# Lifecycle Controller Management Profile

## 1 Scope

The Lifecycle Controller (LC) Management Profile extends the management capabilities of referencing profiles by adding the capability to represent the configuration attributes for the Dell Lifecycle Controller. The LC configuration attributes are modeled as attribute collections for an individual LC; typically there is one LC per system platform. This profile is a specialization of the BIOS Management Profile.

## 2 Normative References

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

### 2.1 Approved References

## 3 Terms and Definitions

For the purposes of this document, the following terms and definitions apply.

### 3.1

**can**

used for statements of possibility and capability, whether material, physical, or causal

### 3.2

**cannot**

used for statements of possibility and capability, whether material, physical, or causal

### **3.3**

#### **conditional**

indicates requirements to be followed strictly in order to conform to the document when the specified conditions are met

### **3.4**

#### **mandatory**

indicates requirements to be followed strictly in order to conform to the document and from which no deviation is permitted

### **3.5**

#### **may**

indicates a course of action permissible within the limits of the document

### **3.6**

#### **need not**

indicates a course of action permissible within the limits of the document

### **3.7**

#### **optional**

indicates a course of action permissible within the limits of the document

### **3.8**

#### **referencing profile**

indicates a profile that owns the definition of this class and can include a reference to this profile in its "Related Profiles" table

### **3.9**

#### **shall**

indicates requirements to be followed strictly in order to conform to the document and from which no deviation is permitted

### **3.10**

#### **shall not**

indicates requirements to be followed strictly in order to conform to the document and from which no deviation is permitted

### **3.11**

#### **should**

indicates that among several possibilities, one is recommended as particularly suitable, without mentioning or excluding others, or that a certain course of action is preferred but not necessarily required

### **3.12**

#### **should not**

indicates that a certain possibility or course of action is deprecated but not prohibited

## 4 Symbols and Abbreviated Terms

### 4.1

#### CIM

Common Information Model

## 5 Synopsis

**Profile Name:** Lifecycle Controller (LC) Management

**Version:** 1.0.0

**Organization:** DCIM

**CIM Schema Version:** 2.19.1

**Central Class:** DCIM\_LCService

**Scoping Class:** CIM\_ComputerSystem

The LC Management Profile extends the management capability of the referencing profiles by adding the capability to describe LC configuration attributes simply. In this profile, LC is represented by a collection and zero or more instances of the CIM\_BIOSAttribute class each representing a LC configuration-related attribute. DCIM\_LCService shall be the Central Class. CIM\_ComputerSystem shall be the Scoping Class. An instance of DCIM\_LCService shall be the Central Instance. The instance of CIM\_ComputerSystem that the Central Instance is associated with through the CIM\_HostedService association shall be the Scoping Instance.

Table 1 identifies profiles that are related to this profile.

