PCI Device Profile

1 Scope

The DCIM PCI Device Profile describes the properties and interfaces for executing system management tasks related to the management of PCI devices within a system. The profile standardizes and aggregates the description for the PCI device properties into a PCI view representation as well as provides static methodology for the clients to query the PCI views without substantial traversal of the model.

2 Normative References

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

DMTF DSP1033, Profile Registration Profile 1.0.0
DMTF DSP0226, Web Services for Management (WS-Management) Specification 1.1.0
DMTF DSP0227, WS-Management CIM Binding Specification 1.0.0

3 Terms and Definitions

For the purposes of this document, the following terms and definitions apply.

3.1 conditional
indicates requirements to be followed strictly in order to conform to the document when the specified conditions are met

3.2 mandatory
indicates requirements to be followed strictly in order to conform to the document and from which no deviation is permitted
3.3 may
indicates a course of action permissible within the limits of the document

3.4 optional
indicates a course of action permissible within the limits of the document

3.5 referencing profile
indicates a profile that owns the definition of this class and can include a reference to this profile in its “Related Profiles” table

3.6 shall
indicates requirements to be followed strictly in order to conform to the document and from which no deviation is permitted

3.7 FQDD
Fully Qualified Device Descriptor is used to identify a particular component in a system.

3.8 Interop Namespace
Interop Namespace is where instrumentation instantiates classes to advertise its capabilities for client discovery.

3.9 Implementation Namespace
Implementation Namespace is where instrumentation instantiates classes relevant to executing core management tasks.

3.10 ENUMERATE
Refers to WS-MAN ENUMERATE operation as described in Section 8.2 of DSP0226_V1.1 and Section 9.1 of DSP0227_V1.0

3.11 GET
Refers to WS-MAN GET operation as defined in Section 7.3 of DSP00226_V1.1 and Section 7.1 of DSP0227_V1.0

4 Symbols and Abbreviated Terms

4.1 CIM
Common Information Model
4.2
iDRAC
Integrated Dell Remote Access Controller – management controller for blades and monolithic servers

4.3
CMC
Chassis Manager Controller – management controller for the modular chassis

4.4
WBEM
Web-Based Enterprise Management

5　Synopsis

Profile Name: PCI Device
Version: 1.1.0
Organization: Dell
CIM Schema Version: 2.26 Experimental
Dell Schema Version: 1.0.0
Interop Namespace: root/interop
Implementation Namespace: root/dcim
Central Class: DCIM_PCIEview
Scoping Class: DCIM_ComputerSystem

The Dell PCI Device Profile is a component profile that contains the Dell specific implementation requirements for PCI Device view.

DCIM_PCIEview shall be the Central Class.

Table 1 identifies profiles that are related to this profile.

<table>
<thead>
<tr>
<th>Profile Name</th>

<td>Reference</td>
</tr>
</tbody>
</table>
6 Description

The Dell PCI Device Profile describes platform's PCI devices. Each PCI device's information is represented by an instance of DCIM_PCIEDeviceView class.

Figure 1 details the class diagram of the Dell PCI Device Profile.

![Class Diagram]

**Figure 1 – Class Diagram**
Figure 2 details typical Dell PCI Device Profile implementation for a platform containing two PCI devices. In order for client to discover the instrumentation’s support of this profile, PCI Device Profile is instantiated in the Interop Namespace. PCI Device Profile instance describes the information about the implemented profile: most importantly, the name and version of the profile and the organization name that produced the profile.

PCI1 and PCI2 are the PCI device views representing the two PCI devices in the Implementation Namespace. They are associated to the Interop namespace’s PCIProfile instance.

7.1 PCI Device View

This section describes the implementation for the DCIM_PCIDeviceView class.

This class shall be instantiated in the Implementation Namespace.

The DCIM_ElementConformsToProfile association(s) shall reference the DCIM_PCIDeviceView instance(s).

7.1.1 Resource URIs for WinRM®

The class Resource URI shall be "http://schemas.dell.com/wbem/wscim/1/cimschema/2/DCIM_PCIDeviceView?__cimnamespace=root/dcim"

The key property shall be the InstanceID.

The instance Resource URI for DCIM_PCIDeviceView instance shall be: "http://schemas.dell.com/wbem/wscim/1/cimschema/2/DCIM_PCIDeviceView?__cimnamespace=root/dcim+InstanceId=<FQDD>"

7.1.2 Operations

The following table details the implemented operations on DCIM_PCIDeviceView.

