask | any | host ip-address} {destination mask | any | host ip-address}` command.

**Parameters**

- `source` Enter the IP address of the network or host from which the packets were sent.
- `mask` Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.
- `any` Enter the keyword any to specify that all routes are subject to the filter.
- `host ip-address` Enter the keyword host then the IP address to specify a host IP address.
- `destination` Enter the IP address of the network or host to which the packets are sent.
- `count` (OPTIONAL) Enter the keyword count to count packets processed by the filter.
- `byte` (OPTIONAL) Enter the keyword byte to count bytes processed by the filter.
- `order` (OPTIONAL) Enter the keyword order to specify the QoS priority for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower order numbers have a higher priority) If you did not use the keyword order, the ACLs have the lowest order by default (255).
- `monitor` (OPTIONAL) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.
- `fragments` Enter the keyword fragments to use ACLs to control packet fragments.
- `log` (OPTIONAL) Enter the keyword log to enable the triggering of ACL log messages.
- `threshold-in msgs` (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the `seq`, `permit`, or `deny` commands. The threshold range is from 1 to 100.
- `interval minutes` (OPTIONAL) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. The time interval range is from 1 to 10 minutes.

**Defaults**

By default, 10 ACL logs are generated if you do not specify the threshold explicitly. The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

Related Commands
deny tcp — assigns a filter to deny TCP packets.
deny udp — assigns a filter to deny UDP packets.
ip access-list extended — creates an extended ACL.

deny icmp

To drop all or specific internet control message protocol (ICMP) messages, configure a filter.

Syntax
deny icmp {source mask | any | host ip-address} {destination mask | any | host ip-address} [dscp] [count [byte]] [order] [fragments][threshold-in-msgs] [count]]

To remove this filter, you have two choices:

- Use the no seq sequence-number command, if you know the filter’s sequence number.
- Use the no deny icmp {source mask | any | host ip-address} {destination mask | any | host ip-address} command.

Parameters

source Enter the IP address of the network or host from which the packets were sent.
mask Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.
any Enter the keyword any to specify that all routes are subject to the filter.
host ip-address Enter the keyword host then the IP address to specify a host IP address.
destination Enter the IP address of the network or host to which the packets are sent.
dscp Enter this keyword dscp to deny a packet based on the DSCP value. The range is from 0 to 63.
count (OPTIONAL) Enter the keyword count to count packets processed by the filter.
byte (OPTIONAL) Enter the keyword byte to count bytes processed by the filter.
order (OPTIONAL) Enter the keyword order to specify the QoS priority for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower order numbers have a higher priority) If you did not use the keyword order, the ACLs have the lowest order by default (255).

fragments Enter the keyword fragments to use ACLs to control packet fragments.

threshold-in msgs count (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the seq, permit, or deny commands. The threshold range is from 1 to 100.

Defaults By default, 10 ACL logs are generated if you do not specify the threshold explicitly. The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

Usage Information

The order option is relevant in the context of the Policy GoS feature only. For more information, refer to the Quality of Service chapter of the Dell Networking OS Configuration Guide.

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the flow-based enable command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).
deny tcp

Configure a filter that drops transmission control protocol (TCP) packets meeting the filter criteria.

Syntax

```
deny tcp {source mask | any | host ip-address} [bit] [operator port [port]]
{destination mask | any | host ip-address} [dscp] [bit] [operator port [port]]
[count [byte] [order] [fragments] [threshold-in-msgs [count]]
```

To remove this filter, you have two choices:

- Use the no seq sequence-number command if you know the filter’s sequence number.
- Use the no deny tcp {source mask | any | host ip-address} {destination mask | any | host ip-address} command.

Parameters

- **source**
Enter the IP address of the network or host from which the packets are sent.

- **mask**
Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.

- **any**
Enter the keyword any to specify that all routes are subject to the filter.

- **host ip-address**
Enter the keyword host then the IP address to specify a host IP address.

- **dscp**
Enter this keyword dscp to deny a packet based on the DSCP value. The range is from 0 to 63.

- **bit**
Enter a flag or combination of bits:
  - `ack`: acknowledgement field
  - `fin`: finish (no more data from the user)
  - `psh`: push function
  - `rst`: reset the connection
  - `syn`: synchronize sequence numbers
  - `urg`: urgent field

- **operator**
  (OPTIONAL) Enter one of the following logical operand:
  - `eq = equal to`
  - `neq = not equal to`
  - `gt = greater than`
  - `lt = less than`
  - `range = inclusive range of ports (you must specify two ports for the port command)`

- **port port**
Enter the application layer port number. Enter two port numbers if using the range logical operand. The range is from 0 to 65535.

The following list includes some common TCP port numbers:

- `23 = Telnet`
- `20 and 21 = FTP`
- `25 = SMTP`
destination
Enter the IP address of the network or host to which the packets are sent.

mask
Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in
A.B.C.D format, may be either contiguous or non-contiguous.

count
(OPTIONAL) Enter the keyword count to count packets the filter processes.

byte
(OPTIONAL) Enter the keyword byte to count bytes the filter processes.

order
(OPTIONAL) Enter the keyword order to specify the QoS priority for the ACL entry.
The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-
order numbers have a higher priority) If you did not use the keyword order, the ACLs
have the lowest order by default (255).

fragments
Enter the keyword fragments to use ACLs to control packet fragments.

threshold-in-msgs
count
(OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate
the maximum number of ACL logs that can be generated, exceeding which the generation
of ACL logs is terminated with the seq, permit, or deny commands. The threshold
range is from 1 to 100.

Defaults
By default, 10 ACL logs are generated if you do not specify the threshold explicitly.
The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not
enabled.

Version Description
9.9(0.0) Introduced on the FN IOM.
9.4(0.0) Added the support for flow-based monitoring on the MXL 10/40GbE Switch IO Module
platforms.
9.3(0.0) Added the support for logging of ACLs on the MXL 10/40GbE Switch IO Module
platforms.
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
The order option is relevant in the context of the Policy QoS feature only. For more information, refer to the
Quality of Service chapter of the Dell Networking OS Configuration Guide.

You can configure either count (packets) or count (bytes). However, for an ACL with multiple rules, you can
configure some ACLs with count (packets) and others as count (bytes) at any given time.

Most ACL rules require one entry in the CAM. However, rules with TCP and UDP port operators (for example, gt,
lt, or range) may require more than one entry. The range of ports is configured in the CAM based on bit mask
boundaries; the space required depends on exactly what ports are included in the range.

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which
ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet
count for that new interval commences from zero. If ACL logging was stopped previously because the configured
threshold is exceeded, it is re-enabled for this new interval.
If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the `flow-based enable` command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

### Example

An ACL rule with a TCP port range of 4000–8000 uses eight entries in the CAM.

```
Dell# Data             Mask        From To  #Covered
1 0000111111010000   1111111111000000  4000  4031 32
2 0000111111000000   1111111111000000  4032  4095 64
3 0001000000000000   1111110000000000  4096  6143 2048
4 0001100000000000   1111100000000000  6144  7167 1024
5 0001110000000000   1111110000000000  7168  7679 512
6 0001111000000000   1111111000000000  7680  7935 256
7 0001111100000000   1111111100000000  7936  7999 64
8 0001111101000000   1111111111000000  8000  8000  1
Total Ports: 4001
```

### Example

An ACL rule with a TCP port lt 1023 uses only one entry in the CAM.

```
Dell# Data              Mask        From To   #Covered
1 0000000000000000   1111110000000000  0    1023 1024
Total Ports: 1024
```

### Related Commands

- `deny` — assigns a filter to deny IP traffic.
- `deny udp` — assigns a filter to deny UDP traffic.

### deny udp

To drop user datagram protocol (UDP) packets meeting the filter criteria, configure a filter.

**Syntax**

```
deny udp {source mask | any | host ip-address} [destination mask | any | host ip-address] [operator port [port]] [dscp] [threshold-in-msgs [count]] [order] [fragments] [count] [byte] [threshold-in-msgs [count]]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter's sequence number.
- Use the `no deny udp {source mask | any | host ip-address} {destination mask | any | host ip-address}` command.

**Parameters**

- `source` Enter the IP address of the network or host from which the packets were sent.

Usage Information

The `order` option is relevant in the context of the Policy GoS feature only. For more information, refer to the Quality of Service chapter of the Dell Networking OS Configuration Guide.

You can configure either count (packets) or count (bytes). However, for an ACL with multiple rules, you can configure some ACLs with count (packets) and others as count (bytes) at any given time.

Most ACL rules require one entry in the CAM. However, rules with TCP and UDP port operators (for example, gt, lt or range) may require more than one entry. The range of ports is configured in the CAM based on bit mask boundaries; the space required depends on exactly what ports are included in the range.

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

Example

An ACL rule with a TCP port range of 4000–8000 uses eight entries in the CAM.

Related Commands

- `deny` — assigns a filter to deny IP traffic.
- `deny tcp` — assigns a filter to deny TCP traffic.

**ip access-list extended**

Name (or select) an extended IP access list (IP ACL) based on IP addresses or protocols.

**Syntax**

```
ip access-list extended access-list-name
```

To delete an access list, use the `no ip access-list extended access-list-name` command.
Parameters  

access-list-name Enter a string up to 140 characters long as the access list name.

Defaults  

All access lists contain an implicit deny any; that is, if no match occurs, the packet is dropped.

Command Modes  

CONFIGURATION

Supported Modes  

Full-Switch

Command History  

Version Description
9.9(0.0) Introduced on the FN IOM.
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information  

The number of entries allowed per ACL is hardware-dependent. For detailed specification on entries allowed per ACL, refer to your line card documentation.

Example  

Dell(conf)#ip access-list extended TESTListEXTEND
Dell(config-ext-nacl)#

Related Commands  

ip access-list standard — configures a standard IP access list.
resequence access-list — Displays the current configuration.

permit (for Extended IP ACLs)

To pass IP packets meeting the filter criteria, configure a filter.

Syntax  

permit {source mask | any | host ip-address} (destination mask | any | host ip-address) [count [bytes]] [dscp value] [order] [fragments] [log [interval minutes] [threshold-in-msgs [count]] [monitor]

To remove this filter, you have two choices:
• Use the no seq sequence-number command if you know the filter’s sequence number.
• Use the no deny {source mask | any | host ip-address} (destination mask | any | host ip-address) command.

Parameters  

source Enter the IP address in dotted decimal format of the network from which the packet was sent.

mask (OPTIONAL) Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.

any Enter the keyword any to specify that all routes are subject to the filter.

host ip-address Enter the keyword host then the IP address to specify a host IP address or hostname.

count (OPTIONAL) Enter the keyword count to count packets processed by the filter.

bytes (OPTIONAL) Enter the keyword bytes to count bytes processed by the filter.

dscp (OPTIONAL) Enter the keyword dscp to match to the IP DCSCP values.

order (OPTIONAL) Enter the keyword order to specify the QoS priority for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order
numbers have a higher priority). If you do not use the keyword order, the ACLs have the lowest order by default (255).

```
fragments
log
threshold-in msgs count
interval minutes
monitor
```

Enter the keyword fragments to use ACLs to control packet fragments.

(OPTIONAL) Enter the keyword log to enable the triggering of ACL log messages.

(OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the seq, permit, or deny commands. The threshold range is from 1 to 100.

(OPTIONAL) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. The interval range is from 1 to 10 minutes.

(OPTIONAL) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

**Defaults**

By default, 10 ACL logs are generated if you do not specify the threshold explicitly. The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

**Command Modes**

**Usage Information**

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the flow-based enable command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

**Related Commands**

- **ip access-list extended** — creates an extended ACL.
- **permit tcp** — assigns a permit filter for TCP packets.
permit udp — assigns a permit filter for UDP packets.

permit icmp

Configure a filter to allow all or specific ICMP messages.

Syntax

`permit icmp {source mask | any | host ip-address} {destination mask | any | host ip-address} [dscp] [message-type] [count [byte]] [order] [fragments] [threshold-in-msgs [count]]`

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no permit icmp {source mask | any | host ip-address} {destination mask | any | host ip-address}` command.

Parameters

- **source**: Enter the IP address of the network or host from which the packets were sent.
- **mask**: Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or noncontiguous.
- **any**: Enter the keyword `any` to match and drop specific Ethernet traffic on the interface.
- **host ip-address**: Enter the keyword `host` and then enter the IP address to specify a host IP address.
- **destination**: Enter the IP address of the network or host to which the packets are sent.
- **dscp**: Enter the keyword `dscp` to deny a packet based on the DSCP value. The range is 0 to 63.
- **message-type**: (OPTIONAL) Enter an ICMP message type, either with the type (and code, if necessary) numbers or with the name of the message type. The range is 0 to 255 for ICMP type and 0 to 255 for ICMP code.
- **count**: (OPTIONAL) Enter the keyword `count` to count packets the filter processes.
- **byte**: (OPTIONAL) Enter the keyword `byte` to count bytes the filter processes.
- **order**: (OPTIONAL) Enter the keyword `order` to specify the QoS priority for the ACL entry. The range is 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority). If you do not use the keyword `order`, the ACLs have the lowest order by default (255).
- **fragments**: Enter the keyword `fragments` to use ACLs to control packet fragments.
- **threshold-in msgs count**: (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the `seq`, `permit`, or `deny` commands. The threshold range is from 1 to 100.

Defaults

By default, 10 ACL logs are generated if you do not specify the threshold explicitly. The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

Usage Information

The `order` option is relevant in the context of the Policy QoS feature only. For more information, refer to the Quality of Service chapter of the Dell Networking OS Configuration Guide.

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the `flow-based enable` command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

**permit tcp**

To pass TCP packets meeting the filter criteria, configure a filter.

**Syntax**

```plaintext
permit tcp {source mask | any} [bit] [operator port [port]]
{destination mask | any} [bit] [dscp] [operator port [port]]
[count [byte]] [order] [fragments] [log [interval minutes] [threshold-in-msgs
[count]] [monitor]
```

**Parameters**

- `source` Enter the IP address of the network or host from which the packets were sent.
- `mask` Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.
- `any` Enter the keyword `any` to specify that all routes are subject to the filter.

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no permit tcp {source mask | any} [bit] [operator port [port]]
{destination mask | any} [bit] [dscp] [operator port [port]]
[count [byte]] [order] [fragments] [log [interval minutes] [threshold-in-msgs [count]] [monitor] command.

Dell EMC Networking OS Configuration Guide
**host ip-address**  
Enter the keyword `host` then the IP address to specify a host IP address.

**bit**  
Enter a flag or combination of bits:

- `ack`: acknowledgement field
- `fin`: finish (no more data from the user)
- `psh`: push function
- `rst`: reset the connection
- `syn`: synchronize sequence numbers
- `urg`: urgent field

**dscp**  
Enter the keyword `dscp` to deny a packet based on the DSCP value. The range is from 0 to 63.

**operator**  
(OPTIONAL) Enter one of the following logical operand:

- `eq`: equal to
- `neq`: not equal to
- `gt`: greater than
- `lt`: less than
- `range`: inclusive range of ports (you must specify two ports for the port parameter)

**port port**  
Enter the application layer port number. Enter two port numbers if you are using the range logical operand. The range is from 0 to 65535.

The following list includes some common TCP port numbers:

- `23` = Telnet
- `20` and `21` = FTP
- `25` = SMTP
- `169` = SNMP

**destination**  
Enter the IP address of the network or host to which the packets are sent.

**mask**  
Enter a network mask in `/prefix` format (`/x`) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.

**count**  
(OPTIONAL) Enter the keyword `count` to count packets the filter processes.

**byte**  
(OPTIONAL) Enter the keyword `byte` to count bytes the filter processes.

**order**  
(OPTIONAL) Enter the keyword `order` to specify the QoS priority for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority). If you do not use the keyword `order`, the ACLs have the lowest order by default (255).

**fragments**  
Enter the keyword `fragments` to use ACLs to control packet fragments.

**log**  
(OPTIONAL) Enter the keyword `log` to enable the triggering of ACL log messages.

**threshold-in msgs**

**count**  
(OPTIONAL) Enter the `threshold-in-msgs` keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the `seq`, `permit`, or deny commands. The threshold range is from 1 to 100.

**interval minutes**  
(OPTIONAL) Enter the keyword `interval` followed by the time period in minutes at which ACL logs must be generated. The threshold range is from 1 to 10 minutes.
(OPTIONAL) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Defaults

By default, 10 ACL logs are generated if you do not specify the threshold explicitly. The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

Version Description

9.9(0.0) Introduced on the FN IOM.
9.4(0.0) Added support for flow-based monitoring on the MXL 10/40GbE Switch IO Module platform.
9.3(0.0) Added support for logging of ACLs on the MXL 10/40GbE Switch IO Module platform.
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module platform.

Usage Information

The order option is relevant in the context of the Policy GoS feature only. For more information, refer to the “Quality of Service” chapter of the Dell Networking OS Configuration Guide.

The switch cannot count both packets and bytes, so when you enter the count byte options, only bytes are incremented.

Most ACL rules require one entry in the CAM. However, rules with TCP and UDP port operators (for example, gt, lt, or range) may require more than one entry. The range of ports is configured in the CAM based on bit mask boundaries; the space required depends on exactly what ports are included in the range.

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the flow-based enable command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

An ACL rule with a TCP port range of 4000–8000 uses eight entries in the CAM.

Related Commands

- `ip access-list extended` — creates an extended ACL.
- `permit` — assigns a permit filter for IP packets.
- `permit udp` — assigns a permit filter for UDP packets.

**permit udp**

To pass UDP packets meeting the filter criteria, configure a filter.

**Syntax**

```
permit udp {source mask | any | host ip-address} [operator port [port]]
{destination mask | any | host ip-address} [dscp] [operator port [port]] [count [byte]] [order] [fragments] [threshold-in-msgs [count]]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no permit udp {source mask | any | host ip-address} {destination mask | any | host ip-ip-address} command.

**Parameters**

- `source` Enter the IP address of the network or host from which the packets were sent.
- `mask` Enter a network mask in `/prefix` format (`/x`) or `A.B.C.D`. The mask, when specified in `A.B.C.D` format, may be either contiguous or non-contiguous.
- `any` Enter the keyword `any` to specify that all routes are subject to the filter.
- `host ip-address` Enter the keyword `host` and then enter the IP address to specify a host IP address.
- `dscp` Enter the keyword `dscp` to deny a packet based on the DSCP value. The range is from 0 to 63.
- `operator` (OPTIONAL) Enter one of the following logical operand:
  - `eq = equal to`
  - `neq = not equal to`
  - `gt = greater than`
  - `lt = less than`
  - `range = inclusive range of ports (you must specify two ports for the port parameter)`
**port**

Enter the application layer port number. Enter two port numbers if you are using the `range` logical operand. The range is 0 to 65535.

**destination**

Enter the IP address of the network or host to which the packets are sent.

**count**

(OPTIONAL) Enter the keyword `count` to count packets processed by the filter.

**byte**

(OPTIONAL) Enter the keyword `byte` to count bytes processed by the filter.

**order**

(OPTIONAL) Enter the keyword `order` to specify the QoS priority for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority). If you do not use the keyword `order`, the ACLs have the lowest order by default (255).

**fragments**

Enter the keyword `fragments` to use ACLs to control packet fragments.

**threshold-in msgs count**

(OPTIONAL) Enter the `threshold-in-msgs` keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the `seq`, `permit`, or `deny` commands. The threshold range is from 1 to 100.

**Defaults**

By default, 10 ACL logs are generated if you do not specify the threshold explicitly. The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

**Usage Information**

The `order` option is relevant in the context of the Policy QoS feature only. For more information, refer to the “Quality of Service” chapter of the Dell Operating System Configuration Guide.

You can configure either count (packets) or count (bytes). However, for an ACL with multiple rules, you can configure some ACLs with count (packets) and others as count (bytes) at any given time.

Most ACL rules require one entry in the CAM. However, rules with TCP and UDP port operators (for example, `gt`, `lt`, or `range`) may require more than one entry. The range of ports is configured in the CAM based on bit mask boundaries; the space required depends on exactly what ports are included in the range.

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the `flow-based enable` command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both
the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

Example

An ACL rule with a TCP port range of 4000–8000 uses eight entries in the CAM.

Related Commands

- **ip access-list extended** — creates an extended ACL.
- **permit** — assigns a permit filter for IP packets.
- **permit tcp** — assigns a permit filter for TCP packets.

**seq**

Assign a sequence number to a deny or permit filter in an extended IP access list while creating the filter.

**Syntax**

```
seq sequence-number {deny | permit} {ip-protocol-number | icmp | ip | tcp | udp} \{source mask | any | host ip-address\} \{destination mask | any | host ip-address\} [operator port \{port\}] [count [byte]] [dscp value] [order] [fragments] [log [interval minutes] [threshold-in-msgs [count]] [monitor]
```

**Parameters**

- **sequence-number**
  - Enter a number from 0 to 4294967290. The range is from 1 to 65534.
- **deny**
  - Enter the keyword deny to configure a filter to drop packets meeting this condition.
- **permit**
  - Enter the keyword permit to configure a filter to forward packets meeting this criteria.
- **ip-protocol-number**
  - Enter a number from 0 to 255 to filter based on the protocol identified in the IP protocol header.
- **icmp**
  - Enter the keyword icmp to configure an ICMP access list filter.
- **ip**
  - Enter the keyword ip to configure a generic IP access list. The keyword ip specifies that the access list permits all IP protocols.
tcp
Enter the keyword `tcp` to configure a TCP access list filter.

udp
Enter the keyword `udp` to configure a UDP access list filter.

source
Enter an IP address in dotted decimal format of the network from which the packet was received.

mask
(OPTIONAL) Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.

any
Enter the keyword `any` to specify that all routes are subject to the filter.

host ip-address
Enter the keyword `host` and then enter the IP address to specify a host IP address or hostname.

operator
(OPTIONAL) Enter one of the following logical operands:
- `eq` = equal to
- `neq` = not equal to
- `gt` = greater than
- `lt` = less than
- `range` = inclusive range of ports (you must specify two ports for the `port` parameter.)

port port
(OPTIONAL) Enter the application layer port number. Enter two port numbers if you are using the range logical operand. The range is from 0 to 65535.

The following list includes some common TCP port numbers:
- 23 = Telnet
- 20 and 21 = FTP
- 25 = SMTP
- 169 = SNMP

destination
Enter the IP address of the network or host to which the packets are sent.

count
(OPTIONAL) Enter the keyword `count` to count packets the filter processes.

byte
(OPTIONAL) Enter the keyword `byte` to count bytes the filter processes.

dscp
(OPTIONAL) Enter the keyword `dscp` to match to the IP DSCP values.

order
(OPTIONAL) Enter the keyword `order` to specify the QoS order for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority). If you do not use the keyword `order`, the ACLs have the lowest order by default (255).

fragments
Enter the keyword `fragments` to use ACLs to control packet fragments.

log
(OPTIONAL) Enter the keyword `log` to enable the triggering of ACL log messages.

threshold-in msgs
(OPTIONAL) Enter the `threshold-in-msgs` keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the `seq`, `permit`, or `deny` commands. The threshold range is from 1 to 100.

interval minutes
(OPTIONAL) Enter the keyword `interval` followed by the time period in minutes at which the ACL logs must be generated. The interval range is from 1 to 10 minutes.
monitor (OPTIONAL) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Defaults
By default 10 ACL logs are generated if you do not specify the threshold explicitly. The default frequency at which the ACL logs are generated is five minutes. By default, the flow-based monitoring is not enabled.

Command Modes
CONFIGURATION-IP ACCESS-LIST-EXTENDED

Supported Modes
Full-Switch

Command History

Version Description
9.9(0.0) Introduced on the FN IOM.
9.4(0.0) Added support for the flow-based monitoring on the MXL 10/40GbE Switch IO Module.
9.3(0.0) Added support for logging of ACLs on the MXL 10/40GbE Switch IO Module.
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
The order option is relevant in the context of the Policy QoS feature only. The following applies:

• The seq sequence-number command is applicable only in an ACL group.
• The order option works across ACL groups that have been applied on an interface via the QoS policy framework.
• The order option takes precedence over seq sequence-number.
• If sequence-number is not configured, the rules with the same order value are ordered according to their configuration order.
• If sequence-number is configured, the sequence-number is used as a tie breaker for rules with the same order.

If you configure the sequence-number, the sequence-number is used as a tie breaker for rules with the same order.

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the flow-based enable command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

Related Commands
deny — Configures a filter to drop packets.
permit — Configures a filter to forward packets.

Common MAC Access List Commands

The following commands are available within both MAC ACL modes (Standard and Extended) and do not have mode-specific options. These commands allow you to clear, display, and assign MAC ACL configurations. The MAC ACL can be applied on Physical, Port-channel and VLAN interfaces. As per the stipulated rules in the ACL, the traffic on the Interface/VLAN members or Port-channel members will be permitted or denied.

The switch supports both Ingress and Egress MAC ACLs.

clear counters mac access-group

Clear counters for all or a specific MAC ACL.

Syntax

clear counters mac access-group [mac-list-name]

Parameters

mac-list-name  (OPTIONAL) Enter the name of a configured MAC access list.

Command Modes

EXEC Privilege

Supported Modes

Full-Switch

Command History

Version  Description
9.9(0.0)     Introduced on the FN IOM.
8.3.16.1     Introduced on the MXL 10/40GbE Switch IO Module.

mac access-group

Apply a MAC ACL to traffic entering or exiting an interface. Enter into the Interface mode and apply the MAC ACL in the following manner.

Syntax

mac access-group access-list-name {in [vlan vlan-range] | out}

To delete a MAC access-group, use the no mac access-group mac-list-name command.

Parameters

access-list-name  Enter the name of a configured MAC access list, up to 140 characters.

vlan vlan-range  (OPTIONAL) Enter the keyword vlan and then enter a range of VLANs. The range is from 1 to 4094 (you can use IDs 1 to 4094).

in  Enter the keyword in to configure the ACL to filter incoming traffic.

out  Enter the keyword out to configure the ACL to filter outgoing traffic.

Defaults

none

Command Modes

INTERFACE

NOTE: This option is available only with the keyword in option.
show mac access-lists

Display all of the Layer 2 ACLs configured in the system, whether or not they are applied to an interface, and the count of matches/mismatches against each ACL entry displayed.

Syntax

```
show mac access-lists [access-list-name] [interface interface] [in | out]
```

Parameters

- **access-list-name**
  - Enter the name of a configured MAC ACL, up to 140 characters.
- **interface interface**
  - Enter the keyword `interface` then the one of the following keywords and slot/port or number information:
    - For a Port Channel interface, enter the keywords `port-channel` and then enter a number. The range is from 1 to 128.
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` and then enter the slot/port information.
    - For a VLAN interface enter the keyword `VLAN` and then the `vlan id`.
- **in | out**
  - Identify whether ACL is applied on ingress or egress side.

Command Modes

- EXEC Privilege

Supported Modes

- Full-Switch

show mac accounting access-list

Display MAC access list configurations and counters (if configured).

**Syntax**
```
show mac accounting access-list access-list-name interface interface in | out
```

**Parameters**
- `access-list-name`: Enter the name of a configured MAC ACL, up to 140 characters.
- `interface`: Enter the keyword `interface` then the one of the following keywords and slot/port or number information:
  - For a Port Channel interface, enter the keywords `port-channel` and then enter a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` and then enter the slot/port information.
  - For a VLAN interface enter the keyword `VLAN` and then the `vlan id`
- `in | out`: Identify whether ACL is applied on ingress or egress side.

</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**
The ACL hit counters in this command increment the counters for each matching rule, not just the first matching rule.

**Example**
```
Dell# show mac accounting access-list TestMac interface tengigabitethernet 0/1 in
Ingress Standard mac access-list TestMac on TenGigabitEthernet 0/1
Total cam count 2
seq 5 permit aa:aa:aa:aa:00:00 00:00:00:00:ff:ff count (0 packets)
seq 10 deny any count (20072594 packets)
Dell#
```

**Standard MAC ACL Commands**

When you create an access control list without any rule and then apply it to an interface, the ACL behavior reflects implicit permit. These commands configure standard MAC ACLs.

The switch supports both Ingress and Egress MAC ACLs.
To drop packets that match the filter criteria, configure a filter.

**Syntax**

```
deny {any | host mac-address | mac-source-address mac-source-address-mask} {any | host mac-address | mac-destination-address mac-destination-address-mask} [ethertype-operator] [count [byte]]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter's sequence number.
- Use the `no deny {any | host mac-address | mac-source-address mac-source-address-mask} {any | host mac-address | mac-destination-address mac-destination-address-mask}` command.

**Parameters**

- **any**
  - Enter the keyword `any` to drop all packets.

- **host mac-address**
  - Enter the keyword `host` and then enter a MAC address to drop packets with that host address.

- **mac-source-address**

- **mac-source-address-mask**
  - Specify which bits in the MAC address must match.

  The MAC ACL supports an inverse mask; therefore, a mask of `ff:ff:ff:ff:ff:ff` allows entries that do not match and a mask of `00:00:00:00:00:00` only allows entries that match exactly.

- **mac-destination-address**
  - Enter the destination MAC address and mask in `nn:nn:nn:nn:nn:nn` format.

- **mac-destination-address-mask**
  - Specify which bits in the MAC address must match.

  The MAC ACL supports an inverse mask; therefore, a mask of `ff:ff:ff:ff:ff:ff` allows entries that do not match and a mask of `00:00:00:00:00:00` only allows entries that match exactly.

- **ethertype operator**
  - *(OPTIONAL)* To filter based on protocol type, enter one of the following Ethertypes:
    - `ev2` - is the Ethernet II frame format
    - `llc` - is the IEEE 802.3 frame format
    - `snap` - is the IEEE 802.3 SNAP frame format

- **count**
  - *(OPTIONAL)* Enter the keyword `count` to count packets processed by the filter.

- **byte**
  - *(OPTIONAL)* Enter the keyword `byte` to count bytes processed by the filter.

**Defaults**

- Not configured.

**Command Modes**

- `CONFIGURATION-MAC ACCESS LIST-EXTENDED`

**Supported Modes**

- Full-Switch
deny

To drop packets with a the MAC address specified, configure a filter.

Syntax

deny {any | mac-source-address [mac-source-address-mask]} [count [byte]] [log [interval minutes] [threshold-in-msgs [count]] [monitor]

To remove this filter, you have two choices:

- Use the no seq sequence-number command if you know the filter's sequence number.
- Use the no deny {any | mac-source-address mac-source-address-mask} command.

Parameters

- **any**
  
  Enter the keyword any to specify that all routes are subject to the filter.

- **mac-source-address**
  

- **mac-source-address-mask**
  
  (OPTIONAL) Specify which bits in the MAC address must match. If no mask is specified, a mask of 00:00:00:00:00:00 is applied (in other words, the filter allows only MAC addresses that match).

- **count**
  
  (OPTIONAL) Enter the keyword count to count packets processed by the filter.

- **byte**
  
  (OPTIONAL) Enter the keyword byte to count bytes processed by the filter.

- **log**
  
  (OPTIONAL) Enter the keyword log to enable the triggering of ACL log messages.

- **threshold-in-msgs**
  
  (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated. with the seq, permit, or deny commands. The threshold range is from 1 to 100.

- **interval minutes**
  
  (OPTIONAL) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. The threshold range is from 1 to 10 minutes.

- **monitor**
  
  (OPTIONAL) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Defaults

By default, 10 ACL logs are generated if you do not specify the threshold explicitly. The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

```

Related Commands

- `mac access-list standard` — configures a standard MAC access list.
- `show mac accounting access-list` — displays MAC access list configurations and counters (if configured).

**permit**

To forward packets from a specific source MAC address, configure a filter.

**Syntax**

```plaintext
permit {any | mac-source-address [mac-source-address-mask]} [count [byte]] | log [interval minutes] [threshold-in-msgs[count] [monitor]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no permit {any | mac-source-address mac-source-address-mask}` command.

**Parameters**

- `any` Enter the keyword `any` to forward all packets received with a MAC address.
- `mac-source-address-mask` (OPTIONAL) Specify which bits in the MAC address must match. If no mask is specified, a mask of 00:00:00:00:00:00 is applied (in other words, the filter allows only MAC addresses that match).
- `count` (OPTIONAL) Enter the keyword `count` to count packets processed by the filter.
- `byte` (OPTIONAL) Enter the keyword `byte` to count bytes processed by the filter.
- `log` (OPTIONAL) Enter the keyword `log` to enable the triggering of ACL log messages.
- `threshold-in-msgs count` (OPTIONAL) Enter the `threshold-in-msgs` keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the `seq`, `permit`, or `deny` commands. The threshold range is from 1 to 100.
- `interval minutes` (OPTIONAL) Enter the keyword `interval` followed by the time period in minutes at which ACL logs must be generated. The interval range is from 1 to 10 minutes.
monitor

(Optional) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Defaults

Not configured.

It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

Related Commands

deny — configures a MAC ACL filter to drop packets.

seq — configure a MAC ACL filter with a specified sequence number.

seq

To a deny or permit filter in a MAC access list while creating the filter, assign a sequence number.

Syntax

```
seq sequence-number {deny | permit} {any | mac-source-address [mac-source-address-mask]} [count [byte]] [log [interval minutes] [threshold-in msgs [count]] [monitor]
```

To remove this filter, use the no seq sequence-number command.
Parameters

- **sequence-number**: Enter a number from 0 to 65535.
- **deny**: Enter the keyword deny to configure a filter to drop packets meeting this condition.
- **permit**: Enter the keyword permit to configure a filter to forward packets meeting this criteria.
- **any**: Enter the keyword any to filter all packets.
- **mac-source-address**: Enter a MAC address in nn:nn:nn:nn:nn:nn format.
- **mac-source-address-mask**: (OPTIONAL) Specify which bits in the MAC address must match. If no mask is specified, a mask of 00:00:00:00:00:00 is applied (in other words, the filter allows only MAC addresses that match).
- **count**: (OPTIONAL) Enter the keyword count to count packets the filter processes.
- **byte**: (OPTIONAL) Enter the keyword byte to count bytes the filter processes.
- **log**: (OPTIONAL) Enter the keyword log to enable the triggering of ACL log messages.
- **threshold-in-msgs**: (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the seq, permit, or deny commands. The threshold range is from 1 to 100.
- **interval minutes**: (OPTIONAL) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. The interval range is from 1 to 10 minutes.
- **monitor**: (OPTIONAL) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Defaults

By default, 10 ACL logs are generated if you do not specify the threshold explicitly. The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

</tr>
<tr>
<td>8.3(16.1)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.
You can activate flow-based monitoring for a monitoring session by entering the `flow-based enable` command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

**Related Commands**

- `deny` — configures a filter to drop packets.
- `permit` — configures a filter to forward packets.

### Extended MAC ACL Commands

When an access-list is created without any rule and then applied to an interface, ACL behavior reflects implicit permit. The following commands configure Extended MAC ACLs.

The Switch supports both Ingress and Egress MAC ACLs.

#### `mac access-list standard`

To configure a standard MAC ACL, name a new or existing MAC access control list (MAC ACL) and enter MAC ACCESS LIST mode.

**Syntax**

```
mac access-list standard mac-list-name
```

**Parameters**

- `mac-list-name` Enter a text string as the name of the standard MAC access list (140 character maximum).

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

The Dell operating system supports one ingress and one egress MAC ACL per interface.

The number of entries allowed per ACL is hardware-dependent. For detailed specification about entries allowed per ACL, refer to your switch documentation.

The switch supports both ingress and egress ACLs.

**Example**

```
Dell(conf)#mac-access-list access-list standard TestMAC
Dell(config-std-macl)#permit 00:00:00:00:00:00 00:00:00:00:ff:ff count
Dell(config-std-macl)#deny any count
```
permit

To pass packets matching the criteria specified, configure a filter.

**Syntax**

```
permit {any | host mac-address | mac-source-address mac-source-address-mask}
{any | host mac-address | mac-destination-address mac-destination-address-mask}
[ethertype operator] [count [byte]]
```

To remove this filter, you have two choices:

- Use the no seq sequence-number command if you know the filter’s sequence number.
- Use the no permit {any | host mac-address | mac-source-address mac-source-address-mask} {any | mac-destination-address mac-destination-address-mask} command.

**Parameters**

- **any**
  - Enter the keyword any to forward all packets.
- **host**
  - Enter the keyword host then a MAC address to forward packets with that host address.
- **mac-source-address**
- **mac-source-address-mask**
  - (OPTIONAL) Specify which bits in the MAC address must match.
  - The MAC ACL supports an inverse mask; therefore, a mask of ff:ff:ff:ff:ff:ff allows entries that do not match and a mask of 00:00:00:00:00:00 only allows entries that match exactly.
- **mac-destination-address**
  - Enter the destination MAC address and mask in nn:nn:nn:nn:nn:nn format.
- **mac-destination-address-mask**
  - Specify which bits in the MAC address must be matched.
  - The MAC ACL supports an inverse mask; therefore, a mask of ff:ff:ff:ff:ff:ff allows entries that do not match and a mask of 00:00:00:00:00:00 only allows entries that match exactly.
- **ethertype operator**
  - (OPTIONAL) To filter based on protocol type, enter one of the following Ethertypes:
    - `ev2` - is the Ethernet II frame format
    - `llc` - is the IEEE 802.3 frame format
    - `snap` - is the IEEE 802.3 SNAP frame format
- **count**
  - (OPTIONAL) Enter the keyword count to count packets the filter processes.
- **byte**
  - (OPTIONAL) Enter the keyword byte to count bytes the filter processes.

**Defaults**

Not configured.

**Command Modes**

- CONFIGURATION-MAC ACCESS LIST-EXTENDED

**Supported Modes**

- Full-Switch

Version Description
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands
deny — configures a MAC ACL filter to drop packets.
seq — configure a MAC ACL filter with a specified sequence number.

seq

Configure a filter with a specific sequence number.

Syntax
seq sequence-number {deny | permit} {any | host mac-address | mac-source-address mac-source-address-mask} {any | host mac-address | mac-destination-address mac-destination-address-mask} [ethertype operator] [count [byte]]

Parameters
- sequence-number: Enter a number as the filter sequence number. The range is from zero (0) to 65535.
- deny: Enter the keyword deny to drop any traffic matching this filter.
- permit: Enter the keyword permit to forward any traffic matching this filter.
- any: Enter the keyword any to filter all packets.
- host mac-address: Enter the keyword host and then enter a MAC address to filter packets with that host address.
  The MAC ACL supports an inverse mask; therefore, a mask of ff:ff:ff:ff:ff:ff allows entries that do not match and a mask of 00:00:00:00:00:00 only allows entries that match exactly.
- mac-source-address-mask: Specify which bits in the MAC address must be matched.
- mac-destination-address-mask: Specify which bits in the MAC address must be matched.
  The MAC ACL supports an inverse mask; therefore, a mask of ff:ff:ff:ff:ff:ff allows entries that do not match and a mask of 00:00:00:00:00:00 only allows entries that match exactly.
- ethertype operator: (OPTIONAL) To filter based on protocol type, enter one of the following Ethertypes:
  - ev2 - is the Ethernet II frame format.
  - llc - is the IEEE 802.3 frame format.
  - snap - is the IEEE 802.3 SNAP frame format.
- count: (OPTIONAL) Enter the keyword count to count packets the filter processes.
- byte: (OPTIONAL) Enter the keyword byte to count bytes the filter processes.

Defaults
Not configured.
IP Prefix List Commands

When you create an access-list without any rule and then apply it to an interface, the ACL behavior reflects implicit permit. To configure or enable IP prefix lists, use these commands.

clear ip prefix-list

Reset the number of times traffic meets the conditions ("hit" counters) of the configured prefix lists.

Syntax

```
clear ip prefix-list [prefix-name]
```

Parameters

- **prefix-name** (OPTIONAL) Enter the name of the configured prefix list to clear only counters for that prefix list, up to 140 characters long.

Defaults

Clears "hit" counters for all prefix lists unless a prefix list is specified.

Command Modes

EXEC Privilege

Supported Modes

Full-Switch

Command History

Version | Description
--------|----------------
9.9(0.0) | Introduced on the FN IOM.
8.3.16.1 | Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands

- **ip prefix-list** — configures a prefix list.

deny

To drop packets meeting the criteria specified, configure a filter.

Syntax

```
deny ip-prefix [ge min-prefix-length] [le max-prefix-length]
```

Parameters

- **ip-prefix** Specify an IP prefix in the network/length format. For example, 35.0.0.0/8 means match the first 8 bits of address 35.0.0.0.
- **ge min-prefix-length** (OPTIONAL) Enter the keyword ge and then enter the minimum prefix length, which is a number from zero (0) to 32.
le max-prefix-length (OPTIONAL) Enter the keyword le and then enter the maximum prefix length, which is a number from zero (0) to 32.

Defaults
Not configured.

Usage Information
Prefix lists redistribute OSPF and RIP routes meeting specific criteria.

Related Commands
show ip route list — displays IP routes in an IP prefix list.
show ip prefix-list summary — displays a summary of the configured prefix lists.

permit

Configure a filter that passes packets meeting the criteria specified.

Syntax
permit ip-prefix [ge min-prefix-length] [le max-prefix-length]
**Parameters**

- **ip-prefix**: Specify an IP prefix in the network/length format. For example, 35.0.0.0/8 means match the first 8 bits of address 35.0.0.0.

- **ge min-prefix-length**: (OPTIONAL) Enter the keyword `ge` and then enter the minimum prefix length, which is a number from zero (0) to 32.

- **le max-prefix-length**: (OPTIONAL) Enter the keyword `le` and then enter the maximum prefix length, which is a number from zero (0) to 32.

**Usage Information**

Sequence numbers for this filter are automatically assigned starting at sequence number 5.

If you do not use the `ge` or `le` options, only packets with an exact match to the prefix are filtered.

**Related Commands**

- **deny**: — configures a filter to drop packets.

- **seq**: — configures a drop or permit filter with a specified sequence number.

**seq**

To a deny or permit filter in a prefix list while configuring the filter, assign a sequence number.

**Syntax**

```
seq sequence-number {deny | permit} {any} | [ip-prefix /nn (ge min-prefix-length) {le max-prefix-length}] | [bitmask number]
```

**Parameters**

- **sequence-number**: Enter a number. The range is from 1 to 4294967294.

- **deny**: Enter the keyword `deny` to configure a filter to drop packets meeting this condition.

- **permit**: Enter the keyword `permit` to configure a filter to forward packets meeting this condition.

- **any**: (OPTIONAL) Enter the keyword `any` to match any packets.

- **ip-prefix /nn**: (OPTIONAL) Specify an IP prefix in the network/length format. For example, 35.0.0.0/8 means match the first 8 bits of address 35.0.0.0.

- **ge min-prefix-length**: (OPTIONAL) Enter the keyword `ge` and then enter the minimum prefix length, which is a number from zero (0) to 32.

- **le max-prefix-length**: (OPTIONAL) Enter the keyword `le` and then enter the maximum prefix length, which is a number from zero (0) to 32.

- **bitmask number**: Enter the keyword `bitmask` then enter a bit mask number in dotted decimal format.

Ip Prefix-list with the last deletion/insertion: PL_OSPF_to_RIP
ip prefix-list PL_OSPF_to_RIP:
count: 3, range entries: 1, sequences: 5 - 25

Route Map Commands

When you create an access-list without any rule and then applied to an interface, the ACL behavior reflects implicit permit.
To configure route maps and their redistribution criteria, use the following commands.

continue

To a route-map entry with a higher sequence number, configure a route-map.

Syntax
continue [sequence-number]

Parameters

  sequence-number  (OPTIONAL) Enter the route map sequence number. The range is from 1 to 65535. The default is: no sequence number
Defaults
Not configured

Command Modes
ROUTE-MAP

Supported Modes
Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information
The `continue` feature allows movement from one route-map entry to a specific route-map entry (the sequence number). If you do not specify the sequence number, the `continue` feature simply moves to the next sequence number (also known as an implied continue). If a match clause exists, the `continue` feature executes only after a successful match occurs. If there are no successful matches, the `continue` feature is ignored.

### Match clause with Continue clause

The `continue` feature can exist without a match clause. A continue clause without a match clause executes and jumps to the specified route-map entry.

With a match clause and a continue clause, the match clause executes first and the continue clause next in a specified route map entry. The continue clause launches only after a successful match. The behavior is:

- A successful match with a continue clause, the route map executes the set clauses and then goes to the specified route map entry upon execution of the continue clause.
- If the next route map entry contains a continue clause, the route map executes the continue clause if a successful match occurs.
- If the next route map entry does not contain a continue clause, the route map evaluates normally. If a match does not occur, the route map does not continue and falls through to the next sequence number, if one exists.

### Set Clause with Continue Clause

If the route-map entry contains sets with the continue clause, set actions are performed first then the continue clause jumps to the specified route map entry.

- If a set action occurs in the first route map entry and then the same set action occurs with a different value in a subsequent route map entry, the last set of actions overrides the previous set of actions with the same set command.
- If `set community additive` and `set as-path prepend` are configure, the communities and AS numbers are prepended.

Related Commands
- `set metric` — Specifies a COMMUNITY attribute
- `set automatic-tag` — Configures a filter to modify the AS path

---

**description**

Add a description to this route map.

**Syntax**

`description description`

**Parameters**

- `description` Enter a description to identify the route map (80 characters maximum).

**Defaults**

none
match interface

To match routes whose next hop is on the interface specified, configure a filter.

Syntax

```
match interface interface
```

To remove a match, use the `no match interface interface` command.

Parameters

- **interface**
  - Enter the following keywords and slot/port or number information:
    - For the Loopback interface, enter the keyword `loopback` then a number from zero (0) to 16383.
    - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
    - For a Ten Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

Defaults

Not configured.

Command Modes

- `match metric` — redistributes routes that match a specific metric.
- `match route-type` — redistributes routes that match a route type.
- `match tag` — redistributes routes that match a specific tag.

**match ip next-hop**

To match based on the next-hop IP addresses specified in an IP access list or IP prefix list, configure a filter.

**Syntax**

```
match ip next-hop {access-list | prefix-list prefix-list-name}
```

**Parameters**

- `access-list-name` Enter the name of a configured IP access list, up to 140 characters.
- `prefix-list prefix-list-name` Enter the keywords `prefix-list` and then enter the name of configured prefix list, up to 140 characters.

- `match route-type` — redistributes routes that match a route type.
- `match tag` — redistributes routes that match a specific tag.

### match route-type

To match routes based on how the route is defined, configure a filter.

**Syntax**

```
match route-type {external {type-1 | type-2} | internal | local}
```

**Parameters**

- `external {type-1 | type-2}` Enter the keyword `external` then either `type-1` or `type-2` to match only on OSPF Type 1 routes or OSPF Type 2 routes.
- `internal` Enter the keyword `internal` to match only on routes generated within OSPF areas.
- `local` Enter the keyword `local` to match only on routes generated within the switch.

**Defaults**
Not configured.

- match ip route-source — redistributes routes that match routes advertised by other routers.
- match metric — redistributes routes that match a specific metric.
- match route-type — redistributes routes that match a route type.

**route-map**

Enable a route map statement and configure its action and sequence number. This command also places you in ROUTE-MAP mode.

**Syntax**

```
route-map map-name [permit | deny] [sequence-number]
```

**Parameters**

- `map-name` Enter a text string of up to 140 characters to name the route map for easy identification.
- `permit` (OPTIONAL) Enter the keyword permit to set the route map default as permit. If you do not specify a keyword, the default is permit.
- `deny` (OPTIONAL) Enter the keyword deny to set the route map default as deny.
- `sequence-number` (OPTIONAL) Enter a number to identify the route map for editing and sequencing with other route maps. You are prompted for a sequence number if there are multiple instances of the route map. The range is from 1 to 65535.
Defaults

Not configured.
If you do not define a keyword (permit or deny) for the route map, the permit action is the default.

Usage Information

Use caution when you delete route maps because if you do not specify a sequence number, all route maps with the same map-name are deleted when you use the no route-map map-name command.

Example

Dell(conf)#route-map dempsey
Dell(config-route-map)#

Related Commands

set automatic-tag — displays the current configuration.

set automatic-tag

To automatically compute the tag value of the route, configure a filter.

Syntax

set automatic-tag

To return to the default, use the no set automatic-tag command.

set metric

To assign a new metric to redistributed routes, configure a filter.

Syntax

set metric [+ | -] metric-value

To delete a setting, use the no set metric command.
Parameters

+ (OPTIONAL) Enter + to add a metric-value to the redistributed routes.
- (OPTIONAL) Enter - to subtract a metric-value from the redistributed routes.
metric-value Enter a number as the new metric value. The range is from zero (0) to 4294967295.

Defaults Not configured.

**set metric-type**

To assign a new route type for routes redistributed to OSPF, configure a filter.

**Syntax**

```
set metric-type {internal | external | type-1 | type-2}
```

**Parameters**

- **internal** Enter the keyword internal to assign the Interior Gateway Protocol metric of the next hop as the route’s BGP MULTI_EXIT_DES (MED) value.
- **external** Enter the keyword external to assign the IS-IS external metric.
- **type-1** Enter the keyword type-1 to assign the OSPF Type 1 metric.
- **type-2** Enter the keyword type-2 to assign the OSPF Type 2 metric.

**Defaults** Not configured.

Related Commands

- **route-map** — configures a route map.

### deny (for Standard IP ACLs)

To drop packets with a certain IP address, configure a filter.

**Syntax**

deny {source | any | host {ip-address}}[[count [byte]] [dscp value] [order] [fragments] [log [interval minutes] [threshold-in-msgs [count]]] [monitor]

To remove this filter, you have two choices:

- Use the no seq sequence-number command if you know the filter’s sequence number.
- Use the no deny {source [mask] | any | host ip-address} command.

**Parameters**

- **source** Enter the IP address of the network or host from which the packets were sent.
- **any** Enter the keyword any to specify that all routes are subject to the filter.
- **host ip-address** Enter the keyword host then the IP address to specify a host IP address.
- **count** *(OPTIONAL)* Enter the keyword count to count packets processed by the filter.
- **byte** *(OPTIONAL)* Enter the keyword byte to count bytes processed by the filter.
- **dscp** Enter this keyword dscp to deny a packet based on the DSCP value. The range is from 0 to 63.
- **log** *(OPTIONAL)* Enter the keyword log to enable the triggering of ACL log messages.
- **order** *(OPTIONAL)* Enter the keyword order to specify the QoS priority for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower order numbers have a higher priority) If you did not use the keyword order, the ACLs have the lowest order by default (255).
- **fragments** Enter the keyword fragments to use ACLs to control packet fragments.
threshold-in msgs count

(Optional) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the seq, permit, or deny commands. The threshold range is from 1 to 100.

interval minutes

(Optional) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. The interval range is from 1 to 10 minutes.

monitor

(Optional) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Defaults

By default, 10 ACL logs are generated if you do not specify the threshold explicitly. The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

Command Modes

CONFIGURATION-STANDARD-ACCESS-LIST

Supported Modes

Full-Switch

Command History

Version Description

9.9(0.0) Introduced on the FN IOM.

9.4(0.0) Added support for flow-based monitoring on the MXL 10/40GbE Switch IO Module platforms.

9.3(0.0) Added support for logging of ACLs on the MXL 10/40GbE Switch IO Module platforms.

Usage Information

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the flow-based enable command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

Related Commands

ip access-list standard — configures a standard ACL.

permit — configures a permit filter.
deny

To drop packets with a certain IP address, configure a filter.

Syntax

deny {any | host mac-address | mac-source-address mac-source-address-mask}{any | host mac-address | mac-destination-address mac-destination-address-mask} [ethertype-operator] [count [byte]][log [interval minutes] [threshold-in-msgs count] [monitor]

To remove this filter, you have two choices:

- Use the no seq sequence-number command if you know the filter’s sequence number.
- Use the no deny {any | host mac-address | mac-source-address mac-source-address-mask}{any | host mac-address | mac-destination-address mac-destination-address-mask} command.

Parameters

- **source**: Enter the IP address in dotted decimal format of the network from which the packet was sent.
- **mask**: (OPTIONAL) Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous (discontiguous).
- **any**: Enter the keyword any to specify that all routes are subject to the filter.
- **host ip-address**: Enter the keyword host and then enter the IP address to specify a host IP address only.
- **count**: (OPTIONAL) Enter the keyword count to count packets processed by the filter.
- **byte**: (OPTIONAL) Enter the keyword byte to count bytes processed by the filter.
- **log**: (OPTIONAL) Enter the keyword log to enable the triggering of ACL log messages.
- **threshold-in-msgs count**: (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the seq, permit, or deny commands. The threshold range is from 1 to 100.
- **interval minutes**: (OPTIONAL) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. The time interval range is from 1 to 10 minutes.
- **monitor**: (OPTIONAL) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Defaults

By default, 10 ACL logs are generated, if you do not specify the threshold explicitly.

The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

**Usage Information**

The `order` option is relevant in the context of the Policy QoS feature only. For more information, refer to the Quality of Service chapter of the *Dell Networking OS Configuration Guide*.

You can configure either count (packets) or count (bytes). However, for an ACL with multiple rules, you can configure some ACLs with count (packets) and others as count (bytes) at any given time.

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and s MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the `flow-based enable` command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only the specified traffic instead of all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

**Related Commands**

- `ip access-list standard` — configures a standard ACL.
- `permit` — configures a MAC address filter to pass packets.
- `seq` — configures a MAC address filter with a specified sequence number.

**seq**

Assign a sequence number to a deny or permit filter in an extended IP access list while creating the filter.

**Syntax**

```plaintext
seq sequence-number {deny | permit} {source [mask] | any | host ip-address} [count [byte]] [dscp value] [order] [fragments] [threshold-in msgs [count]]
```

**Parameters**

- `sequence-number` Enter a number from 0 to 4294967290. The range is from 0 to 65534.
- `deny` Enter the keyword `deny` to configure a filter to drop packets meeting this condition.
- `permit` Enter the keyword `permit` to configure a filter to forward packets meeting this criteria.
- `source` Enter an IP address in dotted decimal format of the network from which the packet was received.
**mask** 
(Optional) Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.

**any** 
Enter the keyword any to specify that all routes are subject to the filter.

**count** 
(Optional) Enter the keyword count to count packets the filter processes.

**byte** 
(Optional) Enter the keyword byte to count bytes the filter processes.

**dscp** 
(Optional) Enter the keyword dscp to match to the IP DCSCP values.

**order** 
(Optional) Enter the keyword order to specify the QoS order for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority). If you do not use the keyword order, the ACLs have the lowest order by default (255).

**fragments** 
Enter the keyword fragments to use ACLs to control packet fragments.

**threshold-in-msgs** 
(Optional) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the seq, permit, or deny commands. The threshold range is from 1 to 100.

**Defaults**
By default, 10 ACL logs are generated if you do not specify the threshold explicitly. The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

</tbody>
</table>

**Usage Information**
The order option is relevant in the context of the Policy QoS feature only. The following applies:

- The seq sequence-number command is applicable only in an ACL group.
- The order option works across ACL groups that have been applied on an interface via the QoS policy framework.
- The order option takes precedence over seq sequence-number.
- If sequence-number is not configured, the rules with the same order value are ordered according to their configuration order.
- If sequence-number is configured, the sequence-number is used as a tie breaker for rules with the same order.

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You
can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the `flow-based enable` command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

**Related Commands**

- **deny** — configures a filter to drop packets.
- **permit** — configures a filter to forward packets.
- **seq** — assigns a sequence number to a deny or permit filter in an IP access list while creating the filter.

### deny tcp

Configure a filter that drops transmission control protocol (TCP) packets meeting the filter criteria.

**Syntax**

```
deny tcp {source mask | any | host ip-address} [bit] [operator port [port]]
(destination mask | any | host ip-address) [dscp] [bit] [operator port [port]]
[count [byte] [order] [fragments] [threshold-in-msgs [count]]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no deny tcp {source mask | any | host ip-address} {destination mask | any | host ip-address}` command.

**Parameters**

- **source**
  Enter the IP address of the network or host from which the packets are sent.

- **mask**
  Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.

- **any**
  Enter the keyword any to specify that all routes are subject to the filter.

- **host ip-address**
  Enter the keyword host then the IP address to specify a host IP address.

- **dscp**
  Enter this keyword dscp to deny a packet based on the DSCP value. The range is from 0 to 63.

- **bit**
  Enter a flag or combination of bits:
  - `ack`: acknowledgement field
  - `fin`: finish (no more data from the user)
  - `psh`: push function
  - `rst`: reset the connection
  - `syn`: synchronize sequence numbers
  - `urg`: urgent field

- **operator**
  (OPTIONAL) Enter one of the following logical operand:
**port port**

Enter the application layer port number. Enter two port numbers if using the range logical operand. The range is from 0 to 65535.

The following list includes some common TCP port numbers:

- 23 = Telnet
- 20 and 21 = FTP
- 25 = SMTP
- 169 = SNMP

**destination**

Enter the IP address of the network or host to which the packets are sent.

**mask**

Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.

**count**

(Optional) Enter the keyword **count** to count packets the filter processes.

**byte**

(Optional) Enter the keyword **byte** to count bytes the filter processes.

**order**

(Optional) Enter the keyword **order** to specify the QoS priority for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority). If you did not use the keyword **order**, the ACLs have the lowest order by default (255).

**fragments**

Enter the keyword **fragments** to use ACLs to control packet fragments.

**threshold-in-msgs count**

(Optional) Enter the **threshold-in-msgs** keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the seq, permit, or deny commands. The threshold range is from 1 to 100.

**Defaults**

By default, 10 ACL logs are generated if you do not specify the threshold explicitly.

The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

Introduction on the MXL 10/40GbE Switch IO Module.

Usage Information

The order option is relevant in the context of the Policy GoS feature only. For more information, refer to the Quality of Service chapter of the Dell Networking OS Configuration Guide.

You can configure either count (packets) or count (bytes). However, for an ACL with multiple rules, you can configure some ACLs with count (packets) and others as count (bytes) at any given time.

Most ACL rules require one entry in the CAM. However, rules with TCP and UDP port operators (for example, gt, lt, or range) may require more than one entry. The range of ports is configured in the CAM based on bit mask boundaries; the space required depends on exactly what ports are included in the range.

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the flow-based enable command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

Example

An ACL rule with a TCP port range of 4000–8000 uses eight entries in the CAM.

Total Ports: 1024

Related Commands
deny — assigns a filter to deny IP traffic.
deny udp

To drop user datagram protocol (UDP) packets meeting the filter criteria, configure a filter.

Syntax

```
deny udp {source mask | any | host ip-address} [operator port [port]]
(destination mask | any | host ip-address) [dscp] [operator port [port]] [count [byte]] [order] [fragments] [threshold-in-msgs [count]]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no deny udp {source mask | any | host ip-address} {destination mask | any | host ip-address}` command.

Parameters

- **source**
  - Enter the IP address of the network or host from which the packets were sent.

- **mask**
  - Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.

- **any**
  - Enter the keyword `any` to specify that all routes are subject to the filter.

- **host ip-address**
  - Enter the keyword `host` then the IP address to specify a host IP address.

- **dscp**
  - Enter this keyword `dscp` to deny a packet based on the DSCP value. The range is from 0 to 63.

- **operator**
  - (OPTIONAL) Enter one of the following logical operand:
    - `eq` = equal to
    - `neq` = not equal to
    - `gt` = greater than
    - `lt` = less than
    - `range` = inclusive range of ports (you must specify two ports for the `port` command)

- **port port**
  - Enter the application layer port number. Enter two port numbers if using the range logical operand. The range is from 0 to 65535.

- **destination**
  - Enter the IP address of the network or host to which the packets are sent.

- **mask**
  - Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.

- **count**
  - (OPTIONAL) Enter the keyword `count` to count packets processed by the filter.

- **byte**
  - (OPTIONAL) Enter the keyword `byte` to count bytes processed by the filter.

- **order**
  - (OPTIONAL) Enter the keyword `order` to specify the QoS priority for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority) If you did not use the keyword `order`, the ACLs have the lowest order by default (255).

- **fragments**
  - Enter the keyword `fragments` to use ACLs to control packet fragments.
threshold-in-msgs  (OPTIONAL) Enter the threshold-in-msgs keyword then a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs are terminated with the seq, permit, or deny commands. The threshold range is from 1 to 100.

Defaults
By default 10 ACL logs are generated if you do not specify the threshold explicitly. The default frequency at which the ACL logs are generated is five minutes.

Command Modes
CONFIGURATION-IP ACCESS-LIST-EXTENDED

Supported Modes

Command History
Version  Description
9.9(0.0)    Introduced on the FN IOM.
9.3(0.0)    Added the support for logging of ACLs on the MXL 10/40GbE Switch IO Module platform.
8.3.16.1    Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
The order option is relevant in the context of the Policy QoS feature only. For more information, refer to the Quality of Service chapter of the Dell Networking OS Configuration Guide.

You can configure either count (packets) or count (bytes). However, for an ACL with multiple rules, you can configure some ACLs with count (packets) and others as count (bytes) at any given time.

Most ACL rules require one entry in the CAM. However, rules with TCP and UDP port operators (for example, gt, It or range) may require more than one entry. The range of ports is configured in the CAM based on bit mask boundaries; the space required depends on exactly what ports are included in the range.

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

Example
An ACL rule with a TCP port range of 4000–8000 uses eight entries in the CAM.

```

**Related Commands**
- `deny` — assigns a filter to deny IP traffic.
- `deny tcp` — assigns a filter to deny TCP traffic.

### deny arp (for Extended MAC ACLs)

Configure an egress filter that drops ARP packets on egress ACL supported line cards. (For more information, refer to your line card documentation).

**Syntax**
```
deny arp {destination-mac-address mac-address-mask | any} vlan vlan-id {ip-address | any | opcode code-number} [count [byte]] [order] [log [interval minutes] [threshold-in-msgs [count]] [monitor]
```

To remove this filter, you have two choices:
- Use the no seq sequence-number command if you know the filter’s sequence number.
- Use the no deny arp {destination-mac-address mac-address-mask | any} vlan vlan-id {ip-address | any | opcode code-number} command.

**Parameters**
- `destination-mac-address mac-address-mask` Enter a MAC address and mask in the nnn:nnn:nnn:nnn:nn format.
  For the MAC address mask, specify which bits in the MAC address must match.
  The MAC ACL supports an inverse mask; therefore, a mask of ff:ff:ff:ff:ff:ff allows entries that do not match and a mask of 00:00:00:00:00:00 only allows entries that match exactly.
- `any` Enter the keyword any to match and drop any ARP traffic on the interface.
- `vlan vlan-id` Enter the keyword vlan and then enter the VLAN ID to filter traffic associated with a specific VLAN. The range is 1 to 4094 and 1 to 2094 for ExaScale (you can use IDs 1 to 4094). To filter all VLAN traffic, specify VLAN 1.
- `ip-address` Enter an IP address in dotted decimal format (A.B.C.D) as the target IP address of the ARP.
- `opcode code-number` Enter the keyword opcode and then enter the number of the ARP opcode. The range is from 1 to 23.
count (OPTIONAL) Enter the keyword count to count packets processed by the filter.

byte (OPTIONAL) Enter the keyword byte to count bytes processed by the filter.

log (OPTIONAL) Enter the keyword log to enable the triggering of ACL log messages.

order (OPTIONAL) Enter the keyword order to specify the QoS priority for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower order numbers have a higher priority) If you did not use the keyword order, the ACLs have the lowest order by default (255).

threshold-in msgs count (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the seq, permit, or deny commands. The threshold range is from 1 to 100.

interval minutes (OPTIONAL) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. The time interval range is from 1 to 10 minutes.

monitor (OPTIONAL) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Defaults
By default, 10 ACL logs are generated if you do not specify the threshold explicitly. The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

Command Modes
CONFIGURATION-EXTENDED-ACCESS-LIST

Supported Modes
Full-Switch

Command History
Version Description
9.9(0.0) Introduced on the FN IOM.
9.4(0.0) Added support for flow-based monitoring on the MXL 10/40GbE Switch IO Module platforms.
9.3(0.0) Added support for logging of ACLs on the MXL 10/40GbE Switch IO Module platforms.
8.2.1.0 Allows ACL control of fragmented packets for IP (Layer 3) ACLs.
8.1.1.0 Introduced on the E-Series ExaScale.
7.4.1.0 Added the support for the non-contiguous mask and the monitor option.
6.5.1.0 Expanded to include the optional GoS order priority for the ACL entry.

Usage Information
When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the flow-based enable command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both
the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

The order option is relevant in the context of the Policy GoS feature only. For more information, refer to the Quality of Service chapter of the Dell Networking OS Configuration Guide.

The monitor option is relevant in the context of flow-based monitoring only. For more information, refer to the Port Monitoring.

When you use the log option, the CP processor logs details the packets that match. Depending on how many packets match the log entry and at what rate, the CP may become busy as it has to log these packets’ details.

You cannot include IP, TCP or UDP (Layer 3) filters in an ACL configured with ARP or Ether-type (Layer 2) filters. Apply Layer 2 ACLs (ARP and Ether-type) to Layer 2 interfaces only.

**NOTE:** When ACL logging and byte counters are configured simultaneously, byte counters may display an incorrect value. Configure packet counters with logging instead.

### deny icmp

To drop all or specific internet control message protocol (ICMP) messages, configure a filter.

**Syntax**

deny icmp {source mask | any | host ip-address} {destination mask | any | host ip-address} [dscp] [count [byte]] [order] [fragments] [threshold-in-msgs] [count]

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command, if you know the filter’s sequence number.
- Use the `no deny icmp {source mask | any | host ip-address} {destination mask | any | host ip-address}` command.

**Parameters**

- **source**
  
  Enter the IP address of the network or host from which the packets were sent.

- **mask**
  
  Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.

- **any**
  
  Enter the keyword any to specify that all routes are subject to the filter.

- **host ip-address**
  
  Enter the keyword host then the IP address to specify a host IP address.

- **destination**
  
  Enter the IP address of the network or host to which the packets are sent.

- **dscp**
  
  Enter this keyword dscp to deny a packet based on the DSCP value. The range is from 0 to 63.

- **count**
  
  (OPTIONAL) Enter the keyword count to count packets processed by the filter.

- **byte**
  
  (OPTIONAL) Enter the keyword byte to count bytes processed by the filter.

- **order**
  
  (OPTIONAL) Enter the keyword order to specify the GoS priority for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower order numbers have a higher priority) If you did not use the keyword order, the ACLs have the lowest order by default (255).
fragments (OPTIONAL) Enter the fragments keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the seq, permit, or deny commands. The threshold range is from 1 to 100.

Defaults
By default, 10 ACL logs are generated if you do not specify the threshold explicitly. The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

deny ether-type (for Extended MAC ACLs)

Configure an egress filter that drops specified types of Ethernet packets on egress ACL supported line cards. (For more information, refer to your line card documentation).

Syntax
deny ether-type protocol-type-number {destination-mac-address mac-address-mask | any} vlan vlan-id {source-mac-address mac-address-mask | any} [count [byte]] [order] [log [interval minutes] [threshold-in-msgs [count]] [monitor]
To remove this filter, you have two choices:

- Use the no seq sequence-number command if you know the filter’s sequence number.
- Use the no deny ether-type protocol-type-number {destination-mac-address mac-address-mask | any} vlan vlan-id {source-mac-address mac-address-mask | any} command.

<table>
<thead>
<tr>
<th>Parameters</th>

</tr>
</tbody>
</table>

**Defaults**

By default, 10 ACL logs are generated if you do not specify the threshold explicitly. The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.
deny

To drop packets with the MAC address specified, configure a filter.

Syntax

```
deny {any | mac-source-address [mac-source-address-mask]} [count [byte]] [log [interval minutes] [threshold-in-msgs [count]] [monitor]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no deny {any | mac-source-address mac-source-address-mask}` command.

Parameters

- **any**
  - Enter the keyword `any` to specify that all routes are subject to the filter.

- **mac-source-address**

- **mac-source-address-mask**
  - (OPTIONAL) Specify which bits in the MAC address must match. If no mask is specified, a mask of 00:00:00:00:00:00 is applied (in other words, the filter allows only MAC addresses that match).

- **count**
  - (OPTIONAL) Enter the keyword `count` to count packets processed by the filter.

- **byte**
  - (OPTIONAL) Enter the keyword `byte` to count bytes processed by the filter.
log (OPTIONAL) Enter the keyword `log` to enable the triggering of ACL log messages.

threshold-in-msgs count (OPTIONAL) Enter the `threshold-in-msgs` keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated. The threshold range is from 1 to 100.

interval minutes (OPTIONAL) Enter the keyword `interval` followed by the time period in minutes at which ACL logs must be generated. The threshold range is from 1 to 10 minutes.

monitor (OPTIONAL) Enter the keyword `monitor` when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Defaults

By default, 10 ACL logs are generated if you do not specify the threshold explicitly. The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

Version Description

9.9(0.0) Introduced on the FN IOM.

9.4(0.0) Added support for flow-based monitoring on the MXL 10/40GbE Switch IO Module platform.

9.3(0.0) Added support for logging of ACLs on the MXL 10/40GbE Switch IO Module platform.

8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module platform.

Usage Information

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the `flow-based enable` command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead of all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

Related Commands

`permit` — configures a MAC address filter to pass packets.

`seq` — configures a MAC address filter with a specified sequence number.
To drop packets with a certain IP address, configure a filter.

Syntax

```
deny {any | host mac-address | mac-source-address mac-source-address-mask}|any
| host mac-address | mac-destination-address mac-destination-address-mask}
```

To remove this filter, you have two choices:

- Use the `no seq` sequence-number command if you know the filter’s sequence number.
- Use the `no deny {any | host mac-address | mac-source-address mac-source-address-mask}|any | host mac-address | mac-destination-address mac-destination-address-mask}command.

Parameters

- **source** Enter the IP address in dotted decimal format of the network from which the packet was sent.
- **mask** (OPTIONAL) Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous (discontiguous).
- **any** Enter the keyword any to specify that all routes are subject to the filter.
- **host ip-address** Enter the keyword host and then enter the IP address to specify a host IP address only.
- **count** (OPTIONAL) Enter the keyword count to count packets processed by the filter.
- **byte** (OPTIONAL) Enter the keyword byte to count bytes processed by the filter.
- **log** (OPTIONAL) Enter the keyword log to enable the triggering of ACL log messages.
- **threshold-in msgs count** (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the `seq`, `permit`, or `deny` commands. The threshold range is from 1 to 100.
- **interval minutes** (OPTIONAL) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. The time interval range is from 1 to 10 minutes.
- **monitor** (OPTIONAL) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Defaults

- By default, 10 ACL logs are generated, if you do not specify the threshold explicitly.
- The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

### Version Description

9.4(0.0)  
Added the support for flow-based monitoring on the MXL 10/40GbE Switch IO Module.

9.3(0.0)  
Added the support for logging of ACLs on the MXL 10/40GbE Switch IO Module.

8.3.16.1  
Introduced on the MXL 10/40GbE Switch IO Module.

#### Usage Information

The `order` option is relevant in the context of the Policy QoS feature only. For more information, refer to the Quality of Service chapter of the Dell Networking OS Configuration Guide.

You can configure either count (packets) or count (bytes). However, for an ACL with multiple rules, you can configure some ACLs with count (packets) and others as count (bytes) at any given time.

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the `flow-based enable` command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only the specified traffic instead of all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

#### Related Commands

- `ip access-list standard` — configures a standard ACL.
- `permit` — configures a MAC address filter to pass packets.
- `seq` — configures a MAC address filter with a specified sequence number.

### permit (for Standard IP ACLs)

To permit packets from a specific source IP address to leave the switch, configure a filter.

#### Syntax

```
permit {source [mask] | any | host ip-address} [no-drop] [count [byte]] [dscp value] [order] [fragments] [log [interval minutes] [threshold-in-msgs [count]]] [monitor]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no permit {source [mask] | any | host ip-address}` command.

#### Parameters

- `source`  
Enter the IP address in dotted decimal format of the network from which the packet was sent.
mask  (OPTIONAL) Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.

any    Enter the keyword any to specify that all routes are subject to the filter.

host ip-address Enter the keyword host then the IP address to specify a host IP address or hostname.

no-drop Enter the keywords no-drop to match only the forwarded packets.

count  (OPTIONAL) Enter the keyword count to count packets processed by the filter.

bytes  (OPTIONAL) Enter the keyword bytes to count bytes processed by the filter.

dscp  (OPTIONAL) Enter the keyword dscp to match to the IP DCSCP values.

order  (OPTIONAL) Enter the keyword order to specify the QoS priority for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority). If you do not use the keyword order, the ACLs have the lowest order by default (255).

fragments Enter the keyword fragments to use ACLs to control packet fragments.

log  (OPTIONAL) Enter the keyword log to enable the triggering of ACL log messages.

threshold-in msgs count  (OPTIONAL) Enter the threshold-in-msgs count keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated, exceeding which the generation of ACL logs is terminated for which the generation of ACL logs is terminated. The threshold range is from 1 to 100.

interval minutes  (OPTIONAL) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. The interval range is from 1 to 10 minutes.

monitor  (OPTIONAL) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Defaults By default, 10 ACL logs are generated if you do not specify the threshold explicitly. The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

</tr>
</tbody>
</table>

Usage Information

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.
You can activate flow-based monitoring for a monitoring session by entering the `flow-based enable` command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

Related Commands
- `deny` — assigns a IP ACL filter to deny IP packets.
- `ip access-list standard` — creates a standard ACL.

**permit**

To forward packets from a specific source MAC address, configure a filter.

**Syntax**

`permit {any | mac-source-address [mac-source-address-mask]} [count [byte]] | log [interval minutes] [threshold-in-msgs[count] [monitor]`

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no permit {any | mac-source-address mac-source-address-mask}` command.

**Parameters**

- `any` Enter the keyword `any` to forward all packets received with a MAC address.
- `mac-source-address-mask` (OPTIONAL) Specify which bits in the MAC address must match. If no mask is specified, a mask of 00:00:00:00:00:00 is applied (in other words, the filter allows only MAC addresses that match).
- `count` (OPTIONAL) Enter the keyword `count` to count packets processed by the filter.
- `byte` (OPTIONAL) Enter the keyword `byte` to count bytes processed by the filter.
- `log` (OPTIONAL) Enter the keyword `log` to enable the triggering of ACL log messages.
- `threshold-in-msgs` (OPTIONAL) Enter the `threshold-in-msgs` keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the seq, permit, or deny commands. The threshold range is from 1 to 100.
- `interval minutes` (OPTIONAL) Enter the keyword `interval` followed by the time period in minutes at which ACL logs must be generated. The interval range is from 1 to 10 minutes.
- `monitor` (OPTIONAL) Enter the keyword `monitor` when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

**Defaults**

Not configured.

**Command Modes**

- CONFIGURATION-MAC ACCESS LIST-STANDARD

**Supported Modes**

- Full-Switch
permit ether-type (for Extended MAC ACLs)

Configure a filter that allows traffic with specified types of Ethernet packets. This command is supported only on 12-port GE line cards with SFP optics. For specifications, refer to your line card documentation.

Syntax

```
permit ether-type protocol-type-number {destination-mac-address mac-address-mask | any} vlan vlan-id {source-mac-address mac-address-mask | any} [count [byte]] [order] [log [interval minutes][threshold-in-msgs] [count]] [monitor]
```

Parameters

- `protocol-type-number` Enter a number from 600 to FFF as the specific Ethernet type traffic to drop.
- `destination-mac-address mac-address-mask` Enter the destination MAC address and mask.
- `source-mac-address mac-address-mask` Enter the source MAC address and mask.
- `count` Count the number of packets.
- `byte` Count the number of bytes.
- `order` Specifies the order for the ACL entry. A lower order value has higher priority.
- `log` Enables logging of ACL messages.
- `interval minutes` Sets the time interval to log a message.
- `threshold-in-msgs [count]` Sets the threshold for logging ACL messages.
- `monitor` Enables monitoring of ACL traffic.

This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

Related Commands

- `deny` — configures a MAC ACL filter to drop packets.
- `seq` — configure a MAC ACL filter with a specified sequence number.
Enter a MAC address and mask in the \texttt{nn:nn:nn:nn:nn} format.

For the MAC address mask, specify which bits in the MAC address must match.

The MAC ACL supports an inverse mask; therefore, a mask of \texttt{ff:ff:ff:ff:ff:ff} allows entries that do not match and a mask of \texttt{00:00:00:00:00:00} only allows entries that match exactly.

Enter the keyword \texttt{any} to match and drop specific Ethernet traffic on the interface.

Enter the keyword \texttt{vlan} and then enter the VLAN ID to filter traffic associated with a specific VLAN. The range is 1 to 4094 and 1 to 2094 for ExaScale (you can use IDs 1 to 4094). To filter all VLAN traffic specify \texttt{VLAN 1}.

Enter a MAC address and mask in the \texttt{nn:nn:nn:nn:nn} format.

For the MAC address mask, specify which bits in the MAC address must match.

The MAC ACL supports an inverse mask; therefore, a mask of \texttt{ff:ff:ff:ff:ff:ff} allows entries that do not match and a mask of \texttt{00:00:00:00:00:00} only allows entries that match exactly.

(Optional) Enter the keyword \texttt{count} to count packets processed by the filter.

(Optional) Enter the keyword \texttt{byte} to count bytes processed by the filter.

(Optional) Enter the keyword \texttt{order} to specify the QoS priority for the ACL entry. The range is 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower order numbers have a higher priority). If you do not use the keyword \texttt{order}, the ACLs have the lowest order by default (255).

(Optional) Enter the keyword \texttt{log} to enable the triggering of ACL log messages.

(Optional) Enter the keyword \texttt{interval} followed by the time period in minutes at which ACL logs must be generated. You can enter an interval in the range of 1-10 minutes.

(Optional) Enter the keyword \texttt{threshold-in} followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated, with the \texttt{seq}, \texttt{permit}, or \texttt{deny} commands. The threshold range is from 1 to 100.

(Optional) Enter the keyword \texttt{monitor} when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

By default, 10 ACL logs are generated if you do not specify the threshold explicitly. The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

### Version Description

- **9.4(0.0)** Added the support for flow-based monitoring on the MXL 10/40GbE Switch IO Module platform.
- **9.3(0.0)** Added the support for logging of ACLs on the MXL 10/40GbE Switch IO Module platform.
- **8.2.1.0** Allows ACL control of fragmented packets for IP (Layer 3) ACLs.
- **8.1.1.0** Introduced on the E-Series ExaScale.
- **7.4.1.0** Added the `monitor` option.
- **6.5.10** Expanded to include the optional QoS `order` priority for the ACL entry.

### Usage Information

The `order` option is relevant in the context of the Policy QoS feature only. For more information, refer to the “Quality of Service” chapter of the *Dell Networking OS Configuration Guide*.

**NOTE:** When ACL logging and byte counters are configured simultaneously, byte counters may display an incorrect value. Configure packet counters with logging instead.

When you use the `log` option, the CP processor logs details about the packets that match. Depending on how many packets match the log entry and at what rate, the CP may become busy as it has to log these packets’ details.

The `monitor` option is relevant in the context of flow-based monitoring only. For more information, refer to Port Monitoring.

You cannot include IP, TCP, or UDP filters in an ACL configured with ARP filters.

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the `flow-based enable` command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

## permit icmp

Configure a filter to allow all or specific ICMP messages.

**Syntax**

```plaintext
permit icmp {source mask | any | host ip-address} {destination mask | any | host ip-address} [dscp] [message-type] [count [byte]] [order] [fragments] [threshold-in-msgs [count]]
```
To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter's sequence number.
- Use the `no permit icmp {source mask | any | host ip-address} {destination mask | any | host ip-address}` command.

### Parameters

- **source**
  - Enter the IP address of the network or host from which the packets were sent.

- **mask**
  - Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or noncontiguous.

- **any**
  - Enter the keyword `any` to match and drop specific Ethernet traffic on the interface.

- **host ip-address**
  - Enter the keyword `host` and then enter the IP address to specify a host IP address.

- **destination**
  - Enter the IP address of the network or host to which the packets are sent.

- **dscp**
  - Enter the keyword `dscp` to deny a packet based on the DSCP value. The range is 0 to 63.

- **message-type**
  - (OPTIONAL) Enter an ICMP message type, either with the type (and code, if necessary) numbers or with the name of the message type. The range is 0 to 255 for ICMP type and 0 to 255 for ICMP code.

- **count**
  - (OPTIONAL) Enter the keyword `count` to count packets the filter processes.

- **byte**
  - (OPTIONAL) Enter the keyword `byte` to count bytes the filter processes.

- **order**
  - (OPTIONAL) Enter the keyword `order` to specify the QoS priority for the ACL entry. The range is 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority). If you do not use the keyword `order`, the ACLs have the lowest order by default (255).

- **fragments**
  - Enter the keyword `fragments` to use ACLs to control packet fragment.

- **threshold-in msgs count**
  - (OPTIONAL) Enter the `threshold-in-msgs count` keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the `seq`, `permit`, or `deny` commands. The threshold range is from 1 to 100.

### Defaults

- By default, 10 ACL logs are generated if you do not specify the threshold explicitly. The default frequency at which ACL logs are generated is 5 minutes. By default, flow-based monitoring is not enabled.

**Usage Information**

The `order` option is relevant in the context of the Policy GoS feature only. For more information, refer to the Quality of Service chapter of the Dell Networking OS Configuration Guide.

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the `flow-based enable` command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

**permit udp**

To pass UDP packets meeting the filter criteria, configure a filter.

```
permit udp {source mask | any | host ip-address} [operator port [port]]
{destination mask | any | host ip-address} [dscp] [operator port [port]] [count [byte]] [order] [fragments] [threshold-inmsgs [count]]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no permit udp {source mask | any | host ip-address} {destination mask | any | host ip-address}` command.

**Parameters**

- **source**
  Enter the IP address of the network or host from which the packets were sent.

- **mask**
  Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.

- **any**
  Enter the keyword any to specify that all routes are subject to the filter.

- **host ip-address**
  Enter the keyword host and then enter the IP address to specify a host IP address.

- **dscp**
  Enter the keyword dscp to deny a packet based on the DSCP value. The range is from 0 to 63.

- **operator**
  (OPTIONAL) Enter one of the following logical operand:
  - `eq` = equal to
  - `neq` = not equal to
  - `gt` = greater than
  - `lt` = less than
  - `range` = range of ports (you must specify two ports for the range operator)
  - `port` = single port
  - `eqport` = equivalent ports (you must specify two ports for the eqport operator)

- **count**
  (OPTIONAL) Enter the keyword count to count packets.

- **byte**
  (OPTIONAL) Enter the keyword byte to count bytes.

- **order**
  (OPTIONAL) Enter the keyword order to specify that the QoS order of this ACL is to be considered.

- **fragments**
  (OPTIONAL) Enter the keyword fragments to process fragments of the packet.

- **threshold-in-msgs**
  (OPTIONAL) Enter the maximum number of packets to be logged. The range is from 1 to 1000000.

- **threshold-in-bytes**
  (OPTIONAL) Enter the maximum number of bytes to be logged. The range is from 1 to 100000000.
• range = inclusive range of ports (you must specify two ports for the port parameter)

port port
Enter the application layer port number. Enter two port numbers if you are using the range logical operand. The range is 0 to 65535.

destination
Enter the IP address of the network or host to which the packets are sent.

count (OPTIONAL) Enter the keyword count to count packets processed by the filter.

byte (OPTIONAL) Enter the keyword byte to count bytes processed by the filter.

order (OPTIONAL) Enter the keyword order to specify the QoS priority for the ACL entry. The range is 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority). If you do not use the keyword order, the ACLs have the lowest order by default (255).

fragments
Enter the keyword fragments to use ACLs to control packet fragments.

threshold-in msgs count (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the seq, permit, or deny commands. The threshold range is from 1 to 100.

Defaults By default, 10 ACL logs are generated if you do not specify the threshold explicitly. The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

Command Modes CONFIGURATION-IP ACCESS-LIST-EXTENDED

Supported Modes Full-Switch

Command History

Version Description
9.9(0.0) Introduced on the FN IOM.
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

- The order option is relevant in the context of the Policy QoS feature only. For more information, refer to the “Quality of Service” chapter of the Dell Operating System Configuration Guide.

- You can configure either count (packets) or count (bytes). However, for an ACL with multiple rules, you can configure some ACLs with count (packets) and others as count (bytes) at any given time.

- Most ACL rules require one entry in the CAM. However, rules with TCP and UDP port operators (for example, gt, lt, or range) may require more than one entry. The range of ports is configured in the CAM based on bit mask boundaries; the space required depends on exactly what ports are included in the range.

- When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

- If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.
You can activate flow-based monitoring for a monitoring session by entering the flow-based enable command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

Example

An ACL rule with a TCP port range of 4000–8000 uses eight entries in the CAM.

Total Ports: 1024

Related Commands

ip access-list extended — creates an extended ACL.

permit — assigns a permit filter for IP packets.

permit tcp — assigns a permit filter for TCP packets.

**permit (for Extended IP ACLs)**

To pass IP packets meeting the filter criteria, configure a filter.

**Syntax**

```
permit {source mask | any | host ip-address} {destination mask | any | host ip-address} [count [bytes]] [dscp value] [order] [fragments] [log [interval minutes] [threshold-in-msgs [count]]] [monitor]
```

To remove this filter, you have two choices:

- Use the **no seq sequence-number** command if you know the filter’s sequence number.
- Use the **no deny {source mask | any | host ip-address} {destination mask | any | host ip-address}** command.

**Parameters**

- source
  - Enter the IP address in dotted decimal format of the network from which the packet was sent.
mask (OPTIONAL) Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.

any Enter the keyword any to specify that all routes are subject to the filter.

host ip-address Enter the keyword host then the IP address to specify a host IP address or hostname.

count (OPTIONAL) Enter the keyword count to count packets processed by the filter.

bytes (OPTIONAL) Enter the keyword bytes to count bytes processed by the filter.

dscp (OPTIONAL) Enter the keyword dscp to match to the IP DCSCP values.

order (OPTIONAL) Enter the keyword order to specify the QoS priority for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority). If you do not use the keyword order, the ACLs have the lowest order by default (255).

fragments Enter the keyword fragments to use ACLs to control packet fragments.

log (OPTIONAL) Enter the keyword log to enable the triggering of ACL log messages.

threshold-in-msgs (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the seq, permit, or deny commands. The threshold range is from 1 to 100.

interval minutes (OPTIONAL) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. The interval range is from 1 to 10 minutes.

monitor (OPTIONAL) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Defaults By default, 10 ACL logs are generated if you do not specify the threshold explicitly. The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

<tr>
<td>9.4(0.0)</td>
<td>Added support for flow-based monitoring on the MXL 10/40GbE Switch IO Module platforms.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Added support for logging of ACLs on the MXL 10/40GbE Switch IO Module platform.</td>
</tr>
</tbody>
</table>

Usage Information

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.
You can activate flow-based monitoring for a monitoring session by entering the `flow-based enable` command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

**Related Commands**
- `ip access-list extended` — creates an extended ACL.
- `permit tcp` — assigns a permit filter for TCP packets.
- `permit udp` — assigns a permit filter for UDP packets.

**Permit**

To forward packets from a specific source MAC address, configure a filter.

**Syntax**
```
permit {any | mac-source-address [mac-source-address-mask]} [count [byte]] | log [interval minutes] [threshold-in-msgs[count] [monitor]
```

To remove this filter, you have two choices:
- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no permit {any | mac-source-address mac-source-address-mask} command.`

**Parameters**

<table>
<thead>

This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

Related Commands

- `deny` — configures a MAC ACL filter to drop packets.
- `permit` — configures a MAC ACL filter to forward packets meeting this criteria.
- `any` — match any source address.
- `deny | permit` — specify whether to deny or permit traffic meeting this criteria.
- `seq` — configure a MAC ACL filter with a specified sequence number.

### seq

To a deny or permit filter in a MAC access list while creating the filter, assign a sequence number.

**Syntax**

```
seq sequence-number {deny | permit} {any | mac-source-address [mac-source-address-mask]} [count [byte]] [log [interval minutes] [threshold-in-msgs [count]]] [monitor]
```

To remove this filter, use the `no seq sequence-number` command.

**Parameters**

- `sequence-number` — Enter a number from 0 to 65535.
- `deny` — Enter the keyword `deny` to configure a filter to drop packets meeting this condition.
- `permit` — Enter the keyword `permit` to configure a filter to forward packets meeting this criteria.
- `any` — Enter the keyword `any` to filter all packets.
**mac-source-address**

**mac-source-address-mask** *(OPTIONAL)* Specify which bits in the MAC address must match. If no mask is specified, a mask of 00:00:00:00:00:00 is applied (in other words, the filter allows only MAC addresses that match).

**count** *(OPTIONAL)* Enter the keyword count to count packets the filter processes.

**byte** *(OPTIONAL)* Enter the keyword byte to count bytes the filter processes.

**log** *(OPTIONAL)* Enter the keyword log to enable the triggering of ACL log messages.

**threshold-in-msgs** *(OPTIONAL)* Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the seq, permit, or deny commands. The threshold range is from 1 to 100.

**interval minutes** *(OPTIONAL)* Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. The interval range is from 1 to 10 minutes.

**monitor** *(OPTIONAL)* Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

---

**Defaults**
By default, 10 ACL logs are generated if you do not specify the threshold explicitly. The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

**Usage Information**
When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the **flow-based enable** command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead of all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available
for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

Related Commands
deny — configures a filter to drop packets.
permit — configures a filter to forward packets.

permit tcp
To pass TCP packets meeting the filter criteria, configure a filter.

Syntax
permit tcp {source mask | any | host ip-address} [bit] [operator port [port]]
{destination mask | any | host ip-address} [bit] [dscp] [operator port [port]]
[count [byte]] [order] [fragments][log [interval minutes] [threshold-inmsgs [count]] [monitor]

To remove this filter, you have two choices:
• Use the no seq sequence-number command if you know the filter’s sequence number.
• Use the no permit tcp {source mask | any | host ip-address} {destination mask | any | host ip-address} command.

Parameters

source Enter the IP address of the network or host from which the packets were sent.
mask Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in
A.B.C.D format, may be either contiguous or non-contiguous.

any Enter the keyword any to specify that all routes are subject to the filter.

host ip-address Enter the keyword host then the IP address to specify a host IP address.

bit Enter a flag or combination of bits:

ack: acknowledgement field
fin: finish (no more data from the user)
psh: push function
rst: reset the connection
syn: synchronize sequence numbers
urg: urgent field
dscp Enter the keyword dscp to deny a packet based on the DSCP value. The range is from 0
to 63.
operator (OPTIONAL) Enter one of the following logical operand:

eq = equal to
neq = not equal to
gt = greater than
lt = less than
range = inclusive range of ports (you must specify two ports for the port parameter)
**port port**

Enter the application layer port number. Enter two port numbers if you are using the range logical operand. The range is from 0 to 65535.

The following list includes some common TCP port numbers:

- 23 = Telnet
- 20 and 21 = FTP
- 25 = SMTP
- 169 = SNMP

**destination**

Enter the IP address of the network or host to which the packets are sent.

**mask**

Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.

**count**

(Optional) Enter the keyword count to count packets the filter processes.

**byte**

(Optional) Enter the keyword byte to count bytes the filter processes.

**order**

(Optional) Enter the keyword order to specify the QoS priority for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority). If you do not use the keyword order, the ACLs have the lowest order by default (255).

**fragments**

Enter the keyword fragments to use ACLs to control packet fragments.

**log**

(Optional) Enter the keyword log to enable the triggering of ACL log messages.

**threshold-in msgs**

(Optional) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the seq, permit, or deny commands. The threshold range is from 1 to 100.

**interval minutes**

(Optional) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. The threshold range is from 1 to 10 minutes.

**monitor**

(Optional) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

**Defaults**

By default, 10 ACL logs are generated if you do not specify the threshold explicitly. The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

The `order` option is relevant in the context of the Policy GoS feature only. For more information, refer to the “Quality of Service” chapter of the *Dell Networking OS Configuration Guide*.

The switch cannot count both packets and bytes, so when you enter the count byte options, only bytes are incremented.

Most ACL rules require one entry in the CAM. However, rules with TCP and UDP port operators (for example, gt, It, or range) may require more than one entry. The range of ports is configured in the CAM based on bit mask boundaries; the space required depends on exactly what ports are included in the range.

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the `flow-based enable` command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

**Example**

An ACL rule with a TCP port range of 4000–8000 uses eight entries in the CAM.

```
1 0000111111010000 1111111111000000 4000 4031 32
2 0000111111100000 1111111111000000 4032 4095 64
3 0001000000000000 1111000000000000 4096 6143 2048
4 0001100000000000 1111100000000000 6144 7167 1024
5 0001110000000000 1111110000000000 7168 7679 512
6 0001111000000000 1111111000000000 7680 7935 256
7 0001111100000000 1111111100000000 7936 7999 64
8 0001111110000000 1111111110000000 8000 8000 1
```

Total Ports: 4001

**Example**

An ACL rule with a TCP port lt 1023 uses only one entry in the CAM.

```
1 0000000000000000 1111110000000000 0    1023 1024
```

Total Ports: 1024

**Related Commands**

- `ip access-list extended` — creates an extended ACL.
- `permit` — assigns a permit filter for IP packets.
- `permit udp` — assigns a permit filter for UDP packets.
seq arp

Configure an egress filter with a sequence number that filters ARP packets meeting this criteria. This command is supported only on 12-port GE line cards with SFP optics. For specifications, refer to your line card documentation.

**Syntax**

```
seq sequence-number {deny | permit} arp {destination-mac-address mac-address-mask | any} vlan vlan-id {ip-address | any | opcode code-number} [count [byte] [order] [log [interval minutes] [threshold-in-msgs[count]] [monitor]
```

To remove this filter, use the no seq sequence-number command.

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>sequence-number</code></td>
<td>Enter a number from 0 to 4294967290.</td>
</tr>
<tr>

</tr>
</tbody>
</table>

Usage Information

The `monitor` option is relevant in the context of flow-based monitoring only. For more information, refer to Port Monitoring.

The `order` option is relevant in the context of the Policy QoS feature only. The following applies:

- The `seq sequence-number` command is applicable only in an ACL group.
- The `order` option works across ACL groups that have been applied on an interface via the QoS policy framework.
- The `order` option takes precedence over `seq sequence-number`.
- If `sequence-number` is not configured, the rules with the same order value are ordered according to their configuration order.
- If `sequence-number` is configured, the sequence-number is used as a tie breaker for rules with the same order.

When you use the `log` option, the CP processor logs details about the packets that match. Depending on how many packets match the log entry and at what rate, the CP may become busy as it has to log these packets’ details.

You cannot include IP, TCP, or UDP (Layer 3) filters in an ACL configured with ARP or Ether-type (Layer 2) filters. Apply Layer 2 ACLs to interfaces in Layer 2 mode.

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You
can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the `flow-based enable` command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

**NOTE:** When ACL logging and byte counters are configured simultaneously, byte counters may display an incorrect value. Configure packet counters with logging instead.

### seq ether-type

Configure an egress filter with a specific sequence number that filters traffic with specified types of Ethernet packets. This command is supported only on 12-port GE line cards with SFP optics. For specifications, refer to your line card documentation.

**Syntax**

```plaintext
seq sequence-number {deny | permit} ether-type protocol-type-number
(destination-mac-address mac-address-mask | any) vlan vlan-id (source-mac-address mac-address-mask | any) [count [byte] [order] [log [interval minutes] [threshold-in-msgs [count]]] [monitor]
```

To remove this filter, use the `no seq sequence-number` command.

**Parameters**

- `sequence-number`: Enter a number from 0 to 4294967290.
- `deny`: Enter the keyword `deny` to drop all traffic meeting the filter criteria.
- `permit`: Enter the keyword `permit` to forward all traffic meeting the filter criteria.
- `destination-mac-address mac-address-mask`: Enter a MAC address and mask in the `nn:nn:nn:nn:nn:nn` format. For the MAC address mask, specify which bits in the MAC address must match. The MAC ACL supports an inverse mask; therefore, a mask of `ff:ff:ff:ff:ff:ff` allows entries that do not match and a mask of `00:00:00:00:00:00` only allows entries that match exactly.
- `any`: Enter the keyword `any` to match and drop specific Ethernet traffic on the interface.
- `vlan vlan-id`: Enter the keyword `vlan` and then enter the VLAN ID to filter traffic associated with a specific VLAN. The range is 1 to 4094 and 1 to 2094 for ExaScale (you can use IDs 1 to 4094). To filter all VLAN traffic specify `VLAN 1`.
- `source-mac-address mac-address-mask`: Enter a MAC address and mask in the `nn:nn:nn:nn:nn:nn` format. For the MAC address mask, specify which bits in the MAC address must match.
The MAC ACL supports an inverse mask; therefore, a mask of ff:ff:ff:ff:ff:ff allows entries that do not match and a mask of 00:00:00:00:00:00 only allows entries that match exactly.

- **count** (OPTIONAL) Enter the keyword count to count packets the filter processes.
- **byte** (OPTIONAL) Enter the keyword byte to count bytes the filter processes.
- **order** (OPTIONAL) Enter the keyword order to specify the QoS priority for the ACL entry. The range is 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority). If you do not use the keyword order, the ACLs have the lowest order by default (255).
- **log** (OPTIONAL) Enter the keyword log to enable the triggering of ACL log messages.
- **interval minutes** (OPTIONAL) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. The interval range is from 1 to 10 minutes.
- **threshold-in msgs** (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the seq, permit, or deny commands. The threshold range is from 1 to 100.
- **monitor** (OPTIONAL) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

**NOTE:** For more information, refer to the Flow-based Monitoring section in the Port Monitoring chapter of the Dell Networking OS Configuration Guide.

**Defaults**

By default, 10 ACL logs are generated if you do not specify the threshold explicitly. The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

<td>Expanded to include the optional QoS order priority for the ACL entry.</td>
</tr>
</tbody>
</table>

**Usage Information**

The **monitor** option is relevant in the context of flow-based monitoring only. For more information, refer to Port Monitoring.

The **order** option is relevant in the context of the Policy QoS feature only. The following applies:

- The **seq sequence-number** command is applicable only in an ACL group.
The `order` option works across ACL groups that have been applied on an interface via the QoS policy framework.

The `order` option takes precedence over `seq sequence-number`.

If `sequence-number` is not configured, the rules with the same order value are ordered according to their configuration order.

If `sequence-number` is configured, the sequence-number is used as a tie breaker for rules with the same order.

When you use the `log` option, the CP processor logs details about the packets that match. Depending on how many packets match the log entry and at what rate, the CP may become busy as it has to log these packets’ details.

You cannot include IP, TCP, or UDP (Layer 3) filters in an ACL configured with ARP or Ether-type (Layer 2) filters. Apply Layer 2 ACLs to interfaces in Layer 2 mode.

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the `flow-based enable` command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists.

This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

**NOTE:** When ACL logging and byte counters are configured simultaneously, byte counters may display an incorrect value. Configure packet counters with logging instead.

### seq

Assign a sequence number to a deny or permit filter in an extended IP access list while creating the filter.

**Syntax**

```
seq sequence-number {deny | permit} {source [mask] | any | host ip-address} [count [byte] [dscp value] [order] [fragments] [threshold-in-msgs [count]]
```

**Parameters**

- `sequence-number`: Enter a number from 0 to 4294967290. The range is from 0 to 65534.
- `deny`: Enter the keyword `deny` to configure a filter to drop packets meeting this condition.
- `permit`: Enter the keyword `permit` to configure a filter to forward packets meeting this criteria.
- `source`: Enter an IP address in dotted decimal format of the network from which the packet was received.
- `mask`: (OPTIONAL) Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.
any
  Enter the keyword any to specify that all routes are subject to the filter.

count
  (OPTIONAL) Enter the keyword count to count packets the filter processes.

byte
  (OPTIONAL) Enter the keyword byte to count bytes the filter processes.

dscp
  (OPTIONAL) Enter the keyword dscp to match to the IP DCSCP values.

order
  (OPTIONAL) Enter the keyword order to specify the QoS order for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority). If you do not use the keyword order, the ACLs have the lowest order by default (255).

fragments
  Enter the keyword fragments to use ACLs to control packet fragments.

threshold-in msgs count
  (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the seq, permit, or deny commands. The threshold range is from 1 to 100.

Defaults
  By default, 10 ACL logs are generated if you do not specify the threshold explicitly. The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

Related Commands

- `deny` — configures a filter to drop packets.
- `permit` — configures a filter to forward packets.
- `seq` — assigns a sequence number to a deny or permit filter in an IP access list while creating the filter.

**seq**

Assign a sequence number to a deny or permit filter in an extended IP access list while creating the filter.

**Syntax**

```
seq sequence-number {deny | permit} {ipv6-protocol-number | icmp | ip | tcp | udp} {source mask | any | host ipv6-address} {destination mask | any | host ipv6-address} [operator port [port]] [count [byte]] [dscp value] [order] [fragments] [log [interval minutes] [threshold-in-msgs [count]]] [monitor]
```

**Parameters**

- `sequence-number` — Enter a number from 0 to 4294967290. The range is from 1 to 65534.
- `deny` — Enter the keyword deny to configure a filter to drop packets meeting this condition.
- `permit` — Enter the keyword permit to configure a filter to forward packets meeting this criteria.
- `ipv6-protocol-number` — Enter a number from 0 to 255 to filter based on the protocol identified in the IP protocol header.
- `icmp` — Enter the keyword icmp to configure an ICMP access list filter.
- `ip` — Enter the keyword ip to configure a generic IP access list. The keyword ip specifies that the access list permits all IP protocols.
- `tcp` — Enter the keyword tcp to configure a TCP access list filter.
- `udp` — Enter the keyword udp to configure a UDP access list filter.
- `source` — Enter an IP address in dotted decimal format of the network from which the packet was received.
- `mask` — (OPTIONAL) Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.
- `any` — Enter the keyword any to specify that all routes are subject to the filter.
- `host ipv6-address` — Enter the keyword host and then enter the IPv6 address to specify a host IP address or hostname.
- `operator` — (OPTIONAL) Enter one of the following logical operands:
  - `eq` = equal to
  - `neq` = not equal to
  - `gt` = greater than
• \( \leq \) = less than
• \( \text{range} \) = inclusive range of ports (you must specify two ports for the \text{port} parameter.)

\text{port port} \quad \text{(OPTIONAL)} Enter the application layer port number. Enter two port numbers if you are using the range logical operand. The range is from 0 to 65535.
The following list includes some common TCP port numbers:
• 23 = Telnet
• 20 and 21 = FTP
• 25 = SMTP
• 169 = SNMP

\text{destination} \quad \text{Enter the IP address of the network or host to which the packets are sent.}
\text{count} \quad \text{(OPTIONAL)} Enter the keyword \text{count} to count packets the filter processes.
\text{byte} \quad \text{(OPTIONAL)} Enter the keyword \text{byte} to count bytes the filter processes.
\text{dscp} \quad \text{(OPTIONAL)} Enter the keyword \text{dscp} to match to the IP DCSCP values.
\text{order} \quad \text{(OPTIONAL)} Enter the keyword \text{order} to specify the QoS order for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority). If you do not use the keyword \text{order}, the ACLs have the lowest order by default (255).
\text{fragments} \quad \text{Enter the keyword \text{fragments} to use ACLs to control packet fragments.}
\text{log} \quad \text{(OPTIONAL)} Enter the keyword \text{log} to enable the triggering of ACL log messages.
\text{threshold-in msgs} \quad \text{(OPTIONAL)} Enter the \text{threshold-in-msgs} keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the \text{seq}, \text{permit}, or \text{deny} commands. The threshold range is from 1 to 100.
\text{interval minutes} \quad \text{(OPTIONAL)} Enter the keyword \text{interval} followed by the time period in minutes at which the ACL logs must be generated. The interval range is from 1 to 10 minutes.
\text{monitor} \quad \text{(OPTIONAL)} Enter the keyword \text{monitor} when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

\text{Defaults} \quad \text{By default 10 ACL logs are generated if you do not specify the threshold explicitly. The default frequency at which the ACL logs are generated is five minutes. By default, the flow-based monitoring is not enabled.}

Usage Information

The order option is relevant in the context of the Policy QoS feature only. The following applies:

- The seq sequence-number command is applicable only in an ACL group.
- The order option works across ACL groups that have been applied on an interface via the QoS policy framework.
- The order option takes precedence over seq sequence-number.
- If sequence-number is not configured, the rules with the same order value are ordered according to their configuration order.
- If sequence-number is configured, the sequence-number is used as a tie breaker for rules with the same order.

If you configure the sequence-number, the sequence-number is used as a tie breaker for rules with the same order.

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the flow-based enable command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists.

This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

Related Commands

deny — Configures a filter to drop packets.

permit — Configures a filter to forward packets.

permit udp

To pass UDP packets meeting the filter criteria, configure a filter.

Syntax

```
permit udp {source mask | any | host ip-address} [operator port [port]]
{destination mask | any | host ip-address} [dscp] [operator port [port]] [count [byte]] [order] [fragments] [threshold-in-msgs [count]]
```

To remove this filter, you have two choices:

- Use the no seq sequence-number command if you know the filter’s sequence number.
- Use the no permit udp {source mask | any | host ip-address} {destination mask | any | host ip-address} command.

Parameters

- **source**
  Enter the IP address of the network or host from which the packets were sent.
**mask**
Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.

**any**
Enter the keyword any to specify that all routes are subject to the filter.

**host ip-address**
Enter the keyword host and then enter the IP address to specify a host IP address.

**dscp**
Enter the keyword dscp to deny a packet based on the DSCP value. The range is from 0 to 63.

**operator**
(Optional) Enter one of the following logical operand:
- `eq` = equal to
- `neq` = not equal to
- `gt` = greater than
- `lt` = less than
- `range` = inclusive range of ports (you must specify two ports for the `port` parameter)

**port port**
Enter the application layer port number. Enter two port numbers if you are using the range logical operand. The range is 0 to 65535.

**destination**
Enter the IP address of the network or host to which the packets are sent.

**count**
(Optional) Enter the keyword count to count packets processed by the filter.

**byte**
(Optional) Enter the keyword byte to count bytes processed by the filter.

**order**
(Optional) Enter the keyword order to specify the QoS priority for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority). If you do not use the keyword order, the ACLs have the lowest order by default (255).

**fragments**
Enter the keyword fragments to use ACLs to control packet fragments.

**threshold-in msgs**
(Optional) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the `seq`, `permit`, or `deny` commands. The threshold range is from 1 to 100.

**Defaults**
By default, 10 ACL logs are generated if you do not specify the threshold explicitly. The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

</tr>
</tbody>
</table>

**Usage Information**
The `order` option is relevant in the context of the Policy GoS feature only. For more information, refer to the “Quality of Service” chapter of the Dell Operating System Configuration Guide.

You can configure either count (packets) or count (bytes). However, for an ACL with multiple rules, you can configure some ACLs with count (packets) and others as count (bytes) at any given time.
Most ACL rules require one entry in the CAM. However, rules with TCP and UDP port operators (for example, gt, lt, or range) may require more than one entry. The range of ports is configured in the CAM based on bit mask boundaries; the space required depends on exactly what ports are included in the range.

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the `flow-based enable` command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

### Example

An ACL rule with a TCP port range of 4000–8000 uses eight entries in the CAM.

<td>1024</td>
</tr>
</tbody>
</table>

Total Ports: 1024

### Related Commands

- `ip access-list extended` — creates an extended ACL.
- `permit` — assigns a permit filter for IP packets.
- `permit tcp` — assigns a permit filter for TCP packets.
To pass TCP packets meeting the filter criteria, configure a filter.

Syntax

```
permit tcp {source mask | any | host ip-address} [bit] [operator port [port]]
{destination mask | any | host ip-address} [bit] [dscp] [operator port [port]]
[count [byte]] [order] [fragments] [log [interval minutes] [threshold-in-msgs [count]]] [monitor]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no permit tcp {source mask | any | host ip-address} {destination mask | any | host ip-address}` command.

### Parameters

- **source**
  - Enter the IP address of the network or host from which the packets were sent.

- **mask**
  - Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.

- **any**
  - Enter the keyword `any` to specify that all routes are subject to the filter.

- **host ip-address**
  - Enter the keyword `host` then the IP address to specify a host IP address.

- **bit**
  - Enter a flag or combination of bits:
    - `ack` : acknowledgment field
    - `fin` : finish (no more data from the user)
    - `psh` : push function
    - `rst` : reset the connection
    - `syn` : synchronize sequence numbers
    - `urg` : urgent field

- **dscp**
  - Enter the keyword `dscp` to deny a packet based on the DSCP value. The range is from 0 to 63.

- **operator**
  - (OPTIONAL) Enter one of the following logical operand:
    - `eq` : equal to
    - `neq` : not equal to
    - `gt` : greater than
    - `lt` : less than
    - `range` : inclusive range of ports (you must specify two ports for the port parameter)

- **port port**
  - Enter the application layer port number. Enter two port numbers if you are using the range logical operand. The range is from 0 to 65535.

The following list includes some common TCP port numbers:

- `23` = Telnet
- `20` and `21` = FTP
- `25` = SMTP
- `169` = SNMP
destination
Enter the IP address of the network or host to which the packets are sent.

mask
Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.

count
(Optional) Enter the keyword count to count packets the filter processes.

byte
(Optional) Enter the keyword byte to count bytes the filter processes.

order
(Optional) Enter the keyword order to specify the QoS priority for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority). If you do not use the keyword order, the ACLs have the lowest order by default (255).

fragments
Enter the keyword fragments to use ACLs to control packet fragments.

log
(Optional) Enter the keyword log to enable the triggering of ACL log messages.

threshold-in msgs count
(Optional) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the seq, permit, or deny commands. The threshold range is from 1 to 100.

interval minutes
(Optional) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. The threshold range is from 1 to 10 minutes.

monitor
(Optional) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Defaults
By default, 10 ACL logs are generated if you do not specify the threshold explicitly. The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

Command Modes
CONFIGURATION-IP ACCESS-LIST-EXTENDED

Supported Modes
Full-Switch

Command History

Version Description
9.9(0.0) Introduced on the FN IOM.
9.4(0.0) Added support for flow-based monitoring on the MXL 10/40GbE Switch IO Module platform.
9.3(0.0) Added support for logging of ACLs on the MXL 10/40GbE Switch IO Module platform.
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module platform.

Usage Information
The order option is relevant in the context of the Policy QoS feature only. For more information, refer to the “Quality of Service” chapter of the Dell Networking OS Configuration Guide.

The switch cannot count both packets and bytes, so when you enter the count byte options, only bytes are incremented.

Most ACL rules require one entry in the CAM. However, rules with TCP and UDP port operators (for example, gt, lt, or range) may require more than one entry. The range of ports is configured in the CAM based on bit mask boundaries; the space required depends on exactly what ports are included in the range.

254 | Access Control Lists (ACL)
When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the flow-based enable command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists.

This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

**Example**

An ACL rule with a TCP port range of 4000–8000 uses eight entries in the CAM.

```
Dell# Data           Mask            From   To    #Covered
1 000001111110100000 1111111111100000 4000  4031  32
2 000001111111100000 1111111111110000 4032  4095  64
3 0001000000000000 1111111111111111 6144  6144  1
4 0001000000000000 1111111111111111 6144  6144  1
5 0001000000000000 1111111111111111 6144  6144  1
6 0001000000000000 1111111111111111 6144  6144  1
7 0001000000000000 1111111111111111 6144  6144  1
8 0001000000000000 1111111111111111 6144  6144  1
Total Ports: 4001
```

**Example**

An ACL rule with a TCP port lt 1023 uses only one entry in the CAM.

```
Dell# Data           Mask            From   To    #Covered
1 0000000000000000 1111110000000000 0    1023  1024
Total Ports: 1024
```

**Related Commands**

- `ip access-list extended` — creates an extended ACL.
- `permit` — assigns a permit filter for IP packets.
- `permit udp` — assigns a permit filter for UDP packets.

**permit icmp**

Configure a filter to allow all or specific ICMP messages.

**Syntax**

```
permit icmp {source mask | any | host ip-address} {destination mask | any | host ip-address} [dscp] [message-type] [count [byte]] [order] [fragments] [threshold-in-msgs [count]]
```

**Example**

An ACL rule with a TCP port range of 4000–8000 uses eight entries in the CAM.

```
Dell# Data           Mask            From   To    #Covered
1 000001111110100000 1111111111100000 4000  4031  32
2 000001111111100000 1111111111110000 4032  4095  64
3 0001000000000000 1111111111111111 6144  6144  1
4 0001000000000000 1111111111111111 6144  6144  1
5 0001000000000000 1111111111111111 6144  6144  1
6 0001000000000000 1111111111111111 6144  6144  1
7 0001000000000000 1111111111111111 6144  6144  1
8 0001000000000000 1111111111111111 6144  6144  1
Total Ports: 4001
```

**Example**

An ACL rule with a TCP port lt 1023 uses only one entry in the CAM.

```
Dell# Data           Mask            From   To    #Covered
1 0000000000000000 1111110000000000 0    1023  1024
Total Ports: 1024
```
To remove this filter, you have two choices:

- Use the no seq sequence-number command if you know the filter’s sequence number.
- Use the no permit icmp {source mask | any | host ip-address} {destination mask | any | host ip-address} command.

**Parameters**

- **source**
  Enter the IP address of the network or host from which the packets were sent.

- **mask**
  Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or noncontiguous.

- **any**
  Enter the keyword any to match and drop specific Ethernet traffic on the interface.

- **host ip-address**
  Enter the keyword host and then enter the IP address to specify a host IP address.

- **destination**
  Enter the IP address of the network or host to which the packets are sent.

- **dscp**
  Enter the keyword dscp to deny a packet based on the DSCP value. The range is 0 to 63.

- **message-type**
  (OPTIONAL) Enter an ICMP message type, either with the type (and code, if necessary) numbers or with the name of the message type. The range is 0 to 255 for ICMP type and 0 to 255 for ICMP code.

- **count**
  (OPTIONAL) Enter the keyword count to count packets the filter processes.

- **byte**
  (OPTIONAL) Enter the keyword byte to count bytes the filter processes.

- **order**
  (OPTIONAL) Enter the keyword order to specify the QoS priority for the ACL entry. The range is 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority). If you do not use the keyword order, the ACLs have the lowest order by default (255).

- **fragments**
  Enter the keyword fragments to use ACLs to control packet fragments.

- **threshold-in msgs**
  (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the seq, permit, or deny commands. The threshold range is from 1 to 100.

**Defaults**

By default, 10 ACL logs are generated if you do not specify the threshold explicitly. The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

The `order` option is relevant in the context of the Policy GoS feature only. For more information, refer to the Quality of Service chapter of the Dell Networking OS Configuration Guide.

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the `flow-based enable` command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

**permit**

To configure a filter that matches the filter criteria, select an IPv6 protocol number, ICMP, IPv6, TCP, or UDP.

```
permit {ipv6-protocol-number | icmp | ipv6 | tcp | udp} [count [byte]] [dscp value] [order] [fragments] [log [interval minutes] [threshold-in-msgs [count]] [monitor]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command syntax if you know the filter’s sequence number
- Use the `no permit {ipv6-protocol-number | icmp | ipv6 | tcp | udp}` command

**Parameters**

- **ip-protocol-number**
  - Enter an IPv6 protocol number. The range is from 0 to 255.
- **icmp**
  - Enter the keyword `icmp` to filter internet Control Message Protocol version 6.
- **ipv6**
  - Enter the keyword `ipv6` to filter any internet Protocol version 6.
- **tcp**
  - Enter the keyword `tcp` to filter the Transmission Control protocol.
- **udp**
  - Enter the keyword `udp` to filter the User Datagram Protocol.
- **count**
  - (OPTIONAL) Enter the keyword `count` to count packets the filter processes.
- **byte**
  - (OPTIONAL) Enter the keyword `byte` to count bytes the filter processes.
- **dscp**
  - (OPTIONAL) Enter the keyword `dscp` to match to the IP DCSCP values.
- **order**
  - (OPTIONAL) Enter the keyword `order` to specify the GoS priority for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority). If you do not use the keyword `order`, the ACLs have the lowest order by default (255).
- **fragments**
  - Enter the keyword `fragments` to use ACLs to control packet fragments.
### deny udp (for IPv6 ACLs)

Configure a filter to drop user datagram protocol (UDP) packets meeting the filter criteria.

**Syntax**

```
deny udp {source address mask | any | host ipv6-address} [operator port [port]]
{destination address | any | host ipv6-address} [operator port [port]] [count [byte]] [log [interval minutes] [threshold-in-msgs [count]] [monitor]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter's sequence number
- Use the `no deny udp {source address mask | any | host ipv6-address} [destination address | any | host ipv6-address]` command

#### Parameters

- **source**
  - Enter the IP address of the network or host from which the packets are sent.

- **mask**
  - Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.

- **any**
  - Enter the keyword `any` to specify that all routes are subject to the filter.

- **host ipv6-address**
  - Enter the keyword `host` then the IPv6 address to specify a host IP address.

- **operator**
  - (OPTIONAL) Enter one of the following logical operand.
    - `eq = equal to`
    - `neq = not equal to`
gt = greater than
lt = less than
range = inclusive range of ports (you must specify two ports for the port command)

port
Enter the application layer port number. Enter two port numbers if using the range logical operand. The range is from 0 to 65535. The following list includes some common TCP port numbers:

• 23 = Telnet
• 20 and 21 = FTP
• 25 = SMTP
• 169 = SNMP

count
(Optional) Enter the keyword count to count the packets that filter the processes.

byte
(Optional) Enter the keyword byte to count the bytes that filter the processes.

log
(Optional) Enter the keyword log to enable the triggering of ACL log messages.

threshold-in msgs
(Optional) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the seq, permit, or deny commands. The threshold range is from 1 to 100.

interval minutes
(Optional) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. The threshold range is from 1 to 10 minutes.

monitor
(Optional) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Defaults
By default, 10 ACL logs are generated if you do not specify the threshold explicitly. The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

**Related Commands**

- `deny` – assigns a filter to deny IP traffic.
- `deny tcp` – assigns a deny filter for TCP traffic.

### deny tcp (for IPv6 ACLs)

Configure a filter that drops TCP packets that match the filter criteria.

**Syntax**

```
deny tcp (source address mask | any | host ipv6-address) [operator port [port]]
(destination address | any | host ipv6-address) [bit] [operator port [port]]
[count [byte]] [log [interval minutes] [threshold-in-msgs [count]] [monitor]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter’s sequence number
- Use the `no deny tcp (source address mask | any | host ipv6-address)
(destination address | any | host ipv6-address)` command

**Parameters**

- `source`
Enter the IP address of the network or host from which the packets are sent.
- `mask`
Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.
- `any`
Enter the keyword `any` to specify that all routes are subject to the filter.
- `host ipv6-address`
Enter the keyword `host` then the IPv6 address to specify a host IP address.
- `operator`
(Optional) Enter one of the following logical operand:
  - `eq` = equal to
  - `neq` = not equal to
  - `gt` = greater than
  - `lt` = less than
  - `range` = inclusive range of ports (you must specify two ports for the `port` command)
- `port`
Enter the application layer port number. Enter two port numbers if using the range logical operand. The range is from 0 to 65535. The following list includes some common TCP port numbers:
  - `23` = Telnet
  - `20` and `21` = FTP
destination

Enter the IP address of the network or host to which the packets are sent.

bit

(Optional) Enter the keyword bit to count the bits that filter the processes.

count

(Optional) Enter the keyword count to count the packets that filter the processes.

byte

(Optional) Enter the keyword byte to count the bytes that filter the processes.

log

(Optional) Enter the keyword log to enable the triggering of ACL log messages.

threshold-in msgs count

(Optional) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the seq, permit, or deny commands. The threshold range is from 1 to 100.

interval minutes

(Optional) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. The time interval range is from 1 to 10 minutes.

monitor

(Optional) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Defaults

By default, 10 ACL logs are generated if you do not specify the threshold explicitly. The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

Related Commands

- **deny** – assigns a filter to deny IP traffic.
- **deny udp** – assigns a filter to deny UDP traffic.

**deny icmp (for Extended IPv6 ACLs)**

Configure a filter to drop all or specific ICMP messages.

**Syntax**

```
deny icmp {source address mask | any | host ipv6-address} {destination address | any | host ipv6-address} [count [byte]] | [log [interval minutes] [threshold-in-msgs [count]] [monitor]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command syntax if you know the filter’s sequence number.
- Use the `no deny icmp {source address mask | any | host ipv6-address} {destination address | any | host ipv6-address}` command

**Parameters**

- **source**
  - Enter the IPv6 address of the network or host from which the packets were sent.
- **mask**
  - Enter a network mask in /prefix format (/X) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.
- **any**
  - Enter the keyword *any* to specify that all routes are subject to the filter.
- **host ipv6-address**
  - Enter the keyword *host* then the IPv6 address to specify a host IP address.
- **destination**
  - Enter the IPv6 address of the network or host to which the packets are sent.
- **count**
  - (OPTIONAL) Enter the keyword *count* to count packets processed by the filter.
- **byte**
  - (OPTIONAL) Enter the keyword *byte* to count bytes processed by the filter.
- **log**
  - (OPTIONAL) Enter the keyword *log* to enable the triggering of ACL log messages.
- **threshold-in-msgs**
  - (OPTIONAL) Enter the `threshold-in-msgs` keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the `seq`, `permit`, or `deny` commands. The threshold range is from 1 to 100.

This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

deny (for IPv6 ACLs)

Configure a filter that drops IPv6 packets that match the filter criteria.

**Syntax**

```
deny {ipv6-protocol-number | icmp | ipv6 | tcp | udp} [count [byte]] [dscp value] [order] [fragments] [log [interval minutes] [threshold-in-msgs [count]] [monitor]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command syntax if you know the filter’s sequence number
- Use the `no deny {ipv6-protocol-number | icmp | ipv6 | tcp | udp} `command

**Parameters**

- `count` (OPTIONAL) Enter the keyword `count` to count packets processed by the filter.
- `byte` (OPTIONAL) Enter the keyword `byte` to count bytes processed by the filter.
- `dscp` (OPTIONAL) Enter the keyword `dscp` to match to the IP DSCP values.
- `order` (OPTIONAL) Enter the keyword `order` to specify the GoS order of priority for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower order numbers have a higher priority). If you do not use the `order` keyword, the ACLs have the lowest order by default as 255.
fragments Enter the keyword fragments to use ACLs to control packet fragments.

log (OPTIONAL) Enter the keyword log to enable the triggering of ACL log messages.

threshold-in msgs count (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated, with the seq, permit, or deny commands. The threshold range is from 1 to 100.

interval minutes (OPTIONAL) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. The time interval range is from 1 to 10 minutes.

monitor (OPTIONAL) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Defaults
By default, 10 ACL logs are generated if you do not specify the threshold explicitly. The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the flow-based enable command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress directions. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).
Access Control List (ACL) VLAN Groups and Content Addressable Memory (CAM)

This section describes the access control list (ACL) virtual local area network (VLAN) group, and content addressable memory (CAM) enhancements.

**member vlan**

Add VLAN members to an ACL VLAN group.

**Syntax**

```
member vlan {VLAN-range}
```

**Parameters**

- **VLAN-range**
  
  Enter the member VLANs using comma-separated VLAN IDs, a range of VLAN IDs, a single VLAN ID, or a combination. For example:

  - Comma-separated: 3, 4, 6
  - Range: 5-10
  - Combination: 3, 4, 5-10, 8

**Default**

None

**Command Modes**

- CONFIGURATION (conf-acl-vl-grp)

**Supported Modes**

- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the MXL platform.</td>
</tr>
</tbody>
</table>

**Usage Information**

At a maximum, there can be only 32 VLAN members in all ACL VLAN groups. A VLAN can belong to only one group at any given time.

You can create an ACL VLAN group and attach the ACL with the VLAN members. The optimization is applicable only when you create an ACL VLAN group. If you apply an ACL separately on the VLAN interface, each ACL has a mapping with the VLAN and increased CAM space utilization occurs.

Attaching an ACL individually to VLAN interfaces is similar to the behavior of ACL-VLAN mapping storage in CAM prior to the implementation of the ACL VLAN group functionality.
**ip access-group**

Apply an egress IP ACL to the ACL VLAN group.

**Syntax**

```plaintext
ip access-group {group name} out implicit-permit
```

**Parameters**

- **group-name**
  - Enter the name of the ACL VLAN group where you want the egress IP ACLs applied, up to 140 characters.

- **out**
  - Enter the keyword `out` to apply the ACL to outgoing traffic.

- **implicit-permit**
  - Enter the keyword `implicit-permit` to change the default action of the ACL from implicit-deny to implicit-permit (that is, if the traffic does not match the filters in the ACL, the traffic is permitted instead of dropped).

**Default**

None

**Command Modes**

CONFIGURATION (conf-acl-vl-grp)

**Supported Modes**

<tr>
<td>9.3(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module platform.</td>
</tr>
</tbody>
</table>

**Usage Information**

You can apply only an egress IP ACL on an ACL VLAN group.

**show acl-vlan-group**

Display all the ACL VLAN groups or display a specific ACL VLAN group, identified by name.

**Syntax**

```plaintext
show acl-vlan-group {group-name | detail}
```

**Parameters**

- **group-name**
  - (Optional) Display only the ACL VLAN group that is specified, up to 140 characters.

- **detail**
  - Display information in a line-by-line format to display the names in their entirety.

Without the detail option, the output displays in a table style and information may be truncated.

**Default**

No default behavior or values

**Command Modes**

EXEC

</tr>
</tbody>
</table>

Usage Information

After CAM configuration for ACL VLAN groups is performed, you must reboot the system to enable the settings to be stored in nonvolatile storage. During the initialization of CAM, the chassis manager reads the NVRAM and allocates the dynamic VCAP regions.

The following table describes the output fields of this show command:

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Chassis Vlan Cam ACL</td>
<td>Details about the CAM blocks allocated for ACLs for various VLAN operations at a system-wide, global level.</td>
</tr>
<tr>
<td>Stack Unit &lt;number&gt;</td>
<td>Details about the CAM blocks allocated for ACLs for various VLAN operations for a particular stack unit.</td>
</tr>
<tr>
<td>Current Settings(in block sizes)</td>
<td>Information about the number of FP blocks that are currently in use or allocated.</td>
</tr>
<tr>
<td>VlanOpenFlow</td>
<td>Number of FP blocks for VLAN open flow operations.</td>
</tr>
<tr>
<td>VlanIscsi</td>
<td>Number of FP blocks for VLAN internet small computer system interface (iSCSI) counters.</td>
</tr>
<tr>
<td>VlanHp</td>
<td>Number of FP blocks for VLAN high performance processes.</td>
</tr>
<tr>
<td>VlanFcoe</td>
<td>Number of FP blocks for VLAN Fiber Channel over Ethernet (FCoE) operations.</td>
</tr>
<tr>
<td>VlanAclOpt</td>
<td>Number of FP blocks for ACL VLAN optimization feature.</td>
</tr>
</tbody>
</table>

Example

```
Dell#show cam-acl-vlan
-- Chassis Vlan Cam ACL --
Current Settings(in block sizes)
VlanOpenFlow :         0
VlanIscsi    :         0
VlanAclOpt   :         2
VlanHp       :         1
VlanFcoe     :         1
```

`cam-acl-vlan`

Allocate the number of flow processor (FP) blocks or entries for VLAN services and processes.

Syntax

```
cam-acl-vlan { default | vlanopenflow <0-2> | vlaniscsi <0-2> | vlanaclopt <0-2> }
```

Parameters

- **default**
  - Reset the number of FP blocks to default. By default, 0 groups are allocated for the ACL in VCAP. ACL VLAN groups or CAM optimization is not enabled by default, and you need to allocate the slices for CAM optimization.

- **vlanopenflow <0-2>**
  - Allocate the number of FP blocks for VLAN open flow operations.

- **vlaniscsi <0-2>**
  - Allocate the number of FP blocks for VLAN iSCSI counters.
Allocate the number of FP blocks for the ACL VLAN optimization feature.

Default

If you use the default keyword with the cam-acl-vlan command, the FP blocks allocated for VLAN processes are restored to their default values. No FP blocks or dynamic VLAN Content Aware Processor (VCAP) groups are allocated for VLAN operations by default.

Command Modes

Supported Modes

Command History

Version Description
9.9(0.0) Introduced on the FN IOM.
9.3(0.0) Introduced on the MXL platform.

Usage Information

The VLAN Content Aware Processor (VCAP) application is a pre-ingress CAP that modifies the VLAN settings before packets are forwarded. To support the ACL CAM optimization functionality, the CAM carving feature is enhanced. A total of four VACP groups are present, of which two are for fixed groups and the other two are for dynamic groups. Out of the total of two dynamic groups, you can allocate zero, one, or two flow processor (FP) blocks to iSCSI Counters, OpenFlow and ACL Optimization. You can configure only two of these features at a point in time.

show cam-usage

View the amount of CAM space available, used, and remaining in each partition (including IPv4Flow and Layer 2 ACL sub-partitions).

Syntax

show cam-usage [acl | router | switch]

Parameters

 acl (OPTIONAL) Enter the keyword acl to display Layer 2 and Layer 3 ACL CAM usage.

 router (OPTIONAL) Enter the keyword router to display Layer 3 CAM usage.

 switch (OPTIONAL) Enter the keyword switch to display Layer 2 CAM usage.

Command Modes

EXEC

EXEC Privilege

Supported Modes

Full-Switch

Command History

Version Description
9.11.0.0 The show cam-usage command is updated to display the ECMP group count information.
9.9(0.0) Introduced on the FN IOM.
9.3(0.0) Introduced on the MXL 10/40GbE Switch IO Module platform.

Usage Information

The following regions must be provided in the show cam-usage output:

- L3AclCam
The following describes the output fields of this `show` command:

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>LineCard</td>
<td>Number of the line card that contains information on ACL VLAN groups</td>
</tr>
<tr>
<td>Portpipe</td>
<td>The hardware path that packets follow through a system for ACL optimization</td>
</tr>
<tr>
<td>CAM-Region</td>
<td>Type of area in the CAM block that is used for ACL VLAN groups</td>
</tr>
<tr>
<td>Total CAM space</td>
<td>Total amount of space in the CAM block</td>
</tr>
<tr>
<td>Used CAM</td>
<td>Amount of CAM space that is currently in use</td>
</tr>
<tr>
<td>Available CAM</td>
<td>Amount of CAM space that is free and remaining to be allocated for ACLs</td>
</tr>
</tbody>
</table>

Example:

```
Dell#show cam-usage
Stackunit|Portpipe|CAM Partition  |Total CAM|Used CAM|Available CAM
--------|--------|===============|---------|--------|-------------
 0   | 0      | IN-L3 ACL      | 512     | 1      | 511          |
     |        | IN-L3 ECMP GRP | 1024    | 0      | 1024        |
     |        | IN-V6 ACL      | 0       | 0      | 0           |
     |        | IN-L2 ACL      | 512     | 0      | 512          |
     |        | IN-NLB ACL     | 256     | 0      | 256          |
     |        | IPMAC ACL      | 0       | 0      | 0           |
     |        | OUT-L3 ACL     | 158     | 6      | 152          |
     |        | OUT-V6 ACL     | 158     | 1      | 157          |
 1   | 0      | IN-L3 ACL      | 512     | 1      | 511          |
     |        | IN-V6 ACL      | 0       | 0      | 0           |
     |        | IN-L2 ACL      | 512     | 0      | 512          |
     |        | IN-NLB ACL     | 256     | 0      | 256          |
     |        | IPMAC ACL      | 0       | 0      | 0           |
     |        | OUT-L3 ACL     | 158     | 6      | 152          |
     |        | OUT-V6 ACL     | 158     | 1      | 157          |
Codes: * - cam usage is above 90%.
Dell#
```

Example (show cam-usage router)

```
Dell#show cam-usage router
Stackunit|Portpipe|CAM Partition  |Total CAM |Used CAM |Available CAM
--------|--------|===============|----------|---------|-------------
 0   | 0      | IN-L3 ACL     | 1024     | 1       | 1023        |
     |        | IN-L3 ECMP GRP| 1024     | 0       | 1024        |
     |        | IN-V6 ACL     | 0        | 0       | 0           |
     |        | IN-L3-MIRR ACL| 0        | 0       | 0           |
     |        | IN-L3 FIB     | 163840   | 15      | 163825      |
```

**show running config acl-vlan-group**

Display the running configuration of all or a given ACL VLAN group.

**Syntax**

`show running config acl-vlan-group group name`

**Parameters**

- **group-name**  
  Display only the ACL VLAN group that is specified. The maximum group name is 140 characters.

**Default**

None
Command Modes

- EXEC
- EXEC Privilege

Supported Modes

- Full-Switch

Command History

<table>
<thead>
<tr>

<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module platform.</td>
</tr>
</tbody>
</table>

Examples

The following sample output shows the line-by-line style display when using the `show running-config acl-vlan-group` option. Note that no group or access list names are truncated.

```
Dell#show running-config acl-vlan-group
acl-vlan-group Test
  member vlan 1-100
  ip access-group test in

Dell#show running-config acl-vlan-group  Test
acl-vlan-group Test
  member vlan 1-100
  ip access-group test in
```

**acl-vlan-group**

Create an ACL VLAN group.

**Syntax**

```
 acl-vlan-group {group name}
```

To remove an ACL VLAN group, use the `no acl-vlan-group {group name}` command.

**Parameters**

- `group-name` Specify the name of the ACL VLAN group. The name can contain a maximum 140 characters.

**Default**

No default behavior or values

**Command Modes**

- CONFIGURATION

**Supported Modes**

- Full-Switch

**Command History**

<table>
<thead>
<tr>

<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module platform.</td>
</tr>
</tbody>
</table>

**Usage Information**

You can have up to eight different ACL VLAN groups at any given time. When you configure an ACL VLAN group, you enter the ACL VLAN Group Configuration mode.

To avoid the problem of excessive consumption of CAM area, you can configure ACL VLAN groups that combines all the VLANs that are applied with the same ACL in a single group. A unique identifier for each of ACL attached to the VLAN is used as a handle or locator in the CAM area instead of the VLAN id. This method of processing significantly reduces the number of entries in the CAM area and saves memory space in CAM.
You can create an ACL VLAN group and attach the ACL with the VLAN members. Optimization is applicable only when you create an ACL VLAN group. If you apply an ACL separately on the VLAN interface, each ACL maps with the VLAN and increased CAM space utilization occurs.

Attaching an ACL individually to VLAN interfaces is similar to the behavior of ACL-VLAN mapping storage in CAM prior to the implementation of the ACL VLAN group functionality.

**show acl-vlan-group detail**

Display all the ACL VLAN Groups or display a specific ACL VLAN Group by name. To display the names in their entirety, the output displays in a line-by-line format.

**Syntax**

```
show acl-vlan-group detail
```

**Parameters**

- `detail`

  Display information in a line-by-line format to display the names in their entirety.

  Without the detail option, the output is displayed in a table style and information may be truncated.

**Default**

No default behavior or values

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

Full-Switch

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module platform.</td>
</tr>
</tbody>
</table>

**Usage Information**

The output for this command displays in a line-by-line format. This allows the ACL-VLAN-Group names (or the Access List Group Names) to display in their entirety.

**Examples**

The following sample output shows the line-by-line style display when using the `show acl-vlan-group detail` option. Note that no group or access list names are truncated.

```
Dell#show acl-vlan-group detail
Group Name : Test
  Egress IP Acl : -
  Ingress IP Acl : test
  Ingress IPV6 Acl : -
  Vlan Members : 1-100
```
description (ACL VLAN Group)

Add a description to the ACL VLAN group.

**Syntax**

```
description description
```

**Parameters**

- `description`: Enter a description to identify the ACL VLAN group (80 characters maximum).

**Default**

No default behavior or values

**Command Modes**

- `CONFIGURATION (conf-acl-vl-grp)`

**Supported Modes**

- Full-Switch

**Command History**

<table>
<thead>
<tr>

</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module platform.</td>
</tr>
</tbody>
</table>

**Usage Information**

Enter a description for each ACL VLAN group that you create for effective and streamlined administrative and logging purposes.
Bidirectional Forwarding Detection (BFD)

Bidirectional forwarding detection (BFD) is a detection protocol that provides fast forwarding path failure detection. The Dell Networking Operating System (OS) implementation is based on the standards specified in the IETF Draft draft-ietf-bfd-base-03 and supports BFD on all Layer 3 physical interfaces including virtual local area network (VLAN) interfaces and port-channels.

Topics:
- bfd all-neighbors
- bfd disable
- bfd enable (Configuration)
- bfd enable (Interface)
- bfd interval
- bfd protocol-liveness
- ip route bfd
- ip ospf bfd all-neighbors
- ipv6 ospf bfd all-neighbors
- isis bfd all-neighbors
- neighbor bfd
- neighbor bfd disable
- show bfd neighbors
- vrrp bfd neighbor

**bfd all-neighbors**

Enable BFD sessions with all neighbors discovered by Layer 3 protocols virtual router redundancy protocol (VRRP), intermediate system to intermediate system (IS-IS), open shortest path first (OSPF), OSPFv3, or border gateway protocol (BGP) on router interfaces, and (optionally) reconfigure the default timer values.

**Syntax**
```
bfd all-neighbors [interval interval min_rx min_rx multiplier value role {active | passive}]
```

**Parameters**
- **interval milliseconds** (OPTIONAL) Enter the keyword interval to specify non-default BFD session parameters beginning with the transmission interval. The range is from 50 to 1000. The default is 200. Dell EMC recommends using more than 100 milliseconds.
- **min_rx milliseconds** Enter the keyword min_rx to specify the minimum rate at which the local system would like to receive control packets from the remote system. The range is from 50 to 1000. The default is 200. Dell EMC recommends using more than 100 milliseconds.
- **multiplier value** Enter the keyword multiplier to specify the number of packets that must be missed in order to declare a session down. The range is from 3 to 50. The default is 3.
- **role [active | passive]**

**Example**
```
DellEMC(conf-router-bfd)# bfd all-neighbors interval 100 min_rx 100 multiplier 50 role active
```
• **Active** — The active system initiates the BFD session. Both systems can be active for the same session.

• **Passive** — The passive system does not initiate a session. It only responds to a request for session initialization from the active system.

The default is **active**.

**Defaults**

See Parameters.

**Command Modes**

- ROUTER OSPF
- ROUTER OSPFv3
- ROUTER BGP
- ROUTER ISIS

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell EMC Networking OS Command Line Reference Guide.

</tbody>
</table>
### Version Description
- **8.4.1.3**: Introduced BFD for BGP on the E-Series.
- **8.2.1.0**: Introduced BFD for OSPF and ISIS on the E-Series.
- **7.6.1.0**: Introduced BFD for OSPF on the C-Series.
- **7.5.1.0**: Introduced BFD for ISIS on the E-Series.
- **7.4.1.0**: Introduced BFD for OSPF on the E-Series.

### Usage Information
All neighbors inherit the timer values configured with the `bfd neighbor` command except in the following cases:

- Timer values configured with the `isis bfd all-neighbors` or `ip ospf bfd all-neighbors` commands in INTERFACE mode override timer values configured with the `bfd neighbor` command. Likewise, using the `no bfd neighbor` command does not disable BFD on an interface if you explicitly enable BFD using the `isis bfd all-neighbors` command.
- Neighbors that have been explicitly enabled or disabled for a BFD session with the `bfd neighbor` or `neighbor bfd disable` commands in ROUTER BGP mode do not inherit the global BFD enable/disable values configured with the `bfd neighbor` command or configured for the peer group to which a neighbor belongs. The neighbors inherit only the global timer values (configured with the `bfd neighbor` command).

You can only enable BFD for VRRP in INTERFACE command mode (`vrrp bfd all-neighbors`).

You can enable BFD on both default and nondefault VRFs for OSPF and BGP protocols for both IPv4 and IPv6 neighbors.

> **NOTE**: The `bfd all-neighbors` command is applicable for both IPv4 and IPv6 BGP sessions.

### bfd disable
Disable BFD on an interface.

**Syntax**
```
bfd disable
```

Re-enable BFD using the `no bfd disable` command.

**Defaults**
BFD is disabled by default.

**Command Modes**
- INTERFACE VRRP

**Supported Modes**
- Full-Switch

### bfd interval

Specify non-default BFD session parameters beginning with the transmission interval.

**Syntax**

```
bfd interval interval min_rx min_rx multiplier value role {active | passive}
```

**Parameters**

- `interval milliseconds`
  Enter the keywords `interval` to specify non-default BFD session parameters beginning with the transmission interval. The range is from 50 to 1000. The default is 200.

- `min_rx milliseconds`
  Enter the keywords `min_rx` to specify the minimum rate at which the local system would like to receive control packets from the remote system. The range is from 50 to 1000. The default is 200.

- `multiplier value`
  Enter the keywords `multiplier` to specify the number of packets that must be missed in order to declare a session down. The range is from 3 to 50. The default is 3.

- `role [active | passive]`
  Enter the role that the local system assumes:
  - **Active** — The active system initiates the BFD session. Both systems can be active for the same session.
  - **Passive** — The passive system does not initiate a session. It only responds to a request for session initialization from the active system.
The default is Active.

Defaults

Refer to Parameters.

</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

Protocol Liveness is a feature that notifies the BFD Manager when a client protocol (for example, OSPF and ISIS) is disabled. When a client is disabled, all BFD sessions for that protocol are torn down. Neighbors on the remote system receive an Admin Down control packet and are placed in the Down state. Peer routers might take corrective action by choosing alternative paths for the routes that originally pointed to this router.

### ip route bfd

Enable BFD for all neighbors configured through static routes.

**Syntax**

```
ip route bfd [prefix-list prefix-list-name] [interval interval min_rx min_rx multiplier value role {active | passive}]
```

To disable BFD for all neighbors configured through static routes, use the **no ip route bfd [prefix-list prefix-list-name] [interval interval min_rx min_rx multiplier value role {active | passive}]** command.

**Parameters**

- `prefix-list prefix-list-name` (Optional) Enter the keyword prefix-list followed by the name of the prefix list to enable or disable BFD on specific neighbors.
interval milliseconds  (OPTIONAL) Enter the keywords interval to specify non-default BFD session parameters beginning with the transmission interval. The range is from 50 to 1000. The default is 200.

min_rx milliseconds  Enter the keywords min_rx to specify the minimum rate at which the local system receives control packets from the remote system. The range is from 50 to 1000. The default is 200.

multiplier value  Enter the keywords multiplier to specify the number of packets that must be missed in order to declare a session down. The range is from 3 to 50. The default is 3.

role [active | passive]  Enter the role that the local system assumes:

  • Active — The active system initiates the BFD session. Both systems can be active for the same session.
  • Passive — The passive system does not initiate a session. It only responds to a request for session initialization from the active system.

The default is Active.

Defaults  See Parameters

**ip ospf bfd all-neighbors**

Establish BFD sessions with all OSPF neighbors on a single interface or use non-default BFD session parameters.

**Syntax**

```
ip ospf bfd all-neighbors [disable | [interval interval min_rx min_rx multiplier value role {active | passive}]]
```

To disable all BFD sessions on an OSPF interface implicitly, use the no ip ospf bfd all-neighbors disable command in interface mode..

**Parameters**

- **disable**  (OPTIONAL) Enter the keyword disable to disable BFD on this interface.

- **interval milliseconds**  (OPTIONAL) Enter the keyword interval to specify non-default BFD session parameters beginning with the transmission interval. The range is from 50 to 1000. The default is 200.

- **min_rx milliseconds**  Enter the keywords min_rx to specify the minimum rate at which the local system receives control packets from the remote system. The range is from 50 to 1000. The default is 200.

- **multiplier value**  Enter the keyword multiplier to specify the number of packets that must be missed in order to declare a session down. The range is from 3 to 50. The default is 3.
role [active | passive]

Enter the role that the local system assumes:

- **Active** — active system initiates the BFD session. Both systems can be active for the same session.
- **Passive** — passive system does not initiate a session. It only responds to a request for session initialization from the active system.

The default is **Active**.

**Defaults**

See Parameters.

</tr>
</tbody>
</table>

**Usage Information**

This command provides the flexibility to fine-tune the timer values based on individual interface needs when you configure ip ospf bfd in CONFIGURATION mode. Any timer values specified with this command overrides timers set using the bfd all-neighbors command. Using the no form of this command does not disable BFD if you configure BFD in CONFIGURATION mode.

To disable BFD on a specific interface while you configure BFD in CONFIGURATION mode, use the keyword disable.

**ipv6 ospf bfd all-neighbors**

Establish BFD sessions with all OSPFV3 neighbors on a single interface or use non-default BFD session parameters.

**Syntax**

\[
\text{ipv6 ospf bfd all-neighbors \{disable | [interval interval min_rx min_rx multiplier value role \{active | passive\}]\}}
\]

To disable all BFD sessions on an OSPFV3 interface implicitly, use the no ipv6 ospf bfd all-neighbors [disable | [interval interval min_rx min_rx multiplier value role \{active | passive\}]] command in interface mode.

**Parameters**

- **disable**
  - (OPTIONAL) Enter the keyword disable to disable BFD on this interface.

- **interval milliseconds**
  - (OPTIONAL) Enter the keyword interval to specify non-default BFD session parameters beginning with the transmission interval. The range is from 50 to 1000. The default is **200**.
**min_rx milliseconds**

Enter the keywords `min_rx` to specify the minimum rate at which the local system receives control packets from the remote system. The range is from 50 to 1000. The default is **200**.

**multiplier value**

Enter the keyword `multiplier` to specify the number of packets that must be missed in order to declare a session down. The range is from 3 to 50. The default is **3**.

**role [active | passive]**

Enter the role that the local system assumes:

- **Active** — The active system initiates the BFD session. Both systems can be active for the same session.
- **Passive** — The passive system does not initiate a session. It only responds to a request for session initialization from the active system.

The default is **Active**.

**Defaults**

See Parameters

### isis bfd all-neighbors

Enable BFD on all IS-IS neighbors discovered on an interface.

**Syntax**

```plaintext
isis bfd all-neighbors [disable | [interval interval min_rx min_rx multiplier value role {active | passive}]]
```

To remove all BFD sessions with IS-IS neighbors discovered on this interface, use the `no isis bfd all-neighbors [disable | [interval interval min_rx min_rx multiplier value role {active | passive}]]` command.

**Parameters**

- **disable** (OPTIONAL) Enter the keyword `disable` to disable BFD on this interface.
- **interval milliseconds** (OPTIONAL) Enter the keywords `interval` to specify non-default BFD session parameters beginning with the transmission interval. The range is from 50 to 1000. The default is **200**.
- **min_rx milliseconds** Enter the keywords `min_rx` to specify the minimum rate at which the local system would like to receive control packets from the remote system. The range is from 50 to 1000. The default is **200**.
- **multiplier value** Enter the keywords `multiplier` to specify the number of packets that must be missed in order to declare a session down. The range is from 3 to 50. The default is **3**.
- **role [active | passive]** Enter the role that the local system assumes:
  - **Active** — The active system initiates the BFD session. Both systems can be active for the same session.
Passive — The passive system does not initiate a session. It only responds to a request for session initialization from the active system.

The default is Active.

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command provides the flexibility to fine-tune the timer values based on individual interface needs when ISIS BFD is configured in CONFIGURATION mode. Any timer values specified with this command overrides timers set using the bfd all-neighbors command. Using the no form of this command does not disable BFD if BFD is configured in CONFIGURATION mode.

To disable BFD on a specific interface while BFD is configured in CONFIGURATION mode, use the keyword disable.

---

**neighbor bfd**

Explicitly enable a BFD session with a BGP neighbor or a BGP peer group.

**Syntax**

```
neighbor {ip-address | peer-group-name} bfd
```

**Parameters**

- `ip-address` Enter the IP address of the BGP neighbor that you want to explicitly enable for BFD sessions in dotted decimal format (A.B.C.D).
- `peer-group-name` Enter the name of the peer group that you want to explicitly enable for BFD sessions.

**Defaults**

- none

**Command Modes**

- ROUTER BGP
- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

When you enable a BFD session with a specified BGP neighbor or peer group using the bfd neighbor command, the default BFD session parameters are used (interval: 200 milliseconds, min_rx: 200 milliseconds, multiplier: 3 packets, and role: active) if you have not specified parameters with the bfd neighbor command.

When you explicitly enable a BGP neighbor for a BFD session with the bfd neighbor command:

- The neighbor does not inherit the global BFD enable values configured with the bfd neighbor command or configured for the peer group to which the neighbor belongs.
• The neighbor only inherits the global timer values configured with the `bfd neighbor` command: interval, min_rx, and multiplier.

**Related Commands**

- `neighbor bfd disable` — explicitly disables a BFD session with a BGP neighbor or a BGP peer group.
- `show bfd neighbors` — displays the BFD neighbor information on all interfaces or a specified interface.

## neighbor bfd disable

Explicitly disable a BFD session with a BGP neighbor or a BGP peer group.

**Syntax**

```plaintext
neighbor {ip-address | peer-group-name} bfd disable
```

**Parameters**

- `ip-address` Enter the IP address of the BGP neighbor that you want to explicitly disable for BFD sessions in dotted decimal format (A.B.C.D).
- `peer-group-name` Enter the name of the peer group that you want to explicitly disable for BFD sessions.

**Defaults**

none

**Command Modes**

ROUTER BGP

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

When you explicitly disable a BGP neighbor for a BFD session with the `neighbor bfd disable` command:

- The neighbor does not inherit the global BFD disable values configured with the `bfd all-neighbors` command or configured for the peer group to which the neighbor belongs.
- The neighbor only inherits the global timer values configured with the `bfd all-neighbors` command: interval, min_rx, and multiplier.

When you remove the Disabled state of a BFD for a BGP session with a specified neighbor by entering the `no neighbor bfd disable` command, the BGP link with the neighbor returns to normal operation and uses the BFD session parameters globally configured with the `bfd all-neighbors` command or configured for the peer group to which the neighbor belongs.

**Related Commands**

- `bfd all-neighbors` — enables BFD sessions with all neighbors discovered by Layer 3 protocols.
- `show bfd neighbors` — displays the BFD neighbor information on all interfaces or a specified interface.

## show bfd neighbors

Display BFD neighbor information on all interfaces or a specified interface.

**Syntax**

```plaintext
show bfd [vrf vrf name] neighbors [interface] [detail]
```
Parameters

vrf vrf name  (Optional) Enter the keyword vrf and then the name of the VRF to display the BFD sessions with all neighbors within the VRF.

interface  (OPTIONAL) Enter one of the following keywords and slot/port or number information:

- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a port channel interface, enter the keywords port-channel then a number.
- For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

detail  (OPTIONAL) Enter the keyword detail to view detailed information about BFD neighbors.

Defaults
None

Command Modes
• EXEC
• EXEC Privilege

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell EMC Networking OS Command Line Reference Guide.

Version Description
9.11(2.1P1) Introduced the vrf keyword on all the remaining Dell EMC Networking OS platforms.
9.10(0.2) Introduced the vrf keyword on the S3048–ON, S4048–ON, S4048T-ON, S6010–ON, Z9100–ON, and S6100–ON.
9.10(0.1) Introduced on the S6010-ON and S4048T-ON.
9.10(0.0) Introduced on the S3148.
9.8(2.0) Introduced on the S3100 series.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.2(1.0) Introduced on the Z9500.
9.0.0.0 Introduced on the Z9000.
8.3.19.0 Introduced on the S4820T.
8.3.8.0 Added support for BFD for BGP on the S4810.
8.4.1.3 Added support for BFD for BGP on the E-Series.
8.2.1.0 Introduced on the E-Series.
7.6.1.0 Introduced on the C-Series.
7.5.1.0 Added support for BFD for VLAN and port-channel interfaces on the E-Series.
7.4.1.0 Introduced BFD on physical ports on the E-Series.

Example
The following example shows the show bfd neighbors command output for the default VRF.

Example (Detail)
**Related Commands**

- `bfd all-neighbors` — establish BFD sessions with all neighbors discovered by the IS-IS protocol or OSPF protocol out of all interfaces.

---

**vrrp bfd neighbor**

Establish a BFD for VRRP session with a neighbor.

**Syntax**

```
vrpp bfd neighbor ip-address
```

**Parameters**

- `neighbor ip-address` Enter the IP address of the BFD neighbor.

**Defaults**

- `none`

**Command Modes**

- `INTERFACE`

**Supported Modes**

- `Full-Switch`

**BGPv4 Commands**

Border gateway protocol (BGP) is an external gateway protocol that transmits interdomain routing information within and between autonomous systems (AS).

BGP version 4 (BGPv4) supports classless interdomain routing (CIDR) and the aggregation of routes and AS paths. Basically, two routers (called neighbors or peers) exchange information including full routing tables and periodically send messages to update those routing tables.
NOTE: Dell Networking OS Version 7.7.1 supports 2-Byte (16-bit) and 4-Byte (32-bit) format for autonomous system numbers (ASNs), where the 2-Byte format is 1-65535 and the 4-Byte format is 1-4294967295.

NOTE: Dell Networking OS Version 8.3.1.0 supports dotted format as well as the traditional plain format for AS numbers. Display the dot format using the `show ip bgp` commands. To determine the comparable dot format for an ASN from a traditional format, use `ASN/65536`. For more information about using the 2-Byte or 4-Byte format, refer to the Dell Networking OS Configuration Guide.

**address-family**

Enable the IPv4 multicast or the IPv6 address family.

**Syntax**

```
address-family [ipv4 multicast| ipv6 unicast]
```

**Parameters**

- `ipv4 multicast` Enter BGPv4 multicast mode.
- `ipv6 unicast` Enter BGPv6 mode.

**Defaults**

Not configured.

**Command Modes**

- ROUTER BGP

**Supported Modes**

- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**aggregate-address**

To minimize the number of entries in the routing table, summarize a range of prefixes.

**Syntax**

```
aggregate-address ip-address mask [advertise-map map-name] [as-set] [attribute-map map-name] [summary-only] [suppress-map map-name]
```

**Parameters**

- `ip-address mask` Enter the IP address and mask of the route to be the aggregate address. Enter the IP address in dotted decimal format (A.B.C.D) and mask in /prefix format (/x).
- `advertise-map map-name` (OPTIONAL) Enter the keywords advertise-map then the name of a configured route map to set filters for advertising an aggregate route.
- `as-set` (OPTIONAL) Enter the keyword as-set to generate path attribute information and include it in the aggregate. AS_SET includes AS_PATH and community information from the routes included in the aggregated route.
- `attribute-map map-name` (OPTIONAL) Enter the keywords attribute-map then the name of a configured route map to modify attributes of the aggregate, excluding AS_PATH and NEXT_HOP attributes.
- `summary-only` (OPTIONAL) Enter the keyword summary-only to advertise only the aggregate address. Specific routes are not advertised.
suppress-map map-name (OPTIONAL) Enter the keywords suppress-map then the name of a configured route map to identify which more-specific routes in the aggregate are suppressed.

Defaults

Not configured.

Command Modes

• ROUTER BGP ADDRESS FAMILY
• ROUTER BGP ADDRESS FAMILY IPv6

Supported Modes

Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

At least one of the routes included in the aggregate address must be in the BGP routing table for the configured aggregate to become active.

If routes within the aggregate are constantly changing, do not add the as-set parameter to the aggregate as the aggregate flaps to keep track of the changes in the AS_PATH.

In route maps used in the suppress-map parameter, routes meeting the deny clause are not suppress; in other words, they are allowed. The opposite is also true: routes meeting the permit clause are suppressed.

If the route is injected via the network command, that route still appears in the routing table if the summary-only parameter is configured in the aggregate-address command.

The summary-only parameter suppresses all advertisements. If you want to suppress advertisements to only specific neighbors, use the neighbor distribute-list command.

In the show ip bgp command, aggregates contain an ‘a’ in the first column and routes suppressed by the aggregate contain an ‘s’ in the first column.

bgp add-path

Allow the advertisement of multiple paths for the same address prefix without the new paths replacing any previous ones.

Syntax

bgp add-path [send | receive | both] path-count

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>send</td>
<td>Enter the keyword send to indicate that the system sends multiple paths to peers.</td>
</tr>
<tr>
<td>receive</td>
<td>Enter the keyword receive to indicate that the system accepts multiple paths from peers.</td>
</tr>
<tr>
<td>both</td>
<td>Enter the keyword both to indicate that the system sends and accepts multiple paths from peers.</td>
</tr>
<tr>
<td>path-count</td>
<td>Enter the number paths supported. The range is from 2 to 64.</td>
</tr>
</tbody>
</table>

Defaults

Disabled

Command Modes

• ROUTER BGP
ROUTER BGP-address-family

Supported Modes

Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Related Commands

`neighbor add-path` — specifies that this neighbor/peer group can send/receive multiple path advertisements.

### bgp always-compare-med

Allows you to enable comparison of the MULTI_EXIT_DISC (MED) attributes in the paths from different external ASs.

**Syntax**

```
bgp always-compare-med
```

To disable comparison of MED, enter `no bgp always-compare-med`.

**Defaults**

Disabled (that is, the software only compares MEDs from neighbors within the same AS).

**Command Modes**

ROUTER BGP

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

Any update without a MED attribute is the least preferred route.

If you enable this command, use the `clear ip bgp *` command to recompute the best path.

### bgp asnotation

Allows you to implement a method for AS number representation in the command line interface (CLI).

**Syntax**

```
bgp asnotation [asplain | asdot+ | asdot]
```

To disable a dot or dot+ representation and return to ASPLAIN, enter the `no bgp asnotation` command.

**Defaults**

asplain

**Command Modes**

ROUTER BGP

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>
### Usage Information

Before enabling this feature, enable the `enable bgp four-octet-as-support` command. If you disable the `four-octect-support` command after using dot or dot+ format, the AS numbers revert to asplain text.

When you apply an asnotation, it is reflected in the running-configuration. If you change the notation type, the running-config updates dynamically and the new notation shows.

### Example

```
Dell(conf)#router bgp 1
Dell(conf-router_bgp)#bgp asnotation asdot
Dell(conf-router_bgp)#ex
Dell(conf)#do show run | grep bgp
  router bgp 1
  bgp four-octet-as-support
  bgp asnotation asdot

Dell(conf)#router bgp 1
Dell(conf-router_bgp)#bgp asnotation asdot+
Dell(conf-router_bgp)#ex
Dell(conf)#do show run | grep bgp
  router bgp 1
  bgp four-octet-as-support
  bgp asnotation asdot+

Dell(conf)#router bgp 1
Dell(conf-router_bgp)#bgp asnotation asplain
Dell(conf-router_bgp)#ex
Dell(conf)#do show run | grep bgp
  router bgp 1
  bgp four-octet-as-support

Dell(conf)#
```

### Related Commands

- `bgp four-octet-as-support` — enables 4-byte support for the BGP process.

### bgp bestpath as-path ignore

Ignore the AS PATH in BGP best path calculations.

#### Syntax

```
bgp bestpath as-path ignore
```

To return to the default, enter the `no bgp bestpath as-path ignore` command.

#### Defaults

Disabled (that is, the software considers the AS_PATH when choosing a route as best).

#### Command Modes

- **ROUTER BGP**

#### Supported Modes

- **Full-Switch**

#### Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

#### Usage Information

If you enable this command, use the `clear ip bgp *` command to recompute the best path.
**bgp bestpath as-path multipath-relax**

Include prefixes received from different AS paths during multipath calculation.

**Syntax**
```
bgp bestpath as-path multipath-relax
```
To return to the default BGP routing process, use the `no bgp bestpath as-path multipath-relax` command.

**Defaults**
Disabled

**Command Modes**
ROUTER BGP

**Supported Modes**
Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**
The `bestpath router bgp configuration mode` command changes the default bestpath selection algorithm. The `multipath-relax` option allows load-sharing across providers with different (but equal-length) autonomous system paths. Without this option, ECMP expects the AS paths to be identical for load-sharing.

**bgp bestpath med confed**

Enable MULTI_EXIT_DISC (MED) attribute comparison on paths learned from BGP confederations.

**Syntax**
```
bgp bestpath med confed
```
To disable MED comparison on BGP confederation paths, enter the `no bgp bestpath med confed` command.

**Defaults**
Disabled

**Command Modes**
ROUTER BGP

**Supported Modes**
Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**
The software compares the MEDs only if the path contains no external autonomous system numbers. If you enable this command, use the `clear ip bgp *` command to recompute the best path.

**bgp bestpath med missing-as-best**

During path selection, indicate preference to paths with missing MED (MULTI_EXIT_DISC) over paths with an advertised MED attribute.

**Syntax**
```
bgp bestpath med missing-as-best
```

**Command Modes**
ROUTER BGP

**Supported Modes**
Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**
The software compares the MEDs only if the path contains no external autonomous system numbers. If you enable this command, use the `clear ip bgp *` command to recompute the best path.
To return to the default selection, use the `no bgp bestpath med missing-as-best` command.

**Defaults**
- Disabled

**Command Modes**
- ROUTER BGP

**Supported Modes**
- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**
The MED is a 4-byte unsigned integer value and the default behavior is to assume a missing MED as 4294967295. This command causes a missing MED to be treated as 0. During path selection, paths with a lower MED are preferred over paths with a higher MED.

### bgp bestpath router-id ignore

Do not compare router-id information for external paths during best path selection.

**Syntax**

```
bgp bestpath router-id ignore
```

To return to the default selection, use the `no bgp bestpath router-id ignore` command.

**Defaults**
- Disabled

**Command Modes**
- ROUTER BGP

**Supported Modes**
- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**
Configuring this option retains the current best-path. When sessions are then reset, the oldest received path is chosen as the best-path.

### bgp client-to-client reflection

Allows you to enable route reflection between clients in a cluster.

**Syntax**

```
bgp client-to-client reflection
```

To disable client-to-client reflection, use the `no bgp client-to-client reflection` command.

**Defaults**
- Enabled when a route reflector is configured.

**Command Modes**
- ROUTER BGP

**Supported Modes**
- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
</tbody>
</table>
Version | Description
--- | ---
9.2(0.0) | Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
Route reflection to clients is not necessary if all client routers are fully meshed.

Related Commands
bgp cluster-id — assigns an ID to a BGP cluster with two or more route reflectors.
neighbor route-reflector-client — configures a route reflector and clients.

b gp cluster-id

Assign a cluster ID to a BGP cluster with more than one route reflector.

Syntax
bgp cluster-id {ip-address | number}
To delete a cluster ID, use the no bgp cluster-id {ip-address | number} command.

Parameters
- **ip-address**: Enter an IP address as the route reflector cluster ID.
- **number**: Enter a route reflector cluster ID as a number from 1 to 4294967295.

Defaults
Not configured.

Command Modes
- ROUTER BGP

Supported Modes
- Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information
When a BGP cluster contains only one route reflector, the cluster ID is the route reflector’s router ID. For redundancy, a BGP cluster may contain two or more route reflectors. Assign a cluster ID with the bgp cluster-id command. Without a cluster ID, the route reflector cannot recognize route updates from the other route reflectors within the cluster.

The default format for displaying the cluster-id is dotted decimal, but if you enter the cluster-id as an integer, it is displayed as an integer.

Related Commands
- bgp client-to-client reflection — enables route reflection between the route reflector and clients.
- neighbor route-reflector-client — configures a route reflector and clients.
- show ip bgp cluster-list — views paths with a cluster ID.

b gp confederation identifier

Configure an identifier for a BGP confederation.

Syntax
bgp confederation identifier as-number
To delete a BGP confederation identifier, use the `no bgp confederation identifier as-number` command.

**Parameters**

- **as-number**
  
  Enter the AS number. The range is from 0 to 65535 (2 byte), from 1 to 4294967295 (4 byte), or from 0.1 to 65535.65535 (dotted format).

**Defaults**

Not configured.

**Command Modes**

ROUTER BGP

**Supported Modes**

Full-Switch

**Command History**

**Version**  
9.9(0.0)  
Introduced on the FN IOM.

9.2(0.0)  
Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

To accept 4-byte formats before entering a 4-byte AS number, configure your system. All the routers in the Confederation must be 4 byte or 2 byte identified routers. You cannot mix them.

The autonomous systems configured in this command are visible to the EBGP neighbors. Each autonomous system is fully meshed and contains a few connections to other autonomous systems. The next hop, MED, and local preference information is preserved throughout the confederation.

The system accepts confederation EBGP peers without a LOCAL_PREF attribute. The software sends AS_CONFED_SET and accepts AS_CONFED_SET and AS_CONF_SEQ.

**Related Commands**

- **bgp four-octet-as-support** — enables 4-byte support for the BGP process.

---

**bgp confederation peers**

Specify the autonomous systems (ASs) that belong to the BGP confederation.

**Syntax**

```
bgp confederation peers as-number [ ...as-number ]
```

To return to the default, use the `no bgp confederation peers` command.

**Parameters**

- **as-number**
  
  Enter the AS number. The range is from 0 to 65535 (2 byte), from 1 to 4294967295 (4 byte), or from 0.1 to 65535.65535 (dotted format).

- **...as-number**
  
  (OPTIONAL) Enter up to 16 confederation numbers. The range is from 0 to 65535 (2 byte), from 1 to 4294967295 (4 byte), or from 0.1 to 65535.65535 (dotted format).

**Defaults**

Not configured.

**Command Modes**

ROUTER BGP

**Supported Modes**

Full-Switch

**Command History**

**Version**  
9.9(0.0)  
Introduced on the FN IOM.
### bgp dampening

Enable BGP route dampening and configure the dampening parameters.

**Syntax**

```
bgp dampening [half-life reuse suppress max-suppress-time] [route-map map-name]
```

To disable route dampening, use the `no bgp dampening [half-life reuse suppress max-suppress-time] [route-map map-name]` command.

**Parameters**

- **half-life**
  - (OPTIONAL) Enter the number of minutes after which the Penalty is decreased. After the router assigns a Penalty of 1024 to a route, the Penalty is decreased by half after the half-life period expires. The range is from 1 to 45. The default is **15 minutes**.

- **reuse**
  - (OPTIONAL) Enter a number as the reuse value, which is compared to the flapping route’s Penalty value. If the Penalty value is less than the reuse value, the flapping route is once again advertised (or no longer suppressed). The range is from 1 to 20000. The default is **750**.

- **suppress**
  - (OPTIONAL) Enter a number as the suppress value, which is compared to the flapping route’s Penalty value. If the Penalty value is greater than the suppress value, the flapping route is no longer advertised (that is, it is suppressed). The range is from 1 to 20000. The default is **2000**.

- **max-suppress-time**
  - (OPTIONAL) Enter the maximum number of minutes a route can be suppressed. The default is four times the half-life value. The range is from 1 to 255. The default is **60 minutes**.

- **route-map map-name**
  - (OPTIONAL) Enter the keyword `route-map` then the name of a configured route map. Only `match` commands in the configured route map are supported.

**Defaults**

Disabled.

**Command Modes**

- ROUTER BGP
- ROUTER BGP-address-family

**Supported Modes**

- Full-Switch
**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

If you enter the `bgp dampening` command, the default values for `half-life`, `reuse`, `suppress`, and `max-suppress-time` are applied. The parameters are position-dependent; therefore, if you configure one parameter, configure the parameters in the order they appear in the CLI.

**Related Commands**

- `show ip bgp dampened-paths` — views the BGP paths.

### bgp default local-preference

Change the default local preference value for routes exchanged between internal BGP peers.

**Syntax**

```
bgp default local-preference value
```

To return to the default value, use the `no bgp default local-preference` command.

**Parameters**

- `value`
  
Enter a number to assign to routes as the degree of preference for those routes. When routes are compared, the higher the degree of preference or local preference value, the more the route is preferred. The range is from 0 to 4294967295. The default is 100.

**Defaults**

100

**Command Modes**

ROUTER BGP

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

All routers apply the `bgp default local-preference` command setting within the AS. To set the local preference for a specific route, use the `set local-preference` command in ROUTE-MAP mode.

**Related Commands**

- `set metric` — assigns a local preference value for a specific route.

### bgp enforce-first-as

Disable (or enable) enforce-first-as check for updates received from EBGP peers.

**Syntax**

```
bgp enforce-first-as
```

To turn off the default, use the `no bgp enforce-first-as` command.

**Defaults**

Enabled

**Command Modes**

ROUTER BGP

**Supported Modes**

Full-Switch
Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

This command is enabled by default, that is for all updates received from EBGP peers, BGP ensures that the first AS of the first AS segment is always the AS of the peer. If not, the update is dropped and a counter is increments. To view the “failed enforce-first-as check” counter, use the `show ip bgp neighbors` command.

If you disable the `enforce-first-as` command, it can be viewed using the `show ip protocols` command.

Related Commands

- `show ip bgp neighbors` — views the information the BGP neighbors exchange.
- `show ip protocols` — views information on routing protocols.

**bgp fast-external-failover**

Enable the fast external failover feature, which immediately resets the BGP session if a link to a directly connected external peer fails.

**Syntax**

```
bgp fast-external-failover
```

To disable fast external failover, use the `no bgp fast-external-failover` command.

**Defaults**

Enabled

**Command Modes**

- ROUTER BGP

**Supported Modes**

- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

The `bgp fast-external-failover` command appears in the `show config` command output.

**bgp four-octet-as-support**

Enable 4-byte support for the BGP process.

**Syntax**

```
bgp four-octet-as-support
```

To disable fast external failover, use the `no bgp four-octet-as-support` command.

**Defaults**

Disabled (supports 2-byte format)

**Command Modes**

- ROUTER BGP

**Supported Modes**

- Full-Switch
### Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

### Usage Information

Routers supporting 4-byte ASNs advertise that function in the OPEN message. The behavior of a 4-byte router is slightly different depending on whether it is speaking to a 2-byte router or a 4-byte router.

When creating Confederations, all the routers in the Confederation must be 4 byte or 2 byte identified routers. You cannot mix them.

Where the 2-byte format is from 1 to 65535, the 4-byte format is from 1 to 4294967295. Both formats are accepted and the advertisements reflect the entered format.

For more information about using the 2 byte or 4-byte format, refer to the Dell Networking OS Configuration Guide.

### bgp graceful-restart

To support graceful restart as a receiver only, enable graceful restart on a BGP neighbor, a BGP node, or designate a local router.

**Syntax**

```
bgp graceful-restart [restart-time seconds] [stale-path-time seconds] [role receiver-only]
```

To return to the default, use the `no bgp graceful-restart` command.

**Parameters**

- **restart-time seconds**
  - Enter the keyword `restart-time` then the maximum number of seconds to restart and bring-up all the peers. The range is from 1 to 3600 seconds. The default is **120 seconds**.

- **stale-path-time seconds**
  - Enter the keyword `stale-path-time` then the maximum number of seconds to wait before restarting a peer’s stale paths. The default is **360 seconds**.

- **role receiver-only**
  - Enter the keyword `role receiver-only` to designate the local router to support graceful restart as a receiver only.

**Defaults**

as above

**Command Modes**

ROUTER BGP

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

This feature is advertised to BGP neighbors through a capability advertisement. In Receiver Only mode, BGP saves the advertised routes of peers that support this capability when they restart.

BGP graceful restart is active only when the neighbor becomes established. Otherwise it is disabled. Graceful-restart applies to all neighbors with established adjacency.
**bgp non-deterministic-med**

Compare MEDs of paths from different autonomous systems.

**Syntax**

```
bgp non-deterministic-med
```

To return to the default, use the **no bgp non-deterministic-med** command.

**Defaults**

Disabled (that is, paths/routes for the same destination but from different ASs do not have their MEDs compared).

**Command Modes**

ROUTER BGP

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

- In Non-Deterministic mode, paths are compared in the order in which they arrive. This method can lead to the system choosing different best paths from a set of paths, depending on the order in which they are received from the neighbors because MED may or may not get compared between adjacent paths. In Deterministic mode (**no bgp non-deterministic-med**), the system compares MED between adjacent paths within an AS group because all paths in the AS group are from the same AS.

- When you change the path selection from Deterministic to Non-Deterministic, the path selection for the existing paths remains Deterministic until you enter the **clear ip bgp** command to clear existing paths.

**bgp outbound-optimization**

Enables outbound optimization for IBGP peer-group members.

**Syntax**

```
bgp outbound-optimization
```

To disable outbound optimization, enter the **no bgp outbound-optimization** command.

**Defaults**

Enabled.

**Command Modes**

ROUTER BGP

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell EMC Networking OS Command Line Reference Guide.

The following is a list of the Dell EMC Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4.(0.0)</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>9.2(1.0)</td>
<td>Introduced on the Z9500.</td>
</tr>
</tbody>
</table>

**Usage Information**

The updates are sent to all the neighbors in the peer-group and all the neighbors have the same attributes including next-hop.
Enabling or disabling outbound optimization dynamically resets all neighbor sessions.

When you enable outbound optimization, all peers receive the same update packets. Also, the next-hop address, which is chosen as one of the addresses of the neighbor's reachable interface, is the same for all peers.

### bgp recursive-bgp-next-hop

Enable next-hop resolution through other routes learned by BGP.

**Syntax**

```plaintext
bgp recursive-bgp-next-hop
```

To disable next-hop resolution, use the `no bgp recursive-bgp-next-hop` command.

**Defaults**

Enabled

**Command Modes**

- ROUTER BGP

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command is a knob to disable BGP next-hop resolution using BGP learned routes. During the next-hop resolution, only the first route that the next-hop resolves through is verified for the route's protocol source and is checked if the route is learned from BGP or not.

The `clear ip bgp` command is required for this command to take effect and to keep the BGP database consistent. Execute the `clear ip bgp` command right after executing this command.

**Related Commands**

- `clear ip bgp` — clears the ip bgp.

### bgp regex-eval-optz-disable

Disables the Regex Performance engine that optimizes complex regular expression with BGP.

**Syntax**

```plaintext
bgp regex-eval-optz-disable
```

To re-enable optimization engine, use the `no bgp regex-eval-optz-disable` command.

**Defaults**

Enabled

**Command Modes**

- ROUTER BGP (conf-router_bgp)

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>
BGP uses regular expressions (regex) to filter route information. In particular, the use of regular expressions to filter routes based on AS-PATHs and communities is common. In a large-scale configuration, filtering millions of routes based on regular expressions can be quite CPU intensive, as a regular expression evaluation involves generation and evaluation of complex finite state machines.

BGP policies, containing regular expressions to match as-path and communities, tend to use much CPU processing time, which in turn affects the BGP routing convergence. Additionally, the show bgp commands, which are filtered through regular expressions, use up CPU cycles particularly with large databases. The Regex Engine Performance Enhancement feature optimizes the CPU usage by caching and reusing regular expression evaluation results. This caching and reuse may be at the expense of RP1 processor memory.

### Examples

```
Dell(conf-router_bgp)#no bgp regex-eval-optz-disable
Dell(conf-router_bgp)#do show ip protocols
Routing Protocol is "ospf 22222"
    Router ID is 2.2.2.2
    Area       Routing for Networks
    51         10.10.10.0/00
Routing Protocol is "bgp 1"
    Cluster Id is set to 10.10.10.0
    Router Id is set to 10.10.10.0
    Fast-external-fallover enabled
    Regular expression evaluation optimization enabled
    Capable of ROUTE REFRESH
    For Address Family IPv4 Unicast
    BGP table version is 0, main routing table version 0
    Distance: external 20 internal 200 local 200
Dell(conf-router_bgp)#
```

### Related Commands

* `show ip protocols` — views information on all routing protocols enabled and active.

### bgp router-id

Assign a user-given ID to a BGP router.

**Syntax**

```
bgp router-id ip-address
```

To delete a user-assigned IP address, use the `no bgp router-id` command.

**Parameters**

* `ip-address` — Enter an IP address in dotted decimal format to reset only that BGP neighbor.

**Defaults**

The router ID is the highest IP address of the Loopback interface or, if no Loopback interfaces are configured, the highest IP address of a physical interface on the router.

**Command Modes**

```
ROUTER BGP
```

**Supported Modes**

```
Full-Switch
```

**Command History**

- **Version**
  - 9.9(0.0) — Introduced on the FN IOM.
  - 9.2(0.0) — Introduced on the MxL 10/40GbE Switch IO Module.

**Usage Information**

Peering sessions are reset when you change the router ID of a BGP router.
**bgp soft-reconfig-backup**

To avoid the peer from resending messages, use this command only when route-refresh is *not* negotiated.

**Syntax**

```
bgp soft-reconfig-backup
```

To return to the default setting, use the `no bgp soft-reconfig-backup` command.

**Defaults**

*Off*

**Command Modes**

ROUTER BGP

**Supported Modes**

Full-Switch

**Command History**

<table>

</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

When you enable soft-reconfiguration for a neighbor and you execute the `clear ip bgp soft` command, the update database stored in the router is replayed and updates are re-evaluated. With this command, the replay and update process is triggered only if route-refresh request is not negotiated with the peer. If the request is indeed negotiated (after executing the `clear ip bgp soft` command), BGP sends a route-refresh request to the neighbor and receives all of the peer’s updates.

**Related Commands**

- `clear ip bgp` — activates inbound policies without resetting the BGP TCP session.

**capture bgp-pdu neighbor**

Enable capture of an IPv4 BGP neighbor packet.

**Syntax**

```
capture bgp-pdu neighbor ipv4-address direction {both | rx | tx}
```

To disable capture of the IPv4 BGP neighbor packet, use the `no capture bgp-pdu neighbor ipv4-address` command.

**Parameters**

- `ipv4-address`:
  - Enter the IPv4 address of the target BGP neighbor.

- `direction` (both | rx | tx):
  - Enter the keyword `direction` and a direction — either `rx` for inbound, `tx` for outbound, or both.

**Defaults**

Not configured.

**Command Modes**

EXEC Privilege

**Supported Modes**

Full-Switch

**Command History**

</tbody>
</table>
Related Commands

- `capture bgp-pdu max-buffer-size` — specifies a size for the capture buffer.
- `show capture bgp-pdu neighbor` — displays BGP packet capture information.

**capture bgp-pdu max-buffer-size**

Set the size of the BGP packet capture buffer. This buffer size pertains to both IPv4 and IPv6 addresses.

**Syntax**

```
capture bgp-pdu max-buffer-size 100-102400000
```

**Parameters**

- `100-102400000` Enter a size for the capture buffer.

**Defaults**

40960000 bytes.

**Command Modes**

- EXEC Privilege

**Supported Modes**

- Full-Switch

**Command History**

- **Version**
  - 9.9(0.0) Introduced on the FN IOM.
  - 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `capture bgp-pdu neighbor` — enables capture of an IPv4 BGP neighbor packet.
- `show capture bgp-pdu neighbor` — displays BGP packet capture information for an IPv6 address.

**clear ip bgp**

Reset BGP sessions. The soft parameter (BGP Soft Reconfiguration) clears the policies without resetting the TCP connection.

**Syntax**

```
clear ip bgp * | as-number | ip-address [flap-statistics | soft [in | out]]
```

**Parameters**

- `*` Enter an asterisk (*) to reset all BGP sessions.
- `as-number` Enter the AS number to reset all neighbors belonging to that AS. The range is from 0 to 65535 (2 byte), from 1 to 4294967295 (4 byte), or from 0.1 to 65535.65535 (dotted format).
- `ip-address` Enter an IP address in dotted decimal format to reset all prefixes from that neighbor.
- `flap-statistics` (OPTIONAL) Enter the keyword flap-statistics to reset the flap statistics on all prefixes from that neighbor.
- `soft` (OPTIONAL) Enter the keyword soft to configure and activate policies without resetting the BGP TCP session, that is, BGP Soft Reconfiguration.

**NOTE:** If you enter the `clear ip bgp ip-address soft command, both inbound and outbound policies are reset.`

- `in` (OPTIONAL) Enter the keyword in to activate only inbound policies.
- `out` (OPTIONAL) Enter the keyword out to activate only outbound policies.
clear ip bgp dampening

Clear information on route dampening and return the suppressed route to the Active state.

Syntax

