Dell Client Statement on Intel AMT Advisory (INTEL-SA-00075)

UPDATED: June 15, 2017

NOTE: Dell PowerEdge systems are detailed in a separate response that you can find at the link below:
http://en.community.dell.com/techcenter/extras/m/white_papers/20443937

Overview
Dell is aware of the industry-wide vulnerability described in the Intel Security Center advisory INTEL-SA-00075 that can affect Dell business PCs that support system manageability via Intel Active Management Technology (AMT), Intel Small Business Technology (SBT), or Intel Standard Manageability (ISM). We are diligently working on helping our customers mitigate the vulnerability through BIOS firmware updates for impacted Dell business products. The firmware update details for these Dell business PCs will be added to this document as they become available.

Recommendation
Dell recommends customers follow the Intel published Detection Guide and Mitigation Guide for these systems immediately. Intel has released a Discovery Tool that can be used by local users or IT administrators to determine whether a system is vulnerable to INTEL-SA-00075. The Mitigation Guide includes instructions and an Unprovisioning Tool to unprovision manageability on affected systems.

Customers should update to the latest BIOS by downloading the patched releases from http://support.dell.com as those releases become available.
**BIOS Release Details**
The systems below are affected and will receive patched Intel firmware via Dell BIOS updates as they become available. This list of systems represents a superset of all possible affected products but only those purchased with Intel AMT, SBT, or ISM capability are vulnerable. This list is provided for customer planning purposes and will be updated with release information when available:
