

# Setting Up Your Network Management Card

- 1** **Verify the package contents**
1. Network Management Card
  2. Serial cable
  3. Setup instructions
  4. Safety, Environmental, and Regulatory Information

- 2** **Note the MAC address on the card**

- 3** **Remove the cover from the UPS communication bay**

- 4** **Insert and secure the card with the retaining screws**

- 5** **Connect an Ethernet cable to the card and to the network (not supplied)**
- NOTE: You can set the card parameters via the Settings Port even if the network is not connected

- 6** **Wait approximately two minutes until the UPS Data LED flashes regularly, indicating normal operation**

## About Your Network Management Card

1. Ethernet port (10/100BaseT)
2. ACT LED (green)
3. 100M LED (orange)
4. Settings port
5. UPS Data LED (green)
6. RS232 LED (orange)

### Ethernet Port (10/100BaseT)

ACT LED (green)	Off	Card is not connected to the network
	On	Card is connected to the network, but no activity
	Flashing	Port is sending/receiving
100M LED (orange)	Off	Port is operating at 10 Mbits/s
	On	Port is operating at 100 Mbits/s

### Settings Port

UPS Data LED (green)	Off	Card is starting
	On	Card is communicating with the UPS
	Flashing	Normal operation; communication with the UPS is operational
RS232 LED (orange)	On	Configuration menu is activated
	Off	Normal operation; Configuration menu is not activated

# Configuring the Card

IP Default Settings:	
IP Network	BOOTP/DHCP enabled
	IP address: 192.168.1.2
	Subnet mask: 255.255.0.0
	Gateway: 0.0.0.0
	NTP server: pool.ntp.org
Web page access control	User name: admin Password: admin
Settings port access control	Password: admin (not modifiable)
Date and time	Synchronize with an NTP server (GMT)

1. Connect the serial cable to the card's Settings port and the computer's COM port.
2. Start a terminal emulator, such as HyperTerminal®, with these settings:

Bits per second	Data bits	Stop bits	Parity	Flow control
9600	8	1	none	none

"Echo typed characters locally" option: disabled.

3. Type admin.

NETWORK MANAGEMENT CARD :	
1	: Reset
2	: Network configuration
3	: Set Login Password to Default
4	: Return to Default Configuration
0	: Exit

## If your network is equipped with a BOOTP/DHCP server (default)

The card automatically collects the IP parameters from the server.

To view the parameters:

1. Press the 2 key for Network configuration.
2. Press the 1 key for Read Network settings.

The card displays the settings supplied by the server.

NETWORK CONFIGURATION :	
MAC address :	00:20:85:FD:1C:07
Mode :	DHCP
IP address :	192.168.1.2
Subnet mask :	255.255.248.0
Gateway :	166.99.17.1

3. To exit, press the 0 key twice.

## If your network is not equipped with a BOOTP/DHCP server

Configure the card manually. To set the network configuration:

1. Press the 2 key for Network configuration.
2. Press the 2 key for Modify Network settings.

Follow the instructions and enter the IP parameters:

NETWORK SETTINGS :	
1	: Read Network settings
2	: Modify Network settings
3	: Set Ethernet speed
0	: Exit
<p>For each of the following questions, you can press &lt;Return&gt; to select the value shown in braces, or you can enter a new value. Should this target obtain IP settings from the network? [N] N Static IP address [172.17.21.94]? 172.17.21.21 Subnet Mask IP address [255.255.248.0]? 255.255.255.0 Gateway address IP address [172.17.17.1]? 172.17.17.1 Done</p>	

Wait until Done displays, indicating that the IP parameters have been saved.

3. Press the 0 key to exit.
4. Press the 1 key to reset.
5. Press the 2 key to restart.

The card restarts with the new IP settings in approximately one minute.

# Accessing the Card

1. Run a Web browser.
2. Enter the card's IP address in the address bar:  
<https://xxx.xxx.xxx.xxx/> (for example, <https://166.99.1.82/>)
3. The home page displays:

4. Set the time by clicking the Time command.
5. Continue configuration via the sections in the Settings menu.