```
clear ip bgp dampening [ip-address mask]
```

Parameters

- `ip-address mask` (OPTIONAL) Enter an IP address in dotted decimal format and the prefix mask in slash format (/x) to clear dampening information only that BGP neighbor.

Command Modes

- EXEC Privilege

Supported Modes

- Full–Switch

Command History

<table>
<thead>
<tr>

</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

- After you enter this command, the software deletes the history routes and returns the suppressed routes to the Active state.

clear ip bgp flap-statistics

Clear BGP flap statistics, which includes number of flaps and the time of the last flap.

Syntax

```
clear ip bgp flap-statistics [ip-address mask | filter-list as-path-name | regexp regular-expression]
```

Parameters

- `ip-address mask` (OPTIONAL) Enter an IP address in dotted decimal format and the prefix mask in slash format (/x) to reset only that prefix.
- `filter-list as-path-name` (OPTIONAL) Enter the keywords `filter-list` then the name of a configured AS-PATH list.
- `regexp regular-expression` (OPTIONAL) Enter the keyword `regexp` then regular expressions. Use one or a combination of the following:
  - `.` (period) any single character (including a white space).
  - `*` (asterisk) the sequences in a pattern (0 or more sequences).
• + = (plus) the sequences in a pattern (1 or more sequences).
• ? = (question mark) sequences in a pattern (either 0 or 1 sequences).

**NOTE:** Enter an escape sequence (CTRL+v) prior to entering the ? regular expression.

• [ ] = (brackets) a range of single-character patterns.
• ( ) = (parenthesis) groups a series of pattern elements to a single element.
• { } = (braces) minimum and the maximum match count.
• ^ = (caret) the beginning of the input string. If you use the caret at the beginning of a sequence or range, it matches on everything BUT the characters specified.
• $ = (dollar sign) the end of the output string.

**Command Modes** EXEC Privilege

**Supported Modes** Full-Switch

**Command History**

<table>

<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

If you enter the `clear ip bgp flap-statistics` command without any parameters, all statistics are cleared.

**Related Commands**

- `show debugging` — views the enabled debugging operations.
- `show ip bgp flap-statistics` — views the BGP flap statistics.
- `undebug all` — disables all debugging operations.

---

### clear ip bgp peer-group

Reset a peer-group’s BGP sessions.

**Syntax**

```
clear ip bgp peer-group peer-group-name
```

**Parameters**

- `peer-group-name` Enter the peer group name to reset the BGP sessions within that peer group.

**Command Modes** EXEC Privilege

**Supported Modes** Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>

</tbody>
</table>
debug ip bgp

Display all information on BGP, including BGP events, keepalives, notifications, and updates.

Syntax
debug ip bgp [ip-address | peer-group peer-group-name] [in | out]
To disable all BGP debugging, use the no debug ip bgp command.

Parameters

Parameters

ip-address
Enter the IP address of the neighbor in dotted decimal format.

peer-group peer-group-name
Enter the keywords peer-group then the name of the peer group to debug.

in (OPTIONAL) Enter the keyword in to view only information on inbound BGP routes.

out (OPTIONAL) Enter the keyword out to view only information on outbound BGP routes.

Command Modes
EXEC Privilege

Supported Modes
Full-Switch

Command History
Version Description
9.9(0.0) Introduced on the FN IOM.
9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
To view information on both incoming and outgoing routes, do not include the in and out parameters in the debugging command. The in and out parameters cancel each other; for example, if you enter the debug ip bgp in command and then enter the debug ip bgp out command, you do not see information on the incoming routes.

Entering a no debug ip bgp command removes all configured debug commands for BGP.

Related Commands
debug ip bgp events — views information about BGP events.
debug ip bgp keepalives — views information about BGP keepalives.
debug ip bgp notifications — views information about BGP notifications.
debug ip bgp updates — views information about BGP updates.
show debugging — views enabled debugging operations.

debug ip bgp dampening

View information on routes being dampened.

Syntax
debug ip bgp dampening [in | out]
To disable debugging, use the no debug ip bgp dampening command.

Parameters

in (OPTIONAL) Enter the keyword in to view only inbound dampened routes.
out  (OPTIONAL) Enter the keyword out to view only outbound dampened routes.

Command Modes  EXEC Privilege

Supported Modes  Full–Switch

</tr>
</tbody>
</table>

Related Commands

- `show debugging` — view enabled debugging operations.
- `show ip bgp dampened-paths` — view BGP dampened routes.

**debug ip bgp events**

Display information on local BGP state changes and other BGP events.

**Syntax**

debug ip bgp [ip-address | peer-group peer-group-name] events [in | out]

To disable debugging, use the `no debug ip bgp [ip-address | peer-group peer-group-name] events` command.

**Parameters**

- `ip-address`  (OPTIONAL) Enter the IP address of the neighbor in dotted decimal format.
- `peer-group peer-group-name`  (OPTIONAL) Enter the keyword peer-group then the name of the peer group.
- `in`  (OPTIONAL) Enter the keyword in to view only events on inbound BGP messages.
- `out`  (OPTIONAL) Enter the keyword out to view only events on outbound BGP messages.

**Command Modes**  EXEC Privilege

**Supported Modes**  Full–Switch

<td>Introduced on the MXL 10/40Gbe Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

To remove all configured debug commands for BGP, enter the `no debug ip bgp` command.

**debug ip bgp keepalives**

Display information about BGP keepalive messages.

**Syntax**

debug ip bgp [ip-address | peer-group peer-group-name] keepalives [in | out]
To disable debugging, use the `no debug ip bgp [ip-address | peer-group peer-group-name] keepalives [in | out]` command.

### Parameters
- **ip-address** *(OPTIONAL)* Enter the IP address of the neighbor in dotted decimal format.
- **peer-group peer-group-name** *(OPTIONAL)* Enter the keyword `peer-group` then the name of the peer group.
- **in** *(OPTIONAL)* Enter the keyword `in` to view only inbound keepalive messages.
- **out** *(OPTIONAL)* Enter the keyword `out` to view only outbound keepalive messages.

### Command Modes

</tr>
</tbody>
</table>

### Usage Information
To remove all configured debug commands for BGP, enter the `no debug ip bgp` command.

---

**debug ip bgp notifications**

Allows you to view information about BGP notifications received from neighbors.

### Syntax
- `debug ip bgp [ip-address | peer-group peer-group-name] notifications [in | out]`
- To disable debugging, use the `no debug ip bgp [ip-address | peer-group peer-group-name] notifications [in | out]` command.

### Parameters
- **ip-address** *(OPTIONAL)* Enter the IP address of the neighbor in dotted decimal format.
- **peer-group peer-group-name** *(OPTIONAL)* Enter the keyword `peer-group` then the name of the peer group.
- **in** *(OPTIONAL)* Enter the keyword `in` to view BGP notifications received from neighbors.
- **out** *(OPTIONAL)* Enter the keyword `out` to view BGP notifications sent to neighbors

### Command Modes
- EXEC Privilege

### Supported Modes
- Full-Switch

</tr>
</tbody>
</table>

### Usage Information
To remove all configured debug commands for BGP, enter the `no debug ip bgp` command.
debug ip bgp soft-reconfiguration

Enable soft-reconfiguration debug.

Syntax
deb ug ip bgp {ip-address | peer-group-name} soft-reconfiguration
To disable, use the no debug ip bgp {ip-address | peer-group-name} soft-
reconfiguration command.

Parameters
- **ip-address**
  - (OPTIONAL) Enter the IP address of the neighbor in dotted decimal format.
- **peer-group-name**
  - (OPTIONAL) Enter the name of the peer group to disable or enable all routers within the peer group.

Defaults
Disabled

Command Modes
- EXEC Privilege

Supported Modes
- Full-Switch

Command History

<table>
<thead>
<tr>

<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information
This command turns on BGP soft-reconfiguration inbound debugging. If no neighbor is specified, debug turns on for all neighbors.

debug ip bgp updates

Allows you to view information about BGP updates.

Syntax
deb ug ip bgp updates [in | out | prefix-list prefix-list-name]
To disable debugging, use the no debug ip bgp {ip-address | peer-group peer-group-name} updates [in | out] command.

Parameters
- **in**
  - (OPTIONAL) Enter the keyword in to view only BGP updates received from neighbors.
- **out**
  - (OPTIONAL) Enter the keyword out to view only BGP updates sent to neighbors.
- **prefix-list prefix-list-name**
  - (OPTIONAL) Enter the keyword prefix-list then the name of an established prefix list. If the prefix list is not configured, the default is permit (to allow all routes).
- **ip-address**
  - (OPTIONAL) Enter the IP address of the neighbor in dotted decimal format.
- **peer-group-name**
  - (OPTIONAL) Enter the name of the peer group to disable or enable all routers within the peer group.

Command Modes
- EXEC Privilege

Supported Modes
- Full-Switch
default-metric

Allows you to change the metric of redistributed routes to locally originated routes. Use this command with the redistribute command.

Syntax
default-metric number

To return to the default setting, use the no default-metric command.

Parameters
number

Enter a number as the metric to be assigned to routes from other protocols. The range is from 1 to 4294967295.

Defaults
0

Command Modes
ROUTER BGP

Supported Modes
Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>

<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

The default-metric command in BGP sets the value of the BGP MULTI_EXIT_DISC (MED) attribute for redistributed routes only.

Related Commands
bgp always-compare-med — enables comparison of all BGP MED attributes.
redistribute — redistributes routes from other routing protocols into BGP.

description

Enter a description of the BGP routing protocol.

Syntax
description {description}

To remove the description, use the no description {description} command.

Parameters
description

Enter a description to identify the BGP protocol (80 characters maximum).

Defaults
none
Command Modes
- ROUTER BGP

Supported Modes
- Full-Switch

Command History

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

Related Commands
- `router bgp` — enters ROUTER mode on the switch.

max-paths

Configure the maximum number of parallel routes (multipath support) BGP supports.

Syntax
```
max-paths {ebgp | ibgp} number
```
To return to the default values, enter the `no maximum-paths` command.

Parameters
- **ebgp**
  - Enter the keyword `ebgp` to enable multipath support for External BGP routes.
- **ibgp**
  - Enter the keyword `ibgp` to enable multipath support for Internal BGP routes.
- **number**
  - Enter a number as the maximum number of parallel paths. The range is from 2 to 64.

Defaults
- none

Command Modes
- ROUTER BGP

Supported Modes
- Full-Switch

Command History

<table>
<thead>

<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information
If you enable this command, use the `clear ip bgp *` command to recompute the best path.

neighbor activate

This command allows the specified neighbor/peer group to be enabled for the current AFI/SAFI (Address Family Identifier/Subsequent Address Family Identifier).

Syntax
```
neighbor [ip-address | peer-group-name] activate
```
To disable, use the `no neighbor [ip-address | peer-group-name] activate` command.

Parameters
- **ip-address**
  - (OPTIONAL) Enter the IP address of the neighbor in dotted decimal format.
- **peer-group-name**
  - (OPTIONAL) Enter the name of the peer group.
- **activate**
  - Enter the keyword `activate` to enable the neighbor/peer group in the new AFI/SAFI.
neighbor add-path

This command allows the specified neighbor/peer group to send/receive multiple path advertisements.

**Syntax**

```plaintext
neighbor [ip-address | peer-group-name] add-path [send | receive | both] count
```

**Parameters**

- `ip-address` (OPTIONAL) Enter the IP address of the neighbor in dotted decimal format.
- `peer-group-name` (OPTIONAL) Enter the name of the peer group.
- `send` Enter the keyword `send` to indicate that the system sends multiple paths to peers.
- `receive` Enter the keyword `receive` to indicate that the system accepts multiple paths from peers.
- `both` Enter the keyword `both` to indicate that the system sends and accepts multiple paths from peers.
- `count` Enter the number paths supported. The range is from 2 to 64.

**Defaults**

none

**Command Modes**

CONFIGURATION-ROUTER-BGP-ADDRESS FAMILY

</tr>
</tbody>
</table>
To return to the default value, use the `no neighbor {ip-address | peer-group-name} advertisement-interval` command.

**Parameters**

- **ip-address**
  - (OPTIONAL) Enter the IP address of the neighbor in dotted decimal format.
- **peer-group-name**
  - Enter the name of the peer group to set the advertisement interval for all routers in the peer group.
- **seconds**
  - Enter a number as the time interval, in seconds, between BGP advertisements. The range is from 0 to 600 seconds. The default is **5 seconds** for internal BGP peers and **30 seconds** for external BGP peers.

**Defaults**

- seconds = **5 seconds** (internal peers)
- seconds = **30 seconds** (external peers)

### neighbor advertisement-start

To send BGP routing updates, set the minimum interval before starting.

**Syntax**

```
neighbor {ip-address} advertisement-start seconds
```

To return to the default value, use the `no neighbor {ip-address} advertisement-start` command.

**Parameters**

- **ip-address**
  - (OPTIONAL) Enter the IP address of the neighbor in dotted decimal format.
- **seconds**
  - Enter a number as the time interval, in seconds, before BGP route updates are sent. The range is from 0 to 3600 seconds.

**Defaults**

none

</table>
neighbor allowas-in

Set the number of times an AS number can occur in the AS path.

Syntax
neighbor {ip-address | peer-group-name} allowas-in number

To return to the default value, use the no neighbor {ip-address | peer-group-name} allowas-in
command.

Parameters
- **ip-address** (OPTIONAL) Enter the IP address of the neighbor in dotted decimal format.
- **peer-group-name** Enter the name of the peer group to set the advertisement interval for all routers in the peer group.
- **number** Enter a number of times to allow this neighbor ID to use the AS path. The range is from 1 to 10.

Defaults
Not configured.

Related Commands
bgp four-octet-as-support — enables 4-byte support for the BGP process.

neighbor default-origininate

Inject the default route to a BGP peer or neighbor.

Syntax
neighbor {ip-address | peer-group-name} default-originate [route-map map-name]

To remove a default route, use the no neighbor {ip-address | peer-group-name} default-originate
command.

Parameters
- **ip-address** (OPTIONAL) Enter the IP address of the neighbor in dotted decimal format.
- **peer-group-name** Enter the name of the peer group to set the default route of all routers in that peer group.
- **route-map map-name** (OPTIONAL) Enter the keyword route-map then the name of a configured route map.

Defaults
Not configured.

316 | Border Gateway Protocol IPv4 (BGPv4)
**neighbor description**

Assign a character string describing the neighbor or group of neighbors (peer group).

**Syntax**

```
neighbor {ip-address | peer-group-name} description text
```

To delete a description, use the `no neighbor {ip-address | peer-group-name} description` command.

**Parameters**

- **ip-address**
  - Enter the IP address of the neighbor in dotted decimal format.

- **peer-group-name**
  - Enter the name of the peer group.

- **text**
  - Enter a continuous text string up to 80 characters.

**Defaults**

Not configured.

</tbody>
</table>

**neighbor distribute-list**

Distribute BGP information via an established prefix list.

**Syntax**

```
neighbor {ip-address | peer-group-name} distribute-list prefix-list-name {in | out}
```

To delete a neighbor distribution list, use the `no neighbor {ip-address | peer-group-name} distribute-list prefix-list-name {in | out}` command.

**Parameters**

- **ip-address**
  - Enter the IP address of the neighbor in dotted decimal format.

- **peer-group-name**
  - Enter the name of the peer group to apply the distribute list filter to all routers in the peer group.

- **prefix-list-name**
  - Enter the name of an established prefix list.

  If the prefix list is not configured, the default is `permit` (to allow all routes).

- **in**
  - Enter the keyword `in` to distribute only inbound traffic.
Enter the keyword **out** to distribute only outbound traffic.

**Defaults**
Not configured.

<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**
Other BGP filtering commands include: `neighbor filter-list`, `ip as-path access-list`, and `neighbor route-map`.

**Related Commands**
`neighbor route-map` — assigns a route map to a neighbor or peer group.

**neighbor ebgp-multihop**

Attempt and accept BGP connections to external peers on networks that are not directly connected.

**Syntax**
```
neighbor {ip-address | peer-group-name} ebgp-multihop [ttl]
```
To disallow and disconnect connections, use the `no neighbor {ip-address | peer-group-name} ebgp-multihop` command.

**Parameters**
- `ip-address`: Enter the IP address of the neighbor in dotted decimal format.
- `peer-group-name`: Enter the name of the peer group.
- `ttl`: (OPTIONAL) Enter the number of hops as the Time to Live (ttl) value. The range is from 1 to 255. The default is **255**.

**Defaults**
Disabled.

**Command Modes**
ROUTER BGP

**Supported Modes**
Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**
To prevent loops, the `neighbor ebgp-multihop` command does not install the default routes of the multihop peer. Networks not directly connected are not considered valid for best-path selection.

**neighbor fall-over**

Enable or disable fast fall-over for BGP neighbors.

**Syntax**
```
neighbor {ipv4-address | peer-group-name} fall-over
```
To disable, use the no neighbor \{ipv4-address | peer-group-name\} fall-over command.

Parameters

- **ipv4-address**: Enter the IP address of the neighbor in dotted decimal format.
- **peer-group-name**: Enter the name of the peer group.

Defaults

Enabled.

Command Modes

- ROUTER BGP

Supported Modes

- Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

When you enable failover, BGP keeps track of IP or IPv6 ability to reach the peer remote address and the peer local address. Whenever either address becomes unreachable (for example, no active route exists in the routing table for the peer IP or IPv6 destination/local address), BGP brings down the session with the peer.

Related Commands

- `show ip bgp neighbors` — displays information on the BGP neighbors.

**neighbor graceful-restart**

Enable graceful restart on a BGP neighbor.

Syntax

```
neighbor \{ip-address | peer-group-name\} graceful-restart [restart-time seconds] [stale-path-time seconds] [role receiver-only]
```

To return to the default, enter the `no bgp graceful-restart` command.

Parameters

- **ip-address**: Enter the IP address of the neighbor in dotted decimal format.
- **peer-group-name**: Enter the name of the peer group to apply the filter to all routers in the peer group.
- **restart-time seconds**: Enter the keyword `restart-time` then the maximum number of seconds to restart and bring-up all the peers. The range is from 1 to 3600 seconds. The default is 120 seconds.
- **stale-path-time seconds**: Enter the keyword `stale-path-time` then the maximum number of seconds to wait before restarting a peer’s stale paths. The default is 360 seconds.
- **role receiver-only**: Enter the keyword `role receiver-only` to designate the local router to support graceful restart as a receiver only.

Defaults

as above

Command Modes

- ROUTER BGP

Supported Modes

- Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>
Usage Information
This feature advertises to BGP neighbors through a capability advertisement. In Receiver Only mode, BGP saves the advertised routes of peers that support this capability when they restart.

neighbor local-as

To accept external routes from neighbors with a local AS number in the AS number path, configure Internal BGP (IBGP) routers.

Syntax
neighbor {ip-address | peer-group-name} local-as as-number [no-prepend]
To return to the default value, use the no neighbor {ip-address | peer-group-name} local-as command.

Parameters
ip-address
Enter the IP address of the neighbor in dotted decimal format.

peer-group-name
Enter the name of the peer group to set the advertisement interval for all routers in the peer group.

as-number
Enter the AS number to reset all neighbors belonging to that AS. The range is from 0 to 65535 (2 byte), from 1 to 4294967295 (4 byte) or from 0.1 to 65535.65535 (dotted format).

no prepend
Specifies that local AS values do not prepend to announcements from the neighbor.

Defaults
Not configured.

Command Modes
ROUTER BGP

Supported Modes
Full-Switch

Command History
Version Description
9.9(0.0) Introduced on the FN IOM.
9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands
bgp four-octet-as-support — enables 4-byte support for the BGP process.

neighbor maximum-prefix

Control the number of network prefixes received.

Syntax
neighbor {ip-address | peer-group-name} maximum-prefix maximum [threshold] [warning-only]
To return to the default values, use the no neighbor {ip-address | peer-group-name} maximum-prefix maximum command.

Parameters
ip-address
Enter the IP address of the neighbor in dotted decimal format.

peer-group-name
Enter the name of the peer group.

maximum
Enter a number as the maximum number of prefixes allowed for this BGP router. The range is from 1 to 4294967295.
**threshold**

(Optional) Enter a number to be used as a percentage of the maximum value. When the number of prefixes reaches this percentage of the maximum value, the software sends a message. The range is from 1 to 100 percent. The default is **75**.

**warning-only**

(Optional) Enter the keyword `warning-only` to set the router to send a log message when the maximum value is reached. If this parameter is not set, the router stops peering when the maximum number of prefixes is reached.

**Defaults**

threshold = **75**

**Command Modes**

ROUTER BGP

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

If you configure the `neighbor maximum-prefix` command and the neighbor receives more prefixes than the `neighbor maximum-prefix` command configuration allows, the neighbor goes down and the `show ip bgp summary` command displays `(prfxd)` in the State/PfxRcd column for that neighbor. The neighbor remains down until you enter the `clear ip bgp` command for the neighbor or the peer group to which the neighbor belongs or you enter the `neighbor shutdown` and `neighbor no shutdown` commands.

**Related Commands**

`show ip bgp summary` — displays the current BGP configuration.

---

**neighbor password**

Enable message digest 5 (MD5) authentication on the TCP connection between two neighbors.

**Syntax**

```
neighbor {ip-address | peer-group-name} password [encryption-type] password
```

To delete a password, use the `no neighbor {ip-address | peer-group-name} password` command.

**Parameters**

- `ip-address`
  - Enter the IP address of the router to be included in the peer group.
- `peer-group-name`
  - Enter the name of a configured peer group.
- `encryption-type`
  - (Optional) Enter 7 as the encryption type for the password entered. 7 means that the password is encrypted and hidden.
- `password`
  - Enter a text string up to 80 characters long. The first character of the password must be a letter.
  
  You cannot use spaces in the password.

**Defaults**

Not configured.

**Command Modes**

ROUTER BGP

**Supported Modes**

Full-Switch

**Command History**

</table>
neighbor peer-group (assigning peers)

Allows you to assign one peer to an existing peer group.

Syntax

```
neighbor ip-address peer-group peer-group-name
```

To delete a peer from a peer group, use the `no neighbor ip-address peer-group peer-group-name` command.

Parameters

- `ip-address`: Enter the IP address of the router to be included in the peer group.
- `peer-group-name`: Enter the name of a configured peer group.

Defaults

Not configured.

Command Modes

- `ROUTER BGP`

Supported Modes

- Full-Switch

Command History

Version Description

- 9.9(0.0) Introduced on the FN IOM.
- 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

You can assign up to 256 peers to one peer group.

When you add a peer to a peer group, it inherits all the peer group’s configured parameters. A peer cannot become part of a peer group if any of the following commands are configured on the peer:

- `neighbor advertisement-interval`
- `neighbor distribute-list`
• neighbor route-map
• neighbor route-reflector-client
• neighbor shutdown

A neighbor may keep its configuration after it was added to a peer group if the neighbor’s configuration is more specific than the peer group’s, and the neighbor’s configuration does not affect outgoing updates.

A peer group must exist before you add a peer to it. If the peer group is disabled (shutdown) the peers within the group are also disabled (shutdown).

Related Commands

- clear ip bgp — resets BGP sessions.
- neighbor peer-group (creating group) — creates a peer group.
- show ip bgp peer-group — views BGP peers.
- show ip bgp neighbors — views BGP neighbors configurations.

neighbor peer-group (creating group)

Allows you to create a peer group and assign it a name.

Syntax

neighbor peer-group-name peer-group

To delete a peer group, use the no neighbor peer-group-name peer-group command.

Parameters

- peer-group-name Enter a text string up to 16 characters long as the name of the peer group.

Defaults

Not configured.

Command Modes

ROUTER BGP

Supported Modes

Full-Switch

Command History

<table>
<thead>
<tr>

<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

When you create a peer group, it is disabled (Shut mode).

Related Commands

- neighbor peer-group (assigning peers) — assigns routers to a peer group.
- neighbor remote-as — assigns a indirectly connected AS to a neighbor or peer group.
- neighbor shutdown — disables a peer or peer group.

neighbor peer-group passive

Enable passive peering on a BGP peer group, that is, the peer group does not send an OPEN message, but responds to one.

Syntax

neighbor peer-group-name peer-group passive [limit sessions]
To delete a passive peer-group, use the `no neighbor peer-group-name peer-group passive` command.

**Parameters**

- `peer-group-name` Enter a text string up to 16 characters long as the name of the peer group.
- `limit` (Optional) Enter the keyword `limit` to constrain the numbers of sessions for this peer-group. The range is from 2 to 256. The default is 256.

**Defaults**

Not configured.

**Command Modes**

- ROUTER BGP

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

After you configure a peer group as passive, assign it a subnet using the `neighbor soft-reconfiguration inbound` command.

For passive eBGP limits, the Remote AS must be different from the AS for this neighbor.

**Related Commands**

- `neighbor soft-reconfiguration inbound` — assigns a subnet to a dynamically configured BGP neighbor.
- `neighbor remote-as` — assigns an indirectly connected AS to a neighbor or peer group.

### neighbor remote-as

Create and specify the remote peer to the BGP neighbor.

**Syntax**

```plaintext
neighbor {ip-address | peer-group-name} remote-as number
```

To delete a remote AS entry, use the `no neighbor {ip-address | peer-group-name} remote-as number` command.

**Parameters**

- `ip-address` Enter the IP address of the neighbor to enter the remote AS in its routing table.
- `peer-group-name` Enter the name of the peer group to enter the remote AS into routing tables of all routers within the peer group.
- `number` Enter a number of the AS. The range is from 0 to 65535 (2 byte) or from 1 to 4294967295 (4 byte).

**Defaults**

Not configured.

**Command Modes**

- ROUTER BGP

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
</tbody>
</table>
Version | Description
--- | ---
9.2(0.0) | Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

To accept 4-byte formats before entering a 4 byte AS Number, configure your system. If the `number` parameter is the same as the AS number used in the `router bgp` command, the remote AS entry in the neighbor is considered an internal BGP peer entry.

This command creates a peer and the newly created peer is disabled (Shutdown).

Related Commands

- `router bgp` — enters ROUTER BGP mode and configures routes in an AS.
- `bgp four-octet-as-support` — enables 4-byte support for the BGP process.

---

**neighbor remove-private-as**

Remove private AS numbers from the AS-PATH of outgoing updates.

**Syntax**

```
neighbor {ip-address | peer-group-name} remove-private-as
```

To return to the default, use the `no neighbor {ip-address | peer-group-name} remove-private-as` command.

**Parameters**

- `ip-address` Enter the IP address of the neighbor to remove the private AS numbers.
- `peer-group-name` Enter the name of the peer group to remove the private AS numbers.

**Defaults**

Disabled (that is, private AS number are not removed).

**Command Modes**

ROUTER BGP

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

- Applies to EBGP neighbors only.
- Configure your system to accept 4-byte formats before entering a 4 byte AS Number.
- If the AS-PATH contains both public and private AS number or contains AS numbers of an EBGP neighbor, the private AS numbers are not removed.
- If a confederation contains private AS numbers in its AS-PATH, the software removes the private AS numbers only if they follow the confederation numbers in the AS path.
- Private AS numbers are from 64512 to 65535 (2 byte).
Apply an established route map to either incoming or outbound routes of a BGP neighbor or peer group.

**Syntax**

```
neighbor {ip-address | peer-group-name} route-map map-name {in | out}
```

To remove the route map, use the no neighbor {ip-address | peer-group-name} route-map map-name {in | out} command.

**Parameters**

- `ip-address`
  - Enter the IP address of the neighbor in dotted decimal format.
- `peer-group-name`
  - Enter the name of the peer group.
- `map-name`
  - Enter the name of an established route map.
  - If the Route map is not configured, the default is `deny` (to drop all routes).
- `in`
  - Enter the keyword `in` to filter inbound routes.
- `out`
  - Enter the keyword `out` to filter outbound routes.

**Defaults**

Not configured.

**Command Modes**

- ROUTER BGP

**Supported Modes**

- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

When you apply a route map to outbound routes, only routes that match at least one section of the route map are permitted.

If you identify a peer group by name, the peers in that peer group inherit the characteristics in the Route map used in this command. If you identify a peer by IP address, the Route map overwrites either the inbound or outbound policies on that peer.

Configure the router as a route reflector and the specified neighbors as members of the cluster.

**Syntax**

```
neighbor {ip-address | peer-group-name} route-reflector-client
```

To remove one or more neighbors from a cluster, use the no neighbor {ip-address | peer-group-name} route-reflector-client command. If you delete all members of a cluster, you also delete the route-reflector configuration on the router.

**Parameters**

- `ip-address`
  - Enter the IP address of the neighbor in dotted decimal format.
- `peer-group-name`
  - Enter the name of the peer group.
All routers in the peer group receive routes from a route reflector.

Defaults
Not configured.

Command Modes
ROUTER BGP

Supported Modes
Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information
A route reflector reflects routes to the neighbors assigned to the cluster. Neighbors in the cluster do not need not to be fully meshed. By default, when you use `no route reflector`, the internal BGP (IBGP) speakers in the network must be fully meshed.

The first time you enter this command, the router configures as a route reflector and the specified BGP neighbors configure as clients in the route-reflector cluster.

When you remove all clients of a route reflector using the `no neighbor route-reflector-client` command, the router no longer functions as a route reflector.

If the clients of a route reflector are fully meshed, you can configure the route reflector to not reflect routes to specified clients by using the `no bgp client-to-client reflection` command.

Related Commands
`bgp client-to-client reflection` — enables route reflection between the route reflector and the clients.

**neighbor shutdown**

Disable a BGP neighbor or peer group.

Syntax

```
neighbor {ip-address | peer-group-name} shutdown
```

To enable a disabled neighbor or peer group, use the `neighbor {ip-address | peer-group-name} no shutdown` command.

Parameters

- `ip-address` Enter the IP address of the neighbor in dotted decimal format.
- `peer-group-name` Enter the name of the peer group to disable or enable all routers within the peer group.

Defaults

Enabled (that is, BGP neighbors and peer groups are disabled.)

Command Modes

- ROUTER BGP

Supported Modes

Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

Peers that are enabled within a peer group are disabled when their peer group is disabled.
The `neighbor shutdown` command terminates all BGP sessions on the BGP neighbor or BGP peer group. Use this command with caution as it terminates the specified BGP sessions. When a neighbor or peer group is shut down, use the `show ip bgp summary` command to confirm its status.

**Related Commands**

- `show ip bgp summary` — displays the current BGP configuration.
- `show ip bgp neighbors` — displays the current BGP neighbors.

### neighbor soft-reconfiguration inbound

Enable soft-reconfiguration for BGP.

**Syntax**

```
neighbor {ip-address | peer-group-name} soft-reconfiguration inbound
```

To disable, use the `no neighbor {ip-address | peer-group-name} soft-reconfiguration inbound` command.

**Parameters**

- `ip-address` Enter the IP address of the neighbor in dotted decimal format.
- `peer-group-name` Enter the name of the peer group to disable or enable all routers within the peer group.

**Defaults**

Disabled

**Command Modes**

ROUTER BGP

**Supported Modes**

Full-Switch

**Command History**

- **Version**
  - 9.9(0.0) Introduced on the FN IOM.
  - 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

This command enables soft-reconfiguration for the BGP neighbor specified. BGP stores all the updates the neighbor receives but does not reset the peer-session.

**CAUTION:** Inbound update storage is a memory-intensive operation. The entire BGP update database from the neighbor is stored in memory regardless of the inbound policy results applied on the neighbor.

**NOTE:** This command is supported in BGP Router Configuration mode for IPv4 Unicast address only.

**Related Commands**

- `show ip bgp neighbors` — displays routes received by a neighbor.

### neighbor timers

Set keepalive and hold time timers for a BGP neighbor or a peer group.

**Syntax**

```
neighbor {ip-address | peer-group-name} timers keepalive holdtime
```

To return to the default values, use the `no neighbor {ip-address | peer-group-name} timers` command.
Parameters

- **ip-address**: Enter the IP address of the peer router in dotted decimal format.
- **peer-group-name**: Enter the name of the peer group to set the timers for all routers within the peer group.
- **keepalive**: Enter a number for the time interval, in seconds, between keepalive messages sent to the neighbor routers. The range is from 1 to 65535. The default is 60 seconds.
- **holdtime**: Enter a number for the time interval, in seconds, between the last keepalive message and declaring the router dead. The range is from 3 to 65535. The default is 180 seconds.

Defaults

- keepalive = 60 seconds
- holdtime = 180 seconds

Command Modes

- ROUTER BGP

Supported Modes

- Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

Timer values configured with the neighbor timers command override the timer values configured with any other command.

When two neighbors, configured with different keepalive and holdtime values, negotiate for new values, the resulting values are as follows:

- the lower of the holdtime value is the new holdtime value, and
- whichever is the lower value; one-third of the new holdtime value, or the configured keepalive value, is the new keepalive value.

**neighbor update-source**

Enable the software to use Loopback interfaces for TCP connections for BGP sessions.

Syntax

```plaintext
neighbor {ip-address | peer-group-name} update-source interface
to use the closest interface, use the no neighbor {ip-address | peer-group-name} update-source interface command.
```

Parameters

- **ip-address**: Enter the IP address of the peer router in dotted decimal format.
- **peer-group-name**: Enter the name of the peer group to disable all routers within the peer group.
- **interface**: Enter the keyword loopback then a number of the Loopback interface. The range is from 0 to 16383.

Defaults

- Not configured.

Command Modes

- ROUTER BGP

Supported Modes

- Full-Switch
Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

Loopback interfaces are up constantly and the BGP session may need one interface constantly up to stabilize the session. The `neighbor update-source` command is not necessary for directly connected internal BGP sessions.

**neighbor weight**

Assign a weight to the neighbor connection, which is used to determine the best path.

**Syntax**

```
neighbor {ip-address | peer-group-name} weight weight
```

To remove a weight value, use the `no neighbor {ip-address | peer-group-name} weight` command.

**Parameters**

- **ip-address**
  - Enter the IP address of the peer router in dotted decimal format.

- **peer-group-name**
  - Enter the name of the peer group to disable all routers within the peer group.

- **weight**
  - Enter a number as the weight. The range is from 0 to 65535. The default is 0.

**Defaults**

0

**Command Modes**

- Full–Switch

**Supported Modes**

- ROUTER BGP

**Command History**

<table>
<thead>
<tr>
<th>Version</th>

</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

In the system best path selection process, the path with the highest weight value is preferred.

**NOTE:** In the system best-path selection process, the path with the highest weight value is preferred.

If you configure the `set weight` command in a route map applied to this neighbor, the weight set in that command overrides the weight set in the `neighbor weight` command.

**network**

Specify the networks for the BGP process and enter them in the BGP routing table.

**Syntax**

```
network ip-address mask [route-map map-name]
```

To remove a network, use the `no network ip-address mask [route-map map-name]` command.

**Parameters**

- **ip-address**
  - Enter an IP address in dotted decimal format of the network.
mask

Enter the mask of the IP address in the slash prefix length format (for example, /24).

The mask appears in command outputs in dotted decimal format (A.B.C.D).

route-map map-name

(Optional) Enter the keyword route-map then the name of an established route map.

Only the following ROUTE-MAP mode commands are supported:

- match ip address
- set metric
- set tag

If the route map is not configured, the default is deny (to drop all routes).

Defaults
Not configured.

Command Modes
ROUTER BGP

Supported Modes
Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

The system software resolves the network address the network command configures with the routes in the main routing table to ensure that the networks are reachable using non-BGP routes and non-default routes.

Related Commands
redistribute — redistributes routes into BGP.

network backdoor

Specify this IGP route as the preferred route.

Syntax

```
network ip-address mask backdoor
```

To remove a network, use the no network ip-address mask backdoor command.

Parameters

- **ip-address**: Enter an IP address in dotted decimal format of the network.
- **mask**: Enter the mask of the IP address in the slash prefix length format (for example, /24).

The mask appears in command outputs in dotted decimal format (A.B.C.D).

Defaults
Not configured.

<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
</tbody>
</table>
Version Description
9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
Although the system does not generate a route due to the backdoor config, there is an option for injecting/sourcing a local route in the presence of network backdoor config on a learned route.

redistribute
Redistribute routes into BGP.

Syntax
```
redistribute {connected | static} [route-map map-name]
```
To disable redistribution, use the `no redistribution {connected | static}` command.

Parameters
- `connected` Enter the keyword `connected` to redistribute routes from physically connected interfaces.
- `static` Enter the keyword `static` to redistribute manually configured routes.

These routes are treated as incomplete routes.

- `route-map map-name` (OPTIONAL) Enter the keyword `route-map` then the name of an established route map.

Only the following ROUTE-MAP mode commands are supported:
- `match ip address`
- `set metric`
- `set tag`

If the route map is not configured, the default is `deny` (to drop all routes).

Defaults
Not configured.

Command Modes
- ROUTER BGP

Supported Modes
- Full-Switch

Command History

Version Description
9.9(0.0) Introduced on the FN IOM.
9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
With the Dell Networking OS version 8.31.0 and later, you can use the `redistribute` command to advertise the IGP cost as the MED on redistributed routes. When you set the route-map with metric-type internal and applied outbound to an EBGP peer/peer-group, the advertised routes corresponding to those peer/peer-groups have the IGP cost set as MED.

If you do not configure the `default-metric` command, in addition to the `redistribute` command, or there is no route map to set the metric, the metric for redistributed static and connected is “0”.

To redistribute the default route (0.0.0.0/0), configure the `neighbor default-originate` command.
Related Commands  
neighbor default-originate — injects the default route.

**redistribute ospf**

Redistribute OSPF routes into BGP.

### Syntax

```
redistribute ospf process-id [[match external {1 | 2}] [match internal]] [route-map map-name]
```

To stop redistribution of OSPF routes, use the `no redistribute ospf process-id` command.

### Parameters

**process-id**

Enter the number of the OSPF process. The range is from 1 to 65535.

**match external {1 | 2}**

(Optional) Enter the keywords `match external` to redistribute OSPF external routes. You can specify 1 or 2 to redistribute those routes only.

**match internal**

(Optional) Enter the keywords `match internal` to redistribute OSPF internal routes only.

**route-map map-name**

(Optional) Enter the keywords `route-map` then the name of a configured route map.

### Defaults

Not configured.

### Command Modes

- **ROUTER BGP**
- **Supported Modes**: Full-Switch

### Command History

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

### Usage Information

With the Dell Networking OS version 8.3.1.0 and later, you can use the `redistribute` command to advertise the IGP cost as the MED on redistributed routes. When you set the route-map with metric-type internal and apply outbound to an EBGP peer/peer-group, the advertised routes corresponding to those peer/peer-groups have the IGP cost set as MED.

When you enter the `redistribute isis process-id` command without any other parameters, the system redistributes all OSPF internal routes, external type 1 routes, and external type 2 routes. RFC does not support this feature.

**router bgp**

To configure and enable BGP, enter ROUTER BGP mode.

### Syntax

```
router bgp as-number
```

To disable BGP, use the `no router bgp as-number` command.

### Parameters

**as-number**

Enter the AS number. The range is from 1 to 65535 (2 byte), from 1 to 4294967295 (4 byte), or from 0.1 to 65535.65535 (dotted format).
Defaults
Not enabled.

</tbody>
</table>

Usage Information
At least one interface must be in Layer 3 mode for the router bgp command to be accepted. If no interfaces are enabled for Layer 3, an error message appears:

```
% Error: No router id configured
```

Example

```
Dell(conf)#router bgp 3
Dell(conf-router_bgp)#
```

**shutdown all**

Disables all the BGP neighbors.

Syntax

```
shutdown all
```

Use the `no shutdown all` command to enable all the configured BGP neighbors.

Command Modes

- ROUTER BGP
- CONFIGURATION

Command History

CONFIGURATION

Command History
Version Description
9.11.0.0  Introduced on the S-Series, Z-Series, MXL, and IOM.

Usage Information
You can use this command to disable all the configured BGP neighbors corresponding to the unicast IPv6 address families.
This command is global for all VRFs.

**show capture bgp-pdu neighbor**

Display BGP packet capture information for an IPv4 address on the system.

**Syntax**

```
show capture bgp-pdu neighbor ipv4-address
```

**Parameters**

- **ipv4-address**
  
Enter the IPv4 address (in dotted decimal format) of the BGP address to display packet information for that address.

**Command Modes**

- EXEC Privilege

**Supported Modes**

- Full-Switch

Dell#
```

**Related Commands**

- `capture bgp-pdu max-buffer-size` — specifies a size for the capture buffer.

**show config**

View the current ROUTER BGP configuration.

**Syntax**

```
show config
```

**Example**

```
Dell(conf-router_bgp)#show config

!Router bgp 65000
  !redistribute ospf 1

Dell(conf-router_bgp)
```

**Related Commands**

- `neighbor default-originate` — advertise a default route to a BGP peer.

Border Gateway Protocol IPv4 (BGPv4)
show ip bgp

View the current BGP IPv4 routing table for the system.

Syntax

    show ip bgp [ipv4 unicast] [network [network-mask] [longer-prefixes]]

Parameters

- **ipv4 unicast**
  - (OPTIONAL) Enter the keywords ipv4 unicast to view information only related to ipv4 unicast routes.

- **network**
  - (OPTIONAL) Enter the network address (in dotted decimal format) of the BGP network to view information only on that network.

- **network-mask**
  - (OPTIONAL) Enter the network mask (in slash prefix format) of the BGP network address.

- **longer-prefixes**
  - (OPTIONAL) Enter the keywords longer-prefixes to view all routes with a common prefix.

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

- Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>

</tbody>
</table>

Usage Information

When you enable the `bgp non-deterministic-med` command, the `show ip bgp` command output for a BGP route does not list the INACTIVE reason.
The following describes the `show ip bgp` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Network</td>
<td>Displays the destination network prefix of each BGP route.</td>
</tr>
<tr>
<td>Next Hop</td>
<td>Displays the next hop address of the BGP router. If 0.0.0.0 is listed in this column, then local routes exist in the routing table.</td>
</tr>
<tr>
<td>Metric</td>
<td>Displays the BGP route’s metric, if assigned.</td>
</tr>
<tr>
<td>LocPrf</td>
<td>Displays the BGP LOCAL_PREF attribute for the route.</td>
</tr>
<tr>
<td>Weight</td>
<td>Displays the route’s weight.</td>
</tr>
<tr>
<td>Path</td>
<td>Lists all the ASs the route passed through to reach the destination network.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell>show ip bgp
BGP table version is 847562, local router ID is 63.114.8.131
Status codes: s suppressed, d damped, h history, * valid, > best
Path source: I - internal, a - aggregate, c - confed-external, r - redistributed, n - network
Origin codes: i - IGP, e - EGP, ? - incomplete

Border Gateway Protocol IPv4 (BGPv4) | 339
show ip bgp community

View information on all routes with Community attributes or view specific BGP community groups.

Syntax

```
show ip bgp [ipv4 unicast] community [community-number] [local-as] [no-export] [no-advertise]
```

Parameters

- **ipv4 unicast** (OPTIONAL) Enter the keywords ipv4 unicast to view information only related to ipv4 unicast routes.
- **community-number** Enter the community number in AA:NN format where AA is the AS number (2 bytes) and NN is a value specific to that autonomous system.
  You can specify up to eight community numbers to view information on those community groups.
- **local-AS** Enter the keywords local-AS to view all routes with the COMMUNITY attribute of NO_EXPORT_SUBCONFED.
  All routes with the NO_EXPORT_SUBCONFED (0xFFFFFF03) community attribute must not be advertised to external BGP peers.
- **no-advertise** Enter the keywords no-advertise to view all routes containing the well-known community attribute of NO_ADVERTISE.
  All routes with the NO_ADVERTISE (0xFFFFFF02) community attribute must not be advertised to other BGP peers.
- **no-export** Enter the keywords no-export to view all routes containing the well-known community attribute of NO_EXPORT.
  All routes with the NO_EXPORT (0xFFFFFF01) community attribute must not be advertised outside a BGP confederation boundary.

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

- Full-Switch

Command History

<table>
<thead>
<tr>

<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

To view the total number of COMMUNITY attributes found, use the `show ip bgp summary` command. The text line above the route table states the number of COMMUNITY attributes found.

The `show ip bgp community` command without any parameters lists BGP routes with at least one BGP community attribute and the output is the same as for the `show ip bgp` command output.
The following describes the `show ip bgp community` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Network</td>
<td>Displays the destination network prefix of each BGP route.</td>
</tr>
<tr>
<td>Next Hop</td>
<td>Displays the next hop address of the BGP router. If 0.0.0.0 is listed in this column, then local routes exist in the routing table.</td>
</tr>
<tr>

```

**show ip bgp community-list**

View routes that a specific community list affects.

**Syntax**

```
show ip bgp [ipv4 unicast] community-list community-list-name [exact-match]
```

**Parameters**

- `ipv4 unicast` (OPTIONAL) Enter the keywords `ipv4 unicast` to view information only related to ipv4 unicast routes.
- `community-list-name` Enter the name of a configured IP community list (maximum 140 characters).
- `exact-match` Enter the keyword for an exact match of the communities.

**Command Modes**

- EXEC
The show ip bgp command without any parameters lists BGP routes matching the Community List and the output is the same as for the show ip bgp command output.

The following describes the show ip bgp community-list pass command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Network</td>
<td>Displays the destination network prefix of each BGP route.</td>
</tr>
<tr>
<td>Next Hop</td>
<td>Displays the next hop address of the BGP router. If 0.0.0.0 is listed in this column, then local routes exist in the routing table.</td>
</tr>
<tr>
<td>Metric</td>
<td>Displays the BGP route’s metric, if assigned.</td>
</tr>
<tr>
<td>LocPrf</td>
<td>Displays the BGP LOCAL_PREF attribute for the route.</td>
</tr>
<tr>
<td>Weight</td>
<td>Displays the route’s weight.</td>
</tr>
<tr>
<td>Path</td>
<td>Lists all the ASs the route passed through to reach the destination network.</td>
</tr>
</tbody>
</table>

Example

```
Dell#show ip bgp community-list pass
BGP table version is 0, local router ID is 10.101.15.13
Status codes: s suppressed, d damped, h history, * valid, > best
Path source: I - internal, a - aggregate, c - confed-external, r - redistributed, n - network
Origin codes: i - IGP, e - EGP, ? - incomplete

Network     Next Hop      Metric     LocPrf     Weight Path
Dell#        
```

show ip bgp dampened-paths

View BGP routes that are dampened (non-active).

Syntax

```
show ip bgp [ipv4 unicast] dampened-paths
```

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

Full-Switch

Command History

<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>
Usage Information

The following describes the `show ip bgp damp` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Network</td>
<td>Displays the network ID to which the route is dampened.</td>
</tr>
<tr>
<td>From</td>
<td>Displays the IP address of the neighbor advertising the dampened route.</td>
</tr>
<tr>
<td>Reuse</td>
<td>Displays the hour:minutes:seconds until the dampened route is available.</td>
</tr>
<tr>
<td>Path</td>
<td>Lists all the ASs the dampened route passed through to reach the destination network.</td>
</tr>
</tbody>
</table>

Example

```
Dell>show ip bgp dampened-paths
BGP table version is 210708, local router ID is 63.114.8.2
Status codes: s suppressed, d damped, h history, * valid, > best
Path source: I - internal, a - aggregate, c - confed-external, r - redistributed, n - network
Origin codes: i - IGP, e - EGP, ? - incomplete
Network From Reuse Path
```

show ip bgp detail

Display BGP internal information for the IPv4 Unicast address family.

Syntax

```
show ip bgp [ipv4 unicast] detail
```

Defaults

none

Border Gateway Protocol IPv4 (BGPv4) | 343
show ip bgp extcommunity-list

View information on all routes with Extended Community attributes.

**Syntax**

```
show ip bgp [ipv4 unicast] extcommunity-list [list name]
```

**Parameters**

- `ipv4 unicast` (OPTIONAL) Enter the keywords `ipv4 unicast` to view information only related to ipv4 unicast routes.
- `list name` Enter the extended community list name you wish to view. The range is 140 characters.

**Command Modes**

- EXEC
show ip bgp filter-list

View the routes that match the filter lists.

Syntax: show ip bgp [ipv4 unicast] filter-list as-path-name

Parameters:
- **ipv4 unicast** (OPTIONAL) Enter the keywords ipv4 unicast to view information only related to ipv4 unicast routes.
- **as-path-name** Enter an AS-PATH access list name. The range is 140 characters.

Command Modes:
- EXEC
- EXEC Privilege

Supported Modes: Full-Switch

Command History:
- **Version 9.9(0.0)** Introduced on the FN IOM.
- **Version 9.2(0.0)** Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information:
The following describes the show ip bgp filter-list hello command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Path source codes</td>
<td>Lists the path sources shown to the right of the last AS number in the Path column:</td>
</tr>
<tr>
<td>i</td>
<td>internal route entry</td>
</tr>
<tr>
<td>a</td>
<td>aggregate route entry</td>
</tr>
<tr>
<td>c</td>
<td>external confederation route entry</td>
</tr>
<tr>
<td>n</td>
<td>network route entry</td>
</tr>
<tr>
<td>r</td>
<td>redistributed route entry</td>
</tr>
<tr>
<td>Next Hop</td>
<td>Displays the next hop address of the BGP router. If 0.0.0.0 is listed in this column, then local routes exist in the routing table.</td>
</tr>
</tbody>
</table>
### Field Description

**Metric**
Displays the BGP route's metric, if assigned.

**LocPrf**
Displays the BGP LOCAL_PREF attribute for the route.

**Weight**
Displays the route's weight.

**Path**
Lists all the ASs the route passed through to reach the destination network.

---

**Example**

Dell\#show ip bgp filter-list hello

BGP table version is 80227, local router ID is 120.1.1.1

Status codes: s suppressed, d damped, h history, * valid, > best

Path source: I - internal, a - aggregate, c - confed-external, r - redistributed, n - network

Origin codes: i - IGP, e - EGP, ? - incomplete

</table>

---

### show ip bgp flap-statistics

View flap statistics on BGP routes.

**Syntax**

`show ip bgp [ipv4 unicast] flap-statistics [ip-address [mask]] [filter-list as-path-name] [regexp regular-expression]`

**Parameters**

- **ipv4 unicast**
  (OPTIONAL) Enter the keywords ipv4 unicast to view information only related to ipv4 unicast routes.

- **ip-address**
  (OPTIONAL) Enter the IP address (in dotted decimal format) of the BGP network to view information only on that network.

- **mask**
  (OPTIONAL) Enter the network mask (in slash prefix (/x) format) of the BGP network address.

- **filter-list as-path-name**
  (OPTIONAL) Enter the keyword filter-list then the name of a configured AS-PATH ACL. The range is 140 characters.

- **regexp regular-expression**
  Enter a regular expression then use one or a combination of the following characters to match. The range is 256 characters.

- **.** = (period) any single character (including a white space).
• \* = (asterisk) the sequences in a pattern (zero or more sequences).
• + = (plus) the sequences in a pattern (one or more sequences).
• ? = (question mark) sequences in a pattern (either zero or one sequences).

<table>
<thead>
<tr>
<th>NOTE: Enter an escape sequence (CTRL+v) prior to entering the ? regular expression.</th>
</tr>
</thead>
<tbody>
<tr>
<td>• [ ] = (brackets) a range of single-character patterns.</td>
</tr>
<tr>
<td>• ( ) = (parenthesis) groups a series of pattern elements to a single element.</td>
</tr>
<tr>
<td>• { } = (braces) minimum and the maximum match count.</td>
</tr>
<tr>
<td>• ^ = (caret) the beginning of the input string. If you use the caret at the beginning of a sequence or range, it matches on everything BUT the characters specified.</td>
</tr>
<tr>
<td>• $ = (dollar sign) the end of the output string.</td>
</tr>
</tbody>
</table>

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>

</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40Gbe Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

The following describes the `show ip bgp flap` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Network</td>
<td>Displays the network ID to which the route is flapping.</td>
</tr>
<tr>
<td>From</td>
<td>Displays the IP address of the neighbor advertising the flapping route.</td>
</tr>
<tr>
<td>Flaps</td>
<td>Displays the number of times the route flapped.</td>
</tr>
<tr>
<td>Duration</td>
<td>Displays the hours:minutes:seconds since the route first flapped.</td>
</tr>
<tr>
<td>Reuse</td>
<td>Displays the hours:minutes:seconds until the flapped route is available.</td>
</tr>
<tr>
<td>Path</td>
<td>Lists all the ASs the flapping route passed through to reach the destination network.</td>
</tr>
</tbody>
</table>

Example

```
Dell>show ip bgp flap-statistics
BGP table version is 210851, local router ID is 63.114.8.2
Status codes: s suppressed, d damped, h history, * valid, > best
Path source: I - internal, a - aggregate, c - confed-external,
            r - redistributed, n - network
Origin codes: i - IGP, e - EGP, ? - incomplete

<table>
<thead>
<tr>
<th>Network</th>
<th>From</th>
<th>Flaps</th>
<th>Duration</th>
<th>Reuse</th>
<th>Path</th>
</tr>
</thead>
</table>
Dell>
```
show ip bgp inconsistent-as

View routes with inconsistent originating autonomous system (AS) numbers; that is, prefixes that are announced from the same neighbor AS but with a different AS-Path.

**Syntax**

```
show ip bgp [ipv4 unicast] inconsistent-as
```

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

Full-Switch

**Command History**

DellEMC>
show ip bgp neighbors

Allows you to view the information BGP neighbors exchange.

**Syntax**

```
show ip bgp [ipv4 unicast] neighbors [ip-address [advertised-routes | dampened-routes | flap-statistics | routes | {received-routes [network [network-mask]]} | {denied-routes [network [network-mask]]}]
```

**Parameters**

- `ipv4 unicast` *(OPTIONAL)* Enter the keywords `ipv4 unicast` to view information only related to ipv4 unicast routes.
- `ip-address` *(OPTIONAL)* Enter the IP address of the neighbor to view only BGP information exchanged with that neighbor.
- `advertised-routes` *(OPTIONAL)* Enter the keywords `advertised-routes` to view only the routes the neighbor sent.
- `dampened-routes` *(OPTIONAL)* Enter the keywords `dampened-routes` to view information on dampened routes from the BGP neighbor.
- `detail` *(OPTIONAL)* Enter the keyword `detail` to view neighbor-specific internal information for the IPv4 Unicast address family.
- `flap-statistics` *(OPTIONAL)* Enter the keywords `flap-statistics` to view flap statistics on the neighbor’s routes.
- `routes` *(OPTIONAL)* Enter the keyword `routes` to view only the neighbor’s feasible routes.
- `received-routes [network [network-mask]]` *(OPTIONAL)* Enter the keywords `received-routes` then either the network address (in dotted decimal format) or the network mask (in slash prefix format) to view all information received from neighbors.

**Usage Information**

After a peer reset, the contents of the notification log messages is displayed in hex values for debugging.

The following describes the `show ip bgp neighbors` command shown in the following examples.
<table>
<thead>
<tr>
<th>The Lines Beginning with:</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>BGP neighbor</td>
<td>Displays the BGP neighbor address and its AS number. The last phrase in the line indicates whether the link between the BGP router and its neighbor is an external or internal one. If they are located in the same AS, the link is internal; otherwise the link is external.</td>
</tr>
<tr>
<td>BGP version</td>
<td>Displays the BGP version (always version 4) and the remote router ID.</td>
</tr>
<tr>
<td>BGP state</td>
<td>Displays the neighbor’s BGP state and the amount of time in hours:minutes:seconds it has been in that state.</td>
</tr>
<tr>
<td>Last read</td>
<td>This line displays the following information:</td>
</tr>
<tr>
<td></td>
<td>• last read is the time (hours:minutes:seconds) the router read a message from its neighbor</td>
</tr>
<tr>
<td></td>
<td>• hold time is the number of seconds configured between messages from its neighbor</td>
</tr>
<tr>
<td></td>
<td>• keepalive interval is the number of seconds between keepalive messages to help ensure that the TCP session is still alive.</td>
</tr>
<tr>
<td>Received messages</td>
<td>This line displays the number of BGP messages received, the number of notifications (error messages), and the number of messages waiting in a queue for processing.</td>
</tr>
<tr>
<td>Sent messages</td>
<td>The line displays the number of BGP messages sent, the number of notifications (error messages), and the number of messages waiting in a queue for processing.</td>
</tr>
<tr>
<td>Received updates</td>
<td>This line displays the number of BGP updates received and sent.</td>
</tr>
<tr>
<td>Soft reconfiguration</td>
<td>This line indicates that soft reconfiguration inbound is configured.</td>
</tr>
<tr>
<td>Minimum time</td>
<td>Displays the minimum time, in seconds, between advertisements.</td>
</tr>
<tr>
<td>(list of inbound and outbound policies)</td>
<td>Displays the policy commands configured and the names of the Route map, AS-PATH ACL, or Prefix list configured for the policy.</td>
</tr>
<tr>
<td>For address family:</td>
<td>Displays the IPv4 Unicast as the address family.</td>
</tr>
<tr>
<td>BGP table version</td>
<td>Displays which version of the primary BGP routing table the router and the neighbor are using.</td>
</tr>
<tr>
<td>accepted prefixes</td>
<td>Displays the number of network prefixes the router accepts and the amount of memory used to process those prefixes.</td>
</tr>
<tr>
<td>Prefix advertised</td>
<td>Displays the number of network prefixes advertised, the number rejected, and the number withdrawn from the BGP routing table.</td>
</tr>
<tr>
<td>Connections established</td>
<td>Displays the number of TCP connections established and dropped between the two peers to exchange BGP information.</td>
</tr>
<tr>
<td>Last reset</td>
<td>Displays the amount of time since the peering session was last reset. Also states if the peer resets the peering session. If the peering session was never reset, the word never is displayed.</td>
</tr>
<tr>
<td>Local host:</td>
<td>Displays the peering address of the local router and the TCP port number.</td>
</tr>
<tr>
<td>Foreign host:</td>
<td>Displays the peering address of the neighbor and the TCP port number.</td>
</tr>
</tbody>
</table>

**Example:**

```
Dell#show ip bgp neighbors
BGP neighbor is 10.10.10.1, remote AS 23456, external link
    BGP version 4, remote router ID 10.10.10.1
    BGP state ESTABLISHED, in this state for 00:00:35
    Capabilities received from neighbor for IPv4 Unicast :
        MULTIPROTO_EXT(1)
```
Example

Dell#show ip bgp neighbors

BGP neighbor is 100.10.10.2, remote AS 200, external link
BGP version 4, remote router ID 192.168.2.101
BGP state ESTABLISHED, in this state for 00:16:12
Last read 00:00:12, last write 00:00:03
Hold time is 180, keepalive interval is 60 seconds
Received 1404 messages, 0 in queue
3 opens, 1 notifications, 1394 updates
6 keepalives, 0 route refresh requests
Sent 48 messages, 0 in queue
3 opens, 2 notifications, 0 updates
43 keepalives, 0 route refresh requests
Minimum time between advertisement runs is 30 seconds
Minimum time before advertisements start is 0 seconds

Capabilities received from neighbor for IPv4 Unicast :
MULTIPROTO_EXT(1)
ROUTE_REFRESH(2)
CISCO_ROUTE_REFRESH(128)

Capabilities advertised to neighbor for IPv4 Unicast :
MULTIPROTO_EXT(1)
ROUTE_REFRESH(2)
ROUTE_REFRESH(2)
GRACEFUL_RESTART(64)
CISCO_ROUTE_REFRESH(128)

Route map for incoming advertisements is test
Maximum prefix set to 4 with threshold 75

For address family: IPv4 Unicast
BGP table version 34, neighbor version 34
5 accepted prefixes consume 20 bytes
Prefix advertised 0, denied 4, withdrawn 0
Prefixes accepted 1 (consume 4 bytes), withdrawn 0 by peer
Prefixes advertised 0, rejected 0, withdrawn 0 from peer
Connections established 2; dropped 1
Last reset 00:18:21, due to Maximum prefix limit reached

Example

(Advertised-Routes)

Dell>show ip bgp neighbors 192.14.1.5 advertised-routes

BGP table version is 74103, local router ID is 33.33.33.33
Status codes: s suppressed, S stale, d damped, h history, * valid, > best
Path source: I - internal, a - aggregate, c - confed-external, r - redistributed,
n - network
Origin codes: i - IGP, e - EGP, ? - incomplete

Related Commands

show ip bgp — views the current BGP routing table.

**show ip bgp next-hop**

View all next hops (using learned routes only) with current reachability and flap status. This command only displays one path, even if the next hop is reachable by multiple paths.

**Syntax**

```
show ip bgp next-hop
```

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

Full-Switch

**Command History**

<table>

</table>
### show ip bgp next-hop

View all the BGP path attributes in the BGP database.

**Syntax**

```
show ip bgp paths [regexp regular-expression]
```

**Parameters**

- `regexp regular-expression` Enter a regular expression then use one or a combination of the following characters to match:
  - . = (period) any single character (including a white space).
  - * = (asterisk) the sequences in a pattern (zero or more sequences).
  - + = (plus) the sequences in a pattern (one or more sequences).
  - ? = (question mark) sequences in a pattern (either zero or one sequences).
  - `[ ]` = (brackets) a range of single-character patterns.
  - `{ }` = (parenthesis) groups a series of pattern elements to a single element.
  - `{ }` = (braces) minimum and the maximum match count.
  - `^` = (caret) the beginning of the input string. If you use the caret at the beginning of a sequence or range, it matches on everything BUT the characters specified.
  - `$` = (dollar sign) the end of the output string.

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

Full-Switch

**Command History**

- **Version**
  - 9.9(0.0): Introduced on the FN IOM.
  - 9.2(0.0): Introduced on the MXL 10/40GbE Switch IO Module.
### show ip bgp path

View all unique AS-PATHs in the BGP database.

#### Syntax

```
show ip bgp paths as-path
```

#### Command Modes

- EXEC
- EXEC Privilege

#### Supported Modes

- Full-Switch

#### Command History

<table>

show ip bgp paths community

View all unique COMMUNITY numbers in the BGP database.

Syntax
show ip bgp paths community

Command Modes
• EXEC
• EXEC Privilege

Supported Modes
Full-Switch

Command History
Version     Description
9.9(0.0)     Introduced on the FN IOM.
9.2(0.0)     Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
The following describes the show ip bgp paths community command shown in the following example.

Field                      Description
Address                    Displays the internal address where the path attribute is stored.
Hash                       Displays the hash bucket where the path attribute is stored.
Refcount                   Displays the number of BGP routes using these communities.
Community                  Displays the community attributes in this BGP path.

Example
E1200-BGP>show ip bgp paths community
Total 293 Communities
<table>

### show ip bgp peer-group

Allows you to view information on the BGP peers in a peer group.

**Syntax**

```plaintext
show ip bgp [ipv4 unicast] peer-group [peer-group-name [detail | summary]]
```

**Parameters**

- **ipv4 unicast** (OPTIONAL) Enter the keywords `ipv4 unicast` to view information only related to `ipv4` unicast routes.
- **peer-group-name** (OPTIONAL) Enter the name of a peer group to view information about that peer group only.
- **detail** (OPTIONAL) Enter the keyword `detail` to view detailed status information of the peers in that peer group.
- **summary** (OPTIONAL) Enter the keyword `summary` to view status information of the peers in that peer group. The output is the same as that found in the `show ip bgp summary` command.

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

The following describes the `show ip bgp peer-group` command shown in the following example.
<table>
<thead>
<tr>
<th>Description</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Displays the peer group's name.</td>
<td></td>
</tr>
<tr>
<td>Displays the peer group's status if the peer group is not enabled. If you</td>
<td></td>
</tr>
<tr>
<td>enable the peer group, this line is not displayed.</td>
<td></td>
</tr>
<tr>
<td>Displays the BGP version supported.</td>
<td></td>
</tr>
<tr>
<td>Displays the time interval between BGP advertisements.</td>
<td></td>
</tr>
<tr>
<td>Displays IPv4 Unicast as the address family.</td>
<td></td>
</tr>
<tr>
<td>Displays the name of the BGP neighbor.</td>
<td></td>
</tr>
<tr>
<td>Displays the number of peers currently configured for this peer group.</td>
<td></td>
</tr>
<tr>
<td>Lists the IP addresses of the peers in the peer group, if the address is</td>
<td></td>
</tr>
<tr>
<td>outbound optimized, an * is displayed next to the IP address.</td>
<td></td>
</tr>
</tbody>
</table>

**Example**

Dell#show ip bgp peer-group

Peer-group pg1
  BGP version 4
  Minimum time between advertisement runs is 30 seconds
  For address family: IPv4 Unicast
  BGP neighbor is pg1
  Number of peers in this group 4
  Update packing has 4_OCTECT_AS support enabled
  Add-path support enabled
  Peer-group members (* - outbound optimized):
    1.1.1.5
    1.1.1.6
    10.10.10.2*
    20.20.20.100

**Example**

Dell#show ip bgp peer-group

Peer-group RT-PEERS
  Description: ***peering-with-RT***
  BGP version 4
  Minimum time between advertisement runs is 30 seconds
  For address family: IPv4 Unicast
  BGP neighbor is RT-PEERS
  Number of peers in this group 20
  Peer-group members (* - outbound optimized):
    12.1.1.2*
    12.1.1.3*
    12.1.1.4*
    12.1.1.5*
    12.1.1.6*
    12.2.1.2*
    12.2.1.3*
    12.2.1.4*
    12.2.1.5*
    12.2.1.6*
    12.3.1.2*
    12.3.1.3*
    12.3.1.4*
    12.3.1.5*
    12.3.1.6*
    12.4.1.2*
    12.4.1.3*
    12.4.1.4*
12.4.1.5*
12.4.1.6*

Related Commands

neighbor peer-group (assigning peers) — assigns a peer to a peer-group.
neighbor peer-group (creating group) — creates a peer group.

show ip bgp regexp

Display the subset of the BGP routing table matching the regular expressions specified.

Syntax

show ip bgp regexp regular-expression [character]

Parameters

regular-expression
[character]  Enter a regular expression then use one or a combination of the following characters to match:

• . (period) any single character (including a white space).
• * (asterisk) the sequences in a pattern (zero or more sequences).
• + (plus) the sequences in a pattern (one or more sequences).
• ? (question mark) sequences in a pattern (either zero or one sequences).

NOTE: Enter an escape sequence (CTRL+v) prior to entering the ? regular expression.

• [ ] (brackets) a range of single-character patterns.
• ( ) (parenthesis) groups a series of pattern elements to a single element.
• { } (braces) minimum and the maximum match count.
• ^ (caret) the beginning of the input string. If you use the caret at the beginning of a sequence or range, it matches on everything BUT the characters specified.
• $ (dollar sign) the end of the output string.

Command Modes

• EXEC
• EXEC Privilege

Supported Modes

Full–Switch

Command History

Version Description
9.9(0.0)    Introduced on the FN IOM.
9.2(0.0)    Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The following describes the show ip bgp regexp command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Network</td>
<td>Displays the destination network prefix of each BGP route.</td>
</tr>
<tr>
<td>Next Hop</td>
<td>Displays the next hop address of the BGP router. If 0.0.0.0 is listed in this column, then non-BGP routes exist in the router’s routing table.</td>
</tr>
<tr>
<td>Metric</td>
<td>Displays the BGP router’s metric, if assigned.</td>
</tr>
<tr>
<td>LocPrf</td>
<td>Displays the BGP LOCAL_PREF attribute for the route.</td>
</tr>
</tbody>
</table>
**Field** | **Description**
--- | ---
Weight | Displays the route’s weight
Path | Lists all the AS paths the route passed through to reach the destination network.

**Example (S4810)**

Dell#show ip bgp regexp ^2914+
BGP table version is 3700481, local router ID is 63.114.8.35
Status codes: s suppressed, S stale, d damped, h history, * valid, > best
Path source: I - internal, a - aggregate, c - confed-external, r - redistributed, n - network
Origin codes: i - IGP, e - EGP, ? - incomplete

**show ip bgp summary**

Allows you to view the status of all BGP connections.

**Syntax**

```
show ip bgp [ipv4 unicast] summary
```

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

The following describes the `show ip bgp summary` command shown in the following example.

**Field** | **Description**
--- | ---
BGP router identifier | Displays the local router ID and the AS number.
<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>BGP table version</td>
<td>Displays the BGP table version and the main routing table version.</td>
</tr>
<tr>
<td>network entries</td>
<td>Displays the number of network entries, route paths, and the amount of memory used to process those entries.</td>
</tr>
<tr>
<td>paths</td>
<td>Displays the number of paths and the amount of memory used.</td>
</tr>
<tr>
<td>denied paths</td>
<td>Displays the number of denied paths and the amount of memory used.</td>
</tr>
<tr>
<td>BGP path attribute entries</td>
<td>Displays the number of BGP path attributes and the amount of memory used to process them.</td>
</tr>
<tr>
<td>BGP AS-PATH entries</td>
<td>Displays the number of BGP AS_PATH attributes processed and the amount of memory used to process them.</td>
</tr>
<tr>
<td>BGP community entries</td>
<td>Displays the number of BGP COMMUNITY attributes processed and the amount of memory used to process them. The <code>show ip bgp community</code> command provides more details on the COMMUNITY attributes.</td>
</tr>
<tr>
<td>Dampening enabled</td>
<td>Displayed only when you enable dampening. Displays the number of paths designated as history, dampened, or penalized.</td>
</tr>
<tr>
<td>Neighbor</td>
<td>Displays the BGP neighbor address.</td>
</tr>
<tr>
<td>AS</td>
<td>Displays the AS number of the neighbor.</td>
</tr>
<tr>
<td>MsgRcvd</td>
<td>Displays the number of BGP messages that neighbor received.</td>
</tr>
<tr>
<td>MsgSent</td>
<td>Displays the number of BGP messages that neighbor sent.</td>
</tr>
<tr>
<td>TblVer</td>
<td>Displays the version of the BGP table that was sent to that neighbor.</td>
</tr>
<tr>
<td>InQ</td>
<td>Displays the number of messages from that neighbor waiting to be processed.</td>
</tr>
<tr>
<td>OutQ</td>
<td>Displays the number of messages waiting to be sent to that neighbor. If a number appears in parentheses, the number represents the number of messages waiting to be sent to the peer group.</td>
</tr>
<tr>
<td>Up/Down</td>
<td>Displays the amount of time that the neighbor is in the Established stage. If the neighbor has never moved into the Established stage, the word never is displayed.</td>
</tr>
</tbody>
</table>

The output format is:

<table>
<thead>
<tr>
<th>Time</th>
<th>Display Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>Established</td>
<td></td>
</tr>
<tr>
<td>&lt; 1 day</td>
<td>00:12:23 (hours:minutes:seconds)</td>
</tr>
<tr>
<td>&lt; 1 week</td>
<td>1d21h (Days:Hours)</td>
</tr>
<tr>
<td>&gt; 1 week</td>
<td>11w2d (Weeks:Days)</td>
</tr>
</tbody>
</table>

**State/Pfxrcd**

If the neighbor is in Established stage, the number of network prefixes received.

If a maximum limit was configured with the `neighbor maximum-prefix` command, (prfxd) appears in this column.

If the neighbor is not in Established stage, the current stage is displayed (Idle, Connect, Active, OpenSent, OpenConfirm). When the peer is transitioning between states and clearing the routes received, the phrase (Purging) may appear in this column.
### Field Description

If the neighbor is disabled, the phrase (Admin shut) appears in this column.

<table>
<thead>
<tr>
<th>Example (S4810)</th>
<th>Dell#show ip bgp summary</th>
</tr>
</thead>
<tbody>
<tr>
<td>BGP router identifier 120.10.10.1, local AS number 100</td>
<td></td>
</tr>
<tr>
<td>BGP table version is 34, main routing table version 34</td>

<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

### timers bgp

Adjust the BGP Keep Alive and Hold Time timers.

**Syntax**

`timers bgp keepalive holdtime`

To return to the default, use the `no timers bgp` command.

**Parameters**

- **keepalive**
  
  Enter a number for the time interval, in seconds, between keepalive messages sent to the neighbor routers. The range is from 1 to 65535. The default is 60 seconds.

- **holdtime**
  
  Enter a number for the time interval, in seconds, between the last keepalive message and declaring the router dead. The range is from 3 to 65535. The default is 180 seconds.

**Defaults**

none

**Command Modes**

EXEC Privilege
**Supported Modes**  
Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**MBGP Commands**

MBGP (Multiprotocol BGP) is an enhanced BGP that enables multicast routing policy throughout the internet and connecting multicast topologies between BGP and autonomous systems (ASs). MBGP is implemented as per IETF RFC 1858.

**debug ip bgp dampening**

View information on routes being dampened.

**Syntax**

ddebug ip bgp ipv4 multicast dampening

To disable debugging, use the `no debug ip bgp ipv4 multicast dampening` command.

**Parameters**

- **dampening**
  
Enter the keyword `dampening` to clear route flap dampening information.

**Command Modes**  
EXEC Privilege

**Supported Modes**  
Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**distance bgp**

Define an administrative distance for routes.

**Syntax**

distance bgp external-distance internal-distance local-distance

To return to default values, use the `no distance bgp` command.

**Parameters**

- **external-distance**  
Enter a number to assign to routes learned from a neighbor external to the AS. The range is from 1 to 255. The default is 20.

- **internal-distance**  
Enter a number to assign to routes learned from a router within the AS. The range is from 1 to 255. The default is 200.

- **local-distance**  
Enter a number to assign to routes learned from networks listed in the network command. The range is from 1 to 255. The default is 200.
Defaults

- external-distance = 20
- internal-distance = 200
- local-distance = 200

Command Modes

ROUTER BGP (conf-router_bgp_af)

Supported Modes

Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

⚠️ CAUTION: Dell Networking OS recommends that you do not change the administrative distance of internal routes. Changing the administrative distances may cause routing table inconsistencies. The higher the administrative distance assigned to a route means that your confidence in that route is low. Routes assigned an administrative distance of 255 are not installed in the routing table. Routes from confederations are treated as internal BGP routes.

**show ip bgp dampened-paths**

View BGP routes that are dampened (non-active).

Syntax

```
show ip bgp [ipv4 unicast] dampened-paths
```

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

The following describes the show ip bgp damp command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Network</td>
<td>Displays the network ID to which the route is dampened.</td>
</tr>
<tr>
<td>From</td>
<td>Displays the IP address of the neighbor advertising the dampened route.</td>
</tr>
<tr>
<td>Reuse</td>
<td>Displays the hour:minutes:seconds until the dampened route is available.</td>
</tr>
<tr>
<td>Path</td>
<td>Lists all the ASs the dampened route passed through to reach the destination network.</td>
</tr>
</tbody>
</table>

Example

```
Dell>show ip bgp dampened-paths
BGP table version is 210708, local router ID is 63.114.8.2
Status codes: s suppressed, d damped, h history, * valid, > best
Path source: I - internal, a - aggregate, c - confed-external, r - redistributed, n - network
```
BGP Extended Communities (RFC 4360)

BGP Extended Communities, as defined in RFC 4360, is an optional transitive BGP attribute. BGP Extended Communities provides two major advantages over Standard Communities:

- The range is extended from 4-octet (AA:NN) to 8-octet (Type:Value) to provide enough number communities.
- Communities are structured using a new “Type” field (1 or 2-octets), allowing you to provide granular control/filter routing information based on the type of extended communities.

set extcommunity rt

To set Route Origin community attributes in Route Map, use this feature.

Syntax

set extcommunity rt {as4 ASN4:NN [non-trans] | ASN:NNNN [non-trans] | IPADDR:NN [non-trans]} [additive]

To delete the Route Origin community, use the no set extcommunity command.

Parameters

- as4 ASN4:NN: Enter the keyword as4 then the 4-octet AS specific extended community number in the format ASN4:NN (4-byte AS number:2-byte community value).
- ASN:NNNN: Enter the 2-octet AS specific extended community number in the format ASN:NNNN (2-byte AS number:4-byte community value).
- IPADDR:NN: Enter the IP address specific extended community in the format IPADDR:NN (4-byte IPv4 Unicast Address:2-byte community value).
- additive: (OPTIONAL) Enter the keyword additive to add to the existing extended community.
- non-trans: (OPTIONAL) Enter the keywords non-trans to indicate a non-transitive BGP extended community.

Defaults

none

Command Modes

ROUTE MAP (config-route-map)

Supported Modes

Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

If the set community rt and soo are in the same route-map entry, the behavior defines as:

- If the rt option comes before soo, with or without the additive option, soo overrides the communities rt sets.
- If the rt option comes after soo, without the additive option, rt overrides the communities soo sets.
- If the rt with the additive option comes after soo, rt adds the communities soo sets.
Related Commands

**set extcommunity soo** — sets the extended community site-of-origin in the route-map.

**set extcommunity soo**

To set extended community site-of-origin in Route Map, use this feature.

**Syntax**

```
set extcommunity soo {as4 ASN4:NN | ASN:NNNN | IPADDR:NN [non-trans]}
```

To delete the site-of-origin community, use the `no set extcommunity` command.

**Parameters**

- **as4 ASN4:NN**: Enter the keyword `as4` then the 4-octet AS specific extended community number in the format `ASN4:NN` (4-byte AS number:2-byte community value).
- **ASN:NNNN**: Enter the 2-octet AS specific extended community number in the format `ASN:NNNN` (2-byte AS number:4-byte community value).
- **IPADDR:NN**: Enter the IP address specific extended community in the format `IPADDR:NN` (4-byte IPv4 Unicast Address:2-byte community value).
- **non-trans**: (OPTIONAL) Enter the keywords `non-trans` to indicate a non-transitive BGP extended community.

**Defaults**

none

**Command Modes**

ROUTE MAP (config-route-map)

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

If the set community `rt` and `soo` are in the same route-map entry, the behavior defines as:

- If the `rt` option comes before `soo`, with or without the `additive` option, `soo` overrides the communities `rt` sets.
- If the `rt` option comes after `soo`, without the `additive` option, `rt` overrides the communities `soo` sets.
- If the `rt` with the `additive` option comes after `soo`, `rt` adds the communities `soo` sets.

**Related Commands**

`set extcommunity rt` — sets the extended community route origins using the route-map.

**show ip bgp paths extcommunity**

To display all BGP paths having extended community attributes, use this feature.

**Syntax**

```
show ip bgp paths extcommunity
```

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

Full-Switch
show ip bgp extcommunity-list

View information on all routes with Extended Community attributes.

**Syntax**
```
show ip bgp [ipv4 unicast] extcommunity-list [list name]
```

**Parameters**
- `ipv4 unicast` *(OPTIONAL)* Enter the keywords `ipv4 unicast` to view information only related to ipv4 unicast routes.
- `list name` Enter the extended community list name you wish to view. The range is 140 characters.

**Command Modes**
- EXEC
- EXEC Privilege

**Supported Modes**
- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

To view the total number of COMMUNITY attributes found, use the `show ip bgp summary` command. The text line above the route table states the number of COMMUNITY attributes found.

The `show ip bgp community` command without any parameters lists BGP routes with at least one BGP community attribute and the output is the same as for the `show ip bgp` command output.
IPv6 BGP Commands

IPv6 Border Gateway Protocol (IPv6 BGP) is supported on the switch. Border gateway protocol (BGP) is an external gateway protocol that transmits interdomain routing information within and between autonomous systems (AS). BGP version 4 (BGPv4) supports classless interdomain routing and the aggregation of routes and AS paths. Basically, two routers (called neighbors or peers) exchange information including full routing tables and periodically send messages to update those routing tables.

bgp soft-reconfig-backup

To avoid the peer from resending messages, use this command only when route-refresh is not negotiated.

Syntax

```
bgp soft-reconfig-backup
```

To return to the default setting, use the `no bgp soft-reconfig-backup` command.

Defaults

Disabled

Command Modes

- ROUTER BGP

Supported Modes

Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

When you enable soft-reconfiguration for a neighbor and you execute the `clear ip bgp soft in` command, the update database stored in the router is replayed and updates are re-evaluated. With this command, the replay and update process is triggered only if route-refresh request is not negotiated with the peer. If the request is indeed negotiated (after executing the `clear ip bgp soft in` command), BGP sends a route-refresh request to the neighbor and receives all of the peer’s updates.

Related Commands

- `clear ip bgp` — activates inbound policies without resetting the BGP TCP session.

clear ip bgp ipv6 unicast soft

Clear and reapply policies for IPv6 unicast routes without resetting the TCP connection; that is, perform BGP soft reconfiguration.

Syntax

```
clear ip bgp { * | as-number | ipv4-neighbor-addr | ipv6-neighbor-addr | peer-group name } ipv6 unicast soft [in | out]
```

Parameters

- `*` 
  - Clear and reapply an asterisk ( * ) for all BGP sessions.
- `as-number` 
  - Clear and reapply policies for all neighbors belonging to the AS. The range is from 0 to 65535 (2 Byte), from 1 to 4294967295 (4 Byte), or from 0.1 to 0.65535.65535 (Dotted format).
- `ipv4-neighbor-addr` | `ipv6-neighbor-addr` 
  - Clear and reapply policies for a neighbor.
Clear and reapply policies for all BGP routers in the specified peer group.

Clear and reapply policies for all IPv6 unicast routes.

Reapply only inbound policies.

**NOTE:** If you enter `soft`, without an `in` or `out` option, both inbound and outbound policies are reset.

Reapply only outbound policies.

**NOTE:** If you enter `soft`, without an `in` or `out` option, both inbound and outbound policies are reset.

**debug ip bgp ipv6 unicast soft-reconfiguration**

Enable soft-reconfiguration debugging for IPv6 unicast routes.

**Syntax**

```
depug ip bgp [ipv4-address | ipv6-address | peer-group-name] ipv6 unicast soft-reconfiguration
```

To disable debugging, use the `no debug ip bgp [ipv4-address | ipv6-address | peer-group-name] ipv6 unicast soft-reconfiguration` command.

**Parameters**

- `ipv4-address` | `ipv6-address`  Enter the IP address of the neighbor on which you want to enable soft-reconfiguration debugging.
- `peer-group-name`  Enter the name of the peer group on which you want to enable soft-reconfiguration debugging.
- `ipv6 unicast`    Debug soft reconfiguration for IPv6 unicast routes.

**Defaults**  Disabled.

IPv6 MBGP Commands

Multiprotocol BGP (MBGP) is an enhanced BGP that enables multicast routing policy throughout the Internet and connecting multicast topologies between BGP and autonomous systems (AS).
MBGP is implemented as per IETF RFC 1858.

show ipv6 mbgproutes

Display the selected IPv6 MBGP route or a summary of all MBGP routes in the table.

Syntax

show ipv6 mbgproutes ipv6-address prefix-length | summary

Parameters

ipv6-address prefix-length

(Optional) Enter the IPv6 address in the x:x:x::x format then the prefix length in the /x format. The range is from /0 to /128.

NOTE: The :: notation specifies successive hexadecimal fields of zeros.

summary

Configuration Cloning

Configuration Cloning enables you to clone the configuration from one aggregator to the other. It identifies a source aggregator where running configuration is check-pointed, extracted and downloaded to the target aggregator for further use. The target aggregator checks the compatibility of the cloning file regarding the mode, port types and optional modules. The target aggregator further takes care of the conflicting configurations and appropriately proceeds with the application of the cloning configuration.

**clone-config apply**

Apply the cloning configuration file on the target aggregator.

**Syntax**

```
clone-config apply [file-name filename][output xml]
```

**Parameters**

- **apply**
  - Enter the keyword apply to apply the cloning configuration.
- **file-name filename**
  - Enter the keywords file-name to specify the user-defined cloning configuration file name in flash. By default, the file name is cloning-config.
- **output xml**
  - Enter the keywords output xml to enable the command output status to be displayed in the XML format.

**Defaults**

- cloning-config

**Command Modes**

- EXEC

| 9.10(0.0)| Introduced on the FN IOM and M I/O Aggregator.

**clone-config check**

Check the cloning configuration file compatibility with the current configurations on the target aggregator.

**Syntax**

```
clone-config check [file-name filename][output xml]
```

**Parameters**

- **check**
  - Enter the keyword check to check the cloning configuration compatibility.
- **file-name filename**
  - Enter the keywords file-name to specify the user-defined cloning configuration file name in flash. By default, the file name is cloning-config.
- **output xml**
  - Enter the keywords output xml to enable the command output status to be displayed in the XML format.

**Defaults**

- cloning-config

**Command Modes**

- EXEC
clone-config create

Create the cloning configuration.

Syntax

```plaintext
clone-config create [file-name filename][output xml]
```

Parameters

- `create`: Enter the keyword `create` to create the cloning configuration file.
- `file-name filename`: Enter the keywords `file-name` to save the cloning configuration in user-defined filename. By default, it gets stored in flash under the filename `cloning-config`.
- `output xml`: Enter the keywords `output xml` to enable the command output status to be displayed in the XML format.

Defaults

`cloning-config`

Command Modes

`EXEC`

Content Addressable Memory (CAM)

Content addressable memory (CAM) commands are supported on the Dell Networking operating software on the platform.

⚠️ **WARNING:** If you are using these features for the first time, contact Dell Networking Technical Assistance Center (TAC) for guidance.

Topics:
- CAM Profile Commands
- cam-acl (Configuration)
- cam-optimization
- cam-threshold
- show cam-acl
- show cam-acl-egress

**CAM Profile Commands**

The CAM profiling feature allows you to partition the CAM to best suit your application. For example:

- Configure more Layer 2 forwarding information base (FIB) entries when the system is deployed as a switch.
- Configure more Layer 3 FIB entries when the system is deployed as a router.
- Configure more access control lists (ACLs).
- Optimize the virtual local area network (VLAN) ACL Group feature, which permits group VLANs for IP egress ACLs.

**Important Points to Remember**

- The Dell Networking Operating System (OS) versions supports CAM allocations.
- The CAM configuration is applied to the entire system when you use the CONFIGURATION mode commands. Save the running-configuration to affect the change.
- When budgeting your CAM allocations for ACLs and quality of service (QoS) configurations, remember that ACL and QoS rules might consume more than one CAM entry depending on complexity. For example, transmission control protocol (TCP) and user datagram protocol (UDP) rules with port range options might require more than one CAM entry.
- After you install a secondary RPM, copy the running-configuration to the startup-configuration so that the new RPM has the correct CAM profile.
- You MUST save your changes and reboot the system for CAM profiling or allocations to take effect.
cam-acl (Configuration)

Select the default CAM allocation settings or reconfigure a new CAM allocation for Layer 2, IPv4, and IPv6 ACLs, Layer 2 and Layer 3 (IPv4) QoS, Layer 2 Protocol Tunneling (L2PT), IP and MAC source address validation for DHCP, Ethernet Connectivity Fault Management (CFM) ACLs, and Policy-based Routing (PBR).

Syntax

cam-acl {default | l2acl number | ipv4acl number | ipv6acl number | ipv4qos number | l2qos number | l2pt number | ipmacacl number | vman-qos | vman-qos-dual-fp number | ipv4pbr number | ecfmacl number | nlbclusteracl number | fcoeacl number | iscsiOptAcl number}

Parameters

- **default**
  Use the default CAM profile settings and set the CAM as follows:
  - L3 ACL (ipv4acl): 4
  - L2 ACL(l2acl): 5
  - IPv6 L3 ACL (ipv6acl): 0
  - L3 QoS (ipv4qos): 1
  - L2 QoS (l2qos): 1
  - L2PT (L2PT): 0
  - MAC ACL (IpMacAcl): 0
  - VmanDualQos: 0
  - EcfmAcl: 0
  - nlbclusteracl: 0
  - FcoeAcl: 4
  - iscsiOptAcl: 2

- **l2acl number**
  Enter the keyword l2acl and then the number of l2acl blocks. The range is from 1 to 8.

- **ipv4acl number**
  Enter the keyword ipv4acl and then the number of FP blocks for IPv4. The range is from 0 to 8.

- **ipv6acl number**
  Enter the keyword ipv6acl and then the number of FP blocks for IPv6. The range is from 0 to 4.

- **ipv4qos number**
  Enter the keyword ipv4qos and then the number of FP blocks for IPv4. The range is from 0 to 8.

- **l2qos number**
  Enter the keyword l2qos and then the number of FP blocks for l2 qos. The range is from 1 to 8.

- **l2pt number**
  Enter the keyword l2pt and then the number of FP blocks for l2 protocol tunnelling. The range is from 0 to 1.

- **ipmacacl number**
  Enter the keyword ipmacacl and then the number of FP blocks for IP and MAC ACL. The range is from 0 to 6.

- **ecfmacl number**
  Enter the keyword ecfmacacl and then the number of FP blocks for ECFM ACL. The range is from 0 to 5.

- **nlbclusteracl number**
  Enter the keyword nlbclusteracl and then the number of FP blocks for nlbcluster ACL. The range is from 0 to 2. By default the value is 0 and it supports eight NLB arp entries reserved for internal functionality.
NOTE: When you reconfigure CAM allocation, use the `nlbclusteracl number` command to change the number of NLB ARP entries. The range is from 0 to 2. The default value is 0. At the default value of 0, eight NLB ARP entries are available for use. This platform supports up to 256 CAM entries. Select 1 to configure 128 entries. Select 2 to configure 256 entries. Even though you can perform CAM carving to allocate the maximum number of NLB entries, Dell Networking recommends that you use a maximum of 64 NLB ARP entries.

- **vman-qos/vman-dual-qos number**: Enter the keyword `vman-qos` and then the number of FP blocks for VMAN QoS. The range is from 0 to 6.
- **vman-dual-qos number**: Enter the keyword `vman-dual-qos` and then the number of FP blocks for VMAN dual QoS. The range is from 0 to 4.
- **ipv4pbr number**: Enter the keyword `ipv4pbr` and then the number of FP blocks for ipv4pbr ACL. The range is from 0 to 8.
- **Openflow number**: Enter the keyword `openflow` and then the number of FP blocks for openflow (multiples of 4). The range is from 0 to 8.
- **fcoeacl number**: Enter the keyword `fcoeacl` and then the number of FP blocks for FCOE ACL. The range is from 0 to 6.
- **iscsioptacl number**: Enter the keyword `iscsioptacl` and then the number of FP blocks for iSCSI optimization ACL. The range is from 0 to 2.
- **l2acl number ipv4acl number ipv6acl number ipv4qos number l2qos number, l2pt number lpmac acl number ecfmacl number [vman-qos | vman-dual-qos | vman-qos-dual-fp number] ipv4pbr number**: Allocate space to each CAM region.
  - Enter the CAM profile name then the amount of CAM space to be allotted. The total space allocated must equal 13. The range for ipv4acl is from 1 to 4. The ipv6acl range must be a factor of 2.
  - The total space allocated must equal 13.
  - The range for ipv4acl is 1 to 4.
  - The ipv6acl range must be a factor of 2.
  - The `vman-qos-dual-fp number` must be entered as a multiple of 4.

**Command Modes**: `CONFIGURATION`

**Supported Modes**: Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.7(0.0)</td>
<td>Added the keyword <code>nlbclusteracl</code>.</td>
</tr>
<tr>
<td>9.4.(0.0)</td>
<td>Added support for PBR.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**: Save the new CAM settings to the startup-config (write-mem or copy run start) then reload the system for the new settings to take effect.
The total amount of space allowed is 16 FP Blocks. System flow requires three blocks; these blocks cannot be reallocated. The ipv4acl profile range is from 1 to 4.

When configuring space for IPv6 ACLs, the total number of Blocks must equal 13.

On the switch, there can be only one odd number of Blocks in the CLI configuration; the other Blocks must be in factors of two. For example, a CLI configuration of 5+4+2+1 Blocks is not supported; a configuration of 6+4+2+1 Blocks is supported.

Ranges for the CAM profiles are from 1 to 10, except for the ipv6acl profile which is from 0 to 10. The ipv6acl allocation must be a factor of two (2, 4, 6, 8, 10).

cam-optimization

Optimize CAM utilization for QoS Entries by minimizing require policy-map CAM space.

Syntax

```
cam-optimization [qos]
```

Parameters

- `qos` Optimize CAM usage for QoS.

Defaults

Disabled.

Command Modes

CONFIGURATION

Supported Modes

Full-Switch

Command History

- **Version** 9.9(0.0) Introduced on the FN IOM.
- **Version** 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

When you enable this command, if a Policy Map containing classification rules (ACL and/or dscp/ip-precedence rules) is applied to more than one physical interface on the same port pipe, only a single copy of the policy is written (only one FP entry is used).

NOTE: An ACL itself may still require more that a single FP entry, regardless of the number of interfaces. For more information, refer to the IP Access Control Lists, Prefix Lists, and Route-maps sections in the Dell Networking Operating System Configuration Guide.

cam-threshold

Configure CAM threshold value for sending the syslog message on CAM usage. Configure silence period for stop receiving syslog message on CAM usage.

Syntax

```
cam-threshold threshold {default | threshold-percent} silence-period {default | silence-period-value}
```

NOTE: This command is applicable only in Full-Switch mode.
Defaults

Enabled

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>threshold default</td>
<td>Enter the keyword default for CAM usage threshold for notification of the CAM usage through syslog message. The default threshold value is 90 percent.</td>
</tr>
<tr>
<td>threshold</td>
<td>Enter the threshold percent for notification of the CAM usage through syslog message. The range is from 1 to 100 percent.</td>
</tr>
<tr>
<td>threshold-percent</td>
<td></td>
</tr>
<tr>
<td>silence-period</td>
<td>Enter the keyword default to set the silence period for receiving syslog message regarding CAM usage for CAM region, slot/portpipe. The default silence period is 0 seconds.</td>
</tr>
<tr>
<td>silence-period-value</td>
<td>Enter the silence period for stop receiving syslog message for the respective CAM region, slot/portpipe. The range is from 0 to 65535 seconds.</td>
</tr>
</tbody>
</table>

Command Modes

<table>
<thead>
<tr>
<th>Command Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CONFIGURATION</td>
<td></td>
</tr>
</tbody>
</table>

Usage Information

- The no cam-threshold command will set the CAM threshold to 90 percent and silence period to 0.

- The CAM threshold and silence period configuration is applicable only for Ingress L2, IPv4, IPv6 and Egress L2, IPv4, and IPv6 ACL CAM groups. For other ACL CAM regions, the CAM threshold and silence period is not configurable and the values are fixed to 90 percent and 0 respectively.

Example

```
DellEMC(conf)#cam-threshold threshold 2 silence-period 2
DellEMC(conf)#do show running-config | g cam-threshold
cam-threshold threshold 2 silence-period 2
```
Usage Information

The display reflects the settings implemented with the `cam-acl` command.

Example (Default)

```
Dell#show cam-acl

-- Chassis Cam ACL --

Ipv6Acl   :       2

Dell#
```
Control Plane Policing (CoPP)

The Dell Networking OS supports the following CoPP commands.

**control-plane-cpuqos**

To manage control-plane traffic, enter control-plane mode and configure the switch.

**Syntax**

```
control-plane-cpuqos
```

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**service-policy rate-limit-cpu-queues**

Apply a policy map for the system to rate limit control traffic on a per-queue basis.

**Syntax**

```
service-policy rate-limit-cpu-queues policy-name
```

**Parameters**

- `policy-name` Enter the service-policy name, using a string up to 32 characters.

**Defaults**

Not configured.

**Command Modes**

CONTROL-PLANE-CPUQOS

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

Create a policy-map by associating a queue number with the qos-policy.

Create QoS policies prior to enabling this command.

For CoPP, do not use the keywords cpu-qos when creating qos-policy-input.
Related Commands
- qos-policy-input — creates a QoS input policy map.
- policy-map-input — creates an input policy map.

**service-policy rate-limit-protocols**

Apply a policy for the system to rate limit control protocols on a per-protocol basis.

**Syntax**
```
service-policy rate-limit-protocols policy-name
```

**Parameters**
- `policy-name` : Enter the service-policy name, using a string up to 32 characters.

**Defaults**
Not configured.

**Command Modes**
CONTROL-PLANE-CPUQOS

**Supported Modes**
Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command applies the service-policy based on the type of protocol defined in the ACL rules.
Create ACL and QoS policies prior to enabling this command.

For CoPP, do not use the keywords cpu-qos when creating qos-policy-input.

**Related Commands**
- ip access-list extended — creates an extended IP ACL.
- mac access-list extended — creates an extended MAC ACL.
- qos-policy-input — creates a QoS input policy map.
- class-map — creates a QoS class map.
- policy-map-input — creates an input policy map.

**show cpu-queue rate cp**

Display the rates for each queue.

**Syntax**
```
show cpu-queue rate cp
```

**Defaults**
Not configured.

**Command Modes**
EXEC Privilege

**Supported Modes**
Full-Switch
Usage Information

This command applies the service-policy based on the type of protocol defined in the ACL rules.

Create ACL and QoS policies prior to enabling this command.

Example

Dell#show cpu-queue rate cp

Dell#
All commands in this chapter are in u-Boot mode. These commands are supported on the Dell Networking Aggregator only. To access this mode, hit any key when the following line appears on the console during a system boot:

```
Hit any key to stop autoboot:
```

You enter u-Boot immediately, as indicated by the `BOOT_USER#` prompt.

**NOTE:** Only the most frequently used commands available in uBoot mode are described in this chapter.
In uBoot mode, you cannot use the Tab key for command completion.

Topics:

- `boot change`
- `boot show net config retries`
- `boot write net config retries`
- `boot zero`
- `default gateway`
- `enable`
- `help`
- `ignore enable password`
- `ignore startup-config`
- `interface management ethernet ip address`
- `no default gateway`
- `no interface management ethernet ip address`
- `reload`
- `show boot blc`
- `show boot selection`
- `show bootflash`
- `show bootvar`
- `show default gateway`
- `show interface management ethernet`
- `show interface management port config`
- `syntax help`

### boot change

Change the operating system boot parameters.

**Syntax**

```
boot change [primary | secondary | default]
```

**Command Modes**

uBoot
### boot show net config retries

Show the number of retries for network boot configuration failure.

**Syntax**

```
boot show net config retries
```

**Command Modes**

uBoot

**Supported Modes**

Data Center Bridging (DCB)

Data center bridging (DCB) refers to a set of IEEE Ethernet enhancements that provide data centers with a single, robust, converged network to support multiple traffic types, including local area network (LAN), server, and storage traffic. DCB features are auto-configured in standalone mode.

The Dell Networking OS commands for DCB features include 802.1Qbb priority-based flow control (PFC), 802.1Qaz enhanced transmission selection (ETS), and the data center bridging exchange (DCBX) protocol.

CLI commands for individual DCB features are as follows:

**DCB command**
- `dcb enable auto-detect on-next-reload`
- `show qos dcb-map`

**PFC Commands**
- `clear pfc counters`
- `show interface pfc`
- `show interface pfc statistics`

**ETS Commands**
- `clear ets counters`
- `show interface ets`

**DCBX Commands**
- `dcbx version`
- `clear dcbx counters`
- `show dcb`
- `show interface dcbx detail`

Topics:
- `advertise dcbx-appln-tlv`
- `advertise dcbx-tlv`
- `bandwidth-percentage`
- `dcb-enable`
- `dcb-policy buffer-threshold (Global Configuration)`
- `dcb-policy buffer-threshold (Interface Configuration)`
- `clear dcbx counters`
- `clear ets counters`
- `clear pfc counters`
- `dcb enable pfc-queues`
- `dcb enable auto-detect on-next-reload`
- `dcb-map stack-unit all stack-ports all`
advertise dcbx-appln-tlv

On a DCBX port with a manual role, configure the application priority TLVs advertised on the interface to DCBX peers.

Syntax

advertise dcbx-appln-tlv {fcoe | iscsi}

To remove the application priority TLVs, use the no advertise dcbx-appln-tlv {fcoe | iscsi} command.

Parameters

{fcoe | iscsi} Enter the application priority TLVs, where:

- fcoe: enables the advertisement of FCoE in application priority TLVs.
iscsi: enables the advertisement of iSCSI in application priority TLVs.

Defaults
Application priority TLVs are enabled to advertise FCoE and iSCSI.

Command Modes
PROTOCOL LLDP

Supported Modes
Programmable-Mux (PMUX)
Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>

</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information
To disable TLV transmission, use the no form of the command; for example, no advertise dcbx-appln-tlv iscsi.

advertise dcbx-tlv

On a DCBX port with a manual role, configure the PFC and ETS TLVs advertised to DCBX peers.

Syntax
advertise dcbx-tlv {ets-conf | ets-reco | pfc} [ets-conf | ets-reco | pfc]
[ets-conf | ets-reco | pfc]
To remove the advertised ETS TLVs, use the no advertise dcbx-tlv command.

Parameters
(ets-conf | ets-reco | pfc) Enter the PFC and ETS TLVs advertised, where:
- ets-conf: enables the advertisement of ETS configuration TLVs.
- ets-reco: enables the advertisement of ETS recommend TLVs.
- pfc: enables the advertisement of PFC TLVs.

Defaults
All PFC and ETS TLVs are advertised.

Command Modes
PROTOCOL LLDP

Supported Modes
Programmable-Mux (PMUX)
Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>
Usage Information

You can configure the transmission of more than one TLV type at a time; for example:
```markdown
advertise dcx-tlv ets-conf ets-reco.
```

You can enable ETS recommend TLVs (`ets-reco`) only if you enable ETS configuration TLVs (`ets-conf`). To disable TLV transmission, use the `no` form of the command; for example:`no advertise dcx-tlv pfc ets-reco`.

DCBX requires that you enable LLDP to advertise DCBX TLVs to peers.

Configure DCBX operation at the INTERFACE level on a switch or globally on the switch. To verify the DCBX configuration on a port, use the `show interface dcbx detail` command.

### bandwidth-percentage

Assign a percentage of weight to the class/queue.

**Syntax**

```
bandwidth-percentage percentage
```

To remove the bandwidth percentage, use the `no bandwidth-percentage` command.

**Parameters**

- `percentage`
  - Enter the percentage assignment of weight to the class/queue. The range is from 1 to 100% (granularity 1%).

**Defaults**

none

**Command Modes**

- CONFIGURATION (conf-qos-policy-out)

**Supported Modes**

Programmable-Mux (PMUX)

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

The unit of bandwidth percentage is 1%. A bandwidth percentage of 0 is allowed and disables the scheduling of that class. If the sum of the bandwidth percentages given to all eight classes exceeds 100%, the bandwidth percentage automatically scales down to 100%.

**Related Commands**

- `qos-policy-output` — creates a QoS output policy.

### dcb-enable

Enable data center bridging.

**Syntax**

```
dcb enable
```

Enable data center bridging.
To disable DCB, use the `no dcb enable` command.

**Defaults**

- **none**

**Command Modes**

- CONFIGURATION

**Supported Modes**

- Programmable-Mux (PMUX)
- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

DCB is not supported if you enable link-level flow control on one or more interfaces.

### dcbb-policy buffer-threshold (Global Configuration)

Assign the dcbb buffer threshold policy on the stack ports. To apply the dcbb buffer threshold policy on the stack-units, use the configuration mode. To apply on front-end ports, use the interface mode.

**Syntax**

```
dcb-policy buffer-threshold stack-unit all stack-ports all profile-name
```

**Parameters**

- **dcb-buffer-threshold**
- **profile-name**
- **stack-unit all**
- **stack-port all**

**Default**

None

**Command Modes**

- CONFIGURATION mode

**Supported Modes**

- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the MXL platform.</td>
</tr>
</tbody>
</table>

**Usage Information**

You can configure up to a maximum of four lossless (PFC) queues. By configuring four lossless queues, you can configure four different priorities and assign a particular priority to each application that your network is used to process. For example, you can assign a higher priority for time-sensitive applications and a lower priority for other services, such as file transfers. You can configure the amount of buffer space for each priority and the pause or resume thresholds for the buffer. This method of configuration enables you to manage and administer the behavior of lossless queues.

**Example for Configuration Mode**

```
Dell(conf)# dcb-policy buffer-threshold stack-unit all stack-ports all test
```
**Example for Interface Mode**

Dell(conf-if-te-1/1)#dcb-policy buffer-threshold test

---

**dcb-policy buffer-threshold (Interface Configuration)**

Assign the DCB policy to the DCB buffer threshold profile on interfaces. This setting takes precedence over the global buffer-threshold setting.

**Syntax**

dcb-policy buffer-threshold profile-name

**Parameters**

- `buffer-threshold`: Configure the profile name for the DCB buffer threshold
- `profile-name`: Enter the name of the profile, which can be a string of up to 32 characters in length.

**Default**

None

**Command Modes**

INTERFACE mode

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>

<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the MXL platform.</td>
</tr>
</tbody>
</table>

**Usage Information**

You can configure a maximum of four lossless (PFC) queues. By configuring four lossless queues, you can configure four different priorities and assign a particular priority to each application that your network is used to process. For example, you can assign a higher priority for time-sensitive applications and a lower priority for other services, such as file transfers. You can configure the amount of buffer space to be allocated for each priority and the pause or resume thresholds for the buffer. This method of configuration enables you to effectively manage and administer the behavior of lossless queues.

**Example**

Dell(conf-if-te-0/0)#dcb-policy buffer-threshold test

---

**clear dcbx counters**

Clear all DCBx TLV counters on an interface.

**Syntax**

clear dcbx counters tengigabitethernet slot/port

**Defaults**

none

**Command Modes**

EXEC Privilege

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>

<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>
clear ets counters

Clear ETS TLV counters.

Syntax:
```
clear ets counters [tengigabitethernet slot/port]
```

Parameters:
- **slot/port**: Enter the slot/port number.

Command Modes:
- EXEC Privilege

Supported Modes:
- All Modes

Command History:

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>

</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

clear pfc counters

Clear the PFC TLV counters and PFC statistics on an interface or stack unit.

Syntax:
```
clear pfc counters [port-type slot/port [statistics]]| [stack-unit {unit-number | all} stack-ports all]
```

Parameters:
- **port-type**: Enter the keywords `port-type` then the slot/port information.
- **stack-unit number**: Enter the keywords `stack-unit` then the stack-unit number to clear. The range is from 0 to 5.
- **all stack-ports all**: Enter the keywords `all stack-ports all` to clear the counters on all interfaces.
- **statistics**: Enter the keyword `statistics` to clear only the hardware PFC counters.

Defaults:
None

Command Modes:
- EXEC Privilege

Supported Modes:
- All Modes

Command History:

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>

Usage information:
If you do not use the `statistics` parameter, both hardware and DCBx counters clear.
dcb enable pfc-queues

Configure the number of PFC queues.

Syntax

dcb enable pfc-queues value

Parameters

value Enter the number of PFC queues. The range is from 1 to 4. The number of ports supported based on lossless queues configured will depend on the buffer.

Default

2

Command Modes CONFIGURATION mode

Supported Modes Programmable-Mux (PMUX)

Full-Switch

Command History

Version Description
9.9(0.0) Introduced on the FN IOM.
9.6(0.0) Supported on the FN 2210S Aggregator.
9.3(0.0) Supported on the MI/O Aggregator.
9.3(0.0) Supported on the MXL 10/40GbE Switch IO Module platform.

Usage Information

You can configure up to a maximum of four lossless (PFC) queues. By configuring four lossless queues, you can configure four different priorities and assign a particular priority to each application that your network is used to process. For example, you can assign a higher priority for time-sensitive applications and a lower priority for other services, such as file transfers. You can configure the amount of buffer space to be allocated for each priority and the pause or resume thresholds for the buffer. This method of configuration enables you to effectively manage and administer the behavior of lossless queues.

Example

Dell(conf)#dcb pfc-queues 4

dcb enable auto-detect on-next-reload

Enables or disables global DCB on a subsequent reload. Also internally configures PFC buffers based on DCB enable or disable. You must save and reload for the configurations to take effect. You can use the auto-detect keyword to re-enable IOA with the port-wise DCB auto detect feature.

Syntax

dcb enable [auto-detect | on-next-reload]

To disable global DCB on a subsequent reload, use the no dcb enable on-next-reload command.

Parameters

auto-detect Enter the keywords auto-detect to re-enable the Aggregator with port wise DCB auto detect feature.

on-next-reload Enter the keywords on-next-reload to apply DCB configurations on subsequent reload.

Defaults DCB is globally enabled with auto-detect feature.

dcb-map stack-unit all stack-ports all

Apply the specified DCB map on all ports of the switch stack.

Syntax

dcb-map stack-unit all stack-ports all dcb-map-name

To remove the PFC and ETS settings in a DCB map from all stack units, use the no dcb-map stack-unit all stack-ports all command.

Parameters

dcb-map-name

Enter the name of the DCB map.

Defaults

None

Command Modes

CONFIGURATION

Supported Modes

Programmable-Mux (PMUX)

Command History

Version | Description
9.9(0.0) | Introduced on the FN IOM.
9.4(0.0) | Supported on the FN I/O Aggregator.
9.3(0.0) | Introduced on the FC Flex IO Modules with I/O Aggregator.
Usage Information

Dell EMC Networking OS requires that you enable LLDP to advertise DCBx TLVs to peers.

Configure DCBX operation at the INTERFACE level on a switch or globally on the switch. To verify the DCBX configuration on a port, use the show interface dcbx detail command.

**Usage Information**

The dcb-map stack-unit all stack-ports all command overwrites any previous DCB maps applied to stack ports.

### dcbx-port role

Configure the DCBX port role the interface uses to exchange DCB information.

**Syntax**

```plaintext
dcbx port-role {config-source | auto-downstream | auto-upstream | manual}
```

To remove DCBX port role, use the `no dcbx port-role {config-source | auto-downstream | auto-upstream | manual}` command.

**Parameters**

- `config-source`
- `auto-downstream`
- `auto-upstream`
- `manual`

Enter the DCBX port role, where:

- **config-source**: configures the port to serve as the configuration source on the switch.
- **auto-upstream**: configures the port to receive a peer configuration. The configuration source is elected from auto-upstream ports.
- **auto-downstream**: configures the port to accept the internally propagated DCB configuration from a configuration source.
- **manual**: configures the port to operate only on administer-configured DCB parameters. The port does not accept a DCB configuration received from a peer or a local configuration source.

**Defaults**

Manual

**Command Modes**

INTERFACE PROTOCOL LLDP

**Supported Modes**

</tr>
</tbody>
</table>

**Usage Information**

DCBX requires that you enable LLDP to advertise DCBx TLVs to peers.

Configure DCBX operation at the INTERFACE level on a switch or globally on the switch. To verify the DCBX configuration on a port, use the `show interface dcbx detail` command.

### dcbx version

Configure the DCBX version used on the interface.

**Syntax**

```plaintext
dcbx version {auto | cee | cin | ieee-v2.5}
```

To remove the DCBX version, use the `no dcbx version {auto | cee | cin | ieee-v2.5}` command.
Parameters

<table>
<thead>
<tr>
<th>Parameters</th>
<th>auto</th>
<th>cee</th>
<th>cin</th>
<th>ieee-v2.5</th>
</tr>
</thead>
</table>

Enter the DCBX version type used on the interface, where:

- **auto**: configures the port to operate using the DCBX version received from a peer.
- **cee**: configures the port to use CEE (Intel 1.01).
- **cin**: configures the port to use Cisco-Intel-Nuova (DCBX 1.0).
- **ieee-v2.5**: configures the port to use IEEE 802.1az (Draft 2.5).

Defaults

**Auto**

### fc-map

In an FCoE map, configure the FCoE mapped address prefix (FC-MAP) value which is used to identify FCoE traffic transmitted on the FCoE VLAN for the specified fabric.

**Syntax**

fc-map fc-map-value

**Parameters**

fc-map-value

Enter the unique MAC address prefix used by a SAN fabric.

The range of FC-MAP values is from 0EFC00 to 0EFCFF.

**Defaults**

None

**Command Modes**

FCoE MAP

**Supported Modes**

</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module.</td>
</tr>
</tbody>
</table>

## Usage Information

The FC-MAP value you enter must match the FC-MAP value used by an FC switch or FCoE forwarder (FCF) in the fabric. An FCF switch accepts only FCoE traffic that uses the correct FC-MAP value.

The FC-MAP value is used to generate the fabric-provided MAC address (FP-MAC). The FPMA is used by servers to transmit FCoE traffic to the fabric. An FC-MAP can be associated with only one FCoE VLAN and vice versa.

In an FCoE map, the FC-MAP value, fabric ID, and FCoE VLAN parameters must be unique.

To remove a configured FC-MAP value from an FCoE map, enter the `no fc-map` command.

## Related Commands

- `fcoe-map` — creates an FCoE map which contains the parameters used in the communication between servers and a SAN fabric.

## fcoe-map

Create an FCoE map which contains the parameters used to configure the links between server CNAs and a SAN fabric. Apply the FCoE map on a server-facing Ethernet port.

### Syntax

```
fcoe-map map-name
```

### Parameters

- `map-name`  
  Maximum: 32 alphanumeric characters.

### Defaults

On the FN2210S Aggregator with PMUX modules, the following parameters are applied on all the PMUX module interfaces:

- Description: SAN_FABRIC
- Fabric-id: 1002
- Fcoe-vlan: 1002
- Fc-map: 0x0efc00
- Fcf-priority: 128
- Fka-adv-period: 8000mSec
- Keepalive: enable
- Vlan priority: 3

### Command Modes

- `CONFIGURATION`
- `INTERFACE`

### Supported Modes

- Programmable-Mux (PMUX)
- Full-Switch
An FCoE map is a template used to map FCoE and FC parameters in a converged fabric. An FCoE map is used to virtualize upstream FC ports on an FN2210S Aggregator with the PMUX module NPIV proxy gateway so that they appear to downstream server CNA ports as FCoE forwarder (FCF) ports on an FCoE network. When applied to FC and Ethernet ports on an NPIV proxy gateway, an FCoE map allows the switch to operate as an FCoE-FC bridge between an FC SAN and an FCoE network by providing FCoE-enabled servers and switches with the necessary parameters to log in to a SAN fabric.

On an FN2210S Aggregator with the PMUX module NPIV proxy gateway, you cannot apply an FCoE map applied on fabric-facing FC ports and server-facing 10-Gigabit Ethernet ports.

An FCoE map consists of the following parameters: the dedicated FCoE VLAN used for storage traffic, the destination SAN fabric (FC-MAP value), FCF priority used by a server, and the FIP keepalive (FKA) advertisement timeout.

In each FCoE map, the fabric ID, FC-MAP value, and FCoE VLAN parameters must be unique. Use one FCoE map to access one SAN fabric. You cannot use the same FCoE map to access different fabrics.

To remove an FCoE map from an Ethernet interface, enter the no fcoe-map map-name command in Interface configuration mode.

**fcoe priority-bits**

Configure the FCoE priority advertised for the FCoE protocol in application priority TLVs.

**Syntax**

```
fcoe priority-bits priority-bitmap
```

To remove the configured FCoE priority, use the `no fcoe priority-bits` command.

**Parameters**

- `priority-bitmap` Enter the priority-bitmap range. The range is from 1 to FF.

**Defaults**

0x8

**Command Modes**

- PROTOCOL LLDP

</tr>
</tbody>
</table>

Usage Information

This command is available at the global level only.

**keepalive**

Send keepalive packets periodically to keep an interface alive when it is not transmitting data.

Syntax

```
keepalive [seconds]
```

To stop sending keepalive packets, use the `no keepalive` command.

Parameters

- **seconds**
  (OPTIONAL) For interfaces with PPP encapsulation enabled, enter the number of seconds between keepalive packets. The range is from 0 to 23767. The default is 10 seconds.

Defaults

Enabled.

Command Modes

- INTERFACE

Supported Modes

<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>
Usage Information
When you configure keepalive, the system sends a self-addressed packet out of the configured interface to verify that the far end of a WAN link is up. When you configure no keepalive, the system does not send keepalive packets and so the local end of a WAN link remains up even if the remote end is down.

interface vlan (NPIV proxy gateway)

Create a dedicated VLAN to be used to send and receive Fibre Channel traffic over FCoE links between servers and a fabric over an Aggregator with the PMUX module of NPIV proxy gateway.

Syntax
interface vlan vlan-id

Parameters
vlan-id
Enter a number as the VLAN Identifier. The range is 1 to 4094.

Defaults
Not configured.

Command Modes
CONFIGURATION

Supported Modes
Programmable-Mux (PMUX)
Full-Switch

Command History
Version Description
9.9(0.0) Introduced on the FN IOM.
9.4(0.0) Introduced on the FN I/O Aggregator.
9.3(0.0) Introduced on the M I/O Aggregator.

Usage Information
FCoE storage traffic received from servers on an M I/O Aggregator with the PMUX module NPIV proxy gateway is de-capsulated into Fibre Channel packets and forwarded over FC links to SAN switches in a specified fabric. You must configure a separate FCoE VLAN for each fabric to which FCoE traffic is forwarded. Any non-FCoE traffic sent on a dedicated FCoE VLAN will be dropped.

You configure the association between a dedicated VLAN, which carries FCoE traffic from server CNAs over the NPIV proxy gateway to a SAN fabric in which destination storage arrays are installed, in an FCoE map by using the fabric id vlan command.

When you apply an FCoE map to a server-facing Ethernet port, the port is automatically configured as a tagged member of the FCoE VLAN.

For more information about VLANs and the commands to configure them, refer to the Virtual LAN (VLAN) Commands section.

Example (Single Range)
Dell(conf)#interface vlan 10
Dell(conf-if-vl-3)#

pfc mode on

Enable the PFC configuration on the port so that the priorities are included in DCBX negotiation with peer PFC devices.

Syntax
pfc mode on
To disable the PFC configuration, use the `no pfc mode on` command.

**Defaults**
- PFC mode is on.

**Command Modes**
- DCB MAP

**Supported Modes**
- Programmable-Mux (PMUX)
- Full-Switch

**Command History**

<table>

<td>Introduced on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

By applying a DCB input policy with PFC enabled, you enable PFC operation on ingress port traffic. To achieve complete lossless handling of traffic, also enable PFC on all DCB egress ports or configure the dot1p priority-queue assignment of PFC priorities to lossless queues (refer to `pfc no-drop queues`).

To disable PFC operation on an interface, enter the `no pfc mode on` command in DCB Input Policy Configuration mode. PFC is enabled and disabled as global DCB operation is enabled (`dcb-enable`) or disabled (`no dcb-enable`).

You cannot enable PFC and link-level flow control at the same time on an interface.

### pfc no-drop queues

Configure the port queues that still function as no-drop queues for lossless traffic.

**Syntax**
```
pfc no-drop queues queue-range
```

To remove the no-drop port queues, use the `no pfc no-drop queues` command.

**Parameters**
- `queue-range` Enter the queue range. Separate the queue values with a comma; specify a priority range with a dash; for example, `pfc no-drop queues 1,3` or `pfc no-drop queues 2-3`. The range is from 0 to 3.

**Defaults**
- No lossless queues are configured.

priority

Configure the priority for the PFC threshold to be allocated to the buffer space parameters.

Syntax

```
priority value buffer-size size pause-threshold threshold-value resume-offset threshold-value shared-threshold-weight size
```

Parameters

- **priority**
  Specify the priority of the queue for which the buffer space settings apply
- **value**
  Enter a number in the range of 0 to 7 to denote the priority to be allocated to the dynamic buffer control mechanism
- **buffer-size**
  Ingress buffer size
- **size**
  Size of the ingress buffer in KB. Enter a number in the range of 0 to 7787. The default is 45 KB.
- **pause-threshold**
  Buffer limit for pause frames to be sent
- **threshold-value**
  Buffer limit at which the port sends the pause to peer in KB. Enter a number in the range of 0 to 7787. The default is 10 KB.
- **resume-offset**
  Buffer offset limit for resuming in KB
- **threshold-value**
  Buffer offset limit at which the port resumes the peer in KB. Enter a number in the range of 1 to 7787. The default is 10 KB.
- **shared-threshold-weight**
  Buffer shared threshold weight
- **size**
  Weightage of the priorities on the shared buffer size in the system. Enter a number in the range of 0 to 9. The default shared threshold weight is 10.
The default size of the ingress buffer is 45 KB. The default buffer limit at which the port sends the pause to peer and recommences the sending of packets to the peer is 10 KB. The default threshold weight of the shared buffer space is 10.

### Command Modes

</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the MXL platform.</td>
</tr>
</tbody>
</table>

### Usage Information
For each priority, you can specify the shared buffer threshold limit, the ingress buffer size, buffer limit for pausing the acceptance of packets, and the buffer offset limit for resuming the acceptance of received packets. When PFC detects congestion on a queue for a specified priority, it sends a pause frame for the 802.1p priority traffic to the transmitting device.

You can use the `priority` command to set up both the administrative and peer-related PFC priorities. For example, you can configure the intended buffer configuration for all 8 priorities. If you configure the number of lossless queues as 4 and if the administrator-configured priorities configured within the DCB input policy is applied, then the configuration for those priorities are pre-designed. However, if the peer-provided priorities are applied, although a DCB input policy is present, the peer-provided priorities become effective for buffer configuration. This method of configuration provides an easy and flexible technique to accommodate both administratively-configured and peer-configured priorities.

### Example
Dell (conf-dcb-buffer-thr)#priority 0 buffer-size 52 pause-threshold 16 resume-offset 10 shared-threshold-weight 7

### priority-group bandwidth pfc

Configure the ETS bandwidth allocation and PFC mode used to manage port traffic in an 802.1p priority group.

#### Syntax
```plaintext
priority-group group-num \{bandwidth percentage| strict-priority\} pfc \{on | off\}
```

#### Parameters
- **priority-group group-num**: Enter the keyword `priority-group` followed by the number of an 802.1p priority group. Use the `priority-pgid` command to create the priority groups in a DCB map.
- **bandwidth percentage**: Enter the keyword `bandwidth` followed by a bandwidth percentage allocated to the priority group. The range of valid values is 1 to 100. The sum of all allocated bandwidth percentages in priority groups in a DCB map must be 100%.
- **strict-priority**: Configure the priority-group traffic to be handled with strict priority scheduling. Strict-priority traffic is serviced first, before bandwidth allocated to other priority groups is made available.
- **pfc (on | off)**: Configure whether priority-based flow control is enabled (on) or disabled (off) for port traffic in the priority group.

#### Defaults
None

#### Command Modes
DCB MAP

#### Supported Modes
Programmable-Mux (PMUX)
Full-Switch
**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the FC Flex IO module installed in the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

Use the `dcb-map` command to configure priority groups with PFC and/or ETS settings and apply them to Ethernet interfaces.

Use the `priority-pgid` command to map 802.1p priorities to a priority group. You can assign each 802.1p priority to only one priority group. A priority group consists of 802.1p priority values that are grouped together for similar bandwidth allocation and scheduling, and that share latency and loss requirements. All 802.1p priorities mapped to the same queue must be in the same priority group.

Repeat the `priority-group bandwidth pfc` command to configure PFC and ETS traffic handling for each priority group in a DCB map.

You can enable PFC on a maximum of two priority queues.

If you configure more than one priority group as strict priority, the higher numbered priority queue is given preference when scheduling data traffic.

If a priority group does not use its allocated bandwidth, the unused bandwidth is made available to other priority groups.

To remove a priority-group configuration in a DCB map, enter the `no priority-group bandwidth pfc` command.

By default, equal bandwidth is assigned to each dot1p priority in a priority group. Use the `bandwidth` parameter to configure the bandwidth percentage assigned to a priority group. The sum of the bandwidth allocated to all priority groups in a DCB map must be 100% of the bandwidth on the link. You must allocate at least 1% of the total port bandwidth to each priority group.

**Related Commands**

priority-pgid — Configures the 802.1p priority traffic in a priority group for a DCB map.

### priority-pgid

Assign 802.1p priority traffic to a priority group in a DCB map.

**Syntax**

```
priority-pgid dot1p0_group-num dot1p1_group-num dot1p2_group-num dot1p3_group-num
dot1p4_group-num dot1p5_group-num dot1p6_group-num dot1p7_group-num
```

**Parameters**

- `dot1p0_group-num` Enter the priority group number for each 802.1p class of traffic in a DCB map.
dot1p6_group-num

dot1p7_group-num

Defaults
None

Command Modes
DCB MAP

Supported Modes
Programmable-Mux (PMUX)
Full-Switch

Command History
Version   Description
9.9(0.0)  Introduced on the FN IOM.
9.4(0.0)  Supported on the FN I/O Aggregator.
9.3(0.0)  Introduced on the FC Flex IO module installed in the M I/O Aggregator.

Usage Information
PFC and ETS settings are not pre-configured on Ethernet ports. You must use the `dcb-map` command to configure different groups of 802.1p priorities with PFC and ETS settings.

Using the `priority-pgid` command, you assign each 802.1p priority to one priority group. A priority group consists of 802.1p priority values that are grouped together for similar bandwidth allocation and scheduling, and that share latency and loss requirements. All 802.1p priorities mapped to the same queue must be in the same priority group. For example, the `priority-pgid 0 0 0 1 2 4 4 4` command creates the following groups of 802.1p priority traffic:

- Priority group 0 contains traffic with dot1p priorities 0, 1, and 2.
- Priority group 1 contains traffic with dot1p priority 3.
- Priority group 2 contains traffic with dot1p priority 4.
- Priority group 4 contains traffic with dot1p priority 5, 6, and 7.

To remove a priority-pgid configuration from a DCB map, enter the `no priority-pgid` command.

Related Commands
`priority-group bandwidth pfc`—Configures the ETS bandwidth allocation and the PFC setting used to manage the port traffic in an 802.1p priority group.

qos-policy-output ets

To configure the ETS bandwidth allocation and scheduling for priority traffic, create a QoS output policy.

Syntax
`qos-policy-output policy-name ets`

To remove the QoS output policy, use the `no qos-policy-output ets` command.

Parameters
`policy-name`  Enter the policy name. The maximum is 32 characters.

</tr>
</tbody>
</table>

Usage Information

If an error occurs in an ETS output-policy configuration, the configuration is ignored and the scheduler and bandwidth allocation settings are reset to the ETS default values (all priorities are in the same ETS priority group and bandwidth is allocated equally to each priority).

If an error occurs when a port receives a peer’s ETS configuration, the port’s configuration is reset to the previously configured ETS output policy. If no ETS output policy was previously applied, the port is reset to the default ETS parameters.

Related Commands

- scheduler — schedules the priority traffic in port queues.
- bandwidth-percentage — bandwidth percentage allocated to the priority traffic in port queues.

qos-policy-buffer

Create a QoS policy buffer and enter the configuration mode to configure the no-drop queues, ingress buffer size, buffer limit for pausing, and buffer offset limit for resuming.

Syntax

```
qos-policy-buffer queue queue-num pause no-drop queue buffer-size size pause-threshold threshold-value resume-offset threshold-value shared-threshold-weight size
```

Parameters

- **policy-name**: Name of the QoS policy buffer that is applied to an interface for this setting to be effective in conjunction with the DCB input policy. You can specify the shared buffer threshold limit, the ingress buffer size, buffer limit for pausing the acceptance of packets, and the buffer offset limit for resuming the acceptance of received packets. This method of configuration enables different peer-provided and administrative priorities to be set up because the intended queue is directly configured instead of determining the priority to queue mapping for local and remote parameters.

- **queue 0 to queue 7**: Specify the queue number to which the QoS policy buffer parameters apply.

- **pause**: Pause frames to be sent at the specified buffer limit levels and pause packet settings.

- **no-drop**: The packets for this queue must not be dropped.

- **value**: Enter a number in the range of 0 to 7 to denote the priority to be allocated to the dynamic buffer control mechanism.

- **buffer-size**: Ingress buffer size.

- **size**: Size of the ingress buffer in KB. Enter a number in the range of 0 to 7787. The default is 45 KB.

- **pause-threshold**: Buffer limit for pause frames to be sent.

- **threshold-value**: Buffer limit at which the port sends the pause to peer in KB. Enter a number in the range of 0 to 7787. The default is 10 KB.
### resume-offset
Buffer offset limit for resuming in KB

### threshold-value
Buffer offset limit at which the port resumes the peer in KB. Enter a number in the range of 1 to 7787. The default is 10 KB.

### shared-threshold-weight
Buffer shared threshold weight

### size
Weightage of the priorities on the shared buffer size in the system. Enter a number in the range from 0 to 9. The default shared threshold weight is 10.

**Default**
The default size of the ingress buffer is 45 KB. The default buffer limit at which the port sends the pause to peer and recommences the sending of packets to the peer is 10 KB. The default threshold weight of the shared buffer space is 10.

**Command Modes**

</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the MXL platform.</td>
</tr>
</tbody>
</table>

**Usage Information**
You must apply this buffer policy at the interface level for the attributes to be applicable in conjunction with the DCB input policy.

For each QoS policy buffer, you can specify the shared buffer threshold limit, the ingress buffer size, buffer limit for pausing the acceptance of packets, and the buffer offset limit for resuming the acceptance of received packets. When PFC detects congestion on a queue for a specified priority, it sends a pause frame for the 802.1p priority traffic to the transmitting device.

You can use set up both the administrative and peer-related PFC priorities. For example, you can configure the intended buffer configuration for all 8 priorities. If you configure the number of lossless queues as 4 and if the administrator-configured priorities configured within the DCB input policy is applied, then the configuration for those priorities are pre-designed. However, if the peer-provided priorities are applied, although a DCB input policy is present, the peer-provided priorities become effective for buffer configuration. This method of configuration provides an easy and flexible technique to accommodate both administratively-configured and peer-configured priorities.

**Example**
```
Dell(conf)# qos-policy-buffer test
Dell (conf-qos-policy-buffer)#queue 0 no-drop buffer-size 128000 pause-threshold 103360 resume-threshold 83520
Dell(conf-qos-policy-buffer)# queue 4 no-drop buffer-size 128000 pause-threshold 103360 resume-threshold 83520
```

### priority-list
Configure the 802.1p priorities for the traffic on which you want to apply an ETS output policy.

**Syntax**
```
priority-list value
```

To remove the priority list, use the no priority-list command.
Parameters

value

Enter the priority list value. Separate priority values with a comma; specify a priority range with a dash; for example, priority-list 3,5-7. The range is from 0 to 7.

Defaults

none

Command Modes

PRIORITY-GROUP

Supported Modes

<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

By default:

- All 802.1p priorities are grouped in priority group 0.
- 100% of the port bandwidth is assigned to priority group 0. The complete bandwidth is equally assigned to each priority class so that each class has 12 to 13%.

NOTE: Please note that Dell Networking does not recommended to use this command as it has been deprecated in the current 9.4(0.0) release. A warning message appears when you try to run this command indicating that you have to use the dcb-map commands in the future.

scheduler

Configure the method used to schedule priority traffic in port queues.

Syntax

scheduler value

To remove the configured priority schedule, use the no scheduler command.

Parameters

value

Enter schedule priority value. The valid values are:

- strict: strict-priority traffic is serviced before any other queued traffic.
- werr: weighted elastic round robin (werr) provides low-latency scheduling for priority traffic on port queues.

Defaults

Weighted elastic round robin (WERR) scheduling is used to queue priority traffic.

</tr>
</tbody>
</table>
dot1p priority traffic on the switch is scheduled to the current queue mapping. dot1p priorities within the same queue must have the same traffic properties and scheduling method.

ETS-assigned scheduling applies only to data queues, not to control queues.

The configuration of bandwidth allocation and strict-queue scheduling is not supported at the same time for a priority group. If you configure both, the configured bandwidth allocation is ignored for priority-group traffic when you apply the output policy on an interface.

**Related Commands**

- `bandwidth-percentage` — bandwidth percentage allocated to priority traffic in port queues.

**show dcb**

Displays the data center bridging status, the number of PFC-enabled ports, and the number of PFC-enabled queues.

**Syntax**

```
show dcb [stack-unit unit-number]
```

**Parameters**

- `unit number` Enter the DCB unit number. The range is from 0 to 5.

</tr>
</tbody>
</table>

**Usage Information**

Specify a stack-unit number on the Master switch in a stack.

**Example**

```
Dell#show dcb
stack-unit 0 port-set 0
DCB Status : Enabled
PFC Queue Count : 2
Total Buffer[lossy + lossless] (in KB) : 3822
PFC Total Buffer (in KB) : 1912
PFC Shared Buffer (in KB) : 832
PFC Available Buffer (in KB) : 1080
```

**show interface dcbx detail**

Displays the DCBX configuration on an interface.

**Syntax**

```
show interface port-type slot/port dcbx detail
```

**Example**

```
Dell#show interface dcbx detail
```
Parameters

- **port-type**: Enter the port type.
- **slot/port**: Enter the slot/port number.

**NOTE**: This command also enables you to view information corresponding to a range of ports.

- You can specify multiple ports as `slot/port-range`. For example, if you want to display information corresponding to all ports between 1 and 4, specify the port range as `show interfaces interface-type 1/1 - 4`.

show interface ets

Displays the ETS configuration applied to egress traffic on an interface, including priority groups with priorities and bandwidth allocation.

Syntax
show interface port-type slot/port ets {summary | detail}

Parameters
- **port-type slot/port ets**
  Enter the port-type slot and port ETS information.
- **{summary | detail}**
  Enter the keyword summary for a summary list of results or enter the keyword detail for a full list of results.

NOTE: This command also enables you to view information corresponding to a range of ports.
- You can specify multiple ports as slot/port-range. For example, if you want to display information corresponding to all ports between 1 and 4, specify the port range as show interfaces interface-type 1/1 - 4.

**show interface pfc**

Displays the PFC configuration applied to ingress traffic on an interface, including priorities and link delay.

**Syntax**

```plaintext
show interface port-type slot/port pfc {summary | detail}
```

**Parameters**

- **port-type slot/port pfc**
  - Enter the port-type slot and port PFC information.
- **(summary | detail)**
  - Enter the keyword summary for a summary list of results or enter the keyword detail for a full list of results.

**NOTE:** This command also enables you to view information corresponding to a range of ports.

- You can specify multiple ports as slot/port-range. For example, if you want to display information corresponding to all ports between 1 and 4, specify the port range as `show interface interface-type 1/1 - 4`.

Example (Summary)

```
Dell# show interfaces tengigabitethernet 0/4 pfc summary
Interface TenGigabitEthernet 0/4
  Admin mode is on
  Admin is enabled
  Remote is enabled, Priority list is 4
  Remote Willing Status is enabled
  Local is enabled
  Oper status is Recommended
  PFC DCBX Oper status is Up
  State Machine Type is Feature
  TLV Tx Status is enabled
  PFC Link Delay 45556 pause quantams
  Application Priority TLV Parameters :
  --------------------------------------
  FCOE TLV Tx Status is disabled
  ISCSI TLV Tx Status is disabled
  Local FCOE PriorityMap is 0x8
  Local ISCSI PriorityMap is 0x10
  Remote FCOE PriorityMap is 0x8
  Remote ISCSI PriorityMap is 0x8

Dell# show interfaces tengigabitethernet 0/4 pfc detail
Interface TenGigabitEthernet 0/4
  Admin mode is on
  Admin is enabled
  Remote is enabled
  Remote Willing Status is enabled
  Local is enabled
  Oper status is recommended
  PFC DCBX Oper status is Up
  State Machine Type is Feature
  TLV Tx Status is enabled
```
show interface pfc statistics

Displays counters for the PFC frames received and transmitted (by dot1p priority class) on an interface.

**Syntax**

```
show interface port-type slot/port pfc statistics
```

**Parameters**

- **port-type**
  - Enter the port type.
- **slot/port**
  - Enter the slot/port number.

**NOTE:** This command also enables you to view information corresponding to a range of ports.

- You can specify multiple ports as \( \text{slot/port-range} \). For example, if you want to display information corresponding to all ports between 1 and 4, specify the port range as `show interfaces interface-type 1/1 - 4`.

**Command Modes**

- INTERFACE

**Supported Modes**

- All Modes

**Command History**

<table>

7 0 0 0
```
show qos priority-groups

Displays the ETS priority groups configured on the switch, including the 802.1p priority classes and ID of each group.

Syntax

show qos priority-groups

Command Modes

EXEC Privilege

Supported Modes

Full-Switch

Command History

Version Description
9.9(0.0) Introduced on the FN IOM.
9.2(0.0) Introduced on the M I/O Aggregator.
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

NOTE: Please note that Dell Networking does not recommended to use this command as it has been deprecated in the current 9.4(0.0) release. A warning message appears when you try to run this command indicating that you have to use the dcb-map commands in the future.

Example

Dell#show qos priority-groups
priority-group ipc
        priority-list 4
        set-pgid 2

show qos dcb-map

Display the DCB parameters configured in a specified DCB map.

Syntax

show qos dcb-map map-name

Parameters

map-name Displays the PFC and ETS parameters configured in the specified map.

Command Modes

• EXEC
• EXEC Privilege

Supported Modes

All Modes

Command History

Version Description
9.9(0.0) Introduced on the FN IOM.
9.6(0.0) Supported on the FN I/O Aggregator.
9.2(0.0) Introduced on the M I/O Aggregator.

Usage Information

Use the show qos dcb-map command to display the enhanced transmission selection (ETS) and priority-based flow control (PFC) parameters used to configure server-facing Ethernet ports.

The following table describes the show qos dcb-map output shown in the example below.
<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>State</td>
<td>Complete: All mandatory DCB parameters are correctly configured. In progress: The DCB map configuration is not complete. Some mandatory parameters are not configured.</td>
</tr>
<tr>
<td>PFC Mode</td>
<td>PFC configuration in DCB map: On (enabled) or Off.</td>
</tr>
<tr>
<td>PG</td>
<td>Priority group configured in the DCB map.</td>
</tr>
<tr>
<td>TSA</td>
<td>Transmission scheduling algorithm used by the priority group: Enhanced Transmission Selection (ETS).</td>
</tr>
<tr>
<td>BW</td>
<td>Percentage of bandwidth allocated to the priority group.</td>
</tr>
<tr>
<td>PFC</td>
<td>PFC setting for the priority group: On (enabled) or Off.</td>
</tr>
<tr>
<td>Priorities</td>
<td>802.1p priorities configured in the priority group.</td>
</tr>
</tbody>
</table>

**Example**

Dell# show qos dcb-map dcbmap2

```
State : Complete
PfcMode: ON
-----------------
PG: 0  TSA: ETS  BW: 50  PFC: OFF
Priorities: 0 1 2 4 5 6 7

PG: 1  TSA: ETS  BW: 50  PFC: ON
Priorities: 3
```

dellEMC(conf)# show stack-unit all stack-ports all ets details

```
Stack unit 0 stack port all
Max Supported TC Groups is 4
Number of Traffic Classes is 1
Admin mode is on
```
dcb pfc-shared-buffer-size

Configure the maximum amount of shared buffer size for PFC packets in kilobytes.

Syntax dcb pfc-shared-buffer-size KB

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>KB</td>
<td>Enter a number in the range of 0 to 7787.</td>
</tr>
</tbody>
</table>

Default None.

Supported Modes Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the MXL platform.</td>
</tr>
</tbody>
</table>

Usage Information Configure the maximum shared buffer available for PFC traffic. You can choose to increase or decrease the shared buffer that is allocated in the system by default. Configure the shared buffer size less than the total PFC buffer size. If the buffer size and DCB buffer threshold settings are applied on one or more ports, a validation is performed to determine whether following condition is satisfied: If the shared buffer size is more than the total PFC buffer size value, the configuration is not saved and a system logging message is generated as follows: Shared-pfc-buffer-size <= (Total-pfc-buffer-size — Σpfc priority <> buffer-size on each port, priority).
Dell(conf)#dcb pfc-shared-buffer-size 2000
%ERROR: pfc shared buffer size configured cannot accommodate existing buffer requirement in the system.

Enter a smaller value for the shared buffer size or increase the total buffer size appropriately by using the dcb pfc-total-buffer-size command.

Example
Dell(conf)#dcb pfc-shared-buffer-size 5000

**dcb pfc-total-buffer-size**

Configure the total buffer size for PFC in kilobytes.

**Syntax**

```
dcb pfc-total-buffer-size KB
```

**Parameters**

- `KB`: Enter a number in the range of 0 to 7787.

**Default**

The default is 6592KB.

**Command Modes**

CONFIGURATION mode

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

Configure the maximum buffer available for PFC traffic. You can choose to increase or decrease the buffer size that is allocated in the system by default. However, if you modify the PFC buffer size lower than the previously configured size, the system determines whether this reduction in size is valid without disrupting the existing configuration. In such a scenario, disable and re-enable DCB. For example, if you modify the total buffer size as 4000 KB from the previous size of 5000 KB, an error message is displayed that this reduction cannot be performed owing to existing system configuration because of queues that are being currently in process.

The lossless queue limit per port is validated based on the dcb pfc-queues command. PFC queue configuration identifies the maximum number of queues a port can support. Although the queue limit per port is a baseline when dynamic buffering is enabled, the limit per port for queues depends on the availability of the buffer.

**Example**

```
Dell(conf)#dcb pfc-total-buffer-size 5000
Dell(conf)#dcb pfc-total-buffer-size 4000
%ERROR: Total pfc buffer size configured cannot accommodate existing buffer requirement in the system.
```

**dcb-buffer-threshold**

Configure the profile name for the DCB buffer threshold.

**Syntax**

```
dcb buffer-threshold profile-name
```

**Example**

```
Dell(conf)#dcb pfc-total-buffer-size 5000
Dell(conf)#dcb pfc-total-buffer-size 4000
%ERROR: Total pfc buffer size configured cannot accommodate existing buffer requirement in the system.
```
**Parameters**

`profile-name` Enter the name of the profile, which can be a string of up to 32 characters in length.

**Default**

None

**Command Modes**

CONFIGURATION mode

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the MXL platform.</td>
</tr>
</tbody>
</table>

**Usage Information**

When you enter the profile name, you enter the DCB buffer threshold configuration mode. You can specify the shared buffer threshold limit, the ingress buffer size, buffer limit for pausing the acceptance of packets, and the buffer offset limit for resuming the acceptance of received packets.

**Example**

Dell(conf)#dcb buffer-threshold test

Qos-policy-buffer queue queue-num pause no-drop queue buffer-size size pause-threshold threshold-value resume-offset threshold-value shared-threshold-weight size

Dell(conf)# qos-policy-buffer test

Dell(conf-qos-policy-buffer)# queue 0 pause no-drop buffer-size 128000 pause-threshold 103360 resume-threshold 83520

Dell(conf-qos-policy-buffer)# queue 4 pause no-drop buffer-size 128000 pause-threshold 103360 resume-threshold 83520

Priority value buffer-size size pause-threshold threshold-value resume-offset threshold-value shared-threshold-weight size

Dell(conf-dcb-buffer-thr)# priority 0 buffer-size 52 pause-threshold 16 resume-offset 10 shared-threshold-weight 7

---

**dcb enable pfc-queues**

Configure the number of PFC queues.

**Syntax**

dcb enable pfc-queues value

**Parameters**

`value` Enter the number of PFC queues. The range is from 1 to 4. The number of ports supported based on lossless queues configured will depend on the buffer.

**Command Modes**

CONFIGURATION mode

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the MXL platform.</td>
</tr>
</tbody>
</table>

**Usage Information**

You can configure up to a maximum of four lossless (PFC) queues. By configuring four lossless queues, you can configure four different priorities and assign a particular priority to each application that your network is used to process. For example, you can assign a higher priority for time-sensitive applications and a lower priority for other...
services, such as file transfers. You can configure the amount of buffer space to be allocated for each priority and the pause or resume thresholds for the buffer. This method of configuration enables you to effectively manage and administer the behavior of lossless queues.

Example

Dell(conf)#dcb pfc-queues 4

dcb {ets | pfc} enable

Enable priority flow control or enhanced transmission selection on interface.

Syntax
dcb {ets | pfc} enable

- To disable ETS on interface, use “no dcb ets enable” command.
- To disable PFC on interface, use “no dcb pfc enable” command.

Defaults
Enable

Command Modes
INTERFACE

Supported Modes
Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.3 (0.1)</td>
<td>Introduced on S6000, S4810, and S4820T.</td>
</tr>
</tbody>
</table>

Usage Information
PFC and ETS are enabled by default on the interfaces when DCB is globally enabled (refer to dcb enable). In some network topology, you may want to disable PFC on an interface and apply link level flow control; Similarly you may want to disable ETS on an interface and apply QoS bandwidth configurations.

Limitations
- “dcb-map” CLI on interface is mutually exclusive to “no dcb ets enable” and “no dcb pfc enable”.
- “pfc priority” CLI is mutually exclusive to “no dcb pfc enable” command.
- Deprecated CLI “dcb-policy input” and “no dcb pfc enable” cannot coexist at interface level.
- Deprecated CLI “dcb-policy output” and “no dcb ets enable” cannot coexist at interface level.

service-class buffer shared-threshold-weight

Create a service class and associate the threshold weight of the shared buffer with each of the queues per port in the egress direction.

Syntax

[No] Service-class buffer shared-threshold-weight ([queue0 number] || [queue1 number] || [queue2 number] || [queue3 number] || [queue4 number] || [queue5 number] || [queue6 number] || [queue7 number])

Parameters

- **buffer**: Define the shared buffer settings.
- **shared-threshold-weight**: Specify the weight of a queue for the shared buffer space.
- **queue 0 to queue 7**: To apply the shared-threshold weight, specify the queue number.
**number**

Enter a weight for the queue on the shared buffer as a number in the range of 1 to 11.

**Default**

The default threshold weight on the shared buffer for each queue is 9. Therefore, each queue can consume up to 66.67 percent of available shared buffer by default.

**Command Modes**

INTERFACE mode

**Supported Modes**

Full-Switch

**Usage Information**

You can configure all the data queues. You can configure queues 0-7. The following table describes the mapping between the threshold weight of the shared buffer on the queue. It also shows the percentage of the available shared buffer used by the queues for each of the corresponding threshold weights of the shared buffer:

<table>
<thead>
<tr>
<th>shared-threshold-weight on the queue</th>
<th>% of available shared buffer that can be consumed by the queue</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>No dynamic sharing; shared buffer = 0.</td>

```
Dell(conf-if-te-1/8)#service-class buffer shared-threshold-weight queue5 4
queue7 6
```

---

**show stack-unit stack-ports pfc details**

Displays the PFC configuration applied to ingress traffic on stacked ports, including PFC Operational mode on each unit with the configured priorities, link delay, and number of pause packets sent and received.

**Syntax**

```
show stack-unit {all | stack-unit} stack-ports {all | port-number} pfc details
```

**Parameters**

- **stack-unit**
  - Enter the stack unit.
- **port-number**
  - Enter the port number.
**Command Modes**

  Admin is enabled, Priority list is 4-5
  Local is enabled, Priority list is 4-5
  Link Delay 45556 pause quantum
  0 Pause Tx pkts, 0 Pause Rx pkts
```
Dynamic Host Configuration Protocol

Dynamic host configuration protocol (DHCP) is an application layer protocol that dynamically assigns IP addresses and other configuration parameters to network end-stations (hosts) based on configuration policies determined by network administrators.

An Aggregator can operate as a DHCP client. As a DHCP client, the Aggregator requests an IP address from a DHCP server.

The following types of DHCP commands are described in this chapter:

- DHCP Client Commands
- Other Commands supported by DHCP Client

### DHCP Client Commands

- clear ip dhcp client statistics
- ip address dhcp
- release dhcp interface
- renew dhcp interface
- show ip dhcp client statistics
- show ip dhcp lease

### Other Commands supported by DHCP Client

- debug ip dhcp client events
- debug ip dhcp client packets

Topics:

- Commands to Configure the System to be a DHCP Server
- Commands to Configure the System to be a DHCP Client
- Other Commands Supported by the DHCP Client
- Commands to Configure Secure DHCP

### Commands to Configure the System to be a DHCP Server

To configure the system to be a DHCP server, use the following commands.

**clear ip dhcp**

Reset the DHCP counters.

**Syntax**

```
clear ip dhcp [binding {address} | conflict | server statistics]
```
Parameters

- **binding**: Enter the keyword binding to delete all entries in the binding table.
- **address**: Enter the IP address to clear the binding entry for a single IP address.
- **conflicts**: Enter the keyword conflicts to delete all of the log entries created for IP address conflicts.
- **server statistics**: Enter the keywords server statistics to clear all the server counter information.

Defaults

- **none**

Command Modes

- **EXEC Privilege**

Supported Modes

- **Full-Switch**

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

- Entering <CR> after the `clear ip dhcp binding` command clears all the IPs from the binding table.

### debug ip dhcp server

Display the Dell Networking OS debugging messages for DHCP.

**Syntax**

dump dhcp server [events | packets]

**Parameters**

- **events**: Enter the keyword events to display the DHCP state changes.
- **packet**: Enter the keyword packet to display packet transmission/reception.

**Defaults**

- **none**

**Command Modes**

- **EXEC Privilege**

**Supported Modes**

- **Full-Switch**

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

### debug ipv6 dhcp

To enable debug logs for DHCPv6 relay agent transactions.

**Syntax**

dump ipv6 dhcp

To disable the debug logs for DHCPv6 relay agent transactions, use the `debug ipv6 dhcp` command.

**Defaults**

- **none**

**Command Modes**

- **EXEC Privilege**
default-router

Assign a default gateway to clients based on the address pool.

**Syntax**

```
default-router address [address2...address8]
```

**Parameters**

- `address` Enter a list of routers that may be the default gateway for clients on the subnet. You may specify up to eight routers. List them in order of preference.

**Defaults**

- none

**Command Modes**

DHCP <POOL>

**Supported Modes**

- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>

</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

disable

Disable the DHCP server.

**Syntax**

```
disable
```

DHCP Server is disabled by default. To enable the system to be a DHCP server, use the `no disable` command.

**Defaults**

- Disabled

**Command Modes**

- DHCP

**Supported Modes**

- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>

<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>
**dns-server**

Assign a DNS server to clients based on address pool.

**Syntax**

dns-server address [address2...address8]

**Parameters**

- **address**
  
Enter a list of DNS servers that may service clients on the subnet. You may list up to eight servers, in order of preference.

**Defaults**

none

**Command Modes**

DHCP <POOL>

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>

<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**domain-name**

Assign a domain to clients based on the address pool.

**Syntax**

domain-name name

**Parameters**

- **name**
  
Give a name to the group of addresses in a pool.

**Defaults**

none

**Command Modes**

DHCP <POOL>

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>

</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**excluded-address**

Prevent the server from leasing an address or range of addresses in the pool.

**Syntax**

excluded-address [address | low-address high-address]

**Parameters**

- **address**
  
Enter a single address to be excluded from the pool.

- **low-address**
  
Enter the lowest address in a range of addresses to be excluded from the pool.

- **high-address**
  
Enter the highest address in a range of addresses to be excluded from the pool.
**hardware-address**

For manual configurations, specify the client hardware address.

**Syntax**

```
hardware-address address
```

**Parameters**

- `address` Enter the hardware address of the client.

**Defaults**

none

**Command Modes**

DHCP <POOL>

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**host**

For manual (rather than automatic) configurations, assign a host to a single-address pool.

**Syntax**

```
host address
```

**Parameters**

- `address/mask` Enter the host IP address and subnet mask.

**Defaults**

none

**Command Modes**

DHCP <POOL>

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>
lease

Specify a lease time for the addresses in a pool.

Syntax

```
lease {days [hours] [minutes] | infinite}
```

Parameters

- **days**
  - Enter the number of days of the lease. The range is from 0 to 31.
- **hours**
  - Enter the number of hours of the lease. The range is from 0 to 23.
- **minutes**
  - Enter the number of minutes of the lease. The range is from 0 to 59.
- **infinite**
  - Specify that the lease never expires.

Defaults

- **24 hours**

Command Modes

- **DHCP <POOL>**

Supported Modes

- **Full-Switch**

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>

</tr>
</tbody>
</table>

netbios-name-server

Specify the NetBIOS windows internet naming service (WINS) name servers, in order of preference, that are available to Microsoft dynamic host configuration protocol (DHCP) clients.

Syntax

```
netbios-name-server address [address2...address8]
```

Parameters

- **address**
  - Enter the address of the NETBIOS name server. You may enter up to eight, in order of preference.

Defaults

- none

Command Modes

- **DHCP <POOL>**

Supported Modes

- **Full-Switch**

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>

</tbody>
</table>
**netbios-node-type**

Specify the NetBIOS node type for a Microsoft DHCP client. Dell Networking Operating System (OS) recommends specifying clients as hybrid.

**Syntax**

netbios-node-type type

**Parameters**

- **type**
  - Enter the NETBIOS node type:
    - Broadcast: Enter the keyword b-node.
    - Hybrid: Enter the keyword h-node.
    - Mixed: Enter the keyword m-node.
    - Peer-to-peer: Enter the keyword p-node.

**Defaults**

Hybrid

**Command Modes**

DHCP <POOL>

**Supported Modes**

Full-Switch

**Command History**

### Commands to Configure the System to be a DHCP Client

To configure the system to be a DHCP client, use the following commands.

**ip address dhcp**

Acquire an IP address dynamically on an interface from the DHCP server.

**Syntax**

```
ip address dhcp [relay | vendor-class-identifier]
```

To disable DHCP Client on an interface, use the `no ip address dhcp` command.

**Command Modes**

INTERFACE

**Supported Modes**

All Modes

**Default**

Enabled

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

In the I/O Aggregator, the DHCP client is enabled only on the default VLAN and management interface 0/0. Use the `ip address` command to assign a static IP address that overwrites the dynamically assigned IP address.
Other Commands Supported by the DHCP Client

The following commands are supported by the DHCP client.

**clear ip dhcp client statistics**

Displays DHCP client statistics, including the number of DHCP messages sent and received on an interface.

**Syntax**
clear ip dhcp client statistics interface type slot/port

**Parameters**

- **interface type slot/port**: Clear DHCP client statistics on the specified interface.
  - For the management interface on the stack-unit, enter the keyword managementethernet followed by slot/port information. The slot and port range is 0.
  - For a VLAN, enter the keyword vlan followed by a number from 1 to 4094.

**Command Modes**

- EXEC Privilege

**Supported Modes**

- All Modes

**Default**

- None

**Command History**

<table>
<thead>
<tr>
<th>Version</th>

<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**debug ip dhcp client events**

Enable the display of log messages for the following events on DHCP client interfaces:

- IP address acquisition
- IP address release
- Renewal of IP address and lease time
- Release of an IP address

**Syntax**
debug ip dhcp client events [interface type slot/port]

**Parameters**

- **interface type slot/port**: Display log messages for DHCP packets sent and received on the specified interface.
  - For the management interface on the stack-unit, enter the keyword managementethernet followed by slot/port information. The slot and port range is 0.
  - For a VLAN, enter the keyword vlan followed by a number from 1 to 4094.
debug ip dhcp client packets

Enable the display of log messages for all DHCP packets sent and received on DHCP client interfaces.

Syntax
 debug ip dhcp client packets [interface type slot/port]

Parameters
- interface type slot/port

Display log messages for DHCP packets sent and received on the specified interface.

- For the management interface on the stack-unit, enter the keyword managementethernet followed by slot/port information. The slot and port range is 0.
- For a VLAN, enter the keyword vlan followed by a number from 1 to 4094.

Command Modes
- EXEC Privilege

Supported Modes
- All Modes

Default
- None

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>

<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

release dhcp interface

Release the dynamically-acquired IP address on an Ethernet interface while retaining the DHCP client configuration on the interface.

Syntax
 release dhcp interface type slot/port

Parameters
- interface type slot/port

- For the management interface on the stack-unit, enter the keyword managementethernet followed by slot/port information. The slot and port range is 0.
- For a VLAN, enter the keyword vlan followed by a number from 1 to 4094.

Command Modes
- EXEC Privilege
Supported Modes
- All Modes

Default
None

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information
When you enter the `release dhcp` command, although the IP address that was dynamically-acquired from a DHCP server is released from an interface, the ability to acquire a new DHCP server-assigned address remains in the running configuration for the interface. To acquire a new IP address, enter either the `renew dhcp` command at the EXEC privilege level or the `ip address dhcp` command at the interface configuration level.

renew dhcp interface

Re-acquire a dynamic IP address on an Ethernet interface enabled as a DHCP client.

Syntax
```
renew dhcp interface type slot/port
```

Parameters
- `interface type slot/port`:
  - Enter any of the following keywords and slot/port or number to clear counters from a specified interface:
    - For the management interface on the stack-unit, enter the keyword `managementethernet` followed by slot/port information. The slot and port range is 0.
    - For a VLAN, enter the keyword `vlan` followed by a number from 1 to 4094.

Command Modes
- EXEC Privilege

Supported Modes
- All Modes

Default
None.

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17(0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage information
The `renew dhcp` command is used to renew the lease of IP address obtained through dhcp.

To display the currently configure dynamic IP address and lease time, enter the `show ip dhcp lease` command.
show ip dhcp client statistics
Displays DHCP client statistics, including the number of DHCP messages sent and received on an interface.

Syntax
show ip dhcp client statistics interface type slot/port

Parameters
interface type slot/port  Display DHCP client statistics on the specified interface.

- For the management interface on the stack-unit, enter the keyword managementethernet followed by slot/port information. The slot and port range is 0.
- For a VLAN, enter the keyword vlan followed by a number from 1 to 4094.

Command Modes EXEC Privilege
Supported Modes All Modes
Default None.

Command History
Version       Description
9.9(0.0)       Introduced on the FN IOM.
9.4(0.0)       Supported on the FN I/O Aggregator.
8.3.17.0       Supported on the M I/O Aggregator.

show ip dhcp lease
Displays lease information about the dynamic IP address currently assigned to a DHCP client-enabled interface.

Syntax
show ip dhcp lease[interface type slot/port]

Parameters
interface type slot/port  Display DHCP client statistics on the specified interface.

- For the management interface on the stack-unit, enter the keyword managementethernet followed by slot/port information. The slot and port range is 0.
- For a VLAN, enter the keyword vlan followed by a number from 1 to 4094.

Command Modes EXEC Privilege
Supported Modes All Modes
Default Display DHCP lease information on all DHCP client-enabled interfaces on the switch.

Command History
Version       Description
9.9(0.0)       Introduced on the FN IOM.
9.4(0.0)       Supported on the FN I/O Aggregator.
8.3.17.0       Supported on the M I/O Aggregator.
Commands to Configure Secure DHCP

DHCP, as defined by RFC 2131, provides no authentication or security mechanisms. Secure DHCP is a suite of features that protects networks that use dynamic address allocation from spoofing and attacks.

arp inspection

Enable dynamic arp inspection (DAI) on a VLAN.

Syntax

```
arp inspection
```

Defaults

Disabled

Command Modes

- INTERFACE VLAN

Supported Modes

- Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Related Commands

- `arp inspection-trust` — specifies a port as trusted so that ARP frames are not validated against the binding table.

arp inspection-trust

Specify a port as trusted so that ARP frames are not validated against the binding table.

Syntax

```
arp inspection-trust
```

Defaults

Disabled

Command Modes

- INTERFACE
- INTERFACE PORT-CHANNEL

Supported Modes

- Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>

<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Related Commands

- `arp inspection` — enables dynamic ARP inspection on a VLAN.

clear ip dhcp snooping

Clear the DHCP binding table.

Syntax

```
clear ip dhcp snooping binding
```
clear ipv6 dhcp snooping binding

Clear all the DHCPv6 snooping binding database entries.

Syntax

```
clear ipv6 dhcp snooping binding
```

Defaults

none

Command Modes

EXEC Privilege

Supported Modes

Full-Switch

Command History

Version Description
9.9(0.0) Introduced on the FN IOM.
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Example

```
Dell# clear ipv6 dhcp snooping?
      binding    Clear the snooping binding database
```

ip dhcp snooping

Enable DHCP snooping globally.

Syntax

```
[no] ip dhcp snooping
```

Defaults

Disabled

Command Modes

CONFIGURATION

Supported Modes

Full-Switch

Command History

Version Description
9.9(0.0) Introduced on the FN IOM.
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

When enabled, no learning takes place until you enable snooping on a VLAN. After disabling DHCP snooping, the
binding table is deleted, and Option 82, IP Source Guard, and Dynamic ARP Inspection are disabled.
Introduced in the Dell Networking OS version 7.8.1.0, DHCP snooping was available for Layer 3 only and dependent on DHCP Relay Agent (ip helper-address). The Dell Networking OS version 8.2.1.0 extends DHCP Snooping to Layer 2, and you do not have to enable relay agent to snoop on Layer 2 interfaces.

Related Commands

ip dhcp snooping vlan — enables DHCP snooping on one or more VLANs.

ipv6 dhcp snooping

Enable DHCPv6 snooping globally for ipv6.

Syntax

[no] ipv6 dhcp snooping

To disable the snooping globally, use the no ipv6 dhcp snooping command.

Defaults

Disabled

Command Modes

CONFIGURATION

Supported Modes

Full-Switch

Command History

Version Description

9.9(0.0) Introduced on the FN IOM.

9.7(0.0) Introduced on the MXL.

ip dhcp snooping database

Delay writing the binding table for a specified time.

Syntax

ip dhcp snooping database write-delay minutes

Parameters

minutes The range is from 5 to 21600.

Defaults

none

Command Modes

CONFIGURATION

Supported Modes

Full-Switch

Command History

Version Description

9.9(0.0) Introduced on the FN IOM.

8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

ipv6 dhcp snooping database write-delay

To set time interval for storing the snooping binding entries in a file.

Syntax

[no] ipv6 dhcp snooping database write-delay value
To disable the storing of snooping binding entries in a file, use the `no ipv6 dhcp snooping write-delay` command.

**Parameters**
- **value**
  
  The range is from 5 to 21600. The value of the minutes range is from 5 min. to 15 days.

**Defaults**
- none

**Command Modes**
- CONFIGURATION

**Supported Modes**
- Full-Switch

</tr>
</tbody>
</table>

### ip dhcp snooping binding

Create a static entry in the DHCP binding table.

**Syntax**

```
[no] ip dhcp snooping binding mac address mac-address vlan-id vlan-id ip ip-address interface type slot/port lease number
```

**Parameters**

- **mac address**
  
  Enter the keyword `mac` then the MAC address of the host to which the server is leasing the IP address.

- **vlan-id**
  
  Enter the keyword `vlan-id` then the VLAN to which the host belongs. The range is from 2 to 4094.

- **ip ip-address**
  
  Enter the keyword `ip` then the IP address that the server is leasing.

- **interface type**
  
  Enter the keyword `interface` then the type of interface to which the host is connected:
  - For a Ten-Gigabit Ethernet interface, enter the keyword `tengigabitethernet`.

- **slot/port**
  
  Enter the slot and port number of the interface.

- **lease time**
  
  Enter the keyword `lease` then the amount of time the IP address are leased. The range is from 1 to 4294967295.

**Defaults**
- none

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**
- Full-Switch

**Command History**

<table>
<thead>
<tr>

<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

Allocate at least one FP block to `ipmacacl` before you can enable IP+MAC Source Address Validation.

1. Use the `cam-acl l2acl` command from CONFIGURATION mode.
2. Save the `running-config` to the `startup-config`.
3. Reload the system.

---

### ip dhcp snooping vlan

Enable DHCP Snooping on one or more VLANs.

**Syntax**

```
[no] ip dhcp snooping vlan name
```

**Parameters**

- `name`
  
  Enter the name of a VLAN on which to enable DHCP Snooping.

**Defaults**

Disabled

**Command Modes**

- CONFIGURATION

**Supported Modes**

- Full-Switch
Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>

Equal Cost Multi-Path (ECMP)

Equal cost multi-path (ECMP) is supported on the Dell Networking OS.

**ecmp-group**

Provides a mechanism to monitor traffic distribution on an ECMP link bundle. A system log is generated when the standard deviation of traffic distribution on a member link exceeds a defined threshold.

**Syntax**
```
ecmp-group {ecmp-group-id interface interface | link-bundle-monitor}
```

To remove the selected interface, use the `ecmp-group no interface` command.

To disable link bundle monitoring, use the `ecmp-group no link-bundle-monitor` command.

**Parameters**
- **ecmp-group ID**: Enter the identifier number for the ECMP group. The range is from 2 to 64.
- **interface**: Enter the following keywords and slot/port to add the interface to the ECMP group:
  - 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- **link-bundle-monitor**: Enter the keywords `link-bundle-monitor` to enable link bundle monitoring.

**Defaults**
Off

**Command Modes**

**hash-algorithm**

Changes the hash algorithm used to distribute traffic flows across a Port Channel.

**Syntax**
```
hash-algorithm {algorithm-number | {ecmp {crc16 | crc16cc | crc32MSB | crc32LSB | crc-upper | dest-ip | lsb | xor1 | xor2 | xor4 | xor8 | xor16} [number] lag
  {checksum | crc | xnor} [number] nh-ecmp {checksum | crc | xnor}[number] linecard
  number ip-sa-mask value ip-da-mask value | seed seed-value | hash-algorithm
  {ecmp {crc16 | crc16cc | crc32MSB | crc32LSB | crc-upper | dest-ip | flow-based-hashing {crc16|crc16cc|crc32MSB|crc32LSB|xor1|xor2|xor4|xor8|xor16}|1sb |}
```

460 | Equal Cost Multi-Path (ECMP)
xor1 | xor2 | xor4 | xor8 | xor16)\{(hg (crc16 | crc16cc | crc32MSB | crc32LSB | crc16 | xor2 | xor4 | xor8 | xor16))\} [lag (crc16 | crc16cc | crc32MSB | crc32LSB | xor1 | xor2 | xor4 | xor8 | xor16 )\} [stack-unit|linecard number | port-set number] | [hg—seed value] | [seedvalue]

To return to the default hash algorithm, use the no hash-algorithm command.

To return to the default ECMP hash algorithm, use the no hash-algorithm ecmp algorithm-value command.

To remove the hash algorithm on a particular stack-unit / line-card, use the no hash-algorithm linecard number command.

**Parameters**

- **algorithm-number**
  - Enter the algorithm number. The range is from 0 to 47.
  - TeraScale and ExaScale Only: Enter the keyword ecmp then one of the following options:
    - crc16: Use CRC16_BISYNC — 16 bit CRC16-bisync polynomial (default)
    - crc16cc: Use CRC16_CCITT — 16 bit CRC16 using CRC16-CCITT polynomial
    - crc32MSB: Use CRC32_UPPER — MSB 16 bits of computed CRC32
    - crc32LSB: Use CRC32_LOWER — LSB 16 bits of computed CRC32
    - crc-upper: Uses the upper 32 bits of the key for the hash computation
    - dest-ip: Uses the destination IP for ECMP hashing
    - lsb: Returns the LSB of the key as the hash
    - xor1: Use CRC16_BISYNC_AND_XOR1 — Upper 8 bits of CRC16-BISYNC and lower 8 bits of xor1
    - xor2: Use CRC16_BISYNC_AND_XOR2 — Upper 8 bits of CRC16-BISYNC and lower 8 bits of xor2
    - xor4: Use CRC16_BISYNC_AND_XOR4 — Upper 8 bits of CRC16-BISYNC and lower 8 bits of xor4
    - xor8: Use CRC16_BISYNC_AND_XOR8 — Upper 8 bits of CRC16-BISYNC and lower 8 bits of xor8
    - xor16: Use CR16 — 16 bit XOR

- **lag hash algorithm value**
  - Enter the keyword lag then the LAG hash algorithm value. The range is from 0 to 47.

- **nh-ecmp hash algorithm value**
  - (OPTIONAL) Enter the keyword nh-ecmp then the ECMP hash algorithm value.

- **linecard number**
  - (OPTIONAL) Enter the keyword linecard then the linecard slot number.

- **ip-sa-mask value**
  - (OPTIONAL) Enter the keywords ip-sa-mask then the ECMP/LAG hash mask value. The range is from 0 to FF. The default is FF.

- **ip-da-mask value**
  - (OPTIONAL) Enter the keywords ip-da-mask then the ECMP/LAG hash mask value. The range is from 0 to FF. The default is FF.

- **ecmp crc16 | crc16cc | crc32MSB | crc32LSB | crc-upper | dest-ip | flow-based-hashing | crc16|crc16cc | crc32MSB | crc32LSB|xor1 |
  - Enter the keyword ecmp then one of the following options:
    - crc16: Use CRC16_BISYNC — 16 bit CRC16-bisync polynomial (default)
    - crc16cc: Use CRC16_CCITT — 16 bit CRC16 using CRC16-CCITT polynomial
    - crc32MSB: Use CRC32_UPPER — MSB 16 bits of computed CRC32
    - crc32LSB: Use CRC32_LOWER — LSB 16 bits of computed CRC32
    - crc-upper: Uses the upper 32 bits of the key for the hash computation
    - dest-ip: Uses the destination IP for ECMP hashing
    - flow-based-hashing: Enter the keywords flow-based-hashing followed by the algorithm

Equal Cost Multi-Path (ECMP) | 461
xor2 | xor4 | xor8 | xor16 | lsb | xor1 | xor2 | xor4 | xor8 | xor16

- lsb: Returns the LSB of the key as the hash
- xor1: Use CRC16_BISYNC_AND_XOR1 — Upper 8 bits of CRC16-BISYNC and lower 8 bits of xor1
- xor2: Use CRC16_BISYNC_AND_XOR2 — Upper 8 bits of CRC16-BISYNC and lower 8 bits of xor2
- xor4: Use CRC16_BISYNC_AND_XOR4 — Upper 8 bits of CRC16-BISYNC and lower 8 bits of xor4
- xor8: Use CRC16_BISYNC_AND_XOR8 — Upper 8 bits of CRC16-BISYNC and lower 8 bits of xor8
- xor16: Use CR16 — 16 bit XOR

hg (crc16 | crc16cc | crc32MSB | crc32LSB | xor1 | xor2 | xor4 | xor8 | xor16)

Enter the keyword hg then one of the following options available in the stack-unit and linecard provisioned devices:

- crc16: Use CRC16_BISYNC — 16 bit CRC16-bisync polynomial (default)
- crc16cc: Use CRC16_CCITT — 16 bit CRC16 using CRC16-CCITT polynomial
- crc32MSB: Use CRC32_UPPER — MSB 16 bits of computed CRC32
- crc32LSB: Use CRC32_LOWER — LSB 16 bits of computed CRC32
- xor1: Use CRC16_BISYNC_AND_XOR1 — Upper 8 bits of CRC16-BISYNC and lower 8 bits of xor1
- xor2: Use CRC16_BISYNC_AND_XOR2 — Upper 8 bits of CRC16-BISYNC and lower 8 bits of xor2
- xor4: Use CRC16_BISYNC_AND_XOR4 — Upper 8 bits of CRC16-BISYNC and lower 8 bits of xor4
- xor8: Use CRC16_BISYNC_AND_XOR8 — Upper 8 bits of CRC16-BISYNC and lower 8 bits of xor8
- xor16: Use CR16 — 16 bit XOR

lag (crc16 | crc16cc | crc32MSB | crc32LSB | xor1 | xor2 | xor4 | xor8 | xor16)

Enter the keyword hg then one of the following options available in the stack-unit and linecard provisioned devices:

- crc16: Use CRC16_BISYNC — 16 bit CRC16-bisync polynomial (default)
- crc16cc: Use CRC16_CCITT — 16 bit CRC16 using CRC16-CCITT polynomial
- crc32MSB: Use CRC32_UPPER — MSB 16 bits of computed CRC32
- crc32LSB: Use CRC32_LOWER — LSB 16 bits of computed CRC32
- xor1: Use CRC16_BISYNC_AND_XOR1 — Upper 8 bits of CRC16-BISYNC and lower 8 bits of xor1
- xor2: Use CRC16_BISYNC_AND_XOR2 — Upper 8 bits of CRC16-BISYNC and lower 8 bits of xor2
- xor4: Use CRC16_BISYNC_AND_XOR4 — Upper 8 bits of CRC16-BISYNC and lower 8 bits of xor4
- xor8: Use CRC16_BISYNC_AND_XOR8 — Upper 8 bits of CRC16-BISYNC and lower 8 bits of xor8
- xor16: Use CR16 — 16 bit XOR

hg-seed seed-value

(This option is available in stack-unit and linecard provisioned devices): Enter the keywords hg-seed then the hash algorithm seed value. The range is from 0 to 2147483646.

stack-unit number

(OPTIONAL) : Enter the keyword stack-unit then the stack-unit slot number.
linecard number  (OPTIONAL) : Enter the keyword linecard then the linecard slot number.

port-set number  (OPTIONAL) Enter the keyword port-set then the port-set slot number.

Defaults

0 for hash-algorithm value on TeraScale and ExaScale IPSA and IPDA mask value is FF for a line card.

Command Modes

CONFIGURATION

Supported Modes

Full-Switch

Command History

Version Description

9.9(0.0)     Introduced on the FN IOM. Added flow-based-hashing support for hashing on ECMP.

9.2(0.0)     Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

To ensure that CRC is not used for LAG, set the default hash-algorithm method on ExaScale systems. For example, hash-algorithm ecmp xor lag checksum nh-ecmp checksum.

To achieve the functionality of hash-align on the ExaScale platform, do not use CRC as a hash-algorithm method.

The hash value calculated with the hash-algorithm command is unique to the entire chassis. The hash algorithm command with the line card option changes the hash for a particular line card by applying the mask specified in the IPSA and IPDA fields.

The line card option is applicable with the lag-hash-align microcode only (refer to CAM Profile Commands). Any other microcode returns an error message as follows:

Dell(conf)#hash-algorithm linecard 5 ip-sa-mask ff ip-da-mask ff
% Error: This command is not supported in the current microcode configuration

In addition, the linecard number ip-sa-mask value ip-da-mask value option has the following behavior to maintain bi-directionality:

- When hashing is done on both IPSA and IPDA, the ip-sa-mask and ip-da-mask values must be equal. (Single Linecard).
- When hashing is done only on IPSA or IPDA, the Dell Networking OS maintains bi-directionality with masks set to XX 00 for line card 1 and 00 XX for line card 2 (ip-sa-mask and ip-da-mask). The mask value must be the same for both line cards when using multiple line cards as ingress (where XX is any value from 00 to FF for both line cards). For example, assume that traffic is flowing between linecard 1 and linecard 2:

  - hash-algorithm linecard 1 ip-sa-mask aa ip-da-mask 00
  - hash-algorithm linecard 2 ip-sa-mask 00 ip-da-mask aa

The different hash algorithms are based on the number of Port Channel members and packet values. The default hash algorithm (number 0) yields the most balanced results in various test scenarios, but if the default algorithm does not provide a satisfactory distribution of traffic, use the hash-algorithm command to designate another algorithm.

When a Port Channel member leaves or is added to the Port Channel, the hash algorithm is recalculated to balance traffic across the members.

On TeraScale, if you do not enter the keyword ECMP or LAG, the Dell Networking OS assumes it to be common for both. If the keyword ECMP or LAG is entered separately, both should fall in the range of 0 to 23 or 24 to 47 since compression enable/disable is common for both TeraScale and ExaScale support the range 0-47. The default for ExaScale is 24.
hash-algorithm ecmp

Change the hash algorithm used to distribute traffic flows across an ECMP (equal-cost multipath routing) group.

Syntax
hash-algorithm ecmp {crc-upper} | {dest-ip} | {lsb}
To return to the default hash algorithm, use the no hash-algorithm ecmp command.

Parameters
- crc-upper
  Uses the upper 32 bits of the key for the hash computation. The default is crc-lower.
- dest-ip
  Uses the destination IP for ECMP hashing. The default is enabled.
- lsb
  Returns the LSB of the key as the hash. The default is crc-lower.

Defaults
- crc-lower
- dest-ip enabled

Command Modes
- CONFIGURATION

Supported Modes
- Full-Switch

Command History
- Version 9.9(0.0) Introduced on the FN IOM.
- Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
The hash value calculated with the hash-algorithm command is unique to the entire chassis. The default ECMP hash configuration is crc-lower. This command takes the lower 32 bits of the hash key to compute the egress port and is the “fall-back” configuration if you have not configured anything else.

The different hash algorithms are based on the number of ECMP group members and packet values. The default hash algorithm yields the most balanced results in various test scenarios, but if the default algorithm does not provide satisfactory distribution of traffic, use this command to designate another algorithm.

When a member leaves or is added to the ECMP group, the hash algorithm is recalculated to balance traffic across the members.

hash-algorithm seed

Select the seed value for the ECMP, LAG, and NH hashing algorithm.

Syntax
hash-algorithm seed value [linecard slot] [port-set number]

Parameters
- seed value
  Enter the keyword seed then the seed value. The range is from 0 to 4095.
- linecard slot
  Enter the keyword linecard then the linecard slot number.
- port-set number
  Enter the keywords port-set then the linecard port-pipe number.

Defaults
- none

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MxL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

Deterministic ECMP sorts ECMPs in order even though RTM provides them in a random order. However, the hash algorithm uses as a seed the lower 12 bits of the chassis MAC, which yields a different hash result for every chassis. This behavior means that for a given flow, even though the prefixes are sorted, two unrelated chassis select different hops.

The Dell Networking OS provides a CLI-based solution for modifying the hash seed to ensure that on each configured system, the ECMP selection is same. When configured, the same seed is set for ECMP, LAG, and NH, and is used for incoming traffic only.

**NOTE:** While the seed is stored separately on each port-pipe, the same seed is used across all CAMs. You cannot separate LAG and ECMP but you can use different algorithms across the chassis with the same seed. If LAG member ports span multiple port-pipes and line cards, set the seed to the same value on each port-pipe to achieve deterministic behavior.

If the hash algorithm configuration is removed, the hash seed does not go to the original factory default setting.

---

**ip ecmp-group**

Enable and specify the maximum number of ecmp that the L3 CAM hold for a route. By default, when maximum paths are not configured, the CAM can hold a maximum of 16 ecmp per route.

**Syntax**

```
ip ecmp-group {maximum-paths | {number} {path-fallback}}
```

To negate a command, use the `no ip ecmp-group maximum-paths` command.

**Parameters**

- **maximum-paths**  
  Specify the maximum number of ECMP for a route. The range is 2 to 64.

- **path-fallback**  
  Use the keywords `path-fallback` to enable this feature. If you enable the feature, re-enter this keyword to disable the feature.

**Defaults**

16

**Usage Information**

You must save the new ECMP settings to the startup-config (`write-mem`) then reload the system for the new settings to take effect.

**Related Commands**

- `show ip cam stack-unit` — Display content-addressable memory (CAM) entries.
link-bundle-distribution trigger-threshold

Provides a mechanism to set the threshold to trigger when traffic distribution begins being monitored on an ECMP link bundle.

**Syntax**

```
link-bundle-distribution trigger-threshold [percent]
```

**Parameters**

`percent` Indicate the threshold value when traffic distribution starts being monitored on an ECMP link bundle. The range is from 1 to 90%. The default is **60%**.

Te 0/3    Up            30
```
The switch is a blade switch which is plugged into the Dell M1000 Blade server chassis. The blade module contains two slots for pluggable flexible module. With single FC Flex I/O module, 4 ports are supported, whereas 8 ports are supported with both FC Flex I/O modules. Each port can operate in 2G, 4G or 8G Fiber Channel speed. The topology-wise, FC Flex IOM is directly connected to a FC Storage. In the following topology, the FC flex IOM model offers local connectivity without a SAN switch or fabric.

Topics:
- feature fc
- fc zone
- fc alias
- fc zoneset
feature fc

Enable feature fc with FPort functionality.

Syntax

```
feature fc fport domain-id range
```

Parameters

```
Range
```
Enter the range from 1 to 239.

</tbody>
</table>

Usage Information

Enable remote-fault-signaling rx off command in FCF FPort mode on interfaces connected to the Compellent and MDF storage devices.

Example

```
Dell(conf)#feature fc fport domain-id
```

fc zone

Create a zone.

Syntax

```
fcc zone zonename member
```

To delete a zone, use the no fc zone zonename member command.

Parameters

```
zonename
```
Enter the zone name.

```
member
```
Enter the WWPN, port ID, or domain/port.

Command History

Version Description

9.9(0.0) Introduced on the FN IOM.
9.7(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
9.1(1.0) Introduced on the S5000.

Example

```
Dell(conf)#fc zoneset test1
Dell(conf-fc-zoneset-test1)#member
Dell(conf-fc-zoneset-test1)#member ?
WORD                Zone Name
Dell(conf-fc-zoneset-test1)#member
```

Related Commands

- `show fc zoneset` — displays the configured and active zoneset.
- `show fcoe-map` — displays the fabric parameters.

**fcoe-map**

Create an FCoE map which contains the parameters used to configure the links between server CNAs and a SAN fabric. Apply the FCoE map on a server-facing Ethernet port.

