About this Guide

This document covers syslog messages included in this Dell Networking W-Series Instant Access Point release.

In this edition, message definition, recommended action and in some cases the cause that generated the syslog message are included. Syslog messages were prioritized for definition; this edition includes definitions for approximately 70% of Dell W-Instant syslog messages. For those messages yet to be defined, the phrase “No description available” appears.

Document Organization

This document contains the complete listings of all syslog messages generated by Dell W-Instant. Each chapter lists the syslogs for a single category as follows:

- Security
- System
- User
- Wireless
- ARM

Each chapter contains the severity level syslog messages in table format (see [Table 1](#) for the complete list of severity levels). The syslog messages are the actual text displayed by Dell W-Instant when encountering the syslog, and some further descriptive text, giving more information about the syslog. The entry may also include recommended action when this syslog is encountered.

Format of Messages

Take the following message as an example:

```
Jan 23 16:26:51 2013 sapd[148]: <404003> <WARN> |AP 00:0b:86:cb:85:db@10.34.84.14 sapd|  
AM 00:0b:86:38:5d:b0: Interfering AP detected with SSID 06B408550367 and BSSID  
00:12:0e:44:d4:2c
```

In this case, the message elements are:

```
<date and time stamp> = Jan 23 16:26:51 2013  
<error location>: = sapd[148]: (the specific module location where this syslog was generated)  
<error number> = <404003> (a unique number within the set of messages generated by Dell W-  
Instant)  
<severity> = <WARN> (Warning severity level)  
<process> = |AP 00:0b:86:cb:85:db@10.34.84.14 sapd| (the Access Point Media Access  
Control (MAC) device address, along with the IP address)  
message text = the remaining part of the message.
```

The message text portion is frequently constructed from information returned with the syslog. For example, the message text for the syslog above is constructed as:

```
AM <BSSID>: Interfering AP detected with SSID <SSID> and BSSID <BSSID>
```

Where:

```
<BSSID> = 00:0b:86:38:5d:b0
```

```

<SSID> = 06B408550367
<BSSID> = 00:12:0e:44:d4:2c

```

These substitutions generate message text as follows:

```
AM 00:0b:86:38:5d:b0: Interfering AP detected with SSID 06B408550367 and BSSID 00:12:0e:44:d4:2c
```

In the following chapters, messages are defined in generic terms with variables shown to indicate where substitutions of actual data will occur.

Severity Levels

The severity levels defined for syslogs are outlined in [Table 1](#), which orders the severity from most to least severe. Note that the syslog messages with the lowest severity level, “Debug”, is listed in this manual. Also, note that the severity level string (such as EMERG, or CRIT), as well as the numeric value associated with that particular severity, is listed in the tables.

Table 1 Message Severity Levels

| Level | Value | Meaning |
|-----------------------|-------|---|
| Emergency <EMERG> | 0 | Panic condition that occurs when the system becomes unusable. |
| Alert <ALERT> | 1 | Any condition requiring immediate attention and correction. |
| Critical <CRIT> | 2 | Any critical conditions such as a hard drive error. |
| Error <ERR> | 3 | Error condition. |
| Warning <WARNING> | 4 | Warning message. |
| Notification <NOTICE> | 5 | Significant event of a non-critical and normal nature. |
| Informational <INFO> | 6 | Message of general interest to system users. |
| Debug <DEBUG> | 7 | Message containing information useful for debugging. |

Message Process Generation

The process that generates syslog messages is detailed in [Table 2](#).

Table 2 Process Generating Syslog Messages

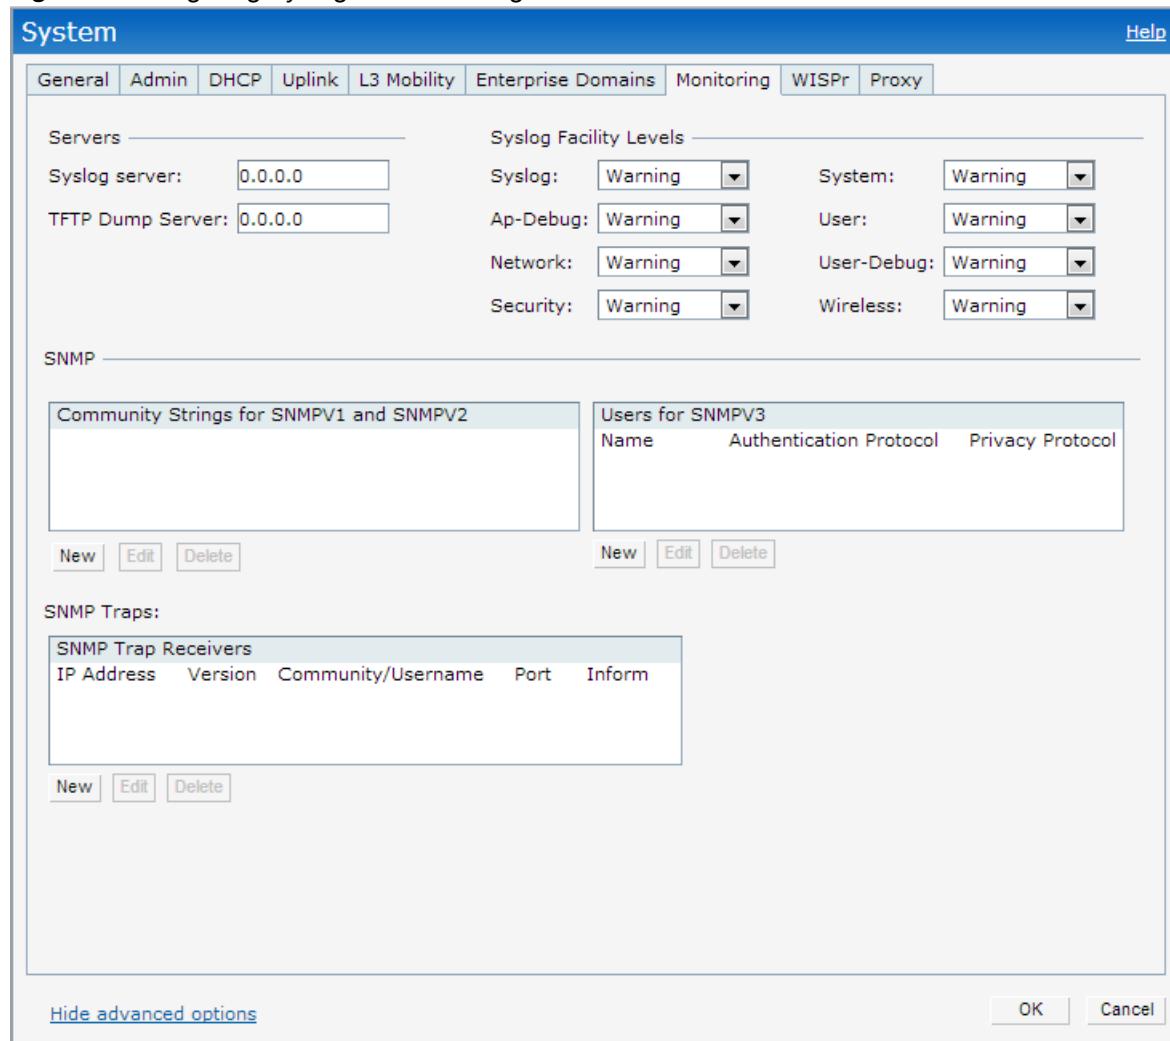

| Process | Description | Categories used by this component |
|---------|---------------------------------------|-----------------------------------|
| 802.1X | Network Access Control authentication | security, user |
| am | Logging for AirMonitor | security, system, wireless |
| meshd | Logging for Mesh daemon | system |
| radius | Logging for RADIUS authentication | security, system, user |
| sapd | Logging for Access Point Manager (AP) | system |
| stm | Logging for Station Management | system, user, wireless |
| vc | Logging for Virtual Controller | system |

Syslog Server

To specify a Syslog Server for sending syslog messages to the external servers, navigate to **System > Show advanced options > Monitoring** in the Dell W-Instant UI and update the following fields.

- **Syslog server**— Enter the IP address of the server to send system logs.
- **Syslog level**— For a global level configuration, select one of the logging levels from the standard list of syslog levels. The default value is **Notice**.

Figure 1 Configuring Syslog Server Settings

You can also configure Syslog server details and logging levels by using the command-line Interface (CLI).

To configure a Syslog server:

```
(Instant Access Point) (config)# syslog-server <IP-address>
```

To configure logging levels:

```
(Instant Access Point) (config)# syslog-level <level>{ap-debug|network|security|system|user|user-debug|wireless}
```

Filtering Syslogs

Searching through the logs for specific events, error categories, or other information, is often quite useful. In addition, long term storage of data required for audits and other business requirements involving

information kept in the system logs is important. The capabilities required for handling logs should include the following:

- Efficient log management
- Sophisticated analysis capabilities
- Consistent report generation
- Scalability
- Security

Analyzing system logs, and extracting relevant information from them, requires an efficient pattern matching engine, where the desired patterns can be created with standard pattern matching commands, such as a regular expression engine.

Driver Log Messages

Some driver log messages such as **LIKELY Tx Radio/Antenna Issues - Probe Failure(96%) Total 1252 Failed 1206** are generated when there are TX Radio and Antenna Issues. The W-IAP uses a timer to monitor TX probe response each hour. If more than 95% failed, this log is triggered. For example, **Probe Failure (98%) Total 1126 Failed 1104** means that within the measured timeframe (1 hour) hour, the W-IAP tried to send 1126 Probe responses, but failed to receive an answer 1104 times.

Security Messages

Critical Messages

Table 4 Security Critical Messages

| Message ID | Message and Description |
|------------|--|
| 132002 | Enabling dot1x termination for AP [mac:%m] [auth_profile:%s] before cert download. Description: Termination is being enabled before certificate is downloaded. |
| 132014 | "AP [bssid:%m] [apname:%s] Incomplete AP configuration. Check if WEP Key, WEP Transmit Key or WPA Passphrase is not configured. Description: AP's configuration is not complete. Either WEP key/WEP Transmit Key/WPA Passphrase is not configured. |
| 132135 | Failed to create SSL_CTX. Description: System failed to create SSL Context. |
| 132136 | Loading Certificate from [fname:%s] failed. Description: Failed to load the Certificate for 802.1x termination. |
| 132137 | Private key does not match cert. Description: Private key is not found in the certificate. |
| 132138 | Failed to alloc BIO in. Description: Failed to allocate BIO structure. |
| 132139 | Failed to alloc BIO out. Description: Failed to allocate BIO out structure. |
| 132140 | Failed to set the cipher - ssl3_get_cipher_by_char. Description: Failed to set the cipher using ssl3_get_cipher_by_char. |
| 132141 | Failed to create buf - BUF_MEM_new. Description: Failed to create a buffer using BUF_MEM_new. |
| 132142 | ssl3_output_cert_chain returned error. Description: Failed to output the certificate chain. |
| 132143 | Failed to download MODEXP for dot1x-termination. Description: Failed to download MODEXP to datapath for 802.1x termination. |
| 132144 | Failed to download the cert for dot1x-termination. Description: Failed to download the server certificate for dot1x termination. |
| 132145 | BIO_read failed len [ln:%d]. Description: BIO read failed. |
| 132146 | ssl_get_server_send_cert faileds. Description: sl_get_server_send_cert failed. |

Error Messages

Table 5 Security Error Messages

| Message ID | Message and Description |
|------------|---|
| 121000 | <p>Failed to calculate the HMAC-MD5 digest.</p> <p>Description: Controller failed to calculate the HMAC-MD5 digest for RADIUS packet due to an internal error.</p> <p>Recommended Action: If the problem persists, contact Aruba support provider.</p> |
| 121001 | <p>Error [errno:%d],[errstr:%s] receiving packet [packet_len:%d], fd=[fd:%d].</p> <p>Description: A socket error occurred while receiving RADIUS server response.</p> <p>Recommended Action: If the problem persists, contact your support provider.</p> |
| 121002 | <p>An error occurred while receiving RADIUS server response.</p> <p>Description: An error occurred while receiving RADIUS server response.</p> <p>Recommended Action: If the problem persists, contact your support provider.</p> |
| 121003 | <p>Discarding unknown response from server.</p> <p>Description: RADIUS Server has returned a response that does not match the request or the packet could be corrupt.</p> <p>Recommended Action: Validate RADIUS server configuration. If the problem persists, contact your support provider.</p> |
| 121005 | <p>An error occurred while receiving RADIUS server response on port 3799 (RFC 3576).</p> <p>Description: An error occurred while receiving RADIUS server response on port 3799 (RFC 3576).</p> <p>Recommended Action: If the problem persists, contact your support provider.</p> |
| 121008 | <p>RADIUS: Error [errno:%d],[errstr:%s] creating client socket.</p> <p>Description: Internal error occurred while initiating connection with the RADIUS server.</p> <p>Recommended Action: If the problem persists, contact your support provider.</p> |
| 121009 | <p>RADIUS: Error [errno:%d],[errstr:%s] in bind.</p> <p>Description: Internal error occurred while connecting with the RADIUS server.</p> <p>Recommended Action: If the problem persists, contact your support provider.</p> |
| 121010 | <p>Error [errno:%d],[errstr:%s] sending [data_len:%d] bytes on radius socket [sockfd:%d]</p> <p>Description: Internal error occurred while sending data to the RADIUS server.</p> <p>Recommended Action: If the problem persists, contact your support provider.</p> |
| 121011 | <p>Received RADIUS server response with invalid length [len:%d].</p> <p>Description: The expected length of a RADIUS server response packet is between 20 and 4096 bytes.</p> <p>Recommended Action: Check the length of response packet from the RADIUS server.</p> |
| 121012 | <p>Not enough buffer space to verify RADIUS server response packet with length [totallen:%d].</p> <p>Description: The internal buffer is not big enough for the RADIUS response packet and RADIUS secret.</p> <p>Recommended Action: Check the length of the RADIUS response packet from the RADIUS server and the length of RADIUS secret.</p> |
| 121013 | <p>Received non-matching ID in RADIUS server response [id:%d], expecting [seq_nbr:%d].</p> <p>Description: Received a response from the RADIUS server, but the sequence number doesn't match the request.</p> <p>Recommended Action: Check the RADIUS server is configured properly.</p> |