**Table 1 – Related Profiles**

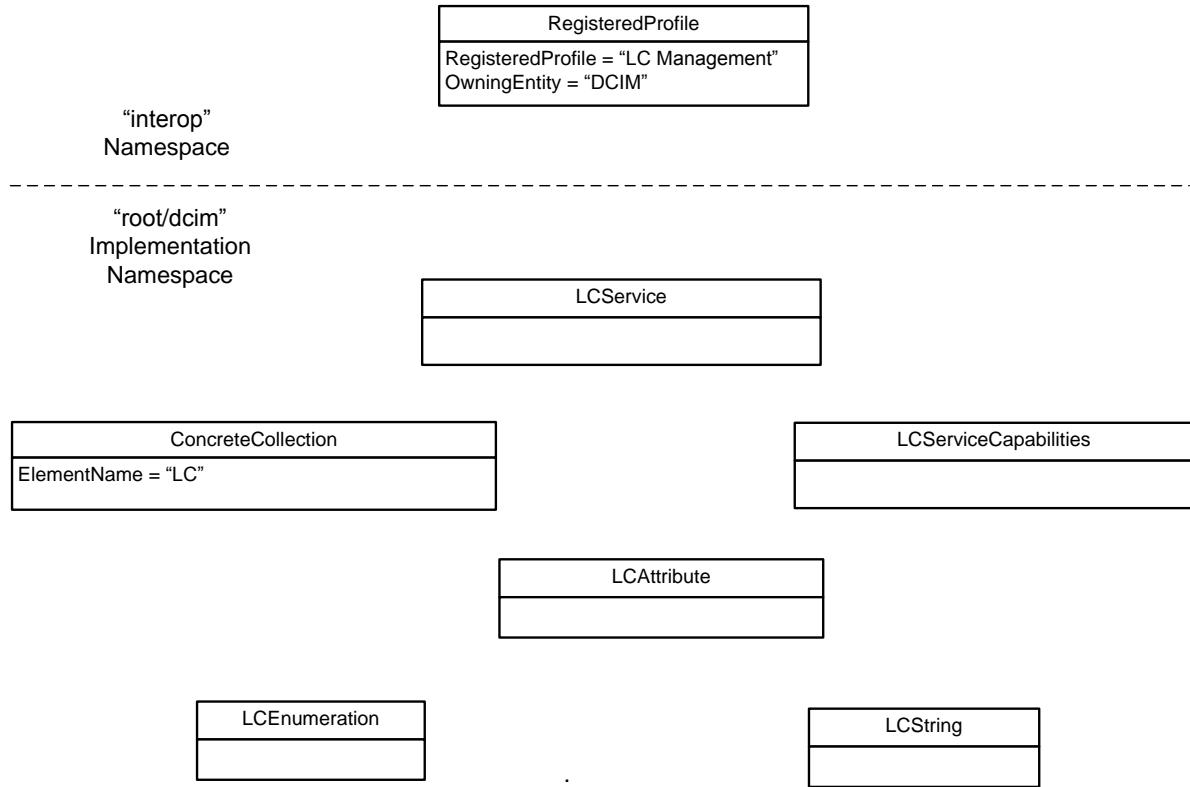

Profile Name	Organization	Version	Relationship
Profile Registration Profile	DMTF	1.0	Mandatory
Dell Job Control	DCIM	1.0	Mandatory

## 6 Description

The LC Management Profile describes the LC attribute configuration service and the collections and attributes instances that the service manages. The profile also describes the relationship of the LC attribute service to the DMTF/Dell profile version information and Dell Job Control profile.

Figure 1 represents the class schema for the LC Management Profile. For simplicity, the prefix CIM\_ has been removed from the names of the classes. The LC service in a managed system is represented by the instance of the DCIM\_LCService class. The LC is represented by the CIM\_ConcreteCollection class.

The LC Management Profile information is represented with the instance of the CIM\_RegisteredProfile.

**Figure 1 – LC Management Profile: Class Diagram**

## 7 Implementation Requirements

Requirements and guidelines for propagating and formulating certain class properties are discussed in this section; methods are listed in section 8, and properties are listed in section 10.

### 7.1 DCIM\_LCService

One instance of DCIM\_LCService shall be instantiated.

### 7.2 DCIM\_LCEnumeration

One or more instances of DCIM\_LCEnumeration shall be instantiated.

### 7.3 DCIM\_LCString

One or more instances of DCIM\_LCString shall be instantiated.

## **7.4 DCIM\_LCRegisteredProfile**

One instance of DCIM\_LCRegisteredProfile shall be instantiated.

## **7.5 Lifecycle Controller Attributes to be Represented by LC Management Profile**

The LC Management Profile defines the modeling of LC configuration attributes using the derivation of CIM\_BIOSAttribute class to represent each LC configuration attribute. The following are the LC configuration areas that may require representation using this profile. Some areas are already represented using other profiles, and will not need representation using the CIM\_BIOSAttribute classes. Each of the attributes represented by the derivation of the CIM\_BIOSAttribute class may be modified using SetAttribute() and SetAttributes() methods.