Syntax

```
fcoe-map map-name
```

Parameters

- `map-name` Maximum: 32 alphanumeric characters.

Defaults

None

Command Modes

- CONFIGURATION
- INTERFACE

Supported Modes

- Full-Switch
An FCoE map is a template used to map FCoE and FC parameters in a converged fabric. An FCoE map virtualizes upstream FC ports on an NPIV proxy gateway to appear to downstream server CNA ports as FCoE forwarder (FCF) ports on an FCoE network. When applied to FC and Ethernet ports on an NPIV proxy gateway, an FCoE map allows the switch to operate as an FCoE-FC bridge between an FC SAN and an FCoE network. It provides necessary parameters to FCoE-enabled servers and switches to log in to a SAN fabric.

On an FN IOM NPIV proxy gateway, an FCoE map is applied on fabric-facing FC ports and server-facing Ethernet ports. Use the `fcoe-map` command to apply an FCoE map on an Ethernet port. Use the `fabric` command to apply an FCoE map on an FC port.

An FCoE map consists of the following parameters: the dedicated FCoE VLAN for storage traffic, the destination SAN fabric (FC-MAP value), FCF priority, and the FIP keepalive (FKA) advertisement timeout.

To remove an FCoE map from an Ethernet interface, enter the `no fcoe-map map-name` command in Interface configuration mode.

**NOTE:** In FCF F mode, you can create only 1 FCoE map. It doesn't get created automatically. If you try to create more than 1 map, an error message is displayed.

**Related Commands**

- `show fcoe-map` — displays the Fibre Channel and FCoE configuration parameters in FCoE maps.

---

**fabric**

Apply an FCoE map on a fabric-facing Fibre Channel (FC) port.

**Syntax**

`fabric map-name`

**Parameters**

- `map-name` Maximum: 32 alphanumeric characters.

**Defaults**

None

**Command Modes**

INTERFACE FIBRE_CHANNEL

**Usage Information**

An FCoE map is a template used to map FCoE and FC parameters in a converged fabric. An FCoE map virtualizes the upstream FC ports on an NPIV proxy gateway to appear to downstream server CNA ports as FCoE forwarder (FCF) ports on an FCoE network. When applied to FC and Ethernet ports on an NPIV proxy gateway, an FCoE
map allows the switch to operate as an FCoE-FC bridge between an FC SAN and an FCoE network. It provides necessary parameters to FCoE-enabled servers and switches to log in to a SAN fabric. Use the `fcoe-map` command to create an FCoE map.

On an FN IOM NPIV proxy gateway, an FCoE map is applied on fabric-facing FC ports and server-facing Ethernet ports. Use the `fabric` command to apply an FCoE map on an FC port. Use the `fcoe-map` command to apply an FCoE map on an Ethernet port.

After you apply an FCoE map on an FC interface, when the port is enabled (no shutdown), the NPIV proxy gateway starts sending FIP multicast advertisements on behalf of the FC port to downstream servers to advertise the availability of a new FCF port on the FCoE VLAN.

To remove an FCoE map from an FC interface, enter the `no fabric map-name` command in Interface configuration mode.

**Related Commands**

- `fcoe-map` — creates an FCoE map which contains the parameters used in the communication between servers and a SAN fabric.
- `show fcoe-map` — displays the Fibre Channel and FCoE configuration parameters in FCoE maps.

```active-zoneset
Activate the zoneset.

**Syntax**

```active-zoneset zoneset_name```

To change to the default zone behavior, use the `no active-zoneset zoneset_name` command.

**Parameters**

- `zoneset_name` Enter the zoneset name.

**Command Modes**

FC FABRIC CONFIGURATION

**Supported Modes**

Full-Switch

**Command History**

**Example**

```
Dell(conf)# fcoe-map default_full_fabric
Dell(conf-fcoe-default_full_fabric)# fc-fabric
Dell(conf-fmap-default_full_fabric-fcfabric)# active-zoneset zsl
```

**Related Commands**

- `show fc zoneset` — displays the configured and active zoneset.
stack-unit port-group port portmode

Convert the external ports to Fibre Channel or Ethernet mode.

**Syntax**

```
stack-unit unit number port-group 0-1 port 9-12 portmode {ethernet | fc}
```

**Parameters**

- `stack-unit` Enter the keywords `stack-unit` then the stack member number to select the stack unit. The range is from 0 to 5.
- `port-group` Enter the keywords `port-group` then the port group number. The range is from 0 to 1.
- `port` Enter the keyword `port` then the port number. The range is from 9 to 12. The port numbers 9 to 10 map to port-group 0 and the port numbers 11 to 12 map to port-group 1.
- `portmode` Enter the keyword `portmode` to set the port mode. The options are:
  - `ethernet` – convert to Ethernet mode.
  - `fc` – convert to Fibre Channel mode.

**Defaults**

Ports 9, 10 – Fibre Channel mode

Ports 11, 12 – Ethernet mode

**Command Modes**

---

**show fc ns**

Display the devices in the name server database.

**Syntax**

```
show fc ns { switch } [brief]
```

**Parameters**

- `switch` Enter the keyword `switch` to display all the devices in the name server database of the switch.
- `brief` Enter the keyword `brief` to display in brief devices in the name server database.

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

| Switch WWN | Factory-assigned worldwide node (WWN) name of the MXL. The MXL WWN name is not user-configurable. |

#### Example

```
Dell(conf)#do show fc switch
Switch Mode : FPORT
Switch WWN  : 10:00:aa:00:00:00:00:ac
Dell(conf)#
```
show fc zoneset

Display the configured and active zoneset.

Syntax

```
show fc zoneset [ zoneset_name | active ]
```

Parameters

- `zoneset_name`  Enter the zoneset name to display the zoneset name
- `active`  Enter the keyword `active` to display the active zonesets.
- `merged`  Enter the keyword `merged` to display the merge active zones.

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

<tr>
<td>9.1(1.0)</td>
<td>Introduced on the S5000.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell# show fc zone
ZoneName                        ZoneMember
-----------------------------------------------
brcd_sanb                      
brcd_cna1_wwpn1
sanb_p2tgt1_wwpn
Dell#
```

**Related Commands**

- `fc zone` — creates a zone.

**show fc alias**

Display the configured alias.

**Syntax**

```
show fc alias [ZoneAliasName ]
```

**Parameters**

- `ZoneAliasName` Enter the zone alias name to display the details.

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

Full-Switch
show fcoe-map

Display the Fibre Channel and FCoE configuration parameters in FCoE maps.

**Syntax**
```
show fcoe-map
```

**Parameters**
None

**Command Modes**
- EXEC
- EXEC Privilege

**Supported Modes**
Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
<tr>
<td>9.1.1.0</td>
<td>Introduced on the S5000.</td>
</tr>
</tbody>
</table>

**Usage Information**

Use the `show fcoe-map` command to display the FC and FCoE parameters used to configure server-facing Ethernet (FCoE) and fabric-facing FC ports in all FCoE maps on the switch.

In each FCoE map, the values for the fabric ID and FC-MAP that identify the SAN fabric to which FC storage traffic is sent, and the FCoE VLAN to be used must be unique.

An FCoE map is used to identify the SAN fabric to which FCoE storage traffic is sent. It also virtualizes the switch with FC Flex IO module FC ports, so that they appear to downstream server CNA ports as FCoE Forwarder (FCF) ports on an FCoE network.

**Example**
```
Dell#show system stack-unit 0 iom-mode
Unit   Boot-Mode   Next-Boot
-----------------------------------------------
0       standalone  standalone

Dell#show fcoe-map

Fabric Name       SAN_FABRIC
Fabric Type       npiv
Fabric Id         1002
```
### show system stack-unit port-group portmode

Display the port-group port mode information.

**Syntax**

```
show system stack-unit unit-number port-group portmode
```

**Parameters**

- `stack-unit unit-number`
  
Enter the keywords `stack-unit` then the unit number. The range is from 0 to 11.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.11(0.0)</td>
<td>Included support for all external ports.</td>

</tr>
<tr>
<td>1</td>
<td>12</td>
<td>FC</td>
<td>FC</td>
</tr>
</tbody>
</table>

Dell#
```

**Related Commands**

- `stack-unit port-group port portmode` — converts the external ports to Fibre Channel or Ethernet mode.
To configure federal information processing standards (FIPS) cryptography, use the following commands on the switch.

Topics:

• fips mode enable
• show fips status
• show ip ssh
• ssh

**fips mode enable**

Enable the FIPS cryptography mode on the platform.

**Syntax**

```
fips mode enable
```

To disable the FIPS cryptography mode, use the `no fips mode enable` command.

**Default**

Disabled

**Command Modes**

CONFIGURATION

</tr>
</tbody>
</table>

Example

Dell#show ip ssh
SSH server                               : enabled.
SSH server version                       : v1 and v2.
Password Authentication                  : enabled.
Hostbased Authentication: disabled.
RSA Authentication                       : disabled.
Vty    Encryption  HMAC       Remote IP
1      3des-cbc    hmac-md5  10.1.20.48
2      3des-cbc    hmac-md5  10.1.20.48

With FIPS Mode enabled:

Dell#show ip ssh
SSH server                               : enabled.
SSH server version                       : v2.
Password Authentication                  : enabled.
Hostbased Authentication: disabled.
RSA Authentication                       : disabled.
Vty    Encryption  HMAC       Remote IP
0      aes128-cbc  hmac-shal  10.11.8.13
1      aes128-cbc  hmac-shal  10.1.20.48
Open an SSH connection specifying the hostname, username, port number, and version of the SSH client.

**Syntax**
```
ssh {hostname | ipv4 address | ipv6 address} [-c encryption cipher | -l username | -m HMAC algorithm | -p port-number | -v {1|2}]
```

**Parameters**
- **hostname**
  (OPTIONAL) Enter the IP address or the hostname of the remote device.

- **ipv4 address**
  (OPTIONAL) Enter the IP address in dotted decimal format A.B.C.D.

- **ipv6 address prefix-length**
  (OPTIONAL) Enter the IPv6 address in the x::x::x format then the prefix length in the /x format. The range is from /0 to /128

  **NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

- **-c encryption cipher**
  Enter the following encryption cipher to use. (For v2 clients only.) Without the FIPS mode enabled:
  - `3des-cbc`: Force ssh to use 3des-cbc encryption cipher.
  With the FIPS mode enabled:
  - `aes128-cbc`: Force ssh to use the aes128-cbc encryption cipher.
  - `aes256-cbc`: Force ssh to use the aes256-cbc encryption cipher.

- **-l username**
  (OPTIONAL) Enter the keyword `-l` then the username used in this SSH session. The default is the user name of the user associated with the terminal.

- **-m HMAC algorithm**
  Enter one of the following HMAC algorithms to use. (For v2 clients only.): Without the FIPS mode enabled:
  - `hmac-sha1`: Force ssh to use the hmac-sha1 HMAC algorithm.
  - `hmac-sha1-96`: Force ssh to use the hmac-sha1-96 HMAC algorithm.
  - `hmac-md5`: Force ssh to use the hmac-md5 HMAC algorithm.
  - `hmac-md5-96`: Force ssh to use the hmac-md5-96 HMAC algorithm.
  With the FIPS mode enabled:
  - `hmac-sha1`: Force ssh to use the hmac-sha1 HMAC algorithm.
  - `hmac-sha1-96`: Force ssh to use the hmac-sha1-96 HMAC algorithm.

- **-p port-number**
  (OPTIONAL) Enter the keyword `-p` then the port number.
  The range is 1 to 65536.
  The default is 22.

- **-v {1|2}**
  (OPTIONAL) Enter the keyword `-v` then the SSH version 1 or 2.
  The default: The version from the protocol negotiation.

  **NOTE:** If the FIPS mode is enabled, this option does not display in the output.

**Defaults**
As indicated above.
Example

If FIPS mode is not enabled:

Dell#ssh 10.11.8.12 ?
-c Encryption cipher to use (for v2 client
-l User name option
-m HMAC algorithm to use (for v2 clients only)
-p SSH server port option (default 22)
-v SSH protocol version
<cr>
Dell#ssh 10.11.8.12 -c ?
3des-cbc Force ssh to use 3des-cbc encryption cipher
Dell#ssh 10.11.8.12 -m ?
hmac-shal Force ssh to use hmac-shal HMAC algorithm
hmac-shal-96 Force ssh to use hmac-shal-96 HMAC algorithm
hmac-md5 Force ssh to use hmac-md5 HMAC algorithm
hmac-md5-96 Force ssh to use hmac-md5-96 HMAC algorithm

With FIPS mode enabled:

Dell#ssh 10.11.8.12 ?
-c Encryption cipher to use (for v2 client
-l User name option
-m HMAC algorithm to use (for v2 clients only)
-p SSH server port option (default 22)
<cr>
Dell#ssh 10.11.8.12 -c ?
aes128-cbc Force ssh to use aes128-cbc encryption cipher
aes256-cbc Force ssh to use aes256-cbc encryption cipher
Dell#ssh 10.11.8.12 -m ?
hmac-shal Force ssh to use hmac-shal HMAC algorithm
hmac-shal-96 Force ssh to use hmac-shal-96 HMAC algorithm
In a converged Ethernet network, an Aggregator can operate as an intermediate Ethernet bridge to snoop on Fibre Channel over Ethernet Initialization Protocol (FIP) packets during the login process on Fibre Channel over Ethernet (FCoE) forwarders (FCFs). Acting as a transit FIP snooping bridge, the switch uses dynamically-created ACLs to permit only authorized FCoE traffic to be transmitted between an FCoE end-device and an FCF.

This chapter describes the FIP snooping commands.

Topics:
- clear fip-snooping database interface vlan
- show fip-snooping statistics
- debug fip-snooping
- show fip-snooping config
- show fip-snooping enode
- show fip-snooping fcf
- show fip-snooping sessions
- show fip-snooping statistics
- show fip-snooping system
- show fip-snooping vlan

**clear fip-snooping database interface vlan**

Clear FIP snooping information on a VLAN for a specified FCoE MAC address, ENode MAC address, or FCF MAC address, and remove the corresponding ACLs FIP snooping generates.

**Syntax**
```
clear fip-snooping database interface vlan vlan-id {fcoe-mac-address | enode-mac-address | fcf-mac-address}
```

**Parameters**
- `fcoe-mac-address` - Enter the FCoE MAC address to be cleared of FIP snooping information.
- `enode-mac-address` - Enter the ENode MAC address to be cleared of FIP snooping information.
- `fcf-mac-address` - Enter the FCF MAC address to be cleared of FIP snooping information.

**Command Modes**
EXEC Privilege

</tr>
</tbody>
</table>
clear fip-snooping statistics

Clear the statistics on the FIP packets snooped on all VLANs, a specified VLAN, or a specified port interface.

**Syntax**
clear fip-snooping statistics [interface vlan vlan-id | interface port-type port/slot | interface port-channel port-channel-number]

**Parameters**
- **vlan-id**: Enter the VLAN ID of the FIP packet statistics to be cleared.
- **port-type port/slot**: Enter the port-type and slot number of the FIP packet statistics to be cleared.
- **port-channel-number**: Enter the port channel number of the FIP packet statistics to be cleared.

**Command Modes**
EXEC Privilege

</table>
### fip-snooping enable

Enable FIP snooping on all VLANs or on a specified VLAN.

#### Syntax

`fip-snooping enable`

To disable the FIP snooping feature on all or a specified VLAN, use the `no fip-snooping enable` command.

#### Defaults

FIP snooping is disabled on all VLANs.

#### Command Modes

- `CONFIGURATION`
- `VLAN INTERFACE`

#### Supported Modes

Programmable-Mux (PMUX)
- Full-Switch

#### Command History

<table>

</tr>
</tbody>
</table>

#### Usage Information

The maximum number of FCFs supported per FIP snooping-enabled VLAN is four. The maximum number of FIP snooping sessions supported per ENode server is 16.

### fip-snooping fc-map

Configure the FC-MAP value FIP snooping uses on all VLANs.

#### Syntax

`fip-snooping fc-map fc-map-value`

To return the configured FM-MAP value to the default value, use the `no fip-snooping fc-map` command.

#### Parameters

- `fc-map-value` Enter the FC-MAP value FIP snooping uses. The range is from 0EFC00 to 0EFCFF.

#### Defaults

0x0EFC00

#### Command Modes

- `CONFIGURATION`
- `VLAN INTERFACE`

#### Supported Modes

Programmable-Mux (PMUX)

**fip-snooping port-mode fcf**

Configure the port for bridge-to-FCF links.

Syntax: `fip-snooping port-mode fcf`

To disable the bridge-to-FCF link on a port, use the `no fip-snooping port-mode fcf` command.

Command Modes: INTERFACE

Supported Modes: Programmable-Mux (PMUX)

Full-Switch

</tbody>
</table>

Usage Information: The maximum number of FCFs supported per FIP snooping-enabled VLAN is four.

**show fip-snooping statistics**

Displays statistics on the FIP packets snooped on all interfaces, including VLANs, physical ports, and port channels.

Syntax: `show fip-snooping statistics [interface vlan vlan-id | interface port-type port/slot | interface port-channel port-channel-number]`

Parameters:
- `vlan-id`: Enter the VLAN ID of the FIP packet statistics to be displayed.
- `port-type port/slot`: Enter the port-type and slot number of the FIP packet statistics to be displayed.
- `port-channel-number`: Enter the port channel number of the FIP packet statistics to be displayed.

Command Modes:
- EXEC
- EXEC Privilege

dbg fip-snooping

Enable the debug FIP protocol specific messages.

Syntax
dbg fip-snooping [all | acl | error | ifm | info | ipc | rx { packet-type
{ all | discovery | virtual-link-instantiation | virtual-link-maintenance |
vlan-discovery } { port-channel | tengigabitethernet } ] | tx ]

Parameters

- all: Enable all the debug options.
- acl: Enable for ACL specific debugs.
- error: Enable for Error specific debugs.
- ifm: Enable for IFM specific debugs.
- info: Enable for Information specific debugs.
- ipc: Enable for IPC specific debugs.
- rx: Enable for packet receive specific debugs.
- packet-type: Specify the packet type. Options are:
  - all
  - discovery
  - virtual-link-instantiation
  - virtual-link-maintenance
  - vlan-discovery
- all: Enable for all the packet types.
- discovery: Enable for FIP discovery solicits (enodes) and adverts (fcf).
virtual-link-instantiation
Enable for flogi, fdisc and flogo packets.

virtual-link-maintenance
Enable for clear virtual link and keepalive packets.

vlan-discovery
Enable for FIP VLAN requests and notifications.

port-channel
Port-channel interface.

tengigabitethernet
TenGigabit Ethernet interface.

tax
Enable for packet transmit specific debugs.

Command Modes
EXEC Privilege

Supported Modes
All Modes

Command History
Version Description
9.4(0.0) Supported on the FN I/O Aggregator.

show fip-snooping config
Displays the FIP snooping status and configured FC-MAP values.

Syntax
show fip-snooping config

Command Modes
- EXEC
- EXEC Privilege

Supported Modes
All Modes

Command History
Version Description
9.9(0.0) Introduced on the FN IOM.
9.4(0.0) Supported on the FN I/O Aggregator.
8.3.17.0 Supported on the M I/O Aggregator.

Example

show fip-snooping enode
Displays information on the ENodes in FIP-snooped sessions, including the ENode interface and MAC address, FCF MAC address, VLAN ID, and FC-ID.

Syntax
show fip-snooping enode [enode-mac-address]

Parameters
enode-mac-address Enter the MAC address of the ENodes to be displayed.

Command Modes
- EXEC
show fip-snooping enode

Displays information on ENodes in FIP-snooped sessions, including the ENodes connected.

Syntax
show fip-snooping enode

Parameters

Usage Information
The following table describes the show fip-snooping enode command.

Field | Description
--- | ---
ENode MAC | MAC address of the ENodes
ENode Interface | Slot/ port number of the interface connected to the ENodes.
FCF MAC | MAC address of the FCF
VLAN | VLAN ID number used by the session
FC-ID | Fibre Channel session ID assigned by the FCF.

Example
Dell# show fip-snooping enode
Enode MAC Enode Interface FCF MAC
-------------- -------------- -------
---- ------ -------------- -------
54:7f:ee:37:34:40 100 62:00:11

show fip-snooping fcf

Displays information on the FCFs in FIP-snooped sessions, including the FCF interface and MAC address, FCF interface, VLAN ID, FC-MAP value, FKA advertisement period, and number of ENodes connected.

Syntax
show fip-snooping fcf [fcf-mac-address]

Parameters
fcf-mac-address Enter the MAC address of the FCF to be displayed.

Command Modes
EXEC
EXEC Privilege

Supported Modes
All Modes

Command History
Version Description
9.9(0.0) Introduced on the FN IOM.
9.4(0.0) Supported on the FN I/O Aggregator.
8.3.17.0 Supported on the M I/O Aggregator.

Usage Information
The following table describes the show fip-snooping fcf command.
Field                  Description
FCF MAC                MAC address of the FCF
FCF Interface          Slot/ port number of the interface to which the FCF is connected.
VLAN                   VLAN ID number used by the session
FC-MAP                 FC-MAP value advertised by the FCF.
FKA_ADV_PERIOD         Period of time (in milliseconds) during which FIP keep-alive advertisements are transmitted.
No of ENodes           Number of ENodes connected to the FCF

Example
Dell# show fip-snooping fcf
<table>
<thead>
<tr>
<th>FCF MAC</th>
<th>FCF Interface</th>
<th>VLAN</th>
<th>FC-MAP</th>
<th>FKA_ADV_PERIOD</th>
<th>No. of Enodes</th>
</tr>
</thead>
<tbody>

<td>4000</td>
<td>1</td>
</tr>
</tbody>
</table>

show fip-snooping sessions

Displays information on FIP-snooped sessions on all VLANs or a specified VLAN, including the ENode interface and MAC address, the FCF interface and MAC address, VLAN ID, FCoE MAC address and FCoE session ID number (FC-ID), worldwide node name (WWNN) and the worldwide port name (WWPN).

Syntax
show fip-snooping sessions[interface vlan vlan-id]

Parameters
vlan-id

Enter the vlan-id of the specified VLAN to be displayed.

Command Modes
• EXEC
• EXEC Privilege

9.4(0.0)    Supported on the FN I/O Aggregator.
8.3.17.0    Supported on the M I/O Aggregator.

Usage Information
The following table describes the show fip-snooping sessions command.

Field                  Description
ENode MAC              MAC address of the ENode.
ENode Interface        Slot/ port number of the interface connected to the ENode.
FCF MAC                MAC address of the FCF.
FC Interface           Slot/ port number of the interface to which the FCF is connected.
VLAN                   VLAN ID number used by the session.
### show fip-snooping statistics

Displays statistics on the FIP packets snooped on all interfaces, including VLANs, physical ports, and port channels.

**Syntax**
```
show fip-snooping statistics [interface vlan vlan-id | interface port-type port/slot | interface port-channel port-channel-number]
```

**Parameters**
- `vlan-id` Enter the VLAN ID of the FIP packet statistics to be displayed.
- `port-type port/slot` Enter the port-type and slot number of the FIP packet statistics to be displayed.
- `port-channel-number` Enter the port channel number of the FIP packet statistics to be displayed.

**Command Modes**
- EXEC

Force10 Resilient Ring Protocol (FRRP)

FRRP is a proprietary protocol for that offers fast convergence in a Layer 2 network without having to run the spanning tree protocol (STP). The resilient ring protocol is an efficient protocol that transmits a high-speed token across a ring to verify the link status. All the intelligence is contained in the master node with practically no intelligence required of the transit mode.

Important Points to Remember

- FRRP is media- and speed-independent.
- FRRP is a Dell Networking proprietary protocol that does not interoperate with any other vendor.
- Spanning Tree must be disabled on both primary and secondary interfaces before Resilient Ring protocol is enabled.
- A virtual local area network (VLAN) configured as the control VLAN for a ring cannot be configured as a control or member VLAN for any other ring.
- Member VLANs across multiple rings are not supported in Master nodes.
- If multiple rings share one or more member VLANs, they cannot share any links between them.
- Each ring can have only one Master node; all others are Transit nodes.

Topics:
- clear frrp
- debug frrp
- description
- disable
- interface
- member-vlan
- mode
- protocol frrp
- show frrp
- timer

clear frrp

Clear the FRRP statistics counters.

Syntax

```plaintext
clear frrp [ring-id]
```

Parameters

- **ring-id**
  
  (Optional) Enter the ring identification number. The range is from 1 to 255.

Defaults

- none

Command Modes

- EXEC

Supported Modes

- Full-Switch
Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN MXL.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

Executing this command without the optional ring-id command clears the statistics counters on all the available rings. The system requires a command line confirmation before the command executes. This command clears the following counters:

- hello Rx and Tx counters
- Topology change Rx and Tx counters
- The number of state change counters

Example

```
Dell#clear frrp
Clear frrp statistics counter on all ring [confirm] yes
Dell#clear frrp 4
Clear frrp statistics counter for ring 4 [confirm] yes
Dell#
```

Related Commands

- `show frrp` — displays the resilient ring protocol configuration.

### debug frrp

Clear the FRRP statistics counters.

**Syntax**

```
debug frrp {event | packet | detail} [ring-id] [count number]
```

To disable debugging, use the `no debug frrp {event | packet | detail} [ring-id] [count number]` command.

**Parameters**

- `event`
  - Enter the keyword `event` to display debug information related to ring protocol transitions.
- `packet`
  - Enter the keyword `packet` to display brief debug information related to control packets.
- `detail`
  - Enter the keyword `detail` to display detailed debug information related to the entire ring protocol packets.
- `ring-id`
  - (Optional) Enter the ring identification number. The range is from 1 to 255.
- `count number`
  - Enter the keyword `count` then the number of debug outputs. The range is from 1 to 65534.

**Defaults**

Disabled.

**Command Modes**

- CONFIGURATION (conf-frrp)

**Supported Modes**

- Full-Switch

**Command History**

<table>
<thead>

</tbody>
</table>

**Usage Information**

This command causes the Ring Manager to take ownership of the two ports after IFM validates the configuration. Ownership is relinquished for a port only when the interface does not play a part in any control VLAN, that is, the interface does not belong to any ring.

**Related Commands**

- `show frrp` — displays the resilient ring protocol configuration information.

---

**member-vlan**

Specify the member VLAN identification numbers.

**Syntax**

```
member-vlan {vlan-range}
```

To return to the default, use the `no member-vlan [vlan-range]` command.

**Parameters**

- `vlan-range` Enter the member VLANs using VLAN IDs (separated by commas), a range of VLAN IDs (separated by a hyphen), a single VLAN ID, or a combination. For example: VLAN IDs (comma-separated): 3, 4, 6. Range (hyphen-separated): 5-10. Combination: 3, 4, 5-10, 8.
mode

Set the Master or Transit mode of the ring.

Syntax

    mode {master | transit}

To reset the mode, use the `no mode {master | transit}` command.

Parameters

- **master**: Enter the keyword `master` to set the Ring node to Master mode.
- **transit**: Enter the keyword `transit` to set the Ring node to Transit mode.

Defaults

Mode None

Command Modes

CONFIGURATION (conf-frrp)

Supported Modes

show frrp

Display the resilient ring protocol configuration.

Syntax

```
show frrp [ring-id [summary]] | [summary]
```

Parameters

- `ring-id`: Enter the ring identification number. The range is from 1 to 255
- `summary` (OPTIONAL) Enter the keyword `summary` to view just a summarized version of the Ring configuration.

Defaults
none

Command Modes
EXEC

Supported Modes
Full-Switch

Command History

- **Version**: 9.9(0.0)
  - Introduced on the FN IOM.
- **Version**: 9.2(0.0)
  - Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
Executing this command without the optional `ring-id` command clears the statistics counters on all the available rings. The system requires a command line confirmation before the command executes. This command clears the following counters:

- hello Rx and Tx counters
- Topology change Rx and Tx counters
- The number of state change counters

Example (Summary)

```
Dell#show frrp summary

Ring-ID State Mode Ctrl_Vlan Member_Vlans
----------------------------------------------
  2    UP  Master   2    11-20, 25,27-30
  31   UP  Transit  31   40-41
  50   Down Transit 50        32

Dell#
```

Example (1)

```
Dell#show frrp 1

Ring protocol 1 is in Master mode
Ring Protocol Interface:
Primary: TenGigabitEthernet 0/6 State: Forwarding
Secondary: Port-channel 100 State: Blocking
Control Vlan: 1
Ring protocol Timers: Hello-Interval 50 msec Dead-Interval 150 msec
Ring Master's MAC Address is 00:01:e8:13:a3:19
Topology Change Statistics: Tx:110 Rx:45
Hello Statistics: Tx:13028 Rx:12348
Number of state Changes: 34
Member Vlans: 1000-1009

Dell#
```
**Example (2)**

Dell#show frrp 2 summary
Ring-ID State Mode Ctrl_Vlan Member_Vlans
-----------------------------------------------
2 Up Master 2 11-20, 25, 27-30
Dell#

**Related Commands**

`protocol frrp` — enters the resilient ring protocol and designates a ring identification.

**timer**

Set the hello interval or dead interval for the Ring control packets.

**Syntax**

```
timer {hello-interval milliseconds} | {dead-interval milliseconds}
```

To remove the timer, use the `no timer {hello-interval [milliseconds]} | {dead-interval milliseconds}` command.

**Parameters**

- **hello-interval milliseconds**
  - Enter the keyword `hello-interval` then the time, in milliseconds, to set the hello interval of the control packets. The milliseconds must be entered in increments of 50 milliseconds; for example, 50, 100, 150, and so on. If an invalid value is entered, an error message is generated. The range is from 50 to 2000 ms. Default: **500 ms**.

- **dead-interval milliseconds**
  - Enter the keyword `dead-interval` then the time, in milliseconds, to set the dead interval of the control packets. The range is from 50 to 6000 ms. Default: **1500 ms**.

  **NOTE:** The configured dead interval must be at least three times the hello interval.

**Defaults**

- **500 ms** for `hello-interval milliseconds`
- **1500 ms** for `dead-interval milliseconds`

**Command Modes**

CONFIGURATION (conf-frrp)

**Supported Modes**

Full-Switch

**Command History**

- **Version**
  - **9.9(0.0)**: Introduced on the FN IOM.
  - **9.2(0.0)**: Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The `hello interval` command is the interval at which ring frames are generated from the primary interface of the master node. The `dead interval` command is the time that elapses before a time-out occurs.
GARP VLAN Registration (GVRP)

The Dell Networking Operating System (OS) supports the basic GVRP commands. The generic attribute registration protocol (GARP) mechanism allows the configuration of a GARP participant to propagate through a network quickly. A GARP participant registers or de-registers its attributes with other participants by making or withdrawing declarations of attributes. At the same time, based on received declarations or withdrawals, GARP handles attributes of other participants.

GVRP enables a device to propagate local virtual local area network (VLAN) registration information to other participant devices and dynamically update the VLAN registration information from other devices. The registration information updates local databases regarding active VLAN members and through which port the VLANs can be reached.

GVRP ensures that all participants on a bridged LAN maintain the same VLAN registration information. The VLAN registration information propagated by GVRP includes both manually configured local static entries and dynamic entries from other devices.

GVRP participants have the following components:

- The GVRP application
- GARP information propagation (GIP)
- GARP information declaration (GID)

Important Points to Remember

- GVRP is supported on Layer 2 ports only.
- All VLAN ports added by GVRP are tagged.
- GVRP is supported on untagged ports belonging to a default VLAN and tagged ports.
- GVRP cannot be enabled on untagged ports belonging to a non-default VLAN unless native VLAN is turned on.
- GVRP requires end stations with dynamic access network interface controller (NICs).
- Based on updates from GVRP-enabled devices, GVRP allows the system to dynamically create a port-based VLAN (unspecified) with a specific VLAN ID and a specific port.
- On a port-by-port basis, GVRP allows the system to learn about GVRP updates to an existing port-based VLAN with that VLAN ID and IEEE 802.1Q tagging.
- GVRP allows the system to send dynamic GVRP updates about your existing port-based VLAN.
- GVRP updates are not sent to any blocked spanning tree protocol (STP) ports. GVRP operates only on ports that are in the forwarding state.
- GVRP operates only on ports that are in the STP forwarding state. If you enable GVRP, a port that changes to the STP Forwarding state automatically begin to participate in GVRP. A port that changes to an STP state other than forwarding no longer participates in GVRP.
- VLANs created dynamically with GVRP exist only as long as a GVRP-enabled device is sending updates. If the devices no longer send updates, or GVRP is disabled, or the system is rebooted, all dynamic VLANs are removed.
- GVRP manages the active topology, not non-topological data such as VLAN protocols. If a local bridge must classify and analyze packets by VLAN protocols, manually configure protocol-based VLANs, and simply rely on GVRP for VLAN updates. But if the local bridge must know only how to reach a given VLAN, then GVRP provides all necessary information.
- The VLAN topologies that GVRP learns are treated differently from VLANs that are statically configured. The GVRP dynamic updates are not saved in NVRAM, while static updates are saved in NVRAM. When GVRP is disabled, the system deletes all VLAN interfaces that were learned through GVRP and leaves unchanged all VLANs that were manually configured.

**Related Commands**

- `show gvrp statistics` — displays the GVRP statistics.

**debug gvrp**

Enable debugging on GVRP.

**Syntax**

```
debug gvrp {config | events | pdu}
```

To disable debugging, use the `no debug gvrp {config | events | pdu}` command.

**Parameters**

- **config**
  Enter the keyword `config` to enable debugging on the GVRP configuration.
event

Enter the keyword event to enable debugging on the JOIN/LEAVE events.

pdu

Enter the keyword pdu then one of the following Interface keywords and slot/port or number information:

- For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

Related Commands

gvrp enable — enables GVRP on physical interfaces and LAGs.

protocol gvrp — access GVRP protocol.

garp timers

Set the intervals (in milliseconds) for sending GARP messages.

Syntax

garp timers {join | leave | leave-all}

to return to the previous setting, use the no garp timers {join | leave | leave-all} command.
**Parameters**

- **join**
  
  Enter the keyword `join` then the number of milliseconds to configure the join time. The range is from 100 to 147483647 milliseconds. The default is **200 milliseconds**.

  **NOTE:** Designate the milliseconds in multiples of 100.

- **leave**
  
  Enter the keyword `leave` then the number of milliseconds to configure the leave time. The range is from 100 to 2147483647 milliseconds. The default is **600 milliseconds**.

  **NOTE:** Designate the milliseconds in multiples of 100.

- **leave-all**
  
  Enter the keywords `leave-all` then the number of milliseconds to configure the leave-all time. The range is from 100 to 2147483647 milliseconds. The default is 1000 milliseconds.

  **NOTE:** Designate the milliseconds in multiples of 100.

**Defaults**

As above.

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

- **Join Timer** — Join messages announce the willingness to register some attributes with other participants. For reliability, each GARP application entity sends a **Join** message twice and uses a join timer to set the sending interval.

- **Leave Timer** — Leave announces the willingness to de-register with other participants. Together with Join, Leave messages help GARP participants complete attribute reregistration and de-registration. The leave timer starts after receipt of a leave message sent for de-registering some attribute information. If a **Join** message is not received before the **Leave** time expires, the GARP application entity removes the attribute information as requested.

- **Leave All Timer** — The Leave All timer starts when a GARP application entity starts. When this timer expires, the entity sends a Leave-all message so that other entities can reregister their attribute information. Then the Leave-all time begins again.

**Related Commands**

- `show garp timers` — displays the current GARP times.

---

**gvrp enable**

Enable GVRP on physical interfaces and LAGs.

**Syntax**

```
gvrp enable
```

To disable GVRP on the interface, use the `no gvrp enable` command.

**Defaults**

Disabled.

**Command Modes**

CONFIGURATION-INTERFACE

gvrp registration

Configure the GVRP register type.

Syntax  
gvrp registration {fixed | normal | forbidden}

Parameters  
fixed  Enter the keyword fixed then the VLAN range in a comma-separated VLAN ID set.

normal  Enter the keyword normal then the VLAN range in a comma-separated VLAN ID set.

This setting is the default.

forbidden  Enter the keyword forbidden then the VLAN range in a comma-separated VLAN ID set.

Defaults  
normal

Command Modes  
CONFIGURATION-INTERFACE

Supported Modes  
Full-Switch

Command History  
Version  
9.9(0.0)  Introduced on the FN IOM.

8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information  
Fixed registration prevents an interface, configured using the command line, to belong to a VLAN (static configuration) from being unconfigured when it receives a Leave message. Therefore, Registration mode on that interface is fixed.

Normal registration is the default registration. The port’s membership in the VLAN depends on GVRP. The interface becomes a member of a VLAN after learning about the VLAN through GVRP. If the VLAN is removed from the port that sends GVRP advertisements to this device, the port stops being a member of the VLAN.

To advertise or learn about VLANs through GVRP, use the forbidden command when you do not want the interface.

Related Commands  
show gvrp — displays the GVRP configuration including the registration.

Related Commands  
garp timers — sets the intervals (in milliseconds) for sending GARP messages.

show gvrp

Display the GVRP configuration.

Syntax  
show gvrp [brief | interface]

Parameters  
brief  (OPTIONAL) Enter the keyword brief to display a brief summary of the GVRP configuration.

interface  (OPTIONAL) Enter the following keywords and slot/port or number information:

- For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

Defaults  
none

Command Modes  
- EXEC
- EXEC Privilege

Supported Modes  
Full–Switch

Command History  
Version  
9.9(0.0)  Introduced on the FN IOM.
8.3.16.1  Introduced on the MXL 10/40Gbe Switch IO Module.

Usage Information  
If no ports are GVRP participants, the message output changes from GVRP Participants running on <port_list> to GVRP Participants running on no ports.

Example  
R3#show gvrp brief
GVRP Feature is currently enabled.
Port                  GVRP Status  Edge-Port
-------------------- ------------- -------
Te 3/0               Disabled     No
Te 3/1               Disabled     No
Te 3/2               Enabled      No
Te 3/3               Disabled     No
Te 3/4               Disabled     No

</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

Invalid messages/attributes skipped can occur in the following cases:

- The incoming GVRP PDU has an incorrect length.
- “End of PDU” was reached before the complete attribute could be parsed.
- The Attribute Type of the attribute that was being parsed was not the GVRP VID Attribute Type (0x01).
- The attribute that was being parsed had an invalid attribute length.
- The attribute that was being parsed had an invalid GARP event.
- The attribute that was being parsed had an invalid VLAN ID. The valid range is 1 - 4095.

A failed registration can occur for the following reasons:

- Join requests were received on a port that was blocked from learning dynamic VLANs (GVRP Blocking state).
- An entry for a new GVRP VLAN could not be created in the GVRP database.

**Example**

```
Dell#show gvrp statistics int tengig 1/0

Join Empty Received: 0
Join In Received: 0
Empty Received: 0
LeaveIn Received: 0
Leave Empty Received: 0
Leave All Received: 40
Join Empty Transmitted: 156
Join In Transmitted: 0
Empty Transmitted: 0
Leave In Transmitted: 0
Leave Empty Transmitted: 0
```
show vlan

Dell
```

Related Commands

- `show gvrp` — displays the GVRP configuration.
- `show gvrp statistics` — displays the GVRP statistics.
Internet Group Management Protocol (IGMP)

The Dell Networking OS supports IGMP snooping version 2 and 3 on all Dell Networking systems.

IGMP Commands

The Dell Networking OS supports the following IGMP commands:

- clear ip igmp groups
- debug ip igmp
- ip igmp group-join-limit
- ip igmp querier-timeout
- ip igmp query-interval
- ip igmp query-max-resp-time
- ip igmp snooping enable
- ip igmp snooping fast-leave
- ip igmp snooping flood
- ip igmp snooping last-member-query-interval
- ip igmp snooping mrouter
- ip igmp snooping querier
- ip igmp version
- show ip igmp groups
- show ip igmp interface
- show ip igmp snooping mrouter

Important Points to Remember

- Dell Networking OS supports version 1, version 2, and version 3 hosts.
- Dell Networking OS IGMP snooping implementation is based on IP multicast address (not based on Layer 2 multicast mac-address) and the IGMP snooping entries are in Layer 3 flow table not in Layer 2 forwarding information base (FIB).
- Dell Networking OS IGMP snooping implementation is based on draft-ietf-magma-snoop-10.
- IGMP snooping is enabled by default on the switch.
- A maximum of 2k groups and 4k virtual local area networks (VLAN) are supported.
- IGMP snooping is not supported on default VLAN interface.
- Flooding of unregistered multicast traffic is enabled by default.
- Queries are not accepted from the server side ports and are only accepted from the uplink LAG.
- Reports and Leaves are flooded by default to the uplink LAG irrespective of whether it is an mrouter port or not.
IGMP Snooping Commands

Dell Networking OS supports IGMP Snooping version 2 and 3 on all Dell Networking systems.

Important Points to Remember for IGMP Snooping

- Dell Networking OS supports version 1, version 2, and version 3 hosts.
- Dell Networking OS IGMP snooping implementation is based on IP multicast address (not based on Layer 2 multicast mac address) and the IGMP snooping entries are in Layer 3 flow table not in Layer 2 forwarding information base (FIB).
- Dell Networking OS IGMP snooping implementation is based on draft-ietf-magma-snoop-10.
- Dell Networking OS supports IGMP snooping on JUMBO-enabled cards.
- IGMP snooping is not enabled by default on the switch.
- A maximum of 1800 groups and 600 VLAN are supported.
- IGMP snooping is not supported on a default VLAN interface.
- IGMP snooping is not supported over VLAN-Stack-enabled VLAN interfaces (you must disable IGMP snooping on a VLAN interface before configuring VLAN-Stack-related commands).

clear ip igmp groups

Clear entries from the group cache table.

Syntax

clear ip igmp groups [group-address | interface]

Parameters

- group-address (OPTIONAL) Enter the IP multicast group address in dotted decimal format.
- interface (OPTIONAL) Enter the interface type and slot/port information: For a VLAN interface enter the keyword vlan followed by a number from 1 to 4094.

Command Modes

EXEC Privilege

Supported Modes

All Modes

Command History

Version Description
9.9(0.0) Introduced on the FN IOM.
9.4(0.0) Supported on the FN I/O Aggregator.
8.3.17.0 Supported on the M I/O Aggregator.

debug ip igmp

Enable debugging of IGMP packets.

Syntax

deb ug ip igmp [group address | interface]

To disable IGMP debugging, enter the no ip igmp command. To disable all debugging, enter the undebug all command.

Defaults

Disabled
Parameters

- **group-address**: (OPTIONAL) Enter the IP multicast group address in dotted decimal format.
- **interface**: (OPTIONAL) Enter the interface type and slot/port information:
  For a VLAN interface enter the keyword `vlan` followed by a number from 1 to 4094.

**Command Modes**

- EXEC Privilege

**Supported Modes**

- All Modes

**Command History**

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

### ip igmp access-group

To specify access control for packets, use this feature.

**Syntax**

```
ip igmp access-group access-list
```

To remove the feature, use the `no ip igmp access-group access-list` command.

**Parameters**

- **access-list**: Enter the name of the extended ACL (16 characters maximum).

**Defaults**

- Not configured

**Command Modes**

- INTERFACE (conf-if-interface-slot/port)

**Supported Modes**

- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

The access list accepted is an extended ACL. To block IGMP reports from hosts, on a per-interface basis based on the group address and source address that you specify in the access list, use this feature.

### ip igmp group-join-limit

To limit the number of IGMP groups that can be joined in a second, use this feature.

**Syntax**

```
ip igmp group-join-limit number
```

**Parameters**

- **number**: Enter the number of IGMP groups permitted to join in a second. The range is from 1 to 10000.

**Defaults**

- none
ip igmp querier-timeout

Change the interval that must pass before a multicast router decides that there is no longer another multicast router that should be the querier.

**Syntax**

```
ip igmp querier-timeout seconds
```

To return to the default value, use the `no ip igmp querier-timeout` command.

**Parameters**

- **seconds**
  
  Enter the number of seconds the router must wait to become the new querier. The range is from 60 to 300. The default is **125 seconds**.

**Defaults**

**125 seconds**

**Command Modes**

INTERFACE

**Supported Modes**

Programmable-Mux (PMUX)
Full-Switch

<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

ip igmp query-interval

Change the transmission frequency of IGMP general queries the Querier sends.

**Syntax**

```
ip igmp query-interval seconds
```

To return to the default values, use the `no ip igmp query-interval` command.

**Parameters**

- **seconds**

  Enter the number of seconds between queries sent out. The range is from 1 to 18000. The default is **60 seconds**.

**Defaults**

**60 seconds**
ip igmp query-max-resp-time

Set the maximum query response time advertised in general queries.

Syntax

    ip igmp query-max-resp-time seconds

To return to the default values, use the no ip igmp query-max-resp-time command.

Parameters

- **seconds**: Enter the number of seconds for the maximum response time. The range is from 1 to 25. The default is 10 seconds.

Defaults

- **10 seconds**

Command Modes

- INTERFACE

Supported Modes

- Programmable-Mux (PMUX)
- Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>

</tr>
</tbody>
</table>

ip igmp snooping enable

Enable IGMP snooping on all or a single VLAN. This command is the master on/off switch to enable IGMP snooping.

Syntax

    ip igmp snooping enable

To disable IGMP snooping, use the no ip igmp snooping enable command.

Defaults

- Disabled.

Command Modes

- CONFIGURATION
- INTERFACE VLAN
Supported Modes

Programmable-Mux (PMUX)
Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>

<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

To enable IGMP snooping, enter this command. When you enable this command from CONFIGURATION mode, IGMP snooping enables on all VLAN interfaces (except the default VLAN).

NOTE: Execute the no shutdown command on the VLAN interface for IGMP Snooping to function.

ip igmp snooping fast-leave

Enable IGMP snooping fast-leave for this VLAN.

Syntax

```
ip igmp snooping fast-leave
```

To disable IGMP snooping fast leave, use the
```
no igmp snooping fast-leave
```
command.

Defaults

Not configured.

Command Modes

INTERFACE VLAN — (conf-if-vl-n)

Supported Modes

Programmable-Mux (PMUX)
Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

Queriers normally send some queries when a leave message is received prior to deleting a group from the membership database. There may be situations when you require a fast deletion of a group. When you enable IGMP fast leave processing, the switch removes an interface from the multicast group as soon as it detects an IGMP version 2 leave message on the interface.

ip igmp snooping flood

This command controls the flooding behavior of unregistered multicast data packets. When flooding is disabled, unregistered multicast data traffic is forwarded to only multicast router ports in a VLAN. If there is no multicast router port in a VLAN, unregistered multicast data traffic is dropped.

Syntax

```
ip igmp snooping flood
```

To disable the flooding, use the
```
no ip igmp snooping flood
```
command.
Parameters
Enabled

Command Modes
CONFIGURATION

Supported Modes

</tr>
</tbody>
</table>

**ip igmp snooping last-member-query-interval**

The last member query interval is the maximum response time inserted into Group-Specific queries sent in response to Group-Leave messages.

**Syntax**

```
ip igmp snooping last-member-query-interval milliseconds
```

To return to the default value, use the `no ip igmp snooping last-member-query-interval` command.

**Parameters**

- `milliseconds`
  Enter the interval in milliseconds. The range is from 100 to 65535. The default is 1000 milliseconds.

**Defaults**

1000 milliseconds

**Command Modes**

INTERFACE VLAN

**Supported Modes**

Programmable-Mux (PMUX)

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>

<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

This last-member-query-interval is also the interval between successive Group-Specific Query messages. To change the last-member-query interval, use this command.

**ip igmp snooping mrouter**

Statically configure a VLAN member port as a multicast router interface.

**Syntax**

```
ip igmp snooping mrouter interface interface
```

To delete a specific multicast router interface, use the `no igmp snooping mrouter interface interface` command.
### Parameters

<table>
<thead>
<tr>
<th>interface interface</th>
<th>Enter the following keywords and slot/port or number information:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.</td>
<td></td>
</tr>
<tr>
<td>• For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.</td>
<td></td>
</tr>
</tbody>
</table>

### Defaults

Not configured.

### Command Modes

INTERFACE VLAN — (conf-if-vl-n)

### Supported Modes

Programmable-Mux (PMUX)

### Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
</tbody>
</table>

### Usage Information

Dell Networking OS provides the capability of statically configuring the interface to which a multicast router is attached. To configure a static connection to the multicast router, enter the `ip igmp snooping mrouter interface` command in the VLAN context. The interface to the router must be a part of the VLAN where you are entering the command.

### ip igmp snooping querier

Enable IGMP querier processing for the VLAN interface.

**Syntax**

```
ip igmp snooping querier
```

To disable IGMP querier processing for the VLAN interface, use the `no ip igmp snooping querier` command.

**Defaults**

Not configured.

**Command Modes**

INTERFACE VLAN — (conf-if-vl-n)

**Supported Modes**

Programmable-Mux (PMUX)

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command enables the IGMP switch to send General Queries periodically. This behavior is useful when there is no multicast router present in the VLAN because the multicast traffic is not routed. Assign an IP address to the VLAN interface for the switch to act as a querier for this VLAN.
**ip igmp version**

Manually set the version of the router to IGMPv2 or IGMPv3.

**Syntax**

```
ip igmp version {2 | 3}
```

**Parameters**

- **2**
  - Enter the number 2 to set the IGMP version number to IGMPv2.
- **3**
  - Enter the number 3 to set the IGMP version number to IGMPv3.

**Defaults**

2 (that is, IGMPv2)

**Command Modes**

INTERFACE

**Supported Modes**

Programmable-Mux (PMUX)

<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**show ip igmp groups**

View the IGMP groups.

**Syntax**

```
show ip igmp groups [group-address [detail] | detail | interface [group-address [detail]]]
```

**Parameters**

- **group-address**
  - (OPTIONAL) Enter the group address in dotted decimal format to view information on that group only.
- **interface**
  - (OPTIONAL) Enter the interface type and slot/port information:
    - For a VLAN interface enter the keyword vlan followed by a number from 1 to 4094.
- **detail**
  - (OPTIONAL) Enter the keyword detail to display the IGMPv3 source information.

</table>

**show ip igmp interface**

View information on the interfaces participating in IGMP.

**Syntax**

```
show ip igmp interface [interface]
```

**Parameters**

- **interface**  
  (OPTIONAL) Enter any of the following keywords and slot/port or number to clear counters from a specified interface:
  - For a Port Channel interface, enter the keyword port-channel followed by a number. Range: 1-128
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.
  - For a VLAN, enter the keyword vlan followed by a number from 1 to 4094.

**Command Modes**

- EXEC
show ip igmp snooping mrouter

Displays multicast router interfaces.

**Syntax**

```
show ip igmp snooping mrouter [vlan number]
```

**Parameters**

- **vlan number**: Enter the keyword vlan followed by the vlan number. Range: 1 to 4094

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

All Modes

**Command History**

</tr>
<tr>
<td>8.3(17.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell#show ip igmp snooping mrouter vlan 2
Interface Router Ports
```
Related Commands

show ip igmp groups — Use this IGMP command to view groups.
This chapter defines the interface commands on the Aggregator switch.

**Basic Interface Commands**

The following commands are for Physical, Loopback, and Null interfaces.

### clear counters

Clear the counters used in the `show interfaces` commands for VLANs, and physical interfaces, or selected ones.

**Syntax**

```
clear counters [interface]
```

**Defaults**

Without a specific interface specified, the command clears all interface counters.

**Parameters**

`interface`  
(OPTIONAL) Enter any of the following keywords and slot/port or number to clear counters from a specified interface:

- For the management interface on the stack-unit, enter the keyword `managementethernet` followed by slot/port information. The slot and port range is 0.
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` followed by the slot/port information.
- For a Port Channel interface, enter the keyword `port-channel` followed by a number. Range: 1-128

**Sample Command**

You can specify multiple ports as slot/port-range. For example, if you want to clear the port configurations corresponding to all ports between 1 and 4, specify the port range as `show interfaces interface-type 1/1 - 4`.

**Command Modes**

- EXEC Privilege

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM and added support to clear the interface configurations corresponding to a range of ports.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3(17.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>
clear dampening

Clear the dampening counters on all the interfaces or just the specified interface.

Syntax

```
clear dampening [interface]
```

Parameters

- **interface**
  - (OPTIONAL) Enter any of the following keywords and slot/port or number to clear counters from a specified interface:
    - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

Defaults

Without an interface specified, the command clears all interface dampening counters.

Command Modes

EXEC Privilege

Supported Modes

Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

On the switch, after you enter the `clear counters` command and verify the results with the `show interfaces` command, the line rate is not reset to 0.00%.

Example

```
Dell#clear dampening tengigabitethernet 1/2
Clear dampening counters on tengig 1/2 [confirm] y
Dell#
```

Related Commands

- `show interfaces dampening` — displays interface dampening information.
- `dampening` — configures dampening on an interface.

**cx4-cable-length**

Configure the length of the cable to be connected to the selected CX4 port.

Syntax

```
[no] cx4-cable-length {long | medium | short}
```

Parameters

- **long | medium | short**
  - Enter the keyword that matches the cable length to be used at the selected port:
    - `short` = For 1-meter and 3-meter cable lengths.
    - `medium` = For 5-meter cable length.

Example

```
DellEMC(conf-if-c-1-1-2-1-1-1-1)
```

Related Commands

- `show interfaces status` — displays the status of interfaces.
long = For 10-meter and 15-meter cable lengths.

- **Defaults**: medium
- **Command Modes**: INTERFACE
- **Supported Modes**: Full-Switch
- **Command History**:
  - **Version**: 9.9(0.0) - Introduced on the FN IOM.
  - **Version**: 9.2(0.0) - Introduced on the M I/O Aggregator.
  - **Version**: 8.3.16.1 - Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**
This command only works on ports that the system recognizes as CX4 ports. The figures below shows an attempt to configure an XFP port with the command after inserting a CX4 converter into the port.

For details about using XFP ports with CX4 cables, refer to your FN IOM switch hardware guide.

**Example (Unsuccessful)**
```
Dell#show interfaces tengigabitethernet 0/26 | grep "XFP type"
Pluggable media present, XFP type is 10GBASE-CX4
Dell(conf-if-te-0/26)#cx4-cable-length short
% Error: Unsupported command.
Dell(conf-if-te-0/26)#cx4-cable-length medium
% Error: Unsupported command.
Dell(conf-if-te-0/26)#cx4-cable-length long
% Error: Unsupported command.
Dell(conf-if-te-0/26)#
```

**Example (Successful)**
```
Dell#config
Dell(config)#interface tengigabitethernet 0/5
Dell(conf-if-0/5)#cx4-cable-length long
Dell(conf-if-0/5)#show config
!
interface TenGigabitEthernet 0/4
   no ip address
   cx4-cable-length long
   shutdown
Dell(conf-if-0/5)#exit
Dell(config)#
```

**Related Commands**
- `show config` – displays the configuration of the selected interface.

---

### dampening

Configure dampening on an interface.

**Syntax**
```
dampening [[[half-life] [reuse-threshold]] [suppress-threshold]] [max-suppress-time]
```

To disable dampening, use the `no dampening [[[half-life] [reuse-threshold]] [suppress-threshold]] [max-suppress-time]` command.
Parameters

**half-life**
Enter the number of seconds after which the penalty is decreased. The penalty decreases half after the half-life period expires. The range is from 1 to 30 seconds. The default is **5 seconds**.

**reuse-threshold**
Enter a number as the reuse threshold, the penalty value below which the interface state is changed to "up". The range is from 1 to 20000. The default is **750**.

**suppress-threshold**
Enter a number as the suppress threshold, the penalty value above which the interface state is changed to "error disabled". The range is from 1 to 20000. The default is **2500**.

**max-suppress-time**
Enter the maximum number for which a route can be suppressed. The default is four times the half-life value. The range is from 1 to 86400. The default is **20 seconds**.

Defaults
Disabled.

Command Modes
INTERFACE (conf-if-)

Supported Modes
Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information
With each flap, the Dell Networking OS penalizes the interface by assigning a penalty (1024) that decays exponentially depending on the configured half-life. After the accumulated penalty exceeds the suppress threshold value, the interface moves to the Error-Disabled state. This interface state is deemed as “down” by all static/dynamic Layer 2 and Layer 3 protocols. The penalty is exponentially decayed based on the half-life timer. After the penalty decays below the reuse threshold, the interface enables. The configured parameters are as follows:

- **suppress-threshold** should be greater than **reuse-threshold**
- **max-suppress-time** should be at least 4 times **half-life**

**NOTE:** You cannot apply dampening on an interface that is monitoring traffic for other interfaces.

Example

```
Dell(conf-if-te-3/2)#dampening 20 800 4500 120
Dell(conf-if-te-3/2)#
```

Related Commands
- `clear dampening` — clears the dampening counters on all the interfaces or just the specified interface.
- `show interfaces dampening` — displays interface dampening information.

**description**

Assign a descriptive text string to the interface.

Syntax

```
description desc_text
```
To delete a description, enter `no description` command.

Parameters

**desc_text**
Enter a text string up to 240 characters long.
Defaults

No description is defined.

Command Modes

INTERFACE

Supported Modes

All Modes

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

- Spaces between characters are not preserved after entering this command unless you enclose the entire description in quotation marks ("desc_text").
- Entering a text string after the default vlan-id command overwrites any previous text string configured as the description.
- The show tdr and default vlan-id commands are the only commands that you can configure on an interface that is a member of a port-channel.
- Use the show interfaces description command to display descriptions configured for each interface.

Related commands

show interfaces description — Displays the description field of interfaces.

flowcontrol

Controls how the system responds to and generates 802.3x pause frames on 10G and 40Gig stack units.

Syntax

flowcontrol rx {off | on} tx {off | on} pause-threshold value [monitor session-ID]

Parameters

- **rx on**
  Enter the keywords rx on to process the received flow control frames on this port. This is the default value for the receive side.

- **rx off**
  Enter the keywords rx off to ignore the received flow control frames on this port.

- **tx on**
  Enter the keywords tx on to send control frames from this port to the connected device when a higher rate of traffic is received. This is the default value on the send side.

- **tx off**
  Enter the keywords tx off so that flow control frames are not sent from this port to the connected device when a higher rate of traffic is received.

- **pause-threshold**
  Enter the buffer threshold limit for generating PAUSE frames.

- **monitor**
  Enter the keyword monitor then the session-ID to enable mirror flow control frames on the interface. The range is from 0 to 65535.

Defaults

- rx off
- tx off

Command Modes

</tr>
</tbody>
</table>

Usage Information

The globally assigned 48-bit Multicast address 01-80-C2-00-00-01 is used to send and receive pause frames. To allow full-duplex flow control, stations implementing the pause operation instruct the MAC to enable the reception of frames with a destination address equal to this multicast address.

The pause:

- Starts when either the packet pointer or the buffer threshold is met (whichever is met first). When the discard threshold is met, packets are dropped.
- Ends when both the packet pointer and the buffer threshold fall below 50% of the threshold settings.

The discard threshold defines when the interface starts dropping the packet on the interface. This may be necessary when a connected device does not honor the flow control frame sent by the switch. The discard threshold should be larger than the buffer threshold so that the buffer holds at least hold at least three packets.

Important Points to Remember

- Do not enable tx pause when buffer carving is enabled. For information and assistance, consult Dell Networking TAC.
- Asymmetric flow control (rx on tx off or rx off tx on) setting for the interface port less than 100 Mb/s speed is not permitted. The following error is returned:
  Can't configure Asymmetric flowcontrol when speed <1G, config ignored
- The only configuration applicable to half duplex ports is rx off tx off. The following error is returned:
  Cannot configure Asymmetric flowcontrol when speed <1G, config ignored
- You cannot configure half duplex when the flow control configuration is on (default is rx on tx on). The following error is returned:
  Cannot configure half duplex when flowcontrol is on, config ignored

**NOTE:** The flow control must be off (rx off tx off) before configuring the half duplex.

Example (partial)

```
Dell(conf-if-tengig-0/1)#show config
!
interface TenGigabitEthernet 0/1
no ip address
switchport
no negotiation auto
flowcontrol monitor session 5 rx off tx on
no shutdown
...
```

Example (Values)

This Example shows how the Dell Networking OS negotiates the flow control values between two Dell Networking chassis connected back-to-back using 1G copper ports.

Related Commands

`show running-config` — displays the flow configuration parameters (non-default values only).

# interface

Configure a physical interface on the switch.

**Syntax**

```
interface interface
```

**Parameters**

`interface` Enter one of the following keywords and slot/port or number information:

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Supported Modes**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
</tbody>
</table>
### Version Description
- **9.4(0.0)** Supported on the FN I/O Aggregator.
- **8.3.17.0** Supported on the M I/O Aggregator.

### Usage Information
You cannot delete a physical interface.

By default, physical interfaces are disabled (shutdown) and are in Layer 3 mode. To place an interface in mode, ensure that the interface’s configuration does not contain an IP address and enter the Port Channel Commands command. By default, the interface is shut down when the portmode hybrid and switchport are enabled.

The tunnel interface operates as an ECMP (equal cost multipath) only when the next hop to the tunnel destination is over a physical interface. If you select any other interface as the next hop to the tunnel destination, the tunnel interface does not operate as an ECMP.

### Example
```
Dell(conf)#interface tengig 0/1
Dell(conf-if-te-0/1)#exit#
```

### Related Commands
- `interface port-channel` — configures a port channel.
- `interface vlan` — configures a VLAN.

### interface loopback
Configure a Loopback interface.

**Syntax**
```
interface loopback number
```
To remove a loopback interface, use the `no interface loopback number` command.

**Parameters**
- `number` Enter a number as the interface number. The range is from 0 to 16383.

**Defaults**
Not configured.

**Command Modes**
- `CONFIGURATION`

**Supported Modes**
- Full-Switch

**Command History**

<table>

**Example**
```
Dell(conf)#interface loopback 1655
Dell(conf-if-lo-1655)#
```

**Related Commands**
- `interface` — configures a physical interface.
- `interface null` — configures a Null interface.
interface port-channel — configures a port channel.

interface vlan — configures a VLAN.

interface ManagementEthernet

Configure the Management port on the system.

Syntax

interface ManagementEthernet slot/port

Parameters

slot/port

Enter the keyword ManagementEthernet, then the slot number (0) and port number zero (0).

Defaults

Not configured.

Command Modes

CONFIGURATION

Supported Modes

All Modes

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator and M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

You cannot delete a Management port.

The Management port is enabled by default (no shutdown). To assign an IP address to the Management port, use the ip address command.

Example

Dell(conf)#interface managementethernet 0/0
Dell(conf-if-ma-0/0)#

interface null

Configure a Null interface on the switch.

Syntax

interface null number

Parameters

number

Enter zero (0) as the Null interface number.

Defaults

Not configured; number = 0

Command Modes

<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>
Version | Description
------|-------------------
8.3.16.1 | Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
You cannot delete the Null interface. The only configuration command possible in a Null interface is `ip unreachables`.

Example
```
Dell(conf)#interface null 0
Dell(conf-if-nu-0)#
```

Related Commands
- `interface` — configures a physical interface.
- `interface loopback` — configures a Loopback interface.
- `interface port-channel` — configures a port channel.
- `interface vlan` — configures a VLAN.
- `ip unreachables` — enables generation of internet control message protocol (ICMP) unreachable messages.

**interface range**

This command permits configuration of a range of interfaces to which subsequent commands are applied (bulk configuration). Using the `interface range` command, you can enter identical commands for a range of interfaces.

**Syntax**
```
interface range interface, interface,...
```

To delete a description, enter `no description` command.

**Parameters**
- `interface`, `interface,...`
Enter the keyword `interface range` and one of the interfaces — slot/port, port-channel or VLAN number. Select the range of interfaces for bulk configuration. You can enter up to six comma separated ranges—spaces are not required between the commas. Comma-separated ranges can include VLANs, port-channels and physical interfaces.

Slot/Port information must contain a space before and after the dash. For example, `interface range tengigabitethernet 0/1 - 5` is valid; `interface range tengigabitethernet 0/1-5` is not valid.

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` followed by the slot/port information.
- For a VLAN, enter the keyword `vlan` followed by a number from 1 to 4094.

**Defaults**
none

**Command Modes**
- `CONFIGURATION`

**Supported Modes**
- All Modes

<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
</tbody>
</table>
### Usage Information
When creating an interface range, interfaces appear in the order they are entered; they are not sorted. The command verifies that interfaces are present (physical) or configured (logical). Important things to remember:

- Bulk configuration is created if at least one interface is valid.
- Non-existing interfaces are excluded from the bulk configuration with a warning message.
- The interface range prompt includes interface types with slot/port information for valid interfaces. The prompt allows for a maximum of 32 characters. If the bulk configuration exceeds 32 characters, it is represented by an ellipsis ( ... ).
- When the interface range prompt has multiple port ranges, the smaller port range is excluded from the prompt.
- If overlapping port ranges are specified, the port range is extended to the smallest start port and the biggest end port.

### Example-Bulk Configuration

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Dell(conf)#interface range tengig 0/1 - 2, tengig 0/4, tengig 0/7, fa 0/0</td>
<td>Example of bulk configuration with multiple interfaces. The prompt includes all valid interfaces.</td>
</tr>
<tr>
<td>% Warning: Non-existing ports (not configured) are ignored by interface-range</td>
<td>Warning message indicating non-existing ports being ignored.</td>
</tr>
</tbody>
</table>

### Example-Interface Range prompt with Multiple Ports

<tr>
<td>Dell(conf-if-range-te-0/1-5)# no shutdown</td>
<td></td>
</tr>
<tr>
<td>Dell(conf-if-range-te-0/1-5)#</td>
<td></td>
</tr>
</tbody>
</table>

### Example-Multiple Range Bulk Configuration with VLAN and port channel

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Dell(conf-if)# interface range tengigabitethernet 0/1 - 5, vlan 2 - 10, port-channel 1 - 25</td>
<td>Example of using commas to add VLAN and port-channel interfaces to the range.</td>
</tr>
<tr>
<td>Dell(conf-if-range-te-0/1-5,vl-2-10,po-1-25)# no shutdown</td>
<td></td>
</tr>
<tr>
<td>Dell(conf-if-range-te-0/1-5,vl-2-10,po-1-25)#</td>
<td></td>
</tr>
</tbody>
</table>

### Related commands
- `show config (from INTERFACE RANGE mode)` — Shows the bulk configuration interfaces.
- `show interfaces status` — Displays a summary of interface information.
**interface range macro (define)**

Defines a macro for an interface range and then saves the macro in the running configuration.

**Syntax**

```
define interface range macro name interface , interface , ...
```

**Parameters**

- **name**
  - Enter up to 16 characters for the macro name.

- **interface, interface,...**
  - Enter the keywords `interface range` and one of the interfaces — slot/port, port-channel, or VLAN number. Select the range of interfaces for bulk configuration. You can enter up to six comma-separated ranges. Spaces are not required between the commas. Comma-separated ranges can include VLANs, port-channels, and physical interfaces.

  Slot/Port information must contain a space before and after the dash. For example, `interface range tengigabitethernet 0/1 - 5` is valid; `interface range tengigabitethernet 0/1-5` is NOT valid.

  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Example (Single Range)**

This example shows how to define an interface range macro named test. Execute the `show running-config` command to display the macro definition.

```
Dell(config)# define interface-range test tengigabitethernet0/0-3, tengigabitethernet 5/0-7
Dell# show running-config | grep define
define interface-range test tengigabitethernet0/0-3, tengigabitethernet5/0-7,
Dell(config)#interface range macro test
Dell(config-if-range-te-0/0-3,te-5/0-7)#
```

**Related Commands**

- `interface range` — configures a range of command (bulk configuration)

- `interface range macro name` — runs an interface range macro.
interface range macro name

Run the interface-range macro to automatically configure the pre-defined range of interfaces.

Syntax

```
interface range macro name
```

Parameters

- `name` Enter the name of an existing macro.

Defaults

none

Command Modes

</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Example (Single Range)

This example shows the macro named test that was defined earlier.

```
Dell(config)#interface range macro test
Dell(config-if-range-te-0/0-3,te-5/0-8)#
```

Related Commands

- `interface range` — configures a range of command (bulk configuration).
- `interface range macro (define)` — defines a macro for an interface range (bulk configuration).

interface vlan

Configure a VLAN. Configure the default VLAN to enable Static or DCHP IP configuration. You can configure up to 4094 VLANs.

Syntax

```
interface vlan vlan-id
```

To delete a VLAN, use the `no interface vlan vlan-id` command.

Parameters

- `vlan-id` Enter 1 for the default VLAN. Enter a number as the VLAN identifier. The range is from 1 to 4096.

Defaults

Not configured, except for the default VLAN, which is configured as VLAN 1.

<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
</tbody>
</table>
Version Description
8.3.17.0 Supported on the M I/O Aggregator.

Usage Information
For more information about VLANs and the commands to configure them, refer to Virtual LAN (VLAN) Commands. FTP, TFTP, and SNMP operations are not supported on a VLAN. MAC/IP ACLs are not supported.

Examples
```
Dell(conf)#int vlan 1
Dell(conf-if-vl-1)#
Dell(conf)#int vlan 3
Dell(conf-if-vl-3)#
```

Related commands
- show vlan — Displays the current VLAN configuration on the switch.
- vlan tagged — Adds a Layer 2 interface to a VLAN as a tagged interface.
- vlan untagged — Adds a Layer 2 interface to a VLAN as an untagged interface.

### intf-type cr4 autoneg

Set the interface type as CR4 with auto-negotiation enabled.

**Syntax**
```
intf-type cr4 autoneg
```

If you configure `intf-type cr4 autoneg`, use the `no intf-type cr4 autoneg` command to set the interface type as cr4 with autonegotiation disabled.

**Defaults**
Not configured

**Command Modes**
CONFIGURATION

**Supported Modes**

<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**
If you configure `interface` type as CR4 with auto-negotiation enabled, also configure CR4 with auto-negotiation. Many DAC cable link issues are resolved by setting the interface type as CR4.

**Related Commands**
- `interface` — configurations a physical interface.
- `interface port-channel` — configurations a port channel group.
**keepalive**

Send keepalive packets periodically to keep an interface alive when it is not transmitting data.

**Syntax**

```
keepalive [seconds]
```

To stop sending keepalive packets, use the `no keepalive` command.

**Parameters**

- `seconds` *(OPTIONAL)* For interfaces with PPP encapsulation enabled, enter the number of seconds between keepalive packets. The range is from 0 to 23767. The default is 10 seconds.

**Defaults**  
Enabled.

**Command Modes**  
INTERFACE

**Supported Modes**  
All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

When you configure `keepalive`, the system sends a self-addressed packet out of the configured interface to verify that the far end of a WAN link is up. When you configure `no keepalive`, the system does not send keepalive packets and so the local end of a WAN link remains up even if the remote end is down.

**load-balance**

By default, Dell Networking OS uses an IP 4-tuple (IP SA, IP DA, Source Port, and Destination Port) to distribute IP traffic over members of a Port Channel as well as equal-cost paths. To designate another method to balance traffic over Port Channel members, use the `load-balance` command.

**Syntax**

```
load-balance {ip-selection [dest-ip | source-ip]} | {mac [dest-mac | source-dest-mac | source-mac]} | {tcp-udp | ingress-port [enable]}
```

To return to the default setting (IP 4-tuple), use the `no load-balance {ip-selection [dest-ip | source-ip]} | {mac [dest-mac | source-dest-mac | source-mac]} | {tcp-udp | ingress-port [enable]}` command.

**Parameters**

- `ip-selection (dest-ip | source-ip)`  
  Enter the keywords to distribute IP traffic based on the following criteria:
  
  - `dest-ip` — Uses destination IP address and destination port fields to hash.
  - `source-ip` — Uses source IP address and source port fields to hash.

**NOTE:** The hashing mechanism returns a 3-bit index indicating which port the packet should be forwarded.
Enter the keywords to distribute MAC traffic based on the following criteria:

- **dest-mac** — Uses the destination MAC address, VLAN, Ethertype, source module ID and source port ID fields to hash.
- **source-dest-mac** — Uses the destination and source MAC address, VLAN, Ethertype, source module ID and source port ID fields to hash.
- **source-mac** — Uses the source MAC address, VLAN, Ethertype, source module ID and source port ID fields to hash.

Enter the keywords to distribute traffic based on the following:

- **enable** — Takes the TCP/UDP source and destination ports into consideration when doing hash computations. This option is enabled by default.
- **ingress-port enable** — Enter the keywords to distribute traffic based on the following:

**Examples**

```
mac (dest-mac | source-dest-mac | source-mac)
```

**Usage Information**

By default, Dell Networking OS distributes incoming traffic based on a hash algorithm using the following criteria:

- IP source address
- IP destination address
- TCP/UDP source port
- TCP/UDP destination port

```
tcp-udp enable
```

Choose the traffic flow parameters the hash calculation uses while distributing the traffic across internal higig links.

```
```

**Parameters**

- **ip-selection**
- **ipv6-selection**
- **source-ip**
- **source-ipv6**
- **source-port-id**
- **source-module-id**
- **dest-ip**
- **dest-ipv6**
- **dest-port-id**
- **dest-module-id**
- **protocol**
- **vlan**
- **L4-source-port**
- **L4-dest-port**
- **mac**
- **source-mac**
- **source-port-id**
- **source-module-id**
- **dest-mac**
- **dest-port-id**
- **dest-module-id**
- **vlan**
- **ethertype**
- **source-dest-mac**
- **tunnel**

To use IPv4 key fields in hash computation, enter the keyword ip-selection then one of the parameters. To use IPv6 key fields in hash computation, enter the keyword ipv6-selection then one of the parameters.

<table>

**Version**

- **9.9(0.0)** Introduced on the FN IOM.
- **8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

- IP source address
- IP destination address
- TCP/UDP source port
- TCP/UDP destination port
source-module-id | dest-ip | dest-ipv6 | dest-port-id | dest-module-id | protocol | vlan | L4-source-port | L4-dest-port

- source-ipv6 — Use IPv6 src-ip field in hash calculation
- source-port-id — Use src-port-id field in hash calculation.
- source-module-id — Use src-module-id field in hash calculation.
- dest-ip — Use IPv4 dest-ip field in hash calculation
- dest-ipv6 — Use IPv6 dest-ip field in hash calculation
- dest-port-id — Use dest-port-id field in hash calculation.
- dest-module-id — Use dest-module-id field in hash calculation.
- protocol — Use IPv4 protocol field in hash calculation.
- vlan — Use vlan field in hash calculation.
- L4-source-port — Use IPv4 L4-source-port field in hash calculation.
- L4-dest-port — Use IPv4 L4-dest-port field in hash calculation.

mac [source-mac | source-port-id | source-module-id | dest-mac | dest-port-id | dest-module-id | vlan | ethertype | source-dest-mac]

To use MAC key fields in hash computation, enter the keyword mac then one of the parameters:
- source-mac — Use source-mac field in hash calculation.
- source-port-id — Use src-port-id field in hash calculation.
- source-module-id — Use src-module-id field in hash calculation.
- dest-mac — Use dest-mac field in hash calculation.
- dest-port-id — Use dest-port-id field in hash calculation.
- dest-module-id — Use dest-module-id field in hash calculation.
- vlan — Use vlan field in hash calculation.
- ethertype — Use Ethertype field in hash calculation.
- source-dest-mac — Use SMAC and DMAC fields in hash calculation.

tunnel [ipv4-over-ipv4 | ipv4-over-gre-ipv4 | mac-in-mac]

To use tunnel key fields in hash computation, enter the keyword tunnel then one of the parameters:
- ipv4-over-ipv4 — Use ipv4-over-ipv4 field in hash calculation.
- ipv4-over-gre-ipv4 — Use ipv4-over-gre-ipv4 field in hash calculation.
- mac-in-mac — Use mac-in-mac field in hash calculation.

Defaults
IP selection 5-tuples (source-ip dest-ip vlan protocol L4-source-port L4-dest-port).

monitor interface

Monitor counters on a single interface or all interfaces on a line card. The screen is refreshed every five seconds and the CLI prompt disappears.

Syntax

```
monitor interface [interface]
```
To disable monitoring and return to the CLI prompt, press the q key.

**Parameters**

- **interface** (OPTIONAL) Enter the following keywords and slot/port or number information:
  - For the management port, enter the keyword `managementethernet` then the slot (0 or 1) and the port (0).
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

<td>Change the [delta] column from change in the number of packets/bytes in the last interval to rate per second.</td>
</tr>
<tr>
<td>l</td>
<td>Change the view to the next interface on the line card, or if in line card mode, the next line card in the chassis.</td>
</tr>
<tr>
<td>a</td>
<td>Change the view to the previous interface on the line card, or if in line card mode, the previous line card in the chassis.</td>
</tr>
<tr>
<td>T</td>
<td>Increase the screen refresh rate.</td>
</tr>
<tr>
<td>t</td>
<td>Decrease the screen refresh rate.</td>
</tr>
<tr>
<td>q</td>
<td>Return to the CLI prompt.</td>
</tr>
</tbody>
</table>

**Example (Single Interface)**

```
systest-3 Monitor time: 00:00:06 Refresh Intvl.: 2s Time: 03:26:26
Interface: Te 0/3, Enabled, Link is Up, Linespeed is 1000 Mbit
Traffic statistics: Current Rate Delta
      Input bytes: 9069828  43 Bps  86
      Output bytes: 606915800  43 Bps  86
      Input packets: 54001  0 pps  1
```
mtu

Set the link maximum transmission unit (MTU) (frame size) for an Ethernet interface.

Syntax

mtu value

To return to the default MTU value, use the no mtu command.

Parameters

value

Enter a maximum frame size in bytes. The range is from 594 to 9252. The default is 1554.

Defaults

1554

Command Modes

INTERFACE

Supported Modes

Programmable-Mux (PMUX)
Full-Switch

Command History

Version Description

9.9(0.0) Introduced on the FN IOM.
9.4(0.0) Supported on the FN I/O Aggregator.
9.2(0.0) Introduced on the M I/O Aggregator.
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

If the packet includes a Layer 2 header, the difference between the link MTU and IP MTU (ip mtu command) must be enough bytes to include the Layer 2 header.

- The IP MTU is adjusted automatically when you configure the Layer 2 MTU with the mtu command.

When you enter the no mtu command, The Dell Networking OS reduces the IP MTU value to 1536 bytes.

Link MTU and IP MTU considerations for port channels and VLANs are as follows.
port channels:

- All members must have the same link MTU value and the same IP MTU value.
- The port channel link MTU and IP MTU must be less than or equal to the link MTU and IP MTU values configured on the channel members. For example, if the members have a link MTU of 2100 and an IP MTU of 2000, the port channel's MTU values cannot be higher than 2100 for link MTU or 2000 bytes for IP MTU.

VLANs:

- All members of a VLAN must have the same IP MTU value.
- Members can have different Link MTU values. Tagged members must have a link MTU 4 bytes higher than untagged members to account for the packet tag.
- The VLAN link MTU and IP MTU must be less than or equal to the link MTU and IP MTU values configured on the VLAN members. For example, the VLAN contains tagged members with Link MTU of 1522 and IP MTU of 1500 and untagged members with Link MTU of 1518 and IP MTU of 1500. The VLAN's Link MTU cannot be higher than 1518 bytes and its IP MTU cannot be higher than 1500 bytes.

The following shows the difference between Link MTU and IP MTU.

<table>
<thead>
<tr>
<th>Layer 2 Overhead</th>
<th>Link MTU and IP MTU Delta</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ethernet (untagged)</td>
<td>18 bytes</td>
</tr>
<tr>
<td>VLAN Tag</td>
<td>22 bytes</td>
</tr>
<tr>
<td>Untagged Packet with VLAN-Stack Header</td>
<td>22 bytes</td>
</tr>
<tr>
<td>Tagged Packet with VLAN-Stack Header</td>
<td>26 bytes</td>
</tr>
</tbody>
</table>

**negotiation auto**

Enable auto-negotiation on an interface.

**Syntax**

```
negotiation auto
```

To disable auto-negotiation, enter `no negotiation auto` command.

**Defaults**

Enabled.

**Command Modes**

INTERFACE

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

The `no negotiation auto` command is only available if you first manually set the speed of a port to **10Mbits** or **100Mbits**.
Dell#show interfaces configured
TenGigabitEthernet 0/1 is up, line protocol is up
Hardware is DellEth, address is 00:1e:c9:de:04:9c
    Current address is 00:1e:c9:de:04:9c
Server Port AdminState is N/A
Pluggable media not present
Interface index is 33886978
Internet address is not set
Mode of IPv4 Address Assignment : NONE
DHCP Client-ID :001ec9de049c
MTU 12000 bytes, IP MTU 11982 bytes
LineSpeed 10000 Mbit
Flowcontrol rx on tx off
ARP type: ARPA, ARP Timeout 04:00:00
Last clearing of "show interface" counters 03:56:48
Queueing strategy: fifo
Input Statistics:

Both sides of the link must have auto-negotiation enabled or disabled for the link to come up.

The following details the possible speed and auto-negotiation combinations for a line between two 10/100/1000 Base-T Ethernet interfaces.

**Port 0**
- auto-negotiation enabled* speed 1000 or auto
- auto-negotiation enabled speed 100
- auto-negotiation disabled speed 100
- auto-negotiation disabled speed 100
- auto-negotiation enabled* speed 1000 or auto

**Port 1**
- auto-negotiation enabled* speed 1000 or auto
- auto-negotiation enabled speed 100
- auto-negotiation disabled speed 100
- auto-negotiation enabled speed 100
- auto-negotiation disabled speed 100

**Link Status Between Port 1 and Port 2**
- Up at 1000 Mb/s
- Up at 100 Mb/s
- Up at 100 Mb/s
- Down
- Down

* You cannot disable auto-negotiation when the speed is set to 1000 or auto.

**Related Commands**  speed (for 1000/10000 interfaces) — sets the link speed to 10, 100, 1000 or auto-negotiate the speed.
**portmode hybrid**

To accept both tagged and untagged frames, set a physical port or port-channel. A port configured this way is identified as a hybrid port in report displays.

**Syntax**

```
portmode hybrid
```

To return a port to accept either tagged or untagged frames (non-hybrid), use the `no portmode hybrid` command.

**Defaults**

non-hybrid

**Command Modes**

INTERFACE (conf-if-interface-slot/port)

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

The following describes the `interface` command shown in the following example. This example sets a port as hybrid, makes the port a tagged member of VLAN 20, and an untagged member of VLAN 10, which becomes the native VLAN of the port. The port now accepts:

- untagged frames and classify them as VLAN 10 frames
- VLAN 20 tagged frames

The following describes the `do show interfaces` command shown in the following example. This example shows output with “Hybrid” as the newly added value for 802.1QTagged. The options for this field are:

- True — port is tagged
- False — port is untagged
- Hybrid — port accepts both tagged and untagged frames

The following describes the `interface vlan` command shown in the following example. This example shows unconfiguration of the hybrid port using the `no portmode hybrid` command.

```
NOTE: Remove all other configurations on the port before you can remove the hybrid configuration from the port.
```

**Example**

```
Dell(conf)#interface tengig 0/2
Dell(conf-if-te-0/2)#no shut
Dell(conf-if-te-0/2)#portmode hybrid
Dell(conf-if-te-0/2)#sw
Dell(conf-if-te-0/2)#int vlan 10
Dell(conf-if-vl-10)#tag tengig 0/2
Dell(conf-if-vl-10)#int vlan 20
Dell(conf-if-vl-20)#untag tengig 0/2
Dell(conf-if-vl-20)#
```

**Example (tagged hybrid)**

```
Dell(conf)#interface tengig 0/2
Dell(conf-if-te-0/2)#no shut
Dell(conf-if-te-0/2)#portmode hybrid
Dell(conf-if-te-0/2)#sw
```
Example (unconfigure the hybrid port)

Dell(conf-if-vl-20)#interface vlan 10
Dell(conf-if-vl-10)#no untagged tengig 0/2
Dell(conf-if-vl-10)#interface vlan 20
Dell(conf-if-vl-20)#no tagged tengig 0/2
Dell(conf-if-vl-20)#interface tengig 0/2
Dell(conf-if-te-0/2)#no portmode hybrid
Dell(conf-if-vl-20)#

Related Commands

- **show interfaces switchport** — displays the configuration of switchport (Layer 2) interfaces on the switch.
- **vlan-stack trunk** — specifies an interface as a trunk port to the Stackable VLAN network.

**rate-interval**

Configure the traffic sampling interval on the selected interface.

**Syntax**

```
rate-interval seconds
```

**Parameters**

- `seconds` - Enter the number of seconds for which to collect traffic data. The range is from 5 to 299 seconds.

**Defaults**

- `299 seconds`

**Command Modes**

- INTERFACE

**Supported Modes**

- Full-Switch

**NOTE:** For 0 to 5 seconds, polling occurs every 5 seconds. For 6 to 10 seconds, polling occurs every 10 seconds. For any other value, polling occurs every 15 seconds.
rate-interval (Configuration Mode)

Configure the traffic sampling interval for all physical and logical port-channel interfaces globally. The support to configure rate-interval globally enables you to modify the default interval rate for all physical and logical interfaces at one time.

Syntax

rate-interval seconds

Use the no rate-interval command to remove the sampling interval configuration.

Parameters

- **seconds**: Enter the number of seconds for which to collect traffic data. The range is from 5 to 299 seconds.

**NOTE**: Because polling occurs every 15 seconds, the number of seconds designated here round to the multiple of 15 seconds lower than the entered value. For example, if 44 seconds is designated, it rounds to 30; 45 to 59 seconds rounds to 45. If you configure this value to be less than 5, then the entire buffer is cleared; the show int stats command shows the rate information to be 0 as the polling interval is less than 5.

Defaults

299 seconds

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description

9.11.0.0 Introduced on all Dell Networking OS platforms.

Usage Information

The output of the show interfaces command displays the configured rate interval, along with the collected traffic data.

When rate-interval is not configured in the global configuration mode or interface mode, the default value of 299 seconds is applied.

When rate-interval is configured only in the global configuration mode and not in the interface mode, the global rate-interval value is applied at the interface level also.

When rate-interval is configured at the interface level and not in the global configuration mode, the interface level rate-interval value is applied for an interface.
When rate interval is configured in both global configuration mode as well as interface mode, then the rate-interval value configured at interface level is applied as it takes precedence over the global value.

**remote-fault-signaling rx**

Brings the interface up or down when a Remote Fault Indication (RFI) error is detected.

**Syntax**

remote-fault-signaling rx {on | off}

**Parameters**

- **on**
  - Brings the interface up when an RFI error is detected.

- **off**
  - Brings the interface down when an RFI error is detected.

**Defaults**

ON.

**Command Modes**

INTERFACE CONFIGURATION

**Supported Modes**

<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the MXL switch.</td>
</tr>
</tbody>
</table>

**Usage Information**

By default, the switch processes the RFI errors transmitted by remote peers and brings down the interface when an RFI error is detected.

**Example**

Dell(conf-if-te-1/3)#remote-fault-signaling rx ?
  on Enable
  off Disable

**show config**

Display the interface configuration.

**Syntax**

show config

**Command Modes**

INTERFACE

**Supported Modes**

**Example**

Dell(conf-if)#show conf

! interface TenGigabitEthernet 1/7
  no ip address
  switchport
show config (from INTERFACE RANGE mode)

Display the bulk configured interfaces (group).

Syntax
show config

Command Modes
CONFIGURATION INTERFACE (conf-if-range)

Supported Modes
All Modes

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Example

show interfaces

Displays information on a specific physical interface or virtual interface.

Syntax
show interfaces interface

Parameters
- interface
  Enter one of the following keywords and slot/port or number information:
  - For the management interface on the stack-unit, enter the keyword
    managementethernet followed by slot/port information. The slot and port range is 0.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then
    the slot/port information.
  - For a VLAN interface, enter the keyword vlan followed by a number from 1 to 4094.
  - For a Port Channel interface, enter the keyword port-channel followed by a
    number. The range is from 1 to 128.

Command Modes
- EXEC
- EXEC Privilege

Supported Modes
All Modes

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
</tbody>
</table>
Usage Information

Use this `show interfaces` command for details on a specific interface. Use the `show interfaces stack-unit` command for details on all interfaces on the designated stack unit.

On the I/O Aggregator, the show interface output displays incorrect rate information details over time for link monitoring when the rate-interval is configured for 5 seconds. Dell Networking recommends using higher rate-intervals such as 15 to 299 seconds to minimize the errors seen.

1. **NOTE:** In the CLI output, the power value will be rounded to a 3-digit value. For receive/transmit power that is less than 0.000, an snmp query will return the corresponding dbm value even though the CLI displays as 0.000.

2. **NOTE:** After the counters are cleared, the line-rate continues to increase until it reaches the maximum line rate. When the maximum line rate is reached, there will be no change in the line-rate.

User Information

The following describes the `show interfaces` command shown in the 10G example below.

<table>
<thead>
<tr>
<th>Line</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>TenGigabitEthernet 0/0...</td>
<td>Displays the interface’s type, slot/port, and administrative and line protocol status.</td>
</tr>
<tr>
<td>Hardware is...</td>
<td>Displays the interface hardware information and its assigned MAC address.</td>
</tr>
<tr>
<td>Interface index...</td>
<td>Displays the interface index number used by SNMP to identify the interface.</td>
</tr>
<tr>
<td>Internet address...</td>
<td>States whether an IP address is assigned to the interface. If an IP address is assigned, that address is displayed.</td>
</tr>
<tr>
<td>MTU 1554...</td>
<td>Displays link and IP MTU information. If the chassis is in Jumbo mode, this number can range from 576 to 12000.</td>
</tr>
<tr>
<td>LineSpeed</td>
<td>Displays the interface’s line speed.</td>
</tr>
<tr>
<td>ARP type...</td>
<td>Displays the ARP type and the ARP timeout value for the interface.</td>
</tr>
<tr>
<td>Last clearing...</td>
<td>Displays the time when the <code>show interfaces</code> counters where cleared.</td>
</tr>
<tr>
<td>Queuing strategy...</td>
<td>States the packet queuing strategy. FIFO means first in first out.</td>
</tr>
</tbody>
</table>

**Input Statistics:**

Displays all the input statistics including:

- Number of packets and bytes into the interface
- Number of packets with IP headers and VLAN tagged headers.

1. **NOTE:** The sum of the number of packets may not be as expected since a VLAN tagged IP packet counts as both a VLAN packet and an IP packet.

- Packet size and the number of those packets inbound to the interface
- Number of symbol errors, runts, giants, and throttles packets:
  - symbol errors = number packets containing bad data. That is, the port MAC detected a physical coding error in the packet.
  - runts = number of packets that are less than 64B
  - giants = packets that are greater than the MTU size
  - throttles = packets containing PAUSE frames
- Number of CRC, IP Checksum, overrun, and discarded packets:
  - CRC = packets with CRC/FCS errors
  - IP Checksum = packets with IP Checksum errors
  - overrun = number of packets discarded due to FIFO overrun conditions
### Line Description

- discarded = the sum of runts, giants, CRC, IP Checksum, and overrun packets discarded without any processing

### Output Statistics:
Displays output statistics sent out of the interface including:

- Number of packets, bytes, and underruns out of the interface
  - packets = total number of packets
  - bytes = total number of bytes
  - underruns = number of packets with FIFO underrun conditions

- Number of Multicast, Broadcast, and Unicast packets:
  - Multicasts = number of MAC multicast packets
  - Broadcasts = number of MAC broadcast packets
  - Unicasts = number of MAC unicast packets

- Number of throttles and discards packets:
  - throttles = packets containing PAUSE frames
  - discarded = number of packets discarded without any processing

### Rate Information...
Estimate of the input and output traffic rate over a designated interval (30 to 299 seconds). Traffic rate is displayed in bits, packets per second, and percent of line rate.

### Time since...
Elapsed time since the last interface status change (hh:mm:ss format).

### Usage Information
The interface counter "over 1023-byte pkts" does not increment for packets in the range 9216 < x < 1023.

The Management port is enabled by default (no shutdown). If necessary, use the `ip address` command to assign an IP address to the Management port.

### Example

```plaintext
Dell#show interface managementethernet 0/0
ManagementEthernet 0/0 is up, line protocol is up
Hardware is DellForce10Eth, address is 00:1e:c9:f1:00:05
Current address is 00:1e:c9:f1:00:05
Pluggable media not present
Interface index is 235159752
Internet address is 10.11.209.87/16
Mode of IP Address Assignment : MANUAL
DHCP Client-ID: mgmt001ec9f10005
Virtual-IP is not set
Virtual-IP IPv6 address is not set
MTU 1554 bytes, IP MTU 1500 bytes
LineSpeed 100 Mbit, Mode full duplex
ARP type: ARPA, ARP Timeout 04:00:00
Last clearing of "show interface" counters 5d4h57m
Queueing strategy: fifo
Input 3448753 packets, 950008323 bytes, 3442163 multicast
Received 0 errors, 0 discarded
Output 4627 packets, 814226 bytes, 0 multicast
Output 0 errors, 0 invalid protocol
```

### Related Commands
- `show interfaces configured` — Displays any interface with a non-default configuration.
- `show interfaces port-channel` — Displays information on all interfaces on a specific stack unit.
- `show interfaces switchport` — Displays Layer 2 information about the interfaces.
**show inventory** — Displays the I/O Aggregator type, components (including media), Dell Networking OS version including hardware identification numbers and configured protocols.

**show ip interface** — Displays Layer 3 information about the interfaces.

**show memory** — Displays the stack unit(s) status.

**show interfaces status** — Displays all interfaces configured using the interface range command.

### show interfaces configured

Displays any interface with a non-default configuration.

**Syntax**

```
show interfaces configured
```

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

```

### show interfaces dampening

Display interface dampening information.

**Syntax**

```
show interfaces dampening [[interface] [summary] [detail]]
```

**Parameters**

- **interface**
  
  (Optional) Enter one of the following keywords and slot/port or number information:
  
  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
NOTE: This command also enables you to view information corresponding to a range of ports. However, for Open Networking (ON) platforms the notation for specifying port range in the command is different from how you specify in non-ON platforms.

- For non-ON platforms, you can specify multiple ports as slot/port-range. For example, if you want to display information corresponding to all ports between 1 and 4, specify the port range as `show interfaces interface-type 1/1 - 4`.
- For ON platforms, you can specify multiple ports as `slot/port/[subport]` - `slot/port/[subport]`. For example, if you want to display information corresponding to all ports between 1 and 4, specify the port range as `show interfaces interface-type 1/1/1 - 1/4/1`.

```
summary

(OPTIONAL) Enter the keyword `summary` to display the current summary of dampening data, including the number of interfaces configured and the number of interfaces suppressed, if any.

detail

(OPTIONAL) Enter the keyword `detail` to display detailed interface dampening data.
```

Defaults

```
one
```

show interfaces configured — displays any interface with a non-default configuration.
```

show interfaces description

Display the descriptions configured on the interface.

```
Syntax

```
show interfaces [interface] description
```

Parameters

```
interface

Enter one of the following keywords and slot/port or number information:

- For the management interface on the stack unit enter the keyword `ManagementEthernet` followed by the slot/port information. The slot range is 0-0 and the port range is 0.
For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.

- For VLAN interfaces, enter the keyword vlan followed by a number from 1 to 4094.

NOTE: This command also enables you to view information corresponding to a range of ports.

- You can specify multiple ports as slot/port-range. For example, if you want to display information corresponding to all ports between 1 and 4, specify the port range as show interfaces interface-type 1/1 - 4.

</tbody>
</table>

Usage Information

The following describes the show interfaces description command shown in the Example below.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Interface</td>
<td>Displays the type of interface and associated slot and port number.</td>
</tr>
<tr>
<td>OK?</td>
<td>Indicates if the hardware is functioning properly.</td>
</tr>
<tr>
<td>Status</td>
<td>States whether the interface is enabled (up) or disabled (administratively down).</td>
</tr>
<tr>
<td>Protocol</td>
<td>States whether IP is enabled (up) or disabled (down) on the interface.</td>
</tr>
<tr>
<td>Description</td>
<td>Displays the description (if any) manually configured for the interface.</td>
</tr>
</tbody>
</table>

Example

Dell#show interface description

<table>
<thead>
<tr>
<th>Interface</th>

</tbody>
</table>

show interfaces stack-unit

Display information on all interfaces on a specific Aggregator stack member.

Syntax

show interfaces stack-unit unit-number
Parameters

unit-number
Enter the stack member number (0 to 5).

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

All Modes

Command History

<table>

Example

Dell#show interfaces stack-unit 0
TenGigabitEthernet 0/1 is down, line protocol is down
Hardware is DellForce10Eth, address is 00:1e:c9:f1:00:05
Current address is 00:1e:c9:f1:00:05
Server Port AdminState is Down
Pluggable media not present
Interface index is 34148609
Internet address is not set
Mode of IP Address Assignment : NONE
DHCP Client-ID :tenG130001ec9f10005
MTU 1554 bytes, IP MTU 1500 bytes
LineSpeed auto
Flowcontrol rx off tx off
ARP type: ARPA, ARP Timeout 04:00:00
Last clearing of "show interface" counters 5d5h24m
Queueing strategy: fifo
Input Statistics:
0 packets, 0 bytes
0 64-byte pkts, 0 over 64-byte pkts, 0 over 127-byte pkts
0 over 255-byte pkts, 0 over 511-byte pkts, 0 over 1023-byte pkts
0 Multicasts, 0 Broadcasts
0 runts, 0 giants, 0 throttles
0 CRC, 0 overrun, 0 discarded
Output Statistics:
0 packets, 0 bytes
0 64-byte pkts, 0 over 64-byte pkts, 0 over 127-byte pkts
0 over 255-byte pkts, 0 over 511-byte pkts, 0 over 1023-byte pkts
0 Multicasts, 0 Broadcasts, 0 Unicasts
0 throttles, 0 discarded, 0 collisions
Rate info (interval 299 seconds):
Input 00.00 Mbits/sec, 0 packets/sec, 0.00% of line-rate
Output 00.00 Mbits/sec, 0 packets/sec, 0.00% of line-rate
Time since last interface status change: 5d5h23m
-------------output truncated -------------!

Related Commands
show diag — Displays data plane and management plane input/output statistics.

show interfaces status

Displays a summary of interface information or specify a stack unit and interface to display status information for that specific interface only.

Syntax

show interfaces [interface | stack-unit unit-number] status
show interfaces status

Display only virtual and physical interfaces in Layer 2 mode. This command displays the Layer 2 mode interfaces’ IEEE 802.1Q tag status and VLAN membership.

**Syntax**

```
show interfaces switchport [interface | stack-unit unit-id ]
```

**Parameters**

- **interface**
  
  (OPTIONAL) Enter one of the following keywords and slot/port or number information:
  
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.

  ```bash
  Dell#sh interfaces status
  Port  Description  Status  Speed    Duplex Vlan
  Te 2/1                    Down   Auto      Auto   --
  Te 2/2                    Down   Auto      Auto   --
  Te 2/3                    Down   Auto      Auto   --
  Te 2/4                    Down   Auto      Auto   --
  Te 2/5                    Down   Auto      Auto   --
  Te 2/6                    Down   Auto      Auto   --
  Te 2/7                    Down   Auto      Auto   --
  Te 2/8                    Down   Auto      Auto   --
  Te 2/9                    Up     10000 Mbit Full 1001
  Te 2/10                   Down   Auto      Auto   --
  Te 2/11                   Up     10000 Mbit Full 1001
  Te 2/12                   Down   Auto      Auto   --
  Dell#
  ```
Enter the keyword backup to view the backup interface for this interface.

**NOTE:** This command also enables you to view information corresponding to a range of ports.

- For physical interfaces, you can specify multiple ports as slot/port-range. For example, if you want to display information corresponding to all ports between 1 and 4, specify the port range as `show interfaces interface-type 1/1 - 4`.
- For port-channel interfaces, you can specify multiple ports as port-range. For example, if you want to display information corresponding to all ports between 1 and 4, specify the port range as `show interfaces port-channel 1 - 4`.

```
stack-unit unit-id (OPTIONAL) Enter the keywords stack-unit followed by the stack member number. The range is from 0 to 5.
```

</tbody>
</table>

### Usage Information

The following describes the `show interfaces switchport` command for the following example.

#### Items

**Name**

Displays the interface's type, slot, and port number.

**802.1QTagged**

Displays whether if the VLAN tagged ("True"), untagged ("False"), or hybrid ("Hybrid"), which supports both untagged and tagged VLANs by port 13/0.

**Vlan membership**

Lists the VLANs to which the interface is a member. Starting with Dell Networking OS version 7.6.1, this field can display native VLAN membership by port 13/0.

#### Example

```
Dell#sh interfaces switchport

Codes:  U - Untagged,  T - Tagged
        x - Dot1x untagged, X - Dot1x tagged
        G - GVRP tagged, M - Trunk, H - VSN tagged
        i - Internal untagged, I - Internal tagged, v - VLT untagged, V - VLT tagged

Name:  TenGigabitEthernet 2/9
802.1QTagged:  True
Vlan membership:
    Q  Vlans
    T  1001

Name:  TenGigabitEthernet 2/11
802.1QTagged:  True
Vlan membership:
```
show interfaces transceiver

Display the physical status and operational status of an installed transceiver. The output also displays the transceiver’s serial number.

Syntax

```plaintext
show interfaces tengigabitethernet slot/port transceiver
```

Parameters

tengigabitethernet For a 10G interface, enter the keyword tengigabitethernet then the slot/port information.

**NOTE:** This command also enables you to view information corresponding to a range of ports. However, for Open Networking (ON) platforms the notation for specifying port range in the command is different from how you specify in non-ON platforms.

- For non-ON platforms, you can specify multiple ports as `slot/port-range`. For example, if you want to display information corresponding to all ports between 1 and 4, specify the port range as `show interfaces interface-type 1/1 - 4`.
- For ON platforms, you can specify multiple ports as `slot/port/[subport] - slot/port/[subpot]`. For example, if you want to display information corresponding to all ports between 1 and 4, specify the port range as `show interfaces interface-type 1/1/1 - 1/4/1`.

tinterface tengigabitethernet 0/6
Dell(conf-if-range-te-0/6)#

Related Commands

interface — configures a physical interface on the switch.
show ip interface — displays Layer 3 information about the interfaces.
show interfaces — displays information on a specific physical interface or virtual interface.

shutdown

Disable an interface.

Syntax

shutdown

To activate an interface, use the no shutdown command.

Defaults

The interface is disabled.

Command Modes

INTERFACE

Supported Modes

All Modes

Command History

Version Description

9.9(0.0) Introduced on the FN IOM.
9.4(0.0) Supported on the FN I/O Aggregator.
8.3.17.0 Supported on the M I/O Aggregator.

Usage Information

The shutdown command marks a physical interface as unavailable for traffic. To discover if an interface is disabled, use the show ip interface command. Disabled interfaces are listed as down.

Disabling a VLAN or a port channel causes different behavior. When a VLAN is disabled, the Layer 3 functions within that VLAN are disabled. Layer 2 traffic continues to flow. Entering the shutdown command on a port channel disables all traffic on the port channel and the individual interfaces within the port channel. To enable a port channel, you must enter no shutdown on the port channel interface and at least one interface within that port channel.

The shutdown and description commands are the only commands that you can configure on an interface that is a member of a port channel.

Related Commands

vlan tagged —Test the condition of copper cables on 100/1000/10G Base-T modules.
interface vlan — Creates a VLAN.
show ip interface — Displays the interface routing status. Add the keyword brief to display a table of interfaces and their status.
**speed (for 1000/10000/auto interfaces)**

Set the speed for 1000/10000 Base-T Ethernet interfaces. Set both sides of a link to the same speed (1000/10000) or to auto or the link may not come up.

**Syntax**
```
speed {1000 | 10000 | auto}
```

To return to the default setting, use the `no speed {1000 | 10000 | auto}` command.

**Parameters**
- **1000**: Enter the keyword `1000` to set the interface’s speed to 1000 Mb/s.
- **10000**: Enter the keyword `10000` to set the interface’s speed to 10000 Mb/s. Auto-negotiation is enabled. For more information, refer to `negotiation auto`.
- **auto**: Enter the keyword `auto` to set the interface to auto-negotiate its speed. Auto-negotiation is enabled. For more information, refer to `negotiation auto`.

**Defaults**
```
auto
```

**Command Modes**
```
INTERFACE
```

**Supported Modes**
```
Full-Switch
```

**Command History**
```
Version 
9.10(0.0) Added support for fanned-out 1 Gigabit SFP port.
9.9(0.0) Introduced on the FN IOM.
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
```

**Usage Information**
This command is found on the 1000/10000 Base-T Ethernet interfaces.

When you enable `auto`, the system performs an automatic discovery to determine the optics installed and configure the appropriate speed.

When you configure a speed for the 1000/10000 interface, confirm the `negotiation auto` command setting. Both sides of the link must have auto-negotiation either enabled or disabled. For speed settings of 1000 or auto, the software sets the link to auto-negotiation and you cannot change that setting.

If you use an active optical cable (AOC), you can convert the QSFP+ port to a 10 Gigabit SFP+ port or 1 Gigabit SFP port. You can use the `speed` command to enable the required speed.

**Related Commands**
- `negotiation auto` — enables or disables auto-negotiation on an interface.

**stack-unit portmode**

Split a single 40G port into 4-10G ports on the switch.

**Syntax**
```
stack-unit stack-unit-number port number portmode quad
```

**Parameters**
- **stack-unit**: Enter the stack member unit identifier of the stack member to reset. The range is 0 to 5.
NOTE: The switch commands accept Unit ID numbers from 0 to 5, though the switch supports stacking up to three units only with the Dell Networking OS version 8.3.7.1.

number

Enter the port number of the 40G port to be split. Enter one of the following port numbers for the switch: 48, 52, 56, or 60.

Defaults

Disabled

Command Modes

CONFIGURATION

Supported Modes

Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

- Splitting a 40G port into 4x10G port is supported on standalone and stacked units.
- You cannot use split ports as stack-link to stack a switch.
- The split ports switch unit cannot be a part of any stacked system.
- The unit number with the split ports must be the default (stack-unit 0).
- This set up can be verified using `show system brief` command. If the unit ID is different than 0, it must be renumbered to 0 before ports are split by using the `stackunit id renumber 0` command in EXEC mode.

The quad port must be in a default configuration before it can be split into 4x10G ports. The 40G port is lost in the config when the port is split, so be sure that the port is also removed from other L2/L3 feature configurations.

The system must be reloaded after issuing the CLI for the change to take effect.

wavelength

Set the wavelength for tunable 10-Gigabit SFP+ optics.

Syntax

```
wavelength
```

To retain the existing wavelength, use the `no wavelength` command.

Defaults

none

Command Modes

INTERFACE

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.10(0.0)</td>
<td>Introduced on the S6000, S6000--ON, S5000, S4810, S4820T, S3048--ON, S4048--ON, M I/O Aggregator, FN I/O Module, MXL, C9010, S3100 series, and Z9100-ON.</td>
</tr>
</tbody>
</table>
### Usage Information

The wavelength can be configured only on a tunable 10–Gigabit SFP+ optic. The wavelength range is from 1528.3 nm to 1568.77nm.

If you configure the wavelength on a non-tunable optic, there is no change to the existing wavelength. The configured wavelength is saved in the running configuration and is applicable, when a tunable optic is used.

If you do not configure the wavelength on an inserted tunable optic, the existing wavelength is used.

### Example

The following example shows the wavelength set for a tunable 10–Gigabit SFP+ optic:

```
```

### Related Commands

- `show config` — displays the interface configuration.

---

### Port Channel Commands

A Link Aggregation Group (LAG) is a group of links that appear to a MAC client as if they were a single link according to IEEE 802.3ad. In Dell Networking OS, a LAG is referred to as a Port Channel.

- For the Aggregator, the maximum port channel ID is 128 and the maximum members per port channel is 4.

Because each port can be assigned to only one Port Channel, and each Port Channel must have at least one port, some of those nominally available Port Channels might have no function because they could have no members if there are not enough ports installed.

**NOTE:** For information about Dell Networking OS link aggregation control protocol (LACP) for dynamic LAGs, refer to the [Link Aggregation Control Protocol (LACP)](link-aggregation-control-protocol) chapter. For more information about configuring and using Port Channels, refer to the [Dell PowerEdge FN I/O Aggregator Configuration Guide](poweredge-fn-i-o-aggregator-configuration-guide).

#### channel-member

Add an interface to the Port Channel, while in INTERFACE PORTCHANNEL mode.

```
channel-member interface
```

To delete an interface from a Port Channel, use the `no channel-member interface` command.

**Parameters**

- `interface` (OPTIONAL) Enter the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

**Defaults**

Not configured.

**Command Modes**

INTERFACE PORTCHANNEL

**Supported Modes**

Programmable-Mux (PMUX)

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
</tbody>
</table>
Version | Description
--- | ---
9.4(0.0) | Supported on the FN I/O Aggregator.

Usage Information
Use the `interface port-channel` command to access this command.

You cannot add an interface to a Port Channel if the interface contains an IP address in its configuration.

Link MTU and IP MTU considerations for Port Channels are:

- All members must have the same link MTU value and the same IP MTU value.
- The Port Channel link MTU and IP MTU must be less than or equal to the link MTU and IP MTU values configured on the channel members. For example, if the members have a link MTU of 2100 and an IP MTU of 2000, the Port Channel's MTU values cannot be higher than 2100 for link MTU or 2000 bytes for IP MTU.

When an interface is removed from a Port Channel with the `no channel-member` command, the interface reverts to its configuration prior to joining the Port Channel.

An interface can belong to only one Port Channel.

You can add up to 16 interfaces to a Port Channel on the switch. The interfaces can be located on different line cards but must be the same physical type and speed (for example, all 10-Gigabit Ethernet interfaces). However, you can combine 100/1000 interfaces and GE interfaces in the same Port Channel.

If the Port Channel contains a mix of interfaces with 100 Mb/s speed and 1000 Mb/s speed, the software disables those interfaces whose speed does not match the speed of the first interface configured and enabled in the Port Channel. If that first interface goes down, the Port Channel does not change its designated speed; disable and re-enable the Port Channel or change the order of the channel members configuration to change the designated speed. If the Port Channel contains a mix of interfaces with 100 Mb/s speed and 1000 Mb/s speed, the software disables those interfaces whose speed does not match the speed of the first interface configured and enabled in the Port Channel. If that first interface goes down, the Port Channel does not change its designated speed; disable and re-enable the Port Channel or change the order of the channel members configuration to change the designated speed. For more information about Port Channels, refer to the Dell Networking OS Configuration Guide.

Related Commands
`interface port-channel` — creates a Port Channel interface.

**group**

Group two LAGs in a supergroup ("fate-sharing group" or "failover group").

**Syntax**

```
group group_number port-channel number port-channel number
```

To remove an existing LAG supergroup, use the `no group group_number` command.

**Parameters**

- `group_number`: Enter an integer from 1 to 32 that uniquely identifies this LAG fate-sharing group.
- `port-channel number`: Enter the keywords `port-channel` then an existing LAG number. Enter this keyword/variable combination twice, identifying the two paired LAGs.

**Defaults**

- `none`

**Command Modes**

- `PORT-CHANNEL FAILOVER-GROUP (conf-po-failover-grp)`

**Supported Modes**

- `Full-Switch`
Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Example

Dell(conf)#port-channel failover-group
Dell(conf-po-failover-grp)#group 1 port-channel 1 port-channel 2
Dell(conf-po-failover-grp)#

Related Commands

- `port-channel failover-group` — accesses PORT-CHANNEL FAILOVER-GROUP mode to configure a LAG failover group.
- `show interfaces port-channel` — displays information on configured Port Channel groups.

### interface port-channel

Create a Port Channel interface, which is a link aggregation group (LAG) containing physical interfaces on the Aggregator.

**Syntax**

```
interface port-channel channel-number
```

To delete a Port Channel, use the `no interface port-channel channel-number` command.

**Parameters**

- `channel-number` For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.

**Defaults**

Not configured.

**Command Modes**

- CONFIGURATION

**Supported Modes**

- Programmable-Mux (PMUX)
- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

Port Channel interfaces are logical interfaces and can be either in Layer 2 mode (by using the `switchport` command) or Layer 3 mode (by configuring an IP address). You can add a Port Channel in Layer 2 mode to a VLAN.

A Port Channel can contain both 100/1000 interfaces and GE interfaces. Based on the first interface configured in the Port Channel and enabled, the Dell Networking OS determines if the Port Channel uses 100 Mb/s or 1000 Mb/s as the common speed. For more information, refer to.
If the line card is in a Jumbo mode chassis, you can also configure the `mtu` and `ip mtu` commands. The Link MTU and IP MTU values configured on the channel members must be greater than the Link MTU and IP MTU values configured on the Port Channel interface.

**NOTE:** In a Jumbo-enabled system, you must configure all members of a Port Channel with the same link MTU values and the same IP MTU values.

**Example**

```
Dell(conf)#int port-channel 2
Dell(conf-if-po-2)#
```

**Related Commands**

`interface` — configures a physical interface.

`interface vlan` — configures a VLAN.

### minimum-links

Configure the minimum number of links in a LAG (Port Channel) that must be in “oper up” status for the LAG to be also in “oper up” status.

**Syntax**

```
minimum-links number
```

**Parameters**

- **number**
  - Enter the number of links in a LAG that must be in “oper up” status. The range is from 1 to 16. The default is 1.

**Defaults**

1

**Command Modes**

- INTERFACE

**Supported Modes**

Programmable-Mux (PMUX)

Full-Switch

**Command History**

- **Version**
  - 9.9(0.0) Introduced on the FN IOM.
  - 9.4(0.0) Supported on the FN I/O Aggregator.
  - 9.2(0.0) Introduced on the M I/O Aggregator.
  - 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

If you use this command to configure the minimum number of links in a LAG that must be in “oper up” status, the LAG must have at least that number of “oper up” links before it can be declared as up. For example, if the required minimum is four, and only three are up, the LAG is considered down.

### port-channel failover-group

To configure a LAG failover group, access PORT-CHANNEL FAILOVER-GROUP mode.

**Syntax**

```
port-channel failover-group
```

To remove all LAG failover groups, use the `no port-channel failover-group` command.
### Defaults
none

### Command Modes
CONFIGURATION

### Supported Modes
Full-Switch

### Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

### Usage Information
This feature groups two LAGs to work in tandem as a supergroup. For example, if one LAG goes down, the other LAG is taken down automatically, providing an alternate path to reroute traffic, avoiding oversubscription on the other LAG. You can use both static and dynamic (LACP) LAGs to configure failover groups. For more information, refer to the Port Channel chapter in the Dell Networking OS Configuration Guide.

### Related Command
- **group** — groups two LAGs in a supergroup (“fate-sharing group”).
- **show interfaces port-channel** — displays information on configured Port Channel groups.

### show config
Display the current configuration of the selected LAG.

**Syntax**
```
show config
```

**Command Modes**
INTERFACE PORTCHANNEL

**Supported Modes**
Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Example**
```
Dell(conf-if-po-1)#show config
!
interface Port-channel 1
   no ip address
   shutdown
Dell(conf-if-po-1)#
```

### show interfaces port-channel
Display information on configured Port Channel groups.

**Syntax**
```
show interfaces port-channel [channel-number] [brief| description]
```

**Parameters**
- **channel-number**
  For a Port Channel interface, enter the keyword port-channel followed by a number. The range is from 1 to 128.
brief (OPTIONAL) Enter the keyword brief to display only the port channel number, the state of the port channel, and the number of interfaces in the port channel.

description (OPTIONAL) Enter the keyword description to display interface information with description.

NOTE: This command also enables you to view information corresponding to a range of ports.

- For port-channel interfaces, you can specify multiple ports as port-range. For example, if you want to display information corresponding to all ports between 1 and 4, specify the port range as show interfaces port-channel 1 - 4.

Command Modes
- EXEC
- EXEC Privilege

Supported Modes
All Modes

Command History

<table>
<thead>
<tr>

<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information
The following describes the show interfaces port-channel command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Port-Channel 1...</td>
<td>Displays the status of LAG. In the Example, the status of the LAG, LAG fate-sharing group (“Failover-group”) is listed.</td>
</tr>
<tr>
<td>Hardware is...</td>
<td>Displays the interface’s hardware information and its assigned MAC address.</td>
</tr>
<tr>
<td>Port-channel is part...</td>
<td>Indicates whether the LAG is part of a LAG fate-sharing group (“Failover-group”).</td>
</tr>
<tr>
<td>Internet address...</td>
<td>States whether an IP address is assigned to the interface. If an IP address is assigned, that address is displayed.</td>
</tr>
<tr>
<td>MTU 1554...</td>
<td>Displays link and IP MTU.</td>
</tr>
<tr>
<td>LineSpeed</td>
<td>Displays the interface’s line speed. For a port channel interface, it is the line speed of the interfaces in the port channel.</td>
</tr>
<tr>
<td>Members in this...</td>
<td>Displays the interfaces belonging to this port channel.</td>
</tr>
<tr>
<td>ARP type...</td>
<td>Displays the ARP type and the ARP timeout value for the interface.</td>
</tr>
<tr>
<td>Last clearing...</td>
<td>Displays the time when the show interfaces counters were cleared.</td>
</tr>
<tr>
<td>Queueing strategy...</td>
<td>States the packet queuing strategy. FIFO means first in first out.</td>
</tr>
<tr>
<td>packets input...</td>
<td>Displays the number of packets and bytes into the interface.</td>
</tr>
<tr>
<td>Input 0 IP packets...</td>
<td>Displays the number of packets with IP headers, VLAN tagged headers, and MPLS headers. The number of packets may not add correctly because a VLAN tagged IP packet counts as both a VLAN packet and an IP packet.</td>
</tr>
<tr>
<td>0 64-byte...</td>
<td>Displays the size of packets and the number of those packets entering that interface. This information is displayed over two lines.</td>
</tr>
</tbody>
</table>
Field | Description
--- | ---
Received 0... | Displays the type and number of errors or other specific packets received. This information is displayed over three lines.
Output 0... | Displays the type and number of packets sent out the interface. This information is displayed over three lines.
Rate information... | Displays the traffic rate information into and out of the interface. Traffic rate is displayed in bits and packets per second.
Time since... | Displays the time since the last change in the configuration of this interface.

Example (EtherScale)

```
Dell#show interfaces port-channel
Port-channel 1 is down, line protocol is down
Hardware address is 00:1e:c9:f1:00:05, Current address is 00:1e:c9:f1:00:05
Interface index is 1107755009
Minimum number of links to bring Port-channel up is 1
Internet address is not set
Mode of IP Address Assignment : NONE
DHCP Client-ID :lag1001ec9f10005
MTU 12000 bytes, IP MTU 1500 bytes
LineSpeed auto
Members in this channel:
ARP type: ARPA, ARP Timeout 04:00:00
Last clearing of "show interface" counters 03:28:00
Queueing strategy: fifo
Input Statistics:
  0 packets, 0 bytes
  0 64-byte pkts, 0 over 64-byte pkts, 0 over 127-byte pkts
  0 over 255-byte pkts, 0 over 511-byte pkts, 0 over 1023-byte pkts
  0 Multicasts, 0 Broadcasts
  0 runts, 0 giants, 0 throttles
  0 CRC, 0 overrun, 0 discarded
Output Statistics:
  0 packets, 0 bytes, 0 underruns
  0 64-byte pkts, 0 over 64-byte pkts, 0 over 127-byte pkts
  0 over 255-byte pkts, 0 over 511-byte pkts, 0 over 1023-byte pkts
  0 Multicasts, 0 Broadcasts, 0 Unicasts
  0 throttles, 0 discarded, 0 collisions
```

User Information

The following describes the `show interfaces port-channel brief` command shown in the following example.

Field | Description
--- | ---
LAG | Lists the port channel number.
Mode | Lists the mode:
  - L3 — for Layer 3
  - L2 — for Layer 2
Status | Displays the status of the port channel:
  - down — if the port channel is disabled (`shutdown`)
  - up — if the port channel is enabled (`no shutdown`)
Uptime | Displays the age of the port channel in hours:minutes:seconds.
Ports | Lists the interfaces assigned to this port channel.
(untitled) | Displays the status of the physical interfaces (up or down).
**Field** | **Description**
--- | ---
* (asterisk) | In Layer 2 port channels, an * (asterisk) indicates which interface is the primary port of the port channel. The primary port sends out interface PDU.

In Layer 3 port channels, the primary port is not indicated.

**Example**

```
Dell#show int po bri
Codes: L - LACP Port-channel
       O - OpenFlow Controller Port-channel
       A - Auto Port-channel
       I - Internally Lagged
LAG Mode Status Uptime Ports
L    128 L3 down 00:00:00
Dell#
```

To indicate the LACP fallback, Internally lagged is added to the list. When the LAG auto-configures itself, the LAG status describes as 'I'.

**Related Commands**

- `show lacp` — displays the LACP matrix.

---

**Time Domain Reflectometer (TDR) Commands**

TDR is useful for troubleshooting an interface that is not establishing a link; either it is flapping or not coming up at all. TDR detects open or short conditions of copper cables on 100/1000/10G Base-T modules.

- `tdr-cable-test`
- `show tdr`

**Important Points to Remember**

- The interface and port must be enabled (configured—see the `interface` command) before running TDR. An error message is generated if you have not enabled the interface.
- The interface on the far-end device must be shut down before running TDR.
- Because TDR is an intrusive test on an interface that is not establishing a link, do not run TDR on an interface that is passing traffic.
- When testing between two devices, do not run the test on both ends of the cable.

**tdr-cable-test**

Test the condition of copper cables on 100/1000/10GBase-T modules.

**Syntax**

```
tdr-cable-test interface
```

**Parameters**

- `interface` Enter the keyword `TenGigabitEthernet` followed by the slot/port information for the 100/1000/10GBase-T Ethernet interface.

**Defaults**

none

**Command Modes**

EXEC

**Supported Modes**

All Modes
### Command History

<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

### Usage Information

The interface must be enabled to run the test or an error message is generated:

%Error: Please run the TDR test first

The following describes the TDR test status.

<table>
<thead>
<tr>
<th>Status</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>OK Status:</strong> Terminated</td>
<td>TDR test is complete, no fault is detected on the cable, and the test is terminated.</td>
</tr>
<tr>
<td>Length: 92 (+/- 1) meters, Status: Shorted</td>
<td>A short is detected on the cable. The location, in this Example is 92 meters. The short is accurate to plus or minus one meter.</td>
</tr>
<tr>
<td>Length: 93 (+/- 1) meters, Status: Open</td>
<td>An opening is detected on the cable. The location, in this Example is 93 meters. The open is accurate to plus or minus one meter.</td>
</tr>
<tr>
<td>Status: Impedance Mismatch</td>
<td>There is an impedance mismatch in the cables.</td>
</tr>
</tbody>
</table>

### Related Commands

**show tdr** — Displays the results of the TDR test.
Enhanced Validation of Interface Ranges

You can avoid specifying spaces between the range of interfaces, separated by commas, that you configure by using the interface range command. For example, if you enter a list of interface ranges, such as interface range fo 2/0-1,te 10/0,fa 0/0, this configuration is considered valid. The comma-separated list is not required to be separated by spaces in between the ranges. You can associate multicast MAC or hardware addresses to an interface range and VLANs by using the mac-address-table static multicast-mac-address vlan vlan-id output-range interface command.

UDP Broadcast

The user datagram protocol (UDP) broadcast feature is a software-based method to forward low throughput (not to exceed 200 pps) IP/UDP broadcast traffic arriving on a physical or VLAN interface.

Important Points to Remember

- Routing information protocol (RIP) is not supported with the UDP Broadcast feature.
- If you configure this feature on an interface using the ip udp-helper udp-port command, the ip directed-broadcast command becomes ineffective on that interface.
- The existing show interface command has been modified to display the configured broadcast address.

debug ip udp-helper

Enable UDP debug and display the debug information on a console.

Syntax

```plaintext
debug ip udp-helper
```

To disable debug information, use the `no debug ip udp-helper` command.

Defaults

Debug disabled.

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Example

```
Dell#debug ip udp-helper
UDP helper debugging is on
01:20:22: Pkt rcvd on Te 4/1 with IP DA (0xffffffff) will be sent on Te 4/2 Te 4/3
Vlan 3
```
ip udp-broadcast-address

Configure an IP UDP address for broadcast.

Syntax:
```
ip udp-broadcast-address address
```
To delete the configuration, use the `no ip udp-broadcast-address address` command.

Parameters:
- **address**: Enter an IP broadcast address in dotted decimal format (A.B.C.D).

Defaults: Not configured.

Command Modes:
- INTERFACE (config-if)

Supported Modes: Full-Switch

Command History:
```
<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Enter an IP broadcast address in dotted decimal format (A.B.C.D).</td>
</tr>
</tbody>
</table>
```

Usage Information:
When a UDP broadcast packet is flooded out of an interface, and the outgoing interface is configured using this command, the outgoing packet’s IP destination address is replaced with the configured broadcast address.

Related Commands:
- `debug ip udp-helper` — enables debug and displays the debug information on a console.
- `show ip udp-helper` — displays the configured UDP helper(s) on all interfaces.

ip udp-helper udp-port

Enable the UDP broadcast feature on an interface either for all UDP ports or a specified list of UDP ports.

Syntax:
```
ip udp-helper udp-port [udp-port-list]
```
To disable the UDP broadcast on a port, use the `no ip udp-helper udp-port [udp-port-list]` command.

Parameters:
- **udp-port-list** (OPTIONAL) Enter up to 16 comma-separated UDP port numbers.

**NOTE:** If you do not use this option, all UDP ports are considered by default.

Defaults: none
Command Modes
- INTERFACE (config-if)

Supported Modes
- Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

If you configure the `ip helper-address` command and the `ip udp-helper udp-port` command, the behavior is that the UDP broadcast traffic with port numbers 67/68 is unicast relayed to the DHCP server per the `ip helper-address` configuration. This occurs regardless if the `ip udp-helper udp-port` command contains port numbers 67/68 or not.

If you only configure the `ip udp-helper udp-port` command, all the UDP broadcast traffic is flooded, including ports 67/68 traffic if those ports are part of the `udp-port-list`.

Related Commands
- `ip helper-address` — configures the destination broadcast or host address for the DHCP server.
- `debug ip udp-helper` — enables debug and displays the debug information on a console.
- `show ip udp-helper` — displays the configured UDP helpers on all interfaces.

**show ip udp-helper**

Display the configured UDP helpers on all interfaces.

Syntax

```
show ip udp-helper
```

Defaults
- none

Command Modes
- EXEC

Supported Modes
- Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Example

```
Dell#show ip udp-helper
--------------------------------------------------
Port     UDP  port  list
--------------------------------------------------
Te 1/1  656, 658
Te 1/2  All
```

Related Commands
- `debug ip udp-helper` — enables debug and displays the debug information on a console.
- `ip udp-broadcast-address` — configures a UDP IP address for broadcast.
- `ip udp-helper udp-port` — enables the UDP broadcast feature on an interface either for all UDP ports or a specified list of UDP ports.
Port Interface Commands

The following commands are for physical, loopback, and null interfaces:

- clear counters
- clear mac-address-table dynamic
- interface range
- interface vlan
- keepalive
- name
- show config (INTERFACE mode)
- show config (from INTERFACE RANGE mode)
- show config (from INTERFACE VLAN mode)
- show interfaces configured
- show interfaces description
- show interfaces stack-unit
- show interfaces port-channel
- show interfaces status
- show interfaces switchport
- show vlan
- shutdown
- speed (for 1000/10000 interfaces)

Virtual LAN (VLAN) Commands

The following commands configure and monitor virtual local area networks (VLANs). VLANs are a virtual interface and use many of the same commands as physical interfaces.

You can configure an IP address only on the default VLAN. FTP, TFTP, ACLs, and SNMP are not supported on a VLAN.

Occasionally, while sending broadcast traffic over multiple VLANs, state of a VLAN interface may continually switch between Master and Backup.

- auto vlan
- default vlan-id
- name
- show config (from INTERFACE VLAN mode)
- show vlan
- vlan tagged
- vlan untagged

auto vlan

Change the port to auto or admin vlan mode (enable or disable all auto VLANs).

**Syntax**

```
auto vlan
```

To remove membership from 4K VLAN, use the `no auto vlan` command.
Defaults none

Parameters

- **description**
  Enter a text string description to identify the VLAN (80 characters maximum).

Command Modes

- INTERFACE

Supported Modes

- Standalone Mode

Usage Information

The `auto vlan` command adds the port as untagged to default vlan and tagged to all other 4094 VLAN.

Command History

<table>
<thead>

</tbody>
</table>

---

**clear mac-address-table dynamic**

Clear the MAC address table of all MAC addresses learned dynamically.

Syntax

clear mac-address-table dynamic {interface tengigabitethernet slot/port-id}

Parameters

- **interface**
  Enter the keyword interface range and one of the interfaces — slot/port, port-channel or VLAN number. Select the range of interfaces for bulk configuration. You can enter up to six comma separated ranges-spaces are not required between the commas. Comma-separated ranges can include VLANs, port-channels and physical interfaces. Slot/Port information must contain a space before and after the dash. For example, interface range tengigabitethernet 0/1 - 5 is valid; interface range tengigabitethernet 0/1-5 is not valid.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.

Command Modes

- EXEC Privilege

Supported Modes

- All Modes

Command History

<table>
<thead>

</tr>
</tbody>
</table>

---

**default vlan-id**

Set the default VLAN ID.

Syntax

default vlan-id <vlan-id>

To reset the default VLAN ID, use the no default vlan-id command.

Defaults none
### feature fc

Enables the Fibre channel communication via the NPG functionality.

**Syntax**

```
feature fc
```

**Command Modes**

- CONFIGURATION

**Default**

Enabled

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

### monitor interface

Monitor counters on a single interface or all interfaces on a stack unit. The screen is refreshed every five seconds and the CLI prompt disappears.

**Syntax**

```
monitor interface [interface]
```

To disable monitoring and return to the CLI prompt, press the q key.

**Parameters**

- **interface** (OPTIONAL) Enter the following keywords and slot/port or number information:
  - For the management port, enter the keyword managementethernet followed by the slot (0) and the port (0).
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.
  - For a Port Channel interface, enter the keyword port-channel followed by a number. The range is from 1 to 128.

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

All Modes
Command History

<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

The delta column displays changes since the last screen refresh.

The following are the `monitor` command menu options.

Key          Description

```
systest-3    Displays the host name assigned to the system.

monitor time Displays the amount of time since the `monitor interface` command was entered.

time         Displays the amount of time the chassis is up (since last reboot).

m             Change the view from a single interface to all interfaces on the stack unit or visa-versa.

c             Refresh the view.

b             Change the counters displayed from Packets on the interface to Bytes.

r             Change the [delta] column from change in the number of packets/bytes in the last interval to rate per second.

l             Change the view to the next interface on the stack unit, or if in the stack unit mode, the next stack unit in the chassis.

A             Change the view to the previous interface on the stack unit, or if in line stack unit mode, the previous stack unit in the chassis.

T             Increase the screen refresh rate.

t             Decrease the screen refresh rate.

q             Return to the CLI prompt.
```

Example (Single Interface)

```
systest-3 Monitor time: 00:00:06 Refresh Intvl.: 2s Time: 03:26:26

m - Change mode  c - Clear screen
b - Display bytes  r - Display pkts/bytes per sec
l - Page up  a - Page down

**name**

Assign a name to the Default VLAN.

**Syntax**

```
name vlan-name
```

To remove the name from the VLAN, use the `no name` command.

**Parameters**

- **vlan-name**: Enter up to 32 characters as the name of the VLAN.

**Defaults**

Not configured.

**Command Modes**

- INTERFACE VLAN

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

This CLI applies only to the Default VLAN.
To display information about a named VLAN, enter the `show vlan` command with the name parameter or the `show interfaces description` command.

**Related commands**
- `default vlan-id` — Assigns a descriptive text string to the interface.
- `interface vlan` — Configures a VLAN.
- `show vlan` — Displays the current VLAN configurations on the switch.

### show config (INTERFACE mode)

Displays the interface configuration.

**Syntax**
```
show config
```

**Command Modes**
- INTERFACE

**Supported Modes**
- All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>

<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Example**
```
Dell(conf-lldp)#show conf
!
protocol lldp
Dell(conf-lldp)#
```

show vlan

Displays the current VLAN configurations on the switch.

**Syntax**
```
show vlan [brief |id vlan-id | name vlan-name]
```

**Parameters**
- **brief** (OPTIONAL) Enter the keyword `brief` to display the following information:
  - VLAN ID
  - VLAN name (left blank if none is configured.)
  - Spanning Tree Group ID
  - MAC address aging time
  - IP address

- **id vlan-id** (OPTIONAL) Enter the keyword `id` followed by a number from 1 to 4094. Only information on the VLAN specified is displayed

- **name vlan-name** (OPTIONAL) Enter the keyword `name` followed by the name configured for the VLAN. Only information on the VLAN named is displayed.

**Command Modes**
- EXEC
- EXEC Privilege

**Supported Modes**
- All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>

<td>U TenGig 1/22</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Dell(conf-if-vl-222)#

Dell#

**Related Commands**

interface vlan — Configures a VLAN.
speed (for 1000/10000 interfaces)

Set the speed for 1000/10000 interfaces. Both sides of a link must be set to the same speed (1000/10000) or to auto or the link may not come up.

**Syntax**

```plaintext
speed {1000 | 10000 | auto}
```

To return to the default setting, use the `no speed {1000 | 10000 | auto}` command.

**Parameters**

- **1000**: Enter the keyword `1000` to set the interface's speed to 1000 Mb/s.
- **10000**: Enter the keyword `10000` to set the interface's speed to 10000 Mb/s. Auto-negotiation is enabled.
- **auto**: Enter the keyword `auto` to set the interface to auto-negotiate its speed. Auto-negotiation is enabled. For more information, refer to `name`.

**Defaults**

`auto`

**Command Modes**

INTERFACE

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.10(0.0)</td>
<td>Added support for fanned-out 1 Gigabit SFP port.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the MI/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command is found on the 1000/10000 Base-T Ethernet interfaces.

When you enable `auto`, the system performs and automatic discovery to determine the optics installed and configure the appropriate speed.

When you configure a speed for the 1000/10000 interface, confirm the `negotiation auto` command setting. Both sides of the link must should have auto-negotiation either enabled or disabled. For speed settings of 1000 or `auto`, the software sets the link to auto-negotiation and you cannot change that setting.

If you use an active optical cable (AOC), you can convert the QSFP+ port to a 10 Gigabit SFP+ port or 1 Gigabit SFP port. You can use the `speed` command to enable the required speed.

**Related Commands**

stack-unit port-group port mode ethernet

Converts the interfaces 9 and 10 from Fibre Channel mode to Ethernet.

**Syntax**

```plaintext
stack-unit unit number port-group 0 portmode ethernet
```

To convert the interfaces 9 and 10 from Ethernet to Fibre Channel mode, use the `no stack-unit unit number port-group 0 portmode ethernet`. 
**Parameters**

- **stack-unit**: Enter the keyword `stack-unit` followed by a stack member number to select the stack unit. The range is 0 to 5.
- **port-group**: Enter the keyword `port-group` followed by 0.
- **portmode ethernet**: Enter the keyword `portmode ethernet` to convert the interfaces from Fibre Channel mode to Ethernet.

**Command Modes**

- **CONFIGURATION**

**Supported Modes**

- All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.6(0.0)</td>
<td>Supported on the FN2210S Aggregator.</td>
</tr>
</tbody>
</table>

---

**vlan tagged (CMC)**

Add a Layer 2 interface to a VLAN as a tagged interface.

**Syntax**

`vlan tagged [vlan-id]`

To remove a tagged interface from a VLAN, use the `no vlan tagged vlan-id` command.

**Parameters**

- **vlan-id**: Enter the VLAN ID. The range is from 1 to 4094.

**Defaults**

- All interfaces in Layer 2 mode are untagged.

**Command Modes**

- **INTERFACE**

**Supported Modes**

- All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

If the interface belongs to several VLANs, you must remove it from all VLANs to change it to an untagged interface.

Tagged interfaces can belong to multiple VLANs, while untagged interfaces can only belong to one VLAN at a time.

When two or more ports configured for VLANs form a LAG, the resulting LAG is a tagged member of all the configured VLANs and an untagged member of the VLAN to which the port with the lowest port ID belongs.

For example, if port 0/1-32 is an untagged member of VLAN 2 and port 0/41 is an untagged member of VLAN 3, the resulting LAG consisting of the two ports is an untagged member of VLAN 2 and a tagged member of VLAN 3.

**Example**

```bash
Dell(conf-if-te-0/2)#vlan tagged ?
VLAN-RANGE Comma/Hyphen separated VLAN ID set
Dell(conf-if-te-0/2)#vlan tagged 2,3-4
Dell(conf-if-te-0/2)#show config
!
interface TenGigabitEthernet 0/2
mtu 12000
```
vlan tagged 2-4
!
port-channel-protocol LACP
port-channel 1 mode active
!
protocol lldp
advertise management-tlv system-name
dcbx port-role auto-downstream
no shutdown
Dell(conf-if-te-0/2)#

Related Commands

interface vlan — Configures a VLAN.

vlan untagged — Specifies which interfaces in a VLAN are untagged.

### vlan untagged (CMC)

Add a Layer 2 interface to a VLAN as an untagged interface.

**Syntax**

```
vlan untagged [vlan-id]
```

To remove a untagged interface from a VLAN, use the `no vlan untagged [vlan-id]` command.

**Parameters**

- `vlan-id` : Enter the VLAN ID. The range is from 1 to 4094.

**Defaults**

All interfaces in Layer 2 mode are untagged.

**Command Modes**

- INTERFACE

**Supported Modes**

- All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

Untagged interfaces can only belong to one VLAN.

In the default VLAN, you cannot use the `no untagged interface` command. To remove an untagged interface from all VLANs, including the default VLAN, enter INTERFACE mode and use the `no vlan tagged` command.

Tagged interfaces can belong to multiple VLANs, while untagged interfaces can only belong to one VLAN at a time.

When two or more ports configured for VLANs form a LAG, the resulting LAG is a tagged member of all the configured VLANs and an untagged member of the VLAN to which the port with the lowest port ID belongs.

For example, if port 0/33 is an untagged member of VLAN 2 and port 0/41 is an untagged member of VLAN 3, the resulting LAG consisting of the two ports is an untagged member of VLAN 2 and a tagged member of VLANs 2 and 3.

**Example**

```
Dell(conf-if-te-0/2)#vlan untagged ?
<1-4094> Untagged VLAN id
Dell(conf-if-te-0/2)#
Dell(conf-if-te-0/2)#vlan untagged 4094
Dell(conf-if-te-0/2)#show config
```
interface TenGigabitEthernet 0/2
mtu 12000
vlan untagged 4094
!
port-channel-protocol LACP
port-channel 1 mode active
!
protocol lldp
advertise management-tlv system-name
dcbx port-role auto-downstream
no shutdown
Dell(conf-if-te-0/2)#

Related Commands

interface vlan — Configures a VLAN.

vlan tagged — Specifies which interfaces in a VLAN are tagged.
The aggregator supports both IPv4 and IPv6 routing and these are used only for the management purpose.

This chapter describes the IPv4 related commands. They are:

- clear tcp statistics
- debug ip dhcp
- debug ip icmp
- show ip management-route
- show ip multicast-cam stack-unit
- show ip interface
- show ip route
- show tcp statistics

Topics:

- arp
- arp learn-enable
- arp retries
- arp timeout
- clear arp-cache
- clear host

To associate an IP address with a multicast MAC address in the switch when you configure multicast mode of the network load balancing (NLB), use the address resolution protocol (ARP).

**Syntax**

```
arp ip-address multicast-mac-address interface
```

To remove an ARP address, use the `no arp ip-address` command.

**Parameters**

- **ip-address**: Enter an IP address in dotted decimal format.
- **multicast-mac-address**: Enter a 48–bit hexadecimal address in MAC address in nn:nn:nn:nn:nn:nn format for the static MAC address to be used to switch multicast traffic.
- **interface**: (OPTIONAL) Enter any of the following keywords and slot/port or number information:
  - For the Management interface, enter the keyword ManagementEthernet then the slot/port information. The slot range is from 0 to 1 and the port range is 0.
  - For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - The interface specified here must be one of the interfaces configured using the \{output-range | output\} interface option with the mac-address-table static command.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Supported Modes**

<tr>
<td>9.3(0.0)</td>
<td>Added the support for association of an IP address with multicast MAC address on the MXL platform.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

For multicast mode of NLB, to associate an IP address with a multicast MAC address in the switch, use address resolution protocol (ARP) by entering the `arp ip-address multicast-mac-address` command in Global configuration mode. This setting causes the multicast MAC address to be mapped to the cluster IP address for NLB mode of operation of the switch.

You cannot use Class D or Class E IP addresses or zero IP address (0.0.0.0) when creating a static ARP. Zero MAC addresses (00:00:00:00:00:00) are also invalid.

Although static ARP entries take precedence over dynamically-learnt ARP entries, a static ARP entry that points to a wrong port is not included in the FIB or ARP entries.

Related Commands:
- `clear arp-cache` — clears dynamic ARP entries from the ARP table.
- `show arp` — displays the ARP table.

**arp learn-enable**

Enable ARP learning using gratuitous ARP.

**Syntax**

```
arp learn-enable
```

**Defaults**

Disabled

</tr>
</tbody>
</table>

**Usage Information**
Retries are 20 seconds apart.

**Related Commands**
- `show arp retries` — displays the configured number of ARP retries.

## arp timeout

Set the time interval for an ARP entry to remain in the ARP cache.

**Syntax**

```
arp timeout minutes
```

**Parameters**

- `minutes`
Enter the number of minutes. The range is from 0 to 35790. The default is 240 minutes.

**Defaults**
- 240 minutes (4 hours)

**Command Modes**

</tr>
</tbody>
</table>

**Related Commands**
- `show interfaces` — displays the ARP timeout value for all available interfaces.

## clear arp-cache

Clear the dynamic ARP entries from a specific interface or optionally delete (no-refresh) ARP entries from the content addressable memory (CAM).

**Syntax**

```
clear arp-cache [interface | ip ip-address] [no-refresh]
```

**Parameters**

- `interface`
  (OPTIONAL) Enter the following keywords and slot/port or number information:
  - For the Management interface, enter the keyword ManagementEthernet then the slot/port information. The slot range is from 0 to 1 and the port range is 0.
  - For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a VLAN, enter the keyword vlan then a number from 1 to 4094.

- `ip ip-address`
  (OPTIONAL) Enter the keyword ip then the IP address of the ARP entry you wish to clear.
no-refresh  (OPTIONAL) Enter the keywords no-refresh to delete the ARP entry from CAM. Or use this option with interface or ip ip-address to specify which dynamic ARP entries you want to delete.

**NOTE:** Transit traffic may not be forwarded during the period when deleted ARP entries are resolved again and re-installed in CAM. Use this option with extreme caution.

**Command Modes**
- EXEC Privilege

**Supported Modes**
- Full-Switch

</tbody>
</table>

### clear ip fib stack-unit

Clear all forwarding information base (FIB) entries in the specified stack unit (use this command with caution, refer to Usage Information.)

**Syntax**

```
clear ip fib stack-unit unit-number
```

**Parameters**

- **unit-number**
  
  Enter the number of the stack unit. The range is from 0 to 5.

**Command Modes**
- EXEC
  
  EXEC Privilege

**Supported Modes**
- Full-Switch
clear ip route

Clear one or all routes in the routing table.

Syntax

```
clear ip route {* | ip-address mask}
```

Parameters

- `*`: Enter an asterisk (*) to clear all learned IP routes.
- `ip-address mask`: Enter a specific IP address and mask in dotted decimal format to clear that IP address from the routing table.

Command Modes

- EXEC Privilege

Supported Modes

- Full-Switch

Command History

</table>
debug arp

View information on ARP transactions.

Syntax

debug arp [interface] [count value]

To stop debugging ARP transactions, use the no debug arp command.

Parameters

interface

(OPTIONAL) Enter the following keywords and slot/port or number information:

- For the Management interface, enter the keyword ManagementEthernet then the slot/port information. The slot range is from 0 to 1 and the port range is 0.
- For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a VLAN, enter the keyword vlan then a number from 1 to 4094.

count value

(OPTIONAL) Enter the keyword count then the count value. The range is from 1 to 65534.

Defaults

none

Command History

Version Description

9.9(0.0) Introduced on the FN IOM.

8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

To stop packets from flooding the user terminal when debugging is turned on, use the count option.

debug ip dhcp

Enable debug information for DHCP relay transactions and display the information on the console.

Syntax
debug ip dhcp

Parameters
debug ip dhcp

To disable debug, use the no debug ip dhcp command.

Defaults

Debug disabled

Command Mode

EXEC Privilege

Supported Modes

All Modes
debug ip icmp

View information on the internal control message protocol (ICMP).

Syntax

download ip icmp [interface] [count value]

To disable debugging, use the no debug ip icmp command.

Parameters

interface

(OPTIONAL) Enter the following keywords and slot/port or number information:

- For the management interface, enter the keyword ManagementEthernet then the slot/port information. The slot range is 0 and the port range is 0.
- For a 10 Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For VLAN, enter the keyword `vlan` then by a number from 1 to 4094.

  `count value` (OPTIONAL) Enter the keywords `count` then the count value. The range is from 1 to 65534. The default is `Infinity`.

</tbody>
</table>

**Usage Information**  
To stop packets from flooding the user terminal when debugging is turned on, use the count option.

**Example**

```
ICMP: echo request rcvd from src 40.40.40.40
ICMP: src 40.40.40.40, dst 40.40.40.40, echo reply
ICMP: src 40.40.40.40, dst 40.40.40.40, echo reply
ICMP: echo request sent to dst 40.40.40.40
ICMP: echo request rcvd from src 40.40.40.40
ICMP: src 40.40.40.40, dst 40.40.40.40, echo reply
ICMP: src 40.40.40.40, dst 40.40.40.40, echo reply
ICMP: echo request sent to dst 40.40.40.40: debug ip packet
```

**debug ip packet**

View a log of IP packets sent and received.

**Syntax**

```
depug ip packet [access-group name] [count value] [interface]
```

To disable debugging, use the `no debug ip packet [access-group name] [count value] [interface]` command.

**Parameters**

- **access-group name**  
Enter the keywords `access-group` then the access list name (maximum 16 characters) to limit the debug output based on the defined rules in the ACL.

- **count value**  
(Optional) Enter the keyword `count` then the count value. The range is from 1 to 65534. The default is `Infinity`.

- **interface**  
(Optional) Enter the following keywords and slot/port or number information:

  - For the Management interface, enter the keyword `ManagementEthernet` then the slot/port information. The slot range is from 0 to 1 and the port range is 0.
  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

</tbody>
</table>

Usage Information

The following describes the `debug ip packet` command in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>s=</td>
<td>Lists the source address of the packet and the name of the interface (in parentheses) that received the packet.</td>
</tr>
<tr>
<td>d=</td>
<td>Lists the destination address of the packet and the name of the interface (in parentheses) through which the packet is being sent out on the network.</td>
</tr>
<tr>
<td>len</td>
<td>Displays the packet’s length.</td>
</tr>
<tr>
<td>sending, rcvd, fragment, sending broad/multicast proto, unroutable</td>
<td>The last part of each line lists the status of the packet.</td>
</tr>
<tr>
<td>TCP src=</td>
<td>Displays the source and destination ports, the sequence number, the acknowledgement number, and the window size of the packets in that TCP packets.</td>
</tr>
<tr>
<td>UDP src=</td>
<td>Displays the source and destination ports for the UDP packets.</td>
</tr>
<tr>
<td>ICMP type=</td>
<td>Displays the ICMP type and code.</td>
</tr>
<tr>
<td>IP Fragment</td>
<td>States that it is a fragment and displays the unique number identifying the fragment (Ident) and the offset (in 8-byte units) of this fragment (fragment offset) from the beginning of the original datagram.</td>
</tr>
</tbody>
</table>

Example

```
IP: s=10.1.2.62 (local), d=10.1.2.206 (Ma 0/0), len 54, sending
   TCP src=23, dst=40869, seq=2112994894, ack=606901739, win=8191 ACK PUSH
IP: s=10.1.2.206 (Ma 0/0), d=10.1.2.62, len 40, rcvd
   TCP src=0, dst=0, seq=0, ack=0, win=0
IP: s=10.1.2.62 (local), d=10.1.2.206 (Ma 0/0), len 226, sending
   TCP src=23, dst=40869, seq=2112994896, ack=606901739, win=8192 ACK PUSH
IP: s=10.1.2.216 (Ma 0/0), d=10.1.2.62, len 78, rcvd
   UDP src=0, dst=0
IP: s=10.1.2.216 (Ma 0/0), d=10.1.2.62 (local), len 1500, sending fragment
   IP Fragment, Ident = 4741, fragment offset = 0
   ICMP type=0, code=0
IP: s=10.1.2.62 (local), d=10.1.2.216 (Ma 0/0), len 1500, sending fragment
   IP Fragment, Ident = 4741, fragment offset = 1480
IP: s=40.40.40.40 (local), d=224.0.0.5 (Te 1/8), len 64, sending broad/multicast
   proto=89
IP: s=40.40.40.40 (local), d=224.0.0.5 (Te 1/8), len 28, sending broad/multicast
   proto=2
IP: s=0.0.0.0, d=30.30.30.30, len 100, unroutable
   ICMP type=8, code=0
IP: s=0.0.0.0, d=30.30.30.30, len 100, unroutable
   ICMP type=8, code=0
```

Usage Information

To stop packets from flooding the user terminal when debugging is turned on, use the `count` option.

The access-group option supports only the equal to (`eq`) operator in TCP ACL rules. Port operators not equal to (`neq`), greater than (`gt`), less than (`lt`), or `range` are not supported in access-group option (refer to the
following example). ARP packets (arp) and Ether-type (ether-type) are also not supported in the access-group option. The entire rule is skipped to compose the filter.

The `access-group` option pertains to:

- IP protocol number: from 0 to 255
- Internet control message protocol (icmp) but not the ICMP message type (from 0 to 255)
- Any internet protocol (ip)
- Transmission Control Protocol (tcp) but not on the rst, syn, or urg bits
- User Datagram Protocol (udp)

In the case of ambiguous access control list rules, the `debug ip packet access-control` command is disabled. A message appears identifying the error (refer to the Example below).

**Example (Error Messages)**

```
Dell#debug ip packet access-group test
%Error: port operator GT not supported in access-list debug
%Error: port operator LT not supported in access-list debug
%Error: port operator RANGE not supported in access-list debug
%Error: port operator NEQ not supported in access-list debug

Dell#00:10:45: %RPM0-P:CP
%IPMGR-3-DEBUG_IP_PACKET_ACL_AMBIGUOUS_EXP: Ambiguous rules not supported in access-list debug, access-list debugging is turned off
```

**ip address**

Assign a primary and secondary IP address to the interface.

**Syntax**

```
ip address ip-address mask [secondary]
```

To delete an IP address from an interface, use the `no ip address [ip-address]` command.

**Parameters**

- **ip-address**: Enter an IP address in dotted decimal format.
- **mask**: Enter the mask of the IP address in slash prefix format (for example, /24).
- **secondary**: (OPTIONAL) Enter the keyword `secondary` to designate the IP address as the secondary address.

**Defaults**

Not configured.

**Command Modes**

- INTERFACE

**Supported Modes**

- Full-Switch

**Command History**

<table>

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

You must be in INTERFACE mode before you add an IP address to an interface. Assign an IP address to an interface prior to entering ROUTER OSPF mode.
ip directed-broadcast

Enables the interface to receive directed broadcast packets.

Syntax

```plaintext
ip directed-broadcast
```

To disable the interface from receiving directed broadcast packets, use the `no ip directed-broadcast` command.

Defaults

Disabled (that is, the interface does not receive directed broadcast packets)

<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

To configure a list of possible domain names, configure the `ip domain-list` command up to six times. If you configure both the `ip domain-name` and `ip domain-list` commands, the software tries to resolve the name using the `ip domain-name` command. If the name is not resolved, the software goes through the list of names configured with the `ip domain-list` command to find a match.

To enable dynamic resolution of hosts, use the following steps:

- specify a domain name server with the `ip name-server` command
- enable DNS with the `ip domain-lookup` command
To view current bindings, use the `show hosts` command. To view a DNS-related configuration, use the `show running-config resolve` command.

Related Commands  
ip domain-name — specifies a DNS server.

### ip domain-lookup

To address resolution (that is, DNS), enable dynamic host-name.

**Syntax**
```
ip domain-lookup
```

To disable DNS lookup, use the `no ip domain-lookup` command.

**Defaults**
Disabled.

**Command Modes**
CONFIGURATION

**Supported Modes**

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**
To fully enable DNS, also specify one or more domain name servers with the `ip name-server` command.

The Dell Networking OS does not support sending DNS queries over a VLAN. DNS queries are sent out all other interfaces, including the Management port.

To view current bindings, use the `show hosts` command.

**Related Commands**
- `ip name-server` — specifies a DNS server.
- `show hosts` — Views the current bindings.

### ip domain-name

Configure one domain name for the switch.

**Syntax**
```
ip domain-name name
```

To remove the domain name, use the `no ip domain-name` command.

**Parameters**
- `name`  
Enter one domain name to be used to complete unqualified names (that is, incomplete domain names that cannot be resolved).

**Defaults**
Not configured.

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

You can only configure one domain name with the `ip domain-name` command. To configure more than one domain name, configure the `ip domain-list` command up to six times.

To enable dynamic resolution of hosts, use the following steps:

- specify a domain name server with the `ip name-server` command
- enable DNS with the `ip domain-lookup` command

To view current bindings, use the `show hosts` command.

Related Commands

`ip domain-list` — configures additional names.

**ip helper-address**

Specify the address of a DHCP server so that DHCP broadcast messages can be forwarded when the DHCP server is not on the same subnet as the client.

**Syntax**

```plaintext
ip helper-address ip-address
```

To remove a DHCP server address, use the `no ip helper-address` command.

**Parameters**

- **ip-address**: Enter an IP address in dotted decimal format (A.B.C.D).

**Defaults**

Not configured.

**Command Modes**

INTERFACE

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

You can add multiple DHCP servers by entering the `ip helper-address` command multiple times. If multiple servers are defined, an incoming request is sent simultaneously to all configured servers and the reply is forwarded to the DHCP client.

The Dell Networking OS uses standard DHCP ports, that is UDP ports 67 (server) and 68 (client) for DHCP relay services. It listens on port 67 and if it receives a broadcast, the software converts it to unicast, and forwards to it to the DHCP-server with source port=68 and destination port=67.

The server replies with source port=67, destination port=67 and the system forwards to the client with source port=67, destination port=68.
**ip helper-address hop-count disable**

Disable the hop-count increment for the DHCP relay agent.

**Syntax**

```plaintext
ip helper-address hop-count disable
To re-enable the hop-count increment, use the no ip helper-address hop-count disable command.
```

**Defaults**

Enabled; the hops field in the DHCP message header is incremented by default.

**Command Modes**

CONFIGURATION

**Supported Modes**

Full–Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command disables the incrementing of the hops field when boot requests are relayed to a DHCP server through the Dell Networking OS. If the incoming boot request already has a non-zero hops field, the message is relayed with the same value for hops. However, the message is discarded if the hops field exceeds 16, to comply with the relay agent behavior specified in RFC 1542.

**Related Commands**

- `ip helper-address` — specifies the destination broadcast or host address for DHCP server requests.
- `show running-config` — displays the current configuration and changes from the default values.

---

**ip host**

Assign a name and IP address to be used by the host-to-IP address mapping table.

**Syntax**

```plaintext
ip host name ip-address
To remove an IP host, use the no ip host name [ip-address] command.
```

**Parameters**

- `name`:
  - Enter a text string to associate with one IP address.
- `ip-address`:
  - Enter an IP address, in dotted decimal format, to be mapped to the name.

**Defaults**

Not configured.

**Command Modes**

ip icmp source-interface

Enable the ICMP error and unreachable messages to be sent with the source interface IP address, such as the loopback address, instead of the hops of the preceding devices along the network path to be used for easy debugging and diagnosis of network disconnections and reachability problems with IPv4 packets.

**Syntax**

```
ip icmp source-interface interface
```

**Parameters**

- **interface**
  - Enter one of the following keywords and slot/port or number information:
    - For a Management Ethernet interface, enter the keyword `managementethernet`.
    - For a Loopback interface, enter the keyword `loopback`. The range is from 0 to 16383.
    - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet`.
    - For a VLAN interface, enter the keyword `vlan`. The range is from 1 to 4094.

**Defaults**

Not configured.

<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the MXL platform.</td>
</tr>
</tbody>
</table>

**Usage Information**

You can enable the mechanism to configure the source or the originating interface from which the packet (the device that generates the ICMP error messages) is received by the switch to send the loopback address instead of its source IP address to be used in the ICMP unreachable messages and in the `traceroute` command output. The loopback address must be unique in a particular domain.

In network environments that contain a large number of devices, ranging up to thousands of systems, and with each device configured for equal-cost multipath (ECMP) links, you cannot effectively and optimally use the `traceroute` and ping applications to examine the network reachability and identify any broken links for diagnostic purposes. In such cases, if the reply that is obtained from each hop on the network path contains the IP address of the adjacent, neighboring interface from which the packet is received, it is difficult to employ the ping and `traceroute` utilities. You can enable the ICMP unreachable messages to contain the loopback address of the source device instead of the previous hop's IP address to be able to easily and quickly identify the device and devices along the path because the DNS server maps the loopback IP address to the hostname and does not translate the IP address of every interface of the switch to the hostname.
ipv6 icmp source-interface

Enable the ICMP error and unreachable messages to be sent with the source interface IP address, such as the loopback address, instead of the hops of the preceding devices along the network path to be used for easy debugging and diagnosis of network disconnections and reachability problems with IPv6 packets.

Syntax

ipv6 icmp source-interface interface

Parameters

- **interface**
  - Enter one of the following keywords and slot/port or number information:
    - For a Management Ethernet interface, enter the keyword managementethernet.
    - For a Loopback interface, enter the keyword loopback. The range is from 0 to 16383.
    - For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
    - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet.
    - For a VLAN interface, enter the keyword vlan. The range is from 1 to 4094.

Defaults
Not configured.

</tbody>
</table>

Usage Information

You can enable the mechanism to configure the source or the originating interface from which the packet (the device that generates the ICMP error messages) is received by the switch to send the loopback address instead of its source IP address to be used in the ICMP unreachable messages and in the traceroute command output. The loopback address must be unique in a particular domain.

In network environments that contain a large number of devices, ranging up to thousands of systems, and with each device configured for equal-cost multipath (ECMP) links, you cannot effectively and optimally use the traceroute and ping applications to examine the network reachability and identify any broken links for diagnostic purposes. In such cases, if the reply that is obtained from each hop on the network path contains the IP address of the adjacent, neighboring interface from which the packet is received, it is difficult to employ the ping and traceroute utilities. You can enable the ICMP unreachable messages to contain the loopback address of the source device instead of the previous hop's IP address to be able to easily and quickly identify the device and devices.
along the path because the DNS server maps the loopback IP address to the hostname and does not translate the
IP address of every interface of the switch to the hostname.

Example
Dell(conf)#ipv6 icmp source-interface tengigabitethernet 0/1
Dell(conf)#

ip max-frag-count

Set the maximum number of fragments allowed in one packet for packet re-assembly.

Syntax
ip max-frag-count count
To place no limit on the number of fragments allowed, use the no ip max-frag-count command.

Parameters
count Enter a number for the number of fragments allowed for re-assembly. The range is from 2 to 256.

Defaults No limit is set on number of fragments allowed.

<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information To avoid denial of service (DOS) attacks, keep the number of fragments allowed for re-assembly low.

ip name-server

Enter up to six IPv4 addresses of name servers. The order you enter the addresses determines the order of their use.

Syntax
ip name-server ipv4-address [ipv4-address2...ipv4-address6]
To remove a name server, use the no ip name-server ip-address command.

Parameters
ipv4-address Enter the IPv4 address, in dotted decimal format, of the name server to be used.
ipv4-address2...ipv4-address6 (OPTIONAL) Enter up to five more IPv4 addresses, in dotted decimal format, of name servers to be used. Separate the addresses with a space.

Defaults No name servers are configured.

</tbody>
</table>

**Related Commands**

- `show ip interface` — displays the interface routing status and configuration.

**ip route**

Assign a static route to the switch.

**Syntax**

```
ip route destination mask {ip-address | interface [ip-address]}[distance]
```

To delete a specific static route, use the no ip route destination mask {address | interface [ip-address]} command.

To delete all routes matching a certain route, use the no ip route destination mask command.

**Parameters**

- `destination`
  - Enter the IP address in dotted decimal format of the destination device.
- `mask`
  - Enter the mask in the slash prefix format (/x) of the destination device’s IP address.
- `ip-address`
  - Enter the IP address in dotted decimal format.
- `interface`
  - For a VLAN, enter the keyword vlan followed by a number from 1 to 4094.
- `distance`
  - (OPTIONAL) Enter a number as the distance metric assigned to the route. The range is from 1 to 255.

**Defaults**

Not configured.

<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

Using the following example of a static route: ip route 33.33.33.0 /24 tengigabitethernet 0/0 172.31.5.43

- The software installs a next hop that is not on the directly connected subnet but which recursively resolves to a next hop on the interface's configured subnet. In the example, if gig 0/0 has an ip address on subnet 2.2.2.0 and if 172.31.5.43 recursively resolves to 2.2.2.0, Dell Networking OS installs the static route.
- When the interface goes down, Dell Networking OS withdraws the route.
- When the interface comes up, Dell Networking OS re-installs the route.
- When recursive resolution is “broken,” Dell Networking OS withdraws the route.
- When recursive resolution is satisfied, Dell Networking OS re-installs the route.

Related Commands

- `show ip route` — views the switch routing table.

**ip source-route**

Enable the system to forward IP packets with source route information in the header.

Syntax

```
ip source-route
```

To drop packets with source route information, use the `no ip route-source` command.

Defaults

Enabled.

</tr>
</tbody>
</table>

**ip tcp initial-time**

Define the wait duration in seconds for the TCP connection to be established.

Syntax

```
ip tcp initial-time <8-75>
```

To restore the default behavior, which causes the wait period to be set as eight seconds, use the `no ip tcp initial-time` command.

Parameters

- `<8-75>`  
  Wait duration in seconds for the TCP connection to be established.

Command Modes

- CONFIGURATION

Supported Modes

- Full-Switch
show ip tcp initial-time

Displays the interval that you configured for the device to wait before the TCP connection is attempted to be established.

Syntax

```
show ip tcp initial-time
```

Command Modes

- EXEC
- EXEC Privilege

</tbody>
</table>
**management route**

Configure a static route that points to the Management interface or a forwarding router.

**Syntax**

```
management route {ipv4-address | ipv6-address}/mask{forwarding-router-address | managementethernet}
```

**Parameters**

- `{ipv4-address | ipv6-address}/mask`  
  Enter an IPv4 address (A.B.C.D) or the IPv6 address followed by the prefix-length for the IP address of the management interface.

- `forwarding-router-address`  
  Enter an IPv4 address of a forwarding router.

- `managementethernet`  
  Enter the keyword `managementethernet` for the Management interface.

**Defaults**

Not configured.

**Command Modes**

`CONFIGURATION`

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>

<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

- When a static route (or a protocol route) overlaps with Management static route, the static route (or a protocol route) is preferred over the Management Static route. Also, Management static routes and the Management Connected prefix are not reflected in the hardware routing tables. Separate routing tables are maintained for IPv4 management routes. This command manages both tables.

**show arp**

Displays the ARP table.

**Syntax**

```
show arp [interface interface ] [dynamic] [summary]
```

**Parameters**

- `interface interface`  
  (OPTIONAL) Enter the following keywords and slot/port or number information:

  - For the Management interface, enter the keyword `managementethernet` followed by the slot/port information.
  - For a VLAN, enter the keyword `vlan` followed by a number from 1 to 4094.

- `dynamic`  
  (OPTIONAL) Enter the keyword `dynamic` to view dynamic entries.

- `summary`  
  (OPTIONAL) Enter the keyword `summary` to view a summary of ARP entries.

<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

The following describes the show hosts command in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Default domain...</td>
<td>Displays the domain name (if configured).</td>
</tr>
<tr>
<td>Name/address lookup...</td>
<td>States if DNS is enabled on the system.</td>
</tr>
<tr>
<td></td>
<td>• If DNS is enabled, the Name/Address lookup is domain service.</td>
</tr>
<tr>
<td></td>
<td>• If DNS is not enabled, the Name/Address lookup is static mapping</td>
</tr>
<tr>
<td>Name servers are...</td>
<td>Lists the name servers, if configured.</td>
</tr>
<tr>
<td>Host</td>
<td>Displays the host name assigned to the IP address.</td>
</tr>
<tr>
<td>Flags</td>
<td>Classifies the entry as one of the following:</td>
</tr>
</tbody>
</table>
Field | Description
---|---
perm | the entry was manually configured and will not time out
temp | the entry was learned and will time out after 72 hours of inactivity.

Also included in the flag is an indication of the validity of the route:
- ok — the entry is valid.
- ex — the entry expired.
- ?? — the entry is suspect.

**TTL**
Displays the amount of time until the entry ages out of the cache. For dynamically learned entries only.

**Type**
Displays IP as the type of entry.

**Address**
Displays the IP addresses assigned to the host.

### Example
```
Dell#show hosts
Default domain is not set
Name/address lookup uses static mappings
Name servers are not set
Host     Flags     TTL   Type   Address
-------- -----     ----  ----   -------
ks      (perm, OK) -     IP     2.2.2.2
4200-1  (perm, OK) -     IP     192.68.69.2
1230-3  (perm, OK) -     IP     192.68.99.2
ZZr     (perm, OK) -     IP     192.71.18.2
Z10-3   (perm, OK) -     IP     192.71.23.1
Dell#
```

### Related Commands
- `traceroute` — views the DNS resolution.
- `ip host` — configures a host.

### show ip cam stack-unit
Display CAM entries.

#### Syntax
```
show ip cam stack-unit {0-5} [port-set {pipe-number} | {ip-address mask [longer-prefixes]}| detail | member-info | summary]
```

#### Parameters
- **0–5**
Enter the stack-unit ID from 0 to 5.
- **pipe-number**
Enter the number of the Port-Pipe number. The range is from 0 to 0.
- **ip-address mask**
  (OPTIONAL) Enter the IP address and mask of a route to CAM entries for that route only.
- **[longer-prefixes]**
Enter the keywords longer-prefixes to view routes with a common prefix.
- **detail**
Enter the keyword detail to display the group index ID used by the ecmp routes in the CAM.
- **member-info**
Enter the keywords member-info to display the group index used by the ecmp, the number of egress ports (members) for the ecmp, and the port details of each member.
The detail information under member-info gives the MAC address, VLAN ID, and gateway of every member port of the ecmp.
**Summary**

(Optionalal) Enter the keyword `summary` to view a table listing route prefixes and the total number routes which can be entered in to CAM.

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

**show ip fib stack-unit**

View all FIB entries.

**Syntax**

```
show ip fib stack-unit 0–5 [ip-address [mask] [longer-prefixes] | summary]
```

**Parameters**

- **0–5**
  - Enter the unit ID, from 0 to 5.
- **ip-address mask**
  - (OPTIONAL) Enter the IP address of the network destination to view only information on that destination. Enter the IP address in dotted decimal format (A.B.C.D). Enter the mask in slash prefix format (/X).
- **longer-prefixes**
  - (OPTIONAL) Enter the keywords longer-prefixes to view all routes with a common prefix.
- **summary**
  - (OPTIONAL) Enter the keyword summary to view the total number of prefixes in the FIB.

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

Full-Switch

**Command History**

- **Version**
  - **9.9(0.0)**: Introduced on the FN IOM.
  - **8.3.16.1**: Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The following describes the show ip fib stack-unit command shown in the following example.
<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Destination</td>
<td>Lists the destination IP address.</td>
</tr>
<tr>
<td>Gateway</td>
<td>Displays either the word “direct” and an interface for a directly connected route or the remote IP address used to forward the traffic.</td>
</tr>
<tr>
<td>First-Hop</td>
<td>Displays the first hop IP address.</td>
</tr>
<tr>
<td>Mac-Addr</td>
<td>Displays the MAC address.</td>
</tr>
<tr>
<td>Port</td>
<td>Displays the egress-port information.</td>
</tr>
<tr>
<td>Vid</td>
<td>Displays the VLAN ID. If no VLAN is assigned, zero (0) is listed.</td>
</tr>
<tr>
<td>EC</td>
<td>Displays the number of ECMP paths.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell#show ip fib stack-unit 0

+---------------+---------------+-------------+------------+--------------+-------+--------+--------+--------+
| Destination   | Gateway       | First-Hop   | Mac-Addr   | Port         | Vid   | EC     | Brief  |
| 10.10.10.10/32| Direct, Nu 0  | 0.0.0.0     | 00:00:00:00:00:00| BLK HOLE 0  | 0     | 0      |        |

Dell>
```

**Related Commands**

- `clear ip fib stack-unit` — clear FIB entries on a specified stack-unit.

---

**show ip interface**

View IP-related information on all interfaces.

**Syntax**

```
show ip interface [interface | brief] [configuration]
```

**Parameters**

- `interface` (OPTIONAL) Enter the following keywords and slot/port or number information:
  - For the Management interface, enter the keyword `ManagementEthernet` followed by zero (0).
  - For a Port Channel interface, enter the keywords `port-channel` followed by a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` followed by the slot/port information.
  - For a VLAN, enter the keyword `vlan` followed by a number from 1 to 4094.

- `brief` (OPTIONAL) Enter the keyword `brief` to view a brief summary of the interfaces and whether an IP address is assigned.

- `configuration` (OPTIONAL) Enter the keyword `configuration` to display the physical interfaces with non-default configurations only.

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

All Modes
Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.11(0.0)</td>
<td>Updated the command output to include the unicast reverse path forwarding (uRPF) status.</td>

<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

The following describes the `show ip interface` command shown in the following example.

<table>
<thead>
<tr>
<th>Lines</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>TenGigabitEthernet 0/0</td>
<td>Displays the interface’s type, slot/port and physical and line protocol</td>
</tr>
<tr>
<td>Internet address...</td>
<td>States whether an IP address is assigned to the interface. If one is, that address is displayed.</td>
</tr>
<tr>
<td>IP MTU is...</td>
<td>Displays IP MTU value.</td>
</tr>
<tr>
<td>Inbound access...</td>
<td>Displays the name of the any configured incoming access list. If none is configured, the phrase “not set” is displayed.</td>
</tr>
<tr>
<td>Proxy ARP...</td>
<td>States whether proxy ARP is enabled on the interface.</td>
</tr>
<tr>
<td>Split horizon...</td>
<td>States whether split horizon for RIP is enabled on the interface.</td>
</tr>
<tr>
<td>Poison Reverse...</td>
<td>States whether poison for RIP is enabled on the interface.</td>
</tr>
<tr>
<td>ICMP redirects...</td>
<td>States if ICMP redirects are sent.</td>
</tr>
<tr>
<td>ICMP unreachable...</td>
<td>States if ICMP unreachable messages are sent.</td>
</tr>
</tbody>
</table>

Example

```
Dell#show ip interface tengigabitethernet 0/0
TenGigabitEthernet 0/0 is down, line protocol is down
Internet address is not set
IP MTU is 1500 bytes
Inbound access list is not set
Proxy ARP is enabled
Split Horizon is enabled
Poison Reverse is disabled
ICMP redirects are not sent
ICMP unreachable are not sent
IP unicast RPF check is not supported
Dell#
```

Usage Information

The following describes the `show ip interface brief` command shown in the following example.

<table>
<thead>
<tr>
<th>Fields</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Interface</td>
<td>Displays type of interface and the associated slot and port number.</td>
</tr>
<tr>
<td>IP-Address</td>
<td>Displays the IP address for the interface, if configured.</td>
</tr>
<tr>
<td>Ok?</td>
<td>Indicates if the hardware is functioning properly.</td>
</tr>
<tr>
<td>Method</td>
<td>Displays “Manual” if the configuration is read from the saved configuration.</td>
</tr>
<tr>
<td>Status</td>
<td>States whether the interface is enabled (up) or disabled (administratively down).</td>
</tr>
<tr>
<td>Protocol</td>
<td>States whether IP is enabled (up) or disabled (down) on the interface.</td>
</tr>
</tbody>
</table>
show ip management-route

View the IP addresses assigned to the Management interface.

Syntax

```
show ip management-route [all | connected | summary | static]
```  

Parameters

- **all** (OPTIONAL) Enter the keyword all to view all IP addresses assigned to all Management interfaces on the switch.
- **connected** (OPTIONAL) Enter the keyword connected to view only routes directly connected to the Management interface.
- **summary** (OPTIONAL) Enter the keyword summary to view a table listing the number of active and non-active routes and their sources.
- **static** (OPTIONAL) Enter the keyword static to view non-active routes also.

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.170</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Example

```
Dell#show ip management-route
Destination        Gateway                 State
------------------ ---------------------- -----
10.1.2.0/24         ManagementEthernet 0/0 Connected
172.16.1.0/24       10.1.2.4              Active
Dell#
```  

show ip multicast-cam stack-unit

Displays content-addressable memory (CAM) entries.

Syntax

```
show ip multicast-cam stack-unit 0-5 port-set pipe-number [ip-address mask [longer-prefixes] | detail | member-info | summary]
```
Parameters

- **Parameters**
  - **0-5** Enter the stack-unit ID, from 0 to 5.
  - **pipe-number** Enter the number of the Port-Pipe number. The range is from 0 to 0.
  - **ip-address mask** (OPTIONAL) Enter the IP address and mask of a route to CAM entries for that route only.
  - **[longer-prefix]**
  - **detail** Enter the keyword detail to display the group index ID used by the ecmp routes in the CAM.
  - **member-info** Enter the keyword member-info to display the group index used by the ecmp, the number of egress ports (members) for the ecmp, and the port details of each member. The detail information under member-info will give the MAC address, VLAN ID and gateway of every member port of the ecmp.
  - **summary** (OPTIONAL) Enter the keyword summary to view a table listing route prefixes and the total number routes which can be entered into CAM.

Command Modes

- **EXEC**
- **EXEC Privilege**

Supported Modes

- All Modes

Command History

- **Version**
  - **9.9(0.0)** Introduced on the FN IOM.
  - **9.4(0.0)** Supported on the FN I/O Aggregator.
  - **8.3.17.0** Supported on the M I/O Aggregator.