Table 5 Security Error Messages (Continued)

| Message ID | Message and Description |
|------------|---|
| 121014 | Received invalid reply digest from RADIUS server. Description: The reply digest received from the RADIUS server doesn't match the calculated digest. Recommended Action: Check the RADIUS server is configured properly and verify shared secret configuration on the controller matches that on the RADIUS server. |
| 121016 | RADIUS server [server:%s],[fqdn:%s][ipaddr:%s] is out of sequence. Description: The PENDING request buffer to RADIUS server is already full (256). Response from RADIUS server seems to be slower than the rate at which the users are coming in. Recommended Action: Check the RADIUS server is configured properly and the connectivity between the controller and RADIUS server is good. |
| 121018 | Unknown RADIUS attribute ID [attrid:%d] in [func:%s] Description: The RADIUS attribute is not known. Recommended Action: Use the show aaa radius-attributes command to check if the attribute ID is supported. |
| 121019 | Received attribute with invalid length [attrlen:%d] in [func:%s]. Description: Received RADIUS attribute with invalid length, while extracting the attribute-value pairs. Recommended Action: Check the RADIUS server is configured properly and the connectivity between controller and RADIUS server is good. |
| 121021 | RADIUS attribute [name:%s] has unknown type [type:%d] in [func:%s]. Description: Received unknown RADIUS attribute type, while extracting the attribute-value pairs. Recommended Action: Please check the supported RADIUS attribute type. |
| 121022 | Unknown RADIUS attribute name [name:%s] in [func:%s]. Description: Received unknown RADIUS attribute name, while extracting the attribute-value pairs. Recommended Action: Please use the show aaa radius-attributes command to check if the attribute name is supported. |
| 121023 | Unknown RADIUS attribute [attr_value:%s] in [func:%s]. Description: Controller received an unknown RADIUS attribute while extracting the attribute-value pairs from Radius server response. Recommended Action: Please use the show aaa radius-attributes command to check if the attribute value is supported. |
| 121025 | Value pair is NULL or empty attribute [id:%d] in [func:%s]. Description: Internal error occurred while converting the attribute-value pairs received in RADIUS response to strings. Recommended Action: If the problem persists, contact your support provider. |
| 121029 | RADIUS: Error [errno:%d], [errstr:%s] creating rfc3576 socket. Description: Internal error occurred while initiating connection with RADIUS server. Recommended Action: Please contact Aruba technical support if this problem persists. |
| 121030 | RADIUS: Error [errno:%d], [errstr:%s] in rfc3576 bind. Description: Error occurred while connecting to RADIUS server. Recommended Action: Please contact Aruba technical support if this problem persists. |
| 121033 | rc_pack_list: Attribute list exceeds 8192 bytes, dropping request. Description: rc_pack_list: Attribute list exceeds 8192 bytes, dropping request. |

Table 5 Security Error Messages (Continued)

| Message ID | Message and Description |
|------------|---|
| 121036 | RADIUS: Error [errno:%d],[errstr:%s] setting client socket options. Description: Internal error occurred while setting connection options with the RADIUS server. Recommended Action: Contact Aruba technical support if this problem persists. |
| 121047 | Failed to add user Port ID in the Radius Accounting Pkt [pkt:%s]. Description: This shows an internal debug message. |
| 121048 | Unknown result type [resultType:%d]. Description: This shows an internal debug message. |
| 121049 | Failed to add user Port ID in the Radius Accounting Start Pkt [portStr:%s]. Description: This shows an internal debug message. |
| 132003 | xSec vlan not configured for [port:%s]. Description: xSec vlan is not configured for the specified port. Recommended Action: Configure VLAN that supports XSEC on specified port. |
| 132004 | Unknown AP [mac:%m] [bssid:%m] [menc:%s] [vlan:%d]. Description: Authentication process has detected an unknown AP. Recommended Action: Execute the show ap database command to determine if system is aware of the Access Point. Power-cycle the unknown AP. |
| 132005 | AP [mac:%m] [apname:%s] is not enabled. Description: Specified AP is not enabled. Recommended Action: Configure AP with a valid virtual-AP or wired profile. |
| 132006 | Station Add failed [mac:%m] [bssid:%m] [apname:%s] [uenc:%s] [menc:%s]. Description: Station failed to complete the security association with authentication process. Recommended Action: Confirm that the SSID that the supplicant is associating to is configured to support 802.1X authentication and is configured correctly. |
| 132008 | Station delete failed, does not exists in the station table. Description: Failed to clear the station from the AP's station table. Recommended Action: Station does not exist in authentication process tables. Confirm by running the show station command. |
| 132009 | Station's dot1x context not initialized [name:%s] [mac:%m] [bssid:%m] Description: Station's internal context is not completely initialized. Recommended Action: Internal error. Clear the station by running the aaa user delete command and reconnect. |
| 132013 | AP [bssid:%m] [apname:%s] Configuration not complete, No Transmit WEP Key set. Description: AP's configuration is not complete. Check if the WEP transmit key is set. Recommended Action: Check of the WEP transmit key is set in the ssid-profile. |
| 132015 | Failed to Deauthenticate the station [mac:%m] [name:%s]. Description: Failed to deauthenticate the specified station. Recommended Action: Internal error. Clear the station and reconnect. |

Table 5 Security Error Messages (Continued)

| Message ID | Message and Description |
|------------|---|
| 132016 | <p>Local Database Server not available to cache the machine auth for user [name:%s] [mac:%m].</p> <p>Description: Internal server is not available for caching the machine authentication for the specified User.</p> <p>Recommended Action: Run the aaa test-server pap internal command to verify connectivity to the local database server. If unavailability of local database server persists and controller is a local-controller, verify connectivity to master-controller. If all else fails, restart the udbserver process on the master-controller by executing the process restart udbserver command and restart the AUTH process on the local-controller by executing the process restart auth command.</p> |
| 132017 | <p>Failed to update Machine Auth status to local DB for Station [mac:%m] [name:%s].</p> <p>Description: Failed to update the Machine authentication Status for the specified User because udbserver process is not responding.</p> <p>Recommended Action: Run the aaa test-server pap internal command to verify connectivity to the local database server. If unavailability of local database server persists and controller is a local-controller, verify connectivity to master-controller. If all else fails, restart the udbserver process on the master-controller by executing the process restart udbserver and restart the AUTH process on the local-controller by executing process restart auth.</p> |
| 132018 | <p>Station [mac:%m] [bssid:%m] was deleted before the response from the local database server.</p> <p>Description: Station was deleted before receiving response from the Internal Server due to high latency between local-controller's AUTH process and master-controller's UDBSERVER process.</p> <p>Recommended Action: Diagnose external IP-latency issues between master-controller and local-controller and have the client re-attempt their authentication-request.</p> |
| 132023 | <p>802.1x authentication is disabled in profile [prof:%s] Station [mac:%m] [bssid:%m].</p> <p>Description: 802.1x authentication is disabled for the specified profile.</p> <p>Recommended Action: Configure the specified aaa-profile to enable 802.1x authentication.</p> |
| 132024 | <p>Station [mac:%m] pre-authenticating with Unknown AP [bssid:%m] vlan [vl:%d].</p> <p>Description: Station is trying to pre-authenticate with an AP that is not registered. This log-message is generated when we detect a race-condition between STM, SOS and AUTH. AUTH is receiving EAP packets from SOS before it received the New-AP message from STM. Execute show ap database to determine if STM is aware of the AP. If not, try rebooting the AP by executing apboot or powercycling the AP. If symptoms persist, then AUTH is either not receiving or not processing New-AP messages from STM. If all else fails, restart the AUTH process by executing process restart auth or reload the controller.</p> |
| 132025 | <p>Station [mac:%m] [bssid:%m] is not enabled for pre-auth.</p> <p>Description: Preauthentication is always disabled.</p> |
| 132026 | <p>Station [mac:%m] [bssid:%m] trying to pre-authenticate with AP that does not have WPA2 enabled.</p> <p>Description: Station trying to preauthenticate with AP that is not WPA2 enabled. Configure the ssid-profile to enable WPA2 and reload the AP.</p> |
| 132027 | <p>Station [mac:%m] associating to Unknown AP [bssid:%m] [menc:%d] [vl:%d].</p> <p>Description: Station is trying to associate with AP that is not registered. This log-message is generated when we detect a race-condition between STM, SOS and AUTH. AUTH is receiving EAP packets from SOS before it received the New-AP message from STM. If not, try rebooting the AP by executing apboot or powercycling the AP. If symptoms persist, then AUTH is either not receiving or not processing New-AP messages from STM. If all else fails, restart the AUTH process by executing process restart auth or reload the controller.</p> |

Table 5 Security Error Messages (Continued)

| Message ID | Message and Description |
|------------|--|
| 132029 | Station [mac:%m] [bssid:%m] sent Unsupported EAPOL Type [type:%d]. Description: Station sent an unsupported EAPOL packet. Recommended Action: Ensure the station is configured properly to perform EAP authentication. If the problem persists, check for packet-corruption by capturing sniffer-traces between client, AP and controller. |
| 132030 | Dropping EAPOL packet sent by Station [mac:%m] [bssid:%m]. Description: Dropping the EAPOL packet sent by the specified station. Recommended Action: Check preceding log-messages to determine the reason the EAPOL packet is being dropped. |
| 132032 | Invalid length in the [msg:%s] from Station [mac:%m] [bssid:%m] [len:%d]. Description: Station sent the specified packet with invalid length. Recommended Action: Ensure the station is configured properly to perform EAP authentication. If problem persists, check for packet-corruption by capturing sniffer-traces between client, AP and controller. |
| 132033 | Invalid WPA Key Description Version [ver:%d] Station [mac:%m]. Description: Station sent a WPA key message with invalid version. Recommended Action: Ensure the station is configured properly to perform EAP authentication. If problem persists, check for packet-corruption by capturing sniffer-traces between client, AP and controller. |
| 132035 | Invalid WPA2 Key Description Version [ver:%d] Station [mac:%m]. Description: Station sent a WPA key message with invalid version. Recommended Action: Ensure the station is configured properly to perform EAP authentication. If problem persists, check for packet-corruption by capturing sniffer-traces between client, AP and controller. |
| 132036 | Station [mac:%m] [bssid:%m] sent Unknown EAP-Request [eaptype:%d]. Description: Station send an EAP packet that is invalid. Recommended Action: Ensure the station is configured properly to perform EAP authentication. If problem persists, check for packet-corruption by capturing sniffer-traces between client, AP and controller. |
| 132037 | Station [mac:%m] [bssid:%m] sent username greater than [MAX_USERNAME_SIZE:%d]. Description: The user name sent by the station is larger than the maximum size supported. Recommended Action: Configure station to use a shorter username and attempt authentication again. |
| 132038 | Station [mac:%m] [bssid:%m] sent Unsupported EAP type [eaptype:%d]. Description: Station sent an EAP packet that is not supported. Recommended Action: Ensure the station is configured correctly to perform an EAP authentication method that is supported by the controller. Ensure that the aaa-profile associated with the authentication request matches the authentication-method the client is sending to authenticate. If problem persists, check for packet-corruption by capturing sniffer-traces between client, AP and controller. |
| 132039 | Station [mac:%m] [bssid:%m] sent Unsupported EAP Code [eapcode:%d]. Description: Station send an EAP packet with unknown EAP code. Ensure the station is configured correctly to perform an EAP authentication method that is supported by the Aruba controller. Ensure that the aaa-profile associated with the authentication request matches the authentication-method the client is sending to authenticate. If problem persists, check for packet-corruption by capturing sniffer-traces between client, AP and controller. |

Table 5 Security Error Messages (Continued)

| Message ID | Message and Description |
|------------|--|
| 132040 | Station [mac:%m] [bssid:%m] sent Unsupported MD5 EAP type [eaptype:%d]. Description: Station sent an EAP packet that is not supported. Ensure the station is configured correctly to perform an EAP authentication method that is supported by the Aruba controller. Ensure that the aaa-profile associated with the authentication request matches the authentication-method the client is sending to authenticate. If problem persists, check for packet-corruption by capturing sniffer-traces between client, AP and controller. |
| 132042 | Sending empty username for user [mac:%m] - WPS is not enabled on AP [bssid:%m] [apname:%s]. Description: Station sent no user name in the EAP Identity Request message. Ensure the station is configured correctly to perform EAP authentication. If problem persists, check for packet-corruption by capturing sniffer-traces between client, AP and controller. |
| 132045 | Error remove stateful dot1x ACL. Description: Failed to remove the Acts configured for stateful dot1x authentication from the stateful_role or logon_role. Cause: This is because the stateful-dot1x ACL is not associated with the stateful_role or logon_role. Recommended Action: Since we are disabling stateful-dot1x anyway, no further action is required. |
| 132049 | Received Invalid digest from Server [srvip:%p], AP [ip:%p]. Description: Received radius packet with invalid digest during stateful dot1x authentication. Cause: This error suggests a possible man-in-the-middle attack. Recommended Action: Contact your administrator to check status of your Radius server. Radius packet will be dropped. |
| 132050 | No Stateful configuration found that could verify the stateful response, [nasip:%p], [srvip:%p]. Description: No server config entry was found for verifying the stateful dot1x response. Recommended Action: Verify that the Radius server in question is configured in the applicable server-group on the controller. |
| 132051 | Failed to validate stateful radius response [nasip:%p] [srvip:%p] station [mac:%m]. Description: Stateful dot1x authentication failed because validation failed. Recommended Action: Refer to previous log-message. If CONFIG_NOTFOUND, verify that the Radius server in question is configured in the applicable server-group on the controller. Otherwise, this may be a potential man-in-the-middle attack. Contact your administrator to validate the status of your Radius sever. |
| 132053 | Dropping the radius packet for Station [mac:%m] [bssid:%m] doing 802.1x. Description: Radius packet for the specified station is dropped. Cause: Either the station has disconnected, has already authenticated or it is busy. Recommended Action: If reauthentication is required, the station will request authentication again. |
| 132055 | [__FUNCTION__:%s]: missing configuration for dot1x profile \"[prof:%s]\". Description: Specified Dot1x profile is not configured or has been deleted. Recommended Action: Validate that the controller configuration contains the specified dot1x profile. |
| 132056 | [__FUNCTION__:%s]: missing server-group configuration for dot1x in aaa-profile \"[prof:%s]\" for Station [mac:%m] [bssid:%m]. Description: Specified server group for dot1x authentication in the aaa profile is not configured or has been deleted. Recommended Action: Validate that the controller configuration contains the specified server-group profile. |