### **7.5.1 CCR (Component Configuration Recovery) Attributes:**

- Licensed
- Part Firmware Update
- Collect System Inventory on Restart

**Table 2 – CCR Attributes**

Attribute Name	Possible Values
Licensed	“Yes” = Licensed “No” = Not Licensed
Part Firmware Update	Disable (default) = firmware update is not allowed Allow version upgrade only = Allow firmware update only on up-revision Match firmware of replaced part = Always update firmware
Collect System Inventory on Restart	Disabled (default) = Disallow collecting inventory on restart Enabled = Allow collecting system inventory on restart

### **7.5.2 Dell System ID**

- System ID

### **7.5.3 Discovery and Handshake Attributes:**

- Provisioning Server
- Auto Discovery
- Discovery Factory Defaults

**Table 3 – Discovery and Handshake Attributes**

<b>Attribute Name</b>	<b>Possible Values</b>
Provisioning Server	provisioning server addresses and ports  Examples: hostname hostname.domain.com 1.1.1.1 Mypc:8080 Myps.dell.com(1.2.3.4):8080 Host1:80,host2:8080 Hostname[2001:db8:0000:1428:57ab]:443 [2001:db8:0000:1428:57ab]:443
Auto Discovery	Off (default) = Auto Discovery feature is turned off On = Auto Discovery feature is turned on
Discovery Factory Defaults	Off (default) = Do not reset to factory defaults when performing auto discovery On = Reset to factory defaults when performing auto discovery

## **8 Methods**

This section details the requirements for supporting intrinsic operations and extrinsic methods for the CIM elements defined by this profile.

### **8.1 DCIM\_LCService.SetAttribute()**

A method used to set the value of a single attribute.

**Table 4 – DCIM\_LCService.SetAttribute() Method: Return Code Values**

<b>Value</b>	<b>Description</b>
0	Request was successfully executed.
1	Method is unsupported.
2	Error occurred

**Table 5 – DCIM\_LCService.SetAttribute() Method: Parameters**

<b>Qualifiers</b>	<b>Name</b>	<b>Type</b>	<b>Description/Values</b>
IN	AttributeName	string	DCIM_LCAttribute.AttributeName
IN	AttributeValue	string [ ]	Pending or Current value to be set
OUT	SetResult	string	Invoking the SetAttribute may result in the CurrentValue or PendingValue property being set. A value of “2” means CurrentValue property is set, and a value of “3” means PendingValue property is set
OUT	RebootRequired	string	A value of “Yes” means a reboot is required to set this value, and a value of “No” means a reboot is not required to set this value
OUT (optional)	MessageID	string	Error Message ID- can be used to index into Dell Message registry files
OUT (optional)	Message	string	Error Message in English corresponding to MessageID is returned if the method fails to execute
OUT	MessageArguments	string[]	Substitution variables for dynamic error messages

## 8.2 DCIM\_LCService.SetAttributes()

A method used to set the values of multiple attributes.

**Table 6 – DCIM\_LCService.SetAttributes() Method: Return Code Values**

Value	Description
0	Request was successfully executed.
1	Method is unsupported.
2	Error occurred

**Table 7 – DCIM\_LCService.SetAttributes() Method: Parameters**

Qualifiers	Name	Type	Description/Values
IN	AttributeName	string [ ]	Array of DCIM_LCAttribute.AttributeName
IN	AttributeValue	string [ ]	Corresponding array of Pending or Current value to be set
OUT	SetResult	string [ ]	invoking the SetAttributes may result in the CurrentValue or PendingValue property of each input element being set. AttributeValue array will have a corresponding SetResult value in the SetResult array. A value of “2” means the CurrentValue property is set, and a value of “3” means the PendingValue property is set
OUT	RebootRequired	string [ ]	Each input element’s AttributeValue array will have a corresponding RebootRequired value in the RebootRequired array. A value of “Yes” means a reboot is required to set this value, and a value of “No” means a reboot is not required to set this value
OUT	MessageID	string [ ]	Error Message ID- can be used to index into Dell Message registry files
OUT	Message	string [ ]	Error Message in English corresponding to MessageID is returned if the method fails to execute
OUT	MessageArguments	string[]	Substitution variables for dynamic error messages

### **8.3 DCIM\_LCService.CreateConfigJob()**

A method used to apply the pending values set by the SetAttribute and SetAttributes methods.

