1. **Scope**

The Simple NIC Profile extends the management capabilities of referencing profiles by adding the capability to represent the configuration of NIC network controllers. The NIC controllers are modeled as views and attributes where there is a view for each individual controller and multiple attributes that allow NIC configuration.

2. **Normative References**

Refer to the following documents for more information.

**NOTE:** For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

- DMTF DSP1033, Profile Registration Profile 1.0.0

3. Terms and Definitions
For the purposes of this document, the following terms and definitions apply.

3.1. Can
Used for statements of possibility and capability, whether material, physical, or causal.

3.2. Cannot
Used for statements of possibility and capability, whether material, physical, or causal.

3.3. Conditional
Indicates requirements to be followed strictly in order to conform to the document when the specified conditions are met.

3.4. Mandatory
Indicates requirements to be followed strictly in order to conform to the document and from which no deviation is permitted.

3.5. May
Indicates a course of action permissible within the limits of the document.

3.6. Need not
Indicates a course of action permissible within the limits of the document.

3.7. Optional
Indicates a course of action permissible within the limits of the document.

3.8. Referencing profile
Indicates a profile that owns the definition of this class and can include a reference to this profile in its “Related Profiles” table.

3.9. Shall
Indicates requirements to be followed strictly in order to conform to the document and from which no deviation is permitted.

3.10. Shall not
Indicates requirements to be followed strictly in order to conform to the document and from which no deviation is permitted.

3.11. Should
Indicates that among several possibilities, one is recommended as particularly suitable, without mentioning or excluding others, or that a certain course of action is preferred but not necessarily required.

3.12. Should not
Indicates that a certain possibility or course of action is deprecated but not prohibited.

3.13. Interop Namespace: root/interop
Interop Namespace: root/interop is where instrumentation instantiates classes to advertise its capabilities for client discovery.

Implementation Namespace: root/dcim is where instrumentation instantiates classes relevant to executing core management tasks.

3.15. ENUMERATE

Refers to WS-MAN ENUMERATE operation as described in Section 8.2 of DSP0226_V1.1 and Section 9.1 of DSP0227_V1.0

3.16. GET

Refers to WS-MAN GET operation as defined in Section 7.3 of DSP0226_V1.1 and Section 7.1 of DSP0227_V1.0

4. Symbols and Abbreviated Terms

4.1. CIM

Common Information Model

4.2. iDRAC

Integrated Dell Remote Access Controller – management controller for blades and monolithic servers

4.3. CMC

Chassis Management Controller – management controller for the modular chassis

4.4. iSCSI

Internet Small Computer System Interface, an Internet Protocol (IP)-based storage networking standard for linking data storage facilities.

4.5. WBEM

Web-Based Enterprise Management

4.6. SRIOV

Singel Root I/O Virtualization

4.7. NPIV

N_Port ID Virtualization

4.8. DCB

Data Center Bridging

4.9. FCF

FCoE Forwarders
5. Synopsis

Profile Name: Simple NIC
Version: 4.0.0
Organization: Dell Inc.
CIM Schema Version: 2.41 Final
Central Class: DCIM_NICService Scoping Class: CIM_ComputerSystem

The Simple NIC Profile extends the management capability of the referencing profiles by adding the capability to describe NIC controllers in a simple way. In this profile, a NIC is represented by a view instance that aggregates zero or more instances of the DCIM_NICAttribute class, each representing a NIC controller related configurable property.

DCIM_NICService shall be the Central Class. CIM_ComputerSystem shall be the Scoping Class.

Instance of DCIM_NICService shall be the Central Instance. Instance of CIM_ComputerSystem shall be the Scoping Instance. Table 1 identifies profiles that are related to this profile.

Table 1. Related Profiles

<table>

</tbody>
</table>

6. Description

The Simple NIC Profile describes NIC controller’s representation and configuration. The profile also describes the relationship of the Simple NIC classes to the DMTF/Dell profile version information.

Figure 1 represents the class schema for the Simple NIC Profile. For simplicity, the prefix CIM_ has been removed from the names of the classes.

The DCIM_NICView class is a NIC controller’s representation that contains controllers’ properties.

The DCIM_NICAttribute class derives from the CIM_BIOSAttribute class and represents each NIC’s configurable attribute. Depending on the data type of the attribute, DCIM_NICAttribute is either instantiated as DCIM_NICEnumeration, DCIM_NICString, or DCIM_NICInteger instance.

DCIM_NICView instance represents the NIC/CNA properties.

The DCIM_NICService class is used to configure the NIC through its attributes. The SetAttribute() and SetAttributes() methods on the DCIM_NICService class configure NIC attributes, DCIM_NICAttribute subclass instances.

The Simple NIC profile information is represented with the instance of CIM_RegisteredProfile.
6.1. Fully Qualified Device Descriptor (FQDD)

Fully Qualified Device Descriptor (FQDD) is a component identifier that uniquely represents a specific system device or component in a platform independent of the operating system, and the device vendor.

The Dell CIM data model utilizes FQDDs to correlate different aspects of representing a component, such as hardware inventory view, configurable attribute, software inventory, and so on. FQDDs are used by software, such as BIOS, UEFI applications that link Unified Server Configurator (USC), and remote management applications to identify various system components in a persistent way.

For NIC devices, the FQDD is used to uniquely identify a particular port. For CNA devices, FDQQ is used to uniquely identify a partition. See Table 2 - NIC FQDD examples and Table 3 - CNA FQDD Example for examples.
### Table 2. NIC FQDD examples

<td>NIC.Slot.1-2-4</td>
</tr>
</tbody>
</table>

### 6.2. CNA Representation

For CNA devices, an instance of DCIM_NICView is created for each partition of a port. Each partition can have the following personalities:

- NIC
- Fibre Channel Over Ethernet (FCoE)
- Internet Small Computer System Interface Over Ethernet (iSCSI).