Table 5 Security Error Messages (Continued)

| Message ID | Message and Description |
|------------|--|
| 132057 | <p>Failed to send the radius request for Station [mac:%m] [bssid:%m].</p> <p>Description: Radius request for specified station is being dropped due to lack of system resources.</p> <p>Recommended Action: Free up system memory and other resources by throttling user-authentication requests.</p> |
| 132059 | <p>Multicast Key type of the AP [bssid:%m] [apname:%s] is not static-wep or dynamic-wep.</p> <p>Description: Multicast key type is not static wep or dynamic wep for the specified AP.</p> <p>Recommended Action: Confirm that the specified ssid-profile is configured for WEP.</p> |
| 132060 | <p>Unknown Multicast Key-type [menc:%d] for AP [mac:%m] [apname:%s].</p> <p>Description: The multicast key type for the specified AP is not known.</p> <p>Recommended Action: Validate the SSID-profile associated with the AP and reboot the AP.</p> |
| 132061 | <p>AP [bssid:%m] [apname:%s] configured with aaa profile [prof:%s] does not have an associated dot1x profile.</p> <p>Description: No dot1x profile is configured for the specified aaa profile.</p> <p>Recommended Action: Configure a dot1x profile in the specified aaa profile.</p> |
| 132062 | <p>Wrong slot configured for AP [bssid:%m] [apname:%s].</p> <p>Description: Invalid key slot configured for the specified AP. This should never happen.</p> <p>Recommended Action: If this happens, an internal error has occurred. Reboot your controller.</p> |
| 132063 | <p>WPA Preshared Key not configured for AP [mac:%m].</p> <p>Description: WPA Preshared Key is not configured for the specified AP.</p> <p>Recommended Action: Configure a WPA Preshared Key for this AP.</p> |
| 132064 | <p>WPA Passphrase not configured for AP [bssid:%m] [apname:%s].</p> <p>Description: WPA passphrase not configured for the specified AP.</p> <p>Recommended Action: Configure a WPA Passphrase for this AP.</p> |
| 132065 | <p>AP [mac:%m] [apname:%s] configured with invalid static-wep key length [slot:%d] [size:%d].</p> <p>Description: AP is configured with invalid Static WEP key length. The valid key length is 40bits or 128bits.</p> <p>Recommended Action: Configure the AP with either a 40bit or 128bit key.</p> |
| 132069 | <p>No Radius server configuration with [srvid:%p] available for creating Stateful AP Configuration entry.</p> <p>Description: While automatically creating stateful dot1x configuration entry the radius server specified was not found.</p> <p>Recommended Action: Configure the specified radius server configuration and try again.</p> |
| 132073 | <p>Wrong WPA OUI Element [oui:%d] from Station [mac:%m] [bssid:%m] [apname:%s].</p> <p>Description: Station sent WPA key message with invalid OUI element.</p> <p>Recommended Action: Identify the station and investigate why it is sending incorrect data.</p> |
| 132074 | <p>Version [stver:%d] does not match [apver:%d] in the [msg:%s] IE Elements from Station [mac:%m] [bssid:%m] [apname:%s].</p> <p>Description: Station sent WPA key message with invalid Version.</p> <p>Recommended Action: Identify the station and investigate why it is sending incorrect data.</p> |

Table 5 Security Error Messages (Continued)

| Message ID | Message and Description |
|------------|--|
| 132075 | Multicast cipher from Station [mac:%m] [stmc:%X] does not match with AP [bssid:%m] [apmc:%X] [apname:%s]. Description: Mismatch in the multicast ciphers specified by the station and AP. Recommended Action: Identify the station and investigate why it is sending incorrect data. |
| 132076 | Station [mac:%m] [bssid:%m] [apname:%s] sent invalid number of unicast ciphers [uc:%d]. Description: Station sent invalid number of unicast cipher in the WPA IE element. Recommended Action: Identify the station and investigate why it is sending incorrect data. |
| 132077 | Station's [mac:%m] [stuc:%X] and AP's [bssid:%m] [apuc:%X] [apname:%s] unicast cipher suites does not match. Description: Mismatch in the unicast cipher specified by the station and the AP |
| 132078 | Station [mac:%m] [bssid:%m] [apname:%s] sent invalid number of key management suite [km:%d]. Description: Station sent invalid number of key management suite in the WPA IE element. |
| 132079 | Station's [mac:%m] [stkm:%X] and AP's [bssid:%m] [apkm:%X] [apname:%s] key management suites does not match. Description: Mismatch in the key management suite specified by the station and the AP. |
| 132080 | Station [mac:%m] [bssid:%m] [apname:%s] did not specify the multicast cipher and the configured multicast cipher [mc:%X] did not match the default cipher TKIP. Description: Station did not specify any multicast cipher and the multicast cipher specified by the is not TKIP. |
| 132081 | Station [mac:%m] [bssid:%m] [apname:%s] did not specify the unicast cipher and the configured unicast cipher [mc:%X] did not match the default cipher TKIP. Description: Station did not specify any unicast cipher and the multicast cipher specified by the AP is not TKIP. |
| 132082 | Station [mac:%m] [bssid:%m] [apname:%s] did not specify the key management selector and the configured key management [km:%X] did not match the default - 802.1x. Description: Station did not specify any key management selector and the configured key management on the AP is not 802.1x. |
| 132083 | [Num:%d] TKIP Michael MIC failure was detected. Description: Specified number of TKIP MIC failure was detected. |
| 132084 | Two TKIP Michael MIC Failures were detected within [last_scan_time:%d] seconds.AP will be shutdown for next 60 seconds. Description: Two MIC failures was received from the station within 60 secs. Recommended Action: The AP must be shutdown for 60 secs. |
| 132085 | Maximum number of %s Key exchanges attempted for station [name:%s] [mac:%m] [bssid:%m] [apname:%s]. Description: Maximum number of key exchanges was attempted for the station. |
| 132088 | Invalid WPA [ver:%d] Key message from Station [mac:%m] [bssid:%m] [apname:%s], reason:ACK bit set. Description: WPA key message with ACK bit set was received from the station. This is invalid. |

Table 5 Security Error Messages (Continued)

| Message ID | Message and Description |
|------------|---|
| 132089 | Invalid WPA [ver:%d] Key message from Station [mac:%m] [bssid:%m] [apname:%s], reason: Error flag without Request bit set. Description: WPA key message with error flag without request bit set was received from the station. This is invalid. |
| 132090 | Received TKIP Michael MIC Failure Report from the Station [mac:%m] [bssid:%m] [apname:%s]. Description: Specified Station sent TKIP MIC failure report. |
| 132091 | Wrong key type [kt:%d] in [msg:%s] from Station [mac:%m] [bssid:%m] [apname:%s]. Description: Station sent wrong key type in the WPA key message. |
| 132092 | Request bit set in [msg:%s] from Station [mac:%m] [bssid:%m] [apname:%s]. Description: Station sent WPA key message with request bit set. |
| 132093 | [msg:%s] from Station [mac:%m] [bssid:%m] [apname:%s] did not match the replay counter [stcnt1:%d][stcnt2:%d] vs [apcnt1:%d][apcnt2:%d]. Description: Station and AP's replay counter does not match. The WPA key message from the station has to be dropped. |
| 132099 | [msg:%s] from Station [mac:%m] [bssid:%m] [apname:%s] has invalid datalen [In:%d] != 0. Description: Station sent WPA key message with invalid key length. |
| 132104 | Invalid character in the passphrase [ch:%c]. Description: Invalid characters in the WPA passphrase. |
| 132105 | Invalid password len [In:%d]. Description: Invalid WPA passphrase length. |
| 132106 | Invalid ssid len [In:%d]. Description: Invalid SSID length. |
| 132113 | Station's [mac:%m] [strsn:%X] and AP's [bssid:%m] [aprsn:%X] [apname:%s] RSN Capability does not match. Description: Station and AP's RSN capability does not match. |
| 132114 | Failed to add xSec station [mac:%m] to AP [bssid:%m]. Description: Failed to add xSec station to AP's station table. |
| 132147 | Invalid length [In:%d] during inner EAP handling. Description: Station sent invalid length in the inner eap. |
| 132149 | MAC User Table Lookup Failed mac=[mac:%m] bssid=[bssid:%m]. Description: Specified MAC is missing in the MAC User Table while trying to process the dot1x packet. |
| 132150 | Station [mac:%m] [bssid:%m] does not have 802.1x context. Description: Station [mac:%m] [bssid:%m] does not have 802.1x context. |
| 132152 | 802.1x termination is disabled user [mac:%m], profile [dot1x_auth_profile:%s]. Description: 802.1x termination is disabled for the specified profile. |
| 132155 | Station [mac:%m] [bssid:%m] sent inner EAP type [eaptype:%d] that is not supported. Description: Station sent inner eap type that is not supported. |

Table 5 Security Error Messages (Continued)

| Message ID | Message and Description |
|------------|--|
| 132156 | Station [mac:%m] [bssid:%m] sent inner EAP Start Description: Station sent inner EAP start packet. This is invalid. |
| 132157 | Station [mac:%m] [bssid:%m] sent inner EAP packet with more-fragments bit set. Description: Station sent inner EAP packet with more fragment bit set. This is invalid. |
| 132158 | Station [mac:%m] [bssid:%m] sent invalid EAP flag. Description: Station sent invalid flag in the inner EAP packet. |
| 132159 | Station[mac:%m] [bssid:%m] sent invalid inner EAP Packet [eaplen:%d]. Description: Station sent invalid len in the inner EAP packet. |
| 132161 | Station [mac:%m] [bssid:%m] sent Invalid TLS Record Layer Type [tlstype:%d]. Description: Station sent invalid TLS record layer type. |
| 132162 | Station [mac:%m] [bssid:%m] sent with unsupported TLS client version [ver:%X]. Description: Station sent unsupported TLS client version. |
| 132165 | Station[mac:%m] [bssid:%m] sent invalid MAC in the TLS Record layer. Description: Station send invalid MAC in the TLS record layer. |
| 132166 | Station[mac:%m] [bssid:%m] sent more than one TLS Application Data Record Layer. Description: Station send more than one TLS application data record layer. |
| 132167 | Verification of TLS Record Layer from Station [mac:%m] [bssid:%m] failed. Description: Verification of the TLS record layer from the station failed. |
| 132171 | Received EAP-NAK from Station [mac:%m] [bssid:%m], Station is configured with [eaptpe:%s]. Description: Station sent inner eap-nak. |
| 132177 | Station [mac:%m] [bssid:%m] sent client finish is that is not 3DES encrypted. Description: Station send client finish that is not 3DES encrypted. This is not supported. |
| 132179 | Failed to decrypt the client finish message from Station [mac:%m] [bssid:%m]. Description: Station sent the client finish message that failed to decrypt. |
| 132180 | Station [mac:%m] [bssid:%m] sent Unknown SSL type in the client finish header [type:%d]. Description: Station sent unknown SSL type in the client finish header. |
| 132182 | Verify data sent by the Station [mac:%m] [bssid:%m] is not valid. Description: Verify data sent by the specified station in not valid. |
| 132185 | Failed to send the server finish for Station [mac:%m] [bssid:%m]. Description: Failed to send server finish for the specified station. |
| 132188 | No user-name found in the inner EAP id response from Station [mac:%m] [bssid:%m]. Description: Station did not send any user name in the inner EAP id response. |
| 132195 | Invalid EAP code [code:%d] in the EAP-TLV/Phase2 response from Station [mac:%m] [bssid:%m]. Description: Station sent invalid EAP code in the TLV response. |

Table 5 Security Error Messages (Continued)

| Message ID | Message and Description |
|------------|---|
| 132196 | Invalid EAP TLV-Type [tlv_type:%d] in the EAP-TLV/Phase2 response from Station [mac:%m] [bssid:%m]. Description: Station sent invalid TLV type. |
| 132197 | Maximum number of retries was attempted for station [name:%s] [mac:%m] [bssid:%m], deauthenticating the station. Description: Maximum number of retries was attempted for station to complete the authentication phase. Recommended Action: Deauthenticating the station. |
| 132198 | Failed to load the CA List File [file:%s]. Description: Failed to load the specified CA List File for 802.1x termination. |
| 132199 | Failed to set up SSL buffers. Description: Failed to set up SSL buffers. |
| 132200 | Received TLS Client Finish but the client certificate [mac:%m][bssid:%m] is not verified. Description: Received TLS Client Finish but the client certificate is not verified. |
| 132201 | Failed to cache EAP-GTC authentication info of Station [name:%s] [mac:%m] [bssid:%m] in the Local Database Server. Description: Failed to cache EAP-GTC authentication information of the station in the Internal server. |
| 132203 | Station [mac:%m][bssid:%m] sent a EAP-NAK, requesting unsupported inner-eap-type [type:%d]. Description: Unsupported inner-eaptype requested by station. |
| 132204 | Inner eapid mismatched [id1:%d]:[id2:%d] for station [mac:%m] [bssid:%m]. Description: Mismatch between the eapid station sent and what was expected. |
| 132205 | Invalid inner-eaptype configured [eaptype:%d]. Description: Configured eaptype is not supported. |
| 132206 | Multiple user name attributes in response packet. Description: The RADIUS response packet is invalid because it contains multiple user name attributes. |
| 132207 | RADIUS reject for station [name:%s] [mac:%m] from server [server:%s]. Description: Radius packet for the specified station was rejected by the server. |
| 132208 | Station setup failed [mac:%m] [bssid:%m] [apname:%s] [uenc:%s] [menc:%s] Description: Station failed to start the security association. |
| 132209 | No unicast ciphers supported by AP [bssid:%m] [apname:%s]. Description: No unicast ciphers supported by AP with WPA2 opcode. |
| 132210 | Error in cb msg processing, message to [ip:%s]:[port:%d]([app_name:%s],[msg_code:%d], Msglen [len:%d], and Msgtype [msg_type:%d] failed with Errno [errno:%d], Errstr [errstr:%s]. Description: Error occurred during key propagation for a client in split/bridge/d-tunnel mode for DWEP/AES/TKIP encryption. Recommended Action: The msg is corrupted, retry the authentication to resolve the issue. |