Usage Information

The following describes the `show ip fib stack-unit` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Destination</td>
<td>Displays the destination route of the index.</td>
</tr>
<tr>
<td>CG</td>
<td>Displays 0.</td>
</tr>
<tr>
<td>V</td>
<td>Displays a 1 if the entry is valid and a 0 otherwise.</td>
</tr>
<tr>
<td>C</td>
<td>Displays the CPU bit. 1 indicates that a packet hitting this entry is forwarded to the control processor, depending on Egress port.</td>
</tr>
<tr>
<td>V Id</td>
<td>Displays the VLAN ID. If the entry is 0, the entry is not part of a VLAN.</td>
</tr>
<tr>
<td>Mac Addr</td>
<td>Displays the next-hop router’s MAC address.</td>
</tr>
<tr>
<td>Port</td>
<td>Displays the egress interface. Use the second half of the entry to determine the interface. For example, in the entry 17d CP, the CP is the pertinent portion.</td>
</tr>
<tr>
<td></td>
<td>• CP = control processor</td>
</tr>
<tr>
<td></td>
<td>• Fo= 40 Gigabit Ethernet interface</td>
</tr>
</tbody>

Routing Protocol is "bgp 1"
  Cluster Id is set to 20.20.20.3
  Router Id is set to 20.20.20.3
  Fast-external-fallover enabled
  Regular expression evaluation optimization enabled
  Capable of ROUTE_REFRESH
  For Address Family IPv4 Unicast
  BGP table version is 0, main routing table version 0
  Distance: external 20 internal 200 local 200
  Neighbor(s):
  Address : 20.20.20.2
  Filter-list in : foo
  Route-map in : foo
  Weight : 0
  Address : 5::6
  Weight : 0
Dell#
```

**show ip route**

View information, including how they were learned, about the IP routes on the switch.

**Syntax**

```
show ip route [hostname | ip-address [mask] [longer-prefixes] | list prefix-list [process-id] | connected | static | summary]
```
Parameters

- **ip-address** (OPTIONAL) Specify a name of a device or the IP address of the device to view more detailed information about the route.
- **mask** (OPTIONAL) Specify the network mask of the route. Use this parameter with the IP address parameter.
- **longer-prefixes** (OPTIONAL) Enter the keywords longer-prefixes to view all routes with a common prefix.
- **list prefix-list** (OPTIONAL) Enter the keyword list and the name of a configured prefix list.
- **process-id** (OPTIONAL) Specify that only OSPF routes with a certain process ID must be displayed.
- **connected** (OPTIONAL) Enter the keyword connected to view only the directly connected routes.
- **static** (OPTIONAL) Enter the keyword static to view only routes configured by the ip route command.
- **summary** (OPTIONAL) Enter the keyword summary.

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

All Modes

Command History

<table>

</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

The following describes the show ip route all command in the following example.

**Field**

- **(undefined)** Identifies the type of route:
  - C = connected
  - S = static
  - R = RIP
  - B = BGP
  - IN = internal BGP
  - EX = external BGP
  - LO = Locally Originated
  - O = OSPF
  - IA = OSPF inter area
  - N1 = OSPF NSSA external type 1
  - N2 = OSPF NSSA external type 2
  - E1 = OSPF external type 1
  - E2 = OSPF external type 2
  - i = IS-IS
  - L1 = IS-IS level-1
  - L2 = IS-IS level-2
### Field Description
- IA = IS-IS inter-area
- * = candidate default
- > = non-active route
- + = summary routes

### Destination
Identifies the route’s destination IP address.

### Gateway
Identifies whether the route is directly connected and on which interface the route is configured.

### Dist/Metric
Identifies if the route has a specified distance or metric.

### Last Change
Identifies when the route was last changed or configured.

#### Example
**Example (Summary)**

<table>
<thead>
<tr>
<th>Route Source</th>
<th>Active Routes</th>
<th>Non-active Routes</th>
</tr>
</thead>
<tbody>
<tr>
<td>connected</td>
<td>2</td>
<td>0</td>
</tr>
<tr>
<td>static</td>
<td>1</td>
<td>0</td>
</tr>
<tr>
<td>Total</td>
<td>3</td>
<td>0</td>
</tr>
</tbody>
</table>

Total 3 active route(s) using 612 bytes

```
Dell# show ip route static ?
|                Pipe through a command <cr>
Dell# show ip route static
```

### show ip route list

Display IP routes in an IP prefix list.

**Syntax**

```
show ip route list prefix-list
```

**Parameters**

- `prefix-list` Enter the name of a configured prefix list.

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

- Full-Switch

**Command History**

- **Version** 9.9(0.0) Introduced on the FN IOM.
- **8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

**Example**

```
Dell# show ip route list test
```

### Codes:
- C - connected, S - static, R - RIP,
- B - BGP, IN - internal BGP, EX - external BGP,
- L0 - Locally Originated,
- O - OSPF, IA - OSPF inter area, N1 - OSPF NSSA external type 1,
- N2 - OSPF NSSA external type 2, E1 - OSPF external type 1,
E2 - OSPF external type 2, i - IS-IS, L1 - IS-IS level-1,
L2 - IS-IS level-2, IA - IS-IS inter area, * - candidate default,
> - non-active route, + - summary route

Gateway of last resort is not set

<table>
<thead>
<tr>

</tbody>
</table>

Related Commands
- `ip prefix-list` — enters CONFIGURATION-IP PREFIX-LIST mode and configures a prefix list.
- `show ip prefix-list summary` — displays a summary of the configured prefix lists.

**show ip route summary**

View a table summarizing the IP routes in the switch.

Syntax
```
show ip route summary
```

Command Modes
- EXEC
- EXEC Privilege

Supported Modes
- Full-Switch

Command History
- **Version**
  - 9.9(0.0) Introduced on the FN IOM.
  - 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
The following describes the `show ip route summary` shown in the following example.

<table>
<thead>
<tr>
<th>Column Heading</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Route Source</td>
<td>Identifies how the route is configured in the system.</td>
</tr>
<tr>
<td>Active Routes</td>
<td>Identifies the best route if a route is learned from two protocol sources.</td>
</tr>
<tr>
<td>Non-active Routes</td>
<td>Identifies the back-up routes when a route is learned by two different protocols. If the best route or active route goes down, the non-active route becomes the best route.</td>
</tr>
<tr>
<td>ospf 100</td>
<td>If routing protocols (OSPF, RIP) are configured and routes are advertised, then information on those routes is displayed.</td>
</tr>
<tr>
<td>Total 1388 active...</td>
<td>Displays the number of active and non-active routes and the memory usage of those routes. If there are no routes configured in the system, this line does not appear.</td>
</tr>
</tbody>
</table>

Example
```
Dell>show ip route summary

Route Source  Active Routes  Non-active Routes
connected       17             0
static          3              0
ospf 100        1368            2
Intra-area:  762 Inter-area:  1 External-1:  600 External-2:  5
Total           1388            2
```
Total 1388 active route(s) using 222440 bytes
Total 2 non-active route(s) using 128 bytes

Command History

Version Description
9.9(0.0) Introduced on the FN IOM.
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The following describes the show ip traffic summary shown in the following example.

<table>
<thead>
<tr>
<th>Keyword</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>unknown protocol...</td>
<td>No receiver for these packets. Counts packets whose protocol type field is not recognized by the system.</td>
</tr>
<tr>
<td>not a gateway...</td>
<td>Packets can not be routed; the host/network is unreachable.</td>
</tr>
<tr>
<td>security failures...</td>
<td>Counts the number of received unicast/multicast packets that could not be forwarded due to:</td>
</tr>
<tr>
<td></td>
<td>- route not found for unicast/multicast; ingress interfaces do not belong to the destination multicast group</td>
</tr>
<tr>
<td></td>
<td>- destination IP address belongs to reserved prefixes; the host/network is unreachable</td>
</tr>
<tr>
<td>bad options...</td>
<td>Unrecognized IP option on a received packet.</td>
</tr>
<tr>
<td>Frags:</td>
<td>IP fragments received.</td>
</tr>
<tr>
<td>... reassembled</td>
<td>Number of IP fragments that were reassembled.</td>
</tr>
<tr>
<td>... timeouts</td>
<td>Number of times a timer expired on a reassembled queue.</td>
</tr>
<tr>
<td>... too big</td>
<td>Number of invalid IP fragments received.</td>
</tr>
<tr>
<td>... couldn’t fragment</td>
<td>Number of packets that could not be fragmented and forwarded.</td>
</tr>
<tr>
<td>... encapsulation failed</td>
<td>Counts packets which could not be forwarded due to ARP resolution failure. The system sends an arp request prior to forwarding an IP packet. If a reply is not received, the system repeats the request three times. These packets are counted in encapsulation failed.</td>
</tr>
<tr>
<td>Rcvd:</td>
<td></td>
</tr>
<tr>
<td>...short packets</td>
<td>The number of bytes in the packet are too small.</td>
</tr>
<tr>
<td>...bad length</td>
<td>The length of the packet was not correct.</td>
</tr>
</tbody>
</table>
Keyword Definition

...no port broadcasts
The incoming broadcast/multicast packet did not have any listener.

...socket full
The applications buffer is full and the incoming packet are dropped.

The F10 Monitoring MIB provides access to the following statistics.

- **IP Statistics: Bcast: Received:** Object = f10BcastPktsRec , OIDs = 1.3.6.1.4.1.6027.3.3.5.1.1

Rcvd: 9849 Total, 0 no port
0 checksum error, 0 bad offset, 0 too short
5735 packets (7919 bytes) in sequence
20 dup packets (2 bytes)
0 partially dup packets (0 bytes)
1 out-of-order packets (0 bytes)
0 packets (0 bytes) with data after window
0 packets after close
0 window probe packets, 0 window update packets
0 dup ack packets, 0 ack packets with unsend data
6671 ack packets (152813 bytes)
Sent: 6778 Total, 0 urgent packets
7 control packets
6674 data packets (152822 bytes)
12 data packets (1222 bytes) retransmitted
85 ack only packets (5677 delayed)
0 window probe packets, 0 window update packets
0 Connections initiated, 7 connections accepted, 7 connections established
8 Connections closed (including 4 dropped, 0 embryonic dropped)
12 Total rxmt timeout, 1 connections dropped in rxmt timeout
26 Keepalive timeout, 25 keepalive probe, 1 Connections dropped in keepalive
Dell#
Internet Protocol Security (IPSec)

Internet protocol security (IPSec) is an end-to-end security scheme for securing IP communications by authenticating and encrypting all packets in a session. Use IPSec between hosts, gateways, or hosts and gateways.

IPSec uses a series of protocol functions to achieve information security:

- **Authentication Headers (AH)** — Connectionless integrity and origin authentication for IP packets.
- **Encapsulating Security Payloads (ESP)** — Confidentiality, authentication, and data integrity for IP packets.
- **Security Associations (SA)** — Algorithm-provided parameters required for AH and ESP protocols.

IPSec capability is available on control (protocol) and management traffic; end-node support is required.

IPSec supports two operational modes: Transport and Tunnel.

- **Transport** is the default mode for IPSec and encrypts only the payload of the packet. Routing information is unchanged.
- **Tunnel mode** is used to encrypt the entire packet, including the routing information in the IP header. Tunnel mode is typically used in creating virtual private networks (VPNs).

Transport mode provides IP packet payload protection using ESP. You can use ESP alone or in combination with AH to provide additional authentication. AH protects data from modification but does not provide confidentiality.

SA is the configuration information that specifies the type of security provided to the IPSec flow. The SA is a set of algorithms and keys used to authenticate and encrypt the traffic flow. The AH and ESP use SA to provide traffic protection for the IPSec flow.

**NOTE:**
The Dell EMC Networking OS supports IPSec only for FTP and telnet protocols (ports 20, 21, and 23). The system rejects if you configure IPSec for other protocols.

**Topics:**
- `crypto ipsec transform-set`
- `crypto ipsec policy`
- `management crypto-policy`
- `match`
- `session-key`
- `show crypto ipsec transform-set`
- `show crypto ipsec policy`
- `transform-set`

**crypto ipsec transform-set**

Create a transform set, or combination of security algorithms and protocols, of cryptos.

**Syntax**

```
crypto ipsec transform-set name {ah-authentication {md5|sha1|null} | esp-authentication {md5|sha1|null} | esp-encryption {3des|cbc|des|null}}
```
To delete a transform set, use the no crypto ipsec transform-set name {ah-authentication \{md5|sha1|null\} | esp-authentication \{md5|sha1|null\} | esp-encryption \{3des|cbc|des|null\}} command.

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>Enter the name for the transform set.</td>
</tr>
<tr>
<td>ah-authentication</td>
<td>Enter the keywords ah-authentication then the transform type of operation to apply to traffic. The transform type represents the encryption or authentication applied to traffic.</td>
</tr>
<tr>
<td>esp-authentication</td>
<td>Enter the keywords esp-authentication then the transform type of operation to apply to traffic. The transform type represents the encryption or authentication applied to traffic.</td>
</tr>
<tr>
<td>esp-encryption</td>
<td>Enter the keywords esp-encryption then the transform type of operation to apply to traffic. The transform type represents the encryption or authentication applied to traffic.</td>
</tr>
</tbody>
</table>

Defaults

</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

- Both sides of the link must specify the same transform set.
- You can create up to 64 transform sets.

Example

```
Dell(conf)#int ten 0/4
Dell(conf-if-te-0/4)#ipv6 address 200:1::/64 eui64
Dell(conf)#int ten 0/6
Dell(conf-if-te-0/6)#ipv6 address 801:10::/64 eui64
```
crypto ipsec policy

Create a crypto policy used by ipsec.

Syntax

```
crypto ipsec policy name seq-num ipsec-manual
```

To delete a crypto policy entry, use the `no crypto ipsec policy name seq-num ipsec-manual` command.

Parameters

- **name**: Enter the name for the crypto policy set.
- **seq-num**: Enter the sequence number assigned to the crypto policy entry.

Defaults

- none

Command Modes

<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

This command creates a crypto policy entry and enters the crypto policy configuration mode for configuring the flow parameters.

Example

```
Dell(conf)#crypto ipsec policy West 10 ipsec-manual
Dell(conf-crypto-policy)#
```

management crypto-policy

Apply the crypto policy to management traffic.

Syntax

```
management crypto-policy name
```

To remove the management traffic crypto policy, use the `no management crypto-policy name` command.

Parameters

- **name**: Enter the name for the crypto policy.

Defaults

- none

</tr>
</tbody>
</table>
match

Match a sequence number to the transmission control protocol (TCP)/user datagram protocol (UDP) packets.

**Syntax**

```
match seq-num {tcp | udp} {ipv6 | ip} port-num dest-ip dest-port-num
```

To remove the match filter for the crypto map, use the `no match seq-num` command.

**Parameters**

- **seq-num**: Enter the match command sequence number. The range is from 0 to 255.
- **tcp**: Enter the keyword `tcp` to configure a TCP access list filter.
- **udp**: Enter the keyword `udp` to configure a UDP access list filter.
- **ipv6**: Enter the source IPv6 address.
- **ip**: Enter the source IPv4 address.
- **port-num**: Enter the source port number. The range is from 0 to 65535.
- **dest-ip**: Enter the destination IP address.
- **dest-port-num**: Enter the destination port number. The range is from 0 to 65535.

**Defaults**

none

**Command Modes**

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

UDP is not supported. Only TCP 23 telnet and 21 FTP are supported.

**Example**

```bash
Dell(conf-crypto-policy)#match 0 tcp a::1 /128 0 a::2 /128 23
Dell(conf-crypto-policy)#match 1 tcp a::1 /128 23 a::2 /128 0

Dell(conf-crypto-policy)#match 3 tcp a::1 /128 21 a::2 /128 0
Dell(conf-crypto-policy)#match 4 tcp 1.1.1.1 /32 0 1.1.1.2 /32 23
Dell(conf-crypto-policy)#match 5 tcp 1.1.1.1 /32 23 1.1.1.2 /32 0
Dell(conf-crypto-policy)#match 6 tcp 1.1.1.1 /32 0 1.1.1.2 /32 21
Dell(conf-crypto-policy)#match 7 tcp 1.1.1.1 /32 21 1.1.1.2 /32 0
```

session-key

Specify the session keys used in the crypto policy entry.

**Syntax**

```
session-key {inbound | outbound} {ah spi hex-key-string | esp spi encrypt hex-key-string auth hex-key-string}
```

To delete the session key information from the crypto policy, use the `no session-key {inbound | outbound} {ah | esp} command.```
**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>Enter the name of the host to delete. Enter * to delete all host table entries.</td>
</tr>
<tr>
<td>inbound</td>
<td>Specify the inbound session key for IPSec.</td>

IPv6 Access Control Lists (IPv6 ACLs)

IPv6 ACLs and IPv6 Route Map commands are supported on Dell Networking switch.

NOTE: For IPv4 ACL commands, refer to the Access Control Lists (ACL) chapter.

Important Points to Remember

- Certain platforms require manual CAM usage space allotment. For more information, refer to the `cam-acl` (Configuration) command.
- Egress IPv6 ACL and IPv6 ACL on the Loopback interface is not supported.
- Reference to an empty ACL permits any traffic.
- ACLs are not applied to self-originated traffic (for example, Control Protocol traffic not affected by IPv6 ACL because the routed bit is not set for Control Protocol traffic and for egress ACLs the routed bit must be set).
- You can use the same access list name for both IPv4 and IPv6 ACLs.
- You can apply both IPv4 and IPv6 ACLs on an interface at the same time.
- You can apply IPv6 ACLs on physical interfaces and a logical interfaces (Port-channel/VLAN).
- Non-contiguous masks are not supported in source or destination addresses in IPv6 ACL entries.
- Because the prefix mask is specified in /x format in IPv6 ACLs, inverse mask is not supported.

IPv6 ACL Commands

The following commands configure IPv6 ACLs.

**cam-acl**

Allocate space for IPv6 ACLs.

**Syntax**

```
cam-acl {default | l2acl 1-10 ipv4acl 1-10 ipv6acl 0-10 ipv4qos 1-10 12qos 1-10}
```

**Parameters**

- **default**
  - Use the default CAM profile settings, and set the CAM as follows:
    - L3 ACL (ipv4acl): 6
    - L2 ACL(l2acl): 5
    - IPv6 L3 ACL (ipv6acl): 0
    - L3 QoS (ipv4qos): 1
    - L2 QoS (l2qos): 1

- **l2acl 1-10 ipv4acl 1-10 ipv6acl 0-10**
  - Allocate space to support IPv6 ACLs. Enter all of the profiles and a range. Enter the CAM profile name then the amount to be allotted. The total space allocated must equal 13. The `ipv6acl` range must be a factor of 2.
ipv4qos 1-10 l2qos 1-10

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information
For the new settings to take effect, save the new CAM settings to the startup-config (write-mem or copy run start), then reload the system.

The total amount of space allowed is 16 FP blocks. System flow requires three blocks and these blocks cannot be reallocated.

When configuring space for IPv6 ACLs, the total number of Blocks must equal 13.

Ranges for the CAM profiles are from 1 to 10, except for the ipv6acl profile which is from 0 to 10. The ipv6acl allocation must be a factor of 2 (2, 4, 6, 8, 10).

cam-acl-egress

Allocate space for IPv6 egress ACLs.

Syntax

```
cam-acl-egress {default | l2acl 1-4 ipv4acl 1-4 ipv6acl 0-4}
```

Parameters

default
Use the default CAM profile settings, and set the CAM as follows:

- L2 ACL(l2acl): 1
- L3 ACL (ipv4acl): 1
- IPv6 L3 ACL (ipv6acl): 2

l2acl 1-4 ipv4acl 1-4 ipv6acl 0-4
Allocate space to support IPv6 ACLs. Enter all of the profiles and a range. Enter the CAM profile name then the amount to be allotted. The total space allocated must equal 13. The ipv6acl range must be a factor of 2.

ipv6acl      Set IPV6-ACL entries
Dell(conf)#cam-acl-egress l2acl 1 ipv4acl 1 ipv6acl 2
```

**ipv6 access-list**

Configure an access list based on IPv6 addresses or protocols.

**Syntax**

```
ipv6 access-list access-list-name cpu-qos {permit | deny} ospfv3
```

To delete an access list, use the `no ipv6 access-list access-list-name` command.

**Parameters**

- `access-list-name`: Enter the access list name as a string, up to 140 characters.
- `cpu-qos`: Enter the keyword `cpu-qos` to assign this ACL to control plane traffic only (CoPP).
- `permit`: Enter the keyword `permit` to configure a filter to forward packets meeting this condition.
- `deny`: Enter the keyword `deny` to configure a filter to drop packets meeting this condition.
- `ospfv3`: Specify that this ACL is for OSPFv3 control plane traffic.

**Defaults**

All access lists contain an implicit “deny any”; that is, if no match occurs, the packet is dropped.

**Command Modes**

CONFIGURATION

**Supported Modes**

Full-Switch

**Command History**

```
Version       Description
-------------  ----------------------------------------
9.9(0.0)       Introduced on the FN IOM.
9.4(0.0)       Added support for CoPP for OSPFv3 on the MXL 10/40GbE Switch IO Module.
9.2(0.0)       Introduced on the MXL 10/40GbE Switch IO Module.
```

**Usage Information**

The number of entries allowed per ACL is hardware-dependent. For detailed specification on entries allowed per ACL, refer to your line card documentation. You can create an IPv6 ACL for control-plane traffic policing for
OSPFv3, in addition to the CoPP support for VRRP, BGP, and ICMP that existed in Dell Networking OS releases 9.3(0.0) and earlier

**Related Commands**
- `show config` — views the current configuration.

## ipv6 control-plane egress-filter

Enable egress Layer 3 ACL lookup for IPv6 CPU traffic.

**Syntax**

```
ipv6 control-plane egress-filter
```

**Defaults**

Not enabled.

</tr>
</tbody>
</table>

## permit

To configure a filter that matches the filter criteria, select an IPv6 protocol number, ICMP, IPv6, TCP, or UDP.

**Syntax**

```
permit {ipv6-protocol-number | icmp | ipv6 | tcp | udp} [count [byte]] [dscp value] [order] [fragments] [log [interval minutes] [threshold-in-msgs [count]]] [monitor]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command syntax if you know the filter’s sequence number
- Use the `no permit {ipv6-protocol-number | icmp | ipv6 | tcp | udp}` command

**Parameters**

- `ip-protocol-number` (OPTIONAL) Enter the IP protocol number. The range is from 0 to 255.
- `icmp` Enter the keyword `icmp` to filter internet Control Message Protocol version 6.
- `ipv6` Enter the keyword `ipv6` to filter any internet Protocol version 6.
- `tcp` Enter the keyword `tcp` to filter the Transmission Control protocol.
- `udp` Enter the keyword `udp` to filter the User Datagram Protocol.
- `count` Enter the keyword `count` to count packets the filter processes.
- `byte` Enter the keyword `byte` to count bytes the filter processes.
- `dscp` Enter the keyword `dscp` to match to the IP DCSCP values.
- `order` Enter the keyword `order` to specify the QoS priority for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority). If you do not use the keyword `order`, the ACLs have the lowest order by default (255).
- `fragments` Enter the keyword `fragments` to use ACLs to control packet fragments.
log

(Optional) Enter the keyword log to enable the triggering of ACL log messages.

threshold-in-msgs

(Optional) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the seq, permit, or deny commands. The threshold range is from 1 to 100.

interval minutes

(Optional) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. The interval range is from 1 to 10 minutes.

monitor

(Optional) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Defaults

Not configured.

Command History

Version Description
9.9(0.0) Introduced on the FN IOM.
9.4(0.0) Added support for logging of ACLs on the MXL 10/40GbE Switch IO Module.
9.3(0.0) Added support for logging of ACLs on the MXL 10/40GbE Switch IO Module.
9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

permit icmp

To allow all or specific internet control message protocol (ICMP) messages, configure a filter.

Syntax

permit icmp {source address mask | any | host ipv6-address} {destination address | any | host ipv6-address} [message-type] [count [byte]] | [log] [interval minutes] [threshold-in-msgs [count]] [monitor]

To remove this filter, you have two choices:

- Use the no seq sequence-number command if you know the filter’s sequence number.
- Use the no permit icmp {source address mask | any | host ipv6-address} {destination address | any | host ipv6-address} command.

Parameters

source address

Enter the IPv6 address of the network or host from which the packets were sent in the x:x:x:x format then the prefix length in the /x format. The range is from /0 to /128. The :: notation specifies successive hexadecimal fields of zero.

mask

Enter a network mask in /prefix format (/x).

any

Enter the keyword any to specify that all routes are subject to the filter.

host ipv6-address

Enter the keyword host then the IPv6 address of the host in the x:x:x:x format. The :: notation specifies successive hexadecimal fields of zero.

destination address

Enter the IPv6 address of the network or host to which the packets are sent in the x:x:x:x format then the prefix length in the /x format. The range is from /0 to /128. The :: notation specifies successive hexadecimal fields of zero.
**message-type**  
(Optional) Enter an ICMP message type, either with the type (and code, if necessary) numbers or with the name of the message type. The range is from 0 to 255 for ICMP type and from 0 to 255 for ICMP code.

**count**  
(Optional) Enter the keyword `count` to count packets the filter processes.

**byte**  
(Optional) Enter the keyword `byte` to count bytes the filter processes.

**log**  
(Optional) Enter the keyword `log` to enable the triggering of ACL log messages.

**threshold-in-msgs count**  
(Optional) Enter the `threshold-in-msgs` keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the `seq`, `permit`, or `deny` commands. The threshold range is from 1 to 100.

**interval minutes**  
(Optional) Enter the keyword `interval` followed by the time period in minutes at which ACL logs must be generated. The interval range is from 1 to 10 minutes.

**monitor**  
(Optional) Enter the keyword `monitor` to monitor traffic on the monitoring interface specified in the flow-based monitoring session along with the filter operation.

**Defaults**  
By default, 10 ACL logs are generated if you do not specify the threshold explicitly. The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

</tbody>
</table>

**Usage Information**

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the `flow-based enable` command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).
**show cam-acl**

Show space allocated for IPv6 ACLs.

**Syntax**

```
show cam-acl
```

**Command Modes**

- EXEC
- EXEC Privilege

- show ipv6 route
- trust ipv6-diffserv

**clear ipv6 fib**

Clear (refresh) all forwarding information base (FIB) entries on a linecard or stack unit.

**Syntax**
```
clear ipv6 fib linecard slot | stack-unit unit-number
```

**Parameters**
- `slot`  
  Enter the slot number to clear the FIB for a linecard.
- `unit-number`  
  Enter the stack member number.

**Command Modes**  
EXEC Privilege

**Supported Modes**  
Full-Switch
clear ipv6 route

Clear (refresh) all or a specific route from the IPv6 routing table.

Syntax  
clear ipv6 route { * | ipv6-address prefix-length }

Parameters  
* 
Enter the * to clear (refresh) all routes from the IPv6 routing table.

ipv6-address prefix-length 
Enter the IPv6 address in the x:x:x:x::x format then the prefix length in the /x format. The range is from /0 to /128.

NOTE: The :: notation specifies successive hexadecimal fields of zeros.

Command Modes  
EXEC Privilege

Supported Modes

</tr>
</tbody>
</table>

Usage Information

- SAA can configure up to two addresses. If any preferred prefix or valid timers time out, the corresponding address are deprecated or removed. If an address is removed due to a time-out, an address from the current unused prefix is used to create a new address. If there are no remaining prefixes, the software waits to receive a new prefix from the RA.
- If auto-configuration is enabled, all IPv6 addresses on that management interface are auto-configured. Manual and auto-configurations are not supported on a single management interface.
- Removing auto-configuration removes all auto-configured IPv6 addresses and the link-local IPv6 address from that management interface.
- IPv6 addresses on a single management interface cannot be members of the same subnet.
- IPv6 secondary addresses on management interfaces across a platform must be members of the same subnet.
- IPv6 secondary addresses on management interfaces should not match the virtual IP address and should not be in the same subnet as the virtual IP.

ipv6 address

Configure an IPv6 address to an interface.

Syntax
```
ipv6 address {ipv6-address prefix-length}
```

To remove the IPv6 address, use the `no ipv6 address {ipv6-address prefix-length}` command.

Parameters

- `ipv6-address prefix-length` Enter the IPv6 address in the x:x:x::x format then the prefix length in the /x format. The range is from /0 to /128.

  | NOTE: The :: notation specifies successive hexadecimal fields of zeros.

Defaults
none

650 | IPv6 Basics
Usage Information

- If two addresses are configured, delete an existing address before configuring a new address.
- If the last manually-configured global IPv6 address is removed using the "no" form of the command, the link-local IPv6 address is removed automatically.
- IPv6 addresses on a single management interface cannot be members of the same subnet.
- IPv6 secondary addresses on management interfaces across platform must be members of the same subnet.
- IPv6 secondary addresses on management interfaces should not match the virtual IP address and should not be in the same subnet as the virtual IP.

**NOTE:** Do not use the /128 prefix length on physical or port channel interfaces. You can use the /128 prefix length on loopback interfaces.

Example

Dell(conf)#interface tengigabitethernet x/x
Dell(conf-if-te-x/x)#ipv6 address ?
X:X:X::X IPv6 address
Dell(conf-if-te-x/x)#ipv6 address 2002:1:2::3 ?
<0-128> Prefix length in bits
Dell(conf-if-te-x/x)#ipv6 address 2002:1:2::3 /96 ?
Dell(conf-if-te-x/x)#ipv6 address 2002:1:2::3 /96
Dell(conf-if-te-x/x)#show config

ipv6 address eui64

Configure IPv6 EUI64 address configuration on the interface.

**Syntax**

```
ipv6 address {ipv6-address prefix-length} eui64
```

To disable IPv6 EUI64 address autoconfiguration, use the `no ipv6 address {ipv6-address prefix-length} eui64` command.

**Parameters**

- `ipv6-address prefix-length

Enter the IPv6 prefix in the x:x:x:x::x format then the prefix length in the /x format. The range is from /0 to /128.

**NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

**Defaults**

none

**Command History**

- **Version**
  - 9.9(0.0) Introduced on the FN IOM.
  - 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

This command allows you to create an EUI64 address based on the specified prefix and MAC address only. Prefixes may be configured on the interface using the `ipv6 nd prefix` command without creating an EUI64 address.

**Example**

Dell(conf)#int ten 0/4
Dell(conf-if-te-0/4)#ipv6 address 200:1::/64 eui64
Dell(conf)#int ten 0/6
Dell(conf-if-te-0/6)#ipv6 address 801:10::/64 eui64
ipv6 control-plane icmp error-rate-limit

Configure the maximum number of ICMP error packets per second that can be sent per second.

Syntax
ipv6 control-plane icmp error-rate-limit {1-200}
To restore the default value, use the no ipv6 control-plane icmp error-rate-limit command.

Parameters
pps Enter the maximum number of error packets generated per second. The range is from 1 to 200, where 0 disables the rate-limiting.

Default
100 pps

</tr>
</tbody>
</table>

Usage Information
If the flowlabel value is already set for BGP or SSH, the system defaults to the already configured value. All packets on the same connection are considered part of the same flow by the system. For new connections, set the new flowlabel to zero.

ipv6 host

Assign a name and IPv6 address the host-to-IPv6 address mapping table uses.

Syntax
ipv6 host name ipv6-address
To remove an IP host, use the `no ipv6 host name {ipv6-address}` command.

**Parameters**

- **name**
  - Enter a text string to associate with one IP address.

- **ipv6-address**
  - Enter the IPv6 address (X:X::X) to be mapped to the name.

**Defaults**
Not configured.

**Command Modes**

---

**ipv6 name-server**

Enter up to six IPv6 addresses of name servers. The order you enter the addresses determines the order of their use.

**Syntax**

```
ipv6 name-server ipv6-address [ipv6-address2... ipv6-address6]
```

**Parameters**

- **ipv6-address**
  - Enter the IPv6 address (X:X::X) of the name server to be used.

- **ipv6-address2... ipv6-address6**
  - (OPTIONAL) Enter up to five more IPv6 addresses, in the x:x:x:x::x format, of name servers to be used. Separate the IPv6 addresses with a space.

**Defaults**

  - **9.9(0.0)**
    - Introduced on the FN IOM.
  - **9.2(0.0)**
    - Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**
You can separately configure both IPv4 and IPv6 domain name servers.

---

**ipv6 nd dad attempts**

To perform duplicate address detection (DAD) on the management interface, configure the number of neighbor solicitation messages that are sent.

**Syntax**

```
ipv6 nd dad attempts {number of attempts}
```

---

**NOTE:** The :: notation specifics successive hexadecimal fields of zeros.
To restore the default value, use the **no ipv6 nd dad attempts** command.

**Parameters**

`number of attempts` Enter the number of attempts to be made to detect a duplicate address. The range is from 0 to 15. Setting the value to 0 disables DAD on the interface.

**Default**

3 attempts

**Command Modes**

**ipv6 nd dns-server**

Configures Recursive DNS Server (RDNSS) addresses to be distributed via IPv6 router advertisements to an IPv6 device.

**Syntax**

`ipv6 nd dns-server {ipv6-RDNSS-address} {lifetime | infinite}`

To remove the IPv6 RDSS configuration, use `no ipv6 nd dns-server {ipv6-RDNSS-address} {lifetime | infinite}`

**Parameters**

`ipv6-RDNSS-address` Enter the IPv6 Recursive DNS Server’s (RDNSS) address. You can specify up to 4 IPv6 RDNSS server addresses.

`lifetime` Enter the lifetime in seconds. The amount of time the IPv6 host can use the IPv6 RDNSS address for name resolution. The range is 0 to 4294967295 seconds. When you specify the maximum lifetime value of 4294967295 or `infinite`, the lifetime does not expire.
A value of 0 indicates to the host that the RDNSS address should not be used. You must specify a lifetime using the lifetime or infinite parameter.

infinite
Enter the keyword infinite to specify that the RDNSS lifetime does not expire.

Defaults
Not Configured

Command Modes
INTERFACE CONFIG

<tr>
<td>9.5(0.0)</td>
<td>Introduced on the MXL.</td>
</tr>
</tbody>
</table>

Usage Information
Use this command to add, edit, or delete an IPv6 RDNSS address and lifetime value. You can configure up to four IPv6 RDNSS addresses. You must specify a lifetime using the lifetime or infinite parameter.

Example

### ipv6 nd prefix

Specify which IPv6 prefixes are included in Neighbor Advertisements.

**Syntax**

```
ipv6 nd prefix {ipv6-prefix | prefix-length | default} [no-advertise] | [no-autoconfig] [no-rtr-address] [off-link] [lifetime {valid | infinite} {preferred | infinite}]
```

**Parameters**

- `ipv6-prefix` Enter an IPv6 prefix.
- `prefix-length` Enter the prefix then the prefix length. The length range is from 0 to 128.
- `default` Enter the keyword default to set default parameters for all prefixes.
- `no-advertise` Enter the keyword no-advertise to prevent the specified prefix from being advertised.
- `no-autoconfig` Enter the keywords no-autoconfig to disable Stateless Address Autoconfiguration.
- `no-rtr-address` Enter the keyword no-rtr-address to exclude the full router address from router advertisements (the R bit is not set).
- `off-link` Enter the keywords off-link to advertise the prefix without stating to recipients that the prefix is either on-link or off-link.
- `valid-lifetime | infinite` Enter the amount of time that the prefix is advertised, or enter infinite for an unlimited amount of time. The range is from 0 to 4294967295. The default is 2592000. The maximum value means that the preferred lifetime does not expire for the valid-life time parameter.
- `preferred-lifetime | infinite` Enter the amount of time that the prefix is preferred, or enter infinite for an unlimited amount of time. The range is from 0 to 4294967295. The default is 2592000. The maximum value means that the preferred lifetime does not expire.

**Command Modes**

INTERFACE

**Supported Modes**

Full-Switch
ipv6 route

Establish a static IPv6 route.

Syntax
ipv6 route ipv6-address prefix-length {ipv6-address | interface | interface ipv6-address} [distance] [tag value] [permanent]

To remove the IPv6 route, use the no ipv6 route ipv6-address prefix-length {ipv6-address | interface | interface ipv6-address} [distance] [tag value] [permanent] command.

Parameters
ipv6-address prefix-length
Enter the IPv6 address in the x:x:x:x::x format then the prefix length in the /x format. The range is from /0 to /128.

- **NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

interface
(Optional) Enter the following keywords and slot/port or number information:

- For a loopback interface, enter the keyword loopback then a number from zero (0) to 16383.
- For the null interface, enter the keyword null then zero (0).
- For a port channel interface, enter the keyword port-channel then the port channel number. The range is from 1 to 128.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a tunnel interface, enter the keyword tunnel then the tunnel interface number. The range is from 1 to 16383.
- For a VLAN interface, enter the keyword VLAN then the vlan number. The range is from 1 to 4094.

If you configure a static IPv6 route using an egress interface and enter the ping command to reach the destination IPv6 address, the ping operation may not work. Configure the IPv6 route using a next-hop IPv6 address in order for the ping command to detect the destination address.

ipv6-address
(Optional) Enter the forwarding router IPv6 address in the x:x:x:x::x format.

- **NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

distance
(Optional) Enter a number as the metric distance assigned to the route. The range is from 1 to 255.

tag value
(Optional) Enter the keyword tag then a tag value number. The range is from 1 to 4294967295.
(OPTIONAL) Enter the keyword permanent to specify that the route is not to be removed, even if the interface assigned to that route goes down.

**NOTE:** If you disable the interface with an IPv6 address associated with the keyword permanent, the route disappears from the routing table.

**Defaults**

none

**Command Modes**

CONFIGURATION

**Supported Modes**

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

When the interface goes down, the system withdraws the route. The route is re-installed by the system when the interface comes back up. When a recursive resolution is “broken,” the system withdraws the route. The route is re-installed by the system when the recursive resolution is satisfied.

After an IPv6 static route interface is created, if an IP address is not assigned to a peer interface, the peer must be manually pinged to resolve the neighbor information.

**Example**

```
Dell(conf)#ipv6 route ?
X:X:X:X::X IPv6 prefix x:x::y
Dell(conf)#ipv6 route 44::0 ?
/nn Mask in slash format
Dell(conf)#ipv6 route 44::0 /64 ?
X:X:X:X::X Forwarding router's address
gigabitethernet Gigabit Ethernet interface
loopback Loopback interface
null Null interface
port-channel Port-Channel interface
tenGigabitethernet TenGigabit Ethernet interface
fortyGigE FortyGigabit Ethernet interface
tunnel Tunnel interface
vlan Vlan interface
Dell(conf)#ipv6 route 44::0 /64 33::1 ?
<1-255> Distance metric for this route
permanent Permanent route
tag Set tag for this route
Dell(conf)#ipv6 route 44::0 /64 33::1
Dell(conf)#ipv6 route 44::0 /64 tengigabitethernet 0/1 ?
X:X:X:X::X Forwarding router's address
Dell(conf)#ipv6 route 44::0 /64 tengigabitethernet 0/1 66::1
Dell(conf)#
```

**Related Commands**

- `show ipv6 route` — views the IPv6 configured routes.

**ipv6 unicast-routing**

Enable IPv6 Unicast routing.

**Syntax**

```
ipv6 unicast-routing
```

To disable unicast routing, use the `no ipv6 unicast-routing` command.

**IPv6 Basics**

657
Defaults
- Enabled

Command Modes
- CONFIGURATION

Supported Modes

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

Because this command is enabled by default, it does not appear in the running configuration. When you disable unicast routing, the no ipv6 unicast-routing command is included in the running configuration. Whenever unicast routing is disabled or re-enabled, the system generates a syslog message indicating the action.

Disabling unicast routing on a chassis causes the following behavior:

- static and protocol learned routes are removed from RTM and from the CAM; packet forwarding to these routes is terminated
- connected routes and resolved neighbors remain in the CAM and new IPv6 neighbors are still discoverable
- additional protocol adjacencies (OSPFv3 and BGP4) are brought down and no new adjacencies are formed
- the IPv6 address family configuration (under router bgp) is deleted
- IPv6 Multicast traffic continues to flow unhindered

**show ipv6 cam stack-unit**

Displays the IPv6 CAM entries for the specified stack-unit.

**Syntax**

```
show ipv6 cam stack-unit unit-number port-set {0-0} [summary | index | ipv6 address]
```

**Parameters**

- `unit-number`: Enter the stack unit's ID number. The range is from 0 to 5.
- `port-set`: Enter the keyword Port Set.
- `summary`: (OPTIONAL) Enter the keyword summary to display a table listing network prefixes and the total number of prefixes which can be entered into the IPv6 CAM.
- `index`: (OPTIONAL) Enter the index in the IPv6 CAM.
- `ipv6-address`: Enter the IPv6 address in the x:x:x:x/n format to display networks that have more specific prefixes. The range is from /0 to /128.

**Defaults**
- none

**Command Modes**
- EXEC
- EXEC Privilege

Command History

Version Description
9.9(0.0) Introduced on the FN IOM.
9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands
ipv6 flowlabel-zero — Configure IPv6 address auto-configuration for the management interface.

show ipv6 fib stack-unit

View all FIB entries.

Syntax
show ipv6 fib stack-unit unit-number [summary | ipv6-address]

Parameters

slot-number
summary
ipv6-address

Enter the number of the stack unit. The range is from 0 to 5.

(Optional) Enter the keyword summary to view a summary of entries in IPv6 cam.

Enter the IPv6 address in the x:x:x:x/x/h format to display networks that have more specific prefixes. The range is from /0 to /128.

NOTE: The :: notation specifies successive hexadecimal fields of zeros.
show ipv6 flowlabel-zero

Display the flow label zero setting.

**Syntax**

```
show ipv6 flowlabel-zero
```

**Default**

Disabled

**Command Modes**

EXEC

</table>

**Related Commands**

- `ipv6 nd dad attempts` — Configure system to set the flow label field in the packets to zero.

---

show ipv6 interface

Display the status of interfaces configured for IPv6.

**Syntax**

```
show ipv6 interface [interface {brief} [configured] [gigabitethernet slot | slot/port] [linecard slot-number][loopback interface-number] [managementethernet slot/port] [port-channel number] [ tengigabitethernet slot | slot/port] [fortyGigE slot | slot/port] [vlan vlan-id]
```

**Parameters**

- `interface` (OPTIONAL) Enter the following keywords and slot/port or number information:
  - For a Loopback interface, enter the keyword Loopback then a number from 0 to 16383.
  - For the Null interface, enter the keyword null then zero (0).
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For stacking, enter the keywords stack-unit then the stack-unit ID.
  - For a tunnel interface, enter the keyword tunnel then the tunnel ID.
  - For a VLAN interface, enter the keyword VLAN.
  - For a port channel interface, enter the keywords port-channel.

- `brief` (OPTIONAL) View a summary of IPv6 interfaces.

- `configured` (OPTIONAL) View information on all IPv6 configured interfaces.
gigabitethernet  (OPTIONAL) View information for an IPv6 gigabitethernet interface.
linecard slot/port  (OPTIONAL) View information for a specific IPv6 linecard or stack-unit. The range is 0 to 11.
managementethernet slot/port  (OPTIONAL) View information on an IPv6 Management port. Enter the slot number (0-1) and port number zero (0).
loopback  (OPTIONAL) View information for IPv6 Loopback interfaces.
port-channel  (OPTIONAL) View information for IPv6 port channels.
tengigabitethernet  (OPTIONAL) View information for an IPv6 tengigabitethernet interface.
fiftyGigE  (OPTIONAL) View information for an IPv6 fortygigabitethernet interface.
vlan  (OPTIONAL) View information for IPv6 VLANs.

Defaults

none

</tr>
</tbody>
</table>

**Example**

```
MLD Host Traffic Counters
Elapsed time since counters cleared: 0028:33:52

Received     Sent
Valid MLD Packets 97962    18036
Reports       79962    18034
Leaves        ----      0
MLDv2 Queries 18000     ----
MLDv1 Queries 0        ----
Errors:
Malformed Packets: 4510
```

**show ipv6 route**

Displays the IPv6 routes.

**Syntax**

```
show ipv6 route [ipv6-address prefix-length] [hostname] [all] [bgp as number]
[connected] [isis tag] [list prefix-list name] [ospf process-id] [rip] [static]
[summary]
```

**Parameters**

- `ipv6-address prefix-length` (OPTIONAL) Enter the IPv6 address in the x::x::x format then the prefix length in the /x format. The range is from /0 to /128.
NOTE: The :: notation specifies successive hexadecimal fields of zeros.

hostname
(OPTIONAL) View information for this IPv6 routes with Host Name.

all
(OPTIONAL) View information for all IPv6 routes.

bgp
(OPTIONAL) View information for all IPv6 BGP routes.

connected
(OPTIONAL) View only the directly connected IPv6 routes.

isis
(OPTIONAL) View information for all IPv6 IS-IS routes.

list
(OPTIONAL) View the IPv6 prefix list.

ospf
(OPTIONAL) View information for all IPv6 OSPF routes.

rip
(OPTIONAL) View information for all IPv6 RIP routes.

static
(OPTIONAL) View only routes configured by the ipv6 route command.

summary
(OPTIONAL) View a brief list of the configured IPv6 routes.

Defaults
none

Command Modes
• EXEC
• EXEC Privilege

Supported Modes

<td>• E1 = OSPF external type 1</td>
</tr>
<tr>
<td></td>
<td>• E2 = OSPF external type 2</td>
</tr>
<tr>
<td></td>
<td>• i = IS-IS</td>
</tr>
<tr>
<td></td>
<td>• L1 = IS-IS level-1</td>
</tr>
</tbody>
</table>
### Field Description
- \( L2 = \) IS-IS level-2
- \( IA = \) IS-IS inter-area
- \( * = \) candidate default
- \( > = \) non-active route
- \( + = \) summary routes

### Destination
Identifies the route’s destination IPv6 address.

### Gateway
Identifies whether the route is directly connected and on which interface the route is configured.

### Dist/Metric
Identifies if the route has a specified distance or metric.

### Last Change
Identifies when the route was last changed or configured.

### Example
```plaintext
Dell#show ipv6 route
Codes: C - connected, S - static, R - RIP, B - BGP, IN - internal BGP, EX - external BGP, LO - Locally Originated, O - OSPF, IA - OSPF inter area, N1 - OSPF NSSA external type 1, N2 - OSPF NSSA external type 2, E1 - OSPF external type 1, E2 - OSPF external type 2, i - IS-IS, L1 - IS-IS level-1, L2 - IS-IS level-2, IA - IS-IS inter area, * - candidate default, Gateway of last resort is not set

<table>
<thead>
<tr>
<th>Destination</th>
<th>Dist/Metric</th>
<th>Gateway</th>
<th>Last Change</th>
</tr>
</thead>
<tbody>
<tr>
<td>C 100::/64</td>
<td>[0/0]</td>
<td>Direct, Te 0/8, 20:00:18</td>

<tr>
<td>C 400::/64</td>
<td>[0/0]</td>
<td>Direct, Tu 1, 00:09:02</td>
<td></td>
</tr>
<tr>
<td>S 800::/64</td>
<td>[1/0]</td>
<td>via 100::1, Te 0/8, 00:00:50</td>
<td></td>
</tr>
<tr>
<td>L fe80::/10</td>
<td>[0/0]</td>
<td>Direct, Nu 0, 20:00:18</td>
<td></td>
</tr>
</tbody>
</table>

Dell#
```

### Example (Summary)
```plaintext
Dell#show ipv6 route summary

<table>
<thead>
<tr>
<th>Route Source</th>
<th>Active Routes</th>
<th>Non-active Routes</th>
</tr>
</thead>
<tbody>
<tr>
<td>connected</td>
<td>3</td>
<td>0</td>
</tr>
<tr>
<td>static</td>
<td>1</td>
<td>0</td>
</tr>
<tr>
<td>Total</td>
<td>4</td>
<td>0</td>
</tr>
</tbody>
</table>

Total 4 active route(s) using 928 bytes

Dell#
```

### trust ipv6-diffserv

Allows the dynamic classification of IPv6 DSCP.

#### Syntax
```
trust ipv6-diffserv
```
To remove the definition, use the `no trust ipv6-diffserv` command.

#### Defaults
none

#### Command Modes
CONFIGURATION-POLICY-MAP-IN

#### Supported Modes
Full-Switch
**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

When you configure trust IPv6 diffserv, matched bytes/packets counters are not incremented in the `show qos statistics` command.

Trust diffserv (IPv4) can co-exist with trust ipv6-diffserv in an Input Policy Map. Dynamic classification happens based on the mapping as shown:

<table>
<thead>
<tr>
<th>IPv6 Service Class Field</th>
<th>Queue ID</th>
</tr>
</thead>
<tbody>
<tr>
<td>111xxxxx</td>
<td>7</td>
</tr>
<tr>
<td>110xxxxx</td>

</tbody>
</table>
IPv6 Border Gateway Protocol (IPv6 BGP)

IPv6 Border Gateway Protocol (IPv6 BGP) is supported on Dell Networking platforms.

This chapter includes the following sections:

- IPv6 BGP Commands
- IPv6 MBGP Commands

Topics:

- IPv6 BGP Commands
- IPv6 MBGP Commands

IPv6 BGP Commands

BGP is an external gateway protocol that transmits interdomain routing information within and between autonomous systems (AS). BGP version 4 (BGPv4) supports classless interdomain routing and the aggregation of routes and AS paths. Basically, two routers (called neighbors or peers) exchange information including full routing tables and periodically send messages to update those routing tables.

The following commands allow you to configure and enable BGP.

address family

This command changes the context to subsequent address family identifier (SAFI).

Syntax

```
address family ipv6 unicast
```

To remove SAFI context, use the `no address family ipv6 unicast` command.

Parameters

- ipv6
  - Enter the keyword `ipv6` to specify the address family as IPv6.
- unicast
  - Enter the keyword `unicast` to specify multicast as SAFI.

Defaults

IPv6 Unicast

Command Modes

ROUTER BGPV6-ADDRESS FAMILY

Supported Modes

Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXP 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>
aggregate-address

Summarize a range of prefixes to minimize the number of entries in the routing table.

Syntax

```
aggregate-address ipv6-address prefix-length [advertise-map map-name] [as-set]
[attribute-map map-name] [summary-only] [suppress-map map-name]
```

Parameters

- **ipv6-address prefix-length**
  - Enter the IPv6 address in the x:x:x:x::x format then the prefix length in the /x format. The range is from 0 to 128.
  - **NOTE:** The :: notation specifies successive hexadecimal fields of zeros.
- **advertise-map map-name**
  - (OPTIONAL) Enter the keywords advertise-map then the name of a configured route map to set filters for advertising an aggregate route.
- **as-set**
  - (OPTIONAL) Enter the keywords as-set to generate path attribute information and include it in the aggregate. AS_SET includes AS_PATH and community information from the routes included in the aggregated route.
- **attribute-map map-name**
  - (OPTIONAL) Enter the keywords attribute-map then the name of a configured route map to modify attributes of the aggregate, excluding AS_PATH and NEXT_HOP attributes.
- **summary-only**
  - (OPTIONAL) Enter the keywords summary-only to advertise only the aggregate address. Specific routes are not advertised.
- **suppress-map map-name**
  - (OPTIONAL) Enter the keywords suppress-map then the name of a configured route map to identify which more-specific routes in the aggregate are suppressed.

Defaults

Not configured.

Command Modes

- ROUTER BGP ADDRESS FAMILY
- ROUTER BGP ADDRESS FAMILY IPv6

Supported Modes

Full-Switch

Command History

- **Version**  
  - 9.9(0.0): Introduced on the FN IOM.
  - 9.2(0.0): Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

- At least one of the routes included in the aggregate address must be in the BGP routing table for the configured aggregate to become active.
- Do not add the as-set parameter to the aggregate if routes within the aggregate are constantly changing as the aggregate will flap to keep track of the changes in the AS_PATH.
In route maps used in the `suppress-map` parameter, routes meeting the `deny` clause are not suppress; in other words, they are allowed. The opposite is true: routes meeting the `permit` clause are suppressed.

If the route is injected using the `network` command, that route still appears in the routing table if you configure the `summary-only` parameter in the `aggregate-address` command.

The `summary-only` parameter suppresses all advertisements. If you want to suppress advertisements to only specific neighbors, use the `neighbor distribute-list` command.

In the `show ip bgp ipv6 unicast` command, aggregates contain an ‘a’ in the first column and routes suppressed by the aggregate contain an ‘s’ in the first column.

### bgp always-compare-med

Allows you to enable comparison of the `MULTI_EXIT_DISC` (MED) attributes in the paths from different external ASs.

**Syntax**
```
bgp always-compare-med
```

To disable comparison of MED, use the `no bgp always-compare-med` command.

**Defaults**
Disabled (that is, the software only compares MEDs from neighbors within the same AS).

**Command Modes**
- ROUTER BGP

**Supported Modes**
- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**
Any update without a MED attribute is the least preferred route.

If you enable this command, use the `capture bgp-pdu max-buffer-size *` command to recompute the best path.

### bgp bestpath as-path ignore

Ignore the AS PATH in BGP best path calculations.

**Syntax**
```
bgp bestpath as-path ignore
```

To return to the default, use the `no bgp bestpath as-path ignore` command.

**Defaults**
Disabled (that is, the software considers the AS_PATH when choosing a route as best).

**Command Modes**
- ROUTER BGP

**Supported Modes**
- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>Version</td>
<td>Description</td>
</tr>
<tr>
<td>-----------</td>
<td>--------------------------------------------------</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

If you enable this command, use the `capture bgp-pdu max-buffer-size *` command to recompute the best path.

## bgp bestpath med confed

Enable MULTI_EXIT_DISC (MED) attribute comparison on paths learned from BGP confederations.

**Syntax**

```plaintext
bgp bestpath med confed  
```

To disable MED comparison on BGP confederation paths, use the `no bgp bestpath med confed` command.

**Defaults**

Disabled.

**Command Modes**

ROUTER BGP

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

The software compares the MEDs only if the path contains no external autonomous system numbers.

If you enable this command, use the `capture bgp-pdu max-buffer-size *` command to recompute the best path.

## bgp bestpath med missing-as-best

During path selection, indicate a preference to paths with missing MED (MULTI_EXIT_DISC) over those paths with an advertised MED attribute.

**Syntax**

```plaintext
bgp bestpath med missing-as-best  
```

To return to the default selection, use the `no bgp bestpath med missing-as-best` command.

**Defaults**

Disabled.

**Command Modes**

ROUTER BGP

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

The software compares the MEDs only if the path contains no external autonomous system numbers.
Usage Information

The MED is a 4-byte unsigned integer value and the default behavior is to assume a missing MED as 4294967295. This command causes a missing MED to be treated as 0. During path selection, paths with a lower MED are preferred over those with a higher MED.

**bgp client-to-client reflection**

Allows you to enable route reflection between clients in a cluster.

**Syntax**

```
bgp client-to-client reflection
```

To disable client-to-client reflection, use the `no bgp client-to-client reflection` command.

**Defaults**

Enabled when a route reflector is configured.

**Command Modes**

ROUTER BGP

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

Route reflection to clients is not necessary if all client routers are fully meshed.

**Related Commands**

- `bgp cluster-id` — assigns and ID to a BGP cluster with two or more route reflectors.
- `neighbor route-reflector-client` — configures a route reflector and clients.

**bgp cluster-id**

Assign a cluster ID to a BGP cluster with more than one route reflector.

**Syntax**

```
bgp cluster-id {ip-address | number}
```

To delete a cluster ID, use the `no bgp cluster-id {ip-address | number}` command.

**Parameters**

- `ip-address` Enter an IP address as the route reflector cluster ID.
- `number` Enter a route reflector cluster ID as a number from 1 to 4294967295.

**Defaults**

Not configured.

**Command Modes**

ROUTER BGP

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>
When a BGP cluster contains only one route reflector, the cluster ID is the route reflector’s router ID. For redundancy, a BGP cluster may contain two or more route reflectors and you assign a cluster ID with the `bgp cluster-id` command. Without a cluster ID, the route reflector cannot recognize route updates from the other route reflectors within the cluster.

The default format for displaying the cluster-id is dotted decimal, but if you enter the cluster-id as an integer, it displays as an integer.

**Related Commands**

- `bgp client-to-client reflection` — enables route reflection between the route reflector and the clients.
- `neighbor route-reflector-client` — configures a route reflector and clients.
- `show ip bgp ipv6 unicast cluster-list` — views paths with a cluster ID.

### bgp confederation identifier

Configure an identifier for a BGP confederation.

**Syntax**

```plaintext
bgp confederation identifier as-number
```

To delete a BGP confederation identifier, use the `no bgp confederation identifier as-number` command.

**Parameters**

- `as-number` Enter the AS number. The range is from 1 to 65535.

**Defaults**

Not configured.

**Command Modes**

- `ROUTER BGP`
- `Full-Switch`

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

The autonomous systems configured in this command are visible to the EBGP neighbors. Each autonomous system is fully meshed and contains a few connections to other autonomous systems. The next hop, MED, and local preference information is preserved throughout the confederation.

The system accepts confederation EBGP peers without a LOCAL_PREF attribute. The software sends AS_CONFED_SET and accepts AS_CONFED_SET and AS_CONF_SEQ.

### bgp confederation peers

Specify the autonomous systems (ASs) that belong to the BGP confederation.

**Syntax**

```plaintext
bgp confederation peers as-number [...as-number]
```

To remove bgp confederation peers, use the `no bgp confederation peer` command.
Parameters

- **as-number**: Enter the AS number. The range is 1 to 65535.
- **...as-number**: (OPTIONAL) Enter up to 16 confederation numbers. The range is from 1 to 65535.

Defaults

Not configured.

Command Modes

- **ROUTER BGP**

Supported Modes

- Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

The Autonomous Systems configured in this command are visible to the EBGP neighbors. Each Autonomous System is fully meshed and contains a few connections to other Autonomous Systems.

After specifying autonomous systems numbers for the BGP confederation, recycle the peers to update their configuration.

Related Commands

- **bgp confederation identifier**: — configures a confederation ID.

**bgp dampening**

Enable BGP route dampening and configure the dampening parameters.

Syntax

```
bgp dampening [half-life reuse suppress max-suppress-time] [route-map map-name]
```

Parameters

- **half-life**: (OPTIONAL) Enter the number of minutes after which the Penalty is decreased. After the router assigns a Penalty of 1024 to a route, the Penalty is decreased by half, after the half-life period expires. The range is from 1 to 45. The default is 15 minutes.
- **reuse**: (OPTIONAL) Enter a number as the reuse value, which is compared to the flapping route’s Penalty value. If the Penalty value is less than the reuse value, the flapping route is once again advertised (or no longer suppressed). The range is from 1 to 20000. The default is 750.
- **suppress**: (OPTIONAL) Enter a number as the suppress value, which is compared to the flapping route’s Penalty value. If the Penalty value is greater than the suppress value, the flapping route is no longer advertised (that is, it is suppressed). The range is from 1 to 20000. The default is 2000.
- **max-suppress-time**: (OPTIONAL) Enter the maximum number of minutes a route can be suppressed. The default is four times the half-life value. The range is from 1 to 255. The default is 60 minutes.
- **route-map map-name**: (OPTIONAL) Enter the keywords route-map then the name of a configured route map. Only match commands in the configured route map are supported.

Defaults

Disabled.

Command Modes

- **ROUTER BGPV6-ADDRESS FAMILY**

Supported Modes

- Full-Switch
bgp default local-preference

Change the default local preference value for routes exchanged between internal BGP peers.

Syntax

```
bgp default local-preference value
```

To return to the default value, use the `no bgp default local-preference` command.

Parameters

- **value**
  
  Enter a number to assign to routes as the degree of preference for those routes. When routes are compared, the higher the degree of preference or local preference value, the more the route is preferred. The range is from 0 to 4294967295. The default is 100.

Defaults

- **100**

Command Modes

- **ROUTER BGP**

Supported Modes

- **Full-Switch**

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

bpg enforce-first-as

Disable (or enable) enforce-first-as check for updates received from EBGP peers.

Syntax

```
bgp enforce-first-as
```

To turn off the default, use the `no bgp enforce-first-as` command.

Defaults

- **Enabled**

Command Modes

- **ROUTER BGP**

Supported Modes

- **Full-Switch**

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>
This is enabled by default; that is, for all updates received from EBGP peers, BGP ensures that the first AS of the first AS segment is always the AS of the peer. If not, the update is dropped and a counter is incremented. To view the failed enforce-first-as check counter, use the `show ip bgp ipv6 unicast neighbors` command.

If you disable `enforce-first-as`, view it using the `show ip protocols` command.

Usage Information

Related Commands

- `show ip bgp ipv6 unicast neighbors` — displays IPv6 routing information exchanged by BGP neighbors.
- `show ip protocols` — views information on routing protocols.

**bgp fast-external-fallover**

Enable the fast external fallover feature, which immediately resets the BGP session if a link to a directly connected external peer fails.

**Syntax**

```
bgp fast-external-fallover
```

To disable fast external fallover, use the `no bgp fast-external-fallover` command.

**Defaults**

Enabled.

**Command Modes**

ROUTER BGP

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

The `bgp fast-external-fallover` command appears in the `show config` command output.

**bgp four-octet-as-support**

Enable 4-byte support for the BGP process.

**Syntax**

```
bgp four-octet-as-support
```

To disable fast external fallover, use the `no bgp four-octet-as-support` command.

**Defaults**

Disabled (supports 2-Byte format)

**Command Modes**

ROUTER BGP

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

Routers supporting 4-Byte ASNs advertise that function in the OPEN message. The behavior of a 4-Byte router is slightly different depending on whether it is speaking to a 2-Byte router or a 4-Byte router.
When creating Confederations, all the routers in the Confederation must be 4- or 2-byte identified routers. You cannot mix them.

Where the 2-Byte format is from 1 to 65535, the 4-Byte format is from 1 to 4294967295. Both formats are accepted, and the advertisements reflect the entered format.

For more information about using the 2- or 4-Byte format, refer to the Dell Networking OS Configuration Guide.

**bgp graceful-restart**

Enable graceful restart on a BGP neighbor, a BGP node, or designate a local router to support graceful restart as a receiver only.

**Syntax**

```plaintext
bgp graceful-restart [restart-time seconds] [stale-path-time seconds] [role receiver-only]
```

To return to the default, enter the `no bgp graceful-restart` command.

**Parameters**

- **neighbor ip-address**
- **peer-group-name**
- **restart-time seconds**
- **stale-path-time seconds**
- **role receiver-only**

**Defaults**

As above

**Command Modes**

ROUTER BGP

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

This feature is advertised to BGP neighbors through a capability advertisement. In Receiver Only mode, BGP saves the advertised routes of peers that support this capability when they restart.

**bgp log-neighbor-changes**

Enable logging of BGP neighbor resets.

**Syntax**

```plaintext
bgp log-neighbor-changes
```
To disable logging, use the `no bgp log-neighbor-changes` command.

**Defaults**
Enabled.

**Command Modes**
ROUTER BGP

**Supported Modes**
Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**
The `bgp log-neighbor-changes` command appears in the `show config` command output.

**Related Commands**
- `show config` — views the current configuration.
- `bgp non-deterministic-med` — Compare MEDs of paths from different autonomous systems (ASs).

### bgp non-deterministic-med

Compare MEDs of paths from different autonomous systems (ASs).

**Syntax**

```
bgp non-deterministic-med
```

To return to the default, use the `no bgp non-deterministic-med` command.

**Defaults**
Disabled (that is, paths/routes for the same destination but from different ASs does not have their MEDs compared).

**Command Modes**
ROUTER BGP

**Supported Modes**
Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**
In Non-Deterministic mode, paths are compared in the order in which they arrive. This method can lead to the system choosing different best paths from a set of paths, depending on the order in which they are received from the neighbors because MED may or may not get compared between adjacent paths. In Deterministic mode (`no bgp non-deterministic-med`), the system compares MED between adjacent paths within an AS group because all paths in the AS group are from the same AS.

When you change the path selection from Deterministic to Non-Deterministic mode, the path selection for existing paths remains Deterministic until you enter the `capture bgp-pdu max-buffer-size` command to clear existing paths.

### bgp recursive-bgp-next-hop

Enable next-hop resolution through other routes learned by BGP.

**Syntax**

```
bgp recursive-bgp-next-hop
```

IPv6 Border Gateway Protocol (IPv6 BGP)
To disable next-hop resolution, use the `no bgp recursive-bgp-next-hop` command.

**Defaults**
- Enabled.

**Command Modes**
- ROUTER BGP

**Supported Modes**
- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command is a knob to disable BGP next-hop resolution using BGP learned routes. During the next-hop resolution, only the first route that the next-hop resolves through is verified for the route's protocol source and is checked if the route is learned from BGP or not.

For this command to take effect and to keep the BGP database consistent, you need the `clear ip bgp` command. Execute the `clear ip bgp` command right after executing this command.

**Related Commands**
- `capture bgp-pdu max-buffer-size`

---

### bgp regex-eval-optz-disable

Disables the Regex Performance engine that optimizes complex regular expression with BGP.

**Syntax**

```
bgp regex-eval-optz-disable
```

To re-enable optimization engine, use the `no bgp regex-eval-optz-disable` command.

**Defaults**
- Enabled.

**Command Modes**
- ROUTER BGP (conf-router_bgp)

**Supported Modes**
- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

BGP uses regular expressions (regex) to filter route information. In particular, the use of regular expressions to filter routes based on AS-PATHs and communities is quite common. In a large scale configuration, filtering millions of routes based on regular expressions can be quite CPU intensive, as a regular expression evaluation involves generation and evaluation of complex finite state machines.

BGP policies, containing regular expressions to match as-path and communities, tend to use a lot of CPU processing time, which in turn affects the BGP routing convergence. Additionally, the `show bgp` commands, which are filtered through regular expressions, use up CPU cycles particularly with large databases. The Regex Engine Performance Enhancement feature optimizes the CPU usage by caching and reusing regular expression evaluation results. This caching and reuse may be at the expensive of RP1 processor memory.

**Related Commands**
- `show ip protocols` — views information on all routing protocols enabled and active.
**bgp router-id**

Assign a user-given ID to a BGP router.

**Syntax**

```
bgp router-id ip-address
```

To delete a user-assigned IP address, use the `no bgp router-id` command.

**Parameters**

- `ip-address` Enter an IP address in dotted decimal format to reset only that BGP neighbor.

**Defaults**

The router ID is the highest IP address of the Loopback interface or, if no Loopback interfaces are configured, the highest IP address of a physical interface on the router.

**Command Modes**

ROUTER BGP

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

Peering sessions are reset when you change the router ID of a BGP router.

---

**bgp soft-reconfig-backup**

Use this command only when route-refresh is *not* negotiated between peers to avoid having a peer re-send BGP updates.

**Syntax**

```
bgp soft-reconfig-backup
```

To return to the default setting, use the `no bgp soft-reconfig-backup` command.

**Defaults**

Off

**Command Modes**

ROUTER BGPV6 ADDRESS FAMILY (conf-router_bgpv6_af)

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

When you enable soft-reconfiguration for a neighbor and you execute the `clear ip bgp soft` in command, the update database stored in the router replays and updates are reevaluated. With this command, the replay and update process is triggered only if route-refresh request is *not* negotiated with the peer. If the request is negotiated (after execution of `clear ip bgp soft in`), BGP sends a route-refresh request to the neighbor and receives all of the peer’s updates.

**Related Commands**

- `clear ip bgp ipv6 unicast soft` — activates inbound policies for IPv6 routes without resetting the BGP TCP session.
capture bgp-pdu neighbor (ipv6)

Enable capture of an IPv6 BGP neighbor packet.

Syntax

```
capture bgp-pdu neighbor ipv6-address direction (both | rx | tx)
```

To disable capture of the IPv6 BGP neighbor packet, use the no capture bgp-pdu neighbor ipv6-address command.

Parameters

- **ipv6-address**: Enter the IPv6 address of the target BGP neighbor.
- **direction**: Enter the keyword direction and a direction — either rx for inbound, tx for outbound, or both.

Defaults

Not configured.

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

Full-Switch

</tbody>
</table>

Related Commands

- ```capture bgp-pdu max-buffer-size``` — enables route reflection between the route reflector and the clients.
- ```show capture bgp-pdu neighbor``` — configures a route reflector and clients.

capture bgp-pdu max-buffer-size

Set the size of the BGP packet capture buffer. This buffer size pertains to both IPv4 and IPv6 addresses.

Syntax

```
capture bgp-pdu max-buffer-size 100-102400000
```

Parameters

- **100-102400000**: Enter a size for the capture buffer.

Defaults

40960000 bytes

Command Modes

**clear ip bgp * (asterisk)**

Reset all BGP sessions in the specified category. The soft parameter (BGP Soft Reconfiguration) clears the policies without resetting the TCP connection.

**Syntax**
```
clear ip bgp * [ipv4 multicast soft [in | out] | ipv6 unicast soft [in | out] | soft [in | out]]
```

**Parameters**
- `*` (OPTIONAL) Enter an asterisk (*) to reset all BGP sessions.
- `ipv4 multicast soft [in | out]` (OPTIONAL) Enter the keywords `ipv4 multicast soft [in | out]` to set options within the specified IPv4 address family.
- `ipv6 unicast soft [in | out]` (OPTIONAL) Enter the keywords `ipv6 unicast soft [in | out]` to set options within the specified IPv6 address family.
- `soft` (OPTIONAL) Enter the keyword `soft` to configure and activate policies without resetting the BGP TCP session, that is, BGP Soft Reconfiguration.

**NOTE:** If you enter `clear ip bgp ip6-address soft`, both inbound and outbound policies are reset.

- `in` (OPTIONAL) Enter the keyword `in` to activate only inbound policies.
- `out` (OPTIONAL) Enter the keyword `out` to activate only outbound policies.

</tbody>
</table>

**clear ip bgp as-number**

Reset BGP sessions. The soft parameter (BGP Soft Reconfiguration) clears the policies without resetting the TCP connection.

**Syntax**
```
clear ip bgp as-number [flap-statistics | ipv4 {multicast {flap-statistics | soft {in | out}} | unicast {flap-statistics | soft {in | out}} | ipv6 unicast {flap-statistics | soft {in | out}} | soft {in | out}]
```

**Related Commands**
- `capture bgp-pdu neighbor (ipv6)` — enables route reflection between the route reflector and the clients.
- `show capture bgp-pdu neighbor` — configures a route reflector and clients.
Parameters

as-number
Enter an autonomous system (AS) number to reset neighbors belonging to that AS. If used without a qualifier, the keyword resets all neighbors belonging to that AS. The range is from 1 to 65535.

flap-statistics
(OPTIONAL) Enter the keywords flap-statistics to clear all flap statistics belonging to that AS or a specified address family within that AS.

ipv4
(OPTIONAL) Enter the keyword ipv4 to select options for that address family.

ipv6
(OPTIONAL) Enter the keyword ipv6 to select options for that address family.

unicast
(OPTIONAL) Enter the keyword unicast to select the unicast option within the selected address family.

multicast
(OPTIONAL) Enter the keyword multicast to select the multicast option within the selected address family. Multicast is supported on IPv4 only.

soft
(OPTIONAL) Enter the keyword soft to configure and activate policies without resetting the BGP TCP session; that is, BGP Soft Reconfiguration.

NOTE: If you enter clear ip bgp ipv6-address soft, both inbound and outbound policies are reset.

in
(OPTIONAL) Enter the keyword in to activate only inbound policies.

out
(OPTIONAL) Enter the keyword out to activate only outbound policies.

Command Modes
EXEC Privilege

Supported Modes
Full-Switch

Command History

Version Description
9.9(0.0) Introduced on the FN IOM.
9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

clear ip bgp ipv6-address
Reset BGP sessions specific to an IPv6 address. The soft parameter (BGP Soft Reconfiguration) clears the policies without resetting the TCP connection.

Syntax

    clear ip bgp ipv6-address [flap-statistics | ipv4 {multicast {flap-statistics | soft {in | out}} | unicast {flap-statistics | soft {in | out}} | ipv6 unicast {flap-statistics | soft {in | out}} | soft {in | out}]

Parameters

ipv6-address
Enter an IPv6 address to reset neighbors belonging to that IP. Used without a qualifier, the keyword ipv6-address resets all neighbors belonging to that IP.

flap-statistics
(OPTIONAL) Enter the keywords flap-statistics to clear all flap statistics belonging to that AS or a specified address family within that IP.

ipv4
(OPTIONAL) Enter the keyword ipv4 to select options for that address family.

ipv6
(OPTIONAL) Enter the keyword ipv6 to select options for that address family.

unicast
(OPTIONAL) Enter the keyword unicast to select the unicast option within the selected address family.
**multicast**  
(Optionalal) Enter the keyword multicast to select the multicast option within the selected address family. Multicast is supported on IPv4 only.

**soft**  
(Optionalal) Enter the keyword soft to configure and activate policies without resetting the BGP TCP session; that is, BGP Soft Reconfiguration.

1. **NOTE:** If you enter `clear ip bgp ip6-address soft`, both inbound and outbound policies are reset.

**in**  
(Optionalal) Enter the keyword in to activate only inbound policies.

**out**  
(Optionalal) Enter the keyword out to activate only outbound policies.

---

**clear ip bgp peer-group**

Reset a peer-group’s BGP sessions.

**Syntax**
```
clear ip bgp peer-group peer-group-name
```

**Parameters**
- `peer-group-name` Enter the peer group name to reset the BGP sessions within that peer group.

---

**clear ip bgp ipv6 dampening**

Clear information on route dampening and return suppressed route to active state.

**Syntax**
```
clear ip bgp ipv6 unicast dampening [ipv6-address]
```

**Parameters**
- `ipv6-address` Enter the IPv6 address in the x:x:x::x format then the prefix length in the /x format. The range is from /0 to /128.

1. **NOTE:** The :: notation specifies successive hexadecimal fields of zeros.
clear ip bgp ipv6 flap-statistics

Clear BGP flap statistics, which includes number of flaps and the time of the last flap.

Syntax

```
clear ip bgp ipv6 unicast flap-statistics [ipv6-address | filter-list as-path-name | regexp regular-expression]
```

Parameters

- `ipv6-address` (OPTIONAL) Enter the IPv6 address in the x:x:x:x::x format then the prefix length in the /x format. The range is from /0 to /128.

  **NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

- `filter-list as-path-name` (OPTIONAL) Enter the keywords filter-list then the name of a configured AS-PATH list.

- `regexp regular-expression` (OPTIONAL) Enter the keyword regexp then the regular expressions. Use one or a combination of the following:

  • . (period) matches on any single character, including white space
  • * (asterisk) matches on sequences in a pattern (zero or more sequences)
  • + (plus sign) matches on sequences in a pattern (one or more sequences)
  • ? (question mark) matches sequences in a pattern (0 or 1 sequences)
  • [ ] (brackets) matches a range of single-character patterns.
  • ^ (caret) matches the beginning of the input string. (If the caret is used at the beginning of a sequence or range, it matches on everything BUT the characters specified.)
  • $ (dollar sign) matches the end of the output string.

Command Modes

- EXEC Privilege

Supported Modes

- Full-Switch

Command History

- **Version** 9.9(0.0) Introduced on the FN IOM.
- **Version** 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

- If you enter the `clear ip bgp ipv6 flap-statistics` command without parameters, all the statistics clear.

Related Commands

- `show ip bgp ipv6 unicast flap-statistics` — views BGP flap statistics.
clear ip bgp ipv6 unicast soft

Clear and reapply policies for IPv6 unicast routes without resetting the TCP connection; that is, perform BGP soft reconfiguration.

Syntax
```
clear ip bgp {* | as-number | ipv4-neighbor-addr | ipv6-neighbor-addr | peer-group name} ipv6 unicast soft [in | out]
```

Parameters
- `*` : Clear and reapply policies for all BGP sessions.
- `as-number` : Clear and reapply policies for all neighbors belonging to the AS. The range is from 0 to 65535 (2 Byte), from 1 to 4294967295 (4 Byte), or from 0.1 to 0.65535.65535 (Dotted format).
- `ipv4-neighbor-addr` | `ipv6-neighbor-addr` : Clear and reapply policies for a neighbor.
- `peer-group name` : Clear and reapply policies for all BGP routers in the specified peer group.
- `ipv6 unicast` : Clear and reapply policies for all IPv6 unicast routes.
- `in` : Reapply only inbound policies.
- `out` : Reapply only outbound policies.

NOTE: If you enter `soft`, without an `in` or `out` option, both inbound and outbound policies are reset.

Command Modes
- EXEC Privilege

Supported Modes
- Full-Switch

debug ip bgp

Allows you to view all information on BGP, including BGP events, keepalives, notifications, and updates.

Syntax
```
debug ip bgp [ipv6-address | peer-group peer-group-name] [in | out]
```

To disable all BGP debugging, use the `no debug ip bgp` command.

Parameters
- `ipv6-address` : (OPTIONAL) Enter the IPv6 address in the `x::x::x` format then the prefix length in the `/x` format. The range is from `/0` to `/128`.

NOTE: The '::' notation specifies successive hexadecimal fields of zeros.
Enter the keywords `peer-group` then the name of the peer group.

(Optional) Enter the keyword `in` to view only information on inbound BGP routes.

(Optional) Enter the keyword `out` to view only information on outbound BGP routes.

**Command Modes**

EXEC Privilege

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40Gbe Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

To view information on both incoming and outgoing routes, do not include the `in` and `out` parameters in the `debugging` command. The `in` and `out` parameters cancel each other; for example, if you enter `debug ip bgp in` and then enter `debug ip bgp out`, you do not see information on the incoming routes.

Entering a `no debug ip bgp` command removes all configured debug commands for BGP.

**Related Commands**

`debug ip bgp events` — views information about BGP events.

`debug ip bgp keepalives` — views information about BGP keepalives.

`debug ip bgp notifications` — views information about BGP notifications.

`debug ip bgp updates` — views information about BGP updates.

### debug ip bgp events

Allows you to view information on local BGP state changes and other BGP events.

**Syntax**

```
depug ip bgp [ipv6-address | peer-group peer-group-name] events [in | out]
```

To disable debugging, use the `no debug ip bgp ipv6-address | peer-group peer-group-name] events` command.

**Parameters**

- **ipv6-address**
  - (OPTIONAL) Enter the IPv6 address in the x:x::x format then the prefix length in the /x format. The range is from /0 to /128.
  - **NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

- **peer-group peer-group-name**
  - Enter the keywords `peer-group` then the name of the peer group.

- **in**
  - (OPTIONAL) Enter the keyword `in` to view only information on inbound BGP routes.

- **out**
  - (OPTIONAL) Enter the keyword `out` to view only information on outbound BGP routes.

</tr>
</tbody>
</table>

**Usage Information**

Entering a `no debug ip bgp` command removes all configured debug commands for BGP.

### debug ip bgp ipv6 dampening

View information on dampened (non-active) IPv6 routes.

**Syntax**

```
display ip bgp ipv6 unicast dampening [in | out]
```

To disable debugging, use the `no display ip bgp ipv6 unicast dampening` command.

**Parameters**

- **in** (OPTIONAL) Enter the keyword `in` to view only inbound dampened routes.
- **out** (OPTIONAL) Enter the keyword `out` to view only outbound dampened routes.

**Command Modes**

EXEC Privilege

**Supported Modes**

</tr>
</tbody>
</table>

**Usage Information**

Entering a `no display ip bgp` command removes all configured debug commands for BGP.

**Related Commands**

- `show ip bgp ipv6 unicast dampened-paths` — views BGP dampened routes.

### debug ip bgp ipv6 unicast soft-reconfiguration

Enable soft-reconfiguration debugging for IPv6 unicast routes.

**Syntax**

```
display bgp [ipv4-address | ipv6-address | peer-group-name] ipv6 unicast soft-reconfiguration
```

To disable debugging, use the `no display bgp [ipv4-address | ipv6-address | peer-group-name] ipv6 unicast soft-reconfiguration` command.

**Parameters**

- **ipv4-address | ipv6-address**
  - Enter the IP address of the neighbor on which you want to enable soft-reconfiguration debugging.

- **peer-group-name**
  - Enter the name of the peer group on which you want to enable soft-reconfiguration debugging.

- **ipv6 unicast**
  - Debug soft reconfiguration for IPv6 unicast routes.
debug ip bgp keepalives

Allows you to view information about BGP keepalive messages.

Syntax

```
delug ip bgp [ipv6-address | peer-group peer-group-name] keepalives [in | out]
```

To disable debugging, use the `no debug ip bgp [ipv6-address | peer-group peer-group-name] keepalives [in | out]` command.

Parameters

- `ipv6-address` (OPTIONAL) Enter the IPv6 address in the x:x::x format then the prefix length in the /x format. The range is /0 to /128.

  | NOTE: The :: notation specifies successive hexadecimal fields of zeros.

- `peer-group peer-group-name` (OPTIONAL) Enter the keywords `peer-group` then the name of the peer group.

- `in` (OPTIONAL) Enter the keyword `in` to view only inbound keepalive messages.

- `out` (OPTIONAL) Enter the keyword `out` to view only outbound keepalive messages.

Command Modes

- EXEC Privilege

Supported Modes

- Full-Switch

</tr>
</tbody>
</table>

Usage Information

Entering a `no debug ip bgp` command removes all configured debug commands for BGP.
debug ip bgp notifications

Allows you to view information about BGP notifications received from neighbors.

Syntax

debug ip bgp [ipv6-address | peer-group peer-group-name] notifications [in | out]

To disable debugging, use the no debug ip bgp [ip-address | peer-group peer-group-name] notifications [in | out] command.

Parameters

ipv6-address

(OPTIONAL) Enter the IPv6 address in the x:x:x::x format then the prefix length in the /x format. The range is from /0 to /128.

peer-group peer-group-name

(OPTIONAL) Enter the keywords peer-group then the name of the peer group.

in

(OPTIONAL) Enter the keyword in to view BGP notifications received from neighbors.

out

(OPTIONAL) Enter the keyword out to view BGP notifications sent to neighbors.

Command Modes

EXEC Privilege

Supported Modes

Full-Switch

Command History

Version Description

9.9(0.0) Introduced on the FN IOM.

9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

Entering a no debug ip bgp command removes all configured debug commands for BGP.

debug ip bgp updates

Allows you to view information about BGP updates.

Syntax

debug ip bgp [ipv6-address | peer-group peer-group-name | ipv6 unicast [ipv6-address]] updates [in | out | prefix-list prefix-list-name]

To disable debugging, use the no debug ip bgp [ip-address | peer-group peer-group-name | ipv6 unicast [ipv6-address]] updates [in | out] command.

Parameters

ipv6-address

(OPTIONAL) Enter the IPv6 address in the x:x:x::x format then the prefix length in the /x format. The range is from /0 to /128.

peer-group peer-group-name

(OPTIONAL) Enter the keywords peer-group then the name of the peer group.
**ipv6 unicast [ipv6-address]**

(OPTIONAL) Enter the keywords `ipv6 unicast`, and, optionally, an `ipv6 address`.

**(OPTIONAL) Enter the keyword `in` to view only BGP updates received from neighbors.**

**(OPTIONAL) Enter the keyword `out` to view only BGP updates sent to neighbors.**

</tr>
</tbody>
</table>

**Usage Information**

Entering a `no debug ip bgp` command removes all configured debug commands for BGP.

---

**default-metric**

Allows you to change the metrics of redistributed routes to locally originated routes. Use this command with the `redistribute` command.

**Syntax**

```
default-metric number
```

To return to the default setting, use the `no default-metric` command.

**Parameters**

`number`

Enter a number as the metric to be assigned to routes from other protocols. The range is from 1 to 4294967295.

**Defaults**

0

**Command Modes**

ROUTER BGP

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

The `default-metric` command in BGP sets the value of the BGP MULTI_EXIT_DISC (MED) attribute for redistributed routes only.

**Related Commands**

`bgp always-compare-med` — enables comparison of all BGP MED attributes.

`redistribute` — redistributes routes from other routing protocols into BGP.
### description

Enter a description of the BGP routing protocol.

**Syntax**

```
description {description}
```

To remove the description, use the `no description {description}` command.

**Parameters**

- `description`
  - Enter a description to identify the BGP protocol (80 characters maximum).

**Defaults**

- none

**Command Modes**

- ROUTER BGP

**Supported Modes**

- Full-Switch

**Command History**

</tr>
</tbody>
</table>

**Related Commands**

- `router bgp` — enters ROUTER mode on the switch.

### distance bgp

Configure three administrative distances for routes.

**Syntax**

```
distance bgp external-distance internal-distance local-distance
```

To return to default values, use the `no distance bgp` command.

**Parameters**

- `external-distance`
  - Enter a number to assign to routes learned from a neighbor external to the AS. The range is from 1 to 255. The default is 20.

- `internal-distance`
  - Enter a number to assign to routes learned from a router within the AS. The range is from 1 to 255. The default is 200.

- `local-distance`
  - Enter a number to assign to routes learned from networks listed in the network command. The range is from 1 to 255. The default is 200.

**Defaults**

- `external-distance = 20`
- `internal-distance = 200`
- `local-distance = 200`

**Command Modes**

- ROUTER BGPV6-ADDRESS FAMILY

**Supported Modes**

</tbody>
</table>
maximum-paths

Configure the maximum number of parallel routes (multipath support) BGP supports.

Syntax

maximum-paths {ebgp | ibgp} number

To return to the default values, use the no maximum-paths command.

Parameters

- **ebgp**: Enter the keyword `ebgp` to enable multipath support for External BGP routes.
- **ibgp**: Enter the keyword `ibgp` to enable multipath support for Internal BGP routes.
- **number**: Enter a number as the maximum number of parallel paths. The range is from 1 to 16. The default is 1.

Defaults

1

Command Modes

ROUTER BGPV6-ADDRESS FAMILY

Supported Modes

Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>

<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

If you enable this command, use the `capture bgp-pdu max-buffer-size` command to recompute the best path.

neighbor activate

This command allows the specified neighbor/peer group to be enabled for the current AFI/SAFI.

Syntax

neighbor {ipv6-address | peer-group-name} activate

To disable, use the no neighbor {ipv6-address | peer-group-name} activate command.

Parameters

- **ipv6-address**: Enter the IPv6 address in the x:x:x::x format.

  **NOTE**: The :: notation specifies successive hexadecimal fields of zeros.
Identify a peer group by name.

activate

Enter the keyword activate to enable the identified neighbor or peer group in the new AFI/SAFI.

Defaults

Disabled.

Command Modes

ROUTER BGPV6-ADDRESS FAMILY

Supported Modes

Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

By default, when you create a neighbor/peer group configuration in the Router BGP context, it is enabled for the IPv6/Unicast AFI/SAFI. By using activate in the new context, the neighbor/peer group is enabled for AFI/SAFI.

**neighbor advertisement-interval**

Set the advertisement interval between BGP neighbors or within a BGP peer group.

**Syntax**

neighbor {ipv6-address | peer-group-name} advertisement-interval seconds

To return to the default value, use the no neighbor {ipv6-address | peer-group-name} advertisement-interval command.

**Parameters**

- **ipv6-address**
  
  Enter the IPv6 address in the x:x:x:x::x format.

  **NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

- **peer-group-name**
  
  Enter the name of the peer group to set the advertisement interval for all routers in the peer group.

- **seconds**
  
  Enter a number as the time interval, in seconds, between BGP advertisements. The range is from 0 to 600 seconds. The default is 5 seconds for internal BGP peers and 30 seconds for external BGP peers.

**Defaults**

- seconds = 5 seconds (internal peers)
- seconds = 30 seconds (external peers)

</tr>
</tbody>
</table>
neighbor allowas-in

Set the number of times an AS number can occur in the AS path.

**Syntax**
```
neighbor {ip-address | peer-group-name} allowas-in number
```

To return to the default value, use the `no neighbor {ip-address | peer-group-name} allowas-in` command.

**Parameters**
- **ip-address**
  - Enter the IPv6 address in the `x:x::x` format.
  - **NOTE:** The `::` notation specifies successive hexadecimal fields of zeros.
- **peer-group-name**
  - Enter the name of the peer group to set the advertisement interval for all routers in the peer group.
- **number**
  - Enter a number of times to allow this neighbor ID to use the AS path. The range is from 1 to 10.

**Defaults**
Not configured.

**Command Modes**
- ROUTER BGP

**Supported Modes**
- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Related Commands**
- `bgp four-octet-as-support` — enables 4-Byte support for the BGP process.

neighbor default-originate

Inject the default route to a BGP peer or neighbor.

**Syntax**
```
neighbor {ipv6-address | peer-group-name} default-originate [route-map map-name]
```

To remove a default route, use the `no neighbor {ipv6-address | peer-group-name} default-originate [route-map map-name]` command.

**Parameters**
- **ipv6-address**
  - Enter the IPv6 address in the `x:x::x` format.
  - **NOTE:** The `::` notation specifies successive hexadecimal fields of zeros.
- **peer-group-name**
  - Enter the name of the peer group to set the default route of all routers in that peer group.
- **route-map map-name**
  - (OPTIONAL) Enter the keywords `route-map` then the name of a configured route map.

**Defaults**
Not configured.
Command Modes

- ROUTER BGPV6-ADDRESS FAMILY

Supported Modes

- Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

If you apply a route map to a BGP peer or neighbor with the `neighbor default-originate` command configured, the software does not apply the set filters in the route map to that BGP peer or neighbor.

### neighbor description

Assign a character string describing the neighbor or group of neighbors (peer group).

**Syntax**

```
neighbor {ipv6-address | peer-group-name} description text
```

To delete a description, use the `no neighbor {ipv6-address | peer-group-name} description text` command.

**Parameters**

- **ipv6-address**: Enter the IPv6 address in the `x:x:x:x::x` format.

**NOTE**: The `::` notation specifies successive hexadecimal fields of zeros.

- **peer-group-name**: Enter the name of the peer group.

- **text**: Enter a continuous text string up to 80 characters.

**Defaults**

- Not configured.

**Command Modes**

- ROUTER BGP

**Supported Modes**

- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>

</tr>
</tbody>
</table>

### neighbor distribute-list

Distribute BGP information using an established prefix list.

**Syntax**

```
neighbor {ipv6-address | peer-group-name} distribute-list prefix-list-name {in | out}
```

To delete a neighbor distribution list, use the `no neighbor {ipv6-address | peer-group-name} distribute-list prefix-list-name {in | out}` command.

**Parameters**

- **ipv6-address**: Enter the IPv6 address in the `x:x:x:x::x` format.
NOTE: The :: notation specifies successive hexadecimal fields of zeros.

**peer-group-name**
Enter the name of the peer group.

**prefix-list-name**
Enter the name of an established prefix list. If the prefix list is not configured, the default is *permit* (to allow all routes).

**in**
Enter the keyword *in* to distribute only inbound traffic.

**out**
Enter the keyword *out* to distribute only outbound traffic.

**Defaults**
Not configured.

**Command Modes**
ROUTER BGPV6-ADDRESS FAMILY

**Supported Modes**

</tbody>
</table>

**Related Commands**
- **neighbor filter-list** — assigns a AS-PATH list to a neighbor or peer group.
- **neighbor route-map** — assigns a route map to a neighbor or peer group.

### neighbor ebgp-multihop

Attempt and accept BGP connections to external peers on networks that are not directly connected.

**Syntax**

```plaintext
neighbor {ipv6-address | peer-group-name} ebgp-multihop [ttl]
```

To disallow and disconnect connections, use the `no neighbor {ipv6-address | peer-group-name} ebgp-multihop [ttl]` command.

**Parameters**

- **ipv6-address**
  - Enter the IPv6 address in the x:x::x format.
  
  **NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

- **peer-group-name**
  - Enter the name of the peer group.

- **ttl**
  - (OPTIONAL) Enter the number of hops as the time to live (ttl) value. The range is from 1 to 255. The default is **255**.

**Defaults**
Disabled.

**Command Modes**
ROUTER BGP

**Supported Modes**
Full-Switch

**Command History**

<table>
<thead>
<tr>

<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

696 IPv6 Border Gateway Protocol (IPv6 BGP)
Usage Information

To prevent loops, the neighbor ebgp-multihop command does not install default routes of the multihop peer. Networks not directly connected are not considered valid for best path selection.

**neighbor fall-over**

Enable or disable fast fall-over for BGP neighbors.

**Syntax**

```
neighbor {ipv6-address | peer-group-name} fall-over
```

To disable, use the `no neighbor {ipv6-address | peer-group-name} fall-over` command.

**Parameters**

- `ipv6-address` Enter the IPv6 address in the `x:x:x:x::x` format.

  **NOTE:** The `::` notation specifies successive hexadecimal fields of zeros.

- `peer-group-name` Enter the name of the peer group.

**Defaults**

Disabled.

**Command Modes**

ROUTER BGP

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

When you enable fall-over, BGP keeps track of IP or IPv6 reachability to the peer remote address and the peer local address. Whenever either address becomes unreachable (for example, no active route exists in the routing table for peer IP or IPv6 destination/local address), BGP brings down the session with the peer.

**Related Commands**

- `show ip bgp ipv6 unicast neighbors` — displays IPv6 routing information exchanged by BGP neighbors.

**neighbor filter-list**

Configure a BGP filter based on the AS-PATH attribute.

**Syntax**

```
neighbor {ipv6-address | peer-group-name} filter-list as-path-name {in | out}
```

To delete a BGP filter, use the `no neighbor {ipv6-address | peer-group-name} filter-list as-path-name {in | out}` command.

**Parameters**

- `ipv6-address` Enter the IPv6 address in the `x:x:x:x::x` format.

  **NOTE:** The `::` notation specifies successive hexadecimal fields of zeros.

- `peer-group-name` Enter the name of the peer group to apply the filter to all routers in the peer group.

- `in` Enter the keyword `in` to filter inbound BGP routes.

- `out` Enter the keyword `out` to filter outbound BGP routes.
neighbor maximum-prefix

Control the number of network prefixes received.

Syntax

```
neighbor {ipv6-address | peer-group-name} maximum-prefix maximum [threshold] [warning-only]
```

To return to the default values, use the `no neighbor {ipv6-address | peer-group-name} maximum-prefix maximum [threshold] [warning-only]` command.

Parameters

- `ipv6-address` Enter the IPv6 address in the `x:x:x:x::x` format.
- `peer-group-name` Enter the name of the peer group.
- `maximum` Enter a number as the maximum number of prefixes allowed for this BGP router. The range is from 1 to 4294967295.
- `threshold` (OPTIONAL) Enter a number to be used as a percentage of the maximum value. When the number of prefixes reaches this percentage of the maximum value, the software sends a message. The range is from 1 to 100 percent. The default is 75.
- `warning-only` (OPTIONAL) Enter the keyword `warning-only` to set the router to send a log message when the maximum value is reached. If this parameter is not set, the router stops peering when the maximum number of prefixes is reached.

Defaults

```
threshold = 75
```

Command Modes

- `ROUTER BGPV6-ADDRESS FAMILY`
- `Full-Switch`

Command History

```
Version Description
9.9(0.0)  Introduced on the FN IOM.
9.2(0.0)  Introduced on the MXL 10/40GbE Switch IO Module.
```

Usage Information

If you configure the `neighbor maximum-prefix` command and the neighbor receives more prefixes than allowed by the `neighbor maximum-prefix` command configuration, the neighbor goes down and the `show ip bgp ipv6 unicast summary` command displays (prfxd) in the State/PfxRcd column for that neighbor. The neighbor remains down until you enter the `capture bgp-pdu max-buffer-size` command for the neighbor or the peer group to which the neighbor belongs or you enter `neighbor shutdown` and `neighbor no shutdown` commands.
neighbor X:X:X::X password

Enable TCP MD5 Authentication for an IPv6 BGP peer session.

Syntax
neighbor x:x:x::x password {7 <encrypt-pass> | <clear-pass>
To return to the default setting, use the no neighbor x:x:x::x password command.

Parameters
- **encrypt-pass**: Enter the encrypted password.
- **clear-pass**: Enter the clear text password.

Defaults
Disabled.

Command Modes
ROUTER BGPV6-ADDRESS FAMILY

Supported Modes
Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information
The TCP session is authentication and prevents the data from being compromised.

neighbor next-hop-self

Allows you to configure the router as the next hop for a BGP neighbor. (This command is used for IBGP).

Syntax
neighbor {ipv6-address | peer-group-name} next-hop-self
To return to the default setting, use the no neighbor {ipv6-address | peer-group-name} next-hop-self command.

Parameters
- **ipv6-address**: Enter the IPv6 address in the x:x:x::x format.
  - **NOTE**: The :: notation specifies successive hexadecimal fields of zeros.
- **peer-group-name**: (OPTIONAL) Enter the name of the peer group.

Defaults
Disabled.

Command Modes
ROUTER BGPV6-ADDRESS FAMILY

Supported Modes
Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>

</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>
Usage Information

If you configure the set ipv6 next-hop command in ROUTE-MAP mode, its configuration takes precedence over the neighbor next-hop-self command.

neighbor peer-group (assigning peers)

Allows you to assign one peer to a existing peer group.

Syntax

neighbor ipv6-address peer-group peer-group-name

To delete a peer from a peer group, use the no neighbor ipv6-address peer-group peer-group-name command.

Parameters

ipv6-address

Enter the IPv6 address in the x:x:x:x::x format.

peer-group peer-group-name

Enter the keywords peer-group then the name of a configured peer group (maximum 16 characters).

Defaults

Not configured.

Command Modes

ROUTER BGP

Supported Modes

Full-Switch

Command History

Version Description

9.9(0.0) Introduced on the FN IOM.

9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

You can assign up to 64 peers to one peer group.

When you add a peer to a peer group, it inherits all the peer group’s configured parameters. A peer cannot become part of a peer group if any of the following commands are configured on the peer:

- neighbor advertisement-interval
- neighbor distribute-list
- neighbor filter-list
- neighbor next-hop-self
- neighbor route-map
- neighbor route-reflector-client
- neighbor send-community

A neighbor may keep its configuration after it was added to a peer group if the neighbor’s configuration is more specific than the peer group’s and the neighbor’s configuration does not affect outgoing updates.

A peer group must exist before you add a peer to it. If the peer group is disabled (shutdown) the peers within the group are also disabled (shutdown).

Related Commands

capture bgp-pdu max-buffer-size — resets BGP sessions.

neighbor peer-group (creating group) — creates a peer group.
show ip bgp ipv6 unicast peer-group — views BGP peers.
show ip bgp ipv6 unicast neighbors — views BGP neighbors configurations.

**neighbor peer-group (creating group)**

Allows you to create a peer group and assign it a name.

**Syntax**

```
neighbor peer-group-name peer-group
```

To delete a peer group, use the `no neighbor peer-group-name peer-group` command.

**Parameters**

- **peer-group-name**
  Enter a text string up to 16 characters long as the name of the peer group.

**Defaults**

Not configured.

**Command Modes**

- ROUTER BGP

**Supported Modes**

- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

When a peer group is created, it is disabled (`shut` mode).

**Related Commands**

- `neighbor peer-group (assigning peers)` — assigns routers to a peer group.
- `neighbor remote-as` — assigns a indirectly connected AS to a neighbor or peer group.
- `neighbor shutdown` — disables a peer or peer group.

**neighbor peer-group passive**

Enable passive peering on a BGP peer group; that is, the peer group does not send an OPEN message, but does respond to one.

**Syntax**

```
neighbor peer-group-name peer-group passive
```

To delete a passive peer-group, use the `no neighbor peer-group-name peer-group passive` command.

**Parameters**

- **peer-group-name**
  Enter a text string up to 16 characters long as the name of the peer group.

**Defaults**

Not configured.

**Command Modes**

- ROUTER BGP

**Supported Modes**

- Full-Switch
neighbor remote-as

Create and specify the remote peer to the BGP neighbor.

Syntax
neighbor \{ipv6-address | peer-group-name\} remote-as number

To delete a remote AS entry, use the no neighbor \{ipv6-address | peer-group-name\} remote-as number command.

Parameters

\begin{itemize}
  \item \textbf{ipv6-address} Enter the IPv6 address in the x:x::x format.
  \item \textbf{peer-group-name} Enter a text string up to 16 characters long as the name of the peer group.
  \item \textbf{number} Enter a number of the AS. The range is from 1 to 65535.
\end{itemize}

Defaults
Not configured.

Command Modes
- ROUTER BGP
- Full-Switch

Command History

\begin{itemize}
  \item 9.9(0.0) Introduced on the FN IOM.
  \item 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
\end{itemize}

Usage Information
If the \textbf{number} parameter is the same as the AS number used in the \textbf{router bgp} command, the remote AS entry in the neighbor is considered an internal BGP peer entry.

This command creates a peer and the newly created peer is disabled (shutdown).

Related Commands
- \textbf{router bgp} — enters the ROUTER BGP mode and configure routes in an AS.

neighbor remove-private-as

Remove private AS numbers from the AS-PATH of outgoing updates.

Syntax
neighbor \{ipv6-address | peer-group-name\} remove-private-as

To return to the default, use the no neighbor \{ipv6-address | peer-group-name\} remove-private-as command.
Parameters

ipv6-address

Enter the IPv6 address in the x:x:x::x format.

NOTE: The :: notation specifies successive hexadecimal fields of zeros.

peer-group-name

Enter the name of the peer group to remove the private AS numbers.

Defaults

Disabled (that is, the private AS number are not removed).

Command Modes

ROUTER BGPV6-ADDRESS FAMILY

Supported Modes

Full-Switch

Command History

Version Description
9.9(0.0) Introduced on the FN IOM.
9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

Applies to external border gateway protocol (EBGP) neighbors only.

If the AS-PATH contains both public and private AS number or contains AS numbers of an EBGP neighbor, the private AS numbers are not removed.

If a confederation contains private AS numbers in its AS-PATH, the software removes the private AS numbers only if they follow the confederation numbers in the AS path.

Private AS numbers are from 64512 to 65535.

neighbor route-map

Apply an established route map to either incoming or outbound routes of a BGP neighbor or peer group.

Syntax

neighbor {ipv6-address | peer-group-name} route-map map-name {in | out}

Parameters

ipv6-address

Enter the IPv6 address in the x:x:x::x format.

NOTE: The :: notation specifies successive hexadecimal fields of zeros.

peer-group-name

Enter the name of the peer group.

map-name

Enter the name of an established route map. If the Route map is not configured, the default is deny (to drop all routes).

in

Enter the keyword in to filter inbound routes.

out

Enter the keyword out to filter outbound routes.

Defaults

Not configured.

Command Modes

ROUTER BGPV6-ADDRESS FAMILY

Supported Modes

Full-Switch
**neighbor route-reflector-client**

Configure a neighbor as a member of a route reflector cluster.

**Syntax**

```
neighbor {ipv6-address | peer-group-name} route-reflector-client
```

To indicate that the neighbor is not a route reflector client or to delete a route reflector configuration, use the `no` neighbor `{ipv6-address | peer-group-name} route-reflector-client` command.

**Parameters**

- `ipv6-address`: Enter the IPv6 address in the x:x:x:x::x format.
  
  **NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

- `peer-group-name`: Enter the name of the peer group. All routers in the peer group receive routes from a route reflector.

**Defaults**

Not configured.

**Command Modes**

ROUTER BGPV6-ADDRESS FAMILY

**Supported Modes**

Full-Switch

**Command History**

- **Version** 9.9(0.0) Introduced on the FN IOM.
- **Version** 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The first time you enter this command it configures the neighbor as a route reflector and members of the route-reflector cluster. Internal BGP (IBGP) speakers do not need to be fully meshed if you configure a route reflector.

When all clients of a route reflector are disabled, the neighbor is no longer a route reflector.

**neighbor send-community**

Send a COMMUNITY attribute to a BGP neighbor or peer group. A COMMUNITY attribute indicates that all routes with that attribute belong to the same community grouping.

**Syntax**

```
neighbor {ipv6-address | peer-group-name} send-community
```

**Usage Information**

When you apply a route map to outbound routes, only routes that match at least one section of the route map are permitted.

If you identify a peer group by name, the peers in that peer group inherit the characteristics in the Route map used in this command. If you identify a peer by IP address, the Route map overwrites either the inbound or outbound policies on that peer.
To disable sending a COMMUNITY attribute, use the `no neighbor {ipv6-address | peer-group-name} send-community` command.

**Parameters**

- **ipv6-address**
  - Enter the IPv6 address in the x:x:x:x::x format.
  
  | NOTE: The :: notation specifies successive hexadecimal fields of zeros.

- **peer-group-name**
  - Enter the name of the peer group. All routers in the peer group receive routes from a route reflector.

**Defaults**

Not configured and COMMUNITY attributes are not sent to neighbors.

**Command Modes**

- **ROUTER BGP**

**Supported Modes**

- Full-Switch

**Command History**

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

### neighbor shutdown

Disable a BGP neighbor or peer group.

**Syntax**

```
neighbor {ipv6-address | peer-group-name} shutdown
```

To enable a disabled neighbor or peer group, use the `no neighbor {ipv6-address | peer-group-name} shutdown` command.

**Parameters**

- **ipv6-address**
  - Enter the IPv6 address in the x:x:x:x::x format.
  
  | NOTE: The :: notation specifies successive hexadecimal fields of zeros.

- **peer-group-name**
  - Enter the name of the peer group to disable or enable all routers within the peer group.

**Defaults**

Enabled (that is, BGP neighbors and peer groups are disabled.)

**Command Modes**

- **ROUTER BGP**

**Supported Modes**

- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

Peers that are enabled within a peer group are disabled when their peer group is disabled.

The `neighbor shutdown` command terminates all BGP sessions on the BGP neighbor or BGP peer group. Use this command with caution as it terminates the specified BGP sessions. When a neighbor or peer group is shutdown, use the `show ip bgp ipv6 unicast summary` command to confirm its status.
**neighbor soft-reconfiguration inbound**

Enable a BGP soft-reconfiguration and start storing updates for inbound IPv6 unicast routes.

**Syntax**

```plaintext
neighbor {ipv4-address | ipv6-address | peer-group-name} soft-reconfiguration inbound
```

**Parameters**

- `ipv4-address | ipv6-address` Enter the IP address of the neighbor for which you want to start storing inbound routing updates.
- `peer-group-name` Enter the name of the peer group for which you want to start storing inbound routing updates.

**Defaults**

Disabled.

**Command Modes**

ROUTER BGPv6 ADDRESS FAMILY (conf-router_bgpv6_af)

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command enables soft-reconfiguration for the specified BGP neighbor. BGP stores all updates for inbound IPv6 unicast routes the neighbor receives but does not reset the peer-session.

⚠️ **CAUTION:** Inbound update storage is a memory-intensive operation. The entire BGP update database from the neighbor is stored in memory regardless of the inbound policy results applied on the neighbor.

**Related Commands**

- `show ip bgp ipv6 unicast neighbors` — displays IPv6 routing information exchanged by BGP neighbors.

---

**neighbor subnet**

Enable passive peering so that the members of the peer group are dynamic.

**Syntax**

```plaintext
neighbor peer-group-name subnet subnet-number mask
```

To remove passive peering, use the `no neighbor peer-group-name subnet subnet-number mask` command.

**Parameters**

- `subnet-number` Enter a subnet number in dotted decimal format (A.B.C.D.) as the allowable range of addresses included in the Peer group. To allow all addresses, enter 0::0/0.
- `mask` Enter a prefix mask in /prefix-length format (/x).

**Defaults**

Not configured.

**Command Modes**

ROUTER BGP
Supported Modes  Full–Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

### neighbor timers

Set keepalive and hold time timers for a BGP neighbor or a peer group.

**Syntax**

```
neighbor {ipv6-address | peer-group-name} timers keepalive holdtime
```

To return to the default values, use the `no neighbor {ipv6-address | peer-group-name} timers` command.

**Parameters**

- **ipv6-address**
  - Enter the IPv6 address in the x:x:x:x::x format.
  - **NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

- **peer-group-name**
  - Enter the name of the peer group to set the timers for all routers within the peer group.

- **keepalive**
  - Enter a number for the time interval, in seconds, between keepalive messages sent to the neighbor routers. the range is from 1 to 65535, the default is 60 seconds.

- **holdtime**
  - Enter a number for the time interval, in seconds, between the last keepalive message and declaring the router dead. The range is from 3 to 65535. The default is 180 seconds.

**Defaults**

- keepalive = 60 seconds
- holdtime = 180 seconds

**Command Modes**

- ROUTER BGP

**Supported Modes**

- Full–Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

Timer values configured with the `neighbor timers` command override the timer values configured with the `timers bgp` command.

When two neighbors, configured with different keepalive and holdtime values, negotiate for new values, the resulting values are as follows:

- the lower of the holdtime values is the new holdtime value
- whichever is the lower value; one-third of the new holdtime value, or the configured keepalive value is the new keepalive value
neighbor update-source

Enable the software to use Loopback interfaces for TCP connections for BGP sessions.

Syntax

```
neighbor {ipv6-address | peer-group-name} update-source loopback interface
```

To use the closest interface, use the `no neighbor {ipv6-address | peer-group-name} update-source loopback interface` command.

Parameters

- **ipv6-address**: Enter the IPv6 address in the x:x:x:x::x format.
  - **NOTE**: The :: notation specifies successive hexadecimal fields of zeros.

- **peer-group-name**: Enter the name of the peer group to set the timers for all routers within the peer group.

- **loopback interface**: Enter the keyword `loopback` then a number of the loopback interface. The range is from 0 to 16383.

Defaults

Not configured.

Command Modes

- ROUTER BGP

Supported Modes

- Full-Switch

Command History

- **Version**: 9.9(0.0) Introduces on the FN IOM.
- **Version**: 9.2(0.0) Introduces on the MXL 10/40GbE Switch IO Module.

Usage Information

Loopback interfaces are up constantly and the BGP session may need one interface constantly up to stabilize the session. The `neighbor update-source` command is not necessary for directly connected internal BGP sessions.

neighbor weight

Assign a weight to the neighbor connection, which is used to determine the best path.

Syntax

```
neighbor {ipv6-address | peer-group-name} weight weight
```

To remove a weight value, use the `no neighbor {ipv6-address | peer-group-name} weight weight` command.

Parameters

- **ipv6-address**: Enter the IPv6 address in the x:x:x:x::x format.
  - **NOTE**: The :: notation specifies successive hexadecimal fields of zeros.

- **peer-group-name**: Enter the name of the peer group to set the timers for all routers within the peer group.

- **weight**: Enter a number as the weight. The range is from 0 to 65535. The default is 0.

Defaults

- 0

Command Modes

- ROUTER BGP
**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

In the system best path selection process, the path with the highest weight value is preferred.

**NOTE:** To apply the weight to the connection and recompute the best path, reset the neighbor connection (the `capture bgp-pdu max-buffer-size * command`).

---

**network**

Specify the networks for the BGP process and enter them in the BGP routing table.

**Syntax**

```
network ipv6-address prefix-length [route-map map-name]
```

To remove a network, use the `no network ip-address mask [route-map map-name]` command.

**Parameters**

- `ipv6-address prefix-length`  
  Enter the IPv6 address in the `x:xxx::x` format then the prefix length in the `/x` format. The range is from `/0` to `/128`.

  **NOTE:** The `::` notation specifies successive hexadecimal fields of zeros.

- `mask`  
  Enter the mask of the IP address in the slash prefix length format (for example, `/24`). The mask appears in command outputs in dotted decimal format (A.B.C.D).

- `route-map map-name` (OPTIONAL) Enter the keywords `route-map` then the name of an established route map. If the route map is not configured, the default is `deny` (to drop all routes).

**Defaults**  
Not configured.

**Command Modes**  
ROUTER BGPV6-ADDRESS FAMILY

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

The software resolves the network address configured by the `network` command with the routes in the main routing table to ensure that the networks are reachable using non-BGP routes and non-default routes.

**Related Commands**

- `redistribute` — redistributes routes into BGP.
network backdoor

Specify this IGP route as the preferred route.

Syntax

network ipv6-address prefix-length backdoor

To remove a network, use the no network ipv6-address prefix-length backdoor command.

Parameters

ipv6-address prefix-length

Enter the IPv6 address in the x:x:x:x::x format then the prefix length in the /x format. The range is from /0 to /128.

NOTE: The :: notation specifies successive hexadecimal fields of zeros.

Defaults

Not configured.

Command Modes

ROUTER BGPV6-ADDRESS FAMILY

Supported Modes

Full-Switch

Command History

Version Description

9.9(0.0) Introduced on the FN IOM.

9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

Though the system does not generate a route due to backdoor config, there is an option for injecting/sourcing a local route in presence of network backdoor config on a learned route.

redistribute

Redistribute routes into BGP.

Syntax

redistribute {connected | static} [route-map map-name]

To disable redistribution, use the no redistribution {connected | static} command.

Parameters

connected

Enter the keyword connected to redistribute routes from physically connected interfaces.

static

Enter the keyword static to redistribute manually configured routes. These routes are treated as incomplete routes.

route-map map-name (OPTIONAL) Enter the keywords route-map then the name of an established route map.

If the route map is not configured, the default is deny (to drop all routes).

Defaults

Not configured.

Command Modes

ROUTER BGPV6-ADDRESS FAMILY

Supported Modes

Full-Switch
Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

If you do not configure the `default-metric` command, in addition to the `redistribute` command, or there is no route map to set the metric, the metric for redistributed static and connected is "0".

To redistribute the default route (0:0:0/0), configure the `neighbor default-originate` command.

Related Commands

- `neighbor default-originate` — injects the default route.

**redistribute isis**

Redistribute IS-IS routes into BGP.

Syntax

```
redistribute isis [level-1 | level-1-2 | level-2] [metric metric-value | metric-type {external | internal}] [route-map map-name]
```

To stop redistribution of IS-IS routes, use the `no redistribute isis` command.

Parameters

- `level-1 | level-1-2 | level-2` *(OPTIONAL)* Enter the type (level) of routes to redistribute.
- `metric` *(OPTIONAL)* Assign metric to an interface for use with IPv6 information.
- `metric-type` *(OPTIONAL)* The external link type associated with the default route advertised into a routing domain. You must specify one of the following:
  - `external`
  - `internal` *(default)*
- `route-map map-name` *(OPTIONAL)* Enter the keywords `route-map` then the name of an established route map.
  
  If the route map is not configured, the default is `deny` *(to drop all routes)*.

Defaults

Not configured.

Command Modes

- `ROUTER BGPV6-ADDRESS FAMILY`

Supported Modes

- `Full-Switch`

Command History

</tbody>
</table>
**redistribute ospf**

Redistribute OSPFv3 routes into BGP.

**Syntax**

```
redistribute ospf process-id [[match external {1 | 2}] [match internal]]
[route-map map-name]
```

To stop redistribution of OSPF routes, use the no redistribute ospf process-id command.

**Parameters**

- **process-id**
  - Enter the number of the OSPFv3 process. The range is from 1 to 65535.

- **match external {1 | 2}** (OPTIONAL)
  - Enter the keywords match external to redistribute OSPF external routes. You can specify 1 or 2 to redistribute those routes only.

- **match internal** (OPTIONAL)
  - Enter the keywords match internal to redistribute OSPFv3 internal routes only.

- **route-map map-name** (OPTIONAL)
  - Enter the keywords route-map then the name of an established route map.

  If the route map is not configured, the default is deny (to drop all routes).

**Defaults**

Not configured.

**Command Modes**

- ROUTER BGPV6-ADDRESS FAMILY

**Supported Modes**

- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

When you enter the redistribute ospf process-id command without any other parameters, the system redistributes all OSPF internal routes, external type 1 routes, and external type 2 routes.

**router bgp**

Enter ROUTER BGP mode to configure and enable BGP.

**Syntax**

```
router bgp as-number
```

To disable BGP, use the no router bgp as-number command.

**Parameters**

- **as-number**
  - Enter the AS number. The range is from 1 to 65535.

**Defaults**

Not enabled.

**Command Modes**

- CONFIGURATION

**Supported Modes**

- Full-Switch
**show capture bgp-pdu neighbor**

Display BGP packet capture information for an IPv6 address.

**Syntax**

```
show capture bgp-pdu neighbor ipv6-address
```

**Parameters**

- `ipv6-address`: Enter the IPv6 address (X:X:X:X::X) of a BGP neighbor.

**Defaults**

- EXEC
- EXEC Privilege

**Command Modes**

- CONFIGURATION

**Supported Modes**

- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Related Command**

- `capture bgp-pdu neighbor (ipv6)` — enables capture of an IPv6 BGP neighbor packet.
- `capture bgp-pdu max-buffer-size` — specifies a size for the capture buffer.

**show config**

View the current ROUTER BGP configuration.

**Syntax**

```
show config
```

**Command Modes**

- ROUTER BGPV6-ADDRESS FAMILY

**Supported Modes**

- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell(conf-router_bgp)#show conf
!
router bgp 18508
  neighbor RR-CLIENT peer-group
  neighbor RR-CLIENT remote-as 18508
  neighbor RR-CLIENT no shutdown
```
show ip bgp ipv6 unicast

View the current BGP information.

Syntax: show ip bgp ipv6 unicast [network [network-mask] [longer-prefixes]]

Parameters:
- **network** (OPTIONAL) Enter the network address (in dotted decimal format) of the BGP network to view information only on that network.
- **network-mask** (OPTIONAL) Enter the keywords network mask (in slash prefix format) of the BGP network address.
- **longer-prefixes** (OPTIONAL) Enter the keywords longer-prefixes to view all routes with a common prefix.

Command Modes:
- EXEC
- EXEC Privilege

Supported Modes: Full-Switch

Command History:
- **Version** 9.9(0.0) Introduced on the FN IOM.
- 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information:
When you enable the `bgp non-deterministic-med` command, the `show ip bgp` command output for a BGP route does not list the INACTIVE reason.

show ip bgp ipv6 unicast cluster-list

View BGP neighbors in a specific cluster.

Syntax: show ip bgp ipv6 unicast cluster-list [cluster-id]
**Parameters**

- **cluster-id** *(OPTIONAL)* Enter the cluster id in dotted decimal format.

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

### show ip bgp ipv6 unicast community

View information on all routes with community attributes or view specific BGP community groups.

**Syntax**

```
show ip bgp ipv6 unicast community [community-number] [local-as] [no-export] [no-advertise]
```

**Parameters**

- **community-number** Enter the community number in AA:NN format where AA is the AS number (2 bytes) and NN is a value specific to that autonomous system. You can specify up to eight community numbers to view information on those community groups.
- **local-AS** Enter the keywords `local-AS` to view all routes with the COMMUNITY attribute of NO_EXPORT_SUBCONFED. All routes with the NO_EXPORT_SUBCONFED (0xFFFFFF03) community attribute must not be advertised to external BGP peers.
- **no-advertise** Enter the keywords `no-advertise` to view all routes containing the well-known community attribute of NO_ADVERTISE. All routes with the NO_ADVERTISE (0xFFFFFF02) community attribute must not be advertised to other BGP peers.
- **no-export** Enter the keywords `no-export` to view all routes containing the well-known community attribute of NO_EXPORT. All routes with the NO_EXPORT (0xFFFFFF01) community attribute must not be advertised outside a BGP confederation boundary.

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

To view the total number of COMMUNITY attributes found, use the `show ip bgp ipv6 unicast summary` command. The text line above the route table states the number of COMMUNITY attributes found.
show ip bgp ipv6 unicast community-list

View routes that are affected by a specific community list.

**Syntax**

```
show ip bgp ipv6 unicast community-list community-list-name [exact-match]
```

**Parameters**

- `community-list-name` Enter the name of a configured IP community list.
- `exact-match` (OPTIONAL) Enter the keywords `exact-match` to display only for an exact match of the communities.

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

show ip bgp ipv6 unicast dampened-paths

View BGP routes that are dampened (non-active).

**Syntax**

```
show ip bgp ipv6 unicast dampened-paths
```

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

show ip bgp ipv6 unicast detail

Display BGP internal information for IPv6 Unicast address family.

**Syntax**

```
show ip bgp ipv6 unicast detail
```

**Defaults**

none

**Command Modes**

- EXEC
**show ip bgp ipv6 unicast extcommunity-list**

View information on all routes with Extended Community attributes.

**Syntax**

```
show ip bgp ipv6 unicast extcommunity-list [list name]
```

**Parameters**

- `list name`  
  Enter the extended community list name you wish to view.

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

To view the total number of COMMUNITY attributes found, use the `show ip bgp ipv6 unicast summary` command. The text line above the route table states the number of COMMUNITY attributes found.

The `show ip bgp ipv6 unicast community` command without any parameters lists BGP routes with at least one BGP community attribute and the output is the same as for the `show ip bgp ipv6 unicast` command output.

**show ip bgp ipv6 unicast filter-list**

View the routes that match the filter lists.

**Syntax**

```
show ip bgp ipv6 unicast filter-list as-path-name
```

**Parameters**

- `as-path-name`  
  Enter the name of an AS-PATH.

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

- Full-Switch
show ip bgp ipv6 unicast flap-statistics

View flap statistics on BGP routes.

Syntax

show ip bgp ipv6 unicast flap-statistics [ipv6-address prefix-length] [filter-list as-path-name] [regexp regular-expression]

Parameters

- **ipv6-address prefix-length**: Enter the IPv6 address in the x:x:x:x format then the prefix length in the /x format. The range is from /0 to /128.
  
  **NOTE**: The :: notation specifies successive hexadecimal fields of zeros.

- **filter-list as-path-name**: (OPTIONAL) Enter the keywords filter-list then the name of a configured AS-PATH ACL.

- **regexp regular-expression**: Enter a regular expression then use one or a combination of the following characters to match:
  
  - . = (period) any single character (including a white space).
  - * = (asterisk) the sequences in a pattern (0 or more sequences).
  - + = (plus) the sequences in a pattern (1 or more sequences).
  - ? = (question mark) sequences in a pattern (either 0 or 1 sequences).

  **NOTE**: You must enter an escape sequence (CTRL+v) prior to entering the ? regular expression.

  - [ ] = (brackets) a range of single-character patterns.
  - ^ = (caret) the beginning of the input string. If the caret is used at the beginning of a sequence or range, it matches on everything BUT the characters specified.
  - $ = (dollar sign) the end of the output string.

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

- Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>

<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>
show ip bgp ipv6 unicast inconsistent-as

View routes with inconsistent originating autonomous system (AS) numbers; that is, prefixes that are announced from the same neighbor AS but with a different AS-Path.

Syntax
show ip bgp ipv6 unicast inconsistent-as

Command Modes
- EXEC
- EXEC Privilege

Supported Modes
Full-Switch

Command History
Version Description
9.9(0.0) Introduced on the FN IOM.
9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

show ip bgp ipv6 unicast neighbors

Displays information on IPv6 unicast routes exchanged by BGP neighbors.

Syntax
show ip bgp ipv6 unicast neighbors [ipv4-neighbor-addr | ipv6-neighbor-addr] [advertised-routes | dampened-routes | detail | flap-statistics | routes | received-routes [network [network-mask]] | denied-routes [network [network-mask]]]

Parameters
ipv6 unicast Enter the keywords ipv6 unicast to view information only related to IPv6 unicast routes.
ipv4-neighbor-addr | ipv6-neighbor-addr (OPTIONAL) Enter the IP address of the neighbor to view only BGP route information exchanged with that neighbor.
advertised-routes (OPTIONAL) Enter the keywords advertised-routes to view only the routes the neighbor sent.
dampened-routes (OPTIONAL) Enter the keywords dampened-routes to view information on dampened routes from the BGP neighbor.
detail (OPTIONAL) Enter the keyword detail to view neighbor-specific internal information for the IPv4 Unicast address family.
flap-statistics (OPTIONAL) Enter the keywords flap-statistics to view flap statistics on the neighbor’s routes.
routes (OPTIONAL) Enter the keyword routes to view only the neighbor’s feasible routes.
received-routes [network [network-mask]] (OPTIONAL) Enter the keywords received-routes then either the network address (in dotted decimal format) or the network mask (in slash prefix format) to view all information received from neighbors.
NOTE: You must configure the `neighbor soft-reconfiguration inbound` command prior to viewing all the information received from the neighbors.

`denied-routes [network [network-mask]]` (OPTIONAL) Enter the keywords `denied-routes` then either the network address (in dotted decimal format) or the network mask (in slash prefix format) to view all information on routes denied using neighbor inbound filters.

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

The following describes the `show ip bgp ipv6 unicast neighbors` command shown in the Example below.

**Lines Beginning With**

**Description**

- **BGP neighbor**
  Displays the BGP neighbor address and its AS number. The last phrase in the line indicates whether the link between the BGP router and its neighbor is an external or internal one. If they are located in the same AS, then the link is internal; otherwise, the link is external.

- **BGP version**
  Displays the BGP version (always version 4) and the remote router ID.

- **BGP state**
  Displays the neighbor’s BGP state and the amount of time in hours:minutes:seconds it has been in that state.

- **Last read**
  This line displays the following information:
  - last read is the time (hours:minutes:seconds) the router reads a message from its neighbor
  - hold time is the number of seconds configured between messages from its neighbor
  - keepalive interval is the number of seconds between keepalive messages to help ensure that the TCP session is still alive

- **Received messages**
  This line displays the number of BGP messages received, the number of notifications (error messages), and the number of messages waiting in a queue for processing.

- **Sent messages**
  The line displays the number of BGP messages sent, the number of notifications (error messages), and the number of messages waiting in a queue for processing.

- **Received updates**
  This line displays the number of BGP updates received and sent.

- **Soft reconfiguration**
  This line indicates that soft reconfiguration inbound is configured.

- **Minimum time**
  Displays the minimum time, in seconds, between advertisements.

- **(List of inbound and outbound policies)**
  Displays the policy commands configured and the names of the Route map, AS-PATH ACL, or Prefix list configured for the policy.

- **For address family**
  Displays IPv6 Unicast as the address family.
<table>
<thead>
<tr>
<th>Lines Beginning With</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>BGP table version</td>
<td>Displays which version of the primary BGP routing table the router and the neighbor are using.</td>
</tr>
<tr>
<td>Prefixes accepted</td>
<td>Displays the number of network prefixes accepted by the router and the amount of memory used to process those prefixes.</td>
</tr>
<tr>
<td>Prefixes advertised</td>
<td>Displays the number of network prefixes advertised, the number rejected, and the number withdrawn from the BGP routing table.</td>
</tr>
<tr>
<td>Connections established</td>
<td>Displays the number of TCP connections established and dropped between the two peers to exchange BGP information.</td>
</tr>
<tr>
<td>Last reset</td>
<td>Displays the amount of time since the peering session was last reset. Also states if the peer resets the peering session. If the peering session was never reset, the word “never” is displayed.</td>
</tr>
<tr>
<td>Local host:</td>
<td>Displays the peering address of the local router and the TCP port number.</td>
</tr>
<tr>
<td>Foreign host:</td>
<td>Displays the peering address of the neighbor and the TCP port number.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell#show ip bgp ipv6 unicast neighbors
BGP neighbor is 5ffe:10::3, remote AS 1, external link
BGP version 4, remote router ID 5.5.5.3
BGP state ESTABLISHED, in this state for 00:00:32
Last read 00:00:32, last write 00:00:32
Hold time is 180, keepalive interval is 60 seconds
Received 1404 messages, 0 in queue
  3 opens, 1 notifications, 1394 updates
  6 keepalives, 0 route refresh requests
Sent 48 messages, 0 in queue
  3 opens, 2 notifications, 0 updates
  43 keepalives, 0 route refresh requests
Minimum time between advertisement runs is 30 seconds
Minimum time before advertisements start is 0 seconds
Capabilities received from neighbor for IPv6 Unicast :
  MULTIPROTO_EXT(1)
  ROUTE_REFRESH(2)
  CISCO_ROUTE_REFRESH(128)
Capabilities advertised to neighbor for IPv6 Unicast :
  MULTIPROTO_EXT(1)
  ROUTE_REFRESH(2)
  CISCO_ROUTE_REFRESH(128)
For address family: IPv6 Unicast
BGP table version 12, neighbor version 12
2 accepted prefixes consume 32 bytes
Prefixes accepted 1 (consume 4 bytes), withdrawn 0 by peer
Prefixes advertised 0, rejected 0, withdrawn 0 from peer
Connections established 3; dropped 2
Last reset 00:00:39, due to Closed by neighbor
Notification History
  'OPEN error/Bad AS' Sent : 0 Recv: 1
Local host: 5ffe:10::4, Local port: 179
Foreign host: 5ffe:10::3, Foreign port: 35470
Notification History
  'Connection Reset' Sent : 1 Recv: 0
```
show ip bgp ipv6 unicast peer-group

Allows you to view information on the BGP peers in a peer group.

Syntax

show ip bgp ipv6 unicast peer-group [peer-group-name [summary]]

Parameters

peer-group-name  (OPTIONAL) Enter the name of a peer group to view information about that peer group only.
detail  (OPTIONAL) Enter the keyword detail to view peer-group-specific information for the IPv6 address family.
summary  (OPTIONAL) Enter the keyword summary to view status information of the peers in that peer group. The output is the same as that found in the show ip bgp ipv6 unicast summary command.

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

Full-Switch

Command History

Version 9.9(0.0)  Introduced on the FN IOM.
**show ip bgp ipv6 unicast summary**

Allows you to view the status of all BGP connections.

**Syntax**

```plaintext
show ip bgp ipv6 unicast summary
```

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

Full-Switch

**Command History**

Dell#
```

**show ip bgp paths**

View all the BGP path attributes in the BGP database.

**Syntax**

```
show ip bgp paths [regexp regular-expression]
```

**Parameters**

- `regexp regular-expression`  
  Enter a regular expression then use one or a combination of the following characters to match:

  - `.` (period) any single character (including a white space).
  - `*` (asterisk) the sequences in a pattern (0 or more sequences).
  - `+` (plus) the sequences in a pattern (1 or more sequences).
  - `?` (question mark) sequences in a pattern (either 0 or 1 sequences).

  ! **NOTE:** You must enter an escape sequence (CTRL+v) prior to entering the ? regular expression.

  - `[ ]` (brackets) a range of single-character patterns.

**show ip bgp regexp**

Allows you to view the subset of BGP routing table matching the regular expressions specified.

**Syntax**

show ip bgp regexp regular-expression [character]

**Parameters**

- **regular-expression**
- **[character]**

Enter a regular expression then use one or a combination of the following characters to match:

- . = (period) any single character (including a white space).
- * = (asterisk) the sequences in a pattern (0 or more sequences).
- + = (plus) the sequences in a pattern (1 or more sequences).
- ? = (question mark) sequences in a pattern (either 0 or 1 sequences).

⚠️ **NOTE:** You must enter an escape sequence (CTRL+v) prior to entering the ? regular expression.

- [ ] = (brackets) a range of single-character patterns.
- ^ = (caret) the beginning of the input string. If the caret is used at the beginning of a sequence or range, it matches on everything BUT the characters specified.
- $ = (dollar sign) the end of the output string.

</table>
**timers bgp**

Allows you to adjust the BGP network timers for all neighbors.

**Syntax**

```plaintext
timers bgp keepalive holdtimer
To return to the default values, use the no timers bgp command.
```

**Parameters**

- **keepalive**
  - Enter the time interval (in seconds) between which the system sends keepalive messages. The range is from 1 to 65535. The default is **60 seconds**.

- **holdtimer**
  - Enter the time interval (in seconds) that the system waits since the last keepalive message before declaring a BGP peer dead. The range is from 3 to 65535. The default is **180 seconds**.

**Defaults**

- keepalive = **60 seconds**
- holdtimer = **180 seconds**

**IPv6 MBGP Commands**

Multiprotocol BGP (MBGP) is an enhanced BGP that enables multicast routing policy throughout the Internet and connecting multicast topologies between BGP and autonomous systems (AS). The Dell Networking MBGP is implemented as per IETF RFC 1858.

**address family**

This command changes the context to subsequent address family identifier (SAFI).

**Syntax**

```plaintext
address family ipv6 unicast
To remove SAFI context, use the no address family ipv6 unicast command.
```

**Parameters**

- **ipv6**
  - Enter the keyword ipv6 to specify the address family as IPv6.

- **unicast**
  - Enter the keyword unicast to specify multicast as SAFI.

**Defaults**

- IPv6 Unicast

**Command Modes**

- ROUTER BGPV6-ADDRESS FAMILY
aggregate-address

Summarize a range of prefixes to minimize the number of entries in the routing table.

Syntax

aggregate-address ipv6-address prefix-length [advertise-map map-name] [as-set] [attribute-map map-name] [summary-only] [suppress-map map-name]

Parameters

ipv6-address prefix-length
Enter the IPv6 address in the x:x:x:x::x format then the prefix length in the /x format. The range is from /0 to /128.

NOTE: The :: notation specifies successive hexadecimal fields of zeros.

advertise-map map-name
(Optional) Enter the keywords advertise-map then the name of a configured route map to set filters for advertising an aggregate route.

as-set
(Optional) Enter the keywords as-set to generate path attribute information and include it in the aggregate. AS_SET includes AS_PATH and community information from the routes included in the aggregated route.

attribute-map map-name
(Optional) Enter the keywords attribute-map then the name of a configured route map to modify attributes of the aggregate, excluding AS_PATH and NEXT_HOP attributes.

summary-only
(Optional) Enter the keywords summary-only to advertise only the aggregate address. Specific routes are not advertised.

suppress-map map-name
(Optional) Enter the keywords suppress-map then the name of a configured route map to identify which more-specific routes in the aggregate are suppressed.

Defaults

Not configured.

Command Modes

ROUTER-BGPV6-ADDRESS FAMILY

Supported Modes

Full-Switch

Command History

Version Description

9.9(0.0) Introduced on the FN IOM.

9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

At least one of the routes included in the aggregate address must be in the BGP routing table for the configured aggregate to become active.
Do not add the `as-set` parameter to the aggregate. If routes within the aggregate are constantly changing, the aggregate flaps to keep track of the changes in the AS_PATH.

In route maps used in the suppress-map parameter, routes meeting the `deny` clause are not suppress; in other words, they are allowed. The opposite is true: routes meeting the `permit` clause are suppressed.

If the route is injected using the `network` command, that route stills appear in the routing table if the `summary-only` parameter is configured in the `aggregate-address` command.

The `summary-only` parameter suppresses all advertisements. If you want to suppress advertisements to only specific neighbors, use the `neighbor distribute-list` command.

### bgp dampening

Enable MBGP route dampening.

**Syntax**

```
bgp dampening [half-life time] [route-map map-name]
```

To disable route dampening, use the `no bgp dampening [half-life time] [route-map map-name]` command.

**Parameters**

- `half-life time` (OPTIONAL) Enter the number of minutes after which the Penalty is decreased. After the router assigns a Penalty of 1024 to a route, the Penalty is decreased by half, after the half-life period expires. The range is from 1 to 45. The default is **15 minutes**.

- `route-map map-name` (OPTIONAL) Enter the keywords `route-map` then the name of a configured route map. Only match commands in the configured route map are supported.

**Defaults**

Disabled.

**Command Modes**

- `ROUTER BGPV6-ADDRESS FAMILY`

**Supported Modes**

- Full-Switch

### clear ip bgp ipv6 unicast

Reset MBGP sessions.

**Syntax**

```
clear ip bgp ipv6 unicast *  ipv6-address prefix-length [dampening | flap-statistics] peer-group
```

**Parameters**

- `*` Enter the character `*` to clear all peers.

- `ipv6-address prefix-length` Enter the IPv6 address in the `x:x:xx:xx:x` format then the prefix length in the `/x` format. The range is from `/0` to `/128`. 
### clear ip bgp dampening

Clear information on route dampening.

**Syntax**

```
clear ip bgp dampening ipv6 unicast [network network-mask]
```

**Parameters**

- `network` (OPTIONAL) Enter the IPv6 network address in `x:x:x:x::x` format.
- `network-mask` If you enter the network address, next enter the network mask, from 0 to 128.

### clear ip bgp ipv6 unicast flap-statistics

Clear BGP flap statistics, which includes the number of flaps and the time of the last flap.

**Syntax**

```
clear ip bgp ipv6 unicast flap-statistics [network | filter-list list | regexp regexpr
```

**Parameters**

- `network` (OPTIONAL) Enter the IPv6 network address in `x:x:x:x::x` format to clear flap statistics.
- `filter-list list` (OPTIONAL) Enter the keywords `filter-list` then the name of a configured AS-PATH list (maximum 16 characters).
- `regexp regexpr` (OPTIONAL) Enter the keyword `regexp` then regular expressions. Use one or a combination of the following:
  - (period) matches on any single character, including white space.
• * (asterisk) matches on sequences in a pattern (zero or more sequences).
• + (plus sign) matches on sequences in a pattern (one or more sequences).
• ? (question mark) matches sequences in a pattern (0 or 1 sequences).
• [ ] (brackets) matches a range of single-character patterns.
• ^ (caret) matches the beginning of the input string. (If the caret is used at the beginning of a sequence or range, it matches on everything BUT the characters specified.)
• $ (dollar sign) matches the end of the output string.

Version Description
9.9(0.0) Introduced on the FN IOM.
9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

debbug ip bgp ipv6 unicast dampening
View information on routes being dampened.
Syntax
debbug ip bgp ipv6 unicast dampening
to disable debugging, use the no debbug ip bgp ipv6 unicast dampening command.
Parameters
dampening Enter the keyword dampening to clear route flap dampening information.

Command Modes
EXEC Privilege
Supported Modes
Full-Switch

Command History
Version Description
9.9(0.0) Introduced on the FN IOM.
9.2(0.0) Introduced on the S4820T.

debbug ip bgp ipv6 unicast peer-group updates
View information about BGP peer-group updates.
Syntax
debbug ip bgp ipv6 unicast peer-group peer-group-name updates [in | out]
to disable debugging, use the no debbug ip bgp ipv6 unicast peer-group peer-group-name updates [in | out] command.
Parameters
peer-group peer-group-name Enter the keywords peer-group then the name of the peer-group.
**debug ip bgp ipv6 unicast updates**

View information about BGP updates.

**Syntax**
```
dump ip bgp ipv6 unicast ipv6-address prefix-length updates [in | out]
```

**Parameters**
- `ipv6-address prefix-length`: Enter the IPv6 address in the x:x:x:x format then the prefix length in the /x format. The range is from /0 to /128.

  | NOTE: The :: notation specifies successive hexadecimal fields of zeros.

- `updates`: Enter the keyword updates to view BGP update information.
- `in`: (OPTIONAL) Enter the keyword in to view only BGP updates received from neighbors.
- `out`: (OPTIONAL) Enter the keyword out to view only BGP updates sent to neighbors.

**Defaults**
Disabled.

**Command Modes**
EXEC Privilege

**Supported Modes**
Full–Switch

</tr>
</tbody>
</table>

**distance bgp**

Define an administrative distance for routes.

**Syntax**
```
distance bgp external-distance internal-distance local-distance
```

To return to default values, use the `no distance bgp` command.

**Parameters**
- `external-distance`: Enter a number to assign to routes learned from a neighbor external to the AS. The range is from 1 to 255. The default is 20.
internal-distance Enter a number to assign to routes learned from a router within the AS. The range is from 1 to 255. The default is 200.

local-distance Enter a number to assign to routes learned from networks listed in the network command. The range is from 1 to 255. The default is 200.

Defaults
- external-distance = 20
- internal-distance = 200
- local-distance = 200

Command Modes
ROUTER BGPV6-ADDRESS FAMILY

Supported Modes
Full–Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

⚠️ **CAUTION:** Dell Networking recommends that you do not change the administrative distance of internal routes. Changing the administrative distances may cause routing table inconsistencies.

The higher the administrative distance assigned to a route means that your confidence in that route is low. Routes assigned an administrative distance of 255 are not installed in the routing table.

Routes from confederations are treated as internal BGP routes.

neighbor activate

Allows you to enable a specified neighbor/peer group for the current address and subsequent address family identifier (AFI/SAFI).

Syntax

```
neighbor [ipv6-address | peer-group-name] activate
```

To disable, use the `no neighbor [ipv6-address | peer-group-name] activate` command.

Parameters

- **ipv6-address**
  - Enter the IPv6 address in the x:x:x:x format.
  - **NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

- **peer-group-name**
  - Identify a peer group by name.

- **activate**
  - Enter the keyword activate to enable the identified neighbor or peer group in the new AFI/SAFI.

Defaults

Disabled.

Command Modes

ROUTER BGPV6-ADDRESS FAMILY

Supported Modes

<td>Introduced on the FN IOM.</td>
</tr>
</tbody>
</table>
Version | Description
---|---
9.2(0.0) | Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
By default, when a neighbor/peer group configuration is created in the Router BGP context, it is enabled for the IPv6/Unicast AFI/Safi. By using `activate` in the new context, the neighbor/peer group is enabled for AFI/Safi.

Related Command
`address family` — changes the context to SAFI.

**neighbor advertisement-interval**

Set the advertisement interval between BGP neighbors or within a BGP peer group.

**Syntax**
```
neighbor {ipv6-address | peer-group-name} advertisement-interval seconds
```
To return to the default value, use the `no neighbor {ipv6-address | peer-group-name} advertisement-interval` command.

**Parameters**
- `ipv6-address`: Enter the IPv6 address in the `x:x:x:x::x` format.
  - **NOTE**: The `::` notation specifies successive hexadecimal fields of zeros.
- `peer-group-name`: Enter the name of the peer group to set the advertisement interval for all routers in the peer group.
- `seconds`: Enter a number as the time interval, in seconds, between BGP advertisements. The range is from 0 to 600 seconds. The default is 5 seconds for internal BGP peers and 30 seconds for external BGP peers.

**Defaults**
- `seconds = 5 seconds` (internal peers)
- `seconds = 30 seconds` (external peers)

</table>

**neighbor default-originate**

Inject the default route to a BGP peer or neighbor.

**Syntax**
```
neighbor {ipv6-address | peer-group-name} default-originate [route-map map-name]
```
To remove a default route, use the `no neighbor {ipv6-address | peer-group-name} default-originate` command.
Parameters

ipv6-address
   Enter the IPv6 address in the x:x:x:x format.

   | NOTE: The :: notation specifies successive hexadecimal fields of zeros.

peer-group-name
   Enter the name of the peer group.

route-map map-name
   (OPTIONAL) Enter the keywords route-map then the name of a configured route map.

Defaults
   Not configured.

neighbor distribute-list

Distribute BGP information using an established prefix list.

Syntax

neighbor {ipv6-address | peer-group-name} distribute-list prefix-list-name {in | out}

To delete a neighbor distribution list, use the no neighbor {ipv6-address | peer-group-name} distribute-list prefix-list-name {in | out} command.

Parameters

ipv6-address
   Enter the IPv6 address in the x:x:x:x format.

   | NOTE: The :: notation specifies successive hexadecimal fields of zeros.

peer-group-name
   Enter the name of the peer group.

prefix-list-name
   Enter the name of an established prefix list. If the prefix list is not configured, the default is permit (to allow all routes).

in
   Enter the keyword in to distribute only inbound traffic.

out
   Enter the keyword out to distribute only outbound traffic.

Defaults
   Not configured.

Command Modes

</tr>
</tbody>
</table>
**neighbor filter-list**

Configure a BGP filter based on the AS-PATH attribute.

**Syntax**

```plaintext
neighbor [ipv6-address | peer-group-name] filter-list aspath access-list-name [in | out]
```

To delete a BGP filter, use the `no neighbor [ipv6-address | peer-group-name] filter-list aspath access-list-name [in | out]` command.

**Parameters**

- **ipv6-address**: Enter the IPv6 address in the x:x:x:x::x format.
  - **NOTE**: The :: notation specifies successive hexadecimal fields of zeros.
- **peer-group-name**: Enter the name of the peer group to apply the filter to all routers in the peer group.
- **access-list-name**: Enter the name of an established AS-PATH access list. If the AS-PATH access list is not configured, the default is `permit` (to allow routes).
- **in**: Enter the keyword `in` to filter inbound BGP routes.
- **out**: Enter the keyword `out` to filter outbound BGP routes.

**Defaults**

Not configured.

**Command Modes**

- ROUTER BGPV6-ADDRESS FAMILY

**Supported Modes**

Full-Switch

**Command History**

</tr>
</tbody>
</table>

**neighbor maximum-prefix**

Control the number of network prefixes received.

**Syntax**

```plaintext
neighbor {ipv6-address | peer-group-name} maximum-prefix maximum [threshold] [warning-only]
```

To return to the default values, use the `no neighbor {ipv6-address | peer-group-name} maximum-prefix maximum [threshold] [warning-only]` command.

**Parameters**

- **ipv6-address**: Enter the IPv6 address in the x:x:x:x::x format.
  - **NOTE**: The :: notation specifies successive hexadecimal fields of zeros.
**peer-group-name**

Enter the name of the peer group.

**maximum**

Enter a number as the maximum number of prefixes allowed for this BGP router. The range is from 1 to 4294967295.

**threshold**

(Optional) Enter a number to be used as a percentage of the maximum value. When the number of prefixes reaches this percentage of the maximum value, the software sends a message. The range is from 1 to 100 percent. The default is 75.

**warning-only**

(Optional) Enter the keyword `warning-only` to set the router to send a log message when the maximum value is reached. If this parameter is not set, the router stops peering when the maximum number of prefixes is reached.

**Defaults**

threshold = 75

</table>

### neighbor next-hop-self

Allows you to configure the router as the next hop for a BGP neighbor.

**Syntax**

```plaintext
neighbor {ipv6-address | peer-group-name} next-hop-self
```

To return to the default setting, use the `no neighbor {ipv6-address | peer-group-name} next-hop-self` command.

**Parameters**

- **ipv6-address**
  
  Enter the IPv6 address in the `x:x:x:x::x` format.

  **NOTE:** The `::` notation specifies successive hexadecimal fields of zeros.

- **peer-group-name**
  
  (Optional) Enter the name of the peer group.

**Defaults**

Disabled.

**Command Modes**

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

If you configure the `set ipv6 next-hop` command in `ROUTE-MAP` mode, its configuration takes precedence over the `neighbor next-hop-self` command.
**neighbor remove-private-as**

Remove private AS numbers from the AS-PATH of outgoing updates.

**Syntax**
neighbor {ipv6-address | peer-group-name} remove-private-as
To return to the default, use the no neighbor {ipv6-address | peer-group-name} remove-private-as command.

**Parameters**
- **ipv6-address**: Enter the IPv6 address in the x:x:x:x::x format.
  
  **NOTE**: The :: notation specifies successive hexadecimal fields of zeros.

- **peer-group-name**: Enter the name of the peer group to remove the private AS numbers.

**Defaults**
Disabled (that is, the private AS number are not removed).

</tbody>
</table>

---

**neighbor route-map**

Apply an established route map to either incoming or outbound routes of a BGP neighbor or peer group.

**Syntax**
neighbor {ipv6-address | peer-group-name} route-map map-name {in | out}
To remove the route map, use the no neighbor {ipv6-address | peer-group-name} route-map map-name {in | out} command.

**Parameters**
- **ipv6-address**: Enter the IPv6 address in the x:x:x:x::x format.
  
  **NOTE**: The :: notation specifies successive hexadecimal fields of zeros.

- **peer-group-name**: Enter the name of the peer group.

- **map-name**: Enter the name of an established route map. If the Route map is not configured, the default is deny (to drop all routes).

- **in**: Enter the keyword in to filter inbound routes.

- **out**: Enter the keyword out to filter outbound routes.

**Defaults**
Not configured.

**Command Modes**
ROUTER BGPV6-ADDRESS FAMILY

**Supported Modes**
Full-Switch
neighbor route-reflector-client

Configure a neighbor as a member of a route reflector cluster.

Syntax

```
neighbor {ipv6-address | peer-group-name} route-reflector-client
```

To indicate that the neighbor is not a route reflector client or to delete a route reflector configuration, use the `no neighbor {ipv6-address | peer-group-name} route-reflector-client` command.

Parameters

- **ipv6-address**: Enter the IPv6 address in the x:x::x format.
  - **NOTE**: The :: notation specifies successive hexadecimal fields of zeros.

- **peer-group-name**: Enter the name of the peer group. All routers in the peer group receive routes from a route reflector.

Defaults

Not configured.

Command Modes

- ROUTER BGPV6-ADDRESS FAMILY

Supported Modes

- Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

The first time you enter this command it configures the neighbor as a route reflector and members of the route-reflector cluster. Internal BGP (IBGP) speakers do not need to be fully meshed if you configure a route reflector.

When all clients of a route reflector are disabled, the neighbor is no longer a route reflector.

network

Specify the networks for the BGP process and enter them in the BGP routing table.

Syntax

```
network ipv6-address [route-map map-name]
```
To remove a network, use the `no network ipv6-address [route-map map-name]` command.

### Parameters

- **ipv6-address**
  - Enter the IPv6 address in the x:x::x format.
  - **NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

- **route-map map-name**
  - (OPTIONAL) Enter the keywords `route-map` then the name of an established route map.
  - If the route map is not configured, the default is `deny` (to drop all routes).

### Defaults

- Not configured.

### Command Modes

</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

### Usage Information

The software resolves the network address configured by the `network` command with the routes in the main routing table to ensure that the networks are reachable using non-BGP routes and non-default routes.

### Related Commands

- `redistribute` — redistributes routes into BGP.

### redistribute

Redistribute routes into BGP.

**Syntax**

```
redistribute {connected | static} [route-map map-name]
```

To disable redistribution, use the `no redistribution {connected | static}` command.

**Parameters**

- **connected**
  - Enter the keyword `connected` to redistribute routes from physically connected interfaces.

- **static**
  - Enter the keyword `static` to redistribute manually configured routes. These routes are treated as incomplete routes.

- **route-map map-name**
  - (OPTIONAL) Enter the keywords `route-map` then the name of an established route map.
  - If the route map is not configured, the default is `deny` (to drop all routes).

### Defaults

- Not configured.

### Command Modes

- **ROUTER BGPV6-ADDRESS FAMILY**

### Supported Modes

- Full-Switch

### Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
</tbody>
</table>
**Version**      **Description**  
9.2(0.0)         Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**  
If you do not configure the `default-metric` command, in addition to the `redistribute` command, or there is no route map to set the metric, the metric for redistributed static and connected is “0”.

To redistribute the default route (0:0/0), configure the `neighbor default-originate` command.

**Related Commands**  
- `neighbor default-originate` — injects the default route.

---

### show ip bgp ipv6 unicast

View the current BGP information.

**Syntax**

```plaintext
show ip bgp ipv6 unicast [network [network-mask] [longer-prefixes]]
```

**Parameters**

- `network`  
  (OPTIONAL) Enter the network address (in dotted decimal format) of the BGP network to view information only on that network.

- `network-mask`  
  (OPTIONAL) Enter the keywords `network mask` (in slash prefix format) of the BGP network address.

- `longer-prefixes`  
  (OPTIONAL) Enter the keywords `longer-prefixes` to view all routes with a common prefix.

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

- Full-Switch

**Command History**

**Version**      **Description**  
9.9(0.0)         Introduced on the FN IOM.
9.2(0.0)         Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**  
When you enable the `bgp non-deterministic-med` command, the `show ip bgp` command output for a BGP route does not list the INACTIVE reason.

---

### show ip bgp ipv6 unicast cluster-list

View BGP neighbors in a specific cluster.

**Syntax**

```plaintext
show ip bgp ipv6 unicast cluster-list [cluster-id]
```

**Parameters**

- `cluster-id`  
  (OPTIONAL) Enter the cluster id in dotted decimal format.

**Command Modes**

- EXEC
- EXEC Privilege
show ip bgp ipv6 unicast community

View information on all routes with community attributes or view specific BGP community groups.

**Syntax**

```
show ip bgp ipv6 unicast community [community-number] [local-as] [no-export] [no-advertise]
```

**Parameters**

- **community-number**: Enter the community number in AA:NN format where AA is the AS number (2 bytes) and NN is a value specific to that autonomous system. You can specify up to eight community numbers to view information on those community groups.

- **local-AS**: Enter the keywords local-AS to view all routes with the COMMUNITY attribute of NO_EXPORT_SUBCONFED. All routes with the NO_EXPORT_SUBCONFED (0xFFFFFF03) community attribute must not be advertised to external BGP peers.

- **no-advertise**: Enter the keywords no-advertise to view all routes containing the well-known community attribute of NO_ADVERTISE. All routes with the NO_ADVERTISE (0xFFFFFF02) community attribute must not be advertised to other BGP peers.

- **no-export**: Enter the keywords no-export to view all routes containing the well-known community attribute of NO_EXPORT. All routes with the NO_EXPORT (0xFFFFFF01) community attribute must not be advertised outside a BGP confederation boundary.

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

- Full-Switch

<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

To view the total number of COMMUNITY attributes found, use the `show ip bgp ipv6 unicast summary` command. The text line above the route table states the number of COMMUNITY attributes found.

show ip bgp ipv6 unicast community-list

View routes that are affected by a specific community list.

**Syntax**

```
show ip bgp ipv6 unicast community-list community-list-name
```

**Supported Modes**

- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>
**Parameters**

- **community-list-name**: Enter the name of a configured IP community list.

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

Full-Switch

**Command History**

<table>

</tr>
</tbody>
</table>

---

**show ip bgp ipv6 unicast dampened-paths**

View BGP routes that are dampened (non-active).

**Syntax**

```
show ip bgp ipv6 unicast dampened-paths
```

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>

<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Example**

```
R2_Training#show ip bgp ipv6 unicast detail
```
show ip bgp ipv6 unicast filter-list

View the routes that match the filter lists.

Syntax
show ip bgp ipv6 unicast filter-list as-path-name

Parameters
as-path-name
   Enter the name of an AS-PATH.

Command Modes
  • EXEC
  • EXEC Privilege

Supported Modes
  Full-Switch

Command History
Version    Description
9.9(0.0)   Introduced on the FN IOM.
9.2(0.0)   Introduced on the MXL 10/40GbE Switch IO Module.

show ip bgp ipv6 unicast flap-statistics

View flap statistics on BGP routes.

Syntax
show ip bgp ipv6 unicast flap-statistics [ipv6-address prefix-length] [filter-list as-path-name] [regexp regular-expression]

Parameters
ipv6-address prefix-length
   Enter the IPv6 address in the x::x::x format then the prefix length in the /x format. The range is from /0 to /128.

   NOTE: The :: notation specifies successive hexadecimal fields of zeros.

filter-list as-path-name
   (OPTIONAL) Enter the keywords filter-list then the name of a configured AS-PATH ACL.

regexp regular-expression
   Enter a regular expression then use one or a combination of the following characters to match:
show ip bgp ipv6 unicast inconsistent-as

View routes with inconsistent originating autonomous system (AS) numbers; that is, prefixes that are announced from the same neighbor AS but with a different AS-Path.

Syntax

show ip bgp ipv6 unicast inconsistent-as

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

Full-Switch

Command History

</tr>
</tbody>
</table>

Dell(conf)＃
show ip bgp ipv6 unicast neighbors

Allows you to view the information exchanged by BGP neighbors.

Syntax

```
show ip bgp ipv6 unicast neighbors [ipv6-address prefix-length [advertised-routes | dampened-routes | detail | flap-statistics | routes]]
```

Parameters

- `ipv6-address prefix-length` (OPTIONAL) Enter the IPv6 address in the x:x:x:x::x format then the prefix length in the /x format. The range is from /0 to /128.

  **NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

- `advertised-routes` (OPTIONAL) Enter the keywords `advertised-routes` to view only the routes the neighbor sent.

- `dampened-routes` (OPTIONAL) Enter the keywords `dampened-routes` to view information on dampened routes from the BGP neighbor.

- `flap-statistics` (OPTIONAL) Enter the keywords `flap-statistics` to view flap statistics on the neighbor’s routes.

- `detail` (OPTIONAL) Display detailed neighbor information.

- `routes` (OPTIONAL) Enter the keyword `routes` to view only the neighbor’s feasible routes.

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

Full-Switch

Command History

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

Usage Information

The following describes the `show ip bgp ipv6 unicast neighbors` command shown in the Example below.

<table>
<thead>
<tr>
<th>Lines Beginning With</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>BGP neighbor</td>
<td>Displays the BGP neighbor address and its AS number. The last phrase in the line indicates whether the link between the BGP router and its neighbor is an external or internal one. If they are located in the same AS, then the link is internal; otherwise, the link is external.</td>
</tr>
<tr>
<td>BGP version</td>
<td>Displays the BGP version (always version 4) and the remote router ID.</td>
</tr>
<tr>
<td>BGP state</td>
<td>Displays the neighbor’s BGP state and the amount of time in hours:minutes:seconds it has been in that state.</td>
</tr>
<tr>
<td>Last read</td>
<td>This line displays the following information:</td>
</tr>
</tbody>
</table>
### Lines Beginning With

<table>
<thead>
<tr>
<th><strong>Description</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>• last read is the time (hours:minutes:seconds) the router reads a message from its neighbor</td>
</tr>
<tr>
<td>• hold time is the number of seconds configured between messages from its neighbor</td>
</tr>
<tr>
<td>• keepalive interval is the number of seconds between keepalive messages to help ensure that the TCP session is still alive</td>
</tr>
</tbody>
</table>

| **Received messages** | This line displays the number of BGP messages received, the number of notifications (error messages), and the number of messages waiting in a queue for processing. |
| **Sent messages** | The line displays the number of BGP messages sent, the number of notifications (error messages), and the number of messages waiting in a queue for processing. |
| **Received updates** | This line displays the number of BGP updates received and sent. |
| **Minimum time** | Displays the minimum time, in seconds, between advertisements. |
| **(List of inbound and outbound policies)** | Displays the policy commands configured and the names of the Route map, AS-PATH ACL, or Prefix list configured for the policy. |
| **For address family:** | Displays IPv6 Unicast as the address family. |
| **BGP table version** | Displays which version of the primary BGP routing table the router and the neighbor are using. |
| **Accepted Prefixes** | Displays the number of network prefixes accepted by the router and the amount of memory used to process those prefixes. |
| **Prefixes advertised** | Displays the number of network prefixes advertised, the number rejected, and the number withdrawn from the BGP routing table. |
| **Connections established** | Displays the number of TCP connections established and dropped between the two peers to exchange BGP information. |
| **Last reset** | Displays the amount of time since the peering session was last reset. Also states if the peer resets the peering session. If the peering session was never reset, the word “never” is displayed. |
| **Local host:** | Displays the peering address of the local router and the TCP port number. |
| **Foreign host:** | Displays the peering address of the neighbor and the TCP port number. |

### Example

```
Dell#show ip bgp ipv6 unicast neighbors

BGP neighbor is 5ffe:10::3, remote AS 1, external link
  BGP version 4, remote router ID 5.5.5.3
  BGP state ESTABLISHED, in this state for 00:00:32
  Last read 00:00:32, last write 00:00:32
  Hold time is 180, keepalive interval is 60 seconds
  Received 1404 messages, 0 in queue
    3 opens, 1 notifications, 1394 updates
    6 keepalives, 0 route refresh requests
  Sent 48 messages, 0 in queue
    3 opens, 2 notifications, 0 updates
    43 keepalives, 0 route refresh requests
  Minimum time between advertisement runs is 30 seconds
  Minimum time before advertisements start is 0 seconds

  Capabilities received from neighbor for IPv6 Unicast :
    MULTIPROTO_EXT(1)
    ROUTE_REFRESH(2)
    CISCO_ROUTE_REFRESH(128)
```
Capabilities advertised to neighbor for IPv6 Unicast:
- MULTIPROTO_EXT(1)
- ROUTE_REFRESH(2)
- CISCO_ROUTE_REFRESH(128)

For address family: IPv6 Unicast
BGP table version 12, neighbor version 12
2 accepted prefixes consume 32 bytes

Prefixes accepted 1 (consume 4 bytes), withdrawn 0 by peer
Prefixes advertised 0, rejected 0, withdrawn 0 from peer
Connections established 3; dropped 2
Last reset 00:00:39, due to Closed by neighbor

Notification History
'OPEN error/Bad AS' Sent : 0 Recv: 1

Local host: 5ffe:10::4, Local port: 179
Foreign host: 5ffe:10::3, Foreign port: 35470

Notification History
'Connection Reset' Sent : 1 Recv: 0

BGP neighbor is 5ffe:11::3, remote AS 1, external link
BGP version 4, remote router ID 5.5.5.3
BGP state ESTABLISHED, in this state for 00:00:28
Last read 00:00:28, last write 00:00:28
Hold time is 180, keepalive interval is 60 seconds
Received 27 messages, 3 notifications, 0 in queue
Sent 0 messages, 0 notifications, 0 in queue
Received 8 updates, Sent 0 updates
Route refresh request: received 0, sent 0
Minimum time between advertisement runs is 30 seconds
Minimum time before advertisements start is 0 seconds

Capabilities received from neighbor for IPv6 Unicast:
- MULTIPROTO_EXT(1)
- ROUTE_REFRESH(2)
- CISCO_ROUTE_REFRESH(128)
Capabilities advertised to neighbor for IPv6 Unicast:
- MULTIPROTO_EXT(1)
- ROUTE_REFRESH(2)
- CISCO_ROUTE_REFRESH(128)

For address family: IPv6 Unicast
BGP table version 12, neighbor version 12
2 accepted prefixes consume 32 bytes
Prefix advertised 0, rejected 0, withdrawn 0
Connections established 3; dropped 2
Last reset 00:00:41, due to Closed by neighbor

Notification History
'OPEN error/Bad AS' Sent : 0 Recv: 1

Local host: 5ffe:11::4, Local port: 179
Parameters

**Parameters**

- **peer-group-name** (OPTIONAL) Enter the name of a peer group to view information about that peer group only.
- **summary** (OPTIONAL) Enter the keyword summary to view status information of the peers in that peer group. The output is the same as that found in the `show ip bgp ipv6 unicast summary` command.

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

- Full-Switch

**Usage Information**

The following describes the `show ip bgp ipv6 unicast summary` command shown in the Example below.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>BGP router identifier</td>
<td>Displays the local router ID and the AS number.</td>
</tr>
<tr>
<td>BGP table version</td>
<td>Displays the BGP table version and the main routing table version.</td>
</tr>
<tr>
<td>network entries</td>
<td>Displays the number of network entries, route paths, and the amount of memory used to process those entries.</td>
</tr>
<tr>
<td>BGP path attribute entries</td>
<td>Displays the number of BGP path attributes and the amount of memory used to process them.</td>
</tr>
<tr>
<td>Field</td>
<td>Description</td>
</tr>
<tr>
<td>-----------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td><strong>BGP AS-PATH entries</strong></td>
<td>Displays the number of BGP AS_PATH attributes processed and the amount of memory used to process them.</td>
</tr>
<tr>
<td><strong>BGP community entries</strong></td>
<td>Displays the number of BGP COMMUNITY attributes processed and the amount of memory used to process them. The <code>show ip bgp ipv6 unicast community</code> command provides more details on the COMMUNITY attributes.</td>
</tr>
<tr>
<td><strong>Dampening enabled</strong></td>
<td>Displayed only when dampening is enabled. Displays the number of paths designated as history, dampened, or penalized.</td>
</tr>
<tr>
<td><strong>Neighbor</strong></td>
<td>Displays the BGP neighbor address.</td>
</tr>
<tr>
<td><strong>AS</strong></td>
<td>Displays the AS number of the neighbor.</td>

Dell#
Internet small computer system interface (iSCSI) optimization enables quality-of-service (QoS) treatment for iSCSI storage traffic on an Aggregator.

**NOTE:** When iSCSI storage devices are detected on the server-ports, storm-control is disabled on those ports. When the iSCSI devices are off the ports, storm-control is enabled again.

Topics:
- advertise dcbbx-app-tlv
- iscsi aging time
- iscsi cos
- iscsi enable
- iscsi priority-bits
- iscsi profile-compellent
- iscsi target port
- show iscsi
- show iscsi sessions
- show iscsi sessions detailed
- show run iscsi

### advertise dcbbx-app-tlv

Configure DCBX to send iSCSI TLV advertisements.

**Syntax**

```plaintext
advertise dcbbx-app-tlv iscsi
```

To disable DCBX iSCSI TLV advertisements, use the `no advertise dcbbx-app-tlv iscsi` command.

**Defaults**

Disabled.

**Command Modes**

- PROTOCOL LLDP

**Supported Modes**

- Programmable-Mux (PMUX)
- Full-Switch

**Command History**

</tr>
</tbody>
</table>
Usage Information
You can configure iSCSI TLVs to send either globally or on a specified interface. The interface configuration takes priority over global configuration.

iscsi aging time

Set the aging time for iSCSI sessions.

Syntax
iscsi aging time time
To remove the iSCSI session aging time, use the no iscsi aging time command.

Parameters
- **time**
  Enter the aging time for the iSCSI session. The range is from 5 to 43,200 minutes.

Defaults
10 minutes

</tr>
</tbody>
</table>

iscsi cos

Set the QoS policy that is applied to the iSCSI flows.

Syntax
iscsi cos {enable | disable | dot1p vlan-priority-value [remark] | dscp dscp-value [remark]}
To disable the QoS policy, use the no iscsi cos dscp command.

Parameters
- **enable**
  Enter the keyword enable to allow the application of preferential QoS treatment to iSCSI traffic so that the iSCSI packets are scheduled in the switch with a dot1p priority 4 regardless of the VLAN priority tag in the packet. The default is: the iSCSI packets are handled with dotp1 priority 4 without remark.

- **disable**
  Enter the keyword disable to disable the application of preferential QoS treatment to iSCSI frames.

- **dot1p vlan-priority-value**
  Enter the dot1p value of the VLAN priority tag assigned to the incoming packets in an iSCSI session. The range is from 0 to 7. The default is the dot1p value in ingress iSCSI frames is not changed and is the same priority is used in iSCSI TLV advertisements if you did not enter the iscsi priority-bits command.

- **dscp dscp-value**
  Enter the dscp value of the DSCP tag that is applied to the iSCSI traffic. The range is 0 to 63. The default is 0.
dscp dscp-value

Enter the DSCP value assigned to the incoming packets in an iSCSI session. The valid range is from 0 to 63. The default is: the DSCP value in ingress packets is not changed.

remark

Marks the incoming iSCSI packets with the configured dot1p or DSCP value when they egress to the switch. The default is: the dot1p and DSCP values in egress packets are not changed.

Defaults

The default dot1p VLAN priority value is 4 without the remark option.

</tr>
</tbody>
</table>

Usage Information

When you enable the iSCSI feature using the iscsi enable command, flow control settings are set to rx on tx off on all interfaces.
**iscsi priority-bits**

Configure the iSCSI priority advertised for the iSCSI protocol in application priority TLVs.

**Syntax**

iscsi priority-bits priority-bitmap

To remove the configured iSCSI priority, use the no iscsi priority-bits command.

**Parameters**

- **priority-bitmap**

  Enter the priority-bitmap range. The range is from 1 to FF.

**Defaults**

0x10

</tr>
</tbody>
</table>
**iscsi target port**

Configure the iSCSI target ports and optionally, the IP addresses on which iSCSI communication is monitored.

**Syntax**

```
iscsi target port [tcp-port-2...tcp-port-16]ip-address [ip-address]
```

To remove the configured iSCSI target ports or IP addresses, use the `no iscsi target port` command.

**Parameters**

- **tcp-port-2...tcp-port-16**
  - Enter the tcp-port number of the iSCSI target ports. The `tcp-port-n` is the TCP port number or a list of TCP port numbers on which the iSCSI target listens to requests.
  - Separate port numbers with a comma. The default is `860, 3260`.

- **ip-address**
  - (Optional) Enter the ip-address that the iSCSI monitors. The ip-address specifies the IP address of the iSCSI target.

**Defaults**

- `860, 3260`

<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module</td>
</tr>
</tbody>
</table>

**Usage Information**

- You can configure up to 16 target TCP ports on the switch in one command or multiple commands.

- When you use the `no iscsi target port` command and the TCP port you wish to delete is one bound to a specific IP address, the IP address value must be included in the command.

**show iscsi**

Display the currently configured iSCSI settings.