DCIM_NICView instances are read-only. For traditional NIC devices or CNA devices that have partitioning turned off, one instance of DCIM_NICView is created for each device port.

The following DCIM_NICView properties represent the CNA behavior. See Table 4 – CNA Properties in DCIM_NICView.

### Table 4. CNA Properties in DCIM_NICView

<table>
<thead>
<tr>
<th>Personality</th>
<th>Detail</th>
</tr>
</thead>
<tbody>
<tr>
<td>NicMode</td>
<td>Indicates if the NIC personality is enabled or disabled on the current partition</td>
</tr>
<tr>
<td>FCoEOffloadMode</td>
<td>Indicates if the Fibre Channel over Ethernet (FCoE) personality is enabled or disabled on the current partition.</td>
</tr>
<tr>
<td>iScsiOffloadMode</td>
<td>Indicates if the Internet Small Computer System Interface (iSCSI) personality is enabled or disabled on current partition</td>
</tr>
<tr>
<td>MaxBandwidth</td>
<td>Indicates maximum bandwidth on current partition.</td>
</tr>
<tr>
<td>MinBandwidth</td>
<td>Indicates minimum bandwidth on current partition.</td>
</tr>
<tr>
<td>WWPN</td>
<td>Indicates World Wide Port Name of a port.</td>
</tr>
</tbody>
</table>

CNA devices allow a user to provide a range of bandwidth for each partition, which is represented in terms of percentage of total bandwidth.
6.3. Changing personalities on a partition

User can enable or disable a personality of a partition by changing the corresponding attribute. Table 5 lists the attribute names that represent each personality.

<table>
<thead>
<tr>
<th>Personality</th>
<th>AttributeName</th>
<th>Detail</th>
</tr>
</thead>
<tbody>
<tr>
<td>NIC</td>
<td>NicMode</td>
<td>Enables or disables NIC personality on the partition.</td>
</tr>
<tr>
<td>Fibre Channel Over Ethernet (FCoE)</td>
<td>FCoEOffloadMode</td>
<td>Enables or disables FC personality on the partition.</td>
</tr>
<tr>
<td>Internet Small Computer System Interface (iSCSI)</td>
<td>iScsiOffloadMode</td>
<td>Enables or disable iSCSI personality on the partition.</td>
</tr>
</tbody>
</table>

Use SetAttribute() or SetAttributes() method on an attribute to change its value. See Section 8.1 and 8.2 for more details.

6.4. Enabling or disabling a partition

There are four partitions on each port of a CNA device. Partition 1 cannot be disabled on any port. Enabling any personality on a partition enables the partition. Disabling all the personalities on a partition disables the partition (see section 6.3 for information to enable or disable a partition personality).

To disable partitioning functionality altogether on all ports simultaneously, set the NicPartitioning attribute to Disabled. After the host system restarts, the CNA device will no longer expose multiple partitions to the host system. Instead, a DCIM_NICView will be created for each port. See section 7.7.2 for more details.

6.5. Changing bandwidth on a partition

Use the MaxBandwidth and MinBandwidth attributes to change the bandwidth range of a partition. MinBandwidth is the relative bandwidth allocated to a partition with respect to the entire port. Make sure that the sum of all MinBandwidth should not be greater than 100% and MinBandwidth should be less than MaxBandwidth. See Section 7.7.2 for more details.

6.6. Virtual Address attributes

Virtual address attributes include the following attributes:

- VirtMacAddr
- VirtIscsiMacAddr
- VirtFIPMacAddr
- VirtWWN
- VirtWWPN
- VirtualizationMode

The default values of these virtual attributes is equal to the permanent addresses programmed onto the controller. For example, the VirtMacAddr default value is MacAddr on that port or partition.

To set these attributes, see Section 8.1 and 8.2 for more details. Virtual address attributes behave differently from the other attributes in the following way:

6.6.1. Read Write behavior

The virtual address attributes listed above behave as Read-Only attributes if accessed via the System Settings (F2 during POST) → Device Settings menu. However, they behave as Read-Write attributes through the Lifecycle Controller Remote Services interface used by WSMAN clients. This allows a remote application to change the
virtual identities of NIC/CNA controllers, similar to the FlexAddress feature that allows a chassis management controller (CMC) to distribute a predefined list of identities across all blade NIC/CNA controllers on a chassis.

6.6.2. Reset behavior

Setting a particular Input/Output (IO) attribute to zeros causes that particular address to be erased and reset to the default permanent address. The attributes can be set to default permanent values: as equivalent to resetting to factory default and removing a virtual address attribute from a system.

When there is AC Power loss to the system, all the virtual address attributes are erased and reset to default addresses when AC Power is restored to the system. AC Power loss includes power loss to both MAIN and AUX power bus.

NOTE: This behavior may not be available on the Broadcom CNA.

6.7. Behavior Differences between Broadcom and QLogic CNAs

There are few key differences between CNA manufacturers: Broadcom and QLogic. The supported CNAs for Broadcom and QLogic include:

- **Broadcom**:
  - M710HD Dual Port 10Gig 57712 NDC,

- **QLogic**:
  - Qlogic QMD8252-K Dual Port 10GbE NDC
  - Qlogic QME8242 10GbE Embedded Mezz Card

Table 6 lists the behavioral differences between Broadcom and QLogic CNAs.

<table>
<thead>
<tr>
<th>Difference</th>
<th>Broadcom</th>
<th>QLogic</th>
</tr>
</thead>
<tbody>
<tr>
<td>Offload</td>
<td>Only two Offload personalities (FCoEOffloadMode and iScsiOffloadMode) are allowed per port.</td>
<td>Partition 3 allows iScsiOffloadMode personality and Partition 4 allows FCoEOffloadMode personality.</td>
</tr>
<tr>
<td>Port level</td>
<td>If NicPartitioning attribute is disabled, then enumeration and get operations only displays port level attributes.</td>
<td>Not applicable as NicPartitioning cannot be disabled.</td>
</tr>
</tbody>
</table>
If the MinBandwidth attribute(s) are set, the total sum of all the MinBandwidth attributes for all partitions on a port must add up to 0 or 100 at the conclusion of set operation. For example, if the MinBandwidth needs to be changed to 50 on partition 1, then the MinBandwidth must be changed on other partition(s) to make sure the MinBandwidth for all partitions on the port adds to a 100.