Table 5 Security Error Messages (Continued)

| Message ID | Message and Description |
|------------|--|
| 132211 | Station [mac:%m] [bssid:%m] sent a cert from which we couldn't extract the public key. Description: Station sent a cert from which we couldn't extract the public key. |
| 132212 | Station [mac:%m] [bssid:%m] certificate signature verification failed. Description: Station sent a cert, but the certificate signature verification failed. |
| 132217 | Failed to convert cert into DER format before sending to certmgr. Description: Failed to convert cert into DER format before sending to certmgr. |
| 132221 | Invalid EAP type [eaptype:%d] received for station[mac:%m][bssid:%m] configured in termination mode. Description: Received invalid EAP type for station that is configured in termination mode. |
| 132222 | Received EAP packet on the wrong BSSID for station [mac:%m][bssid:%m]. Description: Received EAP packet on the wrong BSSID. |
| 132224 | Station [mac:%m] [bssid:%m] sent Unsupported EAP code [eapcode:%d]. Description: Station sent an EAP packet that is not supported. Ensure the station is configured correctly to perform an EAP authentication method that is supported by the Aruba controller. Recommended Action: Ensure that the aaa-profile associated with the authentication request matches the authentication-method the client is sending to authenticate. If problem persists, check for packet-corruption by capturing sniffer-traces between client, AP and controller. |
| 132225 | MAC Authentication was not done for station [mac:%m] [bssid:%m]. Description: MAC Authentication was not done for the specific station. |
| 132226 | MAC Authentication was not successful and I2-fail-thru is not enabled for station [mac:%m] [bssid:%m]. Description: MAC Authentication was not successful and I2 fail thru knob was not enabled for the specific station. |

Warning Messages

Table 6 Security Warning Messages

| Message ID | Message and Description |
|------------|---|
| 106010 | AM [bssid:%s]: Containment enabled on Suspect Rogue AP: BSSID [ap_bssid_str:%s], SSID [ssid:%s], Conf-Level [conf_level:%d]. Description: Containment has been enabled for a suspected rogue AP because the confidence level for that AP equals or exceeds the configured value for that setting. |
| 121004 | RADIUS server [name:%s]-[fqdn:%s]-[ipaddr:%s]-[sin_port:%u] timeout for client=[cbuf:%s] auth method [server:%s]. Description: RADIUS Server is unreachable. The server could be down or there is connectivity problem. Recommended Action: Check RADIUS server connectivity. |

Table 6 Security Warning Messages

| Message ID | Message and Description |
|------------|---|
| 121006 | RADIUS server [name:%s]-[fqdn:%s]-[ipaddr:%s]-[sin_port:%u] timeout for client=[cbuf:%s] auth method [server:%s]. Description: RADIUS Server is unreachable. The server could be down or there is connectivity problem. Recommended Action: Check RADIUS server connectivity . |
| 121007 | RADIUS (RFC 3576): Ignoring request from client [srv_ipaddr:%s] port([srv_port:%d]) with unknown code [code:%d]. Description: A request was received on RADIUS port 3799 (RFC 3576) with unknown code. Recommended Action: Check RADIUS server and RFC 3799 client configuration. |
| 132058 | Vendor Id [vid:%d] not supported. Description: Vendor ID in the radius response is not supported. Radius packet will be dropped. |
| 132094 | MIC failed in [msg:%s] from Station [mac:%m] [bssid:%m] [apname:%s]. Description: Station sent an WPA key message whose MIC verification failed. |

Notice Messages

Table 7 Security Notice Messages

| Message ID | Message and Description |
|------------|--|
| 106000 | AM [bssid:%s]: Potentially rogue AP detected BSSID [bssid_str:%s] SSID [ssid:%s] MATCH MAC [mac:%s]. Description: An AP has been detected with conditions that may cause it to be classified as a rogue (unsecure) or suspected rogue. |
| 106001 | AM [bssid:%s]: Potentially rogue AP detected BSSID [bssid_str:%s] SSID [ssid:%s]. Description: An AP has been detected with conditions that may cause it to be classified as a rogue (unsecure) or suspected rogue. |
| 106005 | AM: Wireless containment: Sending type [subtype:%s] to AP [bssid:%s] from STA [mac:%s] channel [channel:%d]. Description: No description available. |
| 106006 | AM: Wireless containment: Sending type [subtype:%s] from AP [bssid:%s] to STA [mac:%s] channel [channel:%d]. Description: No description available. |
| 106012 | AM: Wireless tarpit containment: Sending Probe-Response with fake channel from AP [bssid:%m] to STA [mac:%m] on channel [channel:%d] with fake_channel [fc:%d]. Description: No description available. |
| 106013 | AM: Wireless tarpit containment: Sending Probe-Response with fake BSSID for frame from AP [bssid:%m] to STA [mac:%m] on channel [channel:%d] with fake_bssid [fbssid:%m]. Description: No description available. |

Table 7 Security Notice Messages

| Message ID | Message and Description |
|------------|--|
| 106014 | AM: Wireless tarpit containment: Sending Auth reply for frame from AP [bssid:%m] to STA [mac:%m] on channel [channel:%d] with algorithm [alg:%d] transaction [xn:%d] seq [seq:%d]. Description: No description available. |
| 106015 | AM: Wireless tarpit containment: Sending Assoc-Response for frame from AP [bssid:%m] to STA [mac:%m] on channel [channel:%d] with aid [aid:%d] seq [seq:%d]. Description: No description available. |
| 106016 | AM: Wireless tarpit containment: Client [mac:%m] is in tarpit for fake BSSID [bssid:%s] on channel [channel:%d]. Description: No description available. |
| 106017 | AM: Wireless tarpit containment: Client [mac:%m] is in tarpit for fake channel [channel:%d] for BSSID [bssid:%m]. Description: No description available. |
| 121015 | Purge Request: [packet_id:%d], [srv_ipaddr:%s], [fd:%d], [timer_id:%d]. Description: A new config was received (write memory on master), hence purging all the pending radius requests. |
| 121017 | Unknown vendor or attribute ID [vendor:%d]/[attrid:%d] in [func:%s]. Description: The RADIUS vendor or the attribute ID is not known. Recommended Action: Use show aaa radius-attributes command to check if the vendor or attribute ID is supported. |
| 121032 | Purge Request: [packet_id:%d], [srv_ipaddr:%s], [fd:%d], [timer_id:%d]. Description: Radius Client IP change, hence purging all the pending radius requests |

Information Messages

Table 8 Security Information Messages

| Message ID | Message and Description |
|------------|---|
| 106009 | AM: Wired Containment: MAC:[mac_addr:%s] IP:[ip:%s]. Description: No description available. |
| 106011 | AM: Wired Containment Tagged: MAC:[mac_addr:%s] IP:[ip:%s] VLAN:[vlanid:%d] GW-MAC:[gw_mac:%s] GW-IP:[gw_ip:%s]. Description: No description available. |
| 121034 | RADIUS attribute not sent: [attribute:%s]. Description: Controller has a reference to a RADIUS attribute that will be dropped. |
| 121035 | RADIUS type not sent: [type:%s]. Description: Controller has a reference to a RADIUS type that will be dropped. |
| 132000 | xSec is enabled wired usersx. Description: Sec is enabled for wired users |
| 132001 | xSec is disabled for wired usersx. Description: Sec is disabled for wired users |

Table 8 Security Information Messages

| Message ID | Message and Description |
|------------|--|
| 132019 | Station [name:%s] [mac:%m] was Machine authenticated. Description: Station successfully authenticated the machine account. |
| 132020 | Station [name:%s] [mac:%m] failed Machine authentication update role [rl:%s]. Description: Station failed to authenticate the machine account. |
| 132021 | Station [mac:%m] [bssid:%m] entered Held state. Description: Authenticator is in the held state for the specified station. In this state no response from the station is accepted till the end of quiet period. This is done to avoid DOS attacks. |
| 132028 | Dropping EAPOL request from Station [mac:%m] reason:AP [bssid:%m] [apname:%s] only is configured for Static-WEP. Description: Station is trying to send EAP packets to AP that is only configured with Static-WEP. Recommended Action: Either configure your client to support static-WEP authentication or configure the ssid-profile on the controller to support an 802.1x authentication method. |
| 132044 | Enabled Stateful Radius Description: Stateful Dot1x is enabled. Controller will start monitoring EAPOL frames to track authentication status. |
| 132048 | Disabled Stateful Radius“Stateful Dot1x is disabled. Description: Controller will stop monitoring EAPOL frames to track authentication status. |
| 132066 | Station[mac:%m] [bssid:%m] [apname:%s] [vl:%d] [gretype:%d] VLAN has been updated. Description: Station VLAN has been changed. Cause: This is because of VLAN derivation rules. |
| 132067 | Cleaning up the Stateful AP Configuration. Description: Clear all the stateful dot1x configuration entries. |
| 132068 | Removing all the Stateful config entries. Description: Remove all stateful dot1 configuration entries. |
| 132070 | Removing trusted AP [mac:%m]. Description: Remove the Trusted AP with the specified MAC address. |
| 132071 | Added trusted AP [mac:%m]. Description: Add the trusted AP with the specified MAC address. |
| 132086 | WPA [ver:%d] Key exchange failed to complete, de-authenticating the station [mac:%m] associated with AP [bssid:%m] [apname:%s]. Description: WPA key exchange failed to complete, deauthenticating the station. |
| 132131 | FIPS mode is enabled. Description: FIPS mode is enabled. |
| 132132 | FIPS mode is disabled. Description: FIPS mode is disabled. |
| 132133 | WPA Countermeasure is enabled. Description: WPA Countermeasure is enabled. |

Table 8 Security Information Messages

| Message ID | Message and Description |
|------------|---|
| 132134 | WPA Countermeasure is disabled. Description: WPA Countermeasure is disabled. |
| 132202 | Successfully downloaded the certs [rootcert:%s] [servercert:%s] for EAP termination. Description: Successfully downloaded the certificates for EAP termination. |
| 132218 | Skipping certificate common name check for username=[user:%s] MAC=[mac:%s]. Description: Based on configuration settings, the check for the certificate common name against a AAA server was skipped. |
| 132219 | MAC=[mac:%s] Local User DB lookup result for Machine auth=[r3:%s] Role=[r4:%s]. Description: Local user database lookup result for Machine authentication status. |

Debug Messages

Table 9 Security Debug Messages

| Message ID | Message and Description |
|------------|---|
| 121031 | \[[file:%s]:[line:%d]] [message:%s]. Description: aaa module's debug message. |
| 121037 | [func:%s]: sta_add_rad_class_attr failed. Description: This shows an internal debug message. |
| 121038 | Save Class in station for MAC [mac:%s]. Description: This shows an internal debug message. |
| 121039 | [func:%s]: sta_update_last_authserver failed. Description: This shows an internal debug message. |
| 121040 | [func:%s]: last_authserver [authserver:%s]. Description: This shows an internal debug message. |
| 121041 | User [user:%s] MAC=[mac:%s] not found. Description: This shows an internal debug message. |
| 121042 | [func:%s]: Server FQDN is '[server:%s]', IP Address is '[ipaddr:%s]'. Description: This shows an internal debug message. |
| 121043 | [func:%s]: Server FQDN '[fqdn:%s]' not found in hash. Description: This shows an internal debug message. |
| 121044 | Radius authenticate user ([user:%s]) PAP query using server [server:%s]. Description: This shows an internal debug message. |
| 121045 | [func:%s]: sta_update_last_srv_grp failed. Description: This shows an internal debug message. |
| 121046 | [func:%s]: last_srv_grp [last_srv_grp:%s]. Description: This shows an internal debug message. |

Table 9 Security Debug Messages

| Message ID | Message and Description |
|------------|--|
| 121050 | [msg:%s] Description: This is an internal RADIUS debug log. |
| 132007 | Clearing Station state on AP [bssid:%m]. Description: Station is forced to be cleared from the AP's stations table. |
| 132022 | Station [mac:%m] [bssid:%m] sent 802.1x packet before association/l2 miss - dropping packet. Description: Received an EAP packet from the station before receiving an association/l2 miss message. Cause: This log-message is generated when we detect a race-condition between STM, SOS and AUTH. AUTH is receiving association-request messages from STM before it received the L2-Miss message from SOS. Recommended Action: If symptoms persist, then AUTH is either not receiving or not processing L2-Miss messages from SOS. Restart the AUTH process by executing “process restart auth” or reload the controller. |
| 132047 | Disabling Stateful 802.1x - removing all Stateful Config entries. Description: Removing all the stateful dot1x config entries that was created. |
| 132213 | Failed to perform revocation check for client cert. Description: Auth failed to contact certmgr to perform revocation check for client cert. |
| 132214 | Client certificate for mac [mac:%m] and bssid [bssid:%m] has been revoked. Description: Client certificate has been revoked. |
| 132215 | Client certificate for mac [mac:%m] and bssid [bssid:%m] has NOT been revoked. Description: Client certificate has not been revoked. |
| 132216 | Revocation check request for mac [mac:%m] and bssid [bssid:%m] sent to certmgr. Description: Auth sent a revocation check request to certmgr process. |
| 132220 | Debug Log Description: Debug Log |
| 132223 | EAP-ID mismatched [id1:%d]:[id2:%d] for station [mac:%m] [bssid:%m]. Description: Mismatch between the eapid station sent and what was expected. |
| 132227 | EAPOL-Logoff ignored for station [mac:%m] [bssid:%m]. Description: EAPOL-Logoff ignored for the specific station. |
| 132228 | Station [mac:%m] got stm-msg with bssid = [bssid:%m] while sap-bssid = [sapbssid:%m]. Description: Should not delete the specified station for this station down. |