**Syntax**

```
show iscsi
```

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

- All Modes

**Command History**

</tr>
<tr>
<td>8.3(17.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell# show iscsi sessions
Session 0:
Target: iqn.2001-05.com.equallogic:0-8a0906-0e70c2002-10a0018426a48c94-iom010
Initiator: iqn.1991-05.com.microsoft:win-x9l8v27yajg
ISID: 400001370000

Session 1:
Target: iqn.2001-05.com.equallogic:0-8a0906-0f60c2002-0360018428d48c94-iom011
Initiator: iqn.1991-05.com.microsoft:win-x9l8v27yajg
ISID: 400001370000.
```

**Related Commands**

- `show iscsi` — displays the currently configured iSCSI settings.
show iscsi sessions detailed

Displays detailed information on active iSCSI sessions on the switch.

Syntax

show iscsi sessions detailed [session isid]

Parameters

isid

Enter the session's iSCSI ID to display detailed information on specified iSCSI session.

Command Modes

• EXEC
• EXEC Privilege

Supported Modes

All Modes

Command History

Version Description
9.9(0.0) Introduced on the FN IOM.
9.4(0.0) Supported on the FN I/O Aggregator.
8.3.17.0 Supported on the M I/O Aggregator.

Example

Dell# show iscsi sessions detailed
Session 0 :
-----------------------------------------------
Up Time: 00:00:01:28 (DD:HH:MM:SS)
Time for aging out: 00:00:09:34 (DD:HH:MM:SS)

The Dell Networking OS supports the intermediate system to intermediate system (IS-IS) protocol for IPv4 and IPv6. IS-IS is an interior gateway protocol that uses a shortest-path-first algorithm. IS-IS facilitates the communication between open systems, supporting routers passing both IP and OSI traffic.

A router is considered an intermediate system. Networks are partitioned into manageable routing domains, called areas. Intermediate systems send, receive, and forward packets to other routers within their area (Level 1 and Level 1-2 devices). Only Level 1-2 and Level 2 devices communicate with other areas.

IS-IS protocol standards are listed in the Standard Compliance chapter in the Dell Networking OS Configuration Guide.

**NOTE:** The fundamental mechanisms of IS-IS are the same between IPv4 and IPv6. Where there are differences between the two versions, they are identified and clarified in this chapter. Except where identified, the information in this chapter applies to both protocol versions.

adjacency-check

Verify that the “protocols supported” field of the IS-IS neighbor contains matching values to this router.

Syntax
adjacency-check
To disable adjacency check, use the no adjacency-check command.

Defaults
Enabled.

Command Modes
• ROUTER ISIS (for IPv4)
• CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)

Supported Modes
Full-Switch

Command History
Version Description
9.9(0.0) Introduced on the FN IOM.
9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
To perform protocol-support consistency checks on hello packets, use this command. The adjacency-check is enabled by default.

advertise

Leak routes between levels (distribute IP prefixes between Level 1 and Level 2 and vice versa).

Syntax
advertise {level1-into-level2 | level2-into-level1} prefix-list-name
To return to the default, use the no advertise {level1-into-level2 | level2-into-level1} [prefix-list-name] command.

Parameters
level1-into-level2 Enter the keywords level1-into-level2 to advertise Level 1 routes into Level 2 LSPs. This setting is the default.
level2-into-level1 Enter the keywords level2-into-level1 to advertise Level 2 inter-area routes into Level 1 LSPs. This behavior is described in RFC 2966.
prefix-list-name Enter the name of a configured IP prefix list. Routes meeting the criteria of the IP Prefix list are leaked.

Defaults
level1-into-level2 (Level 1 to Level 2 leaking enabled.)

Command Modes
• ROUTER ISIS (for IPv4)
• CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)

Supported Modes
Full-Switch

Command History
Version Description
9.9(0.0) Introduced on the FN IOM.
area-password

Configure a hash message authentication code (HMAC) password for an area.

Syntax

area-password [hmac-md5 | encryption-type] password

To delete a password, use the no area-password command.

Parameters

- **hmac-md5** (OPTIONAL) Enter the keywords hmac-md5 to encrypt the password.
- **encryption-type** (OPTIONAL) Enter 7 to encrypt the password using DES.
- **password** Enter a 1 to 16-character length alphanumeric string to prevent unauthorized access or incorrect routing information corrupting the link state database. The password is processed as plain text, which only provides limited security.

Defaults

Not configured.

Command Modes

- **ROUTER ISIS**
- **Full-Switch**

Command History

- **Version** | **Description**
  - 9.9(0.0) | Introduced on the FN IOM.
  - 9.2(0.0) | Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

To prevent the link state database from receiving incorrect routing information from unauthorized routers, use the area-password command on routers within an area.

The configured password injects into Level 1 LSPs, CSNPs, and PSNPs.

Related Commands

- **domain-password** — allows you to set the authentication password for a routing domain.
- **isis password** — allows you to configure an authentication password for an interface.

clear config

Clear IS-IS configurations that display under the router isis heading of the show running-config command output.

Syntax

clear config

Command Modes

- **ROUTER ISIS**
clear isis

Restart the IS-IS process. All IS-IS data is cleared.

Syntax

```
clear isis [tag] {* | database | traffic}
```

Parameters

tag

(Optional) Enter an alphanumeric string to specify the IS-IS routing tag area.

*

Enter the keyword * to clear all IS-IS information and restart the IS-IS process. This command removes IS-IS neighbor information and IS-IS LSP database information and the full SPF calculation is done.

database

Clears IS-IS LSP database information.

traffic

Clears IS-IS counters.

Command Modes EXEC Privilege

Supported Modes Full-Switch

</tr>
</tbody>
</table>

clns host

Define a name-to-network service mapping point (NSAP) that you use with commands that require NSAPs and system IDs.

Syntax

```
clns host name nsap
```

Parameters

name

Enter an alphanumeric string to identify the name-to-NSAP mapping.

nsap

Enter a specific NSAP address that is associated with the name parameter.

Defaults

Not configured.

Command Modes

ROUTER ISIS

Supported Modes Full-Switch
**Command History**

<table>
<thead>
<tr>

<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**
To configure a shortcut name that you can use instead of entering a long string of numbers associated with an NSAP address, use this command.

**Related Commands**

- **hostname dynamic** — enables dynamic learning of host names from routers in the domain and allows the routers to advertise the host names in LSPs.

---

**debug isis**

Enable debugging for all IS-IS operations.

**Syntax**

```plaintext
debug isis
```

To disable debugging of IS-IS, use the

```plaintext
no debug isis
```

**Command Modes**

- EXEC Privilege

**Supported Modes**

- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>

<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**
Entering `debug isis` enables all debugging parameters.

To display all debugging information in one output, use this command. To turn off debugging, you normally enter separate `no` forms of each command. To disable all debug messages for IS-IS at once, enter the `no debug isis` command.

---

**debug isis adj-packets**

Enable debugging on adjacency-related activity such as hello packets that are sent and received on IS-IS adjacencies.

**Syntax**

```plaintext
debug isis adj-packets [interface]
```

To turn off debugging, use the `no debug isis adj-packets [interface]` command.

**Parameters**

- **interface**

  (OPTIONAL) Identifies the interface type slot/port as one of the following:

  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

**Command Modes**

- EXEC Privilege
debug isis local-updates

To debug IS-IS local update packets, enable debugging on a specific interface and provides diagnostic information.

Syntax

```
debug isis local-updates [interface]
```

To turn off debugging, use the `no debug isis local-updates [interface]` command.

Parameters

- `interface` (OPTIONAL) Identifies the interface type slot/port as one of the following:
  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

Command Modes

- EXEC Privilege

Supported Modes

- Full-Switch

Command History

- Version 9.9(0.0) Introduced on the FN IOM.
- Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

debug isis snp-packets

To debug IS-IS complete sequence number PDU (CSNP) and partial sequence number PDU (PSNP) packets, enable debugging on a specific interface and provides diagnostic information.

Syntax

```
debug isis snp-packets [interface]
```

To turn off debugging, use the `no debug isis snp-packets [interface]` command.

Parameters

- `interface` (OPTIONAL) Identifies the interface type slot/port as one of the following:
  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

Intermediate System to Intermediate System (IS-IS)
**debug isis spf-triggers**

Enable debugging on the events that triggered IS-IS shortest path first (SPF) events for debugging purposes.

**Syntax**
```
debug isis spf-triggers
```
To turn off debugging, use the `no debug isis spf-triggers` command.

**Command Modes**
EXEC Privilege

**Command History**

</tbody>
</table>

**debug isis update-packets**

Enable debugging on link state PDUs (LSPs) that a router detects.

**Syntax**
```
debug isis update-packets [interface]
```
To turn off debugging, use the `no debug isis update-packets [interface]` command.

**Parameters**

- `interface` (OPTIONAL) Identifies the interface type slot/port as one of the following:
  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

</tbody>
</table>
default-information originate

Generates a default route into an IS-IS routing domain and controls the distribution of default information.

Syntax

default-information originate [always] [metric metric] [route-map map-name]

To disable the generation of a default route into the specified IS-IS routing domain, use the no default-information originate [always] [metric metric] [route-map map-name] command.

Parameters

always (OPTIONAL) Enter the keyword always to have the default route always advertised.

metric metric (OPTIONAL) Enter the keyword metric then a number to assign to the route. The range is from 0 to 16777215.

route-map map-name (OPTIONAL) A default route the routing process generates if the route map is satisfied.

Defaults

Not configured.

Command Modes

- ROUTER ISIS (for IPv4)
- CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)

Supported Modes

Full-Switch

Command History

Version Description

9.9(0.0) Introduced on the FN IOM.

9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

When you use this command to redistribute routes into a routing domain, the router becomes an autonomous system (AS) boundary router. An AS boundary router does not always generate a default route into a routing domain. The router still requires its own default route before it can generate one.

How a metric value assigned to a default route advertises depends on the metric-style command configuration. If the metric-style command is set for Narrow mode and the metric value in the default-information originate command is set to a number higher than 63, the metric value advertised in the LSPs is 63. If the metric-style command is set for Wide mode, the metric value in the default-information originate command is advertised.

Related Commands

- redistribute — redistributes routes from one routing domain to another routing domain.
- isis metric — configures a metric for an interface.
- metric-style — sets the metric style for the router.
- show isis database — displays the IS-IS link state database.

description

Enter a description of the IS-IS routing protocol.

Syntax
description {description}
To remove the description, use the no description \{description\} command.

**Parameters**

\textbf{description} Enter a description to identify the IS-IS protocol (80 characters maximum).

**Defaults**
none

**Command Modes**
ROUTER ISIS

**Supported Modes**
Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Related Commands**
router isis — Enter ROUTER mode on the switch.

---

**distance**

Define the administrative distance for learned routes.

**Syntax**

distance weight [ip-address mask [prefix-list]]

To return to the default values, use the no distance weight command.

**Parameters**

\textbf{weight} The administrative distance value indicates the reliability of a routing information source. The range is from 1 to 255. (A higher relative value indicates lower reliability. Routes with smaller values are given preference.) The default is \textbf{115}.

\textbf{ip-address mask} (OPTIONAL) Enter an IP address in dotted decimal format and enter a mask in either dotted decimal or /prefix format.

\textbf{prefix-list} (OPTIONAL) Enter the name of a prefix list name.

**Defaults** weight = \textbf{115}

**Command Modes**

- ROUTER ISIS (for IPv4)
- CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)

**Supported Modes**
Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**
The administrative distance indicates the trust value of incoming packets. A low administrative distance indicates a high trust rate. A high value indicates a lower trust rate. For example, a weight of 255 is interpreted that the routing information source is not trustworthy and should be ignored.
**distribute-list in**

Filter network prefixes received in updates.

**Syntax**

distribute-list prefix-list-name in [interface]
To return to the default values, use the no distribute-list prefix-list-name in [interface] command.

**Parameters**

- **prefix-list-name**
  Specify the prefix list to filter prefixes in routing updates.

- **interface**
  (OPTIONAL) Identifies the interface type slot/port as one of the following:
  - For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a VLAN, enter the keyword vlan then a number from 1 to 4094.

**Defaults**
Not configured.

**Command Modes**

- ROUTER ISIS (for IPv4)
- CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)

**Supported Modes**
Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>

</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Related Commands**

- **distribute-list out** — suppresses networks from being advertised in updates.
- **redistribute** — redistributes routes from one routing domain to another routing domain.

**distribute-list out**

Suppress network prefixes from being advertised in outbound updates.

**Syntax**

distribute-list prefix-list-name out [connected | bgp as number | ospf process-id | rip | static]
To return to the default values, use the no distribute-list prefix-list-name out [bgp as number connected | ospf process-id | rip | static] command.

**Parameters**

- **prefix-list-name**
  Specify the prefix list to filter prefixes in routing updates.

- **connected**
  (OPTIONAL) Enter the keyword connected for directly connected routing process.

- **ospf process-id**
  (OPTIONAL) Enter the keyword ospf then the OSPF process-ID number. The range is from 1 to 65535.
bgp as number (OPTIONAL) Enter the BGP then the AS Number. The range is from 1 to 65535.
rip (OPTIONAL) Enter the keyword rip for RIP routes.
static (OPTIONAL) Enter the keyword static for user-configured routing process.

Defaults Not configured.

Command Modes
- ROUTER ISIS (for IPv4)
- CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)

Supported Modes Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information You can assign a name to a routing process so a prefix list IS applied to only the routes derived from the specified routing process.

Related Commands
- distribute-list in — filters the networks received in updates.
- redistribute — redistributes routes from one routing domain to another routing domain.

distribute-list redistributed-override

Suppress flapping of routes when the same route is redistributed into IS-IS from multiple routers in the network.

Syntax distribute-list redistributed-override in

To return to the default, use the no distribute-list redistributed-override in command.

Defaults none

Command Modes
- ROUTER ISIS (for IPv4)
- CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)

Supported Modes Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information When you execute this command, IS-IS does not download the route to the routing table if the same route was redistributed into IS-IS routing protocol on the same router.
domain-password

Set the authentication password for a routing domain.

Syntax

```
domain-password [hmac-md5 | encryption-type] password
```

To disable the password, use the `no domain-password` command.

Parameters

- `hmac-md5` (OPTIONAL) Enter the keywords `hmac-md5` to encrypt the password using MD5.
- `encryption-type` (OPTIONAL) Enter `7` to encrypt the password using DES.
- `password` Enter an alphanumeric string up to 16 characters long. If you do not specify an `encryption-type` or `hmac-md5` keywords, the password is processed as plain text which provides limited security.

Defaults

No default password.

Command Modes

- `ROUTER ISIS`

Supported Modes

- Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

The domain password is inserted in Level 2 link state PDUs (LSPs), complete sequence number PDUs (CSNPs), and partial sequence number PDUs (PSNPs).

Related Commands

- `area-password` — configures an IS-IS area authentication password.
- `isis priority` — configures the authentication password for an interface.

graceful-restart ietf

Enable graceful restart on an IS-IS router.

Syntax

```
graceful-restart ietf
```

To return to the default, use the `no graceful-restart ietf` command.

Parameters

- `ietf` Enter `ietf` to enable graceful restart on the IS-IS router.

Defaults

Graceful restart disabled.

Command Modes

- `ROUTER ISIS`

Supported Modes

- Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
</tbody>
</table>
Every graceful restart enabled router’s HELLO PDUs includes a restart TLV. This restart enables (re)starting as well as the existing ISIS peers to detect the GR capability of the routers on the connected network. A flag in the Restart TLV contains restart request (RR), restart acknowledge (RA) and suppress adjacency advertisement (SA) bit flags.

The ISIS graceful restart-enabled router can co-exist in mixed topologies where some routers are graceful restart-enabled and others are not. For neighbors that are not graceful restart-enabled, the restarting router brings up the adjacency per the usual methods.

**graceful-restart interval**

Set the graceful restart grace period, the time during that all graceful restart attempts are prevented.

**Syntax**

```
graceful-restart interval minutes
```

To return to the default, use the `no graceful-restart interval` command.

**Parameters**

- `minutes` Enter the graceful-restart interval minutes. The range is from 1 to 20 minutes. The default is 5 minutes.

**Defaults**

5 minutes

**Command Modes**

- ROUTER ISIS

**Supported Modes**

- Full–Switch

**Command History**

- Version 9.9(0.0) Introduced on the FN IOM.
- Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**graceful-restart t1**

Set the graceful restart wait time before unacknowledged restart requests are generated. This wait time is the interval before the system sends a restart request (an IIH with RR bit set in Restart TLV) until the CSNP is received from the helping router.

**Syntax**

```
graceful-restart t1 {interval seconds | retry-times value}
```

To return to the default, use the `no graceful-restart t1` command.

**Parameters**

- `interval` Enter the keyword `interval` to set the wait time. The range is from 5 to 120 seconds. The default is 5 seconds.

- `retry-times` Enter the keywords `retry-times` to set the number of times the request interval is extended until a CSNP is received from the helping router. The range is from 1 to 10 attempts. The default is 1.
**graceful-restart t2**

Configure the wait time for the graceful restart timer T2 that a restarting router uses as the wait time for each database to synchronize.

**Syntax**
```
graceful-restart t2 {level-1 | level-2} seconds
```

To return to the default, use the **no graceful-restart t2** command.

**Parameters**
- **level-1, level-2**
  
Enter the keywords `level-1` or `level-2` to identify the database instance type to which the wait interval applies.
- **seconds**
  
Enter the `graceful-restart t2` time in seconds. The range is from 5 to 120 seconds. The default is **30 seconds**.

**Defaults**
- **30 seconds**

**Command Modes**
- ROUTER ISIS

**Supported Modes**
- Full-Switch

**Command History**

</tbody>
</table>

**graceful-restart t3**

Configure the overall wait time before graceful restart completes.

**Syntax**
```
graceful-restart t3 {adjacency | manual} seconds
```

To return to the default, use the **no graceful-restart t3** command.

**Parameters**
- **adjacency**
  
Enter the keyword `adjacency` so that the restarting router receives the remaining time value from its peer and adjusts its T3 value so if you have configured this option.
- **manual**
  
Enter the keyword `manual` to specify a time value that the restarting router uses. The range is from 50 to 120 seconds. The default is **30 seconds**.

**Defaults**
- **manual, 30 seconds**

**Command Modes**

<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

The running router sets the remaining time value to the current adjacency hold time. You can override this setting by implementing this command.

Override the default restart-wait time by entering the `no graceful-restart restart-wait` command. When you disable `restart-wait`, the current adjacency hold time is used.

Set the `t3` timer to `adjacency` on the restarting router when implementing this command. The restarting router gets the remaining time value from its peer and adjusts its `T3` value so only when you have configured `graceful-restart t3 adjacency`.

Related Commands

general-xxxx restart-wait — enables the graceful restart maximum wait time before a restarting peer comes up.

general-xxxx restart-wait

Enable the graceful restart maximum wait time before a restarting peer comes up.

**Syntax**

```
NOTE: Set the `t3` timer to `adjacency` on the restarting router when implementing this command.

general-xxxx restart-wait seconds
```

To return to the default, use the `no general-xxxx restart-wait` command.

**Parameters**

- **seconds**
  - Enter the graceful restart time in seconds. The range is from 5 to 300 seconds. The default is **30 seconds**.

**Defaults**

**30 seconds**

</tbody>
</table>

**Related Commands**

general-xxxx restart-wait t3 — configures the overall wait time before graceful restart completes.

general-xxxx restart-wait t3

Use to turn ON or OFF padding for LAN and point-to-point hello PDUs or to selectively turn padding ON or OFF for LAN or point-to-point hello PDUs.

**Syntax**

```
hello padding [multi-point | point-to-point]
```

Intermediate System to Intermediate System (IS-IS)
To return to the default, use the `no hello padding [multi-point | point-to-point]` command.

**Parameters**

- **multi-point** (OPTIONAL) Enter the keywords `multi-point` to pad only LAN hello PDUs.
- **point-to-point** (OPTIONAL) Enter the keywords `point-to-point` to pad only point-to-point PDUs.

**Defaults**

Both LAN and point-to-point hello PDUs are padded.

**Command Modes**

- ROUTER ISIS

**Supported Modes**

- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

IS-IS hellos are padded to the full maximum transmission unit (MTU) size. Padding IS-IS Hellos (IIHS) to the full MTU provides early error detection of large frame transmission problems or mismatched MTUs on adjacent interfaces.

**Related Commands**

- `isis hello padding` — turns ON or OFF hello padding on an interface basis.

### hostname dynamic

Enables dynamic learning of hostnames from routers in the domain and allows the routers to advertise the hostname in LSPs.

**Syntax**

```
hostname dynamic
```

To disable this command, use the `no hostname dynamic` command.

**Defaults**

Enabled.

**Command Modes**

- ROUTER ISIS

**Supported Modes**

- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

To build name-to-systemID mapping tables through the protocol, use this command. All `show` commands that display systems also display the hostname.

**Related Commands**

- `clns host` — defines a name-to-NSAP mapping.

### ignore-lsp-errors

Ignore LSPs with bad checksums instead of purging those LSPs.

**Syntax**

```
ignore-lsp-errors
```

To return to the default values, use the `no ignore-lsp-errors` command.
In IS-IS, the default deletes LSPs with internal checksum errors (no ignore-lsp-errors).

**Defaults**

**Command Modes**

ROUTER ISIS

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

IS-IS normally purges LSPs with an incorrect data link checksum causing the LSP source to regenerate the message. A cycle of purging and regenerating LSPs can occur when a network link continues to deliver accurate LSPs even though there is a link causing data corruption. This process could cause disruption to your system operation.

**ip router isis**

Configure IS-IS routing processes on an interface and attach an area tag name to the routing process.

**Syntax**

```
ip router isis [tag]
```

To disable IS-IS on an interface, use the `no ip router isis [tag]` command.

**Parameters**

```
tag
```

(Optional) The tag you specify identifies a specific area routing process. If you do not specify a tag, a null tag is assigned.

**Defaults**

No processes are configured.

**Command Modes**

INTERFACE

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

To assign a network entity title to enable IS-IS, use the `net` command.

**Related Commands**

- `net` — configures an IS-IS network entity title (NET) for the routing process.
- `router isis` — enables the IS-IS routing protocol.

**ipv6 router isis**

Enable the IPv6 IS-IS routing protocol and specify an IPv6 IS-IS process.

**Syntax**

```
ipv6 router isis [tag]
```

To disable IS-IS routing, use the `no router isis [tag]` command.
Parameters

**tag**

(OPTIONAL) This parameter is a unique name for a routing process. A null tag is assumed if the tag option is not specified. The tag name must be unique for all IP router processes for a given router.

Defaults

Not configured.

Command Modes

ROUTER ISIS

Supported Modes

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

Configure a network entity title (the **net command**) to specify the area address and the router system ID.

To establish adjacencies and establish dynamic routing, enable routing on one or more interfaces.

You can configure only one IS-IS routing process to perform Level 2 routing. A **level-1-2** designation performs Level 1 and Level 2 routing at the same time.

Related Commands

- **net** — configures an IS-IS network entity title (NET) for the routing process.
- **is-type** — assigns a type for a given area.

**isis circuit-type**

Configure the adjacency type on interfaces.

Syntax

```
isis circuit-type {level-1 | level-1-2 | level-2-only}
```

To return to the default values, use the **no isis circuit-type** command.

Parameters

- **level-1**
  - You can form a Level 1 adjacency if there is at least one common area address between this system and neighbors. You cannot form Level 2 adjacencies on this interface.

- **level-1-2**
  - You can form a Level 1 and Level 2 adjacencies when the neighbor is also configured as Level-1-2 and there is at least one common area, if not, a Level 2 adjacency is established. This setting is the default.

- **level-2-only**
  - You can form a Level 2 adjacencies when other Level 2 or Level 1-2 routers and their interfaces are configured for Level 1-2 or Level 2. Level 1 adjacencies cannot be established on this interface.

Defaults

**level-1-2**

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
</tbody>
</table>
### Version Description
9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

### Usage Information
Because the default establishes Level 1 and Level 2 adjacencies, you do not need to configure this command. Routers in an IS-IS system must be configured as a Level 1-only, Level 1-2, or Level 2-only system.

Only configure interfaces as Level 1 or Level 2 on routers that are between areas (for example, a Level 1-2 router) to prevent the software from sending unused hello packets and wasting bandwidth.

### isis csnp-interval

Configure the IS-IS complete sequence number PDU (CSNP) interval on an interface.

**Syntax**

```
isis csnp-interval seconds [level-1 | level-2]
```

To return to the default values, use the `no isis csnp-interval [seconds] [level-1 | level-2]` command.

**Parameters**

- `seconds` Interval of transmission time between CSNPs on multi-access networks for the designated intermediate system. The range is from 0 to 65535. The default is 10.
- `level-1` (OPTIONAL) Independently configures the interval of time between transmission of CSNPs for Level 1.
- `level-2` (OPTIONAL) Independently configures the interval of time between transmission of CSNPs for Level 2.

**Defaults**

- `seconds = 10; level-1` (if not otherwise specified)

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

The default values of this command are typically satisfactory transmission times for a specific interface on a designated intermediate system. To maintain database synchronization, the designated routers send CSNPs.

You can configure Level 1 and Level 2 CSNP intervals independently.
### Parameters

- **seconds**
  Interval of transmission time between CSNPs on multi-access networks for the designated intermediate system. The range is from 0 to 65535. The default is **10**.

- **level-1**
  (OPTIONAL) Independently configures the interval of time between transmission of CSNPs for Level 1.

- **level-2**
  (OPTIONAL) Independently configures the interval of time between transmission of CSNPs for Level 2.

### Defaults

- **seconds = 10; level-1** (if not otherwise specified)

<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

### Usage Information

The default values of this command are typically satisfactory transmission times for a specific interface on a designated intermediate system. To maintain database synchronization, the designated routers send CSNPs. You can configure Level 1 and Level 2 CSNP intervals independently.

### isis hello-multiplier

Specify the number of IS-IS hello packets a neighbor must miss before the router declares the adjacency down.

**Syntax**

```
isis hello-multiplier multiplier [level-1 | level-2]
```

To return to the default values, use the `no isis hello-multiplier [multiplier] [level-1 | level-2]` command.

**Parameters**

- **multiplier**
  Specifies an integer that sets the multiplier for the hello holding time. Never configure a hello-multiplier lower than the default (3). The range is from 3 to 1000. The default is **3**.

- **level-1**
  (OPTIONAL) Select this value to configure the hello multiplier independently for Level 1 adjacencies. This value is the default.

- **level-2**
  (OPTIONAL) Select this value to configure the hello multiplier independently for Level 2 adjacencies.

**Defaults**

- **multiplier = 3; level-1** (if not otherwise specified)

### Command Modes

- INTERFACE

### Supported Modes

- Full-Switch

### Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>
**Usage Information**
The holdtime (the product of the hello-multiplier multiplied by the hello-interval) determines how long a neighbor waits for a hello packet before declaring the neighbor is down so routes can be recalculated.

**isis hello padding**

Turn ON or OFF padding of hello PDUs from INTERFACE mode.

**Syntax**

```plaintext
isis hello padding
```

To return to the default, use the `no isis hello padding` command.

**Defaults**

Padding of hello PDUs is enabled (ON).

**Command Modes**

INTERFACE

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

Hello PDUs are “padded” only when both the global and interface padding options are ON. Turning either one OFF disables padding for the corresponding interface.

**Related Commands**

`hello padding` — turns ON or OFF padding for LAN and point-to-point hello PDUs.

**isis ipv6 metric**

Assign metric to an interface for use with IPv6 information.

**Syntax**

```plaintext
isis ipv6 metric default-metric [level-1 | level-2]
```

To return to the default values, use the `no ipv6 isis metric [default-metric] [level-1 | level-2]` command.

**Parameters**

- `default-metric` Metric assigned to the link and used to calculate the cost from each other router via the links in the network to other destinations. You can configure this metric for Level 1 or Level 2 routing. The range is from 0 to 16777215. The default is **10**.

- `level-1` (OPTIONAL) Enter the keywords `level-1` to configure the shortest path first (SPF) calculation for Level 1 (intra-area) routing. This value is the default.

- `level-2` (OPTIONAL) Enter the keywords `level-2` to configure the SPF calculation for Level 2 (inter-area) routing.

**Defaults**

`default-metric = 10; level-1` (if not otherwise specified)

**Command Modes**

INTERFACE

**Supported Modes**

Full-Switch
isis metric

Assign a metric to an interface.

Syntax

```
isis metric default-metric [level-1 | level-2]
```

To return to the default values, use the `no isis metric [default-metric] [level-1 | level-2]` command.

Parameters

- **default-metric**
  - Metric assigned to the link and used to calculate the cost from each other router via the links in the network to other destinations. You can configure this metric for Level 1 or Level 2 routing. The range is from 0 to 63 for narrow and transition metric styles and from 0 to 16777215 for wide metric styles. The default is 10.
- **level-1** (OPTIONAL) Enter the keywords level-1 to configure the shortest path first (SPF) calculation for Level 1 (intra-area) routing. This setting is the default.
- **level-2** (OPTIONAL) Enter the keywords level-2 to configure the SPF calculation for Level 2 (inter-area) routing.

Defaults

- default-metric = 10; level-1 (if not otherwise specified)

<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

Dell Networking recommends configuring metrics on all interfaces. Without configuring this command, the IS-IS metrics are similar to hop-count metrics.

isis network point-to-point

Enable the software to treat a broadcast interface as a point-to-point interface.

Syntax

```
isis network point-to-point
```

To disable the feature, use the `no isis network point-to-point` command.

Defaults

- Not enabled.

</tbody>
</table>

isis password

Configure an authentication password for an interface.

Syntax

```
isis password [hmac-md5] password [level-1 | level-2]
```

To delete a password, use the `no isis password [password] [level-1 | level-2]` command.

Parameters

- `encryption-type` (OPTIONAL) Enter `7` to encrypt the password using DES.
- `hmac-md5` (OPTIONAL) Enter the keywords `hmac-md5` to encrypt the password using MD5.
- `password` Assign the interface authentication password.
- `level-1` (OPTIONAL) Independently configures the authentication password for Level 1. The router acts as a station router for Level 1 routing. This setting is the default.
- `level-2` (OPTIONAL) Independently configures the authentication password for Level 2. The router acts as an area router for Level 2 routing.

Defaults

No default password. `level-1` (if not otherwise specified).

Usage Information

To protect your network from unauthorized access, use this command to prevent unauthorized routers from forming adjacencies.

You can assign different passwords for different routing levels by using the keywords `level-1` and `level-2`.

The `no` form of this command disables the password for Level 1 or Level 2 routing, using the respective keywords `level-1` or `level-2`.

This password provides limited security as it is processed as plain text.
**isis priority**

Set the priority of the designated router you select.

Syntax

```
isis priority value [level-1 | level-2]
```

To return to the default values, use the `no isis priority [value] [level-1 | level-2]` command.

Parameters

- **value**: This value sets the router priority. The higher the value, the higher the priority. The range is from 0 to 127. The default is 64.
- **level-1**: (OPTIONAL) Specify the priority for Level 1. This setting is the default.
- **level-2**: (OPTIONAL) Specify the priority for Level 2.

Defaults

```
value = 64: level-1 (if not otherwise specified).
```

Command Modes

```
INTERFACE
```

Supported Modes

Full-Switch

Command History

```
Version Description
------ -------
9.9(0.0) Introduced on the FN IOM.
9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
```

Usage Information

You can configure priorities independently for Level 1 and Level 2. Priorities determine which router on a LAN is the designated router. Priorities are advertised within hellos. The router with the highest priority becomes the designated intermediate system (DIS).

![NOTE: Routers with a priority of 0 cannot be a designated router.]

Setting the priority to 0 lowers the chance of this system becoming the DIS, but does not prevent it. If all the routers have priority 0, one with highest MAC address becomes DIS even though its priority is 0.

**is-type**

Configure IS-IS operating level for a router.

Syntax

```
is-type {level-1 | level-1-2 | level-2-only}
```

To return to the default values, use the `no is-type` command.

Parameters

- **level-1**: Allows a router to act as a Level 1 router.
- **level-1-2**: Allows a router to act as both a Level 1 and Level 2 router. This setting is the default.
- **level-2-only**: Allows a router to act as a Level 2 router.

Defaults

```
level-1-2
```

Command Modes

```
ROUTER ISIS
```

Supported Modes

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command allows you to monitor adjacency state changes, which are useful when you monitor large networks. Messages are logged in the system’s error message facility.

### lsp-gen-interval

Set the minimum interval between successive generations of link-state packets (LSPs).

**Syntax**

```
lsp-gen-interval [level-1 | level-2] interval seconds [initial_wait_interval seconds [second_wait_interval seconds]]
```

To restore default values, use the `no lsp-gen-interval [level-1 | level-2] interval seconds [initial_wait_interval seconds [second_wait_interval seconds]]` command.

**Parameters**

- **level-1** (OPTIONAL) Enter the keywords `level-1` to apply the configuration to generation of Level-1 LSPs.
- **level-2** (OPTIONAL) Enter the keywords `level-2` to apply the configuration to generation of Level-2 LSPs.
- **interval seconds** Enter the maximum number of seconds between LSP generations. The range is from 0 to 120 seconds. The default is 5 seconds.
**initial_wait_interval**

(Optional) Enter the initial wait time, in seconds, before running the first LSP generation. The range is from 0 to 120 seconds. The default is **1 second**.

**second_wait_interval**

(Optional) Enter the wait interval, in seconds, between the first and second LSP generation. The range is from 0 to 120 seconds. The default is **5 seconds**.

**Defaults**

Refer to Parameters.

**Command Modes**

ROUTER ISIS

**Supported Modes**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

LSP throttling slows down the frequency at which LSPs are generated during network instability. Even though throttling LSP generations slows down network convergence, no throttling can result in a network not functioning as expected. If network topology is unstable, throttling slows down the scheduling of LSP generations until the topology regains its stability.

The first generation is controlled by the initial wait interval and the second generation is controlled by the second wait interval. Each subsequent wait interval is twice as long as the previous one until the wait interval reaches the maximum wait time specified (interval seconds). After the network calms down and there are no triggers for two times the maximum interval, fast behavior is restored (the initial wait time).

### lsp-mtu

Set the maximum transmission unit (MTU) of IS-IS link-state packets (LSPs). This command only limits the size of LSPs this router generates.

**Syntax**

lsp-mtu size

To return to the default values, use the no lsp-mtu command.

**Parameters**

- **size**
  
  The maximum LSP size, in bytes. The range is from 128 to 1497 for Non-Jumbo mode and from 128 to 9195 for Jumbo mode. The default is **1497**.

**Defaults**

1497 bytes.

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

The link MTU and the LSP MTU size must be the same.
Because each device can generate a maximum of 255 LSPs, consider carefully whether you use the `lsp-mtu` command.

**lsp-refresh-interval**

Set the link state PDU (LSP) refresh interval. LSPs must be refreshed before they expire. When the LSPs are not refreshed after a refresh interval, they are kept in a database until their `max-lsp-lifetime` reaches zero and then LSPs is purged.

**Syntax**

```
lsp-refresh-interval seconds
```

To restore the default refresh interval, use the `no lsp-refresh-interval` command.

**Parameters**

- **seconds**
  
  The LSP refresh interval, in seconds. This value has to be less than the seconds value specified with the `max-lsp-lifetime` command. The range is from 1 to 65535 seconds. The default is **900**.

**Defaults**

**900** seconds

- **Version**
  - 9.9(0.0) Introduced on the FN IOM.
  - 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The refresh interval determines the rate at which route topology information is transmitted preventing the information from becoming obsolete.

The refresh interval must be less than the LSP lifetime specified with the `max-lsp-lifetime` command. A low value reduces the amount of time that undetected link state database corruption can persist at the cost of increased link utilization. A higher value reduces the link utilization the flooding of refreshed packets causes.

**Related Commands**

- `max-lsp-lifetime` — sets the maximum interval that LSPs persist without being refreshed.

**max-area-addresses**

Configure manual area addresses.

**Syntax**

```
max-area-addresses number
```

To return to the default values, use the `no max-area-addresses` command.

**Parameters**

- **number**
  
  Set the maximum number of manual area addresses. The range is from 3 to 6. The default is **3**.

**Defaults**

**3** addresses

**Command Modes**

ROUTER ISIS

**Supported Modes**

Full–Switch
max-lsp-lifetime

Set the maximum time that link-state packets (LSPs) exist without being refreshed.

Syntax

max-lsp-lifetime seconds

To restore the default time, use the no max-lsp-lifetime command.

Parameters

seconds

The maximum lifetime of LSP in seconds. This value must be greater than the lsp-refresh-interval command. The higher the value the longer the LSPs are kept. The range is from 1 to 65535. The default is 1200.

Defaults

1200 seconds

Command Modes

ROUTER ISIS

Supported Modes

Full-Switch

Command History

Version Description

9.9(0.0) Introduced on the FN IOM.

9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

Change the maximum LSP lifetime with this command. The maximum LSP lifetime must always be greater than the LSP refresh interval.

The seconds parameter enables the router to keep LSPs for the specified length of time. If the value is higher, the overhead is reduced on slower-speed links.

Related Commands

lsp-refresh-interval — sets the link-state packet (LSP) refresh interval.

maximum-paths

Allows you to configure the maximum number of equal cost paths allowed in a routing table.

Syntax

maximum-paths number

To return to the default values, use the no maximum-paths command.

Parameters

number

Enter a number as the maximum number of parallel paths an IP routing installs in a routing table. The range is from 1 to 16. The default is 4.
Defaults  4

Command Modes
• ROUTER ISIS (for IPv4)
• CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)

Supported Modes  Full-Switch

**metric-style**

To generate and accept old-style, new-style, or both styles of type, length, and values (TLV), configure a router.

### Syntax

```plaintext
metric-style {narrow [transition] | transition | wide [transition]} [level-1 | level-2]
```

To return to the default values, use the `no metric-style {narrow [transition] | transition | wide [transition]} [level-1 | level-2]` command.

### Parameters

- **narrow**: Allows you to generate and accept old-style TLVs. The metric range is from 0 to 63.
- **transition**: Allows you to generate both old-style and new-style TLVs. The metric range is from 0 to 63.
- **wide**: Allows you to generate and accept only new-style TLVs. The metric range is from 0 to 16777215.
- **level-1**: Enables the metric style on Level 1.
- **level-2**: Enables the metric style on Level 2.

### Defaults

- **narrow**: if no Level is specified, Level-1 and Level-2 are configured.

### Command Modes

- **ROUTER ISIS**

### Supported Modes

- Full-Switch

### Command History

<table>

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

### Usage Information

If you enter the `metric-style wide` command, the system generates and accepts only new-style TLVs. The router uses less memory and other resources rather than generating both old-style and new-style TLVs.

The new-style TLVs have wider metric fields than old-style TLVs.

### Related Commands

- `isis metric` — configures a metric for an interface.
**multi-topology**

Enables multi-topology IS-IS. It also allows enabling/disabling of old and new style TLVs for IP prefix information in the LSPs.

Syntax
```
multi-topology [transition]
```

To return to a single topology configuration, use the `no multi-topology [transition]` command.

Defaults
Disabled

Command Modes
- CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6

Supported Modes
Full-Switch

</tbody>
</table>

**net**

To configure an IS-IS network entity title (NET) for a routing process, use this mandatory command. If you did not configure a NET, the IS-IS process does not start.

Syntax
```
net network-entity-title
```

To remove a net, use the `no net network-entity-title` command.

Parameters
- `network-entity-title` Specify the area address and system ID for an IS-IS routing process. The first 1 to 13 bytes identify the area address. The next 6 bytes identify the system ID. The last 1 byte is the selector byte, always identified as zero zero (00). This argument can be applied to an address or a name.

Defaults
Not configured.

</tr>
</tbody>
</table>

**passive-interface**

Suppress routing updates on an interface. This command stops the router from sending updates on that interface.

Syntax
```
passive-interface interface
```

To delete a passive interface configuration, use the `no passive-interface interface` command.
Parameters

interface Enter the following keywords and slot/port or number information:

- For a 1-Gigabit Ethernet interface, enter the keyword GigabitEthernet then the slot/port information.
- For Loopback interface, enter the keyword loopback then a number from 0 to 16383.
- For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
- For a SONET interface, enter the keyword sonet then the slot/port information.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a VLAN, enter the keyword vlan then a number from 1 to 4094.

Defaults Not configured.

Command Modes ROUTER ISIS

Supported Modes Full-Switch

Command History

Version Description
9.9(0.0) Introduced on the FN IOM.
9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
Although the passive interface does not send nor receive routing updates, the network on that interface is still included in the IS-IS updates sent using other interfaces.

redistribute

Redistribute routes from one routing domain to another routing domain.

Syntax redistribute {static | connected | rip} [level-1 | level-1-2 | level-2] [metric metric-value] [metric-type {external | internal}] [route-map map-name]

To end redistribution or disable any of the specified keywords, use the no redistribute {static | connected | rip} [metric metric-value] [metric-type {external | internal}] [level-1 | level-1-2 | level-2] [route-map map-name] command.

Parameters

connected Enter the keyword connected to redistribute active routes into IS-IS.

rip Enter the keyword rip to redistribute RIP routes into IS-IS.

static Enter the keyword static to redistribute user-configured routes into IS-IS.

metric metric-value (OPTIONAL) Assign a value to the redistributed route. The range is from 0 to 16777215. The default is 0. Use a value that is consistent with the destination protocol.

metric-type (external | internal) (OPTIONAL) The external link type associated with the default route advertised into a routing domain. Specify one of the following:

  - external
  - internal

level-1 (OPTIONAL) Routes are independently redistributed into IS-IS as Level 1 routes.
(OPTIONAL) Routes are independently redistributed into IS-IS as Level-1-2 routes.

(Optional) Routes are independently redistributed into IS-IS as Level 2 routes. This setting is the default.

(Optional) If you do not enter the route-map argument, all routes are redistributed. If a map-name value is not specified, no routers are imported.

- metric metric-value = 0
- metric-type = internal; level-2

- ROUTER ISIS (for IPv4)
- CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)

Full-Switch

Introduced on the FN IOM.
Introduced on the MXL 10/40GbE Switch IO Module.

To redistribute a default route (0.0.0.0/0), configure the default-information originate command.

Changing or disabling a keyword in this command does not affect the state of the other command keywords.

When an LSP with an internal metric is received, the system considers the route cost while considering the advertised cost to reach the destination.

Redistributed routing information is filtered with the distribute-list out command to ensure that the routes are properly are passed to the receiving routing protocol.

How a metric value assigned to a redistributed route is advertised depends on how on the configuration of the metric-style command. If the metric-style command is set for Narrow or Transition mode and the metric value in the redistribute command is set to a number higher than 63, the metric value advertised in LSPs is 63. If the metric-style command is set for Wide mode, the metric value in the redistribute command is advertised.

- default-information originate — generates a default route for the IS-IS domain.
- distribute-list out — suppresses networks from being advertised in updates. This command filters redistributed routing information.

Redistribute routing information from a BGP process. (New command in Release 6.3.1.)

redistribute bgp AS number [level-1 | level-1-2 | level-2] [metric metric-value] [metric-type {external | internal}] [route-map map-name]

To return to the default values, use the no redistribute bgp command with the appropriate parameters.
Parameters

**AS number**
Enter a number that corresponds to the autonomous system number. The range is from 1 to 65535.

**level-1** (OPTIONAL) Routes are independently redistributed into IS-IS Level 1 routes only.

**level-1-2** (OPTIONAL) Routes are independently redistributed into IS-IS Level 1 and Level 2 routes.

**level-2** (OPTIONAL) Routes are independently redistributed into IS-IS as Level 2 routes only. This setting is the default.

**metric metric-value** (OPTIONAL) The value used for the redistributed route. Use a metric value that is consistent with the destination protocol. The range is from 0 to 16777215. The default is 0.

**metric-type**

- **external**
- **internal**

*(external| internal)*

**route-map map-name**

*map-name* is an identifier for a configured route map. The route map filters imported routes from the source routing protocol to the current routing protocol. If you do not specify a map-name, all routes are redistributed. If you specify a keyword, but fail to list route map tags, no routes are imported.

Defaults

- **IS-IS Level 2 routes only**

Command Modes

- **ROUTER ISIS (for IPv4)**
- **CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)**

Supported Modes

- Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

BGP to IS-IS redistribution supports "match" options using route maps. You can set the metric value, level, and metric-type of redistributed routes by the redistribution command. You can "set" more advanced options using route maps.

Example

```
Dell(conf)#router is
Dell(conf-router_isis)#redistribute bgp 1 level-1 metric 32 metric-type external route-map rmap-isis-to-bgp
Dell(conf-router_bgp)#show running-config isis

! router isis
redistribute bgp 1 level-1 metric 32 metric-type external route-map rmap-isis-to-bgp
```
**redistribute ospf**

Redistribute routing information from an OSPF process.

**Syntax**

```
redistribute ospf process-id [level-1 | level-1-2 | level-2] [match {internal | external}] [metric metric-value] [metric-type {external | internal}] [route-map map-name]
```

To return to the default values, use the `no redistribute ospf process-id [level-1 | level-1-2 | level-2] [match {internal | external}] [metric metric-value] [metric-type {external | internal}] [route-map map-name]` command.

**Parameters**

- **process-id**
  Enter a number that corresponds to the OSPF process ID to be redistributed. The range is from 1 to 65355.

- **metric metric-value** (OPTIONAL) The value used for the redistributed route. Use a metric value that is consistent with the destination protocol. The range is from 0 to 16777215. The default is 0.

- **metric-type {external | internal}** (OPTIONAL) The external link type associated with the default route advertised into a routing domain. The two options are:
  - external
  - internal

- **level-1** (OPTIONAL) Routes are independently redistributed into IS-IS as Level 1 routes.

- **level-1-2** (OPTIONAL) Routes are independently redistributed into IS-IS as Level-1-2 routes.

- **level-2** (OPTIONAL) Routes are independently redistributed into IS-IS as Level 2 routes. This setting is the default.

- **match {internal | external}** (OPTIONAL) The command used for OSPF to route and redistribute into other routing domains. The values are
  - internal
  - external

- **route-map map-name**
  `map-name` is an identifier for a configured route map. The route map should filter imported routes from the source routing protocol to the current routing protocol.
  If you do not specify a map-name, all routes are redistributed. If you specify a keyword, but fail to list route map tags, no routes are imported.

**Defaults**

Refer to Parameters.

**Command Modes**

- ROUTER ISIS (for IPv4)
- CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
</tbody>
</table>
**Usage Information**
How a metric value assigned to a redistributed route is advertised depends on how on the configuration of the `metric-style` command. If the `metric-style` command is set for Narrow mode and the metric value in the `redistribute ospf` command is set to a number higher than 63, the metric value advertised in LSPs is 63. If the `metric-style` command is set for wide mode, the metric value in the `redistribute ospf` command is advertised.

---

### router isis

Allows you to enable the IS-IS routing protocol and to specify an IP IS-IS process.

**Syntax**
```
router isis [tag]
```

To disable IS-IS routing, use the `no router isis [tag]` command.

**Parameters**
- `tag` (OPTIONAL) This is a unique name for a routing process. A null tag is assumed if the `tag` option is not specified. The tag name must be unique for all IP router processes for a given router.

**Defaults**
Not configured.

**Command Modes**
- `ROUTER ISIS`

**Supported Modes**
- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**
Configure a network entity title (the `net` command) to specify the area address and the router system ID.

Enable routing on one or more interfaces to establish adjacencies and establish dynamic routing.

You can configure only one IS-IS routing process to perform Level 2 routing. A `level-1-2` designation performs Level 1 and Level 2 routing at the same time.

**Related Commands**
- `ip router isis` — configures IS-IS routing processes for IP on interfaces and attaches an area designator to the routing process.
- `net` — configures an IS-IS network entity title (NET) for a routing process.
- `is-type` — assigns a type for a given area.

---

### set-overload-bit

To set the overload bit in its non-pseudonode LSPs, configure the router. This setting prevents other routers from using it as an intermediate hop in their shortest path first (SPF) calculations.

**Syntax**
```
set-overload-bit
```

---
To return to the default values, use the `no set-overload-bit` command.

**Defaults**
Not set.

**Command Modes**
- ROUTER ISIS (for IPv4)
- CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)

**Supported Modes**
Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**
Set the overload bit when a router experiences problems, such as a memory shortage due to an incomplete link state database which can result in an incomplete or inaccurate routing table. If you set the overload bit in its LSPs, other routers ignore the unreliable router in their SPF calculations until the router has recovered.

### show config

Display the changes you made to the IS-IS configuration. Default values are not shown.

**Syntax**

```
show config
```

**Command Modes**
- ROUTER ISIS (for IPv4)
- CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)

**Supported Modes**
Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Example (Router-Isis)**
The bold section identifies that Multi-Topology IS-IS is enabled in Transition mode.

Dell(conf-router_isis)#show config
```
!
router isis

!
address-family ipv6 unicast
maximum-paths 16
multi-topology transition
set-overload-bit
spf-interval level-1 100 15 20
spf-interval level-2 120 20 25
exit-address-family
```

**Example (Address-Family_Ipv6)**
The bold section identifies that Multi-Topology IS-IS is enabled in Transition mode.

Dell(conf-router_isis-af_ipv6)#show conf
```
```
address-family ipv6 unicast
maximum-paths 16
multi-topology transition
set-overload-bit
spf-interval level-1 100 15 20
spf-interval level-2 120 20 25
exit-address-family

show isis database

Display the IS-IS link state database.

Syntax
show isis database [level-1 | level-2] [local] [detail | summary] [lspid]

Parameters
level-1 (OPTIONAL) Displays the Level 1 IS-IS link-state database.
level-2 (OPTIONAL) Displays the Level 2 IS-IS link-state database.
local (OPTIONAL) Displays local link-state database information.
detail (OPTIONAL) Detailed link-state database information of each LSP displays when specified. If not specified, a summary displays.
summary (OPTIONAL) Summary of link-state database information displays when specified.
lspid (OPTIONAL) Display only the specified LSP.

Command Modes
• EXEC
• EXEC Privilege

Supported Modes
Full-Switch

Command History
Version Description
9.9(0.0) Introduced on the FN IOM.
9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
The following describes the show isis database command shown in the following example.

Field Description
IS-IS Level-1/ Displays the IS-IS link state database for Level 1 or Level 2.
Level-2 Link State
Database
LSPID Displays the LSP identifier.
The first six octets are the System ID of the originating router.
The first six octets are the System ID of the originating router. The next octet is the pseudonode ID. If this byte is not zero, the LSP describes system links. If this byte is zero (0), the LSP describes the state of the originating router.
The designated router for a LAN creates and floods a pseudonode LSP and describes the attached systems.
Field | Description
---|---
The last octet is the LSP number. An LSP is divided into multiple LSP fragments if there is more data than cannot fit in a single LSP. Each fragment has a unique LSP number.

An * after the LSPID indicates that the system originates an LSP where this command was issued.

LSP Seq Num | This value is the sequence number for the LSP that allows other systems to determine if they have received the latest information from the source.

LSP Checksum | This is the checksum of the entire LSP packet.

LSP Holdtime | This value is the amount of time, in seconds, that the LSP remains valid. A zero holdtime indicates that this is a purged LSP and is being removed from the link state database. A value between brackets indicates the duration that the purged LSP stays in the database before being removed.

ATT | This value represents the Attach bit. This value indicates that the router is a Level 2 router and can reach other areas. Level 1-only routers and Level 1-2 routers that have lost connection to other Level 2 routers use the Attach bit to find the closest Level 2 router. They point a default route to the closest Level 2 router.

P | This value represents the P bit. This bit is always set to zero as Dell Networking does not support area partition repair.

OL | This value represents the overload bit, determining congestion. If the overload bit is set, other routers do not use this system as a transit router when calculating routes.

Example

The bold sections identify that MultiTopology IS-IS is enabled.

Dell#show isis database

```
IS-IS Level-1 Link State Database

show isis interface

Display detailed IS-IS interface status and configuration information.

Syntax
show isis interface [interface]

Parameters
interface (OPTIONAL) Enter the following keywords and slot/port or number information:

- For Loopback interface, enter the keyword loopback then a number from 0 to 16383.
- For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a VLAN, enter the keyword vlan then a number from 1 to 4094.

</table>

Example
Dell>show isis int
GigabitEthernet 0/7 is up, line protocol is up
show isis neighbors

Display information about neighboring (adjacent) routers.

Syntax

show isis neighbors [level-1 | level-2] [detail] [interface]

Parameters

- **level-1** (OPTIONAL) Displays information about Level 1 IS-IS neighbors.
- **level-2** (OPTIONAL) Displays information about Level 2 IS-IS neighbors.
- **detail** (OPTIONAL) Displays detailed information about neighbors.
- **interface** (OPTIONAL) Enter the following keywords and slot/port or number information:
  - For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a VLAN, enter the keyword vlan then a number from 1 to 4094.

<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>
Usage Information

Use this command to confirm that the neighbor adjacencies are operating correctly. If you suspect that they are not, you can verify the specified area addresses of the routers by using the `show isis neighbors` command.

The following describes the `show isis neighbors` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>System Id</td>
<td>The value that identifies a system in an area.</td>
</tr>
<tr>
<td>Interface</td>
<td>The interface, slot, and port in which the router was discovered.</td>
</tr>
<tr>
<td>State</td>
<td>The value providing status about the adjacency state. The range is Up and Init.</td>
</tr>
<tr>
<td>Type</td>
<td>This value displays the adjacency type (Layer 2, Layer 2 or both).</td>
</tr>
<tr>
<td>Priority</td>
<td>IS-IS priority the neighbor advertises. The neighbor with highest priority becomes the designated router for the interface.</td>
</tr>
<tr>
<td>Uptime</td>
<td>Displays the interfaces uptime.</td>
</tr>
<tr>
<td>Circuit Id</td>
<td>The neighbor’s interpretation of the designated router for the interface.</td>
</tr>
</tbody>
</table>

Example

The bold sections below identify that Multi-Topology IS-IS is enabled.

```plaintext
Dell#show isis neighbors
System Id Interface State Type Priority Uptime Circuit Id
TEST Gi 7/1 Up L1L2(M) 127 09:28:01 TEST.02
Dell#show isis neighbors detail
System Id Interface State Type Priority Uptime Circuit Id
TEST Gi 7/1 Up L1L2(M) 127 09:28:04 TEST.02 Area Address(es): 49.0000.0001
  IP Address(es): 25.1.1.3*
  MAC Address: 0000.0000.0000
  Hold Time: 28
  Link Local Address: fe80::201:e8ff:fe00:492c
  Topology: IPv4 IPv6 , Common (IPv4 IPv6 )
  Adjacency being used for MTs: IPv4 IPv6
Dell#
```

`show isis protocol`

Display IS-IS routing information.

**Syntax**

```
show isis protocol
```

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

- Full-Switch

**Command History**

<table>

      Accept wide metrics: none
   Multi Topology Routing is enabled in transition mode.
Dell#
```

### show isis traffic

This command allows you to display IS-IS traffic interface information.

**Syntax**

```
show isis traffic [interface]
```

**Parameters**

- **interface**
  - (OPTIONAL) Identifies the interface type slot/port as one of the following:
    - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
    - For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

<tr>
<td>Level-1/Level-2 LSPs sourced (new/refresh)</td>
<td>Displays the number of new and refreshed LSPs.</td>
</tr>
<tr>
<td>Level-1/Level-2 LSPs flooded (sent/rcvd)</td>
<td>Displays the number of flooded LSPs sent and received.</td>
</tr>
<tr>
<td>Level-1/Level-2 LSPs CSNPs (sent/rcvd)</td>
<td>Displays the number of CSNP LSPs sent and received.</td>
</tr>
<tr>
<td>Level-1/Level-2 LSPs PSNPs (sent/rcvd)</td>
<td>Displays the number of PSNP LPSs sent and received.</td>
</tr>
<tr>
<td>Level-1/Level-2 DR Elections</td>
<td>Displays the number of times designated router elections ran.</td>
</tr>
<tr>
<td>Level-1/Level-2 SPF Calculations</td>
<td>Displays the number of shortest path first calculations.</td>
</tr>
<tr>
<td>LSP checksum errors received</td>
<td>Displays the number of checksum errors LSPs received.</td>
</tr>
<tr>
<td>LSP authentication failures</td>
<td>Displays the number of LSP authentication failures.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell#sho is traffic
IS-IS: Level-1 Hellos (sent/rcvd) : 0/721
IS-IS: Level-2 Hellos (sent/rcvd) : 900/943
IS-IS: PTP Hellos (sent/rcvd) : 0/0
IS-IS: Level-1 LSPs sourced (new/refresh) : 0/0
IS-IS: Level-2 LSPs sourced (new/refresh) : 1/3
IS-IS: Level-1 LSPs flooded (sent/rcvd) : 0/0
IS-IS: Level-2 LSPs flooded (sent/rcvd) : 5934/5217
IS-IS: Level-1 LSPs CSNPs (sent/rcvd) : 0/0
IS-IS: Level-2 LSPs CSNPs (sent/rcvd) : 472/238
IS-IS: Level-1 LSPs PSNPs (sent/rcvd) : 0/0
IS-IS: Level-2 LSPs PSNPs (sent/rcvd) : 10/337
IS-IS: Level-1 DR Elections : 4
IS-IS: Level-2 DR Elections : 4
IS-IS: Level-1 SPF Calculations : 0
IS-IS: Level-2 SPF Calculations : 389
IS-IS: LSP checksum errors received : 0
IS-IS: LSP authentication failures : 0
Dell#
```

**spf-interval**

Specify the minimum interval between shortest path first (SPF) calculations.

**Syntax**

```
spf-interval [level-1 | level-2] interval seconds [initial_wait_interval seconds [second_wait_interval seconds]]
```

To restore default values, use the `no spf-interval [level-1 | level-2] interval seconds [initial_wait_interval seconds [second_wait_interval seconds]]` command.
Parameters

level-1  (OPTIONAL) Enter the keyword level-1 to apply the configuration to Level-1 SPF calculations.

level-2  (OPTIONAL) Enter the keyword level-2 to apply the configuration to Level-2 SPF calculations.

interval seconds  Enter the maximum number of seconds between SPF calculations. The range is from 0 to 120 seconds. The default is 10 seconds.

initial_wait_interval_seconds  (OPTIONAL) Enter the initial wait time, in seconds, before running the first SPF calculations. The range is from 0 to 120 seconds. The default is 5 seconds.

second_wait_interval_seconds  (OPTIONAL) Enter the wait interval, in seconds, between the first and second SPF calculations. The range is from 0 to 120 seconds. The default is 5 seconds.

Defaults

Refer to Parameters.

Command Modes

-  ROUTER ISIS (for IPv4)
-  CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)

Supported Modes

Full–Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

This command spf-interval in CONFIG-ROUTER-ISIS-AF-IPV6 mode is used for IPv6 Multi-Topology route computation only. If using Single Topology mode, use the spf-interval command in CONFIG-ROUTER-ISIS mode for both IPv4 and IPv6 route computations.

SPF throttling slows down the frequency at which route calculations are performed during network instability. Even though throttling route calculations slows down network convergence, not throttling can result in a network not functioning as expected. If network topology is unstable, throttling slows down the scheduling of route calculations until the topology regains its stability.

The first route calculation is controlled by the initial wait interval and the second calculation is controlled by the second wait interval. Each subsequent wait interval is twice as long as the previous one until the wait interval reaches the maximum wait time specified (interval seconds). After the network calms down and there are no triggers for two times the maximum interval, fast behavior is restored (the initial wait time).
Isolated Networks

This chapter describes the isolated networks commands in the Dell Networking OS.

**io-aggregator isolated-network vlan**

Enable the isolated-network functionality for a particular VLAN or a set of VLANs.

**Syntax**

```
[no] io-aggregator isolated-network vlan vlan-range
```

**Parameters**

- **isolated-network**
  - Specify an isolated network to be configured.
- **vlan vlan-range**
  - Enter the keyword vlan followed by the member VLANs using VLAN IDs (separated by commas), a range of VLAN IDs (separated by a hyphen), a single VLAN ID, or a combination. For example: VLAN IDs (comma-separated): 3, 4, 6. Range (hyphen-separated): 5-10. Combination: 3, 4, 5-10, 8.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Usage Information**

To add more VLANs into an isolated network, you can enter this same command at any later point. The VLANs specified are appended to the existing set of VLANs. To remove a VLAN or a set of VLANs from an isolated network, use the no form of command.

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FNIOM.</td>
</tr>
<tr>
<td>9.5(0.0)</td>
<td>Supported on the FNI/O Aggregator.</td>
</tr>
<tr>
<td>9.5(0.0)</td>
<td>Supported on the MI/O Aggregator.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell(conf)#io-aggregator isolated-network vlan 5-10
```

**show io-aggregator isolated-networks**

Display the VLANs that are configured to be part of an isolated network on an Aggregator.

**Syntax**

```
show io-aggregator isolated-networks
```

**Parameters**

- **isolated-networks**
  - Specify an isolated network to be configured.
- **vlan vlan-range**
  - Enter the keyword vlan followed by the member VLANs using VLAN IDs (separated by commas), a range of VLAN IDs (separated by a hyphen), a single VLAN ID, or a combination.

Defaults

None

Command Modes EXEC Privilege

Usage Information This command is used to show the isolated-network feature status and the VLANs configured for this feature. Show running-config will save this command under io-aggregator.

Supported Modes All Modes

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>

</tr>
<tr>
<td>9.5(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Example

```
Dell#show io-aggregator isolated-networks
Isolated Network Enabled VLANs : 5-10
```
Link Aggregation Control Protocol (LACP)

This chapter contains commands for Dell Networking’s implementation of the link aggregation control protocol (LACP) for the creation of dynamic link aggregation groups (LAGs — called port-channels in Dell Networking OS parlance).

Topics:
- auto-lag enable
- clear lACP counters
- debug lACP
- io-aggregator auto-lag enable
- lACP link-fallback
- lACP long-timeout
- lACP port-priority
- port-channel mode
- port-channel-protocol lACP
- show interfaces port-channel
- show io-aggregator auto-lag status
- show lACP
- show link-bundle-distribution port-channel
- show port-channel-flow

auto-lag enable

Enable auto-lag on a server facing port.

Syntax

```
auto-lag enable
```

To disable the auto-lag use the `no auto-lag enable` command.

When disabled, the server port associated in a LAG is removed and the LAG itself gets removed. Any LACPDUs received on the server port are discarded.

Defaults

Enabled

Command Modes

INTERFACE

Supported Modes

Standalone, Stacking, VLT

</tr>
</tbody>
</table>
clear lACP counters

Clear Port Channel counters.

Syntax:
clear lACP port-channel-number counters

Parameters:
- port-channel-number: Enter a port-channel number. The range is from 1 to 128.

Command Modes:
- EXEC
- EXEC Privilege

Supported Modes:
- All Modes

Command History:

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Related Commands:
- show lACP — displays the LACP configuration.

debug lACP

Debug LACP (events).

Syntax:
debug lACP [pdu interface [in | out]]

To disable LACP debugging, use the no debug lACP [pdu interface [in | out]] command.

Parameters:
- pdu in | out: (OPTIONAL) Enter the keyword pdu to debug the LACP Protocol Data Unit information. Optionally, enter an in or out parameter to:
  - Receive enter in
  - Transmit enter out

- interface in | out: Enter the following keywords and slot/port or number information:
  - For a Ten-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.

Defaults:
- none
**Command Modes**

EXEC

EXEC Privilege

**Supported Modes**

</tr>
</tbody>
</table>

### io-aggregator auto-lag enable

Enable auto-lag globally on the server facing ports

**Syntax**

```
io-aggregator auto-lag enable

To disable the auto-lag, use the no io-aggregator auto-lag enable command.
```

When disabled, all the server ports associated in a LAG are removed and the LAG itself gets removed. Any LACPDUs received on the server ports are discarded.

**Defaults**

Enabled

**Command Modes**

CONFIGURATION

<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Related Commands**

- `show io-aggregator auto-lag status` — displays global information on the auto-lag status.

### lacp link-fallback

Enable the LACP link-fallback feature.

**Syntax**

```
lacp link-fallback member-independent port-channel 128

To disable the LACP link-fallback, use the no lacp link-fallback member-independent port-channel 128 command.
```

**Command Modes**

INTERFACE

CONFIGURATION

**Supported Modes**

Standalone, Stacking, and VLT
Full-Switch

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.11(0.0)</td>
<td>Introduced the support on VLT mode.</td>
</tr>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the M I/O Aggregator and FN I/O Aggregator.</td>
</tr>
</tbody>
</table>

**lacp long-timeout**

Configure a long timeout period (30 seconds) for an LACP session.

**Syntax**

```plaintext
lacp long-timeout
```

To reset the timeout period to a short timeout (1 second), use the `no lacp long-timeout` command.

**Defaults**

1 second

**Command Modes**

INTERFACE (conf-if-po-number)

**Supported Modes**

Programmable-Mux (PMUX)

</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command applies to dynamic port-channel interfaces only. When applied on a static port-channel, this command has no effect.

**lacp port-priority**

To influence which ports will be put in Standby mode when there is a hardware limitation that prevents all compatible ports from aggregating, configure the port priority.

**Syntax**

```plaintext
lacp port-priority priority-value
```

To return to the default setting, use the `no lacp port-priority priority-value` command.
Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>priority-value</td>
<td>Enter the port-priority value. The higher the value number, the lower the priority. The range is from 1 to 65535. The default is 32768.</td>

```
show interfaces port-channel

Display information on configured Port Channel groups.

Syntax

show interfaces port-channel [channel-number] [brief| description]

Parameters

channel-number
For a Port Channel interface, enter the keyword port-channel followed by a number.
The range is from 1 to 128.

brief
(Optional) Enter the keyword brief to display only the port channel number, the state of the port channel, and the number of interfaces in the port channel.

description
(Optional) Enter the keyword description to display interface information with description.

NOTE: This command also enables you to view information corresponding to a range of ports.

• For port-channel interfaces, you can specify multiple ports as port-range. For example, if you want to display information corresponding to all ports between 1 and 4, specify the port range as show interfaces port-channel 1 - 4.

Command Modes

• EXEC
• EXEC Privilege

Supported Modes

All Modes

Command History

Version Description
9.9(0.0) Introduced on the FN IOM and added support to display the interface configurations corresponding to a range of ports.
9.7(0.0) Introduced on the M I/O Aggregator.
9.4(0.0) Supported on the FN I/O Aggregator.

Usage Information

The following describes the show interfaces port-channel command shown in the following example.

Field Description
Port-Channel 1... Displays the status of LAG. In the Example, the status of the LAG, LAG fate-sharing group (“Failover-group”) is listed.
Hardware is... Displays the interface’s hardware information and its assigned MAC address.
Port-channel is part... Indicates whether the LAG is part of a LAG fate-sharing group (“Failover-group”).
Internet address... States whether an IP address is assigned to the interface. If an IP address is assigned, that address is displayed.
MTU 1554... Displays link and IP MTU.
LineSpeed Displays the interface’s line speed. For a port channel interface, it is the line speed of the interfaces in the port channel.
Members in this... Displays the interfaces belonging to this port channel.
ARP type:... Displays the ARP type and the ARP timeout value for the interface.
<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Last clearing...</td>
<td>Displays the time when the <code>show interfaces</code> counters were cleared.</td>
</tr>
<tr>
<td>Queueing strategy...</td>
<td>States the packet queueing strategy. FIFO means first in first out.</td>
</tr>
<tr>
<td>packets input...</td>
<td>Displays the number of packets and bytes into the interface.</td>
</tr>
<tr>
<td>Input 0 IP packets...</td>
<td>Displays the number of packets with IP headers, VLAN tagged headers, and MPLS headers. The number of packets may not add correctly because a VLAN tagged IP packet counts as both a VLAN packet and an IP packet.</td>
</tr>
<tr>
<td>0 64-byte...</td>
<td>Displays the size of packets and the number of those packets entering that interface. This information is displayed over two lines.</td>
</tr>
<tr>
<td>Received 0...</td>
<td>Displays the type and number of errors or other specific packets received. This information is displayed over three lines.</td>
</tr>
<tr>
<td>Output 0...</td>
<td>Displays the type and number of packets sent out the interface. This information is displayed over three lines.</td>
</tr>
<tr>
<td>Rate information...</td>
<td>Displays the traffic rate information into and out of the interface. Traffic rate is displayed in bits and packets per second.</td>
</tr>
<tr>
<td>Time since...</td>
<td>Displays the time since the last change in the configuration of this interface.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell#show interfaces port-channel
Port-channel 1 is down, line protocol is down
Hardware address is 00:1e:c9:f1:00:05, Current address is 00:1e:c9:f1:00:05
Interface index is 1107755009
Minimum number of links to bring Port-channel up is 1
Internet address is not set
Mode of IP Address Assignment : NONE
DHCP Client-ID :lag1001ec9f10005
MTU 12000 bytes, IP MTU 1500 bytes
LineSpeed auto
Members in this channel:
ARP type: ARPA, ARP Timeout 04:00:00
Last clearing of "show interface" counters 03:28:00
Queueing strategy: fifo
Input Statistics:
  0 packets, 0 bytes
  0 64-byte pkts, 0 over 64-byte pkts, 0 over 127-byte pkts
  0 over 255-byte pkts, 0 over 511-byte pkts, 0 over 1023-byte pkts
  0 Multicasts, 0 Broadcasts
  0 runts, 0 giants, 0 throttles
  0 CRC, 0 overrun, 0 discarded
Output Statistics:
  0 packets, 0 bytes, 0 underruns
  0 64-byte pkts, 0 over 64-byte pkts, 0 over 127-byte pkts
  0 over 255-byte pkts, 0 over 511-byte pkts, 0 over 1023-byte pkts

```
### Field | Description
--- | ---
**Status** | Displays the status of the port channel.  
• **down** — if the port channel is disabled (**shutdown**)  
• **up** — if the port channel is enabled (**no shutdown**)

**Uptime** | Displays the age of the port channel in hours:minutes:seconds.

**Ports** | Lists the interfaces assigned to this port channel.

(untitled) | Displays the status of the physical interfaces (up or down).  
• In Layer 2 port channels, an * (asterisk) indicates which interface is the primary port of the port channel. The primary port sends out interface PDU.  
• In Layer 3 port channels, the primary port is not indicated.

---

### Example

Dell#show int po bri  
Codes: L - LACP Port-channel  
O - OpenFlow Controller Port-channel  
A - Auto Port-channel  
I - Internally Lagged  
LAG Mode Status Uptime Ports  
L 128 L3 down 00:00:00  
Dell#  

To indicate the LACP fallback, Internally lagged is added to the list. When the LAG auto-configures itself, the LAG status describes as ‘I’.

### Related Commands

**show lacp** — displays the LACP matrix.

---

### show io-aggregator auto-lag status

Displays global information on the auto-lag status.

**Syntax**  
`show io-aggregator auto-lag status`

**Command Modes**  
EXEC

**Supported Modes**  
Standalone, Stacking, VLT  
Full-Switch

**Command History**

<table>

</tr>
</tbody>
</table>

**Example**

Dell-ct-mxl-1-b1(conf)#do show io-aggregator auto-lag status  
Auto LAG creation on server port(s) is disabled
show lACP

Displays the LACP matrix.

Syntax

```
show lACP [port-channel-number [sys-id | counters]]
```

Parameters

- **port-channel-number**: Enter a port-channel number:
  - The range is from 1 to 128.
- **sys-id**: (OPTIONAL) Enter the keywords `sys-id` and the value that identifies a system.
- **counters**: (OPTIONAL) Enter the keyword `counters` to display the LACP counters.

Related Commands

- `clear lacp counters` — Clears the LACP counters.
- `show interfaces port-channel` — Displays the information on configured Port Channel groups.
show port-channel-flow

Display an egress port in a given port-channel flow.

**Syntax**

```
show port-channel-flow port-channel number incoming-interface interface { src-mac address dest-mac address {vlan vlanid | ether-type }} { src-ip address dest-ip address } { src-port number dest-port number }
```

**Parameters**

- **port-channel number**
  - Enter the keywords `port-channel` then the number of the port channel to display flow information. The range is from 1 to 128.

- **incoming-interface interface**
  - Enter the keywords `incoming-interface` then the interface type and slot/port or number information:
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

- **src-mac address**
  - Enter the keywords `src-mac` then the MAC source address in the `nn:nn:nn:nn:nn:nn` format.

- **dest-mac address**
  - Enter the keywords `dest-mac` then the MAC destination address in the `nn:nn:nn:nn:nn:nn` format.

- **vlan vlan-id**
  - Enter the keyword `vlan` then the VLAN ID. The range is from 1 to 4094.

- **ether-type**
  - Enter the keywords `ether-type` then the ether-value in the `XX:XX` format.

- **src-ip address**
  - Enter the keywords `src-ip` then the IP source address in IP address format.

- **dest-ip address**
  - Enter the keywords `dest-ip` then the IP destination address in IP address format.

- **src-port number**
  - Enter the keywords `src-port` then the source port number. The range is from 1 to 65536. The default is `None`.

- **dest-port number**
  - Enter the keywords `dest-port` then the destination port number. The range is from 1 to 65536. The default is `None`.

<tr>
<td>8.3(17.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

Because this command calculates based on a Layer 2 hash algorithm, use this command to display flows for switched Layer 2 packets, not for routed packets (use the `show ip flow` command to display routed packets).

The `show port-channel-flow` command returns the egress port identification in a given port-channel if a valid flow is entered. A mismatched flow error occurs if MAC-based hashing is configured for a Layer 2 interface and you are trying to display a Layer 3 flow.

The output displays three entries:
• Egress port for unfragmented packets.
• In the event of fragmented packets, the egress port of the first fragment.
• In the event of fragmented packets, the egress port of the subsequent fragments.

**NOTE:** In the show port-channel-flow command output, the egress port for an unknown unicast, multicast, or broadcast traffic is not displayed.
This chapter describes commands to configure Layer 2 features. This chapter contains the following sections:

- MAC Addressing Commands
- Virtual LAN (VLAN) Commands

Topics:

- MAC Addressing Commands
- Virtual LAN (VLAN) Commands

### MAC Addressing Commands

The following commands are related to configuring, managing, and viewing MAC addresses:

- `clear mac-address-table dynamic`
- `mac-address-table aging-time`
- `mac-address-table station-move refresh-arp`
- `show cam mac stack-unit`
- `show mac-address-table`

#### clear mac-address-table dynamic

Clear the MAC address table of all MAC addresses learned dynamically.

**Syntax**

```
clear mac-address-table dynamic {address mac-address | all | interface interface | vlan vlan-id}
```

**Parameters**

- `address mac-address`
  - Enter the keyword `address` followed by a MAC address in `nn:nn:nn:nn:nn:nn` format.
- `all`
  - Enter the keyword `all` to delete all MAC address entries in the MAC address table.
- `interface interface`
  - Enter the following keywords and slot/port or number information:
    - For a 10-Gigabit Ethernet interface, enter the `TenGigabitEthernet` followed by the slot/port information.
- `vlan vlan-id`
  - Enter the keyword `vlan` followed by a VLAN ID number from 1 to 4094.

**Command Modes**

- EXEC Privilege

**Supported Modes**

- All Modes
mac-address-table aging-time

Specify an aging time for MAC addresses to remove from the MAC address table.

Syntax: `mac-address-table aging-time seconds`

To delete the configured aging time, use the `no mac-address-table aging-time seconds` command.

Parameters:
- **seconds**: Enter either zero (0) or a number as the number of seconds before MAC addresses are relearned. To disable aging of the MAC address table, enter 0. The range is from 10 to 1000000. The default is 1800 seconds.

Defaults: 1800 seconds

Command Modes: CONFIGURATION

Supported Modes: Programmable-Mux (PMUX), Full-Switch

Command History:
- 9.9(0.0): Introduced on the FN IOM.
- 9.4(0.0): Supported on the FN I/O Aggregator.
- 8.3.17.0: Supported on the M I/O Aggregator.

mac-address-table static

Associate specific MAC or hardware addresses to an interface and virtual local area networks (VLANs).

Syntax: `mac-address-table static mac-address output interface vlan vlan-id`

To remove a MAC address, use the `no mac-address-table static mac-address output interface vlan vlan-id` command.

Parameters:
- **mac-address**: Enter the 48-bit hexadecimal address in nn:nn:nn:nn:nn:nn format.
- **output interface**: Enter the keyword `output` then one of the following interfaces for which traffic is forwarded:
  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

```
vlan vlan-id
```
Enter the keyword vlan then a VLAN ID number from 1 to 4094.

**Defaults**
Not configured.

**Command Modes**
CONFIGURATION

**Supported Modes**
Programmable-Mux (PMUX)

**Command History**

<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**
For details about using this command, refer to the “NIC Teaming” section of the Layer 2 chapter in the Dell Networking OS Configuration Guide.

**mac learning-limit**

Limit the maximum number of MAC addresses (static + dynamic) learned on a selected interface.

**Syntax**

```
mac learning-limit address_limit [dynamic] [no-station-move| station-move] [sticky]
```

---

**Layer 2**

822 |  Dell EMC
Parameters

- **address_limit**
  Enter the maximum number of MAC addresses that can be learned on the interface. The range is from 1 to 1000000.

- **dynamic**
  (OPTIONAL) Enter the keyword dynamic to allow aging of MACs even though a learning limit is configured.

- **no-station-move**
  (OPTIONAL) Enter the keywords no-station-move to disallow a station move (associate the learned MAC address with the most recently accessed port) on learned MAC addresses.

- **station-move**
  (OPTIONAL) Enter the keywords station-move to allow a station move on learned MAC addresses.

- **sticky**
  (OPTIONAL) Enter the keyword sticky to allow configuring the sticky mac feature along with the learning limit.

Defaults

- **dynamic**

  **NOTE:** “Static” means manually entered addresses, which do not age.

Command Modes

- INTERFACE

Supported Modes

- Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

This command and its options are supported on physical interfaces, static LAGs, LACP LAGs, and VLANs.

If you do not specify the `vlan` option, the MAC address counters are not VLAN-based. That is, the sum of the addresses learned on all VLANs (not having any learning limit configuration) is counted against the MAC learning limit.

MAC Learning Limit violation logs and actions are not available on a per-VLAN basis.

With the keyword `no-station-move` option, MAC addresses learned through this feature on the selected interface persist on a per-VLAN basis, even if received on another interface. Enabling or disabling this option has no effect on already learned MAC addresses.

After the MAC address learning limit is reached, the MAC addresses do not age out unless you add the `dynamic` option. To clear statistics on MAC address learning, use the `clear counters` command with the learning-limit parameter.

When a channel member is added to a port-channel and there is not enough ACL CAM space, the MAC limit functionality on that port-channel is undefined. When this occurs, un-configure the existing configuration first and then reapply the limit with a lower value.

Related Commands

- `clear counters` — Clear counters used in the `show interface` command.
- `clear mac-address-table dynamic` — clears the MAC address table of all MAC address learned dynamically.
- `show mac learning-limit` — displays MAC learning-limit configuration.
mac learning-limit learn-limit-violation

Configure an action for a MAC address learning-limit violation.

Syntax

```
mac learning-limit learn-limit-violation {log | shutdown}
```

To return to the default, use the no mac learning-limit learn-limit-violation {log | shutdown} command.

Parameters

- **log**: Enter the keyword `log` to generate a syslog message on a learning-limit violation.
- **shutdown**: Enter the keyword `shutdown` to shut down the port on a learning-limit violation.

Defaults

none

Command Modes

- INTERFACE (conf-if-interface-slot/port)

Supported Modes

- Full-Switch

Command History

- **Version** 9.9(0.0)
  - Introduced on the FN IOM.
- **Version** 8.3.16.1
  - Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

This command is supported on physical interfaces, static LAGs, and LACP LAGs.

Related Commands

- `show mac learning-limit` — displays details of the mac learning-limit.

mac learning-limit station-move-violation

Specify the actions for a station move violation.

Syntax

```
mac learning-limit station-move-violation {log | shutdown-both | shutdown-offending | shutdown-original}
```

To disable a configuration, use the no mac learning-limit station-move-violation command, then the configured keyword.

Parameters

- **log**: Enter the keyword `log` to generate a syslog message on a station move violation.
- **shutdown-both**: Enter the keyword `shutdown` to shut down both the original and offending interface and generate a syslog message.
- **shutdown-offending**: Enter the keywords `shutdown-offending` to shut down the offending interface and generate a syslog message.
- **shutdown-original**: Enter the keywords `shutdown-original` to shut down the original interface and generate a syslog message.

Defaults

none

Command Modes

- INTERFACE (conf-if-interface-slot/port)

Supported Modes

- Full-Switch

show cam mac stack-unit

Display the content addressable memory (CAM) size and the portions allocated for MAC addresses and for MAC ACLs.

Syntax

show cam mac stack-unit unit_number port-set port-pipe count [vlan vlan-id] [interface interface]

Parameters

- `stack-unit unit_number` (REQUIRED) Enter the keyword `stack-unit` followed by a stack member number to select the stack unit for which to gather information. The range is 0 to 5.
- `port-set port-pipe` (REQUIRED) Enter the keywords `port-set` followed by a Port-Pipe number to select the Port-Pipe for which to gather information. The range is 0.
- `address mac-addr` (OPTIONAL) Enter the keyword `address` followed by a MAC address in the nn:nn:nn:nn:nn:nn format to display information on that MAC address.
- `dynamic` (OPTIONAL) Enter the keyword `dynamic` to display only those MAC addresses learned dynamically by the switch.
- `static` (OPTIONAL) Enter the keyword `static` to display only those MAC address specifically configured on the switch.
- `interface interface` (OPTIONAL) Enter the keyword `interface` followed by the interface type, slot and port information:
For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.

```
vlan vlan-id
```

(Optional) Enter the keyword vlan followed by the VLAN ID to display the MAC address assigned to the VLAN. The range is from 1 to 4094.

**Command Modes**
- EXEC
- EXEC Privilege

**Supported Modes**
All Modes

**Command History**

</tbody>
</table>

**show mac-address-table**

Display the MAC address table.

**Syntax**
```
show mac-address-table [dynamic | static] [address mac-address | interface interface | vlan vlan-id] [count [vlan vlan-id] [interface interface-type [slot [/port]]]]
```

**Parameters**
- **dynamic**
  (OPTIONAL) Enter the keyword dynamic to display only those MAC addresses the switch dynamically learns. Optionally, you can also add one of these combinations: address/mac-address, interface/interface, or vlan vlan-id.
- **static**
  (OPTIONAL) Enter the keyword static to display only those MAC addresses specifically configured on the switch. Optionally, you can also add one of these combinations: address/mac-address, interface/interface, or vlan vlan-id.
- **address mac-address**
  (OPTIONAL) Enter the keyword address then a MAC address in the nn:nn:nn:nn:nn:nn format to display information on that MAC address.
- **interface interface**
  (OPTIONAL) Enter the keyword interface then the interface type, slot and port information:
  - For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- **interface interface-type**
  (OPTIONAL) Instead of entering the keyword interface then the interface type, slot and port information, as above, you can enter the interface type, then just a slot number.
- **vlan vlan-id**
  (OPTIONAL) Enter the keyword vlan then the VLAN ID to display the MAC address assigned to the VLAN. The range is 1 to 4094.
count

(Optional) Enter the keyword count, then optionally, by an interface or VLAN ID, to display total or interface-specific static addresses, dynamic addresses, and MAC addresses in use.

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

Programmable-Mux (PMUX)
Full-Switch

Command History

<td>Lists the total number of MAC addresses the switch uses.</td>
</tr>
</tbody>
</table>

**Example (Count)**

```
Dell#show mac-address-table count
MAC Entries for all vlans :
Dynamic Address Count :                5
Static Address (User-defined) Count :  0
Total MAC Addresses in Use:            5
Dell#
```

---

**show mac-address-table aging-time**

Display the aging times assigned to the MAC addresses on the switch.

**Syntax**

```
show mac-address-table aging-time [vlan vlan-id]
```

**Parameters**

- `vlan vlan-id` (OPTIONAL) Enter the keyword `vlan` then the VLAN ID to display the MAC address assigned to the VLAN. The range is from 1 to 4094.

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

Full–Switch

**Command History**

<table>
<thead>
<tr>

</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell#show mac-address-table aging-time
Mac-address-table aging time : 1800
```
show mac learning-limit

Display MAC address learning limits set for various interfaces.

Syntax

```
show mac learning-limit [violate-action] [detail] [interface interface]
```

Parameters

- **violate-action**: (OPTIONAL) Enter the keywords `violate-action` to display the MAC learning limit violation status.
- **detail**: (OPTIONAL) Enter the keyword `detail` to display the MAC learning limit in detail.
- **interface interface**: (OPTIONAL) Enter the keyword `interface` with the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

Example

```
Dell#show mac learning-limit
Interface    Learning Limit  Dynamic MAC count  Static MAC count  Unknown SA  Drops
Slot/port     Limit          MAC count          MAC count         |
Dell#
```

Virtual LAN (VLAN) Commands

The following commands configure and monitor virtual local area networks (VLANs). VLANs are a virtual interface and use many of the same commands as physical interfaces.

For more information, also refer to Virtual LAN (VLAN) Commands.

description

Add a description about the selected VLAN.

Syntax

```
description description
```
To remove the description from the VLAN, use the `no description` command.

**Parameters**

- `description`
  - Enter a text string description to identify the VLAN (80 characters maximum).

**Defaults**

- none

**Command Modes**

- INTERFACE VLAN

**Supported Modes**

- All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the MI/O Aggregator.</td>
</tr>
</tbody>
</table>

**Related Commands**

- `show vlan` — displays the VLAN configuration.

### default vlan-id

Specify a VLAN as the Default VLAN.

**Syntax**

```
default vlan-id vlan-id
```

To remove the default VLAN status from a VLAN and VLAN 1 does not exist, use the `no default vlan-id vlan-id` syntax.

**Parameters**

- `vlan-id`
  - Enter the VLAN ID number of the VLAN to become the new Default VLAN. The range is from 1 to 4094. The default is 1.

**Defaults**

- The Default VLAN is VLAN 1.

**Command Modes**

- CONFIGURATION

**Supported Modes**

- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

To return VLAN 1 as the Default VLAN, use the `(default-vlan-id 1)` command.

The Default VLAN contains only untagged interfaces.

**Related Commands**

- `interface vlan` — configures a VLAN.
**default-vlan disable**

Disable the default VLAN so that all switchports are placed in the Null VLAN until they are explicitly configured as a member of another VLAN.

**Defaults**

Enabled.

**Command Modes**

CONFIGURATION

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

The `no default vlan disable` command is not listed in the running-configuration, but when the default VLAN is disabled, `default-vlan disable` is listed in the running-configuration.

**name**

Assign a name to the VLAN.

**Syntax**

```plaintext
name vlan-name
```

To remove the name from the VLAN, use the `no name` command.

**Parameters**

- `vlan-name`: Enter up to 32 characters as the name of the VLAN.

**Defaults**

Not configured.

**Command Modes**

INTERFACE VLAN

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

To display information about a named VLAN, enter the `show vlan` command with the name parameter or the `show interfaces description` command.

**Related Commands**

- `description` — assigns a descriptive text string to the interface.
- `interface vlan` — configures a VLAN.
- `show vlan` — displays the current VLAN configurations on the switch.
show config

Display the current configuration of the selected VLAN.

Syntax

show config

Command Modes

INTERFACE VLAN

Supported Modes

Full-Switch

Command History

Version Description
9.9(0.0) Introduced on the FN IOM.
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Example

Dell(conf-if-vl-100)#show config
!
interface Vlan 1
   description a
   no ip address
   mtu 2500
   shutdown
Dell(conf-if-vl-100)#

show vlan

Display the current VLAN configurations on the switch.

Syntax

show vlan [brief | id vlan-id | name vlan-name]

Parameters

brief (OPTIONAL) Enter the keyword brief to display the following information:
   • VLAN ID
   • VLAN name (left blank if none is configured)
   • Spanning Tree Group ID
   • MAC address aging time
   • IP address

id vlan-id (OPTIONAL) Enter the keyword id then a number from 1 to 4094. Only information on the VLAN specified is displayed.

name vlan-name (OPTIONAL) Enter the keyword name then the name configured for the VLAN. Only information on the VLAN named is displayed.

Command Modes

• EXEC
• EXEC Privilege

Supported Modes

Full-Switch
Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

The following describes the `show vlan` command shown in the following example.

**Column Heading**

(Column 1 — no heading)

- asterisk symbol (*) = Default VLAN
- G = GVRP VLAN
- P = primary VLAN
- C = community VLAN
- I = isolated VLAN
- O = OpenFlow

**NUM**

Displays existing VLAN IDs.

**Status**

Displays the word Inactive for inactive VLANs and the word Active for active VLANs.

**Q**

- Displays G for GVRP tagged
- M for member of a VLAN-Stack VLAN
- T for tagged interface
- U for untagged interface
- x (not capitalized x) for Dot1x untagged
- X (capitalized X) for Dot1x tagged
- o (not capitalized o) for OpenFlow untagged
- O (capitalized O) for OpenFlow tagged
- H for VSN tagged
- i (not capitalized i) for Internal untagged
- I (capitalized I) for Internal tagged
- v (not capitalized v) for VLT untagged
- V (capitalized V) for VLT tagged

**Ports**

Displays the type, slot, and port information.

- Po = port channel
- Gi = gigabit Ethernet
- Te = ten-gigabit Ethernet

Example

```
Dell#show vlan
Codes: * - Default VLAN, G - GVRP VLANs, R - Remote Port Mirroring VLANs, P - Primary, C - Community, I - Isolated
Q: U - Untagged, T - Tagged
   x - Dot1x untagged, X - Dot1x tagged
   G - GVRP tagged, M - Vlan-stack, H - VSN tagged
   i - Internal untagged, I - Internal tagged, v - VLT untagged, V - VLT tagged

NUM  Status    Description Q Ports
1    Inactive  a
2    Active                 U Te 0/3,5,13,53-56
```
### Example (VLAN ID)

```
Dell# show vlan id 40
```

Codes: * - Default VLAN, G - GVRP VLANs, R - Remote Port Mirroring VLANs, P - Primary, C - Community, I - Isolated
Q: U - Untagged, T - Tagged
x - Dot1x untagged, X - Dot1x tagged
G - GVRP tagged, M - Vlan-stack, H - VSN tagged
i - Internal untagged, I - Internal tagged, v - VLT untagged, V
- VLT tagged

<table>
<thead>
<tr>
<th>NUM</th>
<th>Status</th>
<th>Description</th>
<th>Q</th>
<th>Ports</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Inactive</td>
<td>a</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

```
Dell#
```

### Example (Brief)

```
Dell# show vlan brief
VLAN Name STG MAC Aging IP Address
--- ------------------------------
  1         0   0         unassigned
  2         0   0         unassigned
 20        0   0         unassigned
1002      0   0         unassigned
```

```
Dell#
```

### Example (Name)

```
Dell(conf)# interface vlan 222
Dell(conf-if-vl-222)# name test
Dell(conf-if-vl-222)# do show vlan name test
```

Codes: * - Default VLAN, G - GVRP VLANs
Q: U - Untagged, T - Tagged
x - Dot1x untagged, X - Dot1x tagged
G - GVRP tagged, M - Vlan-stack

<table>
<thead>
<tr>
<th>NUM</th>
<th>Status</th>
<th>Description</th>
<th>Q</th>
<th>Ports</th>
</tr>
</thead>
<tbody>
<tr>
<td>222</td>
<td>Inactive</td>
<td>U Gi 1/22</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

```
Dell(conf-if-vl-222)#
```

### Related Commands
- `vlan-stack compatible` — enables the Stackable VLAN feature on the selected VLAN.
- `interface vlan` — configures a VLAN.

### tagged

Add a Layer 2 interface to a VLAN as a tagged interface.

**Syntax**

```
tagged interface
```

To remove a tagged interface from a VLAN, use the `no tagged interface` command.

**Parameters**

- `interface`

  Enter the following keywords and slot/port or number information:

  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
Defaults

All interfaces in Layer 2 mode are untagged.

Command Modes

INTERFACE VLAN

Supported Modes

Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

When you use the no tagged command, the interface is automatically placed in the Default VLAN as an untagged interface unless the interface is a member of another VLAN. If the interface belongs to several VLANs, remove it from all VLANs to change it to an untagged interface.

Tagged interfaces can belong to multiple VLANs, while untagged interfaces can only belong to one VLAN at a time.

Related Commands

interface vlan — configures a VLAN.

untagged — specifies which interfaces in a VLAN are untagged.

track ip

Track the Layer 3 operational state of a Layer 3 VLAN, using a subset of the VLAN member interfaces.

Syntax

track ip interface

To remove the tracking feature from the VLAN, use the no track ip interface command.

Parameters

- **interface**

  Enter the following keywords and slot/port or number information:

  - For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

Defaults

Not configured.

Command Modes

INTERFACE VLAN

Supported Modes

Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

When this command is configured, the VLAN is operationally UP if any of the interfaces specified in the track ip command are operationally UP, and the VLAN is operationally DOWN if none of the tracking interfaces are operationally UP.
If the track ip command is not configured, the VLAN's Layer 3 operational state depends on all the members of the VLAN.

The Layer 2 state of the VLAN, and hence the Layer 2 traffic, is not affected by the track ip command configuration.

Related Commands

interface vlan — configures a VLAN.

tagged — specifies which interfaces in a VLAN are tagged.

untagged

Add a Layer 2 interface to a VLAN as an untagged interface.

Syntax

untagged interface

To remove an untagged interface from a VLAN, use the no untagged interface command.

Parameters

interface

Enter the following keywords and slot/port or number information:

- For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

Defaults

All interfaces in Layer 2 mode are untagged.

Command Modes

INTERFACE VLAN

Supported Modes

Full-Switch

Command History

Version Description

9.9(0.0) Introduced on the FN IOM.

8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

Untagged interfaces can only belong to one VLAN.

In the Default VLAN, you cannot use the no untagged interface command. To remove an untagged interface from all VLANs, including the Default VLAN, enter INTERFACE mode and use the no switchport command.

Related Commands

interface vlan — configures a VLAN.

tagged — specifies which interfaces in a VLAN are tagged.
The link layer discovery protocol (LLDP) advertises connectivity and management from the local station to the adjacent stations on an IEEE 802 LAN. LLDP facilitates multi-vendor interoperability by using standard management tools to discover and make available a physical topology for network management. The Dell Networking OS implementation of LLDP is based on IEEE standard 801.1ab. This chapter describes the LLDP commands.

The starting point for using LLDP is invoking LLDP with the `protocol lldp` command in either CONFIGURATION or INTERFACE mode.

The information LLDP distributes is stored by its recipients in a standard management information base (MIB). You can access the information by a network management system through a management protocol such as simple network management protocol (SNMP).

For details about implementing LLDP/LLDP-MED, refer to the Link Layer Discovery Protocol chapter of the Dell PowerEdge FN I/O Aggregator Configuration Guide.

### advertise dot1-tlv

Advertise dot1 TLVs (Type, Length, Value).

**Syntax**

```
advertise dot1-tlv {port-protocol-vlan-id | port-vlan-id | vlan-name}
```

To remove advertised dot1-tlv, use the `no advertise dot1-tlv {port-protocol-vlan-id | port-vlan-id | vlan-name}` command.
Parameters

- **port-protocol-vlan-id**: Enter the keywords `port-protocol-vlan-id` to advertise the port protocol VLAN identification TLV.
- **port-vlan-id**: Enter the keywords `port-vlan-id` to advertise the port VLAN identification TLV.
- **vlan-name**: Enter the keywords `vlan-name` to advertise the vlan-name TLV.

Defaults

Disabled.

Command Modes

- **CONFIGURATION (conf-lldp)** and **INTERFACE (conf-if-interface-lldp)**

Supported Modes

- Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>

<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Related Commands

- **protocol lldp (Configuration)** — enables LLDP globally.
- **debug lldp interface** — debugs LLDP.
- **show lldp neighbors** — displays the LLDP neighbors.
- **show running-config lldp** — displays the LLDP running configuration.

### advertise dot3-tlv

Advertise dot3 TLVs (Type, Length, Value).

**Syntax**

```plaintext
advertise dot3-tlv {max-frame-size}
```

To remove advertised dot3-tlv, use the `no advertise dot3-tlv {max-frame-size}` command.

**Parameters**

- **max-frame-size**: Enter the keywords `max-frame-size` to advertise the dot3 maximum frame size.

**Defaults**

None

**Command Modes**

- **CONFIGURATION (conf-lldp)** and **INTERFACE (conf-if-interface-lldp)**

**Supported Modes**

- Programmable-Mux (PMUX)
- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>

</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>
advertise interface-port-desc

Advertise port descriptor.

**Syntax**

advertise interface-port-desc {description | port-id}

To remove the advertised port descriptor, use the no advertise interface-port-desc {description | port-id} command.

**Parameters**

- **description**
  - Enter the keyword description then the interface description.
- **port-id**
  - Enter the keyword port-id then the port-id. The range is from 0 to 7.

**Defaults**

None

**Command Modes**

- CONFIGURATION (conf-lldp)
- INTERFACE (conf-if-interface-lldp)

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell EMC Networking OS Command Line Reference Guide.

**Version**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.11(2.0P1)</td>
<td>Introduced the description and port-id options.</td>
</tr>
</tbody>
</table>

**Usage Information**

If you do not specify the option, by default the port-id takes higher precedence and sends the port-id in the LLDP packets.

advertise management-tlv

Advertise management TLVs (Type, Length, Value).

**Syntax**

advertise management-tlv {system-capabilities | system-description | system-name}

To remove advertised management TLVs, use the no advertise management-tlv {system-capabilities | system-description | system-name} command.

**Parameters**

- **system-capabilities**
  - Enter the keywords system-capabilities to advertise the system capabilities TLVs to the LLDP peer.
- **system-description**
  - Enter the keywords system-description to advertise the system description TLVs to the LLDP peer.
- **system-name**
  - Enter the keywords system-name to advertise the system name TLVs to the LLDP peer.

**Defaults**

none

**Command Modes**

- CONFIGURATION (conf-lldp)
Supported Modes
Programmable-Mux (PMUX)

</tbody>
</table>

**clear lldp neighbors**

Clear LLDP neighbor information for all interfaces or a specific interface.

**Syntax**
clear lldp neighbors {interface}

**Parameters**

<table>
<thead>
<tr>
<th>parameter</th>
</tr>
</thead>
<tbody>
<tr>
<td>interface</td>
</tr>
</tbody>
</table>

- Enter the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

**Defaults**
none
debug lldp interface

Enable LLDP debugging to display timer events, neighbor additions or deletions, and other information about incoming and outgoing packets.

Syntax

debug lldp interface {interface | all}{events | packet {brief | detail} {tx | rx | both}}

To disable debugging, use the no debug lldp interface {interface | all}{events} {packet {brief | detail} {tx | rx | both}} command.

Parameters

- interface
  - Enter the following keywords and slot/port or number information:
    - For a 10-Gigabit Ethernet interface, enter the keyword tenGigabitEthernet followed by the slot/port information.
- all
  - (OPTIONAL) Enter the keyword all to display information on all interfaces.
- events
  - (OPTIONAL) Enter the keyword events to display major events such as timer events.
- packet
  - (OPTIONAL) Enter the keyword packet to display information regarding packets coming in or going out.
- brief
  - (OPTIONAL) Enter the keyword brief to display brief packet information.
- detail
  - (OPTIONAL) Enter the keyword detail to display detailed packet information.
- tx
  - (OPTIONAL) Enter the keyword tx to display transmit-only packet information.
- rx
  - (OPTIONAL) Enter the keyword rx to display receive-only packet information.
- both
  - (OPTIONAL) Enter the keyword both to display both receive and transmit packet information.

Defaults

- none

Related Commands

hello

Configure the rate at which the LLDP control packets are sent to its peer.

Syntax

hello seconds

To revert to the default, use the no hello seconds command.

Parameters

seconds

Enter the rate, in seconds, at which the control packets are sent to its peer. The rate is from 5 to 180 seconds. The default is 30 seconds.

Defaults

30 seconds

## mode

To receive or transmit, set LLDP.

**Syntax**

```plaintext
mode {tx | rx}
```

To return to the default, use the `no mode {tx | rx}` command.

**Parameters**

- **tx**
  - Enter the keyword `tx` to set the mode to transmit.

- **rx**
  - Enter the keyword `rx` to set the mode to receive.

**Defaults**

Both `transmit` and `receive`.

**Command Modes**

- `CONFIGURATION (conf-lldp)` and `INTERFACE (conf-if-interface-lldp)`

**Supported Modes**

- Full-Switch

**Command History**

- **Version**
  - **9.9(0.0)**: Introduced on the FN IOM.
  - **9.2(0.0)**: Introduced on the M I/O Aggregator.
  - **8.3.16.1**: Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `protocol lldp (Configuration)` — enables LLDP globally.
- `show lldp neighbors` — displays the LLDP neighbors.

## multiplier

Set the number of consecutive misses before LLDP declares the interface dead.

**Syntax**

```plaintext
multiplier integer
```

To return to the default, use the `no multiplier integer` command.

**Parameters**

- **integer**
  - Enter the number of consecutive misses before the LLDP declares the interface dead.
  - The range is from 2 to 10.

**Defaults**

4 x `hello`

**Command Modes**

- `CONFIGURATION (conf-lldp)` and `INTERFACE (conf-if-interface-lldp)`

**Supported Modes**

- Programmable-Mux (PMUX)
- Full-Switch
protocol lldp (Configuration)

Enable LLDP globally on the switch.

**Syntax**

```
protocol lldp
```

To disable LLDP globally on the chassis, use the `no protocol lldp` command.

**Defaults**

Enabled.

**Command Modes**

CONFIGURATION (conf-lldp)

**Supported Modes**

All Modes

**Command History**

<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command is available only in PMUX mode.

By default, protocol lldp is enabled. To disable, use the `no protocol lldp` command.

---

**protocol lldp (Interface)**

Enter the LLDP protocol in the INTERFACE mode.

**Syntax**

```
[no] protocol lldp
```

To return to the global LLDP configuration mode, use the `no protocol lldp` command from Interface mode.

**Defaults**

Enabled

**Command Modes**

INTERFACE (conf-if-interface-lldp)

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>

<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command is available only in PMUX mode.

By default, protocol lldp is enabled. To disable, use the `no protocol lldp` command.
When you enter the LLDP protocol in the Interface context, it overrides global configurations. When you execute the no protocol lldp from INTERFACE mode, interfaces begin to inherit the configuration from global LLDP CONFIGURATION mode.

**show lldp neighbors**

Display LLDP neighbor information for all interfaces or a specified interface.

**Syntax**

```
show lldp neighbors [interface] [detail]
```

**Parameters**

- `interface` (OPTIONAL) Enter the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `tenGigabitEthernet` then the slot/port information.

- `detail` (OPTIONAL) Enter the keyword `detail` to display all the TLV information, timers, and LLDP tx and rx counters.

**Defaults**

none

**Command Modes**

EXEC Privilege

**Supported Modes**

All Modes

**Command History**

- **Version 9.9(0.0)**
  - Introduced on the FN IOM.

- **Version 9.4(0.0)**
  - Supported on the FN I/O Aggregator.

**Usage Information**

Omitting the keyword `detail` displays only the remote chassis ID, Port ID, and host name.

**Example**

```
Dell (conf-if-te-0/3)#do show lldp neighbors
Loc PortID  Rem Host Name  Rem Port Id           Rem Chassis Id
--------------------------------------------------------------------
Te 0/1     FTOS        TenGigabitEthernet 0/5  00:01:e8:05:40:46
Te 0/2     FTOS        TenGigabitEthernet 0/6  00:01:e8:05:40:46
Te 0/3     FTOS        TenGigabitEthernet 0/7  00:01:e8:05:40:46
Dell (conf-if-te-0/3)#
```

**show lldp statistics**

Displays the LLDP statistical information.

**Syntax**

```
show lldp statistics
```

**Defaults**

none

**Command Modes**

EXEC Privilege

**Supported Modes**

All Modes

**Command History**

- **Version 9.9(0.0)**
  - Introduced on the FN IOM.

**Usage Information**

```
Dell (conf-if-te-0/3)#

**show running-config lldp**

Display the current global LLDP configuration.

**Syntax**

```
show running-config lldp
```

**Defaults**

none

**Command Modes**

EXEC Privilege

**Supported Modes**

Full-Switch

**Command History**

- 9.9(0.0) Introduced on the FN IOM.
- Version 8.3.16.1 Introduced on the Mxl 10/40GbE Switch IO Module.

**Example**

Dell#show running-config lldp

```
! protocol lldp
   advertise dot1-tlv port-protocol-vlan-id port-vlan-id
   advertise dot3-tlv max-frame-size
   advertise management-tlv system-capabilities system-description
   hello 15
   multiplier 3
   no disable
```

Dell#

**LLDP-MED Commands**

The following are the LLDP-MED (Media Endpoint Discovery) commands. The LLDP-MED commands are an extension of the set of LLDP TLV advertisement commands.

As defined by ANSI/TIA-1057, LLDP-MED provides organizationally specific TLVs (Type Length Value), so that endpoint devices and network connectivity devices can advertise their characteristics and configuration information. The Organizational Unique Identifier (OUI) for the Telecommunications Industry Association (TIA) is 00-12-BB.

- LLDP-MED Endpoint Device — any device that is on an IEEE 802 LAN network edge, can communicate using IP, and uses the LLDP-MED framework.
- LLDP-MED Network Connectivity Device — any device that provides access to an IEEE 802 LAN to an LLDP-MED endpoint device, and supports IEEE 802.1AB (LLDP) and TIA-1057 (LLDP-MED). The Dell Networking system is an LLDP-MED network connectivity device.
Regarding connected endpoint devices, LLDP-MED provides network connectivity devices with the ability to:

- manage inventory
- manage Power over Ethernet (POE)
- identify physical location
- identify network policy

**advertise med guest-voice**

To advertise a separate limited voice service for a guest user with their own IP telephony handset or other appliances that support interactive voice services, configure the system.

**Syntax**

```
advertise med guest-voice {vlan-id layer2_priority DSCP_value} | {priority-tagged number}
```

To return to the default, use the `no advertise med guest-voice {vlan-id layer2_priority DSCP_value} | {priority-tagged number}` command.

**Parameters**

- **vlan-id**
  - Enter the VLAN ID. The range is from 1 to 4094.
- **layer2_priority**
  - Enter the Layer 2 priority. The range is from 0 to 7.
- **DSCP_value**
  - Enter the DSCP value. The range is from 0 to 63.
- **priority-tagged number**
  - Enter the keywords `priority-tagged` followed the Layer 2 priority. The range is from 0 to 7.

**Defaults**

Unconfigured.

**Command Modes**

- CONFIGURATION (conf-lldp)

**Supported Modes**

- Full-Switch

**Command History**

- 9.9(0.0) Introduced on the FN IOM.
- Version 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `protocol lldp (Configuration)` — enables LLDP globally.
- `debug lldp interface` — debugs LLDP.
- `show lldp neighbors` — displays the LLDP neighbors.
- `show running-config lldp` — displays the LLDP running configuration.

**advertise med guest-voice-signaling**

To advertise a separate limited voice service for a guest user when the guest voice control packets use a separate network policy than the voice data, configure the system.

**Syntax**

```
advertise med guest-voice-signaling {vlan-id layer2_priority DSCP_value} | {priority-tagged number}
```

**Related Commands**

- `protocol lldp (Configuration)` — enables LLDP globally.
To return to the default, use the `no advertise med guest-voice-signaling {vlan-id layer2_priority DSCP_value} | {priority-tagged number}` command.

**Parameters**

- `vlan-id` Enter the VLAN ID. The range is from 1 to 4094.
- `layer2_priority` Enter the Layer 2 priority. The range is from 0 to 7.
- `DSCP_value` Enter the DSCP value. The range is from 0 to 63.
- `priority-tagged number` Enter the keywords `priority-tagged` then the Layer 2 priority. The range is from 0 to 7.

**Defaults**

unconfigured.

**Command Modes**

CONFIGURATION (conf-lldp)

**Supported Modes**

Full-Switch

**Command History**

- **9.9(0.0)** Introduced on the FN IOM.
- **Version 8.3.16.1** Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**

- `debug lldp interface` — debugs LLDP.
- `show lldp neighbors` — displays the LLDP neighbors.
- `show running-config lldp` — displays the LLDP running configuration.

---

**advertise med location-identification**

To advertise a location identifier, configure the system.

**Syntax**

```
advertise med location-identification {coordinate-based value | civic-based value | ecs-elin value}
```

To return to the default, use the `no advertise med location-identification {coordinate-based value | civic-based value | ecs-elin value}` command.

**Parameters**

- `coordinate-based value` Enter the keywords `coordinate-based` then the coordinated based location in hexadecimal value of 16 bytes.
- `civic-based value` Enter the keywords `civic-based` then the civic based location in hexadecimal format. The range is from 6 to 255 bytes.
- `ecs-elin value` Enter the keywords `ecs-elin` then the Emergency Call Service (ecs) Emergency Location Identification Number (elin) numeric location string. The range is from 10 to 25 characters.

**Defaults**

unconfigured.

**Command Modes**

CONFIGURATION (conf-lldp)

**Supported Modes**

Full-Switch

**Command History**

- **9.9(0.0)** Introduced on the FN IOM.
advertise med power-via-mdi

To advertise the Extended Power via MDI TLV, configure the system.

Syntax
advertise med power-via-mdi

To return to the default, use the no advertise med power-via-mdi command.

Defaults
unconfigured.

Command Modes
CONFIGURATION (conf-lldp)

Usage Information
Advertise the Extended Power via MDI on all ports that are connected to an 802.3af powered, LLDP-MED endpoint device.

Related Commands
debug lldp interface — debugs LLDP.
show lldp neighbors — displays the LLDP neighbors.
show running-config lldp — displays the LLDP running configuration.

advertise med softphone-voice

To advertise softphone to enable IP telephony on a computer so that the computer can be used as a phone, configure the system.

Syntax
advertise med softphone-voice {vlan-id} | {priority-tagged number}

To return to the default, use the no advertise med softphone-voice {vlan-id} | {priority-tagged number} command.

Parameters
vlan-id
Enter the VLAN ID. The range is from 1 to 4094.
advertise med streaming-video

To advertise streaming video services for broadcast or multicast-based video, configure the system. This command does not include video applications that rely on TCP buffering.

Syntax
advertise med streaming-video {vlan-id} | {priority-tagged number}
To return to the default, use the no advertise med streaming-video {vlan-id} | {priority-tagged number} command.

Parameters
- **vlan-id**: Enter the VLAN ID. The range is from 1 to 4094.
- **priority-tagged number**: Enter the keywords priority-tagged then the Layer 2 priority. The range is from 0 to 7.

Defaults
unconfigured.

Command Modes
CONFIGURATION (conf-lldp)

Supported Modes

advertise med video-conferencing

To advertise dedicated video conferencing and other similar appliances that support real-time interactive video, configure the system.

Syntax
advertise med video-conferencing {vlan-id} | {priority-tagged number}

To return to the default, use the no advertise med video-conferencing {vlan-id} | {priority-tagged number} command.

Parameters
- vlan-id: Enter the VLAN ID. The range is from 1 to 4094.
- priority-tagged number: Enter the keywords priority-tagged then the Layer 2 priority. The range is from 0 to 7.

Defaults
unconfigured.

Command Modes
CONFIGURATION (conf-lldp)

Supported Modes

advertise med voice-signaling

To advertise when voice control packets use a separate network policy than voice data, configure the system.

Syntax
advertise med voice-signaling {vlan-id} | {priority-tagged number}

To return to the default, use the no advertise med voice-signaling {vlan-id} | {priority-tagged number} command.

Parameters
- vlan-id: Enter the VLAN ID. The range is from 1 to 4094.
- priority-tagged number: Enter the keywords priority-tagged then the Layer 2 priority. The range is from 0 to 7.

Defaults
unconfigured.

Microsoft Network Load Balancing

Network Load Balancing (NLB) is a clustering functionality that is implemented by Microsoft on Windows 2000 Server and Windows Server 2003 operating systems. NLB uses a distributed methodology or pattern to equally split and balance the network traffic load across a set of servers that are part of the cluster or group. NLB combines the servers into a single multicast group and attempts to use the standard multicast IP or unicast IP addresses, and MAC addresses for the transmission of network traffic. At the same time, it also uses a single virtual IP address for all clients as the destination IP address, which enables servers to join the same multicast group in a way that is transparent to the clients (the clients do not notice the addition of new servers to the group). The clients use a cluster IP address to connect to the server. The NLB functionality enables flooding of traffic over the VLAN ports (for unicast mode) or a subset of ports in a VLAN (for multicast mode) to avoid overloading and effective performance of the servers for optimal processing of data packets. The maximum NLB entry limit from 8 to 11 is increased and support for more CAM-ACL to increase.

NLB functions in two modes, namely unicast mode and multicast mode. The cluster IP address and the associated cluster MAC address are configured in the NLB application running on the Windows Server. In the unicast mode, when the server IP address is attempted to be resolved to the MAC address using the ARP application, the switch determines whether the ARP reply, obtained from the server, is of an NLB type. The switch then maps the IP address (cluster IP) with the MAC address (cluster MAC address). In multicast mode, the cluster IP address is mapped to a cluster multicast MAC address that is configured using a static ARP CLI configuration command. After the NLB entry is learned, the traffic is forwarded to all the servers in the VLAN corresponding to the cluster virtual IP address.

### NLB Unicast Mode Scenario

Consider a sample topology in which four servers, namely S1 through S4, are configured as a cluster or a farm. This set of servers is connected to a Layer 3 switch, which in turn is connected to the end-clients. The servers contain a single IP address (IP-cluster address of 172.16.2.20) and a single unicast MAC address (MAC-Cluster address of 00-bf-ac-10-00-01) for load-balancing. Because multiple ports of a switch cannot learn a single MAC address, the servers are assigned with MAC addresseses of MAC-s1 to MAC-s4 respectively on S1 through S4 in addition to the MAC cluster address. All the servers of the cluster belong to the VLAN named VLAN1.

In unicast NLB mode, the following sequence of events occurs:

- The switch sends an ARP request to resolve the IP address to the cluster MAC address.
- The ARP servers send an ARP response with the MAC cluster address in the ARP header and a MAC address of MAC-s1/s2/s3/s4 (for servers S1 through S4) in the Ethernet header.
- The switch associates the IP address with the MAC cluster address with the last ARP response it obtains. Assume that in this case, the last ARP reply is obtained from MAC-s4,(assuming that the ARP response with MAC-s4 is received as the last one). The interface associated with server, S4, is added to the ARP table.
- With NLB feature enabled, after learning the NLB ARP entry, all the subsequent traffic is flooded on all ports in VLAN1.

With NLB, the data frame is forwarded to all the servers for them to perform load-balancing.

### NLB Multicast Mode Scenario

Consider a sample topology in which four servers, namely S1 through S4, are configured as a cluster or a farm. This set of servers is connected to a Layer 3 switch, which in turn is connected to the end-clients. They contain a single multicast MAC address (MAC-Cluster: 03-00-5E-11-11-11).

In the multicast NLB mode, a static ARP configuration command is configured to associate the cluster IP address with a multicast cluster MAC address.
With multicast NLB mode, the data is forwarded to all the servers based on the port specified using the Layer 2 multicast command, which is the `mac-address-table static multicast <multicast_mac> multicast vlan <vlan_id> output-range <port1>, <port2>` command in CONFIGURATION mode.

**Limitations With Enabling NLB on Switches**

The following limitations apply to switches on which you configure NLB:

- The NLB unicast mode uses switch flooding to transmit all packets to all the servers that are part of the VLAN. When a large volume of traffic is processed, the clustering performance might be impacted in a small way. This limitation is applicable to switches that perform unicast flooding in the software.
- The `ip vlan-flooding` command applies globally across the system and for all VLANs. In cases where the NLB is applicable and the ARP replies contain a discrepancy in the Ethernet SHA and ARP header SHA frames, a flooding of packets over the relevant VLAN occurs.
- The maximum number of concurrent clusters that is supported is 128.

**Benefits and Working of Microsoft Clustering**

Microsoft clustering allows multiple servers using Microsoft Windows to be represented by one MAC address and IP address in order to provide transparent failover or balancing. Dell Networking OS does not recognize server clusters by default; it must be configured to do so. When an ARP request is sent to a server cluster, either the active server or all the servers send a reply, depending on the cluster configuration. If the active server sends a reply, the Dell switch learns the active server’s MAC address. If all servers reply, the switch registers only the last received ARP reply, and the switch learns one server’s actual MAC address; the virtual MAC address is never learned. Because the virtual MAC address is never learned, traffic is forwarded to only one server rather than the entire cluster, and failover and balancing are not preserved.

To preserve failover and balancing, the switch forwards the traffic destined for the server cluster to all member ports in the VLAN connected to the cluster. To ensure that this happens, you must configure the `ip vlan-flooding` command on the Dell switch at the time that the Microsoft cluster is configured. The server MAC address is given in the Ethernet frame header of the ARP reply, while the virtual MAC address representing the cluster is given in the payload. Then, all the traffic destined for the cluster is flooded out of all member ports. Since all the servers in the cluster receive traffic, failover and balancing are preserved.

**Enable and Disable VLAN Flooding**

- The older ARP entries are overwritten whenever newer NLB entries are learned.
- All ARP entries, learned after the feature is enabled, are deleted when the feature is disabled, and RP2 triggers an ARP resolution. The feature is disabled with the `no ip vlan-flooding` command.
- When a port is added to the VLAN, the port automatically receives traffic if the feature is enabled. Old ARP entries are not deleted or updated.
- When a member port is deleted, its ARP entries are also deleted from the CAM.
- Port channels in the VLAN also receive traffic.
- There is no impact on the configuration from saving the configuration.
- The feature, if enabled, is displayed in the `show running-config` command output that displays the `ip vlan-flooding` CLI configuration. Apart from it, there is no indication of the enabling of this capability.

**Topics:**

Microsoft Network Load Balancing
mac-address-table static (for Multicast MAC Address)

For multicast mode of network load balancing (NLB), configure a static multicast MAC address, associate the multicast MAC address with the VLAN used to switch Layer 2 multicast traffic, and add output ports that will receive multicast streams on the VLAN. To delete a configured static multicast MAC address from the MAC address table on the router, enter the no mac-address-table static multicast-mac-address command.

Syntax

mac-address-table static multicast-mac-address multicast vlan vlan-id range- output {single-interface | interface-list | interface-range}

To remove a MAC address, use the no mac-address-table static multicast-mac-address output interface vlan vlan-id command.

Parameters

- **multicast-mac-address**: Enter the 48-bit hexadecimal address in nn:nn:nn:nn:nn:nn format.
- **multicast**: Enter a vlan port to where L2 multicast MAC traffic is forwarded.
- **NOTE**: Use this option if you want multicast functionality in an L2 VLAN without IGMP protocols.
- **output interface**: For a multicast MAC address, enter the keyword output then one of the following interfaces for which traffic is forwarded:
  - For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- **output-range interface**: For a multicast MAC address, enter the keyword output-range then one of the following interfaces to indicate a range of ports for which traffic is forwarded:
  - For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- **vlan vlan-id**: Enter the keyword vlan then a VLAN ID number from 1 to 4094.

Defaults

Not configured.

Default  Disabled

Usage Information  By default this command is disabled. There might be some ARP table entries which are resolved through ARP packets which had Ethernet MAC SA different from MAC information inside the ARP packet. This unicast data traffic flooding occurs only for those packets which use these ARP entries.
Multicast Source Discovery Protocol (MSDP)

Multicast source discovery protocol (MSDP) connects multiple PIM Sparse-Mode (PIM-SM) domains together. MSDP peers connect using TCP port 639. Peers send keepalives every 60 seconds. A peer connection is reset after 75 seconds if no MSDP packets are received. MSDP connections are parallel with MBGP connections.

Topics:
- clear ip msdp peer
- clear ip msdp sa-cache
- clear ip msdp statistic
- debug ip msdp
- ip msdp cache-rejected-sa
- ip msdp default-peer
- ip msdp log-adjacency-changes
- ip msdp mesh-group

**clear ip msdp sa-cache**

Clears the entire source-active cache, the source-active entries of a particular multicast group, rejected, or local source-active entries.

**Syntax**
```
clear ip msdp sa-cache [group-address | rejected-sa | local]
```

**Parameters**
- `group-address`: Enter the group IP address in dotted decimal format (A.B.C.D.).
- `rejected-sa`: Enter the keywords `rejected-sa` to clear the cache source-active entries that are rejected because the RPF check failed, an SA filter or limit is configured, the RP or MSDP peer is unreachable, or because of a format error.
- `local`: Enter the keyword `local` to clear out local PIM advertised entries. It applies the redistribute filter (if present) while adding the local PIM SA entries to the SA cache.

**Defaults**
Without any options, this command clears the entire source-active cache.

**Command Modes**
- EXEC Privilege

**Supported Modes**
- Full-Switch

**Command History**
- Introduced on the FN IOM.
- Introduced on the MXL Switch.

**clear ip msdp statistic**

Clears the entire source-active cache, the source-active entries of a particular multicast group, rejected, or local source-active entries.

**Syntax**
```
clear ip msdp sa-cache [group-address | rejected-sa | local]
```

**Parameters**
- `group-address`: Enter the group IP address in dotted decimal format (A.B.C.D.).
- `rejected-sa`: Enter the keyword `rejected-sa` to clear the cache source-active entries that are rejected because the RPF check failed, an SA filter or limit is configured, the RP or MSDP peer is unreachable, or because of a format error.
- `local`: Enter the keyword `local` to clear out local PIM advertised entries. It applies the redistribute filter (if present) while adding the local PIM SA entries to the SA cache.

**Defaults**
Without any options, this command clears the entire source-active cache.

**Command Modes**
- EXEC Privilege

**Supported Modes**
- Full-Switch

**Command History**
- Introduced on the FN IOM.
- Introduced on the MXL Switch.
debug ip msdp

Turn on MSDP debugging.

Syntax  
```
debug ip msdp {event peer address | packet peer address | pim}
```

To turn debugging off, use the `no debug ip msdp {event peer address | packet peer address | pim}` command.

Parameters  
- `event peer address`: Enter the keyword `event` then the peer address in a dotted decimal format (A.B.C.D.).
- `packet peer address`: Enter the keyword `packet` then the peer address in a dotted decimal format (A.B.C.D.).
- `pim`: Enter the keyword `pim` to debug advertisement from PIM.

Defaults  
Not configured.

Command Modes  
EXEC Privilege

Supported Modes  
Full-Switch

</tbody>
</table>

ip msdp cache-rejected-sa

Enable an MSDP cache for the rejected source-active entries.

Syntax  
```
ip msdp cache-rejected-sa {number}
```

To clear the MSDP rejected source-active entries, use the `no ip msdp cache-rejected-sa {number}` command then the `ip msdp cache-rejected-sa {number}` command.

Parameters  
- `number`: Enter the number of rejected SA entries to cache. The range is from 0 to 32766.

Defaults  
none

Related Commands show ip msdp sa-cache rejected-sa — Displays the rejected SAs in the SA cache.

**ip msdp default-peer**

Define a default peer from which to accept all source-active (SA) messages.

**Syntax**

```
ip msdp default-peer peer address [list name]
```

To remove the default peer, use the `no ip msdp default-peer {peer address} list name` command.

**Parameters**

- **peer address** Enter the peer address in a dotted decimal format (A.B.C.D.)
- **list name** Enter the keywords list name and specify a standard access list that contains the RP address that should be treated as the default peer. If no access list is specified, then all SAs from the peer are accepted.

**Defaults**

Not configured.

</tbody>
</table>

**Usage Information**

If a list is not specified, all SA messages received from the default peer are accepted. You can enter multiple default peer commands.

**ip msdp log-adjacency-changes**

Enable logging of MSDP adjacency changes.

**Syntax**

```
ip msdp log-adjacency-changes
```

To disable logging, use the `no ip msdp log-adjacency-changes` command.

**Defaults**

Not configured.

### ip msdp mesh-group

To be a member of a mesh group, configure a peer.

**Syntax**

```plaintext
ip msdp mesh-group {name} {peer address}
```

To remove the peer from a mesh group, use the `no ip msdp mesh-group {name} {peer address}` command.

**Parameters**

- **name**
  - Enter a string of up to 16 characters long for as the mesh group name.

- **peer address**
  - Enter the peer address in a dotted decimal format (A.B.C.D.).

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

An MSDP mesh group is a mechanism for reducing SA flooding, typically in an intra-domain setting. When some subset of a domain's MSDP speakers are fully meshed, they can be configured into a mesh-group. If member X of a mesh-group receives a SA message from an MSDP peer that is also a member of the mesh-group, member X accepts the SA message and forwards it to all of its peers that are not part of the mesh-group. However, member X cannot forward the SA message to other members of the mesh-group.

### ip msdp originator-id

Configure the MSDP Originator ID.

**Syntax**

```plaintext
ip msdp originator-id {interface}
```

To remove the originator-id, use the `no ip msdp originator-id {interface}` command.

**Parameters**

- **interface**
  - Enter the following keywords and slot/port or number information:
    - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
    - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
    - For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.
ip msdp peer

Configure an MSDP peer.

Syntax

```
ip msdp peer peer address [connect-source] [description] [sa-limit number]
```

To remove the MSDP peer, use the no ip msdp peer peer address [connect-source interface] [description name] [sa-limit number] command.

Parameters

- **peer address**: Enter the peer address in a dotted decimal format (A.B.C.D).
- **connect-source**: Enter the keywords `connect-source` then one of the interfaces and slot/port or number information:
  - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.
- **description name**: (OPTIONAL) Enter the keyword `description` then a description name (maximum 80 characters) to designate a description for the MSDP peer.
- **sa-limit number**: (OPTIONAL) Enter the maximum number of SA entries in SA-cache. The range is from 1 to 500000. The default is 500000.

Defaults

As described in the Parameters section.

Command Modes

- **CONFIGURATION**
- **Full-Switch**

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

The `connect-source` option is used to supply a source IP address for the TCP connection. When an interface is specified using the `connect-source` option, the primary configured address on the interface is used.
If the total number of SA messages received from the peer is already larger than the limit when this command is applied, those SA messages continue to be accepted. To enforce the limit in such situation, use the `clear ip msdp peer` command to reset the peer.

**Related Commands**
- `ip msdp sa-limit` — configures the MSDP SA Limit.
- `clear ip msdp peer` — clears the MSDP peer.
- `show ip msdp` — displays the MSDP information.

### ip msdp redistribute

Filter local PIM SA entries in the SA cache. SAs which the ACL denies time out and are not refreshed. Until they time out, they continue to reside in the MSDP SA cache.

**Syntax**

```plaintext
ip msdp redistribute [list acl-name]
```

**Parameters**

- `list acl-name` Enter the name of an extended ACL that contains permitted SAs. If you do not use this option, all local entries are blocked.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Supported Modes**

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

Modifications to the ACL do not have an immediate effect on the sa-cache.

To apply the redistribute filter to entries already present in the SA cache, use the `clear ip msdp sa-cache local` command.

### ip msdp sa-filter

Permit or deny MSDP source active (SA) messages based on multicast source and/or group from the specified peer.

**Syntax**

```plaintext
ip msdp sa-filter {in | out} peer-address list [access-list name]
```

Remove this configuration using the `no ip msdp sa-filter {in | out} peer-address list [access-list name]` command.

**Parameters**

- `in` Enter the keyword `in` to enable incoming SA filtering.
- `out` Enter the keyword `out` to enable outgoing SA filtering.
- `peer-address` Enter the peer address of the MSDP peer in a dotted decimal format (A.B.C.D).
Enter the name of an extended ACL that contains permitted SAs. If you do not use this option, all local entries are blocked.

Defaults
Not configured.

Command Modes

</tbody>
</table>

**ip msdp sa-limit**

Configure the upper limit of source-active (SA) entries in SA-cache.

Syntax
ip msdp sa-limit number
To return to the default, use the no ip msdp sa-limit number command.

Parameters

- **number**
  Enter the maximum number of SA entries in SA-cache. The range is from 0 to 40000.

Defaults
50000

Command Modes
CONFIGURATION

Supported Modes
Full-Switch

Command History

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information
The system counts the SA messages originated by itself and those messages received from the MSDP peers. When the total SA messages reach this limit, the subsequent SA messages are dropped (even if they pass RPF checking and policy checking).

If the total number of SA messages is already larger than the limit when this command is applied, those SA messages that are already in the software continue to be accepted. To enforce the limit in such situation, use the clear ip msdp sa-cache command.

Related Commands
ip msdp peer — configures the MSDP peer.

clear ip msdp peer — clears the MSDP peer.

show ip msdp — displays the MSDP information
ip msdp shutdown

Administratively shut down a configured MSDP peer.

Syntax
ip msdp shutdown {peer address}

Parameters
peer address Enter the peer address in a dotted decimal format (A.B.C.D.).

Defaults
Not configured.

show ip msdp

Display the MSDP peer status, SA cache, or peer summary.

Syntax
show ip msdp {peer peer address | sa-cache | summary}

Parameters
peer peer address Enter the keyword peer then the peer address in a dotted decimal format (A.B.C.D.).
sa-cache Enter the keywords sa-cache to display the Source-Active cache.
summary Enter the keyword summary to display an MSDP peer summary.

Defaults
Not configured.
show ip msdp sa-cache rejected-sa

Display the rejected SAs in the SA cache.

**Syntax**

```
show ip msdp sa-cache rejected-sa
```

**Defaults**

none

**Command Modes**

Multiple Spanning Tree Protocol (MSTP)

Multiple spanning tree protocol (MSTP), as implemented by the Dell Networking Operating System (OS), conforms to IEEE 802.1s.

Topics:
- `debug spanning-tree mstp`
- `description`
- `disable`
- `forward-delay`
- `hello-time`
- `max-age`
- `max-hops`
- `msti`
- `name`
- `protocol spanning-tree mstp`
- `revision`
- `show config`
- `show spanning-tree mst configuration`
- `show spanning-tree msti`
- `spanning-tree`
- `spanning-tree msti`
- `tc-flush-standard`

**debug spanning-tree mstp**

Enable debugging of the multiple spanning tree protocol and view information on the protocol.

**Syntax**
```
debug spanning-tree mstp [all | bpdu interface {in | out} | events]
```

**Parameters**
- `all` (OPTIONAL) Enter the keyword all to debug all spanning tree operations.
- `bpdu interface {in | out}` (OPTIONAL) Enter the keyword bpdu to debug bridge protocol data units (BPDU).
- `interface` (OPTIONAL) Enter the interface keyword along with the type slot/port of the interface you want displayed. Type slot/port options are the following:
  - For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

Optionally, enter an `in` or `out` parameter with the optional interface:
For Receive, enter the keyword **in**.
For Transmit, enter the keyword **out**.

(OPTIONAL) Enter the keyword **events** to debug MSTP events.

**Command Modes**
- EXEC Privilege

**Supported Modes**
- Full-Switch

in Receive (in)
out Transmit (out)
Dell#

---

### description

Enter a description of the multiple spanning tree.

**Syntax**

```
description {description}
```

To remove the description, use the `no description {description}` command.

**Parameters**

- **description**
  - Enter a description to identify the multiple spanning tree (maximum 80 characters).

**Defaults**

none

**Command Modes**
- SPANNING TREE (The prompt is "config-mstp.")

**Supported Modes**
- Full-Switch

### forward-delay

The amount of time the interface waits in the Blocking State and the Learning State before transitioning to the Forwarding State.

Syntax

```
forward-delay seconds
```

To return to the default setting, use the `no forward-delay` command.

Parameters

- `seconds`
Enter the number of seconds the interface waits in the Blocking State and the Learning State before transiting to the Forwarding State. The range is from 4 to 30. The default is 15 seconds.

Defaults

- 15 seconds

Command Modes

- MULTIPLE SPANNING TREE

Related Commands

- `max-age` — changes the wait time before MSTP refreshes protocol configuration information.
**hello-time**

Set the time interval between generation of MSTB bridge protocol data units (BPDUs).

**Syntax**

```
hello-time seconds
```

To return to the default value, use the no hello-time command.

**Parameters**

- **seconds**
  
Enter a number as the time interval between transmission of BPDUs. The range is from 1 to 10. The default is 2 seconds.

**Defaults**

2 seconds

Related Commands

- **edge-port bpdudfilter default** — the amount of time the interface waits in the Blocking State and the Learning State before transitioning to the Forwarding State.

- **hello-time** — changes the time interval between BPDUs.

## max-hops

Configure the maximum hop count.

**Syntax**

```
max-hops number
```

To return to the default values, use the `no max-hops` command.

**Parameters**

- **range**
  - Enter a number for the maximum hop count. The range is from 1 to 40. The default is **20**.

**Defaults**

20 hops

**Command Modes**

MULTIPLE SPANNING TREE

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

The `max-hops` command is a configuration command that applies to both the IST and all MST instances in the MSTP region. The BPDUs sent out by the root switch set the remaining-hops parameter to the configured value of `max-hops`. When a switch receives the BPDU, it decrements the received value of the remaining hops and uses the resulting value as remaining-hops in the BPDUs. If the remaining-hops reach zero, the switch discards the BPDU and ages out any information that it holds for the port.

## msti

Configure multiple spanning tree instance, bridge priority, and one or multiple VLANs mapped to the MST instance.

**Syntax**

```
msti instance {vlan range | bridge-priority priority}
```

To disable mapping or bridge priority, use the `no msti instance {vlan range | bridge-priority priority}` command.

**Parameters**

- **msti instance**
  - Enter the MSTP Instance. The range is from zero (0) to 63.

- **vlan range**
  - Enter the keyword `vlan` then the identifier range value. The range is from 1 to 4094.

- **bridge-priority priority**
  - Enter the keywords `bridge-priority` then a value in increments of 4096 as the bridge priority. The range is from zero (0) to 61440. Valid priority values are: 0, 4096, 8192, 12288, 16384, 20480, 24576, 28672, 32768, 36864, 40960, 45056, 49152, 53248, 57344, and 61440. All other values are rejected.

**Defaults**

default bridge-priority is **32768**.
**Command Modes**

INTERFACE

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

By default, all VLANs are mapped to MST instance zero (0) unless you use the `vlan range` command to map it to a non-zero instance.

Although MSTP instance IDs range from 0 to 4094, only 64 active instances are supported on the switch.

### name

The name you assign to the multiple spanning tree region.

**Syntax**

```
name region-name
```

To remove the region name, use the `no name` command.

**Parameters**

- `region-name` Enter the MST region name. The range is 32 character limit.

**Defaults**

no default name.

**Command Modes**

MULTIPLE SPANNING TREE

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

For two MSTP switches to be within the same MSTP region, the switches must share the same region name (including matching case).

**Related Commands**

- `msti` — maps the VLAN(s) to an MST instance.
- `revision` — assigns the revision number to the MST configuration.

### protocol spanning-tree mstp

To enable and configure the multiple spanning tree group, enter MULTIPLE SPANNING TREE mode.

**Syntax**

```
protocol spanning-tree mstp
```

To disable the multiple spanning tree group, use the `no protocol spanning-tree mstp` command.

**Defaults**

Not configured.

<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

MSTP is not enabled when you enter MULTIPLE SPANNING TREE mode. To enable MSTP globally on the switch, enter the `no disable` command while in MULTIPLE SPANNING TREE mode.

For more information about the multiple spanning tree protocol, refer to the Dell Networking OS Configuration Guide.

**Example**

```
Dell(conf)#protocol spanning-tree mstp
Dell(config-mstp)#no disable
```

**Related Commands**

- `disable` — disables multiple spanning tree.

---

**revision**

The revision number for the multiple spanning tree configuration.

**Syntax**

```
revision range
```

To return to the default values, use the `no revision` command.

**Parameters**

- `range` Enter the revision number for the MST configuration. The range is from 0 to 65535. The default is 0.

**Defaults**

0

**Command Modes**

- MULTIPLE SPANNING TREE

**Supported Modes**

- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

For two MSTP switches to be within the same MST region, the switches must share the same revision number.

**Related Commands**

- `msti` — maps the VLAN(s) to an MST instance.
- `name` — assigns the region name to the MST region.

---

**show config**

View the current configuration for the mode. Only non-default values are shown.

**Syntax**

```
show config
```
**Multiple Spanning Tree Protocol (MSTP)**

---

### Command Modes
- **MULTIPLE SPANNING TREE**

**Usage Information**

Enable the multiple spanning tree protocol prior to using this command.

**Example**
```
Dell#show spanning-tree mst configuration
MST region name: CustomerSvc
Revision: 2
  MSTI VID
  10 101-105
Dell#
```

---

**show spanning-tree msti**

View the multiple spanning tree instance.

**Syntax**
```
show spanning-tree msti [instance-number [brief]] [guard]
```

**Parameters**
- **instance-number** (Optional) Enter the multiple spanning tree instance number. The range is from 0 to 63.
- **brief** (Optional) Enter the keyword `brief` to view a synopsis of the MST instance.
(Optional) Enter the keyword **guard** to display the type of guard enabled on an MSTP interface and the current port state.

**Command Modes**
- EXEC
- EXEC Privilege

**Supported Modes**

**spanning-tree**

Enable the multiple spanning tree protocol on the interface.

**Syntax**

`spanning-tree`

To disable the multiple spanning tree protocol on the interface, use the `no spanning-tree` command.
spanning-tree

Enter the keywords spanning-tree to enable the MSTP on the interface.

Parameters

- **spanning-tree**: Enter the keywords spanning-tree to enable the MSTP on the interface.

**Defaults**

- Enable.

**Command Modes**

**spanning-tree msti**

Configure multiple spanning tree instance cost and priority for an interface.

**Syntax**

```
spanning-tree msti instance {cost cost | priority priority}
```

**Parameters**

- **msti instance**: Enter the keyword msti and the MST instance number. The range is from zero (0) to 63.
- **cost cost**: (OPTIONAL) Enter the keyword cost then the port cost value. The range is from 1 to 200000. The defaults are:
  - 10-Gigabit Ethernet interface = 2000
  - Port Channel interface with one 10 Gigabit Ethernet = 2000
  - Port Channel with two 10 Gigabit Ethernet = 1800
  - Port Channel with two 100 Mbps Ethernet = 180000
- **priority priority**: Enter keyword priority then a value in increments of 16 as the priority. The range is from 0 to 240. The default is 128.

**Defaults**

- cost = depends on the interface type
- priority = 128

**Command Modes**

</tbody>
</table>
spanning-tree mstp

Configures a Layer 2 MSTP interface as an edge port with (optionally) a bridge protocol data unit (BPDU) guard, or enables the root guard or loop guard feature on the interface.

Syntax

spanning-tree mstp {edge-port [bpduguard [shutdown-on-violation]] | bpdufilter| rootguard}

Parameters

- edge-port: Enter the keywords edge-port to configure the interface as a multiple spanning tree edge port.
- bpduguard: (OPTIONAL) Enter the keyword portfast to enable Portfast to move the interface into forwarding mode immediately after the root fails. Enter the keyword bpduguard to disable the port when it receives a BPDU.
- bpdufilter: (OPTIONAL) Enter the keyword edgeport to enable edge port configuration to move the interface into forwarding mode immediately after the root fails. Enter the keyword bpdufilter to stop sending and receiving BPDUs on the port-fast enabled ports.
- shutdown-on-violation: (OPTIONAL) Enter the keywords shutdown-on-violation to hardware disable an interface when a BPDU is received and the port is disabled.
- rootguard: Enter the keyword rootguard to enable root guard on an MSTP port or port-channel interface.

Command Modes

INTERFACE

Supported Modes

Full-Switch

Command History

Version Description
9.9(0.0) Introduced on the FN IOM.
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

On an MSTP switch, a port configured as an edge port immediately transitions to the forwarding state. Only ports connected to end-hosts should be configured as an edge port. Consider an edge port similar to a port with spanning-tree portfast enabled.

Root guard and loop guard cannot be enabled at the same time on a port. For example, if you configure loop guard on a port on which root guard is already configured, the following error message is displayed:

% Error: RootGuard is configured. Cannot configure LoopGuard.

When used in an MSTP network, if root guard blocks a boundary port in the CIST, the port is also blocked in all other MST instances.

Enabling Portfast BPDU guard and loop guard at the same time on a port results in a port that remains in a blocking state and prevents traffic from flowing through it. For example, when Portfast BPDU guard and loop guard are both configured:

- If a BPDU is received from a remote device, BPDU guard places the port in an err-disabled blocking state and no traffic is forwarded on the port.
- If no BPDU is received from a remote device, loop guard places the port in a loop-inconsistent blocking state and no traffic is forwarded on the port.
tc-flush-standard

Enable the MAC address flushing after receiving every topology change notification.

Syntax

```
tc-flush-standard
```

To disable, use the `no tc-flush-standard` command.

Defaults

Disabled.

Command Modes

CONFIGURATION

Supported Modes

Full-Switch

Command History

<table>
<thead>
<tr>

<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

By default, the system implements an optimized flush mechanism for MSTP. This mechanism helps in flushing the MAC addresses only when necessary (and less often) allowing for faster convergence during topology changes. However, if a standards-based flush mechanism is needed, this knob command can be turned on to enable flushing MAC addresses after receiving every topology change notification.
The multicast commands are supported by Dell Networking Operating System (OS).

This chapter contains the following sections:

- IPv4 Multicast Commands
- IPv6 Multicast Commands

Topics:

- IPv4 Multicast Commands
- clear ip mroute
- ip mroute
- ip multicast-limit
- ip multicast-routing
- mtrace
- show ip mroute
- show ip rpf
- IPv6 Multicast Commands
- debug ipv6 mld_host
- ip multicast-limit

### IPv4 Multicast Commands

The following section contains the IPv4 multicast commands.

#### clear ip mroute

Clear learned multicast routes on the multicast forwarding table. To clear the protocol-independent multicast (PIM) tree information base, use the `clear ip pim tib` command.

**Syntax**

```
clear ip mroute {group-address [source-address] | * | snooping}
```

**Parameters**

- `group-address` [source-address]
  
Enter the multicast group address and source address (if desired), in dotted decimal format, to clear information on a specific group.

- `*`
  
Enter * to clear all multicast routes.

- `snooping`
  
Enter the keyword snooping to delete multicast snooping route table entries.

**Command Modes**

EXEC Privilege

**Supported Modes**

Full-Switch
ip mroute

Assign a static mroute.

Syntax

```
ip mroute destination mask {ip-address | null 0} {{bgp| ospf} process-id | isis | rip | static} {ip-address | tag | null 0}} [distance]
```

To delete a specific static mroute, use the `ip mroute destination mask {ip-address | null 0} {{bgp| ospf} process-id | isis | rip | static} {ip-address | tag | null 0}} [distance]` command.

To delete all mroutes matching a certain mroute, use the `no ip mroute destination mask` command.

Parameters

- `destination` Enter the IP address in dotted decimal format of the destination device.
- `mask` Enter the mask in slash prefix formation (/x) or in dotted decimal format.
- `null 0` (OPTIONAL) Enter the keyword `null` then zero (0).
- `[protocol [process-id | tag] ip-address]` (OPTIONAL) Enter one of the routing protocols:
  - Enter the BGP as-number then the IP address in dotted decimal format of the reverse path forwarding (RPF) neighbor. The range is from 1 to 65535.
  - Enter the OSPF process identification number then the IP address in dotted decimal format of the RPF neighbor. The range is from 1 to 65535.
  - Enter the IS-IS alphanumeric tag string then the IP address in dotted decimal format of the RPF neighbor.
  - Enter the RIP IP address in dotted decimal format of the RPF neighbor.
- `static ip-address` (OPTIONAL) Enter the Static IP address in dotted decimal format of the RPF neighbor.
- `ip-address` (OPTIONAL) Enter the IP address in dotted decimal format of the RPF neighbor.
- `distance` (OPTIONAL) Enter a number as the distance metric assigned to the mroute. The range is from 0 to 255.

Defaults

Not configured.

</tbody>
</table>

Related Commands

- `show ip mroute` — views the multicast routing table.
### ip multicast-limit

To limit the number of multicast entries on the system, use this feature.

**Syntax**

```
ip multicast-limit limit
```

**Parameters**

- **limit**: Enter the desired maximum number of multicast entries on the system. The range is from 1 to 50000.

**Defaults**

15000 routes.

**Command Modes**

- CONFIGURATION

**Supported Modes**

- Full-Switch

**Command History**

<table>
<thead>
<tr>

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

This feature allows you to limit the number of multicast entries on the system. This number is the total of all the multicast entries on all line cards in the system. On each line card, the multicast module only installs the maximum number of entries, depending on the configured CAM profile.

To store multicast routes, use the IN-L3-McastFib CAM partition. It is a separate hardware limit that exists per port-pipe. This hardware space limitation can supersede any software-configured limit. The opposite is also true, the CAM partition might not be exhausted at the time the system-wide route limit set by the `ip multicast-limit` command is reached.

### ip multicast-routing

Enable IP multicast forwarding.

**Syntax**

```
ip multicast-routing
```

To disable multicast forwarding, use the `no ip multicast-routing` command.

**Defaults**

Disabled.

**Command Modes**

- CONFIGURATION

**Supported Modes**

- Full-Switch

**Command History**

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

**Usage Information**

After you enable multicast, you can enable IGMP and PIM on an interface. In INTERFACE mode, enter the `ip pim sparse-mode` command to enable IGMP and PIM on the interface.

**Related Commands**

- `ip pim sparse-mode` — enables IGMP and PIM on an interface.
mtrace

Trace a multicast route from the source to the receiver.

Syntax

mtrace [vrf vrf-name] {source-address/hostname} [destination-address/hostname] [group-address/hostname]

Parameters

vrf vrf-name
Enter the keyword vrf followed by the name of the VRF. If VRF name is not mentioned, the default VRF will be used. Mtrace is not supported for management VRF.

source-address/hostname
Enter the source IP address in dotted decimal format (A.B.C.D). This is a unicast address of the beginning of the path to be traced.

destination-address/hostname
Enter the destination (receiver) IP address in dotted decimal format (A.B.C.D). If omitted, the mtrace starts from the system at which the command is typed.

group-address/hostname
Enter the multicast group address in dotted decimal format (A.B.C.D). If group address is not given then software shall invokes a weak mtrace. A weak mtrace is one that follows the RPF path to the source, regardless of whether any router along the path has multicast routing table state.

Command Modes

EXEC Privilege

Command History

Version Description
9.11.0.0 Re-introduced the mtrace command on the Dell EMC Networking OS.
7.5.1.0 Expanded to support originator.
7.4.1.0 Expanded to support the intermediate (transit) router.

Usage Information

Mtrace is an IGMP based protocol that provides a multicast trace route facility and is implemented according to the IETF draft “A trace route facility for IP Multicast” (draft-fenner-traceroute-ipm-01.txt). Dell EMC Networking OS supports the Mtrace client and transit functionality.

As an Mtrace client, Dell EMC Networking OS transmits Mtrace queries, receives, parses, and prints out the details in the response packet received.

A transit or intermediate router, forwards mtrace requests to the RPF neighbor after appending its response block to the packet. In case it is the first hop router, it sends a response.

As an Mtrace transit or intermediate router, Dell EMC Networking OS returns the response to Mtrace queries. After receiving the Mtrace request, Dell EMC Networking OS computes the RPF neighbor for the source, fills in the request and the forwards the request to the RPF neighbor.

Example

R1>mtrace 103.103.103.3 1.1.1.1 226.0.0.3
Type Ctrl-C to abort.
Querying reverse path for source 103.103.103.3 to destination 1.1.1.1 via group 226.0.0.3
From source (?) to destination (?)

<table>
<thead>
<tr>
<th>Hop</th>

<td>PIM</td>
<td>-</td>
<td>103.103.103.0/24</td>
</tr>
</tbody>
</table>
The mtrace command traverses the path of the response data block in the reverse direction of the multicast data traffic. The mtrace command traverses the reverse path to the source from the destination. As a result, the tabular output of the mtrace command displays the destination details in the first row, followed by the RPF router details along the path in the consequent rows, and finally the source details in the last row. The tabular output contains the following columns:

- Hop — a hop number (counted negatively to indicate reverse-path)
- OIF IP — outgoing interface address
- Proto — multicast routing protocol
- Forwarding code — error code as present in the response blocks
- Source Network/Mask — source mask

show ip mroute

View the multicast routing table.

Syntax

show ip mroute [static | group-address [source-address] | count | snooping
[vlan vlan-id] [group-address [source-address]] | summary | vlt [group-address [source-address] | count]

Parameters

static (OPTIONAL) Enter the keyword static to view static multicast routes.

group-address Enter the multicast group-address to view only routes associated with that
[source-address] group.

Enter the source-address to view routes with that group-address and source-address.

count (OPTIONAL) Enter the keyword count to view the number of multicast routes and
packets.

snooping [vlan vlan-id] [group-address [source-address]]
Enter the keyword snooping to display information on the multicast routes PIM-SM
snooping discovers.

Enter a VLAN ID to limit the information displayed to the multicast routes PIM-SM
snooping discovers on a specified VLAN. The VLAN ID range is from 1 to 4094.

Enter a multicast group address and, optionally, a source multicast address in dotted
decimal format (A.B.C.D) to limit the information displayed to the multicast routes PIM-
SM snooping discovers for a specified multicast group and source.

summary (OPTIONAL) Enter the keyword summary to view a summary of all routes.

vlt (OPTIONAL) Enter the keyword vlt to view multicast routes with a spanned incoming
interface. Enter a multicast group address in dotted decimal format (A.B.C.D) to limit the
information displayed to the multicast routes for a specified multicast group and optionally
a source multicast address in dotted decimal format (A.B.C.D) to limit the information
displayed for a specified multicast source. Enter the keyword count to display the total
number of multicast routes with the spanned IIF.

Outgoing interface list:
  TenGigabitEthernet 4/13

(*, 225.1.2.1), uptime 00:04:16
Incoming vlan: Vlan 2
Outgoing interface list:
  TenGigabitEthernet 0/4
  TenGigabitEthernet 1/5

(165.87.1.7, 225.1.2.1), uptime 00:03:17
Incoming vlan: Vlan 2
Outgoing interface list:
  TenGigabitEthernet 0/3
  TenGigabitEthernet 0/4
  TenGigabitEthernet 0/5

Example

Dell#show ip mroute

IP Multicast Routing Table

(*, 224.10.10.1), uptime 00:05:12
Incoming interface: TenGigabitEthernet 0/2
Outgoing interface list:
  TenGigabitEthernet 0/13

(1.13.1.100, 224.10.10.1), uptime 00:04:03
Incoming interface: TenGigabitEthernet 1/4
Outgoing interface list:
  TenGigabitEthernet 0/6
  TenGigabitEthernet 0/7

(*, 224.20.20.1), uptime 00:05:12
Incoming interface: TenGigabitEthernet 1/2
Outgoing interface list:
  TenGigabitEthernet 1/4

Usage Information

The following describes the show ip mroute command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>(S, G)</td>
<td>Displays the forwarding entry in the multicast route table.</td>
</tr>
</tbody>
</table>
### Field | Description
--- | ---
uptime | Displays the amount of time the entry has been in the multicast forwarding table.
Incoming interface | Displays the reverse path forwarding (RPF) information towards the source for (S,G) entries and the RP for (*,G) entries.
Outgoing interface list: | Lists the interfaces that meet one of the following:
  - a directly connected member of the Group
  - statically configured member of the Group
  - received a (*,G) or (S,G) Join message

**Example**

```
Dell#show ip mroute
IP Multicast Routing Table
(*, 224.10.10.1), uptime 00:05:12
  Incoming interface: TenGigabitEthernet 1/2
  Outgoing interface list:
    TenGigabitEthernet 3/13
(1.13.1.100, 224.10.10.1), uptime 00:04:03
  Incoming interface: TenGigabitEthernet 1/4
  Outgoing interface list:
    TenGigabitEthernet 0/2
    TenGigabitEthernet 0/3
(*, 224.20.20.1), uptime 00:05:12
  Incoming interface: TenGigabitEthernet 1/2
  Outgoing interface list:
    TenGigabitEthernet 1/4
```

### show ip rpf

View reverse path forwarding.

**Syntax**

```
show ip rpf
```

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2.(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

Network administrators use static mroutes to control the reach-ability of the multicast sources. If a PIM-registered multicast source is reachable using static mroute as well as unicast route, the distance of each route is examined and the route with shorter distance is the one the PIM selects for reach-ability.

**NOTE:** The default distance of mroutes is zero (0) and is CLI configurable on a per route basis.
Example

Dell#show ip rpf
RPF information for 10.10.10.9
  RPF interface: Te 0/4
  RPF neighbor: 165.87.31.4
  RPF route/mask: 10.10.10.9/255.255.255.255
  RPF type: unicast

IPv6 Multicast Commands

The following section contains the IPv6 multicast commands.

debug ipv6 mld_host

Enable the collection of debug information for MLD host transactions.

Syntax

[no] debug ipv6 mld_host [int-count | interface type] [slot/port-range]
To discontinue collection of debug information for the MLD host transactions, use the no debug ipv6 mld_host command.

Parameters

int-count
Enter the keyword count to indicate the number of required debug messages.

interface type
Enter the following keywords and slot/port information:
  • For a 10G Ethernet interface, enter the keyword tengigabitethernet then the slot/port information.
  • For a management interface, enter the keyword managementinterface then the slot/port information.
  • For a port-channel interface, enter the keywords port-channel then the slot/port information.
  • For a VLAN interface, enter the keyword vlan then the slot/port information.

Default
Disabled

Command Modes
EXEC

Supported Modes
Full-Switch

Command History

Version  Description
9.9(0.0)    Introduced on the FN IOM.
9.2.(0.0)   Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
To debug the MLD protocol for all ports or for specified ports, use the debug ipv6 mld_host command. Displayed information includes when a query is received, when a report is sent, when a mcast joins or leaves a group, and some reasons why an MLD query is rejected.
ip multicast-limit

To limit the number of multicast entries on the system, use this feature.

Syntax

    ip multicast-limit limit

Parameters

    limit
        Enter the desired maximum number of multicast entries on the system. The range is from 1 to 50000.

Defaults

    15000 routes.

Command Modes

    CONFIGURATION

Supported Modes

    Full-Switch

Command History

    Version  Description
    9.9(0.0)  Introduced on the FN IOM.
    9.2(0.0)  Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

This feature allows you to limit the number of multicast entries on the system. This number is the total of all the multicast entries on all line cards in the system. On each line card, the multicast module only installs the maximum number of entries, depending on the configured CAM profile.

To store multicast routes, use the IN-L3-McastFib CAM partition. It is a separate hardware limit that exists per port-pipe. This hardware space limitation can supersede any software-configured limit. The opposite is also true, the CAM partition might not be exhausted at the time the system-wide route limit set by the ip multicast-limit command is reached.
Neighbor Discovery Protocol (NDP)

The Dell Networking Operating System (OS) supports the network discovery protocol for IPv6. The neighbor discovery protocol for IPv6 is defined in RFC 2461 as part of the Stateless Address Autoconfiguration protocol. It replaces the Address Resolution Protocol used with IPv4. NDP defines mechanisms for solving the following problems:

- Router discovery: Hosts can locate routers residing on a link
- Prefix discovery: Hosts can discover address prefixes for the link
- Parameter discovery
- Address autoconfiguration — configuration of addresses for an interface
- Address resolution — mapping from IP address to link-layer address
- Next-hop determination
- Neighbor unreachability detection (NUD): Determine that a neighbor is no longer reachable on the link.
- Duplicate address detection (DAD): Allow a node to check whether a proposed address is already in use.
- Redirect: The router can inform a node about a better first-hop.

NDP uses the following five ICMPv6 packet types in its implementation:

- Router Solicitation
- Router Advertisement
- Neighbor Solicitation
- Neighbor Advertisement
- Redirect

Topics:

- clear ipv6 neighbors
- ipv6 neighbor
- show ipv6 neighbors

clear ipv6 neighbors

Delete all entries in the IPv6 neighbor discovery cache or neighbors of a specific interface. Static entries are not removed using this command.

**Syntax**

```
clear ipv6 neighbors [ipv6-address] [interface]
```

**Parameters**

- **ipv6-address**
  - Enter the IPv6 address of the neighbor in the x:x:x:x:x format to remove a specific IPv6 neighbor.
  - **NOTE:** The :: notation specifies successive hexadecimal fields of zero.

- **interface interface**
  - To remove all neighbor entries learned on a specific interface, enter the keyword interface then the interface type and slot/port or number information of the interface:
For a Fast Ethernet interface, enter the keyword `fastEthernet` then the slot/port information.

For a Port Channel interface, enter the keywords `port-channel` then a number.

For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

For a VLAN, enter the keyword `vlan` then the VLAN ID. The range is from 1 to 4094.

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

Full-Switch

**Command History**

<table>

</tr>
</tbody>
</table>

### ipv6 neighbor

Configure a static entry in the IPv6 neighbor discovery.

**Syntax**

```
ipv6 neighbor {ipv6-address} {interface interface} {hardware_address}
```

To remove a static IPv6 entry from the IPv6 neighbor discovery, use the `no ipv6 neighbor {ipv6-address} {interface interface}` command.

**Parameters**

- `ipv6-address` Enter the IPv6 address of the neighbor in the `x:x:x:x::x` format.
  
  **NOTE:** The `::` notation specifies successive hexadecimal fields of zero.

- `interface interface` Enter the keyword `interface` then the interface type and slot/port or number information:
  
  - For a Fast Ethernet interface, enter the keyword `fastEthernet` then the slot/port information.
  
  - For a Port Channel interface, enter the keywords `port-channel` then a number.
  
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

- `hardware_address` Enter a 48-bit hardware MAC address in `nn:nn:nn:nn:nn:nn` format.

**Defaults**

none

show ipv6 neighbors

Display IPv6 discovery information. Entering the command without options shows all the IPv6 neighbor addresses stored on the control processor (CP).

Syntax

```
show ipv6 neighbors [vrf vrf-name] [ipv6-address | interface interface]
```

Parameters

- **vrf vrf-name**
  
  (OPTIONAL) Enter the keyword vrf followed by the name of the VRF to display the neighbors corresponding to that VRF.

  **NOTE:** If you do not specify this option, neighbors corresponding to the default VRF are displayed.

- **ipv6-address**
  
  Enter the IPv6 address of the neighbor in the x:x:x::x format.

  **NOTE:** The :: notation specifies successive hexadecimal fields of zero.

- **interface interface**
  
  Enter the keyword interface then the interface type and slot/port or number information:

  - For a Fast Ethernet interface, enter the keyword fastEthernet then the slot/port information.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a VLAN, enter the keyword vlan then the VLAN ID. The range is from 1 to 4094.

Defaults

none

```
NPIV Proxy Gateway

The N-port identifier virtualization (NPIV) Proxy Gateway (NPG) feature provides FCoE-FC bridging capability on the FN IOM with the FC Flex IO module switch, allowing server CNAs to communicate with SAN fabrics over the FN IOM with the FC Flex IO module.

To configure the FN I/O M with the FC Flex IO module to operate as an NPIV proxy gateway, use the following commands:

Topics:
- dcb-map
- description (for FCoE maps)
- fabric-id vlan
- fcf-priority
- fc-map
- fcoe-map
- feature fc
- fka-adv-period
- keepalive
- show fcoe-map
- show fc sw
- show interfaces status
- show npiv devices
- show qos dcb-map
- show running-config fcoe-map

**dcb-map**

Create a DCB map to configure priority flow control (PFC) and enhanced transmission selection (ETS) on Ethernet ports that support converged Ethernet traffic. Apply the DCB map to an Ethernet interface.

**Syntax**

dcb-map map-name

**Parameters**

- **map-name**: Enter a DCB map name. The maximum number of alphanumeric characters is 32.

**Defaults**
None.

**Command Modes**

- CONFIGURATION
- INTERFACE

**Supported Modes**

- Programmable-Mux (PMUX)
- Full-Switch
### Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

### Usage Information

A DCB map is a template used to configure DCB parameters and apply them on converged Ethernet interfaces. DCB parameters include priority-based flow control (PFC) and enhanced traffic selection (ETS).

To display the PFC and ETS settings in DCB maps, enter the `show qos dcb-map` command.

Use the `dcb-map` command to create a DCB map to specify PFC and ETS settings and apply it on Ethernet ports. After you apply a DCB map to an interface, the PFC and ETS settings in the map are applied when the Ethernet port is enabled. DCBx is enabled on Ethernet ports by default.

The `dcb-map` command is supported only on physical Ethernet interfaces.

To remove a DCB map from an interface, enter the `no dcb-map map-name` command in Interface configuration mode.

### Related Commands

- `show qos dcb-map` - displays the dcb-map profiles configured on the system.
- `dcb-map stack-unit all stack-ports all` - applies a DCB map on all ports of a switch stack.

### description (for FCoE maps)

In an FCoE map, add a text description of the FCoE and FC parameters used to transmit storage traffic over an FN 2210S Aggregator and M I/O Aggregator NPIV proxy gateway in a converged fabric.

#### Syntax

description text

#### Parameters

- `text`  
Enter a maximum of 32 characters.

#### Defaults

None

#### Command Modes

FCOE MAP

#### Supported Modes

Programmable-Mux (PMUX)
Full-Switch

#### Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.6(0.0)</td>
<td>Supported on the FN 2210S Aggregator.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

The text description is displayed in `show fcoe-map` command output.
Related Commands

**fcoe-map** — creates an FCoE map which contains the parameters used in the communication between servers and a SAN fabric.

**show fcoe-map** — displays the Fibre Channel and FCoE configuration parameters in FCoE maps.

---

**fabric-id vlan**

In an FCoE map, configure the association between the dedicated VLAN used to carry FCoE traffic between servers and a SAN, and the fabric where the desired storage arrays are installed.

**Syntax**

```
fabric-id fabric-num vlan vlan-id
```

**Parameters**

- **fabric-id fabric-num**
  
  Enter a fabric ID number that is the same as the ID number of the dedicated VLAN used to carry FCoE storage traffic to the fabric specified in the FCoE map. You can enter a fabric ID in the range 2–4094.

- **vlan vlan-id**
  
  Enter the ID number of the dedicated VLAN used to carry FCoE storage traffic between servers and a SAN fabric and specified with the `vlan` command in the FCoE map.

**Defaults**

None

**Command Modes**

FCOE MAP

**Supported Modes**

Programmable-Mux (PMUX)

Full-Switch

**Command History**

<table>
<thead>
<tr>

<tr>
<td>9.6(0.0)</td>
<td>Supported on the FN 2210S Aggregator.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

In the `fabric-id vlan` command, the fabric and VLAN ID numbers must be the same.

In each FCoE map, the fabric ID, FC-MAP value, and FCoE VLAN parameters must be unique.

To remove a fabric-VLAN association from an FCoE map, enter the `no fabric-id vlan` command.

Create a VLAN and then specify the configured VLAN ID in the `fabric-id vlan` command. Otherwise, the following error message is displayed.

```
Dell(conf-fcoe-f)#fabric-id 10 vlan 10 % Error: Vlan 10 does not exist
```

**Related Commands**

- **fcoe-map** — creates an FCoE map which contains the parameters used in the communication between servers and a SAN fabric.
- **show fcoe-map** — displays the Fibre Channel and FCoE configuration parameters in FCoE maps.
**fcf-priority**

In an FCoE map, configure the priority used by a server CNA to select an upstream FCoE forwarder (FCF).

**Syntax**

```
fcf-priority priority
```

**Parameters**

- **priority**
  
Enter the priority assigned to the FN 2210S Aggregator NPIV proxy gateway, which appears to a downstream server CNA as an FCF. The range of FCF priority values is from 1 to 255.

**Defaults**

```
128
```

**Command Modes**

FCOE MAP

**Supported Modes**

Programmable-Mux (PMUX)
Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.6(0.0)</td>
<td>Supported on the FN 2210S Aggregator.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module.</td>
</tr>
</tbody>
</table>

**Usage Information**

The FCF priority you assign to an FN 2210S Aggregator is used by server CNAs to select an upstream FCF to use for a fabric login (FLOGI).

To remove a configured FCF priority from an FCoE map, enter the `no fcf-priority` command.

**Related Commands**

- `fcoe-map` — creates an FCoE map which contains the parameters used in the communication between servers and a SAN fabric.
- `show fcoe-map` displays the Fibre Channel and FCoE configuration parameters in FCoE maps.

---

**fc-map**

In an FCoE map, configure the FCoE mapped address prefix (FC-MAP) value which is used to identify FCoE traffic transmitted on the FCoE VLAN for the specified fabric.

**Syntax**

```
fc-map fc-map-value
```

**Parameters**

- **fc-map-value**
  
Enter the unique MAC address prefix used by a SAN fabric. The range of FC-MAP values is from 0EFC00 to 0EFCFF.

**Defaults**

None

**Command Modes**

FCOE MAP

**Supported Modes**

Programmable-Mux (PMUX)
Full-Switch

Command History

<table>
<thead>
<tr>

</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module.</td>
</tr>
</tbody>
</table>

Usage Information

The FC-MAP value you enter must match the FC-MAP value used by an FC switch or FCoE forwarder (FCF) in the fabric. An FCF switch accepts only FCoE traffic that uses the correct FC-MAP value.

The FC-MAP value is used to generate the fabric-provided MAC address (FP-MAC). The FPMA is used by servers to transmit FCoE traffic to the fabric. An FC-MAP can be associated with only one FCoE VLAN and vice versa.

In an FCoE map, the FC-MAP value, fabric ID, and FCoE VLAN parameters must be unique.

To remove a configured FC-MAP value from an FCoE map, enter the no fc-map command.

Related Commands

fcoe-map — creates an FCoE map which contains the parameters used in the communication between servers and a SAN fabric.

show fcoe-map — displays the Fibre Channel and FCoE configuration parameters in FCoE maps.

fcoe-map

Create an FCoE map which contains the parameters used to configure the links between server CNAs and a SAN fabric. Apply the FCoE map on a server-facing Ethernet port.

Syntax

fcoe-map map-name

Parameters

map-name

Maximum: 32 alphanumeric characters.

Defaults

On the FN2210S Aggregator with PMUX modules, the following parameters are applied on all the PMUX module interfaces:

- Description: SAN_FABRIC
- Fabric-id: 1002
- Fcoe-vlan: 1002
- Fc-map: 0x0efc00
- Fcf-priority: 128
- Fka-adv-period: 8000mSec
- Keepalive: enable
- Vlan priority: 3

</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the M I/O Aggregator with the PMUX module.</td>
</tr>
</tbody>
</table>

**Usage Information**

An FCoE map is a template used to map FCoE and FC parameters in a converged fabric. An FCoE map is used to virtualize upstream FC ports on an FN2210S Aggregator with the PMUX module NPIV proxy gateway so that they appear to downstream server CNA ports as FCoE forwarder (FCF) ports on an FCoE network. When applied to FC and Ethernet ports on an NPIV proxy gateway, an FCoE map allows the switch to operate as an FCoE-FC bridge between an FC SAN and an FCoE network by providing FCoE-enabled servers and switches with the necessary parameters to log in to a SAN fabric.

On an FN2210S Aggregator with the PMUX module NPIV proxy gateway, you cannot apply an FCoE map applied on fabric-facing FC ports and server-facing 10-Gigabit Ethernet ports.

An FCoE map consists of the following parameters: the dedicated FCoE VLAN used for storage traffic, the destination SAN fabric (FC-MAP value), FCF priority used by a server, and the FIP keepalive (FKA) advertisement timeout.

In each FCoE map, the fabric ID, FC-MAP value, and FCoE VLAN parameters must be unique. Use one FCoE map to access one SAN fabric. You cannot use the same FCoE map to access different fabrics.

To remove an FCoE map from an Ethernet interface, enter the `no fcoe-map map-name` command in Interface configuration mode.

**Related Commands**

- `show fcoe-map` — displays the Fibre Channel and FCoE configuration parameters in FCoE maps.

---

**feature fc**

Enables the Fibre channel communication via the NPG functionality.

**Syntax**

```
feature fc
```

</tbody>
</table>
Usage Information

The command is supported only in FN2210S Aggregator.

**fka-adv-period**

In an FCoE map, configure the time interval used to transmit FIP keepalive (FKA) advertisements.

Syntax

```
fka-adv-period  seconds
```

Parameters

- **seconds**
  
  Enter the time period (in seconds) used to send FIP keepalive messages to peer devices. The range is from 8 to 90 seconds.

Defaults

8 seconds

</tr>
</tbody>
</table>
Usage Information

FIP keepalive (FKA) messaging is used to detect if other FCoE devices are reachable.

To remove FIP keepalive monitoring from an FCoE map, enter the `no keepalive` command.

Related Commands

`fcoe-map` — creates an FCoE map which contains the parameters used in the communication between servers and a SAN fabric.

`show fcoe-map` — displays the Fibre Channel and FCoE configuration parameters in FCoE maps.

show fcoe-map

Displays the Fibre Channel and FCoE configuration parameters in FCoE maps.

Syntax

```
show fcoe-map [brief | map-name]
```

Parameters

- `brief` — Displays an overview of currently configured FCoE maps.
- `map-name` — Displays the FC and FCoE configuration parameters in a specified FCoE map. The FCoE map is applied on Ethernet (FCoE) and FC ports to transmit FC storage traffic to a specified fabric.

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

All modes

Command History

<table>
<thead>
<tr>

<tr>
<td>9.6(0.0)</td>
<td>Supported on the FN2210S Aggregator.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module.</td>
</tr>
</tbody>
</table>

Usage Information

Use the `show fcoe-map` command to display the FC and FCoE parameters used to configure server-facing Ethernet (FCoE) and fabric-facing FC ports in all FCoE maps on an FN 2210S Aggregator with the FC Flex IO module NPIV proxy gateway.

In each FCoE map, the values for the fabric ID and FC-MAP that identify the SAN fabric to which FC storage traffic is sent, and the FCoE VLAN to be used must be unique.

The following describes the `show fcoe-map brief` output shown in the example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fabric-Name</td>
<td>Name of a SAN fabric.</td>
</tr>
<tr>
<td>Fabric ID</td>
<td>The ID number of the SAN fabric to which FC traffic is forwarded.</td>
</tr>
<tr>
<td>VLAN ID</td>
<td>The dedicated FCoE VLAN used to transport FCoE storage traffic between servers and a fabric over the NPIV proxy gateway. The configured VLAN ID must be the same as the fabric ID.</td>
</tr>
</tbody>
</table>
### Field Description

**FC-MAP**  
FCoE MAC address-prefix value - The unique 24-bit MAC address prefix that identifies a fabric.

**FCF Priority**  
The priority used by a server to select an upstream FCoE forwarder.

**Config-State**  
Indicates whether the configured FCoE and FC parameters in the FCoE map are valid: Active (all mandatory FCoE and FC parameters are correctly configured) or Incomplete (either the FC-MAP value, fabric ID, or VLAN ID are not correctly configured).

**Oper-State**  
Operational status of link to the fabric: Up (link is up and transmitting FC traffic), Down (link is down and not transmitting FC traffic), Link-wait (link is up and waiting for FLOGI to complete on peer FC port), or Removed (port has been shut down).

The following describes the `show fcoe-map map-name` output shown in the example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fabric-Name</td>
<td>Name of a SAN fabric.</td>
</tr>
<tr>
<td>Fabric ID</td>
<td>The ID number of the SAN fabric to which FC traffic is forwarded.</td>
</tr>
<tr>
<td>VLAN ID</td>
<td>The dedicated FCoE VLAN used to transport FCoE storage traffic between servers and a fabric over the NPIV proxy gateway. The configured VLAN ID must be the same as the fabric ID.</td>
</tr>
<tr>
<td>VLAN priority</td>
<td>FCoE traffic uses VLAN priority 3. (This setting is not user-configurable.)</td>
</tr>
<tr>
<td>FC-MAP</td>
<td>FCoE MAC address-prefix value - The unique 24-bit MAC address prefix that identifies a fabric.</td>
</tr>
<tr>
<td>FKA-ADV-period</td>
<td>Time interval (in seconds) used to transmit FIP keepalive advertisements.</td>
</tr>
<tr>
<td>FCF Priority</td>
<td>The priority used by a server to select an upstream FCoE forwarder.</td>
</tr>
<tr>
<td>Config-State</td>
<td>Indicates whether the configured FCoE and FC parameters in the FCoE map are valid: Active (all mandatory FCoE and FC parameters are correctly configured) or Incomplete (either the FC-MAP value, fabric ID, or VLAN ID are not correctly configured).</td>
</tr>
<tr>
<td>Oper-State</td>
<td>Operational status of link to the fabric: Up (link is up and transmitting FC traffic), Down (link is down and not transmitting FC traffic), Link-wait (link is up and waiting for FLOGI to complete on peer FC port), or Removed (port has been shut down).</td>
</tr>
</tbody>
</table>

**Members**  
FN2210S Aggregator with the FC Flex IO module Ethernet and FC ports that are members of the dedicated FCoE VLAN that carries storage traffic to the specified fabric.

**Example**

```sh
Dell#show fcoe-map brief
Fabric-Name  Fabric-Id  Vlan-Id  FC-MAP  FCF-Priority  Config-State  Oper-State
   test      16       16    0efc02    128         ACTIVE       UP
  cnatest    1003      1003  0efc03    128        ACTIVE        UP
  sitest     1004      1004  0efc04    128         ACTIVE       DOWN

Dell#show fcoe-map si
Fabric Name     si
Fabric Id       1004
Vlan Id         1004
Vlan priority   3
FC-MAP          0efc04
FKA-ADV-Period  8
FCF Priority    128
Config-State    ACTIVE
```
show fc sw

Display the switch configuration for Fibre Channel capability.

Syntax
show fc sw

Command Modes
- EXEC
- EXEC Privilege

</tbody>
</table>

Example
Dell(conf)#do show fc sw
Switch Mode : NPG
Switch WWN : 10:00:00:1e:c9:f1:00:d7

show interfaces status

Displays a summary of interface information or specify a stack unit and interface to display status information for that specific interface only.

Syntax
show interfaces [interface | stack-unit unit-number] status

Parameters
- interface (OPTIONAL) Enter one of the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet followed by the slot/port information.
- linecard slot-number (OPTIONAL) Enter the keyword linecard then the slot number.

Defaults
none

Command Modes
- EXEC
- EXEC Privilege

Supported Modes
All modes
show npiv devices

Displays the FCoE and FC devices currently logged into an FN I/O Aggregator Switch with the FC Flex IO module NPIV proxy gateway.

Syntax

```
show npiv devices [brief]
```

Parameters

- **brief**: Displays an overview of current server CNA-fabric connections over an FN I/O Aggregator with the FC Flex IO module NPIV proxy gateway.

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

All modes

Command History

<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

Use the `show npiv devices` command to display information on the server CNA, server-facing Ethernet and fabric-facing FC ports, and the SAN fabric in each server-fabric connection over an FN I/O Aggregator with the FC Flex IO module NPIV proxy gateway.

The following describes the `show npiv devices brief` output shown in the example.
Field | Description
--- | ---
ENode-Intf | FN I/O Aggregator with the FC Flex IO module Ethernet interface (slot/port) to which a server CNA is connected.
ENode-WWPN | Worldwide port name (WWPN) of a server CNA port.
FCoE-Vlan | VLAN ID of the dedicated VLAN used to transmit FCoE traffic to and from the fabric.
Fabric-Intf | Fabric-facing Fibre Channel port (slot/port) on which FC traffic is transmitted to the specified fabric.
Fabric-Map | Name of the FCoE map containing the FCoE/FC configuration parameters for the server CNA-fabric connection.
LoginMethod | Method used by the server CNA to log in to the fabric; for example:
FLOGI - ENode logged in using a fabric login (FLOGI).
FDISC - ENode logged in using a fabric discovery (FDISC).
Status | Operational status of the link between a server CNA port and a SAN fabric: Logged In - Server has logged in to the fabric and is able to transmit FCoE traffic.

Example
```
Dell# show npiv devices brief
Total NPIV Devices = 2

---
ENode-Intf  ENode-WWPN  FCoE-Vlan  Fabric-Intf  Fabric-Map  LoginMethod  Status
---
Te 0/12 20:01:00:10:18:f1:94:20 1003 Fc 0/5 fid_1003 FLOGI  LOGGED_IN
Te 0/13 10:00:00:00:c9:d9:9c:cb 1003 Fc 0/0 fid_1003 FDISC  LOGGED_IN
```

Usage Information
The following describes the show npiv devices output shown in the example.

Field | Description
--- | ---
ENode [number] | A server CNA that has successfully logged in to a fabric over an FN I/O Aggregator with the FC Flex IO module Ethernet port in ENode mode.
Enode MAC | MAC address of a server CNA port.
Enode Intf | Port number of a server-facing Ethernet port operating in ENode mode.
FCF MAC | Fibre Channel forwarder MAC: MAC address of FN I/O Aggregator Switch with the FC Flex IO module FCF interface.
Fabric Intf | Fabric-facing Fibre Channel port (slot/port) on which FCoE traffic is transmitted to the specified fabric.
FCoE VLAN | ID of the dedicated VLAN used to transmit FCoE traffic from a server CNA to a fabric and configured on both the server-facing FN I/O Aggregator with the FC Flex IO module port and server CNA port.
Fabric Map | Name of the FCoE map containing the FCoE/FC configuration parameters for the server CNA-fabric connection.
Enode WWPN | Worldwide port name of the server CNA port.
Enode WWNN | Worldwide node name of the server CNA.
FCoE MAC | Fabric-provided MAC address (FPMA). The FPMA consists of the FC-MAP value in the FCoE map and the FC-ID provided by the fabric after a successful FLOGI. In the FPMA, the most significant bytes are the FC-MAP; the least significant bytes are the FC-ID.
### Field Description

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>FC-ID</td>
<td>FC port ID provided by the fabric.</td>
</tr>
<tr>
<td>LoginMethod</td>
<td>Method used by the server CNA to log in to the fabric; for example, FLOGI or FDISC.</td>
</tr>
<tr>
<td>Secs</td>
<td>Number of seconds that the fabric connection is up.</td>
</tr>
<tr>
<td>State</td>
<td>Status of the fabric connection: logged in.</td>
</tr>
</tbody>
</table>

#### Example

ENode[0]:
- ENode MAC: 00:10:18:f1:94:21
- ENode Intf: Te 0/12
- FCF MAC: 5c:f9:dd:ef:10:c8
- Fabric Intf: Fc 0/5
- FCoE Vlan: 1003
- Fabric Map: fid_1003
- ENode WWPN: 20:01:00:10:18:f1:94:20
- ENode WWNN: 20:00:00:10:18:f1:94:21
- FCoE MAC: 0e:fc:03:01:02:01
- FC-ID: 01:02:01
- LoginMethod: FLOGI
- Secs: 5593
- Status: LOGGED_IN

ENode[1]:
- ENode MAC: 00:10:18:f1:94:22
- ENode Intf: Te 0/13
- FCF MAC: 5c:f9:dd:ef:10:c9
- Fabric Intf: Fc 0/0
- FCoE Vlan: 1003
- Fabric Map: fid_1003
- ENode WWPN: 10:00:00:00:c9:d9:9c:cb
- ENode WWNN: 10:00:00:00:c9:d9:9c:cd
- FCoE MAC: 0e:fc:03:01:02:02
- FC-ID: 01:02:01
- LoginMethod: FDISC
- Secs: 5593
- Status: LOGGED_IN

#### Related Commands

- **dcb-map** — creates a DCB map to configure DCB parameters on Ethernet ports that support converged Ethernet traffic.
- **fcoe-map** — creates an FCoE map which contains the parameters used in the communication between servers and a SAN fabric.

### show qos dcb-map

Display the DCB parameters configured in a specified DCB map.

**Syntax**

```
show qos dcb-map map-name
```

**Parameters**

- **map-name**
  
  Displays the PFC and ETS parameters configured in the specified map.

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

All Modes

Dell(conf)#do show running-config fcoe-map

fcoe-map map
  fc-map 0efe00
  fabric-id 100 vlan 100
```
Open Shortest Path First (OSPFv2 and OSPFv3)

The Switch supports open shortest path first version 2 (OSPFv2) for IPv4 and version 3 (OSPFv3) for IPv6. Up to 16 OSPF instances can be run simultaneously on the Switch.

OSPF is an Interior Gateway Protocol (IGP), which means that it distributes routing information between routers in a single Autonomous System (AS). OSPF is also a link-state protocol in which all routers contain forwarding tables derived from information about their links to their neighbors.

The fundamental mechanisms of OSPF (flooding, DR election, area support, SPF calculations, and so on) are the same for OSPFv2 and OSPFv3. OSPFv3 runs on a per-link basis instead of on a per-IP-subnet basis.

This chapter is divided into two sections. There is no overlap between the two sets of commands. You cannot use an OSPFv2 command in the IPv6 OSPFv3 mode.

OSPFv2 Commands

The Dell Networking implementation of OSPFv2 is based on IETF RFC 2328.

area default-cost

Set the metric for the summary default route the area border router (ABR) generates into the stub area. Use this command on the border routers at the edge of a stub area.

Syntax

area area-id default-cost cost

To return default values, use the no area area-id default-cost command.

Parameters

- **area-id**: Specify the OSPF area in dotted decimal format (A.B.C.D.) or enter a number from zero (0) to 65535.
- **cost**: Specifies the stub area’s advertised external route metric. The range is from zero (0) to 65535.
Defaults  \( \text{cost} = 1 \); no areas are configured.

Command Modes  ROUTER OSPF

Supported Modes  Full—Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information  In the Dell Networking operating software, \( \text{cost} \) is defined as reference bandwidth.

Related Commands  area stub — creates a stub area.

area nssa

Specify an area as a not so stubby area (NSSA).

Syntax

area area-id nssa [default-information-originate] [no-redistribution] [no-summary]

To delete an NSSA, use the no area area-id nssa command.

Parameters

- **area-id**: Specify the OSPF area in dotted decimal format (A.B.C.D.) or enter a number from zero (0) to 65535.
- **no-redistribution**: (OPTIONAL) Specify that the redistribute command does not distribute routes into the NSSA. Only use this command in an NSSA area border router (ABR).
- **default-information-originate**: (OPTIONAL) Allows external routing information to be imported into the NSSA by using Type 7 default.
- **no-summary**: (OPTIONAL) Specify that no summary LSAs should be sent into the NSSA.

Defaults  Not configured.

Command Modes  ROUTER OSPF

Supported Modes  Full—Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

area range

Summarize routes matching an address/mask at an area border router (ABR).

Syntax

area area-id range ip-address mask [not-advertise]

To disable route summarization, use the no area area-id range ip-address mask command.
Parameters

- **area-id**: Specify the OSPF area in dotted decimal format (A.B.C.D.) or enter a number from zero (0) to 65535.
- **ip-address**: Specify an IP address in dotted decimal format.
- **mask**: Specify a mask for the destination prefix. Enter the full mask (for example, 255.255.255.0).
- **not-advertise**: (OPTIONAL) Enter the keywords not-advertise to set the status to DoNotAdvertise (that is, the Type 3 summary-LSA is suppressed and the component networks remain hidden from other areas.)

Defaults
- Not configured.

Command Modes
- ROUTER OSPF

Supported Modes
- Full—Switch

Command History

<table>

<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information
- Only the routes within an area are summarized, and that summary is advertised to other areas by the ABR. External routes are not summarized.

Related Commands
- **area stub** — creates a stub area.
- **router ospf** — enters ROUTER OSPF mode to configure an OSPF instance.

---

**area stub**

Configure a stub area, which is an area not connected to other areas.

**Syntax**

```plaintext
area area-id stub [no-summary]
```

To delete a stub area, use the `no area area-id stub` command.

**Parameters**

- **area-id**: Specify the OSPF area in dotted decimal format (A.B.C.D.) or enter a number from zero (0) to 65535.
- **no-summary**: (OPTIONAL) Enter the keywords no-summary to prevent the ABR from sending summary Link State Advertisements (LSAs) into the stub area.

**Defaults**
- Disabled.

**Command Modes**
- ROUTER OSPF

**Supported Modes**
- Full—Switch

**Command History**

<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>
Usage Information

To configure all routers and access servers within a stub, use this command.

Related Commands

**Related Commands**

- **router ospf** — enters ROUTER OSPF mode to configure an OSPF instance.

---

**auto-cost**

Specify how the OSPF interface cost is calculated based on the reference bandwidth method.

**Syntax**

```plaintext
auto-cost [reference-bandwidth ref-bw]
```

To return to the default bandwidth or to assign cost based on the interface type, use the `no auto-cost [reference-bandwidth]` command.

**Parameters**

- **ref-bw**  
  (OPTIONAL) Specify a reference bandwidth in megabits per second. The range is from 1 to 4294967. The default is 100 megabits per second.

**Defaults**

100 megabits per second.

**Command Modes**

ROUTER OSPF

</tr>
</tbody>
</table>

---

**clear ip ospf**

Clear all OSPF routing tables.

**Syntax**

```plaintext
clear ip ospf process-id [process]
```

**Parameters**

- **process-id**  
  Enter the OSPF Process ID to clear a specific process. If no Process ID is entered, all OSPF processes are cleared.

- **process**  
  (OPTIONAL) Enter the keyword `process` to reset the OSPF process.

**Command Modes**

EXEC Privilege

**Supported Modes**

Full—Switch

**Command History**

<table>
<thead>
<tr>

</tr>
</tbody>
</table>
clear ip ospf statistics

Clear the packet statistics in interfaces and neighbors.

Syntax

```
clear ip ospf process-id statistics [interface name (neighbor router-id)]
```

Parameters

- **process-id**
  - Enter the OSPF Process ID to clear a specific process. If no Process ID is entered, all OSPF processes are cleared.

- **interface name** (OPTIONAL)
  - Enter the keyword interface then one of the following interface keywords and slot/port or number information:
    - For Port Channel groups, enter the keywords port-channel then a number. The range is from 1 to 128.
    - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
    - For a VLAN, enter the keyword vlan then a number from 1 to 4094.

- **neighbor router-id** (OPTIONAL)
  - Enter the keyword neighbor then the neighbor’s router-id in dotted decimal format (A.B.C.D).

Defaults

none

Command Modes

EXEC Privilege

Supported Modes

Full-Switch

Command History

- **Version 9.9(0.0)**
  - Introduced on the FN IOM.

- **Version 8.3.16.1**
  - Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands

- **show ip ospf statistics** — displays the OSPF statistics.

debug ip ospf

Display debug information on OSPF. Entering the debug ip ospf commands enables OSPF debugging for the first OSPF process.

Syntax

```
deplog ip ospf process-id [bfd | event | packet | spf | database-timer rate-limit]
```

To cancel the debug command, use the no debug ip ospf command.

Parameters

- **process-id**
  - Enter the OSPF Process ID to clear a specific process. If no Process ID is entered, all OSPF processes are cleared.

- **bfd** (OPTIONAL)
  - Enter the keyword bfd to debug only OSPF BFD information.

- **event** (OPTIONAL)
  - Enter the keyword event to debug only OSPF event information.

- **packet** (OPTIONAL)
  - Enter the keyword packet to debug only OSPF packet information.

- **spf** (OPTIONAL)
  - Enter the keyword spf to display the Shortest Path First information.
database-timer rate-limit  
(OPTIONAL) Enter the keywords database-timer rate-limit to display the LSA throttling timer information.

</table>

Usage Information  
The following describes the debug ip ospf command shown in the Example below.

Field | Description
--- | ---
8:14 | Displays the time stamp.
OSPF | Displays the OSPF process ID: instance ID.
v: | Displays the OSPF version. The system supports version 2 only.
t: | Displays the type of packet sent:
  * 1 - Hello packet
  * 2 - database description
  * 3 - link state request
  * 4 - link state update
  * 5 - link state acknowledgement
l: | Displays the packet length.
rid: | Displays the OSPF router ID.
aid: | Displays the Autonomous System ID.
chk: | Displays the OSPF checksum.
aut: | States if OSPF authentication is configured. One of the following is listed:
  * 0 - no authentication configured
  * 1 - simple authentication configured using the ip ospf authentication-key command
  * 2 - MD5 authentication configured using the ip ospf message-digest-key command
auk: | If the ip ospf authentication-key command is configured, this field displays the key used.
keyid: | If the ip ospf message-digest-key command is configured, this field displays the MD5 key
to: | Displays the interface to which the packet is intended.
dst: | Displays the destination IP address.
netmask: | Displays the destination IP address mask.
pri: | Displays the OSPF priority
N, MC, E, T | Displays information available in the Options field of the HELLO packet:
### Field Description
- N + (N-bit is set)
- N - (N-bit is not set)
- MC+ (bit used by MOSPF is set and router is able to forward IP multicast packets)
- MC- (bit used by MOSPF is not set and router cannot forward IP multicast packets)
- E + (router is able to accept AS External LSAs)
- E - (router cannot accept AS External LSAs)
- T + (router can support TOS)
- T - (router cannot support TOS)

<table>
<thead>
<tr>
<th>hi:</th>
<th>Displays the amount of time configured for the HELLO interval.</th>

<tr>
<td>dr:</td>
<td>Displays the IP address of the designated router.</td>
</tr>
<tr>
<td>bdr:</td>
<td>Displays the IP address of the Border Area Router.</td>
</tr>
</tbody>
</table>

### default-information originate

To generate a default external route into an OSPF routing domain, configure the system.

**Syntax**

```plaintext
default-information originate [always] [metric metric-value] [metric-type type-value] [route-map map-name]
```

To return to the default values, use the `no default-information originate` command.

**Parameters**

- **always** (OPTIONAL) Enter the keyword `always` to specify that default route information must always be advertised.
- **metric metric-value** (OPTIONAL) Enter the keyword `metric` then a number to configure a metric value for the route. The range is from 1 to 16777214.
- **metric-type type-value** (OPTIONAL) Enter the keywords `metric-type` then an OSPF link state type of 1 or 2 for default routes. The values are:
  - 1 = Type 1 external route
  - 2 = Type 2 external route
- **route-map map-name** (OPTIONAL) Enter the keywords `route-map` then the name of an established route map.

**Defaults**

Disabled.

**Command Modes**

ROUTE OSPF
**default-metric**

Change the metrics of redistributed routes to a value useful to OSPF. Use this command with the redistribute command.

**Syntax**

```
default-metric number
```

To return to the default values, use the `no default-metric [number]` command.

**Parameters**

- `number`: Enter a number as the metric. The range is from 1 to 16777214.

**Defaults**

Disabled.

**Command Modes**

- ROUTER OSPF

**Supported Modes**

- Full—Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>

</tr>
</tbody>
</table>

**Related Commands**

- `redistribute` — redistributes routes from other routing protocols into OSPF.

**description**

Add a description about the selected OSPF configuration.

**Syntax**

```
description description
```

To remove the OSPF description, use the `no description` command.

**Parameters**

- `description`: Enter a text string description to identify the OSPF configuration (80 characters maximum).

**Defaults**

- `none`

**Command Modes**

- ROUTER OSPF

**Supported Modes**

- Full—Switch

**Command History**

<table>

8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands  show ip ospf asbr — displays the VLAN configuration.

distance

Define an administrative distance for particular routes to a specific IP address.

Syntax  distance weight [ip-address mask access-list-name]

To delete the settings, use the no distance weight [ip-address mask access-list-name] command.

Parameters

- **weight**  Specify an administrative distance. The range is from 1 to 255. The default is 110.
- **ip-address** (OPTIONAL) Enter a router ID in the dotted decimal format. If you enter a router ID, include the mask for that router address.
- **mask** (OPTIONAL) Enter a mask in dotted decimal format or /n format.
- **access-list-name** (OPTIONAL) Enter the name of an IP standard access list, up to 140 characters.

Defaults  110

</table>

distance ospf

Configure an OSPF distance metric for different types of routes.

Syntax  distance ospf [external dist3] [inter-area dist2] [intra-area dist1]

To delete these settings, use the no distance ospf command.

Parameters

- **external dist3** (OPTIONAL) Enter the keyword external then a number to specify a distance for external type 5 and 7 routes. The range is from 1 to 255. The default is 110.
- **inter-area dist2** (OPTIONAL) Enter the keywords inter-area then a number to specify a distance metric for routes between areas. The range is from 1 to 255. The default is 110.
- **intra-area dist1** (OPTIONAL) Enter the keywords intra-area then a number to specify a distance metric for all routes within an area. The range is from 1 to 255. The default is 110.

Defaults

- external dist3 = 110
- inter-area dist2 = 110
- intra-area dist1 = 110

</tr>
</tbody>
</table>

**Usage Information**  
To specify a distance for routes learned from other routing domains, use the redistribute command.

distribute-list in

Apply a filter to incoming routing updates from OSPF to the routing table.

**Syntax**  
distribute-list prefix-list-name in [interface]

To delete a filter, use the no distribute-list prefix-list-name in [interface] command.

**Parameters**  
- **prefix-list-name**: Enter the name of a configured prefix list.
- **interface** (OPTIONAL) Enter one of the following keywords and slot/port or number information:
  - For Port Channel groups, enter the keywords port-channel then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a VLAN, enter the keyword vlan then a number from 1 to 4094.

**Defaults**  
Not configured.

**Command Modes**  
ROUTER OSPF

**Supported Modes**  
Full-Switch

**Command History**

</tr>
</tbody>
</table>

**distribute-list out**

To restrict certain routes destined for the local routing table after the SPF calculation, apply a filter.

**Syntax**  
distribute-list prefix-list-name out [bgp | connected | isis | rip | static]

To remove a filter, use the no distribute-list prefix-list-name out [bgp | connected | isis | rip | static] command.
## Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>prefix-list-name</td>
<td>Enter the name of a configured prefix list.</td>
</tr>
<tr>
<td>bgp</td>

<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

## Usage Information

The distribute-list out command applies to routes autonomous system boundary routers (ASBRs) redistributes into OSPF. It can be applied to external type 2 and external type 1 routes, but not to intra-area and inter-area routes.

### fast-convergence

This command sets the minimum LSA origination and arrival times to zero (0), allowing more rapid route computation so that convergence takes less time.

**Syntax**

```plaintext
fast-convergence {number}
```

To cancel fast-convergence, use the `no fast convergence` command.

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>number</td>
<td>Enter the convergence level desired. The higher this parameter is set, the faster OSPF converge takes place. The range is from 1 to 4.</td>
</tr>
</tbody>
</table>

**Defaults**

none.

**Command Modes**

<table>
<thead>
<tr>
<th>Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ROUTER OSPF</td>
<td></td>
</tr>
</tbody>
</table>

**Supported Modes**

Full—Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

The higher this parameter is set, the faster OSPF converge takes place.
NOTE: The faster the convergence, the more frequent the route calculations and updates. This behavior impacts CPU utilization and may impact adjacency stability in larger topologies.

Generally, convergence level 1 meets most convergence requirements. Higher convergence levels should only be selected following consultation with Dell Networking technical support.

**flood-2328**

Enable RFC-2328 flooding behavior.

**Syntax**

```plaintext
flood-2328
To disable, use the no flood-2328 command.
```

**Defaults**

Disabled.

**Command Modes**

ROUTER OSPF

**Supported Modes**

Full—Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

In OSPF, flooding is the most resource-consuming task. The flooding algorithm, described in RFC-2328, requires that OSPF flood LSAs (Link State Advertisements) on all interfaces, as governed by LSA's flooding scope (see Section 13 of the RFC). When multiple direct links connect two routers, the RFC-2328 flooding algorithm generates significant redundant information across all links.

By default, the system implements an enhanced flooding procedure that dynamically and intelligently determines when to optimize flooding. Whenever possible, the OSPF task attempts to reduce flooding overhead by selectively flooding on a subset of the interfaces between two routers.

When you enable flood-2328, this command configures the system to flood LSAs on all interfaces.

**graceful-restart grace-period**

Specifies the time duration, in seconds, that the router's neighbors continue to advertise the router as fully adjacent regardless of the synchronization state during a graceful restart.

**Syntax**

```plaintext
graceful-restart grace-period seconds
To disable the grace period, use the no graceful-restart grace-period command.
```

**Parameters**

- `seconds` Time duration, in seconds, that specifies the duration of the restart process before OSPF terminates the process. The range is from 40 to 1800 seconds.

**Defaults**

Not Configured

**Command Modes**

ROUTER OSPF

**Supported Modes**

Full—Switch
graceful-restart helper-reject

Specify the OSPF router to not act as a helper during graceful restart.

Syntax
graceful-restart helper-reject ip-address

Parameters
ip-address Enter the OSPF router-id, in IP address format, of the restart router that will not act as a helper during graceful restart.

Defaults Not configured.

Command Modes ROUTER OSPF

Supported Modes Full—Switch

Command History

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

graceful-restart mode

Enable the graceful restart mode.

Syntax
graceful-restart mode [planned-only | unplanned-only]

Parameters
planned-only (OPTIONAL) Enter the keywords planned-only to indicate graceful restart is supported in a planned restart condition only.

unplanned-only (OPTIONAL) Enter the keywords unplanned-only to indicate graceful restart is supported in an unplanned restart condition only.

Defaults Support for both planned and unplanned failures.

Command Modes ROUTER OSPF

Supported Modes Full—Switch

Command History

<table>
<thead>
<tr>

</tr>
</tbody>
</table>
graceful-restart role

Specify the role for your OSPF router during graceful restart.

Syntax
graceful-restart role [helper-only | restart-only]
To disable graceful restart role, use the no graceful-restart role command.

Parameters
role helper-only (OPTIONAL) Enter the keywords helper-only to specify the OSPF router is a helper only during graceful restart.
role restart-only (OPTIONAL) Enter the keywords restart-only to specify the OSPF router is a restart only during graceful-restart.

Defaults
By default, OSPF routers are both helper and restart routers during a graceful restart.

Command Modes
ROUTER OSPF

Supported Modes
Full—Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>

<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

ip ospf auth-change-wait-time

OSPF provides a grace period while OSPF changes its interface authentication type. During the grace period, OSPF sends out packets with new and old authentication scheme until the grace period expires.

Syntax
ip ospf auth-change-wait-time seconds
To return to the default, use the no ip ospf auth-change-wait-time command.

Parameters
seconds Enter the seconds. The range is from 0 to 300.

Defaults
zero (0) seconds.

Command Modes
INTERFACE

Supported Modes
Full—Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>
ip ospf authentication-key

Enable authentication and set an authentication key on OSPF traffic on an interface.

Syntax
ip ospf authentication-key [encryption-type] key
To delete an authentication key, use the no ip ospf authentication-key command.

Parameters
encryption-type (OPTIONAL) Enter 7 to encrypt the key.
key Enter an eight-character string. Strings longer than eight characters are truncated.

Defaults
Not configured.

Command Modes
INTERFACE

Supported Modes
Full—Switch

Command History
Version Description
9.9(0.0) Introduced on the FN IOM.
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
All neighboring routers in the same network must use the same password to exchange OSPF information.

ip ospf cost

Change the cost associated with the OSPF traffic on an interface.

Syntax
ip ospf cost cost
To return to default value, use the no ip ospf cost command.

Parameters
cost Enter a number as the cost. The range is from 1 to 65535.

Defaults
The default cost is based on the reference bandwidth.

Command Modes
INTERFACE

Supported Modes
Full—Switch

Command History
Version Description
9.9(0.0) Introduced on the FN IOM.
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
If this command is not configured, cost is based on the auto-cost command.

When you configure OSPF over multiple vendors, to ensure that all routers use the same cost, use the ip ospf cost command. Otherwise, OSPF routes improperly.

Related Commands
auto-cost — controls how the OSPF interface cost is calculated.
**ip ospf dead-interval**

Set the time interval since the last hello-packet was received from a router. After the interval elapses, the neighboring routers declare the router dead.