<table>
<thead>
<tr>
<th>Port Partition</th>
<th>Current MinBandwidth</th>
<th>New MinBandwidth</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>30</td>
<td>50</td>
</tr>
<tr>
<td>2</td>
<td>30</td>
<td>20</td>
</tr>
<tr>
<td>3</td>
<td>20</td>
<td>20</td>
</tr>
<tr>
<td>4</td>
<td>20</td>
<td>10</td>
</tr>
</tbody>
</table>

If the MinBandwidth does not add up to 0 or 100, then USC advanced configuration may not set any other attribute until this error condition of MinBandwidth is rectified. USC Advanced Configuration does not notify about this error condition.

Note: MinBandwidth summation can be done independently through USC Advanced Configuration or through Remote Services interface that is used by WSMAN clients.

After NicPartitioning attribute is disabled, partition specific attributes (See the following table) does not exist anymore. Therefore, do not disable NicPartitioning attribute and set partition specific attributes together, and CreateTargetedConfigJob() method.

**Partition specific attributes**
- MinBandwidth
- MaxBandwidth
- NicMode
- iScsiOffloadMode
- FCoEOffloadMode
- VirtMacAddr
- VirtIscsiMacAddr
- VirtFIPMacAddr
- VirtWWN
- VirtWWPN
- VirtualizationMode

Not applicable as NicPartitioning cannot be disabled in QLogic.

**NicMode**
NicMode is used to enable or disable NIC personality on a partition. NIC personality can be disabled on all partitions.

NIC personality cannot be disabled on partition 1, but can be disabled on remaining partitions.
# 7. Implementation Description

Requirements and guidelines for propagating and formulating certain properties of the classes are discussed in this section. Methods are listed in section 8.

Table 7 shows the instances of CIM Elements for this profile. Instances of the CIM Elements shall be implemented as described in Table 7. Sections 7 ("Implementation Requirements" and "Methods") may impose additional requirements on these elements.

7.1. NIC View – DCIM_NICView
This section describes the implementation for the DCIM_NICView class. This class shall be instantiated in the Implementation Namespace: root/dcim.

7.1.1. Resource URIs for WinRM®

The key property shall be the InstanceID.

7.1.2. Operations
The following table lists the implemented operations on DCIM_NICView.

<table>
<thead>
<tr>
<th>Table 8. DCIM_NICView - Operations</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Operation Name</strong></td>
</tr>
<tr>
<td>Get</td>
</tr>
<tr>
<td>Enumerate</td>
</tr>
</tbody>
</table>

7.1.3. Class Properties
The following table details the implemented properties for DCIM_NICView instance representing a NIC in a system. The “Requirements” column shall denote whether the property is implemented (for requirement definitions, see section 3). The “Additional Requirements” column shall denote either possible values for the property, or requirements on the value formulation.

7.2. **NIC Capabilities – DCIM_NICCapabilities**

This section describes the implementation for the DCIM_NICCapabilities class. This class shall be instantiated in the Implementation Namespace: root/dcim.

### 7.2.1. Resource URIs for WinRM®

The class Resource URI shall be "http://schemas.dell.com/wbem/wscim/1/cim-schema/2/DCIM_NICCapabilities?cimnamespace=root/dcim"

The key property shall be the InstanceID.

The instance Resource URI for DCIM_NICCapabilities instance shall be:

### 7.2.2. Operations

The following table lists the implemented operations on DCIM_NICCapabilities.

<table>
<thead>
<tr>
<th>Operation Name</th>
<th>Requirements</th>
<th>Required Input</th>
</tr>
</thead>
<tbody>
<tr>
<td>Get</td>
<td>Mandatory</td>
<td>Instance URI</td>
</tr>
<tr>
<td>Enumerate</td>
<td>Mandatory</td>
<td>Class URI</td>
</tr>
</tbody>
</table>

### 7.2.3. Class Properties

The following table lists the implemented properties for DCIM_NICCapabilities instance representing a NIC in a system. The “Requirements” column shall denote whether the property is implemented (for requirement definitions, see section 3). The “Additional Requirements” column shall denote either possible values for the property, or requirements on the value formulation.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Requirement</th>
<th>Type</th>
<th>Requirement and description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CongestionNotification</td>
<td>Mandatory</td>
<td>uint8</td>
<td>The property shall represent congestion notification support for a NIC port.</td>
</tr>
<tr>
<td>DCBExchangeProtocol</td>
<td>Mandatory</td>
<td>uint8</td>
<td>The property shall represent DCB Exchange protocol support for a NIC port.</td>
</tr>
<tr>
<td>ETS</td>
<td>Mandatory</td>
<td>uint8</td>
<td>The property shall represent Enhanced Transmission Selection support for a NIC port.</td>
</tr>
<tr>
<td>EnergyEfficientEthernet</td>
<td>Mandatory</td>
<td>uint8</td>
<td>The property shall represent energy efficient Ethernet support for a NIC port.</td>
</tr>
<tr>
<td>FCoEBootSupport</td>
<td>Mandatory</td>
<td>uint8</td>
<td>The property shall represent FCoE boot support for a NIC port.</td>
</tr>
<tr>
<td>FCoEMaxIOsPerSession</td>
<td>Mandatory</td>
<td>uint16</td>
<td>The property shall represent maximum number of IOs per connection supported for the NIC.</td>
</tr>
<tr>
<td>FCoEMaxNPIVPerPort</td>
<td>Mandatory</td>
<td>uint16</td>
<td>The property shall represent maximum number of FCoE targets supported for the NIC.</td>
</tr>

