

Statement of Volatility – Dell PowerEdge R530

Dell PowerEdge R530 contains both volatile and non-volatile (NV) components. Volatile components lose their data immediately upon removal of power from the component. Non-volatile components continue to retain their data even after the power has been removed from the component. Components chosen as user-definable configuration options (those not soldered to the motherboard) are not included in the Statement of Volatility. Configuration option information (pertinent to options such as microprocessors, remote access controllers, and storage controllers) is available by component separately. The following NV components are present in the PowerEdge R530 server.

Item	Non-Volatile or Volatile	Quantity	Reference Designator	Size	
Planer					
PCH Internal CMOS RAM	Non-Volatile	1	U_PCH1	256 Bytes

Item	How is data input to this memory?	How is this memory write protected?	
Planer			
PCH Internal CMOS RAM	BIOS	N/A – BIOS only control	
BIOS SPI Flash	SPI interface via iDRAC	Software write protected	
iDRAC SPI Flash	SPI interface via iDRAC	Embedded iDRAC subsystem firmware actively controls sub area based write protection as needed.	
BMC EMMC	NAND Flash interface via iDRAC	Embedded FW write protected	
CPU Vcore and VSA Regulators	Once values are loaded into register space a cmd writes to nvm.	There are passwords for different sections of the register space	
System CPLD RAM	Not utilized	Not accessible	
System Memory	System OS RAM	System OS	
System Memory	System OS	OS Control	
Power Supplies			
PSU FW	Different vendors have different utilities and tools to load the data to memory. It can also be loaded by Dell Update Package from LC or OS (Windows and Linux)	Protected by the embedded microcontroller. Special keys are used by special vendor provided utilities to unlock the ROM with various CRC checks during load.	
2U 8x3.5" Backplane			
SEP internal flash	Firmware + FRU	I2C interface via iDRAC