**Table 8 – DCIM\_LCService.CreateConfigJob() Method: Return Code Values**

<b>Value</b>	<b>Description</b>
0	Request was successfully executed.
1	Method is unsupported.
2	Error occurred
4096	Job started: REF returned to started CIM_ConcreteJob

**Table 9 – DCIM\_LCService.CreateConfigJob() Method: Parameters**

<b>Qualifiers</b>	<b>Name</b>	<b>Type</b>	<b>Description/Values</b>
IN (optional)	ScheduledStartTime	Datetime	Job will be scheduled immediately. Scheduling is not supported in this version
IN (optional)	RebootIfRequired	Boolean	Reboot the system if it is required for the current value to be effective.
OUT	Job	CIM_ConcreteJob REF	Returned to keep track of config job status
OUT	MessageID	string	Error Message ID- can be used to index into Dell Message registry files
OUT	Message	string	Error Message in English corresponding to MessageID is returned if the method fails to execute
OUT	MessageArguments	string[]	Substitution variables for dynamic error messages

## **8.4 DCIM\_LCService.ReInitiateDHS()**

A method used to reinitiate the provisioning server discovery and handshake.

**Table 10 – DCIM\_LCService.ReInitiateDHS() Method: Return Code Values**

<b>Value</b>	<b>Description</b>
0	Request was successfully executed.
1	Method is unsupported.
2	Error occurred

**Table 11 – DCIM\_LCService.ReInitiateDHS() Method: Parameters**

<b>Qualifiers</b>	<b>Name</b>	<b>Type</b>	<b>Description/Values</b>
IN (optional)	ProvisioningServer	string	An optional parameter to specify provisioning server addresses and ports used for auto discovery. If omitted, the Lifecycle Controller will get the value from DHCP or DNS
IN	ResetToFactoryDefaults	boolean	If set to "true", all configuration information is replaced with the auto discovery factory defaults. If set to "false", an error will be returned
IN	PerformAutoDiscovery	uint16	A value of "Off = 1" disables auto discovery. A value of "Now = 2" enables and initiates auto discovery immediately. A value of "NextBoot = 3" will delay reconfiguration and auto discovery until next powercycle.
OUT	MessageID	string	Error Message ID- can be used to index into Dell Message registry files
OUT	Message	string	Error Message in English corresponding to MessageID is returned if the method fails to execute
OUT	MessageArguments	string[]	Substitution variables for dynamic error messages

## **8.5 DCIM\_LCService.ClearProvisioningServer()**

A method used to clear the provisioning server values.

**Table 12 – DCIM\_LCService.ClearProvisioningServer() Method: Return Code Values**

Value	Description
0	Request was successfully executed.
1	Method is unsupported.
2	Error occurred

**Table 13 – DCIM\_LCService.ClearProvisioningServer() Method: Parameters**

Qualifiers	Name	Type	Description/Values
OUT (optional)	MessageID	string	Error MessageID is returned if the method fails to execute
OUT (optional)	Message	string	Error Message in English corresponding to MessageID is returned if the method fails to execute

## 8.6 DCIM\_LCService.DownloadServerPublicKey()

A method used to download the server public key to the LC.

**Table 14 – DCIM\_LCService.DownloadServerPublicKey() Method: Return Code Values**

Value	Description
0	Request was successfully executed.
1	Method is unsupported.
2	Error occurred
4096	Job started: REF returned to started CIM_ConcreteJob

**Table 15 – DCIM\_LCService.DownloadServerPublicKey() Method: Parameters**

Qualifiers	Name	Type	Description/Values
IN, OctetString	KeyContent	string	Base64 encoded public key content.
OUT	Job	CIM_ConcreteJob REF	Returned to keep track of public key download status
OUT	MessageID	string	Error Message ID- can be used to index into Dell Message registry files
OUT	Message	string	Error Message in English corresponding to MessageID is returned if the method fails to execute
OUT	MessageArguments	string[]	Substitution variables for dynamic error messages

## 8.7 DCIM\_LCService.DownloadClientCerts()

A method used to download the client private certificate, password, and root certificate to LC.