<tr>
<td>FCoEMaxNumberExchanges</td>
<td>Mandatory</td>
<td>uint16</td>
<td>The property shall represent maximum number of exchanges for the NIC.</td>
</tr>
<tr>
<td>FCoEMaxNumberLogins</td>
<td>Mandatory</td>
<td>uint16</td>
<td>The property shall represent maximum logins per port for the NIC.</td>
</tr>
<tr>
<td>FCoEMaxNumberOfFCETargets</td>
<td>Mandatory</td>
<td>uint16</td>
<td>The property shall represent maximum number of FCoE targets supported for the NIC.</td>
</tr>
<tr>
<td>FCoEMaxNumberOfOutStandingCommands</td>
<td>Mandatory</td>
<td>uint16</td>
<td>The property shall represent maximum number of outstanding commands supported across all connections for the NIC.</td>
</tr>
<tr>
<td>FCoEOffloadSupport</td>
<td>Mandatory</td>
<td>uint8</td>
<td>The property shall represent FCoE offload support for the NIC.</td>
</tr>
<tr>
<td>FQDD</td>
<td>Mandatory</td>
<td>string</td>
<td>A string containing the Fully Qualified Device Description a user-friendly name for the object.</td>
</tr>
<tr>
<td>FeatureLicensingSupport</td>
<td>Mandatory</td>
<td>uint8</td>
<td>The property shall represent feature licensing support for the NIC.</td>
</tr>
<tr>
<td>FlexAddressingSupport</td>
<td>Mandatory</td>
<td>uint8</td>
<td>The property shall represent flex addressing support for a NIC port.</td>
</tr>
<tr>
<td>IPSecOffloadSupport</td>
<td>Mandatory</td>
<td>uint8</td>
<td>The property shall represent IPSec offload support for a NIC port.</td>
</tr>
<tr>
<td>InstanceID</td>
<td>Mandatory</td>
<td>string</td>
<td>The property value shall be the FQDD property value.</td>
</tr>
<tr>
<td>MACSecSupport</td>
<td>Mandatory</td>
<td>uint8</td>
<td>The property shall represent secure MAC support for a NIC port.</td>
</tr>
<tr>
<td>NWManagementPassThrough</td>
<td>Mandatory</td>
<td>uint8</td>
<td>The property shall represent network management pass through support for a NIC port.</td>
</tr>
<tr>
<td>NicPartitioningSupport</td>
<td>Mandatory</td>
<td>uint8</td>
<td>The property shall represent partitioning support for the NIC.</td>
</tr>
<tr>
<td>OSBMCManagementPassThrough</td>
<td>Mandatory</td>
<td>uint8</td>
<td>The property shall represent OS-inband to BMC-out-of-band management pass through support for a NIC port.</td>
</tr>
<tr>
<td>OnChipThermalSensor</td>
<td>Mandatory</td>
<td>uint8</td>
<td>The property shall represent on chip thermal sensor support for the NIC.</td>
</tr>
<tr>
<td>OpenFlowSupport</td>
<td>Mandatory</td>
<td>uint8</td>
<td>The property shall represent open flow support for a NIC port.</td>
</tr>
<tr>
<td>PXEBootSupport</td>
<td>Mandatory</td>
<td>uint8</td>
<td>The property shall represent PXE boot support for a NIC port.</td>
</tr>
<tr>
<td>PartitionWOLSupport</td>
<td>Mandatory</td>
<td>uint8</td>
<td>The property shall represent Wake-On-LAN support for a NIC partition.</td>
</tr>
<tr>
<td>PriorityFlowControl</td>
<td>Mandatory</td>

<td>The property shall represent UEFI support for a NIC port.</td>
</tr>
</tbody>
</table>
7.3. NIC Statistics – DCIM_NICStatistics

This section describes the implementation for the DCIM_NICStatistics class. This class shall be instantiated in the Implementation Namespace:root/dcim.

7.3.1. Resource URIs for WinRM®

The key property shall be the InstanceID.

7.3.2. Operations

The following table lists the implemented operations on DCIM_NICStatistics.

Table 12. DCIM_NICStatistics - Operations

<table>
<thead>
<tr>
<th>Operation Name</th>
<th>Requirements</th>
<th>Required Input</th>
</tr>
</thead>
<tbody>
<tr>
<td>Get</td>
<td>Mandatory</td>
<td>Instance URI</td>
</tr>
<tr>
<td>Enumerate</td>
<td>Mandatory</td>
<td>Class URI</td>
</tr>
</tbody>
</table>

7.3.3. Properties

The following table details the implemented properties for DCIM_NICStatistics instance representing a NIC in a system. The “Requirements” column shall denote whether the property is implemented (for requirement definitions, see section 3). The “Additional Requirements” column shall denote either possible values for the property, or requirements on the value formulation.

Table 13. DCIM_NICStatistics - Properties

<table>
<thead>
<tr>
<th>Property Name</th>

</tbody>
</table>

### 7.4. DCIM_NICEnumeration

This section describes the implementation for the DCIM_NICEnumeration class.

Each DCIM_NICEnumeration instance is logically associated to a DCIM_NICView instance, where the DCIM_NICEnumeration.FQDD property is equal to the FQDD property on the DCIM_NICView instance.
This class shall be instantiated in the Implementation Namespace:root/dcim.

7.4.1. Resource URIs for WinRM®

The class Resource URI shall be "http://schemas.dell.com/wbem/wscim/1/cim-schema/2/DCIM_NICEnumeration? cimnamespace=root/dcim"

The key property shall be the InstanceID.

The instance Resource URI for DCIM_NICEnumeration instance shall be:
"http://schemas.dell.com/wbem/wscim/1/cim-schema/2/DCIM_NICEnumeration? cimnamespace=root/dcim+InstanceID= <FQDD>:<AttributeName>" where <FQDD> is the FQDD property value and <AttributeName> is the AttributeName property value.