```
Syntax                     ip ospf dead-interval seconds
                          To return to the default values, use the no ip ospf dead-interval command.

Parameters    seconds  Enter the number of seconds for the interval. The range is from 1 to 65535. The default is 40 seconds.

Defaults       40 seconds

Command Modes  INTERFACE

Supported Modes  Full—Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information  By default, the dead interval is four times the default hello-interval.

Related Commands  ip ospf hello-interval — sets the time interval between the hello packets.

**ip ospf hello-interval**

Specify the time interval between the hello packets sent on the interface.

```
Syntax                     ip ospf hello-interval seconds
                          To return to the default value, use the no ip ospf hello-interval command.

Parameters    seconds  Enter the number of seconds for the interval. The range is from 1 to 65535. The default is 10 seconds.

Defaults       10 seconds

Command Modes  INTERFACE

Supported Modes  Full—Switch

Command History

<table>

</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information  The time interval between the hello packets must be the same for routers in a network.

Related Commands  ip ospf dead-interval — sets the time interval before a router is declared dead.
ip ospf message-digest-key

Enable OSPF MD5 authentication and send an OSPF message digest key on the interface.

Syntax

```
ip ospf message-digest-key keyid md5key
```

To delete a key, use the `no ip ospf message-digest-key keyid` command.

Parameters

- **keyid**: Enter a number as the key ID. The range is from 1 to 255.
- **key**: Enter a continuous character string as the password.

Defaults

No MD5 authentication is configured.

Command Modes

INTERFACE

Supported Modes

Full—Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

You can configure a maximum of six digest keys on an interface. Of the available six digest keys, the switches select the MD5 key that is common. The remaining MD5 keys are unused.

To change to a different key on the interface, enable the new key while the old key is still enabled. The system sends two packets: the first packet authenticated with the old key and the second packet authenticated with the new key. This process ensures that the neighbors learn the new key and communication is not disrupted by keeping the old key enabled.

After the reply is received and the new key is authenticated, delete the old key. Dell recommends keeping only one key per interface.

**NOTE:** The MD5 secret is stored as plain text in the configuration file with service password encryption. Write down or otherwise record the key. You cannot learn the key once it is configured. Use caution when changing the key.

ip ospf mtu-ignore

Disable OSPF MTU mismatch detection upon receipt of database description (DBD) packets.

Syntax

```
ip ospf mtu-ignore
```

To return to the default, use the `no ip ospf mtu-ignore` command.

Defaults

Enabled.

Command Modes

</tbody>
</table>

**ip ospf network**

Set the network type for the interface.

**Syntax**

```
ip ospf network {broadcast | point-to-point}
```

To return to the default, use the `no ip ospf network` command.

**Parameters**

- **broadcast**: Enter the keyword `broadcast` to designate the interface as part of a broadcast network.
- **point-to-point**: Enter the keywords `point-to-point` to designate the interface as part of a point-to-point network.

**Defaults**

Not configured.

**Command Modes**

ROUTER OSPF

**Supported Modes**

Full—Switch

**Command History**

<table>
<thead>
<tr>

</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>
Setting a priority of 0 makes the router ineligible for election as a designated router or backup designated router.

Use this command for interfaces connected to multi-access networks, not point-to-point networks.

**ip ospf retransmit-interval**

Set the retransmission time between lost link state advertisements (LSAs) for adjacencies belonging to the interface.

**Syntax**

```
ip ospf retransmit-interval seconds
```

To return to the default values, use the `no ip ospf retransmit-interval` command.

**Parameters**

- **seconds**

  Enter the number of seconds as the interval between retransmission. The range is from 1 to 3600. The default is **5 seconds**.

  This interval must be greater than the expected round-trip time for a packet to travel between two routers.

**Defaults**

**5 seconds**

**Command Modes**

<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

Set the time interval to a number large enough to prevent unnecessary retransmissions. For example, the interval must be larger for interfaces connected to virtual links.

**ip ospf transmit-delay**

To send a link state update packet on the interface, set the estimated time elapsed.

**Syntax**

```
ip ospf transmit-delay seconds
```

To return to the default value, use the `no ip ospf transmit-delay` command.

**Parameters**

- **seconds**

  Enter the number of seconds as the interval between retransmission. The range is from 1 to 3600. The default is **1 second**.

  This value must be greater than the transmission and propagation delays for the interface.
log-adjacency-changes

To send a Syslog message about changes in the OSPF adjacency state, set the system.

Syntax

log-adjacency-changes

To disable the Syslog messages, use the no log-adjacency-changes command.

Defaults

Disabled.

Command Modes

- ROUTER OSPF

Supported Modes

- Full-Switch

</tr>
</tbody>
</table>

maximum-paths

Enable the software to forward packets over multiple paths.

Syntax

maximum-paths number

To disable packet forwarding over multiple paths, use the no maximum-paths command.

Parameters

- number

Specify the number of paths. The range for OSPFv2 is from 1 to 16. The default for OSPFv2 is 4 paths. The range for OSPFv3 is from 1 to 64. The default for OSPFv3 is 8 paths.

Defaults

4

Command Modes

- ROUTER OSPF for OSPFv2
- ROUTER OSPFv3 for OSPFv3

Supported Modes

- Full-Switch

Command History

</tr>
</tbody>
</table>
mib-binding

Enable this OSPF process ID to manage the SNMP traps and process SNMP queries.

Syntax
mib-binding
To mib-binding on this OSPF process, use the no mib-binding command.

Defaults
none.

Command Modes
ROUTER OSPF

Supported Modes
Full–Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

This command is either enabled or disabled. If no OSPF process is identified as the MIB manager, the first OSPF process is used.

If an OSPF process has been selected, it must be disabled prior to assigning new process ID the MIB responsibility.

network area

Define which interfaces run OSPF and the OSPF area for those interfaces.

Syntax
network ip-address mask area area-id
To disable an OSPF area, use the no network ip-address mask area area-id command.

Parameters

- **ip-address**: Specify a primary or secondary address in dotted decimal format. The primary address is required before adding the secondary address.
- **mask**: Enter a network mask in /prefix format. (/x)
- **area-id**: Enter the OSPF area ID as either a decimal value or in a valid IP address. Decimal value range is from 0 to 65535. IP address format is dotted decimal format A.B.C.D.

**NOTE**: If the area ID is smaller than 65535, it is converted to a decimal value. For example, if you use an area ID of 0.0.0.1, it is converted to 1.

Command Modes
ROUTER OSPF

Supported Modes
Full–Switch

Command History

<table>
<thead>
<tr>

</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Open Shortest Path First (OSPFv2 and OSPFv3)
Usage Information
To enable OSPF on an interface, the network area command must include, in its range of addresses, the primary IP address of an interface.

**NOTE:** An interface can be attached only to a single OSPF area.

If you delete all the network area commands for Area 0, the show ip ospf command output does not list Area 0.

**passive-interface**

Suppress both receiving and sending routing updates on an interface.

**Syntax**

```
passive-interface {default | interface}
```

To enable both the receiving and sending routing, use the `no passive-interface interface` command.

To return all OSPF interfaces (current and future) to active, use the `no passive-interface default` command.

**Parameters**

- `default` Enter the keyword default to make all OSPF interfaces (current and future) passive.
- `interface` Enter the following keywords and slot/port or number information:
  - For Port Channel groups, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

**Command Modes**

- ROUTER OSPF

**Supported Modes**

- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.19.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

Although the passive interface does not send or receive routing updates, the network on that interface is still included in OSPF updates sent using other interfaces.

The `default` keyword sets all interfaces as passive. You can then configure individual interfaces, where adjacencies are desired, using the `no passive-interface interface` command. The no form of this command is inserted into the configuration for individual interfaces when the `no passive-interface default` command is issued while passive-interface default is configured.

This command behavior has changed as follows:

```
passive-interface interface
```

- The previous `no passive-interface interface` is removed from the running configuration.
- The ABR status for the router is updated.
• Save passive-interface interface into the running configuration.

**passive-interface default**

• All present and future OSPF interfaces are marked as passive.
• Any adjacency is explicitly terminated from all OSPF interfaces.
• All previous passive-interface interface commands are removed from the running configuration.
• All previous no passive-interface interface commands are removed from the running configuration.

**no passive-interface interface**

• Remove the interface from the passive list.
• The ABR status for the router is updated.
• If passive-interface default is specified, then save no passive-interface interface into the running configuration.

**No passive-interface default**

• Clear everything and revert to the default behavior.
• All previously marked passive interfaces are removed.
• May update ABR status.

---

**redistribute**

Redistribute information from another routing protocol throughout the OSPF process.

**Syntax**

```plaintext
redistribute {connected | rip | static} [metric metric-value | metric-type type-value] [route-map map-name] [tag tag-value]
```

To disable redistribution, use the `no redistribute {connected | isis | rip | static}` command.

**Parameters**

- **connected**: Enter the keyword connected to specify that information from active routes on interfaces is redistributed.
- **rip**: Enter the keyword rip to specify that RIP routing information is redistributed.
- **static**: Enter the keyword static to specify that information from static routes is redistributed.
- **metric metric-value**: (OPTIONAL) Enter the keyword metric then a number. The range is from 0 (zero) to 16777214.
- **metric-type type-value**: (OPTIONAL) Enter the keywords metric-type then one of the following:
  - 1 = OSPF External type 1
  - 2 = OSPF External type 2
- **route-map map-name**: (OPTIONAL) Enter the keywords route-map then the name of the route map.
- **tag tag-value**: (OPTIONAL) Enter the keyword tag then a number. The range is from 0 to 4294967295.

**Defaults**

Not configured.

**Command Modes**

ROUTER OSPF
redistribute bgp

Redistribute BGP routing information throughout the OSPF instance.

Syntax
redistribute bgp as number [metric metric-value] | [metric-type type-value] | [tag tag-value]

To disable redistribution, use the no redistribute bgp as number [metric metric-value] | [metric-type type-value] | [tag tag-value] command.

Parameters
- as number: Enter the autonomous system number. The range is from 1 to 65535.
- metric metric-value: (OPTIONAL) Enter the keyword metric then the metric-value number. The range is from 0 to 16777214.
- metric-type type-value: (OPTIONAL) Enter the keywords metric-type then one of the following:
  - 1 = for OSPF External type 1
  - 2 = for OSPF External type 2
- tag tag-value: (OPTIONAL) Enter the keyword tag to set the tag for routes redistributed into OSPF. The range is from 0 to 4294967295.

Defaults
- none

Command Modes
- ROUTER OSPF

Supported Modes
- Full-Switch

Command History
Version Description
9.9(0.0) Introduced on the FN IOM.
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

redistribute isis

Redistribute IS-IS routing information throughout the OSPF instance.

Syntax
redistribute isis [tag] [level-1 | level-1-2 | level-2] [metric metric-value] | [metric-type type-value] [route-map map-name] [tag tag-value]
To disable redistribution, use the `no redistribute isis [tag] [level-1 | level-1-2 | level-2] [metric metric-value | metric-type type-value] [route-map map-name] [tag tag-value]` command.

**Parameters**
- **tag** *(OPTIONAL)* Enter the name of the IS-IS routing process.
- **level-1** *(OPTIONAL)* Enter the keywords `level-1` to redistribute only IS-IS Level-1 routes.
- **level-1-2** *(OPTIONAL)* Enter the keywords `level-1-2` to redistribute both IS-IS Level-1 and Level-2 routes.
- **level-2** *(OPTIONAL)* Enter the keywords `level-2` to redistribute only IS-IS Level-2 routes.
- **metric metric-value** *(OPTIONAL)* Enter the keyword `metric` then a number. The range is from 0 (zero) to 4294967295.
- **metric-type type-value** *(OPTIONAL)* Enter the keywords `metric-type` then one of the following:
  - `1` = for OSPF External type 1
  - `2` = for OSPF External type 2
- **route-map map-name** *(OPTIONAL)* Enter the keywords `route-map` then the name of the route map.
- **tag tag-value** *(OPTIONAL)* Enter the keyword `tag` to set the tag for routes redistributed into OSPF. The range is from 0 to 4294967295.

**Defaults**
Not configured.

**Command Modes**
- ROUTER OSPF

**Supported Modes**
- Full-Switch

### router-id

To configure a fixed router ID, use this command.

**Syntax**
```
router-id ip-address
```

To remove the fixed router ID, use the `no router-id ip-address` command.

**Parameters**
- **ip-address** Enter the router ID in the IP address format.

**Defaults**
none.

**Command Modes**
- ROUTER OSPF

**Supported Modes**
- Full-Switch
router ospf

To configure an OSPF instance, enter ROUTER OSPF mode.

Syntax

```
router ospf process-id
```

To clear an OSPF instance, use the `no router ospf process-id` command.

Parameters

- **process-id**: Enter a number for the OSPF instance. The range is from 1 to 65535.

Defaults

Not configured.

Command Modes

CONFIGURATION

Supported Modes

Full-Switch

Command History

- **Version**: 9.9(0.0) Introduced on the FN IOM.
- **Version**: 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

You must have an IP address assigned to an interface to enter ROUTER OSPF mode and configure OSPF.

Example

```
Dell(conf)#router ospf 2
Dell(conf-router_ospf)#
```

show config

Display the non-default values in the current OSPF configuration.

Syntax

```
show config
```

Example

```
show config
```

936 | Open Shortest Path First (OSPFv2 and OSPFv3)
show ip ospf

Display information on the OSPF process configured on the switch.

Syntax

show ip ospf process-id

Parameters

process-id

Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.

Command Modes

• EXEC
• EXEC Privilege

Supported Modes

Full-Switch

Command History

Version Description
9.9(0.0) Introduced on the FN IOM.
9.2(0.0) Introduced on the M I/O Aggregator.
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

If you delete all the network area commands for Area 0, the show ip ospf command output does not list Area 0.

The following describes the show ip ospf command shown in the following example.

Line Beginning with Description
"Routing Process..." Displays the OSPF process ID and the IP address associated with the process ID.
"Supports only..." Displays the number of Type of Service (TOS) rouse supported.
"SPF schedule..." Displays the delay and hold time configured for this process ID.
"Convergence Level" Displays the intervals set for LSA transmission and acceptance.
"Min LSA..."
“Number of...”
Displays the number and type of areas configured for this process ID.

Example
Dell#show ip ospf 10
Routing Process ospf 10 with ID 1.1.1.1 Virtual router default-vrf
Supports only single TOS (TOS0) routes
SPF schedule delay 5 secs, Hold time between two SPF s 10 secs
Convergence Level 0
Min LSA origination 0 msec, Min LSA arrival 1000 msec
Min LSA hold time 5000 msec, Max LSA wait time 5000 msec
Number of area in this router is 1, normal 1 stub 0 nssa 0
  Area BACKBONE (0)
    Number of interface in this area is 1
    SPF algorithm executed 205 times
  Area ranges are
Dell#

Related Commands
show ip ospf database — displays information about the OSPF routes configured.
show ip ospf interface — displays the OSPF interfaces configured.
show ip ospf neighbor — displays the OSPF neighbors configured.

show ip ospf asbr
Display all autonomous system boundary router (ASBR) routers visible to OSPF.

Syntax
show ip ospf process-id asbr

Parameters
process-id
Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.

Defaults
none

Command Modes
- EXEC
- EXEC Privilege

Supported Modes
Full-Switch

Command History
Version Description
9.9(0.0) Introduced on the FN IOM.
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
To isolate problems with external routes, use this command. In OSPF, external routes are calculated by adding the LSA cost to the cost of reaching the ASBR router. If an external route does not have the correct cost, use this command to determine if the path to the originating router is correct. The display output is not sorted in any order.

NOTE: ASBRs that are not in directly connected areas are also displayed.
You can determine if an ASBR is in a directly connected area (or not) by the flags. For ASBRs in a directly connected area, E flags are set. In the following example, router 1.1.1.1 is in a directly connected area since the Flag is E/-/-/. For remote ASBRs, the E flag is clear (-/-/-/).

Example

Dell#show ip ospf 1asbr

<table>
<thead>
<tr>
<th>RouterID</th>
<th>Flags</th>
<th>Cost</th>
<th>Nexthop</th>
<th>Interface</th>
<th>Area</th>
</tr>
</thead>
<tbody>
<tr>
<td>3.3.3.3</td>
<td>-/-/-/</td>
<td>2</td>
<td>10.0.0.2</td>
<td>Gi 0/1</td>
<td>1</td>
</tr>
<tr>
<td>1.1.1.1</td>
<td>E/-/-/</td>
<td>0</td>
<td>0.0.0.0</td>
<td>-</td>
<td>0</td>
</tr>
</tbody>
</table>

show ip ospf database

Display all LSA information. If you do not enable OSPF on the switch, no output is generated.

Syntax

`show ip ospf process-id database [database-summary]`

Parameters

- **process-id**: Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.
- **database-summary**: (OPTIONAL) Enter the keywords `database-summary` to the display the number of LSA types in each area and the total number of LSAs.

Command Modes

- EXEC
- EXEC Privilege

Supported Modes: Full-Switch

Command History

- **Version 9.9(0.0)**: Introduced on the FN IOM.
- **Version 8.3.16.1**: Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The following describes the `show ip ospf process-id database` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Link ID</td>
<td>Identifies the router ID.</td>
</tr>
<tr>
<td>ADV Router</td>
<td>Identifies the advertising router’s ID.</td>
</tr>
<tr>
<td>Age</td>
<td>Displays the link state age.</td>
</tr>
<tr>
<td>Seq#</td>
<td>Identifies the link state sequence number. This number allows you to identify old or duplicate link state advertisements.</td>
</tr>
<tr>
<td>Checksum</td>
<td>Displays the Fletcher checksum of an LSA’s complete contents.</td>
</tr>
<tr>
<td>Link count</td>
<td>Displays the number of interfaces for that router.</td>
</tr>
</tbody>
</table>

Example

Dell>show ip ospf 1 database

<table>

Related Commands

**show ip ospf database asbr-summary** — displays only ASBR summary LSA information.

### show ip ospf database asbr-summary

Display information about autonomous system (AS) boundary LSAs.

**Syntax**

```
show ip ospf process-id database asbr-summary [link-state-id] [adv-router ip-address]
```

**Parameters**

- **process-id**
  - Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.

- **link-state-id**
  - (OPTIONAL) Specify LSA ID in dotted decimal format. The LSA ID value depends on the LSA type, and it can be one of the following:
    - the network’s IP address for Type 3 LSAs or Type 5 LSAs
    - the router’s OSPF router ID for Type 1 LSAs or Type 4 LSAs
    - the default destination (0.0.0.0) for Type 5 LSAs

- **adv-router ip-address**
  - (OPTIONAL) Enter the keywords adv-router and the ip-address to display only the LSA information about that router.

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

- Full-Switch

**Command History**

- **Version**
  - **9.9(0.0)**
    - Introduced on the FN IOM.
  - **8.3.16.1**
    - Introduced on the M10 10/40GbE Switch IO Module.
The following describes the `show ip ospf database asbr-summary` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>LS Age</td>
<td>Displays the LSA's age.</td>
</tr>
<tr>
<td>Options</td>
<td>Displays the optional capabilities available on router. The following options can be found in this item:</td>
</tr>
<tr>
<td></td>
<td>• TOS-capability or No TOS-capability is displayed depending on whether the router can support Type of Service.</td>
</tr>
<tr>
<td></td>
<td>• DC or No DC is displayed depending on whether the originating router can support OSPF over demand circuits.</td>
</tr>
<tr>
<td></td>
<td>• E or No E is displayed on whether the originating router can accept AS External LSAs.</td>
</tr>
<tr>
<td>LS Type</td>
<td>Displays the LSA's type.</td>
</tr>

  Length: 28
  --More--
```

**Related Commands**

- `show ip ospf database` — displays OSPF database information.
show ip ospf database external

Display information on the AS external (type 5) LSAs.

Syntax

```
show ip ospf process-id database external [link-state-id] [adv-router ip-address]
```

Parameters

- **process-id**
  - Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.

- **link-state-id**
  - (OPTIONAL) Specify LSA ID in dotted decimal format. The LSA ID value depends on the LSA type, and it can be one of the following:
    - the network’s IP address for Type 3 LSAs or Type 5 LSAs
    - the router’s OSPF router ID for Type 1 LSAs or Type 4 LSAs
    - the default destination (0.0.0.0) for Type 5 LSAs

- **adv-router ip-address**
  - (OPTIONAL) Enter the keywords adv-router and the ip-address to display only the LSA information about that router.

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

**Related Commands**  
show ip ospf database — displays OSPF database information.
show ip ospf database network

Display the network (type 2) LSA information.

Syntax

show ip ospf process-id database network [link-state-id] [adv-router ip-address]

Parameters

process-id

Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.

link-state-id

(OPTIONAL) Specify LSA ID in dotted decimal format. The LSA ID value depends on the LSA type, and it can be one of the following:

- the network's IP address for Type 3 LSAs or Type 5 LSAs
- the router’s OSPF router ID for Type 1 LSAs or Type 4 LSAs
- the default destination (0.0.0.0) for Type 5 LSAs

Supported Modes

Full-Switch

Command History

Version Description
9.9(0.0) Introduced on the FN IOM.
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The following describes the show ip ospf process-id database network command shown in the following example.

Field Description
LS Age Displays the LSA’s age.
Options Displays the optional capabilities available on router. The following options can be found in this item:

- TOS-capability or No TOS-capability is displayed depending on whether the router can support Type of Service.
- DC or No DC is displayed depending on whether the originating router can support OSPF over demand circuits.
- E or No E is displayed on whether the originating router can accept AS External LSAs.

LS Type Displays the LSA’s type.
Link State ID Displays the Link State ID.
Advertising Router Identifies the router ID of the LSA's originating router.
Checksum Identifies the link state sequence number. This number enables you to identify old or duplicate LSAs.

<td>Identifies the IP address of routers attached to the network.</td>
</tr>
</tbody>
</table>

**Example**

```plaintext
Dell#show ip ospf 1 data network

    OSPF Router with ID (20.20.20.5) (Process ID 1)

    Network (Area 0.0.0.0)
        LS age: 1372
        Options: (No TOS-capability, DC, E)
        LS type: Network
        Link State ID: 202.10.10.2
        Advertising Router: 20.20.20.8
        LS Seq Number: 0x80000006
        Checksum: 0xa35
        Length: 36
        Network Mask: /24
            Attached Router: 20.20.20.8
            Attached Router: 20.20.20.9
            Attached Router: 20.20.20.7

    Network (Area 0.0.0.1)

        LS age: 252
        Options: (TOS-capability, No DC, E)
        LS type: Network
        Link State ID: 192.10.10.2
        Advertising Router: 192.10.10.2
        LS Seq Number: 0x80000007
        Checksum: 0x4309
        Length: 36
        Network Mask: /24
            Attached Router: 192.10.10.2
            Attached Router: 20.20.20.1
            Attached Router: 20.20.20.5

Dell#
```

**Related Commands**

- `show ip ospf database` — displays OSPF database information.
- `show ip ospf database nssa-external` — displays NSSA-External (type 7) LSA information.

### show ip ospf database nssa-external

Display NSSA-External (type 7) LSA information.

**Syntax**

```plaintext
show ip ospf database nssa-external [link-state-id] [adv-router ip-address]
```

**Parameters**

- `link-state-id` (OPTIONAL) Specify LSA ID in dotted decimal format. The LSA ID value depends on the LSA type, and it can be one of the following:
  - the network's IP address for Type 3 LSAs or Type 5 LSAs
  - the router's OSPF router ID for Type 1 LSAs or Type 4 LSAs
  - the default destination (0.0.0.0) for Type 5 LSAs

- `adv-router ip-address` (OPTIONAL) Enter the keywords `adv-router` and the `ip-address` to display only the LSA information about that router.
show ip ospf database opaque-area

Display the opaque-area (type 10) LSA information.

Syntax

show ip ospf process-id database opaque-area [link-state-id] [adv-router ip-address]

Parameters

process-id Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.

link-state-id (OPTIONAL) Specify LSA ID in dotted decimal format. The LSA ID value depends on the LSA type, and it can be one of the following:

- the network's IP address for Type 3 LSAs or Type 5 LSAs
- the router's OSPF router ID for Type 1 LSAs or Type 4 LSAs
- the default destination (0.0.0.0) for Type 5 LSAs

adv-router ip-address (OPTIONAL) Enter the keywords adv-router and the ip-address to display only the LSA information about that router.

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

Full-Switch

Command History

Version Description
9.9(0.0) Introduced on the FN IOM.
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The following describes the show ip ospf process-id database opaque-area command shown in the following example.

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>

<td>Displays the length in bytes of the LSA.</td>
</tr>
<tr>
<td>Opaque Type</td>
<td>Displays the Opaque type field (the first 8 bits of the Link State ID).</td>
</tr>
<tr>
<td>Opaque ID</td>
<td>Displays the Opaque type-specific ID (the remaining 24 bits of the Link State ID).</td>
</tr>
</tbody>
</table>

**Example**

Dell>show ip ospf 1 database opaque-area

    OSPF Router with ID (3.3.3.3) (Process ID 1)
    Type-10 Opaque Link Area (Area 0)

    LS age: 1133
    Options: (No TOS-capability, No DC, E)
    LS type: Type-10 Opaque Link Area
    Link State ID: 1.0.0.1
    Advertising Router: 10.16.1.160
    LS Seq Number: 0x80000416
    Checksum: 0x376
    Length: 28
    Opaque Type: 1
    Opaque ID: 1
    Unable to display opaque data

    LS age: 833
    Options: (No TOS-capability, No DC, E)
    LS type: Type-10 Opaque Link Area
    Link State ID: 1.0.0.2
    Advertising Router: 10.16.1.160
    LS Seq Number: 0x80000002
    Checksum: 0x19c2
    --More--

**Related Commands**

- `show ip ospf database` — displays OSPF database information.

**show ip ospf database opaque-as**

Display the opaque-as (type 11) LSA information.

**Syntax**

```
show ip ospf process-id database opaque-as [link-state-id] [adv-router ip-address]
```

**Parameters**

- **process-id**
  - Enter the OSPF process ID to show a specific process. If you do not enter the process ID, the command applies only to the first OSPF process.

- **link-state-id**
  - (OPTIONAL) Specify LSA ID in dotted decimal format. The LSA ID value depends on the LSA type, and it can be one of the following:
adv-router ip-address (OPTIONAL) Enter the keywords adv-router and the ip-address to display only the LSA information about that router.

Command Modes
- EXEC
- EXEC Privilege

Supported Modes Full-Switch

    Number of TOS metric: 0
    TOS 0 Metric: 1

    Link connected to: a Stub Network
Related Commands  
show ip ospf database — displays OSPF database information.

show ip ospf database summary

Display the network summary (type 3) LSA routing information.

Syntax

show ip ospf process-id database summary [link-state-id] [adv-router ip-address]

Parameters

process-id Enter the OSPF process ID to show a specific process. If you do not enter a process ID, the command applies only to the first OSPF process.

link-state-id (OPTIONAL) Specify LSA ID in dotted decimal format. The LSA ID value depends on the LSA type, and it can be one of the following:

• the network’s IP address for Type 3 LSAs or Type 5 LSAs
• the router’s OSPF router ID for Type 1 LSAs or Type 4 LSAs
• the default destination (0.0.0.0) for Type 5 LSAs

adv-router ip-address (OPTIONAL) Enter the keywords adv-router then the IP address of an Advertising Router to display only the LSA information about that router.

</table>
### Item | Description
---|---
Advertising Router | Identifies the router ID of the LSA's originating router.
LS Seq Number | Displays the link state sequence number. This number allows you to identify old or duplicate LSAs.
Checksum | Displays the Fletcher checksum of an LSA's complete contents.
Length | Displays the length in bytes of the LSA.
Network Mask | Displays the network mask implemented on the area.
TOS | Displays the TOS options. Option 0 is the only option.
Metric | Displays the LSA metrics.

#### Example
```
#show ip ospf 100 database summary

OSPF Router with ID (1.1.1.10) (Process ID 100)

    Summary Network (Area 0.0.0.0)
        LS age: 1551
        Options: (No TOS-capability, DC, E)
        LS type: Summary Network
        Link State ID: 192.68.16.0
        Advertising Router: 192.168.17.1
        LS Seq Number: 0x80000054
        Checksum: 0xb5a2
        Length: 28
        Network Mask: /24
        TOS: 0 Metric: 1

    LS age: 9
    Options: (No TOS-capability, No DC, E)
    LS type: Summary Network
    Link State ID: 192.68.32.0
    Advertising Router: 1.1.1.10
    LS Seq Number: 0x80000016
    Checksum: 0x987c
    Length: 28
    Network Mask: /24
    TOS: 0 Metric: 1

    LS age: 7
    Options: (No TOS-capability, No DC, E)
    LS type: Summary Network
    Link State ID: 192.68.33.0
    Advertising Router: 1.1.1.10
    LS Seq Number: 0x80000016
    Checksum: 0x1241
    Length: 28
    Network Mask: /26
    TOS: 0 Metric: 1

#```

#### Related Commands
show ip ospf database — displays OSPF database information.
**show ip ospf interface**

Display the OSPF interfaces configured. If OSPF is not enabled on the switch, no output is generated.

**Syntax**

```
show ip ospf process-id interface [interface]
```

**Parameters**

- **process-id**
  
  Enter the OSPF process ID to show a specific process. If you do not enter a process ID, the command applies only to the first OSPF process.

- **interface**
  
  (OPTIONAL) Enter the following keywords and slot/port or number information:

  - For the null interface, enter the keyword `null` then zero (0).
  - For Loopback interfaces, enter the keyword `loopback` then a number from 0 to 16383.
  - For Port Channel groups, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a VLAN, enter the keyword `vlan` then the VLAN ID. The range is from 1 to 4094.

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

Full-Switch

**Command History**

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch I/O Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

The following describes the `show ip ospf process-id interface` command shown in the following example.

**Item** | **Description**
---|---
| TenGigabitEthernet. .. | This line identifies the interface type slot/port and the status of the OSPF protocol on that interface.
| Internet Address... | This line displays the IP address, network mask and area assigned to this interface.
| Process ID... | This line displays the OSPF Process ID, Router ID, Network type and cost metric for this interface.
| Transmit Delay... | This line displays the interface’s settings for Transmit Delay, State, and Priority. In the State setting, BDR is Backup Designated Router.
| Designated Router... | This line displays the ID of the Designated Router and its interface address.
| Backup Designated... | This line displays the ID of the Backup Designated Router and its interface address.
| Timer intervals... | This line displays the interface’s timer settings for Hello interval, Dead interval, Transmit Delay (Wait), and Retransmit Interval.
| Hello due... | This line displays the amount time until the next Hello packet is sent out this interface.
show ip ospf neighbor

Display the OSPF neighbors connected to the local router.

Syntax

show ip ospf process-id neighbor

Parameters

process-id

Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.

Command Modes

EXEC Privilege

Supported Modes

Full–Switch

Command History

Version Description

9.9(0.0) Introduced on the FN IOM.

8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The following describes the show ip ospf process-id neighbor command shown in the following example.
### Item Description
- **Neighbor ID**: Displays the neighbor router ID.
- **Pri**: Displays the priority assigned neighbor.
- **State**: Displays the OSPF state of the neighbor.
- **Dead Time**: Displays the expected time until the system declares the neighbor dead.
- **Address**: Displays the IP address of the neighbor.
- **Interface**: Displays the interface type slot/port information.
- **Area**: Displays the neighbor’s area (process ID).

### Example
```
Dell#show ip ospf 34 neighbor

Neighbor ID Pri State       Dead Time Address  Interface Area
20.20.20.7  1 FULL/DR     00:00:32 182.10.10.3 Gi 0/0 0.0.0.2
192.10.10.2 1 FULL/DR     00:00:37 192.10.10.2 Gi 0/1 0.0.0.1
20.20.20.1  1 FULL/DROTHER00:00:36 192.10.10.4 Gi 0/1 0.0.0.1
Dell#
```

### show ip ospf routes

Display routes OSPF calculates and stores in OSPF RIB.

**Syntax**
```
show ip ospf process-id routes
```

**Parameters**
- `process-id`: Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.

**Defaults**
none

**Command Modes**
- EXEC
- EXEC Privilege

**Supported Modes**
Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**
This command is useful in isolating routing problems between the OSPF and the RTM. For example, if a route is missing from the RTM/FIB but is visible from the display output of this command, the problem is with downloading the route to the RTM.

This command has the following limitations:
- The display output is sorted by prefixes; intra-area ECMP routes are not displayed together.
- For Type 2 external routes, Type 1 cost is not displayed.

**Example**
```
Dell#show ip ospf 100 route
```
**show ip ospf statistics**

Display OSPF statistics.

**Syntax**

```
show ip ospf [process-id] statistics [global | [interface [neighbor router-id]]]
```

**Parameters**

- **process-id**
  - Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.

- **global**
  - Enter the keyword `global` to display the packet counts received on all running OSPF interfaces and packet counts OSPF neighbors receive and transmit.

- **interface name**
  - (OPTIONAL) Enter the keyword `interface` then one of the following interface keywords and slot/port or number information:
    - For Port Channel groups, enter the keywords `port-channel` then a number. The range is from 1 to 128.
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
    - For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

- **neighbor router-id**
  - (OPTIONAL) Enter the keyword `neighbor` then the neighbor’s router-id in dotted decimal format (A.B.C.D.).

**Defaults**

none

**Supported Modes**

Full-Switch

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

- **Version**
  - 9.9(0.0)
    - Introduced on the FN IOM.
  - 8.3.16.1
    - Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The following describes the `show ip ospf statistics process-id global` command shown in the following example.

<table>
<thead>
<tr>
<th>Row Heading</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Total</td>
<td>Displays the total number of packets the OSPF process receives/transmits.</td>
</tr>

</tr>
</tbody>
</table>

**Example**

```
Dell#show ip ospf 10 statistics global
OSPF Packet Count
  Total Error Hello DDisr LSReq LSUpd
```
usage information

The `show ip ospf process-id statistics` command displays the error packet count received on each interface as:

- The hello-timer remaining value for each interface
- The wait-timer remaining value for each interface
- The grace-timer remaining value for each interface
- The packet count received and transmitted for each neighbor
- The dead timer remaining value for each neighbor
- The transmit timer remaining value for each neighbor
- The LSU Q length and its highest mark for each neighbor
- The LSR Q length and its highest mark for each neighbor

Example (Statistics)

Dell#show ip ospf 10 statistics
Interface TenGigabitEthernet 4/45
Error packets (Receive statistics)
  Intf-Down 0 Non-Dr 0 Self-Org 0
  Wrong-Len 0 Invlid-Nbr 0 Nbr-State 0

  Version 0 AreaMisMatch 0 Conf-Issue 0
  SeqNo-Err 0 Unknown-Pkt 0 Bad-LsReq 0
  RtidZero 0
Neighbor ID 3.1.1.2
  Packet Statistics
    Hello DDiscr LSReq LSUpd LSAck
      RX 47 2 1 3 2
      TX 46 3 1 3 2
  Timers
    Hello 1 Wait 0 Grace 0
    Dead 37 Transmit 0
  Queue Statistics
    LSU-Q-Len 0 LSU-Q-Wmark 1
    LSR-Q-Len 0 LSR-Q-Wmark 1

Related Commands

`clear ip ospf statistics` — clears the packet statistics in all interfaces and neighbors.
show ip ospf timers rate-limit

Show the LSA currently in the queue waiting for timers to expire.

Syntax

```
show ip ospf process-id timers rate-limit
```

Parameters

`process-id` Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.

Defaults

none

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

Full-Switch

Command History

<table>
<thead>
<tr>

</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Example

```
Dell#show ip ospf 10 timers rate-limit
List of LSAs in rate limit Queue
LSA id: 1.1.1.0 Type: 3 Adv Rtld: 3.3.3.3 Expiry time: 00:00:09.111
LSA id: 3.3.3.3 Type: 1 Adv Rtld: 3.3.3.3 Expiry time: 00:00:23.96
Dell#
```

show ip ospf topology

Display routers in directly connected areas.

Syntax

```
show ip ospf process-id topology
```

Parameters

`process-id` Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.

Defaults

none

Command Modes

- EXEC

</tr>
</tbody>
</table>

Open Shortest Path First (OSPFv2 and OSPFv3)
Usage Information
To isolate problems with inter-area and external routes, use this command. In OSPF inter-area and external routes are calculated by adding LSA cost to the cost of reaching the router. If an inter-area or external route is not of correct cost, the display can determine if the path to the originating router is correct or not.

Example
Dell#show ip ospf 1 topology

<table>
<thead>
<tr>
<th>Router ID</th>
<th>Flags</th>
<th>Cost</th>
<th>Nexthop</th>
<th>Interface</th>
<th>Area</th>
</tr>
</thead>

</tr>
</tbody>
</table>
Dell#

summary-address

To advertise one external route, set the OSPF ASBR.

Syntax

```
summary-address ip-address mask [not-advertise] [tag tag-value]
```

To disable summary address, use the `no summary-address ip-address mask` command.

Parameters

- `ip-address`: Specify the IP address in dotted decimal format of the address to summarize.
- `mask`: Specify the mask in dotted decimal format of the address to summarize.
- `not-advertise`: (OPTIONAL) Enter the keywords `not-advertise` to suppress that match the network prefix/mask pair.
- `tag tag-value`: (OPTIONAL) Enter the keyword `tag` then a value to match on routes redistributed through a route map. The range is from 0 to 4294967295.

Defaults

Not configured.

Command Modes

- ROUTER OSPF

Supported Modes

- Full-Switch

Command History

- Version
  - 9.9(0.0): Introduced on the FN IOM.
  - 8.3.16.1: Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The `area range` command summarizes routes for the different areas.

With the `not-advertise` parameter configured, you can use this command to filter out some external routes. For example, if you want to redistribute static routes to OSPF, but you don't want OSPF to advertise routes with prefix 1.1.0.0, you can configure the `summary-address 1.1.0.0 255.255.0.0 not-advertise` to filter out all the routes fall in range 1.1.0.0/16.

Related Commands

- `area range` — summarizes routes within an area.

timers spf

Set the time interval between when the switch receives a topology change and starts a shortest path first (SPF) calculation.

Syntax

```
timers spf delay holdtime msec
```
To return to the default, use the `no timers spf` command.

**Parameters**

- `delay`  
  Enter a number as the delay. The range is from 0 to 2147483647. The default is 5 seconds.
- `holdtime`  
  Enter a number as the hold time. The range is from 0 to 2147483647. The default is 10 seconds.
- `msec`  
  Enter the keyword `msec` to specify the time interval value in milli seconds.

**NOTE:** If you do not specify the `msec` option, the timer values are considered as seconds.

**Defaults**

- delay = 5 seconds
- holdtime = 10 seconds

**Command Modes**

- ROUTER OSPF

**Supported Modes**

- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.11(0.0)</td>
<td>Introduced the <code>msec</code> keyword.</td>
</tr>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

Setting the `delay` and `holdtime` parameters to a low number enables the switch to an alternate path quickly but requires more CPU usage.

**Example for IPv4 and IPv6**

```
Dell#
Dell(conf)#router ospf 1
Dell(conf-router_ospf-1)#timer spf 2 5 msec
Dell(conf-router_ospf-1)#
```
hold-interval  Set the next interval to send the same LSA. This interval is the time between sending the same LSA after the start-interval has been attempted. The range is from 1 to 600,000 milliseconds.

max-interval  Set the maximum amount of time the system waits before sending the LSA. The range is from 1 to 600,000 milliseconds.

Defaults
- start-interval: 0 msec
- hold-interval: 5000 msec
- max-interval: 5000 msec

Command Modes  ROUTER OSPF

Supported Modes  Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information  LSAs are sent after the start-interval and then after hold-interval until the maximum interval is reached. In throttling, exponential backoff is used when sending same LSA, so that the interval is multiplied until the maximum time is reached. For example, if the start-interval 5000 and hold-interval 1000 and max-interval 100,000, the LSA is sent at 5000 msec, then 1000 msec, then 2000 msec, them 4000 until 100,000 msec is reached.

timers throttle lsa arrival

Configure the LSA acceptance intervals.

Syntax

```
timers throttle lsa arrival arrival-time
```

To return to the default, use the no timers throttle lsa command.

Parameters

- `arrival-time`  Set the interval between receiving the same LSA repeatedly, to allow sufficient time for the system to accept the LSA. The range is from 0 to 600,000 milliseconds.

Defaults  1000 msec

Command Modes  ROUTER OSPF

Supported Modes  Full-Switch

Command History

<table>

</tbody>
</table>
The fundamental mechanisms of OSPF (flooding, DR election, area support, SPF calculations, and so on) remain unchanged. However, OSPFv3 runs on a per-link basis instead of on a per-IP-subnet basis. Most changes were necessary to handle the increased address size of IPv6.

The Dell Networking implementation of OSPFv3 is based on IETF RFC 2740.

area authentication

Configure an IPsec authentication policy for OSPFv3 packets in an OFSPFv3 area.

Syntax

```
area area-id authentication ipsec spi number {MD5 | SHA1} [key-encryption-type] key
```

Parameters

- **area area-id**: Area for which OSPFv3 traffic is to be authenticated. For area-id, you can enter a number. The range is from 0 to 4294967295.
- **ipsec spi number**: Security Policy index (SPI) value that identifies an IPsec security policy. The range is from 256 to 4294967295.
- **MD5 | SHA1**: Authentication type: Message Digest 5 (MD5) or Secure Hash Algorithm 1 (SHA-1).
- **key-encryption-type**: (OPTIONAL) Specifies if the key is encrypted. The values are 0 (key is not encrypted) or 7 (key is encrypted).
- **key**: Text string used in authentication.
  - For MD5 authentication, the key must be 32 hex digits (non-encrypted) or 64 hex digits (encrypted).
  - For SHA-1 authentication, the key must be 40 hex digits (non-encrypted) or 80 hex digits (encrypted).

Defaults

Not configured.

Command Modes

- ROUTER OSPFv3

Supported Modes

- Full—Switch

Command History

- **Version 9.9(0.0)**: Introduced on the FN IOM.
- **Version 9.2(0.0)**: Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

Before you enable IPsec authentication on an OSPFv3 area, you must first enable OSPFv3 globally on the router. Configure the same authentication policy (same SPI and key) on each interface in an OSPFv3 link.
An SPI number must be unique to one IPsec security policy (authentication or encryption) on the router.

If you have enabled IPsec encryption in an OSPFv3 area with the `area encryption` command, you cannot use the `area authentication` command in the area at the same time.

The configuration of IPsec authentication on an interface-level takes precedence over an area-level configuration. If you remove an interface configuration, an area authentication policy that has been configured is applied to the interface.

**area encryption**

Configure an IPsec encryption policy for OSPFv3 packets in an OSPFv3 area.

**Syntax**

```
area area-id encryption ipsec spi number esp encryption-algorithm [key-encryption-type] key authentication-algorithm [key-encryption-type] key | null
```

To remove an IPsec encryption policy from an interface, use the `no area area-id encryption spi number` command.

**Parameters**

- `area area-id` Area for which OSPFv3 traffic is to be encrypted. For `area-id`, enter a number.
  The range is from 0 to 4294967295.

- `ipsec spi number` Security Policy index (SPI) value that identifies an IPsec security policy.
  The range is from 256 to 4294967295.

- `esp encryption-algorithm` Encryption algorithm used with ESP.
  Valid values are: 3DES, DES, AES-CBC, and NULL.
  For AES-CBC, only the AES-128 and AES-192 ciphers are supported.

- `key-encryption-algorithm` (OPTIONAL) Specifies if the key is encrypted.
  Valid values: 0 (key is not encrypted) or 7 (key is encrypted).

- `key` Text string used in encryption.
  The required lengths of a non-encrypted or encrypted key are:
  3DES - 48 or 96 hex digits; DES - 16 or 32 hex digits; AES-CBC - 32 or 64 hex digits for AES-128 and 48 or 96 hex digits for AES-192.

- `authentication-algorithm` Specifies the authentication algorithm to use for encryption.
  Valid values are MD5 or SHA1.

- `key-encryption-type` (OPTIONAL) Specifies if the authentication key is encrypted.
Valid values: 0 (key is not encrypted) or 7 (key is encrypted).

**Key**

Text string used in authentication.

For MD5 authentication, the key must be 32 hex digits (non-encrypted) or 64 hex digits (encrypted).

For SHA-1 authentication, the key must be 40 hex digits (non-encrypted) or 80 hex digits (encrypted).

**null**

Causes an encryption policy configured for the area to not be inherited on the interface.

---

**area nssa**

Specify an area as a not so stubby area (NSSA).

**Syntax**

```
area area-id nssa [default-information-originate] [no-redistribution] [no-summary]
```

To delete an NSSA, use the `no area area-id nssa` command.

**Parameters**

- **area-id**
  
  Specify the OSPF area by entering a number from zero (0) to 65535.
no-redistribution  (OPTIONAL) Specify that the redistribute command does not distribute routes into the NSSA. This command can be used when the router is an autonomous system boundary router (ASBR) or area border router (ABR).

default-information-originate  (OPTIONAL) Allows external routing information to be imported into the NSSA by using Type 7 default.

no-summary  (OPTIONAL) Specify that no summary LSAs should be sent into the NSSA.

Defaults
Not configured.

Command Modes
ROUTER OSPF

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell EMC Networking OS Command Line Reference Guide.

Version  Description
9.13(0.0)  Introduced on the remaining DNOS platforms.
9.10(0.1)  Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)  Introduced on the S3148.
9.10(0.0)  Introduced on the S6100-ON.
9.8(2.0)  Introduced on the S3100 series.
9.8(1.0)  Introduced on the Z9100-ON.
9.8(0.0P5)  Introduced on the S4048-ON.
9.8(0.0P2)  Introduced on the S3048-ON.
9.7(0.0)  Introduced on the S6000-ON.
9.2(1.0)  Introduced on the Z9500.
9.0.2.0  Introduced on the S6000.
8.3.19.0  Introduced on the S4820T.
8.3.11.1  Introduced on the Z9000.
8.3.7.0  Introduced on the S4810.
7.8.1.0  Added support for the Multi-Process OSPF.
7.6.1.0  Introduced on the S-Series.
7.5.1.0  Introduced on the C-Series.
pre- 6.1.1.1  Introduced on the E-Series.

auto-cost

Specify how the OSPF interface cost is calculated based on the reference bandwidth method.

Syntax
auto-cost [reference-bandwidth ref-bw]

To return to the default bandwidth or to assign cost based on the interface type, use the no auto-cost [reference-bandwidth ref-bw] command.
**Parameters**

ref-bw  
(Optional) Specify a reference bandwidth in megabits per second. The range is from 1 to 4294967. The default is **100 megabits per second**.

**Defaults**

**100 megabits per second.**

**Command Modes**

ROUTER OSPFv3

**Supported Modes**

Full-Switch

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>

</tbody>
</table>
**debug ipv6 ospf**

Display debug information and interface types on OSPF IPv6 packets or events.

**Syntax**

```
debug ipv6 ospf {packet | events} [interface]
```

**Parameters**

- **interface**
  
  (OPTIONAL) Enter one of the following keywords and slot/port or number information:
  
  - For a 10-Gigabit Ethernet interface, enter the keyword **TenGigabitEthernet** then the slot/port information.
  - For a Port Channel interface, enter the keyword **port-channel** then a number. The range is 1 to 128.
  - For a tunnel interface, enter the keyword **tunnel** then a number. The range is 1 to 16383.
  - For a VLAN, enter the keyword **vlan** then a number from 1 to 4094.

</tbody>
</table>

**debug ipv6 ospf bfd**

Display debug information and interface types for BFD on OSPF IPv6 packets.

**Syntax**

```
[no] debug ipv6 ospf bfd [interface]
```

To cancel the debug command, use the `no debug ipv6 ospf bfd` command.

**Parameters**

- **interface**
  
  (OPTIONAL) Enter one of the following keywords and slot/port or number information:
  
  - For a 10-Gigabit Ethernet interface, enter the keyword **TenGigabitEthernet** then the slot/port information.
  - For a Port Channel interface, enter the keywords **port-channel** then a number. The range is from 1 to 128.
  - For a tunnel interface, enter the keyword **tunnel** then a number. The range is from 1 to 16383.
  - For a VLAN, enter the keyword **vlan** then a number from 1 to 4094.

**debug ipv6 ospf events**

Display debug information and interface types on OSPF IPv6 events.

**Syntax**

debigailv6 ospf events [interface] [vrf vrf-name]

**Parameters**

- **interface**
  - (OPTIONAL) Enter one of the following keywords and slot/port or number information:
    - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
    - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
    - For a port channel interface, enter the keywords port-channel then a number.
For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

```
vrp vrf-name
```

Enter the keyword `vrf` to view debugging information on OSPF corresponding to that VRF.

**Command Modes**

- EXEC Privilege

**Command History**

```
Sending Ver:3
```

```
OSPFv3...
```

```
05:21:01
```

```
Sending Ver:3
```

**Example (detail)**

```
Lines Beginning With or Including Description
OSPFv3... Debugging is on for all OSPFv3 packets and all interfaces.
05:21:01 Displays the time stamp.
Sending Ver:3 Sending OSPFv3 version.. type: Displays the type of packet sent:
    - 1 - Hello packet
    - 2 - database description
    - 3 - link state request
    - 4 - link state update
    - 5 - link state acknowledgement

Length: Displays the OSPFv3 packet length.
Router ID: Displays the OSPFv3 router ID.
Area ID: Displays the OSPFv3 area ID.
debug ipv6 ospf packet

Display debug information and interface types on OSPF IPv6 packets.

Syntax
d debug ipv6 ospf packet [interface] [vrf vrf-name] [detail]

Parameters
   interface
       (OPTIONAL) Enter one of the following keywords and slot/port or number information:
       • For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
       • For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
       • For a port channel interface, enter the keywords port-channel then a number.
       • For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

   vrf vrf-name
       Enter the keyword vrf to view debugging information on OSPF corresponding to that VRF.

   detail
       Enter the keyword detail to view detailed debugging information.

Command Modes EXEC Privilege

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell EMC Networking OS Command Line Reference Guide.

Version Description
9.13(0.0) Added support for detailed debugging.
9.10(0.1) Introduced on the S6010-ON and S4048T-ON.
9.10(0.0) Introduced on the S3148.
9.10(0.0) Introduced on the S6100-ON.
9.8(2.0) Introduced on the S3100 series.
9.8(1.0) Introduced on the Z9100-ON.
9.8(0.0P5) Introduced on the S4048-ON.
9.8(0.0P2) Introduced on the S3048-ON.
9.2(1.0) Introduced on the Z9500.
9.1(0.0) Introduced on the S4810 and Z9000.
8.3.19.0 Introduced on the S4820T.
7.8.1.0 Added support for C-Series.
7.4.1.0 Introduced on E-Series.

Lines Beginning With or Including
Chksum: Displays the OSPFv3 checksum.

971

### debug ipv6 ospf spf

Display debug information for SPF timers on OSPF IPv6 packets.

**Syntax**

```plaintext
[no] debug ipv6 ospf spf [vrf vrf-name]
```

**Parameters**

- `interface` (OPTIONAL) Enter one of the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For a port channel interface, enter the keywords `port-channel` then a number.
  - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

- `vrf vrf-name` Enter the keyword `vrf` to view debugging information on OSPF corresponding to that VRF.

**Command Modes**

- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell EMC Networking OS Command Line Reference Guide.
Version Description
9.11.0.0 Introduced the command.

</tbody>
</table>

Example

default-information originate

Configure the system to generate a default external route into an OSPFv3 routing domain.

Syntax
default-information originate [always] [metric metric-value] [metric-type type-value] [route-map map-name]

To return to the default values, use the no default-information originate command.

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>always</td>
<td>(OPTIONAL) Enter the keyword always to specify that default route information must always be advertised.</td>
</tr>
<tr>
<td>metric metric-value</td>
<td>(OPTIONAL) Enter the keyword metric then a number to configure a metric value for the route. The range is from 1 to 16777214.</td>
</tr>
<tr>
<td>metric-type type-value</td>
<td>(OPTIONAL) Enter the keywords metric-type then an OSPFv3 link state type of 1 or 2 for default routes. The values are:</td>
</tr>
<tr>
<td></td>
<td>• 1 = Type 1 external route</td>
</tr>
<tr>
<td></td>
<td>• 2 = Type 2 external route</td>
</tr>
<tr>
<td>route-map map-name</td>
<td>(OPTIONAL) Enter the keywords route-map then the name of an established route map.</td>
</tr>
</tbody>
</table>

Defaults

Disabled.

</tbody>
</table>
graceful-restart grace-period

Enable OSPFv3 graceful restart globally by setting the grace period (in seconds) that an OSPFv3 router’s neighbors continues to advertise the router as adjacent during a graceful restart.

Syntax
graceful-restart grace-period seconds
To disable OSPFv3 graceful restart, enter no graceful-restart grace-period.

Parameters
seconds
Time duration, in seconds, that specifies the duration of the restart process before OSPFv3 terminates the process. The range is from 40 to 1800 seconds.

Defaults
OSPFv3 graceful restart is disabled and functions in a helper-only role.

Command Modes
ROUTER OSPFv3

Supported Modes
Full—Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information
By default, OSPFv3 graceful restart is disabled and functions only in a helper role to help restarting neighbor routers in their graceful restarts when it receives a Grace LSA.

To enable OSPFv3 graceful restart, enter the ipv6 router ospf command to enter OSPFv3 configuration mode and then configure a grace period using the graceful-restart grace-period command. The grace period is the length of time that OSPFv3 neighbors continue to advertise the restarting router as though it is fully adjacent. When graceful restart is enabled (restarting role), an OSPFv3 restarting expects its OSPFv3 neighbors to help when it restarts by not advertising the broken link.

When you enable the helper-reject role on an interface with the ipv6 ospf graceful-restart helper-reject command, you reconfigure OSPFv3 graceful restart to function in a “restarting-only” role. In a “restarting-only” role, OSPFV3 does not participate in the graceful restart of a neighbor.

graceful-restart mode

Specify the type of events that trigger an OSPFV3 graceful restart.

Syntax
graceful-restart mode {planned-only | unplanned-only}
To disable graceful restart mode, enter no graceful-restart mode.

Parameters
planned-only
(Optionalal) Enter the keywords planned-only to indicate graceful restart is supported in a planned restart condition only.

unplanned-only
(Optionalal) Enter the keywords unplanned-only to indicate graceful restart is supported in an unplanned restart condition only.

Defaults
OSPFV3 graceful restart supports both planned and unplanned failures.
Command Modes
- ROUTER OSPFv3

Supported Modes
- Full—Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information
OSPFv3 graceful restart supports planned-only and/or unplanned-only restarts. The default is support for both planned and unplanned restarts.

- A planned restart occurs when you enter the `redundancy force-failover rpm` command to force the primary RPM to switch to the backup RPM. During a planned restart, OSPF sends out a Type-11 Grace LSA before the system switches over to the backup RPM.
- An unplanned restart occurs when an unplanned event causes the active RPM to switch to the backup RPM, such as when an active process crashes, the active RPM is removed, or a power failure happens. During an unplanned restart, OSPF sends out a Grace LSA when the backup RPM comes online.

By default, both planned and unplanned restarts trigger an OSPFv3 graceful restart. Selecting one or the other mode restricts OSPFv3 to the single selected mode.

ipv6 ospf area
Enable IPv6 OSPF on an interface.

Syntax
```
ipv6 ospf process id area area-id
```
To disable OSPFv6 routing for an interface, use the `no ipv6 ospf process-id area area-id` command.

Parameters
- **process-id**
  - Enter the process identification number.
- **area area-id**
  - Specify the OSPF area. The range is from 0 to 65535.

Defaults
none

Command Modes
- INTERFACE

Supported Modes
- Full—Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

ipv6 ospf authentication
Enable IPv6 OSPF on an interface.

Syntax
```
ipv6 ospf authentication {null | ipsec spi number {MD5 | SHA1} [key-encryption-type] key}
```
To remove an IPsec authentication policy from an interface, use the `no ipv6 ospf authentication spi number` command.

To remove null authentication on an interface to allow the interface to inherit the authentication policy configured for the OSPFv3 area, use the `no ipv6 ospf authentication null` command.

### Parameters

- **null**
  - Causes an authentication policy configured for the area to not be inherited on the interface.

- **ipsec spi number**
  - Security Policy index (SPI) value that identifies an IPsec security policy. The range is from 256 to 4294967295.

- **MD5 | SHA1**
  - Authentication type: Message Digest 5 (MD5) or Secure Hash Algorithm 1 (SHA-1).

- **key-encryption-type**
  - (OPTIONAL) Specifies if the key is encrypted.
  - Valid values: 0 (key is not encrypted) or 7 (key is encrypted).

- **key**
  - Text string used in authentication.
  - For MD5 authentication, the key must be 32 hex digits (non-encrypted) or 64 hex digits (encrypted).
  - For SHA-1 authentication, the key must be 40 hex digits (non-encrypted) or 80 hex digits (encrypted).

### Defaults

- Not configured.

### Command Modes

- **INTERFACE**
- **Full—Switch**

### Command History

- **Version 9.9(0.0)**
  - Introduced on the FN IOM.

- **Version 9.2(0.0)**
  - Introduced on the MXL 10/40GbE Switch IO Module.

### Usage Information

Before you enable IPsec authentication on an OSPFv3 interface, first enable IPv6 unicast routing globally, configure an IPv6 address and enable OSPFv3 on the interface, and assign the interface to an area.

An SPI value must be unique to one IPsec security policy (authentication or encryption) on the router. Configure the same authentication policy (same SPI and key) on each OSPFv3 interface in a link.

---

### ipv6 ospf bfd all-neighbors

Establish BFD sessions with all OSPFv3 neighbors on a single interface or use non-default BFD session parameters.

### Syntax

```
ipv6 ospf bfd all-neighbors [disable | [interval interval min_rx min_rx multiplier value role {active | passive}]]
```
To disable all BFD sessions on an OSPFv3 interface implicitly, use the `no ipv6 ospf bfd all-neighbors disable` command.

<table>
<thead>
<tr>
<th>Parameters</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>disable <em>(OPTIONAL)</em></td>
<td>Enter the keyword <code>disable</code> to disable BFD on this interface.</td>
</tr>
<tr>
<td>interval milliseconds <em>(OPTIONAL)</em></td>
<td>Enter the keyword <code>interval</code> to specify non-default BFD session parameters beginning with the transmission interval. The range is from 50 to 1000. The default is 100.</td>
</tr>
<tr>
<td>min_rx milliseconds</td>
<td>Enter the keywords <code>min_rx</code> to specify the minimum rate at which the local system would like to receive control packets from the remote system. The range is from 50 to 100. The default is 100.</td>
</tr>
<tr>
<td>multiplier value</td>
<td>Enter the keyword <code>multiplier</code> to specify the number of packets that must be missed in order to declare a session down. The range is from 3 to 50. The default is 3.</td>
</tr>
<tr>
<td>role [active</td>
<td>passive]</td>
</tr>
<tr>
<td></td>
<td>• <code>active</code> — The active system initiates the BFD session. Both systems can be active for the same session.</td>
</tr>
<tr>
<td></td>
<td>• <code>passive</code> — The passive system does not initiate a session. It only responds to a request for session initialization from the active system.</td>
</tr>
<tr>
<td></td>
<td>The default is <code>Active</code>.</td>
</tr>
</tbody>
</table>

**Defaults**
See Parameters.

**Command Modes**
INTERFACE

**Supported Modes**
Full—Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**
This command provides the flexibility to fine-tune the timer values based on individual interface needs when you configure the `ipv6 ospf bfd` command in CONFIGURATION mode. Any timer values specified with this command overrides timers set using the `bfd all-neighbors` command. Using the `no` form of this command does not disable BFD if you configured BFD in CONFIGURATION mode.

To disable BFD on a specific interface while BFD is configured in CONFIGURATION mode, use the keyword `disable`.

**ipv6 ospf cost**

Explicitly specify the cost of sending a packet on an interface.

**Syntax**
`ipv6 ospf interface-cost`

**Parameters**
`interface-cost` Enter a unsigned integer value expressed as the link-state metric. The range is from 1 to 65535.
Defaults

Command Modes INTERFACE

Supported Modes Full—Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

In general, the path cost is calculated as:

\[ 10^8 / \text{bandwidth} \]

Using this formula, the default path cost is calculated as:

- TenGigabitEthernet—Default cost is 1
- Ethernet—Default cost is 10

**ipv6 ospf dead-interval**

Set the time interval since the last hello-packet was received from a router. After the time interval elapses, the neighboring routers declare the router down.

Syntax

```
ipv6 ospf dead-interval seconds
```

Parameters

- `seconds` Enter the time interval in seconds. The range is from 1 to 65535 seconds.

Defaults

40 seconds (Ethernet).

Command Modes INTERFACE

Supported Modes Full—Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

By default, the dead interval is four times longer than the default ipv6 ospf hello-interval command.

**ipv6 ospf encryption**

Configure an IPsec encryption policy for OSPFV3 packets on an IPv6 interface.

Syntax

```
ipv6 ospf encryption {null | ipsec spi number esp encryption-algorithm [key-encryption-type] key authentication-algorithm [key-encryption-type] key}
```

To remove an IPsec encryption policy from an interface, use the `no ipv6 ospf encryption spi number` command.
To remove null authentication on an interface to allow the interface to inherit the authentication policy configured for the OSPFv3 area, use the `no ipv6 ospf encryption null` command.

### Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>null</code></td>
<td>Causes an encryption policy configured for the area to not be inherited on the interface.</td>
</tr>
<tr>
<td><code>ipsec spi number</code></td>
<td>Security Policy index (SPI) value that identifies an IPsec security policy. The range is from 256 to 4294967295.</td>
</tr>
</tbody>
</table>
| `esp encryption-algorithm` | Encryption algorithm used with ESP.  
|                       | Valid values are: 3DES, DES, AES-CBC, and NULL.  
|                       | For AES-CBC, only the AES-128 and AES-192 ciphers are supported. |
| `key-encryption-type` | (OPTIONAL) Specifies if the key is encrypted.  
|                       | Valid values: 0 (key is not encrypted) or 7 (key is encrypted). |
| `key`                 | Text string used in authentication.  
|                       | The required lengths of a non-encrypted or encrypted key are:  
|                       | 3DES - 48 or 96 hex digits; DES - 16 or 32 hex digits; AES-CBC -32 or 64 hex digits for AES-128 and 48 or 96 hex digits for AES-192. |
| `authentication-algorithm` | Specifies the authentication algorithm to use for encryption. Valid values are MD5 or SHA1. |
| `key-encryption-type` | (OPTIONAL) Specifies if the authentication key is encrypted.  
|                       | Valid values: 0 (key is not encrypted) or 7 (key is encrypted). |
| `key`                 | Text string used in authentication.  
|                       | For MD5 authentication, the key must be 32 hex digits (non-encrypted) or 64 hex digits (encrypted).  
|                       | For SHA-1 authentication, the key must be 40 hex digits (non-encrypted) or 80 hex digits (encrypted). |

### Defaults

Not configured.

### Command Modes

- INTERFACE

### Supported Modes

- Full-Switch

### Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

### Usage Information

Before you enable IPsec encryption on an OSPFv3 interface, first enable IPv6 unicast routing globally, configure an IPv6 address and enable OSPFv3 on the interface, and assign the interface to an area.
An SPI value must be unique to one IPsec security policy (authentication or encryption) on the router. Configure the same encryption policy (same SPI and key) on each OSPFv3 interface in a link.

**ipv6 ospf graceful-restart helper-reject**

Configure an OSPFv3 interface to not act upon the Grace LSAs that it receives from a restarting OSPFv3 neighbor.

```
Syntax
ipv6 ospf graceful-restart helper-reject
To disable the helper-reject role, use the no ipv6 ospf graceful-restart helper-reject command.

Defaults
The helper-reject role is not configured.

Command Modes
INTERFACE

Supported Modes
Full-Switch

Command History
Version Description
9.9(0.0) Introduced on the FN IOM.
9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Command
By default, OSPFv3 graceful restart is disabled and functions only in a helper role to help restarting neighbor routers in their graceful restarts when it receives a Grace LSA.

When configured in a helper-reject role, an OSPFv3 router ignores the Grace LSAs that it receives from a restarting OSPFv3 neighbor.

The graceful-restart role command is not supported in OSPFv3. When you enable the helper-reject role on an interface, you reconfigure an OSPFv3 router to function in a “restarting-only” role.

**ipv6 ospf hello-interval**

Specify the time interval between the hello packets sent on the interface.

```
Syntax
ipv6 ospf hello-interval seconds

Parameters
 seconds

Defaults 10 seconds (Ethernet).

Command Modes INTERFACE

Supported Modes Full-Switch

Command History
Version Description
9.9(0.0) Introduced on the FN IOM.
9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.
ipv6 ospf priority

To determine the Designated Router for the OSPFv3 network, set the priority of the interface.

Syntax:
```plaintext
ipv6 ospf priority number
```

To return to the default time interval, use the `no ipv6 ospf priority` command.

Parameters:
- **number**: Enter the number as the priority. The range is from 1 to 255.

Defaults:
- 1

Command Modes:
- INTERFACE

Supported Modes:
- Full-Switch

Command History:

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information:

- Setting a priority of 0 makes the router ineligible for election as a Designated Router or Backup Designated Router.
- Use this command for interfaces connected to multi-access networks, not point-to-point networks.

ipv6 router ospf

Enable OSPF for IPv6 router configuration.

Syntax:
```plaintext
ipv6 router ospf process-id
```

To exit OSPF for IPv6, use the `no ipv6 router ospf process-id` command.

Parameters:
- **process-id**: Enter the process identification number. The range is from 1 to 65535.

Defaults:
- none

Command Modes:
- CONFIGURATION

Supported Modes:
- Full-Switch

Command History:

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>
**maximum-paths**

Enable the software to forward packets over multiple paths.

**Syntax**

```
maximum-paths number
```

To disable packet forwarding over multiple paths, use the `no maximum-paths` command.

**Parameters**

```
number
```

Specify the number of paths. The range is from 1 to 64. The default is 8 paths.

**Defaults**

4

**Command Modes**

ROUTER OSPF for OSPFv3

**Supported Modes**

Full-Switch

**Command History**

<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**passive-interface**

Disable (suppress) sending routing updates on an interface.

**Syntax**

```
passive-interface {default | interface}
```

To enable sending routing updates on an interface, use the `no passive-interface interface` command.

To return all OSPF interfaces (current and future) to active, use the `no passive-interface default` command.

**Parameters**

```
default
```

Enter the keyword `default` to make all OSPF interfaces (current and future) passive.

```
interface
```

Enter the following keywords and slot/port or number information:

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
- For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

**Command Modes**

ROUTER OSPF for OSPFv2

ROUTER OSPFv3 for OSPFv3

**Supported Modes**

Full-Switch
Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Added support for OSPFv3.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

By default, no interfaces are passive. Routing updates are sent to all interfaces on which the routing protocol is enabled.

If you disable the sending of routing updates on an interface, the particular address prefix continues to be advertised to other interfaces, and updates from other routers on that interface continue to be received and processed.

OSPFv3 for IPv6 routing information is not sent or received through the specified router interface. The specified interface address appears as a stub network in the OSPFv3 for IPv6 domain.

redistribute

Redistribute information from another routing protocol into OSPFv3 throughout the OSPF process.

Syntax

```
redistribute {bgp as number} {connected | static} [metric metric-value | metric-type type-value] [route-map map-name] [tag tag-value]
```

To disable redistribution, use the `no redistribute {connected | static}` command.

Parameters

- **bgp as number**: Enter the keyword `bgp` then the autonomous system number.
  
The range is from 1 to 65535.

- **connected**: Enter the keyword `connected` to redistribute routes from physically connected interfaces.

- **static**: Enter the keyword `static` to redistribute manually configured routes.

- **metric metric-value**: Enter the keyword `metric` then the metric value.
  
The range is from 0 to 16777214.
  
The default is 20.

- **metric-type type-value**: (OPTIONAL) Enter the keywords `metric-type` then the OSPFv3 link state type of 1 or 2 for default routes. The values are:
  - 1 for a type 1 external route
  - 2 for a type 2 external route
  
The default is 2.
**route-map**

(OPTIONAL) Enter the keywords `route-map` then the name of an established route map. If the route map is not configured, the default is `deny` (to drop all routes).

**tag**

(Optional) Enter the keyword `tag` to set the tag for routes redistributed into OSPFv3.

The range is from 0 to 4294967295

The default is 0.

**Defaults**

Not configured.

**Command Modes**

- ROUTER OSPF for OSPFv2
- ROUTER OSPFv3 for OSPFv3

**Supported Modes**

Full-Switch

**Command History**

<table>

</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

To redistribute the default route (x:x:x:x::x), use the `default-information originate` command.

**Related Commands**

- `default-information originate` — generates a default route into the OSPF routing domain.

---

**router-id**

Designate a fixed router ID.

**Syntax**

```
router-id ip-address
```

To return to the previous router ID, use the `no router-id ip-address` command.

**Parameters**

- `ip-address` Enter the router ID in the dotted decimal format.

**Defaults**

The router ID is selected automatically from the set of IPv4 addresses configured on a router.

**Command Modes**

- ROUTER OSPFv3 for OSPFv3

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>

<td>Added support for OSPFv3.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>
Usage Information

You can configure an arbitrary value in the IP address for each router. However, each router ID must be unique.

If this command is used on an OSPFv3 process that is already active (has neighbors), all the neighbor adjacencies are brought down immediately and new sessions are initiated with the new router ID.

Example

Dell(conf)#router ospf 100
Dell(conf-router_ospf)#router-id 1.1.1.1
Changing router-id will bring down existing OSPF adjacency [y/n]:

Dell(conf-router_ospf)#show config

! router ospf 100
router-id 1.1.1.1
Dell(conf-router_ospf)#no router-id
Changing router-id will bring down existing OSPF adjacency [y/n]:

Dell#

show crypto ipsec policy

Display the configuration of IPsec authentication and encryption policies.

Syntax

show crypto ipsec policy [name name]

Parameters

name name  (OPTIONAL) Displays configuration details about a specified policy.

Defaults

none

Command Modes

EXEC

EXEC Privilege

Supported Modes

Full-Switch

Command History

Version  Description
9.9(0.0)     Introduced on the FN IOM.
9.2(0.0)     Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The show crypto ipsec policy command output displays the AH and ESP parameters configured in IPsec security policies, including the SPI number, keys, and algorithms used.

When configured in a helper-reject role, an OSPFv3 router ignores the Grace LSAs that it receives from a restarting OSPFv3 neighbor.

show crypto ipsec sa ipv6

Display the IPsec security associations (SAs) used on OSPFv3 interfaces.

Syntax

show crypto ipsec sa ipv6 [interface interface]
show ipv6 ospf database

Display information in the OSPFv3 database, including link-state advertisements (LSAs).

Syntax

show ipv6 ospf database [database-summary | grace-lsa]

Parameters

- **database-summary** (OPTIONAL) Enter the keywords database-summary to view a summary of database LSA information.
- **grace-lsa** (OPTIONAL): Enter the keywords grace-lsa to display the Type-11 Grace LSAs sent and received on an OSPFv3 router.

Defaults

none

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

- Full-Switch

Command History

- Version 9.9(0.0) Introduced on the FN IOM.
- Version 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The show crypto ipsec sa ipv6 command output displays security associations set up for OSPFV3 links in IPsec authentication and encryption policies on the router.
show ipv6 ospf interface

View OSPFv3 interface information.

Syntax

```
show ipv6 ospf [interface]
```

Parameters

- **interface** (OPTIONAL) Enter one of the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword **TenGigabitEthernet** and the slot/port information.
  - For a Port Channel interface, enter the keywords **port-channel** and a number. The range is from 1 to 128.
  - For a Tunnel interface, enter the keywords **tunnel** and a number. The range is from 1 to 16383.
  - For a VLAN, enter the keyword **vlan** and a number from 1 to 4094.

Defaults

none

Command Modes

EXEC

Supported Modes

Full-Switch

Command History

- **Version**
  - **9.9(0.0)**: Introduced on the FN IOM.
  - **9.2(0.0)**: Introduced on the M I/O Aggregator.

Usage Information

- If you enable BFD at the global level, `show ipv6 ospf interface` shows the BFD provisioning.
- If you enable BFD at the interface level, `show ipv6 ospf interface` shows the BFD interval timers.

Example

```
Dell#show ipv6 ospf interface TenGigabitethernet 1/0
TenGigabitEthernet 1/0 is up, line protocol is up
  Link Local Address fe80::201:e8ff:fe17:5bbd, Interface ID 67420217
  Area 0, Process ID 1, Instance ID 0, Router ID 11.1.1.1
  NetworkType BROADCAST, Cost: 1, Passive: No
  Transmit Delay is 100 sec, State DR, Priority 1
  Interface is using OSPF global mode BFD configuration.
  Designated router on this network is 11.1.1.1 (local)
  No backup designated router on this network
  Timer intervals configured, Hello 10, Dead 40, Wait 1, Retransmit 5
Dell#
```
show ipv6 ospf neighbor

Display the OSPF neighbor information on a per-interface basis.

Syntax

show ipv6 ospf neighbor [interface]

Parameters

interface (OPTIONAL) Enter the following keywords and slot/port or number information:

- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
- For a VLAN, enter the keyword vlan then the VLAN ID. The range is 1 to 4094.

Defaults

none

Command Modes

EXEC
EXEC Privilege

Supported Modes

Full-Switch

Command History

Version Description
9.9(0.0) Introduced on the FN IOM.
9.2(0.0) Introduced on the M I/O Aggregator.

timers spf

Set the time interval between when the switch receives a topology change and starts a shortest path first (SPF) calculation.

Syntax

timers spf delay holdtime msec

To return to the default, use the no timers spf command.

Parameters

delay Enter a number as the delay. The range is from 0 to 2147483647. The default is 5 seconds.

holdtime Enter a number as the hold time. The range is from 0 to 2147483647. The default is 10 seconds.

msec Enter the keyword msec to specify the time interval value in milli seconds.

NOTE: If you do not specify the msec option, the timer values are considered as seconds.

Defaults

- delay = 5 seconds
- holdtime = 10 seconds
**Command Modes**

ROUTER OSPFv3 for OSPFv3

**Supported Modes**

Full-Switch

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.11(0.0)</td>
<td>Introduced the msec keyword.</td>
</tr>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.8(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

Setting the delay and holdtime parameters to a low number enables the switch to an alternate path quickly but requires more CPU usage.

**Example**

```
Dell#
Dell#conf
Dell(conf)#ipv6 router ospf 1
Dell(conf-ipv6-router_ospf)#timer spf 2 5 msec
Dell(conf-ipv6-router_ospf)#
Dell(conf-ipv6-router_ospf)#show config
! ipv6 router ospf 1
  timers spf 2 5 msec
Dell(conf-ipv6-router_ospf)#
Dell(conf-ipv6-router_ospf)#end
Dell#
```
Policy-based routing (PBR) allows you to apply routing policies to specific interfaces. To enable PBR, create a redirect list and apply it to the interface. After the redirect list is applied to the interface, all traffic passing through the interface is subject to the rules defined in the redirect list. PBR is supported by the Dell Networking operating software (OS).

You can apply PBR to physical interfaces and logical interfaces (such as a link aggregation group [LAG] or virtual local area network [VLAN]). Trace lists and redirect lists do not function correctly when you configure both in the same configuration.

**NOTE:** Apply PBR to Layer 3 interfaces only.

Topics:
- description
- ip redirect-group
- ip redirect-list
- permit
- redirect
- seq
- show cam pbr
- show ip redirect-list

### description

Add a description to this redirect list.

**Syntax**

```
description \{description\}
```

To remove the description, use the `no description \{description\}` command.

**Parameters**

- **description**
  
  Enter a description to identify the IP redirect list (16 characters maximum).

**Defaults**

none

**Command Modes**

REDIRECT-LIST

**Supported Modes**

**Related Commands**

- `ip redirect-list` — enables an IP Redirect List.
Apply a redirect list (policy-based routing) on an interface. You can apply multiple redirect lists to an interface by entering this command multiple times.

Syntax

```
ip redirect-group redirect-list-name test [l2-switch]
```

To remove a redirect list from an interface, use the `no ip redirect-group name` command.

Parameters

- **redirect-list-name**: Enter the name of a configured redirect list.
- **l2-switch**: Enter the keyword `l2-switch` to enable PBR on Layer2 (switched) traffic.

Defaults

none

Command Modes

- INTERFACE (conf-if-vl-)

<td>7.4.2.0</td>
<td>Added support for LAG and VLAN interfaces.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the E-Series ExaScale.</td>
</tr>
</tbody>
</table>

Usage Information

You can apply any number of redirect-groups to an interface. A redirect list can contain any number of configured rules. These rules includes the next-hop IP address where the incoming traffic is to be redirected.

If the next hop address is reachable, traffic is forwarded to the specified next hop. Otherwise, the normal routing table is used to forward traffic. When a redirect-group is applied to an interface and the next-hop is reachable, the rules are added into the PBR CAM region. When incoming traffic hits an entry in the CAM, the traffic is redirected to the corresponding next-hop IP address specified in the rule.

**NOTE**: Apply the redirect list to physical, VLAN, or LAG interfaces only.

The Layer2 PBR option matches the layer2 traffic flow. If you un-configure this option, then the Layer2 traffic is not matched. You can apply the `l2-switch` option to redirect Layer2 traffic only on a VLAN interface. This VLAN interface must be configured with an IP address for ARP resolution.

**NOTE**: The `l2-switch` option that redirects Layer2 traffic is applicable only on VLAN interfaces.

The Layer3 routing is not affected on the same interface on which Layer2 PBR is applied. The port from which Layer2 packets egress and the destination MAC are re-written from static ARP. Layer 2 packets with the re-written destination MAC are forwarded through the outgoing port on the same incoming VLAN interface. The layer2-switch option ensures that the outgoing VLAN and MAC-SA are changed and TTL is not decremented.

Related Commands

- `show cam pbr` — displays the content of the PBR CAM.
ip redirect-list

Configure a redirect list and enter REDIRECT-LIST mode.

Syntax

```
ip redirect-list redirect-list-name
```

To remove a redirect list, use the no ip redirect-list command.

Parameters

- `redirect-list-name`: Enter the name of a redirect list.

Defaults

- none

Command Modes

- CONFIGURATION

Supported Modes

- Full—Switch

</tbody>
</table>

permit

Configure a permit rule. A permit rule excludes the matching packets from PBR classification and routes them using conventional routing.

Syntax

```
permit {ip-protocol-number | protocol-type} {source mask | any | host ip-address} {destination mask | any | host ip-address} [bit] [operators]
```

To remove the rule, use one of the following:

- If you know the filter sequence number, use the no seq sequence-number syntax command.
- You can also use the no permit {ip-protocol-number | protocol-type} {source mask | any | host ip-address} {destination mask | any | host ip-address} [bit] [operators] command.

Parameters

- `ip-protocol-number`: Enter a number from 0 to 255 for the protocol identified in the IP protocol header.
- `protocol-type`: Enter one of the following keywords as the protocol type:
  - icmp for internet control message protocol
  - ip for any internet protocol
  - tcp for transmission control protocol
  - udp for user datagram protocol
- `source`: Enter the IP address of the network or host from which the packets were sent.
**redirect**

Configure a rule for the redirect list.

**Syntax**

```
redirect {ip-address | slot/port} | tunnel tunnel-id}[track <obj-id>]{ip-protocol-number | protocol-type [bit]} [source mask | any | host ip-address] {destination mask | any | host ip-address} [operator]
```

To remove this filter, use one of the following:

- Use the `no seq sequence-number` command if you know the filter's sequence number.
You can also use the `no redirect {ip-address | slot/port| tunnel tunnel-id}[track <obj-id>]{ip-protocol-number [bit] | protocol-type} {source mask | any | host ip-address} {destination mask | any | host ip-address} [operator]` command.

**Parameters**

<table>
<thead>
<tr>

</tr>
<tr>
<td>ip-protocol-number</td>
<td>Enter a number from 0 to 255 for the protocol identified in the IP protocol header.</td>
</tr>
<tr>
<td>tunnel</td>
<td>Enter the keyword tunnel to configure the tunnel setting.</td>
</tr>
<tr>
<td>tunnel-id</td>
<td>Enter the keyword tunnel-id to redirect the traffic.</td>
</tr>
<tr>
<td>track</td>
<td>Enter the keyword track to enable the tracking.</td>
</tr>
<tr>
<td>track &lt;obj-id&gt;</td>
<td>Enter the keyword track &lt;obj-id&gt; to track object-id.</td>
</tr>
<tr>
<td>protocol-type</td>
<td>Enter one of the following keywords as the protocol type:</td>
</tr>
<tr>
<td>bit</td>
<td>(OPTIONAL) For the TCP protocol type only, enter one or a combination of the following TCP flags:</td>
</tr>
<tr>
<td>source</td>
<td>Enter the IP address of the network or host from which the packets were sent.</td>
</tr>
<tr>
<td>mask</td>
<td>Enter a network mask in /prefix format (/x).</td>
</tr>
<tr>
<td>any</td>
<td>Enter the keyword any to specify that all traffic is subject to the filter.</td>
</tr>
<tr>
<td>host ip-address</td>
<td>Enter the keyword host then the IP address to specify a host IP address.</td>
</tr>
<tr>
<td>destination</td>
<td>Enter the IP address of the network or host to which the packets are sent.</td>
</tr>
<tr>
<td>operator</td>
<td>(OPTIONAL) For TCP and UDP parameters only. Enter one of the following logical operand:</td>
</tr>
</tbody>
</table>

**Defaults**

- none
**seq**

Configure a filter with an assigned sequence number for the redirect list.

**Syntax**

```
seq sequence-number {permit | redirect {ip-address | tunnel tunnel-id}[track <obj-id>] } (ip-protocol-number | protocol-type) {source mask | any | host ip-address} {destination mask | any | host ip-address} {bit} [operator]{source-port source-port | source-port-range start-port - end-port} {destination-port destination-port | destination-port-range start-port - end-port}
```

To delete a filter, use the no seq sequence-number command.

**Parameters**

- `sequence-number` Enter a number from 1 to 65535.
- `permit` Enter the keyword permit assign the sequence to the permit list.
- `redirect` Enter the keyword redirect to assign the sequence to the redirect list.
- `ip-address` Enter the IP address of the forwarding router.
- `tunnel` Enter the keyword tunnel to configure the tunnel setting.
- `tunnel-id` Enter the keyword tunnel-id to redirect the traffic.
- `track` Enter the keyword track to enable the tracking.
- `track <obj-id>` Enter the keyword track <obj-id> to track object-id.
- `ip-protocol-number` Enter the keyword ip-protocol-number then the number from 0 to 255 for the protocol identified in the IP protocol header.
- `protocol-type` Enter one of the following keywords as the protocol type:
  - icmp for internet control message protocol
  - ip for any internet protocol
  - tcp for transmission control protocol
  - udp for user datagram protocol
- `source` Enter the IP address of the network or host from which the packets were sent.
- `mask` Enter a network mask in /prefix format (/x).
- `any` Enter the keyword any to specify that all traffic is subject to the filter.
host ip-address Enter the keyword host then the IP address to specify a host IP address.

destination Enter the IP address of the network or host to which the packets are sent.

bit (OPTIONAL) For the TCP protocol type only, enter one or a combination of the following TCP flags:

- `ack` = acknowledgement
- `fin` = finish (no more data from the user)
- `psh` = push function
- `rst` = reset the connection
- `syn` = synchronize sequence number
- `urg` = urgent field

operator (OPTIONAL) For the TCP and UDP parameters only. Enter one of the following logical operand:

- `eq` = equal to
- `neq` = not equal to
- `gt` = greater than
- `lt` = less than
- `range` = inclusive range of ports (you must specify two ports for the port command parameter)

source port Enter the keywords source-port then the port number to be matched in the ACL rule in the ICAP rule.

destination-port Enter the keywords destination-port then the port number to be matched in the ACL rule.

source-port-range Enter the keywords Source-port-range then the range of the start port to end port to be matched in the ACL rule in the ICAP rule.

destination-port-range Enter the keywords destination-port-range then the range of the start port to end port to be matched in the ACL rule in the ICAP rule.

PIM-Sparse Mode (PIM-SM)

The protocol-independent multicast (PIM) commands are supported by the Dell Networking Operating System (OS).

This chapter contains the following sections:

- IPv4 PIM-Sparse Mode Commands
- IPv6 PIM-Sparse Mode Commands

Topics:

- IPv4 PIM-Sparse Mode Commands
  - clear ip pim rp-mapping
  - clear ip pim tib
  - debug ip pim
  - ip pim bsr-border
  - ip pim bsr-candidate
  - ip pim dr-priority
  - ip pim join-filter
  - ip pim ingress-interface-map
  - ip pim neighbor-filter
  - ip pim query-interval
  - ip pim register-filter
  - ip pim rp-address
  - ip pim rp-candidate
  - ip pim sparse-mode
  - ip pim sparse-mode sg-expiry-timer
  - ip pim spt-threshold
  - no ip pim snooping dr-flood
  - show ip pim bsr-router
  - show ip pim interface
  - show ip pim neighbor
  - show ip pim rp
  - show ip pim snooping interface
  - show ip pim snooping neighbor
  - show ip pim snooping tib
  - show ip pim summary
  - show ip pim tib
  - show running-config pim
- IPv6 PIM-Sparse Mode Commands
  - ipv6 pim bsr-border
  - ipv6 pim bsr-candidate
  - ipv6 pim dr-priority
IPv4 PIM-Sparse Mode Commands

The following describes the IPv4 PIM-sparse mode (PIM-SM) commands.

**clear ip pim rp-mapping**

The bootstrap router (BSR) feature uses this command to remove all or particular rendezvous point (RP) advertisement.

**Syntax**

```
clear ip pim rp-mapping [rp-address]
```

**Parameters**

- `rp-address` (OPTIONAL) Enter the RP address in dotted decimal format (A.B.C.D).

**Command Modes**

- EXEC Privilege

**Supported Modes**

- Full—Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**clear ip pim tib**

Clear PIM tree information from the PIM database.

**Syntax**

```
clear ip pim tib [group]
```

**Parameters**

- `group` (OPTIONAL) Enter the multicast group address in dotted decimal format (A.B.C.D).

**Command Modes**

- EXEC Privilege

**Supported Modes**

- Full—Switch
Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

If you use this command on a local VLT node, all multicast routes from the local PIM TIB, the entire multicast route table, and all the entries in the data plane are deleted. The local VLT node sends a request to the peer VLT node to download multicast routes learned by the peer. Both local and synced routes are removed from the local VLT node multicast route table. The peer VLT node clears synced routes from the node.

If you use this command on a peer VLT node, only the synced routes are deleted from the multicast route table.

debug ip pim

View IP PIM debugging messages.

Syntax
debug ip pim [bsr | events | group | packet [in | out] | register | state | timer [assert | hello | joinprune | register]]

To disable PIM debugging, use the no debug ip pim command or use the undebug all to disable all the debugging commands.

Parameters

- **bsr**: (OPTIONAL) Enter the keyword bsr to view PIM Candidate RP/BSR activities.
- **events**: (OPTIONAL) Enter the keyword group to view PIM messages for a specific group.
- **group**: (OPTIONAL) Enter the keyword group to view PIM messages for a specific group.
- **packet [in | out]**: (OPTIONAL) Enter the keyword packet to view PIM packets. Enter one of the optional parameters:
  - in: to view incoming packets
  - out: to view outgoing packets
- **register**: (OPTIONAL) Enter the keyword register to view PIM register address in dotted decimal format (A.B.C.D).
- **state**: (OPTIONAL) Enter the keyword state to view PIM state changes.
- **timer [assert | hello | joinprune | register]**: (OPTIONAL) Enter the keyword timer to view PIM timers. Enter one of the optional parameters:
  - assert: to view the assertion timer
  - hello: to view the PIM neighbor keepalive timer
  - joinprune: to view the expiry timer (join/prune timer)
  - register: to view the register suppression timer

Defaults

Disabled.

Command Modes

EXEC Privilege

Supported Modes

Full—Switch
ip pim bsr-border

Define the border of PIM domain by filtering inbound and outbound PIM-BSR messages per interface.

Syntax

```
ip pim bsr-border
```

To return to the default value, use the no ip pim bsr-border command.

Defaults

Disabled.

Command Modes

INTERFACE

Supported Modes

Full—Switch

Command History

<table>

</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

This command is applied to the subsequent PIM-BSR. Existing BSR advertisements are cleaned up by time-out. To clean the candidate RP advertisements, use the `clear ip pim rp-mapping` command.

ip pim bsr-candidate

To join the Bootstrap election process, configure the PIM router.

Syntax

```
ip pim bsr-candidate interface [hash-mask-length] [priority]
```

To return to the default value, use the no ip pim bsr-candidate command.

Parameters

- **interface**: Enter the following keywords and slot/port or number information:
  - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

- **hash-mask-length**: (OPTIONAL) Enter the hash mask length. The range is from zero (0) to 32. The default is 30.

- **priority**: (OPTIONAL) Enter the priority used in Bootstrap election process. The range is from zero (0) to 255. The default is zero (0).

Defaults

Not configured.

<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**ip pim dr-priority**

Change the designated router (DR) priority for the interface.

**Syntax**

```
ip pim dr-priority priority-value
```

To remove the DR priority value assigned, use the `no ip pim dr-priority` command.

**Parameters**

- `priority-value`
  
  Enter a number. Preference is given to larger/higher number. The range is from 0 to 4294967294. The default is 1.

**Defaults**

- 1

**Command Modes**

- INTERFACE

**Supported Modes**

- Full—Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

The router with the largest value assigned to an interface becomes the designated router. If two interfaces contain the same designated router priority value, the interface with the largest interface IP address becomes the designated router.

**ip pim join-filter**

Permit or deny PIM Join/Prune messages on an interface using an extended IP access list. This command prevents the PIM-SM router from creating state based on multicast source and/or group.

**Syntax**

```
ip pim join-filter ext-access-list {in | out}
```

To remove the access list, use the `no ip pim join-filter ext-access-list {in | out}` command.

**Parameters**

- `ext-access-list`
  
  Enter the name of an extended access list.

- `in`
  
  Enter this keyword to apply the access list to inbound traffic.

- `out`
  
  Enter this keyword to apply the access list to outbound traffic.

**Defaults**

- `none`

**Command Modes**

- INTERFACE
Supported Modes
Full—Switch

Usage Information
When you configure a join filter, it is applicable for both ingress and egress flows. There is no option to specify in or out parameters while configuring a join filter.

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Example
Dell(conf)# ip access-list extended iptv-channels
Dell(config-ext-nacl)# permit ip 10.1.2.3/24 225.1.1.0/24
Dell(config-ext-nacl)# permit ip any 232.1.1.0/24
Dell(config-ext-nacl)# permit ip 100.1.1.0/16 any
Dell(config-if-te-1/1)# ip pim join-filter iptv-channels
Dell(config-if-te-1/1)# ip pim join-filter iptv-channels

Related Commands
ip access-list extended — configure an access list based on IP addresses or protocols.

ip pim ingress-interface-map

When the Dell Networking system is the RP, statically map potential incoming interfaces to (*,G) entries to create a lossless multicast forwarding environment.

Syntax
ip pim ingress-interface-map std-access-list

Parameters
std-access-list Enter the name of a standard access list.

Defaults
none

Command Modes INTERFACE

Supported Modes Full—Switch

Command History

</tr>
</tbody>
</table>

Example
Dell(conf)# ip access-list standard map1
Dell(config-std-nacl)# permit 224.0.0.1/24
Dell(config-std-nacl)# exit
Dell(conf)#int te 0/1
Dell(config-if-te-0/1)# ip pim ingress-interface-map map1

ip pim neighbor-filter

To prevent a router from participating in protocol independent multicast (PIM), configure this feature.

Syntax
ip pim neighbor-filter {access-list}

To remove the restriction, use the no ip pim neighbor-filter {access-list} command.
Parameters

access-list

Enter the name of a standard access list. Maximum 16 characters.

Defaults

none

Command Modes

<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

Do not enter this command before creating the access-list.

ip pim query-interval

Change the frequency of PIM Router-Query messages.

Syntax

ip pim query-interval seconds

To return to the default value, use the no ip pim query-interval seconds command.

Parameters

seconds

Enter a number as the number of seconds between router query messages. The range is from 0 to 65535. The default is 30 seconds.

Defaults

30 seconds

</tr>
</tbody>
</table>

ip pim register-filter

To prevent a PIM source DR from sending register packets to an RP for the specified multicast source and group, use this feature.

Syntax

ip pim register-filter access-list

To return to the default, use the no ip pim register-filter access-list command.

Parameters

access-list

Enter the name of an extended access list. Maximum 16 characters.

Defaults

Not configured.

Command Modes

CONFIGURATION

Supported Modes

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

The access name is an extended IP access list that denies PIM register packets to RP at the source DR based on the multicast and group addresses. Do not enter this command before creating the access-list.

**ip pim rp-address**

Configure a static PIM rendezvous point (RP) address for a group or access-list.

**Syntax**

```
ip pim rp-address address {group-address group-address mask} override
```

To remove an RP address, use the `no ip pim rp-address address {group-address group-address mask} override` command.

**Parameters**

- **address**: Enter the RP address in dotted decimal format (A.B.C.D).
- **group-address**: Enter the keywords `group-address` then a group-address mask, in dotted decimal format (/xx), to assign that group address to the RP.
- **override**: Enter the keyword `override` to override the BSR updates with static RP. The override takes effect immediately during enable/disable.

**Defaults**

Not configured.

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

First-hop routers use this address by to send register packets on behalf of source multicast hosts. The RP addresses are stored in the order in which they are entered. The RP is chosen based on a longer prefix match for a group. The RP selection does not depend on dynamic or static RP assignments.

**ip pim rp-candidate**

To send out a Candidate-RP-Advertisement message to the bootstrap (BS) router or define group prefixes that are defined with the RP address to PIM BSR, configure a PIM router.

**Syntax**

```
ipo pim rp-candidate {interface [priority] [acl-name]
```

To return to the default value, use the `no ip pim rp-candidate {interface [priority] [acl-name]` command.
Parameters

interface

Enter the following keywords and slot/port or number information:

- For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
- For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

priority

(Optional) Enter the priority used in Bootstrap election process. The range is zero (0) to 255. The default is 192.

acl-name

(Optional) Enter the name of an ACL to configure a PIM router to act as an RP for a specific set of multicast group addresses that are defined in the ACL.

Defaults

Not configured.

Command Modes

CONFIGURATION

Supported Modes

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

Priority is stored at BSR router when receiving a Candidate-RP-Advertisement.

ip pim sparse-mode

Enable PIM sparse mode and IGMP on the interface.

Syntax

ip pim sparse-mode

To disable PIM sparse mode and IGMP, use the `no ip pim sparse-mode` command.

Defaults

Disabled.

Command Modes

INTERFACE

Supported Modes

Full—Switch

Command History

<table>
<thead>

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

The interface must be enabled (the `no shutdown` command) and not have the `switchport` command configured. Multicast must also be enabled globally (using the `ip multicast-lag-hashing` command). PIM is supported on the port-channel interface.
ip pim sparse-mode sg-expiry-timer

Enable expiry timers globally for all sources, or for a specific set of (S,G) pairs an access list defines.

Syntax

```
ip pim sparse-mode sg-expiry-timer seconds [access-list name]
```

To disable configured timers and return to default mode, use the no ip pim sparse-mode sg-expiry-timer command.

Parameters

- **seconds**: Enter the number of seconds the S, G entries are retained. The range is from 211 to 86400.
- **access-list name**: (OPTIONAL) Enter the name of a previously configured Extended ACL to enable the expiry time to specified S,G entries.

Defaults

Disabled. The default expiry timer (with no times configured) is 210 sec.

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

This command configures an expiration timer for all S,G entries, unless they are assigned to an Extended ACL.

ip pim spt-threshold

To switch to the shortest path tree when the traffic reaches the specified threshold value, configure the PIM router.

Syntax

```
ip pim spt-threshold value | infinity
```

To return to the default value, use the no ip pim spt-threshold command.

Parameters

- **value**: (OPTIONAL) Enter the traffic value in kilobits per second. The default is 10 packets per second. A value of zero (0) causes a switchover on the first packet.
- **infinity**: (OPTIONAL) Enter the keyword infinity to never switch to the source-tree.

Defaults

Not configured.

</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

This command is applicable to last hop routers on the shared tree towards the rendezvous point (RP).
no ip pim snooping dr-flood

Disable the flooding of multicast packets to the PIM designated router.

**Syntax**

```
no ip pim snooping dr-flood
```

To re-enable the flooding of multicast packets to the PIM designated router, use the `ip pim snooping dr-flood` command.

**Defaults**

Enabled.

**Command Modes**

CONFIGURATION

**Supported Modes**

Full—Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

By default, when you enable PIM-SM snooping, a switch floods all multicast traffic to the PIM designated router (DR), including unnecessary multicast packets. To minimize the traffic sent over the network to the designated router, you can disable designated-router flooding.

When designated-router flooding is disabled, PIM-SM snooping only forwards the multicast traffic, which belongs to a multicast group for which the switch receives a join request, on the port connected towards the designated router.

If the PIM DR flood is not disabled (default setting):

- Multicast traffic is transmitted on the egress port towards the PIM DR if the port is not the incoming interface.
- Multicast traffic for an unknown group is sent on the port towards the PIM DR. When DR flooding is disabled, multicast traffic for an unknown group is dropped.

**Related Commands**

- `ip pim sparse-mode` — enables PIM-SM snooping.

---

**show ip pim bsr-router**

View information on the Bootstrap router.

**Syntax**

```
show ip pim bsr-router
```

Dell#
```

dellEMC

show ip pim rp

View all multicast groups-to-RP mappings.

**Syntax**

```
show ip pim rp [mapping | group-address]
```
Parameters

**mapping**
(Optional) Enter the keyword mapping to display the multicast groups-to-RP mapping and information on how RP is learnt.

**group-address**
(Optional) Enter the multicast group address mask in dotted decimal format to view RP for a specific group.

  RP: 165.87.20.3, v2
    Info source: 165.87.20.5, via bootstrap, priority 0
    Uptime: 00:03:11, expires: 00:03:03
Dell\#

Example (Address)

Dell\# sh ip pim rp 229.1.2.1
Group RP
229.1.2.1 165.87.20.4
Dell\#

show ip pim snooping interface

Display information on VLAN interfaces with PIM-SM snooping enabled.

**Syntax**

`show ip pim snooping interface [vlan vlan-id]`

**Parameters**

**vlan vlan-id**
(Optional) Enter a VLAN ID to display information about a specified VLAN configured for PIM-SM snooping. The valid VLAN IDs range is from 1 to 4094.

**Command Modes**

- EXEC
EXEC Privilege

Supported Modes
Full—Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>

</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information
The following describes the `show ip pim snooping interface` commands shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Interface</td>
<td>Displays the VLAN interfaces with PIM-SM snooping enabled.</td>
</tr>
<tr>
<td>Ver/Mode</td>
<td>Displays the PIM version number for each VLAN interface with PIM-SM snooping enabled:</td>
</tr>
<tr>
<td></td>
<td>• v2 = PIM version 2</td>
</tr>
<tr>
<td></td>
<td>• S = PIM Sparse mode</td>
</tr>
<tr>
<td>Nbr Count</td>
<td>Displays the number of neighbors learned through PIM-SM snooping on the interface.</td>
</tr>
<tr>
<td>DR Prio</td>
<td>Displays the Designated Router priority value configured on the interface (ip pim dr-priority command).</td>
</tr>
<tr>
<td>DR</td>
<td>Displays the IP address of the Designated Router for that interface.</td>
</tr>
</tbody>
</table>

Example (2)

```
Dell#show ip pim snooping interface
Interface   Ver Nbr Count DR Prio   DR
Vlan 2       v2  3      1     165.87.32.2
```

show ip pim snooping neighbor

Display information on PIM neighbors learned through PIM-SM snooping.

Syntax
```
show ip pim snooping neighbor [vlan vlan-id]
```

Parameters
- `vlan vlan-id` (OPTIONAL) Enter a VLAN ID to display information about PIM neighbors that PIM-SM snooping discovered on a specified VLAN. The valid VLAN IDs range is from 1 to 4094.

Command Modes
- EXEC
- EXEC Privilege

Supported Modes

</tbody>
</table>

Example
```
Dell#show ip pim snooping neighbor
Neighbor Address     Interface      Uptime/Expires     Ver DR Prio
165.87.32.2          Vl 2 [tei 4/8 ] 00:04:03/00:01:42 v2 1
165.87.32.10          Vl 2 [te 4/8 ] 00:00:46/00:01:29  v2 0
165.87.32.12          Vl 2 [te 4/8 ] 00:00:51/00:01:24  v2 0
```

show ip pim snooping tib
Display information from the tree information base (TIB) PIM-SM snooping discovered about multicast group members and states.

Syntax
`show ip pim snooping tib [vlan vlan-id] [group-address [source-address]]`

Parameters
- `vlan vlan-id` (OPTIONAL) Enter a VLAN ID to display TIB information PIM-SM snooping discovered on a specified VLAN. The valid VLAN IDs range is from 1 to 4094.
- `group-address` (OPTIONAL) Enter the group address in dotted decimal format (A.B.C.D) to display TIB information PIM-SM snooping discovered for a specified multicast group.
- `source-address` (OPTIONAL) Enter the source address in dotted decimal format (A.B.C.D) to display TIB information PIM-SM snooping discovered for a specified multicast source.

Command Modes
- EXEC
- EXEC Privilege

Supported Modes

Command History

Version Description

9.9(0.0) Introduced on the FN IOM.
9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The following describes the `show ip pim tib` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>(S, G)</td>
<td>Displays the entry in the multicast PIM database.</td>
</tr>
<tr>
<td>uptime</td>
<td>Displays the amount of time the entry has been in the PIM route table.</td>
</tr>
<tr>
<td>expires</td>
<td>Displays the amount of time until the entry expires and is removed from the database.</td>
</tr>
<tr>
<td>RP</td>
<td>Displays the IP address of the RP/source for this entry.</td>
</tr>
<tr>
<td>flags</td>
<td>List the flags to define the entries:</td>
</tr>
<tr>
<td></td>
<td>- D = PIM Dense Mode</td>
</tr>
<tr>
<td></td>
<td>- S = PIM Sparse Mode</td>
</tr>
<tr>
<td></td>
<td>- C = directly connected</td>
</tr>
<tr>
<td></td>
<td>- L = local to the multicast group</td>
</tr>
<tr>
<td></td>
<td>- P = route was pruned</td>
</tr>
<tr>
<td></td>
<td>- R = the forwarding entry is pointing toward the RP</td>
</tr>
<tr>
<td></td>
<td>- F = Dell Networking OS is registering this entry for a multicast source</td>
</tr>
<tr>
<td></td>
<td>- T = packets were received via Shortest Tree Path</td>
</tr>
<tr>
<td></td>
<td>- J = first packet from the last hop router is received and the entry is ready to switch to SPT</td>
</tr>
<tr>
<td></td>
<td>- K = acknowledge pending state</td>
</tr>
</tbody>
</table>
### Field Description

**Incoming interface**
Displays the reverse path forwarding (RPF) interface towards the RP/source.

**RPF neighbor**
Displays the next hop from this interface towards the RP/source.

**Outgoing interface list:**
Lists the interfaces that meet one of the following criteria:
- a directly connect member of the Group
- statically configured member of the Group
- received a (*,G) Join message

### Example

```bash
Dell#show ip pim tib

PIM Multicast Routing Table
Flags: D- Dense, S- Sparse, C- Connected, L- Local, P- Pruned,
R- RP-bit set, F- Register flag, T- SPT-bit set, J- Join SPT,
M- MSDP created entry, A- Candidate for MSDP Advertisement,
K- Ack-Pending State
Timers: Uptime/Expires
Interface state: Interface, next-Hop, State/Mode

(*, 226.1.1.1), uptime 01:29:19, expires 00:00:52, RP 10.211.2.1, flags: SCJ
Incoming interface: TenGigabitEthernet 0/2, RPF neighbor 10.211.1.2
Outgoing interface list:
  TenGigabitEthernet 0/8

(*, 226.1.1.2), uptime 00:18:08, expires 00:00:52, RP 10.211.2.1, flags: SCJ
Incoming interface: TenGigabitEthernet 1/2, RPF neighbor 10.211.1.2
Outgoing interface list:
  TenGigabitEthernet 0/8

(*, 226.1.1.3), uptime 00:18:08, expires 00:00:52, RP 10.211.2.1, flags: SCJ
Incoming interface: TenGigabitEthernet 1/2, RPF neighbor 10.211.1.2
Outgoing interface list:
  TenGigabitEthernet 0/8

(*, 226.1.1.4), uptime 00:18:08, expires 00:00:52, RP 10.211.2.1, flags: SCJ
Incoming interface: TenGigabitEthernet 1/2, RPF neighbor 10.211.1.2
Outgoing interface list:
  TenGigabitEthernet 0/8
```

### show running-config pim

Display the current configuration of PIM-SM snooping.

**Syntax**
```
show running-config pim
```

**Command Modes**
EXEC Privilege

**Supported Modes**
Full—Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>

</tr>
</tbody>
</table>
Example

Dell#show running-config pim
ip pim snooping enable

Related Commands

- **ip pim sparse-mode** — enables PIM-SM snooping.

### IPv6 PIM-Sparse Mode Commands

The following describes the IPv6 PIM-sparse mode (PIM-SM) commands.

#### ipv6 pim bsr-border

Define the border of PIM domain by filtering inbound and outbound PIM-BSR messages per interface.

**Syntax**

```
ipv6 pim bsr-border
```

**Defaults**

Disabled.

**Command Modes**

 INTERFACE

**Supported Modes**

 Full—Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command is applied to the subsequent PIM-BSR messages. Existing BSR advertisements are cleaned up by time-out.

#### ipv6 pim bsr-candidate

Configure the router as a bootstrap (BSR) candidate.

**Syntax**

```
ipv6 pim bsr-candidate interface [hash-mask-length] [priority]
```

To disable the bootstrap candidate, use the **no ipv6 pim bsr-candidate** command.

**Parameters**

- **Interface**
  - Enter the following keywords and slot/port or number information:
    - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
    - For a Port Channel interface, enter the keywords `port-channel` then a number.
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
    - For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

- **hash-mask-length**
  - (OPTIONAL) Enter the hash mask length for RP selection. The range is from 0 to 128. The default is **126**.

- **priority**
  - (OPTIONAL) Enter the priority value for Bootstrap election process. The range is from 0 to 255. The default is **0**.
ipv6 pim dr-priority

Change the designated router (DR) priority for the IPv6 interface.

Syntax: 
```
ipv6 pim dr-priority priority-value
```

Parameters:
- `priority-value`: Enter a number. Preference is given to larger/higher number. The range is from 0 to 4294967294. The default is 1.

Defaults:
1

Command Modes:
- INTERFACE

Supported Modes:
Full—Switch

Command History:
- 9.9(0.0): Introduced on the FN IOM.
- 9.2(0.0): Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information:
The router with the largest value assigned to an interface becomes the designated router. If two interfaces contain the same designated router priority value, the interface with the largest interface IP address becomes the designated router.

ipv6 pim join-filter

Permit or deny PIM Join/Prune messages on an interface using an access list. This command prevents the PIM-SM router from creating state based on multicast source and/or group.

Syntax:
```
ipv6 pim join-filter access-list
```

Parameters:
- `access-list`: Enter the name of an extended access list.
- `in`: Enter the keyword `in` to apply the access list to inbound traffic.
- `out`: Enter the keyword `out` to apply the access list to outbound traffic.

Defaults:
none

Command Modes:
- INTERFACE

Command History:
- 9.9(0.0): Introduced on the FN IOM.
- 9.2(0.0): Introduced on the MXL 10/40GbE Switch IO Module.
ipv6 pim query-interval

Change the frequency of IPv6 PIM router-query messages.

Syntax

```
ipv6 pim query-interval seconds
```

To return to the default value, use the `no ipv6 pim query-interval seconds` command.

Parameters

- **seconds**: Enter a number as the number of seconds between router query messages. The range is from 0 to 65535. The default is 30 seconds.

Defaults

30 seconds

Command Modes

INTERFACE

Supported Modes

</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

ipv6 pim neighbor-filter

Prevent the system from forming a PIM adjacency with a neighboring system.

Syntax

```
ipv6 pim neighbor-filter {access-list}
```

Parameters

- **access-list**: Enter the name of a standard access list. Maximum 16 characters.

Defaults

none

Command Modes

CONFIGURATION

Supported Modes

Full—Switch
**ipv6 pim register-filter**

Configure the source DR so that it does not send register packets to the RP for the specified sources and groups.

**Syntax**
```
ipv6 pim register-filter access-list
```

**Parameters**
- **access-list**
  - Enter the name of the extended ACL that contains the sources and groups to filter.

**Defaults**
none

**Command Modes**
CONFIGURATION

<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell(conf)#ipv6 pim register-filter REG-FIL_ACL
Dell(conf)#ipv6 access-list REG-FIL_ACL
Dell(conf-ipv6-acl)#deny ipv6 165:87:34::10/128 ff0e::225:1:2:0/112
Dell(conf-ipv6-acl)#permit ipv6 any any
Dell(conf-ipv6-acl)#exit
```

---

**ipv6 pim rp-address**

Configure a static PIM rendezvous point (RP) address for a group. First-hop routers use this address to send register packets on behalf of the source multicast host.

**Syntax**
```
ipv6 pim rp-address address group-address group-address mask override
```

To remove an RP address, use the no ipv6 pim re-address address group-address mask override command.

**Parameters**
- **address**
  - Enter the IPv6 RP address in the \xxxx::x format.

  **NOTE:** The :: notation specifies successive hexadecimal fields of zero.

- **group-address**
  - Enter the keywords group-address then the group address in the \xxxx::x format and then the mask in /nn format to assign that group address to the RP.

  **NOTE:** The :: notation specifies successive hexadecimal fields of zero.
override

Enter the keyword override to override the BSR updates with static RP. The override takes effect immediately during enable/disable.

NOTE: This option is applicable to multicast group range.

Defaults

Command Modes

CONFIGURATION

Supported Modes

Full—Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

The RP addresses are stored in the order in which they are entered. RP addresses learned via BSR take priority over static RP addresses.

Without the override option, the BSR-advertised RPs updates take precedence over the statically configured RPs.

ipv6 pim rp-candidate

Specify an interface as an RP candidate.

Syntax

ipv6 pim rp-candidate interface [priority-value]

Parameters

interface

Enter the following keywords and slot/port or number information:

- For a Loopback interface, enter the keyword loopback then a number from 0 to 16383.
- For a Port Channel interface, enter the keywords port-channel then a number.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a VLAN, enter the keyword vlan then a number from 1 to 4094.

priority-value

(Optional) Enter a number as the priority of this RP Candidate, which is included in the Candidate-RP-Advertisements. The range is 0 (highest) to 255 (lowest).

Defaults

none

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

Enable the interface (use the `no shutdown` command) and not have the `switchport` command configured. Also enable Multicast globally. PIM is supported on the port-channel interface.

**ipv6 pim spt-threshold**

Specifies when a PIM leaf router should join the shortest path tree.

**Syntax**

```
ipv6 pim spt-threshold {kbps | infinity}
```

To return to the default value, use the `no ipv6 pim spt-threshold` command.

**Parameters**

- **kbps**
  - Enter a traffic rate in kilobytes per second. The range is from 0 to 4294967 kbps. The default is **10 kbps**.

- **infinity**
  - Enter the keyword `infinity` to have all sources for the specified group use the shared tree and never join shortest path tree (SPT).

**Defaults**

**10 kbps**

**Command Modes**

CONFIGURATION

Dell#
The port monitoring feature allows you to monitor network traffic by forwarding a copy of each incoming or outgoing packet from one port to another port.

**Important Points to Remember**

- Port monitoring is supported on physical ports only. Port-channel interfaces and virtual local area networks (VLANs), are not supported.
- The monitoring (destination, “MG”) and monitored (source, “MD”) ports must be on the same switch.
- The monitored (source) interface must be a server-facing interface in the format slot/port, where valid slot number is 0 and server-facing port numbers are from 1 to 8. The monitoring interface must be an uplink port in the chassis.
- Dell Networking OS permits a limited set of commands for monitoring ports. To display these commands, use the ? command.
- A monitoring port may not be a member of a VLAN.
- There may only be one destination port in a monitoring session.
- A source port (MD) can only be monitored by one destination port (MG). If you try to assign a monitored port to more than one monitoring port, the following error is displayed as shown in example.

**Example**

```
Dell(conf)#mon ses 1
Dell(conf-mon-sess-1)#source tengig 0/1 destination tengig 0/6 direction both
Dell(conf-mon-sess-1)#do show mon ses
SessionID Source      Destination  Direction  Mode  Type
--------- ------      -----------  ---------  ----  ----
1    TenGig 0/1  TenGig 0/6  both            interface
Port-based
Dell(conf-mon-sess-1)#mon ses 2
Dell(conf-mon-sess-2)#source tengig 0/1 destination tengig 0/7 direction both
% Error: MD port is already being monitored.
```

**NOTE:** There is no limit to the number of monitoring sessions per system, provided that there are only four destination ports per port-pipe. If each monitoring session has a unique destination port, the maximum number of session is four per port-pipe.

**Topics:**
- description
- erpm
- flow-based enable
- rate-limit
- monitor session
- show config
- show monitor session
- show running-config monitor session
- source (port monitoring)
**description**

Enter a description of this monitoring session.

**Syntax**

description {description}

To remove the description, use the no description {description} command.

**Parameters**

description Enter a description regarding this session (80 characters maximum).

**Defaults**

none

**Command Modes**

MONITOR SESSION (conf-mon-sess-session-ID)

**Supported Modes**

All Modes

**Command History**

</tbody>
</table>

**erpm**

Configure the source and destination IP address for ERPM traffic.

**Syntax**
erpm source-ip ip-address dest-ip ip-address [gre-protocol value]

To remove the configuration, use the no erpm source-ip IP-address dest-ip IP-address [gre-protocol value] command.

**Parameters**

source-ip ip-address Enter the keywords source-ip then the source IP address in dotted decimal format.

destination-ip ip-address Enter the keywords dest-ip then the destination IP address in dotted decimal format.

gre-protocol value (OPTIONAL) Enter the keywords gre-protocol then the protocol type value for ERPM type monitor session. The range is from 1 to 65535.

**Command Modes**

MONITOR SESSION (conf-mon-sess-session-ID)

**Example**

Dell(conf-mon-sess-10)#erpm source-ip 10.10.10.1 dest-ip 5.1.1.2 gre-protocol 1111

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.
Version Description
9.11(0.0) Introduced GRE protocol support.

Related Commands
- monitor session — creates a session for monitoring traffic with port monitoring.
- show monitor session — displays information about monitor configurations.

flow-based enable
Enable flow-based monitoring.

Syntax
flow-based enable
To disable flow-based monitoring, use the no flow-based enable command.

Defaults
Disabled, that is flow-based monitoring is not applied.

Command Modes
MONITOR SESSION (conf-mon-sess-session-ID)

Supported Modes
Full—Switch

<tr>
<td>8.1.1.0</td>
<td>Introduced on the E-Series ExaScale.</td>
</tr>
<tr>
<td>7.4.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information
To monitor traffic with particular flows the interface, appropriate ACLs has be applied in ingress direction. Flow-based is not supported in the tx direction. Even though we can configure it in both the direction, only rx will work. The flow- based enable command has to be applied as a monitor session with some configuration which is already present in it, other wise flow- based will not take effect.

Related Commands
- monitor session — enables a monitoring session.

rate-limit
Configure the rate-limit to limit the mirrored packets.

Syntax
rate-limit limit
To remove the limit, use the no rate-limit limit command.

Parameters
- limit
  Enter the rate-limit value. The range is from 0 to 40000 Megabits per second.

Defaults
60

<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Related Commands

monitor session — enables a monitoring session.
show monitor session — displays the monitor session.

---

**monitor session**

Create a session for monitoring traffic with port monitoring.

**Syntax**

```
monitor session session-ID (type { rpm | erpm }) [drop]
```

To delete a session, use the `no monitor session session-ID` command.

To delete all monitor sessions, use the `no monitor session all` command.

**Parameters**

- `session-ID` Enter a session identification number. The range is from 0 to 65535.
- `type rpm | erpm` Specifies one of the following type:
  - `rpm`: to create remote port monitoring session.
  - `erpm`: to create encapsulated remote port monitoring session.
  - If no option is specified, by default SPAN will be created.
- `drop` Monitors only the dropped packets in the Ingress.

**Defaults**

`none`

**Command Modes**

</tbody>
</table>
### show running-config monitor session

Displays the running configuration of all monitor sessions or a specific session.

**Syntax**

```
show running-config monitor session {session-ID}
```

To display the running configuration for all monitor sessions, use the `show running-config monitor session` command.

**Parameters**

- **session-ID**
  
  (OPTIONAL) Enter a session identification number. The range is from 0 to 65535.

**Defaults**

- none

**Command Modes**

- EXEC Privilege

**Supported Modes**

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

The `monitoring` command is saved in the running configuration at the Monitor Session mode level and can be restored after a chassis reload.

**Example**

```
Dell#show run monitor session
!
monitor session 5
source TenGigabitEthernet 0/4 destination TenGigabitEthernet 0/5 direction rx
!
monitor session 20
source TenGigabitEthernet 0/3 destination TenGigabitEthernet 0/2 direction both
Dell#
Dell#show run monitor session 20
!
monitor session 20
source TenGigabitEthernet 0/3 destination TenGigabitEthernet 0/2 direction both
Dell#
```

**Related Commands**

- `monitor session` — creates a session for monitoring.
- `show monitor session` — displays a monitor session.
source (port monitoring)

Configure a port monitor source.

Syntax

```
source interface destination interface direction {rx | tx | both}
```

To disable a monitor source, use the `no source interface destination interface direction {rx | tx | both}` command.

Parameters

- **interface**
  - Enter the one of the following keywords and slot/port information:
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

- **destination**
  - Enter the keyword `destination` to indicate the interface destination.

- **direction {rx | tx | both}**
  - Enter the keyword `direction` followed by one of the packet directional indicators.
    - **rx**: to monitor receiving packets only.
    - **tx**: to monitor transmitting packets only.
    - **both**: to monitor both transmitting and receiving packets.

Defaults

none

Command Modes

- MONITOR SESSION (conf-mon-sess-session-ID)

Supported Modes

All Modes

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
</tbody>
</table>

Example

```
Dell(conf-mon-sess-11)#source tengig 0/1 destination tengig 0/8 direction rx
Dell(conf-mon-sess-11)#
```

Usage Information

The monitored (source) interface must be a server-facing interface in the format slot/port, where valid slot number is 0 and server-facing port numbers are from 1 to 8.
Private VLAN (PVLAN)

Private VLANs extend the Dell Networking OS security suite by providing Layer 2 isolation between ports within the same private VLAN. A private VLAN partitions a traditional VLAN into subdomains identified by a primary and secondary VLAN pair. The Dell Networking OS private VLAN implementation is based on RFC 3069.

For more information, refer to the following commands. The command output is augmented in the Dell Networking OS version 7.8.1.0 at later to provide PVLAN data:

- show arp
- show vlan

Private VLAN Concepts

**Primary VLAN:**
The primary VLAN is the base VLAN and can have multiple secondary VLANs. There are two types of secondary VLAN — community VLAN and isolated VLAN:

- A primary VLAN can have any number of community VLANs and isolated VLANs.
- Private VLANs block all traffic to isolated ports except traffic from promiscuous ports. Traffic received from an isolated port is forwarded only to promiscuous ports or trunk ports.

**Community VLAN:**
A community VLAN is a secondary VLAN of the primary VLAN:

- Ports in a community VLAN can talk to each other. Also, all ports in a community VLAN can talk to all promiscuous ports in the primary VLAN and vice versa.
- Devices on a community VLAN can communicate with each other using member ports, while devices in an isolated VLAN cannot.

**Isolated VLAN:**
An isolated VLAN is a secondary VLAN of the primary VLAN:

- Ports in an isolated VLAN cannot talk to each other. Servers would be mostly connected to isolated VLAN ports.
- Isolated ports can talk to promiscuous ports in the primary VLAN, and vice versa.

**Port Types:**
- **Community port**: A community port is a port that belongs to a community VLAN and is allowed to communicate with other ports in the same community VLAN and with promiscuous ports.
- **Isolated port**: An isolated port is a port that, in Layer 2, can only communicate with promiscuous ports that are in the same PVLAN.
- **Promiscuous port**: A promiscuous port is a port that is allowed to communicate with any other port type.
- **Trunk port**: A trunk port carries VLAN traffic across switches:
  - A trunk port in a PVLAN is always tagged.
  - A trunk port in Tagged mode carries primary or secondary VLAN traffic. The tag on the packet helps identify the VLAN to which the packet belongs.
  - A trunk port can also belong to a regular VLAN (non-private VLAN).
ip local-proxy-arp

Enable/disable Layer 3 communication between secondary VLANs in a private VLAN.

Syntax

[no] ip local-proxy-arp

To disable Layer 3 communication between secondary VLANs in a private VLAN, use the no ip local-proxy-arp command in INTERFACE VLAN mode for the primary VLAN.

To disable Layer 3 communication in a particular secondary VLAN, use the no ip local-proxy-arp command in INTERFACE VLAN mode for the selected secondary VLAN.

NOTE: Even after you disable ip-local-proxy-arp (use no ip-local-proxy-arp) in a secondary VLAN, Layer 3 communication may happen between some secondary VLAN hosts, until the address resolution protocol (ARP) timeout happens on those secondary VLAN hosts.

Defaults
Layer 3 communication is disabled between secondary VLANs in a private VLAN.

Related Commands
private-vlan mode — sets the mode of the selected VLAN to community, isolated, or primary.
private-vlan mapping secondary-vlan — maps secondary VLANs to the selected primary VLAN.
show arp — displays the ARP table.
show interfaces private-vlan — displays the type and status of the PVLAN interfaces.
show vlan private-vlan — displays the PVLANs and/or interfaces that are part of a PVLAN.
switchport mode private-vlan — sets PVLAN mode of the selected port.
private-vlan mapping secondary-vlan

Map secondary VLANs to the selected primary VLAN.

**Syntax**
```
[no] private-vlan mapping secondary-vlan vlan-list
```

To remove specific secondary VLANs from the configuration, use the `no private-vlan mapping secondary-vlan vlan-list` command syntax.

**Parameters**
- **vlan-list**: Enter the list of secondary VLANs to associate with the selected primary VLAN. The list can be in comma-delimited or hyphenated-range format, following the convention for the range input.

**Defaults**
none

**Command Modes**

<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**
The list of secondary VLANs can be:
- Specified in comma-delimited or hyphenated-range format.
- Specified with this command even before they have been created.
- Amended by specifying the new secondary VLAN to be added to the list.

**Related Commands**
- `private-vlan mode` — sets the mode of the selected VLAN to community, isolated, or primary.
- `show interfaces private-vlan` — displays the type and status of the PVLAN interfaces.
- `show vlan private-vlan` — displays the PVLANs and/or interfaces that are part of a PVLAN.
- `show vlan private-vlan mapping` — displays the primary-secondary VLAN mapping.
- `switchport mode private-vlan` — sets PVLAN mode of the selected port.

private-vlan mode

Set PVLAN mode of the selected VLAN to community, isolated, or primary.

**Syntax**
```
[no] private-vlan mode {community | isolated | primary}
```

To remove the PVLAN configuration, use the `no private-vlan mode {community | isolated | primary}` command syntax.

**Parameters**
- **community**: Enter the keyword `community` to set the VLAN as a community VLAN.
isolated

Enter the keyword isolated to configure the VLAN as an isolated VLAN.

primary

Enter the keyword primary to configure the VLAN as a primary VLAN.

Default: none

Command Modes

INTERFACE VLAN

Supported Modes

Full—Switch

Command History

Version Description

9.9(0.0) Introduced on the FN IOM.

8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The VLAN:

• can be in only one mode, either community, isolated, or primary.
• mode to community or isolated even before associating it to a primary VLAN. This secondary VLAN continues to work normally as a normal VLAN even though it is not associated to a primary VLAN. (A syslog message indicates this.)
• must not have a port in it when VLAN mode is being set.

Only ports (and port channels) configured as promiscuous, host, or PVLAN trunk ports (as previously described) can be added to the PVLAN. No other regular ports can be added to the PVLAN.

After using this command to configure a VLAN as a primary VLAN, use the private-vlan mapping secondary-vlan command to map secondary VLANs to this VLAN.

Related Commands

private-vlan mapping secondary-vlan — maps secondary VLANs to the selected primary VLAN.

show interfaces private-vlan — displays the type and status of the PVLAN interfaces.

show vlan private-vlan — displays the PVLANs and/or interfaces that are part of a PVLAN.

show vlan private-vlan mapping — displays the primary-secondary VLAN mapping.

switchport mode private-vlan — sets PVLAN mode of the selected port.

show interfaces private-vlan

Display type and status of PVLAN interfaces.

Syntax

show interfaces private-vlan [interface interface]

Parameters

interface interface (OPTIONAL) Enter the keyword interface then the ID of the specific interface for which to display PVLAN status.

Defaults

none

Command Modes

EXEC

EXEC Privilege
show vlan private-vlan

Display PVLANs and/or interfaces that are part of a PVLAN.

Syntax

    show vlan private-vlan [community | interface | isolated | primary | primary_vlan | interface interface]

Parameters

- **community** (OPTIONAL) Enter the keyword `community` to display VLANs configured as community VLANs, along with their interfaces.
- **interface** (OPTIONAL) Enter the keyword `interface` to display VLANs configured as community VLANs, along with their interfaces.
isolated (OPTIONAL) Enter the keyword isolated to display VLANs configured as isolated VLANs, along with their interfaces.

primary (OPTIONAL) Enter the keyword primary to display VLANs configured as primary VLANs, along with their interfaces.

primary_vlan (OPTIONAL) Enter a private VLAN ID or secondary VLAN ID to display interface details about the designated PVLAN.

interface interface (OPTIONAL) Enter the keyword interface and an interface ID to display the PVLAN configuration of the designated interface.

Defaults

- none

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

Full—Switch

```
Dell# show vlan private-vlan community
Primary Secondary Type      Active Ports
------- --------- --------- ------ -----------
10                primary   Yes    Gi 2/1,3
101       community Yes     Gi 2/7-10
20                primary   Yes    Po 10, 12-13
               Gi 3/1
201       community No
202       community Yes     Gi 3/11-12
```

Example (Specific)

```
Dell# show vlan private-vlan interface Gi 2/1
Primary Secondary Type     Active Ports
------- --------- --------- -------------------
10                primary  Yes     Gi 2/1
```

Usage Information

If the VLAN ID is that of a primary VLAN, the entire private VLAN output is displayed, as shown below. If the VLAN ID is a secondary VLAN, only its primary VLAN and its particular secondary VLAN properties are displayed, as shown in the second Example.

```
Example

Dell# show vlan private-vlan 10
Primary Secondary Type      Active  Ports
------- --------- --------- -------------------
10                primary   Yes     Gi 2/1,3
102       isolated  Yes     Gi 0/4
101       community Yes     Gi 2/7-10
```

```
Example

Dell#show vlan private-vlan 102
Primary Secondary Type     Active Ports
------- --------- --------- -------------------
10                Primary  Yes     Po 1
               Gi 0/2
102       Isolated Yes     Gi 0/4
```

Related Commands

- `private-vlan mode` — sets the mode of the selected VLAN to community, isolated, or primary.
- `show interfaces private-vlan` — displays type and status of PVLAN interfaces.
- `show vlan private-vlan mapping` — displays the primary-secondary VLAN mapping.
- `switchport mode private-vlan` — sets PVLAN mode of the selected port.

---

**show vlan private-vlan mapping**

Display primary-secondary VLAN mapping.

**Syntax**

```
show vlan private-vlan mapping
```

**Defaults**

none

**Command Modes**

- EXEC
switchport mode private-vlan

Set PVLAN mode of the selected port.

Syntax

```
[no] switchport mode private-vlan {host | promiscuous | trunk}
```

To remove PVLAN mode from the selected port, use the `no switchport mode private-vlan` command.

Parameters

- **host**: Enter the keyword `host` to configure the selected port or port channel as an isolated interface in a PVLAN.
- **promiscuous**: Enter the keyword `promiscuous` to configure the selected port or port channel as an promiscuous interface.
- **trunk**: Enter the keyword `trunk` to configure the selected port or port channel as a trunk port in a PVLAN.

Defaults

Disabled.

Command Modes

INTERFACE

Supported Modes

Full—Switch

Command History

**Version** | **Description**
--- | ---
9.9(0.0) | Introduced on the FN IOM.
8.3.16.1 | Introduced the on MXL 10/40GbE Switch IO Module.

Usage Information

The output of this command, shown below, displays the community and isolated VLAN IDs that are associated with each primary VLAN.

Example

```
Dell# show vlan private-vlan mapping
Private Vlan:
  Primary   : 100
  Isolated  : 102
  Community : 101
  Unknown   : 200
```

Related Commands

- `private-vlan mode` — sets the mode of the selected VLAN to community, isolated, or primary.
- `show vlan private-vlan` — displays type and status of PVLAN interfaces.
- `show vlan private-vlan mapping` — displays the primary-secondary VLAN mapping.
- `switchport mode private-vlan` — sets PVLAN mode of the selected port.
**Version**

**Description**

8.3.16.1  
Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**

The assignment of the various PVLAN port types to port and port channel (LAG) interfaces is shown in the following example.

**Example**

```
Dell(conf-if-te-2/1)#switchport mode private-vlan promiscuous
Dell(conf-if-te-2/2)#switchport mode private-vlan host
Dell(conf-if-te-2/3)#switchport mode private-vlan trunk
```

**Related Commands**

- `private-vlan mode` — sets the mode of the selected VLAN to community, isolated, or primary.
- `private-vlan mapping secondary-vlan` — sets the mode of the selected VLAN to primary and then associates the secondary VLANs to it.
- `show interfaces private-vlan` — displays type and status of PVLAN interfaces.
- `show vlan private-vlan mapping` — displays the primary-secondary VLAN mapping.
Per-VLAN Spanning Tree Plus (PVST+)

The Dell Networking Operating System (OS) implementation of per-VLAN spanning tree plus (PVST+) is based on the IEEE 802.1w standard spanning tree protocol, but it creates a separate spanning tree for each VLAN configured.

NOTE: For easier command line entry, the plus (+) sign is not used at the command line.

Topics:
- description
- disable
- edge-port bpdufilter default
- extend system-id
- protocol spanning-tree pvst
- show spanning-tree pvst
- spanning-tree pvst
- spanning-tree pvst err-disable
- tc-flush-standard
- vlan bridge-priority
- vlan forward-delay
- vlan hello-time
- vlan max-age

**description**

Enter a description of the PVST+.

**Syntax**

description {description}

To remove the description, use the no description {description} command.

**Parameters**

- **description**
  Enter a description to identify the spanning tree (80 characters maximum).

**Defaults**

- none

**Command Modes**

- SPANNING TREE PVST+ (The prompt is “config-pvst”)

**Supported Modes**

- Full—Switch

**Command History**

**extend system-id**

To augment the Bridge ID with a VLAN ID so that PVST+ differentiate between BPDUs for each VLAN, use extend system ID. If the VLAN receives a BPDU meant for another VLAN, PVST+ does not detect a loop, and both ports can remain in Forwarding state.

**Syntax**

```
extend system-id
```

**Defaults**

Disabled

**Command Modes**

### Example

Dell#conf
Dell(conf)#protocol spanning-tree pvst
Dell(conf-pvst)#no disable
Dell(conf-pvst)#vlan 2 bridge-priority 4096
Dell(conf-pvst)#vlan 3 bridge-priority 16384
Dell(conf-pvst)#
Dell(conf-pvst)#show config

```
! protocol spanning-tree pvst
  no disable
  vlan 2 bridge-priority 4096
  vlan 3 bridge-priority 16384
Dell#
```

### Usage Information

After you enable PVST+, the device runs an STP instance for each VLAN it supports.

### Related Commands

- `disable` — disables PVST+.
- `show spanning-tree pvst` — displays the PVST+ configuration.

### show spanning-tree pvst

View the Per-VLAN spanning tree configuration.

**Syntax**

```
show spanning-tree pvst [vlan vlan-id] [brief] [guard]
```

**Parameters**

- `vlan vlan-id` *(OPTIONAL)* — Enter the keyword `vlan` then the VLAN ID. The range is 1 to 4094.
- `brief` *(OPTIONAL)* — Enter the keyword `brief` to view a synopsis of the PVST+ configuration information.
- `interface` *(OPTIONAL)* — Enter one of the interface keywords along with the slot/port information:
  - For a Port Channel interface, enter the keyword `port-channel` then a number: The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- `guard` *(OPTIONAL)* — Enter the keyword `guard` to display the type of guard enabled on a PVST interface and the current port state.

**Defaults**

`none`

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

Full-Switch

**Command History**

- **Version** 9.9(0.0) — Introduced on the FN IOM.
Version 8.3.16.1
Description
Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
The following describes the `show spanning-tree pvst` command shown in the following examples.

Field Description
Interface Name PVST interface.
Instance PVST instance.
Sts Port state: root-inconsistent (INCON Root), forwarding (FWD), listening (LIS), blocking (BLK), or shut down (EDS Shut).
Guard Type Type of STP guard configured (Root, Loop, or BPDU guard).
Bpdu Filter Yes - Bpdu filter Enabled

Example (Brief)
```
Dell# show spanning-tree pvst vlan 2 brief
VLAN 2
Executing IEEE compatible Spanning Tree Protocol
Root ID Priority 32768, Address 001e.c9f1.00f3
Root Bridge hello time 2, max age 20, forward delay 15
Bridge ID Priority 32768, Address 001e.c9f1.00f3
We are the root of Vlan 2
Configured hello time 2, max age 20, forward delay 15
Bpdu filter disabled globally

Interface Designated

Te 0/3 0      EDS(Shut)   Bpduguard   No
```

Related Commands

```
spanning-tree pvst — configure PVST+ on an interface.
```
spanning-tree pvst

Configure a PVST+ interface with one of these settings: edge port with optional bridge port data unit (BPDU) guard, port disablement if an error condition occurs, port priority or cost for a VLAN range, loop guard, or root guard.

**Syntax**

spanning-tree pvst {edge-port [bpduguard [shutdown-on-violation]] | bpdufilter] | err-disable | vlan vlan-range {cost number | priority value} | rootguard}

**Parameters**

- **edge-port**
  - Enter the keywords edge-port to configure the interface as a PVST+ edge port.

- **bpduguard**
  - Enter the keyword portfast to enable Portfast to move the interface into Forwarding mode immediately after the root fails.
  - Enter the keyword bpduguard to disable the port when it receives a BPDU.

- **shutdown-on-violation**
  - (OPTIONAL) Enter the keywords shutdown-on-violation to hardware disable an interface when a BPDU is received and the port is disabled.

- **bpdufilter**
  - (OPTIONAL) Enter the keyword bpdufilter to stop sending and receiving BPDUs on port fast enabled ports.

- **err-disable**
  - Enter the keywords err-disable to enable the port to be put into the error-disable state (EDS) if an error condition occurs.

- **vlan vlan-range**
  - Enter the keyword vlan then the VLAN numbers. The range is from 1 to 4094.

- **cost number**
  - Enter the keyword cost then the port cost value. The range is from 1 to 200000.
  - **Defaults:**
    - 10-Gigabit Ethernet interface = 2000.
    - Port Channel interface with one 10 Gigabit Ethernet = 2000.
    - Port Channel with two 10 Gigabit Ethernet = 1800.
    - Port Channel with two 40 Mbps Ethernet = 600.

- **priority value**
  - Enter the keyword priority then the Port priority value in increments of 16. The range is from 0 to 240. The default is 128.

- **rootguard**
  - Enter the keyword rootguard to enable root guard on a PVST+ port or port-channel interface.

**Defaults**

Not configured.

**Command Modes**

INTERFACE

**Supported Modes**

Full—Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

The BPDU guard option prevents the port from participating in an active STP topology in case a BPDU appears on a port unintentionally, or is misconfigured, or is subject to a DOS attack. This option places the port into the Error
Disable state if a BPDU appears, and a message is logged so that the administrator can take corrective action. When BPDU guard and BPDU filter is enabled on the port, then BPDU filter takes the highest precedence.

**NOTE:** A port configured as an edge port, on a PVST switch, will immediately transition to the forwarding state. Only ports connected to end-hosts should be configured as an edge port. Consider an edge port similar to a port with a spanning-tree portfast enabled.

**Example**

```
Dell(conf-if-te-0/1)#spanning-tree pvst vlan 3 cost 18000
Dell(conf-if-te-0/1)#end
Dell(conf-if-te-0/1)#show config
!
interface TenGigabitEthernet 0/1
  no ip address
  switchport
  spanning-tree pvst vlan 3 cost 18000
  no shutdown
Dell(conf-if-te-0/1)#end
Dell#
```

**Related Commands**

- `show spanning-tree pvst` — views the PVST+ configuration.

---

**spanning-tree pvst err-disable**

Place ports in an Err-Disabled state if they receive a PVST+ BPDU when they are members an untagged VLAN.

**Syntax**

```
spanning-tree pvst err-disable cause invalid-pvst-bpdu
```

**Defaults**

Enabled; ports are placed in the Err-Disabled state if they receive a PVST+ BPDU when they are members of an untagged VLAN.

**Command Modes**

INTERFACE

**Supported Modes**

Full—Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the M6100/10Gbe Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

Some non-Dell Networking systems which have hybrid ports participating in PVST+ transmit two kinds of BPDUs: an 802.1D BPDU and an untagged PVST+ BPDU.

Dell Networking systems do not expect PVST+ BPDU on an untagged port. If this happens, the system places the port in the Error-Disable state. This behavior might result in the network not converging. To prevent the system from executing this action, use the `no spanning-tree pvst err-disable command cause invalid-pvst-bpdu`.

**Related Commands**

- `show spanning-tree pvst` — views the PVST+ configuration.
**tc-flush-standard**

Enable the MAC address flushing after receiving every topology change notification.

**Syntax**

tc-flush-standard
To disable, use the no tc-flush-standard command.

**Defaults**
Disabled.

**Command Modes**
CONFIGURATION

**Supported Modes**
Full—Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**
By default, the system implements an optimized flush mechanism for PVST+. This implementation helps in flushing the MAC addresses only when necessary (and less often) allowing for faster convergence during topology changes. However, if a standards-based flush mechanism is needed, you can turn this knob command on to enable flushing MAC addresses after receiving every topology change notification.

**vlan bridge-priority**

Set the PVST+ bridge-priority for a VLAN or a set of VLANs.

**Syntax**

vlan vlan-id bridge-priority value
To return to the default value, use the no vlan bridge-priority command.

**Parameters**

- **vlan vlan-range**  
Enter the keyword vlan then the VLAN numbers. The range is from 1 to 4094.
- **bridge-priority value**  
Enter the keywords bridge-priority then the bridge priority value in increments of 4096. The range is from 0 to 61440. The default is 32768.

**Defaults**
32768

**Command Modes**

**Related Commands**

- vlan forward-delay — changes the time interval before the system transitions to the Forwarding state.
- vlan hello-time — change the time interval between BPDUs.
- vlan max-age — changes the time interval before PVST+ refreshes.
show spanning-tree pvst — displays the PVST+ configuration.

**vlan forward-delay**

Set the amount of time the interface waits in the Listening state and the Learning state before transitioning to the Forwarding state.

**Syntax**
```
vlan vlan-id forward-delay seconds
```

To return to the default setting, use the no vlan forward-delay command.

**Parameters**
- **vlan vlan-range**: Enter the keyword `vlan` then the VLAN numbers. The range is from 1 to 4094.
- **forward-delay seconds**: Enter the keywords `forward-delay` then the time interval, in seconds, that the system waits before transitioning PVST+ to the forwarding state. The range is from 4 to 30 seconds. The default is 15 seconds.

**Defaults**
- 15 seconds

**Related Commands**
- `vlan bridge-priority` — sets the bridge-priority value.
- `vlan hello-time` — changes the time interval between BPDUs.
- `vlan max-age` — changes the time interval before PVST+ refreshes.
- `show spanning-tree pvst` — displays the PVST+ configuration.

**vlan hello-time**

Set the time interval between generation of PVST+ and BPDUs.

**Syntax**
```
vlan vlan-id hello-time seconds
```

To return to the default value, use the no vlan hello-time command.

**Parameters**
- **vlan vlan-range**: Enter the keyword `vlan` then the VLAN numbers. The range is from 1 to 4094.
- **hello-time seconds**: Enter the keywords `hello-time` then the time interval, in seconds, between transmission of BPDUs. The range is from 1 to 10 seconds. The default is 2 seconds.

**Defaults**
- 2 seconds

**Command Modes**
- CONFIGURATION (conf-pvst)

**Supported Modes**

Per-VLAN Spanning Tree Plus (PVST+)

**vlan** max-age

To maintain configuration information before refreshing that information, set the time interval for the PVST+ bridge.

**Syntax**

```
vlan vlan-range max-age seconds
```

To return to the default, use the `no vlan max-age` command.

**Parameters**

- `vlan vlan-range` Enter the keyword `vlan` then the VLAN numbers. The range is from 1 to 4094.
- `max-age seconds` Enter the keywords `max-age` then the time interval, in seconds, that the system waits before refreshing configuration information. The range is from 6 to 40 seconds. The default is 20 seconds.

**Defaults**

20 seconds

**Related Commands**

- `vlan bridge-priority` — sets the bridge-priority value.
- `vlan forward-delay` — changes the time interval before the system transitions to the forwarding state.
- `vlan hello-time` — changes the time interval between BPDUs.
- `show spanning-tree pvst` — displays the PVST+ configuration.
Quality of Service (QoS)

The Dell Networking operating software commands for quality of service (QoS) include traffic conditioning and congestion control. QoS commands are not universally supported on all Dell Networking Products.

Global Configuration Commands

There are only two global configuration QoS commands.

qos-rate-adjust

By default, while rate limiting, policing, and shaping, the system does not include the Preamble, SFD, or the IFG fields. These fields are overhead; only the fields from MAC destination address to the CRC are used for forwarding and are included in these rate metering calculations. You can optionally include overhead fields in rate metering calculations by enabling QoS Rate Adjustment.

Syntax

```
qos-rate-adjustment overhead-bytes
```

Parameters

- `overhead-bytes`: Include a specified number of bytes of packet overhead to include in rate limiting, policing, and shaping calculations. The range is from 1 to 31.

Defaults

QoS rate adjustment is disabled by default, and `no qos-rate-adjust` is listed in the running-configuration.

Command Modes

- **CONFIGURATION**

Supported Modes

- Full-Switch

</tr>
</tbody>
</table>

service-class dot1p-mapping

Configure a service-class criterion based on a dot1p value.

Syntax

```
service-class dot1p-mapping {dot1p0 value | dot1p1 value | dot1p2 queue | dot1p3 value | dot1p4 value | dot1p5 value | dot1p6 value | dot1p7 value}
```

Parameters

- `value`: Enter a dot1p list number and value. The list number range is from 0 to 7. The range is from 0 to 3.

Defaults

For each dot1p Priority, the default CoS queue value is:

- dot1p CoS Queue
Per-Port QoS Commands

Per-port QoS (port-based QoS) allows you to define the QoS configuration on a per-physical-port basis.

**dot1p-priority**

Assign a value to the IEEE 802.1p bits on the traffic this interface receives.

**Syntax**

dot1p-priority priority-value

To delete the IEEE 802.1p configuration on the interface, use the no dot1p-priority command.

**Parameters**

<table>
<thead>
<tr>
<th>priority-value</th>

</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

### Usage Information

The `dot1p-priority` command changes the priority of incoming traffic on the interface. The system places traffic marked with a priority in the correct queue and processes that traffic according to its queue.

When you set the priority for a port channel, the physical interfaces assigned to the port channel are configured with the same value. You cannot assign the `dot1p-priority` command to individual interfaces in a port channel.

## rate police

Police the incoming traffic rate on the selected interface.

### Syntax

```
rate police [kbps] committed-rate [burst-KB] [peak [kbps] peak-rate [burst-KB]] [vlan vlan-id]
```

### Parameters

- **kbps**: Enter the keyword `kbps` to specify the rate limit in Kilobits per second (Kbps). Make the following value a multiple of 64. The range is from 0 to 40000000. The default granularity is Megabits per second (Mbps).
- **committed-rate**: Enter the bandwidth in Mbps. The range is from 0 to 10000.
- **burst-KB**: (OPTIONAL) Enter the burst size in KB. The range is from 16 to 200000. The default is 50.
- **peak peak-rate**: (OPTIONAL) Enter the keyword `peak` then a number to specify the peak rate in Mbps. The range is from 0 to 10000.
- **vlan vlan-id**: (OPTIONAL) Enter the keyword `vlan` then a VLAN ID to police traffic to those specific VLANs. The range is from 1 to 4094.

### Defaults

Granularity for `committed-rate` and `peak-rate` is Mbps unless you use the `kbps` option.

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

## Usage Information

**NOTE:** Per port rate police is supported for Layer 2 tagged and untagged switched traffic and for Layer 3 traffic. Per VLAN rate police is supported on only tagged ports with Layer 2 switched traffic.

On one interface, you can configure the `rate police` command for a VLAN or you can configure the `rate police` command for an interface. For each physical interface, you can configure three `rate police` commands specifying different VLANs.

For each physical interface, you can configure three `rate police` commands specifying different VLANs.

## Related Commands
- `rate-police` — specifies traffic policing on the selected interface.

## rate-shape

Shape the traffic output on the selected interface.

**Syntax**

```
rate shape [kbps] rate [burst-KB]
```  

**Parameters**

- **kbps**
  - Enter the keyword `kbps` to specify the rate limit in Kilobits per second (Kbps). Make the following value a multiple of 64. The range is from 0 to 40000000. The default granularity is Megabits per second (Mbps).

- **rate**
  - Enter the outgoing rate in multiples of 10 Mbps. The range is from 10 to 10000.

- **burst-KB**
  - (OPTIONAL) Enter the burst size in KB. The range is from 0 to 10000. The default is 50.

**Defaults**
Granularity for rate is Mbps unless you use the `kbps` option.

**Command Modes**
QoS-POLICY-OUT

**Supported Modes**
Programmable-Mux (PMUX)
Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>

<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**
When you apply `rate-shape` in QoS policy both on the Queue Level and in Aggregate mode, the queue-based shaping occurs first then aggregate rate shaping.
service-class dynamic dot1p

Honor all 802.1p markings on incoming switched traffic on an interface (from INTERFACE mode) or on all interfaces (from CONFIGURATION mode). A CONFIGURATION mode entry supersedes an INTERFACE mode entry.

Syntax

```
service-class dynamic dot1p
```

To return to the default setting, use the `no service-class dynamic dot1p` command.

Defaults

All dot1p traffic is mapped to Queue 0 unless you enable the `service-class dynamic dot1p` command. The default mapping is as follows:

<table>
<thead>
<tr>
<th>dot1p</th>
<th>Queue ID</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>0</td>
</tr>
<tr>
<td>1</td>
<td>0</td>
</tr>

<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch I/O Module.</td>
</tr>
</tbody>
</table>

Usage Information

To honor all incoming 802.1p markings on incoming switched traffic on the interface, enter this command. By default, this facility is not enabled (that is, the 802.1p markings on incoming traffic are not honored).

You can apply this command on both physical interfaces and port channels. When you set the service-class dynamic for a port channel, the physical interfaces assigned to the port channel are automatically configured; you cannot assign the `service-class dynamic dot1p` command to individual interfaces in a port channel.

- All dot1p traffic is mapped to Queue 0 unless you enable the `service-class dynamic dot1p` command on an interface or globally.
- Layer 2 or Layer 3 service policies supersede dot1p service classes.
**service-class bandwidth-percentage**

Specify a minimum bandwidth for queues.

**Syntax**

```
service-class bandwidth-percentage queue0 number queue1 number queue2 number queue3 number
```

**Parameters**

- `number` Enter the bandwidth-weight, as a percentage. The range is from 1 to 100.

**Defaults**

none

**Command Modes**

CONFIGURATION

**Supported Modes**

Programmable-Mux (PMUX)
Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>

</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

Guarantee a minimum bandwidth to different queues globally using the `service-class bandwidth-percentage` command from CONFIGURATION mode. The command is applied in the same way as the `bandwidth-percentage` command in an output QoS policy. The `bandwidth-percentage` command in QOS-POLICY-OUT mode supersedes the `service-class bandwidth-percentage` command.

When you enable ETS, the egress QoS features in the output QoS policy-map (such as `service-class bandwidth-percentage` and `bandwidth-percentage`), the default bandwidth allocation ratio for egress queues are superseded by ETS configurations. This is to provide compatibility with DCBX. Therefore, Dell Networking OS recommends disabling ETS when you wish to apply these features exclusively. After you disable ETS on an interface, the configured parameters are applied.

**strict-priority unicast**

Configure a unicast queue as a strict-priority (SP) queue.

**Syntax**

```
strict-priority unicast queue number
```

**Parameters**

- `unicast number` Enter the keyword `unicast` then the queue number. The range is from 1 to 3.

**Defaults**

none

**Command Modes**

CONFIGURATION

**Supported Modes**

Full-Switch
Policy-Based QoS Commands

Policy-based QoS is not supported on logical interfaces, such as port-channels, VLANs, or Loopbacks. The commands are:

- show qos dcb-map
- show qos dot1p-queue-mapping

**bandwidth-percentage**

Assign a percentage of weight to the class/queue.

**Syntax**

```
bandwidth-percentage percentage
```

To remove the bandwidth percentage, use the `no bandwidth-percentage` command.

**Parameters**

- `percentage`  
  Enter the percentage assignment of weight to the class/queue. The range is from 1 to 100% (granularity 1%).

**Defaults**

```
none
```

**Command Modes**

```
CONFIGURATION (conf-qos-policy-out)

</tr>
</tbody>
</table>
class-map

Create/access a class map. Class maps differentiate traffic so that you can apply separate quality-of-service policies to each class.

Syntax

```
class-map {match-all | match-any} class-map-name [layer2]
```

Parameters

- **match-all**: Determines how packets are evaluated when multiple match criteria exist. Enter the keywords `match-all` to determine that the packets must meet all the match criteria in order to be a member of the class.
- **match-any**: Determines how packets are evaluated when multiple match criteria exist. Enter the keywords `match-any` to determine that the packets must meet at least one of the match criteria in order to be a member of the class.
- **class-map-name**: Enter a name of the class for the class map in a character format (32 character maximum).
- **layer2**: Enter the keyword `layer2` to specify a Layer 2 Class Map. The default is `Layer 3`.

Defaults

Layer 3

Command Modes

- **CONFIGURATION**

Supported Modes

- **Full-Switch**

Command History

- **Version**: 9.9(0.0)
  - Introduced on the FN IOM.
- **Version**: 9.2(0.0)
  - Introduced on the M I/O Aggregator.
- **Version**: 8.3.16.1
  - Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

Packets arriving at the input interface are checked against the match criteria configured using this command to determine if the packet belongs to that class. This command accesses CLASS-MAP mode, where the configuration commands include the `match ip` and `match mac` options.

Related Commands

- `ip access-list extended` — configures an extended IP ACL.
- `ip access-list standard` — configures a standard IP ACL.
- `match ip access-group` — configures the match criteria based on the access control list (ACL).
- `match ip precedence` — identifies the IP precedence values as match criteria.
match ip dscp — configures the match criteria based on the DSCP value.

match ip access-group — configures a match criterion for a class map based on the contents of the designated MAC ACL.

match mac dot1p — configures a match criterion for a class map based on a dot1p value.

match mac vlan — configures a match criterion for a class map based on VLAN ID.

service-queue — assigns a class map and QoS policy to different queues.

show qos class-map — views the current class map information.

clear qos statistics

Clears matched packets.

Syntax

```
clear qos statistics interface-name
```

Parameters

- **interface-name**
  - Enter one of the following keywords:
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

Defaults

- none

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

- Full-Switch

Command History

- **Version**
  - **9.9(0.0)**: Introduced on the FN IOM.
  - **9.2(0.0)**: Introduced on the M I/O Aggregator.
  - **8.3.16.1**: Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

- When you issue this command, statistical information stored regarding QoS clears and resets to 0. You can access these statistics using the `show qos statistics` command in EXEC mode. When the traffic pattern matches the QoS classification criteria flows, the corresponding counters increment.

Related Commands

- `show qos statistics` — displays the QoS statistics.

crypto key zeroize rsa

Removes the generated RSA host keys and zeroize the key storage location.

Syntax

```
crypto key zeroize rsa
```

Defaults

- none
ip ssh rekey

Configures the time rekey-interval or volume rekey-limit threshold at which to re-generate the SSH key during an SSH session.

Syntax

```
ip ssh rekey [time rekey-interval] [volume rekey-limit]
```

To reset to the default, use `no ip ssh rekey [time rekey-interval] [volume rekey-limit]` command.

Parameters

- `time minutes` Enter the keywords `time` then the amount of time in minutes. The range is from 10 to 1440 minutes. The default is 60 minutes.
- `volume rekey-limit` Enter the keywords `volume` then the amount of volume in megabytes. The range is from 1 to 4096 megabytes. The default is 1024 megabytes.

Defaults

- The default time is 60 minutes.
- The default volume is 1024 megabytes.

Command Modes

- CONFIGURATION mode

Supported Modes

- Full-Switch

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<td>9.5(0.0)</td>
<td>Introduced on the Z9000, S6000, S4820T, S4810, MXL</td>
</tr>
</tbody>
</table>
**match ip access-group**

Configure match criteria for a class map, based on the access control list (ACL).

**Syntax**

```
match ip access-group access-group-name [set-ip-dscp value]
```

To remove ACL match criteria from a class map, use the `no match ip access-group access-group-name [set-ip-dscp value]` command.

**Parameters**

- `access-group-name` Enter the ACL name whose contents are used as the match criteria in determining if packets belong to the class the `class-map` specifies.
- `set-ip-dscp value` (OPTIONAL) Enter the keywords `set-ip-dscp` then the IP DSCP value. The matched traffic is marked with the DSCP value. The range is from 0 to 63.

**Defaults**

none

</tr>
</tbody>
</table>

**Usage Information**

To access this command, enter the `class-map` command. After the class map is identified, you can configure the match criteria. For `class-map` match-any, a maximum of five ACL match criteria are allowed. For `class-map` match-all, only one ACL match criteria is allowed.

**Related Commands**

- `class-map` — identifies the class map.

**match ip vlan**

Uses a VLAN as the match criterion for an L3 class map.

**Syntax**

```
match ip vlan vlan-id
```

To remove VLAN as the match criterion, use the `no match ip vlan vlan-id` command.

**Parameters**

- `vlan vlan-id` Enter the keyword `vlan` and then the ID of the VLAN. The range is from 1 to 4094.

**Defaults**

none

Related Commands

- **policy-map-output** — creates an output policy map.
- **qos-policy-output** — creates an output QoS-policy on the router.

**match ip dscp**

Use a differentiated services code point (DSCP) value as a match criteria.

**Syntax**

```plaintext
match {ip | ipv6 | ip-any} dscp dscp-list [set-ip-dscp value]
```

To remove a DSCP value as a match criteria, use the `no match {ip | ipv6 | ip-any} dscp dscp-list [[multicast] set-ip-dscp value]` command.

**Parameters**

- **ip**: Enter the keyword `ip` to support IPv4 traffic.
- **ipv6**: Enter the keyword `ipv6` to support IPv6 traffic.
- **ip-any**: Enter the keyword `ip-any` to support IPv4 and IPv6 traffic.
- **dscp-list**: Enter the IP DSCP values that is to be the match criteria. Separate values by commas — no spaces (1,2,3) or indicate a list of values separated by a hyphen (1-3). The range is from 0 to 63.
- **set-ip-dscp value** (OPTIONAL) Enter the keywords `set-ip-dscp` then the IP DSCP value. The matched traffic is marked with the DSCP value. The range is from 0 to 63.

Defaults

- none

<tr>
<td>9.5(0.0)</td>
<td>Introduced the <code>ipv6</code> and <code>ip-any</code> options on the MXL 10/40GbE Switch.</td>
</tr>
</tbody>
</table>
Version Description
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
To access this command, enter the class-map command. After the class map is identified, you can configure the match criteria.

The `match ip dscp` and `match ip precedence` commands are mutually exclusive.

Up to 64 IP DSCP values can be matched in one match statement. For example, to indicate IP DCSP values 0 1 2 3 4 5 6 7, enter either the `match ip dscp 0,1,2,3,4,5,6,7` or `match ip dscp 0-7` command.

**NOTE:** Only one of the IP DSCP values must be a successful match criterion, not all of the specified IP DSCP values must match.

Related Commands
- `class-map` — identifies the class map.

**match ip precedence**

Use IP precedence values as a match criteria.

**Syntax**
```
match {ip | ipv6 | ip-any} precedence ip-precedence-list [set-ip-dscp value]
```

To remove IP precedence as a match criteria, use the `no match {ip | ipv6 | ip-any} precedence ip-precedence-list [multicast] set-ip-dscp value` command.

**Parameters**
- **ip**
  - Enter the keyword `ip` to support IPv4 traffic.
- **ipv6**
  - Enter the keyword `ipv6` to support IPv6 traffic.
- **ip-any**
  - Enter the keyword `ip-any` to support IPv4 and IPv6 traffic.
- **ip-precedence-list**
  - Enter the IP precedence value(s) as the match criteria. Separate values by commas — no spaces (1,2,3) or indicate a list of values separated by a hyphen (1-3). The range is from 0 to 7.
- **set-ip-dscp value**
  - (OPTIONAL) Enter the keywords `set-ip-dscp` then the IP DSCP value. The matched traffic is marked with the DSCP value. The range is from 0 to 63.

**Defaults**
- none

**Command Modes**
- CLASS-MAP CONFIGURATION (config-class-map)

**Supported Modes**
- Full-Switch

**Command History**

<table>
<thead>
<tr>

<tr>
<td>9.5(0.0)</td>
<td>Introduced the support for ipv6 and ip-any options on the MXL 10/40GbE Switch.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**
To access this command, enter the class-map command. After the class map is identified, you can configure the match criteria.
The `match ip precedence` command and the `match ip dscp` command are mutually exclusive.

Up to eight precedence values can be matched in one match statement. For example, to indicate the IP precedence values 0 1 2 3, enter either the `match ip precedence 0-3` or `match ip precedence 0,1,2,3` command.

NOTE: Only one of the IP precedence values must be a successful match criterion, not all of the specified IP precedence values must match.

Related Commands

- `class-map` — identifies the class map.

**match mac access-group**

Configure a match criterion for a class map, based on the contents of the designated MAC ACL.

**Syntax**

```
match mac access-group {mac-acl-name}
```

**Parameters**

- `mac-acl-name` Enter a MAC ACL name. Its contents is used as the match criteria in the class map.

**Defaults**

- none

**Command Modes**

CLASS-MAP

**Supported Modes**

Full-Switch

<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

To access this command, enter the `class-map` command. After the class map is identified, you can configure the match criteria.

**Related Commands**

- `class-map` — identifies the class map.

**match mac dot1p**

Configure a match criterion for a class map based on a dot1p value.

**Syntax**

```
match mac dot1p {dot1p-list}
```

**Parameters**

- `dot1p-list` Enter a dot1p value. The range is from 0 to 7.

**Defaults**

- none

</tbody>
</table>

**Usage Information**

To access this command, enter the `class-map` command. After the class map is identified, you can configure the match criteria.

**Related Commands**

- `class-map` — identifies the class map.
Usage Information
To access this command, enter the class-map command. After the class map is identified, you can configure the match criteria.

Related Commands
class-map — identifies the class map.

### match mac vlan

Configure a match criterion for a class map based on VLAN ID.

**Syntax**
```
match mac vlan number
```

**Parameters**
- `number`
Enter the VLAN ID. The range is from 1 to 4094.

**Defaults**
none

</tr>
</tbody>
</table>

Usage Information
To access this command, enter the class-map command. You can match against only one VLAN ID.

Related Commands
class-map — identifies the class map.

### policy-aggregate

Allow an aggregate method of configuring per-port QoS via policy maps. An aggregate QoS policy is part of the policy map (input/output) applied on an interface.

**Syntax**
```
policy-aggregate qos-policy-name
```

To remove a policy aggregate configuration, use the `no policy-aggregate qos-policy-name` command.

**Parameters**
- `qos-policy-name`Enter the name of the policy map in character format (32 characters maximum).

**Defaults**
none

**Command Modes**
CONFIGURATION (policy-map-input and policy-map-output)

**Supported Modes**
Programmable-Mux (PMUX)

<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>
Version Description
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
Aggregate input/output QoS policy applies to all the port ingoing/outgoing traffic. Aggregate input/output QoS policy can coexist with per queue input/output QoS policies.

1 If only aggregate input QoS policy exists, input traffic conditioning configurations (rate-police) apply. Any marking configurations in aggregate input QoS policy are ignored.

2 If aggregate input QoS policy and per class input QoS policy coexist, aggregate input QoS policy preempts per class input QoS policy on input traffic conditioning (rate-police). In other words, if rate police configuration exists in the aggregate QoS policy, the rate police configurations in per class QoS are ignored. Marking configurations in per class input QoS policy still apply to each queue.

Related Commands
policy-map-output — creates an output policy map.

policy-map-input
Create an input policy map.

Syntax
policy-map-input policy-map-name [layer2]
To remove an input policy map, use the no policy-map-input policy-map-name [layer2] command.

Parameters
policy-map-name Enter the name of the policy map in character format (32 characters maximum).
layer2 (OPTIONAL) Enter the keyword layer2 to specify a Layer 2 Class Map. The default is Layer 3.

Defaults
Layer 3

Command Modes
CONFIGURATION

Supported Modes
Full-Switch

Command History
Version Description
9.9(0.0) Introduced on the FN IOM.
9.2(0.0) Introduced on the M I/O Aggregator.
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
The input policy map is used to classify incoming traffic to different flows using class-map, QoS policy, or incoming packets DSCP. This command enables Policy-Map-Input Configuration mode (conf-policy-map-in).

Related Commands
service-queue — assigns a class map and QoS policy to different queues.
policy-aggregate — allows an aggregate method of configuring per-port QoS using policy maps.
service-policy input — applies an input policy map to the selected interface.
**policy-map-output**

Create an output policy map.

**Syntax**

```
policy-map-output policy-map-name
```

To remove a policy map, use the `no policy-map-output policy-map-name` command.

**Parameters**

- `policy-map-name` Enter the name for the policy map in character format (32 characters maximum).

**Defaults**

- none

**Command Modes**

- CONFIGURATION

**Supported Modes**

- Programmable-Mux (PMUX)
- Full-Switch

**Command History**

<table>
<thead>
<tr>

</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

To assign traffic to different flows using QoS policy, use the Output Policy map. This command enables Policy-Map-Output Configuration mode (conf-policy-map-out).

**Related Commands**

- `service-queue` — assigns a class map and QoS policy to different queues.
- `policy-aggregate` — allows an aggregate method of configuring per-port QoS using policy maps.
- `service-policy output` — applies an output policy map to the selected interface.

**qos-policy-input**

Create a QoS input policy on the router.

**Syntax**

```
qos-policy-input qos-policy-name [layer2]
```

To remove an existing input QoS policy from the router, use the `no qos-policy-input qos-policy-name [layer2]` command.

**Parameters**

- `qos-policy-name` Enter the name for the policy map in character format (32 characters maximum).
- `layer2` (OPTIONAL) Enter the keyword `layer2` to specify a Layer 2 Class Map. The default is Layer 3.

**Defaults**

- Layer 3

**Command Modes**

- CONFIGURATION
**Supported Modes**

Full-Switch

**Command History**

<table>

</tr>
<tr>
<td>8.3(16.1)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

To specify the name of the input QoS policy, use this command. After the input policy is specified, rate-police is defined. This command enables Qos-Policy-Input Configuration mode — (conf-qos-policy-in).

When changing a Service-Queue configuration in a QoS policy map, all QoS rules are deleted and re-added automatically to ensure that the order of the rules is maintained. As a result, the Matched Packets value shown in the show qos statistics command is reset.

**Related Commands**

rate police — incoming traffic policing function.

---

**qos-policy-output**

Create a QoS output policy.

**Syntax**

```plaintext
qos-policy-output qos-policy-name
```

To remove an existing output QoS policy, use the `no qos-policy-output qos-policy-name` command.

**Parameters**

- `qos-policy-name` Enter your output QoS policy name in character format (32 characters maximum).

**Defaults**

none

**Command Modes**

CONFIGURATION

**Supported Modes**

Programmable-Mux (PMUX)

Full-Switch

<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3(16.1)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

To specify the name of the output QoS policy, use this command. After the output policy is specified, rate-limit, bandwidth-percentage, and WRED can be defined. This command enables Qos-Policy-Output Configuration mode — (conf-qos-policy-out).

**Related Commands**

bandwidth-percentage — assigns weight to the class/queue percentage.
rate police

Police the incoming traffic rate on the selected interface.

Syntax
rate police [kbps] committed-rate [burst-KB] [peak [kbps] peak-rate [burst-KB]]

Parameters
- **kbps**: Enter the keyword kbps to specify the rate limit in Kilobits per second (Kbps). Make the following value a multiple of 64. The range is from 0 to 40000000. The default granularity is Megabits per second (Mbps).
- **committed-rate**: Enter the bandwidth in Mbps. The range is from 0 to 10000.
- **burst-KB**: (OPTIONAL) Enter the burst size in KB. The range is from 16 to 200000. The default is 100.
- **peak peak-rate**: (OPTIONAL) Enter the keyword peak then a number to specify the peak rate in Mbps. The range is from 0 to 10000. The default is the same as designated for committed-rate.

Defaults
Burst size is 100 KB. peak-rate is the same as committed-rate. Granularity for committed-rate and peak-rate is Mbps unless you use the kbps option.

Command Modes
INTERFACE

Supported Modes
Full-Switch

Command History
- **Version**: 9.9(0.0) Introduced on the FN IOM.
- **Version**: 9.2(0.0) Introduced on the M I/O Aggregator.
- **Version**: 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands
- **rate police** — specifies traffic policing on the selected interface.
- **qos-policy-input** — creates a QoS output policy.

rate shape

Shape the traffic output on the selected interface.

Syntax
rate shape [kbps] rate [burst-KB]

Parameters
- **kbps**: Enter the keyword kbps to specify the rate limit in Kilobits per second (Kbps). Make the following value a multiple of 64. The range is from 0 to 40000000. The default granularity is Megabits per second (Mbps).
- **rate**: Enter the outgoing rate in multiples of 10 Mbps. The range is from 10 to 10000.
- **burst-KB**: (OPTIONAL) Enter the burst size in KB. The range is from 0 to 10000. The default is 50.

Defaults
Granularity for rate is Mbps unless you use the kbps option.
**Command Modes**
- QOS-POLICY-OUT

**Supported Modes**
- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

When you apply rate-shape in QoS policy both on the Queue Level and in Aggregate mode, the queue-based shaping occurs first then aggregate rate shaping.

### service-policy input

Apply an input policy map to the selected interface.

**Syntax**

```
service-policy input policy-map-name [layer2]
```

To remove the input policy map from the interface, use the `no service-policy input policy-map-name [layer2]` command.

**Parameters**

- **policy-map-name**: Enter the name for the policy map in character format (16 characters maximum). You can identify an existing policy map or name one that does not yet exist.
- **layer2** (OPTIONAL) Enter the keyword `layer2` to specify a Layer 2 Class Map. The default is Layer 3.

**Defaults**

- Layer 3

**Command Modes**

- INTERFACE

**Supported Modes**

- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

You can attach a single policy-map to one or more interfaces to specify the service-policy for those interfaces. A policy map attached to an interface can be modified.

NOTE: The `service-policy commands are not allowed on a port channel. The `service-policy input policy-map-name` command and the `service-class dynamic dot1p` command are not allowed simultaneously on an interface.

**Related Commands**

- `policy-map-input` — creates an input policy map.
**service-policy output**

Apply an output policy map to the selected interface.

**Syntax**

```
service-policy output policy-map-name
```

To remove the output policy map from the interface, use the `no service-policy output policy-map-name` command.

**Parameters**

- `policy-map-name` Enter the name for the policy map in character format (16 characters maximum). You can identify an existing policy map or name one that does not yet exist.

**Defaults**

none

**Command Modes**

INTERFACE

**Supported Modes**

Programmable-Mux (PMUX)
Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>

<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

A single policy-map can be attached to one or more interfaces to specify the service-policy for those interfaces. A policy map attached to an interface can be modified.

**Related Commands**

- `policy-map-output` — creates an output policy map.

---

**service-queue**

Assign a class map and QoS policy to different queues.

**Syntax**

```
service-queue queue-id [class-map class-map-name] [qos-policy qos-policy-name]
```

To remove the queue assignment, use the `no service-queue queue-id [class-map class-map-name] [qos-policy qos-policy-name]` command.

**Parameters**

- `queue-id` Enter the value used to identify a queue. The range is from 0 to 3 (four queues per interface; four queues are reserved for control traffic).

- `class-map class-map-name` (OPTIONAL) Enter the keyword `class-map` then the class map name assigned to the queue in character format (32 character maximum).

> **NOTE:** This option is available under `policy-map-input` only.
qos-policy qos-policy-name  (OPTIONAL) Enter the keywords qos-policy then the QoS policy name assigned to the queue in text format (32 characters maximum). This specifies the input QoS policy assigned to the queue under policy-map-input and output QoS policy under policy-map-output context.

Defaults  none

Command Modes  CONFIGURATION (conf-policy-map-in and conf-policy-map-out)

Supported Modes  Programmable-Mux (PMUX)
                  Full-Switch

Command History

<table>
<thead>

<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information  This command assigns a class map or QoS policy to different queues.

Related Commands  service-policy output — applies an output policy map to the selected interface.

set

Mark outgoing traffic with a differentiated service code point (DSCP) or dot1p value.

Syntax  set {ip-dscp value | mac-dot1p value}

Parameters  ip-dscp value  (OPTIONAL) Enter the keywords ip-dscp then the IP DSCP value. The range is from 0 to 63.

mac-dot1p value  Enter the keywords mac-dot1p then the dot1p value. The range is from 0 to 7.

Defaults  none

Command Modes  CONFIGURATION (conf-qos-policy-in)

Supported Modes  Full-Switch

Command History

<table>

<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information  After the IP DSCP bit is set, other QoS services can then operate on the bit settings.
**show qos class-map**

View the current class map information.

**Syntax**

```
show qos class-map [class-name]
```

**Parameters**

- `class-name` (Optional) Enter the name of a configured class map.

**Defaults**

none

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

Full-Switch

**Command History**

</tr>
</tbody>
</table>

**Example**

```
Dell#show qos class-map
Class-map match-any CM
  Match ip access-group ACL
```

**Related Commands**

- `class-map` — identifies the class map.

**show qos dcb-map**

Display the DCB parameters configured in a specified DCB map.

**Syntax**

```
show qos dcb-map map-name
```

**Parameters**

- `map-name` Displays the PFC and ETS parameters configured in the specified map.

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

Use the `show qos dcb-map` command to display the enhanced transmission selection (ETS) and priority-based flow control (PFC) parameters used to configure server-facing Ethernet ports.
The following table describes the `show qos dcb-map` output shown in the example below.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>State</td>
<td>Complete: All mandatory DCB parameters are correctly configured. In progress: The DCB map configuration is not complete. Some mandatory parameters are not configured.</td>
</tr>
<tr>
<td>PFC Mode</td>
<td>PFC configuration in DCB map: On (enabled) or Off.</td>
</tr>
<tr>
<td>PG</td>
<td>Priority group configured in the DCB map.</td>
</tr>
<tr>
<td>TSA</td>
<td>Transmission scheduling algorithm used by the priority group: Enhanced Transmission Selection (ETS).</td>
</tr>
<tr>
<td>BW</td>
<td>Percentage of bandwidth allocated to the priority group.</td>
</tr>
<tr>
<td>PFC</td>
<td>PFC setting for the priority group: On (enabled) or Off.</td>
</tr>
<tr>
<td>Priorities</td>
<td>802.1p priorities configured in the priority group.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell# show qos dcb-map dcbmap2
State : Complete
PfcMode: ON
---------------
PG:0 TSA: ETS  BW: 50  PFC: OFF
Priorities: 0 1 2 4 5 6 7

PG:1 TSA: ETS  BW: 50  PFC: ON
Priorities: 3
```

**Related Commands**

`dcb-map` — creates a DCB map to configure PFC and ETS parameters and applies the PFC and ETS settings on Ethernet ports.

### show qos policy-map

View the QoS policy map information.

**Syntax**

```
show qos policy-map {summary [interface] | detail [interface]}
```

**Parameters**

`summary interface` To view a policy map interface summary, enter the keyword `summary` and optionally one of the following keywords and slot/port or number information:

- For a 10 Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

`detail interface` To view a policy map interface in detail, enter the keyword `detail` and optionally one of the following keywords and slot/port or number information:

- For a 10 Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

**Defaults**

`none`

**Command Modes**

- EXEC
show qos policy-map-input

View the input QoS policy map details.

Syntax

```
show qos policy-map-input [policy-map-name] [class class-map-name] [qos-policy-input qos-policy-name]
```

Parameters

- **policy-map-name**: Enter the policy map name.
- **class class-map-name**: Enter the keyword class then the class map name.
- **qos-policy-input qos-policy-name**: Enter the keyword qos-policy-input then the QoS policy name.

Defaults

none

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

Full-Switch

Command History

- **Version 9.9(0.0)**: Introduced on the FN IOM.
- **Version 9.2(0.0)**: Introduced on the M I/O Aggregator.
- **Version 8.3.16.1**: Introduced on the MXL 10/40GbE Switch IO Module.

Example (IPv4)

```
Dell#show qos policy-map detail tengigabitethernet 0/0

Interface tenGigabitEthernet 0/4
Policy-map-input policy
Trust diffserv
Queue# Class-map-name Qos-policy-name
  0       -             q0
  1       CM1           q1
  2       CM2           q2
  3       CM3           q3
```

Example (Summary IPv4)

```
Dell#sho qos policy-map summary

Interface policy-map-input policy-map-output
  Gi 4/1     PM1                 -
  Te 4/2     PM2        PMOut
Dell#
```
show qos qos-policy-output

View the output QoS policy details.

Syntax
show qos qos-policy-output [qos-policy-name]

Parameters
qos-policy-name Enter the QoS policy name.

Defaults
none

Command Modes
• EXEC
• EXEC Privilege

Supported Modes
Programmable-Mux (PMUX)
Full-Switch

Command History
Version Description
9.9(0.0) Introduced on the FN IOM.
9.4(0.0) Supported on the FN I/O Aggregator.
9.2(0.0) Introduced on the M I/O Aggregator.
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Example
Dell#show qos qos-policy-output
Qos-policy-output qmap_out
Bandwidth-percentage 10
Qos-policy-output qmap_wg
Rate-shape 100 50
Wred yellow wy
Wred green wg
Dell#

show qos qos-policy-input

View the input QoS policy details.

Syntax
show qos qos-policy-input [qos-policy-name]
show qos qos-policy-input

View the input QoS policy details.

Syntax

show qos qos-policy-input [qos-policy-name]

Parameters

**qos-policy-name** Enter the QoS policy name.

Defaults

none

Example

```
Dell#show qos qos-policy-input
Qos-policy-input QosInput
  Rate-police 100 50 peak 100 50
  Dscp 32
Dell#
```
**show qos statistics**

View QoS statistics.

**Syntax**

```
show qos statistics {egress-queue [interface]} | {wred-profile [interface]} | [interface]
```

**Parameters**

- **egress-queue**
  - Enter the keyword `egress-queue` to display the egress-queue statistics and optionally one of the following keywords and slot/port or number information.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

- **wred-profile**
  - Enter the keywords `wred-profile` and optionally one of the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

- **interface**
  - Enter one of the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

**Defaults**

none

**Command Modes**

test cam-usage

Checks the Input Policy Map configuration for the CAM usage.

Syntax
test cam-usage service-policy input policy-map stack-unit {
Parameters
policy-map Enter the policy map name.
stack-unit number (OPTIONAL) Enter the keywords stack-unit then the stack-unit number.
stack-unit all (OPTIONAL) Enter the keywords stack-unit all all to indicate all the stack-units.

Defaults
none

Command Modes
EXEC

Supported Modes
Full-Switch

Command History

Version Description
9.9(0.0) Introduced on the FN IOM.
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.
This feature allows you to determine if the CAM has enough space available before applying the configuration on an interface.

An input policy map with both Trust and Class-map configuration, the Class-map rules are ignored and only the Trust rule is programmed in the CAM. In such an instance, the Estimated CAM output column contains the size of the CAM space required for the Trust rule and not the Class-map rule.

The following describes the `text cam-usage service-policy input policy-map linecard` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>stack-unit</td>
<td>Indicates the line card slot number.</td>
</tr>
<tr>
<td>Portpipe</td>
<td>Indicates the portpipe number.</td>
</tr>
<tr>
<td>CAM Partition</td>
<td>The CAM space where the rules are added.</td>
</tr>
<tr>
<td>Available CAM</td>
<td>Indicates the free CAM space, in the partition, for the classification rules.</td>
</tr>
</tbody>
</table>

**NOTE:** The CAM entries reserved for the default rules are not included in the Available CAM column; free entries, from the default rules space, cannot be used as a policy map for the classification rules.

<table>
<thead>
<tr>
<th>Estimated CAM per Port</th>
<th>Indicates the number of free CAM entries required (for the classification rules) to apply the input policy map on a single interface.</th>
</tr>
</thead>
</table>

**NOTE:** The CAM entries for the default rule are not included in this column; a CAM entry for the default rule is always dedicated to a port and is always available for that interface.