**Table 16 – DCIM\_LCService.DownloadClientCerts() Method: Return Code Values**

Value	Description
0	Request was successfully executed.
1	Method is unsupported.
2	Error occurred
4096	Job started: REF returned to started CIM_ConcreteJob

**Table 17 – DCIM\_LCService.DownloadClientCerts() Method: Parameters**

Qualifiers	Name	Type	Description/Values
IN, OctetString	KeyContent	string	Base64 encoded private key content.
IN	Password	string	Private key password
IN, OctetString	CAConcent	string	Base64 encoded root certificate content
OUT	Job	CIM_ConcreteJob REF	Returned to keep track of public key download status
OUT (optional)	MessageID	string	Error Message ID- can be used to index into Dell Message registry files
OUT	Message	string	Error Message in English corresponding to MessageID is returned if the method fails to execute
OUT	MessageArguments	string[]	Substitution variables for dynamic error messages

## 9 Use Cases

This section contains object diagrams and use cases for the LC Management Profile.

### 9.1 Object Diagrams

Figure 2 represents a possible instantiation of the LC Management Profile. In this instantiation, the ComputerSystem is not represented.

For simplicity, the prefix CIM\_ has been removed from the names of the standard classes in the figure.

## 9.2 Use Case 1 – Representing CCR, System ID and DHS attributes

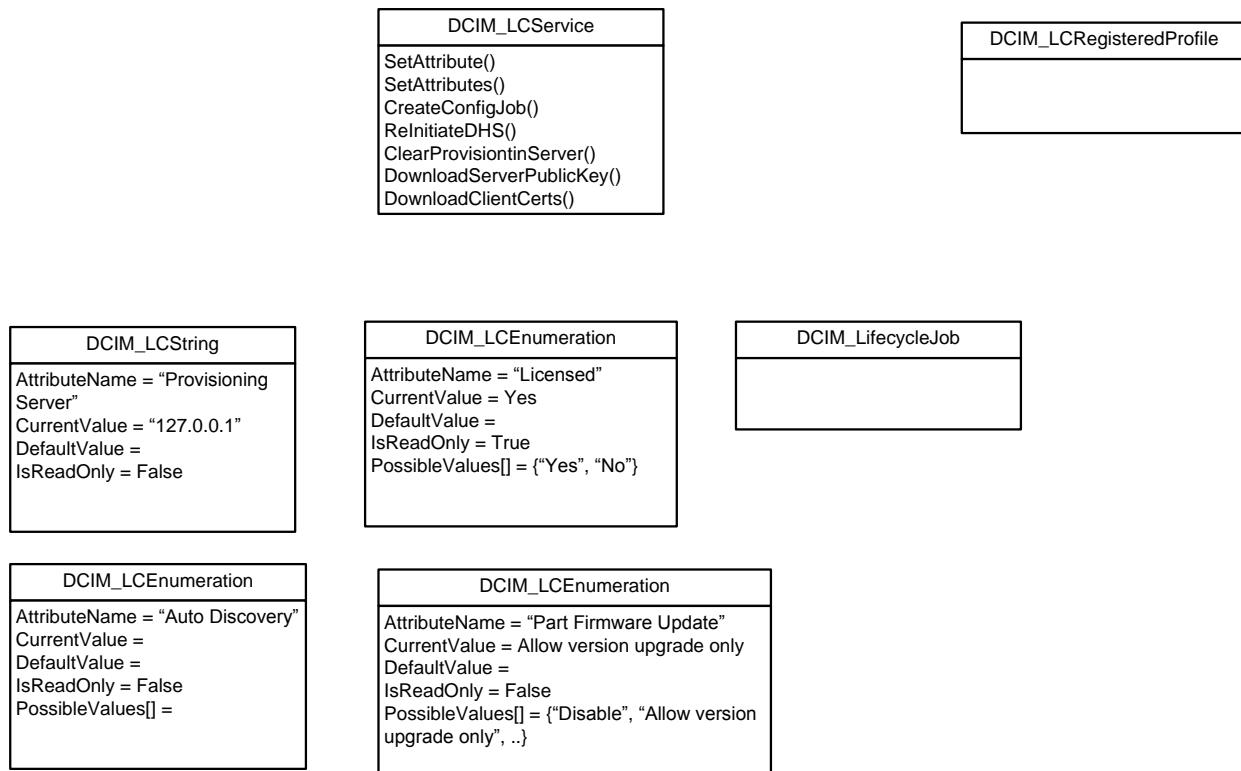

Figure 2 – Object Diagram representing CCR, System ID and DHS attributes

## 10 CIM Elements

Table shows the instances of CIM Elements for this profile. Instances of the CIM Elements shall be implemented as described in Table . Section 0 "Implementation Requirements" and "Methods" may impose additional requirements on these elements.