7.4.2. Operations

The following table lists the implemented operations on DCIM_NICEnumeration.

Table 14. DCIM_NICEnumeration - Operations

<table>
<thead>
<tr>
<th>Operation Name</th>
<th>Requirements</th>
<th>Required Input</th>
</tr>
</thead>
<tbody>
<tr>
<td>Get</td>
<td>Mandatory</td>
<td>Instance URI</td>
</tr>
<tr>
<td>Enumerate</td>
<td>Mandatory</td>
<td>Class URI</td>
</tr>
<tr>
<td>DCIM_NICService.SetAttribute()</td>
<td>Mandatory</td>
<td>See section 8.1</td>
</tr>
<tr>
<td>DCIM_NICService.SetAttributes()</td>
<td>Mandatory</td>
<td>See section 8.2</td>
</tr>
</tbody>
</table>

7.4.3. Class Properties

The following table details the implemented properties for DCIM_NICEnumeration instance representing a NIC controller enumeration attribute. The “Requirements” column shall denote whether the property is implemented (for requirement definitions, see section 3). The "Additional Requirements" column shall denote either possible values for the property, or requirements on the value formulation.

Table 15. Class: DCIM_NICEnumeration

<table>
<thead>
<tr>
<th>Properties</th>
<th>Type</th>
<th>Notes</th>
<th>Additional Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>InstanceID</td>
<td>String</td>
<td>Mandatory</td>
<td>The property value shall be formed as follows: &quot;&lt;FQDD property value&gt;:&lt;AttributeName property value&gt;&quot;.</td>
</tr>
<tr>
<td>AttributeName</td>
<td>String</td>
<td>Mandatory</td>
<td>The property value shall be from the &quot;AttributeName&quot; column in Tables in section 7.7.</td>
</tr>
<tr>
<td>AttributeDisplayName</td>
<td>String</td>
<td>Mandatory</td>
<td>The property value shall be from the &quot;AttributeDisplayName&quot; column in Tables in section 7.7.</td>
</tr>
<tr>
<td>GroupID</td>
<td>String</td>
<td>Mandatory</td>
<td>See section 7.7.</td>
</tr>
<tr>
<td>GroupDisplayName</td>
<td>String</td>
<td>Mandatory</td>
<td>See section 7.7.</td>
</tr>
<tr>
<td>CurrentValue[]</td>
<td>String</td>
<td>Mandatory</td>
<td>The property value shall be one of the values in the &quot;PossibleValues&quot; column in the corresponding row in Tables in section 7.7.</td>
</tr>
<tr>

<td>String</td>
<td>Mandatory</td>
<td>The property value shall be one of the values in the &quot;PossibleValues&quot; column in the corresponding row in Tables in section 7.7.</td>
</tr>
<tr>
<td>IsReadOnly</td>
<td>Boolean</td>
<td>Mandatory</td>
<td>The property value shall be from the &quot;IsReadOnly&quot; column in Tables in section 7.7.</td>
</tr>
</tbody>
</table>
### Properties

<table>
<thead>
<tr>
<th>Properties</th>
<th>Type</th>
<th>Notes</th>
<th>Additional Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>FQDD</td>
<td>String</td>
<td>Mandatory</td>
<td>FQDD of the NIC that the attribute belongs to.</td>
</tr>
<tr>
<td>DisplayOrder</td>
<td>uint16</td>
<td>Mandatory</td>
<td>The property shall represent the sequence number denoting the preferred placement of the attribute in the list of all NIC attributes.</td>
</tr>
<tr>
<td>Dependency</td>
<td>String</td>
<td>Optional</td>
<td>The property shall be formatted as XML describing the attributes dependence on other attribute(s).</td>
</tr>
<tr>
<td>PossibleValues</td>
<td>String</td>
<td>Mandatory</td>
<td>The property value shall be equal to the array of the values in “PossibleValues” column in the corresponding row in Tables in section 7.7.</td>
</tr>
<tr>
<td>PossibleValuesDescription</td>
<td>String</td>
<td>Mandatory</td>
<td>The array property’s each value shall represent the description of the value in the PossibleValue array property at the corresponding index.</td>
</tr>
</tbody>
</table>

### 7.5. DCIM_NICString

This section describes the implementation for the DCIM_NICString class.

Each DCIM_NICString instance is logically associated to a DCIM_NICView instance, where the DCIM_NICString.FQDD property is equal to the FQDD property on the DCIM_NICView instance.

This class shall be instantiated in the Implementation Namespace:root/dcim.

#### 7.5.1. Resource URIs for WinRM®

The key property shall be the InstanceID.

The instance Resource URI for DCIM_NICString instance shall be:

http://schemas.dell.com/wbem/wscim/1/cim-schema/2/DCIM_NICString?cimnamespace=root/dcim+InstanceID=<FQDD><AttributeName where <FQDD> is the FQDD property value, and <AttributeName> is the AttributeName property value.

#### 7.5.2. Operations

The following table lists the Implemented operations on DCIM_NICString.

<table>
<thead>
<tr>
<th>Operation Name</th>
<th>Requirements</th>
<th>Required Input</th>
</tr>
</thead>
<tbody>
<tr>
<td>Get</td>
<td>Mandatory</td>
<td>Instance URI</td>
</tr>
<tr>
<td>Enumerate</td>
<td>Mandatory</td>
<td>Class URI</td>
</tr>
<tr>
<td>DCIM_NICService.SetAttribute()</td>
<td>Mandatory</td>
<td>See section 8.1</td>
</tr>
<tr>
<td>DCIM_NICService.SetAttributes()</td>
<td>Mandatory</td>
<td>See section 8.2</td>
</tr>
</tbody>
</table>

#### 7.5.3. Class Properties

The following table details the implemented properties for DCIM_NICString instance representing a NIC controller string attribute. The “Requirements” column shall denote whether the property is implemented (for requirement definitions, see section 3). The “Additional Requirements” column shall denote either possible values for the property, or requirements on the value formulation.
### Table 17. Class: DCIM_NICString

<table>
<thead>
<tr>
<th>Properties</th>
<th>Type</th>
<th>Notes</th>
<th>Additional Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>InstanceID</td>
<td>String</td>
<td>Mandatory</td>
<td>The property value shall be formed as follows:</td>
</tr>
<tr>
<td></td>
<td></td>

### 7.6. DCIM_NICInteger

This section describes the implementation for the DCIM_NICInteger class.