System Messages

Emergency Messages

Table 10 System Emergency Messages

| Message ID | Message and Description |
|------------|--|
| 330203 | MESHD process initialization failed. Cause: MESHD process initialization failed possibly because the mesh-node is not correctly provisioned. Recommended Action: Re-provision the AP. Contact Dell technical support if this problem persists. |
| 330204 | MESHD process exiting. No MESH role was specified. Cause: No MESH role was specified. Recommended Action: Re-provision the AP. Contact Dell technical support if this problem persists. |
| 330205 | MESHD process exiting. No MESH cluster profile was specified. Cause: No MESH cluster profile was specified. Recommended Action: Re-provision the AP. Contact Dell technical support if this problem persists. |
| 341008 | [msg:%s] Description: No description available. |

Alert Messages

Table 11 System Alert Messages

| Message ID | Message and Description |
|------------|---|
| 341007 | [msg:%s] Description: No description available. |
| 341091 | [func:%s]: [line:%d]: out of memory. Description: The AP is upgrading image from awc. |
| 341276 | Could not program ACL = [acl:%d] to datapath. Description: Datapath ACL programming failed. |
| 341286 | Could not download the required file, reason [reason:%s]. Description: Could not download the required file. |
| 341287 | Managed mode: Could not apply the config fetched from server [reason:%s], error code [error_code:%d]. Description: Could not apply the configuration fetched from server. |

Critical Messages

Table 12 Critical System Messages

| Message ID | Message and Description |
|------------|--|
| 341006 | [msg:%s] Description: No description available. |
| 341275 | VPN tunnel switch to [tunnel:%s], reason:[reason:%s]. Recommended Action: VPN tunnel switch. |
| 341279 | Managed mode: Could not download the configuration from the server. Description: Could not download the configuration from the server. |

Error Messages

Table 13 Error System Messages

| Message ID | Message and Description |
|------------|---|
| 304000 | Unexpected stm (Station management) runtime error at [func:%s], [line:%d]. Description: Unexpected condition occurred in the station manager (stm). Recommended Action: Contact your support provider. |
| 304001 | Unexpected stm (Station management) runtime error at [func:%s], [line:%d], [data:%s]. Description: Unexpected condition occurred in the station manager (stm). Recommended Action: Contact your support provider. |
| 304035 | PAPI_Send failed: [error:%d]; from [sport:%d] to [toaddr:%p]:[toport:%d] len [len:%d] type [type:%d]. Description: Inter-process communication message failed to reach the target. |
| 304039 | VPOOL: Maximum capacity ([count:%d]) reached for Vlan Pool hash table Recommended Action: Contact your support provider. |
| 304040 | VPOOL: Vlan Pool hash table ([vap:%s]) collision at [entry:%d]. Not handled! Recommended Action: Contact your support provider. |
| 304041 | VPOOL: Error allocating VLAN from Virtual AP pool [name:%s] Recommended Action: Contact your support provider. |
| 304045 | Connection to User DB failed. Description: The application was not able to connect to the user database. |
| 304046 | Creation of Client Blacklist tables in User DB failed. Description: The application was not able to create the Client Blacklist tables in the user database. |
| 304047 | SQL Command [command:%s] failed on User DB. Reason: [reason:%s]. Description: This log indicates that an SQL command failed when it was executed on the user database. |
| 304049 | Update to client blacklist database table failed. Description: This log indicates that an update to the client blacklist database table failed. |

Table 13 Error System Messages (Continued)

| Message ID | Message and Description |
|------------|---|
| 304054 | Client blacklist is full and caused an entry to not be added. Limit: [limit: %d]. Description: This log indicates that the client blacklist table is full and an entry that would have been added could not be added. |
| 304055 | Contact Aruba tech-support.“Unexpected stm (Station management) runtime error at [func:%s], [line:%d], [data:%s]. Description: Unexpected condition occurred in the station manager (stm). |
| 304058 | PAPI_Send failed, [func:%s], [line:%d]: [error:%s]; opcode [opcode:%d] action [action:%d]. Description: Aruba inter-process communication message failed to reach datapath. |
| 304060 | [func:%s], [line:%d]: Sibyte reply truncated; opcode [opcode:%d] action [action:%d]. Description: Datapath reply to PAPI message sent is truncated. |
| 304062 | PAPI_Send failed, [func:%s], [line:%d]: [error:%s]. Description: Aruba inter-process communication message failed to reach auth manager. |
| 304063 | PAPI_Send failed, [func:%s], [line:%d]: [error:%s]. Description: Aruba inter-process communication message failed to reach air monitor. |
| 304064 | PAPI_Send failed, [func:%s], [line:%d]: [error:%s], dstport [dst:%d], msgcode [code:%d]. Description: Aruba inter-process communication message failed to reach destination. |
| 304065 | PAPI_Send failed, [func:%s], [line:%d]: [error:%s], dstport [dst:%d]. Description: Aruba inter-process communication message failed to reach destination. |
| 304067 | PAPI_Send failed: [func:%s], [line:%d]: [error:%s]; from [sport:%d] to [toaddr:%p]:[toport:%d] len [len:%d] type [type:%d]. Description: Inter-process communication message failed to reach the target. |
| 311013 | Image upgrade failed; details follow. Description: The AP was unable to upgrade its image. Message 311014 will follow with details about the error. |
| 311014 | [line:%s] Description: This message presents detailed information about an AP image upgrade error. |
| 311016 | Unable to create domain list file. Description: Internal error occurred while accessing domain lists file. |
| 311017 | Error occurred while resolving IP's for domains. Description: Internal error occurred while resolving the domain names. Recommended Action: Contact your support provider. |
| 311018 | Unable to read domain results file. Description: Internal error occurred while processing the domain results file. Recommended Action: Contact your support provider. |

Table 13 Error System Messages (Continued)

| Message ID | Message and Description |
|------------|--|
| 311019 | <p>Unable to generate certificate signing request (CSR). AP will reboot.</p> <p>Description: The access point was unable to generate a certificate signing request (CSR).</p> <p>Recommended Action: Contact your support provider.</p> |
| 311020 | <p>An internal system error has occurred at file [file:%s] function [function:%s] line [line:%d] error [error:%s].</p> <p>Description: This log indicates that we encountered an internal system error.</p> <p>Recommended Action: Contact your support provider.</p> |
| 311021 | <p>An internal system error has occurred at file [file:%s] function [function:%s] line [line:%d] error [error:%s].</p> <p>Description: This log indicates that we encountered an internal system error.</p> <p>Recommended Action: Contact your support provider.</p> |
| 311022 | <p>Error allocating memory at file [file:%s] function [function:%s] line [line:%d]. Allocating [bytes:%d] bytes.</p> <p>Description: System failed to allocate memory at the specified location.</p> <p>Recommended Action: Use the show memory and the show process commands to monitor memory usage. If the problem persist, contact your support provider.</p> |
| 311023 | <p>Error allocating memory at file [file:%s] function [function:%s] line [line:%d]. Allocating [bytes:%d] bytes.</p> <p>Description: System failed to allocate memory at the specified location.</p> <p>Recommended Action: Use the show memory and the show process commands to monitor memory usage. If the problem persist, contact your support provider.</p> |
| 311027 | <p>[msg:%s]</p> <p>Description: No description available.</p> |
| 326054 | <p>AM: read error - [recvlen:%d]</p> <p>Description: No description available.</p> |
| 326055 | <p>AM: Received frame of size 0 from driver: Is-RX=[rx:%d] BufLen= [buf_len:%d] Channel=[ch:%d].</p> <p>Description: No description available.</p> |
| 326063 | <p>AM: INET not configured in this system.</p> <p>Description: No description available.</p> |
| 326068 | <p>AM: Cannot retrieve ARP info.</p> <p>Description: No description available.</p> |
| 326071 | <p>AM: System encountered an internal communication error. Error occurred when message was sent from source application [src:%s] destination application [dst:%s] at file [file:%s] function [func:%s] line [line:%d] error [error:%s].</p> <p>Description: This log indicates that application processes in the system encountered an error when sending messages to each other.</p> <p>Cause: This could be a transient condition and the problem may go away.</p> <p>Recommended Action: If the problem persists, contact your support provider.</p> |
| 326143 | <p>AM: Received incorrect number of Rate Threshold Profile instances: [np:%d].</p> <p>Description: No description available.</p> |
| 326183 | <p>AM: Can't get STA_INFO for [ifname:%s]:[rval:%d].</p> <p>Description: No description available.</p> |

Table 13 Error System Messages (Continued)

| Message ID | Message and Description |
|------------|---|
| 326267 | An internal system error has occurred at file [file:%s] function [function:%s] line [line:%d]. Description: This log indicates that we encountered an internal system error. Recommended Action: Contact your support provider. |
| 326268 | An internal system error has occurred at file [file:%s] function [function:%s] line [line:%d] error [error:%s]. Description: This log indicates that we encountered an internal system error. Recommended Action: Contact your support provider. |
| 326269 | AM: System encountered an internal communication error. Error occurred when message is being sent from source application [src:%s] destination application [dst:%s] at file [file:%s] function [func:%s] line [line:%d]. Description: This log indicates that the application processes, in the system, encountered an error while sending messages to each other. This may be a transient condition and the problem might resolve itself. Recommended Action: Contact your support provider. |
| 326270 | AM: Error allocating memory at file [file:%s] function [function:%s] line [line:%d]. Allocating [bytes:%d] bytes. Description: System failed to allocate memory at the specified location. Recommended Action: Execute the show memory and show process commands to view and monitor memory usage. If the problem persists, contact your support provider. |
| 326281 | AM:SM: An internal system error has occurred at file [file:%s] function [function:%s] line [line:%d] error [error:%s]. Description: This log indicates that we encountered an internal system error. Recommended Action: Contact your support provider. |
| 330201 | System encountered an internal communication error. Error occurred when message is being sent from source application [src:%s] destination application [dst:%s] at file [file:%s] function [func:%s] line [line:%d] error [error:%s]. Description: This log indicates that application processes in the system encountered an error sending messages to each other. Cause: This could be a transient condition and the problem might go away. Recommended Action: If the problem persists, contact your support provider. |
| 330208 | [msg:%s] Description: This log indicates a general error other than internal/communications errors. e.g. might point to a configuration problem. |
| 330209 | An internal system error has occurred at file [file:%s] function [function:%s] line [line:%d]. Description: This log indicates that we encountered an internal system error. Recommended Action: Contact your support provider. |
| 330210 | An internal system error has occurred at file [file:%s] function [function:%s] line [line:%d] error [error:%s]. Description: This log indicates that we encountered an internal system error. Recommended Action: Contact your support provider. |
| 330211 | Error allocating memory at file [file:%s] function [function:%s] line [line:%d]. Allocating [bytes:%d] bytes. Description: System failed to allocate memory at the specified location. Recommended Action: Use the show memory and show process command to monitor memory usage. If the problem persists, contact your support provider. |

Table 13 Error System Messages (Continued)

| Message ID | Message and Description |
|------------|---|
| 330212 | <p>System encountered an internal communication error. Error occurred when message is being sent from source application [src:%s] destination application [dst:%s] at file [file:%s] function [func:%s] line [line:%d].</p> <p>Description: This log indicates that application processes in the system encountered an error sending messages to each other. This could be a transient condition and the problem might go away.</p> <p>Recommended Action: If the problem persist, contact your support provider.</p> |
| 341005 | [msg:%s] Description: No description available. |
| 341023 | Error setting global LED mode at [node:%s]. Description: The AP is configuring LED mode. |
| 341026 | Fail to save configuration, error-[error:%s]. Description: The AP is saving configuration. |
| 341027 | Fail to initial configuration, error-[error:%s]. Description: The AP is initialing configuration. |
| 341028 | Image version format invalid: [version:%s]. Description: The AP is upgrading image. |
| 341029 | Compare image version fail, old version-[old_version:%s], current version-[new_version:%s]. Description: The AP is upgrading image. |
| 341030 | Upgrade version fail, from version [old_version:%s] to [new_version:%s]. Description: The AP is upgrading image. |
| 341031 | Retrieve image fail, retry [time:%d]. Description: The AP is loading configuration. |
| 341033 | Read configuration fail, error-[error:%s]. Description: The AP is loading configuration. |
| 341034 | Save configuration fail, error-[error:%s]. Description: The AP is saving configuration. |
| 341036 | [func:%s]: invalid image name. Description: The AP is upgrading image. |
| 341037 | Open image-[image:%s] fail. Description: The AP is upgrading image. |
| 341038 | Read image-[image:%s] header fail. Description: The AP is upgrading image. |
| 341039 | AP check image-[image:%s] version fail. Description: The AP is upgrading image. |
| 341040 | AP verify image-[image:%s] fail. Description: The AP is upgrading image. |

Table 13 Error System Messages (Continued)

| Message ID | Message and Description |
|------------|--|
| 341041 | AP basic verify image-[image:%s] fail. Description: The AP is upgrading image. |
| 341042 | AP check image-[image:%s] version for mesh fail. Description: The AP is upgrading image. |
| 341044 | AP can't open MTD device-[device:%s]. Description: The AP is setuping image. |
| 341047 | AP regulatory domains don't match Master-[id1:%d], slave-[id2:%d]. Description: The AP is upgrading image. |
| 341048 | Controller doesn't allow new AP-[mac:%s], reboot it. Description: The AP is upgrading image. |
| 341049 | [func:%s]: AP malloc sync list fail. Description: The AP is upgrading image. |
| 341050 | AP setup image fail, ret-[ret:%d]. Description: The AP is setuping image. |
| 341051 | AP vendor name not match, Master-[name1:%s], Slave-[name2:%s]. Description: The AP is setting up image. |
| 341052 | [func:%s], [line:%d]: AP class not match, Master-[class:%d], Slave-[class2:%d]. Description: The AP is setting up image. |
| 341054 | [func:%s]: can't find right iurl for AP-[mac:%s], [ip:%s], class [class:%s]. Description: The AP is upgrading image. |
| 341055 | [func:%s]: find right iurl for AP-[mac:%s], url [url:%s]. Description: The AP is upgrading image. |
| 341056 | AP can't find image file-[file:%s]. Description: The AP is upgrading image. |
| 341058 | AP download image state-[state:%d] error. Description: The AP is upgrading image. |
| 341063 | Could not open socket for [dip:%x]/[mask:%x]. Description: The AP is setting kernal route. |
| 341064 | Could not add route for [dip:%x]/[mask:%x]. Description: The AP is setting kernal route. |
| 341067 | Open socket for corp fail [dip:%x]/[sip:%x]/[devname:%s]. Description: The AP is creating tunnel. |
| 341068 | Get ifindex for corp fail [dip:%x]/[sip:%x]/[devname:%s]. Description: The AP is creating tunnel. |
| 341070 | No space for corp tunnel [dip:%x]/[sip:%x]/[devname:%s]. Description: The AP is creating tunnel. |