Table 3 – DCIM_PCIDeviceView - Operations

<table>
<thead>
<tr>
<th>Operation Name</th>
<th>Requirements</th>
<th>Required Input</th>
</tr>
</thead>
<tbody>
<tr>
<td>Get</td>

</tbody>
</table>
7.1.3 Properties

The following table details the implemented properties for DCIM_PCIDeviceView instance representing a PCI in a system. The “Requirements” column shall denote the implementation requirement for the corresponding property. If the column “Property Name” matches the property name, the property either shall have the value denoted in the corresponding column “Additional Requirement”, or shall be implemented according to the requirements in the corresponding column “Additional Requirement”.

Table 4 – DCIM_PCIDeviceView - Properties

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Requirements</th>
<th>Type</th>
<th>Requirement and description</th>
</tr>
</thead>
<tbody>
<tr>
<td>InstanceID</td>
<td>Mandatory</td>
<td>string</td>
<td>The property value shall be the FQDD property value.</td>
</tr>
<tr>
<td>FQDD</td>
<td>Mandatory</td>
<td>string</td>
<td>A string containing the Fully Qualified Device Description, a user-friendly name for the object.</td>
</tr>
<tr>
<td>DeviceDescription</td>
<td>Mandatory</td>
<td>string</td>
<td>A string containing the friendly Fully Qualified Device Description, a property that describes the device and its location</td>
</tr>
<tr>
<td>BusNumber</td>
<td>Mandatory</td>
<td>uint32</td>
<td>The bus number where the PCI device resides.</td>
</tr>
<tr>
<td>DeviceNumber</td>
<td>Mandatory</td>
<td>uint32</td>
<td>The device number assigned to the PCI device for this bus.</td>
</tr>
<tr>
<td>FunctionNumber</td>
<td>Mandatory</td>
<td>uint32</td>
<td>The function number for the PCI device.</td>
</tr>
<tr>
<td>PCIVendorID</td>
<td>Mandatory</td>
<td>string</td>
<td>The property contains a value assigned by the PCI SIG used to identify the manufacturer of the device.</td>
</tr>
<tr>
<td>PCISubVendorID</td>
<td>Mandatory</td>
<td>string</td>
<td>Subsystem vendor ID.</td>

</table>
7.2 PCI Device Profile Profile Registration

This section describes the implementation for the DCIM_LCRegisteredProfile class.

This class shall be instantiated in the Interop Namespace.

The DCIM_LCElementConformsToProfile association(s) shall reference the DCIM_LCRegisteredProfile instance.

7.2.1 Resource URIs for WinRM®

The class Resource URI shall be "http://schemas.dmtf.org/wbem/wscim/1/cim-schema/2/CIM_RegisteredProfile?__cimnamespace=root/interop"

The key property shall be the InstanceID property.

7.2.2 Operations

The following table details the implemented operations on DCIM_LCRegisteredProfile.

<table>
<thead>
<tr>
<th>Operation Name</th>
<th>Requirements</th>
<th>Required Input</th>
</tr>
</thead>
<tbody>
<tr>
<td>Get</td>
<td>Mandatory</td>
<td>Instance URI</td>

<tr>
<td>Enumerate</td>
<td>Mandatory</td>
<td>Class URI</td>
</tr>
</tbody>
</table>

7.2.3 Properties

The following table details the implemented properties for DCIM_LCRegisteredProfile instance representing PCI Device Profile implementation. The “Requirements” column shall denote the implementation requirement for the corresponding property. If the column “Name” matches the property name, the property either shall have the value denoted in the corresponding column “Additional Requirements”, or shall be implemented according to the requirements in the corresponding column “Additional Requirements”.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Requirement</th>

</tr>
</tbody>
</table>
ProfileRequireLicenseStatus[]

Mandatory

String

This property array shall contain the status for the corresponding license in the same element index of the ProfileRequireLicense array property. Each array element shall contain:

- “LICENSED”
- “NOT_LICENSED”

If no license is required for the profile, the property shall have value NULL.

8 Methods

This section details the requirements for supporting extrinsic methods for the CIM elements defined by this profile.

No additional details specified.

9 Use Cases

See Lifecycle Controller (LC) Integration Best Practices Guide.

10 CIM Elements

No additional details specified.

11 Privilege and License Requirement

The following table describes the privilege and license requirements for the listed operations. For the detailed explanation of the privileges and licenses, refer to the Dell WSMAN Licenses and Privileges specification.

<table>