Each DCIM_NICInteger instance is logically associated to a DCIM_NICView instance, where the DCIM_NICInteger.FQDD property is equal to the FQDD property on the DCIM_NICView instance.

This class shall be instantiated in the Implementation Namespace:root/dcim.
7.6.1. Resource URIs for WinRM®

The class Resource URI shall be "http://schemas.dell.com/wbem/wscim/1/cim-schema/2/DCIM_NICInteger?cimnamespace=root/dcim"

The key property shall be the InstanceID.

The instance Resource URI for DCIM_NICInteger instance shall be:

http://schemas.dell.com/wbem/wscim/1/cim-schema/2/DCIM_NICInteger?cimnamespace=root/dcim+InstanceID=<FQDD>:<AttributeName where <FQDD> is the FQDD property value, and <AttributeName> is the AttributeName property value.

7.6.2. Operations

The following table lists the implemented operations on DCIM_NICInteger.

<table>
<thead>
<tr>
<th>Operation Name</th>
<th>Requirements</th>
<th>Required Input</th>
</tr>
</thead>
<tbody>
<tr>
<td>Get</td>
<td>Mandatory</td>
<td>Instance URI</td>
</tr>
<tr>
<td>Enumerate</td>
<td>Mandatory</td>
<td>Class URI</td>
</tr>
<tr>
<td>DCIM_NICService.SetAttribute()</td>
<td>Mandatory</td>
<td>See section 8.1</td>
</tr>
<tr>
<td>DCIM_NICService.SetAttributes()</td>
<td>Mandatory</td>
<td>See section 8.2</td>
</tr>
</tbody>
</table>

7.6.3. Properties

The following table details the implemented properties for DCIM_NICInteger instance representing a NIC controller integer attribute. The “Requirements” column shall denote whether the property is implemented (for requirement definitions, see section 3). The “Additional Requirements” column shall denote either possible values for the property, or requirements on the value formulation.

<table>
<thead>
<tr>
<th>Properties</th>
<th>Type</th>
<th>Requirement</th>
<th>Additional Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>InstanceID</td>

</tbody>
</table>
### 7.7. NIC Attributes

This section lists and describes the attributes and their logical grouping.

#### 7.7.1. NIC Configuration

This section describes the attributes for NIC’s Configuration.

The GroupID property for the DCIM_NICEnumeration, DCIM_NICString, and DCIM_NICInteger shall be “NICConfig”.

The GroupDisplayName property for the DCIM_NICEnumeration, DCIM_NICString, and DCIM_NICInteger shall be “NIC Configuration”.

The following table describes the values for the DCIM_NICEnumeration of this group. Each of the column headings correspond to a property name on the DCIM_NICEnumeration class. The Description column contains the description for each of the attribute. Each of the rows contain the values for the properties listed in the column headings. The PossibleValues property is an array property represented in the table as comma delimited list.

<table>

• "Enabled" | Preboot Wake on LAN                                 |
| WakeOnLanLnkSp   | WOL Link Speed**                                         | FALSE      | 904          | • "AutoNeg"  
• "10Mbps Half"  
• "10Mbps Full"  
• "100Mbps Half"  
• "100Mbps Full" | Wake On LAN (WOL) link speed                          |

**NOTE:** 1 – PossibleValues property shall contain either "iSCSI" value or "iSCSIPrimary" and "iSCSISecondary" values."iSCSI" value denotes that the selection of the NIC in the non-UEFI boot sequence shall boot the system to an iSCSI target. Further, the IPVer attribute in the iSCSI General Parameters group shall denote the IP version of the configured target’s IP address for iSCSI.

"iSCSIPrimary" value denotes that the NIC is the primary iSCSI boot source in the non-UEFI boot sequence. Thus, if the booting to this iSCSI NIC fails, the iSCSI target configured in the secondary iSCSI NIC shall be attempted automatically. The secondary iSCSI NIC shall be denoted by "iSCSISecondary" value for this attribute.

The following table describes the values for the DCIM_NICInteger of this group. Each of the column headings correspond to a property name on the DCIM_NICInteger class. Each of the rows contain the values for the properties listed in the column headings.

### Table 21. DCIM_NICInteger NIC Configuration

### 7.7.2. Main Configuration

This section describes the attributes for NIC’s Main Configuration.

The GroupID property for the DCIM_NICEnumeration, DCIM_NICString, and DCIM_NICInteger shall be "VndrConfigPage".

The GroupDisplayName property for the DCIM_NICEnumeration, DCIM_NICString, and DCIM_NICInteger shall be "Main Configuration Page".

The following table describes the values for the DCIM_NICEnumeration of this group. Each of the column headings correspond to a property name on the DCIM_NICEnumeration class. The Description column contains the description for each of the attribute. Each of the rows contain the values for the properties listed in the column headings. The PossibleValues property is an array property represented in the table as comma delimited list.

### 7.7.3. NIC Partitioning Configuration

This section describes the attributes for NIC’s Partitioning Configuration.

The GroupID property for the DCIM_NICEnumeration, DCIM_NICString, and DCIM_NICInteger shall be “NICPartitioningConfig”.

---

*This content is extracted from a document and presented in a readable format.*
The GroupDisplayName property for the DCIM_NICEnumeration, DCIM_NICString, and DCIM_NICInteger shall be “NIC Partitioning Configuration”.