<table>
<thead>
<tr>
<th>Status (Allowed ports)</th>
<th>Indicates if the input policy map configuration on an interface belonging to a linecard/port-pipe is successful — Allowed (n) — or not successful — Exception. The allowed number (n) indicates the number of ports in that port-pipe on which the Policy Map can be applied successfully.</th>
</tr>
</thead>
</table>

**NOTE:** In a Layer 2 Policy Map, IPv4/IPv6 rules are not allowed; therefore, the output contains only L2ACL CAM partition entries.

**Example**

```
Dell# test cam-usage service-policy input pmap_l2 stack-unit all
```

For a L2 Input Policy Map pmap_l2, the output must be as follows,

<table>
<thead>
<tr>
<th>Stack-unit</th>
<th>Portpipe</th>
<th>CAM Partition</th>
<th>Available CAM</th>
<th>Estimated CAM</th>
<th>Status (Allowed ports)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td>L2ACL</td>
<td>500</td>
<td>200</td>
<td>Allowed (2)</td>
</tr>
<tr>
<td>0</td>
<td>0</td>
<td>L2ACL</td>
<td>100</td>
<td>200</td>
<td>Exception</td>
</tr>
<tr>
<td>1</td>
<td>0</td>
<td>L2ACL</td>
<td>1000</td>
<td>200</td>
<td>Allowed (5)</td>
</tr>
<tr>
<td></td>
<td>1</td>
<td>L2ACL</td>
<td>0</td>
<td>200</td>
<td>Exception</td>
</tr>
<tr>
<td>13</td>
<td>1</td>
<td>L2ACL</td>
<td>400</td>
<td>200</td>
<td>Allowed (2)</td>
</tr>
</tbody>
</table>

Dell#
trust

Specify dynamic classification (DSCP) or dot1p to trust.

Syntax

```plaintext
trust {diffserv [fallback]| dot1p [fallback]}
```

Parameters

- **diffserv**
  - Enter the keyword `diffserv` to specify trust of DSCP markings.
- **dot1p**
  - Enter the keyword `dot1p` to specify trust dot1p configuration.
- **fallback**
  - Enter the keyword `fallback` to classify packets according to their DSCP value as a secondary option in case no match occurs against the configured class maps.

Defaults

none

Command Modes

CONFIGURATION (conf-policy-map-in)

<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

When you configure `trust`, matched bytes/packets counters are not incremented in the `show qos statistics` command.

Dynamic mapping honors packets marked according to the standard definitions of DSCP. The following lists the default mapping.

<table>
<thead>
<tr>
<th>Table 2. Default Mapping</th>

</tbody>
</table>
**wred**

Designate the WRED profile to yellow or green traffic.

**Syntax**

```
wred [{yellow | green} profile-name] ecn
```

To remove the WRED drop precedence, use the `no wred {yellow | green} [profile-name]` command.

**Parameters**

- **yellow | green**
  - Enter the keyword `yellow` for yellow traffic. A DSCP value of xxx110 and xxx101 maps to yellow.
  - Enter the keyword `green` for green traffic. A DSCP value of xxx0xx maps to green.

- **profile-name**
  - Enter your WRED profile name in character format (16 character maximum). Or use one of the five pre-defined WRED profile names.
  
  Pre-defined Profiles: wred_drop, wred_ge_y, wred_ge_g, wred_teng_y, wred_teng_g.

- **ecn**
  - When you configure `wred ecn <cr>` command, instead of dropping the packets exponentially, Explicit Congestion Notification (ECN) marking is made on the packets.

**Defaults**

```
none
```

**Command Modes**

```
CONFIGURATION (conf-qos-policy-out)
```

**Supported Modes**

```
Full-Switch
```

**Command History**

```
Version Description
9.9(0.0)  Introduced on the FN IOM.
9.2(0.0)  Introduced on the M I/O Aggregator.
8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.
```

**Usage Information**

To assign drop precedence to green or yellow traffic, use this command. If there is no honoring enabled on the input, all the traffic defaults to green drop precedence.

**Related Commands**

- **wred-profile** — creates a WRED profile and name that profile.
- **trust** — defines the dynamic classification to trust DSCP.

**wred ecn**

To indicate network congestion, rather than dropping packets, use explicit congestion notification (ECN).

**Syntax**

```
wred ecn
```

To stop marking packets, use the `no wred ecn` command.

**Defaults**

```
none
```

<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

Usage Information
When you enable \texttt{wred ecn}, and the number of packets in the queue is below the minimum threshold, packets are transmitted per the usual WRED treatment.

When you enable \texttt{wred ecn}, and the number of packets in the queue is between the minimum threshold and the maximum threshold, one of the following two scenarios can occur:

- If the transmission endpoints are ECN-capable and traffic is congested, and the WRED algorithm determines that the packet should have been dropped based on the drop probability, the packet is transmitted and marked so the routers know the system is congested and can slow transmission rates.
- If neither endpoint is ECN-capable, the packet may be dropped based on the WRED drop probability. This behavior is the identical treatment that a packet receives when WRED is enabled without ECN configured on the router.

When you enable \texttt{wred ecn}, and the number of packets in the queue is above the maximum threshold, packets are dropped based on the drop probability. This behavior is the identical treatment a packet receives when WRED is enabled without ECN configured on the router.

Related Commands
\texttt{wred-profile} — creates a WRED profile and name that profile.

\textbf{wred-profile}

Create a WRED profile and name the profile.

Syntax
\texttt{wred-profile \textit{wred-profile-name}}

To remove an existing WRED profile, use the \texttt{no wred-profile} command.

Parameters
\texttt{wred-profile-name} Enter your WRED profile name in character format (16 character maximum). Or use one of the pre-defined WRED profile names. You can configure up to 26 WRED profiles plus the five pre-defined profiles, for a total of 31 WRED profiles.

Pre-defined Profiles: \texttt{wred_drop}, \texttt{wred-ge_y}, \texttt{wred_ge_g}, \texttt{wred_teng_y}, \texttt{wred_teng_g}.
The five pre-defined WRED profiles. When you configure a new profile, the minimum and maximum threshold defaults to predefined wred_ge_g values.

<td>Introduced on the M I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

Use the default pre-defined profiles or configure your own profile. You cannot delete the pre-defined profiles or their default values. This command enables WRED configuration mode — (conf-wred).

**dscp**

Sets the number of specific DSCP values for a color map profile to yellow or red.

**Syntax**

dscp {yellow | red} [list-dscp-values]

To remove a color policy map profile, use the no dscp {yellow | red} [dscp-list] command.

**Parameters**

- **Yellow**
  - Enter the yellow keyword. Traffic marked as yellow delivers traffic to the egress queue which either transmits the packet if it has available bandwidth or drops the packet due to no ability to send.

- **Red**
  - Enter the red keyword. Traffic marked as red is dropped.

- **dscp-list**
  - Enter a list of IP DSCP values. The dscp-list parameter specifies the full list of IP DSCP value(s) for the specified color. Each DSCP value in a list is separate values by commas — no spaces (1,2,3) or indicates a list of values separated by a hyphen (1-3). Range is 0 to 63.

**Defaults**

None

**Command Modes**

CONFIG-COLOR-MAP

**Supported Modes**

Full-Switch

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.5.0.0</td>
<td>Introduced on the Z9000, S6000, S4820T, S4810, and MXL.</td>
</tr>
</tbody>
</table>

**Usage Information**

If the specified color-map does not exist, the Diffserv Manager (DSM) creates a color map and sets all the DSCP values to green (low drop precedence).
The default setting for each DSCP value (0-63) is green (low drop precedence). This command allows setting the number of specific DSCP values to yellow or red.

**Important Points to Remember**

- All DSCP values that are not specified as yellow or red are colored green.
- A DSCP value cannot be in both the yellow and red lists. Setting the red or yellow list with any DSCP value that is already in the other list results in an error and no update to that list is made.
- Each color map can only have one list of DSCP values for each color; any DSCP values previously listed for that color that are not in the new DSCP list are colored green.

**Example**

```
Dell(conf-dscp-color-map)# dscp yellow 9,10,11,13,15,16
```

**Related Commands**

- `qos dscp-color-map` — configures the DSCP color map
- `qos dscp-color-policy` — configures a DSCP color policy

### qos dscp-color-map

Configure the DSCP color map.

**Syntax**

```
qos dscp-color-map map-name
```

To remove a color map, use the `no qos dscp-color-map map-name` command.

**Parameters**

- `map-name`  
  Enter the name of the DSCP color map. The map name can have a maximum of 32 characters.

**Defaults**

None

**Command Modes**

CONFIGURATION

**Supported Modes**

</tr>
<tr>
<td>9.5.0.0</td>
<td>Introduced on the Z9000, S6000, S4820T, S4810, and MXL.</td>
</tr>
</tbody>
</table>

**Usage Information**

A color map outlines the codepoint mappings to the appropriate color mapping (green, yellow, red) for the traffic. The system uses this information use to handle the traffic on the interface based on the traffic priority and places it into the appropriate shaping queue. You cannot delete a DSCP color map when it is configured on an interface. If you do, all the DSCP values are set to green (low drop precedence). To delete the DSCP color map that is being used by one or more interfaces, remove the DSCP map from each interface.

**Example**

```
Dell(conf)#qos dscp-color-map mymap
```
Related Commands
qos dscp-color-map — associates the DSCP color map profile with an interface so that all IP packets received on it is given a color based on that color map

dscp — sets the number of specific DSCP values for color map profile to yellow or red.

qos dscp-color-policy

Associates the DSCP color map profile with an interface so that all IP packets received on it is given a color based on that color map.

Syntax
dscp-color-policy color-map-profile-name

To remove a color policy map profile, use the no dscp-color-policy color-map-profile-name command.

Parameters
color-map-profile-name Enter the color map profile name. The name can have a maximum of 32 characters.

Defaults None

Command Modes CONFIG-INTERFACE

Supported Modes Full-Switch

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version Description
9.9(0.0) Introduced on the FN IOM.
9.7(0.0) Introduced on the S6000-ON.
Version 9.5.0.0 Introduced on the Z9000, S6000, S4820T, S4810, and MXL.

Usage Information
If the specified color-map does not exist, the Diffserv Manager (DSM) creates a color map and sets all the DSCP values to green (low drop precedence).

Example
The following example assigns the color map, bat-enclave-map, to interface.

dscp-color-policy color-map-profile-name

Related Commands
dscp — sets the number of specific DSCP values for color map profile to yellow or red.
qos dscp-color-map — configures the DSCP color map.

show qos dscp-color-policy

Display DSCP color policy configuration for one or all interfaces.

Syntax
show qos dscp-color-policy {summary [interface] | detail [interface]}

Usage Information
show qos dscp-color-policy summary

Example
The following example shows the summary of the DSCP color policy configuration.

Related Commands
dscp — sets the number of specific DSCP values for color map profile to yellow or red.
qos dscp-color-map — configures the DSCP color map.
show qos dscp-color-map

Display the DSCP color map for one or all interfaces.

Syntax

show qos dscp-color-map map-name

Parameters

map-name

Enter the name of the color map.

Defaults

None

Routing Information Protocol (RIP)

Routing information protocol (RIP) is a distance vector routing protocol. The Dell Networking Operating System (OS) supports both RIP version 1 (RIPv1) and RIP version 2 (RIPv2). The implementation of RIP is based on IETF RFCs 2453 and RFC 1058. For more information about configuring RIP, refer to the Dell Networking OS Configuration Guide.

auto-summary

Restore the default behavior of automatic summarization of subnet routes into network routes. This command applies only to RIP version 2.

Syntax

```
auto-summary
```
To send sub-prefix routing information, use the `no auto-summary` command.

**clear ip rip**

Update all the RIP routes in the routing table.

**Syntax**
clear ip rip

**Command Modes**
EXEC Privilege

**Supported Modes**
Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**
This command triggers updates of the main RIP routing tables.

**debug ip rip**

Examine RIP routing information for troubleshooting.

**Syntax**

To turn off debugging output, use the `no debug ip rip` command.

**Parameters**

- **interface**
  (OPTIONAL) Enter the interface type and ID as one of the following:
  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

- **database**
  (OPTIONAL) Enter the keyword `database` to display messages when there is a change to the RIP database.

- **events**
  (OPTIONAL) Enter the keyword `events` to debug only RIP protocol changes.
trigger  (OPTIONAL) Enter the keyword trigger to debug only RIP trigger extensions.

Command Modes  EXEC Privilege
Supported Modes  Full-Switch

Command History

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

**default-information originate**

Generate a default route for the RIP traffic.

**Syntax**

default-information originate [always] [metric metric-value] [route-map map-name]

To return to the default values, use the no default-information originate command.

**Parameters**

always  (OPTIONAL) Enter the keyword always to enable the switch software to always advertise the default route.

metric metric-value  (OPTIONAL) Enter the keyword metric then a number as the metric value. The range is from 1 to 16. The default is 1.

route-map map-name  (OPTIONAL) Enter the keywords route-map then the name of a configured route-map.

**Defaults**

**Command Modes**  ROUTER RIP

**Supported Modes**  Full-Switch

**Command History**

<table>

</tr>
</tbody>
</table>

**Usage Information**  The default route must be present in the switch routing table for the default-information originate command to take effect.

**default-metric**

Change the default metric for routes. To ensure that all redistributed routes use the same metric value, use this command with the redistribute command.

**Syntax**

default-metric number

To return the default metric to the original values, use the no default-metric command.
Parameters

number

Specify a number. The range is from 1 to 16. The default is 1.

Defaults

1

Command Modes

ROUTER RIP

Supported Modes

Full-Switch

Command History

<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

This command ensures that route information being redistributed is converted to the same metric value.

Related Commands

redistribute — allows you to redistribute routes learned by other methods.

description

Enter a description of the RIP routing protocol.

Syntax

description {description}

To remove the description, use the no description {description} command.

Parameters

description

Enter a description to identify the RIP protocol (80 characters maximum).

Defaults

none

Command Modes

ROUTER RIP

Supported Modes

Full-Switch

Command History

<table>

</tr>
</tbody>
</table>

Related Commands

router rip — enters ROUTER mode on the switch.

distance

Assign a weight (for prioritization) to all routes in the RIP routing table or to a specific route. Lower weights (“administrative distance”) are preferred.

Syntax

distance weight [ip-address mask [prefix-name]]

To return to the default values, use the no distance weight [ip-address mask] command.

Parameters

weight

Enter a number from 1 to 255 for the weight (for prioritization). The default is 120.

ip-address

(OPTIONAL) Enter the IP address, in dotted decimal format (A.B.C.D), of the host or network to receive the new distance metric.
**mask**

If you enter an IP address, also enter a mask for that IP address, in either dotted decimal format or /prefix format (/x).

**prefix-name**

(Optional) Enter a configured prefix list name.

**Defaults**

weight = 120

**Command Modes**

ROUTER RIP

**Supported Modes**

Full-Switch

</tr>
</tbody>
</table>

**Related Commands**

`default-metric` — assigns one distance metric to all routes learned using the `redistribute` command.

### distribute-list in

Configure a filter for incoming routing updates.

**Syntax**

```
distribute-list prefix-list-name in [interface]
```

To delete the filter, use the `no distribute-list prefix-list-name in` command.

**Parameters**

- **prefix-list-name**
  - Enter the name of a configured prefix list.

- **interface**
  - (OPTIONAL) Identifies the interface type slot/port as one of the following:
    - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
    - For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

- **Defaults**
  - Not configured.

- **Command Modes**
  - ROUTER RIP

- **Supported Modes**
  - Full-Switch

- **Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Related Commands**

`ip prefix-list` — enters PREFIX-LIST mode and configures a prefix list.
**distribute-list out**

Configure a filter for outgoing routing updates.

Syntax: `distribute-list prefix-list-name out [interface | bgp | connected | ospf | static]`

To delete the filter, use the `no distribute-list prefix-list-name out` command.

**Parameters**

- `prefix-list-name` (OPTIONAL) Enter the name of a configured prefix list.
- `interface` (OPTIONAL) Identifies the interface type slot/port as one of the following:
  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.
- `connected` (OPTIONAL) Enter the keyword `connected` to filter only directly connected routes.
- `ospf` (OPTIONAL) Enter the keyword `ospf` to filter all OSPF routes.
- `static` (OPTIONAL) Enter the keyword `static` to filter manually configured routes.

**Defaults**

Not configured.

**Command Modes**

- ROUTER RIP

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Related Commands**

- `ip prefix-list` — enters PREFIX-LIST mode and configures a prefix list.

---

**ip poison-reverse**

Set the prefix of the RIP routing updates to the RIP infinity value.

Syntax: `ip poison-reverse`

To disable poison reverse, use the `no ip poison-reverse` command.

**Defaults**

Disabled.

**Command Modes**

- INTERFACE

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
</tbody>
</table>
**Version**  
8.3.16.1  
Introduced on the MXL 10/40GbE Switch IO Module.

**Related Commands**  
ip split-horizon — sets the RIP routing updates to exclude routing prefixes.

### ip rip receive version

To receive specific versions of RIP, set the interface. The RIP version you set on the interface overrides the version command in ROUTER RIP mode.

**Syntax**

```
ip rip receive version [1] [2]
```

To return to the default, use the `no ip rip receive version` command.

**Parameters**

- **1** (OPTIONAL) Enter the number 1 for RIP version 1.
- **2** (OPTIONAL) Enter the number 2 for RIP version 2.

**Defaults**

RIPv1 and RIPv2

**Command Modes**

INTERFACE

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

If you want the interface to receive both versions of RIP, use the `ip rip receive version 1 2` command.

**Related Commands**

- `ip rip send version` — sets the RIP version for sending RIP traffic on an interface.
- `version` — sets the RIP version the switch software uses.

### ip rip send version

To send a specific version of RIP, set the interface. The version you set on the interface overrides the version command in ROUTER RIP mode.

**Syntax**

```
ip rip send version [1] [2]
```

To return to the default value, use the `no ip rip send version` command.

**Parameters**

- **1** (OPTIONAL) Enter the number 1 for RIP version 1. The default is RIPv1.
- **2** (OPTIONAL) Enter the number 2 for RIP version 2.

**Defaults**

RIPv1

**Command Modes**

INTERFACE

**Supported Modes**

Full-Switch
Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information
To enable the interface to send both version of RIP packets, use the `ip rip send version 1 2` command.

Related Commands
- `ip rip receive version` — sets the RIP version for the interface to receive traffic.
- `version` — sets the RIP version for the switch software.

### ip split-horizon

Enable split-horizon for RIP data on the interface. As described in RFC 2453, the split-horizon scheme prevents any routes learned over a specific interface to be sent back out that interface.

**Syntax**

```plaintext
ip split-horizon
```

To disable split-horizon, use the `no ip split-horizon` command.

**Defaults**

Enabled

**Command Modes**

- INTERFACE

**Supported Modes**

- Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Related Commands**

- `ip poison-reverse` — sets the prefix for RIP routing updates.

### maximum-paths

Set RIP to forward packets over multiple paths.

**Syntax**

```plaintext
maximum-paths number
```

To return to the default values, use the `no maximum-paths` commands.

**Parameters**

- `number` — Enter the number of paths. The range is from 1 to 16. The default is 4 paths.

**Defaults**

4

**Command Modes**

- ROUTER RIP

**Supported Modes**

- Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
</tbody>
</table>
### Version 8.3.16.1
- Introduced on the MXL 10/40GbE Switch IO Module.

### Usage Information
RIP supports a maximum of 16 ECMP paths.

## neighbor

Define a neighbor router with which to exchange RIP information.

**Syntax**
```
neighbor ip-address
```
- To delete a neighbor setting, use the `no neighbor ip-address` command.

**Parameters**
- `ip-address` Enter the IP address, in dotted decimal format, of a router with which to exchange information.

**Defaults**
Not configured.

**Command Modes**
- ROUTER RIP

**Supported Modes**
- Full–Switch

### Command History
<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**
- When a neighbor router is identified, unicast data exchanges occur. Multiple neighbor routers are possible.
- To ensure that only specific interfaces are receiving and sending data, use the `passive-interface` command with the `neighbor` command.

**Related Commands**
- `passive-interface` — sets the interface to only listen to RIP broadcasts.

## network

Enable RIP for a specified network. To enable RIP on all networks connected to the switch, use this command.

**Syntax**
```
network ip-address
```
- To disable RIP for a network, use the `no network ip-address` command.

**Parameters**
- `ip-address` Specify an IP network address in dotted decimal format. You cannot specify a subnet.

**Defaults**
No RIP network is configured.

**Command Modes**
- ROUTER RIP

**Supported Modes**
- Full–Switch
offset-list

Specify a number to add to the incoming or outgoing route metrics learned using RIP.

Syntax

offset-list prefix-list-name {in | out} offset [interface]

To delete an offset list, use the no offset-list prefix-list-name {in | out} offset [interface] command.

Parameters

- **prefix-list-name**
  - Enter the name of an established Prefix list to determine which incoming routes are modified.
- **offset**
  - Enter a number from zero (0) to 16 to be applied to the incoming route metric matching the access list specified. If you set an offset value to zero (0), no action is taken.
- **interface**
  - (OPTIONAL) Enter the following keywords and slot/port or number information:
    - For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
    - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
    - For a VLAN, enter the keyword vlan then a number from 1 to 4094.

Defaults

Not configured.

Command Modes

- ROUTER RIP

Supported Modes

- Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

When the offset metric is applied to an interface, that value takes precedence over an offset value that is not extended to an interface.

Related Commands

- ip prefix-list — enters PREFIX-LIST mode and configure a prefix list.
**output-delay**

Set the interpacket delay of successive packets to the same neighbor.

**Syntax**

```
output-delay delay
```

To return to the switch software defaults for interpacket delay, use the `no output-delay` command.

**Parameters**

- `delay`  
  Specify a number of milliseconds as the delay interval. The range is from 8 to 50.

**Defaults**

Not configured.

**Command Modes**

ROUTER RIP

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command is intended for low-speed interfaces.

---

**passive-interface**

Suppress routing updates on a specified interface.

**Syntax**

```
passive-interface interface
```

To delete a passive interface, use the `no passive-interface interface` command.

**Parameters**

- `interface`  
  Enter the following information:

  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults**

Not configured.

**Command Modes**

ROUTER RIP

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

Although the passive interface does not send or receive routing updates, the network on that interface still includes in RIP updates sent using other interfaces.
redistribute

Redistribute information from other routing instances.

Syntax
redistribute {connected | static}
To disable redistribution, use the no redistribute {connected | static} command.

Parameters

- **connected**: Enter the keyword connected to specify that information from active routes on interfaces is redistributed.
- **static**: Enter the keyword static to specify that information from static routes is redistributed.

Defaults
Not configured.

Command Modes
- ROUTER RIP

Supported Modes
Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>

<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information
To redistribute the default route (0.0.0.0/0), configure the default-information originate command.

Related Commands

- **default-information originate** — generates a default route for RIP traffic.

redistribute ospf

Redistribute routing information from an OSPF process.

Syntax
redistribute ospf process-id [match external {1 | 2} | match internal | metric metric-value] [route-map map-name]
To disable redistribution, use the no redistribute ospf process-id [match external {1 | 2} | match internal | metric metric-value] [route-map map-name] command.

Parameters

- **process-id**: Enter a number that corresponds to the OSPF process ID to redistribute. The range is from 1 to 65535.
- **match external (1 | 2)** (OPTIONAL) Enter the keywords match external then the numbers 1 or 2 to indicated that external 1 routes or external 2 routes should be redistributed.
- **match internal** (OPTIONAL) Enter the keywords match internal to indicate that internal routes should be redistributed.
metric metric-value  (OPTIONAL) Enter the keyword metric then a number as the metric value. The range is from 0 to 16.

route-map map-name  (OPTIONAL) Enter the keywords route-map then the name of a configured route map.

Defaults   Not configured.

Command Modes  ROUTER RIP

Supported Modes  Full–Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**router rip**

To configure and enable RIP, enter ROUTER RIP mode.

**Syntax**

```
router rip
```

To disable RIP, use the `no router rip` command.

**Defaults**   Disabled.

**Command Modes**  CONFIGURATION

**Supported Modes**  Full–Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

To enable RIP, assign a network address using the `network` command.

**Example**

```
Dell(conf)#router rip
Dell(conf-router_rip)#
```

**Related Commands**  `network` — enables RIP.

**show config**

Display the changes you made to the RIP configuration. The default values are not shown.

**Syntax**  `show config`

**Command Modes**  ROUTER RIP

**Supported Modes**  Full–Switch
show ip rip database

Display the routes that RIP learns. If the switch learned no RIP routes, no output is generated.

Syntax

show ip rip database [ip-address mask]

Parameters

- **ip-address**: (OPTIONAL) Specify an IP address in dotted decimal format to view RIP information on that network only. If you enter an IP address, also enter a mask for that IP address.
- **mask**: (OPTIONAL) Specify a mask, in /network format, for the IP address.

Command Modes

- EXEC Privilege

Supported Modes

- Full-Switch

Command History

- **Version**
  - 9.9(0.0): Introduced on the FN IOM.
  - 8.3.16.1: Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The following describes the `show ip rip database` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Total number of routes in RIP database</td>
<td>Displays the number of RIP routes stored in the RIP database.</td>
</tr>
<tr>
<td>100.10.10.0/24 directly connected</td>
<td>Lists the routes directly connected.</td>
</tr>
<tr>
<td>150.100.0.0 redistributed</td>
<td>Lists the routes learned through redistribution.</td>
</tr>
<tr>
<td>209.9.16.0/24...</td>
<td>Lists the routes and the sources advertising those routes.</td>
</tr>
</tbody>
</table>

Example

```
Dell#show ip rip database
Total number of routes in RIP database: 1624
204.250.54.0/24
  [50/1] via 192.14.1.3, 00:00:12, TenGigabitEthernet 0/1
204.250.54.0/24 auto-summary
203.250.49.0/24
  [50/1] via 192.13.1.3, 00:00:12, TenGigabitEthernet 0/1
203.250.49.0/24 auto-summary
210.250.40.0/24
```
show running-config rip

Display the current RIP configuration.

Syntax
show running-config rip

Defaults
none

Command Modes
EXEC Privilege

Supported Modes
Full-Switch

Command History

Version Description
9.9(0.0) Introduced on the FN IOM.
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Example

show running-config rip
!
router rip
distribute-list Test1 in
distribute-list Test21 out
network 10.0.0.0
passive-interface TenGigabitEthernet 1/4
neighbor 20.20.20.20
redistribute ospf 999
version 2

timers basic

Manipulate the RIP timers for routing updates, invalid, holddown times, and flush time.

Syntax
timers basic update invalid holddown flush

Parameters
update
Enter the number of seconds to specify the rate at which RIP routing updates are sent. The range is from zero (0) to 4294967295. The default is 30 seconds.

invalid
Enter the number of seconds to specify the time interval before routing updates are declared invalid or expired. The invalid value should be at least three times the update timer value. The range is from zero (0) to 4294967295. The default is 180 seconds.
**holddown**

Enter the number of seconds to specify a time interval during which the route is marked as unreachable but still sending RIP packets. The holddown value should be at least three times the update timer value. The range is from zero (0) to 4294967295. The default is **180 seconds**.

**flush**

Enter the number of seconds to specify the time interval during which the route is advertised as unreachable. When this interval expires, the route is flushed from the routing table. The flush value should be greater than the update value. The range is from zero (0) to 4294967295. The default is **240 seconds**.

**Defaults**

- `update = 30 seconds`
- `invalid = 180 seconds`
- `holddown = 180 seconds`
- `flush = 240 seconds`

**Command Modes**

- **ROUTER RIP**

**Supported Modes**

- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

If you change the timers on one router, also synchronize the timers on all routers in the RIP domain.

---

**version**

Specify either RIP version 1 or RIP version 2.

**Syntax**

```plaintext
version {1 | 2}
```

To return to the default version setting, use the `no version` command.

**Parameters**

- `1` Enter the keyword 1 to specify RIP version 1.
- `2` Enter the keyword 2 to specify RIP version 2.

**Defaults**

The system sends RIPv1 and receives RIPv1 and RIPv2.

**Command Modes**

- **ROUTER RIP**

**Supported Modes**

- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>

**Related Commands**

- `ip rip receive version` — sets the RIP version the interface receives.
- `ip rip send version` — sets the RIP version the interface sends.
Remote Monitoring (RMON)

The Dell Networking Operating System (OS) remote monitoring (RMON) is based on IEEE standards, providing both 32-bit and 64-bit monitoring and long-term statistics collection.

RMON supports the following RMON groups, as defined in RFC-2819, RFC-3273, RFC-3434 and RFC-4502:

- Ethernet Statistics Table; RFC-2819
- Ethernet Statistics High-Capacity Table; RFC-3273, 64bits
- Ethernet History Control Table; RFC-2819
- Ethernet History Table; RFC-2819
- Ethernet History High-Capacity Table; RFC-3273, 64bits
- Alarm Table; RFC-2819
- High-Capacity Alarm Table (64bits); RFC-3434, 64bits
- Event Table; RFC-2819
- Log Table; RFC-2819
- User History; RFC-4502
- Probe Configuration (Capabilities, SoftwareRev, HardwareRev, Date Time and ResetControl); RFC-4502

RMON does not support the following statistics:

- etherStatsCollisions
- etherHistoryCollisions
- etherHistoryUtilization

**NOTE:** Only simple network management protocol (SNMP) GET/GETNEXT access is supported. Configure RMON using the RMON commands. Collected data is lost during a chassis reboot.

Topics:

- rmon alarm
- rmon collection history
- rmon collection statistics
- rmon event
- rmon hc-alarm
- show rmon
- show rmon alarms
- show rmon events
- show rmon hc-alarm
- show rmon history
- show rmon log
- show rmon statistics
rmon alarm

Set an alarm on any MIB object.

Syntax

rmon alarm number variable interval {delta | absolute} rising-threshold value event-number falling-threshold value event-number [owner string]

To disable the alarm, use the no rmon alarm number command.

Parameters

- **number**: Enter the alarm integer number from 1 to 65535. The value must be unique in the RMON alarm table.
- **variable**: Enter the MIB object to monitor. The variable must be in the SNMP OID format; for example, 1.3.6.1.2.1.1.3. The object type must be a 32-bit integer.
- **interval**: Time, in seconds, the alarm monitors the MIB variables; this is the alarmSampleType in the RMON alarm table. The range is from 5 to 3600 seconds.
- **delta**: Enter the keyword delta to test the change between MIB variables. This is the alarmSampleType in the RMON alarm table.
- **absolute**: Enter the keyword absolute to test each MIB variable directly. This is the alarmSampleType in the RMON alarm table.
- **rising-threshold value event-number**: Enter the keywords rising-threshold then the value (32 bit) the rising-threshold alarm is either triggered or reset. Then enter the event-number to trigger when the rising threshold exceeds its limit. This value is the same as the alarmRisingEventIndex or alarmTable of the RMON MIB. If there is no corresponding rising-threshold event, the value is zero.
- **falling-threshold value event-number**: Enter the keywords falling-threshold then the value (32 bit) the falling-threshold alarm is either triggered or reset. Then enter the event-number to trigger when the falling threshold exceeds its limit. This value is the same as the alarmFallingEventIndex or the alarmTable of the RMON MIB. If there is no corresponding falling-threshold event, the value is zero.
- **owner string**: (OPTIONAL) Enter the keyword owner then the owner name to specify an owner for the alarm. This is the alarmOwner object in the alarmTable of the RMON MIB.

Defaults

owner

rmon collection history

Enable the RMON MIB history group of statistics collection on an interface.

Syntax
rmon collection history {controlEntry integer} [owner name] [buckets number] [interval seconds]

To remove a specified RMON history group of statistics collection, use the no rmon collection history {controlEntry integer} command.

Parameters
- controlEntry integer: Enter the keyword controlEntry to specify the RMON group of statistics using a value. Then enter an integer value from 1 to 65535 that identifies the RMON group of statistics. The integer value must be a unique index in the RMON history table.
- owner name: (OPTIONAL) Enter the keyword owner then the owner name to record the owner of the RMON group of statistics.
- buckets number: (OPTIONAL) Enter the keyword buckets then the number of buckets for the RMON collection history group of statistics. The bucket range is from 1 to 1000. The default is 50.
- interval seconds: (OPTIONAL) Enter the keyword interval then the number of seconds in each polling cycle. The range is from 5 to 3600 seconds. The default is 1800 seconds.

Defaults
none

rmon collection statistics

Enable RMON MIB statistics collection on an interface.

Syntax
rmon collection statistics {controlEntry integer} [owner name]

To remove RMON MIB statistics collection on an interface, use the no rmon collection statistics {controlEntry integer} command.

Parameters
- controlEntry integer: Enter the keyword controlEntry to specify the RMON group of statistics using a value. Then enter an integer value from 1 to 65535 that identifies the RMON Statistic Table. The integer value must be a unique in the RMON statistic table.
- owner name: (OPTIONAL) Enter the keyword owner then the owner name to record the owner of the RMON group of statistics.

rmon event

Add an event in the RMON event table.

Syntax

```
rmon event number [log] [trap community] [description string] [owner name]
```

To disable RMON on an interface, use the `no rmon event number` command.

Parameters

- `number` Assign an event number in integer format from 1 to 65535. The number value must be unique in the RMON event table.
- `log` (OPTIONAL) Enter the keyword `log` to generate an RMON log entry. The log entry is triggered and sets the eventType in the RMON MIB to log or log-and-trap. The default is No log.
- `trap community` (OPTIONAL) Enter the keyword `trap` then an SNMP community string to configure the eventType setting in the RMON MIB. This keyword sets either snmp-trap or log-and-trap. The default is public.
- `description string` (OPTIONAL) Enter the keyword `description` then a string describing the event.
- `owner name` (OPTIONAL) Enter the keyword `owner` then the name of the owner of this event.

Defaults

As noted in the Parameters section.

</tbody>
</table>

rmon hc-alarm

Set an alarm on any MIB object.

Syntax

```
rmon hc-alarm number variable interval {delta | absolute} rising-threshold value event-number falling-threshold value event-number [owner string]
```

To disable the alarm, use the `no rmon hc-alarm number` command.

Parameters

- `number` Enter the alarm integer number from 1 to 65535. The value must be unique in the RMON alarm table.
variable

The MIB object to monitor. The variable must be in the SNMP OID format; for example, 1.3.6.1.2.1.1.3. The object type must be a 64-bit integer.

interval

Time, in seconds, the alarm monitors the MIB variables; this is the alarmSampleType in the RMON alarm table. The range is from 5 to 3600 seconds.

delta

Enter the keyword delta to test the change between MIB variables. This is the alarmSampleType in the RMON alarm table.

absolute

Enter the keyword absolute to test each MIB variable directly. This is the alarmSampleType in the RMON alarm table.

rising-threshold value event-number

Enter the keywords rising-threshold then the value (64 bit) the rising-threshold alarm is either triggered or reset. Then enter the event-number to trigger when the rising threshold exceeds its limit. This value is the same as the alarmRisingEventIndex or alarmTable of the RMON MIB. If there is no corresponding rising-threshold event, the value is zero.

depending-threshold value event-number

Enter the keywords depending-threshold then the value (64 bit) the depending-threshold alarm is either triggered or reset. Then enter the event-number to trigger when the depending threshold exceeds its limit. This value is the same as the alarmDependingEventIndex or the alarmTable of the RMON MIB. If there is no corresponding depending-threshold event, the value is zero.

owner string

(Optional) Enter the keyword owner then the owner name to specify an owner for the alarm. This is the alarmOwner object in the alarmTable of the RMON MIB.

Defaults

owner

Dell#
Rapid Spanning Tree Protocol (RSTP)

The Dell Networking Operating System (OS) implementation of rapid spanning tree protocol (RSTP) is based on the IEEE 802.1w standard spanning-tree protocol. The RSTP algorithm configures connectivity throughout a bridged local area network (LAN) that is comprised of LANs interconnected by bridges.

**bridge-priority**

Set the bridge priority for RSTP.

**Syntax**

```plaintext
bridge-priority priority-value
```

To return to the default value, use the **no bridge-priority** command.

**Parameters**

- `priority-value`: Enter a number as the bridge priority value in increments of 4096. The range is from 0 to 61440. The default is **32768**.

**Defaults**

**32768**

**Command Modes**

- **CONFIGURATION RSTP (conf-rstp)**

**Supported Modes**

- Full-Switch

**Command History**

<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Related Commands**

- `protocol spanning-tree rstp` — enters rapid spanning tree mode.

**debug spanning-tree rstp**

Enable debugging of RSTP and view information on the protocol.

**Syntax**

```plaintext
debug spanning-tree rstp [all | bpdu interface {in | out} | events]
```

To disable debugging, use the **no debug spanning-tree rstp** command.

**Parameters**

- **all**: (OPTIONAL) Enter the keyword all to debug all spanning tree operations.
- **bpdu interface {in | out}**: (OPTIONAL) Enter the keyword bpdu to debug the bridge protocol data units.
- **interface**: (OPTIONAL) Enter the keyword interface along with the type slot/port of the interface you want displayed. Type slot/port options are the following:
  - For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

Optionally, enter an in or out parameter with the optional interface:

- For Receive, enter in.
- For Transmit, enter out.

(events) (OPTIONAL) Enter the keyword events to debug RSTP events.

Command Modes
- EXEC Privilege
- Full-Switch

Related Commands

- protocol spanning-tree rstp — enters SPANNING TREE mode on the switch.

disable

Disable RSTP globally on the system.

Syntax
disable

To enable Rapid Spanning Tree Protocol, use the no disable command.
forward-delay

Configure the amount of time the interface waits in the Listening State and the Learning State before transitioning to the Forwarding State.

Syntax

```
forward-delay seconds
```

To return to the default setting, use the `no forward-delay` command.

Parameters

- `seconds`: Enter the number of seconds that the system waits before transitioning RSTP to the forwarding state. The range is from 4 to 30. The default is `15 seconds`.

Defaults

`15 seconds`

</tbody>
</table>

Related Commands

- `hello-time` — changes the time interval between BPDUs.
- `max-age` — changes the wait time before RSTP refreshes the protocol configuration information.

hello-time

Set the time interval between the generation of the RSTP bridge protocol data units (BPDUs).

Syntax

```
hello-time [milli-second] seconds
```

To return to the default value, use the `no hello-time` command.

Parameters

- `seconds`: Enter a number as the time interval between transmission of BPDUs. The range is from 1 to 10 seconds. The default is `2 seconds`.
- `milli-second`: Enter the keywords `milli-second` to configure a hello time on the order of milliseconds. The range is from 50 to 950 milliseconds.
Defaults 2 seconds
Command Modes CONFIGURATION RSTP (conf-rstp)
Supported Modes Full-Switch

Command History

<table>
<thead>
<tr>

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

The hello time is encoded in BPDUs in increments of 1/256ths of a second. The standard minimum hello time in seconds is 1 second, which is encoded as 256. Millisecond hello times are encoded using values less than 256; the millisecond hello time equals (x/1000)*256.

When you configure millisecond hellos, the default hello interval of 2 seconds is still used for edge ports; the millisecond hello interval is not used.

Related Commands

forward-delay — changes the wait time before RSTP transitions to the Forwarding state.

max-age — changes the wait time before RSTP refreshes the protocol configuration information.

max-age

To maintain configuration information before refreshing that information, set the time interval for the RSTP bridge.

Syntax max-age seconds

To return to the default values, use the no max-age command.

Parameters max-age

Enter a number of seconds that the waits before refreshing configuration information. The range is from 6 to 40 seconds. The default is 20 seconds.

Defaults 20 seconds

Example

Dell(conf-rstp)#show config
!
protocol spanning-tree rstp
no disable
bridge-priority 16384

spanning-tree rstp

Configure an RSTP interface with one of these settings: port cost, edge port with optional bridge port data unit (BPDU) guard, port priority, loop guard, or root guard.

Syntax

spanning-tree rstp {cost port-cost | edge-port [bpduguard [shutdown-on-violation]] | bpdufilter | priority priority | {rootguard}}

Parameters

cost port-cost

Enter the keyword cost then the port cost value. The range is from 1 to 200000. The defaults are:

- 10-Gigabit Ethernet interface = 2000
- Port Channel interface with one 10 Gigabit Ethernet = 2000
- Port Channel interface with one 40 Gigabit Ethernet = 1400
- Port Channel with two 10 Gigabit Ethernet = 1800
- Port Channel with two 40 Gigabit Ethernet = 600

edge-port

Enter the keywords edge-port to configure the interface as a rapid spanning tree edge port.

bpduguard

(Optional) Enter the keyword portfast to enable Portfast to move the interface into Forwarding mode immediately after the root fails.

Enter the keyword bpduguard to disable the port when it receives a BPDU.

shutdown-on-violation

(Optional) Enter the keywords shutdown-on-violation to hardware disable an interface when a BPDU is received and the port is disabled.

bpdufilter

(Optional) Enter the keyword bpdufilter to enable BPDU Filter to stop sending and receiving BPDUs on port enabled interfaces.
priority priority

Enter keyword priority then a value in increments of 16 as the priority. The range is from 0 to 240. The default is 128.

rootguard

Enter the keyword rootguard to enable root guard on an RSTP port or port-channel interface.

Defaults

Not configured.

Command Modes

INTERFACE

Supported Modes

Full-Switch

Command History

Version Description

9.9(0.0) Introduced on the FN IOM.
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The BPDU guard option prevents the port from participating in an active STP topology in case a BPDU appears on a port unintentionally, or is misconfigured, or is subject to a DOS attack. This option places the port into an Error Disable state if a BPDU appears and a message is logged so that the administrator can take corrective action.

NOTE: A port configured as an edge port, on an RSTP switch, immediately transitions to the Forwarding state. Only configure ports connected to end-hosts as edge ports. Consider an edge port similar to a port with a spanning-tree portfast enabled.

If you do not enable shutdown-on-violation, BPDUs are still sent to the RPM CPU.

You cannot enable STP root guard and loop guard at the same time on a port. For example, if you configure loop guard on a port on which root guard is already configured, the following error message displays:

% Error: RootGuard is configured. Cannot configure LoopGuard.

Enabling Portfast BPDU guard and loop guard at the same time on a port results in a port that remains in a Blocking state and prevents traffic from flowing through it. For example, when Portfast BPDU guard and loop guard are both configured:

- If a BPDU is received from a remote device, BPDU guard places the port in an Err-Disabled Blocking state and no traffic is forwarded on the port.
- If no BPDU is received from a remote device, loop guard places the port in a Loop-Inconsistent Blocking state and no traffic is forwarded on the port.

Example

Dell(conf)#interface gigabitethernet 4/0
Dell(conf-if-gi-4/0)#spanning-tree rstp edge-port
Dell(conf-if-gi-4/0)#show config

! interface GigabitEthernet 4/0
  no ip address
  switchport
  spanning-tree rstp edge-port
  no shutdown
Dell#
spanning-tree rstp

Configure an RSTP interface with one of these settings: port cost, edge port with optional bridge port data unit (BPDU) guard, port priority, loop guard, or root guard.

Syntax

```
spanning-tree rstp {cost port-cost | edge-port [bpduguard [shutdown-on-violation]] | bpdufilter | priority priority | (rootguard)}
```

Parameters

- **cost port-cost** Enter the keyword `cost` then the port cost value. The range is from 1 to 200000. The defaults are:
  - 10-Gigabit Ethernet interface = 2000
  - Port Channel interface with one 10 Gigabit Ethernet = 2000
  - Port Channel interface with one 40 Gigabit Ethernet = 1400
  - Port Channel with two 10 Gigabit Ethernet = 1800
  - Port Channel with two 40 Gigabit Ethernet = 600

- **edge-port** Enter the keywords `edge-port` to configure the interface as a rapid spanning tree edge port.

- **bpduguard** (OPTIONAL) Enter the keyword `portfast` to enable Portfast to move the interface into Forwarding mode immediately after the root fails.

  Enter the keyword `bpduguard` to disable the port when it receives a BPDU.

- **shutdown-on-violation** (OPTIONAL) Enter the keywords `shutdown-on-violation` to hardware disable an interface when a BPDU is received and the port is disabled.

- **bpdufilter** (OPTIONAL) Enter the keyword `bpdufilter` to enable BPDU Filter to stop sending and receiving BPDUs on port enabled interfaces.

- **priority priority** Enter keyword `priority` then a value in increments of 16 as the priority. The range is from 0 to 240. The default is 128.

- **rootguard** Enter the keyword `rootguard` to enable root guard on an RSTP port or port-channel interface.

Defaults

Not configured.

</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

By default, the system implements an optimized flush mechanism for RSTP. This implementation helps in flushing MAC addresses only when necessary (and less often), allowing for faster convergence during topology changes. However, if a standards-based flush mechanism is needed, you can turn on this knob command to enable flushing MAC addresses after receiving every topology change notification.
This chapter describes various types of security commands in the Dell Networking OS, in the following sections:
The commands are listed in the following sections:

- AAA Accounting Commands
- Authentication and Password Commands
- RADIUS Commands
- TACACS+ Commands
- SSH Server and SCP Commands

**NOTE:** Starting with the Dell Networking OS version 7.2.1.0, LEAP with MSCHAP v2 supplicant is implemented.

Topics:

- AAA Accounting Commands
- Authentication and Password Commands
- RADIUS Commands
- Suppressing AAA Accounting for Null Username Sessions
- TACACS+ Commands
- SSH Server and SCP Commands
- Secure DHCP Commands
- ICMP Vulnerabilities
- System Security Commands

### AAA Accounting Commands

AAA Accounting enables tracking of services that users are accessing and the amount of network resources being consumed by those services. When you enable AAA Accounting, the network server reports user activity to the TACACS+ security server in the form of accounting records. Each accounting record is comprised of accounting AV pairs and is stored on the access control server.

As with authentication and authorization, you must configure AAA Accounting by defining a named list of accounting methods, and then applying that list to various interfaces.

#### aaa accounting

Enable AAA Accounting and create a record for monitoring the accounting function.

**Syntax**

```
aaa accounting {system | exec | commands level} {name | default}{start-stop | wait-start | stop-only} {tacacs+}
```

To disable AAA Accounting, use the `no aaa accounting {system | exec | command level} {name | default}{start-stop | wait-start | stop-only} {tacacs+}` command.
Parameters

- **system**
  - Enter the keyword `system` to send accounting information of any other AAA configuration.

- **exec**
  - Enter the keyword `exec` to send accounting information when a user has logged in to EXEC mode.

- **commands level**
  - Enter the keyword `command` then a privilege level for accounting of commands executed at that privilege level.

- **name | default**
  - Enter one of the following:
    - For `name`, enter a user-defined name of a list of accounting methods.
    - For `default`, the default accounting methods used.

- **start-stop**
  - Enter the keywords `start-stop` to send a "start accounting" notice at the beginning of the requested event and a "stop accounting" notice at the end of the event.

- **wait-start**
  - Enter the keywords `wait-start` to ensure that the TACACS+ security server acknowledges the start notice before granting the user’s process request.

- **stop-only**
  - Enter the keywords `stop-only` to instruct the TACACS+ security server to send a "stop record accounting" notice at the end of the requested user process.

- **tacacs+**
  - Enter the keyword `tacacs+` to use TACACS+ data for accounting. Dell Networking OS currently only supports TACACS+ accounting.

Defaults
- none

Command Modes

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator and M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

In the example above, TACACS+ accounting is used to track all usage of EXEC command and commands on privilege level 15.

Privilege level 15 is the default. If you want to track usage at privilege level 1 for example, use the `aaa accounting command 1` command.

Example

```
Dell(conf)# aaa accounting exec default start-stop tacacs+
Dell(conf)# aaa accounting command 15 default start-stop tacacs+
Dell(config)#
```

Related Commands
- `enable password` — changes the password for the `enable` command.

### aaa accounting suppress

Prevent the generation of accounting records of users with the user name value of NULL.

**Syntax**

```
aaa accounting suppress null-username
```
To permit accounting records to users with user name value of NULL, use the `no aaa accounting suppress null-username` command.

**Defaults**
Accounting records are recorded for all users.

**Command Modes**
CONFIGURATION

**Supported Modes**
All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator and M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**
Dell Networking OS issues accounting records for all users on the system, including users whose username string, due to protocol translation, is NULL. For example, a user who comes on line with the `aaa authentication login method-list none` command is applied. To prevent the accounting records from being generated for sessions that do not have user names associated to them, use the `aaa accounting suppress` command.

### aaa authorization commands

Set parameters that restrict (or permit) a user’s access to EXEC and CONFIGURATION level commands.

**Syntax**
```
aaa authorization commands {level}{name|default}{local | tacacs+ | none}
```

**Parameters**
- `commands level` Enter the keyword `commands` then the command privilege level for command level authorization.
- `name` Define a name for the list of authorization methods.
- `default` Define the default list of authorization methods.
- `local` Use the authorization parameters on the system to perform authorization.
- `tacacs+` Use the TACACS+ protocol to perform authorization.
- `none` Enter the keyword `none` to apply no authorization.

**Defaults**
none

</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.6(0.0)</td>
<td>Supported on the FN I/O Aggregator</td>
</tr>
</tbody>
</table>

Usage Information

By default, the `aaa authorization commands` command configures the system to check both EXEC level and CONFIGURATION level commands. Use the command `no aaa authorization config-commands` to enable only EXEC-level command checking.

aaa authorization exec

Set parameters that restrict (or permit) a user’s access to EXEC-level commands.

Syntax

```
aaa authorization exec {name | default} {local || tacacs+ || if-authenticated || none}
```

To disable authorization checking for EXEC level commands, use the `no aaa authorization exec` command.

Parameters

- `name`: Define a name for the list of authorization methods.
- `default`: Define the default list of authorization methods.
- `local`: Use the authorization parameters on the system to perform authorization.
- `tacacs+`: Use the TACACS+ protocol to perform authorization.
- `none`: Enter the keyword `none` to apply no authorization.

Defaults

`none`

</tr>
<tr>
<td>9.5(0.0)</td>
<td>Introduced on the Z9000, S6000, S4820T, S4810, MXL</td>
</tr>
</tbody>
</table>

Usage Information
This command steps through all active sessions and then displays the accounting records for the active account functions.

Example
Dell#show accounting
Active accounted actions on tty2, User admin Priv 1
  Task ID 1, EXEC Accounting record, 00:00:39 Elapsed, service=shell
Active accounted actions on tty3, User admin Priv 1
  Task ID 2, EXEC Accounting record, 00:00:26 Elapsed, service=shell
Dell#

Related Commands
aaa accounting — enables AAA Accounting and creates a record for monitoring the accounting function.
Authentication and Password Commands

This section contains the commands that control the management access to the system.

**aaa authentication enable**

Configure AAA Authentication method lists for user access to EXEC privilege mode (the “Enable” access).

```plaintext
Syntax
aaa authentication enable {default | method-list-name} method [... method2]
To return to the default setting, use the no aaa authentication enable {default | method-list-name} method [... method2] command.
```

**Parameters**

- `default` Enter the keyword default then the authentication methods to use as the default sequence of methods for the Enable login. The default is default enable.
- `method-list-name` Enter a text string (up to 16 characters long) to name the list of enabled authentication methods activated at login.
- `method` Enter one of the following methods:
  - `enable`: use the password the `enable password` command defines in CONFIGURATION mode.
  - `line`: use the password the `password` command defines in LINE mode.
  - `none`: no authentication.
  - `radius`: use the RADIUS servers configured with the `radius-server host` command.
  - `tacacs+`: use the TACACS+ server(s) configured with the `tacacs-server host` command.
- `... method2` (OPTIONAL) In the event of a “no response” from the first method, Dell Networking Operating System (OS) applies the next configured method.

**Defaults**

Use the `enable password`.

**Command Modes**

- **CONFIGURATION**

**Supported Modes**

- All Modes

**Command History**

- **Version**
  - 9.9(0.0): Introduced on the FN IOM.
  - 9.4(0.0): Supported on the FN I/O Aggregator.
  - 9.3(0.0): Supported on the M I/O Aggregator.

**Usage Information**

By default, the `Enable password` is used. If you configure `aaa authentication enable default default`, Dell Networking Operating System (OS) uses the methods defined for Enable access instead.

Methods configured with the `aaa authentication enable` command are evaluated in the order they are configured. If authentication fails using the primary method, Dell Networking Operating System (OS) employs the second method (or third method, if necessary) automatically. For example, if the TACACS+ server is reachable, but
the server key is invalid, Dell Networking OS proceeds to the next authentication method. The TACACS+ is incorrect, but the user is still authenticated by the secondary method.

Related Commands

- **enable password** — changes the password for the `enable` command.
- **login authentication** — enables AAA login authentication on the terminal lines.
- **radius-server host** — specifies a RADIUS server host.
- **tacacs-server host** — specifies a TACACS+ server host.

### aaa authentication login

Configure AAA Authentication method lists for user access to EXEC mode (Enable log-in).

**Syntax**

```
aaa authentication login {method-list-name | default} method [... method4]
```

To return to the default setting, use the `no aaa authentication login {method-list-name | default}` command.

**Parameters**

- **method-list-name**
  - Enter a text string (up to 16 characters long) as the name of a user-configured method list that can be applied to different lines.
- **default**
  - Enter the keyword `default` to specify that the method list specified is the default method for all terminal lines.
- **method**
  - Enter one of the following methods:
    - `enable`: use the password the `enable password` command defines in CONFIGURATION mode.
    - `line`: use the password the `password` command defines in LINE mode.
    - `none`: no authentication.
    - `radius`: use the RADIUS servers configured with the `radius-server host` command.
    - `tacacs+`: use the TACACS+ servers configured with the `tacacs-server host` command.

- **... method4**
  - (OPTIONAL) Enter up to four additional methods. In the event of a “no response” from the first method, Dell Networking Operating System (OS) applies the next configured method (up to four configured methods).

**Defaults**

Not configured (that is, no authentication is performed).

**Command Modes**

- **CONFIGURATION**

**Supported Modes**

- All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.11(0.0)</td>
<td>Included a prompt to force the users to re-authenticate, when re-authentication is enabled.</td>
</tr>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
</tbody>
</table>
Usage Information

By default, the locally configured username password is used. If you configure `aaa authentication login default`, Dell Networking Operating System (OS) uses the methods this command defines for login instead.

Methods configured with the `aaa authentication login` command are evaluated in the order they are configured. If users encounter an error with the first method listed, Dell Networking Operating System (OS) applies the next method configured. If users fail the first method listed, no other methods are applied. The only exception is the local method. If the user’s name is not listed in the local database, the next method is applied. If the correct user name/password combination is not entered, the user is not allowed access to the switch.

**NOTE:** If authentication fails using the primary method, Dell Networking Operating System (OS) employs the second method (or third method, if necessary) automatically. For example, if the TACACS+ server is reachable, but the server key is invalid, Dell Networking Operating System (OS) proceeds to the next authentication method. The TACACS+ is incorrect, but the user is still authenticated by the secondary method.

After configuring the `aaa authentication login` command, configure the `login authentication` command to enable the authentication scheme on terminal lines.

Connections to the SSH server work with the following login mechanisms: local, radius, and tacacs.

Related Commands

- `login authentication` — enables AAA login authentication on the terminal lines.
- `radius-server host` — specifies a RADIUS server host.
- `tacacs-server host` — specifies a TACACS+ server host.

### authorization

Apply an authorization method list to terminal lines.

**Syntax**

```
authorization {exec | commands {level | role role-name}} method-list
```

**Parameters**

- `exec` : Enter the keyword `exec` to apply an EXEC level accounting method list.
- `commands {level | role role-name}` : Enter the keywords `commands` followed by either a privilege level for accounting of commands executed at that privilege level, or enter the keyword `role` then the role name for authorization of commands executed by a user with that user role. `role` method is supported only on Full-Switch mode.
- `method-list` : Enter a method list that you defined using the `aaa accounting exec` or `aaa accounting commands` commands.

**Defaults**

`none`

**Command Modes**

- `LINE`

**Supported Modes**

- All Modes.

**Command History**

- **Version**
  - **9.9(0.0)**: Introduced on the FN IOM.

---

**Usage Information**

Methods configured with the `aaa authentication login` command are evaluated in the order they are configured. If users encounter an error with the first method listed, Dell Networking Operating System (OS) applies the next method configured. If users fail the first method listed, no other methods are applied. The only exception is the local method. If the user’s name is not listed in the local database, the next method is applied. If the correct user name/password combination is not entered, the user is not allowed access to the switch.

**NOTE:** If authentication fails using the primary method, Dell Networking Operating System (OS) employs the second method (or third method, if necessary) automatically. For example, if the TACACS+ server is reachable, but the server key is invalid, Dell Networking Operating System (OS) proceeds to the next authentication method. The TACACS+ is incorrect, but the user is still authenticated by the secondary method.

After configuring the `aaa authentication login` command, configure the `login authentication` command to enable the authentication scheme on terminal lines.

Connections to the SSH server work with the following login mechanisms: local, radius, and tacacs.

**Related Commands**

- `login authentication` — enables AAA login authentication on the terminal lines.
- `radius-server host` — specifies a RADIUS server host.
- `tacacs-server host` — specifies a TACACS+ server host.
### aaa authorization commands

Set parameters that restrict (or permit) a user’s access to EXEC and CONFIGURATION level commands.

**Syntax**

```plaintext
aaa authorization commands {level | role role-name} {name | default} {local | tacacs+ | none}
```

**Parameters**

- `commands level` Enter the keyword `commands` then the command privilege level for command level authorization.
- `role role-name` Enter the keyword `role` then the role name. `role` method is supported only on Full-Switch mode.
- `name` Define a name for the list of authorization methods.
- `default` Define the default list of authorization methods.
- `local` Use the authorization parameters on the system to perform authorization.
- `tacacs+` Use the TACACS+ protocol to perform authorization.
- `none` Enter the keyword `none` to apply no authorization.

**Defaults**

`none`

**Command Modes**

- **CONFIGURATION**

**Supported Modes**

- All Modes.

</tr>
</tbody>
</table>

### aaa authorization role-only

Configure authentication to use the user’s role only when determining if access to commands is permitted.

**Syntax**

```plaintext
aaa authorization role-only
```

Related Commands  

- `aaa authorization commands` — sets the parameters that restrict (or permit) a user’s access to EXEC and CONFIGURATION level commands
- `aaa authorization exec` — sets the parameters that restrict (or permit) a user’s access to EXEC level commands.
To return to the default setting, use the no aaa authentication role-only command.

Parameters

- **name**
  - Enter a text string for the name of the user up to 63 characters. It cannot be one of the system defined roles (sysadmin, secadmin, netadmin, netoperator).

- **inherit existing-role-name**
  - Enter the `inherit` keyword then specify the system defined role to inherit permissions from (sysadmin, secadmin, netadmin, netoperator).

Defaults

- none

</tr>
</tbody>
</table>

Usage Information

By default, access to commands are determined by the user's role (if defined) or by the user's privilege level. If the `aaa authorization role-only` command is enabled, then only the user's role is used.

Before you enable role-based only AAA authorization:

1. Locally define a system administrator user role. This will give you access to login with full permissions even if network connectivity to remote authentication servers is not available.
2. Configure login authentication on the console. This ensures that all users are properly identified through authentication no matter the access point.
3. Specify an authentication method (RADIUS, TACACS+, or Local).
4. Specify authorization method (RADIUS, TACACS+ or Local).
5. Verify the configuration has been applied to the console or VTY line.

Related Commands

- login authentication, password, radius-server host, tacacs-server host

### aaa authorization config-commands

Set parameters that restrict (or permit) a user’s access to EXEC level commands.

**Syntax**

```
aaa authorization config-commands
```

Disable authorization checking for CONFIGURATION level commands using the no aaa authorization config-commands command.

**Defaults**

Enabled when you configure `aaa authorization commands command`.

aaa authorization exec

Set parameters that restrict (or permit) a user’s access to EXEC-level commands.

Syntax

```
aaa authorization exec {name | default} {local || tacacs+ || if-authenticated || none}
```

To disable authorization checking for EXEC level commands, use the `no aaa authorization exec` command.

Parameters

- **name**: Define a name for the list of authorization methods.
- **default**: Define the default list of authorization methods.
- **local**: Use the authorization parameters on the system to perform authorization.
- **tacacs+**: Use the TACACS+ protocol to perform authorization.
- **none**: Enter the keyword `none` to apply no authorization.

Defaults

`none`

aaa reauthenticate enable

Enable re-authentication of user whenever there is a change in the authenticators.

Syntax

```
aaa reauthenticate enable
```

To disable the re-authentication option, use the `no aaa reauthenticate enable` command.

Defaults

`Disabled`

Command Modes

```
CONFIGURATION
```

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell EMC Networking OS Command Line Reference Guide.
Version  Description
9.11(0.0)  Introduced this command.

Usage Information
When an operating system enables to change the user authenticators, the users might access resources and perform tasks that they do not have authorization.

Once re-authentication is enabled, Dell EMC Networking OS prompts the users to re-authenticate whenever there is a change in authenticators.

The change in authentication happens when:

- Add or remove an authentication server (RADIUS/TACACS+)
- Modify an AAA authentication/authorization list
- Change to role-only (RBAC) mode

The re-authentication is also applicable for authenticated 802.1x devices. When there is a change in the authentication servers, the supplicants connected to all the ports are forced to re-authenticate.

Example
DellEMC(config)#aaa reauthenticate enable
DellEMC(config)#aaa authentication login vty_auth_list radius
Force all logged-in users to re-authenticate (y/n)?
DellEMC(config)#radius-server host 192.100.0.12
Force all logged-in users to re-authenticate (y/n).Nodes

privilege level (CONFIGURATION mode)
Change the access or privilege level of one or more commands.

Syntax
privilege mode {level level command | reset command}
To delete access to a level and command, use the no privilege mode level level command command.

Parameters
mode  Enter one of the following keywords as the mode for which you are controlling access:
     - configure for CONFIGURATION mode
     - exec for EXEC mode
     - interface for INTERFACE modes
     - line for LINE mode
     - route-map for ROUTE-MAP mode
     - router for ROUTER OSPF, ROUTER RIP, ROUTER ISIS and ROUTER BGP modes
level level  Enter the keyword level then a number for the access level. The range is from 0 to 15. Level 1 is EXEC mode and Level 15 allows access to all CLI modes and commands.
reset  Enter the keyword reset to return the security level to the default setting.
command  Enter the command’s keywords to assign the command to a certain access level. You can enter one or all of the keywords.

Defaults
Not configured.
privilege level (LINE mode)

Change the access level for users on the terminal lines.

Syntax

```
privilege level level
```

To delete access to a terminal line, use the `no privilege level level` command.

Parameters

- `level level`: Enter the keyword `level` then a number for the access level. The range is from 0 to 15. Level 1 is EXEC mode and Level 15 allows access to all CLI modes.

Defaults

- `level = 15`

banner exec

Configure a message that is displayed when your enter EXEC mode.

Syntax

```
banner exec c line c
```

To delete a banner, use the `no banner exec` command.

Parameters

- `c`: Enter the keywords `banner exec`, then enter a character delineator, represented here by the letter `c`. Press ENTER.
- `line`: Enter a text string for your banner message ending the message with your delineator. In the following example, the delineator is a percent character (%); the banner message is "testing, testing".

Defaults

- No banner is displayed.

</tbody>
</table>

Usage Information

After entering the banner login command, type one or more spaces and a delineator character. Enter the banner text then the second delineator character. When the user is connected to the router, if a message of the day banner is configured, it displays first. If no message of the day banner is configured, the login banner and prompt appear. After the user has logged in, the EXEC banner (if configured) displays.

Example

```
Dell(conf)#banner exec ?
LINE c banner-text c, where 'c' is a delimiting character
Dell(conf)#banner exec %
Enter TEXT message. End with the character '%'.
This is the banner%
Dell(conf)#end
Dell#exit

Related Commands

- **banner login** — sets a banner for login connections to the system.
- **exec-banner** — enables the display of a text string when you enter EXEC mode.
- **line** — enables and configures the console and virtual terminal lines to the system.

### banner login

Set a banner to display when logging on to the system.

**Syntax**

```
banner login {keyboard-interactive | no keyboard-interactive} [c line c]
```

**Parameters**

- **keyboard-interactive**
  - Enter the keyword `keyboard-interactive` to require a carriage return (CR) to get the message banner prompt.
- **c**
  - Enter a delineator character to specify the limits of the text banner. The delineator is a percent character (%).
- **line**
  - Enter a text string for your text banner message ending the message with your delineator. The delineator is a percent character (%). Range: maximum of 50 lines, up to 255 characters per line.
No banner is configured and the CR is required when creating a banner.

<tr>
<td>9.3(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

Optionally, use the `banner exec` command to create a text string that is displayed when you access EXEC mode. This command toggles that display.

**Related Commands**

- `banner exec` — configures a banner to display when entering EXEC mode.
- `line` — enables and configures console and virtual terminal lines to the system.

**access-class**

Restrict incoming connections to a particular IP address in a defined IP access control list (ACL).

**Syntax**

```
access-class access-list-name
```

To delete a setting, use the `no access-class` command.

**Parameters**

- `access-list-name` Enter the name of an established IP Standard ACL.

**Defaults**

Not configured.

**Command Modes**

LINE

**Supported Modes**

Full-Switch
enable password

Change the password for the enable command.

Syntax

```plaintext
enable password [level level] [encryption-type] password
```

To delete a password, use the `no enable password [encryption-type] password [level level]` command.

Parameters

- **level level** (OPTIONAL) Enter the keyword `level` then a number as the level of access. The range is from 1 to 15.
- **encryption-type** (OPTIONAL) Enter the number 7 or 0 as the encryption type.
  
  Enter a 7 then a text string as the hidden password. The text string must be a password that was already encrypted by a Dell Networking router. Use this parameter only with a password that you copied from the `show running-config` file of another Dell Networking router.

- **password**
  Enter a text string, up to 32 characters long, as the clear text password.

Defaults

No password is configured. `level` = 15.

Command Modes

- CONFIGURATION

Supported Modes

All Modes

Command History

Version Description

9.9(0.0) Introduced on the FN IOM.

8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

To control access to command modes, use this command to define a password for a level and use the `privilege level (CONFIGURATION mode)` command.

Passwords must meet the following criteria:

- Start with a letter, not a number.
- Passwords can have a regular expression as the password. To create a password with a regular expression in it, use CNTL + v prior to entering regular expression. For example, to create the password `abcd\[e`, you type `abcd\[e`.
When the password is created, you do not use the CNTL + v key combination and enter "abcd\]e".

**NOTE:** The question mark (?) is not a supported character.

Related Commands

- **show running-config** — views the current configuration.
- **privilege level (CONFIGURATION mode)** — controls access to the command modes within the switch.

### enable restricted

Allows Dell Networking technical support to access restricted commands.

**Syntax**

```plaintext
enable restricted [encryption-type] password
```

To disallow access to restricted commands, use the **no enable restricted** command.

**Parameters**

- **encryption-type** (OPTIONAL) Enter the number 7 as the encryption type.
  
  Enter 7 followed a text string as the hidden password. The text string must be a password that was already encrypted by a Dell Networking router.
  
  Use this parameter only with a password that you copied from the **show running-config** file of another Dell Networking router.

- **password**
  
  Enter a text string, up to 32 characters long, as the clear text password.

**Defaults**

Not configured.

**Supported Modes**

All Modes

</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

Only Dell Networking Technical Support staff use this command.

### enable secret

Change the password for the **enable** command.

**Syntax**

```plaintext
enable secret [level level] [encryption-type] password
```

To delete a password, use the **no enable secret [encryption-type] password [level level]** command.

**Parameters**

- **level level** (OPTIONAL) Enter the keyword level then a number as the level of access. The range is from 1 to 15.
encryption-type

(OPTIONAL) Enter the number 5 or 0 as the encryption type.

Enter a 5 then a text string as the hidden password. The text string must be a password that was already encrypted by a Dell Networking router.

Use this parameter only with a password that you copied from the show running-config file of another Dell Networking router.

password

Enter a text string, up to 32 characters long, as the clear text password.

Defaults
No password is configured. level = 15.

privilege level (CONFIGURATION mode) — controls access to the command modes within the switch.

enable sha256-password

Configure SHA-256 based password for the enable command.

Syntax
enable sha256-password [level level] [encryption-type] password
To delete a password, use the no enable sha256-password [encryption-type] password [level level] command.

Parameters
sha256-password Enter the keyword sha256-password then the encryption-type or the password.
level level (OPTIONAL) Enter the keyword level then a number as the level of access. The range is from 1 to 15.
encryption-type

(OPTIONAL) Enter the number 8 or 0 as the encryption type.

Enter 8 to enter the sha256–based hashed password.

password

Enter a text string, up to 32 characters long, as the clear text password.

Defaults

No password is configured. level = 15.

Command Modes

CONFIGURATION

Command History

- privilege level (CONFIGURATION mode) — controls access to the command modes within the switch.

login authentication

To designate the terminal lines, apply an authentication method list.

Syntax

login authentication {method-list-name | default}

To use the local user/password database for login authentication, use the no login authentication command.

Parameters

method-list-name

Enter the keywords method-list-name to specify that method list, created in the aaa authentication login command, to be applied to the designated terminal line.

default

Enter the keyword default to specify that the default method list, created in the aaa authentication login command, is applied to the terminal line.

Defaults

No authentication is performed on the console lines. Local authentication is performed on the virtual terminal and auxiliary lines.

Version Description

9.9(0.0) Introduced on the FN IOM.

9.4(0.0) Supported on the FN I/O Aggregator.

9.3(0.0) Supported on the M I/O Aggregator.

Usage Information

If you configure the aaa authentication login default command, the login authentication default command automatically is applied to all terminal lines.
Related Commands

aaa authentication login — selects the login authentication methods.

**password**

Specify a password for users on terminal lines.

**Syntax**

```plaintext
password [encryption-type] password
```

To delete a password, use the `no password password` command.

**Parameters**

- **encryption-type**
  
  (OPTIONAL) Enter either zero (0) or 7 as the encryption type for the password entered.
  
  The options are
  
  - 0 is the default and means the password is not encrypted and stored as clear text.
  - 7 means that the password is encrypted and hidden.

- **password**
  
  Enter a text string up to 32 characters long. The first character of the password must be a letter. You cannot use spaces in the password.

**Defaults**

No password is configured.

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

The system prompts users for these passwords when the method for authentication or authorization used is "line".

**Related Commands**

- **enable password** — sets the password for the enable command.
- **login authentication** — configures an authentication method to log in to the switch.
- **service password-encryption** — encrypts all passwords configured in the system.
- **radius-server key** — configures a key for all RADIUS communications between the switch and the RADIUS host server.
- **tacacs-server key** — configures a key for communication between a TACACS+ server and client.
- **username** — establishes an authentication system based on user names.

**password-attributes**

Configure the password attributes (strong password).

**Syntax**

```plaintext
password-attributes [min-length number] [max-retry number] [lockout-period minutes] [character-restriction [upper number] [lower number] [numeric number] [special-char number]]
```
To return to the default, use the no password-attributes [min-length number] [max-retry number] [lockout-period minutes] [character-restriction [upper number] [lower number] [numeric number] [special-char number]] command.

Parameters

min-length number  (OPTIONAL) Enter the keywords min-length then the number of characters. The range is from 0 to 32 characters.

max-retry number    (OPTIONAL) Enter the keywords max-retry then the number of maximum password retries. The range is from 0 to 16.

lockout-period minutes  (OPTIONAL) Enter the keyword lockout-period then the number of minutes. The range is from 1 to 1440 minutes. The default is 0 minutes and the lockout-period is not enabled. This parameter enhances the security of the switch by locking out sessions on the Telnet or SSH sessions for which there has been a consecutive failed login attempts. The console is not locked out.

character-restriction (OPTIONAL) Enter the keywords character-restriction to indicate a character restriction for the password.

upper number        (OPTIONAL) Enter the keyword upper then the upper number. The range is from 0 to 31.

lower number        (OPTIONAL) Enter the keyword lower then the lower number. The range is from 0 to 31.

numeric number      (OPTIONAL) Enter the keyword numeric then the numeric number. The range is from 0 to 31.

special-char number (OPTIONAL) Enter the keywords special-char then the number of special characters permitted. The range is from 0 to 31.

The following special characters are supported:

! " # % & ' ( ) ; < = > ? [ \ ] * + , . / : ^ _ { | } ~ @ $

Defaults

none

Command Modes CONFIGURATION

Supported Modes Full-Switch

Command History

Version Description
9.9(0.0)  Introduced on the FN IOM.
9.6(0.0)  Introduced the special-characters on the MXL Switch.
9.5(0.0)  Introduced the lockout-period option on the MXL 10/40GbE Switch.
8.3(16.1) Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands

password — specifies a password for users on terminal lines.

service password-encryption

Encrypt all passwords configured in the system.

Syntax service password-encryption
To store new passwords as clear text, use the no service password-encryption command.

**Defaults**
Enabled.

**Command Modes**
CONFIGURATION

**Supported Modes**
All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

⚠️ **CAUTION:** Encrypting passwords with this command does not provide a high level of security. When the passwords are encrypted, you cannot return them to plain text unless you re-configure them. To remove an encrypted password, use the no password password command.

To keep unauthorized people from viewing passwords in the switch configuration file, use the **service password-encryption** command. This command encrypts the clear-text passwords created for user name passwords, authentication key passwords, the privileged command password, and console and virtual terminal line access passwords.

To view passwords, use the **show running-config** command.

### show privilege

**View your access level.**

**Syntax**

```
show privilege
```

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell#show privilege
Current privilege level is 15
Dell#

Dell#show privilege
Current privilege level is 14.
Dell#

Dell#show privilege
Current privilege level is 10.
Dell#
```

**Related Commands**

- privilege level (CONFIGURATION mode) — assigns access control to different command modes.
**show users**

Allows you to view information on all users logged in to the switch.

**Syntax**

```plaintext
show users [all]
```

**Parameters**

- `all` (OPTIONAL) Enter the keyword `all` to view all terminal lines in the switch.

**Command Modes**

- EXEC Privilege

**Supported Modes**

- All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.5(0.0)</td>
<td>Introduced the support for roles on the MXL 10/40GbE Switch.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

The following describes the `show users` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>(untitled)</td>
<td>Indicates with an asterisk (*) which terminal line you are using.</td>
</tr>
<tr>
<td>Line</td>
<td>Displays the terminal lines currently in use.</td>
</tr>
<tr>
<td>User</td>
<td>Displays the user name of all users logged in.</td>
</tr>
<tr>
<td>Host(s)</td>
<td>Displays the terminal line status.</td>
</tr>
<tr>
<td>Location</td>
<td>Displays the IP address of the user.</td>
</tr>
</tbody>
</table>

**Example**

```plaintext
Dell# show users
Authorization Mode: role or privilege
Line       User   Role       Priv Host(s) Location
* 0  console 0      unassigned 1   idle
  2  vty 0   admin  unassigned 1   idle    10.16.127.35
  3  vty 1   ad     unassigned 15  idle    10.16.127.145
  4  vty 2   ad1    sysadmin  1    idle    10.16.127.141
  5  vty 3   ad1    sysadmin  1    idle    10.16.127.145
  6  vty 4   admin  unassigned 1   idle    10.16.127.141
  7  vty 5   ad     unassigned 15  idle    10.16.127.141
Dell#
```

**Related Commands**

- `username` — enables a user.

---

**secure-cli enable**

Enable the secured CLI mode.

**Syntax**

```plaintext
secure-cli enable
```

**Command Modes**

- CONFIGURATION
This guide is platform-specific. For command information about other platforms, see the relevant Dell EMC Networking OS Command Line Reference Guide.

## Command History

**Version** | **Description**
--- | ---
9.11(0.0) | Introduced this command.

## Usage Information

The secured CLI mode prevents the users from enhancing the permissions or promoting the privilege levels. After entering the command, save the running-configuration.

Once you save the running-configuration, the secured CLI mode is enabled. If you do not want to enter the secured mode, do not save the running-configuration.

Once saved, to disable the secured CLI mode, you need to manually edit the startup-configuration file and reboot the system.

### timeout login response

Specify how long the software waits for the login input (for example, the user name and password) before timing out.

**Syntax**

```plaintext
timeout login response seconds
```

To return to the default values, use the `no timeout login response` command.

**Parameters**

- **seconds**
  - Enter a number of seconds the software waits before logging you out. The range is:
    - VTY: the range is from 1 to 30 seconds, the default is 30 seconds.
    - Console: the range is from 1 to 300 seconds, the default is 0 seconds (no timeout).
    - AUX: the range is from 1 to 300 seconds, the default is 0 seconds (no timeout).

**Defaults**

See the defaults settings shown in Parameters.

**Command Modes**

- `LINE`

**Supported Modes**

- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

The software measures the period of inactivity defined in this command as the period between consecutive keystrokes. For example, if your password is “password” you can enter “p” and wait 29 seconds to enter the next letter.
username

Establish an authentication system based on user names.

Syntax

username name [access-class access-list-name] [nopassword | (password | secret | sha256-password) [encryption-type] password] [privilege level] [role role-name]

If you do not want a specific user to enter a password, use the nopassword option.

To delete authentication for a user, use the no username name command.

Parameters

name
Enter a text string for the name of the user up to 63 characters.

access-class
access-list-name
Enter the keywords access-class then the name of a configured access control list (either an IP access control list or MAC access control list).

nopassword
Enter the keyword nopassword to specify that the user should not enter a password.

password
Enter the keyword password then the encryption-type or the password.

secret
Enter the keyword secret then the encryption-type or the password.

encryption-type
Enter an encryption type for the password that you enter.

- 0 directs the system to store the password as clear text. It is the default encryption type when using the password option.
- 8 to indicate that a password encrypted using a sha256 hashing algorithm follows. This encryption type is available with the sha256-password option only, and is the default encryption type for this option.
- 7 to indicate that a password encrypted using a DES hashing algorithm follows. This encryption type is available with the password option only.
- 5 to indicate that a password encrypted using an MD5 hashing algorithm follows. This encryption type is available with the secret option only, and is the default encryption type for this option.

password
Enter a string up to 32 characters long.

privilege level
Enter the keyword privilege then a number from zero (0) to 15.

role role-name
Enter the keyword role followed by the role name to associate with that user ID.

secret
Enter the keyword secret then the encryption type.

sha256-password
Enter the keyword sha256-password then the encryption-type or the password.

Defaults
The default encryption type for password option is 0. The default encryption type for secret option is 5. The default encryption type for sha256-password option is 8. The default value of privilege level is 1.

Command Modes
CONFIGURATION

Supported Modes
All Modes

Command History

Version Description
9.10(0.0) Added support for the sha256-password option.
9.9(0.0) Introduced on the FN IOM.
**Version** | **Description**
--- | ---
9.5(0.0) | Introduced the support for roles on the MXL 10/40GbE Switch.
8.3.16.1 | Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**
To view the defined user names, use the `show running-config user` command.

**Related Commands**
- `password` — specifies a password for users on terminal lines.
- `show running-config` — views the current configuration.

## RADIUS Commands

The following RADIUS commands are supported by Dell Networking Operating System (OS).

### client

Configures trusted DAC clients.

**Syntax**
```
client {ipv4-addr | ipv6-addr | hostname} [vrf vrf-name] [key [encryption-type] key]
```

To undo the DAC client configuration, enter the `no client host` command.

**Defaults**
If VRF is not configured, default VRF is considered.

**Parameters**
- `ipv4-addr` Enter the keyword `ipv4-addr` to specify the IPv4 address of the DAC.
- `ipv6-addr` Enter the keyword `ipv6-addr` to specify the IPv6 address of the DAC.
- `hostname` Enter the keyword `hostname` to enter the name of the host.
- `vrf vrf-name` Enter the keyword `vrf` followed by the name of the VRF to associate a VRF with the client.
- `key` (Optional) Enter the keyword `key` to specify an encryption key.
- `encryption-type` (Optional) Enter either 0 or 7 as the encryption type for the specified key. The options are:
  - 0 — implies that the key is not encrypted and is stored as clear text.
  - 7 — implies that the key is encrypted and hidden.

**Command Modes**
- CONF-DYNAMIC-AUTH

**Usage Information**
- It is possible to configure more than one dynamic authorization clients Duplicate (ipv4-addr or ipv6-addr or host-name) configurations are not allowed.
client-key

Configures global shared key for the trusted DAC clients.

Syntax

```
client-key [encryption-type] key
```

To remove the shared key configuration, enter the no client-key command.

Defaults

None.

Parameters

- **encryption-type:** (OPTIONAL) Enter either 0 or 7 as the encryption type for the key entered. The options are:
  - 0 — is the default and means the key is not encrypted and stored as clear text.
  - 7 — means that the key is encrypted and hidden.

- **key**
  Enter a string that is the key to be exchanged between the switch and RADIUS servers. It can be up to 42 characters long.

Command Modes

- CONF-DYNAMIC-AUTH

Usage Information

- Configure global shared key applicable for DA clients. If client configuration has shared key configured, that will take precedence.

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell EMC Networking OS Command Line Reference Guide.

The following is a list of the Dell EMC Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.13(0.0)</td>
<td>Introduced on the C9010, S3100, S3048-ON, S4048T-ON, S4048-ON, S5000, S6010-ON, S6000-ON, S6100-ON, S6000, Z9100-ON, Z9500, FN-IOM, and MXL.</td>
</tr>
</tbody>
</table>

coa-bounce-port

Configure NAS to ignore the port bounce RADIUS messages from DAC.

Syntax

```
coa-bounce-port
```
To remove the port bounce configuration, enter the no coa-bounce-port command.

Defaults

Enabled.

Command Modes

- CONF-DYNAMIC-AUTH

Usage Information

- Configure no coa-bounce-port to drop radius CoA port-bounce requests from the DAC.

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell EMC Networking OS Command Line Reference Guide.

The following is a list of the Dell EMC Networking OS version history for this command.

<table>

**coa-disable-port**

Configure NAS to reject disable-port requests from DAC.

Syntax

coa-disable-port

To undo this configuration, enter the no coa-disable-port command.

Defaults

Enabled.

Command Modes

- CONF-DYNAMIC-AUTH

Usage Information

- Configure no coa-disable-port DAS to drop radius CoA disable-port requests from DAC.

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell EMC Networking OS Command Line Reference Guide.

The following is a list of the Dell EMC Networking OS version history for this command.

<table>

| 9.13(0.0) | Introduced on the C9010, S3100, S3048–ON, S4048T-ON, S4048–ON, S5000, S6010–ON, S6100–ON, S6000, Z9100–ON, Z9500, FN-IOM, and MXL.

**coa-reauthenticate**

Configure NAS to re-authenticate dot1x user session requests from DAC.

Syntax

coa-reauthenticate

To ignore re-authentication requests, enter the no coa-reauthenticate command.
debug radius

View RADIUS transactions to assist with troubleshooting.

Syntax debug radius

To disable debugging of RADIUS, use the no debug radius command.

Defaults Disabled.

Command Modes EXEC Privilege

Supported Modes Full-Switch

</tbody>
</table>

da-rsp-timeout

Configure timeout value for the back end task to respond to DAC requests.

Syntax da-rsp-timeout minutes

To undo the configuration, enter the no da-rsp-timeout command.

Defaults 10 Minutes.

Parameters

- **minutes**: Enter the time out value.

Command Modes

- CONF-DYNAMIC-AUTH

Usage Information

- Time for DAS to wait before the back end response is received.
disconnect-user

Configure NAS to ignore DM requests corresponding to AAA users-sessions coming from the DAC.

Syntax
disconnect-user
To undo this configuration, enter the no disconnect-user command.

Defaults
Enabled.

Command Modes
- CONF-DYNAMIC-AUTH

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell EMC Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>
**ip radius source-interface**

Specify an interface's IP address as the source IP address for RADIUS connections.

**Syntax**

```
ip radius source-interface interface
```

To delete a source interface, use the `no ip radius source-interface` command.

**Parameters**

- **interface**
  
  Enter the following keywords and slot/port or number information:
  
  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a ten-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults**

Not configured.

</tr>
</tbody>
</table>

**port**

Configures NAS port number to accept CoA or DM requests.

**Syntax**

```
port port-number
```

To remove the NAS port configuration, enter the `no port` command.

**Defaults**

3799

**Parameters**

- **port-number**
  
  Enter the NAS port number to accept CoA and DM requests. The range is from 1 to 65535.

**Command Modes**

- CONF-DYNAMIC-AUTH
radius dynamic-auth

Enters a new sub-mode, RADIUS-DYNAMIC-AUTH, which enables you to modify dynamic authorization settings.

Syntax

```
radius dynamic-auth
```

To remove the dynamic authorization method for RADIUS users, enter the `no radius dynamic-auth` command.

Defaults

Disabled.

Command Modes

- CONFIGURATION

Usage Information

- All dynamic authorization commands are configured by entering this mode.

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell EMC Networking OS Command Line Reference Guide.

The following is a list of the Dell EMC Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.13(0.0)</td>
<td>Introduced on the C9010, S3100, S3048-ON, S4048T-ON, S4048-ON, S5000, S6010-ON, S6000-ON, S6100-ON, S6000, Z9100-ON, Z9500, FN-IOM, and MXL.</td>
</tr>
</tbody>
</table>

radius-server deadtime

Configure a time interval during which non-responsive RADIUS servers to authentication requests are skipped.

Syntax

```
radius-server deadtime seconds
```

To disable this function or return to the default value, use the `no radius-server deadtime` command.

Parameters

- `seconds`: Enter a number of seconds during which non-responsive RADIUS servers are skipped. The range is from 0 to 2147483647 seconds. The default is 0 seconds.

Defaults

- 0 seconds
radius-server host

Configure a RADIUS server host.

Syntax
radius-server host {hostname | ipv4-address | ipv6-address} [auth-port port-number] [retransmit retries] [timeout seconds] [key [encryption-type] key]

Parameters
hostname
Enter the name of the RADIUS server host.

ipv4-address | ipv6-address
Enter the IPv4 address (A.B.C.D) or IPv6 address (X:XX:XX::X) of the RADIUS server host.

auth-port port-number
(Optional) Enter auth-port then a number as the port number. The range is from zero (0) to 65535. The default port-number is 1812.

timeout seconds
(Optional) Enter timeout then the seconds the time interval the switch waits for a reply from the RADIUS server. This parameter overwrites the radius-server timeout command. The range is from 0 to 1000. The default is 5 seconds.

retransmit retries
(Optional) Enter the keyword retransmit then a number as the number of attempts. This parameter overwrites the radius-server retransmit command. The range is from zero (0) to 100. The default is 3 attempts.

key [encryption-type] key
(Optional) Enter key then an optional encryption-type and a string up to 42 characters long as the authentication key. The RADIUS host server uses this authentication key and the RADIUS daemon operating on this switch.

For the encryption-type, enter either zero (0) or 7 as the encryption type for the key entered. The options are:

- 0 is the default and means the password is not encrypted and stored as clear text.
- 7 means that the password is encrypted and hidden.

Configure this parameter last because leading spaces are ignored.

Defaults
Not configured.

Command Modes
CONFIGURATION

Supported Modes
All Modes

Command History
Version | Description
---------|-------------
9.9(0.0) | Introduced on the FN IOM.
9.4(0.0) | Supported on the FN I/O Aggregator.
9.3(0.0) | Supported on the M I/O Aggregator.
### Version Description

- **9.4(0.0)**: Supported on the FN I/O Aggregator.
- **9.3(0.0)**: Supported on the M I/O Aggregator.

### Usage Information

To configure any number of RADIUS server hosts for each server host that is configured, use this command. Dell Networking Operating System (OS) searches for the RADIUS hosts in the order they are configured in the software.

The global default values for the `timeout`, `retransmit`, and `key` optional parameters are applied, unless those values are specified in the `radius-server host` or other commands. To return to the global default values, if you configure the `timeout`, `retransmit`, or `key` values, include those keywords when using the `no radius-server host` command syntax.

### Related Commands

- `login authentication` — sets the database to be checked when a user logs in.
- `radius-server retransmit` — sets the number of times the RADIUS server attempts to send information.
- `radius-server timeout` — sets the time interval before the RADIUS server times out.

### radius-server key

Configure a key for all RADIUS communications between the switch and the RADIUS host server.

**Syntax**

```
radius-server key [encryption-type] key
```

To delete a password, use the `no radius-server key` command.

**Parameters**

- **encryption-type** *(OPTIONAL)*: Enter either zero (0) or 7 as the encryption type for the key entered. The options are:
  - 0 is the default and means the key is not encrypted and stored as clear text.
  - 7 means that the key is encrypted and hidden.

- **key**: Enter a string that is the key to be exchanged between the switch and RADIUS servers. It can be up to 42 characters long.

**Defaults**

Not configured.

**Command Modes**

- CONFIGURATION

**Supported Modes**

- All Modes

<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

The key configured on the switch must match the key configured on the RADIUS server daemon.
If you configure the key parameter in the radius-server host command, the key configured with the radius-server key command is the default key for all RADIUS communications.

**Related Commands**

radius-server host — configures a RADIUS host.

---

### radius-server retransmit

Configure the number of times the switch attempts to connect with the configured RADIUS host server before declaring the RADIUS host server unreachable.

**Syntax**

radius-server retransmit retries

To configure zero retransmit attempts, use the no radius-server retransmit command.

To return to the default setting, use the radius-server retransmit 3 command.

**Parameters**

- **retries**
  
  Enter a number of attempts that Dell Networking Operating System (OS) tries to locate a RADIUS server. The range is from zero (0) to 100. The default is 3 retries.

**Defaults**

3 retries

**Related Commands**

radius-server host — configures a RADIUS host.

---

### radius-server timeout

To reply to a request, configure the amount of time the RADIUS client (the switch) waits for a RADIUS host server.

**Syntax**

radius-server timeout seconds

To return to the default value, use the no radius-server timeout command.

**Parameters**

- **seconds**
  
  Enter the number of seconds between an unsuccessful attempt and the radius-server timeout times out. The range is from zero (0) to 1000 seconds. The default is 5 seconds.

**Defaults**

5 seconds

Related Commands

radius-server host — configures a RADIUS host.

role

Changes command permissions for roles.

Syntax

```
role mode [(addrole | deleterole) role-name] [reset] command
```

To delete access to a command, use the no role mode role-name

Parameters

- **mode**
  Enter one of the following keywords as the mode for which you are controlling access:
  - configure for CONFIGURATION mode
  - exec for EXEC mode
  - interface for INTERFACE modes
  - line for LINE mode
  - route-map for Route-map mode
  - router for Router mode

- **addrole**
  Enter the keyword addrole to add permission to the command. You cannot add or delete rights for the sysadmin role.

- **deleterole**
  Enter the keyword deleterole to remove access to the command. You cannot add or delete rights for the sysadmin role.

- **role-name**
  Enter a text string for the name of the user role up to 63 characters. These are 3 system defined roles you can modify: secadmin, netadmin, and netoperator.

- **reset**
  Enter the keyword reset to reset all roles back to default for that command.

- **command**
  Enter the command's keywords to assign the command to a certain access level. You can enter one or more keywords.

Defaults

none

</table>
rate-limit

Configure NAS to allow or reject RADIUS dynamic authorization (DA) packets based on the configurable rate limit value.

Syntax

```
rate-limit packets per minute
```

To undo the configuration, enter the no rate-limit command.

Defaults

30 packets per minute.

Parameters

```
packet per minute
```
Enter the number of packets that you want processed per minute. The range is between 10 to 60 packets per minute.

Command Modes

- CONF-DYNAMIC-AUTH

Usage Information

- Packets are dropped after number of packets reaches the configured rate-limit.

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell EMC Networking OS Command Line Reference Guide.

The following is a list of the Dell EMC Networking OS version history for this command.

<table>

</tr>
</tbody>
</table>

replay-protection-window

Configure replay protection window period to drop the duplicate packets.

Syntax

```
replay-protection-window minutes
```

To undo the configuration, enter the no replay-protection-window command.

Defaults

5 Minutes.

Parameters

```
minutes
```
Enter the number of minutes to drop the packets. The range is from 1 to 10 minutes.

Command Modes

- CONF-DYNAMIC-AUTH
Usage Information

- Duplicate packets are dropped within replay-protection-window period if packet has same source IP address, source UDP port and identifier.

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell EMC Networking OS Command Line Reference Guide.

**terminate-session**

Configure NAS to reject dot1x terminate-session requests from DAC.

**Syntax**

```
.terminate-session
```

To drop the DM terminate-session requests from DAC, enter the `no terminate-session` command.

**Defaults**

Enabled.

**Command Modes**

- CONF-DYNAMIC-AUTH

**Command History**

## Suppressing AAA Accounting for Null Username Sessions

When you activate AAA accounting, the Dell Networking OS software issues accounting records for all users on the system, including users whose username string, because of protocol translation, is NULL. An example of this is a user who comes in on a line where the AAA authentication `login method-list none` command is applied. To prevent accounting records from being generated for sessions that do not have usernames associated with them, use the following command.

- Prevent accounting records from being generated for users whose username string is NULL.

CONFIGURATION mode

```conf
aaa accounting suppress null-username
```

## TACACS+ Commands

Dell Networking OS supports TACACS+ as an alternate method for login authentication.

### TACACS+ Accounting

Enable AAA Accounting and create a record for monitoring the accounting function.

**Syntax**

```conf
aaa accounting {system | exec | commands level} {name | default}{start-stop | wait-start | stop-only} {tacacs+}
```

To disable AAA Accounting, use the `no aaa accounting {system | exec | command level} {name | default}{start-stop | wait-start | stop-only} {tacacs+}` command

**Parameters**

- **system**
  - Enter the keyword system to send accounting information of any other AAA configuration.

- **exec**
  - Enter the keyword exec to send accounting information when a user has logged in to EXEC mode.

- **commands level**
  - Enter the keyword command then a privilege level for accounting of commands executed at that privilege level.

- **name | default**
  - Enter one of the following:
    - For name, enter a user-defined name of a list of accounting methods.
    - For default, the default accounting methods used.
**start-stop**

Enter the keywords `start-stop` to send a “start accounting” notice at the beginning of the requested event and a “stop accounting” notice at the end of the event.

**wait-start**

Enter the keywords `wait-start` to ensure that the TACACS+ security server acknowledges the start notice before granting the user’s process request.

**stop-only**

Enter the keywords `stop-only` to instruct the TACACS+ security server to send a “stop record accounting” notice at the end of the requested user process.

**tacacs+**

Enter the keyword `tacacs+` to use TACACS+ data for accounting.

Dell Networking OS currently only supports TACACS+ accounting.

**Defaults**  
None

**Command Modes**  
CONFIGURATION

**Usage Information**  
In the example above, TACACS+ accounting is used to track all usage of EXEC command and commands on privilege level 15. Privilege level 15 is the default. If you want to track usage at privilege level 1 for example, use the `aaa accounting command 1` command.

**Supported Modes**  
All Modes

</tr>
</tbody>
</table>

**debug tacacs+**

To assist with troubleshooting, view TACACS+ transactions.

**Syntax**

```
debug tacacs+
```

To disable debugging of TACACS+, use the `no debug tacacs+` command.

**Defaults**  
Disabled.

**Command Modes**  
EXEC Privilege

**Supported Modes**  
Full-Switch

**Command History**

ip tacacs source-interface

Specify an interface’s IP address as the source IP address for TACACS+ connections.

Syntax

```
ip tacacs source-interface interface
```

To delete a source interface, use the `no ip tacacs source-interface` command.

Parameters

- **interface**
  
  Enter the following keywords and slot/port or number information:
  
  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a ten-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

Defaults

Not configured.

</tbody>
</table>

---

tacacs-server host

Specify a TACACS+ host.

Syntax

```
tacacs-server host {hostname | ipv4-address | ipv6-address} [port number] [timeout seconds] [key key]
```

Parameters

- **hostname**
  
  Enter the name of the TACACS+ server host.

- **ipv4-address | ipv6-address**
  
  Enter the IPv4 address (A.B.C.D) or IPv6 address (X:XX:XX::X) of the TACACS+ server host.

- **port number**
  
  (OPTIONAL) Enter the keyword `port` then a number as the port to be used by the TACACS+ server. The range is from zero (0) to 65535. The default is 49.

- **timeout seconds**
  
  (OPTIONAL) Enter the keyword `timeout` then the number of seconds the switch waits for a reply from the TACACS+ server. The range is from 0 to 1000. The default is 10 seconds.
(OPTIONAL) Enter the keyword `key` then a string up to 42 characters long as the authentication key. This authentication key must match the key specified in the `tacacs-server key` for the TACACS+ daemon.

**Defaults**  
Not configured.

**Command Modes**  
CONFIGURATION

**Supported Modes**  
All Modes

**Command History**  

<table>
<thead>
<tr>

<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**  
To list multiple TACACS+ servers to be used by the `aaa authentication login` command, configure this command multiple times.

If you are not configuring the switch as a TACACS+ server, you do not need to configure the `port`, `timeout` and `key` optional parameters. If you do not configure a key, the key assigned in the `tacacs-server key` command is used.

**Related Commands**

- `aaa authentication login` — specifies the login authentication method.
- `tacacs-server key` — configures a TACACS+ key for the TACACS server.

---

**tacacs-server key**

Configure a key for communication between a TACACS+ server and a client.

**Syntax**

tacacs-server key [encryption-type] key

To delete a key, use the `no tacacs-server key key` command.

**Parameters**

- `encryption-type`  
  (OPTIONAL) Enter either zero (0) or 7 as the encryption type for the key entered. The options are:
  - 0 is the default and means the key is not encrypted and stored as clear text.
  - 7 means that the key is encrypted and hidden.

- `key`  
  Enter a text string, up to 42 characters long, as the clear text password. Leading spaces are ignored.

**Defaults**  
Not configured.

**Command Modes**  
CONFIGURATION

<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

The key configured with this command must match the key configured on the TACACS+ daemon.

**timeout login response**

Specify how long the software waits for the login input (for example, the user name and password) before timing out.

**Syntax**

```
timeout login response seconds
```

To return to the default values, use the `no timeout login response` command.

**Parameters**

- **seconds**
  - Enter a number of seconds the software waits before logging you out. The range is:
    - VTY: the range is from 1 to 30 seconds, the default is 30 seconds.
    - Console: the range is from 1 to 300 seconds, the default is 0 seconds (no timeout).
    - AUX: the range is from 1 to 300 seconds, the default is 0 seconds (no timeout).

**Defaults**

See the defaults settings shown in Parameters.

**Command Modes**

- LINE

**Supported Modes**

- All Modes

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

The software measures the period of inactivity defined in this command as the period between consecutive keystrokes. For example, if your password is “password” you can enter “p” and wait 29 seconds to enter the next letter.

**SSH Server and SCP Commands**

The Dell Networking OS supports secure shell (SSH) protocol versions 1.5 and 2.0. SSH is a protocol for secure remote login over an insecure network. SSH sessions are encrypted and use authentication.

**crypto key generate**

Generates keys for the SSH server.

**Syntax**

```
crypto key generate {rsa | rsal}
```
**Parameters**

- **rsa**
  Enter the keyword `rsa` then the key size to generate a SSHv2 RSA host keys. The range is from 1024 to 2048 if you did not enable FIPS mode; if you enabled FIPS mode, you can only generate a 2048-bit key. The default is **1024**.

- **rsa1**
  Enter the keyword `rsa1` then the key size to generate a SSHv1 RSA host keys. The range is from 1024 to 2048. The default is **1024**.

**Defaults**

Key size **1024**: if you enable FIPS mode, the key size is **2048**.

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

The host keys are required for key-exchange by the SSH server. If the keys are not found when you enable the server (`ip ssh server enable`), the keys are automatically generated.

This command requires user interaction and generates a prompt prior to overwriting any existing host keys.

- **NOTE:** Only a user with superuser permissions should generate host-keys.

**Example**

```plaintext
Dell(conf)#crypto key generate rsa
Enter key size <1024-2048>. Default<1024>  :
Host key already exists. Overwrite (y/n)?y
Generating 1024-bit SSHv2 RSA key.
Dell(conf)#
Dell(conf)#crypto key generate rsa1
Enter key size <1024-2048>. Default<1024>  :
Host key already exists. Overwrite (y/n)?y
Generating 1024-bit SSHv1 RSA key.
Dell(conf)#
```

**Related Commands**

- `ip ssh server` — enables the SSH server.
- `show crypto` — displays the SSH host public keys.

---

**debug ip ssh**

Enables collecting SSH debug information.

**Syntax**

```plaintext
debug ip ssh {client | server}
```

To disable debugging, use the `no debug ip ssh {client | server}` command.

**Parameters**

- **client**
  Enter the keyword `client` to enable collecting debug information on the client.

- **server**
  Enter the keyword `server` to enable collecting debug information on the server.

**Defaults**

Disabled on both client and server.

**Command Modes**

EXEC
Supported Modes: Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information: Debug information includes details for key-exchange, authentication, and established session for each connection.

**ip scp topdir**

Identify a location for files used in secure copy transfer.

Syntax: `ip scp topdir directory`

To return to the default setting, use the `no ip scp topdir` command.

Parameters:

- **directory**: Enter a directory name.

Defaults: The internal flash (flash:) is the default directory.

Command Modes: CONFIGURATION

Supported Modes: Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information: To configure the switch as an SCP server, use the `ip ssh server` command.

Related Commands: `ip ssh server` — enables the SSH and SCP server on the switch.

**ip ssh authentication-retries**

Configure the maximum number of attempts that should be used to authenticate a user.

Syntax: `ip ssh authentication-retries 1-10`

Parameters:

- **1-10**: Enter the number of maximum retries to authenticate a user. The range is from 1 to 10. The default is 3.

Defaults: 3

Command Modes: CONFIGURATION

Supported Modes: Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
</tbody>
</table>
Version Description
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information This command specifies the maximum number of attempts to authenticate a user on an SSH connection with the remote host for password authentication. SSH disconnects when the number of password failures exceeds authentication-retries.

ip ssh cipher

Configure the list of ciphers supported on both SSH client and SCP.

Syntax ip ssh cipher cipher-list

Parameters cipher cipher-list Enter the keyword cipher and then a space-delimited list of ciphers that the SSH client supports. The following ciphers are available.

- aes256-ctr
- aes256-cbc
- aes192-ctr
- aes192-cbc
- aes128-ctr
- aes128-cbc
- 3des-cbc

Defaults The default list of ciphers is in the order as shown below:

- aes256-ctr
- aes256-cbc
- aes192-ctr
- aes192-cbc
- aes128-ctr
- aes128-cbc
- 3des-cbc

Command Modes CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.10(0.0) Introduced on the S6100–ON, S6000, S6000–ON, S5000, S4810, S4820T, S3048–ON, S4048–ON, MXL, C9010, S3100 series, and Z9100–ON.

Usage Information
- You can select one or more ciphers from the list.
- The default list of supported ciphers is same irrespective of whether FIPS mode is enabled or disabled.
- Client-supported cipher list gets preference over the server-supported cipher list in selecting the cipher for the SSH session.
- When the cipher (-c) option is used with the SSH CLI, it overrides the configured or default cipher list.
When FIPS is enabled or disabled, the client ciphers get default configuration.

### ip ssh connection-rate-limit

Configure the maximum number of incoming SSH connections per minute.

**Syntax**

```
ip ssh connection-rate-limit 1-10
```

**Parameters**

- **1-10**
  
  Enter the number of maximum numbers of incoming SSH connections allowed per minute. The range is from 1 to 10 per minute. The default is **10 per minute**.

**Defaults**

**10 per minute**

**Command Modes**

- **CONFIGURATION**

**Supported Modes**

</tr>
</tbody>
</table>

### ip ssh hostbased-authentication

Enable hostbased-authentication for the SSHv2 server.

**Syntax**

```
ip ssh hostbased-authentication enable
```

To disable hostbased-authentication for SSHv2 server, use the `no ip ssh hostbased-authentication enable` command.

**Parameters**

- **enable**

  Enter the keyword `enable` to enable hostbased-authentication for SSHv2 server.

**Defaults**

Disabled.

**Command Modes**

- **CONFIGURATION**

**Supported Modes**

- Full-Switch

**Command History**

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MxL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

If you enable this command, clients can log in without a password prompt. This command provides two levels of authentication:

- rhost-authentication is done with the file specified in the `ip ssh rhostfile` command.
- checking client host-keys is done with the file specified in the `ip ssh pub-key-file` command.
NOTE: Administrators must specify the two files (`rhosts` and `pub-key-file`) to configure host-based authentication.

Related Commands
- `ip ssh pub-key-file` — public keys of trusted hosts from a file.
- `ip ssh rhostsfile` — trusted hosts and users for rhost authentication.

**ip ssh key-size**

Configure the size of the server-generated RSA SSHv1 key.

**Syntax**
```
ip ssh key-size 512-869
```

**Parameters**
- `512-869` Enter the key-size number for the server-generated RSA SSHv1 key. The range is from 512 to 869. The default is 768.

**Defaults**
- Key size 768

**Command Modes**
- CONFIGURATION

**Supported Modes**

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**
- The server-generated key is used for SSHv1 key-exchange.

**ip ssh mac**

Configure the list of MAC algorithms supported on both SSH client and SCP.

**Syntax**
```
ip ssh mac mac-list
```

**Parameters**
- `mac mac-list` Enter the keyword `mac` then a space-delimited list of message authentication code (MAC) algorithms supported by the SSH client. The following MAC algorithms are available.

When FIPS mode is enabled:
- `hmac-sha2-256`
- `hmac-shal`
- `hmac-shal-96`

When FIPS mode is disabled:
- `hmac-sha2-256`
- `hmac-shal`
- `hmac-shal-96`
- `hmac-md5`
Defaults

The default list of MAC algorithm is in the order as shown below:

When FIPS mode is enabled:

• hmac-sha2-256
• hmac-shal
• hmac-shal-96

When FIPS mode is disabled:

• hmac-sha2-256
• hmac-shal
• hmac-shal-96
• hmac-md5
• hmac-md5-96

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.10(0.0) Introduced on the S6100–ON, S6000, S6000–ON, S5000, S4810, S4820T, S3048–ON, S4048–ON, MXL, C9010, S3100 series, and Z9100-ON.

Usage Information

• You can select one or more MAC algorithms from the list.
• Client-supported MAC list gets preference over the server-supported MAC list in selecting the MAC algorithm for the SSH session.
• When the MAC (-m) option is used with the SSH CLI, it overrides the configured or default MAC list.
• When FIPS is enabled or disabled, the client MACs get default configuration.

ip ssh password-authentication

Enable password authentication for the SSH server.

Syntax

ip ssh password-authentication enable

To disable password-authentication, use the no ip ssh password-authentication enable command.

Parameters

enable Enter the keyword enable to enable password-authentication for the SSH server.

Defaults

Enabled

Command Modes

CONFIGURATION

Supported Modes

Full-Switch
**ip ssh rhostsfile**

Specify the rhost file used for host-based authorization.

**Syntax**

```markdown
ip ssh rhostsfile {WORD}
```

**Parameters**

- **WORD**
  
  Enter the rhost file name for the host-based authentication.

**Defaults**

none

**Command Modes**

</tr>
</tbody>
</table>

**Example**

```bash
Dell#conf
Dell(conf)# ip ssh rhostsfile flash://hosts
Dell(conf)#
```

**Usage Information**

This command specifies the rhost file used for host-based authentication. This creates/overwrites the flash://ADMIN_DIR/ssh/shosts file and deletes the user-specified file. Even though this command is a global configuration command, it does not appear in the running configuration because you only need to run this command once.

This file contains hostnames and usernames, for which hosts and users, rhost-authentication can be allowed.

**NOTE:** For rhostsfile and pub-key-file, the administrator must FTP the file to the switch.

**ip ssh rekey**

Configures the time rekey-interval or volume rekey-limit threshold at which to re-generate the SSH key during an SSH session.

**Syntax**

```bash
ip ssh rekey [time rekey-interval] [volume rekey-limit]
```

To reset to the default, use no ip ssh rekey [time rekey-interval] [volume rekey-limit] command.
**Parameters**

- **time minutes**
  
Enter the keywords `time` then the amount of time in minutes. The range is from 10 to 1440 minutes. The default is 60 minutes.

- **volume rekey-limit**
  
Enter the keywords `volume` then the amount of volume in megabytes. The range is from 1 to 4096 megabytes. The default is 1024 megabytes.

**Defaults**

The default time is 60 minutes. The default volume is 1024 megabytes.

- Full-Switch

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
<tr>
<td>9.5(0.0)</td>
<td>Introduced on the Z9000, S6000, S4820T, S4810, MXL</td>
</tr>
</tbody>
</table>

**ip ssh rsa-authentication (Config)**

Enable RSA authentication for the SSHv2 server.

**Syntax**

```
ip ssh rsa-authentication enable
```

To disable RSA authentication, use the `no ip ssh rsa-authentication enable` command.

**Parameters**

- **enable**
  
Enter the keyword `enable` to enable RSA authentication for the SSHv2 server.

**Defaults**

Disabled.

**Command Modes**

- CONFIGURATION

**Supported Modes**

- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

Enabling RSA authentication allows the user to log in without being prompted for a password. In addition, the OpenSSH compatible SSHv2 RSA public key must be added to the list of authorized keys (ip ssh rsa-authentication my-authorized-keys device://filename command).

**Related Commands**

- `ip ssh rsa-authentication (EXEC)` — adds keys for RSA authentication.
ip ssh rsa-authentication (EXEC)

Add keys for the RSA authentication.

Syntax

    ip ssh rsa-authentication {my-authorized-keys WORD}

To delete the authorized keys, use the no ip ssh rsa-authentication {my-authorized-keys} command.

Parameters

    my-authorized-keys WORD
    Enter the keywords my-authorized-keys then the filename of the RSA authorized-keys.

Defaults

    none

Command Modes

    EXEC

Supported Modes

    Full-Switch

Command History

    Version     Description
    9.9(0.0)    Introduced on the FN IOM.
    8.3.16.1    Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

    If you want to log in without being prompted for a password, log in through RSA authentication. To do that, first add the SSHv2 RSA public keys to the list of authorized keys. This command adds the specified RSA keys to the following file: flash://ADMIN_DIR/ssh/authorized-keys-username (where username is the user associated with this terminal).

    NOTE: The no form of this command deletes the file flash://ADMIN_DIR/ssh/authorized-keys-username file.

Related Commands

    show ip ssh rsa-authentication — displays the RSA authorized keys.

    ip ssh rsa-authentication (Config) — enables RSA authentication.

ip ssh server

Configure an SSH server.

Syntax

    ip ssh server {ciphers cipher-list} {enable | port port-number} [kex key-exchange-algorithm] [mac hmac-algorithm] [version {1 | 2}]

To disable SSH server functions, use the no ip ssh server {ciphers cipher-list} {enable | port port-number} [kex key-exchange-algorithm] command.

Parameters

    enable
    Enter the keyword enable to start the SSH server.

    ciphers cipher-list
    Enter the keyword ciphers and then a space-delimited list of ciphers that the SSH server supports. The following ciphers are available.
    - 3des-cbc
The default cipher list is used.

- aes128-cbc
- aes192-cbc
- aes256-cbc
- aes128-ctr
- aes192-ctr
- aes256-ctr

Enter the keyword `mac` then a space-delimited list of hash message authentication code (HMAC) algorithms supported by the SSH server for keying hashing for the message authentication.

The following HMAC algorithms are available:

- hmac-sha1
- hmac-sha1-96
- hmac-sha2-256

When FIPS is enabled, the default HMAC algorithm is `hmac-sha1-96`.

When FIPS is not enabled, the default HMAC algorithms are the following:

- hmac-md5
- hmac-md5-96
- hmac-sha1
- hmac-sha1-96
- hmac-sha2-256

Enter the keyword `kex` and then a space-delimited list of key exchange algorithms supported by the SSH server.

The following key exchange algorithms are available:

- diffie-hellman-group-exchange-shal
- diffie-hellman-group1-shal
- diffie-hellman-group14-shal

When FIPS is enabled, the default key-exchange-algorithm is `diffie-hellman-group14-shal`. 
When FIPS is not enabled, the default key-exchange-algorithms are the following:

- diffie-hellman-group-exchange-sha1
- diffie-hellman-group1-sha1,
- diffie-hellman-group14-sha1

port port-number

(Optional) Enter the keyword port then the port number of the listening port of the SSH server. The range is from 1 to 65535. The default is 22.

[version (1 | 2)]

(Optional) Enter the keyword version then the SSH version 1 or 2 to specify only SSHv1 or SSHv2.

NOTE: If you enable FIPS mode, you can only select version 2.

Defaults

Default listening port is 22.

Command Modes

<tr>
<td>9.5(0.0)</td>
<td>Introduced the cipher, kex and mac options on the MXL 10/40GbE Switch.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IOModule.</td>
</tr>
</tbody>
</table>

Usage Information

This command enables the SSH server and begins listening on a port. If a port is not specified, listening is on SSH default port 22.

NOTE: Starting with Dell Networking OS Release 9.2(0.0), SSH server is enabled by default.

Example

```
Dell(conf)# ip ssh server port 45
Dell(conf)# ip ssh server enable
Dell#
```

Related Commands

- `show ip ssh` — displays the ssh information.

**show crypto**

Displays the public part of the SSH host-keys.

**Syntax**

```
show crypto key mypubkey {rsa | rsal}
```

**Parameters**

- **Key**
  - Enter the keyword key to display the host public key.
- **mypubkey**
  - Enter the keyword mypubkey to display the host public key.
- **rsa**
  - Enter the keyword rsa to display the host SSHv2 RSA public key.
- **rsal**
  - Enter the keyword rsal to display the host SSHv1 RSA public key.

**Defaults**

none

**Command Modes**

EXEC
show ip ssh

Display information about established SSH sessions.

Syntax
show ip ssh

Command Modes
- EXEC
- EXEC Privilege

Version Description
9.9(0.0) Introduced on the FN IOM.
9.4(0.0) Supported on the FN I/O Aggregator.
8.3.17.0 Supported on the M I/O Aggregator.

Usage Information
This command displays the contents of the flash://ADMIN_DIRssh/knownhosts file.

Example
Dell#show ip ssh client-pub-keys
poclub4,123.12.1.123 ssh-rsa AAAAB3NzaC1yc2EAAAABIwAAAIEAox/QQp8xYhzOxn07yh4VGPAsUfgKoleTH09G4sNV+ui +DWEc3cgYAcUSlaiMU2ODrzhcWyDnp05tKBU3tReGl/08AxLi6+S4hyEMgHzkzBFNVqHzpQc +Rs4p2urzVF4pRknaXdhf3Lk4D460HZRrhVrxqeNxDpEnWIMPJi0 ds= ashwani@poclub4
Dell#

show ip ssh rsa-authentication
Displays the authorized-keys for the RSA authentication.

Syntax
show ip ssh rsa-authentication {my-authorized-keys}

Parameters
my-authorized-keys Display the RSA authorized keys.
show role

Display information on permissions assigned to a command, including user role and/or permission level.

Syntax

```
show role mode {mode} {command}
```

Parameters

- **command**: Enter the command’s keywords to assign the command to a certain access level. You can enter one or all of the keywords.
- **mode mode**: Enter keyword then one of the following modes.
  - configure
  - exec
  - interface
  - line
  - route-map
  - router

Defaults

none

Command Modes

EXEC Privilege

9.5(0.0) Introduced on the Z9000, S6000, S4820T, S4810, MXL.

Related Commands
userrole — creates user roles for the role-based security model.

ssh

Open an SSH connection specifying the host name, username, port number and version of the SSH client.

Dell Networking OS supports both inbound and outbound SSH sessions using IPv4 addressing. Inbound SSH supports accessing the system through the management interface as well as through a physical Layer 3 interface.

Syntax

ssh {hostname | ipv4 address} [-l username | -p port-number | -v {1|2}]

Parameters

hostname (OPTIONAL) Enter the IP address or the host name of the remote device.
ipv4 address (OPTIONAL) Enter the IP address in dotted decimal format A.B.C.D.
-l username (OPTIONAL) Enter the keyword -l followed by the user name used in this SSH session. The default is the user name of the user associated with the terminal.
-p port-number  (OPTIONAL) Enter the keyword -p followed by the port number. The range is from 1 to 65536. The default is 22.

-v (1 | 2)  (OPTIONAL) Enter the keyword -v then the SSH version 1 or 2. The default is the version from the protocol negotiation.

Defaults
As shown in the Parameters section.

Command Modes
EXEC Privilege

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command specifies the file used for the host-based authentication. The creates/ file overwrites the flash://ADMIN_DIR/ssh/knownhosts file and deletes the user-specified file. Even though this command is a global configuration command, it does not appear in the running configuration because you only need to run this command once.

The file contains the OpenSSH-compatible public keys of the host for which host-based authentication is allowed. An example known host file format:

```
poclab4,123.12.1.123 ssh-rsa AAAAB3NzaC1yc2EAAAABIwAAAIEAcx/QQp8xYhzOxn07yh4VGPAC0fKoleTHO9G4sNV+ui+DWEc3cgYAcU5La1MU2DzhrCwyDNp05tKBu3tReGlo8AxLi6+S4hyEMqHzkzBFNVqHzpQc +Rs4p2urzV0F4pRKnaxh5f3Lk4D460HZRhVrxqeNxDpEn WIMPJi0ds= ashwani@poclab4
```
NOTE: For rhostfile and pub-key-file, the administrator must FTP the file to the chassis.

Example

Dell#conf
Dell(conf)# ip ssh pub-key-file flash://knownhosts
Dell(conf)#

Related Commands show ip ssh client-pub-keys — displays the client-public keys used for the host-based authentication.

Secure DHCP Commands

The dynamic host configuration protocol (DHCP) as defined by RFC 2131 provides no authentication or security mechanisms. Secure DHCP is a suite of features that protects networks that use dynamic address allocation from spoofing and attacks.

clear ip dhcp snooping

Clear the DHCP binding table.

Syntax

clear ip dhcp snooping binding

Defaults

none

Command Modes

ip dhcp snooping binding

Create a static entry in the DHCP binding table.

Syntax

[no] ip dhcp snooping binding mac address vlan-id vlan-id ip ip-address interface type slot/port lease number
Parameters

- **mac address**: Enter the keyword `mac` then the MAC address of the host to which the server is leasing the IP address.
- **vlan-id vlan-id**: Enter the keywords `vlan-id` then the VLAN to which the host belongs. The range is from 2 to 4094.
- **ip ip-address**: Enter the keyword `ip` then the IP address that the server is leasing.
- **interface type**: Enter the keyword `interface` then the type of interface to which the host is connected.
  - For a ten-Gigabit Ethernet interface, enter the keyword `tengigabitethernet`.
- **slot/port**: Enter the slot and port number of the interface.
- **lease time**: Enter the keyword `lease` then the amount of time the IP address is leased. The range is from 1 to 4294967295.

Related Commands

clear ip dhcp snooping — clears the contents of the DHCP binding table.

**username**

Establish an authentication system based on user names.

Syntax

```
username name [nopassword | {password | secret} [encryption-type] password] [privilege level]
```

If you do not want a specific user to enter a password, use the nopassword option.

To delete authentication for a user, use the no username name command.

Parameters

- **name**: Enter a text string for the name of the user up to 63 characters.
- **nopassword**: Enter the keyword nopassword to specify that the user should not enter a password.
- **password**: Enter the keyword password followed by the encryption-type or the password.
- **secret**: Enter the keyword secret followed by the encryption-type or the password.
- **encryption-type**: Enter an encryption type for the password that you enter.

- 0 directs Dell Networking OS to store the password as clear text. It is the default encryption type when using the password option.
• 7 to indicate that a password encrypted using a DES hashing algorithm follows. This encryption type is available with the password option only.
• 5 to indicate that a password encrypted using an MD5 hashing algorithm follow. This encryption type is available with the secret option only, and is the default encryption type for this option.

**password**
Enter a string up to 32 characters long.

**privilege level**
Enter the keyword privilege then a number from zero (0) to 15.

**secret**
Enter the keyword secret then the encryption type.

**Defaults**
The default encryption type for the password option is 0. The default encryption type for the secret option is 0.

</tbody>
</table>

**Usage Information**
To view the defined user names, use the show running-config user command.

**Related Commands**

- service password-encryption — specifies a password for users on terminal lines.
- show running-config — views the current configuration.

### userrole

Create user roles for the role-based security model.

**Syntax**

userrole name inherit existing-role-name

To delete a role name, use the no userrole name command. Note that the reserved role names may not be deleted.

**Parameters**

- **name**
  - Enter a text string for the name of the user up to 63 characters. It cannot be one of the system defined roles (sysadmin, secadmin, netadmin, netoperator).

- **inherit existing-role-name**
  - Enter the inherit keyword then specify the system defined role to inherit permissions from (sysadmin, secadmin, netadmin, netoperator).

**Defaults**
none

</tr>
</tbody>
</table>
Version | Description
--- | ---
9.5(0.0) | Introduced on the Z9000, S6000, S4820T, S4810, MXL.

Usage Information

Instead of using the system defined user roles, you can create a new user role that best matches your organization. When you create a new user role, you first inherit permissions from one of the system defined roles. Otherwise you would have to create a user role from scratch. You then restrict commands or add commands to that role. For information about this topic, See Modifying Command Permissions for Roles.

NOTE: You can change user role permissions on system pre-defined user roles or user-defined user roles.

Important Points to Remember

Consider the following when creating a user role:

- Only the system administrator and user-defined roles inherited from the system administrator can create roles and usernames. Only the system administrator, security administrator, and roles inherited from these can use the role command to modify command permissions. The security administrator and roles inherited by security administrator can only modify permissions for commands they already have access to.
- Make sure you select the correct role you want to inherit.

NOTE: If you inherit a user role, you cannot modify or delete the inheritance. If you want to change or remove the inheritance, delete the user role and create it again. If the user role is in use, you cannot delete the user role.

Related Commands

`role mode { { addrole | deleterole } role-name } | reset } command – Modifies (adds or deletes) command permissions for newly created user roles and system defined roles.

ICMP Vulnerabilities

The Internet Control Message Protocol (ICMP) is a network-layer internet protocol that provides message packets to report errors and other information regarding IP packet processing back to the source. Dell Networking OS mainly addresses the following ICMP vulnerabilities:

- ICMP Mask Reply
- ICMP Timestamp Request
- ICMP Replies
- IP ID Values Randomness

You can configure the Dell Networking OS to drop ICMP reply messages. When you configure the `drop icmp` command, the system drops the ICMP reply messages from the front end and management interfaces. By default, the Dell Networking OS responds to all the ICMP messages. The Dell Networking OS suppresses the following ICMPv4 and ICMPv6 message types:

**Table 4. Suppressed ICMPv4 message types**

<table>
<thead>

ICMPv4 Message Types

Router solicitation (10)
Time exceeded (11)
IP header bad (12)
Timestamp request (13)
Timestamp reply (14)
Information request (15)
Information reply (16)
Address mask request (17)
Address mask reply (18)

NOTE: The Dell Networking OS does not suppress the ICMPv4 message type Echo request (8).

Table 5. Suppressed ICMPv6 message types

ICMPv6 Message Types

Destination unreachable (1)
Time exceeded (3)
IPv6 header bad (4)
Echo reply (129)
Who are you request (139)
Who are you reply (140)
Mtrace response (200)
Mtrace messages (201)

NOTE:
The Dell Networking OS does not suppress the following ICMPv6 message types:

- Packet too big (2)
- Echo request (128)
- Multicast listener query (130)
- Multicast listener report (131)
- Multicast listener done (132)
- Router solicitation (133)
- Router advertisement (134)
- Neighbor solicitation (135)
- Neighbor advertisement (136)
- Redirect (137)
- Router renumbering (138)
- MLD v2 listener report (143)
- Duplicate Address Request (157)
- Duplicate Address Confirmation (158)
drop icmp

Drops the ICMPv4 and ICMPv6 packets.

Syntax

drop {icmp | icmp6}

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

Version Description

9.11.0.0 Introduced on the S4810, S4820T, S3048–ON, S3100 Series, S4048–ON, S5000, S6000, S6000–ON, Z9500, Z9100–ON, S6100–ON, S6010–ON, S4048T–ON, C9000, M IOA, FN IOM, and MXL.

Usage Information

When the drop icmp feature is configured, the system drops the ICMP reply messages on the front end and management interfaces. By default, the Dell Networking OS responds to all the ICMP messages.

NOTE: There is no separate CLI to enable IP ID randomness. By default, the IP ID in the kernel is randomized.

System Security Commands

The following section lists the system security commands.

generate hash

Generate a hash checksum for the given file or the startup configuration using the MD5, SHA1, or SHA256 algorithm.

Syntax

generate hash {md5 | sha1 | sha256} {flash://filename | startup-config}

Parameters

md5 | sha1 | sha256 Enter the keyword md5, sha1, or sha256 to generate.
flash://filename Enter the keyword flash:// and enter the filename to generate the hash checksum for any file in the flash drive using the MD5, SHA1, or SHA256 algorithm.
startup-config Enter the keyword startup-config to generate the hash checksum for the startup configuration using the MD5, SHA1, or SHA256 algorithm.

Defaults

None

Command Modes

EXEC Privilege

Command History

Version Description

9.13(0.0) Introduced on the S3100 series, S3048–ON, S4048–ON, S4048T-ON, S5000, S6000, S6000–ON, S6100–ON, S6010–ON, S4048T–ON, C9000, M IOA, FN IOM, and MXL.
Usage Information

Use the generate hash command to generate a hash checksum for your startup configuration, and use the hash to verify using the verified boot hash command.

Example

DellEMC#generate hash md5 startup-config
MD5SUM(/f10/flash/startup-config) : f81812a64eea202c5b2ef782639bafc3

root-access password

Configure the root access password.

Syntax

root-access password [encryption-type] root-password

To reset to the default password, use the no root-access password command.

Parameters

- **encryption-type** (OPTOINAL) Enter an encryption type for the root password that you enter.
  - 0 directs the system to store the password as clear text.
  - 7 directs the system to store the password with a dynamic salt.
  - 9 directs the system to store the password as clear text in an inaccessible location.

- **root-password** Enter the root password.

Defaults

Not configured

Command Modes

Full-Switch

Command History

- **Version 9.13(0.0)**
  - Introduced on the S3100 series, S3048–ON, S4048–ON, S4048T-ON, S5000, S6000, S6000–ON, S6010–ON, S6100–ON, Z9100–ON, Z9500, C9010, MXL, and FN-IOM.

Usage Information

If you configure the secure-cli command on the system, the Dell EMC Networking OS resets any previously-configured root access password to the default root password without displaying any warning message. With the secure-cli command enabled on the system, the CONFIGURATION mode does not display the root access password option.

When you configure the root access password, ensure that your password meets the following criteria:

- A minimum of eight characters in length
- A minimum of one lower case letter (a to z)
- A minimum of one upper case letter (A to Z)
- A minimum of one numeric character (0 to 9)
- A minimum of one special character including a space ("!"#$%&'()*+,-./:;<=>?@[\]^`{|}~")

If your password does not meet the criteria, the system does not accept your password.

If you use encryption type 9, the system stores the clear text password in an inaccessible location on the system. The show running-configuration command does not display the password. This configuration is not portable between different systems.
Example
DellEMC)# show running-config | g root
root-access password 7
f4dc0cb9787722dd1084d17f417f164cc7f730d4f03d4f0215294cbd899614e3

**verified boot**

Enable OS image hash validation during system startup.

**Syntax**

```
verified boot
```

To disable OS image hash validation, use the `no verified boot` command.

**Defaults**
Not configured

**Command Modes**
CONFIGURATION

**Command History**

<table>
<thead>
<tr>

<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.13(0.0)</td>
<td>Introduced on the S3100 series, S3048–ON, S4048–ON, S4048T-ON, S5000, S6000, S6000–ON, S6010–ON, S6100–ON, Z9100–ON, Z9500, C9010, MXL, and FN-IOM.</td>
</tr>
</tbody>
</table>

**Usage Information**
When you reboot the system using the `reload` command, the system performs OS image verification on the primary boot image. You can enable boot image hash validation only for images on local flash partitions such as A: or B:.

**Example**
DellEMC(config)# verified boot

---

**verified boot hash**

Verify and store the hash value of the startup configuration.

**Syntax**

```
verified boot hash {system-image {A: | B:} | startup-config} hash value
```

**Parameters**

- `system-image {A: | B:}`: Enter the keyword `system-image` and A: or B:, depending on where the image is stored and then the hash value that is present on the iSupport page for your image.
- `startup-config`: Enter the keyword `startup-config` and then the hash value for the startup configuration. You can get the hash value for the startup configuration using the `generate hash` command.
- `hash value`: Enter the MD5, SHA1, or SHA256 hash.

**Defaults**
None

**Command Modes**
EXEC Privilege

**Command History**

</tr>
</tbody>
</table>
Usage Information

Dell EMC Networking OS supports MD5, SHA1, and SHA256.

Example

DellEMC# verified boot hash system-image A: 619A8C1B7A2BC9692A221E2151B9DA9E

verified startup-config

Enable hash validation for the startup configuration during system startup.

Syntax

verified startup-config

To disable hash validation for the startup configuration, use the no verified startup-config command.

Defaults

Not configured

Command Modes

Full-Switch

Command History

Version Description
9.13(0.0) Introduced on the S3100 series, S3048–ON, S4048–ON, S4048T-ON, S5000, S6000, S6000–ON, S6010–ON, S6100–ON, Z9100–ON, Z9500, C9010, MXL, and FN-IOM.

Example

DellEMC(config)# verified startup-config
sFlow monitoring system includes an sFlow Agent and an sFlow Collector.

- The sFlow Agent combines the flow samples and interface counters into sFlow datagrams and forwards them to the sFlow Collector.
- The sFlow Collector analyses the sFlow Datagrams received from the different devices and produces a network-wide view of traffic flows.

### Important Points to Remember

- Dell Networking OS recommends that the sFlow Collector be connected to the Dell Networking chassis through a line card port rather than the route processor module (RPM) Management Ethernet port.
- The system exports all sFlow packets to the sFlow Collector. A small sampling rate can equate to many exported packets. A backoff mechanism is automatically applied to reduce this amount. Some sampled packets may be dropped when the exported packet rate is high and the backoff mechanism is about to or is starting to take effect. The dropEvent counter, in the sFlow packet, is always zero.
- sFlow sampling is done on a per-port basis.
- Community list and local preference fields are not filled up in the extended gateway element in the sFlow datagram.
- The 802.1P source priority field is not filled up in the extended switch element in the sFlow datagram.
- Only Destination and Destination Peer AS numbers are packed in the dst-as-path field in the extended gateway element.
- If the packet being sampled is redirected using policy-based routing (PBR), the sFlow datagram may contain incorrect extended gateway/router information.
- The source virtual local area network (VLAN) field in the extended switch element is not packed if there is a routed packet.
- The destination VLAN field in the extended switch element is not packed if there is a multicast packet.
- The maximum number of packets that can be sampled and processed per second is:
  - 7500 packets when no extended information packing is enabled.
  - 7500 packets when only extended-switch information packing is enabled (refer to `sflow extended-switch enable`).
  - 1600 packets when you enable extended-router and/or extended-gateway information packing.

### Topics:

- `sflow collector`
- `sflow enable (Global)`
- `sflow ingress-enable`
- `sflow extended-switch enable`
- `sflow max-header-size extended`
- `sflow polling-interval (Global)`
- `sflow polling-interval (Interface)`
- `sflow sample-rate (Global)`
- `sflow sample-rate (Interface)`
- `show sflow`
- `show sflow stack-unit`
sflow collector

Configure a collector device to which sFlow datagrams are forwarded.

Syntax

sflow collector {ip-address} agent-addr {ip-address} [number [max-datagram-size number]] | [max-datagram-size number]

To delete a configured collector, use the no sflow collector {ip-address} agent-addr {ipv4-address} [number [max-datagram-size number]] | [max-datagram-size number] command.

Parameters

- **sflow collector ip-address**: Enter the IPv4 (A.B.C.D) of the sFlow collector device.
- **agent-addr ip-address**: Enter the IPv4 (A.B.C.D) of the sFlow agent in the router.
- **number**: (OPTIONAL) Enter the user datagram protocol (UDP) port number. The range is from 0 to 65535. The default is 6343.
- **max-datagram-size number**: (OPTIONAL) Enter the keyword max-datagram-size then the size number in bytes. The range is from 400 to 1500. The default is 1400.

Defaults

Not configured.

Command Modes

<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

You can configure up to two sFlow collectors (IPv4 or IPv6). If two collectors are configured, traffic samples are sent to both.

The sFlow agent address is carried in a field in SFlow packets and is used by the collector to identify the sFlow agent.

In sFlow, the agent address is a single invariant IPv4 or IPv6 address used to identify the agent to the collector. It is usually assigned the address of a loopback interface on the agent, which provides invariance. The agent address is carried as a field in the payload of the sFlow packets.

As part of the sFlow-MIB, if the SNMP request originates from a configured collector, the system returns the corresponding configured agent IP in the MIB requests. The system checks to ensure that two entries are not configured for the same collector IP with a different agent IP. Should that happen, the system generates the following error: %Error: Different agent-addr attempted for an existing collector.
sflow enable (Global)

Enable sFlow globally.

Syntax
sflow enable

To disable sFlow, use the no sflow enable command.

Defaults
Disabled.

Command Modes
CONFIGURATION

Supported Modes
Full-Switch Mode

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3(16.1)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information
sFlow is disabled by default. In addition to this command, you must enable sFlow on individual interfaces where you want sFlow sampling.

Related Commands
sflow enable (Global) — enables sFlow on interfaces.

sflow ingress-enable

Enable sFlow ingress on interfaces.

Syntax
sflow ingress-enable

To disable sFlow, use the no sflow ingress enable command.

Defaults
Disabled.

Command Modes
INTERFACE

Supported Modes
Full-Switch Mode

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the MXL switch.</td>
</tr>
</tbody>
</table>

Usage Information
When you enable ingress sFlow on an interface, flow sampling is done on any incoming traffic.

**NOTE:** After a physical port is a member of a LAG, it inherits the sFlow configuration from the LAG port.

Related Commands
sflow enable (Global) — turns sFlow globally.
sflow extended-switch enable

Enable packing information on a switch only.

Syntax
sflow extended-switch enable
To disable packing information, use the no sflow extended-switch [enable] command.

Parameters
enable
Enter the keyword enable to enable global extended information.

Defaults
Disabled.

Command Modes
CONFIGURATION

Supported Modes
Full-Switch Mode

Command History

<table>
<thead>
<tr>

<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information
The Dell Networking OS version 7.8.1.0 and later enhances the sflow implementation for real time traffic analysis to provide extended gateway information in cases where the destination IP addresses are learned by different routing protocols and for cases where the destination is reachable over ECMP.

Related Commands
show sflow — displays the sFlow configuration.

sflow max-header-size extended

Set the maximum header size of a packet to 256 bytes.

Syntax
sflow max-header-size extended
To reset the maximum header size of a packet, use the [no] sflow max-header-size extended command.

Parameters
extended
Enter the keyword extended to copy 256 bytes from the sample packets to sFlow datagram.

Defaults
128 bytes

Command Modes
CONFIGURATION

INTERFACE

Full-Switch Mode

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.
### sflow polling-interval (Global)

Set the sFlow polling interval at a global level.

**Syntax**

```
sflow polling-interval interval value
```

To return to the default, use the `no sflow polling-interval interval` command.

**Parameters**

- `interval value`: Enter the interval value in seconds. The range is from 15 to 86400 seconds. The default is 20 seconds.

**Defaults**

- `20 seconds`

**Command Modes**

- `CONFIGURATION`

**Supported Modes**

- Full-Switch Mode

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

The polling interval for an interface is the maximum number of seconds between successive samples of counters sent to the collector. This command changes the global default counter polling (20 seconds) interval. You can configure an interface to use a different polling interval.

### sflow polling-interval (Interface)

Set the sFlow polling interval at an interface (overrides the global-level setting).

**Syntax**

```
sflow polling-interval interval value
```

To return to the default, use the `no sflow polling-interval interval` command.

**Parameters**

- `interval value`: Enter the interval value in seconds. The range is from 15 to 86400 seconds. The default is the global counter polling interval.

**Defaults**

The same value as the current global default counter polling interval.

**Command Modes**

- `INTERFACE`

**Supported Modes**

- Full-Switch Mode

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
</tbody>
</table>
Usage Information

This command sets the counter polling interval for an interface.

Related Commands

sflow polling-interval (Global) — globally sets the polling interval.

sflow sample-rate (Global)

Change the global default sampling rate.

Syntax

sflow sample-rate value

To return to the default sampling rate, use the no sflow sample-rate command.

Parameters

value

Enter the sampling rate value. The range is from 256 to 8388608 packets. Enter values in powers of 2 only; for example, 4096, 8192, 16384, and so on. The default is 32768 packets.

Defaults

32768 packets

Command Modes

CONFIGURATION

Supported Modes

Full-Switch Mode

Command History

Version Description

9.9(0.0) Introduced on the FN IOM.

8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

Sample-rate is the average number of packets skipped before the sample is taken. This command changes the global default sampling rate. You can configure an interface to use a different sampling rate than the global sampling rate. If the value entered is not a correct power of 2, the command generates an error message with the previous and next power of 2 value. Select one of these two packet numbers and re-enter the command.

Related Commands

sflow sample-rate (Interface) — changes the interface sampling rate.

sflow sample-rate (Interface)

Change the interface default sampling rate.

Syntax

sflow sample-rate value

To return to the default sampling rate, use the no sflow sample-rate command.

Parameters

value

Enter the sampling rate value. The range is from 256 to 8388608 packets. Enter values in powers of 2 only; for example, 4096, 8192, and 16384. The default is the Global default sampling.

Defaults

The Global default sampling.

Command Modes

CONFIGURATION

Supported Modes

Full-Switch Mode
show sflow

Display the current sFlow configuration.

Syntax

```
show sflow [interface]
```

Parameters

- **interface** (OPTIONAL) Enter the following keywords and slot/port or number information:
  - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

Full-Switch Mode

Command History

- **Version**
  - 9.9(0.0) Introduced on the FN IOM.
  - 8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

The dropEvent counter (sFlow samples dropped due to sub-sampling) shown in the following example always displays a value of zero.

Example

```
Dell#show sflow
sFlow services are enabled
Egress Management Interface sFlow services are disabled
Global default sampling rate: 2048
Global default counter polling interval: 20
Global extended information enabled: none
0 collectors configured
0 UDP packets exported
0 UDP packets dropped
0 sFlow samples collected

stack-unit 0 Port set 0
  Te 0/1: configured rate 256, actual rate 256
Dell#
```

Dell#show running-config sflow

---

Related Commands:
- `sflow sample-rate (Global)` — changes the sampling rate globally.
show sflow stack-unit

Display the sFlow information on a stack unit.

**Syntax**

```
show sflow stack-unit {unit number}
```

**Parameters**

- **unit number** *(OPTIONAL) Enter a unit number to view information on the stack unit in that slot. The range is from 0 to 5.*

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

Full-Switch Mode

**Command History**

<table>

</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

The dropEvent counter (sFlow samples dropped due to sub-sampling) shown in the following example below always displays a value of zero.

**Example**

Dell#show sflow stack-unit 1
Stack-Unit 1
  Samples rcvd from h/w :0
  Total UDP packets exported :0
  UDP packets dropped :0
Dell#
Service Provider Bridging

Service provider bridging is composed of virtual local area network (VLAN) Stacking, Layer 2 Protocol Tunneling, and Provider Backbone Bridging as described in the Dell Networking OS Configuration Guide.

This chapter includes commands for the Dell Networking operating software Layer 2 Protocol Tunneling (L2PT). L2PT enables protocols to tunnel through an 802.1q tunnel.

For more information, see VLAN Stacking, Spanning Tree Protocol (STP), and GARP VLAN Registration (GVRP).

Important Points to Remember

- L2PT is enabled at the interface VLAN-Stack VLAN level. For more information about Stackable VLAN (VLAN-Stacking) commands, see VLAN Stacking.
- The default behavior is to disable protocol packet tunneling through the 802.1q tunnel.
- Rate-limiting is required to protect against bridge protocol data units (BPDU) attacks.
- A port channel (including through link aggregation control protocol [LACP]) can be configured as a VLAN-Stack access or trunk port.
- Address resolution protocol (ARP) packets work as expected across the tunnel.
- Far-end failure detection (FEFD) works the same as with Layer 2 links.
- Protocols that use Multicast MAC addresses (for example, open shortest path first [OSPF]) work as expected and carry over to the other end of the VLAN-Stack VLAN.

Topics:

- debug protocol-tunnel
- protocol-tunnel
- protocol-tunnel destination-mac
- protocol-tunnel enable
- protocol-tunnel rate-limit
- show protocol-tunnel

debug protocol-tunnel

Enable debugging to ensure incoming packets are received and rewritten to a new MAC address.

Syntax

deploy protocol-tunnel interface {in | out | both} [vlan vlan-id] [count value]

To disable debugging, use the no debug protocol-tunnel interface {in | out | both} [vlan vlan-id] [count value] command.

Parameters

- interface Enter one of the following interfaces and slot/port information:
  - For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

- `in`, `out`, or `both` Enter the keyword `in`, `out`, or `both` to debug incoming interfaces, outgoing interfaces, or both incoming and outgoing interfaces.

- `vlan vlan-id` Enter the keyword `vlan` then the VLAN ID. The range is from 1 to 4094.

- `count value` Enter the keyword `count` then the number of debug outputs. The range is from 1 to 100.

**Defaults**
Debug disabled.

**Command Modes**
EXEC Privilege

**Supported Modes**
Full-Switch Mode

**Command History**

<table>

</tr>
</tbody>
</table>

### protocol-tunnel

Enable protocol tunneling on a stacked (Q-in-Q) VLAN for specified protocol packets.

**Syntax**

```
protocol-tunnel {rate-limit rate | stp}
```

To disable protocol tunneling for a Layer 2 protocol, use the `no protocol-tunnel` command.

**Parameters**

- `rate-limit rate` Enter the keyword `rate-limit` then a number for the rate-limit for tunneled packets on the VMAN. The range is from 64 to 320.

- `stp` Enter the keyword `stp` to enable protocol tunneling on a spanning tree, including STP, MSTP, RSTP, and PVST.

**Defaults**
none

**Command Modes**
CONF-IF-VLAN

**Supported Modes**
Full-Switch Mode

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>

<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell#conf
Dell(conf)#interface vlan 2
Dell(conf-if-vl-2)#vlan-stack compatible
Dell(conf-if-vl-2)#member Ten1/2-3
Dell(conf-if-vl-2)#protocol-tunnel stp
Dell(conf-if-vl-2)#protocol-tunnel enable
```

**Related Command**

`show protocol-tunnel` — displays tunneling information for all VLANs.
**protocol-tunnel destination-mac**

Overwrite the BPDU destination MAC address with a specific value.

**Syntax**

```plaintext
protocol-tunnel destination-mac xstp address
```

**Parameters**

- **stp**
  
  Change the default destination MAC address used for L2PT to another value.

**Defaults**

The default destination MAC is 01:01:e8:00:00:00.

**Command Modes**

<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

When you enable VLAN-Stacking, no protocol packets are tunneled.

**Related Command**

- `show protocol-tunnel` — displays tunneling information for all VLANs.

**protocol-tunnel enable**

Enable protocol tunneling globally on the system.

**Syntax**

```plaintext
protocol-tunnel enable
```

To disable protocol tunneling, use the `no protocol-tunnel enable` command.

**Defaults**

Disabled.

</table>

**Usage Information**

The system must have the default CAM profile with the default microcode before you enable L2PT.

**protocol-tunnel rate-limit**

Enable traffic rate limiting per box.

**Syntax**

```plaintext
protocol-tunnel rate-limit rate
```

To reset the rate limit to the default, use the `no protocol-tunnel rate-limit rate` command.
**Parameters**

rate

Enter the rate in frames per second. The range is from 75 to 3000. The default is 75.

**Defaults**

75 frames per second.

**Related Commands**

- `show protocol-tunnel` — displays tunneling information for all VLANs.
- `show running-config` — displays the current configuration.

### show protocol-tunnel

Display protocol tunnel information for all or a specified VLAN-Stack VLAN.

**Syntax**

show protocol-tunnel [vlan vlan-id]

**Parameters**

- **vlan vlan-id**
  
  (OPTIONAL) Enter the keyword `vlan` then the VLAN ID to display information for the one VLAN. The range is from 1 to 4094.

**Defaults**

none

**Command Modes**

EXEC

**Supported Modes**

**Related Commands**  
`show running-config` — displays the current configuration.
This chapter contains commands to configure and monitor the simple network management protocol (SNMP) v1/v2/v3 and Syslog.

The chapter contains the following sections:

- SNMP Commands
- Syslog Commands

Topics:

- SNMP Commands
- clear logging auditlog
- show snmp
- show snmp engineID
- show snmp group
- show snmp user
- snmp context
- snmp ifmib ifalias long
- snmp-server community
- snmp-server contact
- snmp-server enable traps
- snmp-server engineID
- snmp-server group
- snmp-server host
- snmp-server location
- snmp-server packetsize
- snmp-server trap-source
- snmp-server user
- snmp-server user (for AES128-CFB Encryption)
- snmp-server view
- snmp trap link-status
- Syslog Commands
- clear logging
- default logging buffered
- default logging console
- logging extended
- default logging monitor
- default logging trap
- logging
- logging buffered
SNMP Commands

The following SNMP commands are available in the Dell Networking OS.

The simple network management protocol (SNMP) is used to communicate management information between the network management stations and the agents in the network elements. The system supports SNMP versions 1, 2c, and 3, supporting both read-only and read-write modes. The system sends SNMP traps, which are messages informing an SNMP management system about the network. The system supports up to 16 SNMP trap receivers.

\**NOTE:** The system does not support SNMPv3 traps in PMUX mode.

Important Points to Remember

- Typically, 5-second timeout and 3-second retry values on an SNMP server are sufficient for both local area network (LAN) and wide area network (WAN) applications. If you experience a timeout with these values, the recommended best practice on Dell Networking switches (to accommodate their high port density) is to increase the timeout and retry values on your SNMP server to the following:
  - SNMP Timeout — greater than 3 seconds.
  - SNMP Retry count — greater than 2 seconds.
- If you are using access control lists (ACLs) in an SNMP v3 configuration, group ACL overrides user ACL if the user is part of that group.
- SNMP operations are not supported on a virtual local area network (VLAN).

**clear logging auditlog**

Clears audit log.

**Syntax**

```
clear logging auditlog
```

**Defaults**

none

**Command Modes**

EXEC

**Supported Modes**

Full-Switch Mode

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.
The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.5(0.0)</td>
<td>Introduced on the MXL.</td>
</tr>
</tbody>
</table>

Example

Dell(conf)#clear logging auditlog

Related Commands  
show logging auditlog — displays audit log

---

**show snmp**

Display the status of SNMP network elements.

**Syntax**

```plaintext
show snmp
```

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

Full-Switch Mode

**Command History**

<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

The following Example displays a group named ngroup. The ngroup has a security model of version 3 (v3) with authentication (auth), the read and notify name is nview with no write view name specified, and finally the row status is active.

Example

```
Dell#show snmp group
  groupname: ngroup              security model: v3 auth
  readview : nview               writeview: no write view specified
  notifyview: nview
  row status: active
Dell#
```

Related Commands
snmp-server group — configures an SNMP server group.
**show snmp user**

Display the information configured on each SNMP user name.

**Syntax**

```
show snmp user
```

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

IF-MIB::ifAlias.134530304 = STRING: This is a port connected to Router2. This is a port connected to Router2. This is a port connected to Router2. This is a port connected to Router2.
IF-MIB::ifAlias.134792448 = STRING:
```

snmp-server community

Configure a new community string access for SNMPv1 v2 and v3.

Syntax

```
snmp-server community community-name {ro | rw} [security-name name][access-list-name]
```

To remove access to a community, use the `no snmp-server community community-string {ro | rw} [security-name name] [access-list-name]` command.

Parameters

- **community-name**: Enter a text string (up to 20 characters long) to act as a password for SNMP.
- **ro**: Enter the keyword `ro` to specify read-only permission.
- **rw**: Enter the keyword `rw` to specify read-write permission.
- **security-name name**: (Optional) Enter the keywords `security-name` then the security name as defined by the community MIB.
- **access-list-name**: (Optional) Enter a standard IPv4 access list name (a string up to 16 characters long).

Defaults

`none`

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

The following example configures a community named public that is mapped to the security named guestuser with Read Only (ro) permissions.

The security-name parameter maps the community string to an SNMPv3 user/security name as defined by the community MIB. If a community string is configured without a security-name (for example, snmp-server community public ro), the community is mapped to a default security-name/group:

- v1v2creadu / v1v2creadg — maps to a community with ro (read-only) permissions.
- v1v2cwriteu / v1v2cwriteg — maps to a community with rw (read-write) permissions.

The community-name parameter indexes this command.

If you do not configure the snmp-server community command, you cannot query SNMP data. Only Standard IPv4 ACL and IPv6 ACL is supported in the optional access-list-name.

The command options ipv6, security-name, and access-list-name are recursive. In other words, each option can, in turn, accept any of the three options as a sub-option, and each of those sub-options can accept any of the three sub-options as a sub-option, and so forth. The second Example shows the creation of a standard IPv4 ACL called snmp-ro-acl and then assigning it to the SNMP community guest.

```
NOTE: For IPv6 ACLs, only IPv6 and UDP types are valid for SNMP; TCP and ICMP rules are not valid for SNMP. In IPv6 ACLs, port rules are not valid for SNMP.
```

Example

```
Dell#config
Dell(conf)# snmp-server community public ro
Dell(conf)# snmp-server community guest ro security-name guestuser
Dell(conf)#
```

```
Example

Dell(conf)# ip access-list standard snmp-ro-acl
Dell(config-standard-nacl)# seq 5 permit host 10.10.10.224
Dell(config-standard-nacl)# seq 10 deny any count
!
Dell(conf)# snmp-server community guest ro snmp-ro-acl
Dell(conf)#
```

Related Commands

- ip access-list standard — names (or selects) a standard access list to filter based on IP address.

- show running-config — displays the current SNMP configuration and defaults.
**snmp-server contact**

Configure contact information for troubleshooting this SNMP node.

**Syntax**

```
snmp-server contact text
```

To delete the SNMP server contact information, use the `no snmp-server contact` command.

**Parameters**

- **text**
  
Enter an alphanumeric text string, up to 55 characters long.

**Defaults**

none

**Command Modes**

CONFIGURATION

**Supported Modes**

</tbody>
</table>
| 8.3.16.1 | Introduced on the MXL 10/40GbE Switch IO Module.

**snmp-server enable traps**

Enable SNMP traps.

**Syntax**

```
snmp-server enable traps [notification-type] [notification-option]
```

To disable traps, use the `no snmp-server enable traps [notification-type] [notification-option]` command.

**Parameters**

- **notification-type**
  
Enter the type of notification from the following list:
  
  - `ecfm` — Notification of changes to ECFM.
  - `entity` — Notification of changes to entity.
  - `envmon` — For Dell Networking device notifications when an environmental threshold is exceeded.
  - `eoam` — Notification of changes to the EOAM state.
  - `ets` — Notification of changes to the ets traps.
  - `fips` — Notification of changes to the FIP snooping state.
  - `lacp` — Notification of changes.
  - `pfc` — Notification of changes to pfc traps.
  - `snmp` — Notification of RFC 1157 traps.
  - `stp` — Notification of a state change in the spanning tree protocol (RFC 1493).
  - `vrrp` — Notification of a state change in a VRRP group.
  - `xstp` — Notification of a state change in MSTP (802.1s), RSTP (802.1w), and PVST +.

- **notification-option**
  
  For the `envmon` notification-type, enter one of the following optional parameters:
For the `snmp` notification-type, enter one of the following optional parameters:

- authentication
- coldstart
- linkdown
- linkup
- syslog-reachable
- syslog-unreachable

Defaults
Not enabled.

</tr>
</tbody>
</table>

Usage Information
The system supports up to 16 SNMP trap receivers.

If you do not configure this command, no traps controlled by this command are sent. If you do not specify a notification-type and notification-option, all traps are enabled.

Related Commands
`snmp-server community` — enables SNMP and sets the community string.

---

**snmp-server engineID**

Configure the name for both the local and remote SNMP engines on the router.

**Syntax**

```
snmp-server engineID [local engineID] [remote ip-address udp-port port-number engineID]

To return to the default, use the no snmp-server engineID [local engineID] [remote ip-address udp-port port-number engineID] command.
```

**Parameters**

- **local engineID**
  - Enter the keyword `local` then the engine ID number that identifies the copy of the SNMP on the local device.
  - Format (as specified in RFC 3411): 12 octets.
  - The first four octets are set to the private enterprise number.
  - The remaining eight octets are the MAC address of the chassis.

- **remote ip-address**
  - Enter the keyword `remote` then the IP address that identifies the copy of the SNMP on the remote device.
**udp-port** Enter the keywords **udp-port** then the user datagram protocol (UDP) port number on the remote device. The range is from 0 to 65535. The default is **162**.

**Defaults**
- As above.

**Command Modes**
- CONFIGURATION

**Supported Modes**
- Full-Switch Mode

**Command History**

<table>
<thead>
<tr>

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

Changing the value of the SNMP Engine ID has important side effects. A user’s password (entered on the command line) is converted to a message digest algorithm (MD5) or secure hash algorithm (SHA) security digest. This digest is based on both the password and the local Engine ID. The command line password is then destroyed, as required by RFC 2274. Because of this deletion, if the local value of the Engine ID changes, the security digests of SNMPv3 users is invalid and you must reconfigure the users.

For the remote Engine ID, the host IP and UDP port are the indexes to the command that are matched to either overwrite or remove the configuration.

**Related Commands**
- `show snmp engineID` — displays the SNMP engine and all the remote engines that are configured on the router.
- `show running-config` — displays the SNMP running configuration.

---

**snmp-server group**

Configure a new SNMP group or a table that maps SNMP users to SNMP views.

**Syntax**

```snmp-server group {group_name {1 | 2c | 3 {auth | noauth | priv}}} {read name} {write name} {notify name} {access-list-name | access-list-name}]

To remove a specified group, use the `no snmp-server group {group_name {v1 | v2c | v3 {auth | noauth | priv}}} {read name} {write name} {notify name} {access-list-name | access-list-name}]
```

**Parameters**

- **group_name**
  - Enter a text string (up to 20 characters long) as the name of the group. The following groups are created for mapping to read/write community/security-names (defaults):
    - `v1v2creadg` — maps to a community/security-name with `ro` permissions.
    - `v1v2cwriteg` — maps to a community/security-name `rw` permissions.

- **1 | 2c | 3**
  - (OPTIONAL) Enter the security model version number (1, 2c, or 3):
    - 1 is the least secure version.
    - 3 is the most secure of the security modes.
    - 2c allows transmission of informs and counter 64, which allows for integers twice the width of what is normally allowed.

The default is **1**.
auth 
(Optional) Enter the keyword `auth` to specify authentication of a packet without encryption.

noauth 
(Optional) Enter the keyword `noauth` to specify no authentication of a packet.

priv 
(Optional) Enter the keyword `priv` to specify both authentication and then scrambling of the packet.

read name 
(Optional) Enter the keyword `read` then a name (a string of up to 20 characters long) as the read view name. The default is `GlobalView` and is assumed to be every object belonging to the internet (1,3,6,1) OID space.

write name 
(Optional) Enter the keyword `write` then a name (a string of up to 20 characters long) as the write view name.

notify name 
(Optional) Enter the keyword `notify` then a name (a string of up to 20 characters long) as the notify view name.

access-list-name 
(Optional) Enter the standard IPv4 access list name (a string up to 16 characters long).

Defaults 
As above.

</tr>
</tbody>
</table>

Usage Information 
The following Example specifies the group named `harig` as a version 3 user requiring both authentication and encryption and read access limited to the read named `rview`.

NOTE: The number of configurable groups is limited to 16 groups.

Example 

```bash
Dell(conf)# snmp-server group harig 3 priv read rview
```

Related Commands 
- `show snmp group` — displays the group name, security model, view status, and storage type of each group.
- `show running-config` — displays the SNMP running configuration.

**snmp-server host**

Configure the recipient of an SNMP trap operation.

Syntax 

```bash
snmp-server host ip-address [traps | informs] [version 1 | 2c | 3] [auth | no auth | priv] [community-string] [udp-port port-number] [notification-type]
```

To remove the SNMP host, use the `no snmp-server host ip-address [traps | informs] [version 1 | 2c | 3] [auth | noauth | priv] [community-string] [udp-port number] [notification-type]` command.
### Parameters

<table>
<thead>
<tr>

<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

In order to configure the router to send SNMP notifications, enter at least one snmp-server host command. If you enter the command with no keywords, all trap types are enabled for the host. If you do not enter an snmp-server host command, no notifications are sent.

In order to enable multiple hosts, issue a separate snmp-server host command for each host. You can specify multiple notification types in the command for each host.

When multiple snmp-server host commands are given for the same host and type of notification (trap or inform), each succeeding command overwrites the previous command. Only the last snmp-server host command is in effect. For example, if you enter an snmp-server host inform command for a host and then enter another snmp-server host inform command for the same host, the second command replaces the first command.

The snmp-server host command is used with the snmp-server enable command. Use the snmp-server enable command to specify which SNMP notifications are sent globally. For a host to receive most notifications, at least one snmp-server enable command and the snmp-server host command for that host must be enabled.

NOTE: For v1 / v2c trap configuration, if the community-string is not defined using the snmp-server community command prior to using this command, the default form of the snmp-server community command automatically is configured with the community-name the same as specified in the snmp-server host command.

Configuring Informs

To send an inform, use the following steps:

1. Configure a remote engine ID.
2. Configure a remote user.
3. Configure a group for this user with access rights.
4. Enable traps.
5. Configure a host to receive informs.

Related Commands
- snmp-server enable traps — enables SNMP traps.
- snmp-server community — configures a new community SNMPv1 or SNMPv2c.

snmp-server location

Configure the location of the SNMP server.

Syntax
snmp-server location text
To delete the SNMP location, use the `no snmp-server location` command.

**Parameters**

| text | Enter an alpha-numeric text string, up to 55 characters long. |

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Supported Modes**

Full-Switch Mode

**Command History**

</tr>
</tbody>
</table>

**snmp-server packetsize**

Set the largest SNMP packet size permitted. When the SNMP server is receiving a request or generating a reply, use the `snmp-server packetsize` global configuration command.

**Syntax**

`snmp-server packetsize byte-count`

**Parameters**

| byte-count | Enter one of the following values 8, 16, 24 or 32. Packet sizes are 8000 bytes, 16000 bytes, 32000 bytes, and 64000 bytes. |

**Defaults**

8

</tr>
</tbody>
</table>

**snmp-server trap-source**

Configure a specific interface as the source for SNMP traffic.

**Syntax**

`snmp-server trap-source interface`

To disable sending traps out a specific interface, use the `no snmp trap-source` command.

**Parameters**

<table>
<thead>
<tr>
<th>interface</th>
<th>Enter the following keywords and slot/port or number information:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• For a Loopback interface, enter the keyword <code>loopback</code> then a number from 0 to 16383.</td>
</tr>
<tr>
<td></td>
<td>• For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information.</td>
</tr>
</tbody>
</table>
The IP address assigned to the management interface is the default.

**Command Modes**

</tr>
<tr>
<td>8.3(16.1)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**
To enable this `snmp-server trap-source` command, configure an IP address on the interface and enable the interface configured as an SNMP trap source.

**Related Commands**
- `snmp-server community` — sets the community string.

### snmp-server user

Configure a new user to an SNMP group.

**Syntax**

```
snmp-server user name {group_name remote ip-address udp-port port-number} [1 | 2c | 3] [encrypted] [auth {md5 | sha} auth-password] [priv des56 | aes128-cfb] priv-password [access access-list-name | ipv6 access-list-name | access-list-name ipv6 access-list-name]
```

To remove a user from the SNMP group, use the `no snmp-server user name {group_name remote ip-address udp-port port-number} [1 | 2c | 3] [encrypted] [auth {md5 | sha} auth-password] [priv des56 | aes128-cfb] priv password [access access-list-name | ipv6 access-list-name | access-list-name ipv6 access-list-name]` command.

**Parameters**

- `name` Enter the name of the user (not to exceed 20 characters), on the host that connects to the agent.
- `group_name` Enter a text string (up to 20 characters long) as the name of the group. The following groups are created for mapping to read/write community/security-names (defaults):
  - `v1v2creadu` — maps to a community with ro permissions.
  - `v1v2cwriteu` — maps to a community rw permissions.
- `remote ip-address` Enter the keywords `udp-port` then the user datagram protocol (UDP) port number on the remote device. The range is from 0 to 65535. The default is 162.
- `udp-port port-number` Enter the keywords `udp-port` then the UDP (User Datagram Protocol) port number on the remote device. The range is from 0 to 65535. The default is 162.
- `1 | 2c | 3` (OPTIONAL) Enter the security model version number (1, 2c, or 3):
  - 1 is the least secure version.
  - 3 is the most secure of the security modes.
  - 2c allows transmission of informs and counter 64, which allows for integers twice the width of what is normally allowed.

The default is 1.
encrypted  (OPTIONAL) Enter the keyword `encrypted` to specify the password appear in encrypted format (a series of digits, masking the true characters of the string).

**auth**  (OPTIONAL) Enter the keyword `auth` to specify authentication of a packet without encryption.

**md5 | sha**  (OPTIONAL) Enter the keyword `md5` or `sha` to designate the authentication level.
- `md5` — Message Digest Algorithm
- `sha` — Secure Hash Algorithm

**auth-password**  (OPTIONAL) Enter a text string (up to 20 characters long) password that enables the agent to receive packets from the host and to send packets to the host. Minimum: eight characters long.

**priv des56**  (OPTIONAL) Enter the keywords `priv des56` to initiate a privacy authentication level setting using the CBC-DES privacy authentication algorithm (des56).

**aes128**  (OPTIONAL) Enter the keyword `aes128` to initiate the AES128-CFB encryption algorithm for transmission of SNMP packets.

**priv password**  (OPTIONAL) Enter a text string (up to 20 characters long) password that enables the host to encrypt the contents of the message it sends to the agent and decrypt the contents of the message it receives from the agent. Minimum: eight characters long.

**access-list-name**  (Optional) Enter the standard IPv4 access list name (a string up to 16 characters long).

**Defaults**
If no authentication or privacy option is configured, then the messages are exchanged (attempted anyway) without any authentication or encryption.

**Command Modes**
CONFIGURATION

**Supported Modes**
Full-Switch Mode

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Added support for the AES128-CFB encryption algorithm on the MXL 10/40GbE Switch IO Module platform.</td>
</tr>
<tr>
<td>8.3(16.1)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**
No default values exist for authentication or privacy algorithms and no default password exists. If you forget a password, you cannot recover it; the user must be reconfigured. You can specify either a plain-text password or an encrypted cypher-text password. In either case, the password is stored in the configuration in an encrypted form and displayed as encrypted in the show running-config command.

If you have an encrypted password, you can specify the encrypted string instead of the plain-text password. The following command is an Example of how to specify the command with an encrypted string.

```
NOTE: The number of configurable users is limited to 16.
```

**Example**
```
Dell# snmp-server user privuser v3group v3 encrypted auth md5 9fc53d9d908118b2804fe80e3ba8763d priv des56 d0452401a8c3ce42804fe80e3ba8763d
```

**Usage Information**
The following command is an example of how to enter a plain-text password as the string `authpasswd` for user `authuser` of group `v3group`. 

1234      Simple Network Management Protocol (SNMP) and Syslog
Example
Dell#conf
Dell(conf)# snmp-server user authuser v3group v3 auth md5 authpasswd

Usage Information
The following command configures a remote user named n3user with a v3 security model and a security level of authNOPriv.

Example
Dell#conf
Dell(conf)# snmp-server user n3user ngroup remote 172.31.1.3 udp-port 5009 3 auth md5 authpasswd

Related Commands
show snmp user — displays the information configured on each SNMP user name.

snmp-server user (for AES128-CFB Encryption)

Specify that AES128-CFB encryption algorithm needs to be used for transmission of SNMP information. The Advanced Encryption Standard (AES) Cipher Feedback (CFB) 128-bit encryption algorithm is in compliance with RFC 3826. RFCs for SNMPv3 define two authentication hash algorithms, namely, HMAC-MD5-96 and HMAC-SHA1-96. These are the full forms or editions of the truncated versions, namely, HMAC-MD5 and HMAC-SHA1 authentication algorithms.

Syntax
snmp-server user name {group_name remote ip-address udp-port port-number} [1 | 2c | 3] [encrypted] [auth {md5 | sha} auth-password] [priv {des56 | aes128-cfb} priv-password] [access access-list-name | ipv6 access-list-name | access-list-name ipv6 access-list-name]

To remove a user from the SNMP group, use the no snmp-server user name {group_name remote ip-address udp-port port-number} [1 | 2c | 3] [encrypted] [auth {md5 | sha} auth-password] [priv {des56 | aes128-cfb} priv-password] [access access-list-name | ipv6 access-list-name | access-list-name ipv6 access-list-name] command.

Parameters

auth-password (OPTIONAL) Enter a text string (up to 20 characters long) password that enables the agent to receive packets from the host and to send packets to the host. Minimum: eight characters long.

eas128 (OPTIONAL) Enter the keyword aes128 to initiate the AES128-CFB encryption algorithm for transmission of SNMP packets.

priv-password (OPTIONAL) Enter a text string (up to 20 characters long) password that enables the host to encrypt the contents of the message it sends to the agent and to decrypt the contents of the message it receives from the agent. Minimum: eight characters long.

Defaults
If no authentication or privacy option is configured, then the messages are exchanged (attempted anyway) without any authentication or encryption.

Command Modes
CONFIGURATION

Full-Switch Mode

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Added support for the AES128-CFB encryption algorithm on the MXL 10/40GbE Switch IO Module platform</td>
</tr>
<tr>
<td>8.3(16.1)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>
Usage Information
To enable robust, effective protection and security for SNMP packets transferred between the server and the client, you can use the `snmp-server user username group groupname 3 auth authentication-type auth-password priv aes128 priv-password` command to specify that AES128-CFB encryption algorithm needs to be used.

You cannot modify the FIPS mode if SNMPv3 users are already configured and present in the system. An error message is displayed if you attempt to change the FIPS mode by using the `fips mode enable` command in Global Configuration mode. You can enable or disable FIPS mode only if SNMPv3 users are not previously set up. Otherwise, you must remove the previously configured users before you change the FIPS mode.

Example

```
Dell# snmp-server user privuser v3group v3 encrypted auth md5 9fc53d9d908118b2804fe80e3ba8763d priv aes128 d0452401a8c3ce42804fe80e3ba8763d
```

Related Commands
- `show snmp user` — Displays the information configured on each SNMP user name.

### snmp-server view

Configure an SNMPv3 view.

**Syntax**

```
snmp-server view view-name oid-tree {included | excluded}
```

To remove an SNMPv3 view, use the `no snmp-server view view-name oid-tree {included | excluded}` command.

**Parameters**

- `view-name` (required) Enter the name of the view (not to exceed 20 characters).
- `oid-tree` (required) Enter the OID sub tree for the view (not to exceed 20 characters).
- `included` (OPTIONAL) Enter the keyword `included` to include the MIB family in the view.
- `excluded` (OPTIONAL) Enter the keyword `excluded` to exclude the MIB family in the view.

**Defaults**

none

**Command Modes**

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

The `oid-tree` variable is a full sub-tree starting from 1.3.6 and cannot specify the name of a sub-tree or a MIB. The following Example configures a view named `rview` that allows access to all objects under 1.3.6.1.

**Example**

```
Dell (conf) snmp-server view rview 1.3.6.1 included
```

**Related Commands**

- `show running-config` — displays the SNMP running configuration.
**snmp trap link-status**

Enable the interface to send SNMP link traps, which indicate whether the interface is up or down.

**Syntax**

```
snmp trap link-status
```

To disable sending link trap messages, use the `no` `snmp trap link-status` command.

**Defaults**

Enabled.

**Command Modes**

INTERFACE

</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

If the interface is expected to flap during normal usage, you could disable this command.

### Syslog Commands

The following commands allow you to configure logging functions on all Dell Networking switches.

**clear logging**

Clear the messages in the logging buffer.

**Syntax**

```
clear logging
```

**Defaults**

none

**Command Modes**

EXEC Privilege

**Supported Modes**

Full-Switch Mode

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Related Commands**

- `show logging` — displays logging settings and system messages in the internal buffer.

**default logging buffered**

Return to the default setting for messages logged to the internal buffer.

**Syntax**

```
default logging buffered
```

**Defaults**

```
size = 40960; level = 7 or debugging
```

**Command Modes**

CONFIGURATION

**Supported Modes**

Full-Switch Mode
**default logging console**

Return the default settings for messages logged to the console.

**Syntax**
```
default logging console
```

**Defaults**
```
level = 7 or debugging
```

**Command Modes**
```
CONFIGURATION
```

**Supported Modes**
```
Full-Switch Mode
```

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Related Commands**
- `default logging buffered` — sets the logging buffered parameters.
- `logging console` — sets the logging console parameters.

**logging extended**

Logs security and audit events to a system log server.

**Syntax**
```
logging extended
```

**Defaults**
```
none
```

**Command Modes**
```
CONFIGURATION
```

**Supported Modes**
```
Full-Switch Mode
```

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.5(0.0)</td>
<td>Introduced on the MXL.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command is available with or without RBAC enabled. When RBAC is enabled you can restrict access to audit and security logs based on the CLI sessions' user roles. If extended logging is disabled, you can only view system events, regardless of RBAC user role.
When you enabled RBAC and extended logging:

- Only the system administrator role can execute this command.
- The system administrator and system security administrator roles can view security events and system events.
- The system administrator role can view audit, security, and system events.
- The network administrator and network operator roles can view system events.

Examples:

```text
Dell(conf)#logging extended
```

Related Commands:

- `show logging auditlog` — displays audit log,
- `clear logging auditlog` — clears audit log

### default logging monitor

Return to the default settings for messages logged to the terminal.

**Syntax**

```text
default logging monitor
```

**Defaults**

```text
level = 7 or debugging
```

**Command Modes**

- CONFIGURATION

**Supported Modes**

- Full-Switch Mode

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>

</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Related Commands**

- `logging monitor` — sets the logging monitor parameters.
- `terminal monitor` — sends system messages to the terminal/monitor.

### default logging trap

Return to the default settings for logging messages to the Syslog servers.

**Syntax**

```text
default logging trap
```

**Defaults**

```text
level = 6 or informational
```

**Command Modes**

- CONFIGURATION

**Supported Modes**

- Full-Switch Mode

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Related Commands**

- `logging trap` — limit messages logged to the Syslog servers based on severity.
logging

Configure an IP address or host name of a Syslog server where logging messages are sent. You can configure multiple logging servers of both IPv4 and/or IPv6.

Syntax

```
logging {ip-address | ipv6-address | hostname} {{udp {port}} | {tcp {port}}}
```

To disable logging, use the `no logging` command.

Parameters

- `ip-address` Enter the IPv4 address in dotted decimal format.
- `ipv6-address` Enter the IPv6 address in the x:x:x:x::X format.
- `hostname` Enter the name of a host already configured and recognized by the switch.
- `udp` Enter the keyword `udp` to enable transmission of log message over UDP followed by port number. The default port is 514
- `tcp` Enter the keyword `tcp` to enable transmission of log message over TCP followed by port number.

Defaults

Disabled.

Command Modes

- CONFIGURATION

Supported Modes

- Full-Switch Mode

Command History

```
Version  Description
---  -------
9.9(0.0)  Introduced on the FN IOM.
9.5(0.0)  Introduced `udp` and `tcp` keywords on the MXL 10/40GbE Switch.
8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.
```

Related Commands

- `logging on` — enables the logging asynchronously to logging buffer, console, Syslog server, and terminal lines.
- `logging trap` — enables logging to the Syslog server based on severity.

logging buffered

Enable logging and specify which messages are logged to an internal buffer. By default, all messages are logged to the internal buffer.

Syntax

```
logging buffered [level] [size]
```

To return to the default values, use the `default logging buffered` command.

To disable logging stored to an internal buffer, use the `no logging buffered` command.

Parameters

- `level` (OPTIONAL) Indicate a value from 0 to 7 or enter one of the following equivalent words: emergencies, alerts, critical, errors, warnings, notifications, informational, or debugging. The default is 7 or `debugging`.
(OPTIONAL) Indicate the size, in bytes, of the logging buffer. The number of messages buffered depends on the size of each message. The range is from 40960 to 524288. The default is **40960 bytes**.

**Defaults**
- level = 7; size = **40960 bytes**

**Command Modes**
- CONFIGURATION

**Supported Modes**
- Full-Switch Mode

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**
When you decrease the buffer size, all messages stored in the buffer are lost. Increasing the buffer size does not affect messages stored in the buffer.

**Related Commands**
- clear logging — clears the logging buffer.
- default logging buffered — returns the logging buffered parameters to the default setting.
- show logging — displays the logging setting and system messages in the internal buffer.

## logging console

Specify which messages are logged to the console.

**Syntax**

```
logging console [level]
```

To return to the default values, use the `default logging console` command.

To disable logging to the console, use the `no logging console` command.

**Parameters**

- **level**

  (OPTIONAL) Indicate a value from 0 to 7 or enter one of the following parameters: emergencies, alerts, critical, errors, warnings, notifications, informational, or debugging. The default is **7 or debugging**.

**Defaults**
- level = 7; size = **debugging**

**Command Modes**

</tr>
</tbody>
</table>

**Related Commands**
- clear logging — clears the logging buffer.
- default logging console — returns the logging console parameters to the default setting.
show logging — displays the logging setting and system messages in the internal buffer.

logging facility

Configure the Syslog facility used for error messages sent to Syslog servers.

Syntax

```
logging facility [facility-type]
```

To return to the default values, use the `no logging facility` command.

Parameters

<table>
<thead>
<tr>
<th>facility-type</th>
<th>(OPTIONAL) Enter one of the following parameters:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• auth (authorization system)</td>
</tr>
<tr>
<td></td>
<td>• cron (Cron/at facility)</td>
</tr>
<tr>
<td></td>
<td>• daemon (system daemons)</td>
</tr>
<tr>
<td></td>
<td>• kern (kernel)</td>
</tr>
<tr>
<td></td>
<td>• local0 (local use)</td>
</tr>
<tr>
<td></td>
<td>• local1 (local use)</td>
</tr>

</table>

**Usage Information**

When you configure the `snmp-server trap-source` command, the system messages logged to the history table are also sent to the SNMP network management station.

**Related Commands**

- `show logging` — displays information logged to the history buffer.

logging history size

Specify the number of messages stored in the system logging history table.

```
Syntax: logging history size size
```

To return to the default values, use the `no logging history size` command.

**Parameters**

- `size`
  
  Indicate a value as the number of messages to be stored. The range is from 0 to 500. The default is 1 message.

**Defaults**

- 1 message

**Command Modes**

- `CONFIGURATION`

**Supported Modes**

- Full-Switch Mode
Command History

</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information
When the number of messages reach the limit you set with the `logging history size` command, older messages are deleted as newer ones are added to the table.

Related Commands
- `show logging` — displays information logged to the history buffer.

**logging monitor**

Specify which messages are logged to Telnet applications.

**Syntax**

logging monitor [level]

To disable logging to terminal connections, use the `no logging monitor` command.

**Parameters**

- **level**
  - Indicate a value from 0 to 7 or enter one of the following parameters: emergencies, alerts, critical, errors, warnings, notifications, informational, or debugging. The default is 7 or debugging.

**Defaults**

7 or debugging

</tbody>
</table>

**Related Commands**

- `default logging monitor` — returns the logging monitor parameters to the default setting.

**logging on**

Specify that debug or error messages are asynchronously logged to multiple destinations, such as the logging buffer, Syslog server, or terminal lines.

**Syntax**

logging on

To disable logging to logging buffer, Syslog server and terminal lines, use the `no logging on` command.

**Defaults**

Enabled.

</tr>
</tbody>
</table>
9.9(0.0) Introduced on the FN IOM.
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
When you use the no logging on command, messages are logged only to the console.

Related Commands
logging — enables logging to the Syslog server.
logging buffered — sets the logging buffered parameters.
logging console — sets the logging console parameters.
logging monitor — sets the logging parameters for the terminal connections.

logging source-interface

Specify that the IP address of an interface is the source IP address of Syslog packets sent to the Syslog server.

Syntax
logging source-interface interface

To disable this command and return to the default setting, use the no logging source-interface command.

Parameters
interface

Enter the following keywords and slot/port or number information:

- For Loopback interfaces, enter the keyword loopback then a number from zero (0) to 16383.
- For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
- For a ten-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For VLAN interface, enter the keyword vlan then a number from 1 to 4094.

Defaults
Not configured.

Command Modes
CONFIGURATION

Supported Modes
Full-Switch Mode

Command History

Version Description
9.9(0.0) Introduced on the FN IOM.
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
Syslog messages contain the IP address of the interface used to egress the router. By configuring the logging source-interface command, the Syslog packets contain the IP address of the interface configured.

Related Commands
logging — enables logging to the Syslog server.
logging synchronous

Synchronize unsolicited messages and output.

Syntax

logging synchronous [level level | all] [limit number-of-buffers]

To disable message synchronization, use the no logging synchronous [level level | all] [limit number-of-buffers] command.

Parameters

- all
  - Enter the keyword all to ensure that all levels are printed asynchronously.
- level level
  - Enter the keyword level then a number as the severity level. A high number indicates a low severity level and vice versa. The range is from 0 to 7. The default is 2.
- all
  - Enter the keyword all to turn off all.
- limit number-of-buffers
  - Enter the keyword limit then the number of buffers to be queued for the terminal after which new messages are dropped. The range is from 20 to 300. The default is 20.

Defaults

Disabled. If enabled without the level or number-of-buffers options specified, level = 2 and number-of-buffers = 20 are the defaults.

Command Modes

LINE

Supported Modes

Full-Switch Mode

Command History

Version Description

9.9(0.0) Introduced on the FN IOM.
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

When you enable logging synchronous, unsolicited messages appear between software prompts and outputs. Only the messages with a severity at or below the set level are sent to the console.

If the message queue limit is reached on a terminal line and messages are discarded, a system message appears on that terminal line. Messages may continue to appear on other terminal lines.

Related Commands

logging on — enables logging.

logging trap

Specify which messages are logged to the Syslog server based on the message severity.

Syntax

logging trap [level]

To return to the default values, use the default logging trap command.

To disable logging, use the no logging trap command.
Parameters

Indicate a value from 0 to 7 or enter one of the following parameters: emergencies, alerts, critical, errors, warnings, notifications, informational, or debugging. The default is 6 or informational.

Defaults

6 or informational

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.5(0.0)</td>
<td>Introduced on the MXL.</td>
</tr>
</tbody>
</table>

Usage Information

To display syslog messages in a RFC 3164 or RFC 5424 format, use the log version command in configuration mode. By default, the system log version is set to 0.

The following describes the two supported log messages formats:

- 0 – Displays syslog messages format as described in RFC 3164, The BSD syslog Protocol
- 1 – Displays SYSLOG message format as described in RFC 5424, The Syslog Protocol

Example

Dell(conf)#logging version ?
<0-1> Select syslog version (default = 0)
Dell(conf)#logging version 1
show logging

Display the logging settings and system messages logged to the internal buffer of the switch.

**Syntax**

```
show logging [number | history [reverse][number] | reverse [number] | summary]
```

**Parameters**

- **number** (OPTIONAL) Enter the number of messages displayed in the output. The range is from 1 to 65535.
- **history** (OPTIONAL) Enter the keyword history to view only information in the Syslog history table.
- **reverse** (OPTIONAL) Enter the keyword reverse to view the Syslog messages in FIFO (first in, first out) order.
- **summary** (OPTIONAL) Enter the keyword summary to view a table showing the number of messages per type and per slot. Slots *7* and *8* represent RPMs.