Table 13 Error System Messages (Continued)

| Message ID | Message and Description |
|------------|--|
| 341072 | AP could not find post auth role [name:%s]. Description: The AP is creating SSID. |
| 341074 | AP can't find essid-[name:%s]. Description: The AP is creating SSID. |
| 341081 | No space for acl-[name:%s]. Description: The AP is configuring ACL. |
| 341082 | ACL index-[index:%d] is invalid. Description: The AP is configuring ACL. |
| 341083 | ACL index-[index:%d] is inuse. Description: The AP is configuring ACL. |
| 341085 | [func:%s]: [line:%d]: payload empty. Description: The AP is upgrading image. |
| 341089 | [func:%s]: [line:%d]: AWC login error. Description: The AP is upgrading image from awc. |
| 341090 | [func:%s]: [line:%d]: could not save file. Description: The AP is upgrading image from awc. |
| 341092 | [func:%s]: [line:%d]: Parse error in payload. Description: The AP is upgrading image from awc. |
| 341093 | [func:%s]: [line:%d]: required class [class:%u] not found in payload. Description: The AP is upgrading image. |
| 341094 | [func:%s]: no class in url. Description: The AP is upgrading image. |
| 341095 | [func:%s]: url is NULL!. Description: The AP is upgrading image. |
| 341107 | [func:%s]: [line:%d] Cannot get essid from datapath for client-[ip:%s] port-[port:%s]. Description: Handle papi message. |
| 341108 | [func:%s]: [line:%d] invalid session client-[ip:%s] sid-[sid:%s]. |
| 341109 | [func:%s]: save certificate fail-[error:%s]. Description: AP is setting cert. |
| 341110 | [func:%s]: delete certificate fail-[error:%s]. Description: AP is setting cert. |
| 341111 | [func:%s]: save cert key fail-[error:%s]. Description: AP is setting cert. |
| 341113 | [func:%s]: get gre host fail by [server:%s]. Description: AP is setting gre name. |

Table 13 Error System Messages (Continued)

| Message ID | Message and Description |
|------------|---|
| 341114 | [func:%s]: set gre name-[name:%s] fail. Description: AP is setting gre name. |
| 341116 | [func:%s]: clr gre name-[name:%s] fail. Description: AP is setting gre name. |
| 341118 | [func:%s]: create session fail for ip-[ipaddr:%s]. Description: AP is creating session. |
| 341119 | [func:%s]: SID not match for IP-[ip:%s] sid-[sid:%s]. Description: Handle papi message. |
| 341122 | [func:%s]: Malloc fail [num:%d]. Description: Station sync. |
| 341123 | [func:%s]: [line:%d] parse token ret-[ret:%d]. Description: Station sync. |
| 341130 | [func:%s], [line:%d]: ioctl fail ipaddr-[ip:%d] mac-[mac:%s] add-[add:%d]. Description: AP is configuring arp entry. |
| 341141 | [func:%s], [line:%d]: bid is [bid:%d], max bid is [max_bid:%d]. Description: Invalid branch ID. |
| 341143 | [func:%s],[line:%d]: could not get class-[class:%s] in payload. Description: AP receive upgrade message from airwave to update image. |
| 341144 | [func:%s],[line:%d]: could not find file-[file:%s]. Description: AP is executing "show support-commands". |
| 341163 | Fail to add ids radio [mac:%m]. Description: Fail to add ids radio. |
| 341210 | [func:%s]: ASAP to CLI socket open failed [errno:%d]. Description: ASAP to CLI socket open failed. |
| 341211 | [func:%s]: ASAP to CLI socket ioctl failed [fd:%d] [errno:%d]. Description: ASAP to CLI socket ioctl failed. |
| 341212 | [func:%s]: ASAP to CLI socket bind failed [fd:%d] [errno:%d]. Description: ASAP to CLI socket bind failed. |
| 341213 | [func:%s]: ASAP to CLI socket recv failed [fd:%d] [errno:%d]. Description: ASAP to CLI socket recv failed. |
| 341214 | [func:%s]: L2 Roam failed at home network [mac:%s] [ssid:%s]. Description: L2 Roam failed at home network. |
| 341224 | [func: %s]: [nodename:%s], errno [errno:%s] info [info:%s]. Description: sysctl fw from cli error. |
| 341230 | Controller denies new AP when upgrading-[mac:%s]. Description: Controller denies new AP for upgrading image. |

Table 13 Error System Messages (Continued)

| Message ID | Message and Description |
|------------|--|
| 341232 | Fail to retrieve ap config from flash after [retry:%d] retries. Description: fail to retrieve ap config from flash. |
| 341235 | Add [mac:%s] to subscription ap list failed. Description: Add ap to subscription ap list failed. |
| 341270 | Set priority failed, failed to find type [type:%d], sub port [port:%d], priority [priority:%d]. Description: Set priority failed. |
| 341271 | Ethernet uplink [uplink_name:%s] link down. Description: Ethernet uplink link down. |
| 341272 | Ethernet uplink [uplink_name:%s] link up. Description: Ethernet uplink link up. |
| 341289 | Sending full configuration to slave ip = [ip:%s], ap config dirty = [dirty:%d] error cnt = [cnt:%d]. Description: Sending full configuration from Master to slave APs. |
| 341292 | ale: encode [msg_type:%s] message failed, err_msg:[err_msg:%s]. Description: encode message failed. |
| 341293 | ale: encode [msg_type:%s] message tag for field failed, err_msg:[err_msg:%s]. Description: encode message tag for field failed. |
| 341294 | ale: encode [msg_type:%s] message failed because of full buffer, bytes_written [bytes:%d], max size [max:%d]. Description: encode message failed because of full buffer. |

Warning Messages

Table 14 Warning System Messages

| Message ID | Message and Description |
|------------|---|
| 304002 | AP [name:%s]: No response from authmgr for BSSID [bssid:%m] Description: Unexpected condition occurred in the station manager (stm). Recommended Action: Contact your support provider. |
| 304004 | “License Check failed, dropping request Description: No description available. |
| 304005 | Ortronics AP support not licensed; dropping request Description: No description available. |
| 304009 | enet_move_tunnel: Tunnel [id:%d] not found. Description: No description available. |
| 304011 | stop_signal - Why was I called ... exiting. Description: No description available. |

| Message ID | Message and Description |
|------------|--|
| 341102 | Incorrect format for message type[type:%d]:[msg_len:%d]:[recv_len:%d]:[bytes_read:%d]:[from_ip:%s]:[from_port:%d]. Description: Handle papi message. |
| 341103 | Unknown version from [ipaddr:%s] in message type-[type:%d]. Description: Handle papi message. |
| 341104 | Invalid version for message type-[type:%d] from [ipaddr:%s] (local [ver:%s] vs. master [m_ver:%s]). Description: Handle papi message. |
| 341149 | Sending upgrade url [url:%s] to [ap_ip:%s], mode [mode:%d], ip [ip:%s]. Description: Master send upgrade url to slave. |
| 341159 | Got AMP from dhcp ([org:%s]-[ip:%s]-[key:%s]) vs. mine ([org1:%s]-[ip1:%s]-[key1:%s]). Description: Learning AMP info from DHCP. |
| 341164 | send ap not allowed to [ip:%s]. Description: Send not allowed msg to an AP. |
| 341165 | send image match to [ip:%s]. Description: Send image match msg to an AP. |
| 341166 | Get interface [ifname:%s] ip: [ip:%s]/[mask:%s]. Description: Print interface ip. |
| 341167 | Uplink [type:%s], state [old:%s]->[new:%s]. Description: Uplink state changed. |
| 341169 | Add uplink [type:%s] [pri:%d]. Description: Add new uplink. |
| 341170 | Del uplink [type:%s]. Description: Del uplink. |
| 341171 | Active 3g uplink, enable [yes: %d]. Description: Active 3g uplink. |
| 341172 | Find enet0 name [name: %s]. Description: Find enet0 uplink name. |
| 341173 | Current uplink set to [type:%s], state [state:%s]. Description: Print current uplink. |
| 341174 | No current uplink, pick the highest one - [type:%s]. Description: Pick the highest uplink. |
| 341175 | Connecting with current uplink - [type:%s]. Description: Connect with current uplink. |
| 341176 | Probing too long with current uplink - [type:%s]. Description: Probe too long. |

Table 14 Warning System Messages (Continued)

| Message ID | Message and Description |
|------------|---|
| 341177 | Try next uplink because current uplink is down - [type:%s]. Description: Try next uplink. |
| 341181 | Setup ip for uplink - [type:%s]. Description: Setup ip for uplink interface. |
| 341182 | Setup vpn for rap conversion - [ip:%s]. Description: Setup vpn for rap conversion. |
| 341183 | Downloading rap image via vpn - url [url:%s]. Description: Downloading rap image via vpn. |
| 341184 | Downloading rap image via vpn timeout - count [count:%d]. Description: Downloading rap image via vpn timeout. |
| 341185 | Retrieving ip address from [inf:%s], ip [ip:%s], mask [mask: %s]. Description: Retrieving ip address from an interface. |
| 341194 | Loading configuration, func [func:%s], line [line:%d]. Description: loading AP configuration. |
| 341199 | [func:%s]: send config to slave [ip:%s]. Description: Send ap config to slave. |
| 341205 | Applying enet config : port [name:%s]. Description: Apply enet config. |
| 341206 | Command syntax error: [cmd:%s]. Description: Command syntax error. |
| 341207 | AP support up to [num: %d] SSID. Description: Max ssid support |
| 341208 | Activate SSID [SSID1: %s], remove SSID [SSID2:%s]. Description: Deactive SSID |
| 341227 | uplink detection: total_icmp_sent [sent:%d], total_icmp_lost [lost:%d], continuous_icmp_lost [clost:%d]. Description: Uplink detetcion statistics. |
| 341228 | uplink switchover internet since link threshold is reached [thld:%d]. Description: Uplink switchover internet. |
| 341229 | uplink switchover vpn since ipsec goes down for a while, cnt [cnt:%d] vs. threshold [thld:%d]. Description: Uplink switchover vpn. |
| 341233 | Saveing AP config, reason [str:%s]. Description: Save ap config |
| 341245 | Not allowed ap [mac:%s] for invalid subscription status [status:%s] in function[function:%s] [line:%d] . Description: Not allowed ap for invalid subscription status. |

Table 14 Warning System Messages (Continued)

| Message ID | Message and Description |
|------------|---|
| 341250 | VC record delta configuration, malloc error. len [len:%d] port [port:%d] flags [flags:%d] seq [seq:%d] case [case:%s]. Description: VC record delta configuration, malloc error. |
| 341252 | VC send delta configurations to ap error. ap [ap_ip:%s] ap_cfg_id [acid:%d] current_cfg_id [cid:%d] top_cfg_id [tid:%d] case [case:%s]. Description: VC send delta configuration to ap error. |
| 341258 | AP receive delta configuration id [acid:%d] current_cfg_id [cid:%d] from msg [msg:%s] is not correct. Description: AP receive delta configuration id from msg is not correct. |
| 341260 | VC rejects the [number:%d]th ap because IAP9x in the swarm. Description: VC rejects slave for ap number. |
| 341261 | VC rejects the IAP9x because we have [number:%d] users in local DB. Description: VC rejects slave for internal DB. |
| 341262 | Switch to higher uplink [uplink_name:%s] by preemption. Description: Switch to highest uplink. |
| 341263 | Enable uplink [uplink_name:%s]. Description: Enable an uplink. |
| 341264 | Disable uplink [uplink_name:%s]. Description: Disable an uplink. |
| 341265 | Enable ethernet uplink [uplink_name:%s]. Description: Enable ethernet uplink. |
| 341266 | Uplink preempt to [uplink_name:%s]. Description: Uplink preempt. |
| 341267 | Add wired port [port_num:%d] to uplink table. Description: Wired port add to uplink table. |
| 341268 | Del wired port [port_num:%d] from uplink table. Description: Wired port delete from uplink table. |
| 341269 | Uplink [uplink_name:%s] is exist update it. Description: Update uplink table because uplink is already exist. |
| 341273 | Config file length is [len:%d], allowed length is [len2:%d]. Description: Check configuration file before saving it. |
| 341274 | Update election ip from [inf:%s], election ip [elect_ip:%s]/[elect_mask:%s]. Description: Update election IP and mask. |
| 341289 | Sending full configuration to slave ip = [ip:%s], ap config dirty = [dirty:%d] error cnt = [cnt:%d]. Description: Sending full configuration from Master to slaves APs. |