The following table describes the values for the DCIM_NICEnumeration of this group. Each of the column headings correspond to a property name on the DCIM_NICEnumeration class. The Description column contains the description for each of the attribute. Each of the rows contain the values for the properties listed in the column headings. The PossibleValues property is an array property represented in the table as comma delimited list.

#### 7.7.4. Partition Configuration

This section describes the attributes for NIC’s Partition 1 Configuration. Partition attributes are also used to configure the physical port.

The GroupID property for the DCIM_NICEnumeration, DCIM_NICString, and DCIM_NICInteger shall be “ConfigureForm<n>” where <n> is the partition number.

The GroupDisplayName property for the DCIM_NICEnumeration, DCIM_NICString, and DCIM_NICInteger shall be “Partition <n> Configuration” where <n> is the partition number.

The following table describes the values for the DCIM_NICEnumeration of this group. Each of the column headings correspond to a property name on the DCIM_NICEnumeration class. The Description column contains the description for each of the attribute. Each of the rows contain the values for the properties listed in the column headings. The PossibleValues property is an array property represented in the table as comma delimited list.

7.7.9. Firmware Image Properties

This section describes the attributes for NIC’s Firmware Image Properties.

The GroupID property for the DCIM_NICEnumeration, DCIM_NICString, and DCIM_NICInteger shall be “FrmwImgMenu”. 
The GroupDisplayName property for the DCIM\_NICEnumeration, DCIM\_NICString, and DCIM\_NICInteger shall be “Firmware Image Properties”.

The following table describes the values for the DCIM\_NICString of this group. Each of the column headings correspond to a property name on the DCIM\_NICString class. The Value Expression column contains constraints on string value formulation. Each of the rows contain the values for the properties listed in the column headings.

**Table 41. DCIM\_NICString Firmware Image Properties**

7.7.14. iSCSI Secondary Device Parameters

This section describes the attributes for NIC’s iSCSI Secondary Device Parameters. The GroupID property for the DCIM_NICEnumeration, DCIM_NICString, and DCIM_NICInteger shall be “IscsiSecondaryDeviceParams”. The GroupDisplayName property for the DCIM_NICEnumeration, DCIM_NICString, and DCIM_NICInteger shall be “iSCSI Secondary Device Parameters”. The following table describes the values for the DCIM_NICEnumeration of this group. Each of the column headings correspond to a property name on the DCIM_NICEnumeration class. The Description column contains the description for each of the attribute. Each of the rows contain the values for the properties listed in the column headings. The PossibleValues property is an array property represented in the table as comma delimited list.

Table 50. DCIM_NICEnumeration iSCSI Secondary Device Parameters

<table>
<thead>
<tr>

7.8. DCIM_NICService

This section describes the implementation for the DCIM_NICService class. This class shall be instantiated in the Implementation Namespace:root/dcim.

The DCIM_LCEElementConformsToProfile association(s)' ManagedElement property shall reference the DCIM_NICService instance(s).

7.8.1. Resource URIs for WinRM®

The class Resource URI shall be "http://schemas.dell.com/wbem/wscim/1/cim-schema/2/DCIM_NICService? cimnamespace=root/dcim"

The key properties shall be the SystemCreationClassName, CreationClassName, SystemName, and Name.

The instance Resource URI for DCIM_NICService instance shall be: "http://schemas.dell.com/wbem/wscim/1/cim-schema/2/DCIM_NICService? cimnamespace=root/dcim+SystemCreationClassName=DCIM_ComputerSystem+CreationClassName=DCIM_NICService+SystemName=DCIM:ComputerSystem+Name= DCIM:NICService"

7.8.2. Operations

The following table lists the implemented operations on DCIM_NICService.
Table 55. DCIM_NICService – Operations

<table>
<thead>
<tr>
<th>Operation Name</th>
<th>Requirements</th>
<th>Required Input</th>
</tr>
</thead>
<tbody>
<tr>
<td>Get</td>
<td>Mandatory</td>
<td>Instance URI</td>
</tr>
<tr>
<td>Enumerate</td>
<td>Mandatory</td>
<td>Class URI</td>
</tr>
<tr>
<td>Invoke</td>
<td>Mandatory</td>
<td>Instance URI</td>
</tr>
</tbody>
</table>

7.8.3. Properties

The following table details the implemented properties for DCIM_NICService instance representing a system in a system. The “Requirements” column shall denote whether the property is implemented (for requirement definitions, see section 3). The “Additional Requirements” column shall denote either possible values for the property, or requirements on the value formulation.

Table 56. Class: DCIM_NICService

<table>
<thead>
<tr>
<th>Properties and Methods</th>
<th>Requirement</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SystemCreationClassName</td>
<td>Mandatory</td>
<td>The property value shall be “DCIM_ComputerSystem”.</td>
</tr>
<tr>

</tr>
<tr>
<td>ElementName</td>
<td>Mandatory</td>
<td>The property value shall be “NIC Service”</td>
</tr>
<tr>
<td>SystemName</td>
<td>Mandatory</td>
<td>The property value shall be “DCIM:ComputerSystem”</td>
</tr>
<tr>
<td>Name</td>
<td>Mandatory</td>
<td>The property value shall be “DCIM:NICService”</td>
</tr>
</tbody>
</table>

7.9. Simple NIC Profile Registration

This section describes the implementation for the DCIM_LCRegisteredProfile class. This class shall be instantiated in the Interop Namespace: root/interop.

The DCIM_ElementConformsToProfile association(s)’ ConformantStandard property shall reference the DCIM_LCRegisteredProfile instance.

7.9.1. Resource URIs for WinRM®

The class Resource URI shall be "http://schemas.dmtf.org/wbem/wscim/1/cim-schema/2/CIM_RegisteredProfile?cimnamespace=root/interop"

The key property shall be the InstanceID property.