**Command Modes**

- EXEC
- EXEC Privilege

```

Simple Network Management Protocol (SNMP) and Syslog
Example (History)

Dell#show logging history
Syslog History Table: 1 maximum table entries, saving level warnings or higher
SNMP notifications not Enabled
May 22 08:53:09: %STKUNIT0-M:CP %SEC-3-AUTHENTICATION_ENABLE_SUCCESS: Enable password authentication success on vty0 (10.11.68.22)
Dell#

show logging driverlog stack-unit

Display the driver log for the specified stack member.

Syntax

show logging driverlog stack-unit unit#

Parameters

stack-unit unit# Enter the keywords stack-unit then the stack member ID of the switch for which you want to display the driver log. The range is from 0 to 1.

defaults none

Command Modes

• EXEC
• EXEC Privilege

Command History

Version Description
9.9(0.0) Introduced on the FN IOM.
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information
This command displays internal software driver information, which may be useful during troubleshooting switch initialization errors, such as a downed Port-Pipe.

show logging auditlog

Displays an audit log.

Syntax

show logging auditlog

Defaults none

Command Modes EXEC

Supported Modes Full–Switch

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.
The following is a list of the Dell Networking OS version history for this command.

<table>

</tr>
</tbody>
</table>

**Related Commands**

- `logging monitor` — sets the logging parameters on the monitor/terminal.
Stacking commands are always available and operational. You can use the commands to pre-configure an Aggregator, so that the configuration settings are invoked when the Aggregator is attached to other Aggregator blades.

For more information about using the Aggregator stacking feature, see the Stacking Aggregators chapter in the Dell Networking OS Configuration Guide for the FN IOM.

You can use the following commands to manage a stack of Aggregator I/O modules:

- power-cycle stack-unit
- reset stack-unit
- show system stack-ports
- show system stack-unit stack-group
- stack-unit iom-mode

**NOTE:** The terms stack-unit-id, unit-id, stack-unit-number, stack-number, and unit-number mentioned in this chapter refers to the stack-unit-number.

Topics:
- power-cycle stack-unit
- redundancy disable-auto-reboot
- redundancy force-failover stack-unit
- reset stack-unit
- show redundancy
- show system stack-ports
- show system stack-unit iom-mode
- show system stack-unit stack-group
- stack-unit iom-mode
- stack-unit priority
- stack-unit provision
- stack-unit renumber

**power-cycle stack-unit**

To hard reset any stack unit including master unit.

**Syntax**

```
power-cycle stack-unit unit-number
```
Parameter

| Parameter          | Unit number | The unit number ranges from 0 to 5. |

Defaults

None

Command Modes

EXEC Privilege

Supported Modes

All Modes

Command History

<table>
<thead>
<tr>

<tr>
<td>9.6(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information

This command is supported on the M I/O, FN410S, and FN410T Aggregators.

This command is used to reset the stack-unit. The master unit can also be power cycled using this command.

**redundancy disable-auto-reboot**

Prevent the switch stack management unit from rebooting if it fail.

**Syntax**

```
redundancy disable-auto-reboot stack-unit [0-5 | members]
```

To return to the default, use the `no redundancy disable-auto-reboot stack-unit [0-5 | members]` command.

**Defaults**

Disabled (the failed switch is automatically rebooted).

**Command Modes**

CONFIGURATION

**Supported Modes**

Full-Switch Mode

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

When the command is given as `redundancy disable-auto-reboot stack-unit`, it prevents the switch stack management unit and standby unit from rebooting if they fail.

When a particular unit number in the range from 0 to 5 is issued as part of the CLI, it prevents that particular unit from rebooting after failure.

When members are issued as part of the CLI, all the units part of the stack are prevented from rebooting after failure.

The unit does not reboot until it is manually rebooted.

**Related Commands**

- `show redundancy` — displays the current redundancy status.
**redundancy force-failover stack-unit**

Force the standby unit in the stack to become the management unit.

**Syntax**

```
redundancy force-failover stack-unit
```

**Defaults**

Not enabled.

**Command Modes**

EXEC Privilege

**Supported Modes**

Full-Switch Mode

**Command History**

<table>

</tr>
</tbody>
</table>

**reset stack-unit**

Reset any designated stack member except the management unit (master unit).

**Syntax**

```
reset stack-unit 0–5 hard
```

**Parameters**

- `0–5` Enter the stack member unit identifier of the stack member to reset.
- `hard` Reset the stack unit if the unit is in a problem state.

**Defaults**

none

**Command Modes**

EXEC Privilege

All Modes

**Command History**

<table>
<thead>
<tr>

<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command is supported on the M I/O, FN410S, and FN410T Aggregators

Resetting the management unit is not allowed and an error message displays if you try to do so. Resetting is a soft reboot, including flushing the forwarding tables.

You can run this command directly on the stack standby unit (Standby Master) to reset the standby. You cannot reset any other unit from the standby unit.

**Example**

```
Dell#show system brief
Stack MAC : 00:1e:c9:f1:00:9b
-- Stack Info --
Unit    UnitType      Status      ReqTyp        CurTyp         Version      Ports
--- 0 Management     online    I/O-Aggregator I/O-Aggregator 8-3-17-46   56
  1 Standby        online    I/O-Aggregator I/O-Aggregator 8-3-17-46   56
  2 Member      not present
  3 Member      not present
```
show redundancy

Display the current redundancy configuration (status of automatic reboot configuration on stack management unit).

**Syntax**

```
show redundancy
```

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

```

**Related Commands**

- `reload` — reboots the system.
Related Commands  

**redundancy disable-auto-reboot** — prevents the system from auto-rebooting if it fails.

### show system stack-ports

Display information about the stacking ports on all switches in the FN I/O Aggregator switch stack.

**Syntax**

```
show system stack-ports [status | topology]
```

**Parameters**

- **status**  
  (OPTIONAL) Enter the keyword `status` to display the command output without the `Connection` field.

- **topology**  
  (OPTIONAL) Enter the keyword `topology` to limit the table to just the Interface and `Connection` fields.

**Defaults**

none

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

<tr>
<td>9.6.(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command is supported on the M I/O, FN410S, and FN410T Aggregators.

The following describes the `show interfaces` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Topology</td>
<td>Lists the topology of stack ports connected: Ring, Daisy chain, or Standalone.</td>
</tr>
<tr>
<td>Interface</td>
<td>The unit/port ID of the connected stack port on this unit.</td>
</tr>
<tr>
<td>Link Speed</td>
<td>Link Speed of the stack port (10) in Gb/s.</td>
</tr>
<tr>
<td>Admin Status</td>
<td>The only currently listed status is Up.</td>
</tr>
<tr>
<td>Connection</td>
<td>The stack port ID to which this unit’s stack port is connected.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell# show system stack-ports
Topology: Ring

<table>
<thead>
<tr>
<th>Interface</th>
<th>Link Speed (Gb/s)</th>
<th>Admin Status</th>
<th>Link Status</th>
<th>Trunk Group</th>
</tr>
</thead>
<tbody>
<tr>
<td>0/9</td>
<td>10</td>
<td>up</td>
<td>down</td>
<td></td>
</tr>
</tbody>
</table>
```
show system stack-unit iom-mode

Displays the current iom-mode (stack/standalone) and the mode configured after next reboot.

Syntax
show system stack-unit unit-number iom-mode

Parameters
unit number <0–5> Enter the number of the member stack unit. The range is from 0 to 5.

Command Modes
EXEC Privilege

Supported Modes
All Modes

Command History
Version Description
9.9(0.0) Introduced on the FN IOM.
9.6.(0.0) Supported on the FN I/O Aggregator.
8.3.17.0 Supported on the M I/O Aggregator.

Usage Information
This command is supported on the M I/O, FN410S, and FN410T Aggregators

Example
Dell#show system stack-unit all iom-mode ? | Pipe through a command <cr>
Dell#show system stack-unit all iom-mode

</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.6.(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command is supported on the M I/O, FN410S, and FN410T Aggregators.

**Example**

```
Dell#show system stack-unit 0 stack-group ?
configured Configured stack groups
<cr>
Dell#show system stack-unit 0 stack-group configured
Dell#show system stack-unit 0 stack-group
Stack group Ports
  0  0/9
  1  0/10
  2  0/11
  3  0/12
Dell#
```

**Related Commands**

- `reload` — reboots the system.
- `show system` — displays the current status of all stack members or a specific member.

### stack-unit iom-mode

Toggle the operating mode between programmable multiplex, standalone, stack, full-switch, and VLT modes.

**Syntax**

```
stack-unit <unit-number> iom-mode [programmable-mux | stack | standalone | vlt | full-switch]
```

**Stacking Commands**

1257
**Parameters**

- **unit number <0-5>** Enter the number of the member stack unit. The range is from 0 to 5.
- **programmable-mux** Enable programmable multiplex mode.
- **stack** Enable stack mode.
- **standalone** Enable stand-alone mode.
- **vlt** Enable virtual link trunking mode.
- **full-switch** Enable full-switch mode.

**Defaults**

standalone

**Command Modes**

- CONFIGURATION

**Supported Modes**

<td>9.6.(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>8.3.17.0</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command is supported on the M I/O, FN410S, and FN410T Aggregators.

**Example**

Dell(conf)#stack-unit 0 iom-mode stack
% You are about to stack your IOA module, please reload the IOA and then plug in the stacking cable for the changes to take effect.
Dell(conf)#

**Related Commands**

- **reload**— Reboots the operating system.
- **show system**— displays the current status of all stack members or a specific member.

---

**stack-unit priority**

Configure the ability of a switch to become the management unit of a stack.

**Syntax**

```
stack-unit stack-number priority 1-14
```

**Parameters**

- **stack-number** Enter the stack member unit identifier.
- **1-14** This preference parameter allows you to specify the management priority of one backup switch over another, with 0 the lowest priority and 14 the highest. The switch with the highest priority value is chosen to become the management unit if the active management unit fails or on the next reload.

**Defaults**

0

<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information
This command is supported on the M I/O, FN410S, and FN410T Aggregators.

Related Commands
- `reload` — reboots Dell Networking Operating System (OS).
- `show system` — displays the status of all stack members or a specific member.

**stack-unit provision**

Preconfigure a logical stacking ID of a switch that joins the stack. This is an optional command that is executed on the management unit.

**Syntax**

```
stack-unit 0-5 provision {MXL-10/40GbE}
```

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
</tr>
</thead>
<tbody>
<tr>
<td>0-5</td>
</tr>
</tbody>
</table>

Enter a stack member identifier, from 0 to 5, of the switch that you want to add to the stack.

<table>
<thead>
<tr>
<th>Parameter</th>
</tr>
</thead>
<tbody>
<tr>
<td>MXL-10/40GbE</td>
</tr>
</tbody>
</table>

Enter the model identifier of the switch to be added as a stack member. This identifier is also referred to as the provision type.

<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Related Commands**
- `reload` — reboots the system.
- `show system` — displays the status of all stack members or a specific member.

**stack-unit renumber**

Change the stack member ID of any stack member or a stand-alone unit.

**Syntax**

```
stack-unit 0-5 renumber 0-5
```

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
</tr>
</thead>
<tbody>
<tr>
<td>0-5</td>
</tr>
</tbody>
</table>

The first instance of this value is the stack member unit identifier, from 0 to 5, of the switch that you want add to the stack. The range is from 0 to 5. The second instance of this value is the desired new unit identifier number.

**Defaults**
none

**Command Modes**
EXEC Privilege

**Related Commands**
- `reload` — reboots the system.
- `show system` — displays the status of all stack members or a specific member.
Supported Modes: All Modes

Command History:

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.6(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Usage Information:

This command is supported on the FN410S and the FN410T Aggregators.

You can renumber any switch, including the management unit or a stand-alone unit.

You cannot renumber a unit to a number of an active member in the stack.

When executing this command on the master, the stack reloads. When the members are renumbered, only that specific unit is reset and comes up with the new unit number.

Example:

```
Dell#stack-unit 5 renumber 4
Renumbering will reset the unit.
Warning: Interface configuration for current unit will be lost!
Proceed to renumber [confirm yes/no]:
```

Related Commands:

- `reload` — reboots Dell Networking Operating System (OS).
- `reset stack-unit` — resets the designated stack member.
- `show system` — displays the current status of all stack members or a specific member.
Storm Control

The Dell Networking operating software storm control feature allows you to limit or suppress traffic during a traffic storm.

Important Points to Remember

• Interface commands can only be applied on physical interfaces (virtual local area networks [VLANs] and link aggregation group [LAG] interfaces are not supported).
• An INTERFACE-level command only supports storm control configuration on ingress.
• An INTERFACE-level command overrides any CONFIGURATION-level ingress command for that physical interface, if both are configured.
• You can apply the CONFIGURATION-level storm control commands at ingress or egress and are supported on all physical interfaces.
• When storm control is applied on an interface, the percentage of storm control applied is calculated based on the advertised rate of the line card. It is not based on the speed setting for the line card.
• Do not apply per-VLAN quality of service (QoS) on an interface that has storm control enabled (either on an interface or globally).
• When you enable broadcast storm control on an interface or globally on ingress, and DSCP marking for a DSCP value 1 is configured for the data traffic, the traffic goes to queue 1 instead of queue 0.
• Similarly, if you enable unicast storm control on an interface or globally on ingress, and DSCP marking for a DSCP value 2 is configured for the data traffic, the traffic goes to queue 2 instead of queue 0.

NOTE: Bi-directional traffic (unknown unicast and broadcast) along with egress storm control causes the configured traffic rates split between the involved ports. The percentage of traffic that each port receives after the split is not predictable. These ports can be in the same/different port pipes or the same/different line cards.

NOTE: The policy discard drop counters are common across storm-control drops, ACL drops and QoS drops. Therefore, if your configuration includes ACL and QoS, those drops are also computed and displayed in the policy discard drops counter field along with storm-control drops. The packets dropped by the storm control feature can be monitored by viewing the value of the Policy Discard Drops field of the output of the show hardware stack-unit 0 drops command.

Topics:

• io-aggregator broadcast storm-control
• show io-aggregator broadcast storm-control status
• show storm-control unknown-unicast
• show storm-control broadcast
• show storm-control multicast
• storm-control multicast (Interface)
• storm-control broadcast (Configuration)

Example  

Dell#show io-aggregator broadcast storm-control status
Storm-Control Enabled
Broadcast Traffic limited to 1000 Mbps
Dell#
show storm-control unknown-unicast

Display the storm control unknown-unicast configuration.

Syntax
show storm-control unknown-unicast [interface]

Parameters

interface (OPTIONAL) Enter the following interface to display the interface specific storm control configuration:

• For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

Defaults
none

Command Modes
• EXEC
• EXEC Privilege

Supported Modes
Programmable-Mux (PMUX)
Full-Switch Mode

Command History

Version Description
9.9(0.0) Introduced on the FN IOM.
9.4(0.0) Supported on the FN I/O Aggregator.

show storm-control broadcast

Display the storm control broadcast configuration.

Syntax
show storm-control broadcast [interface]

Parameters

interface (OPTIONAL) Enter one of the following interfaces to display the interface-specific storm control configuration:

• For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

Defaults
none

Command Modes
• EXEC
• EXEC Privilege

Supported Modes
Full-Switch Mode

Command History

Version Description
9.9(0.0) Introduced on the FN IOM.
Example

Dell#show storm-control broadcast tengigabitethernet 3/8

Broadcast storm control configuration

<table>
<thead>
<tr>
<th>Interface</th>
<th>Direction</th>
<th>Packets/Second</th>
</tr>
</thead>
<tbody>
<tr>
<td>TenGig 3/8</td>
<td>Ingress</td>
<td>1000</td>
</tr>
</tbody>
</table>

Dell#

show storm-control multicast

Display the storm control multicast configuration.

Syntax

show storm-control multicast [interface]

Parameters

interface (OPTIONAL) Enter one of the following interfaces to display the interface specific storm control configuration:

- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

Defaults

none

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

Full-Switch Mode

Command History

Version Description

9.9(0.0) Introduced on the FN IOM.

8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

Example

Dell#show storm-control multicast gigabitethernet 1/1

Multicast storm control configuration

<table>
<thead>
<tr>
<th>Interface</th>
<th>Direction</th>
<th>Packets/Second</th>
</tr>
</thead>
<tbody>
<tr>
<td>Te 2/2</td>
<td>Ingress</td>
<td>5</td>
</tr>
</tbody>
</table>

Dell#

storm-control multicast (Interface)

Configure the percentage of multicast traffic allowed on the interface.

Syntax

storm-control multicast packets_per_second in
To disable multicast storm control on the interface, use the no storm-control multicast packets_per_second in command.

**Parameters**

- **packets_per_second**
  
  Enter the packets per second of broadcast traffic allowed into the network. The range is from 0 to 33554368.

**Command Modes**

- INTERFACE (conf-if-interface-slot/port)

**Supported Modes**

- Programmable-Mux (PMUX)
- Full-Switch Mode

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

### storm-control broadcast (Configuration)

Configure the percentage of broadcast traffic allowed in the network.

**Syntax**

```
storm-control broadcast [packets_per_second in]
```

To disable broadcast rate-limiting, use the no storm-control broadcast [packets_per_second in] command.

**Parameters**

- **packets_per_second**
  
  Enter the packets per second of broadcast traffic allowed into the network. The range is from 0 to 33554368.

**Defaults**

none

**Command Modes**

CONFIGURATION (conf)

**Supported Modes**

Full-Switch Mode

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

Broadcast storm control is valid on Layer 2/Layer 3 interfaces only. Layer 2 broadcast traffic is treated as unknown-unicast traffic.

### storm-control broadcast (Interface)

Configure the percentage of broadcast traffic allowed on an interface.

**Syntax**

```
storm-control broadcast [packets_per_second in]
```

Dell EMC  | Storm Control  | 1265
To disable broadcast storm control on the interface, use the `no storm-control broadcast` command.

**Parameters**

- `packets_per_second in`

  Enter the packets per second of broadcast traffic allowed into the network. The range is from 0 to 33554368.

**Defaults**

- None

**Command Modes**

- INTERFACE (conf-if-slot/port)

**Supported Modes**

- Full-Switch Mode

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

---

**storm-control multicast (Configuration)**

Configure the packets per second (pps) of multicast traffic.

**Syntax**

```
storm-control multicast packets_per_second in
```

To disable storm-control for multicast traffic into the network, use the `no storm-control multicast packets_per_second in` command.

**Parameters**

- `packets_per_second`

  Enter the packets per second of multicast traffic allowed into the network. The range is from 0 to 33554368.

**Defaults**

- None

**Command Modes**

- CONFIGURATION (conf)

**Supported Modes**

- Full-Switch Mode

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

Broadcast traffic (all 0xFs) should be counted against the broadcast storm control meter, not against the multicast storm control meter. It is possible, however, that some multicast control traffic may get dropped when storm control thresholds are exceeded.

---

**storm-control PFC/LLFC**

Shut down the port if it receives the PFC/LLFC frames more than the configured rate.

**Syntax**

```
storm-control pfc-llfc [pps] in shutdown
```

---
Parameters

- `pfc-llfc in` Enter the keyword `pfc-llfc` to get the flow control traffic. The range is from 0 to 33554368 packets per second.

- `shutdown` Enter the keyword `shutdown` to shut down the port when the rate exceeds.

Defaults

- `none`

Command Modes

- `INTERFACE (conf-if-interface-slot/port)`

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Supported on the FN IOM, FN I/O Aggregator, and M I/O Aggregator</td>
</tr>
</tbody>
</table>

Usage Information

- **NOTE:** PFC/LLFC storm control enabled interfaces disable the interfaces if it receives continuous PFC/LLFC packets. It can be a result of a faulty NIC/Switch that sends spurious PFC/LLFC packets.

**storm-control unknown-unicast (Configuration)**

Configure the percentage of unknown-unicast traffic allowed on the switch (ingress rate only).

**Syntax**

```
system-control unknown-unicast [packets_per_second in]
```

To disable storm control for unknown-unicast traffic, use the `no system-control unknown-unicast [packets_per_second in]` command.

**Parameters**

- `packets_per_second` Enter the packets per second of broadcast traffic allowed into the network. The range is from 0 to 33554368.

**Defaults**

- `none`

**Command Modes**

- `CONFIGURATION`

**Supported Modes**

- Full-Switch Mode

<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

Unknown Unicast Storm-Control is valid for Layer 2 and Layer 2/Layer 3 interfaces.

**storm-control unknown-unicast (Interface)**

Configure percentage of unknown-unicast traffic allowed on the interface.

**Syntax**

```
storm-control unknown-unicast [packets_per_second in]
```

**Parameters**

- `packets_per_second` Enter the packets per second of broadcast traffic allowed into the network. The range is from 0 to 33554368.
To disable unknown-unicast storm control on the interface, use the `no storm-control unknown-unicast [packets_per_second in]` command.

**Parameters**

- `packets_per_second`
  
  Enter the packets per second of broadcast traffic allowed into the network. The range is from 0 to 33554431.

**Command Modes**

- INTERFACE (conf-if-interface-slot/port)

**Supported Modes**

- Programmable-Mux (PMUX)
- Full-Switch Mode

1268  Storm Control
SupportAssist

SupportAssist sends troubleshooting data securely to Dell. SupportAssist in this Dell EMC Networking OS release does not support automated email notification at the time of hardware fault alert, automatic case creation, automatic part dispatch, or reports. SupportAssist requires Dell EMC Networking OS 9.9(0.0) and SmartScripts 9.7 or later to be installed on the Dell EMC Networking device. For more information on SmartScripts, see Dell EMC Networking Open Automation guide.

**NOTE:** SupportAssist is enabled by default on the system. To disable SupportAssist, enter the `eula-consent support-assist reject` command in Global Configuration mode and save the configuration.

Topics:
- `eula-consent`
- `support-assist`
- `support-assist activate`
- `support-assist activity`
- `SupportAssist Commands`
- `SupportAssist Activity Commands`
- `SupportAssist Company Commands`
- `SupportAssist Person Commands`
- `SupportAssist Server Commands`
- `show eula-consent`
- `show running-config`
- `show support-assist status`

### eula-consent
Accept or reject the end user license agreement (EULA).

**Syntax**

```
eula-consent {support-assist} {accept | reject}
```

**Parameters**

- `support-assist`
  
  Enter the keywords `support-assist` to either accept or reject the EULA for the specified service.

- `accept`
  
  Enter the keyword `accept` to accept the EULA for the specified service.

- `reject`
  
  Enter the keyword `reject` to reject the EULA for the specified service.

**Defaults**

None

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell EMC Networking OS Command Line Reference Guide.
### Version | Description
--- | ---
9.11(0.0) | Introduced on the M I/O Aggregator and FN IOM.
9.10(0.1) | Introduced on the S6010-ON and S4048T-ON.
9.10(0.0) | Introduced on the S3148.
9.10(0.0) | Introduced on the C9010, Z9100–ON, S6100–ON, and S3100 series.
9.9(0.0) | Introduced on the S4810, S4820T, S3048–ON, S4048–ON, S5000, S6000, S6000–ON, Z9500, MXL.

### Usage Information
- When you run the command, the system displays a message with the information directing to the URL for further information.
- Even before you accept or reject the EULA, the configuration data is sent to the default centrally deployed SupportAssist Server. If you reject the EULA, the configuration data is not transmitted to the SupportAssist server.
- If there is an existing SupportAssist configuration, the configuration is not removed and the feature is disabled.

### Example
Accept the EULA:

```
DellEMC(conf)# eula-consent support-assist accept
I accept the terms of the license agreement. You can reject the license agreement by configuring this command 'eula-consent support-assist reject'.

By installing SupportAssist, you allow Dell to save your contact information (e.g. name, phone number and/or email address) which would be used to provide technical support for your Dell products and services. Dell may use the information for providing recommendations to improve your IT infrastructure.

Dell SupportAssist also collects and stores machine diagnostic information, which may include but is not limited to configuration information, user supplied contact information, names of data volumes, IP addresses, access control lists, diagnostics & performance information, network configuration information, host/server configuration & performance information and related data ("Collected Data") and transmits this information to Dell. By downloading SupportAssist and agreeing to be bound by these terms and the Dell end user license agreement, available at: www.dell.com/privacypolicycountryspecific, in order to enable the performance of all of the various functions of SupportAssist during your entitlement to receive related repair services from Dell, you further agree to allow Dell to transmit and store the Collected Data from SupportAssist in accordance with these terms. You agree that the provision of SupportAssist may involve international transfers of data from you to Dell and/or to Dells affiliates, subcontractors or business partners. When making such transfers, Dell shall ensure appropriate protection is in place to safeguard the Collected Data being transferred in connection with SupportAssist. If you are downloading SupportAssist on behalf of a company or other legal entity, you are further certifying to Dell that you have appropriate authority to provide this consent on behalf of that entity. If you do not consent to the collection,
Reject the EULA:

DellEMC(conf)#eula-consent support-assist reject
Aug 24 22:35:38: %STKUNIT1-M:CP %SUPPORT_ASSIST-6-SUPASSIST_EVT: Event monitor service stopped
I do not accept the terms of the license agreement. The SupportAssist feature has been deactivated and can no longer be used.
To enable SupportAssist configurations, accept the terms of the license agreement by configuring this command 'eula-consent support-assist accept'.
DellEMC(conf)#
DellEMC(conf)#
DellEMC(conf)#

Related Commands

- support-assist — moves to the SupportAssist Configuration mode.

**support-assist**

Move to the SupportAssist configuration mode.

**Syntax**

```
support-assist
```

To remove all the configuration of the SupportAssist service, use the `no support-assist` command.

**Command Modes**

- CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell EMC Networking OS Command Line Reference Guide.

</tbody>
</table>

**Usage Information**

If you reject the EULA, the data is not transmitted to the SupportAssist server.

**Related Commands**

- `eula-consent` — accept or reject the EULA.

**support-assist activate**

Launch the configuration wizard that enables SupportAssist service and guides through a series of commands to configure SupportAssist.

**Syntax**

```
support-assist activate
```

**Usage Information**

If you reject the EULA, the data is not transmitted to the SupportAssist server.

Usage Information

You are guided through a series of queries to configure SupportAssist. The generated commands are added to the running configuration, including the DNS resolve commands, if configured.

This command starts the configuration wizard for the SupportAssist. At any time, you can exit by entering Ctrl-C. If necessary, you can skip some data entry.

Once you exit the wizard, the Dell EMC Networking OS starts a full transfer.

**support-assist activity**

Trigger an activity event immediately.

**Syntax**

```
support-assist activity {full-transfer | core-transfer} start now
```

**Parameters**

- `full-transfer` Enter the keyword `full-transfer` to specify transfer of configuration, inventory, logs, and other information.
- `core-transfer` Enter the keyword `core-transfer` to specify transfer of core files.

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell EMC Networking OS Command Line Reference Guide.

</table>

**Usage Information**

Use the command to trigger the activity that enables transfer of information. You can choose a full transfer that includes all the details or core transfer that includes only the core files.
NOTE: The full transfer includes the core files as well in the information sent. The core transfer does not send core files that are older than 30 days.

SupportAssist Commands

Dell EMC Networking OS supports the following SupportAssist mode commands.

activity

Move to the SupportAssist Activity mode for an activity. Allow the user to configure customized details for a specific activity.

Syntax

activity {activity-name}

To remove all customized detail for a specific activity, use the no activity {activity-name} command.

Parameters

- **activity-name**: Enter one of the following keywords:
  - Enter the keyword full-transfer to enable or disable full transfer. You can create a custom file to transfer the outputs from a set of show commands. By default, the full transfer runs once in every 30 days.
  - Enter the keyword core-transfer to enable or disable core transfer.
  - Enter the keyword event-transfer to enable or disable event transfer. You can create a custom file to monitor a set of events.

Command Modes

SUPPORTASSIST

Command History

</tr>
</tbody>
</table>

Usage Information

By default, each activity follows a set of default actions using a default schedule. Using this command, you can customize the set of actions and disable a certain activity.
**contact-company**

Configure the contact information for the company.

**Syntax**

```
contact-company name {company-name}[company-next-name] ... [company-next-name]
```

To remove the contact company information, use the `no contact-company` command.

**Parameters**

- `company-name` Enter the name for the company. If there are multiple words in the name, use optional additional fields.
- `company-next-name` (OPTIONAL) Enter the next components of the company name, up to 5 components are allowed.

**Command Modes**

SUPPORTASSIST

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell EMC Networking OS Command Line Reference Guide.

**Version** | **Description**
--- | ---
9.11(0.0) | Introduced on the M I/O Aggregator and FN IOM.
9.10(0.1) | Introduced on the S6010-ON and S4048T-ON.
9.10(0.0) | Introduced on the S3148.
9.10(0.0) | Introduced on the C9010, Z9100–ON, S6100–ON, and S3100 series.
9.9(0.0) | Introduced on the S4810, S4820T, S3048–ON, S4048–ON, S5000, S6000, S6000–ON, Z9500, MXL.

**Usage Information**

- You can configure only one contact-company.
- It is not possible to remove the components of the company name. The no form of the command removes the entire contact-company entry.
- This command is optional for SupportAssist service configuration.

**contact-person**

Configure the contact name for an individual.

**Syntax**

```
contact-person [first <first-name>] last <last-name>
```

To remove the contact person and all their details, use the `no contact-person [first <first-name>] last <last-name>` command.

**Parameters**

- `first-name` (Optional) Enter the first name for the contact person. This is optional provided each contact person name is unique. To include a space, enter a space within double quotes.
- `last-name` Enter the last name for the contact person. To include a space, enter a space within double quotes.
enable

Enable all activities and servers for the SupportAssist service.

Syntax

```
enable all
```

To disable the SupportAssist activities temporarily, use the `no enable all` command.

Parameters

- `all` Enter the keyword `all` to enable all SupportAssist service activities.

Defaults

Enabled or All Enabled

Command Modes

- SUPPORTASSIST

</tr>
</tbody>
</table>
server

Configure the name of the remote SupportAssist Server and move to SupportAssist Server mode.

Syntax

```
server {default | server-name}
```

To delete a server, use the no server server-name command.

Parameters

- **default**: Enter the keyword default for the default server.
- **server-name**: Enter the name of the custom server to which the logs would be transferred. To include a space, enter a space within double quotes.

Defaults

Default server has URL stor.g3.ph.dell.com

Command Modes

SUPPORTASSIST

Command History

</tr>
</tbody>
</table>

Usage Information

The server-name is used as a reference only and is not required to be used as part of a URL definition.

There is a reserved name of default for the default server at stor.g3.ph.dell.com. You can customize the defaults for this server by entering the server default command and use the custom commands.

You can configure one additional server.

SupportAssist Activity Commands

Dell EMC Networking OS supports the following SupportAssist Activity mode commands.

**action-manifest get**

Copy an action-manifest file for an activity to the system.

Syntax

```
action-manifest get tftp | ftp | flash <file-specification> <local-file-name>
```
Parameters

**file-specification**
Enter the full file specification for the action-manifest file. For example:

- tftp:hostip/filepath
- ftp:hostip/filepath
- scp:hostip/filepath

**local-file-name**
Enter the name of the local action-manifest file, up to 32 characters long. Allowable characters are: a to z, A to Z, 0 to 9, -, _, and space.

Command Modes

SUPPORTASSIST ACTIVITY FULL-TRANSFER
SUPPORTASSIST ACTIVITY EVENT-TRANSFER

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell EMC Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>

Usage Information

The remote file specification for full transfer includes the protocol that is used to copy the file from the remote system.

The default Manifest-file for full transfer includes records like alarms, logs, operational, and configuration data.

Related Commands

- action-manifest install — configure the action-manifest to use for a specific activity.
- action-manifest show — view the list of action-manifest for a specific activity.
- action-manifest remove — remove the action-manifest file for an activity.

**action-manifest install**

Configure action-manifest to transfer a set of customized records for full transfer and to monitor a set of specified events for event transfer.

**Syntax**

```
action-manifest install {default | <local-file-name>}
```

To revert to the default action-manifest file, use the `action-manifest install default` command.

**Parameters**

- `default` Enter the keyword `default` to revert back to the default set of actions for an activity.
- `local-file-name` Enter the name of the local action-manifest file. Allowable characters are: a to z, A to Z, 0 to 9, -, _, and space.
Defaults

</tr>
</tbody>
</table>

Usage Information

To replace the default action-manifest with a customized one, copy the action-manifest file to the system using the action-manifest get command and then use the action-manifest install command. To revert to the default action-manifest file, use the action-manifest install default command.

Related Commands

- action-manifest get — copy an action-manifest file for an activity to the system.
- action-manifest show — view the list of action-manifest for a specific activity.
- action-manifest remove — remove the action-manifest file for an activity.

**action-manifest remove**

Remove the action-manifest file from Dell EMC Networking OS.

**Syntax**

```
action-manifest remove <local-file-name>
```

**Parameters**

- `<local-file-name>`: Enter the name of the local action-manifest file. Allowable characters are: a to z, A to Z, 0 to 9, -, _, and space.

**Command Modes**

SUPPORTASSIST ACTIVITY FULL-TRANSFER

SUPPORTASSIST ACTIVITY EVENT-TRANSFER

</tr>
</tbody>
</table>

### Usage Information

Enter the specific SupportAssist activity mode and then enable it.

**NOTE:** By default, the full transfer includes the core files. When you disable the core transfer activity, the full transfer excludes the core files.

### Related Commands

- **activity** — move user to the SupportAssist Activity mode for that activity.

## SupportAssist Company Commands

Dell EMC Networking OS supports the following SupportAssist Company mode commands.

### address

Configure the address information for the company.

**Syntax**

```
address [city company-city] [{province | region | state} name] [country company-country] [{postalcode | zipcode} company-code]
```

To remove a portion of the company address information, use the no address [city | province | region | state | country | postalcode | zipcode] command. For example, to remove the city alone, use the no address city command.

To remove the complete company contact information, use the no address command.

**Parameters**

- **city company-city** (OPTIONAL) Enter the keyword city then the city or town for the company site. To include a space, enter a space within double quotes.
province | region | state name
(OPTIONAL) Enter the keyword province, region or state then the name of province, region or state for the company site. To include a space, enter a space within double quotes.

country company-
country
(OPTIONAL) Enter the keyword country then the country for the company site. To include a space, enter a space within double quotes.

postalcode | zipcode company-
code
(OPTIONAL) Enter the keyword postalcode or zipcode then the postal code or zip code for the company site, as one string with no spaces.

Command Modes
SUPPORTASSIST COMPANY

Command History
This guide is platform-specific. For command information about other platforms, see the relevant Dell EMC Networking OS Command Line Reference Guide.

Version Description
9.11(0.0) Introduced on the M I/O Aggregator and FN IOM.
9.10(0.1) Introduced on the S6010-ON and S4048T-ON.
9.10(0.0) Introduced on the S3148.
9.10(0.0) Introduced on the C9010, Z9100–ON, S6100–ON, and S3100 series.
9.9(0.0) Introduced on the S4810, S4820T, S3048–ON, S4048–ON, S5000, S6000, S6000–ON, Z9500, MXL.

Usage Information
The optional parameters must be provided in the following order: city state country postalcode. If specified in a different order, the command returns an error as follows:

DellEMC(conf-supportassist-cmpy-test)# address city Minneapolis postalcode 55344 country USA state Minnesota
^% Error: Invalid input at "^^" marker.

This command is optional for SupportAssist service configuration.

Example
DellEMC(conf-supportassist-cmpy-test)# address city Minneapolis state Minnesota country USA postalcode 55344

street-address

Configure the street address information for the company.

Syntax
street-address {address1} [address2]...[address8]

To remove the street address, use the no street-address command.

Parameters
address1 Enter the street address for the company.
address2..address8 (OPTIONAL) Enter the street address of the company site. Up to 8 fields are allowed.

Command Modes
SUPPORTASSIST COMPANY

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

**Version** | **Description**
--- | ---
9.11(0.0) | Introduced on the M I/O Aggregator and FN IOM.
9.10(0.1) | Introduced on the S6010-ON and S4048T-ON.

9.10(0.0) | Introduced on the C9010, Z9100–ON, S6100–ON, and S3100 series.
9.9(0.0) | Introduced on the S4810, S4820T, S3048–ON, S4048–ON, S5000, S6000, S6000–ON, Z9500, MXL.

**Usage Information**

This command is optional for SupportAssist service configuration.

---

**territory**

Configure the territory and set the coverage for the company site.

**Syntax**

```
territory company-territory
```

To remove the company territory information, use the `no territory` command.

**Parameters**

- `company-territory` Enter the territory name for the company. To include a space, enter a space within double quotes. Use three-letter country codes like USA, IND, FRA, GER and so on.

**Command Modes**

SUPPORTASSIST COMPANY

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

**Version** | **Description**

9.11(0.0) | Introduced on the M I/O Aggregator and FN IOM.
9.10(0.1) | Introduced on the S6010-ON and S4048T-ON.
9.10(0.0) | Introduced on the S3148.
9.10(0.0) | Introduced on the C9010, Z9100–ON, S6100–ON, and S3100 series.
9.9(0.0) | Introduced on the S4810, S4820T, S3048–ON, S4048–ON, S5000, S6000, S6000–ON, Z9500, MXL.

**Usage Information**

This command is optional for SupportAssist service configuration.

---

**SupportAssist Person Commands**

Dell EMC Networking OS supports the following SupportAssist Person mode commands.
email-address

Configure the email addresses to reach the contact person.

Syntax

```
email-address primary email-address [alternate email-address]
```

To remove an email address, use the `no email-address` command. To remove the primary and the alternate email addresses, use the `no email-address primary` and `no email-address alternate` commands respectively.

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>primary email-address</td>
<td>Enter the keyword <code>primary</code> then the primary email address for the person.</td>
</tr>
<tr>

</tr>
</tbody>
</table>

Usage Information

The email addresses must have the standard form of `<username>@<email system>` to be considered valid.

This command is optional for SupportAssist service configuration.

Related Commands

- `preferred-method` — configure the preferred method for contacting the person.

phone

Configure phone numbers to reach the contact person.

Syntax

```
phone primary phone [alternate phone]
```

To remove a phone number, use the `no phone` command. To remove the primary and alternate phone numbers, use the `no phone primary` and `no phone alternate` commands respectively.

Parameters

<table>

Related Commands
- email-address — configure email addresses to reach the contact person.
- phone — configure phone numbers to reach the contact person.

**time-zone**

Configure the time zone for contacting the person.

**Syntax**

```
time-zone zone +HH:MM[start-time HH:MM] [end-time HH:MM]  
```

To remove the time zone, use the no time-zone [zone | start-time | end-time] command.

**Parameters**

- **zone +HH:MM**
  
  Enter the keyword zone then a time difference from GMT expressed as HH:MM. This number may be preceded by either a + or – sign.

- **start-time HH:MM**
  
  Enter the keywords start-time then a starting time expressed as HH:MM. Use the 24-hour clock format.

- **stop-time HH:MM**
  
  Enter the keywords stop-time then a stopping time expressed as HH:MM. Use the 24-hour clock format.

**Command Modes**

</tbody>
</table>

**Usage Information**

This command is optional for SupportAssist service configuration.

**SupportAssist Server Commands**

Dell EMC Networking OS supports the following SupportAssist Server mode commands.
proxy-ip-address

Configure a proxy for reaching the SupportAssist remote server.

Syntax

proxy-ip-address {ipv4-address | ipv6-address} port port-number [ username userid password [encryption-type] password ]

To remove the proxy, use the no proxy-ip-address command.

Parameters

ipv4-address
Enter the IP address of the proxy server in a dotted decimal format (A.B.C.D).

ipv6-address
Enter the IPv6 address of the proxy server in the x:x:x:x::x format.

| NOTE: The :: notation specifies successive hexadecimal fields of zeros. |

| NOTE: To use the IPv6 address, the Open Automation package should also support IPv6 communications. For this purpose, SupportAssist requires Dell EMC Networking Open Automation 9.10(0.0) package or later. |

port port-number
Enter the keyword port then the TCP/IP port number. The port number range is from 1024 to 65534.

username userid
(OPTIONAL) Enter the keyword username then the user ID used for the proxy server.

password
Enter the keyword password then the encryption-type or the user password.

encryption-type
(OPTIONAL) Enter an encryption type for the password you enter.

| • 0 directs the system to interpret the password as clear text. |
| • 7 indicates that the password is encrypted using a DES hashing algorithm. |

password
Enter a string up to 32 characters long.

Defaults

encryption-type for the password is 0.

Command Modes

SUPPORTASSIST SERVER

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell EMC Networking OS Command Line Reference Guide.

Version Description

9.11(0.0)
Introduced on the M I/O Aggregator and FN IOM.

9.10(0.1)
Introduced on the S6010-ON and S4048T-ON.

9.10(0.0)
Introduced on the S3148.

9.10(0.0)
Introduced on the C9010, Z9100-ON, S6100-ON, and S3100 series.

9.9(0.0)
Introduced on the S4810, S4820T, S3048-ON, S4048-ON, S5000, S6000, S6000-ON, Z9500, M7010, MXL.

Usage Information

The passwords are stored encrypted in the running configuration.
**enable**

Enable communication with the SupportAssist server.

**Syntax**

```
enable
```

To disable communication to a specific SupportAssist server, use the `no enable` command.

**Defaults**

Enabled

**Command Modes**

SUPPORTASSIST SERVER

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell EMC Networking OS Command Line Reference Guide.

**Related Commands**

- `server` — configure the name of the remote SupportAssist server.

---

**url**

Configure the URL to reach the SupportAssist remote server.

**Syntax**

```
url uniform-resource-locator
```

To delete the URL for the server, use the `no url` command.

**Parameters**

- `uniform-resource-locator` Enter a text string for the URL using one of the following formats:
  - `http://[username:password@]<hostip>:<portNum>/<filepath>`
  - `https://[username:password@]<hostip>:<portNum>/<filepath>`

**Note:** The host IP for the server may be specified as an IPv4 address, an IPv6 address or as a DNS hostname. If using the DNS hostname, the DNS resolver will need to be configured and enabled.

**Command Modes**

SUPPORTASSIST SERVER

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell EMC Networking OS Command Line Reference Guide.
show eula-consent

Display the EULA for the feature.

Syntax

show eula-consent {support-assist | other feature}

Parameters

support-assist | other feature

Enter the keywords support-assist or the text corresponding to other feature.

Command Modes

EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell EMC Networking OS Command Line Reference Guide.

Version Description

9.11(0.0) Introduced on the M I/O Aggregator and FN IOM.
9.10(0.1) Introduced on the S6010-ON and S4048T-ON.
9.10(0.0) Introduced on the S3148.
9.10(0.0) Introduced on the C9010, Z9100–ON, S6100–ON, and S3100 series.
9.9(0.0) Introduced on the S4810, S4820T, S3048–ON, S4048–ON, S5000, S6000, S6000–ON, Z9500, MXL.

Example

DellEMC# show eula-consent support-assist
SupportAssist EULA has been: Accepted

Additional information about the SupportAssist EULA is as follows:

By installing SupportAssist, you allow Dell to save your contact information (e.g. name, phone number and/or email address) which would be used to provide technical support for your Dell products and services. Dell may use the information for providing recommendations to improve your IT infrastructure.

Dell SupportAssist also collects and stores machine diagnostic information, which may include but is not limited to configuration information, user supplied contact information, names of data volumes, IP addresses, access control lists, diagnostics & performance information, network configuration information, host/server configuration
& performance information and related data (Collected Data) and transmits this information to Dell. By downloading SupportAssist and agreeing to be bound by these terms and the Dell end user license agreement, available at: www.dell.com/aeula, you agree to allow Dell to provide remote monitoring services of your IT environment and you give Dell the right to collect the Collected Data in accordance with Dell's Privacy Policy, available at: www.dell.com/privacypolicycountryspecific, in order to enable the performance of all of the various functions of SupportAssist during your entitlement to receive related repair services from Dell. You further agree to allow Dell to transmit and store the Collected Data from SupportAssist in accordance with these terms. You agree that the provision of SupportAssist may involve international transfers of data from you to Dell and/or to Dell's affiliates, subcontractors or business partners. When making such transfers, Dell shall ensure appropriate protection is in place to safeguard the Collected Data being transferred in connection with SupportAssist. If you are downloading SupportAssist on behalf of a company or other legal entity, you are further certifying to Dell that you have appropriate authority to provide this consent on behalf of that entity. If you do not consent to the collection, transmission and/or use of the Collected Data, you may not download, install or otherwise use SupportAssist.

DellEMC# show running-config support-assist

show running-config

Display the current configuration and changes from the default values.

Syntax

show running-config support-assist

Parameters

support-assist Enter the keyword support-assist to view the detailed configuration for the feature.

Command Modes

EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell EMC Networking OS Command Line Reference Guide.

Version Description

9.11(0.0) Introduced on the M I/O Aggregator and FN IOM.

9.10(0.1) Introduced on the S6010-ON and S4048T-ON.

9.10(0.0) Introduced on the S3148.

9.10(0.0) Introduced on the C9010, Z9100–ON, S6100–ON, and S3100 series.

9.9(0.0) Introduced on the S4810, S4820T, S3048–ON, S4048–ON, S5000, S6000, S6000–ON, Z9500, MXL.

Spanning Tree Protocol (STP)

The commands in this chapter configure and monitor the IEEE 802.1d spanning tree protocol (STP).

Topics:
- bridge-priority
- debug spanning-tree
- description
- disable
- forward-delay
- hello-time
- max-age
- portfast bpdufilter default
- protocol spanning-tree
- show config
- show spanning-tree 0
- spanning-tree 0

**bridge-priority**

Set the bridge priority of the switch in an IEEE 802.1D spanning tree.

**Syntax**

```
bridge-priority {priority-value | primary | secondary}
```

To return to the default value, use the `no bridge-priority` command.

**Parameters**

- **priority-value**
  - Enter a number as the bridge priority value. The range is from 0 to 65535. The default is `32768`.
- **primary**
  - Enter the keyword `primary` to designate the bridge as the root bridge.
- **secondary**
  - Enter the keyword `secondary` to designate the bridge as a secondary root bridge.

**Defaults**

```
priority-value = 32768
```

**Command Modes**

SPANNING TREE (The prompt is “config-stp”.)

**Supported Modes**

Full-Switch

**Command History**

- **Version**
  - **9.9(0.0)**: Introduced on the FN IOM.
  - **8.3.16.1**: Introduced on the MXL 10/40GbE Switch IO Module.
debug spanning-tree

Enable debugging of the spanning tree protocol and view information on the protocol.

Syntax: debug spanning-tree {stp-id [all | bpdu | events | exceptions] | protocol}

To disable debugging, use the no debug spanning-tree command.

Parameters:
- stp-id: Enter zero (0). The switch supports one spanning tree group with a group ID of 0.
- protocol: Enter the keyword for the type of STP to debug, either mstp, pvst, or rstp.
- all: (OPTIONAL) Enter the keyword all to debug all spanning tree operations.
- bpdu: (OPTIONAL) Enter the keyword bpdu to debug bridge protocol data units.
- events: (OPTIONAL) Enter the keyword events to debug STP events.

Command Modes: EXEC Privilege

Supported Modes: Full-Switch Mode

Command History:
- Version 9.9(0.0): Introduced on the FN IOM.
- Version 8.3.16.1: Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information: When you enable debug spanning-tree bpdu for multiple interfaces, the software only sends information on BPDUs for the last interface specified.

Related Commands:
- portfast bpdufilter default — enters SPANNING TREE mode on the switch.

description

Enter a description of the spanning tree.

Syntax: description {description}

To remove the description from the spanning tree, use the no description {description} command.

Parameters:
- description: Enter a description to identify the spanning tree (80 characters maximum).

Defaults: none

Command Modes: SPANNING TREE (The prompt is "config-stp").

Supported Modes: Full-Switch Mode

Command History:
- Version 9.9(0.0): Introduced on the FN IOM.
- Version 8.3.16.1: Introduced on the MXL 10/40GbE Switch IO Module.

Related Commands: portfast bpdufilter default — enters SPANNING TREE mode on the switch.
disable

Disable the spanning tree protocol globally on the switch.

Syntax  disable

To enable Spanning Tree Protocol, use the no disable command.

Defaults  Enabled (that is, the spanning tree protocol is disabled.)

Command Modes  SPANNING TREE

Supported Modes  Full–Switch Mode

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Related Commands  portfast bpdufilter default — enters SPANNING TREE mode.

forward-delay

The amount of time the interface waits in the Listening state and the Learning state before transitioning to the Forwarding state.

Syntax  forward-delay seconds

To return to the default setting, use the no forward-delay command.

Parameters  seconds  Enter the number of seconds that the system waits before transitioning STP to the Forwarding state. The range is from 4 to 30. The default is 15 seconds.

Defaults  15 seconds

Command Modes  SPANNING TREE

Supported Modes  Full–Switch Mode

Command History

</tr>
</tbody>
</table>

Related Commands  max-age — changes the wait time before STP refreshes protocol configuration information.

hello-time — changes the time interval between BPDUs.
**hello-time**

Set the time interval between generation of the spanning tree bridge protocol data units (BPDUs).

**Syntax**

```plaintext
hello-time seconds
```

To return to the default value, use the `no hello-time` command.

**Parameters**

- **seconds**

Enter a number as the time interval between transmission of BPDUs. The range is from 1 to 10. The default is 2 seconds.

**Defaults**  
2 seconds

**Command Modes**  
SPANNING TREE

**Supported Modes**  
Full-Switch Mode

</tr>
</tbody>
</table>

**Related Commands**

- `forward-delay` — changes the wait time before STP transitions to the Forwarding state.
- `max-age` — changes the wait time before STP refreshes protocol configuration information.

**max-age**

To maintain configuration information before refreshing that information, set the time interval for the spanning tree bridge.

**Syntax**

```plaintext
max-age seconds
```

To return to the default values, use the `no max-age` command.

**Parameters**

- **seconds**

Enter a number of seconds the system waits before refreshing configuration information. The range is from 6 to 40. The default is 20 seconds.

**Defaults**  
20 seconds

**Command Modes**  
SPANNING TREE

**Supported Modes**  
Full-Switch Mode

**Command History**

<table>

</tr>
</tbody>
</table>

**Related Commands**

- `forward-delay` — changes the wait time before STP transitions to the Forwarding state.
**hello-time** — changes the time interval between BPDUs.

**portfast bpdufilter default**

Enable BPDU Filter globally to filter transmission of BPDU on port fast enabled interfaces.

**Syntax**

```plaintext
portfast bpdufilter default
```

To disable global bpdu filter default, use the `no edge-port bpdufilter default` command.

**Defaults**

Disabled

**Command Modes**

SPANNING TREE

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>

</tr>
</tbody>
</table>

**protocol spanning-tree**

To enable and configure the spanning tree group, enter SPANNING TREE mode.

**Syntax**

```plaintext
protocol spanning-tree stp-id
```

To disable the Spanning Tree group, use the `no protocol spanning-tree stp-id` command.

**Parameters**

- **stp-id**
  
Enter zero (0). The system supports one spanning tree group, group 0.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Supported Modes**

Full-Switch Mode

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>

<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

STP is not enabled when you enter SPANNING TREE mode. To enable STP globally on the switch, use the `no disable` command from SPANNING TREE mode.

**Example**

```
Dell(conf)#protocol spanning-tree 0
Dell(config-stp)#
```

**Related Commands**

- **disable** — disables spanning tree group 0. To enable spanning tree group 0, use the `no disable` command.
show config

Display the current configuration for the mode. Only non-default values display.

**Syntax**

```
show config
```

**Command Modes**

SPANNING TREE

**Supported Modes**

Full-Switch Mode

**Command History**

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

**Example**

Dell(config-stp)#show config
protocol spanning-tree 0
no disable
Dell(config-stp)#

show spanning-tree 0

Display the spanning tree group configuration and status of interfaces in the spanning tree group.

**Syntax**

```
show spanning-tree 0 [active | brief | guard | interface interface | root | summary]
```

**Parameters**

- `0`: Enter 0 (zero) to display information about that specific spanning tree group.
- `active` (OPTIONAL) Enter the keyword active to display only active interfaces in spanning tree group 0.
- `brief` (OPTIONAL) Enter the keyword brief to display a synopsis of the spanning tree group configuration information.
- `guard` (OPTIONAL) Enter the keyword guard to display the type of guard enabled on an STP interface and the current port state.
- `interface interface` (OPTIONAL) Enter the keyword interface and the type slot/port of the interface you want displayed. Type slot/port options are the following:
  - For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- `root` (OPTIONAL) Enter the keyword root to display configuration information on the spanning tree group root.
- `summary` (OPTIONAL) Enter the keyword summary to only the number of ports in the spanning tree group and their state.

**Command Modes**

EXEC Privilege

**Supported Modes**

Full-Switch Mode

Usage Information

Enable spanning tree group 0 prior to using this command.

The following describes the `show spanning-tree 0` command shown in the example.

Field          Description
---             ------------------
“Bridge Identifier...” Lists the bridge priority and the MAC address for this STP bridge.
“Configured hello...” Displays the settings for hello time, max age, and forward delay.
“We are...” States whether this bridge is the root bridge for the STG.
“Current root...” Lists the bridge priority and MAC address for the root bridge.
“Topology flag...” States whether the topology flag and the detected flag were set.
“Number of...” Displays the number of topology changes, the time of the last topology change, and on what interface the topology change occurred.
“Timers” Lists the values for the following bridge timers: hold time, topology change, hello time, max age, and forward delay.
“Times” List the number of seconds since the last:
  • hello time
  • topology change
  • notification
  • aging

“Port 1...” Displays the Interface type slot/port information and the status of the interface (Disabled or Enabled).
“Port path...” Displays the path cost, priority, and identifier for the interface.
“Designated root...” Displays the priority and MAC address of the root bridge of the STG that the interface belongs.
“Designated port...” Displays the designated port ID.

Example

```
Dell#show spann 0

Executing IEEE compatible Spanning Tree Protocol
Bridge Identifier has priority 32768, Address 0001.e800.0a56
Configured hello time 2, max age 20, forward delay 15
We are the root of the spanning tree
Current root has priority 32768 address 0001.e800.0a56
Topology change flag set, detected flag set
Number of topology changes 1 last change occurred 0:00:05 ago from TenGigabitEthernet 1/3
Timers:hold 1, topology change 35
Times:hello 2, max age 20, forward delay 15
Port 2 (TenGigabitEthernet 1/1) is Forwarding
Port path cost 4, Port priority 8, Port Identifier 8.26
Designated root has priority 32768, address 0001.e800.0a56
Designated bridge has priority 32768, address 0001.e800.0a56
Designated port id is 8.26, designated path cost 0
```
Timers: message age 0, forward_delay 0, hold 0
Number of transitions to forwarding state 1
BPDU: sent:18, received 0
The port is not in the portfast mode

Port 3 (TenGigabitEthernet 1/2) is Forwarding
Port path cost 4, Port priority 8, Port Identifier 8.27
Designated root has priority 32768, address 0001.e800.0a56
Designated bridge has priority 32768, address 0001.e800.0a56
Designated port id is 8.27, designated path cost 0
Timers: message age 0, forward_delay 0, hold 0
Number of transitions to forwarding state 1
BPDU: sent:18, received 0
The port is not in the portfast mode

Port 4 (TenGigabitEthernet 1/3) is Forwarding
Port path cost 4, Port priority 8, Port Identifier 8.28
Designated root has priority 32768, address 0001.e800.0a56
Designated bridge has priority 32768, address 0001.e800.0a56
Designated port id is 8.28, designated path cost 0
Timers: message age 0, forward_delay 0, hold 0
Number of transitions to forwarding state 1
BPDU: sent:31, received 0
The port is not in the portfast mode

Example (Brief)
The following describes the `show spanning-tree 0 guard` command shown in the example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Interface Name</td>
<td>STP interface.</td>
</tr>
<tr>
<td>Instance</td>
<td>STP 0 instance.</td>
</tr>
<tr>
<td>Sts</td>
<td>Port state: root-inconsistent (INCON Root), forwarding (FWD), listening (LIS), blocking (BLK), or shut down (EDS Shut).</td>
</tr>
<tr>
<td>Guard Type</td>
<td>Type of STP guard configured (Root, Loop, or BPDU guard).</td>
</tr>
<tr>
<td>Bpdu Filter</td>
<td>BPDU Filter enabled - Yes, BPDU Filter disabled - No.</td>
</tr>
</tbody>
</table>

Example (Guard)
```
Dell#show spanning-tree 0 guard
Interface
Name Instance Sts Guard type
------ ------ ------- ----------
Te 0/1 0 INCON(Root) Rootguard
Te 0/2 0 LIS Loopguard
Te 0/3 0 EDS (Shut) Bpduguard
```

**spanning-tree 0**

Assigns a Layer 2 interface to STP instance 0 and configures a port cost or port priority, or enables loop guard, root guard, or the Portfast feature on the interface.

**Syntax**

```
spanning-tree stp-id {cost cost | {rootguard} | portfast [bpduguard [shutdown-on-violation]]| bpdufilter] | priority priority}
```
To disable Spanning Tree group on an interface, use the `no spanning-tree stp-id {cost cost | (rootguard) | portfast [bpduguard [shutdown-on-violation] | bpdufilter] | priority priority}` command.

**Parameters**

- **stp-id**
  Enter the STP instance ID. The range is 0.

- **cost**
  Enter the keyword `cost` then a number as the cost. The range is 1 to 65535. The defaults are:
  - 10-Gigabit Ethernet interface = 2.
  - Port Channel interface with 10-Gigabit Ethernet = 1.

- **rootguard**
  Enter the keyword `rootguard` to enable STP root guard on a port or port-channel interface.

- **portfast [bpduguard [shutdown-on-violation] | bpdufilter]**
  Enter the keyword `portfast` to enable Portfast to move the interface into Forwarding mode immediately after the root fails.
  Enter the optional keyword `bpduguard` to disable the port when it receives a BPDU.
  Enter the optional keywords `shutdown-on-violation` to hardware disable an interface when a BPDU is received and the port is disabled.
  Enter the keyword `bpdufilter` to enable on an interface; it should stop sending and receiving BPDUs on the port fast enabled ports.

- **priority**
  Enter keyword `priority` then a number as the priority. The range is zero (0) to 15. The default is 8.

**Defaults**

- `cost` = depends on the interface type; `priority` = 8

**Command Modes**

- INTERFACE

**Supported Modes**

- Full-Switch Mode

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

- If you enable `portfast bpduguard` on an interface and the interface receives a BPDU, the software disables the interface and sends a message stating that fact. The port is in ERR_DISABLE mode, yet appears in the show interface commands as enabled. If you do not enable `shutdown-on-violation`, BPDUs still are sent to the RPM CPU.

- STP root guard is supported on a port or port-channel enabled in any Spanning Tree mode: Spanning Tree Protocol (STP), Rapid Spanning Tree Protocol (RSTP), Multiple Spanning Tree Protocol (MSTP), and Per-VLAN Spanning Tree Plus (PVST+).

- Root guard is supported on any STP-enabled port or port-channel except when used as a stacking port. When enabled on a port, root guard applies to all VLANs configured on the port.
The commands in this chapter configure time values on the system, either using the Dell Networking OS, the hardware, or using the network time protocol (NTP). With NTP, the switch can act only as a client to an NTP clock host. For more information, refer to the Network Time Protocol section of the Management chapter in the Dell Networking OS Configuration Guide.

The NTP commands are:

- `show clock`
- `clock set`
- `clock summer-time date`
- `clock summer-time recurring`

Topics:

- `clock set`
- `clock summer-time date`
- `clock summer-time recurring`
- `debug ntp`
- `ntp offset-threshold`
- `ntp server`
- `ntp authenticate`
- `ntp authentication-key`
- `ntp master <stratum>`
- `ntp server`
- `ntp source`
- `ntp trusted-key`
- `show clock`
- `show ntp associations`
- `show ntp vrf associations`
- `show ntp status`

**clock set**

Set the software clock in the switch.

**Syntax**

```
clock set time month day year
```

**Parameters**

- `time`
  
  Enter the time in hours:minutes:seconds. For the hour variable, use the 24-hour format; example, 17:15:00 is 5:15 pm.

- `month`
  
  Enter the name of one of the 12 months, in English. You can enter the number of a day and change the order of the display to `time day month year`.
day

Enter the number of the day. The range is from 1 to 31. You can enter the name of a month to change the order of the display to time month day year.

year

Enter a four-digit number as the year. The range is from 1993 to 2035.

Defaults

Not configured.

Command Modes

EXEC Privilege

Supported Modes

All Modes

Command History

Version Description
9.9(0.0) Introduced on the FN IOM.
9.4(0.0) Supported on the FN I/O Aggregator.
8.3.17.0 Supported on the M I/O Aggregator.

Usage Information

You can change the order of the month and day parameters to enter the time and date as time day month year.

You cannot delete the software clock.

The software clock runs only when the software is up. The clock restarts, based on the hardware clock, when the switch reboots.

Dell Networking recommends using an outside time source, such as NTP, to ensure accurate time on the switch.

Example

Dell#clock set 12:11:00 21 may 2012
Dell#

clock summer-time date

Set a date (and time zone) on which to convert the switch to daylight saving time on a one-time basis.

Syntax

```
clock summer-time time-zone date start-month start-day start-year start-time end-month end-day end-year end-time [offset]
```

To delete a daylight saving time zone configuration, use the no clock summer-time command.

Parameters

time-zone

Enter the three-letter name for the time zone. This name is displayed in the show clock output.

start-month

Enter the name of one of the 12 months in English. You can enter the name of a day to change the order of the display to time day month year.

start-day

Enter the number of the day. The range is from 1 to 31. You can enter the name of a month to change the order of the display to time day month year.

start-year

Enter a four-digit number as the year. The range is from 1993 to 2035.

start-time

Enter the time in hours:minutes. For the hour variable, use the 24-hour format; example, 17:15 is 5:15 pm.

end-day

Enter the number of the day. The range is from 1 to 31. You can enter the name of a month to change the order of the display to time day month year.

end-month

Enter the name of one of the 12 months in English. You can enter the name of a day to change the order of the display to time day month year.
**clock summer-time recurring**

Set the software clock to convert to daylight saving time on a specific day each year.

**Syntax**

```
clock summer-time time-zone recurring [start-week start-day start-month start-time end-week end-day end-month end-time [offset]]
```

To delete a daylight saving time zone configuration, use the `no clock summer-time` command.

**Parameters**

- `time-zone` Enter the three-letter name for the time zone. This name is displayed in the `show clock` output. You can enter up to eight characters.

- `start-week` (OPTIONAL) Enter one of the following as the week that daylight saving begins and then enter values for start-day through end-time:
  - `week-number`: Enter a number from 1 to 4 as the number of the week in the month to start daylight saving time.
  - `first`: Enter this keyword to start daylight saving time in the first week of the month.
  - `last`: Enter this keyword to start daylight saving time in the last week of the month.

- `start-day` Enter the name of the day that you want daylight saving time to begin. Use English three letter abbreviations; for example, Sun, Sat, Mon, and so on. The range is from Sun to Sat.

- `start-month` Enter the name of one of the 12 months in English.

- `start-time` Enter the time in hours:minutes. For the hour variable, use the 24-hour format; example, 17:15 is 5:15 pm.

- `end-week` Enter the one of the following as the week that daylight saving ends:
week-number: enter a number from 1 to 4 as the number of the week to end daylight saving time.

first: enter the keyword first to end daylight saving time in the first week of the month.

last: enter the keyword last to end daylight saving time in the last week of the month.

end-day Enter the weekday name that you want daylight saving time to end. Enter the weekdays using the three letter abbreviations; for example Sun, Sat, Mon, and so on. The range is from Sun to Sat.

end-month Enter the name of one of the 12 months in English.

end-time Enter the time in hours:minutes:seconds. For the hour variable, use the 24-hour format; example, 17:15:00 is 5:15 pm.

offset (OPTIONAL) Enter the number of minutes to add during the summer-time period. The range is from 1 to 1440. The default is 60 minutes.

Defaults Not configured.

Related Commands
clock summer-time date — sets a date (and time zone) on which to convert the switch to daylight saving time on a one-time basis.

show clock — displays the current clock settings.

debug ntp

Display network time protocol (NTP) transactions and protocol messages for troubleshooting.

Syntax debug ntp {adjust | all | authentication | events | loopfilter | packets | select | sync}

To disable debugging of NTP transactions, use the no debug ntp {adjust | all | authentication | events | loopfilter | packets | select | sync} command.

Parameters

adjust Enter the keyword adjust to display information on NTP clock adjustments.

all Enter the keyword all to display information on all NTP transactions.

authentication Enter the keyword authentication to display information on NTP authentication transactions.

events Enter the keyword events to display information on NTP events.

loopfilter Enter the keyword loopfilter to display information on NTP local clock frequency.
packets
Enter the keyword packets to display information on NTP packets.

select
Enter the keyword select to display information on the NTP clock selection.

sync
Enter the keyword sync to display information on the NTP clock synchronization.

ntp offset-threshold
Configure the threshold time interval before which the system generates an NTP audit log message if the time difference from the NTP server is greater than a threshold value (offset-threshold).

Syntax

```
ntp offset-threshold threshold-value
```

To disable the threshold value, use the `no ntp offset-threshold` command.

Parameters

- **offset-threshold** (Optional) Enter the keyword offset-threshold and then the threshold value. The range is from 0 to 999.

Defaults

Not enabled.

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, see the relevant Dell EMC Networking OS Command Line Reference Guide.

<table>

</tr>
</tbody>
</table>

Usage Information

The `ntp offset-threshold` command does not time synchronization.

Example

```
DellEMC(config)# ntp offset-threshold 4
```

ntp server

Configure an NTP time-serving host.

Syntax

```
ntp server {ipv4-address}
```

Usage Information

When using the `ntp server {ipv4-address}` command, the destination port number for NTP (default 123) can be modified using the `ntp server {ipv4-address} [port]` command.

Example

```
DellEMC(config)# ntp server 192.0.2.10
```
Parameters

\textbf{ipv4-address} Enter an IPv4 address (A.B.C.D).

Defaults

Not configured.

</tbody>
</table>

Usage Information

You can configure multiple time-serving hosts (up to 250). From these time-serving hosts, the operating system chooses one NTP host with which to synchronize.

Because many polls to NTP hosts can impact network performance, Dell Networking recommends limiting the number of hosts configured.

\section*{ntp authenticate}

Enable authentication of NTP traffic between the switch and the NTP time serving hosts.

\textbf{Syntax}

\texttt{ntp authenticate}

To disable NTP authentication, use the \texttt{no ntp authentication} command.

\textbf{Defaults}

Not enabled.

Command Modes

<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

You also must configure an authentication key for NTP traffic using the \texttt{ntp authentication-key} command.

Related Commands

\texttt{ntp authentication-key} — configures the authentication key for NTP traffic.

\texttt{ntp trusted-key} — configures a key to authenticate.

\section*{ntp authentication-key}

Specify a key for authenticating the NTP server.

\textbf{Syntax}

\texttt{ntp authentication-key number md5 [0 | 7] key}

\textbf{Parameters}

\texttt{number} Specify a number for the authentication key. The range is from 1 to 4294967295.
This number must be the same as the `number` parameter configured in the `ntp trusted-key` command.

<table>
<thead>
<tr>
<th>md5</th>
<th>Specify that the authentication key is encrypted using MD5 encryption algorithm.</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>Specify that authentication key is entered in an unencrypted format (default).</td>
</tr>
<tr>
<td>7</td>
<td>Specify that the authentication key is entered in DES encrypted format.</td>
</tr>
<tr>
<td>key</td>
<td>Enter the authentication key in the previously specified format.</td>
</tr>
</tbody>
</table>

**Defaults**
NTP authentication is not configured by default. If you do not specify the option `[0 7]`, `0` is selected by default.

**Command Modes**
- CONFIGURATION

**Supported Modes**
- Full-Switch

**Command History**
<table>
<thead>
<tr>

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**
After configuring the `ntp authentication-key` command, configure the `ntp trusted-key` command to complete NTP authentication.

The Dell Networking OS versions 8.2.1.0 and later use an encryption algorithm to store the authentication key that is different from previous versions; beginning in version 8.2.1.0, the system uses DES encryption to store the key in the startup-config when you enter the `ntp authentication-key` command. Therefore, if your system boots with a startup-configuration from an versions prior to 8.2.1.0 in which you have configured `ntp authentication-key`, the system cannot correctly decrypt the key, and cannot authenticate NTP packets. In this case you must re-enter this command and save the running-config to the startup-config.

**Related Commands**
- `ntp authenticate` — enables NTP authentication.
- `ntp trusted-key` — configures a trusted key.

### ntp master `<stratum>`

Configure the switch as NTP Server.

**Syntax**

```plaintext
ntp master `<stratum>`
```

**Parameters**
- `ntp master `<stratum>``: Enter the keyword `stratum` number to identify the NTP Server's hierarchy.

**Defaults**
- Not configured.

**Command Modes**
- CONFIGURATION

**Supported Modes**
- Full-Switch

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the MxL.</td>
</tr>
</tbody>
</table>

### ntp server

Configure an NTP time-serving host.

#### Syntax

```plaintext
ntp server [vrf vrf-name] (hostname | ipv4-address | ipv6-address) [key keyid] [prefer] [version number]
```

#### Parameters

- **vrf vrf-name**  
  (Optional) Enter the keyword vrf and then the name of the VRF to configure a NTP time-serving host corresponding to that VRF.

- **ipv4-address | ipv6-address**  
  Enter an IPv4 address (A.B.C.D) or IPv6 address (X::X::X::X) of NTP server.

- **hostname**  
  Enter the hostname of the server.

- **key keyid**  
  (OPTIONAL) Enter the keyword key and a number as the NTP peer key. The range is from 1 to 4294967295.

- **prefer**  
  (OPTIONAL) Enter the keyword prefer to indicate that this peer has priority over other servers.

- **version number**  
  (OPTIONAL) Enter the keyword version and a number to correspond to the NTP version used on the server. The range is from 1 to 4.

#### Defaults

Not configured.

#### Command Modes

- CONFIGURATION

#### Supported Modes

- Full-Switch

#### Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>

<td>Added support for VRF.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

#### Usage Information

You can configure multiple time-serving hosts (up to 250). From these time-serving hosts, the system chooses one NTP host with which to synchronize. To determine which server was selected, use the `show ntp associations` command.

Because many polls to NTP hosts can impact network performance, Dell Networking OS recommends limiting the number of hosts configured.

#### Related Commands

- `show ntp associations` — displays the NTP servers configured and their status.
**ntp source**

Specify an interface’s IP address to be included in the NTP packets.

**Syntax**

```
ntp source interface
```

to delete the configuration, use the no ntp source command.

**Parameters**

<table>
<thead>
<tr>
<th>Interface</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>loopback</td>
<td>For Loopback interfaces, enter the keyword loopback then a number from zero (0) to 16383.</td>
</tr>
<tr>
<td>lag</td>
<td>For a Port Channel interface, enter the keyword lag then a number. The range is from 1 to 128.</td>
</tr>
<tr>
<td>TenGigabitEthernet</td>
<td>For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.</td>

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.6(0.0)</td>
<td>Added support for VRF.</td>
</tr>
<tr>
<td>9.4.(0.0)</td>
<td>Added support for VRF.</td>
</tr>
</tbody>
</table>

Usage Information

The following describes the show ntp status command shown in the following example.

Field                      Description
"Clock is..."              States whether the switch clock is synchronized, which NTP stratum the system is assigned and the IP address of the NTP peer.
"frequency is..."          Displays the frequency (in ppm), stability (in ppm) and precision (in Hertz) of the clock in this system.
"reference time is..."     Displays the reference time stamp.
"clock offset is..."       Displays the system offset to the synchronized peer and the time delay on the path to the NTP root clock.
"root dispersion is..."    Displays the root and path dispersion.
"peer mode is..."          State what NTP mode the switch is. This should be Client mode.

Example

Dell#show ntp status
Clock is unsynchronized, stratum 16, no reference clock
frequency is 0.000 ppm, stability is 0.000 ppm, precision is 4294967279
Related Commands

- `show ntp associations` — displays information on the NTP master and peer configurations.
Tunneling is supported on the Dell Networking OS.

**tunnel-mode**

Enable a tunnel interface.

**Syntax**

```
tunnel mode {ipip | ipv6 | ipv6ip}[decapsulate-any]
```

To disable an active tunnel interface, use the no tunnel mode command.

**Parameters**

- **ipip**: Enable tunnel in RFC 2003 mode and encapsulate IPv4 and/or IPv6 datagrams inside an IPv4 tunnel.
- **ipv6**: Enable tunnel in RFC 2473 mode and encapsulate IPv4 and/or IPv6 datagrams inside an IPv6 tunnel.
- **ipv6ip**: Enable tunnel in RFC 4213 mode and encapsulate IPv6 datagrams inside an IPv4 tunnel.
- **decapsulate-any**: (Optional) Enable tunnel in multipoint receive-only mode.

**Defaults**

None

**Command Modes**

INTERFACE TUNNEL

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Added the decapsulate-any command.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

To enable a tunnel interface, use this command. You must define a tunnel mode for the tunnel to function. If you previously defined the tunnel destination or source address, the tunnel mode must be compatible.

Including the decapsulate-any option causes the command to fail if any of the following tunnel transmit options are configured: tunnel destination, tunnel dscp, tunnel flow-label, tunnel hop-limit, or tunnel keepalive. Conversely, if you configure any tunnel allow-remote entries, the tunnel-mode command fails unless the decapsulate-any option is included.

Configuration of IPv6 commands over decapsulate-any tunnel causes an error.
### tunnel source

Set a source address for the tunnel.

**Syntax**

```plaintext
tunnel source {ip-address | ipv6-address | interface-type-number}
```

To delete the current tunnel source address, use the `no tunnel source` command.

**Parameters**

- `ip-address`
  - Enter the source IPv4 address in A.B.C.D format.
- `ipv6-address`
  - Enter the source IPv6 address in X:XX:XX::X format.
- `interface-type-number`
  - For a Port Channel interface, enter the keywords `port-channel` then a number from 1 to 128.
  - For a 10–Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults**

none

**Command Modes**

INTERFACE TUNNEL (conf-if-tu)

</tbody>
</table>

**Usage Information**

If you configure a tunnel interface or destination address, the tunnel source must be compatible.

If you configure a tunnel source address as an interface, the tunnel does not function until the compatible address is present on the particular interface.

### tunnel keepalive

Configure the tunnel keepalive target, interval and attempts.

**Syntax**

```plaintext
tunnel keepalive {ip-address | ipv6-address}[interval {seconds}] [attempts {count | unlimited}]
```

Use the `no tunnel keepalive` command to disable tunnel keepalive probes.

**Parameters**

- `ip-address ipv6 address`
  - Enter the IPv4 or IPv6 address of the peer to which the keepalive probes will be sent.
- `interval seconds`
  - Enter the keyword `interval` followed by the interval time, in seconds, after which the restart process to keepalive probe packets.
  - The range is from 5- 255. Default range is 5.
**count**

(OPTIONAL) Enter the keyword `count` to count packets processed by the filter.

The range is from 3-10, Default range is 3.

**unlimited**

Enter the keyword `unlimited` to specify the unlimited number of keepalive probe packets.

**Defaults**

Tunnel keepalive is disabled.

**Command Modes**

INTERFACE TUNNEL

**Supported Modes**

Full–Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Introduced on the MXL.</td>
</tr>
</tbody>
</table>

**Usage Information**

When configured, the system will send ICMP echo probe packets at the configured interval and expect a response within the configured number of attempts, else the tunnel interface will be declared operational down.

### tunnel allow-remote

Configure an IPv4 or IPv6 address or prefix whose tunneled packets will be accepted for decapsulation. If no allow-remote entries are configured, tunneled packets from any remote peer address will be accepted.

**Syntax**

```
tunnel allow-remote {ip-address | ipv6-address} [mask]
```

Use the `no tunnel allow-remote` command to delete a configured allow-remote entry. Any specified address/mask values must match an existing entry for the delete to succeed. If the address and mask are not specified, this command deletes all allow-remote entries.

**Parameters**

- `ip-address`
  - Enter the source IPv4 address in A.B.C.D format.
- `ipv6-address`
  - Enter the source IPv6 address in X::X::X::X format.
- `mask`
  - (OPTIONAL) Enter a network mask in /prefix format (/x) or A.B.C.D to match a range of remote addresses. The default mask is /32 for IPv4 addresses and /128 for IPv6 addresses, which match only the specified address.

**Defaults**

If no tunnel allow remote is configured, all traffic which is destined to tunnel source address will be decapsulated.

**Command Modes**

INTERFACE TUNNEL

**Supported Modes**

Full–Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Introduced on the MXL.</td>
</tr>
</tbody>
</table>

**Usage Information**

Up to eight allow-remote entries can be configured on any particular multipoint receive-only tunnel.
This command will fail if the address family entered does not match the outer header address family of the tunnel mode, tunnel source, or any other tunnel allow-remote.

If any allow-remote are configured, the tunnel source or tunnel mode commands will fail if the outer header address family does not match that of the configured allow-remote.

tunnel dscp

Configure the method to set the DSCP in the outer tunnel header.

**Syntax**
```
tunnel dscp {mapped | <value>}
```

To use the default tunnel mapping behavior, use the `no tunnel dscp value` command.

**Parameters**
- **mapped**
  - Enter the keyword `mapped` to map the original packet DSCP (IPv4)/Traffic Class (IPv6) to the tunnel header DSCP (IPv4)/Traffic Class (IPv6) depending on the mode of tunnel.
- **value**
  - Enter a value to set the DSCP value in the tunnel header. The range is from 0 to 63. The default value of 0 denotes mapping of original packet DSCP (IPv4)/Traffic Class (IPv6) to the tunnel header DSCP (IPv4)/Traffic Class (IPv6) depending on the mode of tunnel.

**Defaults**
0 (Mapped)

**Command Modes**
- INTERFACE TUNNEL (conf-if-tu)

**Supported Modes**
- Full-Switch

**Command History**
- **Version**
  - 9.9(0.0) Introduced on the FN IOM.
  - 9.3(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**
This command configures the method used to set the high 6 bits (the differentiated services codepoint) of the IPv4 TOS or the IPv6 traffic class in the outer IP header.

A value of 0 copies original packet DSCP (IPv4)/Traffic Class (IPv6) to the tunnel header DSCP (IPv4)/Traffic Class (IPv6) depending on the mode of tunnel.

tunnel destination

Set a destination endpoint for the tunnel.

**Syntax**
```
tunnel destination {ip-address | ipv6-address}
```

To delete a tunnel destination address, use the `no tunnel destination {ip-address | ipv6-address}` command.

**Parameters**
- **ip-address**
  - Enter the destination IPv4 address for the tunnel.
- **ipv6-address**
  - Enter the destination IPv6 address for the tunnel.

**Defaults**
none
Command Modes

INTERFACE TUNNEL (conf-if-tu)

Supported Modes

Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

The tunnel interface is inoperable without a valid tunnel destination address for the configured Tunnel mode. To establish a logical tunnel to the particular destination address, use the destination address of the outer tunnel header. If you configure a tunnel interface or source address, the tunnel destination must be compatible.

tunnel flow-label

Configure the method to set the IPv6 flow label value in the outer tunnel header.

Syntax
tunnel flow-label value

To return to the default value of 0, use the no tunnel flow-label value command.

Parameters

- **value**: Enter a value to set the IPv6 flow label value in the tunnel header. The range is from 0 to 1048575. The default value is 0.

Defaults

0 (Mapped original packet flow-label value to tunnel header flow-label value)

Command Modes

INTERFACE TUNNEL (conf-if-tu)

Supported Modes

Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

This command is only valid for tunnel interfaces with an IPv6 outer header.

tunnel hop-limit

Configure the method to set the IPv4 time-to-live or the IPv6 hop limit value in the outer tunnel header.

Syntax
tunnel hop-limit value

To restore the default tunnel hop-limit, use the no tunnel hop-limit command.

Parameters

- **value**: Enter the hop limit (ipv6) or time-to-live (ipv4) value to include in the tunnel header. The range is from 0 to 255. The default is 64.

Defaults

64 (Time-to-live for IPv4 outer tunnel header or hop limit for IPv6 outer tunnel header)
Command Modes

- INTERFACE TUNNEL (conf-if-tu)

Supported Modes

- Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>

<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

A value of 0 copies the inner packet hop limit (ipv6) or time-to-live (ipv4) in the encapsulated packet to the tunnel header hop limit (ipv6) or time-to-live (ipv4) value.

**ip unnumbered**

Configure a tunnel interface to operate without a unique explicit IPv4 address and select the interface from which the tunnel will borrow its address.

**Syntax**

`ip unnumbered {interface-type interface-number}`

Use the `no ip unnumbered` command to set the tunnel back to default logical address. If the tunnel was previously operational, this will make the tunnel interface operationally down, unless the tunnel also has an IPv6 address configured.

**Parameters**

- `interface-type interface-number`
  
  Enter the interface type, followed by a slot number.

**Defaults**

None

**Command Modes**

- INTERFACE TUNNEL

**Supported Modes**

- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Introduced on the MXL.</td>
</tr>
</tbody>
</table>

**Usage Information**

The `ip unnumbered` command will fail in two condition:

- If the logical ip address is configured.
- If the tunnel mode is ipv6ip (where ip address over tunnel interface is not possible).

To ping the unnumbered tunnels the logical address route information should be present in both the ends.

**NOTE:** The `ip unnumbered` command can specify an interface name that does not yet exist, or does not yet have a configured IPv6 address. The tunnel interface is not changed to the operationally up state until logically ip address is identified from the one of the address family.
ipv6 unnumbered

Configure a tunnel interface to operate without a unique explicit IPv6 address and select the interface from which the tunnel will borrow its address.

Syntax

```
ipv6 unnumbered {interface-type interface-number}
```

Use the `no ipv6 unnumbered` command to set the tunnel back to default logical address. If the tunnel was previously operational, this will make the tunnel interface operationally down, unless the tunnel also has an IPv4 address configured.

Parameters

- `interface-type interface-number` Enter the interface type, followed by the type, slot and port information.

Defaults

None.

<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Introduced on the MXL.</td>
</tr>
</tbody>
</table>

Usage Information

The ip unnumbered command will fail in two condition:

- If the logical ip address is configured.
- If the tunnel mode is ipv6ip (where ip address over tunnel interface is not possible).

To ping the unnumbered tunnels the logical address route information should be present in both the ends.

| NOTE: | The ipv6 unnumbered command can specify an interface name that does not yet exist, or does not yet have a configured IPv6 address. But the tunnel interface will not go operationally up until it has determined a logical address to use of at least one address family. |
All commands in this chapter are in u-Boot mode. These commands are supported on the Dell Networking Operating System (OS) FN IOM platform.

To access this mode, press any key when the following line appears on the console during a system boot.

Hit any key to stop autoboot:

Enter u-Boot immediately, as the \texttt{BOOT\_USER\#} prompt.

\textbf{NOTE:} This chapter describes only a few commands available in u-Boot mode.

\textbf{NOTE:} You cannot use the Tab key to complete commands in this mode.

Topics:

- boot change
- boot selection
- boot show net config retries
- boot write net config retries
- boot zero
- default gateway
- enable
- help
- ignore enable password
- ignore startup config
- interface management ethernet ip address
- no default-gateway
- no interface management ethernet ip address
- reload
- show boot bIC
- show boot selection
- show bootflash
- show bootvar
- show default-gateway
- show interface management Ethernet
- show interface management port config
- syntax help

\section*{boot change}

Change the operating system boot parameters.

\textbf{Syntax} \hspace{1em} \texttt{boot change [primary | secondary | default]}
**Command Modes**  
uBoot

**Supported Modes**  
Full-Switch

BOOT_USER #
Uplink Failure Detection (UFD)

Uplink failure detection (UFD) provides detection of the loss of upstream connectivity and, if you use this with network interface controller (NIC) teaming, automatic recovery from a failed link.

**NOTE:** In Standalone, VLT, and Stacking modes, the UFD group number is 1 by default and cannot be changed.

Topics:
- clear ufd-disable
- debug uplink-state-group
- defer-timer
- description
- downstream
- downstream auto-recover
- downstream disable links
- enable
- show running-config uplink-state-group
- show uplink-state-group
- uplink-state-group
- upstream

**clear ufd-disable**

Re-enable one or more downstream interfaces on the switch/router that are in a UFD-Disabled Error state so that an interface can send and receive traffic.

**Syntax**

```
clear ufd-disable {interface interface | uplink-state-group group-id}
```

**Parameters**

- **interface interface**
  
  Specify one or more downstream interfaces. For *interface*, enter one of the following interface types:
  
  - 10 Gigabit Ethernet: `tengigabitethernet {slot/port | slot/ port-range}`
  - Port channel: `port-channel {1-512 | port-channel-range}`

  Where *port-range* and *port-channel-range* specify a range of ports separated by a dash (-) and/or individual ports/port channels in any order; for example: `tengigabitethernet 1/1-2,5,9,11-12 port-channel 1-3,5`. A comma is required to separate each port and port-range entry.

- **uplink-state-group group-id**

  Re-enables all UFD-disabled downstream interfaces in the group. The valid group-id values are from 1 to 16.

**Defaults**

A downstream interface in a UFD-disabled uplink-state group is also disabled and is in a UFD-Disabled Error state.

Related Commands

- downstream — assigns a port or port-channel to the uplink-state group as a downstream interface.
- uplink-state-group — creates an uplink-state group and enables the tracking of upstream links.

**debug uplink-state-group**

Enable debug messages for events related to a specified uplink-state group or all groups.

**Syntax**

debug uplink-state-group [group-id]

To turn off debugging event messages, enter the no debug uplink-state-group [group-id] command.

**Parameters**

- **group-id** Enables debugging on the specified uplink-state group. The valid group-id values are from 1 to 16.

**Defaults**

- none

**Command Modes**

- EXEC Privilege

**Supported Modes**

- Programmable-Mux (PMUX)
- Full-Switch

</tbody>
</table>

**Related Commands**

- clear ufd-disable — re-enables downstream interfaces that are in a UFD-Disabled Error state.

**defer-timer**

Configure a timer that prevents unwanted flapping of downstream ports when the uplink port channel goes down and comes up.

**Syntax**

defer-timer seconds

**Defaults**

- 10 (Standalone mode)
### Parameters

- **seconds**
  
  Specify the time (in seconds) to wait for the upstream port channel (LAG 128) to come back up before server ports are brought down. The range is from 1 to 120.

### Command Modes

- **UPLINK-STATE-GROUP**

### Supported Modes

- Standalone, Stacking, VLT
- Full-Switch

### Command History

</table>

### Usage Information

This command is not supported in Programmable-Mux mode.

---

## description

Enter a text description of an uplink-state group.

### Syntax

```
description text
```

### Parameters

- **text**
  
  Text description of the uplink-state group. The maximum length is 80 alphanumeric characters.

### Defaults

- none

### Command Modes

- **UPLINK-STATE-GROUP**

### Supported Modes

- Programmable-Mux (PMUX)
- Full-Switch

### Command History

<table>
<thead>

<tr>
<td>9.2(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

### Example

Dell(conf-uplink-state-group-16)# description test
Dell(conf-uplink-state-group-16)#

### Related Commands

- **uplink-state-group** — creates an uplink-state group and enables the tracking of upstream links.

---

## downstream

Assign a port or port-channel to the uplink-state group as a downstream interface.

### Syntax

```
downstream interface
```

---

Uplink Failure Detection (UFD) | 1333
To delete an uplink-state group, enter the `no downstream interface` command.

**Parameters**

- **interface**  
  Enter one of the following interface types:
  - 10 Gigabit Ethernet: `tengigabitethernet {slot/port | slot/port-range}`
  - Port channel: `port-channel {1-512 | port-channel-range}`

  Where `port-range` and `port-channel-range` specify a range of ports separated by a dash (-) and/or individual ports/port channels in any order; for example: `tengigabitethernet 1/1-2,5,9,11-12 port-channel 1-3,5`. A comma is required to separate each port and port-range entry.

**Defaults**

- **none**

**Command Modes**

- **UPLINK-STATE-GROUP**

**Supported Modes**

- Programmable-Mux (PMUX)
- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

- You can assign physical port or port-channel interfaces to an uplink-state group.
- You can assign an interface to only one uplink-state group. Configure each interface assigned to an uplink-state group as either an upstream or downstream interface, but not both.
- You can assign individual member ports of a port channel to the group. An uplink-state group can contain either the member ports of a port channel or the port channel itself, but not both.

**Related Commands**

- `upstream` — assigns a port or port-channel to the uplink-state group as an upstream interface.
- `uplink-state-group` — creates an uplink-state group and enables the tracking of upstream links.

**downstream auto-recover**

Enable auto-recovery so that UFD-disabled downstream ports in an uplink-state group automatically come up when a disabled upstream port in the group comes back up.

**Syntax**

```
downstream auto-recover
```

To disable auto-recovery on downstream links, use the `no downstream auto-recover` command.

**Defaults**

- The auto-recovery of UFD-disabled downstream ports is enabled.

**Command Modes**

- **UPLINK-STATE-GROUP**

**Supported Modes**

- Programmable-Mux (PMUX)
downstream disable links

Configure the number of downstream links in the uplink-state group that are disabled if one upstream link in an uplink-state group goes down.

Syntax
downstream disable links {number | all}

Parameters
- **number**: Enter the number of downstream links to be brought down by UFD. The range is from 1 to 1024.
- **all**: Brings down all downstream links in the group.

Defaults
No downstream links are disabled when an upstream link in an uplink-state group goes down.

Command Modes
- UPLINK-STATE-GROUP
- Programmable-Mux (PMUX)

Supported Modes
- Full-Switch

Command History
- **Version**: 9.9(0.0) Introduced on the FN IOM.
- **Version**: 9.4(0.0) Supported on the FN I/O Aggregator.
- **Version**: 9.2(0.0) Supported on the M I/O Aggregator.

Usage Information
A user-configurable number of downstream interfaces in an uplink-state group are put into a link-down state with an UFD-Disabled error message when one upstream interface in an uplink-state group goes down.

If all upstream interfaces in an uplink-state group go down, all downstream interfaces in the same uplink-state group are put into a link-down state.

Related Commands
- **downstream**: assigns a port or port-channel to the uplink-state group as a downstream interface.
- **uplink-state-group**: creates an uplink-state group and enables the tracking of upstream links.
**enable**

Re-enable upstream-link tracking for an uplink-state group after it has been disabled.

**Syntax**
```
enable
```

To disable upstream-link tracking without deleting the uplink-state group, use the no enable command.

**group-id**
Enables debugging on the specified uplink-state group. Valid group-id values are 1 to 16.

**Defaults**
Upstream-link tracking is automatically enabled in an uplink-state group.

**Command Modes**
UPLINK-STATE-GROUP

**Supported Modes**
All Modes

</tbody>
</table>

**show running-config uplink-state-group**

Display the current configuration of one or more uplink-state groups.

**Syntax**
```
show running-config uplink-state-group [group-id]
```

**Parameters**

<table>
<thead>
<tr>
<th>group-id</th>
<th>Displays the current configuration of all uplink-state groups or a specified group. The valid group-id values are from 1 to 16.</th>
</tr>

</tbody>
</table>

**Example**
```
Dell#show running-config uplink-state-group
!
no enable
uplink state track 1
downstream TengigabitEthernet 0/2,4,6,11
upstream TengigabitEthernet 0/8, 12
```
show uplink-state-group

Display status information on a specified uplink-state group or all groups.

Syntax
show uplink-state-group [group-id] [detail]

Parameters
- **group-id**: Displays status information on a specified uplink-state group or all groups. The valid group-id values are from 1 to 16.
- **detail**: Displays additional status information on the upstream and downstream interfaces in each group.

Defaults
none

Command Modes
- EXEC
- EXEC Privilege

Supported Modes
Programmable-Mux (PMUX)
Full-Switch

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
</tbody>
</table>

Example

```
Dell#show uplink-state-group detail
(Up): Interface up   (Dwn): Interface down   (Dis): Interface disabled
Uplink State Group : 1   Status: Enabled, Up
Defer Timer : 10 sec
Upstream Interfaces : Po 128(Up)
Downstream Interfaces : Te 0/1(Dwn) Te 0/2(Dwn) Te 0/3(Up) Te 0/4(Dwn) Te 0/5(Up) Te 0/6(Dwn) Te 0/7(Up) Te 0/8(Up)
Dell#
```
Related Commands

- show running-config uplink-state-group — displays the current configuration of one or more uplink-state groups.
- uplink-state-group — create an uplink-state group and enables the tracking of upstream links.

**uplink-state-group**

Create an uplink-state group and enable the tracking of upstream links on a switch/router.

**Syntax**

```
uplink-state-group group-id
```

To delete an uplink-state group, enter the `no uplink-state-group group-id` command.

**Parameters**

- `group-id` Enter the ID number of an uplink-state group. The range is from 1 to 16.

**Defaults**

none

**Command Modes**

CONFIGURATION

**Supported Modes**

Programmable-Mux (PMUX)

Full-Switch

**Command History**

- **Version**
  - 9.9(0.0) Introduced on the FN IOM.
  - 9.4(0.0) Supported on the FN I/O Aggregator.
  - 9.2(0.0) Supported on the M I/O Aggregator.

**Usage Information**

After you enter the command, to assign upstream and downstream interfaces to the group, enter Uplink-State-Group Configuration mode.

An uplink-state group is considered to be operationally up if at least one upstream interface in the group is in the Link-Up state.

An uplink-state group is considered to be operationally down if no upstream interfaces in the group are in the Link-Up state. No uplink-state tracking is performed when a group is disabled or in an operationally down state.

To disable upstream-link tracking without deleting the uplink-state group, use the `no enable` command in uplink-state-group configuration mode.

**Example**

```
Dell(conf)#uplink-state-group 16
Dell(conf)#
02:23:17: %RPM0-P:CP %IFMGR-5-ASTATE_UP: Changed uplink state group Admin state to up: Group 16
```

**Related Commands**

- show running-config uplink-state-group — displays the current configuration of one or more uplink-state groups.
- show uplink-state-group — displays the status information on a specified uplink-state group or all groups.
Assign a port or port-channel to the uplink-state group as an upstream interface.

**Syntax**

```text
upstream interface
```

To delete an uplink-state group, use the `no upstream interface` command.

**Parameters**

- `interface`
  - Enter one of the following interface types:
    - 10 Gigabit Ethernet: `tengigabitethernet {slot/port | slot/port-range}`
    - Port channel: `port-channel {1-512 | port-channel-range}`
  - Where `port-range` and `port-channel-range` specify a range of ports separated by a dash (-) and/or individual ports/port channels in any order; for example: `tengigabitethernet 0/1-2,5,9,11-12 port-channel 1-3,5`. A comma is required to separate each port and port-range entry.

**Defaults**

- none

**Command Modes**

- UPLINK-STATE-GROUP

**Supported Modes**

- Programmable-Mux (PMUX)
- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>

</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

- You can assign physical port or port-channel interfaces to an uplink-state group.
- You can assign an interface to only one uplink-state group. Configure each interface assigned to an uplink-state group as either an upstream or downstream interface, but not both.
- You can assign individual member ports of a port channel to the group. An uplink-state group can contain either the member ports of a port channel or the port channel itself, but not both.

**Example**

```text
Dell(conf-uplink-state-group-16)# upstream tengigabitethernet 0/1-5
Dell(conf-uplink-state-group-16)#
```

**Related Commands**

- `downstream` — assigns a port or port-channel to the uplink-state group as a downstream interface.
- `uplink-state-group` — creates an uplink-state group and enables the tracking of upstream links.
With the virtual local area network (VLAN)-stacking feature (also called stackable VLANs and QinQ), you can “stack” VLANs into one tunnel and switch them through the network transparently.

For more information about basic VLAN commands, refer to the Virtual LAN (VLAN) Commands section in the Layer 2 chapter.

Important Points to Remember

- If you do not enable the spanning tree protocol (STP) across the stackable VLAN network, STP bridge protocol data units (BPDUs) from the customer’s networks are tunneled across the stackable VLAN network.
- If you do enable STP across the stackable VLAN network, STP BPDUs from the customer’s networks are consumed and not tunneled across the stackable VLAN network unless you enable protocol tunneling.
- Layer 3 protocols are not supported on a stackable VLAN network.
- Assigning an IP address to a stackable VLAN is supported when all the members are only stackable VLAN trunk ports. IP addresses on a stackable VLAN-enabled VLAN are not supported if the VLAN contains stackable VLAN access ports. This facility is provided for the simple network management protocol (SNMP) management over a stackable VLAN-enabled VLAN containing only stackable VLAN trunk interfaces. Layer 3 routing protocols on such a VLAN are not supported.
- Dell Networking OS recommends that you do not use the same MAC address, on different customer VLANs, on the same stackable VLAN.
- Interfaces configured using stackable VLAN access or stackable VLAN trunk commands do not switch traffic for the default VLAN. These interfaces are switch traffic only when they are added to a non-default VLAN.

Topics:
- dei enable
- dei honor
- dei mark
- member
- show interface dei-honor
- show interface dei-mark
- vlan-stack access
- vlan-stack compatible
- vlan-stack dot1p-mapping

- vlan-stack trunk

**dei enable**

Make packets eligible for dropping based on their drop eligible indicator (DEI) value.

**Syntax**

```
dei enable
```

**Defaults**

Packets are colored green; no packets are dropped.

**Command Modes**

CONFIGURATION
**dei honor**

Honor the incoming DEI value by mapping it to a system drop precedence. Enter the command once for 0 and once for 1.

**Syntax**
```
dei honor {0 | 1} {green | red | yellow}
```

**Parameters**
- **0 | 1**
  - Enter the bit value you want to map to a color.
- **green | red | yellow**
  - Choose a color:
    - **Green**: High priority packets that are the least preferred to be dropped.
    - **Yellow**: Lower priority packets that are treated as best-effort.
    - **Red**: Lowest priority packets that are always dropped (regardless of congestion status).

**Defaults**
Disabled; Packets with an unmapped DEI value are colored green.

**Command Modes**
- INTERFACE

**Command History**
- Version 9.9(0.0)
  - Introduced on the FN IOM.
- Version 8.3.16.1
  - Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**
You must first enable DEI for this configuration to take effect.

**Related Commands**
- `dei enable` — enables DEI.

**dei mark**

Set the DEI value on egress according to the color currently assigned to the packet.

**Syntax**
```
dei mark {green | yellow} {0 | 1}
```

**Parameters**
- **0 | 1**
  - Enter the bit value you want to map to a color.
- **green | yellow**
  - Choose a color:
    - **Green**: High priority packets that are the least preferred to be dropped.
    - **Yellow**: Lower priority packets that are treated as best-effort.

**Defaults**
All the packets on egress are marked with DEI 0.

### Usage Information
You must first enable DEI for this configuration to take effect.

### Related Commands
- `dei enable` — enables DEI.

---

**member**

Assign a stackable VLAN access or trunk port to a VLAN. The VLAN must contain the `vlan-stack compatible` command in its configuration.

**Syntax**

```
member interface
```

To remove an interface from a Stackable VLAN, use the `no member interface` command.

**Parameters**

- `interface`
  - Enter the following keywords and slot/port or number information:
    - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

**Defaults**
- Not configured.

**Command Modes**
- `conf-if-vl-<vlan-id>-stack`

**Supported Modes**
- **Full-Switch**

**Command History**
<table>
<thead>
<tr>

<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**
You must enable the stackable VLAN (using the `vlan-stack compatible` command) on the VLAN prior to adding a member to the VLAN.

**Related Commands**
- `vlan-stack compatible` — enables stackable VLAN on a VLAN.

---

**show interface dei-honor**

Display the dei honor configuration.

**Syntax**

```
show interface dei-honor [interface slot/port]
```

**Parameters**

- `interface slot/port`  — Enter the interface type then the line card slot and port number.
show interface dei-mark

Display the dei mark configuration.

Syntax
show interface dei-mark [interface slot/port]

Parameters
interface slot/port  Enter the interface type then the line card slot and port number.

Command Modes
EXEC Privilege

Supported Modes
Full-Switch

Command History
Version  Description
9.9(0.0)  Introduced on the FN IOM.
8.3.16.1  Introduced on the MXL 10/40GbE Switch IO Module.

Example
Dell#show interface dei-mark
Default CFI/DEI Marking: 0
Interface  Drop precedence  CFI/DEI
------------------------------------------------
Te 0/1     Green            0
Te 0/1     Yellow           1
Te 8/9     Yellow           0
Te 8/12    Yellow           0
Related Commands
dei mark — sets the DEI value on egress.

**vlan-stack access**

Specify a Layer 2 port or port channel as an access port to the stackable VLAN network.

**Syntax**

```plaintext
vlan-stack access
```

To remove access port designation, use the `no vlan-stack access` command.

**Defaults**

Not configured.

**Command Modes**

INTERFACE

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

Prior to enabling this command, to place the interface in Layer 2 mode, enter the `switchport` command.

To remove the access port designation, remove the port (using the `no member interface` command) from all stackable VLAN enabled VLANs.

---

**vlan-stack compatible**

Enable the stackable VLAN feature on a VLAN.

**Syntax**

```plaintext
vlan-stack compatible
```

To disable the Stackable VLAN feature on a VLAN, use the `no vlan-stack compatible` command.

**Defaults**

Not configured.

**Command Modes**

CONF-IF-VLAN

**Supported Modes**

Full-Switch

**Command History**

<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

Prior to disabling the stackable VLAN feature, remove the members.

To view the stackable VLANs, use the `show vlan` command in EXEC Privilege mode. Stackable VLANs contain members, designated by the M in the Q column of the command output.

**Example**

```plaintext
Dell#show vlan
Codes: * - Default VLAN, G - GVRP VLANs
```
### vlan-stack dot1p-mapping

Map C-Tag dot1p values to an S-Tag dot1p value. You can separate the C-Tag values by commas and dashed ranges are permitted. Dynamic mode CoS overrides any Layer 2 QoS configuration if there is conflicts.

**Syntax**

```
vlan-stack dot1p-mapping c-tag-dot1p values sp-tag-dot1p value
```

**Parameters**

- **c-tag-dot1p value**
  - Enter the keyword `c-tag-dot1p` then the customer dot1p value that is mapped to a service provider dot1p value. The range is from 0 to 5.

- **sp-tag-dot1p value**
  - Enter the keyword `sp-tag-dot1p` then the service provider dot1p value. The range is from 0 to 5.

**Defaults**

none

**Command Modes**

</tr>
<tr>
<td>8.3(16.1)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

### vlan-stack protocol-type

Define the stackable VLAN tag protocol identifier (TPID) for the outer VLAN tag (also called the VMAN tag). If you do not configure this command, the system assigns the value 0x9100.

**Syntax**

```
vlan-stack protocol-type number
```

**Parameters**

- **number**
  - Enter the hexadecimal number as the stackable VLAN tag.
  - You may specify both bytes of the 2-byte S-Tag TPID. The range is from 0 to FFFF. The default is 9100.

**Defaults**

0x9100

**Command Modes**

CONFIGURATION

**Supported Modes**

Full-Switch
vlan-stack trunk

Specify a Layer 2 port or port channel as a trunk port to the Stackable VLAN network.

Syntax

```
vlan-stack trunk
```

To remove a trunk port designation from the selected interface, use the `no vlan-stack trunk` command.

Defaults

Not configured.

Command Modes

```
INTERFACE
```

Supported Modes

```
Full-Switch
```

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

Prior to using this command, to place the interface in Layer 2 mode, execute the `switchport` command.

To remove the trunk port designation, first remove the port (using the `no member interface command`) from all stackable VLAN-enabled VLANs.

Starting with the Dell Networking OS version 7.8.1.0, a VLAN-Stack trunk port is also allowed to be configured as a tagged port and as an untagged port for single-tagged VLANs. When the VLAN-Stack trunk port is also a member of an untagged VLAN, the port must be in Hybrid mode. Refer to `portmode hybrid`.

In the first example, a VLAN-Stack trunk port is configured and then also made part of a single-tagged VLAN.

```
Dell(conf-if-Te-0/12)#switchport
Dell(conf-if-Te-0/12)#vlan-stack trunk
Dell(conf-if-Te-0/12)#show config
```

In the second example, the tag protocol identifier (TPID) is set to 8848. The “Gi 3/10” Te 3/8 port is configured to act as a VLAN-Stack access port, while the “TenGi 8/0” port acts as a VLAN-Stack trunk port, switching stackable VLAN traffic for VLAN 10, while also switching untagged traffic for VLAN 30 and tagged traffic for VLAN 40. (To allow VLAN 30 traffic, the native VLAN feature is required, by executing the `portmode hybrid` command. Refer to `portmode hybrid` in the Interfaces chapter)

```
Dell(conf-if-Te-0/12)#switchport
Dell(conf-if-Te-0/12)#vlan-stack trunk
Dell(conf-if-Te-0/12)#show config
```
interface TenGigabitEthernet 0/42
  no ip address
  switchport
  vlan-stack trunk
  no shutdown

Virtual Link Trunking (VLT)

VLT allows physical links between two chassis to appear as a single virtual link to the network core. VLT eliminates the requirement for Spanning Tree protocols by allowing link aggregation group (LAG) terminations on two separate distribution or core switches, and by supporting a loop-free topology. VLT provides Layer 2 multipathing, creating redundancy through increased bandwidth and enabling multiple parallel paths between nodes and load-balancing traffic where alternative paths exist.

**NOTE:** When you launch the VLT link, the VLT peer-ship is not established if any of the following is TRUE:

- The VLT System-MAC configured on both the VLT peers do not match.
- The VLT Unit-Id configured on both the VLT peers are identical.
- The VLT System-MAC or Unit-Id is configured only on one of the VLT peers.
- The VLT domain ID is not the same on both peers.

If the VLT peer-ship is already established, changing the System-MAC or Unit-Id does not cause VLT peer-ship to go down.

Also, if the VLT peer-ship is already established and the VLT Unit-Id or System-MAC are configured on both peers, then changing the CLI configurations on the VLT Unit-Id or System-MAC is rejected if any of the following become TRUE:

- After making the CLI configuration change, the VLT Unit-Id becomes identical on both peers.
- After making the CLI configuration change, the VLT System-MAC do not match on both peers.

When the VLT peer-ship is already established, you can remove the VLT Unit-Id or System-MAC configuration from either or both peers. However, removing configuration settings can cause the VLT ports to go down if you configure the Unit-Id or System-MAC on only one of the VLT peers.

back-up destination

Configure the IPv4 or IPv6 address of the management interface on the remote VLT peer to be used as the endpoint of the VLT backup link for sending out-of-band hello messages.

Syntax
back-up destination {{ipv4-address} | [ipv6 ipv6-address] [interval seconds]}

Parameters
ipv4-address
Enter the IPv4 address of the backup destination.

ipv6
Enter the keyword ipv6 then an IPv6 address in the X:XX:XX::X format.

interval seconds
Enter the keyword interval to specify the time interval to send hello messages. The range is from 1 to 5 seconds. The default is 1 second.

Defaults
1 second

Command Modes
VLT DOMAIN

Supported Modes
Programmable-Mux (PMUX)
Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

clear ip mroute

Clear learned multicast routes on the multicast forwarding table. To clear the protocol-independent multicast (PIM) tree information base, use the clear ip pim tib command.

Syntax
clear ip mroute {group-address [source-address] | * | snooping}

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>group-address</td>
<td>Enter the multicast group address and source address (if desired), in dotted decimal format, to clear information on a specific group.</td>
</tr>
<tr>
<td>source-address</td>
<td></td>
</tr>
<tr>
<td>*</td>
<td>Enter * to clear all multicast routes.</td>
</tr>
<tr>
<td>snooping</td>
<td>Enter the keyword snooping to delete multicast snooping route table entries.</td>
</tr>
</tbody>
</table>

Command Modes
EXEC Privilege
clear ip pim tib

Clear PIM tree information from the PIM database.

Syntax: clear ip pim tib [group]

Parameters:
- **group** (OPTIONAL) Enter the multicast group address in dotted decimal format (A.B.C.D).

Command Modes: EXEC Privilege

Supported Modes: Full-Switch

Command History:
- **Version** 9.9(0.0) Introduced on the FN IOM.
- **Version** 9.2(0.0) Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information:
- If you use this command on a local VLT node, all multicast routes from the local PIM TIB, the entire multicast route table, and all the entries in the data plane are deleted. The entries in Peer PIM TIB (Sync) are not deleted but are marked for re-download. Both local and synced routes are removed from the multicast route table. The peer VLT node clears synced routes from the node.
- If you use this command on a peer VLT node, only the synced routes are deleted from the multicast route table.

clear vlt statistics

Clear the statistics on VLT operations.

Syntax: clear vlt statistics [arp | domain | igmp-snoop | mac | multicast | ndp]

Parameters:
- **domain** Clear the VLT statistics for the domain.
- **multicast** Clear the VLT statistics for multicast.
- **mac** Clear the VLT statistics for the MAC address.
- **arp** Clear the VLT statistics for ARP.
- **igmp-snoop** Clear the VLT statistics for IGMP snooping.
- **ndp** Clear the VLT statistics for NDP.

Command Modes: EXEC

Supported Modes: Programmable-Mux (PMUX)
Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

Example

```
VLT ARP Statistics
---------------
ARP TunnelPkts sent:0
ARP TunnelPkts Rcvd:0
ARP-syncPkts Sent:0
ARP-syncPkts Rcvd:0
ARP Reg Request sent:19
ARP Reg Request rcdv:10
```

delay-restore abort-threshold

Increase the Boot Up timer to some value (>60 seconds).

**Syntax**

```
delay-restore abort-threshold <interval>
```

To remove use the `no delay-restore abort-threshold` command.

**Defaults**

60 seconds

**Command Modes**

VLT DOMAIN

**Supported Modes**

Full-Switch

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on Supported on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Parameter**

Enter the value (in seconds) to specify the time interval for delay restore timer to abort. This timer is applicable only during reload/boot-up and not in other scenarios (example, ICL flap).

The range is from 1 to 1800 seconds.

**Usage Information**

To abort VLT delay restore timer as the maximum threshold, the maximum time interval is applied to hold down ICL peer-up in the start-up configurations during the reload.
**lacp ungroup member-independent**

Prevent possible loop during the bootup of a VLT peer switch or a device that accesses the VLT domain.

**Syntax**

```
lacp ungroup member-independent {vlt | port-channel}
```

**Parameters**

- **port-channel**
  - Force all LACP port-channel members to become switchports.
- **vlt**
  - Force all VLT LACP members to become switchports.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Supported Modes**

Programmable-Mux (PMUX)
Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

LACP on the VLT ports (on a VLT switch or access device), which are members of the virtual link trunk, is not brought up until the VLT domain is recognized on the access device.

To ungroup the VLT and port-channel configurations, use the `no lacp ungroup member independent` command on a VLT port channel, depending on whether the port channel is VLT or non-VLT.

**Example**

```
Dell(conf)#lacp ungroup member-independent ?
port-channel LACP port-channel members become switchports
vlt All VLT LACP members become switchports
```

**multicast peer-routing timeout**

Configure the time for a VLT node to retain synced multicast routes or synced multicast outgoing interface (OIF) after a VLT peer node failure.

**Syntax**

```
multicast peer-routing timeout value
```

To restore the default value, use the `no multicast peer-routing timeout` command.

**Parameters**

- **value**
  - Enter the timeout value in seconds. The range is from 1 to 1200. The default is 150.

**Defaults**

Not configured.

**Command Modes**

VLT DOMAIN (conf-vlt-domain)

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1352</td>
<td>Virtual Link Trunking (VLT)</td>
</tr>
</tbody>
</table>
peer-link port-channel

Configure the specified port channel as the chassis interconnect trunk between VLT peers in the domain.

**Syntax**

```
peer-link port-channel port-channel-number {peer-down-vlan vlan id}
```

**Parameters**

- `port-channel-number` Enter the port-channel number that acts as the interconnect trunk.
- `peer-down-vlan vlan id` Enter the keyword `peer-down-vlan` then a VLAN ID to configure the VLAN that the VLT peer link uses when the VLT peer is down.

**Defaults**

Not configured.

**Command Modes**

VLT DOMAIN

**Supported Modes**

Programmable-Mux (PMUX)
Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Supported on the MXL I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

To configure the VLAN from where the VLT peer forwards packets received over the VLTI from an adjacent VLT peer that is down, use the `peer-down-vlan` parameter. To ensure that the DHCP discover packets are forwarded to the VLAN that has the DHCP server, use this configuration.

peer-routing

Enable L3 VLT peer-routing. This command is applicable for both IPV6/ IPV4.

**Syntax**

```
peer-routing
```

To disable L3 VLT peer-routing, use the `no peer-routing` command.

**Defaults**

Disabled.

**Command Modes**

VLT DOMAIN (conf-vlt-domain)

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Added the IPV6/IPV4 support on the MXL.</td>
</tr>
</tbody>
</table>
peer-routing-timeout

Configure the timeout for the software to wait before connecting to a VLT peer with a Down status. This command is applicable for both IPV6/IPV4.

Syntax

```
peer-routing-timeout value
```

To restore the default value, use the `no peer-routing-timeout` command.

Parameters

- **value**
  - Enter the timeout value in seconds. The range is from 1 to 65535. The default value is 0 (no timeout).

Command Modes

VLT DOMAIN (conf-vlt-domain)

Supported Modes

Full-Switch

Command History

- **Version 9.9(0.0)**
  - Introduced on the FN IOM.

- **Version 9.4(0.0)**
  - Added the IPV6/IPV4 support on the MXL.

- **Version 9.2(0.0)**
  - Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

When the timer expires, the software checks to see if the VLT peer is now available. If the VLT peer is not available, peer-routing is disabled on that peer.

primary-priority

Reconfigure the primary role of VLT peer switches.

Syntax

```
primary-priority value
```

Parameters

- **value**
  - To configure the primary role on a VLT peer, enter a lower value than the priority value of the remote peer. The range is from 1 to 65535.

Default

32768

Command Modes

VLT DOMAIN

Supported Modes

Full-Switch

Command History

- **Version 9.9(0.0)**
  - Introduced on the FN IOM.

- **Version 9.2(0.0)**
  - Introduced on the MXL 10/40GbE Switch IO Module.

Usage Information

After you configure the VLT domain on each peer switch on both sides of the interconnect trunk, by default, the software elects a primary and secondary VLT peer device. To reconfigure the primary role of VLT peer switches, use the `priority` command.
show ip mroute

View the multicast routing table.

**Syntax**

```
show ip mroute [static | group-address [source-address] | count | snooping [vlan vlan-id] [group-address [source-address]] | summary | vlt [group-address | count]
```

**Parameters**

- **Static**
  - *(OPTIONAL)* Enter the keyword static to view static multicast routes.
- **group-address**
  - *(OPTIONAL)* Enter the multicast group-address to view only routes associated with that group.
  - Enter the source-address to view routes with that group-address and source-address.
- **count**
  - *(OPTIONAL)* Enter the keyword count to view the number of multicast routes and packets.
- **snooping [vlan vlan-id] [group-address [source-address]]**
  - *(OPTIONAL)* Enter the keyword snooping to display information on the multicast routes PIM-SM snooping discovers.
  - Enter a VLAN ID to limit the information displayed to the multicast routes PIM-SM snooping discovers on a specified VLAN. The VLAN ID range is from 1 to 4094.
  - Enter a multicast group address and, optionally, a source multicast address in dotted decimal format (A.B.C.D) to limit the information displayed to the multicast routes PIM-SM snooping discovers for a specified multicast group and source.
- **summary**
  - *(OPTIONAL)* Enter the keyword summary to view routes in a tabular format.
- **vlt**
  - *(OPTIONAL)* Enter the keyword vlt to view multicast routes with a spanned incoming interface. Enter a multicast group address in dotted decimal format (A.B.C.D) to limit the information displayed to the multicast routes for a specified multicast group.
  - Enter the keyword count to display VLT route and packet data.

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

The following describes the `show ip mroute` command shown in the examples.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>(S, G)</td>
<td>Displays the forwarding entry in the multicast route table.</td>
</tr>
<tr>
<td>uptime</td>
<td>Displays the amount of time the entry has been in the multicast forwarding table.</td>
</tr>
</tbody>
</table>
### Field | Description
--- | ---
Incoming interface | Displays the reverse path forwarding (RPF) information towards the source for (S,G) entries and the RP for (*,G) entries.
Outgoing interface list: | Lists the interfaces that meet one of the following:
- a directly connected member of the Group
- statically configured member of the Group
- received a (*,G) or (S,G) Join message

#### Example (static)
```
Dell#show ip mroute static
Mroute: 23.23.23.0/24, interface: Lo 2
Protocol: static, distance: 0, route-map: none, last change: 00:00:23
```

#### Example (snooping)
```
Dell#show ip mroute snooping
IPv4 Multicast Snooping Table (*, 224.0.0.0), uptime 17:46:23
Incoming vlan: Vlan 2
Outgoing interface list:
TenGigabitEthernet 4/1
(*, 225.1.2.1), uptime 00:04:16
Incoming vlan: Vlan 2
Outgoing interface list:
TenGigabitEthernet 4/2
TenGigabitEthernet 4/3
(165.87.1.7, 225.1.2.1), uptime 00:03:17
Incoming vlan: Vlan 2
Outgoing interface list:
TenGigabitEthernet 4/1
TenGigabitEthernet 4/2
TenGigabitEthernet 4/3
TenGigabitEthernet 4/4
TenGigabitEthernet 4/5
```

#### Example (detail)
```
Dell#show ip mroute
IP Multicast Routing Table
(*, 224.10.10.1), uptime 00:05:12
Incoming interface: TenGigabitEthernet 3/1
Outgoing interface list:
GigabitEthernet 3/2
(1.13.1.100, 224.10.10.1), uptime 00:04:03
Incoming interface: TenGigabitEthernet 3/4
Outgoing interface list:
TenGigabitEthernet 3/4
TenGigabitEthernet 3/5
(*, 224.20.20.1), uptime 00:05:12
Incoming interface: TenGigabitEthernet 3/2
Outgoing interface list:
TenGigabitEthernet 3/4
TenGigabitEthernet 3/3
show vlt backup-link

Displays information on the backup link operation.

Syntax

    show vlt backup-link

Default

    Not configured.

Command Modes

    EXEC

Supported Modes

    All Modes

Command History

    Version            Description
    9.9(0.0)            Introduced on the FN IOM.
    9.4(0.0)            Supported on the FN I/O Aggregator.
    9.2(0.0)            Supported on the M I/O Aggregator.

Example

    Dell# show vlt backup-link
    VLT Backup Link
    -----------------
    Destination:                 169.254.31.23
    Peer HeartBeat status:       Up
    HeartBeat Timer Interval:    1
    HeartBeat Timeout:           3
    UDP Port:                    34998
    HeartBeat Messages Sent:     24
    HeartBeat Messages Received: 25

show vlt brief

Display brief status information about VLT domains currently configured on the switch.

Syntax

    show vlt brief

Default

    Not configured.

Command Modes

    EXEC

Supported Modes

    All Modes

Command History

    Version            Description
    9.9(0.0)            Introduced on the FN IOM.
    9.4(0.0)            Supported on the FN I/O Aggregator.
    9.2(0.0)            Supported on the M I/O Aggregator.

Example (Brief)

    Dell#show vlt br
    VLT Domain Brief
    ------------------
    Domain ID          : 1
    Role               : Secondary
    Role Priority      : 32768
    ICL Link Status    : Up
    HeartBeat Status   : Up
    VLT Peer Status    : Up
show vlt detail

Displays detailed status information about VLT domains currently configured on the switch.

Syntax

show vlt detail

Default

Not configured.

Command Modes

EXEC

VLT multicast not enabled

stack-unit iom-mode

Set the switch operating mode to VLT mode.

Syntax
stack-unit <unit-number> iom-mode vlt

Parameters

unit number <0-5> Enter the number of the member stack unit. The range is from 0 to 5. The default is 0.

vlt Enable virtual link trunking mode.

Command Modes
CONFIGURATION

Supported Modes
All Modes

Command History

Version Description
9.9(0.0) Introduced on the FN IOM.
9.4(0.0) Supported on the FN I/O Aggregator.
9.2(0.0) Supported on the M I/O Aggregator.

Usage Information
This command resets the operating mode to VLT. You must reboot the switch after using this command.
**system-mac**

Reconfigure the default MAC address for the domain.

**Syntax**

```
system-mac mac-address
```

**Parameters**

- `mac-address` Enter the system MAC address for the VLT domain.

**Defaults**

Not configured.

**Command Modes**

VLT DOMAIN

**Supported Modes**

Programmable-Mux (PMUX)

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

When you create a VLT domain on a switch, Dell Networking OS automatically creates a VLT-system MAC address used for internal system operations.

To reconfigure the default MAC address for the domain by entering a new MAC address in the format nn:nn:nn:nn:nn:nn, use the `system-mac` command.

You must also reconfigure the same MAC address on the VLT peer switch.

---

**unit-id**

Explicitly configure the default unit ID of a VLT peer switch.

**Syntax**

```
unit-id [0 | 1]
```

**Parameters**

- `0 | 1` Configure the default unit ID of a VLT peer switch. Enter 0 for the first peer or enter 1 for the second peer.

**Defaults**

Automatically assigned based on the MAC address of each VLT peer. The peer with the lower MAC address is assigned unit 0; the peer with the higher MAC address is assigned unit 1.

**Command Modes**

VLT DOMAIN

**Supported Modes**

Programmable-Mux (PMUX)

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
</tbody>
</table>
Usage Information

When you create a VLT domain on a switch, Dell Networking OS automatically assigns a unique unit ID (0 or 1) to each peer switch. The unit IDs are used for internal system operations. Use the `unit-id` command to explicitly configure the unit ID of a VLT peer. Configure a different unit ID (0 or 1) on each peer switch.

To minimize the time required for the VLT system to determine the unit ID assigned to each peer switch when one peer reboots, use this command.

**vlt domain**

Enable VLT on a switch, configure a VLT domain, and enter VLT-domain configuration mode.

**Syntax**

`vlt domain domain-id`

**Parameters**

- `domain-id` Enter the Domain ID number. Configure the same domain ID on the peer switch. The range of domain IDs is from 1 to 1000.

**Command Modes**

- CONFIGURATION

**Supported Modes**

Programmable-Mux (PMUX)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Supported on the FN I/O Aggregator.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Usage Information**

The VLT domain ID must be the same between the two VLT devices. If the domain ID is not the same, a syslog message is generated and VLT does not launch.

**vlt-peer-lag port-channel**

Associate the port channel to the corresponding port channel in the VLT peer for the VLT connection to an attached device.

**Syntax**

`vlt-peer-lag port-channel id-number`

**Parameters**

- `id-number` Enter the respective vlt port-channel number of the peer device.

**Defaults**

Not configured.

**Command Modes**

- INTERFACE PORT-CHANNEL

**Supported Modes**

Programmable-Mux (PMUX)

Full-Switch
**Command History**

<table>
<thead>
<tr>
<th>Version</th>

<tr>
<td>9.2(0.0)</td>
<td>Supported on the M I/O Aggregator.</td>
</tr>
</tbody>
</table>

**show vlt private-vlan**

Display the association of private VLAN (PVLAN) with the VLT LAG. You can configure VLT peer nodes in a PVLAN on the switch.

**Syntax**

```plaintext```
show vlt private-vlan
```

**Command Modes**

EXEC

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module platform.</td>
</tr>
</tbody>
</table>

**Usage Information**

If you add an ICL or VLTi link as a member of a primary VLAN, the ICL becomes a part of the primary VLAN and its associated secondary VLANs, similar to the behavior for normal trunk ports. VLAN symmetry is not validated if you associate an ICL to a PVLAN. Similarly, if you dissociate an ICL from a PVLAN, although the PVLAN symmetricity exists, ICL is removed from that PVLAN in such a case. The **ICL Status** field denotes the type of the VLAN port of the VLTi link configured in a PVLAN.

**Example**

```plaintext```
Dell#Show vlt private-vlan vlan-id
Codes: C- Community, I - Isolated, V - Internally tagged, T - tagged, * - VLT
Pvlan
Primary Secondary ICL Status
10 20 (C) V (*)
   30 (I) V

40 50 (C) T
   60 (I) T
```

Dell#
Virtual Router Redundancy Protocol (VRRP)

Virtual router redundancy protocol (VRRP) is supported by the Dell Networking Operating System (OS) for IPv4 and IPv6. The following commands apply to both VRRP IPv4 and IPv6:

- advertise-interval
- description
- disable
- hold-time
- preempt
- priority
- show config
- track
- virtual-address

VRRP Ipv6 are in the VRRP for IPv6 Commands section.

Topics:
- advertise-interval
- authentication-type
- clear counters vrrp
- debug vrrp
- description
- disable
- hold-time
- preempt
- priority
- show config
- show vrrp
- track
- virtual-address
- vrrp delay minimum
- vrrp delay reload
- vrrp-group
- VRRP for IPv6 Commands
- clear counters vrrp ipv6
- debug vrrp ipv6
- show vrrp ipv6
- vrrp-ipv6-group
- version
advertise-interval

Set the time interval between VRRP advertisements.

Syntax
advertise-interval {seconds | centisecs centisecs}

To return to the default settings, use the no advertise-interval command.

Parameters
- **seconds**
  - Enter a number of seconds. The range is from 1 to 255. The default is **1 second**.

- **centisecs centisecs**
  - Enter the keyword centisecs followed by the number of centisecs in multiple of 25 centisecs. The range is 25 to 4075 centisecs in multiples of 25 centisecs.

Defaults
**1 second or 100 centisecs**

Command Modes
- INTERFACE-VRRP

Supported Modes
- Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.5(0.0)</td>
<td>Introduced the support for centisecs on the MXL 10/40GbE Switch.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information
Dell Networking OS recommends keeping the default setting for this command. If you do change the time interval between VRRP advertisements on one router, change it on all routers.

authentication-type

Enable authentication of VRRP data exchanges.

Syntax
authentication-type simple [encryption-type] password

To delete an authentication type and password, use the no authentication-type command.

Parameters
- **simple**
  - Enter the keyword simple to specify simple authentication.

- **encryption-type**
  - (OPTIONAL) Enter one of the following numbers:
    - 0 (zero) specifies an un-encrypted authentication data follows.
    - 7 (seven) specifies a hidden authentication data follows.

- **password**
  - Enter a character string up to eight characters long as a password. If you do not enter an encryption-type, the password is stored as clear text.

Defaults
Not configured.

Command Modes
- VRRP

Supported Modes
- Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>13.6.6</td>
<td>Virtual Router Redundancy Protocol (VRRP)</td>
</tr>
</tbody>
</table>
clear counters vrrp

Clear the counters maintained on VRRP operations.

Syntax

```
clear counters vrrp [vrrp-id]
```

Parameters

- **vrrp-id**
  - (OPTIONAL) Enter the number of the VRRP group ID. The range is from 1 to 255.

Command Modes

- EXEC Privilege

Supported Modes

- Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

- **NOTE:** This command also enables you to clear the port configurations corresponding to a range of ports.
  - You can specify multiple ports as slot/port-range. For example, if you want to clear the port configurations corresponding to all ports between 1 and 4, specify the port range as `clear counters interface interface-type 1/1 - 4`.

debug vrrp

Allows you to enable debugging of VRRP.

Syntax

```
dump vrrp interface [vrrp-id] {all | packets | state | timer}
```

To disable debugging, use the no debug vrrp interface [vrrp-id] {all | packets | state | timer} command.

Parameters

- **interface**
  - Enter the following keywords and slot/port or number information
    - For Port Channel interface types, enter the keywords port-channel then the number. The range is from 1 to 128.
    - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
    - For a VLAN interface, enter the keyword vlan then the VLAN ID. The VLAN ID range is from 1 to 4094.

- **vrrp-id**
  - (OPTIONAL) Enter a number from 1 to 255 as the VRRP group ID.

- **all**
  - Enter the keyword all to enable debugging of all VRRP groups.
packets
Enter the keyword packets to enable debugging of VRRP control packets.

state
Enter the keyword state to enable debugging of VRRP state changes.

timer
Enter the keyword timer to enable debugging of the VRRP timer.

Command Modes
 EXEC Privilege

Supported Modes
 Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information
If you do not specify options, debug is active on all interfaces and all VRRP groups.

description

Configure a short text string describing the VRRP group.

Syntax
description text
To delete a VRRP group description, use the no description command.

Parameters
text
Enter a text string up to 80 characters long.

Defaults
Not enabled.

Command Modes
VRRP

Supported Modes
Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

</tr>
</tbody>
</table>

disable

Disable a VRRP group.

Syntax
disable
To re-enable a disabled VRRP group, use the no disable command.

Defaults
Enabled.

Command Modes
VRRP

Supported Modes
Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
</tbody>
</table>
**Version**  
8.3.16.1  
Introduced on the MXL 10/40GbE Switch IO Module.

**Usage Information**  
To enable VRRP traffic, assign an IP address to the VRRP group using the `virtual-address` command and enter `no disable`.

**Related Commands**  
`virtual-address` — specifies the IP address of the virtual router.

---

### hold-time

Specify a delay (in seconds) before a switch becomes the MASTER virtual router. By delaying the initialization of the VRRP MASTER, the new switch can stabilize its routing tables.

**Syntax**  
```
hold-time {seconds | centisecs centisecs}
```

To return to the default value, use the `no hold-time` command.

**Parameters**

- `seconds`  
Enter a number of seconds. The range is from 0 to 65535. The default is `zero (0)` seconds.

- `centisecs centisecs`  
Enter the keyword `centisecs` then the number of centisecs in units of 25 centisecs. The range is from 0 to 65525 in units of 25 centisecs.

**Defaults**  
`zero (0) seconds`

**Command Modes**  
VRRP

**Supported Modes**  
Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.5(0.0)</td>
<td>Introduced the support for centisecs on the MXL 10/40GbE Switch.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**  
If a switch is a MASTER and you change the hold timer, disable and re-enable VRRP for the new hold timer value to take effect.

**Related Commands**  
`disable` — disables a VRRP group.

---

### preempt

To preempt or become the MASTER router, permit a BACKUP router with a higher priority value.

**Syntax**  
```
preempt
```

To prohibit preemption, use the `no preempt` command.

**Defaults**  
Enabled (that is, a BACKUP router can preempt the MASTER router).

**Command Modes**  
VRRP

**Supported Modes**  
Full-Switch
priority

Specify a VRRP priority value for the VRRP group. The VRRP protocol uses this value during the MASTER election process.

Syntax

```
priority priority
```

To return to the default value, use the `no priority` command.

Parameters

- `priority` Enter a number as the priority. Enter 255 only if the router’s virtual address is the same as the interface’s primary IP address (that is, the router is the OWNER). The range is from 1 to 255. The default is `100`.

Defaults

`100`

Command Modes

VRRP

Supported Modes

Full-Switch

Usage Information

To guarantee that a VRRP group becomes MASTER, configure the VRRP group’s virtual address with same IP address as the interface’s primary IP address and change the priority of the VRRP group to 255.

If you set the `priority` command to 255 and the `virtual-address` is not equal to the interface’s primary IP address, an error message appears.

**NOTE:** Configuring VRRP priority 255 on an interface on which DHCP Client is enabled is not supported.

show config

View the non-default VRRP configuration.

Syntax

```
show config [verbose]
```

Parameters

- `verbose` (OPTIONAL) Enter the keyword `verbose` to view all VRRP group configuration information, including defaults.

Command Modes

VRRP

Supported Modes

Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>

</tr>
</tbody>
</table>
show vrrp

View the VRRP groups that are active. If no VRRP groups are active, the system returns No Active VRRP group.

Syntax

```
show vrrp [vrrp-id] [interface] [brief]
```

Parameters

- **vrrp-id** (OPTIONAL) Enter the Virtual Router Identifier for the VRRP group to view only that group. The range is from 1 to 255.
- **interface** (OPTIONAL) Enter the following keywords and slot/port or number information:
  - For Port Channel interface types, enter the keywords `port-channel` then the number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a VLAN interface, enter the keyword `vlan` then the VLAN ID. The VLAN ID range is from 1 to 4094.
- **brief** (OPTIONAL) Enter the keyword `brief` to view a table of information on the VRRP groups.

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

Full-Switch

Command History

<table>
<thead>
<tr>

</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

The following describes the show vrrp brief command shown in the following example.

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Interface</td>
<td>Lists the interface type, slot and port on which the VRRP group is configured.</td>
</tr>
<tr>
<td>Grp</td>
<td>Displays the VRRP group ID.</td>
</tr>
<tr>
<td>Pri</td>
<td>Displays the priority value assigned to the interface. If the track command is configured to track that interface and the interface is disabled, the cost is subtracted from the priority value assigned to the interface.</td>
</tr>
<tr>
<td>Pre</td>
<td>States whether preempt is enabled on the interface.</td>
</tr>
</tbody>
</table>
  - **Y** = Preempt is enabled.
**Item** | **Description**
--- | ---
N | Preempt is not enabled.

**State**
Displays the operational state of the interface by using one of the following:
- NA/IF (the interface is not available).
- MASTER (the interface associated with the MASTER router).
- BACKUP (the interface associated with the BACKUP router).

**Master addr**
Displays the IP address of the MASTER router.

**Virtual addr(s)**
Displays the virtual IP addresses of the VRRP routers associated with the interface.

### Example (Brief)

```
Dell>Interface Grp Pri Pre State Master addr Virtual addr(s)
Description-----------------------------------------------------
TenGig 1/9 1 100 Y Master 200.200.200.200 200.200.200.201
Description
TenGig1/9  3 100 Y Master 1.1.1.1 1.1.1.2
short
desc
Dell>
```

### Usage Information
The following describes the `show vrrp` command shown in the following example.

**Item** | **Description**
--- | ---
State: master... | Displays the interface's state:
- Na/If (not available)
- master (MASTER virtual router)
- backup (BACKUP virtual router)
the interface’s priority and the IP address of the MASTER.

Hold Down:... | This line displays additional VRRP configuration information:
- Hold Down displays the hold down timer interval in seconds.
- Preempt displays TRUE if preempt is configured and FALSE if preempt is not configured.
- AdvInt displays the Advertise Interval in seconds.

Adv rcvd:... | This line displays counters for the following:
- Adv rcvd displays the number of VRRP advertisements received on the interface.
- Adv sent displays the number of VRRP advertisements sent on the interface.
- Gratuitous ARP sent displays the number of gratuitous ARPs sent.

Virtual MAC address | Displays the virtual MAC address of the VRRP group.

Virtual IP address | Displays the virtual IP address of the VRRP router to which the interface is connected.

Authentication:... | States whether authentication is configured for the VRRP group. If it is, the authentication type and the password are listed.
### track

Monitor an interface and lower the priority value of the VRRP group on that interface if it is disabled.

**Syntax**

```
track interface [priority-cost cost]
```

To disable monitoring, use the `no track interface` command.

**Parameters**

- **interface**
  
  (OPTIONAL) Enter the following keywords and slot/port or number information:

  - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
  - For Port Channel interface types, enter the keywords `port-channel` then the number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a VLAN interface, enter the keyword `vlan` then the VLAN ID. The VLAN ID range is from 1 to 4094.
(OPTIONAL) Enter a number as the amount to be subtracted from the priority value. The range is 1 to 254. The default is 10.

**Defaults**
- **cost = 10**

**Command Modes**
- VRRP

**Supported Modes**
- Full-Switch

### Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

If the interface is disabled, the cost value is subtracted from the priority value and forces a new MASTER election if the priority value is lower than the priority value in the BACKUP virtual routers.

### virtual-address

Configure up to 12 IP addresses of virtual routers in the VRRP group. To start sending VRRP packets, set at least one virtual address for the VRRP group.

**Syntax**

```
virtual-address ip-address1 [... ip-address12]
```

To delete one or more virtual IP addresses, use the `no virtual-address ip-address1 [... ip-address12]` command.

**Parameters**

- **ip-address1**
  - Enter an IP address of the virtual router in dotted decimal format. The IP address must be on the same subnet as the interface’s primary IP address.

- **... ip-address12**
  - (OPTIONAL) Enter up to 11 additional IP addresses of virtual routers in dotted decimal format. Separate the IP addresses with a space. The IP addresses must be on the same subnet as the interface’s primary IP address.

**Defaults**
- Not configured.

**Command Modes**
- VRRP

**Supported Modes**
- Full-Switch

### Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

The VRRP group only becomes active and sends VRRP packets when a virtual IP address is configured. When you delete the virtual address, the VRRP group stops sending VRRP packets.

A system message appears after you enter or delete the `virtual-address` command.

To guarantee that a VRRP group becomes MASTER, configure the VRRP group’s virtual address with the same IP address as the interface’s primary IP address and change the priority of the VRRP group to 255.

You can ping the virtual addresses configured in all VRRP groups.
vrrp delay minimum

Set the delay time for VRRP initialization after an interface comes up.

Syntax
vrrp delay minimum seconds

Parameters
seconds Enter the number of seconds for the delay for VRRP initialization after an interface becomes operational. The range is from 0 to 900 (0 indicates no delay).

Defaults 0

Command Modes INTERFACE

Supported Modes Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information
This command applies to a single interface. When used with the vrrp delay reload CLI, the later timer rules the VRRP enabling. For example, if vrrp delay reload is 600 and the vrrp delay minimum is 300:

- When the system reloads, VRRP waits 600 seconds (10 minutes) to bring up VRRP on all interfaces that are up and configured for VRRP.
- When an interface comes up, whether as part of a system reload or an interface reload, the system waits 300 seconds (5 minutes) to bring up VRRP on that interface.

Related Command
vrrp delay reload — sets the delay time for VRRP initialization after a system reboot.

vrrp delay reload

Set the delay time for VRRP initialization after a system reboot.

Syntax
vrrp delay reload seconds

Parameters
seconds Enter the number of seconds for the delay. The range is from 0 to 900 (0 indicates no delay).

Defaults 0

Command Modes INTERFACE

Supported Modes Full-Switch

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>
Usage Information
This command applies to all the VRRP configured interfaces on a system. When used with the \texttt{vrrp delay minimum} CLI, the later timer rules the VRRP enabling. For example, if \texttt{vrrp delay reload} is 600 and the \texttt{vrrp delay minimum} is 300:

- When the system reloads, VRRP waits 600 seconds (10 minutes) to bring up VRRP on all interfaces that are up and configured for VRRP.
- When an interface comes up, whether as part of a system reload or an interface reload, the system waits 300 seconds (5 minutes) to bring up VRRP on that interface.

Save the configuration and reload the system for the delay timers to take effect.

Related Command \texttt{vrrp delay minimum} — sets the delay time for VRRP initialization after a line card reboot.

\textbf{vrrp-group}

Assign a VRRP ID to an interface. You can configure up to 12 VRRP groups per interface.

\textbf{Syntax}
\texttt{vrrp-group vrrp-id}

\textbf{Parameters}
- \texttt{vrrp-id} Enter a number as the group ID. The range is from 1 to 255.

\textbf{Defaults} Not configured.

\textbf{Command Modes} INTERFACE

\textbf{Supported Modes} Full-Switch

\textbf{Command History}

\begin{tabular}{|c|c|}
\hline
\textbf{Version} & \textbf{Description} \\
\hline
9.9(0.0) & Introduced on the FN IOM. \\
8.3.16.1 & Introduced on the MXL 10/40GbE Switch IO Module. \\
\hline
\end{tabular}

\textbf{Usage Information} The VRRP group only becomes active and sends VRRP packets when a virtual IP address is configured. When you delete the virtual address, the VRRP group stops sending VRRP packets.

\textbf{Related Command} \texttt{virtual-address} — assigns up to 12 virtual IP addresses per VRRP group.

\textbf{VRRP for IPv6 Commands}

The following commands apply to IPv6.

\textbf{clear counters vrrp ipv6}

Clear the counters recorded for IPv6 VRRP groups.

\textbf{Syntax}
\texttt{clear counters vrrp ipv6 [vrid | vrf instance]}

\textbf{Parameters}
- \texttt{vrid} (OPTIONAL) Enter the number of an IPv6 VRRP group. The range is from 1 to 255.
- \texttt{vrf instance} (OPTIONAL) Enter the name of a VRF instance (32 characters maximum) to clear the counters of all IPv6 VRRP groups in the specified VRF.
Defaults
Not configured

</tr>
</tbody>
</table>

Usage Information

- This command also enables you to clear the port configurations corresponding to a range of ports.
- You can specify multiple ports as slot/port-range. For example, if you want to clear the port configurations corresponding to all ports between 1 and 4, specify the port range as clear counters interfaces interface-type 1/1 - 4.

**debug vrrp ipv6**

Allows you to enable debugging of VRRP.

**Syntax**

`debug vrrp ipv6 interface [vrid] {all | packets | state | timer}`

**Parameters**

- `interface` Enter the following keywords and slot/port or number information:
  - For a Port Channel interface, enter the keywords port-channel then a number.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a VLAN interface, enter the keyword vlan then the VLAN ID. The VLAN ID range is from 1 to 4094.

- `vrid` (OPTIONAL) Enter a number from 1 to 255 as the VRRP group ID.
- `all` Enter the keyword all to enable debugging of all VRRP groups.
- `packets` Enter the keyword packets to enable debugging of VRRP control packets.
- `state` Enter the keyword state to enable debugging of VRRP state changes
- `timer` Enter the keyword timer to enable debugging of the VRRP timer.

</tr>
</tbody>
</table>

**Usage Information**

If no options are specified, debug is active on all interfaces and all VRRP groups.
**show vrrp ipv6**

View the IPv6 VRRP groups that are active. If no VRRP groups are active, the system returns No Active VRRP group.

**Syntax**

```
show vrrp ipv6 [vrid] [interface] [brief]
```

**Parameters**

- **vrid** (OPTIONAL) Enter the virtual router identifier for the VRRP group to view only that group. The range is from 1 to 255.
- **interface**
  - Enter the following keywords and slot/port or number information:
    - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
    - For SONET interfaces, enter the keyword `sonet` then the slot/port information.
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
    - For a VLAN interface, enter the keyword `vlan` then the VLAN ID. The VLAN ID range is from 1 to 4094.
- **brief** (OPTIONAL) Enter the keyword `brief` to view a table of information on the VRRP groups.

**Command Modes**

</tr>
</tbody>
</table>

**Usage Information**

The following describes the `show vrrp ipv6` command shown in the following example.

- **Line Beginning with**
- **Description**
  - **GigabitEthernet**
    - Displays the Interface, the VRRP group ID, and the network address. If the interface is no sending VRRP packets, 0.0.0.0 appears as the network address.
  - **State: master**
    - Displays the interface’s state:
      - Na/If (not available).
      - master (MASTER virtual router).
      - backup (BACKUP virtual router).
    - the interface’s priority and the IP address of the MASTER.
  - **Hold Down:**
    - This line displays additional VRRP configuration information:
      - Hold Down displays the hold down timer interval in seconds.
      - Preempt displays TRUE if preempt is configured and FALSE if preempt is not configured.
      - AdvInt displays the Advertise Interval in seconds.
This line displays counters for the following:

- **Adv rcvd** displays the number of VRRP advertisements received on the interface.
- **Adv sent** displays the number of VRRP advertisements sent on the interface.
- **Bad pkts rcvd** displays the number of invalid packets received on the interface.

### Virtual MAC address
Displays the virtual MAC address of the VRRP group.

### Virtual IP address
Displays the virtual IP address of the VRRP router to which the interface is connected.

### Tracking states...
Displays information on the tracked interfaces or objects configured for a VRRP group (track command), including:

- **UP or DOWN state of the tracked interface or object (Up or Dn).**
- **Interface type and slot/port or object number, description, and time since the last change in the state of the tracked object.**
- **Cost to be subtracted from the VRRP group priority if the state of the tracked interface/object goes DOWN.**

**Example**

```plaintext
Dell(conf)#show vrrp ipv6
 State: Master, Priority: 101, Master: fe80::201:e8ff:fe7a:6bb9 (local)
 Hold Down: 0 centisec, Preempt: TRUE, AdvInt: 100 centisec
 Accept Mode: FALSE, Master AdvInt: 100 centisec
 Adv rcvd: 0, Bad pkts rcvd: 0, Adv sent: 64
 Virtual MAC address: 00:00:5e:00:02:ff
 Virtual IP address: 1::255 fe80::255
```

### vrrp-ipv6-group

Assign an interface to a VRRP group.

**Syntax**

```
vrrp-ipv6-group vrid
```

**Parameters**

- **vrid**
  
Enter the virtual-router ID number of the VRRP group. The VRID range is from 1 to 255.

**Defaults**

- Not configured.

**Command Modes**

- INTERFACE

**Supported Modes**

- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>8.3(16.1)</td>
<td>Introduced on the MxL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>
The VRRP group only becomes active and sends VRRP packets when a link-local virtual IP address is configured. When you delete the virtual address, the VRRP group stops sending VRRP packets.

- When VRF microcode is not loaded in CAM, the VRID for a VRRP group is the same as the VRID number configured with the `vrrp-group` or `vrrp-ipv6-group` command.
- When VRF microcode is loaded in CAM, the VRID for a VRRP group is equal to 16 times the `vrrp-group` or `vrrp-ipv6-group vrid` number plus the `ip vrf vrf-id` number. For example, if VRF microcode is loaded and VRRP group 10 is configured in VRF 2, the VRID used for the VRRP group is (16 x 10) + 2, or 162. This VRID value is used in the lowest byte of the virtual MAC address of the VRRP group and is also used for VRF routing.

**NOTE:** Configure the same VRID on neighboring routers (Dell Networking OS or non-Dell Networking OS) in the same VRRP group in order for all routers to interoperate.

### version

Set the VRRP protocol version for the IPv4 group.

**Syntax**

```
version {2 | 3 | both}
```

To return to the default setting, use the `no version` command.

**Parameters**

- **2**
  - Enter the keyword 2 to specify VRRP version 2 as defined by RFC 3768, *Virtual Router Redundancy Protocol*.

- **3**
  - Enter the keyword 3 to specify VRRP version 3 as defined by RFC 5798, *Virtual Router Redundancy Protocol*.

- **both**
  - Enter the keyword both for in-service migration from VRRP version 2 to VRRP version 3.

**Defaults**

2

**Command Modes**

VRRP

**Supported Modes**

Full-Switch

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON..</td>
</tr>
<tr>
<td>9.5(0.0)</td>
<td>Introduced on the Z9000, S6000, S4820T, S4810, and MXL.</td>
</tr>
</tbody>
</table>

**Usage Information**

You can use the `both` command to migrate from VRRPv2 to VRRPv3. When you set the VRRP protocol version to `both`, the switch sends only VRRPv3 advertisements but can receive either VRRPv2 or VRRPv3 packets. To migrate an IPv4 VRRP group from VRRPv2 to VRRPv3:

1. Set the switches with the lowest priority to `both`.
2. Set the switch with the highest priority to version 3.
3. Set all the switches from `both` to version 3.
**NOTE:** Do not run VRRP version 2 and version 3 in the same group for an extended period of time.

**Example**

```
Dell(conf-if-te-1/1-vrid-100)#version ?
2       VRRPv2
3       VRRPv3
both    Interoperable, send VRRPv3 receive both

Dell(conf-if-te-1/1-vrid-100)#version 3
```
This chapter lists the traps sent by the Dell Networking Operating System (OS). Each trap is listed by the fields Message ID, Trap Type, and Trap Option.

FC Flex IO Modules

This part provides a generic, broad-level description of the operations, capabilities, and configuration commands of the Fiber Channel (FC) Flex IO module.

FC Flex IO Module mentioned in this guide refers to FCF Port Combo Card.

Topics:
- FC Flex IO Modules
- Data Center Bridging (DCB) for FC Flex IO Modules
- NPIV Proxy Gateway for FC Flex IO Modules

FC Flex IO Modules

This part provides a generic, broad-level description of the operations, capabilities, and configuration commands of the Fiber Channel (FC) Flex IO module.

Data Center Bridging (DCB) for FC Flex IO Modules

Data center bridging (DCB) refers to a set of IEEE Ethernet enhancements that provide data centers with a single, converged network to support multiple traffic types, including local area network (LAN), server, and storage traffic.

The Fibre Channel (FC) Flex IO module is supported on switch. The switch installed with the FC Flex IO module functions as a top-of-rack edge switch that supports converged enhanced ethernet (CEE) traffic — Fibre Channel over Ethernet (FCoE) for storage, inter-process communication (IPC) for servers, and Ethernet local area network (LAN) (IP cloud) for data — and FC links to one or more storage area network (SAN) fabrics.

The dcb-input and dcb-output configuration commands are deprecated, starting with Dell Networking OS Release 9.3(0.0) on the Dell switches. Use the dcp-map command to create a DCB map to configure priority flow control (PFC) and enhanced transmission selection (ETS) on Ethernet ports that support converged Ethernet traffic.

The Dell Networking Operating System (OS) commands for the DCB features include 802.1Qbb priority-based flow control (PFC), 802.1Qaz enhanced transmission selection (ETS), and the data center bridging exchange (DCBX) protocol.

NPIV Proxy Gateway for FC Flex IO Modules

The N-port identifier virtualization (NPIV) Proxy Gateway (NPG) feature provides FCoE-FC bridging capability on the system with the FC Flex IO module switch, allowing server CNAs to communicate with SAN fabrics over the FN IOM with the FC Flex IO module.

To configure the FN IOM with the FC Flex IO module to operate as an NPIV proxy gateway, use the following commands:
**description (for FCoE maps)**

In an FCoE map, add a text description of the FCoE and FC parameters used to transmit storage traffic over a Switch with the FC Flex IO module NPIV proxy gateway in a converged fabric.

**Syntax**

```plaintext
description text
```

**Parameters**

- `text` Enter a maximum of 32 characters.

**Defaults**

None

**Command Modes**

FOCE MAP

**Supported Modes**

Full–Switch

**Command History**

- **Version**
  - **9.9(0.0)** Introduced on the FN IOM.
  - **9.3(0.0)** Introduced on the M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module.

**Usage Information**

The text description is displayed in `show fcoe-map` command output.

**Related Commands**

- `fcoe-map` — creates an FCoE map which contains the parameters used in the communication between servers and a SAN fabric.
- `show fcoe-map` — displays the Fibre Channel and FCoE configuration parameters in FCoE maps.

---

**fabric**

Apply an FCoE map on a fabric-facing Fibre Channel (FC) port.

**Syntax**

```
fabric map-name
```

**Parameters**

- `map-name` Maximum: 32 alphanumeric characters.

**Defaults**

None

**Command Modes**

INTERFACE FIBRE_CHANNEL

**Supported Modes**

Full–Switch

**Command History**

- **Version**
  - **9.9(0.0)** Introduced on the FN IOM.
  - **9.3(0.0)** Introduced on the M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module.

**Usage Information**

An FCoE map is a template used to map FCoE and FC parameters in a converged fabric. An FCoE map is used to virtualize upstream FC ports on a switch with the FC Flex IO module NPIV proxy gateway so that they appear to
downstream server CNA ports as FCoE forwarder (FCF) ports on an FCoE network. When applied to FC and Ethernet ports on an NPIV proxy gateway, an FCoE map allows the switch to operate as an FCoE-FC bridge between an FC SAN and an FCoE network by providing FCoE-enabled servers and switches with the necessary parameters to log in to a SAN fabric. Use the `fcoe-map` command to create an FCoE map.

On a switch with the FC Flex IO module NPIV proxy gateway, you cannot apply an FCoE map on fabric-facing FC ports and server-facing Ethernet ports.

After you apply an FCoE map on an FC interface, when the port is enabled (no shutdown), the NPIV proxy gateway starts sending FIP multicast advertisements on behalf of the FC port to downstream servers in order to advertise the availability of a new FCF port on the FCoE VLAN.

To remove an FCoE map from an FC interface, enter the `no fabric map-name` command in Interface configuration mode.

Related Commands

- `fcoe-map` — creates an FCoE map which contains the parameters used in the communication between servers and a SAN fabric.
- `show fcoe-map` — displays the Fibre Channel and FCoE configuration parameters in FCoE maps.

**fabric-id vlan**

In an FCoE map, configure the association between the dedicated VLAN used to carry FCoE traffic between servers and a SAN, and the fabric where the desired storage arrays are installed.

**Syntax**

```
fabric-id fabric-num vlan vlan-id
```

**Parameters**

- `fabric-id fabric-num` Enter a fabric ID number that is the same as the ID number of the dedicated VLAN used to carry FCoE storage traffic to the fabric specified in the FCoE map. You can enter a fabric ID in the range 1–4094.
- `vlan vlan-id` Enter the ID number of the dedicated VLAN used to carry FCoE storage traffic between servers and a SAN fabric and specified with the `vlan` command in the FCoE map.

**Defaults**

None

**Command Modes**

FCOE MAP

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module.</td>
</tr>
</tbody>
</table>

**Usage Information**

- In the `fabric-id vlan` command, the fabric and VLAN ID numbers must be the same.
- In each FCoE map, the fabric ID, FC-MAP value, and FCoE VLAN parameters must be unique.
- To remove a fabric-VLAN association from an FCoE map, enter the `no fabric-id vlan` command.
You must first create a VLAN and then specify the configured VLAN ID in the `fabric-id vlan` command. Otherwise, the following error message is displayed.

```
FTOS(conf-fcoe-f)#fabric-id 10 vlan 10 % Error: Vlan 10 does not exist
```

**Related Commands**

- `fcoe-map` — creates an FCoE map which contains the parameters used in the communication between servers and a SAN fabric.
- `show fcoe-map` — displays the Fibre Channel and FCoE configuration parameters in FCoE maps.

**fcf-priority**

In an FCoE map, configure the priority used by a server CNA to select an upstream FCoE forwarder (FCF).

**Syntax**

```
fcf-priority priority
```

**Parameters**

- `priority` Enter the priority assigned to the switch with the FC Flex IO module NPIV proxy gateway, which appears to a downstream server CNA as an FCF. The range of FCF priority values is from 1 to 255.

**Defaults**

128

**Command Modes**

FCOE MAP

**Supported Modes**

Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module.</td>
</tr>
</tbody>
</table>

**Usage Information**

The FCF priority you assign to the Switch with the FC Flex IO module is used by server CNAs to select an upstream FCF to use for a fabric login (FLOGI).

To remove a configured FCF priority from an FCoE map, enter the `no fcf-priority` command.

**Related Commands**

- `fcoe-map` — creates an FCoE map which contains the parameters used in the communication between servers and a SAN fabric.
- `show fcoe-map` — displays the Fibre Channel and FCoE configuration parameters in FCoE maps.

**fc-map**

In an FCoE map, configure the FCoE mapped address prefix (FC-MAP) value which is used to identify FCoE traffic transmitted on the FCoE VLAN for the specified fabric.

**Syntax**

```
fc-map fc-map-value
```

**Parameters**

- `fc-map-value` Enter the unique MAC address prefix used by a SAN fabric.
The range of FC-MAP values is from 0EFC00 to 0EFCFF.

**Defaults**
None

**Command Modes**
FCoE MAP

**Supported Modes**
Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.6(0.0)</td>
<td>Supported on the FN 2210S Aggregator.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module.</td>
</tr>
</tbody>
</table>

**Usage Information**
The FC-MAP value you enter must match the FC-MAP value used by an FC switch or FCoE forwarder (FCF) in the fabric. An FCF switch accepts only FCoE traffic that uses the correct FC-MAP value.

The FC-MAP value is used to generate the fabric-provided MAC address (FP-MAC). The FPMA is used by servers to transmit FCoE traffic to the fabric. An FC-MAP can be associated with only one FCoE VLAN and vice versa.

In an FCoE map, the FC-MAP value, fabric ID, and FCoE VLAN parameters must be unique.

To remove a configured FC-MAP value from an FCoE map, enter the `no fc-map` command.

</tbody>
</table>

**fcoe-map**

Create an FCoE map which contains the parameters used to configure the links between server CNAs and a SAN fabric. Apply the FCoE map on a server-facing Ethernet port.

**Syntax**

```plaintext
fcoe-map map-name
```

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>map-name</code></td>
<td>Maximum: 32 alphanumeric characters.</td>
</tr>
</tbody>
</table>

**Defaults**
None

On the I/O Aggregator with FC Flex IO modules, the following parameters are applied on all the FC Flex IO module interfaces:

- Description: SAN_FABRIC
- Fabric-id: 1002
- Fcoe-vlan: 1002
- Fc-map: 0x0efc00
- Fcf-priority: 128
- Fka-adv-period: 8000mSec
• Keepalive: enable
• Vlan priority: 3

</tr>
</tbody>
</table>

Usage Information

An FCoE map is a template used to map FCoE and FC parameters in a converged fabric. An FCoE map is used to virtualize upstream FC ports on the switch with the FC Flex IO module NPIV proxy gateway so that they appear to downstream server CNA ports as FCoE forwarder (FCF) ports on an FCoE network. When applied to FC and Ethernet ports on an NPIV proxy gateway, an FCoE map allows the switch to operate as an FCoE-FC bridge between an FC SAN and an FCoE network by providing FCoE-enabled servers and switches with the necessary parameters to log in to a SAN fabric.

On a switch with the FC Flex IO module NPIV proxy gateway, you cannot apply an FCoE map is applied on fabric-facing FC ports and server-facing 10–Gigabit Ethernet ports.

An FCoE map consists of the following parameters: the dedicated FCoE VLAN used for storage traffic, the destination SAN fabric (FC-MAP value), FCF priority used by a server, and the FIP keepalive (FKA) advertisement timeout.

In each FCoE map, the fabric ID, FC-MAP value, and FCoE VLAN parameters must be unique. Use one FCoE map to access one SAN fabric. You cannot use the same FCoE map to access different fabrics.

To remove an FCoE map from an Ethernet interface, enter the `no fcoe-map map-name` command in Interface configuration mode.

Related Commands
- `show fcoe-map` — displays the Fibre Channel and FCoE configuration parameters in FCoE maps.

fka-adv-period

In an FCoE map, configure the time interval used to transmit FIP keepalive (FKA) advertisements.

Syntax

`fka-adv-period seconds`

Parameters

- `seconds` Enter the time period (in seconds) used to send FIP keepalive messages to peer devices. The range is from 8 to 90 seconds.

Defaults

8 seconds

Command Modes

FCOE MAP

Supported Modes

Full-Switch

</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module.</td>
</tr>
</tbody>
</table>

### Usage Information

To delete the FIP keepalive time period from an FCoE map, enter the `no fka-adv-erpid` command.

### Related Commands

- `fcoe-map` — creates an FCoE map which contains the parameters used in the communication between servers and a SAN fabric.
- `show fcoe-map` — displays the Fibre Channel and FCoE configuration parameters in FCoE maps.

### interface vlan (NPIV proxy gateway)

Create a dedicated VLAN to be used to send and receive Fibre Channel traffic over FCoE links between servers and a fabric over a switch with the FC Flex IO module NPIV proxy gateway.

**Syntax**

```plaintext
interface vlan vlan-id
```

**Parameters**

- `vlan-id`  
Enter a number as the VLAN Identifier. The range is 1 to 4094.

**Defaults**

Not configured.

**Command Modes**

- **CONFIGURATION**

**Supported Modes**

- Full-Switch

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.3.0.0</td>
<td>Introduced on the M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module configured as an NPIV proxy gateway.</td>
</tr>
</tbody>
</table>

**Usage Information**

FCoE storage traffic received from servers on a switch with the FC Flex IO module NPIV proxy gateway is decapsulated into Fibre Channel packets and forwarded over FC links to SAN switches in a specified fabric. You must configure a separate FCoE VLAN for each fabric to which FCoE traffic is forwarded. Any non-FCoE traffic sent on a dedicated FCoE VLAN will be dropped.

You configure the association between a dedicated VLAN, which carries FCoE traffic from server CNAs over the NPIV proxy gateway to a SAN fabric in which destination storage arrays are installed, in an FCoE map by using the `fabric id vlan` command.

When you apply an FCoE map to a server-facing Ethernet port, the port is automatically configured as a tagged member of the FCoE VLAN.

For more information about VLANs and the commands to configure them, refer to the Virtual LAN (VLAN) Commands section of the Layer 2 chapter.

**Example (Single Range)**

```plaintext
FTOS(conf)#interface vlan 10
FTOS(conf-if-vl-10)#
```
Related Commands

- **fcoe-map** — creates an FCoE map which contains the parameters used in the communication between servers and a SAN fabric.
- **show fcoe-map** — displays the Fibre Channel and FCoE configuration parameters in FCoE maps.

**keepalive**

In an FCoE map, enable the monitoring of FIP keepalive messages (if it is disabled).

**Syntax**

```
keepalive
```

**Parameters**

None

**Defaults**

FIP keepalive monitoring is enabled on Ethernet and Fibre Channel interfaces.

**Command Modes**

- FCOE MAP

**Supported Modes**

- Full-Switch

**Command History**

- **Version 9.9(0.0)**
  - Introduced on the FN IOM.
- **Version 9.3(0.0)**
  - Introduced on the M I/O Aggregator and MXL 10/40GbE Switch with the FC Flex IO module.

**Usage Information**

FIP keepalive (FKA) messaging is used to detect if other FCoE devices are reachable.

To remove FIP keepalive monitoring from an FCoE map, enter the `no keepalive` command.

**Related Commands**

- **fcoe-map** — creates an FCoE map which contains the parameters used in the communication between servers and a SAN fabric.
- **show fcoe-map** — displays the Fibre Channel and FCoE configuration parameters in FCoE maps.

**show fcoe-map**

Display the Fibre Channel and FCoE configuration parameters in FCoE maps.

**Syntax**

```
show fcoe-map [brief | map-name]
```

**Parameters**

- **brief**
  - Displays an overview of currently configured FCoE maps.
- **map-name**
  - Displays the FC and FCoE configuration parameters in a specified FCoE map. The FCoE map is applied on Ethernet (FCoE) and FC ports to transmit FC storage traffic to a specified fabric.

**Command Modes**

- EXEC
- EXEC Privilege

**Supported Modes**

- Full-Switch
Usage Information

Use the `show fcoe-map` command to display the FC and FCoE parameters used to configure server-facing Ethernet (FCoE) and fabric-facing FC ports in all FCoE maps on a switch with the FC Flex IO module NPIV proxy gateway.

In each FCoE map, the values for the fabric ID and FC-MAP that identify the SAN fabric to which FC storage traffic is sent, and the FCoE VLAN to be used must be unique.

An FCoE map is used to identify the SAN fabric to which FCoE storage traffic is sent and to virtualize the switch with the FC Flex IO module FC ports so that they appear to downstream server CNA ports as FCoE Forwarder (FCF) ports on an FCoE network.

The following table describes the `show fcoe-map brief` output shown in the example below.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fabric-Name</td>
<td>Name of a SAN fabric.</td>

<tr>
<td>VLAN priority</td>
<td>FCoE traffic uses VLAN priority 3. (This setting is not user-configurable.)</td>
</tr>
<tr>
<td>FC-MAP</td>
<td>FCoE MAC address-prefix value - The unique 24-bit MAC address prefix that identifies a fabric.</td>
</tr>
</tbody>
</table>
### Field Description

**FKA-ADV-period**
Time interval (in seconds) used to transmit FIP keepalive advertisements.

**FCF Priority**
The priority used by a server to select an upstream FCoE forwarder.

**Config-State**
Indicates whether the configured FCoE and FC parameters in the FCoE map are valid: Active (all mandatory FCoE and FC parameters are correctly configured) or Incomplete (either the FC-MAP value, fabric ID, or VLAN ID are not correctly configured).

**Oper-State**
Operational status of link to the fabric: Up (link is up and transmitting FC traffic), Down (link is down and not transmitting FC traffic), Link-wait (link is up and waiting for FLOGI to complete on peer FC port), or Removed (port has been shut down).

**Members**
The switches with the FC Flex IO module Ethernet and FC ports that are members of the dedicated FCoE VLAN that carries storage traffic to the specified fabric.

### Example

```
FTOS#show fcoe-map brief
Fabric-Name  Fabric-Id  Vlan-Id  FC-MAP  FCF-Priority Config-State Oper-State
  test        16          16      0efc02  128          ACTIVE        UP
  cnatest     1003           1003    0efc03  128          ACTIVE        UP
  sitest      1004        1004    0efc04  128          ACTIVE        DOWN
```

```
FTOS#show fcoe-map si
Fabric Name    si
Fabric Id      1004
Vlan Id        1004
Vlan Priority  3
FC-MAP         0efc04
FKA-ADV-Period 8
Fcf Priority   128
Config-State   ACTIVE
Oper-State     DOWN
Members
```

### Related Commands
- `fcoe-map` — creates an FCoE map which contains the parameters used in the communication between servers and a SAN fabric.

### show npiv devices

Display the FCoE and FC devices currently logged in to a Switch with the FC Flex IO module NPIV proxy gateway.

#### Syntax

```
show npiv devices [brief]
```

#### Parameters

- **brief**
  Displays an overview of current server CNA-fabric connections over a switch with the FC Flex IO module NPIV proxy gateway.

#### Command Modes

- EXEC
- EXEC Privilege

#### Command History

<table>
<thead>
<tr>

**Related Commands**

`fcoe-map` — creates an FCoE map which contains the parameters used in the communication between servers and a SAN fabric.
Debugging and Diagnostics

This chapter contains the following sections:

- Offline Diagnostic Commands
- Hardware Commands

Topics:

- Offline Diagnostic Commands
- Hardware Commands
  - clear hardware stack-unit
  - clear hardware system-flow
  - show hardware layer2 acl
  - show hardware layer3
  - diag stack-unit
  - hardware watchdog
  - online stack-unit
  - offline stack-unit
  - show diag
  - show hardware stack-unit
  - show hardware system-flow
  - show hardware buffer interface
  - show hardware counters interface interface
  - show hardware drops

Offline Diagnostic Commands

The offline diagnostics test suite is useful for isolating faults and debugging hardware. While tests are running, the Dell Networking OS results are saved as a text file (TestReport-SU-X.txt) in the flash directory. The `show file` command is available only on Master and Standby.

**Important Points to Remember**

- Offline diagnostics can only be run when the unit is offline.
- Offline diagnostics cannot be run in Stacking mode.
- You can only run offline diagnostics on a unit to which you are connected via the console. In other words, you cannot run diagnostics on a unit to which you are connected via a stacking link.
- Diagnostic results are stored in a file (TestReport-SU-X.txt) in the flash directory. To review the results, use the `show file` command, which prints the results to the screen.
- Diagnostics only test connectivity, not the entire data path.

The offline diagnostics commands are:

- `diag stack-unit`
**Hardware Commands**

These commands display information from a hardware sub-component or ASIC. The hardware commands are:

- clear hardware stack-unit
- show diag
- show hardware stack-unit
- show hardware system-flow

### clear hardware stack-unit

Clear statistics from selected hardware components.

**Syntax**

```
clear hardware stack-unit 0-5 {counters | unit 0-1 counters | cpu data-plane statistics | stack-port 9-12}
```

**Parameters**

- **stack-unit 0-5**: Enter the keywords stack-unit then 0 to 5 to select a particular stack member and then enter one of the following command options to clear a specific collection of data.
- **counters**: Enter the keyword counters to clear the counters on the selected stack member.
- **unit 0-0 counters**: Enter the keyword unit along with a port-pipe number, from 0 to 1, then the keyword counters to clear the counters on the selected port-pipe.
- **cpu data-plane statistics**: Enter the keywords cpu data-plane statistics to clear the data plane statistics.
- **stack-port 9-12**: Enter the keywords stack-port then the port number of the stacking port to clear the statistics of the particular stacking port. The range is from 9 to 12.

| NOTE: You can identify stack port numbers by physical inspection of the rear modules. The numbering is the same as for the 10G ports. You can also inspect the output of the show system stack-ports command. |

**Defaults**

```
none
```

**Command Modes**

EXEC Privilege

**Supported Modes**

All Modes

**Command History**

<table>

<td>Supported on the FN I/O Aggregator.</td>
</tr>
</tbody>
</table>

**Related Commands**

- `show diag` — displays the data plane or management plane input and output statistics of the designated component of the designated stack member.
clear hardware system-flow

Clear system-flow statistics from selected hardware components.

Syntax

```
clear hardware system-flow layer2 stack-unit 0–5 port-set 0–0 counters
```

Parameters

- **stack-unit 0–5**
  - Enter the keywords `stack-unit` then 0 to 5 to select a particular stack member and then enter one of the following command options to clear a specific collection of data.
- **port-set 0–0 counters**
  - Enter the keywords `port-set` along with a port-pipe number, then the keyword `counters` to clear the system-flow counters on the selected port-pipe.

Defaults

```
one
```

Command Modes

Related Commands

- `show hardware stack-unit` — displays the data plane or management plane input and output statistics of the designated component of the designated stack member.

show hardware layer2 acl

Display Layer 2 ACL or eg data for the selected stack member and stack member port-pipe.

Syntax

```
show hardware layer2 acl stack-unit 0–5 port-set 0–0
```

Parameters

- **stack-unit 0–5**
  - Enter the keyword `stack-unit` then 0 to 5 to select a stack ID.
- **port-set 0–0**
  - Enter the keywords `port-set` with a port-pipe number.

Defaults

```
one
```

Related Commands

- `show hardware stack-unit` — displays the data plane or management plane input and output statistics of the designated component of the designated stack member.
show hardware layer3

Display Layer 3 ACL or QoS data for the selected stack member and stack member port-pipe.

**Syntax**

```
show hardware layer3 {acl | qos} stack-unit 0–5 port-set 0–0
```

**Parameters**

- `acl | qos`
  - Enter either the keyword `acl` or the keyword `qos` to select between ACL or QoS data.
- `stack-unit 0–5`
  - Enter the keywords `stack-unit` then a numeral from 0 to 5 to select a stack ID.
- `port-set 0–0`
  - Enter the keyword `port-set` with a port-pipe number.

**Defaults**

`none`

**diag stack-unit**

Run offline diagnostics on a stack unit.

**Syntax**

```
diag stack-unit number {alllevels | level0 | level1 | level2 [verbose no-reboot] | terminate | interactive test <id>}
```

**Parameters**

- `number`
  - Enter the stack-unit number. The range is from 0 to 5.
- `alllevels`
  - Enter the keyword `alllevels` to run the complete set of offline diagnostic tests.
- `level0`
  - Enter the keyword `level0` to run Level 0 diagnostics. Level 0 diagnostics check for the presence of various components and perform essential path verifications. In addition, they verify the identification registers of the components on the board.
- `level1`
  - Enter the keyword `level1` to run Level 1 diagnostics. Level 1 diagnostics is a smaller set of diagnostic tests with support for automatic partitioning. They perform status/self test for all the components on the board and test their registers for appropriate values. In addition, they perform extensive tests on memory devices (for example, SDRAM, flash, NVRAM, EEPROM, and CPLD) wherever possible. There are no tests on 10G links. At this level, stack ports are shut down automatically.
- `level2`
  - Enter the keyword `level2` to run Level 2 diagnostics. Level 2 diagnostics are a full set of diagnostic tests with no support for automatic partitioning. Level 2 diagnostics are used primarily for on-board loopback tests and more extensive component diagnostics. Various components on the board are put into Loopback mode and test packets are transmitted through those components. These diagnostics also perform snake tests using VLAN configurations. To test 10G links, physically remove the unit from the stack.
- `verbose`
  - Enter the keyword `verbose` to run the diagnostic in Verbose mode. Verbose mode gives more information in the output than Standard mode.
- `no-reboot`
  - Enter the keyword `no-reboot` to run the diagnostic without rebooting the unit.
- `terminate`
  - Enter the keyword `terminate` to terminate the diagnostic.
- `interactive test <id>`
  - Enter the keyword `interactive test <id>` to run an interactive diagnostic test.
no-reboot

Enter the keyword no-reboot to avoid automatic rebooting of the chassis after completion of diagnostic execution. Generally, this option is never used because if you run the diagnostic once again without rebooting the chassis, it may cause an issue with the diagnostic results.

terminate

Enter the keyword terminate to stop the execution of the level diag that is already started using the diag stack-unit command. Once this CLI is issued, syslogs indicating the termination of the diag test is displayed. The diag results for the executed tests are stored in the flash directory (TestReport-SU-X.txt).

interactive

Enter the keyword interactive to run some individual diag tests such as POWERLEDTEST, STATUSLEDTEST and so on. The help option under the interactive command displays the list of tests that can be run.

Defaults  none

Command Modes  EXEC Privilege

Supported Modes  All Modes

Command History

Version  Description
9.9(0.0)  Introduced on the FN IOM.
9.4(0.0)  Supported on the FN I/O Aggregator.
8.3.17.0  Supported on the M I/O Aggregator.

hardware watchdog

Set the watchdog timer to trigger a reboot and restart the system.

Syntax  hardware watchdog

Defaults  Enabled

Command Modes  CONFIGURATION

Supported Modes  All Modes

Command History

Version  Description
9.9(0.0)  Introduced on the FN IOM.
9.4(0.0)  Supported on the FN I/O Aggregator.
8.3.17.0  Supported on the M I/O Aggregator.

Usage Information

This command enables a hardware watchdog mechanism that automatically reboots an Dell Networking OS switch/router with a single unresponsive unit. This is a last resort mechanism intended to prevent a manual power cycle.
online stack-unit

Place a stack unit in the online state.

Syntax

online stack-unit number

Parameters

number Enter the stack-unit number. The range is from 0 to 5.

Defaults

none

Command Modes

EXEC Privilege

Command History

Version Description
9.9(0.0) Introduced on the FN IOM.
8.3.16.1 Introduced on the MXL 10/40GbE Switch IO Module.

offline stack-unit

Place a stack unit in the offline state.

Syntax

offline stack-unit number

Parameters

number Enter the stack-unit number. The range is from 0 to 5.

Defaults

none

Command Modes

EXEC Privilege

Supported Modes

All Modes

Command History

Version Description
9.9(0.0) Introduced on the FN IOM.
9.4(0.0) Supported on the FN I/O Aggregator.
8.3.17.0 Supported on the M I/O Aggregator.

Usage Information

While executing the offline stack unit CLI, the following warning message is displayed:

Dell#offline stack-unit 0
Warning - offline of unit will bring down all the protocols and the unit will be operationally down, except for running Diagnostics.
Please make sure that stacking/fanout not configured for Diagnostics execution. Also reboot/online command is necessary for normal operation after the offline command is issued.
Proceed with Offline [confirm yes/no]:no
Dell#

Make sure that stacking is not configured for Diagnostics execution. Also, reboot/online command is necessary for normal operation after the offline command is issued.
show diag

View diagnostics information.

Syntax

show diag {information | stack-unit unit-id [detail | summary] | testcase}

Parameters

information

Enter the keyword information to view current diagnostics information in the system.

stack-unit unit-id

Enter the keyword stack-unit followed by the unit-id to display information on a specific stack member. The range is from 0 to 5.

detail

(Optional) Enter the keyword detail to view detailed diagnostics information.

summary

(Optional) Enter the keyword summary to view a summary of the diagnostics information. By default, the summary is displayed.

testcase

Enter the keyword testcase to view the list of all the diag tests available.

Defaults

******* END ***************
show hardware stack-unit

Display the data plane or management plane input and output statistics of the designated component of the designated stack member.

Syntax

```
show hardware stack-unit 0 {buffer [ unit 0 ] total buffer | buffer unit 0 interface all queue [(0-14) | all] buffer-info} {cpu {data-plane statistics | private-mgmt statistics} | drops [unit 0-0 | fpga registers | fru dump | stack-port 9-12 | unit 0-0 {counters | details | ipmc-replication | port-stats [detail] | register | table-dump WORD}}
```

Parameters

- **stack-unit 0 (command-option)**: Enter the keywords `stack-unit` then 0 to select the stack member and then enter one of the following command options to display a collection of data based on the option entered.
- **buffer**: Enter the keyword `buffer`. To display buffer statistics for a all interface, enter the keyword `interface` followed by the keyword `all`. To display the forwarding plane statistics containing the packet buffer usage per port per stack unit, enter the keyword `unit` then 0 for port-pipe 0, then `port` and the port number (42-53, and then `buffer-info`.
- **cpu (data-plane statistics | management statistics | private-mgmt statistics)**: Enter the keyword `cpu` then one of the keywords to display the CPU statistics: `data-plane statistics`, `management statistics`, or `private-mgmt statistics`.
- **drops interface interface**: Enter the keyword `drops` to display internal drops on the selected stack member.
- **fpga registers**: Enter the keywords `fpga` `registers` to display fpga details.
- **fru dump**: Enter the keywords `fru` `dump` to display fru details.
- **stack-port 9-12**: Enter the keywords `stack-port` and a stacking port number to select a stacking port for which to display statistics. Identify the stack port number as you would to identify a 10G port that was in the same place in one of the rear modules.

**NOTE:** You can identify stack port numbers by physical inspection of the rear modules. The numbering is the same as for the 10G ports. You can also inspect the output of the `show system stack-ports` command.

- **unit 0-0 (counters | details | ipmc-replication | port-stats [detail] | register | table-dump WORD)**: Enter the keyword `unit` then 0 for port-pipe 0, and then enter one of the following keywords to troubleshoot errors on the selected port-pipe and to give status on why a port is not coming up to register level: `counters`, `details`, `ipmc-replication`, `port-stats [detail]`, `register`, or `table-dump WORD`.

show hardware system-flow

Display Layer 2 ACL or QoS data for the selected stack member and stack member port-pipe.

Syntax

```
show hardware system-flow layer2 stack-unit 0–5 port-set 0–0 [counters]
```

Parameters

- `acl | qos` For the selected stack member and stack member port-pipe, display which system flow entry the packet hits and what queue the packet takes as it dumps the raw system flow tables.
- `stack-unit 0–5` Enter the keywords `stack-unit` then 0 to 5 to select a stack member ID.
- `port-set 0–0 [counters]` Enter the keywords `port-set` with a port-pipe number—0. (OPTIONAL) Enter the keyword `counters` to display hit counters for the selected ACL or QoS option.

Defaults

none

Command Modes

EXEC Privilege

Supported Modes

```
show hardware buffer interface

Display buffer statistics for a specific interface.

Syntax

```
show hardware buffer interface interface[priority-group { id | all } | queue { id| all} ] buffer-info
```

Parameters

- **interface interface**: Enter any of the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

- **priority-group**: Identifier of the priority group in the range of 0 to 7.

- **queue**: Enter the keyword queue followed by id for specific queue or keyword all.

- **buffer-info**: To display total buffer information for the interface, enter the keywords buffer-info.

Command Modes

- EXEC
EXEC Privilege

Supported Modes
- Full-Switch

Command History

Maximum Shared Limit: 29514
Default Packet Buffer allocate for the Queue: 8
```
show hardware counters interface <interface>

Display the counter information for a specific interface.

Syntax

    show hardware counters interface <interface>

Parameters

- **counters**
  - Enter the keywords `counters` to display counter value for the specified stack-member the port-pipe.
- **<interface>**
  - Enter any of the following keywords and slot/port or number information:
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
    - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

Defaults

    none

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

    Full-Switch

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant **Dell Networking OS Command Line Reference Guide**.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.9(0.0)</td>
<td>Introduced on the FN IOM.</td>
</tr>
<tr>
<td>9.8(0.0)</td>
<td>Introduced on the FN I/O Aggregator.</td>
</tr>
</tbody>
</table>

Example

```
Dell(#)show hardware counters interface tengigabitethernet 5/1
unit: 0 port: 2 (interface Te 5/1)

<table>

</tr>
</tbody>
</table>
```
show hardware drops

Displays internal drops on the specified interface or for a range of interface.

Syntax

```
show hardware drops interface interface
```

Parameters

- **interface**
  - Enter any of the following keywords and slot/port or slot/port-range or number information:
    - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
    - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.

- **drops**
  - Enter the keyword drops to display internal drops.

Command Modes

- EXEC
- EXEC Privilege

Supported Modes

- Full-Switch

Command History

- **Version** 9.9(0.0)
  - Introduced on the FN IOM.
Example displaying internal drops for the specific interface

Dell(conf)#
Internet Control Message Protocol (ICMP)  
Message Types

This chapter lists and describes the possible ICMP message type resulting from a ping. The first three columns list the possible symbol or type/code. For example, you would receive a ! or 03 as an echo reply from your ping.
