

Statement of Volatility – Dell PowerEdge T620

Dell PowerEdge T620 contains both volatile and non-volatile (NV) components. Volatile components lose their data immediately upon removal of power from the component. Non-volatile components continue to retain their data even after the power has been removed from the component. Components chosen as user-definable configuration options (those not soldered to the motherboard) are not included in the Statement of Volatility. Configuration option information (pertinent to options such as microprocessors, remote access controllers, and storage controllers) is available by component separately. The following NV components are present in the PowerEdge T620 server.

Item	Non-Volatile or Volatile	Quantity	Reference Designator	Size
Planner				
PCH Internal CMOS RAM	Non-Volatile	1	U41	256 Bytes
BIOS SPI Flash	Non-Volatile	1	U49-1	8 MB
iDRAC SPI Flash	Non-Volatile	1	U16-1	4 MB
BMC EMMC	Non-Volatile	1	U2018	4 GB
CPU Vcore and VSA Regulators	Non-Volatile	2	PDU1, PAU1	4.25 KB
System CPLD RAM	Volatile	1	U44	1 KB
System Memory	Volatile	Up to 12 per CPU	DIMM<24:1>	Up to 32GB per DIMM
Power Supplies				
PSU FW	Non-Volatile	1 per PSU	Varies by part number	Up to 2MB. Varies by part number
16x2.5" Backplane				
Flash memory	Non-Volatile	1	U_EXP_FLASH-1	32 Mb
Expander FRU image	Non-Volatile	1	U_EXP_EEPROM	512 Bytes
BP FRU image	Non-Volatile	1	U_BP_EEPROM	256 Bytes
8x3.5" Backplane				

Item	Non-Volatile or Volatile	Quantity	Reference Designator	Size
SEP internal flash	Non-Volatile	1	U_SEP	Flash:32KB + 4KB EEPROM: 1KB
12x3.5" Backplane				
Flash memory	Non-Volatile	1	U_EXP_FLASH-1	32 Mb
BP FRU image	Non-Volatile	1	U_BP_EEPROM	256 Bytes
Expander FRU image	Non-Volatile	1	U_EXP_EEPROM	512 Bytes
PCIe SSD Backplane				
SEP internal flash	Non-Volatile	1	U_SEP1	Flash:32KB + 4KB EEPROM: 1KB

Item	Type (e.g. Flash PROM, EEPROM)	Can user programs or operating system write data to it during normal operation?	Purpose? (e.g. boot code)
Planer			
PCH Internal CMOS RAM	Battery-backed CMOS RAM	No	Real-time clock and BIOS configuration settings
BIOS SPI Flash	SPI Flash	No	Boot code, system configuration information, UEFI environment, Flash Disceptor, ME
iDRAC SPI Flash	SPI Flash	No	iDRAC Uboot (bootloader), server managent persistent store (i.e. IDRAC MAC Address, iDRAC boot variables), lifecycle log cache, virtual planar FRU and EPPID, rac log, System Event Log, JobStore, iDRAC Secure Boot Code,
BMC EMMC	eMMC NAND Flash	No	Operational iDRAC FW, Lifecycle Controller (LC) USC partition, LC service diags, LC OS drivers, USC firmware

Item	Type (e.g. Flash PROM, EEPROM)	Can user programs or operating system write data to it during normal operation?	Purpose? (e.g. boot code)
CPU Vcore and VSA Regulators	OTP(one time programmable)	No	Operational parameters
System CPLD RAM	RAM	No	Not utilized
System Memory	RAM	Yes	System OS RAM
Power Supplies			
PSU FW	Embedded microcontroller flash	No	Power Supply operation, power management data and fault behaviors
16x2.5" Backplane			
Flash memory	Flash	No	Firmware
Expander FRU image	I2C EEPROM	No	FRU
BP FRU image	I2C EEPROM	No	FRU
8x3.5" Backplane			
SEP internal flash	Integrated Flash+EEPROM	No	Firmware + FRU
12x3.5" Backplane			
Flash memory	Flash	No	Firmware
BP FRU image	I2C EEPROM	No	FRU
Expander FRU image	I2C EEPROM	No	FRU
PCIe SSD Backplane			
SEP internal flash	Integrated Flash+EEPROM	No	Firmware + FRU

Item	How is data input to this memory?	How is this memory write protected?
Planer		
PCH Internal CMOS RAM	BIOS	N/A – BIOS only control
BIOS SPI Flash	SPI interface via iDRAC	Software write protected
iDRAC SPI Flash	SPI interface via iDRAC	Embedded iDRAC subsystem firmware actively controls sub area based write

Item	How is data input to this memory?	How is this memory write protected?
		protection as needed.
BMC EMMC	NAND Flash interface via iDRAC	Embedded FW write protected
CPU Vcore and VSA Regulators	Once value are loaded into register space a cmd writes to nvm.	There are passwords for different sections of the register space
System CPLD RAM	Not utilized	Not accessible
System Memory	System OS	OS Control
Power Supplies		
PSU FW	Different vendors have different utilities and tools to load the data to memory. It can also be loaded by Dell Update Package from LC or OS (Windows and Linux)	Protected by the embedded microcontroller. Special keys are used by special vendor provided utilities to unlock the ROM with various CRC checks during load.
16x2.5" Backplane		
Flash memory	Common Flash memory Interface (CFI)	Hardware strapping
Expander FRU image	I2C interface via iDRAC	Hardware strapping
BP FRU image	I2C interface via iDRAC	Hardware strapping
8x3.5" Backplane		
SEP internal flash	I2C interface via iDRAC	Program write protect bit
12x3.5" Backplane		
Flash memory	Common Flash memory Interface (CFI)	Hardware strapping
BP FRU image	I2C interface via iDRAC	Hardware strapping
Expander FRU image	I2C interface via iDRAC	Hardware strapping
PCIe SSD Backplane		
SEP internal flash	I2C interface via iDRAC	Program write protect bit