7.9.2. Operations

The following table lists the implemented operations on DCIM_NICView.

Table 57. DCIM_LCRegisteredProfile - Operations

<table>
<thead>
<tr>
<th>Operation Name</th>
<th>Requirements</th>
<th>Required Input</th>
</tr>
</thead>
<tbody>
<tr>
<td>Get</td>
<td>Mandatory</td>

<td></td>
<td>If no license is required for the profile, the property shall have value NULL.</td>
</tr>
</tbody>
</table>

8. Methods

This section details the requirements for supporting intrinsic operations and extrinsic methods for the CIM elements defined by this profile.

8.1. DCIM_NICService.SetAttribute( )

The SetAttribute( ) method is used to set or change the value of a NIC attribute. Invocation of the SetAttribute( ) method shall change the value of the DCIM_NICAttribute.CurrentValue or DCIM_NICAttribute.PendingValue property to the value specified by the AttributeValue parameter if the DCIM_NICAttribute.IsReadOnly property is FALSE. Invocation of this method when the DCIM_NICAttribute.IsReadOnly property is TRUE shall result in no change to the value of the DCIM_NICAttribute.CurrentValue property. The results of changing this value is described with the SetResult parameter.

Return code values for the SetAttribute( ) method are specified in Table 59 and parameters are specified in Table 60. Invoking the SetAttribute( ) method multiple times can result in the earlier requests being overwritten or lost.

Table 59. DCIM_NICService.SetAttribute( ) Method: Return Code Values

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>Completed with no error</td>

<td></td>
</tr>
<tr>
<td>LC062</td>
<td>An instance of Export or Import System Configuration is already running.</td>
<td></td>
</tr>
</tbody>
</table>

### 8.2. DCIM_NICService.SetAttributes( )

The `SetAttributes( )` method is used to set or change the values of a group of attributes. Successful `SetAttributes( )` method invocation shall change the values of the `CurrentValue` or `PendingValue` properties of the `DCIM_NICAttribute` instance that correspond to the names specified by the `AttributeName` parameter, with the values specified by the `AttributeValue` parameter.
If the respective DCIM_NICAttribute.IsReadOnly property is TRUE, the method invocation shall fail and shall result in no change to the corresponding value of the DCIM_NICAttribute.CurrentValue property.

Return code values for the SetAttributes( ) method are specified in Table 62 and parameters are specified in Table 63.

Invoking the SetAttributes( ) method multiple times can result in the earlier requests being overwritten or lost.

**Table 62.** DCIM_NICService.SetAttributes( ) Method: Return Code Values

<tr>
<td>NIC015</td>
<td>AttributeValue cannot be changed for ReadOnly AttributeName %s</td>
<td>AttributeName</td>
</tr>
</tbody>
</table>
8.3. **DCIM_NICService.CreateTargetedConfigJob( )**

The CreateTargetedConfigJob( ) method is used to apply the pending values created by the SetAttribute and SetAttributes methods. The successful execution of this method creates a job for application of pending attribute values.

CreateTargetedConfigJob method supports the following optional input parameters:

1. **RebootJobType**: When provided in the input parameters, creates a specific reboot job to “PowerCycle”, “Graceful Reboot without forced shutdown”, or “Graceful Reboot with forced shutdown”. This parameter only creates the RebootJob and does not schedule it.

2. **ScheduledStartTime**: When provided in the input parameters, schedules the “configuration job” and the optional “reboot job” at the specified start time. A special value of “TIME_NOW” schedules the job(s) immediately.

3. **UntilTime**: This parameter has a dependency on “ScheduledStartTime”, together “ScheduledStartTime” and “UntilTime” define a time window for scheduling the job(s). Once scheduled, jobs will be executed within the time window.

If CreateTargetedConfigJob method is executed without the three optional parameters discussed above, then configuration job is created but not scheduled. However, this configuration job can be scheduled later using the DCIM_JobService.SetupJobQueue () method from the “Job Control Profile”. DCIM_JobService.SetupJobQueue () can be executed to schedule several configuration jobs including the reboot job. Refer to “Job Control Profile” for more details.

Return code values for the CreateTargetedConfigJob( ) method are specified in Table 65, and parameters are specified in Table 66.

Subsequent calls to CreateTargetedConfigJob after the first CreateTargetedConfigJob will result in error until the first job is completed.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>2</td>
<td>Failed</td>
</tr>
<tr>
<td>4096¹</td>
<td>Job Created¹</td>
</tr>
</tbody>
</table>

### Table 66. DCIM_NICService.CreateTargetedConfigJob( ) Method: Method parameters

<table>
<thead>
<tr>
<th>Qualifiers</th>
<th>Name</th>
<th>Type</th>
<th>Description/Values</th>
</tr>
</thead>
<tbody>
<tr>
<td>OUT</td>
<td>Job¹</td>
<td>CIM_ConcreteJobREF</td>
<td>Reference to the newly created pending value application job.¹</td>

<td>Unable to delete vFlash pending one-time boot configuration</td>
<td></td>
</tr>
<tr>
<td>LC062</td>
<td>An instance of Export or Import System Configuration is already running.</td>
<td></td>
</tr>
</tbody>
</table>

8.4. DCIM_NICService.DeletePendingConfiguration() Method

The DeletePendingConfiguration() method is used to cancel the pending values created by the SetAttribute and SetAttributes methods. The DeletePendingConfiguration() method cancels the pending configuration changes made before the configuration job is created with CreateTargetedConfigJob(). This method only operates on the pending changes prior to CreateTargetedConfigJob() being called. After the configuration job is created, the pending changes can only be canceled by calling DeleteJobQueue() method in the Job Control profile.

Return code values for the DeletePendingConfiguration() method are specified in Table 68 and parameters are specified in Table 69.

Table 68. DCIM_NICService.DeletePendingConfiguration() Method: Return Code Values