Notice Messages

| Message ID | Message and Description |
|------------|---|
| 326276 | AM: Inactive AP Detected SSID = [ssid:%s] BSSID = [bssid_str:%s]. Description: No description available. |
| 326277 | AM: Setting RAP Type for AP [bssid_str:%s] to: [rap_str:%s]. Description: No description available. |
| 326278 | AM: STA [mac_addr:%s] Authenticated with AP [bssid_str:%s]. Description: No description available. |
| 341003 | [msg:%s] Description: No description available. |
| 341043 | AP check image-[image:%s] successfully. Description: The AP is upgrading image. |
| 341045 | Receive image upgrade successful for [ipaddr:%s]. Description: The AP is upgrading image. |
| 341046 | Receive download image successful for [ipaddr:%s]. Description: The AP is upgrading image. |
| 341053 | AP try version [version:%s] [number:%d] times. Description: The AP is setting up image. |
| 341057 | [func:%s]: upgrade image file [file:%s], url [url:%s]. Description: The AP is upgrading image. |
| 341097 | [func:%s]: mac-[mac:%s], version-[version:%s], ccode_idx-[id:%d]. Description: The AP is upgrading image. |
| 341147 | Upimage: [msg:%s] Description: Upimage related messages. |
| 341148 | Checking slave [ap_ip:%s] [state:%s] Description: Master check image upgrade for a slave. |
| 341150 | Local AP-[ipaddr:%s] start upgrade image. Description: The AP starts to upgrade image. |
| 341151 | Local AP-[ipaddr:%s] start download image. Description: The AP starts to download image. |
| 341152 | Receive image err [state:%s] for [ap_ip:%s]. Description: Set AP image err state. |
| 341153 | Sending upgrade write flash to [ap_ip:%s]. Description: Master send upgrade write flash to slave. |
| 341154 | Sending upgrade success to [ap_ip:%s]. Description: Send upgrade success to Master. |
| 341155 | Sending download success to [ap_ip:%s]. Description: Send download success to Master. |

Table 15 Notice System Messages (Continued)

| Message ID | Message and Description |
|------------|--|
| 341156 | Sending image err [state:%s] to [ap_ip:%s]. Description: Send image err state to Master. |
| 341157 | AP reaches count [count:%d]-[msg:%s]. Description: AP image upgrade timeout. |
| 341158 | [func:%s],[line:%d]: Setup image with code [ret:%d]. Description: AP image upgrade timeout. |
| 341201 | AP [name:%s] reports a spectrum alert: non-wifi device(ID: [id:%d],type: [type:%s]). Description: Non-wifi device is detected. |
| 341202 | AP [name:%s] removes a spectrum alert: non-wifi device(ID: [id:%d],type: [type:%s]). Description: Non-wifi device is removed. |
| 341282 | Managed mode: Applied the latest config from server. Description: : Applied the latest configuration from the server. |
| 341283 | Managed mode: Could not download the configuration from server, retrying - [num:%d]. Description: Could not download the configuration from the server, retry in progress. |
| 341284 | Managed mode: Config download from server timed out. Description: Config download from server timed out. |
| 341285 | Managed mode: Config file download retry count over. Description: Config file download retry count over. |
| 341288 | Managed mode: Insufficient configuration to start this mode. Description: Because of insufficient configuration, the managed mode did not start. |
| 341290 | [msg:%s] Description: Per ap settings are applied. |

Information Messages

Table 16 Information System Messages

| Message ID | Message and Description |
|------------|---|
| 304037 | VPOOL: Initialized VLAN pool for virtual AP '[name:%s]' (size=[size:%d], VLAN-MAP=[addr:%x], Refcnt=[cnt:%d]). Description: No description available. |
| 304038 | VPOOL: VLAN Pool already initialized for VLAN-MAP [addr:%x], refcnt [cnt:%d]. Description: No description available. |
| 304042 | VPOOL: Adding VLAN [vid:%d] to hash table. Description: No description available. |
| 304043 | VPOOL: Free VLAN Pool for VLAN-MAP [addr:%x], refcnt [cnt:%d]. Description: No description available. |

| 341121 | SNMP return [mac:%s]:[num:%d]. Description: SNMP action. |
| 341128 | [func:%s], [line:%d]: index-[idx:%d] is [type:%s]. Description: AP is setting SSID. |
| 341129 | [func:%s], [line:%d]: index-[idx:%d] of ssid-[ssid:%s]is set to [new_idx:%d]. Description: AP is setting SSID. |
| 341134 | AP will remove alerts of client-[mac:%s]. Description: AP is removing alerts. |
| 341135 | Master Changed - new [new_ip:%s] old [old_ip:%s] current swarm state [state:%d]. Master in network changed. |
| 341136 | Perform image checking with master [master_ip:%s]. Description: Slave check image with master. |
| 341139 | SNMP get mac-[mac:%s], index-[index:%d]. Description: SNMP action. |
| 341140 | [func:%s], [line:%d]: payload is [payload:%s]. Description: AirWave upgrade image. |
| 341145 | Cert type is [type:%s], format is [format:%s]. Description: AP upload certificate for radius server. |
| 341146 | [func:%s]: result for CLI_EXECUTE_CERT_UPLOAD [result:%s]. Description: AP upload certificate for radius server. |
| 341160 | Send reboot cmd to AP [ap:%s], reason [reason:%s]. Description: Send reboot cmd. |
| 341161 | Send reboot ack to AP [ap:%s]. Description: Send reboot ack cmd. |
| 341162 | Receive reboot ack from AP [ap:%s]. Description: Receive reboot ack. |
| 341168 | [func:%s],[line:%d]: uplink type [type:%s], state [state:%s]. Description: Print the uplink info. |

Table 16 Information System Messages (Continued)

| Message ID | Message and Description |
|------------|--|
| 341178 | [func:%s],[line:%d]: send message to awc [type:%d], [username:%s], [password:%s], [device_key:%s], [label:%s]. Description: clid send papi message to awc. |
| 341179 | [func:%s],[line:%d]: receive message from awc [key:%s], [state:%d], [value:%s]. Description: clid receives message from awc. |
| 341180 | [func:%s],[line:%d]: send mesh cfg. Description: Send mesh cfg. |
| 341186 | Find uplink fail, type [type:%d]. Description: Find uplink fail. |
| 341187 | Add [mac:%m] to ap whitelist. Description: Add an ap to the whitelist. |
| 341188 | Del [mac:%m] from ap whitelist. Description: Del an ap from the whitelist. |
| 341189 | [func:%s]: discover client [mac:%s] [fapip:%s] [vlan:%d]. Description: Discover client request. |
| 341190 | [func:%s]: found client [mac:%s] [vlan:%d] [hapip:%s] [oldapip:%s] [vcip:%s]. Description: Found client response. |
| 341191 | [func:%s]: hap req for [mac:%s] [fapip:%s] [vcip:%s] [oldapip:%s] [rtid:%d] [vlan:%d] [vapvlan:%d]. Description: HAP request. |
| 341192 | [func:%s]: hap ack for [mac:%s] [rtid:%d]. Description: HAP Ack. |
| 341193 | [func:%s]: foreign client info [mac:%s] [type:%s] [vapvlan:%d] [vlan:%d] [ssid:%s] [vcip:%s] [hapip:%s]. Description: Foreign client info. |
| 341195 | [func:%s]: clt del req for [mac:%s] [rehome:%d] [fapip:%s]. Description: Client Delete Request. |
| 341196 | [func:%s]: clt del notification for [mac:%s] [hapip:%s]. Description: Client Delete Notification. |
| 341197 | Send [msg:%s] to vc [ip:%s]. Description: Send register/heartbeat msg to vc. |
| 341198 | [func:%s]: receive register/heartbeat from [mac:%m], [ip:%s]. Description: Receive register/heartbeat msg from slave. |
| 341203 | [func:%s]: foreign client rehome [mac:%s]. Description: Foreign Client re-home. |
| 341204 | [func:%s]: client subnet info [mac:%s] [subnet:%s]. Description: Foreign Client re-home. |

Table 16 Information System Messages (Continued)

| Message ID | Message and Description |
|------------|---|
| 341209 | [func:%s]: mip tunnel down [tid:%d]. Description: MIP tunnel down. |
| 341215 | [func:%s]: L3 Subnet Update [cmd:%d] [subnet:%s] [mask:%s] [vlan:%d] [vcip:%s] [flag:%x]. Description: L3 Subnet Update. |
| 341216 | [func:%s]: awc logout from [ip:%s]. Description: Awc logout. |
| 341217 | [func:%s]: awc connect to [ip:%s] successfully. Description: Awc connect successfully. |
| 341218 | [func:%s]: awc login to [ip:%s] successfully. Description: Awc login successfully. |
| 341219 | [func:%s]: awc identify [ip:%s] successfully. Description: Awc identify successfully. |
| 341220 | [func:%s]: L2 Roam session requested for client [mac:%s] [ssid:%s]. Description: L2 Roam session requested. |
| 341221 | [func:%s]: Foreign sta info for [mac:%s] from [vcip:%s]. Description: Foreign sta info. |
| 341222 | [func:%s]: Remote sta info for [mac:%s] from [vcip:%s]. Description: Remote sta info. |
| 341223 | [func:%s]: L3 VC Update [cmd:%d] [vcip:%s] [flags:%d]. Description: L3 VC Update. |
| 341225 | [func:%s]: VC Auto Discover. Description: VC Auto Discover. |
| 341226 | [func:%s]: VC IP changed [oip:%s] [nip:%s]. Description: L3 VC Update. |
| 341231 | [func:%s]: Sta ACL changed for [mac:%s] [ssid:%s] [role:%s]. Description: L3 Sta ACL changed. |
| 341295 | ale: encode [msg_type:%s] message succeed, total msg len [len:%d]. Description: encode message succeed. |
| 341296 | Statrt key generation. PAN state:[state:%s] PAN ip:[ip:%s] port:[port:%d] user:[user:%s]. Description: Start connect to PAN Firewall to do key generation |
| 341297 | PAN Firewall Integeration state changed from [old_state:%s] to [new_state:%s]. function:[func:%s] line:[line:%d]. Description: PAN Firewall state change |
| 341298 | Send PAN user login. User info : [cmd : %s]. Description: Send user login and logout info to PAN firewall. |

Debug Messages

Table 17 Debug System Messages

| Message ID | Message and Description |
|------------|--|
| 304003 | [msg:%s] Description: System related debugging messages logged in the station manager (stm). |
| 304008 | [msg:%s] Description: No description available. |
| 304021 | [func:%s]:[line:%d] Flow [flow_id:%d] not found. Description: No description available. |
| 304030 | License key - [f:%s] - [mode:%s] Description: This message indicates whether the specified licensed feature is enabled or disabled |
| 304034 | handle_enet_message_response: MAC [mac:%m] nothing outstanding. Description: No description available. |
| 304036 | handle_enet_message_response: IP [ip:%P] not found. Description: No description available. |
| 304051 | In-memory client blacklist table cleared. Description: This log indicates that the in-memory client blacklist was cleared. |
| 304052 | Client blacklist database table cleared. Description: This log indicates that the client blacklist database table was cleared. |
| 304053 | Client blacklist repopulated from database. Description: This log indicates that the in-memory client blacklist was repopulated from the database. |
| 304059 | [func:%s], [line:%d]: sap_ip: [sapip:%s], tunnel_ip: [tunnelip:%s], tunnel id: [tunnelid:%x]. Description: This debugging log indicates the tunnel id returned from datapath. |
| 304061 | [func:%s], [line:%d]: add [add:%d] mcast_group [group:%x] dest_idx: [dest:%x]. Description: This debugging log indicates the multicast group and destination index. |
| 304066 | [func:%s]: [line:%d]: vlan [id:%d] has [user:%d] users. Description: Count user number from a specified vlan. |
| 304069 | Sending msg from STM to AMP mgmt-server [ip:%p]. radios:[nradios:%d] vaps:[nvaps:%d] stas:[stas:%d] unassoc_stas:[unassoc_stas:%d] ap_info:[ap_info:%d] radio_info:[radio_info:%d] vap_info:[vap_info:%d] ap_sys_info:[ap_sys_info:%d] Description: This log displays a record of the transmission of the AMON message from STM to the amp management server. It includes statistics regarding the number of transmitted STM records. |

Table 17 Debug System Messages (Continued)

| Message ID | Message and Description |
|------------|--|
| 304070 | Sending msg STM to HTTP mgmt-server [protocol:%s] [hostname:%s] [port:%d] [identifier:%s] radios:[nradios:%d] vaps:[nvaps:%d] stas:[stas:%d] unassoc_stas:[unassoc_stas:%d] ap_info:[ap_info:%d] radio_info:[radio_info:%d] vap_info:[vap_info:%d] ap_sys_info:[ap_sys_info:%d]. Description: This log displays a record of the transmission of the AMON message from STM to the http management server. It includes statistics regarding the number of transmitted STM records. |
| 304071 | Adding AP_NEIGHBORS records, count [num_records:%d]. Description: This log indicates the number of ap neighbors records added to the AMON message buffer. |
| 304072 | Sent a total of [num_records:%d] AP_NEIGHBORS records. Description: This log indicates the total number of ap neighbors records sent to the management server. |
| 304073 | Adding RADIO_STATS records, count [num_records:%d]. Description: This log indicates the number of radio stats records added to the AMON message buffer. |
| 304074 | Sent a total of [num_records:%d] RADIO_STATS records. Description: This log indicates the total number of radio stats records sent to the management server. |
| 304075 | Adding VAP_STATS records, count [num_records:%d]. Description: This log indicates the number of vap stats records added to the AMON message buffer. |
| 304076 | Sent a total of [num_records:%d] VAP_STATS records. Description: This log indicates the total number of vap stats records sent to the management server. |
| 304077 | Adding UNASSOCIATED_STA records, count [num_records:%d]. Description: This log indicates the number of unassociated station records added to the AMON message buffer. |
| 304078 | Sent a total of [num_records:%d] UNASSOCIATED_STA records. Description: This log indicates the total number of unassociated station records sent to the management server. |
| 304079 | Adding STATION_STATS records, count [num_records:%d]. Description: This log indicates the number of station stats records added to the AMON message buffer. |
| 304080 | Sent a total of [num_records:%d] STATION_STATS records. Description: This log indicates the total number of station stats records sent to the management server. |
| 304081 | Adding AP_INFO records, count [num_records:%d]. Description: This log indicates the number of ap info records to the AMON message buffer. |
| 304082 | Sent a total of [num_records:%d] AP_INFO records. Description: This log indicates the total number of ap info records sent to the management server. |