Table 18 – CIM Elements: iDRAC Attribute Profile

Element Name	Requirement	Description
<b>Classes</b>		
DCIM_LCAttribute	Mandatory	See subclause 10.1
DCIM_LCService	Mandatory	See subclause 10.2
DCIM_LCEnumeration	Mandatory	See subclause 10.3
DCIM_LCString	Mandatory	See subclause 10.4
DCIM_LCRegisteredProfile	Mandatory	See subclause 10.5
<b>Indications</b>		
None defined in this profile		

## 10.1 DCIM\_LCAttribute

DCIM\_LCAttribute is a trivial derivation of CIM\_BIOSAttribute. The CIM\_BIOSAttribute class is implemented to represent all LC attributes. Table21 contains the element requirements for this class.

**Table 19 – Class: DCIM\_LCAttribute**

Properties	Notes	Description
InstanceID	Mandatory	<b>Key:</b> This element shall specify the unique identifier for an instance of this class within the Implementation namespace.
AttributeName	Mandatory	
CurrentValue	Mandatory	Current value of this attribute
DefaultValue	Optional	Contains the default value for this attribute
PendingValue	Conditional	Pending value of this attribute set via DCIM_LCService.SetAttribute or SetAttributes methods.
IsReadOnly	Mandatory	True if current value cannot be changed

## 10.2 DCIM\_LCService

DCIM\_LCService is used to provide a central class for the LC Management Profile, and to provide a place for the SetAttribute() and SetAttributes() methods that will change LC configuration attribute values.

**Table 20 – Class: DCIM\_LCService**

Properties and Methods	Requirement	Description
SystemCreationClassName	Mandatory	<b>Key</b>
CreationClassName	Mandatory	<b>Key</b>
SystemName	Mandatory	<b>Key</b>
Name	Mandatory	<b>Key</b>
ElementName	Mandatory	This property shall have value of "LC Service".

## 10.3 DCIM\_LCEnumeration

DCIM\_LCEnumeration is derived from DCIM\_LCAttribute, and also contains properties from CIM\_BIOSEnumeration.

**Table 21 – Class: DCIM\_LCEnumeration**

<b>Properties and Methods</b>	<b>Requirement</b>	<b>Description</b>
Inherited from DCIM_LCAttribute	Mandatory	Keys and mandatory properties inherited from DCIM_LCAttribute
PossibleValues[ ]	Mandatory	

## **10.4 DCIM\_LCString**

DCIM\_LCString is derived from DCIM\_LCAttribute, and also contains properties from CIM\_BIOSString.

**Table 22 – Class: DCIM\_LCString**

Properties and Methods	Requirement	Description
Inherited from DCIM_LCAttribute	Mandatory	Keys and mandatory properties inherited from DCIM_LCAttribute
StringType	Mandatory	

## **10.5 DCIM\_LCRegisteredProfile**

DCIM\_LCRegisteredProfile is a trivial derivation of CIM\_RegisteredProfile. The CIM\_RegisteredProfile class is defined by the Profile Registration Profile. The requirements denoted in 25 are in addition to those mandated by the Profile Registration Profile.

**Table 23 – Class: CIM\_RegisteredProfile**

Properties	Requirement	Description
RegisteredName	Mandatory	This property shall have a value of “Lifecycle Controller Management”.
RegisteredVersion	Mandatory	This property shall have a value of “1.0.0”.
RegisteredOrganization	Mandatory	This property shall have a value of 1 (Other).
OtherRegisteredOrganization	Mandatory	This property shall match “DCIM”