Table 17 Debug System Messages (Continued)

| Message ID | Message and Description |
|------------|---|
| 304083 | Adding RADIO_INFO records, count [num_records:%d]. Description: This log indicates the number of radio info records added to the AMON message buffer. |
| 304084 | Sent a total of [num_records:%d] RADIO_INFO records. Description: This log indicates the total number of radio info records sent to the management server. |
| 304085 | Adding VAP_INFO records, count [num_records:%d]. Description: This log indicates the number of vap info records added to the AMON message buffer. |
| 304086 | Sent a total of [num_records:%d] VAP_INFO records. Description: This log indicates the total number of vap info records sent to the management server. |
| 304087 | Adding AP_SYS_STATS records, count [num_records:%d]. Description: This log indicates the number of ap system stats records added to the AMON message buffer. |
| 304088 | Sent a total of [num_records:%d] AP_SYS_STATS records. Description: This log indicates the total number of ap system stats records sent to the management server. |
| 304089 | handle_enet_message_response: IP [ip:%P] PORT [port:%d] not found. |
| 311008 | [msg:%s] Description: No description available. |
| 311009 | [msg:%s] Description: No description available. |
| 311025 | [msg:%s] Description: No description available. |
| 326001 | AM: [msg:%s] Description: No description available. |
| 326076 | AM: Sending Probe Poll Response V2: NumAPs=[num_aps:%d] NumSTAs=[num_sta:%d] Len=[bl:%d] Description: No description available. |
| 326081 | AM: Processing WMS_MODE message Description: No description available. |
| 326086 | AM: Sending Probe Register Message to : [ip:%s] Description: No description available. |
| 326087 | AM: Sending Probe UnRegister Message to : [ip:%s] Description: No description available. |
| 326090 | AM: message len [node_bl:%d] Description: No description available. |

Table 17 Debug System Messages (Continued)

| Message ID | Message and Description |
|------------|---|
| 326092 | AM: [line:%d]: Sending PROBE_STATS_UPDATE_MESSAGE for STAs of length [bl:%d] Description: No description available. |
| 326093 | AM: [line:%d]: Sending STM_AP_STATS_UPDATE for STAs of length [bl:%d] Description: No description available. |
| 326094 | AM:SM: Sending Spectrum Register Message for radio [r:%d] band [band:%s] to [ip:%s]. Description: This log indicates that spectrum radio is registering with the controller. |
| 326095 | AM:SM: Sending Spectrum Unregister Message for radio [r:%d] band [band:%s] to [ip:%s]. Description: This log indicates that spectrum radio is un-registering with the controller. |
| 326099 | AM:SM: Received Spectrum Unknown Radio Message for [bssid:%s]. Description: No description available. |
| 326213 | AM: MAC [mac:%s] matched with offset [match:%s]. Description: No description available. |
| 326216 | AM: MAC [mac:%s] matched in [config_eth:%s] wired mac table. Description: No description available. |
| 326280 | AM:SM: [msg:%s] Description: No description available. |
| 330200 | [msg:%s] Description: No description available. |
| 341001 | [msg:%s] Description: No description available. |
| 341022 | AP can't retrieve data from datapath for session [ipaddr:%s] - [dipaddr:%s]. Description: The AP is configuring ACL. |
| 341024 | Setting global LED mode [mode:%d]. Description: The AP is configuring LED mode. |
| 341025 | Setting virtual controller key [key:%s]. Description: The AP is configuring VC key. |
| 341124 | [func:%s]: mac auth token client number-[num:%d]. Description: Station update. |
| 341125 | [func:%s]: add reauth ctx client-[num:%d]. Description: Station update. |
| 341126 | User: [user:%s] login by [type:%s] [result:%s]. Description: User login. |
| 341127 | [func:%s], [line:%d]: flushing ACL rule-[profile:%s]. Description: AP is setting SSID. |

Table 17 Debug System Messages (Continued)

| Message ID | Message and Description |
|------------|--|
| 341131 | AP sends meshd parameters [cs_key:%s]-[key:%s]-[country_code:%d]. Description: AP is sending mesh parameters. |
| 341132 | Check sum error for AP-[ip:%s], slave [s_sum:%u] vs master [m_sum:%u]. Description: AP is checking configuration. |
| 341133 | Find AP-[ip:%s] fail. Description: AP is receiving stats sync. |
| 341137 | Client [mac:%s] was removed. Description: AP remove client when timeout. |
| 341138 | Master received alerts message from AP [ap_ip:%s]. Description: AP receive user alert. |
| 341142 | [func:%s], [line:%d]: html msg is [msg:%s]. Description: AP receives HTML message from controller. |
| 341200 | Check session id fail: client_ip [ip:%s], string [sid:%s]. Description: Checking session id fail |
| 341234 | Receive stats publish from [ip:%s]. Description: Receive stats publish msg. |
| 341236 | Add [mac:%s] [status:%s] to subscription ap list. Description: Add ap to subscription ap list |
| 341237 | Del [mac:%s] [status:%s] from subscription ap list. Description: Del ap from subscription ap list |
| 341238 | Update [mac:%s] [status:%s] - [newstatus:%s] in subscription ap list. Description: Update ap status in subscription ap list |
| 341239 | Del [mac:%s] [status:%s] from subscription ap list in timer. Description: Del ap from subscription ap list in timer |
| 341240 | Del [mac:%s] from whitelist ap for not in subscription ap list. Description: Del ap from whitelist ap for not in subscription ap list |
| 341241 | Del [mac:%s] from whitelist ap in case of [status:%s]. Description: Del ap from whitelist ap in case of invalid status |
| 341242 | Ap [mac:%s] has invalid subscription status [status:%d] in function[function:%s] [line:%d] . Description: ap has invalid subscription status |
| 341243 | Reboot ap [mac:%s] for not in subscription ap list. Description: Reboot ap for not in subscription ap list |
| 341244 | Reboot ap [mac:%s] for invalid subscription status [status:%s] in function[function:%s] [line:%d] . Description: Reboot ap for invalid subscription status |

Table 17 Debug System Messages (Continued)

| Message ID | Message and Description |
|------------|--|
| 341246 | VC set delta configuration current_cfg_id [cid:%d] top_cfg_id [tid:%d]. Description: New master set its own celta cfg id |
| 341247 | VC need shrink delta configuration entrys. current_cfg_id [cid:%d] top_cfg_id [tid:%d] max [mid:%d]. Description: VC need shrink delta configuration entrys. |
| 341248 | VC delta configuration entry list is empty. Description: VC delta configuration entry list is empty. |
| 341249 | VC delete delta configuration cfg_id [cid:%d] in shrink operation. current_cfg_id [ccid:%d] top_cfg_id [tid:%d]. Description: VC delete delta configuration entry in shrink operation. |
| 341251 | VC record new delta configuration entry. cfg_id [cid:%d] current [c:%d] top [t:%d] len [len:%d] port [port:%d] flags [flags:%d] seq [seq:%d]. Description: VC record new delta configuration entry. |
| 341253 | VC send delta configurations to ap. ap [ap_ip:%s] ap_cfg_id [acid:%d] delta_cfg_id [did:%d] current_cfg_id [cid:%d] top_cfg_id [tid:%d]. Description: VC send delta configuration to ap. |
| 341254 | VC add delta configuration id [id:%d] to msg [msg:%s]. Description: VC add delta configuration to msg. |
| 341255 | VC need send delta configurations to ap [ap_ip:%s]. ap_cg_id [acid:%d] current_cfg_id [cid:%d] top_cfg_id [tid:%d]. Description: VC need send delta configurations to ap. |
| 341256 | AP receive delta configuration id [acid:%d] current_cfg_id [cid:%d] from msg [msg:%s] . Description: AP receive delta configuration id from msg. |
| 341257 | VC delete delta configuration cfg_id [cid:%d] in timer operation. current_cfg_id [ccid:%d] top_cfg_id [tid:%d] timestamp [t:%u] current_time [ct:%u]. Description: AP receive delta configuration id from msg. |
| 341259 | Forming the Register Request message [Func:%s] - [Register:%s] . Description: Register Request Message. |
| 341277 | Managed mode: Starts fetching configuration from the server. Description: Starts fetching configuration from the server. |
| 341278 | Managed mode: Config download done. File hash before [csum1:%s], after [csum2:%s]. Description: Config file downloaded from server. |
| 341280 | Managed mode: Config on AP and server matches. Description: Configuration on AP matches with the configuration on the server. |
| 341281 | Managed mode: AP and server configuration differs. Description: AP and server configuration differs. |
| 341291 | [msg:%s] Description: No per ap setting is present. |

User Messages

Error Messages

Table 18 User Error Messages

| Message ID | Message and Description |
|------------|---|
| 524005 | Invalid action :[file:%s],[func:%s],[line:%d],[action:%d]. Description: This shows internal debug messages. |
| 524006 | [file:%s], [func:%s],[line:%d],cur=0x[cur:%x],end=0x[end:%x]. Description: This shows internal debug messages. |
| 524007 | [file:%s], [func:%s],[line:%d], realloc size invalid, tot=[tot:%d],certlen=[len:%d]. Description: This shows internal debug messages. |
| 524008 | [file:%s], [func:%s],[line:%d], offset should be zero but is =[offset:%d]. Description: This shows internal debug messages. |
| 524009 | [file:%s], [func:%s],[line:%d] Sanity check for first/Only cert chunk failed. Ignoring cert chunk. Description: This shows internal debug messages. |
| 524010 | [file:%s], [func:%s],[line:%d] malloc size:=[total:%d] failed. Description: This shows internal debug messages. |
| 524019 | Invalid MPPE recv-key length:[len:%d]. Description: This shows internal debug messages. |
| 524020 | Unknown protocol/Opcode [proto:%2X] [opcode:%2X] from the Datapath. Description: This shows internal debug messages. |
| 524021 | [string:%s] Description: This shows internal debug messages. |
| 524022 | Radius Shared secret is NULL, NASIP = [nasip:%s], Radius Server [srvid:%s]. Description: This shows internal debug messages. |
| 524023 | Error decoding LEAP key (code=[code:%d]). Description: This shows internal debug messages. |
| 524024 | Error decoding MPPE recv-key (code = [code:%d]). Description: This shows internal debug messages. |
| 524025 | Could not create the stateful config entry, dropping the request. NASIP=[nasip:%s],[srvid:%s]. Description: This shows internal debug messages. |
| 524026 | Dropping the radius request to=[srvid:%s]. Description: This shows internal debug messages. |

Table 18 User Error Messages

| Message ID | Message and Description |
|------------|--|
| 524027 | Error decoding MPPE send-key (code = [code:%d]). Description: This shows internal debug messages. |
| 524028 | Invalid MPPE send-key length:[len:%d]. Description: This shows internal debug messages. |
| 524030 | Invalid Radius Code [radcode:%d]. Description: This shows internal debug messages. |
| 524043 | [string:%s]: FT mic=[string1:%s]. Description: This shows internal debug messages. |
| 524044 | AES-GCM key size should be either [key1:%d] or [key2:%d]. Description: This shows internal debug messages. |
| 524046 | Station UP failed for station [str:%s] [str1:%s]. Description: This shows internal debug messages. |
| 524056 | Invalid radius code. Description: This shows internal debug messages. |
| 524057 | Dropping the radius packet for stateful dot1x processing. Description: This shows internal debug messages. |
| 524058 | No Valid NAS IP dropping the request. Description: This shows internal debug messages. |
| 524059 | NAS IP address didn't match the NASIP attribute. Description: This shows internal debug messages. |
| 524060 | No Valid Calling Station ID dropping the request. Description: This shows internal debug messages. |
| 524061 | Could not create a new user entry. Description: This shows internal debug messages. |
| 524062 | Failed to add to the radius request list. Description: This shows internal debug messages. |
| 524063 | Dropping radius response to AP. Description: This shows internal debug messages. |
| 524064 | No matching request for the response..dropping the pkt. Description: This shows internal debug messages. |
| 524065 | User was deleted before the response came in. Description: This shows internal debug messages. |
| 524066 | No dot1xctx for this response. Description: This shows internal debug messages. |
| 524067 | Failed to process EAP packet from backend. Description: This shows internal debug messages. |

Table 18 User Error Messages

| Message ID | Message and Description |
|------------|--|
| 524068 | AES-GCM key setting is allowed only for Tunnel mode VAP's. Description: This shows internal debug messages. |
| 541012 | [func:%s]: [line:%d]: find client-[mac:%m] fail. Description: Station sync. |
| 541017 | [func:%s]: parse tlv ret-[ret:%d] mac-[mac:%m] fail. Description: Station sync. |
| 541018 | [func:%s],[line:%d]: could not find client-[mac:%m]. Description: AP is looking up station. |
| 541021 | sta [mac:%m] - fail to find wlan profile for ssid-[ssid:%s]. Description: Station sync. |
| 541028 | [func:%s],[line:%d]: could not get stm ip for client-[client:%m], essid-[essid:%s]. Description: AP send portal auth acl to STM. |
| 541046 | [func:%s]: Unexpected sta-[mac:%m] lkip resp from [ip:%s]. Description: Unexpected station lkip response. |

Warning Messages

Table 19 User Warning Messages

| Message ID | Message and Description |
|------------|--|
| 501026 | Station [sta:%m]: too many vlan ([num:%d]) trying to associate to BSSID [bss:%m] on AP [name:%s]. Description: No description available. |
| 501027 | Station [sta:%m]: authentication payload shorter than min, length [len:%d], expected [elen:%d] trying to associate to BSSID [bss:%m] on AP [name:%s]. Description: No description available. |
| 501030 | Station [sta:%m]: Packet too short, length [len:%d], expected [elen:%d] trying to disassociate to BSSID [bss:%m] on AP [name:%s]. Description: An 802.11 Disassociation frame was received that was too short. Recommended Action: It will be ignored. |
| 501040 | Station [sta:%m]: Packet too short, length [len:%d], expected [elen:%d] trying to de-authenticate to BSSID [bss:%m] on AP [name:%s]. Description: No description available. |
| 501060 | Station [sta:%m]: Ignored Association response to BSSID [bss:%m] on AP [name:%s]. Description: No description available. |
| 501061 | Station [sta:%m]: Ignored Re-Association response to BSSID [bss:%m] on AP [name:%s] Description: No description available. |

Table 19 User Warning Messages

| Message ID | Message and Description |
|------------|---|
| 501062 | Station [sta:%m]: Ignored ATIM to BSSID [bss:%m] on AP [name:%s]. Description: No description available. |
